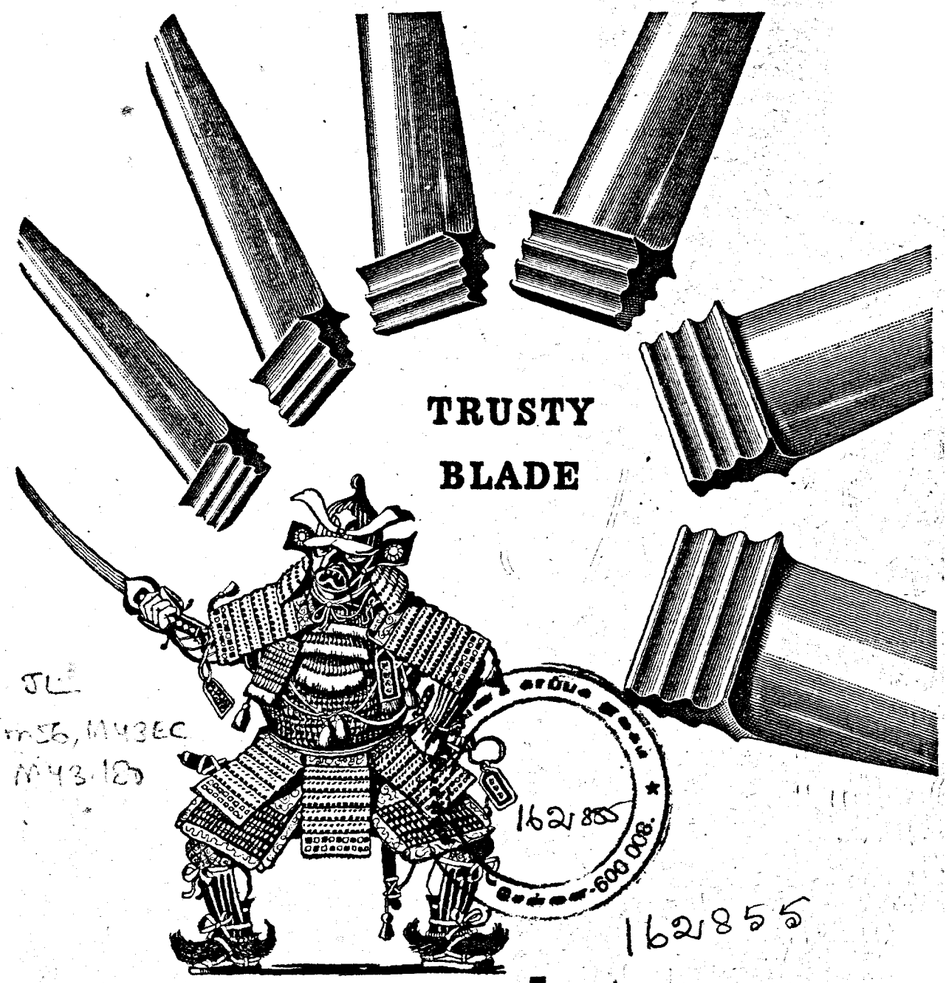
THE ECONOMIST · 22 RYDER STREET · ST. JAMES'S · LONDON · S.W.1

VOLUME CLXXX · NUMBER 5891



Mechanical polishing of precision components, such as turbo-jet blades, is relatively costly, can lack uniformity and can disguise flaws in the metal surface. Electrolytic polishing in solutions based on phosphoric acid is much quicker and cheaper; uniformity is more easily controlled and flaws in the surface are not flowed over. This process can be used not only with high temperature alloys but with other metals such as stainless steel and aluminium and copper alloys.

Post Mill at Outwood, Surrey.

...but now air is harnessed for industry by "BROOMWADE"

Built in 1665, the picturesque Post Mill at Outwood in Surrey, is Britain's oldest mill in working order. Its survival is largely due to the efforts of the Society for the Protection of Ancient Buildings.

Though the mill at Outwood is but a reminder of more spacious days, air still plays a most important role in industry. For it is air compressed by "BROOMWADE" to power "BROOMWADE" pneumatic tools which speeds production and reduces costs for the world's most important engineering developments.

The Township of Tintamare

WE FRANKLY admit it—now you've started reading—the township of Tintamare could be any town or city in the British Isles. In fact, what we're talking about probably applies to anywhere in the world—any place where excessive sound or oppressive heat affects the work-potential of industry. But back to Tintamare. There's almost certain to be a small works or factory there, and it is as certain that unwanted noise and heat slow down production. It's a point that large and small industrialists alike should study carefully.

Noise produces irritation, constant irritation frays the nerves, leading to absenteeism through illness or anxiety-complexes, culminating in reduced production. Free one section from the racket created by another, release the canteen from the boom and bang of the workshops, guard the administration from incessant noise-disturbance, and work improves. From such simple reasoning derives an almost-as-simple solution.

Consult Newalls, and you will find that both heat and noise can be kept in their respectively correct places, aiding fuel economy, and reducing considerably the wear-and-tear on staff nerves.

Newalls materials often effect double-purpose insulation, and, certainly, Newalls success-record in this important field gives a more than adequate testimonial to the quality and effectiveness of Newalls experience and ingenuity.

Give your problem to us and let us discuss the manner in which we can improve the 'habitability' of your working spaces, both on the shop floor and in the office. It will cost you nothing for us to investigate the problem.

Always Ready to Write

The popular Esterbrook writing set needs no attention, no special care, and your writing glides on instantly and smoothly the moment point touches paper.
The ink fountain is in the base instead of the pen-holder. It holds 40 times more ink than the ordinary fountain pen and the pen fills itself every time you return it to the socket. It is always ready to write a full page or more whenever you pick it up.
There are 30 numbered points to choose from to suit your type and style of handwriting.
Just the gift for business friends with your name and trade mark engraved.

In Black, Grey and Ivory at 34/3 and 37/10. Also the two pen model in Black (Model 487) at 68/5 and 75/8 from all leading stationers.

CAPILLARY ELEVATOR

- *Pen seals base (which is spill proof) and thus prevents evaporation.*
- *Combined ink-feed and writing point (30 to choose from).*
- *Exclusive filling device also cushions point against damage.*
- *Reservoir holds 40 times more ink than a fountain pen.*

FASHIONED FOR NOW... AND THE FUTURE

Some day, of course, all watches will be self-winding. For Mido, that day is now — every Mido watch is self-winding. And what beautiful examples of watchmaking they are! Designed out of sheer fashion excitement, engineered for worry-free performance — 100% waterproof, shock-protected, anti-magnetic, unbreakable mainspring! Wear a Mido when you will, where you will — nothing can dismay it. And Mido gives you the privilege of choosing from the world's largest selection of self-winding watches — strikingly handsome models for men... the tiniest self-winding watches for women. See them at better jewellers everywhere.

Mido Powerwind

The Watch You Never Have to Wind

● SELF-WINDING ● 100% WATERPROOF ● SHOCK-PROTECTED ● ANTI-MAGNETIC ● UNBREAKABLE MAINSPRING

Mido watches are sold and serviced in 65 countries throughout the world.

The Press of Our Times

LORD SELBORNE'S bid to go back to 1643 by setting up a triumvirate to license the press has no friends. His Press Authority Bill has been denounced by the Press Council itself as "misguided and reactionary." So it is; and so, too, would be any attempt to give powers of command or control over the press to the Press Council. The only significance of this Bill and similar unacceptable proposals is that they do reflect, absurdly, a real anxiety. Education, people used to say half a century ago, would do the trick: a generation of popular schooling, and popular taste and discernment would follow. But the most conspicuous fruit, in fact, has been the popular press, which is as widely criticised as it is widely read

One can see from Lord Selborne's Bill what the anxiety is. In wanting Sir William Haley's principled *Times* of today to set the "standard" for the rest he agrees with some 230,000 other people, perhaps 5 per cent of those who buy the *Daily Mirror*. In not wanting twisted news, intrusions on privacy, photographs calculated to do injustice or cause distress, and the exploitation of grief he has the agreement of very many more. It was this desire for "better" newspapers that provided half the support for setting up the Press Council three years ago; the other half came from the Labour party's distrust of the concentration of capitalist power in Fleet Street. It can be agreed that licensing or control would be tyrannical, intolerable and unworkable; and that the only proper curb for the press—as for any other body or person in the land—is the ordinary law of the land (including perhaps the law of trespass). The sanctions of the law in Milton's day were ruder, but the principle stands: "If they be found mischievous or libellous, the fire and the executioner will be the timeliest and most effectual remedy that man's prevention can use." Yet the more general question remains. Can we go on any longer saying that the free British press is the best in the world?

In fairness it has to be recognised that much of the criticism of the popular press can itself be called "misguided and reactionary." To a large extent the complaint against the popular press is that it is popular; it is a complaint against "vulgarity." It is a protest against the revolution in methods of presentation and communication by which, through the Northcliffe, Beaverbrook and Geraldine House eras, newspapers have with great skill been made understandable and attractive to now literate but non-literary millions of ordinary people; against newspapers which can be looked at rather than read, with their own deft form of basic English; and against a process of selection that tends to put all sorts and conditions of men and women (especially women) before politicians and diplomats (unless they are missing). This is an attitude of superiority. There is no more reason for setting up *The Times* of 1956 as a standard for all newspapers than there would be for setting up the pre-Northcliffe *Times* of 1900. Indeed, the tables could be turned; someone might introduce a Bill laying down that "all newspapers should say and display what they have to

say in language and lay-out which the people, educated to a defined stage in state schools, will understand" —an 11+ standard, so to speak, with parity of esteem. The truth is that the rise of the popular press has been no isolated or capricious phenomenon. Certainly it has been very largely the remarkable achievement, both journalistic and commercial, of remarkable individuals. But it has been an inseparable part of the growth, warts and all, of twentieth-century democracy; and the essence of a free press is variety and freedom of choice.

To say all this is, of course, to explain the warts rather than to explain them away. It is not enough to say simply that this is what the millions want (which is not altogether true) or to retort by saying, truly enough, that the less popular press has its blinkers, too, in the selection of news and themes. Catering for the common taste, in whatever field, carries with it special dangers. It tends to under reach itself. The process by which in much of the popular press the important is made a trivial, and the trivial important, can be defended in a free and democratic society. Equally, the accent on titillation can, as a consistent diet, especially perhaps for Sunday breakfast, be deplored, or, according to one's view of these things, denounced. Stricture is reserved for the exaggerated attention given to sex and crime, but, however shocking, this particular manifestation of contemporary popular taste may well be less important than the use of the half-truth and the sacrifice of facts to triviality and sensation. T[illegible] this is not simply to strike the superior attitude [illegible] can be put to the democratic test. Sex is at an [illegible] popular, whereas paradoxically, judged simp[illegible] medium of information, the popular press is no[illegible] most avid customers will say that "you can't b[illegible] what you see in the papers."

This point should not be misunderstood, as [illegible] often is. The suggestion is not that newspapers te[illegible] lies; nor is it, whatever the politicians may say, that they habitually distort the truth for political reasons. It is rather that in the process of fitting news and information into their popular formula too many newspapers too often twist them out of shape and give a misleading or incomplete impression; and in so doing they undermine the authority and respect which a free press ought to have. This is the really disturbing tendency. It is no more susceptible, of course, than any of the other latter-day characteristics of the press to regulation or enactment. Only the press itself, its publishers and its editors—and their customers—can grapple with it. In the end public opinion will decide. The argument comes back to where it started—to the role of education in the formation of popular taste; and the eventual outcome, when education itself and public opinion are both powerfully influenced by the press (and by other, newer means of communication), is one of the great riddles of our times.

Half Measures in Cyprus

IF the Government's decision to send Lord Radcliffe to Cyprus proves to be the beginning of the long unravelling of the Cypriot tangle nobody will be more pleased than this journal. Unfortunately, it looks much more likely to turn out to be one more example of the futility of doing things by halves.

Lord Radcliffe's mission ought to be a token to the Cypriot people that when the Government talks of giving them self-government under a liberal constitution, it means what it says, and success against the terrorists will not cause it to go back on its promise. But to the Cypriots, in their present mood, self-government is only a means to an end—self-determination. And on this vital point, the Prime Minister's statement last week gave them little satisfaction—though he did, it is true, for the first time acknowledge in plain and positive terms the Cypriots' claim to decide their own national status.

But, while the "principle" is accepted, its "application" is left to an indeterminate future; Sir Anthony ended all the hopes that had been allowed to burgeon that the British Government had decided to name a day when the Cypriots can vote on the national status they want. This, together with the assumption—in spite of all the evidence to the contrary—that the Cypriots would co-operate in the absence of Archbishop Makarios, seems to have foredoomed Lord Radcliffe's mission to failure. In an explosive situation, a gesture deprived of the ingredients essential for success can be worse than no gesture at all.

The Government puts the blame for its decision to hold back, after all, on self-determination largely on the resolute Turkish refusal to allow Cyprus to go to Greece, with the implied threat of civil war in the island should the British withdraw. But Turkey's fears for the security of its southern ports should Cyprus pass out of British hands have been known for a long time. They are real and rightly command a good deal of sympathy; but they do not render all other considerations of no account.

The test here is pragmatic. Refusal to name a date for the application of self-determination does not guarantee continued British control of the island at all. On the contrary, in view of the hardening of Cypriot opinion this year, it would seem to make it far more probable that the British will be forced to leave—ignominously, and sooner rather than later. If this is so, then it should be a purpose of British diplomacy to get the Turks to understand it, and each successive Turkish refusal to understand it is not a success, but a

[illegible]e, for Britain. The Cypriots must one day be [illegible]d to vote on their future status; by Sir Anthony's [illegible]ptance of the "principle" of self-determination the [illegible]ish Government now admits that this has become [illegible]itable. If, when that happens, the Cypriots then [illegible]de to change their status, they will have to get not [illegible]y Greek but Turkish assent, for which they will have [illegible] negotiate; by then they will have their own representatives to speak for them.

The Government has failed to convince the Turks of all this. Apparently it can see no good purpose in enlisting the good offices of Nato to help it in its task. Cyprus, it is true, is primarily a British, not a Nato, defence post, but Nato is closely interested in a quarrel that has shot to pieces the defence arrangements on its eastern flank. Its participation in the international negotiations that must precede any solution of the Cyprus problem might make it easier for the Turks to play a positive part in place of this present *non possinus*. Naturally enough, preoccupied with the need to safeguard its oil interests in the Middle East, and to honour its treaty obligations to its remaining Arab protegés, the British Government is reluctant to give up the advantages of the *status quo*. The temptation to give way to its own backbenchers and to take refuge behind Turkey's attitude must be strong. But it is too late to dig its toes in now. Once the Cypriot claim has been clearly acknowledged in principle there is bound to be continued agitation for a definite date when it can be exercised in practice.

At the time of going to press, Cyprus is being debated in the Commons, and it is not known whether anything of substance will be added to the Prime Minister's statement last week. But it is clear that if Lord Radcliffe's mission is really to be the first step towards pacification, three things are essential. First, the Cypriots must be made to believe that the introduction of self-government is not an attempt to fob them off with a second-best, but an essential preliminary to enosis—assuming that, once they have the running of their affairs in their own hands, they will still want to be governed from Athens. Only a definite date for the exercise of their choice can do this. Secondly, if there is to be any forward move, the deportation of Archbishop Makarios will have to be undone; he will have to be brought back, at least to London. If he is really the only representative whom the Greek Cypriots will accept—and there is no evidence to confute this—to refuse to treat with him, simply because he is a political prelate and none too scrupulous about the use of violent men to gain his ends, is unwise; moral scruples, however well-founded, defeat themselves when they lead to the use of British soldiers indefinitely to keep an alien people under British rule. If the Archbishop is ever effectively discredited, it will be by the people of Cyprus, not by the British Government.

Finally, the campaign against the terrorists, which has recently enjoyed some encouraging successes, has to be carried on, and with undiminished vigour. But it must be pursued without recourse to such expedients as collective punishments. These are wrong; whether technically legal or not, they are repugnant to all principles of law; and their practical value is dubious, at best. Has any information been extracted from any Cypriot town or village through this kind of pressure? The collective punishments are turning against Britain the general mass of Cypriots without whose goodwill no satisfactory settlement, now or later, is possible.

The Noble Classes—I.

Peers from the People

THOUGH the public continues to be deeply interested in the peerage, it is doubtful how far mass observation of the daily lives, fortunes and misadventures of the nobility through the medium of the press (and latterly with the aid of television and domiciliary visits) provides a picture with any precision of outline. The exercise of the vestigial constitutional powers of the nobility is probably the least interesting feature to the average commoner; but the arrival of the "backwoodsmen" to swell the adverse vote against the bill to abolish hanging last week may prompt some people to ask just who the British nobility is, in the second half of the twentieth century, in standard sociological terms.

There is a wealth of genealogy in the reference books, but there are very few statistics in the modern sense. The purpose of this short article, and a subsequent one, is simply to indicate the possibilities of the statistical approach to the nobility, made in much the same way as is now normal for other social strata or groups. The material is incomplete; but it puts to the test of a few figures some widely held beliefs about this class, and it may even throw some light on its future in an egalitarian age.

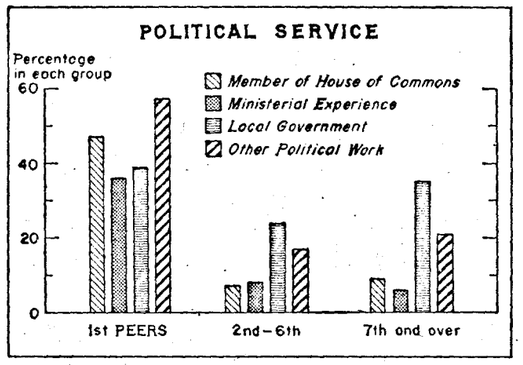
The study of a social class can be powerfully helped by the modern device of sending out a detailed questionnaire for answer by a sample in it; but it may be doubted if the nobility—particularly the older nobility—is yet responsive to detailed questionnaires. The method adopted here has been to analyse and tabulate the biographical details of about 830 hereditary peers who composed the House of Lords in 1954 and set out in *Dod* and *Who's Who*. This omits 16 Scottish peers and about 50 Irish peers. Moreover, not all peers give full and frank details of their *curricula vitae*. But it probably gives a fairly reliable picture of the class.

It is well known that, though the peerage is an ancient order, most titles are recent. The figures given here show that 21 per cent of the peerage is newly created, and a further 19 per cent of titles are held by the first descendant. Over half consist of first, second and third holders of the title—peerages mainly created in this century. Mr L. G. Pine calculates, in his recent study of the peerage*, that of 870 peerages—including Irish—extant in 1955, at least 395 were created since Queen Victoria's death. Only 20 per cent are held by the eighth (or later) holder of the title—go back, that is, on an average life-span, to the eighteenth century.

This is less true of the three higher orders of the peerage than of the two lower, which together make up 71 per cent of the peerage. Twenty-eight per cent of barons and 29 per cent of viscounts are newly ennobled, but only 4 per cent of earls. Nearly a third of the earls are eighth holders of the title or even older. There is less readiness to create new earls—ex-prime ministers are limited in supply—and this, the most ancient of English titles, has not been unduly inflated. Dukedoms have been for some years reserved to royalty, and marquisates are also not freely given. There is thus a clear distinction between these degrees of precedence and the commoner run of barons and viscounts.

But it is a mistake to suppose that the peerage has been inflated in any Gilbertian manner. As the accompanying chart should suggest, the currency has suffered far more than the peerage at the hands of successive governments. The number of titles has, of course, increased—from 200 in the middle of the eighteenth century to about 870 today in a fairly steady line (but with a significant pause in the eighteen-forties and fifties). This does not mean that the proportion of peers in the population has increased ; on the contrary there has been a tendency to decline from about 22 per million in the eighteenth century to about 17 per million today. The proportion of the later Middle Ages was almost certainly higher ; later in this century the proportion might increase again if the population ceased to grow.

The growth of the peerage in numbers is, of course, the result of the ratio between creations and extinctions. Peerages in Britain are relatively shortlived, compared with continental nobility, because the title descends only to the male heir (occasionally though the female line). Elsewhere all noble offspring are noble ; in Britain the other children have mere courtesy titles which do not pass to their children. If the British nobility had not been maintained by new creations since the French Revolution it would by now have died out ; the old French nobility is still alive. The ratio between creation and extinction is getting on for



2:1. In the last twenty years 235 peerages have been created (over 100 by Labour governments) and 135 have become extinct, an average of 11.7 creations and 6.7 extinctions a year. At the present net creation rate of 5 per annum, there would thus be 1,100 peers by the end of the century. But if a series of egalitarian governments ceased creating peers—among other things—it would still require 150 years to extinguish the peerage (and 350 years for the baronetage).

It does not follow that egalitarian governments would cease creating peers. The peerage, in fact, is no caste, and never has been ; it has always been permeable by commoners who gave service to the state — first by military prowess, later through trade (an early example was the contracting firm of de la Pole which was ennobled in the fifteenth century and ended as Earls of Suffolk.) The old and the new peer have always worn

The Chairman speaks . . . on

TECHNOLOGICAL EDUCATION

'We welcome the fact that the Government have shown very definite evidence of being alive to the ever-increasing need for technically trained people; but we believe that the future requirements of industry are still not fully appreciated.' *Sir Alexander Fleck, Chairman of I.C.I. Ltd., in his annual report published in The Birmingham Post, June 15th 1956.*

'The supply of technological and scientific manpower in this country is a problem giving rise to increasing concern—recruitment of an adequate supply is one of the most urgent problems facing our group today.' *Mr. W. H. McFadzean, Chairman, British Insulated Callender's Cables Ltd., in his annual report published in The Birmingham Post, May 25th 1956.*

Companies wishing their reports and statements to reach a wide and influential audience throughout the United Kingdom's most important manufacturing centre, publish them in . . .

Power

dive

A diver descends to examine power cables which have been laid across a river.
He will make sure that the cables are correctly sited in the dredged trench. This is a difficult job in muddy water since he has to work blind and completely by touch, but the life of the cable depends upon the accuracy with which he carries out his task.
This is only one of the many types of cable installation—underground, overhead and underwater—which BICC and its associate BIC Construction Company undertake anywhere in the World.

Other Eden?

THE vital tussle over Suez has not been brought to a head yet. It is not clear what shape the proposed association of canal users (who are still conferring as *The Economist* goes to press) will, after all, take. It is less clear than seemed likely a week ago whether the circumstances which would draw the users together in a collective boycott—that is, the abrupt running down of the canal traffic under Egyptian management, allied to President Nasser's refusal to facilitate the users' convoys—are going to arise. There is still uncertainty about how the heavy cost of such a "sea lift," and especially of the substitution of other sources of oil supplies, would be met. The hope that the calamitous affair may be in sight of entering, for the first time, a phase of negotiation is only a hope.

It is therefore an appropriate moment to seize the opportunity of looking homewards and attempting a first judgment of the record of the two political parties in the past two months. Throughout the Suez crisis, while most other independent newspapers have hurried to take sides, *The Economist* has found itself critical of both Sir Anthony Eden and the Labour leaders, but without getting as excited about the relatively narrow difference between them as the two parties gradually seem to have themselves become. Now that there is a pause for breath in the crisis, it is possible to weigh the record of the Government and the alternative government in more detail.

In order to be fair, judgment should begin not from the afternoon of July 26th, when President Nasser made his announcement that he had seized the canal, but from a short time after that—from, say, the time of the Cabinet meeting of July 30th, which faced a situation not essentially different from that which later confronted Parliament in its debate on August 2nd. To pass over those first few hours without comment is, admittedly, to pass over a question that many people feel is a damaging and embarrassing one for the Conservatives—namely, how near Britain's finger came to the trigger at the first onset of the crisis ; but this is a question that cannot now be answered. Nobody can tell at this stage whether Britain really would have used force against Egypt during the first forty-eight hours if it had had the force available and in position ; the fact is that the force was not available and in position, and this realisation overwhelmed the dangerous initial impulse (undoubtedly, the impulse was there) before it had time to be translated into hard-and-fast intention. Once this had happened, however, a basic choice of aims lay before the statesmen of this country.

One course was to set as our sole aim the safeguarding of our interests in the canal ; the other was to say that our aim must be not only to safeguard our interests, but also (in a phrase that has been too much used) to "slap Nasser down." In retrospect, this, surely, is where all the major politicians—of both parties—went wrong. To have adopted the first course would still have meant that Egypt should be warned that to persist in its flagrant nationalist intentions would bring down economic or military sanctions upon its head ; but it would also

have meant that everything possible should be done to enable President Nasser to save face for himself as we tried to save the canal for ourselves. It would have been the way, not of ultimatum backed by angry cries, but of negotiation backed by quiet determination. Instead, the Government chose to proclaim that President Nasser was the new Hitler, and to make plain to him that Britain's aim was to shake him, not only in his policies, but also in his personal position. And so—after reading and rereading Mr Gaitskell's speech of August 2nd, it is impossible to see how Labour can deny this—did Her Majesty's Opposition.

★

The parties therefore emerged from the debate of August 2nd with apparently united agreement that President Nasser had got to be made publicly to climb down. The split between Government and Opposition opened only at the next stage: on the means to get this very difficult aim achieved. The Opposition was at an advantage here because it did not have to, and therefore did not, suggest any effective means at all. Labour supported the Menzies mission's proposals (which were presented in Cairo as an ultimatum, not as a basis for negotiation), but its view apparently was that, if Egypt did not accept them, then the dispute should simply be referred to the United Nations. If this meant going to the Security Council, the case would merely have come back to the Cabinet within a fortnight, with a Russian veto attached and everything the same as before; if it meant going to the General Assembly, the matter would have been discussed for several weeks longer, but again without any action that might induce President Nasser to climb down. From the start it was evident that at some stage it would be both morally right and politically and diplomatically expedient to take the dispute to the United Nations. But at this stage Labour's policy was not a policy at all; it was an evasion.

The Government, on the other hand, had to suggest some policy for securing the united (and appallingly difficult) political objective of making President Nasser give way publicly; the split in the country that now appeared opened largely because many people misunderstood what this policy was. The *Manchester Guardian* opined flatly that the Government was "preparing to go to war immediately if the Menzies mission fails." If this had indeed been the cold-blooded intention—if Sir Anthony had really been prepared to act independently of the American alliance and to fly in the face of the realities of present balance of power politics—then all the attacks upon the Tories would have been justified. A policy of this sort would have been infinitely worse than the Opposition's expedient of having no policy at all. In fact, however, the *Guardian* and others, in ascribing this intention to the Government, went too far. It was not an intention but a serious risk. The most dangerous factor at this stage was that a detailed military plan had—properly and contingently—been drawn up, presumably complete with an "earliest possible" D-day and so forth; and a military plan can acquire a dread momentum of its own—besides gravely increasing the risk of accident, or of a more or less spontaneous combustion, if President Nasser, faced with what in effect were ultimatums, went over the edge with brinkmanship of his own. Moreover, the Government did intend to put the military plan into operation under certain conditions; the principal of these conditions, however, was that the Government should feel assured that it could use force without involving the consequences in damaging the alliance and the Commonwealth of which the *Guardian* sensibly warned. Finally, Ministers were at this stage over-emphasising the possibility of using force, for deliberate purposes of external consumption. It is probable that history will summarise the Government's policy at this stage as one of extreme verbal bellicosity and three-quarters—but note, only three-quarters—bluff.

★

Usually, there is nothing to be said for a policy of bluff. In this case, however, three arguments could be advanced for it. The first was that loud menaces might scare President Nasser away from taking any further step that would make a clash inevitable. There was something to be said for this view: it had become obvious that President Nasser's wisest personal course would be to avoid doing anything that might bring the United States to agree that Britain and France would be justified in using force, and President Nasser is an intelligent enough man to recognise the obvious. Indirectly, therefore, the menaces may possibly have influenced the Egyptian President not to go forward swiftly to hang the so-called British "spies" or to arrest the canal pilots when they resigned their jobs, to keep the Cairo mob in order, and to agree at least to meet the Menzies mission. Clearly, however, the purpose of the military bluff (in so far as it was bluff) was not merely to frighten President Nasser from taking further provocative steps. Some Ministers also hoped that it would frighten him into acceptable co-operation with British aims.

It was this second argument for the bluff that was absurd, and contradicted the first. Given that one of Britain's aims was to strike him down by diplomatic defeat, President Nasser was not at all likely to co-operate in this aim out of fear of being struck down by military defeat instead. He knew as well as anyone that America and the rest of the world were opposed to the threat of an Anglo-American invasion of Egypt. There remains then the third—and most subtle—argument for a policy of sabre-rattling at this time.

This argument—the phrase here is not original—was that Britain should "so frighten our friends that they would come in and save us from our foes." There is almost certainly in this argument a strong element of *ex-post* rationalisation of a policy that was originally

started for quite other reasons; many of Sir Anthony Eden's most fervent admirers would admit that he has been forced into any success under this heading rather than that he has plotted the course from the first. But on Wednesday of last week he was able to announce an apparent success. Apart from the essential fact of American involvement, there are certain subsidiary advantages in the proposal for a canal users' association: it could provide a gathering haven for Suez technicians who would otherwise be hopelessly dispersed in other jobs, and the formula of "technicians under users' control and canal ownership under Egypt's" might even—and may still—provide the basis for an eventual negotiated solution. But the real point about the new Dulles-Eden plan, as announced on Wednesday of last week, seemed to be this. Given that some pressure must be brought upon President Nasser to make him accord with our proper aims and interests, and given that military action must in this context be ruled out, the only alternative source of pressure lay in economic measures and particularly, as the ultimate sanction, in boycott of the canal itself; but Britain could not afford this unless America agreed to join with it and, perhaps, foot part of the bill.

How far, then, has Sir Anthony's policy of three-quarters bluff paid off? At this stage, a week after the announcement, it is very difficult to say. Nobody can be sure to what lengths America would in fact go in supporting a boycott; and the attitude of other important maritime nations is more nerve-rackingly doubtful still. If they do not give sufficient backing, the whole of Sir Anthony's new policy could be an expensive fiasco. But, at the moment, it is fair comment that America would have been unlikely to go as far as it has now gone, in an election year, unless Mr Dulles had been afraid that Britain and France would otherwise have gone further.

★

There remains the question of reference of the dispute to the United Nations. Up to last week the Government's wisest course would have been to have talked more about this but not to have done any more than it in fact did; too early a reference to the long processes of United Nations debate might have hamstrung any effective practical action. But once the machinery for concerted economic measures, including boycott, can be finally agreed with the United States—whether as a plan of action or a firm platform for negotiation—all objections to a reference to the Security Council surely vanish. It was presumably on this reasoning, having got the final green light from Washington for the users' association idea as last week's debate was about to begin, that Sir Anthony Eden announced his intentions about the Security Council—thirty hours later than he should have done, as the debate was ending.

That seems to be the fairest summary of the bewildering political events of the past seven weeks. Three points for internal political digestion seem to stand out from the analysis. The first is that the most crucial—and most regrettable—decision was taken at the very beginning, when it was decided that President Nasser must be "slapped down"; both political parties agreed to this decision, although Sir Anthony probably went further in the wrong direction than the more emollient Mr Gaitskell would have done. The second point, however, is that, given the decision to try to dethrone President Nasser, the Government's policy of bellicosity and bluff was more logical than Labour's lack of any policy at all; indeed, Sir Anthony may even have scored a success by his tactics—through scaring America, not President Nasser, into co-operation. The third point is that resort to the United Nations, though indispensable at the right moment both because of the nature of the world and because of Britain's moral commitments, has been used too much by the Government's critics as a red herring; in particular, if the idea of a users' association had been submitted to the General Assembly before Britain and America had agreed upon it, the assembly would probably have gone on talking until next Christmas about under which article it could legally be set up. If the second and third of these points could be considered in isolation, this other Eden we have seen in action in the last seven weeks would not appear to be so very different from the skilled diplomat we used to know.

★

But they cannot be considered in isolation. The original mistaken decision personally to bring down Nasser—*debellare superbum*—has dictated the subsequent course of events. If support for the users' association is not now secured from a great majority of maritime nations—and, still more, if it is not most firmly sustained by America—then Britain faces a severe diplomatic defeat. Even if it avoids this, economic measures by a users' front, including the boycott, would not necessarily bring Egypt to its knees; in any case, the attempt to do so is bound to be expensive—and, meanwhile, the traffic is still obstinately moving through the canal. All this seems a heavy risk to run for the sake of dethroning a Middle East dictator who, if a Hitler, is much littler; and who might more easily, and more realistically, have been brought to reason by firmness backed by negotiation, instead of being confronted from the start by firmness backed by ultimatum alone.

Aspects of the Suez crisis are also discussed in Notes of the Week on pages 943, 944, 945 *and* 947, *and in Business Notes on pages* 982 *to* 988. *Articles from correspondents on the French attitude to Suez and on Egypt's economic vulnerability appear on pages* 968 *and* 973.

Free Trade With Europe

EARLY in July, the Economic Secretary to the Treasury breached the Maginot line of British indifference to European integration by announcing that "no subject" would "more attract the attention of the Government in the months ahead" than that of British relations with the proposed European common market about which France, Germany, Italy and the Benelux trio are now negotiating. President Nasser has proved Sir Edward Boyle wrong; but the Suez crisis has not removed the need to clarify the British attitude toward one of the most hopeful prospects left to the western world. Mr Macmillan himself set the ball rolling at the OEEC's July meeting by inspiring the proposal that a working party should report by New Year on the chances of creating a "free trade zone" of OEEC countries round the six-nation common market. This working party will begin its work on Monday, and, as the common market talks between the Six have already begun and will reach the level of a ministerial meeting next month, it is clear that its study will be no mere academic investigation of possibilities, but a preliminary negotiation for a link with a common market. That is why the Government now needs to define its policy quickly, despite its preoccupations.

Admittedly, the European common market is still not a certain starter. The French in particular are tempted to shy away from it. But the Spaak report, on which the negotiations between the Six are based, tackles the difficulties realistically; and even in France the "new drive" towards European economic unity has made headway in the last year. If the advance towards a common market begins and Germany gains access to a European market in which tariffs against its goods gradually disappear, while tariffs against British goods remain at their present level, the results could be disastrous to Britain's trade.

The Government can hardly commit itself today to a full customs union with wide delegation of powers to federal institutions; for one thing, such a union would cover only one eighth of British trade, at the expense of the Commonwealth trade that accounts for one half. But a free trade zone, in which Britain would gradually abolish trade restrictions with Europe but retain independent tariffs for the rest of the world, is another matter. It would associate her with the common market while preserving the great majority of imperial preferences. As most of the other OEEC countries could be expected to join Britain in a free trade area, she would gain a special relationship with the countries that take a quarter of her trade without sacrificing her Commonwealth links. The fragile base of British prosperity would be widened.

The sudden discovery that imperial preference is not an insurmountable obstacle to closer economic co-operation with Europe is probably the clearest sign that the Government is in earnest. The Commonwealth Relations Office, which fears any weakening of economic ties at a time when so many colonies are becoming independent, may be a little worried; but the Treasury and the Board of Trade look as if they are near to being convinced. The essential fact seems to be that nine-tenths of Commonwealth imports into Britain are agricultural and primary products which either do not compete with European goods, or enter free of duty, or are likely to be excluded for a long time from effective participation in the common market.

Apart from Canada (which hopes to sell more manufactures to Britain in time), the Commonwealth countries that set the highest store by imperial preference seem to have little to lose. Detailed talks with the Commonwealth have not begun; but preliminary consultations suggest that they will not raise insurmountable difficulties. It is worth noting that the average rate of imperial preference has been halved since 1937 and is not now high—about 5 per cent (though in some cases the preferences go over 50 per cent). Imperial preference is a wasting asset, eaten into by rising prices which lower the real value of absolute rates of duty that Gatt forbids governments to raise; by the independent trading policies of the ever more numerous former dependencies; by the difficulties of Australia with her balance of payments; and by Canada's gradual adoption of free trade policies.

★

The free trade zone scheme can therefore be treated on its merits. What are those merits? If the common market proposals of the Six are to be the model, a free trade area would mean the gradual abolition over fifteen years of tariff, quota and other restrictions on trade with Europe. Britain is a high tariff country; the average rate of duty on manufactured goods is 20 to 25 per cent, permitting peaks of 30 per cent on cars and 40 per cent on cameras. Yet this amounts to protection less for the life than for the frailties of the British economy. A fifteen-year transitional period ought to enable threatened firms to adapt themselves to new competition and to take the opportunity of entering the new markets. Further, the common market project is replete with safeguards that could presumably be invoked whenever balance of payments trouble developed. It is certain that, whatever the habitual pessimists may say, no British industry, not even cotton, would, as such, be uncompetitive; some marginal firms only would have to undertake far-reaching reconversion. Many, like the heavy equipment industries, based on cheap steel, would be admirably placed to expand. If the experience of the European Coal and Steel Community is any guide, the opening of frontiers does not so much kill off marginal firms as encourage most firms to reorganise to exploit a wider market.

This conclusion is reinforced by the fact that the European Six represent the most rapidly expanding major market in the world. While Commonwealth imports have remained static around $12,000 million since 1950, the total imports of the Six have increased from $11,000 to over $19,000 million. And as yet Britain has benefited by this growth only to a limited extent, her exports to the Six rising from $700 to $1,100 million between 1950 and 1955.

The contrast between the opportunities for Britain in joining the free trade area and the dangers of not doing so are admirably illustrated by the case of Benelux, the only low-tariff area within the Six. Making all due allowance for the fact that Benelux is a centre of transit trade and that its production is largely complementary to Britain's, it is surely instructive that, with only one-eighth of the population and one-seventh of the income of the Six as a whole, it should account for half Britain's trade with the area. If the Six adopt a common tariff against the outside world, the consequent raising of average Benelux tariffs will be as dangerous for Britain as the lowering of French, German and Italian ones would be hopeful. Mutual tariff concessions with the Six might recoup some of the lost advantages. But the nature of Britain's trade with Europe suggests that it would be in the weaker bargaining position. Moreover, the Gatt regulations require that any concessions would have to be generalised to all Britain's trading partners. An important aspect of the free trade area plan is that American interest in European unity would probably secure a United States blessing for geographically limited trade concessions which it would not otherwise countenance.

The virtue of the threat of the common market is that it is making the Government and informed opinion examine the implications of free trade with Europe. Perhaps some people at the Conservative Central Office are looking askance at certain of those implications (although they are now noticeably less worried about the imperial complications, they still think that a reduction in tariffs will annoy some of the industries that contribute to their party funds). But economic, as distinct from party political, examination shows that the opportunities far outweigh the dangers of a bold trade policy. Britain now has to treat this matter as her own interest, and not simply as a manœuvre to meet the disturbing will to unity of the Six. And the Six with whom the exploratory talks, under the pseudonym of an "OEEC working party," are to be held need to be convinced of this new direction. The British have indulged too long in double talk on Europe for doubts to be dispelled merely by hints. What is needed now is an unequivocal public statement of support for a free trade area. The Government is still consulting industry, and cannot make that statement before October. But the longer it hesitates, the greater the risk that the advantage of Britain having at last given a lead in a phase of European integration will be dissipated.

This is not merely a matter of economics. There is no getting over the fact that Britain, in working for a free trade zone, would be undertaking a major political reorientation. The impetus towards European unity among the Six would be considerably increased—though less than if Britain had made an equivalent gesture over the EDC before the crisis of 1954. For the smaller nations, like the Scandinavians, the Austrians and the Swiss, the contradiction between their fear of living alongside a giant and their need to open their frontiers as widely as possible to trade would be largely dissipated. The problems of European unity, which have hitherto been primarily political, would be reduced to the economic and social scale. If Britain, late though it is, takes the lead in championing a free trade area for Europe, she will have done more than the OEEC alone or the Six alone could have done in realising the aims the OEEC's founders set for the survival of Europe in 1947. The circumstances of that survival have radically changed in ten years. But Suez points the need for a more self-reliant Europe just as sharply today as the threat of poverty and of Russian invasion did in the first days of Marshall Aid. The opportunity should not be missed.

Slavery in Fiction and Fact

DRED: A Tale of the Great Dismal Swamp.
By Harriet Beecher Stowe.
Sampson Low, Son, and Co.

Dred must not be judged by the rules of art. To do so would be to condemn it. The book is a remarkable instance of the impossibility of combining the expression of a definite moral with an artistically evolved course of actions and events. . . . Dred contains the elements of a good tale, but it is anything but satisfactory in its development. . . . We can hardly blame the author for these imperfections. A depiction of the evils of slavery was her main object. . . . Her assertions are, however, still better illustrated by the actual events that are taking place in the United States, than by those which imagination or experience have strewn over the pages of her novel. The attack on Sumner in the Senate House was a more audacious act of violence than that which Mrs Stowe's villain perpetrates on Clayton in the woods of South Carolina. The comments on Brooks' chivalric action in the Southern newspapers and the conduct of the Missouri invaders in Kansas show more forcibly the fierce determination and reckless brutality of the slave-holding population than any scene throughout the volume; the horsewhipping of the meek and defenceless Father Dickson, the burning of the school where Clayton and his sister taught the children of their own slaves to read and write, the desertion and indignation of friends and neighbours as soon as his abolitionist tendencies were detected—all fade into insignificance when compared with the violence and intolerance to which each fresh account of actual transactions testifies. What is of perhaps the greatest and most painful significance among the many stirring events which are agitating the States, is the last surrender of the anti-slavery party in the House of Representatives, corroborating the opinion of Mrs Stowe's shrewd and worldly wise Frank Russel, that in case of extremities the Free States would be found to have one other interest much nearer at heart than the cause of humanity.

The Homeless in London

TRAMPS are a dying race : the few who survive contracted the habit when young, and will not change their ways for a mere welfare state. On the Embankment, London's traditional home-from-home for the down-and-out, the London County Council runs an office to find any such a bed for the night ; it usually closes down, its work done, at five in the evening. Recently, the Salvation Army sent out a party on Christmas Eve to give money to anyone who might be homeless on the streets. It had some difficulty in trying to persuade the only man it met to accept five shillings : he turned out to be a policeman. At Rowton Houses, the commercial organisation providing "Hotels for the Working Man," a bed in a single cubicle can be got for half a crown a night : a sign of the times is that they are converting some of the houses into "super-special accommodation." (They will be comfortable enough and more expensive than the cubicles, even though not as super-special as all that.) In London, in short, poverty is fast disappearing. But need remains.

There is a safety net for those who are driven by need into homelessness : provided, for example, by the LCC's reception centre at Camberwell, a former workhouse which looks like what it was. The men coming in are greeted by great hunks of bread and marge and the traditional mugs of steaming soup, and in the room where the newcomers wash, a bottle, labelled "live vermin," and destined for a research establishment, makes it plain that no wanderer is unwelcome. The centre's clients divide into two broad groups. About the first group there is nothing particularly pathetic : well shaven, in their decent suits, they are obviously labourers between jobs, who take this opportunity of a cheap bed and the good offices of the Ministry of Labour, who will find them work in the morning. They often spurn the bread and marge, having spent their last money on a meal—and probably, for that matter, a drink—before coming on to the stricter rations provided from public funds.

Some of these labourers, called by the LCC "wayfarers," come back again and again ; these are congenital drifters, who work here and there, on the harvest or by the seaside in the summer, settling down in a town for the winter, even having a regular itinerary and going back each year to a particular farm. A few workshy ones are sent to a "designated centre," where they can be made to work ; and recently the first prosecution was made of a man who refused to accept any of the jobs found for him, and declared his intention of relying on national assistance. But such slackers are the exception. Most wayfarers are resourceful and amusing characters, who simply prefer to move from one casual job to another. The London catering trade, for example, relies on them greatly, and their main nuisance value is that they make things untidy for planners.

The second group at the centres—and a far more serious problem—consists of those who have been driven there by personal or domestic problems ; the men may be the fathers of the "homeless families" discussed later in this article. Most of these are victims of their own recklessness or incompetence in face of the world. At the Camberwell reception centre a Scots steelworker arrived back with his first week's wages from his new job as a kitchen porter. When asked to give up some of this money in payment for his keep, he recited a long and incomprehensible story about his wife, which was thought to be the usual lead-swinging. But in the end it turned out that, when he had been earning eleven pounds a week, he had been ordered by a court to pay three pounds of it to his wife, from whom he was separated. Falling on bad times, he came down to a weekly wage of about six pounds: but it did not occur to him that so imposing a thing as a court order could be changed in his favour. It fell to the LCC officer at Camberwell to sort out his muddle. Similarly, a wife came, a nervous wreck, into a Salvation Army hostel in the East End. She begged for shelter for herself and her children ; she and her husband had, quite without realising what it meant, made hire purchase agreements for six pounds a week, and simply had nothing left with which to feed the children.

★

These are by no means extreme examples of the ignorance, or improvidence that really springs from ignorance, which lies at the root of much of the family homelessness in London. While earning quite enough for their needs, people may be evicted for arrears of rent because they do not want to get behind with the hire purchase on a television set, or because they make themselves intolerable as neighbours by filth or noisiness. Their circumstances are likely to be depressingly similar : children of improvident or mentally deficient parents, marrying young, having large families, so that their own disorganised youth is followed by a disorganised married life. They may never have had a chance of seeing how life might be better run. There is an alarming story of two such families who lived in the shell of a bombed-out house, so animal-quiet that for some time neither knew of the other's existence ; they were finally dislodged by the demolition of the house. The parents may even prefer such a life, having no other with which to compare it, and enjoying their independence. It is the children who suffer, for if they do not know any better they cannot be expected to live any better than their parents: problem families breed problem families.

The old answer to the problem of the children was to separate them from their parents and put them in a home. This may still have to be done in the case of parents of quite hopelessly weak mind or character. But it is a bad practice psychologically, a confession of failure sociologically—and also very expensive. The search for better ways of handling them is intensive and has become untidy ; a committee is at present investigating the overlapping of the various agencies concerned with trying to help them in their own homes. For those who have fallen right through the net and become homeless, however, there is one experiment that deserves special mention.

In 1953, the LCC set up what it calls "special units," where, in flats provided by the council, suitable families can live together under the supervision of a woman superintendent, who tries to train the parents to keep house and to care for the children. The theory is that the conditions should simulate those in the world outside ; the men pay rent about the same as they would have to pay for the same kind of accommodation in the real world, but the conditions are designed to give the families as much incentive as possible to improve themselves. Factors such as the element of competition in keeping clean the kitchens they share are powerful in making the mothers begin to realise the benefits of a properly conducted home ; many have never before had a chance of comparing the advantages of ordinary housekeeping over downright sluttishness.

When they are thought to have reached normal standards and have saved a certain amount of money, the families are put out into ordinary council accommodation and left to get on with life like anyone else. In the two houses converted for this purpose there are sixteen families, and so far thirty-two families have been taken in. One was a complete failure, for the family had to be broken up when the father was sent to prison ; and four of the original families are still in the special units, their future in the balance. But the superintendents, who keep up friendships with the resettled families, say that they are happy and houseproud ; in these cases the vicious circle of recurring problem families seems to have been broken, although none has stood the real test of success, that of time. The LCC are hopeful enough to have planned to set up two more units, for fifteen more families.

The problem families, who are ignorant of the art of ordinary living, are not the only people who need a safety net below the welfare state. Apart from the perennial problem of lonely old age pensioners (especially those who are too proud or too obstinate to go and live in the too few "eventide homes"), perhaps there are two sorts of case which most obviously require increased attention : that of the drunkards who need proper care in order to keep a job and have a chance of improving themselves ; and, still more urgently, that of released prisoners, cast out from their former families, who need a home of some kind to keep them from their old habits and companions. In general, however, a visit to the homeless in London leaves one more optimistic than a first sight of some of this human driftwood might suggest. The poor are always with us, but now that there are not so many of them the problem of controlling the safety net seems to be gradually coming into hand.

Notes of the Week

Ragged Convoy in London

PRESIDENT NASSER'S plain sailing through the Suez Canal of all the ships that have sought passage since the resigning pilots departed has put a new complexion on the projected users' association. No longer can this be presented as an immediate remedy for a traffic jam. It has become a long term design to restore confidence in international law and in the canal. The key theme is that one man must not be left in a position to exercise subtle pressure or discrimination, while paying lip service to the principle of free passage.

The first hours of the conference which opened at Lancaster House on Wednesday were necessarily spent in making mental adjustments to this new situation. They revealed a measure of agreement about what was desirable in the long run, but clear differences of opinion about what immediate steps should be taken. Mr Dulles presented his concept of the users' association as a body which would seek Egyptian co-operation, but would also provide machinery for organising traffic either through the canal or round the Cape as circumstances might dictate. In a word, what he seemed to be proposing was not boycott now, but boycott if need be.

The eighteen powers that are debating in London as *The Economist* goes to press are not out of the confusion of mind into which they have been thrown by, on the one hand, British and French phrases such as "inviting submission" and "demanding co-operation"—both of which preclude assent—and, on the other, Egypt's day-to-day success with convoys. But there seems at least to be a fairly widespread grasp of the fact that in approaching a final settlement with President Nasser, who as the man in possession has strong cards in his hand, the canal users will need to keep as many cards up their sleeve as possible.

President Nasser's strong hint on Wednesday about his ability to take over oil installations in Egypt indicated that he, too, was squaring up for the tussle to come.

Mr Dulles's six-point plan, presented very tentatively and accompanied by an invitation to suggest amendments, was welcomed by the representatives of Britain, France, Norway, Italy, Australia, New Zealand, Western Germany, Holland and Portugal. Their flags and those of the United States represent over 65 per cent of the canal traffic in the first six months of 1956; if Liberia and Panama are included as tanker flags of convenience, the figure rises to 83 per cent. But an overwhelming majority of canal traffic is not the same thing as an overwhelming majority of interested nations. The 22 governments represented at the first London conference are already reduced to 18, and the political dangers involved in a further loss of solidarity are plain.

In London this week, Sweden, Iran and Denmark shied away from the users' association in the direction of an early reference to the United Nations. (Mr Dulles had not excluded resort to the UN; the association would, he said, be able to get matters "into shape" for that body.) Pakistan rejected the association scheme outright, and, together with Spain, advocated negotiation in the form that President Nasser has proposed. Simultaneously the Soviet government, using a western journalist as a stalking-horse in its familiar manner, mooted the idea of a "summit" conference of six powers, with India, Egypt and Russia confronting America, France and Britain. With so many variants being offered, this second London conference seems unlikely to achieve even the limited amount of unity that made the Menzies mission possible.

Asians in Two Minds

A BLESSING to count as the conference began was that there was no diametrical opposition between Asia and the West on the Suez issue. The five "Bandoeng States" among the eighteen—Japan, Turkey, Iran, Pakistan and Ethiopia—had decided to give the Big Three's projects the benefit of the doubt and to come to London. Further, although over twenty Asian and Soviet bloc states (plus Jugoslavia and Panama) had accepted President Nasser's plan for a different kind of conference, one of them—India—is doing diplomatic overtime in Cairo to make sure that negotiation between east and west shall not become impossible.

Broadly speaking, all the Afro-Asian users of the canal are torn by two emotions. All are inevitably stirred by the spectacle of a non-European standing up to the palefaces and disproving their claims to superiority, especially in technical efficiency. In this context it is relevant to compare President Nasser not to Hitler, but to the Japanese, who gave widespread pleasure to Asians when they defeated Russia in 1905, when they humiliated Europeans in China in 1938, and when they swept them out of South East Asia in 1942. (The Japanese disillusioned their admirers only when their "Greater East Asia Co-Prosperity Sphere" turned out to award the Japanese all the prosperity and the other Asians only the "Co-.")

But at the same time there are Asians, not only in Pakistan and Iran but in India and the Arab states, who are far too dependent on the canal to wish to see it pass into the hands of a dictator unrestrained by any checks and balances. Iran's robust resistance to pressure against coming to London—an impulse strong among the many who still admire Dr Mossadegh—reflects its rising dependence on the canal as its oil exports regain their old dimensions. (Iran shipped nearly 3 million tons more oil via Suez in the first six months of 1956 than in the same period of 1955.) And although the Arab League has paid its emotional tribute to President Nasser's act of nationalisation, some of its members—Saudi Arabia in particular—are increasingly doubtful about his actions and ambitions. The current Saudi *rapprochement* with Iraq, almost inconceivable six months ago, suggests misgivings about getting embroiled at Egyptian instance in radical ventures that bode no good for Arab dynasties.

How They Came Together

WHILE on the first day of the emergency parliamentary session the parties split unnecessarily far apart on the Suez issue, on the second day they unexpectedly but fortunately came much closer together. There was no promise of this at the opening of proceedings on the Thursday. Mr Selwyn Lloyd did his usual orthodox lawyer's job of presenting the brief, but threw in an unworthy charge that Mr Gaitskell was using a national crisis for party advantage. Mr Robens then did his best to prove him right by a deplorable (and personally revealing) speech, full of some extraordinarily extravagant accusations. Fortunately, the debate then took a turn for the better. The turning point came when Sir Lionel Heald, a former Tory Attorney-General, effectively jogged the Government's arm in the direction of promising not to use force without United Nations backing. Arrangements seem to have been made that as many "moderate" Tory MPs as possible should get a chance to speak—partly, apparently, in order to impress opinion abroad that the Conservative species is not wholly bloodthirsty; this moderate group now proved to be larger than most people expected. It spent the next few hours, on the floor and off it, bundling the startled "gunboat Tories" aside, and urging that the Prime Minister should give a promise about the United Nations before the end of the debate. While this was going on, the atmosphere was further improved by a calm elder statesman's speech from, of all people, Mr Shinwell.

The scene was thus favourably set for the party leaders. They reversed their showings of the previous day, Mr Gaitskell putting up a very good parliamentary performance (which he has followed by an excellent speech to the Foreign Press Association on Monday of this week), and Sir Anthony Eden rather a bad one. Mr Gaitskell had by now realised what the scheme for (in his aphorism) the Cape users' association was supposed to be about; he urged the Prime Minister to confirm the impression that the danger of force had now receded and to promise that the Government's next step would be to take a recalcitrant Egypt to the United Nations. When Sir Anthony stood up he had certainly decided to give this promise, but he delayed it until his peroration, became entangled by interjections, and gave Mr Gaitskell the opportunity to appear to winkle it out of him. Labour let out a shout of triumph and then went on cheering for nearly a minute. If Mr Gaitskell had quickly withdrawn his censure motion and left the matter there, he would have been left in full possession of the field; why he did not do this—and why he cast doubt on what was now regarded as his own handiwork, by writing next day to *The Times* complaining that Sir Anthony had not made his position clear—remains something of a mystery. But Thursday was Mr Gaitskell's day, just as Wednesday had been the Prime Minister's. There is a useful parliamentary lesson here: that moderation in oratory pays.

Liberals Against Nationalism

MEETING at Stresa, the Liberal International has declared that a "supra-national regime" on the Suez Canal is essential to protect the welfare and development of Asia and Africa as well as of Europe. It explains that it has no thought of an imposed regime, but begs all concerned to reflect on history's bitter lessons about the consequences of violating agreements, and to accept voluntary limitations on sovereignty. It is not very clear how the Liberal International has convinced itself that a supra-national system would in no way infringe Egypt's independence. But it is undoubtedly true that Liberals who have consistently campaigned for supra-national institutions in Europe are in a position to urge similar ideas upon African and Asian leaders without being accused of discrimination.

There was a sharp point, too, to the argument advanced by an Italian member of parliament at Stresa: that Italians and Germans in particular ought to be able to draw on their own experience to persuade the newly independent peoples of the perils and evils of perverted nationalism. It was fully recognised at Stresa that the "new nations" are bound to be intensely suspicious of anything that looks like an attempt to rob them of the fruits of their struggles for independence. The International reaffirmed its support for the emancipation of dependencies, and made the point that only by building up an international society based on respect for law and on scrupulous fulfilment of pledges can freedom, national or personal, be protected and enlarged. One may well question the view, expressed by several delegates, that if European union had already been achieved it would have been possible to avert any serious conflict of interest between the West and the "Bandoeng" world of Asia and Africa. But the International's arguments in other respects deserve a wide hearing wherever unreasoning nationalism is rampant, both east and west of Suez.

Bromides from Bromley

MR MACMILLAN'S speech on Wednesday to the Young Conservatives at Bromley is reported to have been received by those Young Conservatives without visible enthusiasm; it will be received in the same way by the country at large. For connoisseurs of the Chancellor's economic instincts, Mr Macmillan insisted again what a very undoctrinaire fellow he is in choosing the weapons with which to fight inflation; unfortunately he also gave the impression that one of the doctrinaire impressions he wants to avoid is that, at a pinch, he would fight inflation really hard. For connoisseurs of the Chancellor's diplomacy, Mr Macmillan once again deployed the right statistics about real wages, in an effort to reason with workers who are going to meet resistance to their wage demands; he also threw out an obvious offer of personal friendship—but of no surrender—to Mr Cousins, which represents the right tactics at this time. What the country really wanted to know, however, was whether Mr Macmillan has yet decided to trim his policies to accord with the economic consequences of the Suez crisis. His implied answer was that he has not, because he does not yet know how the crisis will turn out and therefore what the economic consequences will be. The rumours this week that the Government was considering the possibility of an autumn budget, and the subsequent official denial of them, both have no firmer foundation than that.

Unconditional Independence for Ghana

THE Colonial Secretary's announcement of the date for the Gold Coast's independence could not have been held back much longer. It therefore had to be made before the delegation of members from Ashanti and the Northern territories had time to return to their constituents and tell them that their bid for delay and for the imposition of safeguards for minorities in the constitution by Britain was in vain. At the twelfth hour, Dr Busia and the other Ashanti leaders had abandoned their intransigent demand for federation and were clearly ready to negotiate on a very much more limited set of safeguards for the minorities they represent. But the Colonial Secretary's despatch to the Governor, Sir Charles Arden-Clarke, contained only a formal expression of the British Government's hope that "all sections of the community will be able to work together for the common good." It leaves entirely to the Gold Coastians themselves whether the constitution will embody even the degree of devolution recommended by Sir Frederick Bourne and broadly accepted by Dr Nkrumah and the leaders of the Convention People's Party.

This, however, was almost inevitable. Any attempt to force safeguards on the Nkrumah government could quickly be frustrated after independence day on March 6th next: Dr Nkrumah controls two-thirds of the votes in the new assembly, which is the conventional majority required for changing a written constitution. Mr Lennox-Boyd no doubt considered that, since independence has been won and must be given, it was better to give it freely and unreservedly, and on the assumption that the Gold Coast government will act responsibly. Both the Colonial Office and the Commonwealth Relations Office, which will handle relations with the new state when it becomes an independent member of the Commonwealth, are naturally anxious that Ghana should be launched without any residual bickering between Gold Coastians and British. Commonwealth membership has, in fact, yet to be fixed up; and the position of British expatriate civil servants, police and army officers,

which the new state will need to keep for some time ahead, ought not to be made difficult at the transition.

Fortunately, first indications are that the announcement has proved a douche of cold water to the Ashanti extremists and they have now offered to treat on the Bourne proposals; while Dr Nkrumah, probably in response to energetic but tactful and unofficial pressure from the Colonial Office, has agreed to a conference at which the chiefs as well as opposition MPs will be represented. All who care for African advancement must hope that this more responsible mood on both sides will last, and that from the discussion there will emerge an agreed constitution embodying safeguards and making possible a working two-party system of parliamentary democracy.

Cyprus Limps On

THE debate on Cyprus last week was an unprofitable affair. It was also unrealistic. Opposition spokesmen, who as politicians should have known better, ignored the political obstacles in the way of any significant change in Sir Anthony Eden's Cyprus policy so long as the Suez crisis persists. Even more disquieting was the way in which Government spokesmen, with an optimism that flies in the face of the available evidence, insisted that present measures filled the bill and would eventually bring peace and a satisfactory settlement to the island. Mr Lennox-Boyd declared that only terrorism prevented the introduction of a constitution. But in the absence of Archbishop Makarios, who among the Cypriots is to negotiate with the Government about a constitution? Mr John Hare, Minister of State for the Colonies, said that the Grivas diaries demonstrated conclusively that the Archbishop was not a "moderate" and vindicated the Government's decision to deport him. But neither he nor the Colonial Secretary had anything to say about the "moderate" Cypriots whom the Government hopes will step into Makarios's shoes once Eoka has been brought under control.

The only important new information produced during the debate concerned the terms of reference under which Lord Radcliffe is working on a constitution. These provide that, in addition to external affairs and defence, the Governor is also to keep internal security in his own hands. During the negotiations with Archbishop Makarios last February the formula was that internal security should be retained by the Governor "as long as he thinks necessary," and the Government's refusal to state a definite time for handing it over to a Cypriot minister was one of the bones of contention. The Colonial Secretary justified the new decision to retain permanent control of internal security on the grounds that it was necessary to prevent a revival of the "very dangerous subversive organisation" that the Grivas documents had disclosed. Clearly, however, it will make agreement on a constitution more difficult than ever. Moreover, Mr Lennox-Boyd's categorical statement that self-determination is not "in present circumstances a practical proposition" seems to indicate that the Government is still not thinking of linking self-government with self-determination. Yet in Cypriot eyes, this link is likely to grow stronger, not weaker, the longer the crisis drags on. It is depressing that Lord Radcliffe's constitution, the one constructive move on which the Government is engaged, should be doomed to such an inauspicious start.

At the moment, Cyprus is clearly a casualty of Suez. But last Friday's debate left the disturbing impression that even if there were no Suez crisis, the Cyprus problem would be limping along just as painfully.

Party Congress in Peking

IN Peking, the Chinese Communist party is holding its first congress since 1945. It has not been able entirely to avoid references to the "cult of personality," for after Stalin himself no Communist leader has been the object of such organised adoration as Mao Tse-tung, and in view of recent developments in Russia it was evidently felt that the honour paid to him and the concentration of governmental and party power in his hands required some explanation. His second-in-command in the party, Liu Shao-chi, told the comrades that Mao "firmly believes in the strength and wisdom of the masses, initiates and advocates the mass line in party work, and steadfastly upholds the party's principles of democracy and collective leadership," so that all was well; there could be no conflict between the formula of collective leadership and the supreme personal authority of Chairman Mao.

On a more mundane level the Congress was informed of the outlines of China's second Five-Year Plan. Mr Liu declared that by 1962 China expected to produce 70 per cent of the equipment needed for economic construction, and to raise steel production to over 10½ million tons. Average wages of workers and peasants should by 1962 have risen by 25 to 30 per cent. Meanwhile, however, it seems that the masses may have to practise wage restraint a little longer; they have recently been warned that their jam is for tomorrow, not for today. Some of China's few surviving capitalists were prosecuted not long ago for "offering high wages in contravention of labour regulations," and an organ of the Communist press has explained that "workers should be told that their former high wages were unreasonable, a remnant of the outmoded capitalist system and a strategic manœuvre of the capitalists."

A Settlement—But Shush

AFTER three weeks of unnecessary strike comes the glad news that the Clydeside shipbuilding craftsmen have voted to go back to work. The settlement is apparently on the same terms as those which averted a stoppage on Tyneside, but which were then kept secret; the majority by which the Clyde men voted to call off the strike is being kept secret too. It is now revealed, however, that the men are not going to get the guaranteed minimum wage for which they struck; on the other hand, they are no longer going to suffer when their piecework pay falls through no fault of their own, and the antiquated structure of piecework rates is to be revised after constructive consultation with the unions. It is not clear that these terms differ greatly from those that the employers offered before the strike began; the secrecy that has surrounded the settlement, which has annoyed some sections of the press, therefore looks suspiciously like a device to save the union's face. But if it has also saved any further dislocation in the programme for delivery of ships, this particular silence may be golden.

Economic Sanctions Against Whom?

ECONOMIC sanctions against Egypt are in fashion. It is to be hoped, however, that any new ones will be more intelligently applied than the blocking of "Egyptian sterling," which took place at the beginning of the crisis. The sensible objective of this sanction was to block the Egyptian Government's sterling balances; in the hurry of the moment, however, Britain decided that "private Egyptian accounts" should be indiscriminately blocked as well. This has caused some absurd anomalies, which bureaucracy seems to be taking an unconscionable time to iron out.

"Private Egyptian accounts" in Britain fall into three main groups. First, there are those which belong to Egyptian companies. These were allowed sterling by the Egyptian exchange control only to the extent of their contractual engagements. The blocking of these accounts simply means that British creditors will not get paid, or rather that a charge that should be laid on Egyptian accounts will now often be temporarily transferred to the British Government's own Export Credit Guarantees Department. This cannot have been what the Government intended. It is sensible enough to impede British exports to Egypt for the time being, but not to block payment by Egypt for exports that have already been received there.

The Key Wage Claim

THE Confederation of Shipbuilding and Engineering Unions decided last week to put in its claim to the employers for a "substantial" wage increase—without defining exactly what "substantial" means. The employers have already said that this year they will grant no increase at all; it is not clear whether this means that they also will not negotiate about fringe benefits. But as the retail price index has risen by less than 2 per cent since the confederation got its last increase, this March—and as since then engineering output has fallen, profit margins have probably declined and some employers assumed that this is the claim that may trigger off a winter of industrial trouble and strikes.

Table I.—INCREASES IN BASIC WAGES SECURED BY THE CONFEDERATION SINCE 1950

	Skilled Workers	Unskilled Workers
November, 1950 .	11/-	8/-
November, 1951 .	11/-	11/-
November, 1952 .	7/4	7/4
April, 1954	8/6	6/6
March, 1955	11/-	8/-
March, 1956	12/6	9/6

The accompanying tables are drawn up as a guide to how serious the trouble might be. The first table shows the size of the annual increases in wages secured by the confederation in the last six years. It will be seen that up to 1952 annual increases were regularly negotiated each November; there was a delaying action—and a threat of strikes—during negotiations for the 1953 claim, and the cycle has since moved on to settlement in March or April of each new year instead. If there is an early breakdown in negotiations this year, strike action could presumably be expected about November; if negotiations drag on, with some hope of settlement, matters might not come to a head, one way or another, until March or April. But if the employers think that they can defer trouble by offering some sort of an increase, the table suggests that they will not succeed in doing so with an offer below, say, the 7s. 4d. granted in 1952; in view of the annual increases to which the workers have become accustomed since then, anything lower would now be regarded by the unions as tantamount to *tipping with coppers*.

The second table shows the strength of the unions involved. In all, it is estimated that some three million workers in engineering shops and shipyards would be affected by any wage increase. The confederation, however, is only negotiating directly for the 1,250,000 of them, spread over forty unions, who are affiliated to it; the unions concerned, of course, affiliate to the confederation only that part of their membership which is engaged in engineering. The table shows that the relatively left wing Amalgamated Engineering Union, having the biggest representation in the confederation; then come Mr Cousins's Transport and General Workers (100,000), Sir Tom Williamson's General and Municipal Workers (95,000), Mr Hill's Boilermakers (75,000), Mr Gardner's Foundry Workers (65,000) and the communist-dominated Electrical Trades Union (50,000).

How determined is the confederation? It learned two lessons from the only recent strike it has organised, that against the British Motor Corporation in July. The sobering lesson was that many union members are not well disciplined for direct action; the exhilarating one (for the confederation) was that its power stretches menacingly across the economy. The confederated unions' "outside" members would certainly be told to refuse to handle any "black" supplies from factories affected by any new stoppage; this would be particularly important in the case of the Transport and General Workers' dockers and lorry drivers. Thanks to the Cousins-Campbell partnership [illegible] evident at Brighton, [illegible] Campbell's National Union of Railwaymen would probably refuse to handle any "black cargo" from affected factories, too.

Table II.—UNIONS IN THE CONFEDERATION

	Members Affiliated to Confederation	Total Membership
Amalgamated Engineering Union	500,000	854,000
Transport and General Workers	100,000	1,277,000
General and Municipal Workers	95,000	805,000
Society of Boilermakers	75,000	88,000
Foundry Workers	65,000	76,000
Electrical Trades Union	50,000	224,000
Engineering and Shipbuilding Draughtsmen	50,000	59,000
Metal Mechanics	27,000	38,000
Sheet Metal Workers	25,000	42,000
Vehicle Builders	20,000	60,000
Thirty Other Unions	243,000	...
Total	1,250,000	...

The second sub-division of "private Egyptian accounts" consists of bank accounts which have been built up in London by Egyptian nationals, in defiance of the Egyptian exchange control. This is refugee money—most of it belongs to Jews—which is not really likely to be used for the benefit of Egypt. A stop on these accounts is perhaps not immediately serious, since most of the money was not intended for use anyway, until the refugees could follow their cash to Europe. As a result of this warning, however, the refugees are likely in future to build up their funds in Switzerland rather than London. This is a minor—but surely it was an avoidable ?—blow to the status of sterling.

★

The third and most extraordinary anomaly concerns the remaining group of private Egyptian accounts—those that belong to British nationals resident in Egypt. These people are now being encouraged to send their wives and families home ; but the wives and families, when they arrive, find they can draw only limited amounts for personal maintenance, presumably according to some bureaucrat's idea of what is right. There is already a story of at least one reasonably affluent British wife who has spent (on her children's school kit) most of the money which she brought over with her, and now finds that her husband cannot remit from Egypt ; there is the story of an even richer Englishman who was yachting in British waters when the crisis broke, and now finds that he cannot draw money to pay his crew ; and absurdities of this kind are likely to multiply so long as the control remains. What good purpose this restriction on private accounts serves is difficult to see. It certainly causes inconvenience to the British people concerned, but it leaves the Egyptians undisturbed—and perhaps even laughing. It would be better to unblock the private accounts straight away, and set up some discriminatory mechanism which would operate only if this led to any of the wrong sort of leaks.

Bulganin's Windmill

PREOCCUPIED by Suez, press and public alike have hardly noticed the arrival in Washington of a fresh message on disarmament from Marshal Bulganin. True, the official American comment that the message contains "nothing new" is largely justified. The Soviet government is giving no ground on the key issue of international inspection, and, apart from a hint that it might prefer to negotiate disarmament bilaterally with the United States rather than through the United Nations, its statement is mainly devoted to repeating familiar propaganda points. But two of these points, familiar though they may be, call for comment in the light of other current events.

Marshal Bulganin lays particular stress, first, on the claimed demobilisation of over 1,800,000 Soviet soldiers, and, secondly, on the approach of conscription in Western Germany. By careful selection of such facts, he manages to contrast a communist world which is stripping its armed strength down to the bone with a western world still engaged in an all-out arms drive. These images scarcely correspond to present realities. General Gruenther, on his farewell tour of Europe, is sounding vain warnings about the inadequacy of many Nato members' short terms of military service ; the council of Western European Union has been learning of Herr von Brentano's alarm at the prospect of sizeable withdrawals of allied troops from Germany ; and in Western Germany itself the original timetable and scale of rearmament seem daily more and more impracticable. These and other trends make Marshal Bulganin's denunciation of the supposed "arms race" in the West look rather like Don Quixote's assault on the windmill.

It is also unfortunate for the Soviet premier that, on the day when he despatched his claim that "the Soviet Union's unilateral reduction of its armed forces indisputably testifies to its love of peace," the Hungarian defence minister, General Bata, was announcing that the manpower cuts which his country, like Russia, had made in its forces, involved no significant loss of striking power.

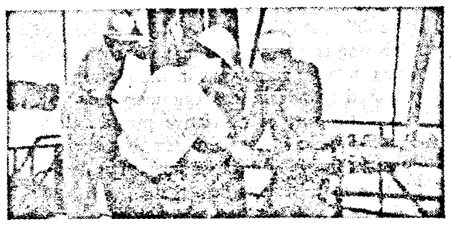
Wrong Recruits for Bonn

ON both flanks the omens are now bad for the prospe of Western Germany creating the kind of citize army that its allies, and its own democratically mind elements, would wish to see. On the one hand the par politicians are preoccupied by next year's elections and ful aware of the unpopularity of conscription ; and the idea a term of service of not more than twelve months has be grasped at by Christian Democrats anxious to regain son of the electoral ground already lost to the opposition. C the other, there is growing reason for disquiet about th kind of men most likely to volunteer for service in an arm which, if the present trend continues, will contain mo volunteers than conscripts. It is the least desirable elemen who show the greatest eagerness to don uniform.

At Minden last weekend the former members of th military branch of the Nazi SS held their biggest rally t date. Ostensibly summoned to discuss welfare question the gathering, 10,000 strong, was an open demonstration c unrepentant arrogance. The Waffen SS men assured eac other that the new German army would be of no use witho them. They were encouraged in this confidence not only b the Bonn government's deplorable offer to reinstate them i their previous ranks, but also by the appearance at Minde of Dr Mende, the opposition Free Democrat party's defenc expert. Dr Mende's party seems confident that after th elections it will either come to power in alliance with th Social Democrats, or be able to name its own terms fo realigning itself with the Christian Democrats. This prospec lent weight to Dr Mende's words when he tried to wash the record of the Waffen SS and assured its forme members that any who wish to join the new army will b accepted before long—the implication being that the officia committee set up to scrutinise stains on individua escutcheons is to be brushed aside.

It is ominous that there should be any question of enrolling former SS men at all, whether their personal records are black or not. The reputation of the military SS may not reek as strongly as that of the political branch, but most of its members were devoted Nazis, and their conduct at Minden confirmed the belief that many of them have not changed their views. More evidence in this direction can be expected within a few days, for the release from prison of Admiral Doenitz, Hitler's appointed successor, seems bound to provoke some illuminating reactions.

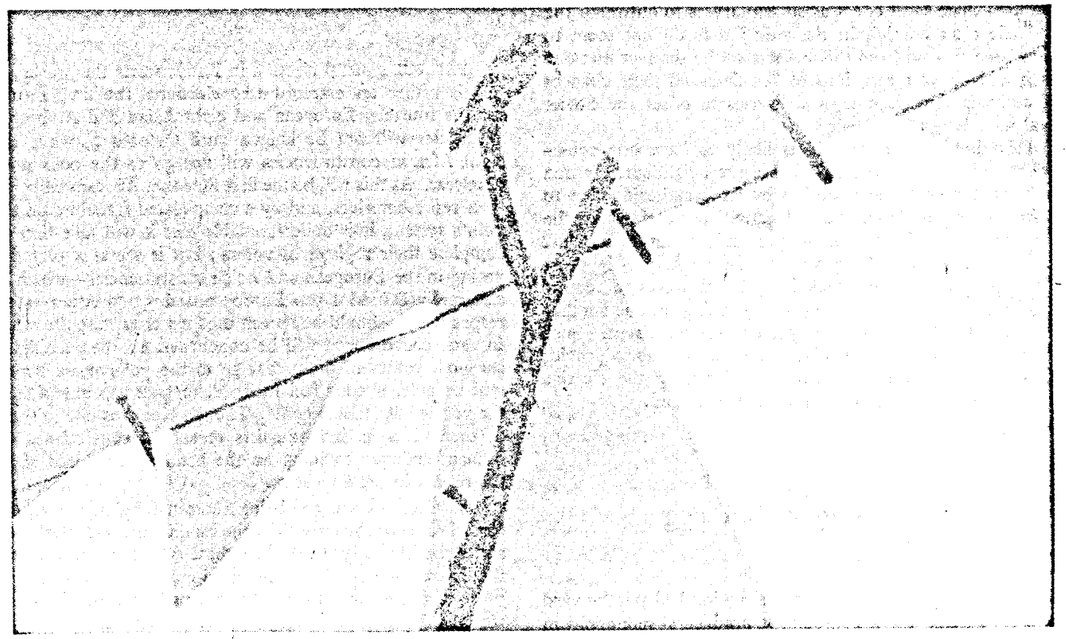
Through creative chemistry, Monsanto turns yesterday's dreams into present-day realities



MONSANTO

Reg'd.

Black oil gushes to wash white clothes whiter



USING SOAPLESS DETERGENTS is like talking about the weather. Somebody's always doing it. That means a lot of detergents. *That* means a lot of Alkyl Benzene, basis of many modern detergents. And *that* means Monsanto — for Monsanto is a major producer of Alkyl Benzene in Britain.

To make Alkyl Benzene, Monsanto takes oil derivatives, and processes them in a big, expanding, modern plant at Newport, Monmouthshire. And they produce tetra-propylene-benzene — the high quality Alkyl Benzene the detergent manufacturer *needs*.

Behind your packet of detergent, there's initiative and business sense. The initiative Monsanto and other pioneers showed eight years ago, when the British detergent industry was just starting to find its feet. The business sense they showed — and still show — by heavy capital investment in the most modern of plants and continual research. Initiative and business sense allied to creative chemistry — bringing a better future closer.

If you (as a manufacturer) are interested in chemicals, it will pay you to get in touch with Monsanto.

The Logic of Israel's Reprisals

A DEATH-ROLL of over sixty represents a black week on the Israel-Jordan frontier. Lately, an increase of minor forays by Arabs has been ascribed by the Israelis to a reduction of discipline because frontier posts are being manned with more civil guards and less army units than in Glubb Pasha's day. Early in September there occurred the worst of these incidents—an affray in the south in which six Israelis were killed and for which the Mixed Armistice Commission has held Jordan to blame. In the night of September 11th-12th the Israeli forces staged one of the planned retaliatory raids of the kind they have not perpetrated for many months. They claim that such reprisals always deter intruders for some months. They must regard the immediate local effect as so salutary as to outweigh the bad effect on opinion in the west; they do not seem to have been swayed from this belief even by the fact that one such raid—a year ago, into Syria—damaged their chances of securing American arms deliveries to offset the Soviet deal with Egypt.

This time, too, their raid is likely to have one consequence which benefits an Arab League neighbour. Jordan is without a parliament, and is by its constitution due to hold elections by November. Elections or no elections, the country is torn by faction—republican versus monarchist and Hashimite, east bank versus west bank, pro-Egyptian versus pro-Iraqi. An attack from Israel serves to remind these factions that unless they stop gunning for one another they may not have any country left to quarrel about. Such an attack not only unites adversaries; it could also provide King Hussein with a pretext for postponing the election until inter-Arab friction over Suez has abated.

Trimming a Bad Egg

As soon as the National Farmers' Union had put forward its scheme for a compulsory producers' monopoly in egg marketing, it was clear that there was nothing to be said for it, and a great deal that should be said against it. For the modified scheme which the Government is now prepared to accept there is still nothing to be said; all that has happened is that a few of the more obvious (although not always the more serious) objections to the original scheme have, for the sake of the look of the thing, been removed. As the commissioner at the public inquiry had recommended, the restrictive machinery of registration need not now apply to the man who keeps less than fifty chickens in his back garden. More important, the Government recommends that even registered egg producers (this means the farmers, not the hens) should be allowed to sell eggs directly to retailers (that is, outside the monopoly scheme) if they get a special sort of licence (the conditions for which do not seem very onerous); they will also be able to sell eggs directly to consumers and to institutions such as hospitals and restaurants if they get another sort of licence (which would apparently be given more or less without conditions at all). The scheme, in short, is one that will not now completely destroy the possibility of competition; it will merely make competition more difficult. As the National Farmers' Union has put it, "several of the Government's modifications" are from its point of view (i.e. from the point of view of rigging the market) "neither necessary nor helpful," but "they do not materially affect the basic marketing conditions laid down in the original submission." As an outsider might put it, the Government is apparently prepared to admit into egg marketing, by statutory provision, the sort of restrictive practice that the Restrictive Trade Practices Act is to try to turn out of industry in general through judicial enquiry; but perhaps the matter is now no more serious than that.

Kenya at the Hustings

A FATEFUL general election in Kenya starts this week. It is rather an extraordinary election: the final results for the fourteen European and eight Asian and Arab constituencies will not be known until October 2, while the eight African constituencies will not go to the polls until next year. As this will be the first time that Africans will elect their representatives, and by a complicated franchise on the points system, it is understandable that it will take time to complete their register of voters; but it seems a pity that voting in the European and Asian constituencies—which in size rarely exceed 1,500 European and 5,000 Asian voters respectively—should be spread over ten days. As the result in each constituency will be announced on the evening of the poll, voters in those that go to the polls subsequently will be able, if they feel inclined, to take account of how the voting has already gone. Though Kenyans like to think of themselves as individualists of settled convictions, the human tendency to jump on the band-wagon could affect the results in the final seats.

The elections are not being contested by parties in the formal sense of the term; but the candidates, both European and Asian, broadly divide into those who are satisfied with the Lyttelton experiment in multi-racial government, and those who are not. In the Asian constituencies, of course, the main split is between those who accept Lyttelton and those who back African demands for a multi-racial common franchise. In the European constituencies the battle is between the cautiously liberal group which supports Mr Michael Blundell, the Minister of Agriculture, and a more reactionary "opposition" group. The Blundellites agree that multi-racial government must be continued, but they insist that present communal strengths in the legislature should be approximately maintained for some considerable time. The "opposition" group consists of two sets of candidates who in four or five seats are splitting the anti-Blundell vote: the set of sitting members who support Group-Captain Briggs in desiring a considerable pro-European modification, though not now the total abandonment, of the Lyttelton settlement; and the Federal Independence Party, which appears to want a peculiar form of apartheid with permanent white domination of Kenya. At present Blundell and anti-Blundell factions among elected European members are about equal. But even if the Briggsites won a clear majority of seats, it would not follow that members of their group would replace the present ministers, for Kenya has nothing like party and cabinet government. There is little doubt, however, that three or four gains by the Briggs group would darken the prospect for racial co-operation and make the next stage of constitutional evolution much harder.

Back to the Bear-Garden

COCK-FIGHTING is a sport which sounds picturesque in historical novels, and looks gay in sporting prints. It is, however, illegal, a fact which has not prevented its survival in many parts of England. The recent conviction of thirty-six people at Chester was fairly obviously one of those cases when, in order to ensure publicity which may warn off future offenders, reputable people of some standing are chosen by the authorities as sacrificial victims. As meetings are held in other areas under conditions of much less profound secrecy than those reported from Chester, one suspects that the claim that great detective work was involved in this case is so much poppycock.

Was it "unfair" that these people at Chester should suffer heavy fines for an offence that others commit with impunity elsewhere? To answer that, one can only look at the report of the case. In making it plain that there was no evidence for charges of gambling a police officer emphasised that "It was a quiet meeting of people of good standing." In some instances they had come from far away to take part in what appears to have been a very well-organised show—there was a prefabricated cock-pit with a sponge-rubber floor—and there is something inevitably comical in the story of the lady who took refuge and was found under a pile of hay, and of the man who had the weights of his birds written in a copy of the Rubáiyát of Omar Khayyám. But one bird "had the tattered remains of an eye hanging out of the socket." Sixty-two live birds were brought into court, some of them injured, and fourteen dead ones were found on the farm. Nobody (except those wishful thinkers who say that birds really love fighting) could deny that this is an extremely cruel sport, regardless of its illegality or, for that matter, of its Olde Englisheness. The great puzzle is why, when these people were breaking the law in this peculiarly beastly way in any case, they did not go the whole hog and put some money on their birds? It would have ensured them at least a modicum of public sympathy.

Swedes Slightly to the Right

THE Social Democrats' loss of two seats in last Sunday's elections in Sweden may not at first sight seem of much significance. The party has been in office, with one three-month interval, since 1932 and it still holds the allegiance of half the electorate. But in a country where family tradition is the dominating consideration for most voters even a small setback may foreshadow a political trend of some importance. Moreover, the Farmers' party, the Social Democrats' partner in the coalition, has lost seven seats, while the Conservatives have gained nine, and may get another from the Farmers when the postal votes are counted. The result is that the coalition can now only muster 127 seats out of 231. Ironically, the immediate result is a strengthening of the position of the Farmers, who, although left with only 19 seats, now hold a delicate balance between the Social Democrats (108) and the opposition parties—Conservatives (40), Liberals (58), and Communists (6).

The coalition has already been showing some signs of strain, as the Socialists and the Farmers have different definitions of just food prices; and the fall in the Farmers' vote appears to have been at least partly caused by their supporters' dissatisfaction with the alliance. The Social Democrats, for their part, may soon start to think about forming a new alliance with the opposition parties, thereby freeing themselves from dependence on the uncertain and dwindling support of the Farmers, but submitting to an inevitable check in their programme. More houses and lower taxes seem to be more important to the Swedes at the moment than a further development of the social services.

President Tubman's Tour

PRESIDENT TUBMAN of Liberia, who was recently inaugurated for his third term, is quite pointedly avoiding Britain on his autumn tour of Europe. Accompanied by his commercial adviser, he will visit Italy, France, Western Germany, Holland, Sweden and Switzerland—in all of which countries he may expect a warm welcome, for they are all active in the development of Liberia. Italy is interested in civil engineering contracts, Germany in new plantations, Holland in palm produce and trade, Sweden in iron ore (like the Americans) and Switzerland in supplying tech-

Binding Cases

Binding cases for THE ECONOMIST *are available from Messrs.* EASIBIND LTD. *The cases are in stiff, dark blue cloth covers, and are gilt-lettered on the spine; they provide an extremely effective and firm binding and will hold* 13 *issues of the normal edition together with the quarterly Index, or* 26 *issues of the air edition with two quarterly Indexes. The year can be stamped on the spine. The cost per case, post free throughout the world, is* 11/-. *Orders, stating requirements clearly and enclosing a remittance, should be sent,* **not** *to* THE ECONOMIST, *but to—*

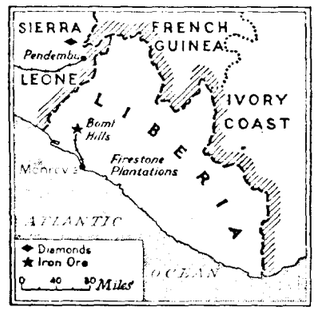
(Dept. E), 84 Newman St., London, W.1

nical services. France's commercial interests are smaller, but as a colonial neighbour France is keen to develop neighbourliness. Britain apparently is interested neither in neighbourliness nor in trade ; nor yet even in cultural relations, for though Liberia is an English-speaking as well as a dollar area, there has never been a British Council representative in Monrovia. Everything is left to an extraordinarily languid British Embassy, which permitted the Foreign Office to give great offence by not arranging for a special representative to attend the President's inauguration last January, although every other interested country did so—including, for the first time, the Soviet Union.



Foreign Office attitudes to Liberia need overhauling, at a time when the Colonial Office is in the process of creating independent West African states itself. Liberia may conjure up comic ideas—but perhaps more thought should be given to the fact that the value of its imports and exports tripled between 1949 and 1955, that, willy-nilly, it is an important entrepôt for Sierra Leone's diamonds, that President Tubman is determined to keep an open door for European enterprise in spite of the predominance of American interests, and that it has an important strategic position. If President Tubman will not stop off in London for a few days, perhaps the Board of Trade might exert some pressure to have his commercial adviser (who formerly worked in a British firm) invited to drop in—and given enough red carpet treatment to report favourably back to the President.

The Swiss and the Atom

THE Swiss are the first prospective recipients of American atomic fuel to make gestures welcoming the goods but not the American inspectors who accompany them. The Swiss government is having difficulty in persuading the Foreign Affairs Committee of the upper house to approve the agreement with the United States for the purchase of half a ton of enriched uranium for experimental reactors in the next five years. The opposition draws its strength from a feeling that the American supervision clause is incompatible with Swiss neutrality. The Russians have dexterously cast aspersions on this neutrality by hinting that they would also negotiate a bilateral agreement if the Swiss would apply for one. The offer is not likely to be taken up, and the government hopes to iron out its difficulties with the parliamentarians by explaining its case to them better than it has so far done. The case is basically that Switzerland must develop her atomic research to keep her vital electrical and engineering industries abreast of their competitors and to diversify her sources of power ; and that to obtain the raw material she must accept the supervision of those who have it. The fact that the Russians have subscribed to the draft charter of the International Atomic Agency, which includes this requirement, implies that wherever the Swiss turn they will have to comply with it. As the *Neue Zuercher Zeitung* has put it: "In the atomic age, all too provincial concepts of sovereignty are of little use."

Nevertheless, it is true that the atomic age is, as the traditionalists fear, incompatible with the historic view of an immaculately neutral Switzerland, free from all ties. The Swiss interest in the OEEC's cooperative atomic energy plans shows that. It is also true that the need to supervise the use of fissile materials painfully highlights the dependence of "have-not" nations in atomic industry. The Swiss, sensitive about their neutrality, have reacted quicker than most to this subordination. But there are many among the growing number of countries with which the United States is signing bilateral atomic agreements which may be shorter tempered than the Swiss when their public opinion wakes up to atomic realities. The State Department is already more concerned at the prospect than most of the recipients themselves. American support for the International Atomic Agency, and also for "Euratom," is partly due to the realisation that the sooner fissile materials are distributed and controlled on an international basis, the better.

Indonesia Bites Its Roubles

IN spite of the brotherly affection which he has expressed for the Russians, President Soekarno has shown a good deal of caution in negotiating the terms of the $100 million loan which has just been arranged between Russia and Indonesia. The projects which are to be assisted have not yet been specified and each one is to be dealt with carefully and separately ; moreover, the Indonesian government retains the right to refuse further credit if it is not satisfied with progress made during the first three years of the loan. The Indonesians seem to have learnt from Burma's disastrous experience to scrutinize carefully the goods and prices offered by Russia.

While this agreement was being signed in Jakarta, President Soekarno issued a joint statement with Mr Bulganin in Moscow on the beauty of the Bandoeng spirit and the wickedness of imperialism and military pacts. This statement has been criticised in the Indonesian press, by Nationalists as well as by the main Moslem parties. They are anxious that Indonesia should not be too visibly committed to the Soviet bloc and fear, very naturally, that President Soekarno's statement may "arouse doubts among our friends in America as to the sincerity of our friendship for them." The president's answer to these comments, which follow the publication of sweeping accusations of corruption, has been a decree imposing a heavy penalty upon any newspaper which dares to criticise "the president, vice-president, or any other officials." This move gives the measure of the government's failure to inspire confidence in its political or economic leadership. Even the Russian loan, which appears to be a positive achievement, is intended to play a part in a much publicised five-year plan which, so far as is known, does not yet exist in a coherent form. This failure has disappointed the hopes aroused by the vigorous performance of the "caretaker" administration which was in office until last March, and has given weight to the views of those who regard Indonesia as a bad investment risk.

Letters to the Editor

Liberals Start by Running

SIR—Your homework on the forthcoming Liberal Assembly is not up to your usual high standard. You seem to have assumed that items from the Party Executive are inevitably placed early in the agenda. Not so does the party override its local associations. You should not have stopped at page 20.

Quite apart from a probable emergency resolution on Suez, there are four, not two, resolutions submitted by the Executive ; your comment overlooks a substantial and detailed motion on restrictive practices and trade barriers, to be moved by Mr Donald Wade, MP.

Your acid comment upon a constituency resolution on inflation implies that the Liberal Party is only now starting to tackle this subject. Inflation has, in fact, figured on the agenda of most of the postwar assemblies ; but, with a lack of complacency which some would commend, the Putney Association evidently believes that a "true radical solution" has still to be found, at any rate on the political level.—Yours faithfully,

Leeds RICHARD WAINWRIGHT

On Beef and Milk

SIR—You suggest in your issue of September 8th that it should be possible for the small farmer to change from milk to beef production. This alternative is open to very few. The small farmer must maintain a large turnover per acre if he is to live. In producing milk, he makes use of bought feeding stuffs and in this way he overcomes the handicap of a small acreage. Few small farmers are in the position to wean calves profitably. Where beef calves are readily available, they may be grown profitably to a certain stage, but after that the return per acre from beef is not good enough to cover high overheads. The use of bought animal feeding stuffs is unprofitable after the weaning stage, and the small farmer faces his greatest disadvantage.

In his dilemma, he may turn to pigs or poultry, but here he is up against the problem of heavy capital expenditure which is necessary these days for the efficient production of eggs and bacon. On rented land the landlord cannot be expected to erect such specialist buildings, and only a few landlords would be willing to accept such buildings as improvements under the Act. In fact, you have touched on the fundamental difficulty facing the small farmers of today. If they are unable to make a living out of milk, many of them will go under.—Yours faithfully, FRANK SYKES

Warminster, Wilts

Investment Trusts Compared

SIR—The following facts will clarify some of the generalities contained in your article on August 18th.

There are well over 200 investment trust ordinary stocks quoted in London, and the market in these is broadening, as investment trusts are enjoying increasing popularity. The actual amount of new capital raised from cash subscriptions for new issues (granted a quotation) by investment trusts, excluding value of conversion rights, has been as follows:—

Year to March 24th		*Year to March 24th*	
1951	£2,417,758	1954	£10,903,921
1952	£2,301,595	1955	£23,195,267
1953	£2,288,947	1956	£23,190,344

Surely this is a creditable effort.

Investment trust equities have done better than industrial equities generally, not only because of gearing in their capital structure, but also because asset values of the total funds contained in their portfolios have risen to a greater extent than the *Financial Times* Industrial Index. Although admittedly the management expenses (usually only ½ of 1 per cent of total assets) have to be paid, the investor is, in fact, obtaining the benefit of this management at a considerable discount.

Reference to the "time lag" in the receipt of dividends is clearly unimportant during a period of inflation, particularly as asset values are far more important, in the long run, than past dividend receipts. Several trusts have recently referred to the fact that they have purposely invested their funds at a lower rate of interest but in securities of a higher grade, i.e., usually those with greater earnings cover for their dividend payments. Surely the fact that industrial dividend payments generally are at least two and a half times covered, and quite frequently more than four times covered, must be taken into account. This is a great change compared with before the war. Consequently, as investment trusts are now paying out approximately 80 per cent of their total income, the likelihood of having to draw on reserves to maintain current dividends envisages a first-class slump, of 1931 dimensions. Before such a slump could take place the Governments of this country, the United States, and Canada, where the majority of the assets are held, would certainly have injected a major dose of inflation into their economies.

The fact that well-managed assets can be bought at a very considerable discount has caused investment trust equities to become increasingly popular with insurance companies, pension funds and other institutions. Consequently, it is often investment trust equities which are bought for the investment of 'insurance policies with profits and contributions to pensions funds." Thus, far from being a source of competition, these "various forms of indirect investment" contribute towards the popularity of investment trusts.—Yours faithfully,

London, E.C.4 G. W. ASHFIELD

Minding Other People's Business

SIR—It has long been recognised in sound and hard working industries that the onset of problems in organisation, marketing, manufacturing and engineering is usually insidious and is certainly indigenous to the process of executive control. Experience has shown that it is almost impossible for executives who are never unemotionally detached to find solutions to problems which are invisible because of their familiarity.

Your article is fair when stating that consultants have made useful contributions to the efforts to raise standards of British management and productivity since the war, but it only touches on a comparatively unimportant facet of consultancy work when referring to "putting in a new system."

The most valuable contributions of consultants are concerned with questions of policy and organisation which have to be devised and related to the logic of what has to be done. When these problems have been highlighted the average efficient business can take care of the routines itself ; in fact, the virile consultant likes to feel that the routine activities of control are better left in the hands of the business. No experienced consultant lightly advises changes in established procedures.

It is now realised that successful industry reflects three influences—the operational activities ; administration needed to support and sustain them ; and a third concerned with the effectiveness of propagating an understanding of policy and carrying it out efficiently. The third is always concealed by too intimate contact with the routine activities so that the sight of the logic of the work to be done is lost. A consultant is almost the only and usually by far the most effective means for exposing it.

The really valuable consultant is the man who exists by consultancy as a career. He is trained and deeply experienced in perceiving basic problems. It is probable that misunderstanding has arisen in this country by the sale of consultancy by time. The brilliant flash of perception cannot be sold in this manner, neither is it related to the size of the consulting firm. Therefore it may be logical to pay for consultancy on the basis of the values contributed. This is the normal approach of the medical profession and it is not unknown amongst enterprises who realise the value and make full use of consulting services for highlighting insidious industrial problems.—Yours faithfully, F. COLIN SWALLOW

Books & Publications

The White House Files

EISENHOWER: THE INSIDE STORY.
By Robert J. Donovan.
New York: *Harper and Brothers.* 441 pages. $4.95.

MR DONOVAN is the lucky reporter from the *New York Herald Tribune* whose privileged access to White House files has filled members of Congress with envy. Oddly enough his book reveals little that would not have been known to assiduous readers of the American press, and what little new there is does not contribute much to the reputation of the Eisenhower Administration.

The publishers' claim that Mr Donovan provides a unique insight into the inner workings of government is true only to the extent that its main source is the Cabinet minutes and that no previous Cabinet has kept them. But journalists have been given presidential material before, and some of them have made better use of it. Mr Donovan was obliged to work at great speed—which is unfortunately apparent. The relatively few items of new material are padded out with summaries of well-known facts and long quotations from public statements and even articles by other journalists. The book abounds in loose ends and unasked questions; the reader ends it none the wiser about how most of the really important decisions of the last three and a half years were made.

Nevertheless, there are some revealing details and some questions, of lesser moment, are answered. Do, for instance, the President and his colleagues talk to each other in the same homiletic way in which they address the public? Yes, apparently they do. Does Mr Benson, the Mormon Secretary of the Agriculture, open Cabinet meetings with a prayer? He did the first time; the next time the President forgot and received a pained note; after that sessions started with a minute's silent reflection. When Stalin died the President complained at the lack of plans or studies foreseeing this eventuality; but there is no evidence in the book that this complaint led to any greater foresight later. When the recession began in the autumn of 1953 there was very energetic talk in the Cabinet of the actions which the Administration must take to prevent "another 1929": when it was over the Secretary of the Treasury remarked that the things the Administration did were without great effect.

After his first session of Congress Mr Eisenhower was so fed up with the Republican leaders, especially over the way they had treated the mutual aid programme, that he talked about forming a third party. This line of speculation petered out in a search for the right name, but his failure to get all his programme enacted in his first term was one of his motives in deciding to try for a second. When he was fit and well he leaned towards retirement next year; after his heart attack and the boredom of life on the Gettysburg farm, he decided to consult his advisers about a second term. The decision was taken on Friday, January 13th, in the President's study. The advisers he chose to ask were twelve men, all of whom were deeply committed to his running again—except for his brother, who tried to sum up both sides of the question.

By far the best chapter in the book is the first, because a verbatim transcript was apparently kept of the meeting of the future Cabinet before the inauguration. The new chieftain and his henchmen are seen round a table composing a collective speech. As the general reads his draft his colleagues make respectful comments, and Mr Charles Wilson blurts out: "You flew the flag! It was wonderful!" By contrast the Cabinet minutes proper seem to be brief summaries, somewhat expanded for the period when the President was away after his heart attack. Despite recent propaganda, of which Mr Donovan and his publishers are among the victims, about the new significance that the Republicans have given to the institution of the Cabinet, these minutes leave much the same impression as the memoirs of former Democratic Cabinet members. The discussions are inconclusive and the important decisions are made elsewhere.

Presumably foreign and defence policies are nowadays decided in the National Security Council and decisions on political tactics are not made in formal meetings at all. No inside history of the White House can be told without much more information than Mr Donovan offers about the numerous presidential assistants and liaison men who are so close to the throne. They seem to fall roughly into two categories, men with a background either in politics or in publicity. On such crucial questions as what the President should do about Senator McCarthy, the public relations men were on the side of boldness and the politicians on the side of caution. Perhaps one should speak more politely about public relations men in future.

Ultra Ultra

ON FREEDOM AND FREE ENTERPRISE: *Essays in Honour of Ludwig von Mises.*
Edited by Mary Sennholz.
USA: *Van Nostrand.* London: *Macmillan.* 347 pages. 25s. $3.50.

NOT all the essays in this volume display the awe-inspiring last-ditch intransigence of Professor von Mises himself, that Hereward the Wake of ultra-ultra-liberalism. Professor William Rappard removes a substantial underpinning from the Master's argument with his reference to deliberate democratic decisions involving material sacrifice; M. Bertrand de Jouvenel's terse and brilliant essay on "Order vs. Organisation" plants a charge of explosive quite as lethal to elaborate praxeological constructs as to the pretensions of planners; Professor Machlup ends a paper on methodology and technique in the social sciences with a plea for mutual tolerance. Mostly, however, whether dealing with a technical point, a question of policy, a political problem, or an aspect of scientific method, the contributors to "Freedom and Free Enterprise" show themselves as ultra-ultra as Professor von Mises could wish. The least deviation from *laisser-faire* means a headlong rush down the road to serfdom; outside the free market, all action is blindfold; the distribution of wealth arising from free exchange is sacrosanct; even—in one marvellous museum-piece—the only true charity is private investment. Outside the ultra-ultra school there is no salvation; for the New Economics, Keynesian and neo-Keynesian, no contempt and loathing is black enough.

There are some excellent essays in the collection. Professor W. H. Hutt makes a valuable and original contribution with his "Yield from Money Held"—though his argument is not, as he holds it to be, an invincible club with which to batter Keynes. The reaction expressed by Dr Louis Spadau against the sort of economic reasoning which works from aggregate to aggregate without taking human decisions into account is undoubtedly a healthy one—though it is a pity that the weight of his argument should rest so heavily on mathematical technicalities. But what a curious world these ultra-ultra-liberals live in. That it is a world in which all trees grow up to the sky and every non-teetotaller dies in the horrors is the least of its oddities. It is a world in which *homo œconomicus* is not merely a handy abstraction, not even merely an ideal citizen, but an actual norm. Party manifestoes, so Professor von Mises has noticed, invariably claim that their policies will bring material betterment. Therefore—in the teeth not merely of all systematic sociological inquiry but of all everyday observation—men desire material benefit at whatever cost.

As corollaries to this proposition, no one, in this world of the ultra-ultras, allows solidarity with his fellows, desire for approval, or fear of disapproval, to modify his actions in pursuit of wealth. No one stops thinking about his material standard of living in order to act on a generous or envious impulse, pay off a score, comply with a taboo, or merely enjoy the negative pleasure of not weighing pros and cons. Nobody translates unrecognised psychological stresses into inconsistent economic demands. Questions of status, prestige, loyalty, continuity, have no legitimate existence. Consequently, but for bad economic doctrines, power-hunting politicians, and the resulting deplorable laws, there would be no trade unions (and presumably no business monopolies or oligopolies either), no national barriers, no sticky prices, no unemployment, no inflation, and practically no taxes.

It is a world of some merit as a stage for catallactic exercises; but it is hardly relevant to the concerns of the policy-maker or adviser, who must take workers and business men, consumers and taxpayers and savers, as they are. One wishes that, instead of impugning the *bona fides* and ridiculing the intelligence of that vast majority of not altogether evil and imbecile fellow-economists who disagree with them, the disciples of Professor von Mises would take time off to look at the humanity of human action.

Standard Bearer of Democracy

MAZZINI.
By Gaetano Salvemini. Translated from the Italian by I. M. Rawson.
Cape. 192 pages. 18s.

WHEN Gaetano Salvemini's "The French Revolution" was translated last year, English readers were astonished by the penetration with which this Italian scholar had been writing fifty years ago and because he could be read so profitably today. Salvemini is still an active student of politics and history, and his current writings are still an oracle to great numbers of his fellow-countrymen. English readers now have a chance to see another of his early works, a book that remains the clearest summary of Mazzini's views. It comes out in translation with the author's blessing, and he has made some changes and additions for the occasion.

As Salvemini points out, very justly, the best of Mazzini is his life, tragic, dramatic, ringing absolutely true to immovable standards of conduct. This volume is more about his thought. To students of human nature, Mazzini will be chiefly interesting as a personality; but to students of the nineteenth century in general, he will rather be a set book reflecting, as no other writer did, the climate of thought in Europe between 1830 and 1850. This was the age of romanticism, and Mazzini was the romantic in politics, the great admirer of Byron. It was an age of democratic and nationalistic revolutions; and Mazzini was the prophet of democracy and nationalism, the standard-bearer of a new Italy, the missionary of a new deist religion intended to correct the errors of Rome, the champion of the common people everywhere and of the fight for popular emancipation. To these causes Mazzini gave his life, and for them he lived in exile and poverty.

As a study of Mazzini, this book is quite admirable. It is as clear as crystal, and a limpid style reduces Mazzini's mystical notions to intelligibility. It is written with great sympathy, but also with scholarly detachment. It is short; the translation is good; and the print most readable. A particularly interesting chapter is that on the analogies of his ideas with socialism. Salvemini is always interested in the extent to which Mazzini's ideas were internally consistent, and in considering how important they were in their effects. Mazzini himself was always concerned with thought as an influence upon action. He has here an ideal interpreter.

Advice to Ghana

BLACK POWER.
By Richard Wright.
Dobson. 358 pages. 25s.

IN the valedictory epistle to Dr Kwame Nkrumah with which Mr Wright concludes this report on a visit he made to the Gold Coast in 1953, he urges the Prime Minister to build the Volta River scheme out of the Gold Coast's own resources, to avoid dependence on Russia as carefully as dependence on Britain, to keep clear of corruption, and to find "African solutions for African problems." What African solutions may be, Mr Wright confesses himself at a loss to know, except that they must involve a degree of coercion and regimentation such as even the cruel and rapacious British never dared to use; but he does give some thought to the problems facing an independent Ghana. (By 1953, Mr Wright realised, Ghana had reached its 1783—all over bar the hauling down of the last union jacks.)

As an American—a coloured writer of distinction—Mr Wright was much shocked by the poverty of the Gold Coast, the main reason for which, of course, he laid at the door of the British, who, he considered, had milked the country instead of developing it as America had been developed. Little matters like the productivity of labour, the shortage of capital, the narrow basis of the economy based on cocoa did not enter into the analysis; the Gold Coast, the size of Britain, had only one-tenth the inhabitants—which was all the proof of exploitation that he, as a Marxist, needed. The gold was being taken out, as the slaves had been, and that was all there was to it.

But on the problem of African mentality, Mr Wright is more interesting. It was not long before he found that, though he is of African descent, his own mind was western, empirical and scientific. He found himself out of sympathy with *ju-ju*, with those rogues, the chiefs, with African laziness and ignorance, with African treatment of women, with tribal custom, with African financial morality, with almost everything. But he put the blame for most of it on the excessive influence of the white overlord, which, though it had mercilessly broken tribal society (which he disliked) and left a void into which the Convention People's party (which he admired) had entered, had not offered Africans a satisfying existence. Since Mr Wright feels that the western way of life is neurotic and played out, this is hardly surprising. His final plea, therefore, is for a new African renaissance, born of the self-confidence engendered by African success in driving the British out, which shall neither be the individualism of the West nor the primitive communalism of tribal life—which was so fine before the British came, but is so irritating to progressive, pro-Nkrumah people now.

In his reactions to modern Africans Mr Wright is always interesting and sensitive; but this is, nevertheless, a disappointing book. One expects it to reveal, just because the author is a coloured American, an intelligent American reaction plus something special. In fact, one seems to get something less than an intelligent American reaction. But if Dr Nkrumah can screw the whole cost of the Volta scheme out of his electorate, nobody, it is now clear (and Mr Wright may be astonished to learn), will be more thankful than the British taxpayer and the Canadian and British aluminium companies. Rugged independence, especially, is nowadays conceded without a struggle.

Dossier on Saucers

REPORT ON UNIDENTIFIED FLYING OBJECTS.
By Edward J. Ruppelt.
Gollancz. 315 pages. 18s.

AN unidentified flying object is something for which the United States Air Force can find no rational explanation. Since the late 1940s, a good many UFOs were seen and tracked over the United States and a special intelligence section was set up to investigate the reports. When Mr Ruppelt first became involved in the investigation in 1951, the project was at its lowest ebb. Official ridicule had been poured on "flying saucers" until reputable witnesses became so discouraged that they stopped reporting phenomena in the sky. However, the objects themselves went on reappearing with such regularity that scepticism gradually changed into a suspicion that something was flying that could not be explained away in terms of weather balloons, meteorological phenomena, optical illusion, reflected lights, birds, and so on. All these can and do deceive both radar and experienced observers, but some UFOs could not by any amount of manipulation be fitted into any of these categories. But neither could Mr Ruppelt's investigators ever get evidence on what they were.

In 1953 Mr Ruppelt presented a dossier on nearly 1,600 reported sightings to a panel of scientists. Half the total had been tracked down with a fair degree of certainty to aircraft, balloons, etc., and even hoaxes. In 23 per cent

of the cases there were not enough data to reach a conclusion, but there were 429 cases, or nearly 27 per cent of the total, for which no reasonable explanation could be found. These were genuine Unidentified Flying Objects, and by that time there were quite a number of responsible people prepared to say they were genuine spaceships. The scientists did not go as far as this, nor does Mr Ruppelt. The panel would not guess what the UFOs might be, but did press for their continued investigation. There the matter rests. Mr Ruppelt's account of UFO investigations up to 1953, when he left the air force, reaches no conclusions and is written in a palsy-walsy style calculated to knock the romance out of saucers and their spacemen. It leaves a crawling feeling of discomfort, of contact with the inexplicable, that more enthusiastic believers in saucers have been unable to convey.

Philosophy's Mortuary

PHILOSOPHY, POLITICS, AND SOCIETY.
Edited by Peter Laslett.
Basil Blackwell. 199 pages. 18s.

IT seems rather odd that this collection of articles should be introduced by a stark editorial assertion that "For the moment, anyway, political philosophy is dead." For why go to the trouble of laying out the bodies if the editor is really convinced that his verdict is correct? Perhaps it was merely the taste for tidiness—the publishers' need to make their series on modern philosophy comprehensive—which landed Mr Laslett with the embarrassing task of putting flesh on the skeletons in the modern philosopher's cupboard.

The collection brings out forcibly the poverty of modern political philosophy. Professor Gallie offers a stimulating essay on liberal morality and social morality; Professor Oakeshott discurses charmingly and unconvincingly on political education; Mr Weldon analyses trivialities with vigorous logic; and Mr Laslett himself takes a brave but wild jump into the problems of the "face to face society." However, most of the essays consist of modern treatments of well-worn topics. Law, sovereignty, natural rights, Plato's political analogies, and, of course, the general will, have the breath of life blown into their dry bones. But they are hollow and stuffed men; they crack at the joints. The articles read too much like analytic exercises. They convey little feeling for the problems which such concepts were designed to solve. As Mr Laslett remarks, the contributors "give the feeling that they have turned their attention to politics only because the curriculum of their university requires it."

For the most part the reader will look in vain for any philosophical treatment of problems thrown up by recent social developments. Equality, planning, the welfare state, ideologies, property—all such concepts badly need re-examination. Yet, so it seems, the philosopher's Owl of Minerva is still flapping dutifully over the scene of past problems.

Mr Laslett offers some explanations of this regrettable state of affairs. Perhaps the development of the social sciences has stolen much of the philosopher's ammunition; perhaps the success of Marxism has swamped serious attempts to justify political principles. More probably logical positivism has killed political philosophy. Philosophers have had to withdraw from the world and re-examine their logical and linguistic apparatus. While doing this they have stuck up a notice over political philosophy saying "Temporarily railed off pending examination and repair." This may be so. But Mr Laslett never asks whether there is any necessary connection between the reluctance of modern philosophers to tackle political philosophy and their ideas about method. Is it, after all, merely a passing fashion not to think too much or too clearly about political concepts? Mr Laslett thinks that there are signs that "our philosophers" are "preparing to take up their responsibilities towards political discussions once more." His optimism is certainly not justified by the samples which he serves up in his collection.

Nobleman-Bishop

THE PROTESTANT BISHOP.
By Edward Carpenter.
Longmans. 411 pages. 35s.

AMONG the signatures to the invitation to William of Orange in 1688, especially important was that of Henry Compton, sixth son of the Earl of Northampton and Bishop of London. His was the only episcopal signature, and it demonstrated that the Church of England was not unanimously committed to the doctrine of non-resistance, that shield between the Stuart monarchy and revolution. Canon Carpenter has done a valuable service in writing the life of this nobleman-bishop, who was so influential in forming Anglican opinion in a period of tension and uncertainty and who was a colourful and controversial figure, twice the favourite for the Archbishopric of Canterbury and twice frustrated. As a younger son Compton first tried the army, but found that "preferment, like other things, is more easily imagined than compassed." To one in debt and with aristocratic connections the Church offered quicker and more lucrative rewards. Ordained in 1666, he rapidly collected livings. Burnet described him unkindly as the "property and tool of the Earl of Danby"; and it was indeed through Danby's influence that Compton was made Bishop of Oxford in 1674 and, a year later, Bishop of London.

But, as Burnet admitted, Compton was also "a bold man, an enemy to the Papists, and one that would speak and act freely." Compton's insistence upon being allowed to instruct the Princesses Mary and Anne in the Anglican faith earned for him the hostility of their father, the future James II, and may have cost him the Archbishopric in 1677. His practical bent and his combatant temper fitted him better for politics and administration than for theological exposition. "Not every Article in the Thirty-nine," he remarked bluffly, "obliges to an explicit belief. It is enough for many of them that they are not opposed." He led a vigorous campaign against Roman Catholicism and worked hard for a common Protestant front at home and abroad, being prepared for a measure of Prayer Book revision. He was quick to sound the alarm against James II, of whom he said: "We have a Prince of another religion . . . the least we can expect is that he should promote it all he could."

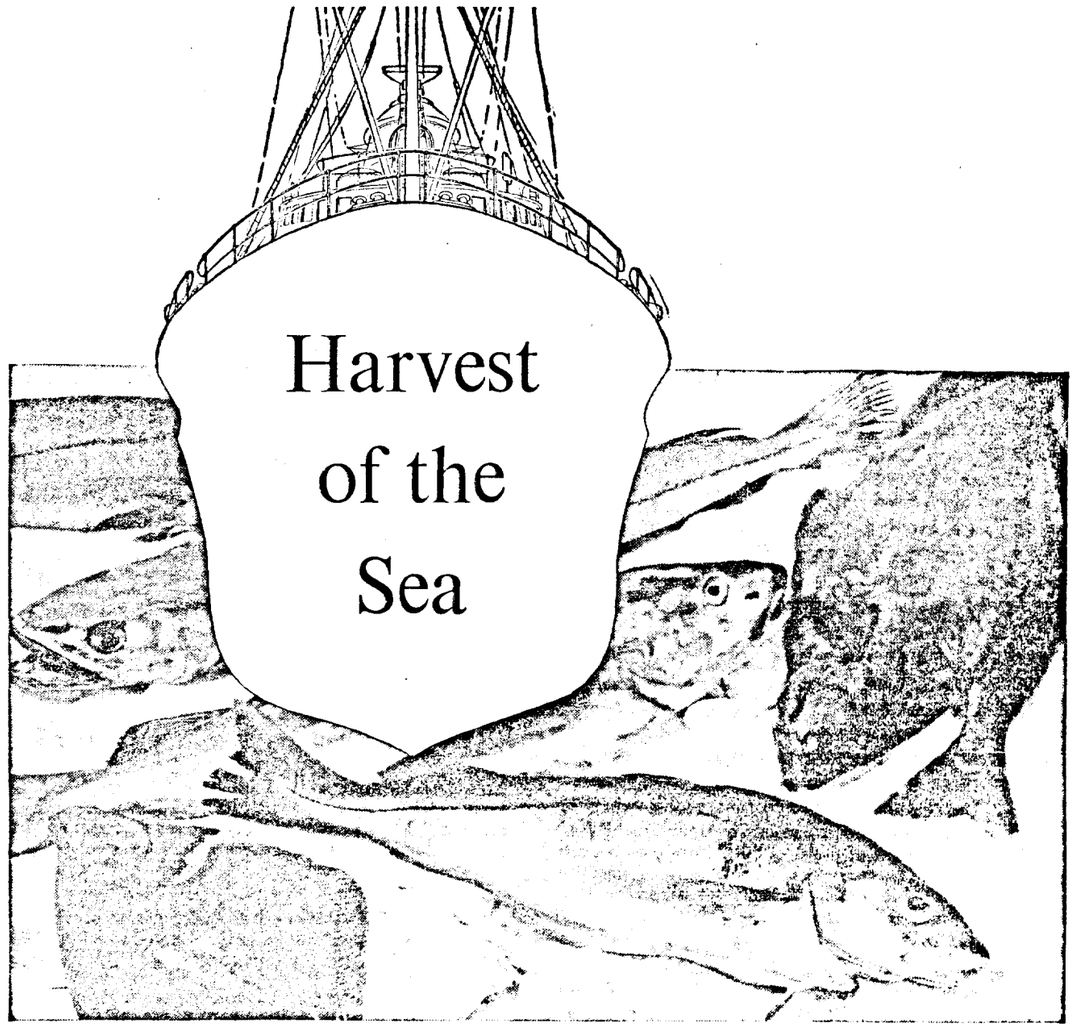
James said sourly of Compton that he talked more like a colonel than a bishop. In 1688 Compton enthusiastically acted as he had talked. He arranged the flight of Anne, assumed a military command, and in captain's uniform rode through the streets of Oxford with drawn sword. But despite his services, and partly because of the incongruity of his martial zeal, he was again passed over for Canterbury. Disappointment made him a disgruntled high Tory who helped to sabotage comprehension, attacked occasional conformity and supported Dr. Sacheverell. But if resentment made Compton inconsistent, Canon Carpenter's careful study of his diocesan work and his constant generosity reveals the pleasanter side of this vigorous, conscientious and unsubtle aristocrat. Canon Carpenter's biography shares with the subject the qualities of robustness and shrewdness; in addition it is lit by humour and wide scholarship.

Shorter Notice

THE ROYAL PARKS OF LONDON.
By Richard Church with drawings by Victor Cooley.
Ministry of Works Guide Book. *Her Majesty's Stationery Office.* 60 pages. 2s. 6d.

The "lungs of London," as Lord Chatham used to describe the parks, are portrayed here with a freshness which will be a delight to many users of them. With useful maps, imaginative line drawings and some reproductions of old prints, this is excellent value for half-a-crown.

The royal parks are the property of the Sovereign and they owe their beginnings to the hunting zeal of Henry VIII but for public access to them all credit must be given to the Stuart Kings. Just over a hundred years ago management of them was handed over to the Office of Works and Public Buildings and their expenses were transferred to public funds. The fashion parades in the parks are no more, changing tastes and the income-tax inspector have thinned out the horse-riders in Hyde Park and the cafeterias may seem a mundane, although more hygienic, substitute for the old custom of "selling milk from a red cow." But the beauty of the parks remains undiminished and Mr Church is a charming guide through them. the starting of *pell mell* (a sort of croquet) by Charles II in St James's Park, his founding of an aviary near Birdcage Walk; the siting of Clarence Gate to allow Mrs Siddons an uninterrupted view of Regent's Park—these are the sort of facts which enliven Mr Church's itinerary.



There's much to be thankful for when our farmers have gathered in their harvest. Only too often the difference between a good year and a bad one depends on the caprice of Nature. We all know how late frost can ruin outdoor crops, how rain can mildew ripening fruit, and it only needs a heavy thunderstorm to lay low acres of corn.

Consider too how uncertain is the harvest of the sea. Like farming, fishing is anything but a mechanical process. Despite the latest electronic devices and equipment, it is man against the elements in lashing rain and icy waves. And worse still, Distant Water fishing grounds are far from the comforts of home, well within the Arctic Circle. The average fishing voyage takes 21 days.

To add to these risks, trawlermen can never pre-gauge the size of a catch. They can never see their harvest in the same way as the farmer can daily watch his crops. Moreover, the trawlerman must use a net, an instrument no man has ever studied in operation at normal working depth — between 600 feet and 1,500 feet. Also, conditions a ship experiences when working at these depths cannot be reproduced in tanks on shore.

Trawling in Distant Waters is indeed a venturesome and hazardous undertaking at all times. But consider the returns in terms of staple, protein food. In the first half of this year, Distant Water Trawlers brought 521,950,940 lbs. of fish into Hull, Grimsby and Fleetwood—54,575,080 lbs. more than last year. That means tasty, first-rate meals for you and your family, and thousands of tons of white-fish meal to feed the nation's livestock.

Your liking for fish has already raised consumption considerably, underlining the fact that, despite the difficulties and seasonal price fluctuations, fish is the best food bargain there is — *the cheapest first-class food money can buy.*

The metal that thrives on punishment

Steel serves you better when manganese is added

—because the harder it works, the tougher it gets

EVER WATCH a power shovel bite into earth and rock? And wonder how the teeth of the steel bucket can endure such punishment? The amazing answer is that the teeth not only endure such treatment—they actually get harder because of it!

MANGANESE HOLDS THE SECRET—The story behind this remarkable steel is the unusual metal called *manganese*. The hundreds of thousands of tons of manganese required each year by steel and other metal-making industries are obtained by refining huge quantities of ore that come from mines in widely scattered points across the face of the globe.

ADDED TO STEEL—All steel contains manganese. A small amount "cleanses" molten steel and removes impurities. A larger amount of manganese makes the steel tougher and stronger.

FROM ORE TO ALLOY—Transforming raw ores into a variety of manganese alloys for the metal-producing industries is one of the many important jobs of the people of Union Carbide.

Union Carbide's Products include

SYNTHETIC ORGANIC CHEMICALS • EVEREADY Flashlights and Batteries • NATIONAL Carbons • ACHESON Electrodes
UNION CARBIDE Silicones • Dynel Textile Fibers • ELECTROMET Alloys and Metals • HAYNES STELLITE Alloys
UNION CARBIDE and VINYLITE Plastics • LINDE Welding and Cutting Equipment • PRESTONE Anti-Freeze

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Fight for the Senate

Washington, D.C.

THE Republicans are making no secret of the fact that in attempting to regain control of the Senate they are facing a mathematically difficult task. They start from a tantalisingly close position. The Democrats have a majority of only two, 49 seats to 47, which they owe to Senator Wayne Morse of Oregon, who was elected in 1950 as a Republican and went over to the other side, after an interim period as an independent. But the particular contests which are being decided this November offer more opportunities to the Democrats than to the Republicans.

Of the ninety-six seats in the Senate thirty-five, and possibly thirty-six, have to be filled this year, thirty-two because of the normal expiration of six-year terms, three, in Kentucky, South Carolina and West Virginia, because of vacancies, and one in Texas, where Senator Daniel will nearly certainly become Governor. Whether this vacancy in a normally safe Democratic seat will be filled by a "special election" or by appointment is still uncertain. Of the thirty-five seats being contested in November, eighteen are held by Democrats, seventeen by Republicans. But nine of the Democratic seats are southern and absolutely safe, and a tenth, Arizona, can probably be added to this list, because Senator Carl Hayden has been a member of Congress ever since Arizona has been a state and received an impressive number of votes in last week's primary election.

On the Republican side only five states have been marked "safe" on the map, and two of these, Utah and South Dakota, with some hesitation. In Utah Senator Bennett, who is now seeking a second term, captured his seat from a Democrat in 1950 but the Democrat held it by personal qualities alone, and the state has voted solidly Republican in elections since. In South Dakota, a normally safe Republican stronghold, Senator Francis Case is reported to be uneasy about the impact being made by his Democratic opponent, a Mr Holum.

Assuming that these "safe" seats are indeed safe, the Republicans have twelve contests to worry about and the Democrats only eight. This probably exaggerates the Republican's handicap. In three of the "doubtful" midwestern states, Indiana, Wisconsin, and Iowa, it would take a farm revolt of very substantial proportions to shake Senators Capehart, Wiley and Hickenlooper. It is difficult to guess what will happen in a fourth, North Dakota, because there has just been a complete realignment of local political forces, which is bound to strengthen the Democratic opposition to Senator Milton Young.

The main Democratic hopes are concentrated on three eastern states, Maryland, Pennsylvania, and Connecticut, which were held by the Democrats in the recent past; one midwestern state, Ohio, where their candidate has an exceptional flair for capturing votes; and a western state, Colorado, which has a habit of dividing its electoral favours between the two parties.

In Pennsylvania and Connecticut two Republicans who are strong supporters of President Eisenhower's "progressive approach" are in danger: Senator Duff, who won Pennsylvania in 1950 by a margin of three and a half per cent of the votes, and Senator Bush, who captured Connecticut from a Democrat in 1952 with only two and a half per cent to separate them. Since then, in 1954, the Republican state governments have been overthrown in both places. There could hardly be a greater contrast between the two Democratic challengers. In Connecticut Mr Thomas Dodd, a former agent of the Federal Bureau of Investigation, is concentrating on Communism. He denounces Mr Dulles for breaking his electoral promise to "liberate" the captive peoples of Europe, discovers a plot to admit the Chinese "reds" to the United Nations once the American elections are over, and calls for the arraignment of Russia for a string of war crimes beginning with the Katyn massacre. Mr Joseph Clark, the Democratic candidate in Pennsylvania, on the other hand, is seeking to sustain the impetus of the drive for domestic reform that made him the first Democratic mayor of Philadelphia for generations.

★

The Democrats ought to pick up Maryland, where their majority of registered voters increased still further this year, and Ohio, where their candidate, the present Governor, Mr Frank Lausche, has made a habit of winning. But they are capable of fumbling in both. Few Maryland Democratic leaders are happy about the unfortunate chain of circumstances that has landed them with a demagogic pavement contractor, Mr Mahoney, as their standard bearer. In past years factional bitterness has repeatedly handed the elections on a plate to the Republican minority, but as this one approaches the Democrats' distaste for their own candidate could be overborne by their wish to dispose of the undistinguished Republican incumbent, Senator John Marshall Butler, who was swept in on a McCarthyite wave in 1950.

In Ohio the Democrats' problem stems from the eccentric tactics of their champion, on whose personal drawing power

all hope of victory rests. A few weeks ago Mr Lausche seemed a certain winner. He had been elected Governor for the fifth time in 1954 by a margin of 213,000 votes in the same election in which the present Republican Senator, Mr Bender, had staggered into the Senate to fill out the rest of Mr Taft's term with a majority of less than 3,000. Mr Lausche has a compelling personality, whereas Mr Bender is a jovial nonentity. But opinion in Ohio is veering against Mr Lausche because of the lengths to which he is prepared to go in order to retain Republican votes which he has normally received when running for the governorship.

In Colorado, the western state where the Democrats are thought to have their best chance, the result is likely to be very close. Two strong candidates, each with his own popular following built up over a long period—Mr Dan Thornton, the colourful former cowboy who has been the Republican Governor of the state, and Mr John Carroll, the New Deal Democrat whose third attempt this is to become a Senator—are fighting for the inheritance of the retiring Republican, Senator Eugene Millikin.

In addition to these five states the Democrats have a chance in three others, Illinois, California and Idaho, in which three young political newcomers, Mr Stengel, Mr Richards and Mr Church, are challenging Republican Senators. In California, where the Democrats always lose—although they have now 800,000 more registered voters—because of their inability to produce leaders, they for once have a candidate who is fighting an efficient campaign. Mr Stengel's chances in Illinois against Senator Dirksen have been improved by a scandal in the Republican state administration, while Mr Church, who could not normally expect to win in Idaho, could benefit from the growing feeling among the Republicans of that state that their McCarthyite Senator, Mr Welker, may not be their best advertisement.

Republicans have to ward off the attacks in all, or almost all, these areas and make gains themselves in the small group of states where opportunity offers. Their best prospects seems to be in New York and Kentucky, where victories for Mr Jacob Javits and Mr John Sherman Cooper would not merely add precious votes to the Republican total but would supply much needed leadership to the Eisenhower wing of the party in the Senate. But Mr Javits faces strong frontal opposition from the Democratic mayor of New York City, Mr Wagner, while being obliged to guard his rear from harassing fire from the extreme Republican right. In Kentucky Mr Cooper has to fight against a habitual Democratic majority, but should be helped by the mutual detestation between the Democrat's Governor and their senatorial candidate.

★

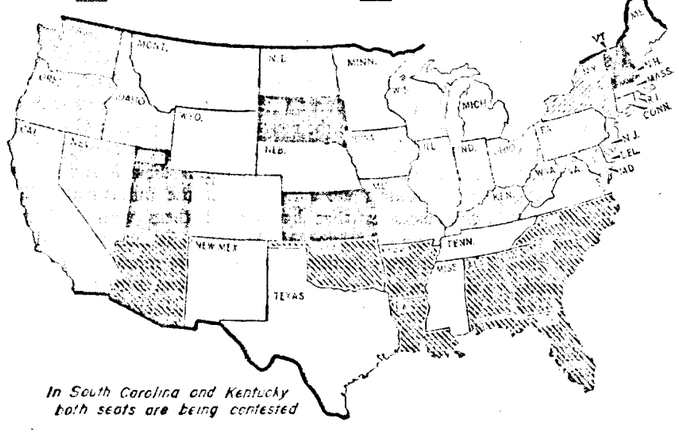
But it may well be in the Pacific northwest, where problems of natural resources and hydro-electric power provide the main issues, that the control of the Senate will be determined. President Eisenhower's immediate entourage was responsible for pressing two strong Republican candidates into this battle, Governor Langlie of Washington and Mr McKay, who was Governor of Oregon before he was Secretary of the Interior. Mr Langlie's prospects have been dimmed by the vote in the primary election last week. While neither he nor the incumbent Democrat, Senator Magnuson, was opposed in his party's primary, 138,000 more people turned out to express loyalty to the Senator than did the same for his opponent. On the other hand, the fight in Oregon is likely to be very close and extremely bitter, since the Republicans intend to bring every available resource to the task of punishing Senator Morse for deserting the party.

Finally, there are three other states in which, despite the odds against them, the Republicans might be able to scrape up extra senatorial votes. Mr Thruston Morton, who is running for the second Kentuckian seat, might be carried in on the coat tails of Mr Eisenhower and Mr Cooper; and, with the help of the Democratic feud in Nevada, the Democratic Senator there faces strong opposition from the vigorous young Republican who holds the state's only seat in the House of Representatives. Finally, the number of enemies made by the indiscreet young Democratic candidate in West Virginia, Governor Marland, has led the local Republicans to suppose that this normally Democratic state may restore to Washington Mr Chapman Revercomb, an arch conservative, an isolationist and the state's only previous Republican Senator.

SENATE ELECTIONS

SEATS AT STAKE THIS YEAR

Safe Democrats (10) — Safe Republicans (5)
Doubtful Democrats (6) — Doubtful Republicans (12)



In South Carolina and Kentucky both seats are being contested

COMPOSITION OF PRESENT SENATE AFTER 1954 ELECTIONS

Democrats - 49 • Republicans - 47

There are two Senators from each state. One-third must be re-elected every two years when any vacancies must also be filled. Senators are chosen by all the voters in the state.

Some of the seats listed as doubtful are obviously safer than others. In several cases the personalities of the candidates may prove decisive or the outcome may hinge on special local conditions. But the map shows why political experts believe that next November the Democrats are more likely to hold or improve their present edge in the Senate than are the Republicans to gain a majority.

The assignment is, however, based on estimates of relative party strength as shown in recent state-wide elections.

Endorsement from Labour

LAST week the general board of the American Federation of Labour and Congress of Industrial Organisations overwhelmingly endorsed Mr Stevenson and Senator Kefauver for the coming elections. But this endorsement which, in theory, is taken to express or influence the sentiments of some fifteen million workers, in practice signifies much less. The action of the general board ratified an earlier vote by the executive council of the AFL-CIO. Urged on by Mr Reuther, the council endorsed the Democratic candidates by 17 votes to 5, but among the dissenters were the presidents of the two largest unions in the federation—Mr Beck of the International Brotherhood of Teamsters and Mr Hutcheson of the Brotherhood of Carpenters. Another opposition vote was cast by Mr Randolph, head of the Sleeping Car Porters, and this may express the disappointment of many Negroes at the Democratic party's evasive attitude towards civil rights. The total membership of the unions whose heads opposed an endorsement for Mr Stevenson is about 2.5 million.

There is much evidence to suggest that endorsement by the leadership of the AFL-CIO will not bring with it the rest of organised labour. Both the AFL and the CIO, which were at that time separate and rival bodies, supported Mr Stevenson in 1952. But an estimated 39 per cent of organised labour voted individually for General Eisenhower. Earlier this summer, moreover, the Gallup poll indicated that 56 per cent of union members would favour Mr Eisenhower this November. The Democratic platform's unequivocal stand against the Taft-Hartley labour law, the rising cost of living, the efforts of the AFL-CIO's committee on political education and Mr Stevenson's personal campaign in key industrial areas will no doubt reduce this figure. But Republican strategists seem justified in asserting that many American workers will disregard the recommendations of their unions and support an Administration with which they associate record employment and a high level of prosperity.

Endorsement by organised labour counts more heavily in local and congressional elections. In crucial states such as Ohio, Illinois and Indiana, the unions' capacity to give financial support to "friendly" candidates and to get out the vote can secure the margin of victory. The AFL-CIO are trying to raise $3 million for a campaign fund to educate voters and assist individual candidates—only a few of whom will be Republicans friendly to labour. Much of the money is collected from union members and this raises legal problems which a number of Republicans have long been anxious to investigate. When the Senate subcommittee on elections met this week, Senator Curtis of Nebraska promised to look into the matter.

It's Dearer by Rail

THE full-scale inquiry by the Interstate Commerce Commission into the accounting procedures of the railway companies may bring fundamental changes in the structure of both passenger fares and freight rates. In essence, the argument concerns the allocation of overhead costs between freight and passenger services. On the present basis, enforced by the ICC, the railways show a large and chronic deficit on their passenger operations, offset by a healthy profit on the carriage of freight, especially coal. The coal shippers and other big users of rail freight argue that they are being charged at an inordinately high level to subsidise huge passenger deficits incurred through inefficient operation. The contrary view is that the passenger services are being forced to bear a heavy share of overhead costs which would have to be incurred even if the passenger services were completely abandoned, and that part, at least, of the deficit on passenger operations is thus a book-keeping illusion.

While the ICC has been considering this debate in leisurely fashion, the railways in the east of the United States have brought matters to a head by requesting permission to raise both passenger fares and freight rates. The New York Central, the Pennsylvania and four other eastern railways have applied for a spectacular increase of 45 per cent in first class fares, which would raise the cost of first class rail travel in most cases well above the equivalent air fare. This has been interpreted as a disguised move by the railways to divest themselves completely of their unprofitable de luxe operations, on which the six railways in question lose $47 million a year, but the railways claim that they are merely raising fares to cover operating expenses which at present run 48 per cent above revenues. Commuters on the New York Central's suburban services also face sharply increased fares. Long distance third-class fares will be raised as well if the ICC approves, but only by 5 per cent, as this traffic is more profitable. Finally, the New York Central has decided to lease or sell some 700 of its most uneconomic stations, ranging from small halts where no tickets are sold at all to large terminal buildings such as that in Detroit.

Freight rates throughout the United States were raised by 6 per cent last March, after a combined application to the ICC by all the railway companies. Since then the steel strike and higher labour costs have lowered profits on freight operations, especially in the east, and a further round of substantial wage increases is expected to follow from the present negotiations with railway employees which are being conducted under the threat of a national rail strike. The eastern railways have, therefore, informed the commission that they will ask for a further rise. But on this occasion they may be supported neither by their colleagues in the southern and western United States, where revenues from freight are more satisfactory, nor by those eastern companies that specialise in the profitable hauling of coal.

Creditworthy Consumers

CONSUMER credit, which consists mainly of borrowing on hire purchase agreements, has been given a certificate of respectability by President Eisenhower who said at a recent press conference that he did not consider it too high. Mr Stevenson, and others who feel that the volume of consumer credit outstanding is at a dangerous level, are finding it difficult to justify their fears. In July the total of hire purchase credit rose, for the fifth month in succession, to a new record of over $29 billion; other personal loans and charge accounts in department stores amounted to a further $8 billion. More than $15 billion—over half of all the borrowing on hire purchase—is incurred on motor cars, and in spite of the decline in sales this year, borrowing to buy new automobiles has continued to rise.

Many American economists still argue that this heavy debt could, if incomes fall, aggravate a depression. But even at the level of $37 billion, credit outstanding is equivalent to less than 10 per cent of the national income. This, the President and his advisers feel, is not an unhealthily high proportion. Mass production demands mass means of financing purchases if high output rates are to be maintained, and the severity of the recent decline in employment in such areas as Detroit has clearly been mitigated by the extensive use of credit facilities to stimulate the sales of new cars. Repossessions of automobiles from borrowers who fail to keep up their instalment payments have been surprisingly low; surveys show that the use of instalment credit is concentrated in the middle income groups, especially among young families with the expectation of higher incomes; and experience suggests that heavy debtors continue to buy new goods on hire purchase as they gradually pay off their debts. Over half of all American families with incomes between $3,000 and $7,500 a year owe money on hire purchase agreements—a sign that consumer credit has lost its stigma and become socially acceptable.

But to the Federal Reserve, which is applying a squeeze to ward off inflation, consumer credit may appear dangerously immune to monetary control. The higher interest rates paid by the finance companies for their funds have been passed on to the customers, but new borrowing is still running ahead of repayments, and the 1957 automobile models, which are about to be unveiled, will give it added impetus. If the rise becomes too sharp President Eisenhower may remember his request, made at the beginning of 1956, for a study of consumer credit to determine whether it should be more directly controlled.

Calm on the Potomac

FROM A SPECIAL CORRESPONDENT

LAST week, when headlines told of racial violence in the South, white and Negro school children in Washington quietly re-entered their classrooms to begin their third year together. Immediately after May, 1954, when the Supreme Court banned racial segregation in publicly financed schools, the District of Columbia's Board of Education, reinforced by President Eisenhower's wish that the nation's capital should serve as a "model," acted on a plan to begin desegregation in the following term. This was a formidable undertaking in view of the highly inadequate and unequal facilities of the existing dual school system and the fact that coloured children considerably outnumbered white. So far, the revolution has produced no major disturbances. But its pressures have seriously widened the cracks that were already there in the school structure and could result in serious educational handicaps for the generation now in.

Before September, 1954, Washington had two school systems, not by statute, but because congressional appropriations designated funds separately for the white and coloured schools. While white schools operated below capacity, coloured school enrolment grew from 36 per cent twenty years ago to 65 per cent this year. Consequently, Negro schools became seriously overcrowded and understaffed and the growing disparity had not been assessed owing to the separate testing of the two systems. By the early 1950s, the impracticability of this situation, combined with the post-war economic and social evolution of Washington's Negroes, had forced even some observers with segregationist sympathies to realise that integration must eventually come. But, neither the necessary money to equalise conditions nor a definitive plan for integration was produced in time, and after September, 1954, harassed teachers found themselves instructing simultaneously some forty or fifty white and Negro pupils, ranging from the highly privileged to the destitute and from the near moron to the genius. Even the simplest communication in such classes is extremely time consuming.

★

Last March, the results of the first series of uniform tests conducted in the desegregated schools leaked to the press. They revealed a startling lag in the achievement of the students. With Negroes, on an average, lagging behind whites, almost 1,800 of the city's 4,000 10th grade (16 year old) children were four years or more behind in arithmetic, and more than a thousand were as bad in reading. Subsequent tests have shown that the average level of children in most Washington grades is from several months to two years below national standards. In order to achieve more homogeneous classes, a "four-track" plan is being tried experimentally in the 10th grade this year. It divides each class, according to ability, into groups studying one of four curricula; "honours," "college preparatory," "general" and "basic." Combined with stiffer standards for promotion the new system may solve many practical problems, but it has also been accused of restoring segregation by educational achievement.

The handling of the difficult revolution in Washington has been criticised both for being too "gradual" and for being too precipitous. Owing to the uneven distribution of the races throughout the city, many schools are still preponderantly white or coloured. Desegregation has been slowed down by a controversial "option plan" intended to promote stability and continuity. It allows children to remain in the school where they were in September, 1954, until they graduate to the next level in the educational system. In schools with a high proportion of Negroes, considerable "policing" by the faculty has been necessary. Negroes moving from the more authoritarian coloured schools into the freer atmosphere of the white schools are said to "let off steam," but few serious problems have developed. Police records show a definite rise in minor "racial incidents." According to the chief of police, however, few of these involve the schools themselves.

Recent sociological studies reveal that many children experience varying depths of unhappiness and dissatisfaction, in the process of adjusting to racial integration. This can affect both their scholastic performance and their social status and can seriously lower morale. But at the same time, considerable evidence has been found to support the view that segregationist instincts give way when strongly challenged by such ideals as respect for law and order. A newspaper poll indicated at the time of the Supreme Court decision that 52 per cent of the white population of the District of Columbia was opposed to desegregation. So far as is known, this attitude has not changed fundamentally, but has become one of acceptance and "make the best of it."

Today the moral initiative appears to be with the advocates of integration who have forced their opponents into defending segregation on the grounds of expediency. This week a congressional subcommittee has opened extensive public hearings on alleged lowered school standards and increased juvenile delinquency in Washington. Dominated by what the *Washington Post* calls the "*arrière-garde* Southern thinkers," the investigation has been denounced in advance as "propaganda." Since the early part of the summer the subcommittee's chief counsel, a former "hatchet man" for a notorious southern political machine, has interviewed almost 400 people on all phases of the school situation. The first polite session on Wednesday, with the chairman of the Board of Education and school principals as witnesses, focused on the problems of integration. The counsel of the committee pointed to the rise in operating costs since desegregation and brought out the fact that in predominantely coloured schools 65 per cent of eighth grade pupils were three to four years behind in reading skill compared with 12 per cent in mainly white schools. Witnesses were questioned about "native abilities" of both races, retarded students and the exodus of white families from certain districts. In general, it was felt that progress was being made but that more preparation, more teachers and better facilities were essential for eventual success.

The New Stevenson

Washington, D.C.

LAST week the "new Stevenson" was unveiled on television at a cost of $280,000 for half an hour. It was a "saturation broadcast" of a Democratic party rally at Harrisburg, Pennsylvania, which meant that, however much the viewer turned the knob, he kept coming to Mr Stevenson. Most people who saw the show agreed that it was a flop. Certainly, Mr Stevenson worked hard at not being an intellectual. He staged his speech in what is for him the least congenial of settings—a mob of ten thousand banner waving enthusiasts, most of whose hands he had previously had to shake. He avoided wit and allowed himself only one clumsy bit of humour. He mispronounced *élite* as "e-light" and read a dictionary definition of it, thus demonstrating to rural viewers, who are supposed to dislike him as an intellectual "city slicker," that the word and its concept are strangers to his vocabulary.

Few people will blame Mr Stevenson for dropping the rapier for the bludgeon. Most of his difficulties last week were due to bad stage management. The camera angles exaggerated instead of concealing his lack of inches. He was frequently caught out by that terrible trap, the teleprompter, the cameras fixing mercilessly on the desperate, hunted look in his eyes as he lost track of his artfully penned phrases on the concealed screen. But part of the problem is that the Democratic candidate is his own speech writer. He is not a good one, if the test of a speech is its suitability for the speaker rather than its readability in the collected works. Mr Stevenson has neither the vocal resonance nor the breathing control to make effective play of the lengthy and delicately orchestrated sentences that he composes.

Exhausted by his handshaking and worried about his text, Mr Stevenson looked to the television viewers like the unhappiest of men. With President Eisenhower's health as one of the main issues, the Democratic challenger looked in much worse condition than his opponent. This is not, in fact, a correct impression. The "new Stevenson" is much more effective in person than he has been so far on television. When he arrived at his headquarters in Washington last week he came with a springy step, a glad hand and a ready smile, to demonstrate that he was a "proper fighter."

Although some of his admirers are afraid that he will wear himself out too early in the campaign, Mr Stevenson's whirlwind start has built up enthusiasm inside the party organisation. Since the Democrats are the majority party the task is not to convert Republicans but to inspire Democrats to revert to their normal allegiance and come out and vote. In the course of doing this Mr Stevenson has made only one major concession to expediency: his indication, in qualified terms, that he might end conscription. The excuse that is being made for him is that he had received word that Mr Eisenhower was going to do this himself on the eve of the election.

Old Soldiers Gather

FROM A CORRESPONDENT IN LOS ANGELES

IN spite of a steady decline in membership and prestige, the American Legion, which recently held its annual convention in Los Angeles, reaffirmed the very policies that are causing it to lose influence. With a minimum of debate, the 3,200 delegates adopted resolutions expressing the Legion's distrust of the United Nations and international alliances, opposing the admission of Communist China to the United Nations and attacking the controversial Fund for the Republic.

Since the second world war, the American Legion has become more and more of a political organisation. Nominally its main emphasis is still on problems affecting ex-servicemen, but it is now devoting increasing attention to general political questions. And the convention clearly demonstrated that xenophobia is becoming a permanent part of the Legion's personality. But if the delegates were in complete unanimity on all political questions, there was some debate on organisational affairs. A fight between a group within the Legion, the "40 et 8," and the national executive committee was resolved, after heated bickering, in favour of the committee. In spite of the "unhealthy and

most discouraging " drop in membership, peacetime servicemen are still not considered eligible for the Legion, and the committee was overwhelmingly sustained in refusing to delete a " Caucasians only " clause from the Legion's constitution. When it came to their proper affairs, the delegates advocated increases in pensions for disabled ex-servicemen, the establishment of a pension system for all needy veterans over 65 years of age and compulsory military service.

The resolutions on foreign policy, the informal discussions on the floor of the convention, the boos for Mr Adlai Stevenson, the sentiments in favour of states rights expressed by Legion leaders—all combined to create an image of an organisation oriented towards the right wing of the Republican party. Whatever more liberal forces may once have existed within the Legion, are now either silent or gone. For the Legion has had to pay for its policy of expressing views on issues not directly related to veterans' affairs. Many legionnaires have left, offended by the intemperate manner in which the Legion has attacked all who disagreed with it.

Formerly, the American Legion's self-adopted role as the guardian of the nation's virtues went without serious challenge. But now it represents little more than ten per cent of American veterans, and its demands are not as quickly accepted by either the legislature or the press. Since its recent national commanders have been almost totally indistinguishable from each other, less and less attention is being paid to their utterances. The newly elected head of the Legion is Mr Wilbur Daniel ; his military service consisted of only a short period in basic training, and he appears to differ in no way from his predecessors.

It is reported that there are some elements within the leadership of the Legion who are greatly concerned with its present course and threatened decline. But it is extremely doubtful whether very much can be changed in the foreseeable future. The permanent staff obviously makes many of the decisions, and seems committed to an outmoded brand of isolationism while the conventions appear neither willing nor capable of charting a new course. The overwhelming majority of the 2.8 million legionnaires seem quite happy to leave matters of policy in the hands of their present leaders. The delegates, for their part, are content with marching in parades, listening to Mr Nixon, sightseeing and purchasing medals—marking their attendance at the convention—to pin on to their overseas caps.

Strike Against Income Tax

FROM A CORRESPONDENT IN SALT LAKE CITY

THE refusal of Mr Bracken Lee, the Republican Governor of Utah, to pay income tax to the federal government is only one, although the most colourful, of a number of recent protests against this tax. But his is based on rather unusual grounds. Mr Lee, who was defeated last week in his bid for re-nomination, contends that it is unconstitutional for the federal government to use tax moneys to aid foreign nations. He filed his tax return last January, but did not enclose the money he owed, except for the payment due on his salary as Governor. Thus he hopes to force a court test of his claim that there is no provision anywhere in the Constitution granting the United States government the right to appropriate public funds for the support of foreign countries. He insists that he will go to the Supreme Court if necessary to prove his case. The Secretary of the Treasury in Washington replied that the government would " proceed in the usual manner to collect the taxes," and federal agents have attached Governor Lee's bank account.

Mr Lee's stand is a reminder that isolationism is not altogether a dead issue in America, particularly in the areas which are geographically remote from Washington and cut off by mountains or plains from the sea and the world at large. His defiance has also a flavour of the independent philosophy of the old frontier days. But the fact that his revolt seems to be inspired more by dislike of foreign aid than by hostility to the federal income tax as such has eliminated some potential sympathisers who think Mr Lee would have a stronger case if he had withheld payment of federal tax on his income as a State Governor. They believe that there is constitutional warrant, based on the doctrine of " reciprocal immunity," for challenging the federal government's right to tax a salary paid to a state official.

Meanwhile, Mr Lee is receiving aid and comfort from a responsible quarter—Mr Coleman Andrews, who resigned not long ago as Collector of Internal Revenue, the country's chief tax official. Mr Andrews has spoken out strongly to the embarrassment of his former colleagues in Washington, against what he terms the " iniquitous " federal income tax. He has also taken to the lecture platform to spread his doctrine that income tax at present levels is both unfair and an encouragement to evasion, particularly in the higher income brackets. He argues that

> if Congress ever allowed the Revenue Service to have enough money for all-out enforcement of the income tax, the demand for repeal would become so great within a year that it would be irresistible.

Governor Lee is a less effective advocate. An address before the New York City Rotary Club drove a number of listeners away before the end. But he has a small, scattered, but very vocal following of wealthy citizens, including some of the Texas oil millionaires, who helped to underwrite Senator McCarthy's earlier belligerency. He is also one of the idols of a Californian group dedicated to the abolition of the income tax. Unlike Mr Andrews, who refuses to say what he wants as a substitute, Governor Lee favours a return to state responsibility for local affairs and believes the states should contribute their proportional share of money to the federal government for its running expenses.

Meanwhile, however, the mounting public discontent over heavy income taxes is being reflected in Congress. A proposal for putting a top limit on it was discussed during the last session. The alternative method of raising revenue which is most favoured—this does not mean that it is likely to be enacted—is some form of much stiffer sales, or excise, tax. At present personal income taxes are bringing in about $35 billion a year and corporate income taxes another $20 billion, out of a total national revenue of $68 billion.

The issue in Governor Lee's position was blurred by his long-standing and very vocal criticism of President Eisenhower, whom he calls a " New Dealer," with the thunderous approval of his audiences of mining and cattle men. But his isolationism and his opposition to the President stimulated strong resistance to him in Utah, and this brought on his downfall. Mr Lee's supporters regret that there was no chance of his income tax case being tried before the elections, for they believe that his stand would have endeared him to the voters.

Do American Politics baffle you?

Most of us find it hard to understand their real significance. The United States, so integral to our own security and prosperity, can often seem the most foreign and mysterious of our allies.

You have certainly heard of THE REPORTER, the liberal fortnightly which has brought a new dimension to American journalism. Through its treatment of politics, American and international: through its insight into the changing patterns of American life and work: through its wit and good temper, THE REPORTER has become, in only seven years, one of the most respected journals of fact and opinion in the free world.

Now you can buy it here in Britain.

This week's issue contains special reports on the developing Suez crisis by British, European and American journalists. The ensuing issues will closely follow the Election Campaign. Ask your local newsagent for a copy or a subscription. If you have any difficulty write to

TRANSWORLD CIRCULATION COMPANY,
PARK ROYAL ROAD, LONDON, N.W.10.

cient to make this solution acceptable to the north. At present, however, it represents only a tragedy that has left an intensified legacy of distrust—the most serious obstacle to the emergence of a united and prosperous Sudan.

Reunion of Laos

FROM OUR SPECIAL CORRESPONDENT LATELY IN VIENTIANE

LAOS has made its own peculiar contribution to ideological thought. "Our country," its prime minister, Prince Souvanna Phouma, has now said, "has no intention of joining any block, even the neutralist block." "Neutrality," he elaborated, "is more neutral than neutralism," adding that his country aspired to be the Switzerland of the Far East. This understandable, indeed praiseworthy, aim is complicated by Laos's geographical nearness to communist China, and by the prime minister's eagerness to receive economic aid from all and sundry in order to begin the long process of modernising this delightfully unmodern country. But the acceptance of foreign aid and the preservation of complete neutrality are uneasily reconcilable. There is only one Switzerland, and the attainment of Swissness involves sacrifices.

Agreement was reached last month in Laos whereby the illegal occupation of the two northern provinces of Phong Saly and Sam Neua by the pro-communist Pathet Lao was ended in exchange for the return of the dissidents to the national fold. The agreement was achieved because the Pathet Lao decided to want it, although a tribute must be paid to the very efficient International Control Commission, whose activities had an undoubted catalytic effect on the slow processes of conciliation. It had been clear for some months that the communists wanted to make a change in Laos. They realised that continued occupation of the two northern provinces was simply driving the Royal Laotian government into the western camp, and that their complaint that the failure to hold elections to unify Vietnam was a breach of the 1954 Geneva agreement could always be very reasonably parried with the charge that what they were doing in Laos was equally illegal. On top of all this, the Pathet Lao themselves were increasingly weary of being cooped up in the mountains and jungles, and many doubtless wished to return to a more civilised existence. Thus it seems to have dawned on all ranks on the communist side that the communist revolution in Laos would never be achieved in this way, and a much better tactic was to combine the advantages to be derived from a profitable agreement with the glory of being the good boys of South East Asia.

The reward was twofold: an increase in Laotian neutralism, and the dissemination of Pathet Lao elements throughout the Laotian body politic. In exchange for the reversion of the two provinces to its authority, the royal government has promised to form a government of national union—in which Pathet Lao leaders will presumably serve—and to hold supplementary elections throughout the kingdom to increase the membership of the National Assembly, in which Pathet Lao candidates will undoubtedly win seats. Some western observers fear that this will lead inevitably to communist subversion of the regime. Indeed, some have found more cause for flurry in the observance of the Geneva agreement in Laos than in the breach. It is doubtful whether this gloomy view is justified.

There is no question of Laos "moving out of the western camp," as some would have it, for the simple reason that it never was in it. The Royal Laotian government was temporarily, and artificially, aligned with the West on account of the open fighting which was going on with the Pathet Lao forces, and the interference from the communists across the frontier in North Vietnam. The fighting ended, the reversion of Laos to its natural neutrality is entirely to be expected. The Laotian delegation which recently visited Peking, in a cordial atmosphere which has disturbed some people, made no pronouncements which would not be expected from any small neutral country making contact with a large neighbour. No provision has yet been made for economic aid from China, and the Laotian prime minister recently stated that his country wished to continue receiving American aid, which is running at the rate of about $50 million a year. The present attitude of Laotian leaders to Seato is that they do not object to its protection provided it is left to them to ask for it; this is an attitude they have maintained all along.

The Prodigal Brother

The future seems to depend a great deal on whether the Pathet Lao leaders are determined communists or merely recalcitrant Laotians. Their chief, Prince Souphanouvong, is a relative of the King, and brother to the prime minister. It is not impossible that the prodigal brother, given a comfortable post in the national government, will reform his ways. It cannot be assumed that he aspires to be the Laotian Lenin. It can plausibly be argued that, in nearby Vietnam, the Viet Minh were only reluctantly driven from nationalism into communism and dependence on China, and that the reverse experiment—that of union rather than division—is worth trying in Laos. The skill with which the government handles the situation during the next few months will count for much; so will the clash of personalities, which in this part of the world plays a more important role than that of principles. The supplementary elections for the National Assembly—probably to be held early in 1957—will provide the next important pointer in Laotian affairs.

Economic Pressure on Egypt

BY A CORRESPONDENT

EGYPT'S financial and economic structure has so far stood up surprisingly well to the strains of the past three years. Despite a considerable fall in the value of its cotton exports, and a great increase in government expenditure and borrowing, the price-level and cost of living have remained remarkably steady. The inflationary effect of the government's expenditure appears to have been neutralised by the deflationary effect of realising foreign assets to cover the adverse balance of payments.

The pattern of the country's trade has changed considerably in recent years. Britain has lost its traditional

place as the best customer for Egypt's exports, but it still takes the lead as regards imports. In the first seven months of this year, Britain had a favourable balance of trade of over £12 million. Egypt has generally had unfavourable balances with most of Western Europe and with the United States. On the other hand, it has expanded its trade with Asiatic countries and has substantial favourable balances with India, China and Japan. Its trade with Eastern Europe, being on a barter basis, is more or less balanced, with some credit owing, usually in favour of Egypt.

Despite the fact that since 1947 Egypt has been outside the sterling area, most of its trade has been financed on a sterling basis, and it has been able to meet its deficits with Western Europe and America by obtaining transferable sterling from its debtors, supplemented, where necessary, by drawing on its accumulated sterling balances. In the two years to February, 1956, the sterling balances were reduced by £E44 million, though the dollar balances increased by £E14 million. The sterling balances have therefore been of the greatest value to Egypt in covering its international indebtedness; they have also been used both to meet its dollar deficit and to increase dollar reserves.

The Suez Canal dues have also been an important source of foreign exchange, amounting last year to some £E30 million gross. Of this, rather more than half was released to the Canal Company to cover payment of dividends and other liabilities abroad. However, it may be estimated that Egypt obtained a net £E10-12 million of foreign exchange from this source, and a stoppage of these receipts could have a serious effect on its balance of payments.

Switch in Import Trade

The position of the reserves in March last was that Egypt had £E139 million in sterling (of which £E33 million was in free accounts); £E25 million in US dollars; and £E11 million in other currencies. The free sterling may well have been reduced during the five months to the end of July, when the British Government imposed a rigid control over drawings. It is not clear whether the similar control imposed in the United States will be enforced equally strictly to prevent drawings on the dollar reserves. The gold can be freely disposed of, but as this is regarded as the main security for the currency, the Egyptian government will probably be reluctant to part with it.

It looks, therefore, as if Egypt would very soon be forced to restrict imports from Western Europe and America, replacing them where possible with imports from elsewhere. It is not easy to estimate how serious the [illegible] on the country's economy. Egypt is still predominantly an agricultural country, 70 per cent of the population being employed (or unemployed) on the land. Their average income per head is less than £E20 per annum—an income which is barely above minimum subsistence level. Egypt is practically self-sufficient in food supplies, except for wheat, which it has arranged to obtain from Russia. Of imports from Britain, three-fourths are machinery, metals and metal manufactures and chemicals, and probably the main effect of an embargo on exports from Britain and France would be to slow down the progress of development and industrialisation. For the rest, it might enforce a certain degree of austerity on the small proportion of the population which is addicted to Scotch whisky, Bradford woollens and French perfumery. Prices of imported goods would tend to rise.

It should not, however, be assumed that Egypt could not procure any urgently needed supplies from other countries. German (and Italian) traders are making great efforts to capture the Egyptian market, and would welcome the opportunity to fill the vacuum created by British and French economic measures. The Egyptian clearing account with West Germany has before now been allowed to develop a very large unfavourable balance, and it would not be surprising if Egypt was able to obtain a substantial amount of credit in this way.

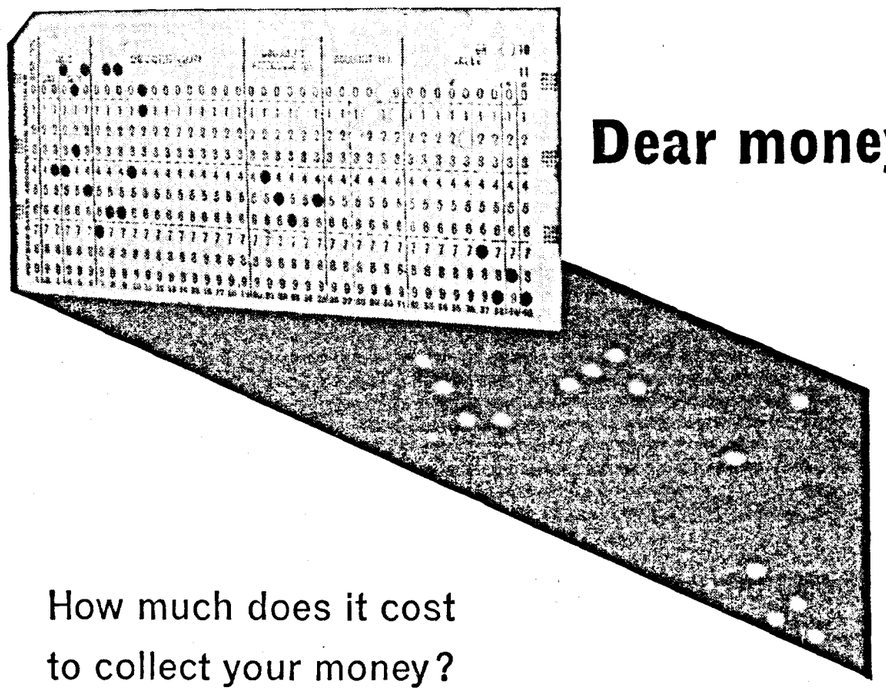
Egypt's most essential import is mineral oil—especially kerosene for domestic use. Indigenous production of oil which last year amounted to 1.8 million metric tons, covers about two-thirds of requirements, but consumption could not easily be reduced, and if the oil companies refused to deliver supplies, the shortage would be felt acutely throughout the country. But the oil companies might well hesitate to apply pressure of this kind which might cause trouble with the other Arab countries. Egypt is already trying to set up a pan-Arab oil marketing organisation, and it has strong claims on Saudi-Arabia. In the event of trouble, the Anglo-Egyptian oil fields and their installations would be a hostage to fortune. Moreover, Egypt was the destination of nearly half of the 790,000 tons of Soviet and Rumanian oil that passed through the canal from North to South in the first six months of this year.

Double-Edged Weapon

Altogether, further economic measures by Britain and France alone are not likely to have any immediate effect on Egyptian policy. They would be more effective if supported by Western Europe generally, as well as by the United States. They would certainly cause Egypt some embarrassment and necessitate a diversion of trade as well as a slowing-down of the development programme, but it would be a long time before they could cause anything like a breakdown in the economy.

Further economic sanctions would also be damaging to Britain. Apart from the loss of a valuable export market, where we have a substantial favourable balance of trade, there are many British interests—banking, insurance, hotels, local companies, etc., as well as commercial and industrial concerns—which would be vulnerable to reprisals. The same is true of France. All economic sanctions tend to be double-edged.

In fact, the British Government has already taken the [illegible] blocking Egypt's sterling balances. This step can be fully justified because the British Government has a claim against the Egyptian government in respect of its holding of Suez Canal shares, and until that claim has been satisfied, it is entitled to block Egyptian government assets under its control. This measure must have the effect, very soon if not immediately, of stopping British exports to Egypt, as it is from these sterling balances that the Egyptian control provides sterling for imports. Any further economic sanctions would have little additional effect, and might well prove more damaging to Britain than to Egypt. The slowing-down of the canal traffic, with the loss of revenue and of foreign exchange earnings and the general loss of confidence in Egypt which that would entail, will probably weigh more heavily with Colonel Nasser than any further economic sanctions.



Dear money

How much does it cost to collect your money?

Whether you sell goods or services, run a business or control the finances of a local authority, the preparation of invoices, bills, demands (call them what you will) involves costly clerical effort.

Powers-Samas punched card methods make light work of the job. Machines do the arithmetic and produce the finished bills — swiftly, at low cost and with machine accuracy. Then they fill in their time with other accounting, costing and statistical tasks.

What does punched card equipment cost? Powers-Samas have matched their ranges of machines to the needs and budgets of the small, the medium and the large organisation.

France and Suez

THE unity in action of the British and French governments over Suez has been such that the French role and French attitudes have not in London been clearly distinguished from British. When a distinction has been essayed it has been grossly oversimplified. Labour party speakers and the *Daily Herald* have accused France of trying to embroil Britain in its Algerian failure by encouraging Sir Anthony Eden to wave a sword at Colonel Nasser's head. The French Socialists have replied that they would have reacted similarly to Nasser's coup at Suez whatever the Algerian situation. There is more to this difference of attitude than the fact that the French Socialists are in power and the Labour party is in opposition. The French, passionate politicians themselves, have been more responsive than the Labour party, for instance, to the element of passionate power politics in Nasser's game. Certainly the violence of the initial French reaction to the Nasser coup was due to the smart of seeing Nasser's hand in many phases of the Algerian rebellion. But even the Frenchmen who were most convinced of the need for a more liberal policy than M. Lacoste's in Algeria gave fiery support to the policy of overthrowing Nasser.

Even left-wing French politicians have become, like the British conservatives, convinced that if "Nasser gets away with it" the pan-Islamic movement will be given an impetus to which there is no measurable end. It is this which has led to what the French call "the anti-Munich complex." They are not thinking only of Algeria or North Africa, but of French negro Africa, half of which is Moslem ; and of the problems involved in having a potentially hostile coalition on the south coast of the Mediterranean. With such perspectives it is understandable that they have not been eager to follow the Labour party's advice and refer Suez to the United Nations, which they regard as ineffective.

Mixed Feelings

In Paris, it is only gradually dawning on a political opinion unwilling to believe it that the threat of force against Nasser is past. The government, which continues to enjoy an amazing immunity to criticism, is not blamed for any retreats ; France's allies tend to be held responsible. Confronted with Mr Dulles's canal users' association, the French are a prey to very mixed feelings. On the one hand the common front of America, Britain and France on Middle Eastern questions is an achievement which French policy has long sought. Yet from the beginning of the Suez crisis the rather unlovely anti-Americanism that is always ready to come to the surface has reared its head. During the days when the London talks were languishing for lack of Mr Dulles, absent in Lima, the French parliament had already produced a minatory motion for American ears which emphasised the dangers to the Atlantic alliance. More recently the French press has been quick to blame American diplomacy for the failure of the Menzies mission to Cairo. None of these accusations has been levelled at the British. Yet for the moment the attainment of unity of action takes precedence over all. If, however, Nasser were to win all along the line there might be a return of anti-Atlantic feeling, especially if the North African repercussions were rapidly obvious.

Just as it has been easy in London to think of the French as merely seeking alibis for failure in Algeria, so there has been a tendency to see them fighting to the last British soldier. It is true that French fire-eating has been considerably devalued by the obvious incapacity of France to "go it alone" in the Middle East. But had the French sent their warships, and the two divisions which they ostentatiously camouflaged light sand-colour in green and brown Algeria, their contribution to any Suez expedition would have been considerable. Was it only bluff when they prepared two of the best divisions originally brought from Germany in this way ?

Similarly it has been tempting to see the united French facade over Suez as a proof of complete rigidity. In fact there has been a considerable evolution of opinion. Its most important manifestation has been over Algeria. Originally there was a tendency to make an Algerian solution depend upon an Egyptian one. But as soon as it became clear that the Suez crisis was not a nine days wonder and that a "long haul" would be required, it was realised that Algeria's problems must be faced in their own right. It may also be that the government discovered that the effect of the Suez crisis in a country where the balance of power between 500,000 French troops and 20,000 elusive rebels is strongly rooted in local conditions, has been less than the alarmists originally forecast. The government has recently been elaborately preparing its next proposals of reform in Algeria. Whether they will be satisfactory is another story. But the fact remains that French reactions to Nasser are not now, even if they once were, a mere offshoot of the Algerian crisis. In a sense French alarm has been touched off by the contrary thought—that one day the Algerian rebellion might appear as a very secondary aspect of the eruption of Islam engineered by Nasser.

Poland's New Deal?

POLAND'S new five-year plan which Mr Jedrychowski, a vice-premier, has this week undertaken to present to the Sejm next month, reflects the political changes which have recently taken place. Even in the balance-sheet for the past six years, the list of achievements is coupled with a confession of past mistakes. The provisional blueprint for the future takes into account the economic discontent of which the Poznan rising was only a single violent expression. It promises more flexible planning, a greater reliance on incentives and greater consideration for the Polish consumer. The report ends with a pledge of a new deal for the small craftsmen and traders.

* In terms of progress in heavy industry, the six-year plan ended in 1955 could be considered a success. Though some targets for basic raw materials have not been reached, the defence drive gave such a spur to certain branches that, according to the published figures, the very stiff pace originally planned for metallurgy and chemicals was actually greatly exceeded. The output per head of many basic industrial commodities is now between a third and a half of the British levels, which for Poland is quite an achievement. Helped by the postwar shift of its frontiers, the country has advanced rapidly on the road to an industrialised society. But it is now admitted that the price of this industrial revolution was not only high, but unnecessarily so.

The high cost in terms of human suffering is attributed to a multiplicity of factors. The initial bias in favour of heavy industry was coupled with too tight planning, little provision being made for building up stocks. The defence drive of 1951-53 increased the pressure on resources and

INDUSTRIAL PRODUCTION

Unit	1949 act.	1955 Plan	1955 act.	1960 Plan	1960 plan (1955=100)
Hard coal mn. tons..	74·0	100·0	94·5	110·0	116
Crude steel „ „ ..	2·3	4·6	4·4	7·2	163
Cement „ „ ..	2·3	5·0	3·8	6·8	178
Elec. power, bn. kWh..	8·3	19·3	17·8	29·9	168
Cotton fabs. mn. m..	404·0	609·0	565·0	681·0	122
Woollen fabs. „ „ .	50·0	75·0	76·0	87·0	117
Sugar '000 tons	740·0	1,190·0	890·0	1,350·0	138
Wireless sets, '000 units	66·0	300·0	461·0	860·0	187

played havoc with plans. There were not enough consumer goods to supply the towns and to tempt the farmers to sell. In the countryside the regime got the worst of both worlds: state and collective farms—which still own only one-fifth of the land—could not meet the demand for foodstuffs, while there was no system of incentives to get supplies from the private smallholders. Not only did agricultural production lag far behind that of industry as well as behind its own targets (it rose by 19 instead of 50 per cent during the plan), but it was extremely difficult to extract surpluses for the towns at a time when urban population was growing very fast (urban employment increased by about two million during the six-year period). Thus for wage-earners there was a complete discrepancy between promise and fulfilment. They were promised an increase of wages of more than 50 per cent compared with 1949; it is officially admitted that real wages rose by merely 13 per cent and that, for a period, they actually declined.

There is no question of abandoning planning or the goal of industrialisation. In the next five years national income is to be raised by half, industrial production increasing by about 55 per cent and agricultural output by about a quarter. Yet within the established framework planning is to be more flexible, more decentralised, with greater scope for initiative from below. Above all, a genuine effort is apparently to be made to improve living conditions. To raise real wages, salaries and rural incomes by 30 per cent

DISTRIBUTION OF INVESTMENT
(percentage)

	Industry	Building	Agricul. and forestry	Transport	Housing	Social	Total incl. other
1951-55*	48·3	3·6	8·2	12·2	10·7	4·6	100
1956-60†	45·9	4·7	12·3	9·7	14·4	6·3	100

* 1955 prices. † 1956 prices.

in five years is, at least on paper, the primary objective of the plan. The share of consumption cannot be increased without a corresponding reduction in investment. True, investment need not be cut in absolute terms; it should actually be 45 per cent higher in the next five years than during the last plan. Its share in the national income, however, is to be reduced to between 17 and 18.5 per cent. The development of production will thus have to depend much more on quick yielding projects, on a fuller use of existing capacity and, to an unspecified extent, on the transformation of military plants to peaceful purposes.

The decline in the proportion ploughed back is to be accompanied by a substantial shift of emphasis in investment. Agricultural equipment, housing—which is sadly inadequate—as well as schools and hospitals are to be the main beneficiaries, while the budgetary axe is to be applied to some branches of engineering, to transport and to public administration. Even so, the pledge to the consumers will be kept only thanks to Soviet aid. Polish planners are also relying on the benefits of closer co-operation within the Soviet bloc and, incidentally, seem more interested than before in trade with the West.

Agriculture may prove the most difficult sector of the plan, though the draftsmen have been much more modest than in the past; they foresee a 25 per cent increase over the five-year period. For crops this is expected to be obtained partly through the extension of the cultivated area to 15.8 million hectares and even more through increased yields. It is also hoped to raise the numbers of horned cattle by about a quarter to nearly 10 million head (that of cows more slowly to 6.3 million by 1960) and the stock of pigs to 12.5 million. Agricultural production is to be fostered through increased supplies of fertilisers, tractors and equipment. Farmers are promised that their coal allocations will be duly delivered, that they will get building materials and consumer goods. The government is, however,

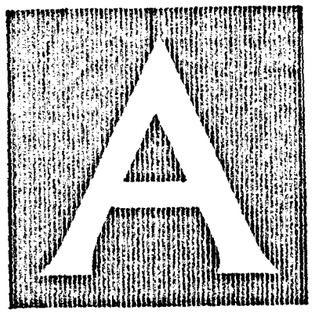
AGRICULTURAL PLANS

	Production (mn tons)		Yield (quintals per hectare)	
	1951-55 Average	1960 Plan	1951-55 Average	1960 Plan
Grain	11·7	14·2	12·8	14·2
Potatoes	30·0	38·0	113·0	140·0
Sugar beet	6·5	9·2	180·0	220·0

particularly vague about the projected pace of collectivisation. The emphasis on incentives and on the "mistaken" coercion of the past points to a new attempt to coax the kulaks to play their part in increasing production; here the planners may meet with a rebuff.

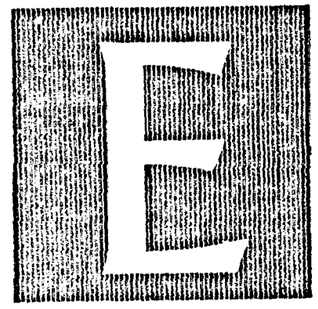
The planners do not hide the fact that in housing as in light industry they are planning merely the first timid steps to relieve acute shortages. To dispel the worst grievances, a two-year transition programme has also been outlined. This envisages an immediate increase in the lowest wages, which have been allowed to fall below the subsistence level, and measures enabling small traders and artisans to compete on more equal terms with co-operatives and state shops.

The whole new plan is really a transitional one. After years of unrewarded exertions the Polish people are promised a greater share of the profits. The new policy seems to contain no threat for the regime in the towns, where it controls the "commanding heights" of nationalised industry and trade. In the countryside the adventure may be more dangerous. The projected sale of tractors to collective farms must have raised many an eyebrow in Moscow (in the Soviet Union they are the property of state-owned machine tractor stations). In general, the regime is less master of the situation in the countryside, where it has opted for concessions because it needs quick results. The shape of the plan is apparently not final. It is to be debated at various levels, and the amendments, if any, will be interesting pointers.



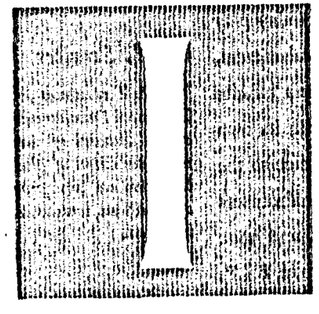
The first stage of the Kariba hydro-electric scheme will cost about £78 million. When the original contracts were announced disappointment was felt in this country because the main contract for the civil engineering work, worth about £25 million, had gone to an Italian firm. Consolation, however, may now be derived from the fact that with exception of the transmission lines, all the electrical equipment for this major electrical generation and distribution project will be supplied by Great Britain.

KARIBA



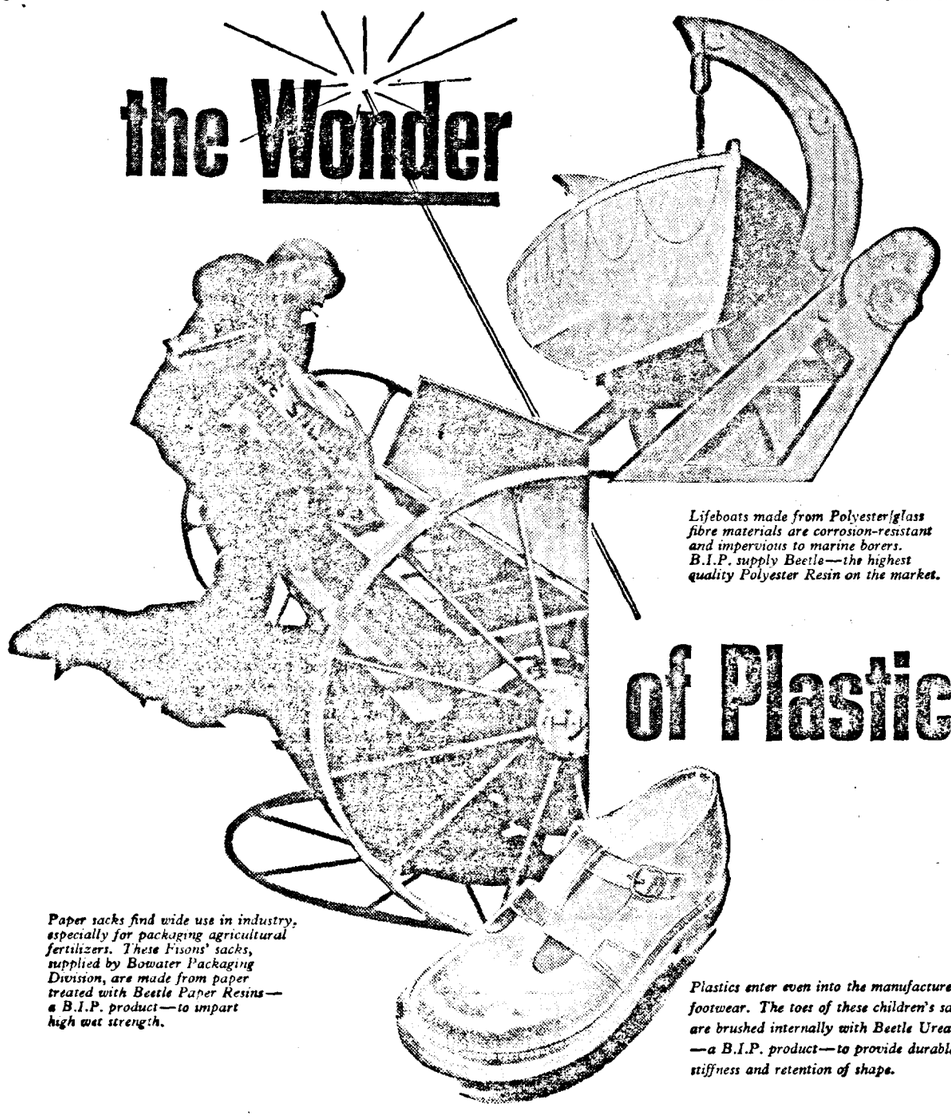
The first five water-wheel alternators which will generate electric power from the waters of the Zambesi are to be built by Metropolitan-Vickers. Each alternator will weigh as much as 750 tons, and this order alone is worth £1¾ million. The British Thomson-Houston Company is to supply 330,000 volt switchgear which will control this power, at six sub-stations from Kariba to Bulawayo.

MILLIONS



This is one of the first two orders for such high voltage switchgear to be received by British firms, and this part of the contract is worth more than £2 million. Metropolitan-Vickers have received the other high voltage switchgear order which is for air-blast circuit breakers for the Snowy Mountains hydro-electric scheme in Australia. For the Kariba project these two A.E.I. companies, which compete one with the other in many spheres, have together received orders worth £4 million.

the Wonder of Plastics



Lifeboats made from Polyester/glass fibre materials are corrosion-resistant and impervious to marine borers. B.I.P. supply Beetle—the highest quality Polyester Resin on the market.

Paper sacks find wide use in industry, especially for packaging agricultural fertilizers. These Fisons' sacks, supplied by Bowater Packaging Division, are made from paper treated with Beetle Paper Resins—a B.I.P. product—to impart high wet strength.

Plastics enter even into the manufacture of footwear. The toes of these children's sandals are brushed internally with Beetle Urea Resin—a B.I.P. product—to provide durable stiffness and retention of shape.

In sacks and shipping, in fashions and footwear, plastics today play their part. Their role may be contributory, it may be fundamental, but the wonder of plastics is in their versatility, their infinite possibilities. Types and grades are innumerable, each with its own properties—and limitations—presenting a wide field of choice to the intending user. The leading plastics materials manufacturers maintain extensive consultative and development services, and none is better qualified to advise and assist than B.I.P.

B.I.P. *Services*

The full resources of the B.I.P. Research, Technical Development and Design services are at the disposal of manufacturers interested in the possibilities of plastics. Advice will gladly be given on any problem concerning plastics applications, irrespective of the type of material involved.

THE BUSINESS WORLD

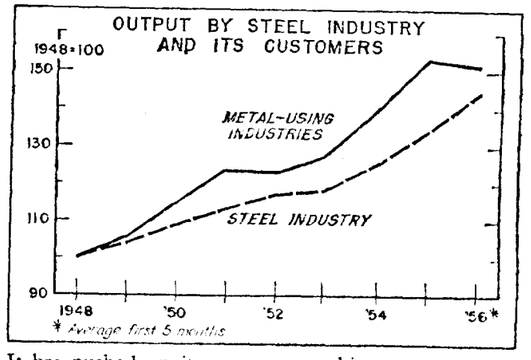
Steel Cannot Freeze

DURING the 1954-55 boom, as during other surges of economic activity in Britain since the war, output in the industries that use steel shot up at a rate that the British steel industry was quite unable to match. And last year that growth out of balance in the industrial structure of the country played a significant part in the balance of payments difficulties that led the Government to apply its successive measures of credit restraint. Exceptionally large imports of steel as well as coal had to be brought in to help make more metal goods than ever before, since home supplies could not meet the full demand: and not enough of the extra metal goods were sold abroad.

This year credit restraint has effectively checked the growth of output in the metal-using industries, but it is taking some time for their steel demand to respond. In the first half of the year their production seems actually to have fallen below the level of twelve months before; but they bought nearly 11 per cent more steel. The amount they actually used, so far as can be judged from statistics of steel deliveries, imports and reported stocks in all hands, seems to have been lower in the second quarter of this year than in the first; but the pressure of total demand for steel has not greatly moderated. At the end of June the consuming industries' stocks of steel were very high—about 3¼ million tons of finished steel, 14 per cent up on a year before.

So far, not many of these steel customers seem to be using up those stocks and cutting down orders for fresh steel, though some that had been importing heavily on their own account have certainly ceased to buy steel abroad. They have, after all, good reason to suspect that some increase in steel prices cannot be long delayed; and many of them may feel that unless inflation is checked a good deal more decisively than it has been so far, heavy stocks of steel will remain a good thing to hold. Moreover, with the gradual shift towards exports and capital goods, their output may soon be on the upgrade again. On the other hand, these unusually high stocks are becoming steadily more expensive to finance: and the possibility that a significant number of customers might decide to fall back on them more or less at once does constitute quite a significant built-in uncertainty in steel market prospects during the next six months or so.

The industry, to do it credit, is at present much less concerned with short-term market prospects than with long-term prospects of expansion—for its customers and itself. It has been raising its output more rapidly during the last two or three years than ever before, even if it has not managed to keep up with its customers.



It has pushed up its own output this year—to a rate of, say, 21.3 million ingot tons—at the same time as its customers' output fell off. And it is revising upwards its production plans for the next seven years. As the Iron and Steel Board records in its second annual report this week, the industry is now prepared to raise its output to 23½ million ingot tons by 1958, something over a million tons more than it originally intended by then; and the British Iron and Steel Federation has been talking for some time of 28 million ingot tons a year by 1962.

That would mean doubling the output of the British steel industry in 15 years ; but at the rate of expansion they achieved between 1948 and 1955, the main metal-using industries would double their output in 10 years. Even though steel consumption need not rise quite as fast as output of the goods made from it, as efficiency in its use increases over the years, the 1953-55 demonstration of the sheer rate of climb that these customer industries can achieve once given their head may leave some misgivings. So may international comparisons with other steel industries. British steel output, at present, is growing and is planned to grow proportionately faster than output in the United States. Russian output has been and is growing faster, but the extent to which it is significant in international competition is still uncertain. Output in Western Germany has recently been growing much more rapidly and has passed the British level. That has been the recovery from a collapse of production ; but the extent to which Germany has been spending money on development suggests that for some years at least it will go on expanding faster than Britain.

Investment in West German steel last year, for example, appears to have been close on twice as much as in British steel. Development expenditure in Britain, as measured by the Iron and Steel Board's figures of expenditure on schemes costing more than £100,000 each, did in fact decline a few years ago, particularly when allowance is made for the fall in the value of money.

	£ million		£ million
1946	5	1951	62¼
1947	30	1952	65
1948	40½	1953	49
1949	50½	1954	52
1950	56¼	1955	58

In real terms, last year's expenditure probably bought little more development than in 1947. It is fair to say that the expenditure expected this year may be nearly half as high again in money: in real terms, perhaps, around the peak levels of investment achieved in 1950-52. The steel industry, moreover, was bedevilled with politics in the years when its capital expenditure faltered ; whatever his intentions, the presence of Mr Hardie breathing down one's neck was not entirely likely to promote confidence among steelmakers in the future of their industry.

Other discouragements have had a more lasting tenure. One potent factor influencing the steel industry's ability and willingness to invest in steel development since the war has been the policy of stable, controlled, and therefore low prices it has followed. The steelmasters may fairly be said to have chosen this policy before the war ; in principle, perhaps, most of them still believe in it ; but during and since the war the actual price control has always been largely in the hands of outside authorities. Since the war, the guarantee of stability for which the industry was prepared to exchange its powers to raise prices as it chose has been a dead letter ; at no time has demand slackened enough to make significant declines in price a live issue. Stability, therefore, has meant first that the industry has been unable to take advantage of its sellers' market—except through export premiums on selling steel abroad, the amount of which has also been broadly controlled. Secondly, the controlled price has seldom been adjusted upwards as fast as steelmaking costs have risen. Thirdly, the costings upon which the maximum price is fixed, while generous in their allowances for depreciation (based upon replacement costs), allow profit margins based upon capital employed only at written-down historical costs. In some cases—though not all—such margins hardly encourage expansion of output of certain kinds of steel.

★

Narrow margins, it may be said, did not prevent the major steel companies from showing handsome profits in the year ending in October, 1955 ; and though those profits do not seem likely to be quite so handsome this year, it will probably be extra costs to be absorbed, thinner pickings from export premiums, and the cost of the maintenance men's ban on overtime that affect them, rather than margins on home output. But the question is whether those margins and the extra allowances for depreciation over and above historical costs of plant—both after tax—are such as to encourage the expansion of output. This is partly a technological question: the dramatic improvements in productivity offered by a strip mill over the older processes of making thin flat steel, for example, make it well worth while putting in new plant or large-scale extensions, even with the present capital cost of plant. For certain kinds of heavy steel, where no such dramatic technical changes have taken place, expansion at current capital costs—out of the net return that the controlled price offers—is a much more dubious proposition. This is not simply a matter of self-financing, though the industry is leaning in that direction. Given an adequate net return on new investment, self-financing or raising money outside is a choice of policy ; without it, neither is on.

It is highly understandable that the steel industry should have declined the Government's invitation to join in the price freeze. A review of prices is now in train, taking into consideration not only the several additions to direct costs that were not taken into account when steel prices were raised in May, but also the whole estimation of capital employed, the depreciation formula, and the margins to be allowed on different products. To the outsider, no great disagreement is apparent between the price-controlling authority, the Iron and Steel Board, and the steel industry itself over the fact that prices need generally to be adjusted upwards, though there are plenty of arguments over detail. The more immediate disagreement might come this autumn between the industry and its price controllers on one side and the Government on the other. If price stability in steel is incompatible with growth, which is more important ?

Price List for New Pensions

NOW that the "self-employed" pension arrangements have been duly placed on the statute book, the assurance offices are vying with each other to produce attractive pension arrangements which will comply with the requirements laid down in this year's Finance Act. The Chancellor claimed to have implemented the Tucker II Committee's recommendations in a simple and modified form. That may be so ; but the policies that the offices are offering are surprisingly diverse in type and number and the complexity of choice for the self-employed man who at last has a fair deal for retirement must seem quite bewildering. This article is intended to make his task a little easier.

What he may decide to set aside for pension rests on several factors. One is the amount that he thinks he can spare out of his income, given the standard of living he is used to, the obligations he has already assumed, and his marginal tax rate. But in any event his contribution will be subject to limits at the upper end according to his income and his age. The maximum standard contribution is £750 a year or 10 per cent of net relevant earnings, whichever is less. But the over-forties can go to higher limits, if they wish, because they have a shorter remaining working life out of which to build up their pension. For them the limits are:

Born	Maximum Contribution lesser of	
	£	Per cent of Earnings
1914-15	825	11
1912-13	900	12
1910-11	975	13
1908-09	1,050	14
1907 or earlier	1,125	15

This means, for example, that a self-employed or professional man of 48 with an income of £6,500 could use £910 of it (if he wished) towards a pension—with the premium allowed for tax relief. The limits of advantage are set by an income of £7,500 and an age of 50. The rest is for him to choose.

He will soon find that if he wants to secure any benefits beyond a straightforward pension on his own life it can be done only at the expense of a reduced pension for a given premium. The highest pension should be secured by a deferred annuity, with no right to the return of premiums if he should die before attaining pension age. Yet there would be some reluctance to recommend policies in this form alone: the policyholder himself may understand his decision to go for the highest pension knowing that if he does not survive to pensionable age there will be nothing, but his dependants or other potential beneficiaries may feel very aggrieved to discover that nothing is coming back from the sum paid in on the policy.

The Act allows pension payments to be guaranteed for 5 and for 10 years and most offices are quoting on one of these bases. A wealthy man who elects for a guaranteed pension might reflect that if he dies before the guarantee expires he may merely be contributing to the Exchequer, for the annuity payments outstanding under the guarantee will not only be subject to income tax, and perhaps surtax, but to estate duty as well. Policies that provide for the return of premiums in the event of the death of the contributor before he reaches pensionable age vary between allowing no interest at all and allowing up to 4 per cent. Those offices that bind themselves to return only the premiums without interest can apply the interest they earn on the funds of those who do not reach pensionable age by offering correspondingly higher pensions for those who survive. There seems no way of avoiding any return of premiums being aggregated with the deceased's estate for estate duty.

There has been a rush—particularly on the part of offices with good bonus records for ordinary whole life and endowment assurances—to provide with-profit deferred annuities which will increase with bonuses allocated during the years of contribution. Some of these offices are applying the same rate of reversionary bonus to deferred annuities as for ordinary business. This is surprising. Traditionally, bonuses come from profit on interest, expenses of management and mortality in the life fund concerned. On each of these points pension funds for the self-employed will show differences compared with normal participating life funds. Interest from self-employed pension investments will accumulate tax free against the standard rate of 7s. 6d. in the £ for life funds. Expenses of management can hardly correspond, for while the offices will be involved with increased administration to satisfy the Inland Revenue's requirements, the commission terms to brokers and agents are lower than for ordinary business and there can be no dealings with the new pension policies by way of loan or surrender during their currency. Mortality will affect deferred annuities in the completely opposite way to whole life or endowment assurances—a low mortality rate for annuitants being "a bad thing" for the assurance offices. But no doubt there is much to be said for simplicity and a uniform

(*b*) No guaranteed period ; pensions paid quarterly in advance commencing with policy anniversary following attainment of annuity age. (*c*) Figures in brackets are results with minimum guaranteed bonus. (*d*) Pensions payable quarterly.

rate of bonus for all classes of with-profit business will have a commercial value for offices who can point to a favourable record in the past. The difficulty for the contributor is that one element in his pension is contingent on what happens in future. He has to make assumptions about future rates of bonus—but they remain assumptions which may be exceeded or might not be reached.

Under the Act pensions can be drawn early on the grounds of ill-health, when the normal procedure would be to apply the premiums paid to date to purchase a reduced pension. If, however, the premium were to be loaded appropriately there seems no reason why a policy should not be taken which would provide the same pension either at a selected age or in the event of earlier retirement through ill-health. Such an arrangement would have obvious attractions if it secured Inland Revenue approval and if a satisfactory definition of "ill-health" could be devised.

★

Most offices give the contributor an option to take a joint pension with his wife when he retires, though the pension secured on their joint lives will be lower than the pension on his life alone. It is also possible to arrange for reversionary annuities for widows, to begin on the husband's death, whether it occurs before or after retirement age, provided they do not exceed in amount the husband's pension. Since such policies can be written so that the husband has no interest in them from the outset, they can form a separate estate for duty purposes (and thus attract a lower rate) whereas a return of premiums would be aggregated with the estate and attract duty at the rate applicable to the total estate. A combination of a deferred annuity without return of premium on death with a reversionary annuity for the surviving widow has its attractions ; but if part of the premiums is used for reversionary annuities there will be less available for pension—and owing to the facts that life cover is provided and that women live longer than men, reversionary annuities tend to use up a lot of premiums.

Life cover can be provided by the new pension policies only to the extent of return of premiums (with or without interest) or by reversionary annuities. But the offices will be anxious to obtain further business by providing additional life cover. Here the most common suggestion is for reducing term assurances, under which the cover is greatest at the beginning and falls with each premium payment. Supplementary benefits of this nature, however, are outside the scope of the new pension arrangements ; the premiums rank only for life assurance relief and their appeal will depend on individual taste and circumstances.

★

The Act allows pensions to start at any age between 60 and 70 and offices are showing a welcome flexibility in arranging their contracts so that the benefits may be drawn at any age between these limits. Some are showing on the policy the pension secured at each age from 60 to 70 in return for a given premium, and where the policy is expressed as payable at age 65 options for earlier or later retirement are given. In some cases it is possible to defer the decision regarding a guaranteed period for the annuity until retirement takes place. Incidentally, there is no need for actual retirement to take place before the "pension" starts to be drawn. Earlier retirement than at age 60 is only permitted by the Act where it is the custom in any particular occupation for there to be an earlier retirement age, in which case the lower limit drops to 50 ; and on the grounds of ill-health.

Incomes of the self-employed can fluctuate fairly widely. Should the self-employed contributor wish to pay fluctuating premiums, according to his changing income, he would normally be able to do so by buying, in effect, a series of "single premium" policies. But most offices are suggesting annual premium contracts with "paid-up" policy options under which adjustments to subsequent changes in income can be made if desired.

★

Although negotiations with the Inland Revenue about the precise conditions of the new policies are not yet complete, most offices have now published rates and forms of contract. But it seems likely that some appreciable modifications will occur in them as the market settles down and finds out which type of contract has the most appeal. It is too early to say; the self-employed can now pay pension premiums out of their gross income, but the effect of these far-reaching concessions on the disposition of their incomes remains to be seen. Their main appeal will obviously be to the surtax payer, who will be able to make some nice calculations about the net cost of his contributions from the top slices of his income. The individual whose rate of contribution will be sufficiently high for the resultant pension to be liable to surtax may well be more tempted by the "fringe" benefits permitted. In any list of specimen rates at this stage some omissions are inevitable, but professional and self-employed people who have been eagerly awaiting the opportunity to take advantage of the new arrangements can now pause and consider the variations of policies and premiums that the life offices are now offering. Rates must be considered in conjunction with policy conditions and it does not follow that if an office quotes a better rate than another for retirement age 65 it will necessarily show better results if retirement is taken at 60 or at 70. A little tax-free interest on premiums may be lost by deferring a decision until the market is more settled, but there is plenty of time to obtain the tax concession within this fiscal year.

Business Notes

The Cost of Going Round

To calculate the cost to shipowners and their customers of sending ships round the Cape of Good Hope instead of through the Suez Canal is still impossible. Indeed, the amount of shipping that has been diverted so far is modest, though it happens to include some of the more impressive liners. P & O and Orient Lines have diverted their passenger liners and a few cargo liners, but still hope to maintain at least a small service through the canal to India. The French lines serving Indo-China and the Dutch lines will go round the Cape. So will British troopships. As yet it is certain only that the number of ships diverted could be increased, and that diversion would involve extra costs falling quite unevenly on the different routes. At one extreme is Australia: no change is proposed at present in passenger fares to Australia nor has the conference made any change so far in liner freight rates on that route; the detour round the Cape takes one or two days longer, and the cargo shipowner's risk is largely that of losing valuable cargo to intermediate ports, while the passenger line is at risk on the cost of providing extra ships to serve passengers to India or losing his Indian passage money. At the other extreme a tramp ship belonging to Silver Line has been chartered to take about 8,000 tons of sugar from Britain to Port Sudan with the option to the shipowner to go round if necessary. If that option is exercised, and an extra 30 days taken for the voyage, the freight charge will be nearly £15,000 higher.

★

Such arrangements do not mean that the extra costs for these runs can be exactly calculated. Clearly shipowners' costs must rise and the rise must be steep on some routes. The 15 per cent increase announced on Far Eastern freights (but not on intermediate freights) and the 20 per cent increase that P & O has announced for its Far Eastern passengers on the *Chusan*, diverted round the Cape, take account of that. War risk insurance rates on cargo for the Suez area have been raised in two stages by 5s. per £100, though it is fair to add that a high proportion of the war risk on hulls is insured through the shipowners' mutual clubs. The clubs have not changed their rates and shipowners will only suffer if the club gets a claim and has to make a call. Costs at Cape Town and other South African ports seem certain to rise and there may be losses of time, too, as congestion in those ports increases. Fuel oil is already 34s. 6d. per ton dearer in South Africa than at Aden and diesel oil 33s. 6d. dearer. There are now rumours of an increase of as much as 60 per cent in Cape Town port dues. Hull insurances have not so far risen; in general they are on fairly long contract.

A number of shipowners have recently received requests from the Egyptian authorities to pay their dues to the new canal authority account. So far as the British and French owners are concerned, they have no permission to make payments to the new Egyptian canal authority even if they wished.

British Exports to the East

So far the burdens placed on British exports to the East are small. The increase in liner freight rates applies at present only to shipments between Europe and the Far East, a region which collectively takes some five per cent of Britain's total exports; liner rates to Australasia, by far the largest market, are fortunately not affected. The burdens will become weightier, however, if freight rates between Europe and the Indian sub-continent have to be increased. India alone takes nearly five per cent of Britain's exports, mainly machinery, iron and steel and other metals, transport equipment and chemicals. It is on these goods, not consumer goods, that higher freight charges are felt though the extent of the increase varies with the volume and value of the cargo. To take an example at one end of the scale: a 15 per cent increase in freight rates to India would raise the landed cost of a jute loom by £40 to £7,700 c & f Calcutta, an increase of only 0.5 per cent. The landed cost of a small boiler, on the other hand, would rise by £100 to £1,700, an increase of six per cent.

For goods already ordered for the Far East the additional freight charges will fall to the buyer's account, as provided by the contract of sale. For new business the buyer will certainly be pressed to pay the full increase. Whether British exporters will be obliged to absorb a part of it depends partly on the state of demand—which for most capital goods is still buoyant—and partly on what their competitors in Western Europe do. But Britain cannot reckon with its Continental competitors alone. Japan is presenting a formidable challenge in Eastern markets for capital as well as consumer goods, and the much shorter haul is to its advantage.

Higher freight rates, however, are not the only extra costs to be considered. Delays in shipments, and the difficulty of securing freight at all will become expensive if a large part of the traffic has to be diverted round the Cape and the shortage of freight will not apply to Indian and Far Eastern markets alone; Eastern Mediterranean and Red Sea ports would certainly be sharply affected. Delays in shipments mean delays in receiving payment, and the exporters' working capital would be stretched. The credit squeeze will thus be reinforced from an unexpected quarter.

Where the Shoe Pinches

Two areas that will obviously be much affected if more ships are diverted are the Mediterranean, which relies to an appreciable extent on shipping passing to and from the Suez Canal, and India, where the lengthening of the voyage if ships have to go round the Cape will be great. The difficulties in the Mediterranean are somewhat alleviated by the decision of the shipowners' conferences to leave it to the companies' individual discretion whether or not to cut out their Mediterranean calls. P & O will still call at Marseilles and Genoa with such cargo there as it is able to send through the Canal, and the Dutch lines intend to continue calling at Marseilles. The Dutch ships will have to go into the Mediterranean and out again into the Atlantic.

India is probably the shipowners' worst headache. To go to Bombay round the Cape involves a loss of time of about 11 days on a fast vessel. To keep up a reasonable schedule to Australia, therefore, India must be omitted. Yet lines with long-established connections with India would be most reluctant to abandon it. P & O has a few sailings planned, some of which it apparently still hopes to send via Suez. But as yet there is no agreement in the Indian Conference to raise freight rates. Obviously if Suez became impossible even the Indian members of the conference might have to agree to higher charges. The more these longer voyages become necessary the greater will be the demand for tramp tonnage. If the tramp freight market so far fails to reflect that demand, it is because the policy of charterers so far is to wait and see. At the moment the volume of business has actually diminished and it is possible that however the Suez crisis is resolved tramp freights will rise because of the backlog of business.

Financial Pressure on Egypt

The monetary sanctions taken against Egypt by many of the users of the Suez Canal have so far shown no sign of bringing Egyptian trade to a standstill. This is partly because Egypt is now receiving a proportion of the Canal dues, estimated at between one-third and a half, in a form in which the foreign exchange can be used without hindrance. Moreover Egypt has at its disposal a gold reserve of about £60 million which could be used to finance essential imports. The restrictions on payments by certain of the Canal users, however, is causing a considerable reorientation of Egyptian trade, mainly towards the Communist countries and towards a number of the Bandoeng nations which have gone out of their way to counteract the sanctions of the Western Powers. The key move by the West was the British Government's decision to remove Egypt from the transferable sterling account area and to control, and if necessary stop, payments into and out of Egyptian sterling accounts. Personal withdrawals of up to £100 have been permitted for Egyptians residing in Britain but commercial payments out of Egyptian accounts have been persistently refused except for transactions covered by confirmed credits arranged before July 27th. There is a mounting number of British exporters to whom money is due but who are prevented from receiving payments which importers in Egypt would be perfectly willing to make, and for which the sterling is available in London. The predicament of holders of private accounts, discussed on page 947, is another oddity of the regulations. The latest published figures suggest that the freely available Egyptian sterling amounted to about £27 million when Egypt was removed from the transferable account area. The balance in the blocked No. 2 Account is about £110 million.

The similar immobilisation of Egypt's French franc assets has been of much less importance, for these balances (other than those belonging to the Suez Canal Company) are meagre and francs do not have the virtue of transferability and were not used outside Franco-Egyptian trade. The United States has blocked Egyptian government accounts but has not interfered with private dollar accounts. No other European countries have similarly immobilised Egyptian assets. Since Egyptian trade with them was for the most part conducted in sterling the departure of Egypt from the transferable account system has removed the principal mechanism by which trade between Egypt and the rest of Europe was financed. The recent Egyptian embargo on all imports from countries which have placed restrictions on Egyptian assets is largely a propaganda move, which makes a virtue of necessity; since Egypt is without means of payment these countries have virtually stopped current exports to Egypt.

Many countries East of Suez have made special arrangements for easing the pressure of these payments restrictions on Egypt. India has made rupees available, pending a more permanent settlement, for payments due by Egypt for imports from India. Indonesia is deferring payments in respect of its shipments to Egypt. China has used some of its sterling to establish a 20 million Swiss franc account in favour of Egypt in Switzerland. Japan has announced that Egypt will be allowed to defer payments for certain imports from that country. The main development which is preventing sterling and other payments restrictions from becoming a stranglehold on Egypt is, however, the income which Egypt is receiving in readily available foreign currency from many of the ships using the Canal.

Rescue by American Oil?

The American Government, after consulting the four largest oil-producing States, has declared that, if tankers could not use the Suez Canal, the United States could produce an additional 500,000 barrels of crude oil a day (25 million tons a year); if the pipelines to the Eastern Mediterranean were cut as well, a further 600,000 b/d could be found, making a total increase of 1,100,000 b/d or 55 million tons a year in American domestic output. Some 13 million tons a year of Middle East oil are at present shipped to the United States, and the first charge on the extra domestic output would be to replace this. The extra American supplies could be supplemented by additional shipments from Venezuela to Europe, although to the extent that these were merely a diversion of Venezuelan oil now shipped to the United States, the availability of American oil for export would be reduced by a corresponding amount.

How much, under the American government's two assumptions, is Western Europe likely to need? Under normal conditions, Western Europe would have consumed

this year some 100 million tons of Middle East oil. The pipelines to the Mediterranean, if they remain open, could carry 40 million tons of this, leaving 60 million tons to come either round the Cape or from the Western Hemisphere. To ship 30 million tons round the Cape would take up roughly as much tanker tonnage as 60 million tons shipped through the Suez Canal as the voyage round the Cape is nearly twice as long. This would leave 30 million tons to be brought across the Atlantic—rather more than the American government assumed, but still well within America's ability to supply. Tankers enough to transport this amount could probably be found. There would be a saving of the equivalent of about 100 T-2's now employed in carrying Middle East oil to the United States. Over a score of tankers could be taken out of the American government reserve fleet, and at least as many again out of the American coastal trades, although the season of peak demand for coastal tankers to stock up fuel oil for the American winter is just beginning. These savings, reinforced by the fully integrated operation of the world's tanker fleets, should suffice.

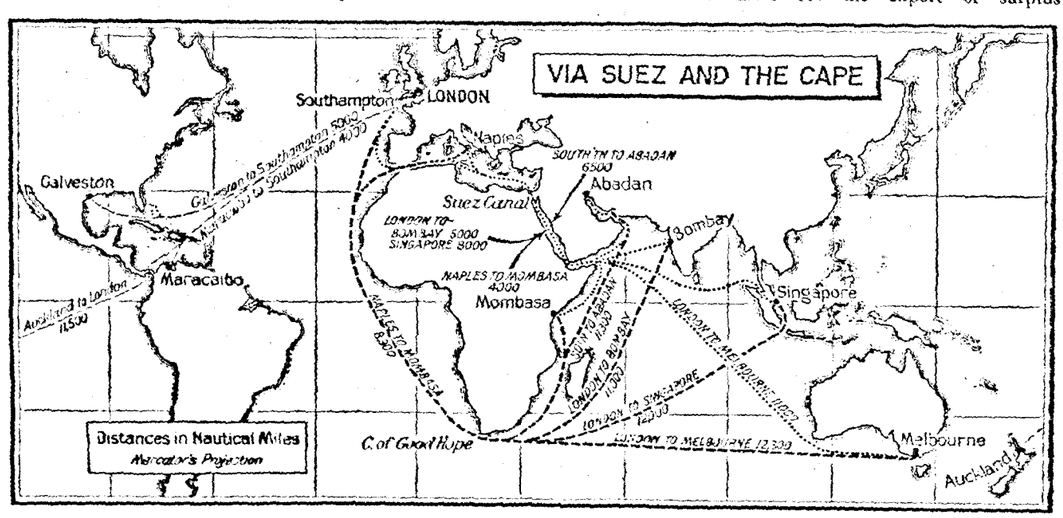
Even Without the Pipelines?

IF the pipelines were to be closed as well as the Suez Canal, some 70 million tons of oil would have to be brought across the Atlantic, even if 30 million tons could still be loaded in the Persian Gulf for shipment round the Cape. Another 70 million tons of Western Hemisphere oil for Europe could probably be found, and the American oil companies might not be averse to demonstrating to the Arabs that the world could manage, at a pinch, without 70 per cent of the Middle East's oil. But the world tanker fleet, already intensively employed, would in that case have to be squeezed to take a further 40 million tons across the Atlantic, a voyage nearly half as long again as that from the Eastern Mediterranean terminals.

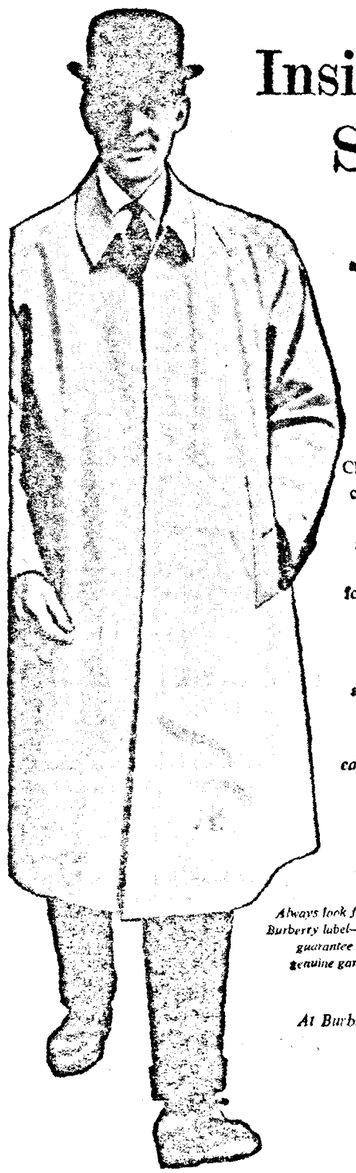
Given full scale emergency conditions in Europe, rationing of supplies for essential needs, and the complete integration of the world tanker fleet, even this should be possible. But what of the cost? At the current price of Texas crude at $2.90 a barrel, Europe's additional supplies—even if they could be obtained without paying premium prices—would cost $650 million (if the pipelines to the Mediterranean remained open) or $1,500 million (if they were cut), without counting extra freight costs. The British share of this burden would depend, in part, upon the pattern of distribution within Europe of the supplies still brought from the Persian Gulf and Eastern Mediterranean terminals, if they were open. But this country consumes between a fifth and a quarter of all the oil shipped to Europe, and is hardly likely to escape bearing an equivalent share of the additional dollar cost. This is enough to dim the attractions of any boycott, but if the cost had to be incurred, there is much to be said for the suggestion that the extra imports of dollar oil might be repaid in kind at a later date. The total sum involved would be the same, but such an arrangement would have the merit of guaranteeing a future American market in which the dollars to repay the loan could be earned.

Finding the Dollars

IF the Canal Users' Association were to impose a boycott of the canal and compels traffic to use the longer Cape route, the resultant shortage of Middle East oil would call for substantial diversion of oil from the Western Hemisphere to Britain and the rest of Western Europe. The problem of paying for that oil is among the issues that have been under discussion in London and Washington in recent days. Three possibilities have been considered. The first is that the dollars required to pay for Caribbean and other Western Hemisphere oil should be made available on normal commercial terms through the Export-Import Bank. Facilities of up to $500 million have been mentioned in the United States. Whether the British and other governments concerned would, or should, regard the financing of oil as an appropriate purpose for which dollar indebtedness should be incurred is still for them to decide. A second possibility is that the oil in question should be paid for in local currencies, under arrangements similar to those for the export of surplus



BY APPOINTMENT TO HER MAJESTY THE QUEEN
WEATHERPROOFERS



Inside Story

IT'S the hidden points about a Burberry which really put it one up on the others. Exclusive DOUBLE-PROOFING of cotton gabardines—in the yarn *and* in the piece, for *extra* weather-protection. Close weaving. Generous cutting for extra roominess. Tailored hand-sewn collars, graded to your linen-collar size for a perfect fit and 'sit'. Hand stitching, superb finishing, exclusive luxurious linings . . . and of course they *look* so good. These are the reasons why you just *cannot* better a Burberry. From 7 guineas.

Always look for the Burberry label—your guarantee of the genuine garment.

Rainmaker extraordinary

THE ORINOCO INDIANS thought frogs had the power to make rain. As protection against drought they kept frogs captive. Then, if it got too dry, the captives were paraded and given a gentle beating; the idea was to make them croak and so bring on a shower.

Protection today is less bizarre, more scientific. Not least in modern industry where protection—product packaging—is often the key to successful marketing on a national scale. Today "Fiberite" cases, and cartons made from "Thames Board" are used with confidence by every division of industry, to deliver their goods and display them to advantage.

As long as the competitive spirit lives in business, as long as our economy is built on the capacity of people to consume the goods our manufacturers are able to produce, so long will packaging continue to play its part as a sales aid as well as a safeguard.

Today, as the result of a planned policy of expansion, Thames Board Mills are increasing production to meet the ever-growing demands of industry for more and better packaging material.

agricultural produce. There is, however, no exact parallel between these operations. The agricultural surpluses are already in American government ownership, having been acquired through the Commodity Credit Corporation. There is no similar organisation that could acquire dollar oil for dollars and then resell it to Western Europe against local currencies.

It has also been suggested from the European side that sales of Western Hemisphere oil should conform to those which already exist in respect of Middle East and Trinidad oil under arrangements made with other American companies. The effect of this would be that sales in the sterling area and other non-dollar countries would be made for sterling and in dollar areas for dollars. These arrangements, however, are based on the fact that the American companies concerned spend sterling on an appropriately substantial scale. The producing countries accept sterling in respect of royalties and in most cases the profits of the operating companies are subject to United Kingdom tax. These reservations could not apply for Western Hemisphere oil, though it would be open to American companies to increase their sterling expenditure, as has recently been done for example in the supply of oil piping from Britain to Venezuela.

These possibilities have so far been discussed in the vacuum caused by complete uncertainty about the intentions of the Canal Users' Association if Egypt remains obdurate. If a boycott of the canal becomes inescapable, heavy additional expenditure will be incurred and special payments arrangements will have to be devised. But until a major diversion of oil traffic round the Cape occurs these remain matters of conjecture.

Afterthoughts on Commodities

PRICES of the commodities most sensitive to the Suez troubles have sagged this week after their sharp rise last week. Tin, copper and the other non-ferrous metals have declined and rubber is slightly cheaper. While convoys are still passing through the Suez Canal few consumers are inclined to buy more than they need; indeed consumers have throughout shown a somewhat surprising reluctance to build up stocks. Nor do the professional market operators seem willing to take much of a view one way or the other. The decline in copper has been helped by the resumption of work by Africans at most of the mines on the Rhodesian copperbelt, though no one can be confident that fresh troubles will not break out.

The increase of 15 per cent in liner freight rates from the Far East is small in relation both to the cost of Eastern commodities and to the fluctuations in price that are common in these markets. Of far more importance would be the disruption of shipments, and consequent shortage of nearby supplies, that would follow the wholesale diversion of traffic round the Cape. It is that contingency that maintains prices of commodities, such as rubber, that are basically rather weak. The appreciation in the value of commodities as they approach European shores is illustrated by prices of raw jute from Pakistan. While jute firsts for October/November shipment fetch about £88 a ton cif Europe, there is a premium of about £8 a ton for the same jute on a steamer east of Suez, and a premium of about £10 a ton for cargoes west of the canal. The fear of an interruption of shipments has evidently spread now to the London tea market. Prices of common tea have risen, despite the news of increased production in North India last month. It is not only the shipment of tea to the west that would be delayed. Shipments of Ceylon tea to Australia are already

	July 26	Sept. 13	Sept. 20

Copper, „ „	£288	£310	£297
Rubber, spot, per lb	27d	29d	28⅛d
Wool top futures (Dec.), per lb	114d	129½d	130¼d

affected by the reduction in the number of vessels calling at ports in the Indian Ocean on their way east.

The bulk of India's exports—tea, jute goods, oils and oilseeds, manganese ore and cotton—is normally shipped via Suez. If freight rates from India go up it may not be possible for India to pass on to buyers the full increase in such commodities as manganese ore, which are sold in competition with suppliers nearer to Europe. Prices of its imports, in addition, would probably have to absorb most of an increase in freight rates. India's foreign reserves, already fully committed to the five-year plan, would thus be squeezed from both sides of the trade account.

No Autumn Budget?

AN official spokesman has this week denied a new crop of rumours that Mr Macmillan was already making plans for the introduction of an emergency budget this autumn to cope with the domestic strains of the Suez crisis. There are no such plans. This does not mean, of course, that the Chancellor has set his face against a supplementary budget whatever the circumstances; it simply means that no such change has yet occurred as would justify special budgetary measures—and might also mean that no such change is expected. Obviously, the Suez crisis has already imposed an additional strain both upon the budget and upon the economy; but, in terms of actual budgetary expenditure, the addition so far may be presumed to be within the range of changes that often occur within a budget year, and might even pass virtually unnoticed unless, as in this instance, special circumstances draw attention to them. They are not of a magnitude to require a recasting of the budget.

Equally obviously, the wider economic repercussions of the Suez crisis are only just beginning to develop, but nobody has yet any basis for estimating their nature, magnitude or duration. No decision would ever be taken to introduce a supplementary budget in conditions of such uncertainty—unless even the best assumption showed it to be necessary. Short of a quick settlement of the whole dispute, the best (economic) assumption now is that a substantial proportion of the normal flow of traffic continues to pass through the canal. If that happens, the additional burden upon the domestic economy in the immediate future would be slight (though it would be far from negligible on the balance of payments). But if traffic

through the canal is seriously diminished or stopped, the domestic burden will depend upon how far and how quickly alternative routes and sources of supply can sustain Britain's trade. Neither the nature nor the extent of the resultant disturbance can yet be assessed—and, more significant from the budgetary point of view, it is impossible to guess how the balance would rest between inflationary and deflationary influences. A slackening of exports would be deflationary, but of imports, inflationary.

Suez Markets

On Wednesday afternoon as the buying for the new account developed investment markets seemed to be shaking off a little of the Suez fears that had been restraining them. An advance developed in oil shares, not only those Western hemisphere oil shares that had been good propositions on the worst possible assumptions about Suez but also BP and Burmah, the two companies most obviously vulnerable to any interruption of the canal traffic. Shipping shares that had been heavily bought during the previous three days became a little irregular and even the gilt-edged market, though it is not affected by buying for the account, developed a firmer tendency. The background to this small, but possibly significant, change was the stronger tone of sterling. The same market tendencies supplemented by a rise in some of the hire purchase shares and by the continued strength of gold mines continued on Thursday.

	July 26	Sept. 12	Sept. 19
Shipping			
Aviation Shipping	7/8½	7/7½	8/4½
Coast Lines	28/9	28/9	29/–
London & Overseas Freighters	81/–	127/6	127/6
Reardon Smith	40/9	39/6	42/6xd
Stanhope Steamship	25/9	28/–	30/9
"Canal" Oil			
British Petroleum	174/4½	145/3	143/9
Burmah	111/10½	87/6	88/9
Western Hemisphere Oil			
Apex (Trinidad) Oilfields	38/–	43/9	46/3
Shell Trinidad	58/9	58/1½	61/3
Ultramar	41/–	42/9	46/6

Nevertheless there has been no general expansion of business on either the gilt-edged or the industrial side of the market. The rally in gilt-edged probably reflects mainly an adjustment of books and a slight change of view by the jobbers. Save in the shortest dated stocks, where some banks are believed to have been nibbling, the volume of business has been remarkably small, and despite the modest relief that Wednesday brought, Suez continues to set the pattern of the markets. But there is nothing dramatic in it; the *Financial Times* government security index is hardly perceptibly changed, from 83.54 to 83.41, in a week and the industrial index has remained almost steady at 181.3 on Wednesday if compared with 181.2 a week earlier. As the table suggests there has also been some considerable buying of shipping shares, and some of it has been "new time" buying which suggests short-term speculation.

Commercial Demand for Sterling

The foreign exchange market has this week confirmed the truism that there is a limit to what bears can do. Sterling, oversold consistently for weeks past, has at last begun to feel the impact of genuine commercial demand. It has been strong particularly against those continental currencies such as the German mark, Belgian and Swiss francs against which it had previously been weak. In relation to the German mark the rate for sterling has lifted to 11.69¾ or well above the lower "gold point" of 11.67⅞.

Against the dollar the sterling rate remains steady at $2.78⅛ or just above the Bank of England support point. No official intervention appears to have been called for. Although the whole of the Trinidad Oil money has now been paid there has been no sign of the resulting offer of dollars and demand for sterling in the market. This transaction is presumed to have been completed by a direct deal between the Texas Company and the Exchange Equalisation Account. Security sterling has continued to weaken, the rate falling to $2.59½, and the premium on US dollar securities quoted in London has again widened. It touched 8¼ per cent (over $2.80) at one point on Thursday and some official sales of US stocks were needed to bring it back to 7¼ per cent. The Suez crisis continues to dominate this and every other section of the foreign exchange market. In the prevailing uncertainty dealers are unwilling to run positions of any size, and this is making for unusually thin and potentially volatile markets.

German Central Bank Battle

The German government last week published the bill that seeks to establish a new central bank. This marks the final stage of the government's plan, first drafted in 1950 to replace the proud and independent Bank deutscher Laender. The Bank was established by the Allies after the war on a formally federal basis (on the lines of the Federal Reserve System) and with complete autonomy *vis à vis* the

German government. The government has not relished the co-existence of "a law unto itself" (the phrase is Dr Adenauer's) and aims in its new scheme to increase its own influence. The projected inroads into central banking autonomy have been fought hard by the Bank deutscher Laender, and especially by its chairman, Dr Vocke; the bill now published represents a certain compromise, but one that is weighted heavily on the government's side.

The proposed *Bundesbank* would be both more centralised and more politically controlled than the Bank deutscher Laender. The existing bank, although it has carried out a strong central policy, is owned by the individual *Land* central banks; and its board of directors comprises the presidents of those banks, though under an independent chairman. The Bundesbank would be a central institution, with the Land organisations merely as branches; moreover, all its directors at the head office would be appointed by the government, whilst the branch directors would be appointed by the *Bundesrat* (the federal second chamber representing the Land governments).

The new bill also proposes that the government itself shall be given increased influence in the sphere of the central bank's operations; it increases the government's right to borrow from the bank to 50 per cent of the bank's sales of Treasury bills and bonds. The bank's open market operations could to this extent be directly offset. The Bank deutscher Laender and its influential friends have understandably declined to accept the government's "compromise," and intend to carry the fight into the crucial debates in the two houses of parliament.

The State of the Airlines

THE progress of the air transport industry, as reported by Sir William Hildred, director of the International Air Transport Association, at IATA's annual general meeting held in Edinburgh this week might be summed up as:

Passenger traffic ...	excellent.
Freight	big improvement on the last year.
Mail	could do better if it tried.
Profits	weak, showing net loss on international routes.
Efficiency ...	liable to be handicapped by inadequate ground services.

The airlines were meeting for the first time since the stormy conference held at Cannes earlier in the year when it was agreed to introduce a new and lower third-class fare into the two-tier fare structure of air transport. Those operators who then gave their assent with marked reluctance cannot have gained much comfort from Sir William's figures showing that the industry as a whole was making a bare operating profit in 1955, before meeting charges, of only 1.1 per cent out of a turnover of slightly more than £1,000 million, with every indication that the international services were not even giving this return..

It is, however, hardly fair to give the impression, as the airlines often like to do, that pressure of public opinion from outside is forever obliging operators to cut their rates as soon as the services look like showing a more comfortable margin of profit. The pressures to reduce fares come mitially from inside IATA, from the ginger group of airlines that believe a high rate of turnover can outweigh shaving of the profit margin. These are the airlines that are constantly on the search for bigger aircraft to carry more passengers and then for lower fares to get the extra passengers to fill the bigger aircraft. Buying policy, in their scheme of things, is directly linked to operating efficiency.

The fact that traffic is rising at an increasing rate—16 per cent more passengers in 1955 compared with only a 13 per cent increase in 1954 and 18 per cent more freight (a direct result of more sensible tariffs?)—was offered by Sir William as evidence that the industry's expansion plans for the 1960s are not as wildly optimistic as many of its critics have supposed. But the scars of Cannes are still tender, some worn with an air like the tattered ears of a tabby cat, others not so visible; both Sir William and the current IATA president, Lord Douglas, diplomatically keyed their speeches to one issue on which all the airlines could agree. This was the inadequacy of the ground services within whose framework the airlines are obliged to operate. The owners and managers of airports and of the traffic control system that spans the air routes are always fair sport for the operators who use their services but have little say in their planning. There is no doubt that traffic congestion in the air is becoming serious.

AEI Profits Fall

EVEN the giants of industry are now feeling some attrition of profit margins. The half yearly figures of Associated Electrical Industries reflect the tendency. Compared with the corresponding half of 1955, turnover was £2.6 million higher, but trading profit, assuming an unchanged appropriation to fixed assets replacement reserve, was £1.4 million lower.

	1955 1st half	1955 2nd half	1956 1st half
		£ million	
Value of Output (excluding inter-company trading)	58.6	69.2	61.2
Trading Profit	6.50	6.83	5.18
Orders Received	67.1	73.4	66.9

Orders received (mainly for delivery within three years) have also fallen off. The group naturally has no difficulty in maintaining its second interim dividend for which the 8½ million ordinary shares issued in March this year do not yet participate at 2½ per cent. The market found the interim statement disappointing, and AEI ordinary stock fell 1s. 9d. to 65s. 6d.

Lorries on Show

THE market for commercial vehicles has been more competitive and at the same time more steady than the market for passenger cars. One result is that production has held up fairly well this year in spite of the slump in passenger car sales. The Commercial Motor Show, which opened in London on Friday, is the largest of its kind to be held, a collection of leviathans apparently communing

with each other over the heads of visitors who creep between the flanks of buses and apparently endless road tankers and under the shadows thrown by trailers with as many wheels as giant centipedes.

	1955 (7 months,	1956 Jan.-July)
Production	189,746	193,540
Exports	90,422	96,343

The ingenuity that has gone into the design of these vehicles is considerable, not only to give the mechanical strength they need to carry heavy loads under awkward conditions, but also to ease the strain on the crews by using every possible mechanical and hydraulic trick to cut down the manhandling. These developments are now beginning to reach the more humble type of lorry and light van. The two big innovations of the show were Vauxhall's power steering on heavy Bedford vans for an extra £38 and Standard's two-pedal control on vans for an extra £16. It is only since the middle of the summer that the home market has shown any sign of feeling the credit squeeze. Sales of light vehicles are reported to be slowing down and there is a fairly widespread tendency to squeeze a few more months out of lorries, or to buy second-hand before replacing them.

Money for American Oil Companies

SEPTEMBER is normally an active month in the new issue market and despite inactive investment markets—perhaps almost because of them—the institutions seem to have money available for the issues that take their fancy. Two groups of borrowers are ready to bid for money—the smaller gilt-edged borrowers and the American oil companies. The latter are prepared to offer attractive terms. Caltex Oil has this week placed £3 million of 6 per cent guaranteed loan stock 1971-76 at £98 per cent. It is a private placing arranged by Morgan Grenfell and Company, and the stock will not be quoted. It will help to finance the group's Indian refinery and is guaranteed by the three main operating companies of the Caltex group, of which Standard Oil of California is the largest. The yields of £6 2s. 6d. per cent flat and £6 3s. 6d. to redemption to the latest date are certainly attractive. They do not necessarily set the pattern for the issue planned in a few weeks' time for Esso Petroleum, which is to be much larger. It is expected to take the form of a debenture issue to the public, with a quotation. One of the reasons for delaying the operation a few weeks is the difficulty, in the present state of the Suez affair, of writing a public prospectus.

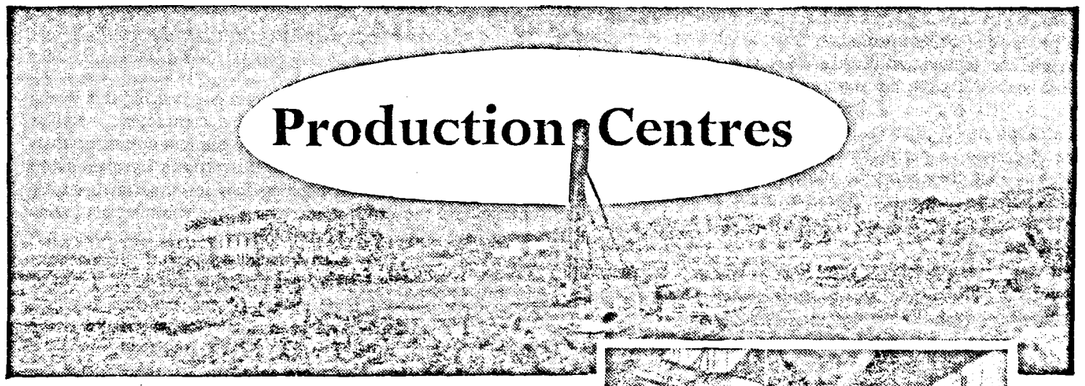
On the gilt edged side of the market new ground has also been broken with the first trustee issue for a long time with a 5½ per cent coupon. The East African High Commission yesterday opened its lists for £3½ million 5½ per cent stock dated 1980-84 at £93½, of which £3 million of the total was offered for public subscription, the balance being taken up by colonial Government funds. The proceeds are to be devoted to railway and harbour development. The yield basis—£5 11s. 8d. per cent flat and £5 12s. 2d. per cent to final redemption—was considered in the market to be reasonably attractive; it is better than the redemption yield of £5 10s. 1d. per cent offered on the recent issue of 5½ per cent New Zealand stock which now stands at a premium of ¾ per cent. Among the home corporations Croydon has raised a loan of £1 million, redeemable in August, 1961, which is being placed privately at £99 per cent. Dealings in the East Africa stock are expected to start on Monday and in the Croydon stock on September 27th.

Mr Clore Buys Dolcis

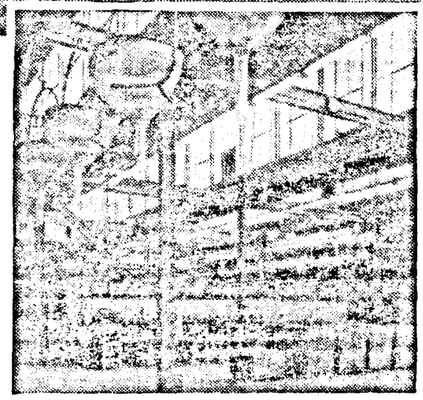
SEARS—Manfield—Dolcis—the building of Mr Charles Clore's shoe trade group, must surely be complete when ordinary shareholders of Dolcis have accepted his offer of one non-voting "A" share of Sears Holdings and six shillings cash for each 5s. unit of Dolcis. They will accept. The offer, with Sears standing around 14s., is worth nearly £1 and Dolcis 5s. units have come up from 13s. 4½d. to 19s. in a month. Holders are being offered the best price their stock has commanded for several years. No struggle for control is in prospect; the Dolcis Board has recommended acceptance; the chairman and managing director, Mr F. J. Stratton, is joining Mr Clore as chairman and managing director of his whole shoe group, and the largest shareholder—the Swiss Bally group believed to hold about a quarter of the stock—is understood to be accepting. So Mr Clore's group, already the largest shoe distributor in this country, will have about 1,500 shoe shops, perhaps a tenth of the shoe shops in this country. It will be important, though nothing like so big, in shoe manufacturing too. The recent acquisitions, Manfield and Dolcis, make a smaller proportion of the shoes they sell than does Freeman Hardy and Willis.

What the Dolcis merger does envisage is first a rounding off of the range of shoes, men's, women's and children's, that the group will sell; Dolcis will be the high grade end of that range. Secondly it strengthens management; the bringing in of Mr Stratton and his team is not the first objective but it is useful. Now all the shoe undertakings of the Sears group—Freeman Hardy and Willis, Trueform, Phillips Character Shoes, Curtis Shoes, Manfield and Dolcis—will be transferred to a new company with assets approaching £18 million, probably to be called The National Shoe Corporation. It takes no enormous stretch of the imagination to see that the company need not for ever remain an almost wholly owned subsidiary of Sears Holdings and that some day when the group wants liquid funds for other development, a quotation for the National Shoe ordinary stock and a sale of a minority of it might be the answer.

Mr Clore is buying well, even though this is a rounding off purchase and not this time a picking up of fantastically undervalued and under-employed assets that could be put to work. Taking the Sears "A" at their market price he is giving £5¼ million (including over £1½ million of cash) for net tangible assets at a balance sheet value of £4.8 million which are subject to £1.6 million of preference shares and other prior charges, but which include over



Site clearance at Padiham, May 1954



Production of cathode-ray tubes, June 1955

From site clearance to production in 12 months

INCREASED PRODUCTION essential to National prosperity and a higher standard of living can only be accomplished through efficient team-work backed by modern methods and equipment.

Cubitts built this factory for Mullard Blackburn Works Ltd. and are pleased to acknowledge the successful efforts of their own team and their sub-contractors who, jointly enabled cathode-ray tube production to commence 12 months after site clearance started.

Architects: Messrs. Ormrod & Partners, FF.R.I.B.A., MM.T.P.I.

£500,000 of cash. Dolcis has a recent dividend record of 20 per cent 1½ times covered so that the earnings even with the present deployment of capital are reasonable. And Mr Clore may still redeploy some of that capital. The assets contain £1.3 million of freehold properties and the substantial profit—£363,000 that the company realised on the sale of certain properties in the year ended January 31st—suggests that they must be undervalued. It will be surprising if the new group does not mobilise some of those hidden reserves by selling freeholds and leasing the properties back, setting free at the cost of an increased rent cash that could be used for expansion—not, perhaps, in the shoe trade.

Britannia's 6-month Set-back

AFTER a melancholy inquest on proving flights with the modified version of the Bristol Britannia, the British Overseas Airways Corporation has thrown up all hopes of putting the Britannia into service next month as scheduled. It will give no probable date when it expects to start these often-postponed services, and has disbanded the massive organisation, spreading from crews to traffic clerks and maintenance shops, that was set up ready for the Britannia's introduction. It is suggested that three to six months will be needed to rectify the troubles that douse the flames in the Britannia's engines, sometimes singly but at other times, as on the recent proving flight in normal monsoon conditions, in all four engines at once.

The corporation is already running well into the red on this year's operations; it is alarming to contemplate what this further delay will do to its out-turn by the end of the financial year. The cost of preparing the organisation needed for operating Britannias falls entirely on BOAC, whatever financial arrangements it has managed to make about the cost of test flying; besides, the corporation's patchwork fleet is steadily losing its traffic on any routes where it meets more than the minimum of competition. It is another unfortunate experience for BOAC in its attempts to support British aircraft.

The cause of the Britannia's engine troubles is known. Pockets of ice accumulate in various points of the engine cowling and the ducts through it, and break off at intervals when they melt and raise the moisture content of the air to a level that puts out the flame. Bristol's first reaction was to attempt a quick first-aid treatment aimed at heating the cowling to stop ice forming and smoothing out the most troublesome pockets. It is now only too apparent that these emergency measures have not been successful, even though their first trials were encouraging. Weather is capricious and will not always provide bad conditions to order. A fairly drastic re-design of the installations round the engines now seems inevitable to keep the ice away. The root of the trouble is in the basic design of the Proteus engine, which is based on a reverse flow system where the air is drawn in well to the back of the engine, so that it has to flow past the ice-collecting pockets inside the cowling before it reaches the compressor. In other turbo-prop engines where the air flows straight through from front to back, this complication seems to be largely avoided.

ITA's First Birthday

COMMERCIAL television in Britain is a year old this week, and advertisers and programme contractors are alike older, wiser and not necessarily any the less optimistic than they were twelve months ago. Advertisers have probably paid about £10 million booking fees for time on the ITA circuits and the production costs of the commercials themselves have added a good deal to that sum. This income has almost certainly not been enough to permit all the contractors to break even, but it is probable that at least two of them have covered their outgoings even during this first year. Those that have been losing most heavily have drastically streamlined their organisations during the summer, and have had their costs further reduced by the growth of networking between the three main ITA stations, which enables the cost of the more expensive programmes to be divided between the three contractors sharing them.

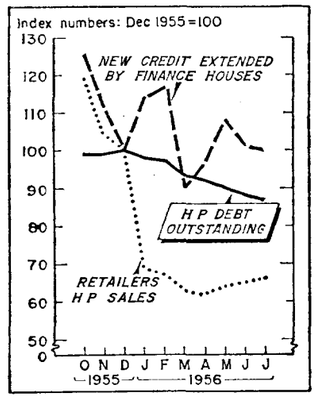
During September, television advertising has come out of the doldrums it was in for most of the summer; most of the companies that already advertise on television have increased their appropriations. These advertisers appear to have used the slack summer months as a time for weighing up the results of their first ITA experiments; now they have dropped their original tip-and-run approach and have decided that ITA advertising should take its place in their sales plans along with other accepted advertising media. The results have been occasionally embarrassing to the programme contractors who wooed these same advertisers during the summer with lavish promises of bonus time free of charge with every so many minutes booked. It is taking some ingenuity to fit these bonuses in with the regular bookings and there is a great deal of speculation about the future of these schemes.

The strong card of the ITA has been the smooth and steady way its audience has grown. When services started a year ago, there was doubt about how many sets could receive the second programme, how many would be converted to take it, and what the volume of television sales would be. The opening of the second service coincided happily with a television boom that has increased the number of sets able to receive ITA programmes from 200,000 when the service opened to 1,750,000 today and a probable 2 million by Christmas when the Yorkshire transmitter starts working. This gives a potential audience of roughly 6 million, and the records show that 65 to 70 per cent of those who can choose, settle for the ITA programme. With this data the advertising managers of the programme contractors are given some hard basis on which to sell their unquestionably expensive time which advertisers previously bought on trust rather than figures. As the time available is limited, competition for bookings at favoured times may make it possible for them to increase the rates slightly, at least by dropping the bonus schemes.

HP Debt Still Falling

IN July retailers did a slightly increased hire purchase business both through the furniture shops and through the radio and electrical goods shops, though the furniture shops did not do an increased proportion on their total trade on hire purchase terms. Despite the steadier tendency in new hire purchase business, the nation's total hire purchase debt continued to fall. It was estimated in July at thirteen per cent below the figure of "at least £450 million" established at the end of 1955. The nature of the Board of Trade's indices and the methods that have been used for restraining hire purchase make that fall inevitable. Total outstandings have declined every month this year, and if no change is made in the present control orders are likely to go on falling for several more months.

This is partly because the index (December 1955=100) of hire purchase debts outstanding is steadied by the large volume of running hire purchase debt to which only marginal sums are added and paid off each month. The index which dropped from 88 in June to 87 in July, assumes a longer and smoother pattern than the two indices of HP transactions by retailers and new credits extended by finance houses. The retailers' index rose one point to 66 in July, continuing its steady rise since its low point of 62 in April. The finance house index fell one point to 100 in July and has been falling since the seasonal peak of the motor trade in May. Moreover, the hire purchase debts now being paid off were largely entered into before the February restrictions came into force. Those new ones now being contracted are based on 50 per cent deposits for a wide range of articles. That has little bearing on the finance house section



of the index which represents money credit extended, but the retail index of new hire purchase transactions measures not money borrowed, but value of goods sold.

SHORTER NOTES

It was learned in the market on Thursday that the long expected splitting of the units of Royal Dutch stock is to take place at the end of October or early in November. At present London deals in the stock in units of 100 florins and New York in units of 50 florins. After the split both markets will deal in units of 20 florins.

★

Strong progress is disclosed in the half-yearly statement of United Drapery Stores. The group is paying an interim dividend on a capital of £6,932,108 which is the precise equivalent of the 25 per cent paid a year ago on a capital of £3,466,054 before the 100 per cent free scrip issue. These are the group's half-yearly figures:

Six months ended July 28

	1955	1956
	£	£
Group trading profit	2,935,043	3,235,087
Group net profit (after tax)...	1,228,251	1,354,902

The chairman, Sir Brian Mountain, told shareholders when the report was issued last May that the figures for the first quarter of the new year showed a satisfactory increase. He now reports that the rate of increase has been maintained in the second quarter and has indeed continued since July 28th.

Company Notes

METAL INDUSTRIES. A moderate financial squeeze, such as the country is now experiencing, has useful by-products. Not the least of them is the showing up of weak spots in industry before it is too late. The report of Metal Industries, the statement of the new chairman, Sir Charles Westlake, and the report of the investigation carried out by Cooper Brothers and Company provide as good an example of a weakness uncovered just in time as the investing public could wish for. The company had a trading profit of £640,576 in the year ended March 31, 1955, and a trading loss of £544,923 in this latest year. When he spoke to shareholders in September last year the previous chairman foresaw some temporary check to profitability, "but looking further ahead than the current year I am glad to say that I am firmly confident as to the future." Now the dividend is nil instead of 9 per cent and shareholders learn from their new chairman that the group's reserves were overstated and it has been found wise to reduce them by £867,352. They learn from the report of Cooper Brothers, that the group has had no strong central secretarial or accountancy departments, that the chairman and head office in Glasgow have been remote from the businesses, and that as a result of directives given without appreciation of their effect, of bad accounting, and of inaccurate budgeting and costing and rapid changes in policy there has been a serious deterioration in the businesses of the group.

The board has quickly and fully accepted the devastating report of these accountants. Metal Industries had a long and successful record as shipbreakers and dealers in scrap metals and has still a large investment in British Oxygen. Cooper Brothers have not criticised the more recent decision to widen the base of the business into electrical manufacture and mechanical engineering. But it is apparent that in accepting their report the directors have taken a long stride back towards the shipbreaking starting point. The metals division actually increased its profits last year. The weaknesses and the recommendations mainly affect the electrical and mechanical engineering divisions. In the electrical division three companies have been closed and activities concentrated in the remaining two. From the mechanical engineering division Sentinel Wagon has been sold to Rolls-Royce since the financial year closed. It is now disclosed that that subsidiary made a loss of £600,000. So the sale to Rolls-Royce for around £1½ million which has cleared the group's whole bank overdraft (£1,434,619) must be welcomed.

Shareholders whose £1 stock units paying no dividend stand at 20s. 9d. must reflect that such a price still reflects a future for their company. If they wonder what it holds there is this crumb of comfort. The chairman reports that the

"trends show a heartening measure of recovery." He intends to forecast the future at the meeting on October 9th.

★

QUALCAST. Record profits by Qualcast, the Derby firm that makes lawn mowers and castings, are returned for the year ended June 30th. The chairman had foreshadowed that record in a letter to the employees last July. He is now able to propose a final dividend of 16¼ per cent thus maintaining the total payment for this year at 24 per cent on a capital increased by the 10 per cent free scrip issue of October last year. In fact though the profit broke the previous year's record it did so by a fairly narrow margin. Trading profits advanced by £34,000 to exceed £1 million for the first time and profits before tax showed an advance of £29,000, but owing

	Years ended June 30th	
	1955	1956
Consolidated earnings:—	£	£
Trading profit	957,722	1,001,412

Ordinary dividend (per cent)	24	*24
To Reserve	175,000	157,049
Added to Carry forward	48,232	47,100

5s. Ordinary share at 13s. 7½d. yields £6 8s. 11d. per cent.
* On capital increased by 10 per cent scrip issue.

partly to an increase in the profits tax charge and partly to the inclusion of a recovery of tax in the previous year there was a slight decline in the net profit after tax.

Despite the strong figures and the unbroken progress, it does not appear that the company has wholly escaped the effects of the squeeze and of the setback in the motor industry, for which it makes castings. The chairman has already reported a cutback in foundry production which he had not expected to have to make so soon. The dividend however remains conservative. Less than half the net taxed profit—£165,519 out of £369,688—is distributed as ordinary and preference dividends.

DISTILLERS. The chairman of Distillers, Sir Henry J. Ross, is adamant that he will not break down the group's profit into its whisky and gin section and its industrial section. He said as much in the company's full accounts when he offered, as a consolation prize, the information that the greater proportion of the group's total earnings (which were £9.2 million in 1956 compared with £7.9 million in 1955) was attributable to the whisky and gin companies, but that "on the other hand, our industrial and general operations are satisfactory and profitable." He added that the industrial businesses should contribute steadily improved results in the future. To emphasise his decision not to give details, Sir Henry made a further disclaimer at the meeting in Edinburgh last week. The board had, he said, again reviewed all the circumstances and had confirmed its decision "that the operations of the group should be taken as a whole." Instead of figures shareholders are to get an illustrated brochure giving them a clearer picture of the background and progress of the group's industrial enterprises.

They appear to have accepted his ruling: there were neither comments nor questions from those present. But some shareholders must surely be wondering why the board is so secretive about these thriving industrial enterprises. The chairman went out of his way to proclaim that all their operations are entirely within the powers contained in the company's Memorandum of Association, though no one has suggested that they were not. He claimed also that the company had broadened its interest as a carefully planned programme which should be a safeguard in adverse economic conditions and that in normal circumstances the industrial assets should make an increasingly valuable contribution to earnings. He added naturally that the expansion into the chemicals and plastic industries had needed substantial investment, a need that had been largely met by ploughing back profits. The yield on the capital employed, he said, compared "favourably with that of other similar organisations." Is its progress then not something that shareholders might be proud of—if they had the facts?

LONDON STOCK EXCHANGE

Next Account begins: October 3rd
Next Contango Day: October 3rd
Next Settlement Day: September 25th

PRICES this week show little change; gilt-edged again touched a new low point for the year, the *Financial Times* index of Government stocks declining slightly to 83.35 on Tuesday under the influence of the projected East African loan, while the index of industrial stocks stood virtually unchanged at 181.3 on Wednesday.

Electrical stocks rallied on dealings in the new account on Wednesday; on balance, AEI lost 3s. to 67s. 3d., but Radio Rentals gained 3s. 3d. to 44s. Engineering shares improved, Babcock and Wilcox rising to 81s. and Swan, Hunter to 53s., but steels were again depressed, Stewarts and Lloyds dropping 1s. 6d. to 62s. 9d. and Dorman Long 9d. to 25s. 10½d. Stores were firm on Wednesday, J. and F. Stone rising 1s. 9d. and United Drapery 1s. 1½d. in anticipation of the interim statement. This section was dominated by a spurt in Debenhams, 3s. 3d. higher on balance at 41s., and a rise of 4s. 6d. to 41s. 6d. in Mappin and Webb. Dolcis jumped 2s. 9d. to 19s. after the bid from Sears. Gains in shipping shares were again extensive; Britain Steamship rose 2s. 9d. to 20s. 6d., Reardon Smith 3s. to 42s. 6d. xd, Stanhope 2s. 9d. to 30s. 9d. and Furness Withy 2s. 3d. to 56s. 9d. Among the liners, P and O deferred gained 2s. 6d. to 32s., Cunard 1s. 6d. to 25s. and Royal Mail 1s. to 38s.

"Western" oils again advanced, Ultramar rising 3s. 9d. to 46s. 6d. and Shell Trinidad 3s. 7½d. to 61s. 9d. There was on balance another small decline in British Petroleum which, despite a late rally, was 1s. 6d. lower at 143s. 9d., Burmah, however, recovering to gain 1s. 3d. to 88s. 9d. Kaffirs became active on Tuesday, the new OFS and West Rand mines making widespread gains. Winkelhaak jumped 1s. 9d. so 17s. 3d. on rumours of a further reef strike. Tins were again strong and Consolidated Zinc touched 70s. before easing to 68s. 3d. Messina jumped 8s. 9d. to 183s. 9d. and Rio Tinto 3s. 9d. to 85s. for the registered stock. Rubbers and teas improved strongly during the week.

THE MONEY MARKET

CREDIT continued short in Lombard Street during the past week. Before the week-end the market just succeeded in balancing its books without official help, but on Saturday and on each of the first three days of this week the Bank has stepped in with small purchases of bills. Nonetheless, the market was obliged to take small loans at Bank rate on Tuesday and again on Wednesday, when more than half the discount houses were affected. Rates on overnight loans reached 5 per cent, and occasionally even more. December bill maturities were sold at 5⅛ per cent, a bare ½ per cent below the market's rate at the tender on Friday last.

At that tender, the market made a further reduction in its bid, by 2d. to £98 14s. 6d. per cent. Credit had been very short in the preceding week; sterling had been weak and Suez appeared to have taken an ominous twist. Total applications for the high volume of £290 million of bills again on offer fell by £25.8 million to £404.2 million, so that the market's allotment rose from 55 to 61 per cent of its own application. At yesterday's tender, the offer was reduced to £280 million, and next week the excess of new bills over matching maturities will fall from £50 million to £20 million.

The Treasury bill rate in the United States has this week risen from 2.770 to 2.908 per cent, its highest level since the early 'thirties.

COMPANY MEETINGS

DAVY AND UNITED ENGINEERING COMPANY LIMITED

OUTSTANDINGLY SUCCESSFUL RESEARCH WORK

MR D. F. CAMPBELL DETAILS IMPORTANT CONTRACTS

The eighty-third annual general meeting of the Davy and United Engineering Company Limited, will be held on October 11th at Sheffield.

The following is the statement by the chairman, Mr D. F. Campbell, circulated with the report and accounts:

The trading profit of the Group for the year has increased from £626,153 to £673,013 and the net profit, after the deduction of taxation has increased from £196,792 to £232,700.

The Company's Works and those of its subsidiaries have again been fully employed and a considerable amount of work has been subcontracted so as to deal with the large volume of orders. In particular, the demand for rolling mill plant has continued unabated and the same applies to the rolls which are made at your Middlesbrough Works. There was some fall in demand for Sugar Machinery, but the capacity at your Glasgow subsidiary, Duncan Stewart & Company, Limited, was fully employed on other products. Since the year ended, there has been some revival in demand for Sugar Plant, and we have received a contract for a complete Sugar Factory for India.

PRODUCTIVE CAPACITY ENLARGED

Since the end of the War, the productive capacity of the Group has been greatly developed and progressively enlarged, both as regards designing and manufacturing. The volume of orders obtained has fully justified this policy and, indeed, the Order Book today is greater by a considerable margin than it has ever been before. This, coupled with a forecast of future prospects over the next few years, has led your Directors to the conclusion that a further scheme of expansion should be implemented at an early date.

The first stage will be directed towards the provision of additional plant within the existing buildings at the Sheffield and Glasgow Works, coupled with a further development at Middlesbrough. At the same time, your Directors have decided to close down the Iron Foundry in Sheffield. The trend of design in our products over recent years has been markedly away from cast iron and towards cast and fabricated steel, so that little more than one quarter of the output of the Iron Foundry is now absorbed within the Group. When the Foundry is closed towards the end of 1956, the Fabricating Department will be moved from Park Iron Works to the Foundry Building.

Expansion in manufacturing facilities, to be successful, must be matched by a corresponding expansion in the output of drawings and designs. The old offices at Park Iron Works are no longer adequate for their purpose and a completely new office block is now under construction at Darnall to house the Design and Administrative Staffs. It is thus intended that Park Iron Works, which has been occupied by the Company since 1840, will in due course be vacated and offered for sale. The resultant concentration on one site of your Company's activities in Sheffield should make for greater economy and efficiency in many ways.

As a second stage in the expansion programme, your Directors have under consideration the establishment of further machine and erecting shops at Darnall.

LARGE VOLUME OF EXPORTS

Apart from its substantial share in satisfying the machinery requirements of the Steel and Non-Ferrous Industries in this Country, the Group is undertaking a large volume of export work, amounting at present to about half of its production. This does not take into account the Company's share of the important contract for the construction of a complete integrated Steel Works at Durgapur in West Bengal, India. As a Member of the British Consortium, the Indian Steel Works Construction Company Limited, which has been formed by the Metallurgical Equipment Export Company Limited (MEECO), to undertake this contract, your Company will be responsible for supplying the whole of the Rolling Mill equipment; the Wheel, Tyre and Axle Plant; the Central Maintenance Departments and the Foundry.

These responsibilities include, in addition to the mill machinery proper, the provision of buildings, electrical equipment, cranes, furnaces and, in fact, the complete installations other than the Civil Engineering work. This contract is the largest ever undertaken in the Company's history.

ROLLING MILL EQUIPMENT

In recent years, your Company has specialised in Rolling Mill equipment for the production of steel and non-ferrous strip. In previous statements to Stockholders I have referred to a large group of contracts, totalling more than £4 million in value, placed with us by Richard Thomas & Baldwins Limited and The Steel Company of Wales Limited for mills for the production of Tinplate by modern continuous methods, both at Ebbw Vale and Velindre in South Wales.

The main units of machinery included in these contracts have now been satisfactorily completed and are in operation. They comprised two 5-stand Tandem Cold Reduction Strip Mills and their associated Temper Mills, requiring the manufacture in series of 32 cast steel mill housings weighing about 100 tons each. All these mills were delivered promptly to time and went into production without trouble, rolling accurate strip from the inception.

TRIBUTE TO STAFF AND WORKPEOPLE

While we may take justifiable pride in this successful outcome, I refer to it particularly to stress the debt which Stockholders owe to the skill of our designers, the fine craftsmanship of our workpeople and the high level of administrative ability shown by the staff in all grades. We have indeed an exceptionally fine and loyal body of men and women and I am sure that Stockholders will wish to record their appreciation of all which they have done during the year under review.

This achievement has been followed by a further contract from The Steel Company of Wales of about £2 million in value, which includes a new 4-stand Tandem Cold Strip Mill, the conversion of the Slabbing Mill at Abbey Works to a Universal Mill and a wide range of ancillary equipment.

NEW METHODS

I have also referred in my previous statements to the work being done in our Research Department in the development of various kinds of instruments for the efficient operation of rolling mills. It is gratifying to record that this work has been outstandingly successful and that the newly formed Instruments Department has already secured a substantial volume of orders for equipment in this new field.

The first commercial application of our method of controlling automatically the gauge or thickness of steel strip delivered by a mill has proved highly successful. Further orders have been received at home and abroad and negotiations are proceeding to licence manufacturers in Canada and the United States of America.

CONTROL OF INFLATION

The control of inflation is one of the vital questions of the present time and much has been said and written on the contribution which Private Industry should make. In a Company such as yours, prices are based upon estimates of cost, made in many cases before the machinery can be designed in detail. To this is added a margin of profit calculated to produce in a normal year's operation a fair and reasonable return upon the capital employed. A high proportion of our cost, namely that represented by purchased materials, is outside our control. Similarly, rates of wages are governed by National Agreements.

It is clear that some measure of stability in these elements of cost is now imperative if this Company is to remain competitive in World Markets, but the only elements in our price structure which are within our own direct control are those related to productivity and profit margins. Productivity has been steadily increasing in all your factories during recent years and this has come, not only from a good standard of effort by our employees, but mainly from the sustained attention which has been given to the installation of modern plant and the best method of using it.

PROFITS POLICY

On profits, I would say that in a time of full employment and with a record Order

Book, our policy is to increase the return on the capital employed, not by increasing the margin of profit included in our prices, but by shipping more goods through our Factory doors in any year per capita of employment. The further expansion and modernisation to which I have referred will give a further impetus in this direction and enable your Company to contribute in an ever increasing degree to the re-equipment and expansion of the Metals Industries at Home and to the Export Trade upon which this Country's livelihood depends.

GAS PURIFICATION AND CHEMICAL COMPANY

GROUP'S WIDESPREAD RAMIFICATIONS

DEVELOPMENT OF NEW PRODUCTS

The eighty-second annual general meeting of Gas Purification and Chemical Company, Limited, was held on September 18th in London.

Mr J. R. Sorsbie (Chairman and Managing Director) presided and, in the course of his speech, said:

Net profits of the Group for the year before taxation amounted to £464,270, compared with £296,256 for the previous 15 months period. These earnings are the equivalent of 88.8 per cent on the Share Capital in issue at the end of the year. The final dividend which we are proposing will bring the total distribution up to 40 per cent per annum as against the equivalent of 22 per cent in the previous year.

In the course of his review of the Group's activities, the Chairman said: Only one Company was temporarily affected by the credit squeeze. However, the ground lost in February has since been regained.

The business of Grundig (Great Britain) Limited remains very good indeed and expanded further during the year. The outstanding organisation and management of Grundig (Great Britain) Limited is further illustrated by its impact on the progress of Wolsey Television Limited which was acquired by the Group in March, 1955.

Besson and Robinson Limited has been the object of a great deal of attention by the Group and we have made a substantial capital investment in this company during the year and its prospects for the current year show a marked change. The output of electric relays has been very nearly doubled and we have added the production of two electric motors.

Smart & Brown (Machine Tools) Limited had a strenuous and very successful year. In addition to the expansion of their own business the management of Modern Machine Tools Limited and Besson and Robinson Limited has been integrated with that of Smart and Brown to the benefit of all the Companies concerned.

We are very fortunate in acquiring the business of E. G. Irwin and Partners Limited in November, 1955, since that Company will indeed play a key part in our future development programme.

In March of this year we acquired Electric Audio Reproducers Limited.

The order books of the Group are so full that we are now turning to outside sources of production in addition to our own in order to obtain goods which we know we can sell and for which we already have orders.

IMPORTANT NEW DEVELOPMENT

The most important item affecting our future prospects is undoubtedly the connection which we made during the year with Usines Gustave Staar SA of Brussels. The Staar record changer has already had a warm reception, and I can assert that it has been recognised as a highly saleable article. It is being manufactured by Smart & Brown (Machine Tools) Limited and thus further diversifies the Group's output with a product which will undoubtedly find its place in the market for record changers for many years to come, and will contribute substantially to our dollar exports.

The connection with Staar of Brussels has developed very happily and other products of unique design will be exploited by our sales company, Staar Electronics Limited, during the next few months. In the meantime they have been granted a licence exclusive to Great Britain for the production of the Kinder electric motor.

The activities of our Group are broadly based and include manufacturing Companies which have substantial contracts from HM Government. We can look forward, therefore, to an active year and to reaping the reward of all the hard work that has been put into the manufacture and exploitation of our new products, which should add substantially to the profitability of the Group, not only this year but for many years to come.

During the past 12 months we have been spending our time very largely in consolidation, but you may anticipate that we are again entering into another growth period.

The report and accounts were adopted.

THE GOLDEN HOPE RUBBER ESTATE LIMITED

SIR ERIC MACFADYEN'S ADDRESS

The fiftieth annual general meeting of The Golden Hope Rubber Estate, Limited was held on September 17th in London, Sir Eric Macfadyen, chairman of the Company, presiding.

In the course of his address he said: We harvested 7,590,300 lb of rubber as compared with 7,327,020 lb the previous year and additionally 362,000 lb from our new subsidiary company Klanang Bahru. Our rubber selling price averaged 8½d. per lb more than in the previous year. Against that our costs rose by 5¼d. per lb, of which some 3½d. was due to higher export duty and cesses and the balance to higher wages.

Oil palm products amounted to 1,113 tons oil and 287 tons kernels—against 488 tons and 136 tons.

In 1954-55 gross revenue from all sources exceeded expenditure (inclusive of export duties) by £289,536. The surplus this time was £377,332. Taxes were heavier and, having no windfall comparable with the £35,799 provision freed last year after the war damage grant settlement, the amount available for allocation is much the same at £245,596 against £236,248. Reserve allocations amount to £107,358 as compared with £102,881 and a repetition of the 25 per cent dividend will cost £5,030 more owing to the increase in capital now ranking for dividend. We shall then be left with a carry forward of £37,018 against £37,177 brought in.

The report was adopted.

THE DISTILLERS COMPANY LIMITED

Supplementary statement to shareholders made by the Chairman at the Annual General Meeting held in Edinburgh on Friday, September 14, 1956.

The Chairman said:

"In view of the criticism expressed in certain sections of the press, I feel that in the interests of our shareholders I should make a short statement with regard to the request for a detailed breakdown of the profits earned by the various divisions of this organisation.

"You will be aware that over a number of years the Company has broadened and diversified its interests, particularly in the chemical and plastics fields. This has been carried out as a carefully planned programme, and all these operations are entirely within the powers contained in the Company's Memorandum of Association.

"It is your Board's considered opinion that diversification of the Group's activities is a sound policy which has been fully justified by results. The steady consolidation of our assets in the industrial field gives the group a spread of earning power which should be a safeguard in adverse economic conditions. In normal circumstances it should make an increasingly valuable contribution to our earnings.

"The constantly expanding and changing character of the chemical and plastics industries has of course necessitated substantial investments, which to a large degree have been met by ploughing back profits earned on these enterprises. These industrial developments have followed a logical and progressive pattern, and, as I have reported in my annual statements to shareholders, they have in the main proved successful and profitable, with the overall yield on the capital employed comparing favourably with that of other similar organisations.

"Having again reviewed all the circumstances, the opinion of the Board is that the operations of the group should be taken as a whole. The conservative policy of this Company, and its marked progress over the years, are the best assurances for the future that we can offer to our investing shareholders, the great majority of whom I am sure will readily approve the attitude of your directors on this matter.

"In order to give our shareholders a clearer picture of the background and progress of our industrial enterprises than is possible in my annual statements, an illustrated brochure is now in course of preparation. This will be circulated in due course and I feel sure you will find it of considerable interest."

After the Chairman had called for any comments or questions, to which there was no response, the Report of the Directors and the Accounts for the year ended March 31, 1956, were unanimously adopted.

POWELL DUFFRYN LIMITED

COMPENSATION CLAIMS SETTLED

SIR HERBERT MERRETT'S REVIEW OF GROUP ACTIVITIES

The annual general meeting of Powell Duffryn Limited was held on September 19th in London, Sir Henry Wilson Smith, KCB, KBE (deputy chairman), presiding.

The following is an extract from the statement by the chairman, Sir Herbert Merrett, which had been circulated with the report and accounts for the year ended March 31, 1956:

At last our claims for compensation for our nationalised assets have been settled. We received a net figure of £2,557,868 for our Power Stations, the final item in dispute. This brings the total compensation of the Group under the Coal Industry Nationalisation Act to £15,964,712, compared with a book value at December 31, 1946, of £12,608,478.

GROUP'S NEED FOR WORKING CAPITAL

The proceeds of the sale of the Compensation Stock strengthen the cash position of the Company, but there is no intention to make any further capital distribution as a result of the settlement referred to above. Although the cash position of the Group is for the moment good, Shareholders will see that we have capital commitments exceeding £3 million, and that there are a number of proposals for further development which will require still more capital expenditure. Moreover, the Group's need for working capital has increased substantially, not least because of recent upward movements in the price of coal.

The profits of the year again show an improvement upon previous years, before taking into account items of income of a non-recurring nature. It is unlikely that such items will appear in future accounts.

We have enjoyed a fair share of the limited quantity of coal available for export, and are well equipped to deal with a much greater quantity should it become available. I am afraid, however, that the immediate future offers little prospect of any increase in the quantity of coal we shall be allowed to send overseas.

GROUP ACTIVITIES

In the year under review there was a further substantial increase in the activities of *Stephenson Clarke Limited* and of its Associated Companies. Stephenson Clarke itself not only continued its traditional role as one of the leading coal distributors in this country, but also played a major part in the successful operation of the large-scale coal import programme. The Company's fleet of ships remains fully employed and, with an eye on the future, various steps are being taken to diversify its range of activity.

Maris Export and Trading Company Limited had an exceptionally good year due to the continuance in 1955 of still sizeable exports of British coal combined with greatly increased activity on sales of American coal to this country and to the Continent. Immediate prospects are inevitably more favourable under the second head than under the first.

Associated Coal and Wharf Companies Limited by its published results has shown once more the valuable nature of this particular investment. This Company too made a significant contribution in relation to the coal import programme, for which its wharves and discharging plant are eminently suitable. In addition to the healthy state of its normal coal business, the Company is making satisfactory progress in the development of fuel oil distribution.

Weatherfoil Heating Systems Limited has well maintained its progress. The Company's turnover last year exceeded previous years, and the forward order book indicates a continuance in the current year of a high level of activity. To its normal business it has added the sales agency for Dravo Oil Fired Space Heaters, an appointment which has made an encouraging start.

In Northern Ireland, the business of John Kelly Limited, in which we are equal partners with William Cory & Son Limited, continues to be well run and active.

Despite the changes which have taken place in the nature of the activities of *Cory Brothers & Company Limited* in recent years, the Company continues to show good results and increased turnover, especially in oil storage, distribution and bunkering.

The Barry storage and bunkering installation has shown further expansion, and a site is now being prepared for the erection, in stages over the next few years, of new tanks with a capacity of 150,000 tons, which will bring the total storage to nearly 300,000 tons. Additions are also being made to the storage and bunkering facilities at Ipswich and at Las Palmas. Long-term contracts have been made with major Oil Companies which justify the expectation of reasonable profits at all these depots in the coming years.

At Aden, where we have a very important organisation, employing more than 700 people, we are adding to our facilities for lighterage, bunkering, engineering, etc., and have made a good start as representatives of the Ford Company.

Business in Spain continues on a satisfactory basis, and the new Oil bunkering station in which we are interested at Ceuta on the North African coast should be in operation next year.

There has been an expansion of our business in the Timber industry, both at home and abroad, and as part of our programme in this country a new Insulation Board Mill is now in course of erection in Wales and should be in operation in 1957. We expect that its output will find a ready market, as the products which the mill is to manufacture are now being imported in substantial quantities.

Cambrian Wagon & Engineering Company has maintained its output and its profits on a steady basis. The new department engaged in the manufacture of liquid-storage containers has increased its output, and further expansion is planned for the near future.

Rhymney Engineering Company, in which we are associated with International Combustion (Holdings) Limited, was fully and profitably employed during the year.

Powell Duffryn Technical Services Limited have had a successful year. Their area of employment is widening and their services are in greater demand than they have been since the formation of the Company.

Powell Duffryn Carbon Products continue to produce heat-exchangers, etc., and have under active consideration a number of interesting and soundly based developments of their business.

I am pleased to say that our new building in the City of London has now been completed and already accommodates the bulk of our Group Companies previously housed in various buildings in London since the war.

CHAIRMAN'S RETIREMENT FORESHADOWED

My agreement for service with your Company expires in a few months, and at the end of that time I do not intend to seek re-election either as Chairman or as a Director of the Company. It is the intention of your Board to appoint Sir Henry Wilson Smith, KCB, KBE, to the Chairmanship of the Parent Company and its principal operating subsidiaries, and with the knowledge I have obtained of the strength and sound judgment of Sir Henry, I shall pass over my duties to him with the greatest possible confidence.

The report and accounts were adopted.

ALLIED INDUSTRIAL SERVICES

RECORD TRADING

The twenty-second annual general meeting of Allied Industrial Services Limited will be held on October 10th at Bradford.

The following is an extract from the circulated Statement of the Chairman, Mr Frank W. R. Douglas, for the year ended June 30, 1956:

It is indeed a pleasant duty to be able to report yet another year of record trading and profits. The figures, to which I shall refer in a moment, have been achieved by continuing improvement in efficiency assisted by a greater output at the Factories, due to further additions and extensions since last year.

From the Directors' Report and Company's Accounts you will see that after making provision for depreciation, Directors' Remuneration and Taxation on the Profits for the year, the net profit amounts to £327,999. After taking into account the balance from the previous year, and one or two minor adjustments, there remains a disposable sum of £374,762; the suggested distribution and allocation of which your Board now submits for your approval.

We have decided to recommend a final Ordinary Dividend of 21 per cent, making, with the Interim dividend of 6½ per cent, a total of 27½ per cent for the year. After transferring £170,000 to General Reserve, bringing it up to £570,000, the carry forward on Profit and Loss Account stands at £39,737, as compared with £40,484—the figure of a year ago.

Since the commencement of the year, our turnover has not been discouraging, and, always provided there is no international upheaval or serious interference with industrial output and production at home, I hope we may be able to lay before you figures not less satisfactory than those shown for the past year.

KEPONG (MALAY) RUBBER ESTATES

IMPROVED PROFIT

The fifty-first annual general meeting of Kepong (Malay) Rubber Estates, Limited, was held on September 19th in London, Mr T. J. Cumming, chairman, presiding.

The following are extracts from his circulated statement for the year ended December 31, 1955:

The profit for the past year, before providing for taxation, amounted to £434,041, a substantial improvement when compared with that for the previous year. This was due mainly to the better average net price realised for our crop, viz., 32.26d. per lb. It is proposed to pay a final dividend of 15 per cent, less tax, making a total of 25 per cent, less tax, for the year.

The estimated crop was 10,004,260 lb, but this figure was not reached mainly owing to difficulties of maintaining a full quota of tappers on the Johore areas. The actual crop for the year amounted to 9,674,759 lb.

Steady progress is reported from the Oban (Nigeria) Rubber Estates, Limited, in which we have a substantial interest. Up to the present, 8,800 acres have been opened, 5,500 acres planted and 2,400 acres budded.

During the current year there has been a serious falling off in the market for latex, and recourse to the manufacture of smoked sheet has had to be made to a certain extent. At one time it seemed likely that the market price would stabilise itself at round 2s. per lb, but since the Suez Crisis there has been a substantial rise. For the current year, our estimate is 10,108,040 lb.

The report was adopted.

GORDON (MALAYA) RUBBER ESTATES

INCREASED TRADING INCOME

The thirty-third annual general meeting of Gordon (Malaya) Rubber Estates, Limited, was held on September 19th in London, Mr T. J. Cumming, chairman, presiding.

The following are extracts from his circulated statement for the year ended December 31, 1955:

The crop harvested from our Estates during the year was 1,910,100 lb against our estimate of 2 million lb, the shortfall being due in the main to resting a small area of seedling rubber and to unsettled labour on certain divisions.

The average selling price realised for all grades over the year being 31.3d. per lb against 21.22d. in 1954, is reflected in the increase in trading income from £193,367 to £259,184.

The profit on actual estate operations was £79,877; adding investment and other income and providing for other expenses, including no less an amount than £46,542 for taxation, we are left with a balance of £33,507 to be brought into Appropriation Account. The amount brought forward from the previous account was £11,311, and other credits to the account bring the amount for disposal to £49,857. We have transferred £13,000 to General Reserve, and £5,000 to Provision for Replanting. We recommend a dividend of 10 per cent, less tax, on the Ordinary Stock, leaving a balance of £13,801 to carry forward.

The report was adopted.

SALTS (SALTAIRE) LIMITED

INCREASED TRADING PROFIT

The thirty-third annual general meeting of Salts (Saltaire), Limited, was held on September 19th at the registered office, Saltaire, Yorkshire, Sir Frank B. Sanderson, Bt, chairman, presiding.

The following is an extract from the statement circulated with the report and accounts:

Profit on trading of the Group for the year ended March 31, 1956, amounts to £1,071,193, compared with £827,013 for the previous year. After charging £592,500 for taxation, the net profit of the Group amounts to £501,433. £200,000 has been transferred to General Reserve. The Board recommends payment of the following dividends, subject to Income Tax, at the same rates as last year; (a) a final dividend of 3½ per cent on the 7 per cent Non-Cumulative Preference shares; (b) a dividend of 12½ per cent on the Ordinary shares. The dividends for the year absorb net £208,150 and there remains a balance of £660,070 which it is proposed to carry forward.

The shareholders' interest aggregates £6,853,603, represented by fixed assets £1,592,487, trade investments £101,109 and net current assets £5,631,007, less the provision for future Income Tax of £471,000.

SUBSIDIARY COMPANIES

The volume of business of the subsidiary companies has expanded during the year under review, an increased proportion being for export, including the dollar countries. All our subsidiaries have made profits and have contributed towards the results which are now before you.

Wool Values.—Since the decline at the commencement of the Australian wool-selling season at the end of August, 1955, prices have been more stable than for a considerable number of years. This stability lasted until the end of our financial year and there has been a hardening tendency since that date. A maintenance of reasonably level values will do much to ensure confidence.

FUTURE PROSPECTS

In my address last year I intimated that production had been well maintained since the commencement of the current financial year, and that our factories were running practically to capacity, limited only by the shortage of labour.

I am happy to be in a position to state that since the beginning of this financial year we have maintained a high rate of machinery activity and have sufficient orders on hand to ensure the continuance of this level of production for the next few months. Nevertheless, it is important that I should strike a warning note. Competition is perhaps more severe today than at any time since the war. The margin between costs and selling prices is less. Your group of companies, however, have most modern machinery and every effort is being made to keep down production costs by ever-increasing efficiency.

A good demand for our products is being experienced from both home and export markets, and given reasonably settled conditions, I feel we can look to the future with justifiable confidence.

The report and accounts were adopted.

ASSAM FRONTIER TEA

INCREASED COSTS

The sixty-eighth annual general meeting of The Assam Frontier Tea Company Limited was held on September 19th in London, Sir Charles Miles, OBE, chairman, presiding. The following are extracts from his circulated Review for the year ended December 31, 1955:

The profit for the year, after charging Depreciation and deducting Taxation and Indian Estate Duty, amounts to £222,17[illegible]. This compares with £281,128 for 1954, a. the fall in profits is entirely due to the substantially increased payments to labour, si. proceeds were slightly higher than those the previous year. Your Board recommend a dividend of 15 per cent on the Ordinar Stock.

Fine quality teas have continued to sel well, but prices for medium and commo descriptions have, for some time, been nea to or under costs of production. This company's teas realised most satisfactory pri on the London market, where the aver price obtained was approximately 6s. 8 per lb, compared with 5s. 11d. per lb 1954. In Calcutta, the season closed a an average of 39.42 annas per lb, compared with 46.08 annas per lb for the previou year. Whereas in London, the average price was higher than that received in 1954, the Calcutta figure was well below last year's level.

With regard to 1956, our crop to the end of July is 3,419,520 lb, which compares with 3,201,760 lb for the same period last year. Every effort is being made to produce ever better teas. The report and accounts were adopted.

ZALONI TEA ESTATES

MR ADDINSELL'S STATEMENT

The forty-fourth annual general meeting of the Zaloni Tea Estates, Limited, was held on September 13th in London, Mr Jack Addinsell, the chairman, presiding.

The following is an extract from his circulated statement for 1955:

Since the close of the financial year agreement has been reached between representatives of the Tea Industry in North India and the Indian Government for the payment of bonus to tea garden labour which has had to be back-dated to the year 1953. After providing for the bonus for 1955 profit worked out to £44,488, a reduction of £30,294 on 1954. This was mainly accounted for by lower sale prices and an increase in costs. In respect of the years 1953 and 1954, the bonus is expected to cost £15,400. Your Board recommend a dividend of 20 per cent.

Our tea crops in the postwar years have risen from 642,347 lb in 1946 to 886,414 lb in the year under review. The manager estimates 920,000 lb for the current ye As the young areas come to full maturity further capital expenditure will be necessary.

The company's cash position, which at the end of 1954 showed merely a nominal credit balance, had improved by December 31, 1955, to a figure of £43,889. It is still necessary, however, for the company to continue to conserve its liquid resources.

As a result of a revaluation of the Fixed Assets a Capital Reserve amounting to £77,420 has been created. It is the directors' intention to recommend a free scrip issue o one £1 share for every two held. The repor was adopted.

Cargoes sweat too

And when they do, rust, staining and other damage may be the result. "Cargo sweat" occurs when ships pass from cold to warm climates. A change from warm to cold can cause condensation on the ship's structure, known as "ship sweat". Shipowners have found the answer to both problems is Thermotank Drihold equipment. This maintains close control of ventilation and drying to ensure that condensation cannot occur. Control of the atmosphere for comfort or industrial processes is the business of Thermotank—on land, sea and in the air. The Company pioneered the first air conditioning of ships more than fifty years ago. Today Thermotank maintain an unequalled service covering every major shipping route throughout the world.

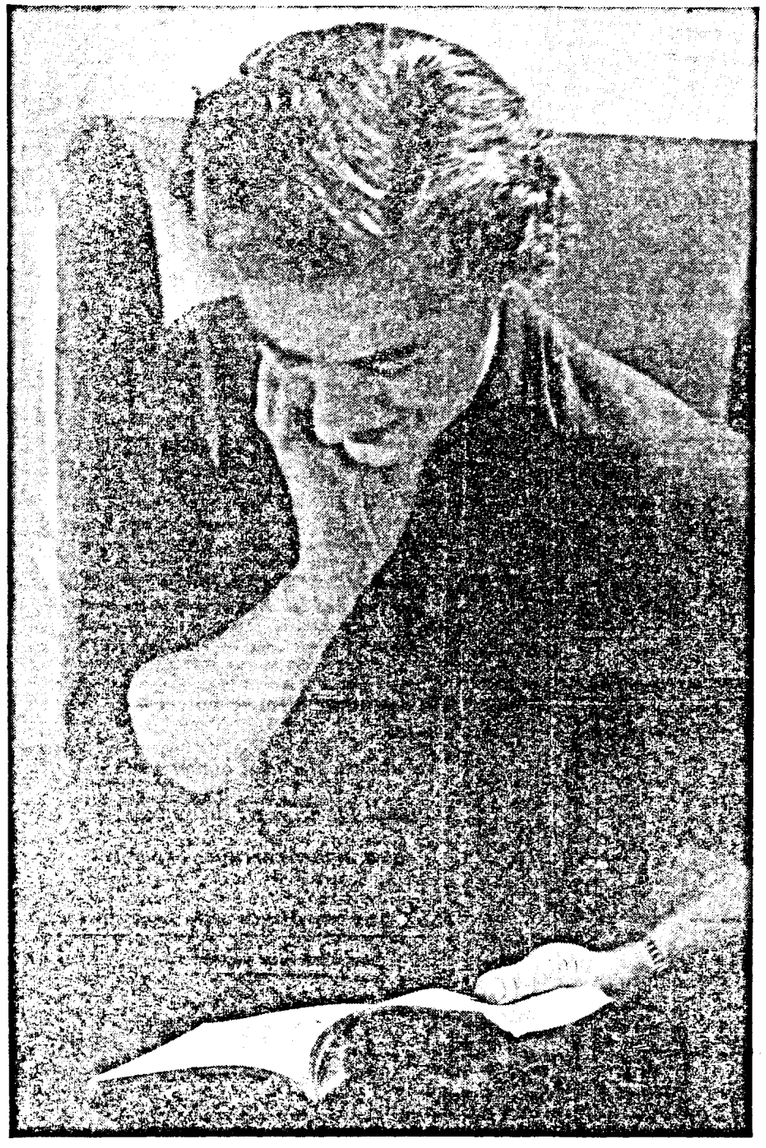
Changing her mind:



AN ADVERTISER'S PRIVILEGE

The fickleness of women is the advertiser's opportunity. But to change a woman's mind, you have to get into it. The Reader's Digest is your way into the minds of well over two million women—women who are prepared to *read* what you have to say to them.

Altogether, some five million people enjoy this magazine each month. Why do they provide such a productive market for your advertising message? One reason is that they are comfortably above the average in income—for instance, over a million of our readers own their own houses, and nearly a million have motor-cars.

An even more important factor is our readers' *character*. The Reader's Digest deliberately sets out to please people with inquiring minds, interested in many things, receptive to new ideas. Its phenomenal success—over a million sale in Britain, a *world* sale of over eighteen million—is the measure of the opportunity it offers to the advertiser who has something to say. Its readers really *read* it—pick up each issue many times as they browse through its articles. There is ample evidence that they read the advertisements, too. And they are exactly the kind of people, better informed than most, whose example is apt to influence their friends.

It is because of the character of its readers and their pleasure in *reading* it that The Reader's Digest is one of the great advertising media of Britain.

OVERSEAS. *International editions, 27 of them, cover key export markets. The British exporter can book space in London and, usually, pay in sterling.*

NO WONDER IT'S CALLED

The Reader's Digest

A MAGAZINE FOR *READERS* WITH A GUARANTEED 1,100,000 SALE

"Gentlemen, we are installing TELEX"

"and about time too" muttered the Sales Director.

Every day more and more commercial and industrial organisations are becoming Telex subscribers. Go-ahead concerns can no longer afford to be without this new communication system that combines the speed of the telephone with the authority of the printed word. Telex is a 24-hour Post Office Teleprinter Service that enables you to exchange messages with any other Telex subscriber either at home or overseas. A Telex call to a subscriber beyond a 25-mile radius costs about half as much as a telephone call of the same duration. Most overseas calls, too, are cheaper than their telephone equivalents. Telex requires no special staff; a competent typist is an efficient operator after the briefest instruction.

"Are you on Telex yet? If not, shouldn't you be? Ask for the Telex booklet from your local Telephone Manager or from the address below. Your Telephone Manager will be pleased to arrange for his representative to call and discuss the service with you and for you to see Telex in action at your nearest Demonstration Centre."

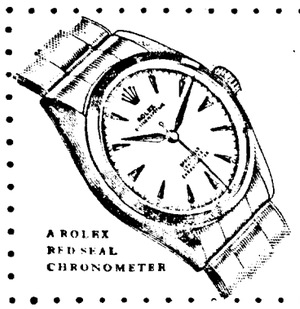
Men who guide the destinies of the world wear Rolex watches

WHEREVER historical decisions are made, at top-level conferences, in Cabinet meetings, at strategy discussions, you will find these men. No day passes without some reference to them in newspapers, on radio or television. Their fame is the measure of their importance—to each of us and to the whole world.

We cannot mention their names or picture them. It would not be fitting to do so—for they include royalty, the heads of States, great service chiefs and statesmen. But when next you see them or their pictures, look at something you might not normally notice—the watch on their wrists. That watch will most likely have been made by Rolex of Geneva.

These men expect reliable service, yet even they are amazed at the efficiency of their Rolex watches. Rolex are proud that they so soon take it for granted.

The Rolex Oyster Perpetual Datejust. Every Datejust is awarded an Official Timing Certificate by a Swiss Institute for Official Timekeeping with the mention "Especially good results." This accuracy is protected from water, dust and humidity and all other hazards by the famous Oyster case. The watch is self-wound by the Perpetual "rotor" mechanism, another Rolex invention, that makes for even greater accuracy. The date is shown on the dial, changing automatically every midnight, and magnified by the "Cyclops" lens for easy reading.



A ROLEX RED SEAL CHRONOMETER

The Rolex Oyster Perpetual—culmination of three Rolex triumphs. In 1910 Rolex gained their first Official Timing Certificate for a wrist-chronometer. Now Rolex have produced over 270,000 Officially Certified wrist-chronometers. In 1926 Rolex invented the Oyster watch-case, the first truly waterproof case in the world. In 1931 Rolex invented the first "rotor" self-winding mechanism.

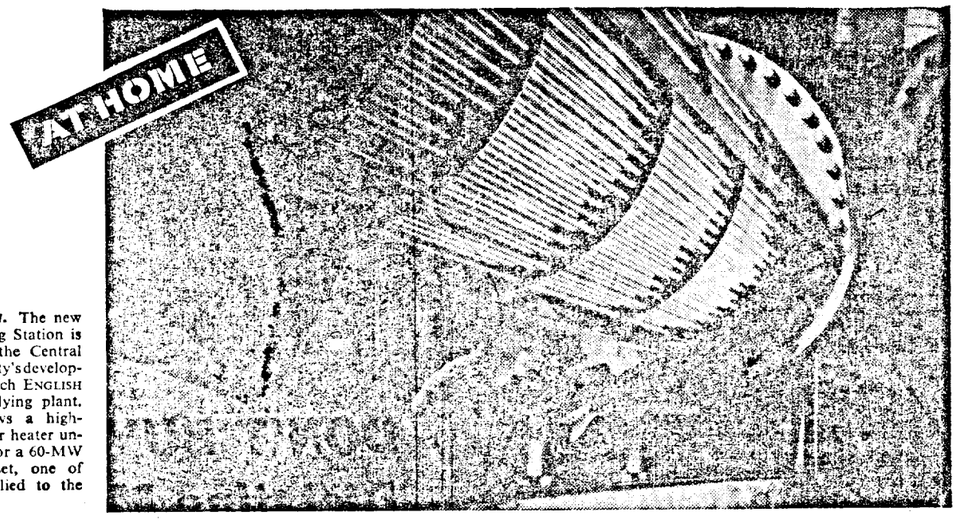
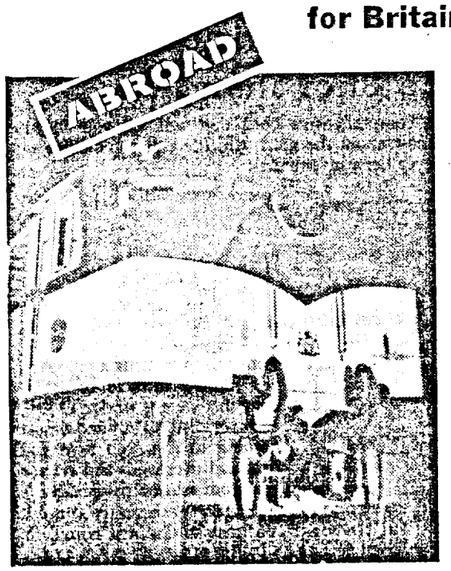
A TWOFOLD JOB...



Power for Industry. The new Tilbury Generating Station is one of many in the Central Electricity Authority's development plan for which ENGLISH ELECTRIC is supplying plant. The picture shows a high-pressure feed water heater under construction for a 60-MW turbo-alternator set, one of three to be supplied to the Tilbury Station.

How the English Electric Company is working for Britain at home *and* abroad



Rhodesia. The demand for modern locomotives comes from all over the world. Here is one near completion in the Preston Works—one of twenty-three ENGLISH ELECTRIC 2,000-h.p. diesel-electric locomotives for Rhodesia Railways. NAPIER turbo-blowers are fitted to the diesel engines of all these locomotives.

THESE ARE challenging times for Britain. Great strides have been made since the war in rebuilding our economy. The problem is to *maintain* this progress.

From 1949 to 1955 our total industrial output rose by 27%, and the value of our exports by 58%. British industry is busy, and actively developing—there are more jobs than workers. Our standard of living is high. But to ensure *still better living* for Britain, we need still higher production, still more activity in competitive export markets. In both these ways, ENGLISH ELECTRIC is playing its full part.

At home, this company helps to supply the generators, transformers, switchgear and other plant needed for Britain's expanding power generation programme; it also makes the electrical equipment by which our industries *use* this energy for production—production not only for home demand but for the world.

In addition ENGLISH ELECTRIC is itself a vigorous exporter; *about half the Group's business is overseas*, earning foreign currency for Britain.

With the world-wide experience of its engineers and technicians, backed by great manufacturing resources and advanced research, ENGLISH ELECTRIC is hard at work, making an important *twofold* contribution to Britain's economic progress.

To young men and their parents *To any boy or young man considering a career in science or engineering,* ENGLISH ELECTRIC *offers almost unlimited opportunities—first-class training, and a choice of rewarding jobs at home or abroad. For details, please write to Mr. G. S. Bosworth, Central Personnel Department D.6.*

Poker Play for Canal Users

THE state of business in the Suez Canal affair is that, at the Egyptian end, traffic is still working normally; that, at the United Nations, both the British and French, on the one hand, and the Egyptians on the other, have established that they merit a hearing before the Security Council; and that, on the users' front, eighteen nations have agreed to set up some sort of Suez Canal Users' Association. They have outlined this new body in terms so vague as to disquiet all those who do not want to see President Nasser win, though total despondency is still premature. Their eighteen plenipotentiaries are meeting in London on Monday to forge the new instrument, which is likely to be known as SCUA. Meanwhile, however, their foreign ministers are emitting statements in such variety, and so uneven in emphasis, that confusion of mind is inevitable. Now is the time to analyse events and to discover to what end the users can wield such weapons as they are able to manufacture.

There are three courses open to the client who considers his interests to have been flouted or denied. One is to exercise pressure: he can stop paying for goods and services, or transfer his custom elsewhere. Another is to negotiate in order to get the wrong righted or adjusted. The third is to shrug his shoulders and accept that he has been worsted. What the two London conferences of Suez Canal users have made clear is that a majority of the users rightly rate the last course as out of the question. They do not feel safe if passage depends on decisions taken by Egypt alone, and some of them add that thus to surrender all vestige of control would have boundless ill effects on other interests all over the world. (Europeans think this about their existing investments: Asians about their prospects as good risks for future investors.) What is more, most users do not accept the argument that President Nasser has only taken what is his own. While recognising that the canal is itself an integral part of Egypt, they do not recognise that, as a corollary, he was entitled to seize without notice and at the point of army guns the local assets of a company which, though registered in Egypt, is international in ownership and direction, and in the broader obligations which it shares with Egypt itself.

Once surrender to President Nasser is ruled out—and this is the consensus in Britain—the alternatives are pressure and negotiation, and, contrary to much argument in recent weeks, these are not incompatible; they can be complementary. This is the point to emphasise at this moment when negotiations may for the first time become possible; it has been blurred in the flurry of loose (and perilous) talk about resort to force, which still offers no solution and would put its users in the wrong—though it cannot but remain an ultimate sanction if the 1888 Convention is violated (a contingency which has not arisen yet) or if action has to be taken in defence of persons or property against attack. The milder forms of pressure—those which are compatible with negotiation—begin with the withholding of dues pending negotiation and proceed up a scale

that includes boycott of the canal, and, if greater impact is needed, boycott of Egyptian goods and services. Readiness to withhold dues entails the corollary of readiness, if need be, to take these sterner measures, however painful they may temporarily be to the users themselves. To ensure that all minds are clear on this point should be one of SCUA's first duties on Monday. For if a client withholds dues and, later, meets with Egyptian refusal to let him through without payment, his only alternatives are to give in (in which case he might as well have surrendered before bluffing) or else to go round by the Cape. Last week some free nations were uncertain—indeed, were perhaps refreshingly uncertain in these regimented days—whether they could get their shipowners to sail in an ordained direction. To get eighteen signatures on to the final document, the tougher members present had to agree to water it down and to say that users "may," and not "must," pay SCUA their dues.

At one end of the scale, Britain and France were always ready to exercise currency control for the purpose; at the other, Italy says that it must pay its dues to Egypt—although to upbraid it as a blackleg, as M. Pineau has done, is to disregard its vulnerability as the only major trading power wholly within the Mediterranean. Between these extremes lie most of the shipowning nations shown in the adjoining table, including the country of SCUA's original inventor, Mr Dulles. But he seems to have to water his invention down every time he opens his mouth. While he rightly says, first, that "war is not the way," and, secondly, that "Egypt must not get away with it," he is averse to any step that smacks of economic boycott; and is therefore unready to take the wholesale Treasury measures which are the only way of inducing American ships (and, numerically far more important, American-controlled tankers flying the Panamanian and Liberian flags) to stop paying their dues to Egypt. He said on Wednesday in Washington that for the purpose of cutting President Nasser down to size he is ready to rely on time, attrition and the chagrin he hopes Egypt will suffer as supertankers and pipelines multiply on alternative routes. But to assume this is to want the end but to shrink from the means; for—let there be no doubt about it—to negotiate with an ambitious dictator without keeping some means of leverage during the negotiation is to concede him the victory right away.

★

The case for negotiation is now being pressed on all sides—by Asians as well as Europeans and Americans; one of its principal advocates is Mr Krishna Menon, as he hurries, indefatigable but planless, from embassy to embassy and capital to capital. Negotiation has not, as some aver, already proved impossible; it has not yet been tried. Mr Menzies, whose mission was a take it or leave it affair demanding internationalisation or denationalisation of the canal, had no mandate to try it, and met with point blank refusal. What is the users' bargaining position? Admittedly, if negotiations begin now, it will be a weaker position than was expected when the world assumed that President Nasser would be unable to keep the canal traffic moving; and President Nasser holds the ace of trumps, the canal itself. But the strength of SCUA will depend—as in poker—on the combination of cards in its hand, and on its poker face—in this case, on its readiness seriously to apply pressure, if need be.

For just how strong is President Nasser's hand? In addition to his physical possession of the canal, he has now run it for a fortnight without mishap and is recruiting pilots, seemingly in plenty; and he is reinforced by the conviction that the maritime powers are at sixes and sevens. He has shown his hand so far as to say that even if only 20 per cent of the normal traffic uses the canal, this can pay its way and show a small profit. But, in offset, he holds weak cards as well. He needs more profit than this modicum, or his exchequer and foreign exchange positions will suffer seriously; winter conditions will test new pilots more severely than does summer weather; last and worst, his unwillingness to meet the users' demands for checks and balances is throwing him into most unneutral attitudes. An article from our Cairo correspondent on page 1057 explains that the biggest setback so far administered to his ego is the patent dismay of some Arab and Asian neighbours at his readiness, in flouting the west, to fall back on Russia. He needs to recover some lost ground among his friends and neighbours; hence his rush to Saudi Arabia this week—no pleasure trip at the height of the summer's heat. Finally, the strength of his hand will begin to deteriorate as soon as the users can show that they are not at sixes and sevens.

PRINCIPAL SUEZ CANAL USERS
1956 (six months)

By flag	Net Registered Tonnage	Per cent
British	17,653	27·3
Norwegian	9,587	14·8
Liberian	7,343	11·4
French	6,169	9·5
Italian	4,497	7·0
Panamanian	4,310	6·7
Dutch	3,053	4·7
Swedish	1,377	2·1
United States	459	0·7
German	394	0·6
Other	9,783	15·2

If negotiations are to take place between two parties neither of which holds all the cards, how should SCUA play its hand, and what should be its aim? What pattern, short of the wholly international one that President Nasser has rejected, would restore confidence to its members? *The Economist*, in its issue of August 18th and during the first users' conference, suggested two second-bests, either of which might work even now. One was that a permanent users' council—a forecast of SCUA—should supervise a board of management made up of an Egyptian majority but also of user representatives, and should be ready to apply sanctions in the event of any departure, whether deliberate or involuntary, from a new edition of the 1888 Convention. The second possibility was that a consortium of maritime nations should take over management and training for a fixed period, thereafter handing over to a management composed of Egyptians. (Wing-Commander Ali Sabry, President Nasser's *chef de cabinet*, is quoted as having said that Egypt vainly suggested some months ago that the Suez Canal Company should train Egyptians in some numbers at Egyptian government expense, and that he still thought this a good way of working towards complete Egyptian staffing and control.)

It is perhaps best to look less far ahead, until next week's SCUA meeting has revealed whether the users in fact are able to combine sufficiently to play their poker hand with all the cards that are vital to negotiation. If not, it is they, not President Nasser, who will lose the game; and it will be their own fault.

Peace of Blackpool?

LABOUR seems to have passed the first stage on the road to political recovery. The party assembles for its annual conference at Blackpool next week with a settled leadership, but without a policy. It is not altogether cynical to suggest that, on the whole, it might be wise to keep things that way.

Certainly, the party's unity around its new leadership is impressive. Mr Gaitskell has had many hard things said about him in these columns; the leader of a major British party usually does. But today, on the anniversary of the time when his tide came in at Margate, it is right to take note of how remarkable have been his achievements in his present office. When he was handed the reins by Lord Attlee, one's apprehension was that as a moderate and sensible Labour leader—who was not also a hero of the trade union movement—he might be going to be a desperately lonely man. Without a faithful bodyguard of like-minded supporters immediately behind him, regarded by the intellectuals as too right wing and by the trade union right wing as too intellectual, it seemed that he could rule Labour's wilder men only by persuasion, and that persuasion might mean conciliation. If one could have foreseen the alarming change in the balance of trade union power that has taken place this year, that apprehension would have been stronger still.

In fact, however, Mr Gaitskell has not only ruled Labour's wilder wing; for the time being he seems to have absorbed it. Although the delegates from the constituency parties remain as militant as ever—and next week may even elevate the tiresome Mr Zilliacus to the National Executive—it is Mr Gaitskell's capacity to influence Labour's left-wingers at Westminster that has proved important; some people are beginning to wonder whether Mr Bevan should not now be called an ex-Bevanite himself. In part, Mr Gaitskell's success has been due to the power of patronage, and in part to the trend of public opinion against the Tories: he has gained upon the swings. But his greatest success has sprung from an essentially personal quality: from his personal ability to make his moderate opinions seem sensible to all manners and unexpected factions of Labour MPs, once he is given the opportunity to present them. He is, quite simply, bidding fair to be the most quietly dominant chairman the Parliamentary Labour Party has ever had.

So far, only the process of policy re-thinking has taken some of the gilt off the unginger-bread. It has been said that a party leader cannot be better than the policies his party puts out. This is unjustified; Mr Gaitskell has proved a better leader than these cruel words imply. But many of Labour's wiser tacticians are beginning to realise that the system of seeking a policy through study groups has been a mistake. Labour policy must spring from the heart, acting upon the most pressing problems of the day; it cannot be processed from a haphazardly-collected and oddly-assorted committee of heads—say, Mr Crossman's, Mrs Castle's and Mr Sam Watson's—acting upon the problems that they think (or say they think) will be most pressing in 1959-60. This may seem a strange conclusion, when Labour has so often been urged to think instead of feel. In fact, however, the real need for Labour has always been to think and feel instead of striking postures; and to ask a Labour committee not to strike postures, when it has a public document to compile, is against the nature of the beast.

Yet even these study group documents should not be taken too tragically. They have avoided the two worst traps. One important trap was that they should not too specifically commit the next Labour Government to certain undesirable lines of action; so far, apart from the recommendation to municipalise all rented housing—which would not, in fact, be administratively capable of fulfilment—the documents have been unspecific in the extreme. The second important trap was that, even if unspecific, they should not set a tone of policy that would be long remembered, and could not then be ignored; fortunately the statements to date have been so turgid that they have been very widely forgotten already. The oratory about them next week does not seem likely to alter that. When the date for the next election is announced, and Labour has to draw up an election manifesto in some hasty fortnight, one suspects

that the national executive will still be able to compose it in accordance with the apparent needs of the hour and without too much reference to what has unwisely been set down on paper before. That, after all, was the fate of some things that were in "Challenge to Britain."

Of course, the pressures upon Mr Gaitskell may still go awry. If Mr Bevan gets the treasurership next week—and, still more, if he does not get it (the odds are discussed in a Note of the Week on page 1030)—some people fear that his strategy may then be to lash out after so many months of continence; it is an important political fact that Mr Bevan is still personally inimical to Mr Gaitskell. The emergence of Mr Cousins and the changed balance of power in the trade union movement may still be a political nuisance. The Suez crisis could still turn out in a way that would be personally disadvantageous for Mr Gaitskell. Above all, pressures for a more extreme policy may still swell up from the rank and file of the party, and Mr Gaitskell may still bow to them. One will be watching out for these next week, though in an initial attitude of some disbelief. At the moment, Blackpool looks like being a place of bright lights and some gaiety; one cannot yet see the rock.

Unforgettable People

MOST of us are refugees from refugees. It is not really true that they are "forgotten people." They are, rather, people about whom we should like to forget. A vague feeling of guilt makes us recoil, in classical Freudian style, from the thought of our homeless and helpless fellows. It is less emotionally disturbing to turn mind and conversation on to Mrs Penomareva's hats or Mr Liberace's clothes, even on to the more serious problems of navigation through Oxford and Suez. Mercifully, a few devoted people refuse to push all thought about refugees to the back of the mind, and instead give of their best to help them. But the mass of mankind grasps at excuses for its inaction. And some of the excuses that come to hand are plausible: "Surely an enormous amount has already been done for these people?"—"But there are so many of them; where can you even begin?"—"What's the good of talking about solving the problem when new refugees keep coming?"

There is enough basis for these arguments to make them worth examining—although there is not enough to justify despair. Since 1945, hundreds of millions of pounds have been given, from public funds and private pockets, to help refugees build themselves new lives, or at least to save them from death. Yet there are more refugees in the world today than there were in 1945; and still they come. War in Palestine and Korea, partition in India and Vietnam, persecution in China and in the Arab world have driven around twenty million people from their homes in Asia. In Europe, the ten million "displaced persons" found in the ruins of Hitler's empire represented only part of the postwar refugee problem. There were, too, the Finns whose homes had been annexed by Russia, Greeks uprooted in the civil war, Spanish republicans who had crossed the Pyrenees before 1939, survivors of East European Jewry whose one thought was to flee from the places where their communities had been butchered—and on top of all these, the twelve million Germans expelled from East Prussia, Silesia, the Sudetenland, and other parts of Eastern Europe. Even if one sets aside those DPs (the great majority) who were returned to their own countries soon after the end of the war in Europe, there is left a total of well over thirty million refugees.

And still they come. So accepted a feature of our age is the refugee that only the more spectacular escapes make news—a Polish airman landing on Bornholm, a Jugoslav braving the Adriatic on a raft, an athlete or dancer from Eastern Europe eluding his team while visiting a western capital, a band of Epirots who fight their way south into Greece, bringing with them the Albanian frontier guards who at first tried to stop them and then decided to come along too. Behind them, almost unnoticed, presses the broader stream: seamen jumping ship, aged Jews at last allowed to leave Balkan countries, Hungarians and Czechs emboldened by the Red Army's withdrawal from Austria to attempt the still dangerous frontier crossing, the Germans fleeing the "Democratic Republic," over 500 of them a day. Nobody (except the political police) knows how many try to escape, are caught and suffer for it, although occasionally a fugitive is shot down in full view of helpless onlookers across the frontier. But it is painfully clear that the stream is not drying up.

So vast and unending a problem is indeed sickening to contemplate. There is all the more need to look again, as unemotionally as possible, at the specific facts behind the dreary procession on the horizon, and to consider where, if anywhere, some new effort can be applied to good effect. And as soon as this is done, it becomes clear that there is one facet of the refugee problem which calls for special attention in Britain and other countries, and is small enough in its proportions for a complete solution to be perfectly practicable.

The plight of nearly all refugees is miserable. They have lost homes and belongings, family and friends. But for some among these millions there is an additional loss: they have lost their country. The German from Silesia, the Hindu from Dacca, the Korean or Vietnamese fleeing from the communist north, the Palestinian Arab in Syria or Jordan, all have at least the advantage of finding themselves among their own fellows. The refugee from Eastern Europe is that much worse off than they. He is in a strange land, his

helplessness increased by inability to understand the language. He does not know the ways of the people who surround him, and, whether they ostracise or discriminate against him or not, he feels unwelcome and alone. Above all, he has forfeited the protection of his government; he has no passport, no inherent legal rights, no particular claim on the attention of anybody.

For these very reasons, he should command the special attention of the international community—not because he is a victim of communism (victims of fascism have fully as good a claim) nor because he is a European; but rather because he has lost his country, and must rely solely on the humane instincts of humanity as a whole. His peculiarly unhappy position has been repeatedly recognised by the United Nations. Although the UN has handled specific emergency relief programmes for Palestinian and Korean refugees, it has maintained the distinction between "national refugees"—uprooted, but remaining within the bounds of national states and under the protection of national governments—and those refugees who find themselves in strange lands, unable or unwilling even to seek aid from a consul. It was with these latter—in the Far East as well as in Europe, Spaniards and Armenians as well as Czechs, Balts and Ukrainians—that the UN High Commissioner for Refugees was directed to concern himself when his office was set up in 1951.

★

The first High Commissioner, Dr van Heuven Goedhart, whose sudden death this summer was a very real blow to the cause he championed, was confronted with a notably painful task. Two big temporary UN agencies, Unrra and the International Refugee Organisation, had disposed of the great majority of the DPs of 1945. Unrra had repatriated seven million who were willing to return home; the IRO had resettled in new homelands over a million who were not. The problem no longer loomed large on the face of Europe, and the inevitable happened: large-scale international aid was shut off just at the point when support on a relatively modest scale would have sufficed to finish the job. The High Commissioner was instructed to watch over the interests of those refugees who still lacked the protection of a national government. He found nearly half a million of them in penury; and he was given no fresh funds with which to help them.

For five years Dr Goedhart begged and badgered his way across the world. He and his very small staff had to devote to fund-raising campaigns time and energy which they could ill spare from their other duties. About 160,000 of their charges were resettled overseas through the Intergovernmental Committee for European Migration, the United States "escapee programme," and other public and voluntary agencies. There is hope that perhaps another 100,000 will eventually be admitted to overseas countries. But it has long been clear that for the majority of the High Commissioner's remaining charges the only chance of breaking out of their present wretched existence is to make themselves self-supporting in the countries where they have spent the postwar years—principally, Germany, Austria, Italy and Greece.

Many former DPs have already succeeded in this. For many of those who still live in camps, slums, former barracks or jails, the road to re-establishment as self-respecting citizens has been blocked by obstacles insuperable to the unaided individual but by no means too high for him if he can get a leg-up. Experienced craftsmen have lacked the essential tools of their trade; promising youngsters have had no opportunity to acquire skills; men and women who could earn a fair living in an industrial centre or on a farm have had to stay in camps to tend sick or aged relatives. In all too many cases the gap between misery and a new life has been pitifully small.

The High Commissioner's Office has therefore made it its first concern to help these unfortunates to help themselves. Some of the funds it has scraped together have had to go to help provide the essentials of existence; although, when the IRO was wound up, the governments on whose territory the refugees remained accepted the duty of maintaining them, and although this very meagre public maintenance has been supplemented by voluntary bodies, many refugees still live from hand to mouth in foul surroundings. But wherever possible small sums—usually loans—have been provided to enable a refugee to build a little house or to buy tools, to obtain schooling for a child, to finance a co-operative business or a shop. The results have shown that, even after a decade of demoralising stagnation, many thousands of the refugees are still able and willing to build themselves new lives.

★

Theirs, then, is a very special problem. Although a certain proportion of them are debarred by sickness or age from any hope of becoming self-supporting, the majority ask only for a modest amount of help to enable them to make a fresh start. Two years ago the High Commissioner prepared a programme to provide precisely this kind of aid; he estimated that it would cost only £4,300,000, spread over four years. So far, however, appeals to public and private generosity throughout the world have brought money in at not much more than half the necessary rate. If the response does not improve—and quickly—the record of the great effort made in the first postwar years to save the East European refugees will be irreparably tarnished. If we are not humane enough to heed the appeal of these tragic figures out of sheer charity, have we not reason at least to make one more effort to clear our own consciences—an absurdly small effort when seen against what has already been done? To spoil a ship for a ha'p'orth of tar is peculiarly mean when the ship happens to be an ark of refuge.

When is a Liberal not a Liberal?

LIKE the worm, the Liberal party is always said to be turning. Like the atom, it often seems to be splitting. The turning point that most Liberals were thinking of as they gathered at Folkestone for their annual assembly this week was that which they think they see in their fortunes ; much more important, however, is the turning point that not sufficient of them see in their functions. The split that they will immediately be reminded of, and will as immediately want to forget, is that caused by the defections to the Labour party in the past year of Mr Dingle Foot and two appendages ; but the split to which their attention really needs to be directed is a (partly unconscious) one within their own faithful ranks.

This is the split between those Liberals who now realise that the object of keeping their party alive is to help jog the Government—which is now, and is always going to be in the foreseeable future, formed by one of the other two parties—towards certain specific policies with which Liberalism is identified ; and those who still act as if the only object of keeping a Liberal party alive is in order to keep it alive. The second school stands by an unhappy tenet—a tenet which it will sometimes actually publicly proclaim—that the most important thing for the Liberals to do is to keep striving to show that there is a recognisable difference between them and the other two parties ; the first group realises that the most important thing for the Liberals to do is to try to make the other two parties as much like the Liberals as possible. The split is basic, for it is a split between attachment to an ideal and attachment mainly to a concept of self-importance. Quite clearly, the Liberals' future must lie with those attached to an ideal.

It is with this in mind that the Liberals should make their decisions about the main problems before them : about policy, about the role and record of the party in Parliament, and about the role and intentions of the party in the constituencies. About policy, the best advice to them can be summarised in a sentence. The sensible course is for Liberals to concentrate on championing specific measures which the other parties know they should carry out, but do not want to ; the useless course is to champion popular but meaningless policies which the other parties would like to carry out, but cannot. Every Liberal knows in his heart what these popular but meaningless policies are: to cite the clearest examples—the abolition of conscription while maintaining adequate defence, conquering inflation while maintaining overfull employment, establishing the rule of international law by talking like international lawyers, and (worthiest, but emptiest, phrase of all) "humanising industrial relations by giving the workers a feeling of co-partnership."

The constructive policies required from a Liberal pressure group seem to be equally obvious. Looking towards Labour, the most fruitful fields of Liberal pressure now are to keep on publicising and fighting some of the offences against liberty and of the restrictions to production thrown up by modern trade unionism, and to keep on probing some of the problems of economic inefficiency arising from Labour's nationalisations ; official action on these fronts has been inhibited because Labour's two most sacred cows are apprehended by the Conservative Government to be very dangerous bulls from which to keep away. Looking towards the Tories, the Liberals' most useful task is to help fight fear of the inconvenience of change, especially the sort of change occasioned by the removal of distortions. The Tories have shown some courage in facing, or preparing to face, some of these inconveniences—in removing subsidies, preparing to tackle rent control, in their monopolies legislation, and their edging towards freer trade ; but they would benefit from more pressure behind their elbows. If the Liberals concentrated on these specific problems, they could with advantage avoid party involvement in major but less clear cut issues on which they have nothing much to say: and they should try to avoid constantly putting up Mr Clement Davies in order to say it.

*

It is with the embarrassing topic of Mr Davies's future that the second main item that should be on the Liberals' agenda—the role of their party in Parliament—inevitably merges. One of the most welcome, though largely unnoticed, features of this Parliament has been the success of the three English and Scottish Liberal members in gradually filling the role that independent MPs used to fill some years ago. Their achievement has been praiseworthy, especially in view of the sketchiness of the organisation behind them ; the Liberal party in the constituencies would do well to follow their example by concentrating much more on what might be called the committee, rather than the second reading, stage of prospective legislation and reforms. By their hard and detailed work on a variety of technical, and especially industrial, matters few members of this parliament have served the country more assiduously than Mr Grimond, Mr Holt and Mr Wade.

But, unfortunately, Mr Davies—and through him, perhaps unfairly, the Welsh half of the Liberal party in the Commons—has been given the reputation of standing outside this line of development. When Mr Davies comes forward to make his speeches (on major occasions only), he too often gives the impression that his main objective is to show that he can be impartially critical of both the other parties, although he seems willing to be flatly opposed to one of them only if he is sure that he will soon be able to fill his ration of being equally flatly opposed to the other. This is not a recipe for giving the Liberal party a practical reformist's name. It may well be the inevitable consequence of his leadership of a party that still strives to be too much of a party and too little of a pressure group ; probably the fault lies much more in his star than in himself. But the conclusion prevalent among most non-Liberals at Westminster—that Mr Davies, after years of most devoted service, would perform a further service now by handing over the leadership to Mr Grimond—is too widely spread for any honest commentator to ignore it, however ungrateful such a conclusion may seem.

*

There remains the problem of the Liberal party in the constituencies. This at once raises the emotional question: how many election candidacies ? Here again the realistic answer seems obvious. The right decision is to have sufficient candidacies to keep the local constituency parties alive ; in an imperfect world, they will not be kept alive unless sufficient of them are allowed to enjoy the fun of engaging in elections every five years. The wrong decision is to try to keep constituency parties alive merely in order to run candidates at elections. Although the Liberals have made a hearteningly better showing in by-elections in the last year, they need to be frankly warned against a flame of optimism. There is no evidence that the party would win a single additional seat if a general election were held tomorrow (indeed, if the Tories yielded to the growing temptation of putting up candidates at Montgomery and Huddersfield West, it might have two net losses). There is still force in the cruel crack that the Liberals' decision to adopt a medical hypnotist as their prospective Parliamentary candidate at Chelsea represents their most hopeful throw yet in the face of a mass television election. But the Liberals' task now is to make such cracks unworthy ; and this brings them back to where this article started, to confront their party's basic dilemma.

Is Liberalism to be regarded as a gleam in the eye of old men who remember battles long ago, and of young ones who have sometimes (let us face it) come into the party largely because they like playing politics and feel that they would not be sufficiently important in either of the larger parties' organisations ? Or is it (this is its real appeal to its most effective new members) a doctrine to be impelled on non-Liberal governments by a pressure group, which can legitimately sharpen itself by playing a part—every five years, and in about one-fifth of the available constituencies—in electoral politics, but which is mainly characterised by hard and specific attachment to two major principles: those of defending individual liberty against bureaucratic organisations, and of opposing "protective" economic distortions ? That is the real split among the Liberals ; understanding of it could provide their real turning point. Every delegate at Folkestone, from the leader of the party downwards, has to indulge in some honest self-criticism to find out on which side of the turning he stands.

Notes of the Week

Battle of Llandudno?

ON the surface, it would seem that not since Baldwin's early years has the Tory party been so at odds with its leaders. For this year's annual Conservative conference at Llandudno on October 11th-13th there is a record number of 394 resolutions, and the vast majority are either downright critical or at best leaven their praise of Government policy with urgent pleas for new, or different, action. Mr Oliver Poole, the party chairman, has taken pride in "a particularly genuine attempt" to give time for criticisms to be debated, but faced with such an agenda it would have needed some remarkable gerrymandering to keep the critics out.

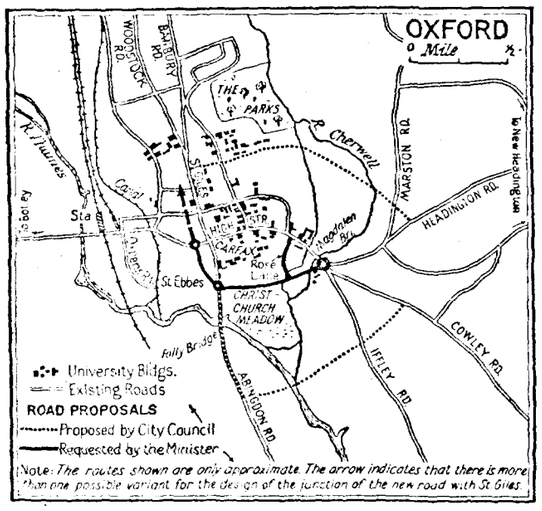
Nevertheless, there does seem to have been, if not gerrymandering, at least some of the usual tactful arrangement ; and the "starred" motions (i.e. those chosen for debate) deserve close study to see how many of Llandudno's promised rows are really likely to explode. The party leaders seem to be running their biggest risks on the first day. The morning session will open with a debate on Suez, on which a revolt from the floor is still possible ; then—a dangerous piece of timing—the afternoon session will open with a motion that roundly condemns "the Government's apparent inability to reverse trends resulting from Socialist maladministration," a motion which Mr Butler, who is to speak for the platform, will clearly have to oppose. In arranging the programme for the second day, however, the party managers have been much more circumspect. From the 59 resolutions on economic policy (mostly calling for amelioration of the living conditions of the middle class) and the 31 demands for lower taxation, the organisers have picked two chummy exhortations which the platform should be able, with kind words about good intentions, modestly to accept. On one or two other subjects—notably on farming and industrial relations—the

cratic leadership (which could well be thoroughly collective) by "elective, controlled and responsible leadership subject to recall." Here are ideas that seem to be full of dynamite. Elsewhere, however, Mr Hochfeld has expressed his view that the Sejm is no longer a body in which the workers' representatives fight against other parties; it is "as a whole, an emanation of the National Front in which the Workers' Party provides the guidance." This is much less exciting. Mr Hochfeld's ideas, in fact, hardly seem to question the supremacy of the party, although they do threaten the autocratic tyranny of the party bureaucracy and of individual party bosses.

Clearly, a good deal will depend on the new electoral law that a special commission is now drafting. Will it make it possible to bring into the Sejm enough deputies who are not communist-controlled to influence its debates? Poland, unlike some other satellites, has nominally retained two other parties, beside the Communist party. Even so, it is highly improbable that the regime would willingly allow an alternative government to develop within the walls of parliament.

Town, Gown and Mr Sandys

DESPITE the inevitable heartburning, Mr Sandys's directive about Oxford's roads should be accepted without further argument about the main issue; it is high time this long controversy was settled. The Minister has avoided the chief danger: the danger of searching for a compromise



that would merely diminish Oxford's attractions without providing any relief to its traffic problem. At the cost of one drastic blow to those attractions (and, it should not be forgotten, at the cost of specific harm to St Hilda's and Magdalen College School), Mr Sandys's solution seeks to give the maximum relief to the congestion in the centre of Oxford by the closing of Magdalen Bridge to motor traffic. Once it was apparent that the widely canvassed proposal for "intermediate relief roads," so far away from the centre that none of the city's amenities would be affected, was unacceptable, the issue boiled down to whether the Parks or Christ Church Meadow should be sacrificed to provide the alternative road to the High. And since Congregation itself had narrowly voted in favour of the Meadow if an inner relief road had to come, the Minister was left with a choice between the north and south sides of the Meadow. Once his choice had thus been narrowed, he was right to choose the north side, thereby reviving—though with variations—Dr Sharp's plan for a Merton Mall, which both preserves as much as possible of the Meadow's amenities and provides the most convenient alternative for traffic formerly using the High.

Three provisos should be entered, while one accepts the main plan. First, since passions are no longer involved once St Aldate's is crossed and condemned St Ebbes is entered, there is a strong case for reconsidering the later reaches of "Sandys Avenue." Instead of turning up a widened New Inn Hall Street parallel to the Cornmarket, the new road might well be extended to the broad Oxpens Road. This would provide an easier approach to the stations, and if coupled with the building of a new shopping centre in that area, would materially assist Mr Sandys's aim of removing congestion (including that caused by pedestrians and prams) from the centre of the city.

Secondly, since Mr Sandys's decision will be justified only if it does succeed in providing "peace and dignity in the heart of the University," the question arises whether this one relief road is enough: the city council will probably suggest that a link between Marston Road and north Oxford, emerging north of the Parks, should be built at the same time. Thirdly, it is going to be very important to ensure that the extension of Rose Lane from the High to the new road, for the convenience of local traffic, can in fact be "designed in such a way as not to attract through-going traffic."

Earning Merdeka

MR LIM YEW HOCK, Chief Minister of Singapore, has won another round. A fortnight ago he won a unanimous vote of confidence in the Assembly on his policy of approaching the Colonial Office next year with a demand for independence. He has now put to the proof his policy of "earning merdeka" before asking for it. His predecessor, Mr Marshall, wanted independence on the ground that without it he could not hope to ensure that a democratic Singapore could survive against the assaults of communism. Mr Lim is determined to show that with the increased power wrested by Mr Marshall from the Colonial Office he can demonstrate the ability of Singapore's existing democracy to root out communism. He has now expelled five alien Chinese well known to be communist organisers, cancelled the licence originally granted to the Chinese Middle Schools Union, which has long proved to be a kind of communist-dominated over-age schoolboys' union, and proscribed two innocuously-named communist-front organisations, the Singapore Women's Federation and the Chinese Gong Musical Party. Just as there is nothing picturesque about the last named, so there is nothing moderate about the Middle Schools Union or the Middle

Road group of industrial unions, based on a union whose general secretary is now to be deported.

Mr Lim's action promptly brought Mr Lee Kuan Yew, leader of the People's Action Party, and a large delegation to his door. Whereupon Mr Lim not only invited them in, but the press too, and thus obtained excellent publicity for his cutting denunciation of the trouble-makers, his grim promise to put down disorder "ruthlessly," and his own policy for upholding democracy by putting down communist intimidation. This resolution to govern the colony has brought him an undertaking from the Liberal Socialists, who hold the balance in the Assembly, to back him when his actions are debated in ten days' time. Mr Lee Kuan Yew has once again been worsted; but as his position as a figurehead becomes clearer, so does the strength of the organisation behind him. Mr Lim has only begun his fight; but he has shown how ready many Singapore Chinese are to find and to follow a leader who tries to free their lives from communist physical and moral "squeeze."

A Bullet in the Ballet

ON Thursday there were three developments in the affair of the Bolshoi Ballet. The Foreign Office announced that it had informed Moscow, on the previous day, that the Government could not interfere in the legal proceedings against Mrs Ponomareva. The Bolshsoi company asked for their British visas; and the Soviet Ministry of Culture promised that "by tomorrow morning everything will be clear." Some points might well have been made clear earlier. Once a warrant is out for the arrest of a person who has failed to answer his or her bail, however minor the offence in the charge, nothing can be done to quash it. The Government, however much reasons of state seem to justify interference, is powerless, and rightly; the law itself is irreversible. The police are apparently also quite unable to relax their watch for the bail-breaker.

That is why Mrs Ponomareva has had to remain extra-territorially encapsulated in the Russian Embassy, and Covent Garden has faced a possible loss of £40,000 owing to the Bolshoi Ballet's threat not to visit London. What was not quite clear, however, was whether this threat was simply intended as a reprisal or in fear that a ballerina would be had up in the same way (though any English store detective who hears Russian being spoken is henceforth likely to find urgent business in another department).

It might, however be worth the Soviet government's while to examine its own logic in the matter. As a reprisal was it not going rather far? Does it not set a precedent which might preclude any Russian entertainers or athletes visiting Britain, and which stultifies obvious Russian interests in showing their prowess here? Has it not so overdone matters as to weaken British sympathy for the Russian position in the matter—and the British, while they think the Russians have made an incomprehensible fuss, are also wishing their own revered law was not, on occasion, such an ass. Does it not suggest that what the Russians want for all their visiting celebrities, if not for all their visitors, is diplomatic immunity? If so, is this not a demand for *Herrenvolk* treatment—or a confession that Russians are liable to land themselves in court in their own country occasionally but that this is too shameful a state secret to be revealed?

Crust or Crumb?

FROM next Monday, "national" flour is no longer subsidised, nor are millers any longer obliged to produce it. In considering the problems thus raised, the bakery trade was right to reject, at a conference last week, the idea of a national price for bread. The plant bakeries are proposing that their 1½ lb loaf should sell at 10d. in or near the ports where flour is landed, and 10½d. elsewhere—with a 1d. extra for sliced and wrapped bread. In *The Economist* of September 8th it was suggested that 10½d. would be a reasonable competitive charge if the price of flour remained unchanged. Since then, however, national flour has been reduced in price by 3s. a sack, and the large bakeries have very properly trimmed their basic price to 10d.

This price is going to provide some uncomfortable competition for the small bakers. Their national association has recommended 11d. as their minimum for the 1½ lb loaf, and in parts of the country where the plant bakeries do not deliver, the new price may be more than 11d. But it is not a straight case of bakers in the country putting up their prices while those in the towns are forced down to the plant bakeries' 10d.; the London master bakers recommend 11d., and those in East Anglia 10d. It looks as if the trade would do well to study East Anglia's methods. But if the small bakers are going to have any success in selling at 11d. or more (with perhaps another halfpenny, too, for delivery), they must concentrate on their declared aim of producing a better loaf for the extra money. What is more, they must convince the public that it is better.

It cannot be said that they have made much effort to do this so far. They have had five months' warning of decontrol, five months in which to extol crusty loaves, to point out, perhaps, how they strengthen the teeth and curl the hair, and how delicious they are when served hot and crisp. Instead, their approach to the public has had a note of self-pity, with its tales of family bakers going out of business and its underlying assumption that the nation owes them a living even if it prefers cheaper, if more woolly, bread to their own "craftsmen's loaves." Nor was it a good idea, in statements on the wireless and in the press, to emphasise that, with the end of control, the small baker will try to increase his profit margin—justifiable as such an increase may in most cases be. The trade has something to learn about public relations; they are an essential part of the competition in which, to the public benefit, bakers should now be engaged.

Return of Seretse

THE Government's decision to permit Seretse Khama to return to Bechuanaland is welcome. The way was opened by his agreement to follow his uncle Tshekedi's example and to renounce the chieftainship of the Bamangwato tribe for himself and his children. This is a step which he has, in fact, been willing to make for some time, but he wished to make it in Bechuanaland, not here; his concession on this procedural matter, and the alliance which he struck with his uncle during the latter's visit this summer,

has enabled the Commonwealth Relations Office to withdraw its previous conditions for his return as a private person—that the tribe should have already elected a chief. This the tribe has firmly refused to do, and it is unlikely to do so now.

The Government has undertaken to set up an advisory council to help the existing native authority, Rasebolai Kgamane, who was appointed in the absence of a chief by the British High Commissioner for the territories; since both Seretse and Tshekedi will be free to serve on this council, it needs no great perspicacity to predict that to a considerable extent they will, before long, jointly run Bamangwato affairs. This is all to the good on two provisos. One is that they do, in fact, work jointly instead of trying to stab each other in the back; the other is that development is in the direction of some form of constitutional government. Seretse's decision is perhaps another indication to add to others that have been seen recently in East and West Africa that the institution of chieftainship is of declining significance in Africa.

The decision may evoke angry criticism in South Africa, where what matters is that Seretse has a white wife. But it shows that the British Government is prepared to come to decisions of its own about the High Commission territories—though the Labour party will take some credit for having jostled it this way. Last August Labour announced that if it came to power it would lift the ban on Seretse in any event.

Turnover in Trinidad

THE massive figure of Mr Albert Gomes has so dominated the political landscape in Trinidad that his sudden disappearance seems almost against nature. But his defeat, with his entire party, at the elections for a new and enlarged legislature is a familiar colonial phenomenon: a desire for change in colonial elections often exaggerates the swing of the pendulum when a large number of newly enfranchised voters comes to the poll. Mr Gomes stood, on the whole, for stability and businesslike administration; in the eyes of Trinidadians he was, if anything, rather too close to business interests. They therefore turned leftwards; and leftwards meant towards Dr Eric Williams and his People's National Movement. This is a new, but responsibly-officered, party (Dr Williams himself is an Oxford graduate, and one of his MPs is a figure well-known to Englishmen, Mr Leary Constantine); its general philosophy corresponds with that of Mr Norman Manley in Jamaica. Trinidad, with its oilfields, is by far the most prosperous island in the British West Indies. The People's National Movement, which won 13 out of 24 elected seats (there are also 12 nominated and ex-officio members in the legislature) may be expected to consider how far this justifies larger social benefits for its citizens, but the oilmen probably need not be too scared.

The most hopeful aspect of Dr Williams's victory is that his People's National Movement is a federal-minded party. It is linked, albeit perhaps still only loosely, with Mr Gramley Adams's party in Barbados and with Mr Manley's supporters in Jamaica. There is thus a real prospect that, when the time for a federal election arrives, a single federal party, which may be described as a Labour party, will present a federal programme. If so, this will be much to the good. Mr Gomes made a sizeable personal contribution to federation; but it was not easy to see how he would work in harness with Mr Manley, who is obviously a coming federal leader. By putting Dr Williams in power Trinidad seems to have resisted the island's temptations to indulge in sectionalism. Although this may mean some controversial left wing measures, it should also ensure a more rapid advance towards the Caribbean Dominion.

Guarding Italian Democracy

IN Rome, anxiety over Suez and speculation about the manœuvres of the two Italian socialist parties have been temporarily overshadowed by a flurry over the activities of the new *Corte Costituzionale*. Provision for this court was written into the postwar constitution, but not until last December, nearly eight years after the new constitution came into force, were the political difficulties involved in the election of its members finally overcome. Since its first meeting last April, however, the court has shown that it means to take seriously its job as the supreme guardian of Italy's democratic constitution.

It has already issued a number of important judgments invalidating laws left over from the fascist regime, including some that give the police various arbitrary powers; for instance, over individual freedom of movement. The court's decisions, however, have aroused strong criticism, not only from the extreme right but also, apparently, from within the government. More important, the president of the court, Senator De Nicola, has apparently been driven to the conclusion that its decisions were not always being respected. For these reasons the senator, who is one of the most honoured public figures in Italy and was Head of State from 1946 to 1948, last week threatened to resign as president.

In Italy those who are in favour of retaining the arbitrary powers of Mussolini's police can plausibly argue that strong weapons may possibly be needed against the communists. But to allow relics of the fascist regime to remain on the statute book accords ill with the practices of a democracy. The court was set up to make sure that Italy's laws conformed with its democratic constitution, and it is clearly essential that its authority should be firmly established at the outset of its career. Senator De Nicola has done his best to ensure this. Fortunately, he has now allowed himself to be persuaded to withdraw his resignation, and it is not likely that he would have done so without satisfactory assurances from the government about the future of the court.

Setback for Bolivia

BY the usual standards of the Andean republics, last week's riots in Bolivia were on a modest scale; three policemen were killed, three seriously injured and the government newspaper offices and radio station were burnt

down. By Saturday night everything was under control. The president proclaimed a state of siege and thirty members of the opposition Socialist Falange party took refuge in foreign embassies. Nevertheless, the outbreak has shown that the ruling party, the National Revolutionary Movement (MNR), has failed to induce the opposition to confine itself to parliamentary methods of protest, and that economic progress is in danger of being sacrificed to a bitter political struggle.

The MNR, now headed by President Hernan Siles Zuazo, came to power in 1952 after a popular revolution. It has concentrated on securing the support of the tin miners and peasants by a programme of nationalisation and land reform, and it commands little middle-class support. In August, after winning a decisive electoral victory, it risked granting an amnesty to anyone exiled since the 1952 revolution. Many exiles returned, and it is these whom the government now accuses of fomenting last week's outbreak.

Yet the average townsman had plenty of reason for discontent without any prodding by politicians. The cost of living rose 44 per cent in two months at the beginning of this year; food, in spite of generous American aid, is still very short and there are acute foreign exchange difficulties. The right-wing opposition blames the government's economic policy for this situation. Bolivia is a land of considerable possibilities. A British official report has argued that it could become self-sufficient in food supplies in three to five years, and that its timber as well as its minerals is a great potential source of wealth. But if last week's upheaval was the beginning of a drift back into the political instability for which the country was notorious before 1952, a drift which would extinguish hopes of carrying out long-term economic and social reforms, Bolivia may never climb out of its present poverty.

Battle for a Library

AMONG the old houses of the Ile St. Louis in Paris none is of greater historic interest than the former mansion of the Czartoryski family, which is now the subject of bitter dispute between the Warsaw government and the Polish emigration in Western Europe. Since 1838 it has housed the famous Bibliothèque Polonaise, founded by the poet Mickiewicz and his friends in exile after the failure of the Polish rising of 1830. It was intended to be, and became, a great storehouse of Polish literature and historical documents out of reach of the powers which had partitioned Poland. For many years it was legally owned by the Polish Historical and Literary Society formed by exiles in Paris, but in 1893 ownership was transferred to the Cracow Academy of Arts and Sciences, which had received guarantees of autonomy as a learned body from the Austrian authorities. In 1940 the library was occupied and wrecked by the Germans, but the most valuable of its contents had already been hidden and more were recovered from Germany after the war. Since then the restored library has again been administered by the Historical and Literary Society, but it has now been claimed by the reconstituted Cracow Academy. The case has gone to the French courts, and the first round has been won by the Academy. An appeal is pending.

If the legal finding is finally in favour of the Cracow Academy, an old centre of Polish culture will become yet another agency of communist propaganda in Western Europe; and in view of the falsifications of history which have been made official doctrine in Poland, it is only too likely that many documents will disappear. But the collection is a concern not only of Poles; it is also a resort of scholars of all countries concerned with the history of Poland, and it is a historic monument of the city of Paris. The best solution might be for the French government to nationalise the library, keeping it open and available without discrimination to scholars of all nations and all parties. No communist state is in a position to object to a government nationalising a piece of property in its own capital.

Quarrel on Olympus

A FLAMING row is now in progress over the television and newsreel rights in the Olympic Games. The arrangement for these in previous years—admittedly with certain variations—has been that the television and news companies have pooled their resources to film the entire games, each contributor taking from the pool what he wanted to use in news reports. Those using more than a

Forever Congresses

From the fourth century to the sixteenth, councils and synods continually met, and laboured to establish and preserve one faith throughout Christendom. While kings waged war, nobles rode out in feud or to foray, while traders were also plunderers and conquerors, and there was general strife, these councils and synods kept Christendom united, and formed a kind of public tribunal which all the combatants acknowledged and partly obeyed. It is not without reason, therefore, that M. Guizot ascribes to their predominance over the warring classes in the early ages of Christianity the promotion of peaceful communication and the advance of civilisation. What synods and councils then were, congresses and associations are in our time. They meet at Brussels, at Bristol, at Berlin and Glasgow, at Albany and Cheltenham, etc., etc., to gather and spread abroad knowledge, or find means to promote the welfare of all. They enlighten governments and people—help to remove the restrictions of the former and lessen the vices of the latter. Their object—and none can be higher or more noble—is to investigate the natural laws, moral and physical, which all men must follow in small things and in great—in rivetting a piece of iron or in constructing codes of laws—to achieve welfare. Though unfortunately for ourselves we dissent from the pursuits of some of these modern councils, believing that they have adopted old prejudices without investigation, and, like their predecessors, act before they know, there are others, such as the Congress at Brussels, to promote the removal of all obstacles to the commerce of foreign countries and the associations for the promotion of knowledge, whether they meet at Albany, or Cheltenham, or Glasgow, on which we cannot bestow too much honour.

The Economist

September 27, 1856

certain fixed amount (last time it was nine minutes per day) paid the games committee for the excess: the committee received a free copy of the entire film, and rights to distribute it in countries not covered by the companies in the pool. The committee now wants to organise the principal filming of the games itself, and to hand out at cost price to the companies three minutes of film a day. It is not clear whether the companies would have the right to choose the bits they might happen to prefer. The companies have threatened a boycott in protest at these arrangements. The fundamental difference between the two sides is that the games committee regards any film of the Olympics as entertainment over which it has sovereign rights ; the news companies say that television is now one of the most important media for bringing news into the home—and that for the committee to demand such tight control over the news they can circulate is to threaten freedom of the press and the whole doctrine of editorial responsibility. No doubt both sides have reasons which lie nearer their wallets than their hearts, but both support their arguments with high moral principles.

★

Those principles can be left aside. There are two practical issues here. First, the public would be likely to get a better service if the news companies—who, after all, have the accumulated experience and know-how—were allowed to organise their own coverage of the games. The precedents of the 1948 London games, when the committee sold the rights for a full-length film to one company but allowed a newsreel pool to operate as well (under better conditions than are apparently envisaged at Melbourne), and of the 1936 games, when Hitler gave some of the rights to his girl friend, are neither directly relevant nor particularly satisfactory.

Secondly, the Melbourne games committee seems to be fortified in its determination to stand firm by an honest belief that a boycott by the television companies, by leaving a more open market for its film, might enable it to make larger profits for amateur sport. This belief is Luddite nonsense. If there is not adequate coverage of the events by television, amateur sport all over the world is going to lose a lot of money that it would otherwise have got ; odd Olympic sports like weight-lifting, which at the moment attract hardly any supporters at all, had relied on this publicity to bring in new enthusiasts in future years. Partly because the people in Australia, which has not got television, do not understand what television is, the Olympics committee seems to be in danger of making an Olympian ass of itself.

More About the Garbett Case

THE case of Lady Garbett, evicted from her Sussex farm because of inefficient farming, continues to attract much stupid criticism. The farm is still Lady Garbett's property, and the Ministry of Agriculture is being attacked for its intention to repair it at the owner's expense. In fact the Ministry and the local agricultural committee seem to be remarkably patient. Lady Garbett has so far declined either to sell the farm or to let it to an approved tenant. In these circumstances, what are the authorities to do but put the farm in decent order ? Why else did they take it over?

In the Garbett case, heart-burning about individual liberty and bureaucratic interference has inhibited proper discussion of the principle at stake. This is whether the state, under safeguards and as a last resort, should possess the right to oust an inefficient farmer. The principle was accepted after the war by all the main agricultural organisations. It can be justified on two fairly respectable grounds. One is that the state ought to possess some sanction against inefficiency in the farming which it subsidises ; the other is that Britain is too small and crowded for any flagrant misuse of land to be tolerable.

Clearly these arguments no longer seem as strong as they once did. But both still carry weight—particularly the "scarce land" argument which looks beyond the present situation (when agricultural land is not particularly precious) to the future (when it may become so). Yet theory and experience alike suggest that, in a democratic country, physical sanctions are far inferior to economic pressure as a way of combating inefficiency. That being so, the state's coercive powers over farmers had better be scrapped, at least until some clearer need for their existence arises. But the worst way to go about this change is to hurl brickbats at a Government department which is merely applying a once-agreed principle in the most lenient manner.

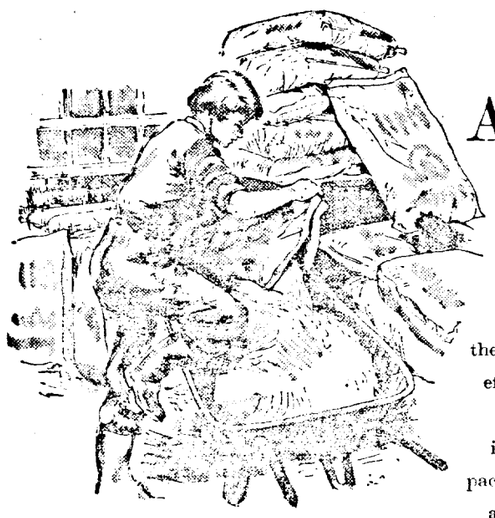
Interplanetary Good Manners

THE International Astronautical Congress in Rome has found its more technical proceedings somewhat hampered by security requirements. The relation between space-travel research and guided-missile research is too close, and the potential strategic importance of artificial satellites too obvious, for a quite uninhibited exchange of information. One of the questions discussed, however, unmistakably transcended all national rivalries and anxieties ; it also tickles the fancy. Supposing—a large supposition—that any "sapient life," as distinct from lichens and other low organisms, exists either on the solar planets or in other systems which may one day become accessible to explorers, a new and difficult ethical and political problem will arise. No earth-ship, said one delegate, should land on an inhabited planet without an invitation. There must be no ambition to conquer ; no projection into space of "the bleak and devastating crimes of mankind."

These are exemplary sentiments, and if they had inspired the policy of merely terrestrial explorers and colonists in past centuries history would present a less deplorable record. But the problems in the way of securing the needful invitation look forbiddingly difficult. Communications is one of them ; even the most remarkable linguistic gifts can hardly achieve a tricky diplomatic *démarche* before their possessor has had a chance to apply them to any process of learning. The rule laid down in Rome for interplanetary good manners is in fact all too like the well-known instruction to would-be swimmers: "Hang your clothes on the hickory limb, but don't go near the water." Luckily the problem, however baffling, was agreed to be something less than immediate ; the space experts turned to talking about next year's football-size satellites, and thereby came down to earth.

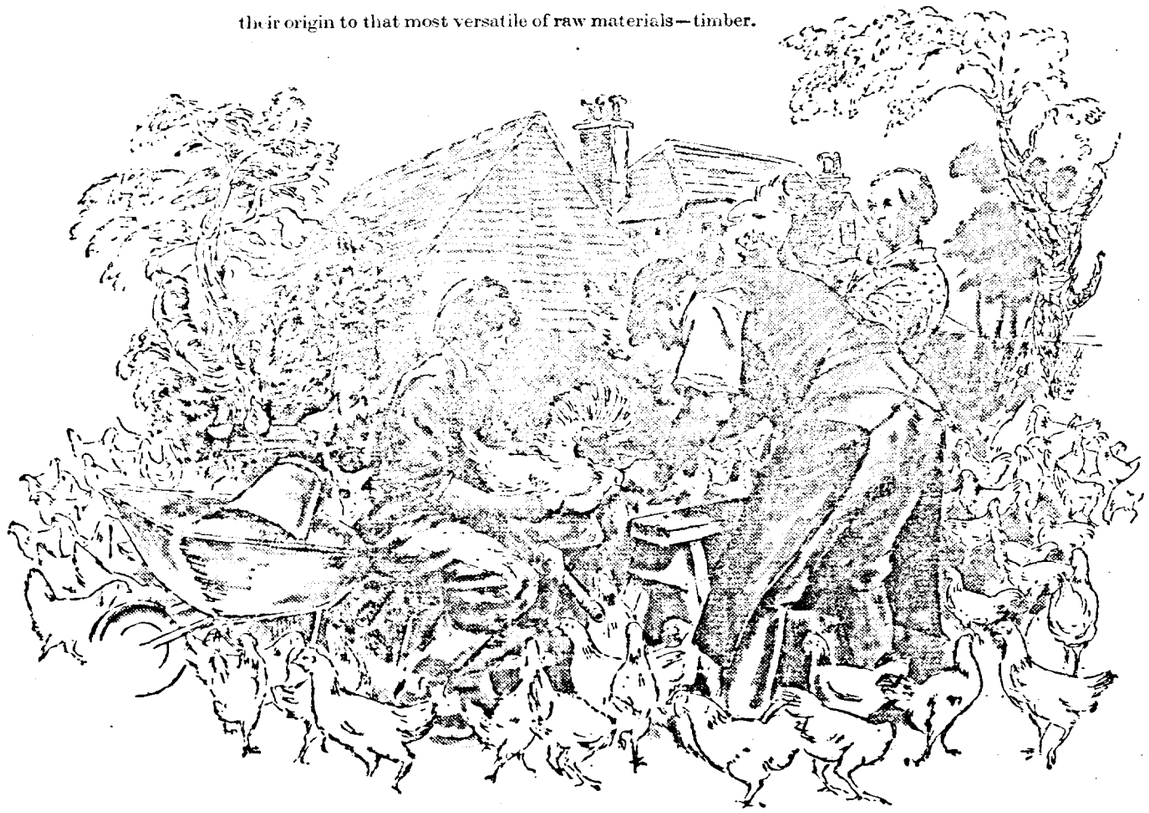
OUTSTANDING VALUE
IN
LIFE ASSURANCE

ESTABLISHED 1844
EQUITY & LAW
LIFE ASSURANCE SOCIETY
20, LINCOLN'S INN FIELDS, LONDON, W.C.2.



Australorp, Rhode Island, Leghorn, Sussex; there is hardly a part of the world that has not contributed something to the vocabulary of poultry raising. And farmer tending chickens is a traditional scene as valid for Kent as for Carolina or the Cape. In recent times, however, the scene has changed in one small, but important, particular. The meal now comes to the farm in paper sacks—multiwall sacks, strong, of several thicknesses—that bring the feed clean and then go for burning. Quietly, these paper sacks have effected a revolution in the hygienic carriage of all kinds of materials, from poultry meal to chemical powders. And this revolution is by no means confined to farming. Manufacturers now use Bowater packaging for all manner of goods. Shop windows, shelves and counters are gayer, neater, cleaner—thanks to protective Bowater wrappings.

The tree from the far-off Bowater forest is much more today than just a provider of newsprint. Your cleansing tissues, madam; your hardboard, sir; all owe their origin to that most versatile of raw materials—timber.



The harvest of the forest is given many forms by **BOWATERS**

Letters to the Editor

Other Eden?

SIR—You say that the main thing to be said for Sir Anthony Eden's policy is that he has frightened and forced the Americans into doing for us something they might not otherwise have done. But before chalking this up to his credit, should you not ask a question? Is this a statesmanlike way of behaving towards a vital ally? If, as I submit, it is the reverse, then your main argument in support of the Prime Minister becomes a capital charge against him.—Yours faithfully, PETER CALVOCRESSI
Frankfurt-am-Main

How They Came Together

SIR—Your report last week of the Suez debate unwittingly gives a false impression. You say "arrangements seem to have been made that as many 'moderate' Tory MPs as possible should get a chance to speak." That implies that the government exercises power over Mr Speaker as to whom he shall call, and thereby controls our debates. Although this is quite untrue, it could leave unfortunate impressions abroad, especially in the Communist countries.

Early Thursday morning I was told that 43 members wanted to speak. Backbenchers' time was limited to four hours, and it was obvious that less than half of these would "get in." Mr Speaker, who is a servant of the whole House and not a government stooge, at his absolute discretion tries to see that all shades of opinion get a fair hearing. I do not believe any government could make arrangements for a debate to take the course it desires. If this were not so the House would cease to be a free Parliament.

The real explanation is that most Tory MPs are keen supporters of the United Nations and this emerged from the debate. It may be that your misunderstanding arose from your assumption that the Suez group represents the majority of Tory MPs, which is far from the truth.—Yours faithfully,
House of Commons CYRIL OSBORNE

Economics at Sheffield

SIR—It was kind of you to notice our business at Sheffield in your issue of September 8th, though I was disturbed to learn that we had failed to satisfy your requirements. Readers of papers before Section F (Economic Science and Statistics) of the British Association are acutely aware of the congregation whom they are addressing. This applies particularly to the president of that section. Should we direct our remarks to the faithful few who attend, the larger number who may read the gist of our proceedings in *The Economist* and elsewhere, or one's colleagues, supposing the paper appears subsequently in a learned journal? A "keynote speech" presumably should be read and understood by the country at large. The chance of reaching so wide a public depends upon the perception of the reporters who may be attracted to our meetings and upon the editors of the national press who have to find space for extracts from our discussions. Whether in 1956, a speech on the consequences, or some of them, of competition as an instrument of policy in an industry producing 15 per cent of the gross national output strikes such a note is a matter of opinion. Personally I think it does and I am sorry not to have your support.—Yours faithfully, GILBERT WALKER
Birmingham

President Tubman's Tour

SIR—It is a pity, before making allegations such as are contained in your issue of September 22, that you do not ascertain the facts.

You accuse "an extraordinarily languid British Embassy" of the responsibility, *inter alia*, for not arranging with the Foreign Office for a special representative to attend President Tubman's Inauguration this year.

Nothing could be further from the truth. I have been Her Majesty's Ambassador in Liberia for the past four years, and it was through no fault of mine that I was the Queen's only representative at the Inauguration Ceremonies. On the contrary, in spite of all my efforts no special representative was forthcoming.

Your article contains other innuendoes and implications which convey an impression far from the truth.—Yours faithfully, C. F. CAPPER
Army and Navy Club, S.W.1.

Time Out for Defence

SIR—In your August 11th issue of *The Economist* you discuss the doctrine of "defence essentiality" as it has been applied to the American watch manufacturing industry. In the course of the discussion you make the following statement: "One of the most conspicuous developments has been the increase in 'upjewelling' or remanufacture of watches after they have been imported—a loophole which the American Treasury has been trying unsuccessfully to persuade Congress to close." I am afraid that you have allowed yourself to be persuaded of the validity of some of the arguments advanced by the American watch manufacturers for legislative action designed to fortify their already almost complete monopoly in the high-jewelled watch field.

In the first place, it is not true to say that upjewelling is a "conspicuous development." It has been going on for many decades and has been upheld by the courts as far back as 1933. Furthermore, the remanufacture of watch movements after they have cleared Customs, in order to increase the jewel count, is no different in practice from the remanufacturing of thousands of other items imported into the United States. Indeed, the encouragement of the use of American labour to further fabricate imported articles has always been, as I am sure you know, a fundamental tenet of US tariff policy.

In the second place, as to your statement that there has been an "increase in upjewelling," I would like to quote from the recent report, to which you referred in your editorial, of the US Tariff Commission:

> No official statistics are available on the extent of upjewelling in the United States, but the proportion of imported movements that are upjewelled is very small.

This has also been the opinion of the American Watch Association for some time.

Your editorial writer, following the lead of official statements of the US Treasury, has used the word "loophole." This word means, in my opinion, something which was not visualised when the original action was taken. It is very difficult to see how the practice of upjewelling can be so defined, since the Congress thoroughly understood that upjewelling had been going on and would continue to go on when it passed the original law in 1930. There has never been any question legally about it, as I have previously pointed out. You may be interested in the fact that the Treasury is no longer referring to this practice as a "loophole," but rather has adopted the phrase, "a recently developed deficiency in the provisions of the Tariff Act of 1930 relating to watch movements." This currently used phrase, however, is subject to the same criticism as the word "loophole."—Yours faithfully,
SAMUEL W. ANDERSON
American Watch Association, Inc.,
Washington, D.C.

Independence for Ghana

SIR—I have an irrepressible suspicion that the "conventional majority required for changing a written constitution" to which you alluded with reference to the Gold Coast is that operative under a Bi-cameral Legislature—one of the pivotal points on which the Opposition are "intransigent."

Those constitutional theoreticians who invented this conventional majority would have laboured in vain if they had meant it to be used so decisively even under a Uni-cameral Legislature such as we have in the Gold Coast.—Yours faithfully, THEO. BRODIE-METHOS
London, S.E.27

Books & Publications

Lessons from Byzantium

HISTORY OF THE BYZANTINE STATE.

By George Ostrogorsky. Translated by Joan Hussey.

Basil Blackwell. 575 pages. £4 4s.

THE vitality of Byzantine studies is one of the most conspicuous features of the present historical landscape. A glance at the comprehensive bibliography of this volume gives an immediate and impressive idea of the number of countries in which work of major importance is being done. Professor Ostrogorsky is by birth a Russian; he received his historical training in Germany and is at present professor of history in Belgrade. In his own person, therefore, he well illustrates the unusual extent to which this field of study transcends national frontiers, and the biographies of other distinguished scholars in the subject would reveal the same characteristic.

From the reader's point of view, perhaps the most significant fact about the author's background is his German historical training. Technically this book is a product of the critical and massively learned school of history built up in Germany in the course of the last century. It is entirely appropriate that it should first (in 1940) have appeared in German as a volume in the well-known *Handbuch der Altertumswissenschaft*. Although it can be read straight through as a history of the Byzantine state from 324 to 1453, its true value can only be appreciated if it is used as a guide, indicating the main outlines of the subject, suggesting lines of further inquiry, and providing the essential bibliographical references for such inquiries. For this purpose it is beyond question the best book covering the whole subject at present in existence. It is a masterpiece of exact and concise scholarship.

The word "State" in the title is used designedly to indicate the main emphasis throughout the work. It is planned as one of five volumes on Byzantine civilisation in the series to which it originally belongs. Professor Ostrogorsky's task is to describe Byzantine organisation as a going concern. Without confining himself within the limits of a constitutional or administrative history but following the fortunes of the Empire as they unfold, he constantly returns to its internal condition for an explanation of external events. Thus, for example, although, as everybody must, he looks on the battle of Mantzikert in 1071 as a fatal turning point in Byzantine affairs, he regards it as a symptom rather than a cause of decline:

> The Empire was internally played out: the system wherein its strength had lain during the previous centuries had broken down, and, for precisely this reason, the real source of its strength—Asia Minor—had been abandoned almost without a blow.

The nature and causes of this internal collapse are matters on which more light is urgently needed. The whole of Byzantine history is a study of withdrawal, recovery and stabilisation on an ever narrower foundation. This fact gives an ominous significance to the present widespread interest in the subject; it also means that Byzantium contains countless lessons for the politicians in their study of the possible. From this point of view Professor Ostrogorsky's learned volume is (all unconsciously maybe) a treatise with practical implications. One can only hope that he will continue the studies on the internal condition of the Empire where his own specialised contributions to the subject have chiefly lain; again and again we have suggestions in this book (like the passage just quoted) which seem obviously right but are still tantalisingly elusive.

This review cannot conclude without a special word of praise for the translation. It is the work of one of our leading Byzantinists and it is therefore not surprising that it shows an entire grasp of the subject. What is more remarkable is that it reads as if it had been written in English from the start, and most readable English at that. The one point which is open to criticism in an otherwise admirable and enterprising production (once we grant that the price of four guineas is inevitable) is the shoddy little paper folder holding the maps; they, and indeed the price, call for something better than this.

Real Russia

THE CHANGING WORLD OF SOVIET RUSSIA.

By David J. Dallin.

Yale University Press. London: *Cumberlege.* 431 pages. 40s.

THIS is an expanded version of Mr Dallin's "The Real Soviet Russia," first published in 1944. The earlier book did much to correct the exaggerated optimism, generated by wartime alliance, which tended to relegate the uglier sides of communist rule to the past. It has once again become a necessary book today, when wishful thinkers are beginning to bury communism along with Stalin. The great bulk of the earlier book has been reincorporated. On the basic factors that make up Soviet society—inequality, exploitation of the peasants, and dependence on forced labour—Mr Dallin has found little grounds for altering much of what he wrote twelve years ago. The reason for this, though Mr Dallin is too modest to say so, is the accuracy with which he was then able to foretell some of the future trends in the development of Soviet society. But Mr Dallin possibly underestimates the recent pace of evolution in one respect: the disbanding of forced labour. The reason for this move is now evident—a deficit of twenty millions in population; this figure was published by the Soviet government recently, but too late for Mr Dallin to take into account. Evidently Stalin and Hitler between them did greater ravage to the population of Russia than even Mr Dallin allowed for.

The last, and only completely new, part of Mr Dallin's book analyses post-war Soviet domestic and foreign policy. In foreign policy Mr Dallin draws no conclusions and makes no predictions. On the home scene he sees hope of ultimate evolution towards a free society. But he does not explain either how freedom is possible so long as the communist party insists on its monopoly of all power, or how and by whom this monopoly will be ended. Indeed, as he shrewdly points out, those who suffer most from the communist regime, the peasants, are the least capable of overthrowing it, while those most capable of doing so, the new bourgeoisie, are the least inclined. Are they then likely to press for freedom, which will endanger their privileges?

Parts of the additional matter in this volume necessarily seem rather thin in comparison with the dynamic "The Real Soviet Russia." But for new readers this volume provides an excellent up to date, sober, balanced and informative guide to the Soviet Union.

Working Mothers

WOMEN'S TWO ROLES: *Home and Work.*

By Alva Myrdal and Viola Klein.

Routledge and Kegan Paul. 221 pages. 25s.

"EGALITÉ oblige" is the keynote of this enterprising book: equality of duties as well as of rights between men and women, and mainly the right and duty to work outside home. The authors analyse the position of women in France, Great Britain, Sweden and the United States in the light of two important factors: the human one of a lengthened expectation of life combined with a smaller birthrate, and the economic one of a shortage of manpower. Inevitably for those such as Fru Myrdal and Dr Klein, who see many advantages in women going out to work, the crux in these four western industrial countries is children.

It is, generally speaking, true that the planned family of today takes only about fifteen full-time years of a woman's adult life. Married women in increasing numbers are seeking paid employment. The tables in this book are unfortunately not all built on the most up-to-date figures, which are difficult to come by. The authors rightly plead for more factual studies to follow this one.

Employers' problems, the effects on the children, contemporary feminine dilemmas and the next steps; all are intelligently presented. The practical difficulties are well met, human and emotional ones less so. The all-too-small supply of aunts and grandmothers to help in times of family crises will be still further diminished if full-time paid employment of women over forty takes the place of part-time and voluntary work. After giving their blessing to the argument that there should be more opportunities for a fifty-fifty division of a woman's time between domestic and outside work, the authors declare later in the book that "as a more or less permanent pattern of employment for married women . . . part-time work seems to us neither practicable nor desirable." The fact is that most families prefer a wife and mother not to be working full-time, and observation suggests that full-time work before the children are fully grown-up is only possible for the woman of exceptional drive, excellent health and first-rate nervous energy. It is not possible to discuss all married women in the same breath where employment problems are concerned. But the authors are, of course, right in their emphasis on the point of view that a home is the joint responsibility of husband and wife. Only so can wives work outside home.

Servant of Jordan

A CRACKLE OF THORNS.

By Alec Seath Kirkbride.

John Murray. 201 pages. 21s.

AT one point in this book Sir Alec Kirkbride (who was for thirty years a pillar of the Kingdom of Jordan) has no difficulty in convincing a shepherd of Bethlehem that he is a ghoul. He has just explored a ghoul-ridden cave:

> The boy: 'Why did they not eat you?'
>
> Myself: 'Because a ghoul never harms a ghoul. Have you ever seen a man as tall as I am?' The boy moved away and would not come near me as we walked back across the hills. His companion pretended to be vastly amused by the whole business, but twice I caught him looking at me rather thoughtfully.

More sophisticated acquaintances, such as journalists, were less easily cowed, though they too were often given a dose of his fee-fi-fo-fum treatment. Sir Alec had the Arab habit of revealing little until time and familiarity had softened the approaches; only then would he offer admission to the storehouse of his knowledge, till in the end his stories would emerge gem by gem, told with insight and the humour that comes of understatement. This slight but agreeable book provides them without the daunting preliminaries. It also reveals an unsuspected talent: one of its illustrations is his excellent sketch of Mar Saba monastery done from the stone on which Edward Lear must have sat a hundred years earlier.

The book is dedicated to King Abdullah, who is its hero. He emerges from it with all his attractions as well as some of his faults—dignified, humorous, debonair, devout, instantaneous in the uptake, full of commonsense, impatient with those who say much and do little. ("He pushed through the guards and gave one of the more prominent ringleaders, who was shouting at full vent, a tremendous slap across the face. . . 'What nonsense is this? You want to fight the Jews? Very well, there is a recruiting office for the Arab Legion just over there.'") He had no time for the tram-burning nationalist in his creased civvy suit.

Nor has Sir Alec. "It became more difficult to establish with the newcomers the sympathetic co-operation which had marked my relations with their fathers"; so he had the good sense to go before he had outlived his great value both to Jordan and to Britain. His book, which is entertaining and very well written, will give pleasure to anyone who has ever enjoyed himself in the highlands of Moab and Edom: its drawback is that it consists only of twenty-four aperitifs to the absorbing piece of Arab and British history he could write if he were minded to do his duty by posterity.

The End of *Laisser Faire*

LAISSEZ FAIRE AND THE GENERAL-WELFARE STATE: *A study of conflict in American thought, 1865-1901.*

By Sidney Fine.

Michigan University Press. London: *Cumberlege.* 478 pages. 60s.

ONE merit of this book is that it reminds us that, over the last eighty years, American ideas about the role of the state have changed quite as much as our own. Despite the language of pure *laisser faire* which American business men are apt to speak on occasions calling for formal oratory, the dominant assumption in the United States today is that the state should play a positive role in promoting the general welfare. This is a far cry from the decades after the civil war when the American disciples of the English classical economists regurgitated the principles of their masters shorn of all reservations, and when *laisser faire* ideas were accepted in a more rigid and uncompromising form than was ever the case in Britain. This shift of attitude is not simply the result of the New Deal. The foundations of the old orthodoxy were already under challenge in the last two decades of the nineteenth century, and it is the conflict of those years between the defenders of the negative state and the advocates of positive state action that forms the core of Professor Fine's book. There are resemblances to England, but socialist ideas played a negligible part in the United States, and the change of attitude towards the state took place within the framework of an exclusively liberal tradition. It is the transmutation of an ideology rather than its displacement; the story of how American liberalism became detached from *laisser faire*. As a contribution to the intellectual genealogy of the liberal-reform movement in America in the mid-twentieth century it is of contemporary relevance, and it is of particular interest to Englishmen, who are apt to regard positive government activity in the United States as an *ad hoc* response to depression and war.

Professor Fine's exposition, though somewhat copious, is scholarly and judicious. He ranges widely, beyond formal ideas into the subterranean world of implicit attitudes and assumptions, from the academic thinkers and popularisers to the clergymen and judges, the business men and the popular movements. It is, however, the formal ideas that get most space, and the professors and publicists who appear as the pacemakers. In writing this kind of intellectual history one can either start with the seminal ideas and raid the works of individual writers for illustration, or concentrate on the writers and summarise their distinctive contribution to the general body of ideas. Professor Fine has chosen the second method. It has certainly enabled him to present an impressive amount of fresh material in an intelligible form. But there is something unprepossessing about the succession of dead writers, each trailing a cloud of quotations from once renowned and now forgotten works; and despite the skill with which Professor Fine has disinterred them, one sometimes feels choked by the dust of old controversies.

The accumulation of detailed summaries does indeed show more effectively than any general outline how intellectual fashions change. But after a while one begins to wonder how many of these writers deserve such elaborate exposition, except perhaps to warn modern professors and publicists that their most confident assumptions may look very odd fifty years hence. They certainly wrote enough—the bibliography of their works runs to some twenty-four pages—but subtract the few originals like Henry George, and one cannot help suspecting that most of the rest, while great guns in their own day and circle, are only popguns.

Marx and the Middle Ages

STUDIES IN THE AGRARIAN HISTORY OF ENGLAND IN THE THIRTEENTH CENTURY.

By E. A. Kosminsky. Edited by R. H. Hilton. Translated from the Russian by Ruth Kisch.

Basil Blackwell. 397 pages. 37s. 6d.

THIS book is a translation of a work that first appeared in Russian in 1935 and was republished in a revised and enlarged form in 1947. Medievalists will look to it for light on thirteenth-century England, and students of Soviet culture for the clues it affords to scholarship in twentieth-century Russia. The former will be greatly enlightened and the latter somewhat relieved. There

C.P.V. and the British exporter

WHEN we talk about the C.P.V. *World* Organisation, we mean just that; for the maps at our London headquarters are flagged in unexpected, as well as in obvious, parts of the globe.

In Fiji, for instance, it is perfume that C.P.V. advertisements are selling: in Istanbul—sewing threads and air services; in the great native markets of Africa and Malaya—a host of things, from toothpaste to silver polish. There is hardly an overseas country where we are not working, with our own on-the-spot organisation or an associate, to market and advertise the varied products of our British clients.

To *market* them, we say. For though C.P.V. advertising weapons are tactically powerful, it is marketing strategy which dictates their use. We do not regard export marketing as a hit-or-miss affair —a casual matter of sending translated advertisements through the post or leaving things to the man-on-the-spot. We believe it is a serious business. And we know a good deal about it; as our clients, and their sales, will testify.

To help the British exporter to market his products in almost any part of the world: indeed to advise him whether, where and when he should market them at all; that is one of the chief purposes for which C.P.V. exist.

'The choice for a lifetime'

NCT 94 5

is a long and distinguished tradition of Russian work on English agrarian history which in origin owed a good deal to apparent analogies between the peasant problems of post-emancipation Russia and those of medieval England. The names best known in the English speaking world are those of Vinogradoff and Savine. Academician Kosminsky, who was a pupil of Savine and who graduated before the Revolution, belongs to this tradition.

Although he assures us that his work has been written "on the basis of Marxist-Leninist method" and uses Marxist terminology, there is little distinctively Marxist either about the questions he poses or the methods he employs to answer them. Nor, apart from an occasional genuflection to Lenin and Marx, is there much ostentatiously Marxist about the presentation. The greater part of the work is an attempt, by an intensive study of the Hundred Rolls of 1279, to give statistical precision to our notions about the manor. How far did the country consist of manors? What was their usual size? What were the differences between manors of different size? How large was the demesne in relation to the holdings of villeins and freemen? What were the social and economic divisions among the peasantry?

On such central questions Professor Kosminsky has collected a wealth of precise statistics clearly analysed and lucidly presented. Their chronological and geographical limitations are obvious: despite some excursions fore and aft of 1279 and into areas not covered by the Hundred Rolls, the most reliable of his statistics are confined to some five counties covered by this source, and to those problems which it is capable of illuminating. Nevertheless despite—or perhaps because of—these limitations, the author's statistical conclusions constitute one of the most impressive contributions to medieval social history since Vinogradoff and Maitland.

The wider verdicts which the author occasionally passes on his statistics are a different matter. Unsubstantiated generalisation is an occupational disease of historians, and the gap between Professor Kosminsky's facts and some of his larger deductions is probably no greater than is commonly found among non-Marxist historians of equal distinction. But his Marxist assumptions bias his deductions in a single direction. "What was it," he asks, "that divided the knights from the great barons and linked them so closely with the upper ranks of the free tenants and the burgesses?" A difference, he answers, in their economic interests, the antithesis between an embryonic form of capitalist production and the feudal form of production. It may be so, but his answer is a foray into speculation well in advance of the main army of his facts. Nor, in this form, is it a very plausible speculation, since after all the conflict between gentry and magnates has been in some form or other a recurrent feature of English history.

For the most part, however, the reader is free to concentrate on the pupil of Savine without being too much distracted by the disciple of Marx. The importance of the work and the excellence of the translation make one hope that other Russian contributions to English history will be translated. There are works written before 1914 still hardly known in England. There is a new generation of scholars, many of them Professor Kosminsky's pupils; it would be interesting to know what these latest Marxists make of English history.

Trade Disputes Down Under

INDUSTRIAL RELATIONS IN AUSTRALIA.
By Kenneth F. Walker.
Harvard University Press. London: *Cumberlege.* 407 pages. 60s.

THIS is the first attempt at a general account of industrial relations in Australia, but it is disappointing. It is confined to relations between unions, management and industrial tribunals; relations on the job, such as foremanship and apprenticeship and the position of women workers, are given little attention, except in the context of conflict between workers and management. "Australian Arbitration and its Alternatives" would have been an apter title. Again, it is disappointing in its choice of examples. These are drawn from industries established before tariffs changed the face of Australian manufacturing. The great twentieth century industries, such as steel, chemicals, textiles, rubber, paper, tobacco and motor vehicles, get very little mention. And despite the prominence given to the arbitration system, there is nothing about its effects upon the status and organisation of the white-collar worker.

The main part of the book is descriptive: first of arbitration machinery; then, in fair detail, of relations between organisations of workers and employers in four industrial examples (coal mining and furniture making in New South Wales, meat slaughtering in Queensland, and metal mining at Broken Hill); and then of the general pattern in the pastoral, metal and stevedoring industries. Lastly, there are eighty pages of "evaluation." The author is a psychologist with training in economics and anthropology, who spent ten years in the Australian Department of Labour and National Service—which seems to have had regrettable effects on his literary style.

The work would be more welcome if the claims made in the preface were less ambitious. Professor Walker insists that his approach has been "analytic rather than descriptive," and that he has used the "ecological approach" characteristic of Professor John T. Dunlop of Harvard. The first claim is true only in so far as the "evaluation" involves the application of certain categories of relations between unions and employers which the author has either invented or borrowed; there is nothing esoteric about them, and they are very much the categories which any man of common sense would suggest if he had had any industrial experience at all. The application of the categories so as to show casual elements at work is another matter; and here Professor Walker is vague and inclined to be platitudinous.

The claim about "ecology" is also of little value. If we are to take an ecological view of any social process, presumably we must view it in terms of the whole social and geographical environment in which it takes place. If we are considering Queensland meat-slaughterers, it means discussing the environment not only of their meatworks but of the towns they live in, and the special social patterns of Queensland and Australia. If we are discussing Broken Hill miners, ecology will lead us to discuss in some detail the consequences of living in the middle of a desert. Professor Walker has not neglected these considerations, but there is not enough of them to give his work a special ecological twist. At the most they are incidental to the business of describing, for each industry, the particular relationships that arbitration tribunals take into account.

Statistical Signpost

AN INTRODUCTION TO BRITISH ECONOMIC STATISTICS.
By Ely Devons.
Cambridge University Press. 251 pages. 22s. 6d.

IT may seem surprising that, with the growing wealth of economic statistics, little has been written to describe them for the general user. Readers of these columns may recollect a book with a similar title published some two years ago under the auspices of the National Bureau of Economic and Social Research, but it was concerned not so much with describing existing information as with discussing what kind of statistics are really needed. The Royal Statistical Society is doing a valuable service in publishing pamphlets by experts on particular fields of statistics; one set of these has been brought together in a volume and a second is in the press. Otherwise, would-be users of statistics have had to discover what exists from a wide variety of publications. They will welcome this book, therefore, which attempts to produce under one cover a general survey of the major British economic statistics—where the information is to be found, what it means and how reliable it is.

But it does not take long to perceive the difficulties of such a task. First, it is impossible to include all kinds of economic statistics in such a small compass. When Professor Devons made his selection, he unfortunately found he had to exclude the whole of public finance because, as he admits, "of the peculiar difficulty and intricacy in interpreting the available statistics." But the fields he covers—quite extensively—include population, manpower, distribution, transport, trade, prices and national income.

The second major difficulty arises from the changing nature of economic statistics, particularly at the present time when a good deal of effort is being put into their improvement. Even by the time this book was published, some of the series had been superseded by others, while a number of important new indicators had been added. In some respects, therefore, this book is already out of date.

There is, however, much useful information in it, particularly for those who want to delve back into the past and to be shown just how different series of figures can be reconciled. Equally valuable is the lesson that Professor Devons teaches of how official statistics can be misinterpreted without knowledge of the regulations governing their collection. This comes out most clearly in the statistics of manpower, which have always been closely related to the various national insurance schemes. There will be few users of statistics who will not learn something from this book, and many difficult points are ably discussed. Perhaps it should be added that it shows where to find the statistics; it does not reproduce them.

Federal Comparisons

FEDERALISM AND CONSTITUTIONAL CHANGE.
By William S. Livingston.
Oxford University Press. 390 pages. 42s.

THIS book submits to a close comparative examination the process of constitutional amendment in federal states. As such it is to be recommended, if only because the process of formal amendment may turn out to be a vital factor in the development of a federal constitution: if amendment proves to be easy, as in Switzerland, changes in the working of the constitution can take place by formal amendment; if it proves to be difficult, as in Australia, those who have to work the constitution have to find other ways of changing it. This means that any worthwhile examination of change in federal constitutions must take into account not only the business of formal amendment, but also such matters as judicial review, financial relations between the centre and the regions, and arrangements made between the civil services of the two sorts of government. Mr Livingston has not done this, though his title suggests that he would like to have done so. Instead, he has done two things: painstakingly compared the formal amendment processes of the major federal states, and used the amendment process to illustrate his general theory of federalism. Internal evidence suggests that the book started out as a simple thesis on the amendment process alone, and was later enlarged to carry the weight of the theory.

The essence of this theory is that federalism is not simply a legal system, as some earlier writers have characterised it, but is a reflection of diversified social conditions. A society has federal qualities, in that it contains divergent social elements which demand recognition and expression; and "federal government is a device by which the federal qualities of the society are articulated and protected." This being so, the important things in federalism are not its formal characteristics, but its "instrumentalities." By an instrumentality Mr Livingston appears to mean an institution, a convention or an institutionalised political habit which the society could not do without. He uses the term to cover both formalised institutions and habitual political acts—even long-standing prejudices and taboos. Constitutional amendment in a federal state is an instrumentality, and Mr Livingston hopes that by showing how constitutional amendment operates in accordance with the social pressures of the state in question, he will illustrate his general theory of federalism.

The difficulty of such an approach is that of striking a balance between the theory and its illustration. This is where the book has gone astray. The illustration is excellent, to the extent that the reader finishes the book with a clear idea of how various federations amend their constitutions; but the theoretical application is skimped. This is a pity. But the book does tidy up a neglected aspect of the study of federal government.

Aristocratic Nurseries

THEIR FIRST TEN YEARS.
By Marion Lochhead.
Murray. 259 pages. 21s.

THIS is an account of nursery management from early Victorian times, when sin was sin and self-expression had not yet come into vogue, to the late Edwardian days of the cult of Peter Pan. It is largely devoted to the "aristocratic nursery"—beginning with that of Princess Victoria herself—or to those of the famous: the splendid one of Maurice Baring, the more modest but equally happy one of Mary Vivian Hughes, the dim one of Beatrix Potter, the cruelly repressed one of Augustus Hare, or the lively and comic one of Charles Dodgson.

The most interesting feature of the book is the contrast it presents between the approach to life of English, French and American children of the period. While all have similar standards of behaviour, English—and even more Scottish children—appear to be almost hag-ridden by religion, while the French take it more for granted. The salient fact of nineteenth-century American childhood is its far greater freedom from nursery control. It need scarcely be mentioned that both French and American children fed better.

Miss Lochhead's survey is a compilation from memoirs of the notable, with a repetition of routine and experience that is sometimes tiresome; yet it has some value, for the castles have been given to the nation, the manor houses divided into flats, and the families, reduced from twelve, through sixes and fours, to the couple or only child, have a different idiom indeed. To them the tale of dolls' houses inhabited by penny wooden dolls, rocking horses, brass water-cans and baths in front of the nursery fire with night clothes warming on the brass fender rail is almost as remote as stories of King Arthur or Robin Hood, while fears of the dark or of sin and its corollary hell fire tend to be replaced by dreams of space travel and spacemen.

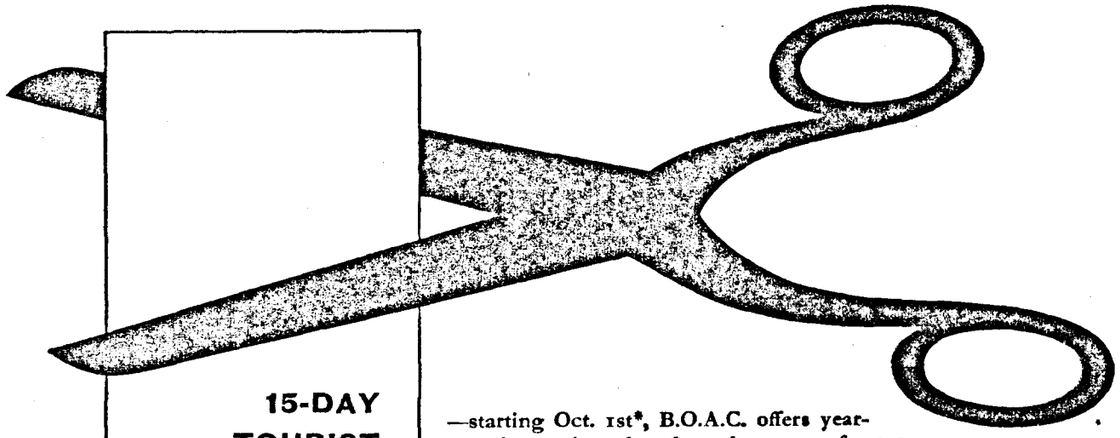
Shorter Notice

THE NEW OUTLINE OF MODERN KNOWLEDGE.
Edited by Alan Pryce-Jones.
Gollancz. 623 pages. 18s.

The title of this volume, though carrying the advantage of a considerable fund of goodwill, dating from the original "Outline" of 1931, has the defect of starting criticism off on the wrong foot by suggesting an aim which is not attempted, let alone achieved. What is "outlined" here is not modern knowledge as a whole—heaven forbid—but, to quote the Editor's excellent preface, those particular topics which make "active and insistent demands" on the reasonably alert-minded reader in this decade; and within those topics themselves the reader is provided sometimes indeed with a sketch map, but elsewhere with something more like a snapshot from a key eminence or a set of compass bearings. This flexible and various approach to diversity is surely the right one; painting and atomic science, political theory and para-psychology, cannot equally be "outlined" or potted. Whether the proper choice, of topic or of treatment, has been made is quite another question, and there seem to be sufficient obvious omissions to ensure a negative answer.

Modestly confining criticism here to the section dealing with politico-economic themes, one notes an unevenness that others have detected elsewhere. Mr T. E. Utley's paper on democracy and totalitarianism is a model of snapshot-from-an-eminence technique. Mr R. F. Harrod supplies a remarkably comprehensive and beautifully balanced summary of the present state of economics, which, however, is more a self-contained feat of exposition than an aid to further progress. M. Francois Lafitte's account of the welfare state is a beautiful job, perfectly blending description and comment; a sketch map and compass in one. But Lord Boyd-Orr ponders an outline of his own earlier works, complete with the abyss-revealing remark that "the obstacles to increasing production and to adjusting distribution" (of food) to a satisfactory level "are social, economic and political in character," and therefore "outside the scope of this essay"; and Dr Thomas Balogh's paper on international economics, a good, round, competent statement of the well-known Balogh point of view, is a happy hunting ground for connoisseurs of those slanted phrases and loaded words which contributors to such a volume as this really ought to eschew. Mr Christopher Hollis is perhaps rather too intelligent about international organisations; the topic urgently calls for a *catalogue raisonnée*, rather than an essay proper. The most serious criticism, however, must be reserved for a paper which does not appear at all, and whose subject unfortunately makes more "active and insistent demands" on most people's attention than any other in the entire volume. This New Outline of Modern Knowledge offers no information on the arts of war.

B·O·A·C cuts Atlantic air fares these 3 ways...



15-DAY TOURIST RETURN FARES

—starting Oct. 1st*, B.O.A.C. offers year-round, greatly reduced, 15-day return fares on "Coronet" Tourist Class services across the North and Central Atlantic. Between London and New York, for example, the special 15-day return rate will be £151.16.0d. compared with the 12-month return rate of £186.10.0d.

FAMILY FARES PLAN

—between Nov. 1st and March 31st, only the head of the family pays the full fare when you fly the Atlantic as a family (First Class or Tourist). For example, with a wife and two children between 12 and 25, a man might save over £300 on a First Class return journey!

SPECIAL EMIGRANT FARES

—between Nov. 1st and March 31st*, B.O.A.C. offers emigrants to Canada or the U.S.A. a 40% *reduction* on the normal Tourist single Transatlantic fare! There is a special baggage allowance, too—*66 lbs.* are carried free of charge.
(Available for one-way Westbound journey only.)
Not applicable to Italian nationals.
**Subject to Government approvals.*

Consult your local B.O.A.C. Appointed Agent or B.O.A.C., Airways Terminal, Victoria, S.W.1 (VIC 2323); 75 Regent Street, W.1 (MAY 6611); or offices in Birmingham, Leeds, Manchester, Liverpool and Glasgow (see your Telephone Directory for details).

Poor Man's Party

Washington, D.C.

LAST Sunday the *New York Times*, noting that " most of the campaign issues have long been apparent," listed them as " the President's health, Mr Nixon, foreign policy, defence policy, farm income." Judging from the emphasis in election speeches so far, this seems a fair assessment. Yet most of the thirty million or so Americans who will vote in November for Mr Stevenson and against Mr Eisenhower will do so for none of these reasons. Most of them will vote Democratic (as they have always voted Democratic) for reasons which are essentially economic. While millions of people in the South will vote Democratic because the Republicans are still held responsible for the Civil War and its aftermath and a comparatively few people throughout the country will vote Democratic from intellectual motives, the great bulk of Democratic strength, in the North at least, comes simply from people who argue as a Harlem housewife recently argued: " Why, we've always voted Democratic because the Democrats are more for us poor folks, aren't they ?"

It is undoubtedly true that the basic economic policies of the two great parties—certainly as reflected in their actual achievements in the past decade and even as reflected in their election platforms—have come strikingly closer together, more so than in Britain. Yet economic considerations undoubtedly remain the most significant reason for voting one way or the other, on the Democratic side at least. The " independents " who will decide the outcome of the election may choose on grounds of foreign policy or of Mr Nixon's fitness to be President. Those issues are thus undoubtedly of great importance, but they will affect comparatively few voters in the national totals. The Democrats know perfectly well where their root strength lies. They are certain that all the economic progress—and economic progressivism—of Mr Eisenhower's four years will not undermine more than a small margin of this strength, simply because voting habits are so firmly fixed. And yet they know they must continue to re-emphasise their basic role as the champion of the " little guy " against the " big shots "—and they have been doing so more than the *New York Times* gave them credit for.

The Democratic theme in the economic field—leaving out of this analysis the farm problem and the alleged " giveaway of natural resources," campaign issues which also have economic roots—is that the Republicans have favoured the rich few at the expense of the people generally. This phrase creeps into nearly every Democratic speech, sometimes with a maliciousness that makes wealthy businessmen shiver in front of their television sets.

The theme is developed along two broad paths. First, it is contended that the nation is really not as prosperous as it seems—or as the Republicans claim. The figures come tumbling from Democratic mouths and mimeographing machines in a torrent. There are still around 2,700,000 unemployed, more than during Mr Truman's Administration. Over 50 communities have enough unemployment to be counted officially as distressed. The astonishingly high figure of 8,000,000 families (which includes some single individuals) have incomes of less than $2,000 a year—almost one fifth of all the families in the country. Gross national product, even at the present annual rate of $408 billion, is nearly $20 billion below what it would be if the nation had " full prosperity." The economy has been growing at a slower rate during the Eisenhower period than during the Truman period. The Republicans are charged with exaggerating the increase in the income of the working force by statistical legerdemain—and so on and so on.

Second, and probably more effective, is the charge that prosperity has been very badly distributed and that the gap between the well-off and the working man has increased. Here the theme has many variations. Largely, it is alleged, because of the Republican policy of " hard money," earnings from interest have been advancing some 65 per cent faster than wages. People buying homes have had to pay more for their mortgages, small businessmen and farmers have been squeezed for credit—all to help a few rich bankers. For this and other reasons, business failures have reached a record postwar high, and profits of larger corporations have increased sharply while those of smaller businesses have stayed level or declined. Indeed, corporate profits have risen almost a third faster than the personal incomes of people generally. Furthermore, so the argument runs, tax policy has been wickedly devised to favour the rich and the corporations at the expense of the ordinary man: witness the 1954 Republican Tax Bill with its relief for earnings from dividends.

★

As always, practically anything can be proved by statistics. The genuine economic issue comes down to this: the Democrats believe that the federal government has a large and growing role in creating more prosperity for those who have been left behind the general advance, while the Republicans

...lieve that the economy will grow faster—with more benefits for all—with a minimum of government interference. The real question, of course, is whether the Democrats, if they are elected to office, would do anything about the troubles they profess to discern. There is considerable evidence that they would not.

First, there is the political ideology of Mr Stevenson himself. No less a person than Mr Truman has termed him "a conservative" at heart, and there is nothing in his liberal speeches and proposals to erase in many minds the conviction that Mr Truman is right. Mr Stevenson has not, in fact, been as aggressive on the economic front as have lesser Democrats—though the "new" Mr Stevenson is undoubtedly less cautious than the old. In a widely read article in *Fortune* magazine last year, Mr Stevenson argued that there was no longer any reason for a conflict between business and government; if he believes this he can scarcely also back the policies that would be necessary to alter significantly the pattern of income distribution in the country. Perhaps most significant of all, Mr Stevenson is widely believed to have as much distaste for inflation as any Republican—a distaste which, if it exists, would deter him from any such surge of federal government spending or any such radical reversal of monetary restraint as the Democratic formula would appear to require.

But more important than this is the probability that the basic balance of power in Congress will be not much altered by the election, even should there be a Democratic sweep. Mr Truman's last four years saw the passage of only one important piece of "liberal" legislation—the Public Housing Act of 1949—and even that began to be frustrated even before he left office by the annual process of appropriating inadequate funds. The block of Democrats in Congress whose thinking reflects the kind of talk that is heard in a Democratic election campaign is much smaller than would be supposed, and includes not more than half the Democratic members. Although Southerners in Congress have backed a great many of the reform measures proposed by Democratic Presidents, they have been supporting fewer and fewer in recent years. However liberal Mr Stevenson's proposals might be, their chances in Congress would be doubtful at best.

What is more, in the crucial area of monetary policy, Mr Stevenson would have to live with an "independent" central bank just as Mr Eisenhower has done, and as Mr Truman did in the last twenty months of his term. It would take a radical change indeed to put the Federal Reserve Board back again into the Treasury's bottle. As long as it remains out of that bottle, "hard money" will remain the national policy when inflation threatens, no matter how much the Democrats may complain.

Barnstorming

DURING the last ten days the presidential campaign has really got off the ground with all four candidates flying around the country storming barns—in fact as well as in metaphor. President Eisenhower, in particular, after making his first campaign speech outside Washington at the national ploughing contest in Iowa, returned to the farm four days later in Illinois. Thus he sandwiched the ...ise promised to farmers in his speech at the same contest, between two slices, the second fairly thick, of what the Republican Administration had actually done for agriculture. This concentrated nourishment of the farmers' votes was inspired by a series of opinion surveys which suggested that the Republicans, in the words of one columnist, had better "hitch up their farm belt." This view was apparently confirmed by the Vice President, Mr Nixon, after the first few days of his round-country flight.

He also seems to have been concerned at the lack of enthusiasm among Republican workers and the lack of interest among voters generally, and to have confirmed the growing feeling that a victory for Mr Eisenhower was no longer a foregone conclusion. Mr Nixon apparently recommended more personal appearances—much more effective in these circumstances than television addresses—by the President. Mr Eisenhower immediately added to his campaign schedule very substantially in order to spend more time in places where contests are likely to be close. His obvious sincerity and vigour should attract many of the doubting independent voters and prove not only that he is keen on his job but also that he is fit for it.

Meanwhile Mr Nixon himself has been on his best behaviour, speaking with responsibility and restraint, in a way which makes his critics look unfair. The two Democratic candidates are following the high road just as assiduously as are their opponents, but experienced observers doubt whether all—or any—of the contenders can stay out of the mud as the campaign grows more desperate. So far few constructive plans for the future have developed from the challenging speeches and exhausting journeys, but Mr Stevenson has now begun to issue his "blueprints for a new America," documents which will give his solutions for the country's problems in more detail than is possible from electioneering platforms. The first dealt with the provision of a better life for old people.

Small Comfort for Home Builders

ALTHOUGH total expenditure on new construction, pushed up by the expansion in industrial building, is running slightly ahead of last year, the number of new houses being started, now at an annual rate of about 1,100,000, is 20 per cent lower than at this time last year. As a result, the housing industry is complaining bitterly that it is being forced to bear more than its share of the harsh measures necessary to ward off inflation. With less than two months to go to the presidential election the Administration could hardly ignore pleas from such a powerful political group, and last week it announced several measures designed to ease the builders' plight without impairing the national policy of credit restraint to avoid inflation.

The government plays several parts in the complicated American mortgage market. Through the Veterans' Administration it guarantees mortgages on houses bought by ex-servicemen, a large programme which covers about a quarter of all the mortgage debt in the United States. A further 10 per cent of American mortgages are insured by the Federal Housing Authority. Last week the government announced that the down payment required in order to obtain FHA insurance of a mortgage on a house valued at less than $9,000 would be reduced from 7 to 5 per cent. With government insurance more readily available, applicants for mortgages are theoretically put in a stronger position. But the real shortage which is curtailing house building is not in the demand for mortgages but in the supply of funds to the mortgage market. The government already assists this market through the Federal National Mortgage Association—condemned by its initials to the nickname "Fannie Mae"—which acts as a secondary mortgage market, buying VA-guaranteed and FHA-insured mortgages from the original sellers. The government has now in effect raised the price that "Fannie Mae" will pay for mortgages. It has also enabled savings and loans associations, which often buy mortgages, to increase their resources by borrowing more from the Federal Home Loan Bank system.

None of these measures seems likely, however, to draw funds into the mortgage market as a whole. VA-guaranteed and FHA-insured mortgages still yield only 4½ per cent interest, and although these are often bought at a discount, which in effect raises the yield above 4½ per cent, they are still unattractive when alternative investments are now yielding 5½ per cent or more. The one sure way of stimulating house-building would therefore be, paradoxically, to raise interest rates on government-guaranteed mortgages—a move which would be as unpopular with house purchasers as it would please the builders, and one which could add significantly to the inflationary pressure in the economy. Last week's steps, although they may do little harm to the policy of credit restraint, are also unlikely to stimulate much building of houses.

Vacancy in Court

FROM A CORRESPONDENT IN WASHINGTON DC

MR JUSTICE MINTON'S imminent retirement from the Supreme Court, because of ill health, gives President Eisenhower his third opportunity to fill a vacancy there. But it has been suggested that he may wait until he has—or has not—been reconfirmed in office by the voters on November 6th. If he does act he intends, he says, to appoint someone who has already had substantial judicial, as well as legal, experience. In that case, the new Justice will be the only member of the nine-man court who has qualified under this standard. Mr Justice Harlan, the junior member of the present Court, served on the Federal Circuit Court of Appeals for one year. Of the other members of the Court, two Justices, Messrs Frankfurter and Douglas, came from the academic world with some previous experience in government, and the other five came directly from the world of politics. Justices Black and Burton had been in the Senate; Justices Reed and Clark had been, respectively, Solicitor General and Attorney General; and the Chief Justice had been Governor of California and a candidate for Vice President. Mr Minton himself did have prior judicial service, but his approach was regarded, even by his friends, as the product more of his years in the Senate than of his term as a judge. Although previous judicial service used to be more common than it has been in recent years, of the 87 Justices who have served on the Court during its century and a half of existence, only 60 per cent have had any such experience, and less than half of them spent as much as five years as judges before going on the Supreme Bench.

The nature of the Court's work suggests that experience in the legislative or executive branches of the government may, indeed, be more useful to the new Justice. Leading cases on the Court's docket for the term which is about to begin raise questions of broad public policy. Four cases will be heard involving the penalties attached to membership of the Communist party. In the field of business regulation the Court will hear the government contend that the economic alliance between the General Motors Corporation and the Du Pont Chemical Company should be dissolved and, in the National Lead case, that individual use of a zone pricing system can be forbidden without proof of a combination or conspiracy to restrain trade. While no cases specifically dealing with the problems of race relations are at present on the Court's list, it is not unlikely that several will come up during the term.

Despite the political characteristics of the office, appointments to the Supreme Court have not always followed party lines. There is at least a possibility that purely political considerations may lead the present Republican Administration to appoint a Democrat—and to appoint him before the election. A bold stroke, calculated to attract the Negro vote in the key industrial states, would be to name Judge William Hastie, a distinguished Negro jurist, formerly Governor of the Virgin Islands under a Democratic Administration, and now an Appeals Judge. Another possibility would be Senator Sam Ervin of North Carolina, a southern Democrat, once a State Court Judge, whose appointment might help to keep at least some southern states in the Republican column. If the President is looking for a judge who has achieved high professional distinction, he will have difficulty in finding one, since most of the leaders of the Bench are virtually disqualified by age or, in the case of Chief Judge Clark of the Federal Second Circuit, by a record of decisions highly critical of some of the Administration's policies, particularly as they affect individual liberty. Justice Minton came from the Federal Circuit covering Indiana, Illinois and Wisconsin. There is no member of that Circuit Court, however, who appears to be particularly qualified for the appointment. Geography may, therefore, be taken into consideration only to exclude candidates who come from the same states as present members of the Court.

Once he is appointed, the new member of the Court, like all federal judges and high policy-making officials, will have to be confirmed by the Senate. For this he will have to wait until January, when Congress reconvenes; a Justice who is appointed when Congress is not in session serves only subject to senatorial action. Since 1789 nine nominees have been directly rejected by the Senate—only one in the last fifty years—and nine have been withdrawn or had their appointment postponed because of senatorial opposition. But recent delays in the confirmation of Mr Justice Harlan, President Eisenhower's latest appointee to the Court, and of Judge Sobeloff to an Appeals Court, suggest that any candidate who is suspected of strong views on racial questions might meet similar difficulties, particularly if the next Senate is controlled by the Democrats.

More Work for the "Eximbank"

IF the Export-Import Bank were called upon to make large loans to European importers of American oil it would be performing a familiar role, but under abnormal conditions in an area where its operations have been on a relatively small scale. In the twelve months ending in June, 1956, the bank's most active period so far, it authorised loans totalling $376 million to governments and private firms in 39 countries. Of this, $156 million was for Latin America, $150 million for Asia, and only $36 million for Europe. Since the end of its fiscal year the bank has extended its commitments in Latin America by agreeing to advance $151 million to Brazil and $100 million to the new government in the Argentine. Both of these loans, which will be spent mainly on rehabilitating railways, are regarded as " initial advances " to be followed by further loans as the development programmes are carried out.

The Export-Import Bank, which, unlike the International Bank, is an agency of the United States government, had its lending authority prolonged by the Senate earlier this year, and can now make loans for periods extending up to 1963. It has an authorised capital of $1 billion, and may borrow from the United States Treasury up to a limit of $4 billion. It is not allowed to have more than $5 billion of loans, guarantees and insurances outstanding at any one time, but the total outstanding at the end of June was well below this, at $2.6 billion. Last year, as it has done for twenty years, the bank paid the entire cost of its operations out of its earnings.

The functions of the " Eximbank " are more limited than those of the International Bank, although it sometimes imposes less stringent conditions on its borrowers than does the international organisation. The " Eximbank " is concerned solely with stimulating the flow of trade between the United States and other countries, both directly by enabling foreign importers to pay for specific American exports, and indirectly by lending money for economic development abroad on condition that the money be spent on American equipment or technical services. The bank's largest loans have been made directly to governments, but it also lends extensively to private firms, following a policy of supplementing and supporting the investment of private capital. While the major share of its activities last year was concerned with large loans for economic development, the bank also grants lines of credit to American exporters to enable them to extend credit to their overseas customers. Credit lines amounting to nearly $200 million have been arranged since this scheme began at the end of 1954 and, as funds are becoming more difficult to obtain privately, an increasing number of American exporters are applying to the Export-Import Bank for assistance.

Cleansing Labour's Stables

DOCKERS in New York and other east coast ports have threatened to go on strike if their contract with the New York Shipping Association is not renewed before October 1st. Negotiations broke down earlier this month because of the union's insistence that the bargaining cover other ports, besides New York. They are unlikely to be resumed until a decision has been made in the jurisdictional dispute between the International Longshoremen's Association and its bitter rival on the New York waterfront, the International Brotherhood of Longshoremen, which has petitioned the National Labour Relations Board for another election to decide which union should represent the dockers in their negotiations with the employers. The NLRB has now granted the request, against the wishes of the ILA, and the election will be held in a month's time. Meanwhile the ILA is under strong pressure from government agencies to keep its men working at the docks.

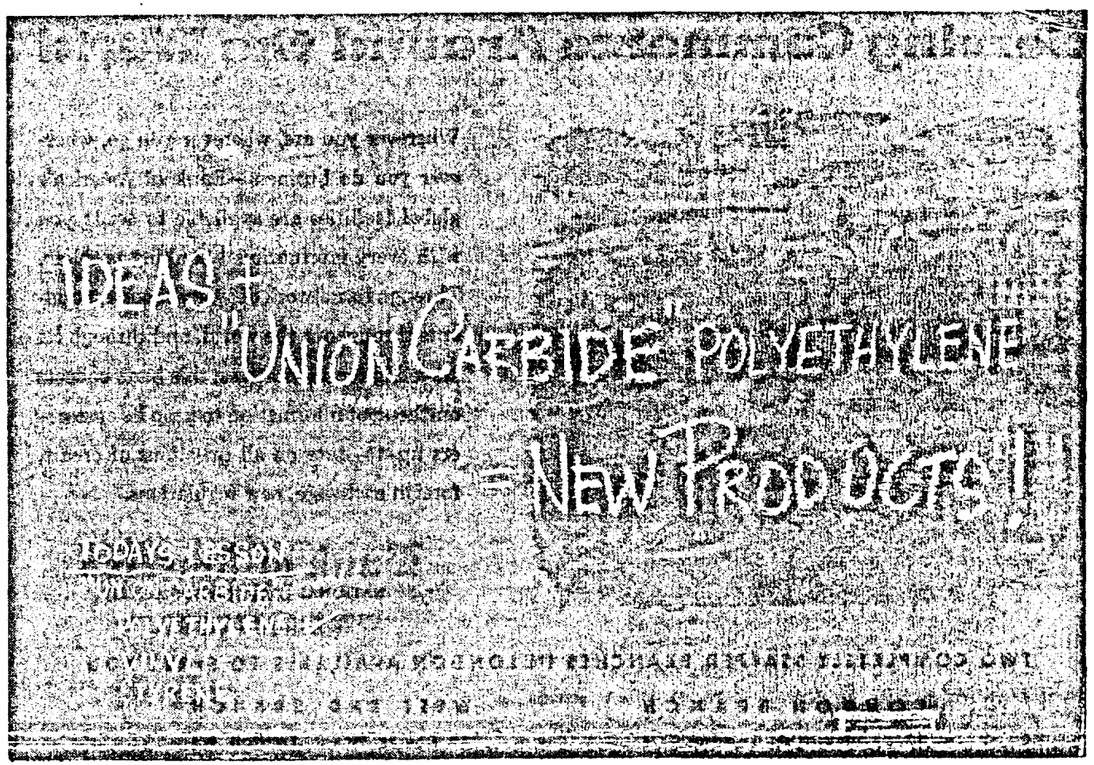
Any prospect of reconciliation between the two unions under the auspices of the national labour organisation, the AFL-CIO, was removed last week when it reminded the public of the unsavoury nature of the ILA leadership. Mr Meany, in refusing to readmit the dockers' union to the AFL-CIO, implied that the ILA has not abandoned the corrupt practices for which it was expelled from the federation in 1953. This is only the latest example of the determination of the AFL-CIO to step in where legal sanctions are ineffective in eliminating racketeering from its member unions. Following a report by the ethical practices committee of the national body, the Distillery Workers' Union was recently asked to show why it should not be suspended for irregularities in the control of its welfare funds. Formal investigation of charges of corruption in two other unions have also been started.

One practice to which the committee was particularly opposed is the device of the " paper local "—the grant of a charter for a local union to a racketeer who serves no union members but who engages in a conspiracy with corrupt employers to prevent—for a price—the organisation of their workers into unions. The new broom has been given added force by the public's horror at the blinding of a well-known newspaperman with acid as he was leaving a broadcasting studio. Seven men have been charged with conspiring to intimidate him and other prospective witnesses before a Grand Jury which is investigating racketeering in clothing and road transport.

A Keystone State

FROM A CORRESPONDENT IN PENNSYLVANIA

THE choice of Harrisburg, the capital of Pennsylvania, for the official opening of the Democratic presidential campaign two weeks ago was no accident. For Pennsylvania, once a Republican fortress which gave Mr Hoover thirty-six of his fifty-nine electoral votes in 1932, is now one of the keys to Democratic hopes of victory. Its two Senators, and sixteen of its thirty Representatives, are Republican. But in 1954 it elected a Democratic Governor by a margin slightly larger than that by which Mr Eisenhower carried the state two years earlier. Philadelphia, where for a long generation the Democratic party lived only as the tame accomplice of a corrupt and complacent Republican city machine, has since 1951 been governed by an alliance of Democrats and civic reformers who have cleared slums and cleaned up the spoils system with equal



UNION CARBIDE polyethylene is the plastic with which *you* can translate ideas into new products...new successful products to meet a mounting consumer demand for this remarkable plastic.

This plastic's nature facilitates planning when lightness, flexibility, toughness, abrasion and chemical resistance are needed. It can be molded, extruded, or formed into film. Indeed, it can assuage anxieties which so often attend the development of any new product. Easily fabricated, UNION CARBIDE polyethylene can help solve your design and production problems.

New facilities for the production of polyethylene have made increased quantities of UNION CARBIDE polyethylene resins and compounds available.

For additional information, write for booklet PE-9, "UNION CARBIDE Polyethylene".

energy and effectiveness. Pittsburgh, under Mayor David Lawrence, has long been a Democratic stronghold.

Both Governor Leader and Mayor Lawrence are confirmed supporters of Mr Adlai Stevenson, whose choice of another Pennsylvanian, Mr James Finnegan, to manage his campaign this year was a sign of Mr Stevenson's gain in political shrewdness since 1952, and a major factor in his successful fight for the nomination. Mr Finnegan is an astute politician; he also represents the new, post-Truman Democratic party, with its fresh, relatively young leadership and its emancipation from the old-fashioned city bosses. He was a key figure in the administration of Mr Joseph Clark, who wrested Philadelphia from the Republicans in 1951 and served four years as reform mayor. And now Mr Clark is challenging Mr James Duff, a former Governor of the state and an early backer of Mr Eisenhower's nomination in 1952, for his seat in the United States Senate. In Pennsylvania this autumn, each party seems to be putting its best foot forward.

★

But both sides have their troubles. The Democrats have found cleaning up Harrisburg an even tougher job than cleaning up Philadelphia. There may have been corruption in the previous state regime, but the central and intractable problem is finance. Under the state constitution, a Governor cannot succeed himself. Each incumbent is thus tempted to spend freely, and let his successor pay the bills. But paying them is made next to impossible by a further constitutional provision, which prohibits a graduated income tax. Mr Leader's Republican predecessors, notably including Mr Duff, left him a deficit of some $300 million. Still worse, the Democrats had narrowly failed to win control of the upper house of the state legislature. Mr Leader had promised not to renew the state sales tax; without a majority in the state senate he could not carry his alternative tax proposals. The upshot was a drearily protracted struggle, until finally Mr Leader had to swallow a 3 per cent sales tax, instead of the previous 1 per cent. Even at that, the state's financial problem is not solved, a fact that largely obscures the Leader administration's substantial achievements in such fields as health and education.

The Governor intends to campaign vigorously this autumn, fighting to get the control of the state legislature that he so desperately needs. Some Clark supporters fear that this will hurt their candidate, by giving prominence to the sales tax imbroglio and confusing the issues in the contest for the United States Senate. This may be undue pessimism, for although Mr Leader has lost some of his first glamour he remains an attractive campaigner, young, intelligent, and obviously sincere. His farming background may also be helpful in the rural areas where Mr Clark is not well known.

Becoming known outside the Philadelphia area is one of Mr Clark's tasks; a more difficult one is that of converting his deserved reputation as a municipal reformer into political capital of the kind that will elect him Senator. To many independents and even Republicans, he symbolises the return of good government to the city. But his campaign against "single-interest government in Washington," and on behalf of the progressive side in national political issues, may not be so popular with these same voters. By calling Mr Duff "a timid liberal who won't fight for liberal causes," Mr Clark perhaps hopes to make the distinction between himself and his opponent one of personal qualities more than issues. And when Mr Duff calls Mr Clark "a sincere socialist," he is, among other things, trying to do just the reverse.

If the Democrats in Pennsylvania are encountering the perils of success, the Republican party is divided in failure. There is no love lost between Mr Duff's forces and the old guard which ruled Pennsylvania when it was a safe Republican preserve. At present the state organisation is in the hands of the latter. So Mr Eisenhower's adopted home (his farm retreat is at Gettysburg) is, ironically, resistant to the President's attempt to bring his party up to date. Democrats hope that the old guard Republicans will quietly sabotage Senator Duff's candidacy, just as Republicans hope that the Democratic professional politicians in Philadelphia will seek revenge upon Mr Clark for having destroyed the patronage system in that city. Maybe such internal difficulties will cancel out; if anything, the advantage is with Mr Clark, for the Democratic professionals know that he will not be nearly the trouble to them in Washington that he was in Philadelphia, and they respect his talents as a vote-getter.

There are those who maintain, however, that all these parochial considerations will count for little in a presidential year. Pennsylvanians are not given to splitting their tickets (voting for one party's nominee for President, and another's for Congress). Republicans, especially, argue that Mr Eisenhower is unbeatable and that Mr Duff, who can ride the presidential coat tails without the ideological contortions of some of his Senate colleagues, will win, despite his age (seventy-three) and his opponent's remarkably energetic campaigning. They may be underestimating the appeal of youth and a fresh outlook in a state somewhat weary of being a political backwater. It is no secret that Mr Duff, like most of the more liberal Republicans in the Senate, has made disappointingly little use of the opportunity given him by Mr Eisenhower's ascendancy. When Mr Clark asks the voters to "fill the empty chair," he is reminding them not only of Mr Duff's rather sketchy attendance record in the Senate, but of this more general failure of the liberal Republicans to change the face of their party in Congress. At present, the odds are still that Pennsylvania will vote for Mr Eisenhower. But unless the President's margin of victory is a big one, Mr Clark may well be the next junior Senator from the state.

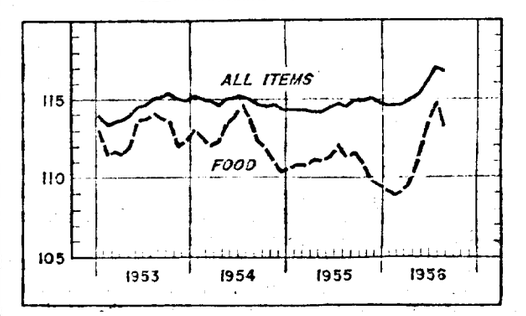
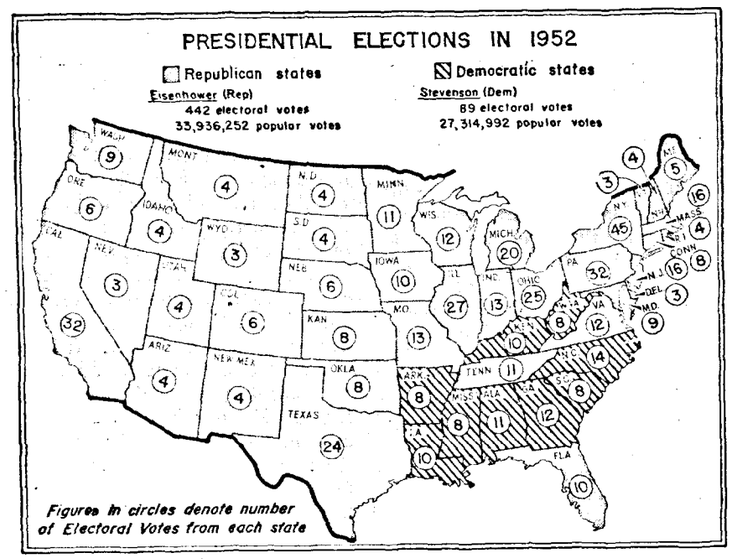
INDEX NUMBERS 1947-49=100



The Electoral College

Washington, D.C.

MR STEVENSON does not need to have as many people vote for him as vote for Mr Eisenhower to be elected President this year. All that counts is that he should have 266 of the 531 votes in the electoral college. For strictly speaking it is the presidential electors, not the President, who are chosen in the forty-eight states on November 6th under electoral laws differing in each state. In turn, these electors assemble in the state capitals on December 17th to elect the President and Vice President. Nominally, and according to the intention of the "Founding Fathers," they have a free choice. But since 1820, only five electors, one of them a Tennesseean in 1948, have deserted the candidate to whom they were previously committed.



Each state has as many electors as it has Senators and Representatives combined; this gives an advantage to the smaller states since they all have two Senators, regardless of size, and only the number of seats in the lower House is related to population. Moreover, the fact that the electoral power of the various states is determined in advance gives an advantage to the South. It saves southern states from being penalised for the exceptionally low voting turnout which results from election laws which disenfranchise large sections of the population—primarily the Negroes—and from the general apathy about politics in places where a single party is almost permanently in control.

But the large northern industrial states also have a strong interest in the archaic electoral system. This arises from the fact that under the Constitution it was left to the state legislatures to decide how electors should be chosen. In the early days of the Republic the individual states experimented with a variety of ingenious devices. One of these provided that each voter should cast a single ballot for a statewide list of electors, so that a party which is victorious in a state by the narrowest of popular margins carries its whole vote in the electoral college. This method soon replaced the other systems. All states now deliver block votes, and it is obviously the ones with the largest number of electoral votes to offer that attract the most attention when candidates are chosen and partisan issues are defined.

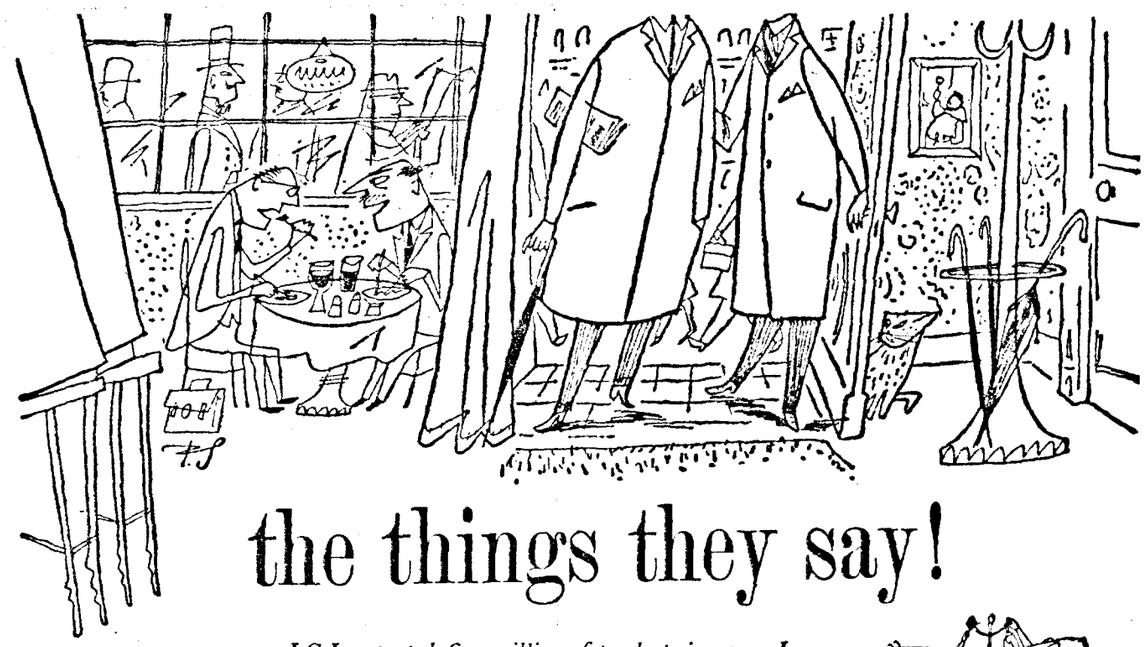
Although repeated attempts have been made, including one in the Senate this year, to modernise the method of choosing Presidents, they fail precisely because so many interests draw special advantages from the present machinery. The simplest solution, a straightforward popular vote, seems the least acceptable because both small states and the South would lose influence by it.

Plans for keeping the presidential electors as units of calculation even if not as actual personages, and dividing their votes in proportion to the popular votes, have run up against strong opposition from liberals. They argue that both the Senate and the House of Representatives are biased against the big cities—the Senate because states of all sizes are represented equally and the House because the constituency boundaries are drawn up by state legislatures dominated by rural interests. Therefore, to offset this, the urban interests, especially racial minorities and trade unions, deserve to retain what special influence they have on the Presidency by virtue of their key position in evenly divided states with large electoral votes.

Advocates of electoral reform claim that two-party systems will be encouraged in states traditionally dominated by one party once the minority vote begins to count in the national totals. Enlightened defenders of the *status quo* argue that, on the contrary, Democratic and Republican votes in the big industrial states would almost cancel each other out. The two parties would then concentrate on their more conservative wings operating in states where large and perennial margins could be the decisive factor in the presidential race.

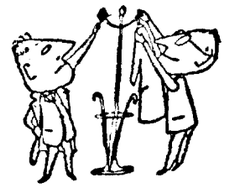
In the last election Mr Stevenson received 89 electoral votes from nine states, all southern except for West Virginia, against General Eisenhower's 442 votes from thirty-nine states. Some Democrats claim that their candidate has an excellent chance of making the South solid again; this, with West Virginia, would start him off with 146 votes and the recapture of a number of other border states that frequently go Democratic would put him up to 179. This would leave him with only 87 more votes to pick up from the North and West in order to win.

Various optimistic calculations have been cited by Democrats, making use of states which Mr Stevenson lost by less than five per cent or which have shown striking Democratic gains in the congressional and local elections in the intervening years. It is clear that if he has the South and the border lands, he could manage to win by scraping together one or two of the farm states, some of the western states and a few of the industrial states with large electoral votes. It cannot be said that, against Mr Eisenhower, this seems very probable; but at least it is less discouraging than trying to reverse the margin of 6,622,740 popular votes that the President ran up in 1952.



the things they say!

I.C.I. exported £71 million of products in 1955, I see.



Yes, they've been doing well.

How do they manage it, I wonder?

One reason is that they've built up a sales organisation all over the world. Indeed, they have subsidiary companies in 42 countries, and agents in nearly all the rest.

And what's the other reason?

Well, foreigners have come to trust the quality of I.C.I. products and the technical service that goes with them.

Is Britain, then, a force to be reckoned with in the chemical field?

Yes. And high quality isn't the only reason. Thanks to our research workers, we in Britain now have hundreds of outstanding chemical products to sell to the world.

Such as?

Polythene, for instance, and the powerful 'Gammexane' range of insecticides, brilliant new dyes like 'Alcian' Blue, and drugs like 'Paludrine' and 'Antrycide'. They're all I.C.I. discoveries, you know.

And they're helping us in world markets?

They are, indeed. What's more, I.C.I. are spending over £9 million a year on research and development. So far as they can, they mean to ensure that British chemicals stay in the lead.

GOING TO CANADA?

Fly to Canada on TCA's new 15-day Excursion

From October 1st*, you can fly to Canada on TCA's new 15-day Excursion and save *more than* £34. With this notable economy you get the same comfort, the same excellent meals, the same choice of frequent, direct flights that have made TCA's Super Constellation service the most popular way to fly to Canada. Your Travel Agent will give you full details of TCA's new 15-day Excursion to Canada—the considerable sums you can save, and the magnificent service you get.

* *Subject to Government approval*

Asian Pressures for a Suez Settlement

FROM OUR CAIRO CORRESPONDENT

To most people here, the Suez Canal crisis appears to move inevitably towards negotiations with President Nasser and it is difficult to see what useful purpose is served by refusing to face this fact. The reference to the Security Council can hardly produce any other result; and India and the Arab states have done their utmost to influence Nasser in favour of conciliation at this late stage. Indeed, however much the Arabs and Asia have given their support to the claims of Egyptian sovereignty, they have not lost sight of the importance of free navigation to their own economies. Mr Krishna Menon made much of this point while he was in Egypt, pursuing throughout his visit the ultimate aim of negotiations. He has, it is said, taken assurances from Egypt which offer bases for direct discussion of the issues at stake.

President Nasser will not, of course, agree to denationalise the management of the Suez Canal. But no one knows how far he is prepared to go in accepting conditions, guaranteed within an international convention, which will limit the managerial freedom of his own canal administration. It seems clearly possible to secure a convention backed by the United Nations and the great powers which would give an international structure to a national administration and Nasser has for long said he is willing to discuss a solution along these lines. The Menzies mission, which has been the only direct contact with the Egyptian government, did not investigate this possibility. It seems essential now that the western powers should learn how strong would be the guarantees and how far they would cover the needs of the maritime nations. Not to do so would suggest that any commitment by Nasser would be unacceptable. This may be the attitude of Britain and France, but it is hardly likely to be the attitude of the United Nations.

President Nasser's friends rather than his opponents have probably been the greatest influence in favour of moderation. From the outset he was surprised not so much by the strength of western reaction, which he duly assessed in the terms of Sir Anthony Eden's first broadcast speech on the subject, but by the dismay of much of Asia. The threats of the western powers, no matter what emphasis was put on their precautionary nature, overlaid this dismay. They roused popular nationalism to the point where governments could do no more than approve in public the whole course of Egyptian policy. The subsequent events, from the first London conference to the Menzies mission, sustained eastern resistance, because the methods used were still judged to be high-handed. The weakness of the second London conference decisions, the obvious distaste for military measures and resistance even to a canal boycott, have brought Nasser's friends nearer to his "enemies." They, too, want a workable settlement.

The position is now approaching a neat point of balance. India did not like the nationalisation of the Canal Company nor the abrupt, polemic manner in which it was done. The oil-bearing states of Iraq and Saudi Arabia, faced with a possible boycott of the canal which, for lack of adequate shipping, would cut their oil output (and therefore their revenues) by one-third, have come nearer to actual friendship than for many a year and together have pressed for moderation by Egypt; this was the outcome of the meeting between their kings last week in the torrid heat of the Persian Gulf. The vagueness of phraseology in the communiqué issued after the Riyadh conference of King Saud, President Kuwatly of Syria and President Nasser only reached something like precision in its reference to the desire for negotiations. Jordan, Syria and Lebanon are anxious about Israel. The weakening of the western position is therefore paralleled by the less obvious weakening of the position of Egypt. There is a two-way pressure for a reasonable settlement which could only be destroyed by insistence upon the form of words, on international management, on the Dulles plan.

It can be argued with reason that the anger of the western powers made a contribution to this state of affairs by bringing to the minds of the peoples of Asia the gravity of the issue which is at stake. But in the process much has been lost. The threats strengthened Nasser; the failure to implement them will strengthen him further. Yet his failure to consult the Bandoeng powers or even inform them, or to tell the much tighter corporation of Arab states, had disturbed confidence in him, however much his right to nationalise the canal was recognised. Nasser's foundations were shored-up by precipitate anger from the west. At more practical levels, the departure of the western European pilots has left vacancies on the canal which Russians, Poles, Jugoslavs, as well as Egyptians are now filling. The pool of experienced pilots upon which depends the ability to impose freedom of navigation is evaporating. The process continues inexorably. When the momentum of Arab support is falling, Canada announces the decision to send Sabre jets to Israel. There are reports of plans for possible new oilpipes, through Turkey and even through Israel. The west seems determined not to have Arab support if it can possibly avoid it.

In the light of the current situation, the more promising approach to a settlement seems to be by contact with Asia through India, rather than by efforts to secure ineffectual votes through the United Nations. Asians argue that, by comparison with the weakness of their economies, their dependence on the Suez Canal is greater than that of the western powers. They want a secure canal. If the aim is a secure canal, then this is best achieved by bringing a willing Asia into the final field of agreement. To squeeze a reluctant assent from it, for the pleasure of apparent victory, is to sacrifice the substance of security in the years to come.

Shall Lebanon Copy Nasser?

FROM OUR SPECIAL CORRESPONDENT IN BEIRUT

THE next few days may prove to be fateful ones in the story of the Lebanese oil industry. By the end of September, the Iraq Petroleum Company is required to reply to the communication received from the Lebanese government last month on the tax issue. The contents of the government communication have not been made public here, but Saeb Salam, the Minister of State dealing with oil problems, has been quoted in the press to the effect that the government rejected the company's claim that its business in the Lebanon was conducted on a non-profit-making basis; assessed its profits over the past four years at about £L45 million; computed the tax due thereon at £L12 million; and, for good measure, imposed on the company a fine of £L12 million for issuing a false declaration. Saeb Salam has not denied the press reports. Meantime, there are unofficial reports that the company, last Saturday, requested submission of the matter to arbitration under the terms of its 1931 agreement with Lebanon on the conditions for company operations there.

At first, the Lebanese government required an answer to its formidable statement within five days. That period of grace was later extended by another thirty days. If no reply is forthcoming within the time limit, or if the reply proves unsatisfactory, the government could demand payment within two months, in default of which it could presumably proceed against the company as against any other tax defaulter, namely, by seizure of its assets in the Lebanon. These include the small but efficient refinery at Tripoli, the installations in the pipeline terminal area, the numerous workshops and stores, not to mention the company hospital (which any country might envy), clubs, canteens and other institutions for workers' welfare.

There is still more at stake. Work must soon begin on a new pipeline planned to carry a further 9 million tons of oil to the Mediterranean from Homs in Syria, and the question arises whether the terminal should be at Tripoli (Lebanon) or Banyas (Syria). For technical reasons, the decision must be taken by early October at the latest. As a pipeline terminal, Tripoli has slight advantages over Banyas. Loading, for instance, is less often stopped by bad weather. But the difference is small, and weighs little or not at all when thrown into the balance with the goodwill or ill-will of the governments concerned. The Syrian government, despite its strong anti-western complexion, has so far shown much realism in its dealings with the oil companies; the Saudis and the Iraqis, even more interested than the countries of transit in keeping the oil flowing, are encouraging Syria in this attitude. According to Egypt's Middle East News Agency, the Saudi and Iraqi governments, after the recent meeting between their Kings, indicated where the balance of advantage for themselves lay by calling on the Syrian government to take such measures as would ensure the safety of the pipelines running through Syrian territory.

The Iraq Petroleum Company can afford to face the crisis calmly. Its Lebanese business is a convenience, but in no way vital to its operations as a whole; and convenience loses much of its appeal in the face of vexatious government interference. But the loss on the Lebanese side would be considerable if the company were forced out of business. In Tripoli, 2,500 workers would lose their present employment; which means employment at wage-rates comparing very favourably with those paid by local contractors, quite apart from the company's elaborate welfare apparatus. In addition, IPC expenditure in the Lebanon is running at an annual rate of over £L25 million—about £3 million sterling. Nearly half this goes on wages and salaries; over £L2½ million on local purchases; nearly £L7 million on works and buildings; over £L1 million on rents, hotels and travel agencies; while miscellaneous expenditure, such as rail freight, post, telephones and the rest, accounts for nearly £L2½ million. Other results of a transfer elsewhere of company activities would be a rise in the price of all oil products in the Lebanon, and loss of government revenue, amounting to some £L7 million annually, on the basis of the company's present offer, through the choice of Banyas as the terminal of the new pipeline. An economic setback of that order might well have immediate political consequences in Tripoli, and later in the rest of the country, as the repercussions spread. Tripoli is a largely Moslem city, and it is clearly difficult to predict Moslem reactions in the present upsurge of Arab nationalism. But IPC's record in dealing with its employees has been such that many might decide that the responsibility for their plight must be sought outside the company.

Solomon's Judgment?

The Lebanese oil problem is further clouded by continuing uncertainty over the American Tapline. Profiting by the experience of IPC, the Americans hoped to avoid the difficulties of allocating pipeline royalties on a ton-mile basis by leaving the whole problem of allocation to the transit states—in this case, Saudi Arabia, Jordan, Syria and Lebanon. It was an ingenious device, but so far it has not worked. Saeb Salam returned from the conference held in Riyadh to settle the matter with the firm statement that agreement had been reached on the basis of equal shares. The lack of confirmation has been deafening. Instead, there are strong suggestions that the Saudi government proposes a division into five equal shares, of which Saudi Arabia, as both producing and transit state, should get two, and the others, as transit states only, should get one each.

The reported Saudi suggestion for division on a 40:20:20:20 basis is in fact a generous one. On a ton-mile reckoning, Saudi Arabia would get 70 per cent. But still agreement is lacking. A cynic has prophesied that the four states will soon refer the matter back to Tapline, with a request that the Americans should, after all, divide the shares as they please. What is one to think of Arab unity if after so much palaver the mothers can think of nothing better than to hand their baby back to Solomon?

How comfortable does the Lebanese government feel about its prospects of copying President Nasser? The latest government move, which is the despatch of Saeb Salam on an urgent mission to Damascus, betrays some nervousness. He has recently committed himself to several statements on the oil industry that are now coming home to roost. In addition to his wrong forecast about shares of the Tapline profits, he said that the Syrian government would never agree to the diversion of the new pipe to Banyas instead of Tripoli; and that the Iraq government would never agree to a pipeline through Turkey to Iskenderun—a line now being prospected. The public is growing increasingly uneasy at lack of confirmation of his assertions. The parliamentary Oil Commission, which was due to question the foundation for them at a meeting on Wednesday, has postponed this till Monday next so as to afford Salam a chance to substantiate at least one of them. If he returns from Damascus empty-handed, his immediate political future would seem to be in jeopardy.

Indian Views on Suez

FROM OUR CORRESPONDENT IN INDIA

INDIA'S attitude to the Suez dispute is quite cool and practical. It wants a solution which will at once avoid war and ensure free passage through the canal and it thinks it can be better attained by talking to Colonel Nasser than by moving troops or forming users' associations.

India's difference with the western powers is primarily not one of morality but of political judgment. Few in India approve of Nasser's methods of overnight seizure, nor would many like to leave the canal in totally unfettered Egyptian control, but virtually all consider that military action would not work. The only result, they feel, would be an Algerian-style guerilla war, the blocking of the canal, and the sabotage of western oil installations all over the Middle East. They dismiss complacently the possibility that a successful military action would dictate terms to Nasser.

Indeed, Indians do not see the situation in terms of the individual Nasser, his breaking of contracts and his methods of running Egypt at all. They look on it as part of that resurgence of Asia and Africa of which Mr Nehru talks so often, and which consists so largely of the removal of every possible limitation of Afro-Asian sovereignty. If there were no Nasser, there would be somebody else. To Indians, the only course to be taken when a special regime of the Suez type is challenged is to renegotiate with it. One cannot stand on 19th century rights without creating more bitterness than they are worth; and reminders of the difficulties the Egyptians will have in running the canal fall upon unwilling ears.

Nevertheless, because Indians consider Nasser's nationalisation as something which cannot be undone, indeed something he was within his rights in doing—however much they may disapprove of the way in which he did it—it does not mean that they forget the interest other nations also have in the canal. Nearly three-quarters of their own trade passes through the canal—a far higher proportion than that of Great Britain, and they are profoundly alarmed at the thought of the burden on their foreign exchange position that a diversion of shipping round the Cape would involve. Nor do they overlook the possibility that if Egypt had the right to discriminate against particular ships or to raise tolls as it liked, it might conceivably discriminate against their ships, and raise tolls on their traffic. Therefore, they are very eager for negotiations with Egypt, not just so that Nasser's seizure of the canal may be ratified, but also so that it can be kept in order. Indian advice in Cairo has been steadily in favour of moderation, and it may well explain, not only the care with which Nasser has avoided further hostile acts, but also his expressed willingness to bind himself to the sort of agreements India would like to see made.

Indians indeed do not take too tragic a view of the gap between their advisory committee and the western-advocated internationalisation. Even an international canal authority could not prevent Egypt from exercising its sovereign rights to interfere with transit; it did so against Israeli ships under the company. On the other hand, Indians do not believe that the Egyptians could ever lightly disregard the advice of an advisory committee which would contain themselves, the Russians, and the western powers. Indians have no objection to their scheme of an advisory committee being strengthened; they would, for example, find an Egyptian canal authority with some non-Egyptian members perfectly acceptable. Their point is only that it is useless to present solutions which it is known Nasser will not, perhaps cannot, negotiate on, and that, since force is excluded, some basis must be found from which both sides can negotiate. That is also why they prefer Mr Krishna Menon's talks to a reference to the United Nations. They suspect that once both sides have taken up formal positions in New York, negotiation becomes unnecessarily difficult.

Few have praised Nasser's action as a stroke for freedom; there was far more praise for Britain for naming a date for Gold Coast independence. Fewer still have seen England and France as big bad wolves; rather has there been regret at seeing them act so out of what Indians conceive to be their character. There is regret, too, at seeing Britain in particular lose prestige. Nobody has believed that Britain and France would, or could, really use force. Rather have they been seen as old aunts threatening to spank naughty Johnny although he runs faster and they lack the physical strength to catch him. Most Indians do not want to see Britain and France reduced to unimportance, or to be left with a world split between Russia and America. The return of Britain especially to milder courses has therefore been genuinely welcome. It has been treated, not as weakness, but as a sign of the capacity to recognise facts, a capacity Indians have always considered a major British virtue.

"MOTOR BUSINESS"

The September issue of this quarterly research bulletin for the motor and allied industries includes:

The long-term growth in domestic passenger car demand.
The domestic and export markets for agricultural tractors.
The South African market for vehicles and tractors.
Notes on the East German motor industry.

The Bulletin is fully illustrated by charts, amongst which are:

Price indexes of used cars and vans.
World exports of vehicles.
Vehicle exports by countries of origin.

For full particulars of this Bulletin, apply to:

Black Mood in Paris

FROM OUR PARIS CORRESPONDENT

LAST Friday has become in French eyes a diplomatic Black Friday; it was the day on which it became clear that the original scheme for a Suez Canal users' association would be watered down and would not lead to a rapid boycott of Egypt. French opinion was more united than British (or than French has been since 1945) in hoping for forceful action to beat down President Nasser. The revulsion at the loss of that hope after so many martial speeches has been proportionately violent. The government's protest and its reservation of its "freedom of action" in joining the users' association have weighed little beside the shattered hopes, especially since the pause before the American elections promises further delays in taking decisions. Equally the Franco-British appeal to the Security Council and the visit of Sir Anthony Eden and Mr Selwyn Lloyd to Paris seem, in the shadow of French disappointment, to be a regrouping of forces after retreat.

For the government, however, the visit is essential: common Franco-British policy in the United Nations and after could have been more discreetly prepared, but public evidence of the *entente cordiale* was necessary at the critical moment of shock. For the government continues to maintain that its aim is international control of the canal; that this is the basis on which Nasser should be brought to negotiate; and that even force cannot be excluded should he refuse. However, when an unfortunate newsreel flashes M. Mollet on cinema screens affirming that there will be no bogging down over Suez, the audience reaction is not flattering.

Anger Against Allies

The government has been criticised by the conservatives for its "vain threats" and some Mendèsiste Radicals, like the young M. Hernu, are now claiming that military action could and should have been taken at the outset of the crisis. But M. Robert Lecourt, speaking for the Catholic MRP, has said that "our bitterness is not directed at the government." The French government acquiesced in the revised users' association in the name of solidarity with its Atlantic allies. It is against those allies that feeling is aimed—mainly the United States, but also others, notably Italy for paying canal dues to Egypt and weakening the association. A large number of parliamentarians have stressed that failure over Suez would deal a "fatal blow" to the Atlantic alliance. Even MM. Mollet and Pineau have expressed "bitterness" and "anxiety" and blamed risks of future war on "those who have been weakest" with Nasser in the last two months.

On the surface Britain has escaped lightly in this chorus of resentment, despite early hints in the press (not echoed by the government, which has constantly stressed solidarity with Britain) that it had failed France by accepting too quickly the revised users' association. Yet Britain's stature too has been diminished. *Le Monde's* bitter comment is that the Franco-British team is an alliance of "possessors dispossessed" while M. Reynaud has concluded that "the Franco-British tandem is no longer enough." For the French reaction has not been entirely, or even most profoundly, a search for scapegoats. The need for renewal has been one of the themes that has crystallised within the last few days. The "Europeans," even fairly new ones like *Le Monde*, have gained points by claiming that Suez shows that European unity is more urgent than ever and that Britain should take steps towards it. M. Pineau has made the point in his talks with Sir Anthony Eden. The French government has already endorsed the recent recommendation of M. Jean Monnet's action committee for a united states of Europe that the Six should establish European atomic power production targets in the light of Suez. This Saturday, M. Mollet meets Dr Adenauer to discuss the obstacles, such as German resistance to European ownership of fissile materials, which hamper the drafting of the Euratom Treaty.

All these themes are likely to emerge in violent terms when parliament reassembles within the next fortnight. The government faces a threefold crisis. It will be challenged to find some effective riposte to Nasser, if only because so many politicians, like M. Lacoste, link Suez with Algeria. The Algerian reforms, too, must be tackled before the United Nations session in November—and the conflict between those who want negotiations with the rebels and those, like M. Lacoste, who want to grant a charter dispensing with prior discussion (and that only after President Nasser's fate is clear) will be a keen one. Finally inflation, despite the rousing success of the national loan to finance Algeria, is still threatening. The Socialists remain the lynchpin of any majority and M. Mollet's position is still strong. But events are moving fast. Last week several of M. Mollet's own ministers made noises off suggesting the government might resign over Suez. The atmosphere of governmental crisis, absent in April, has returned.

Japan's Sick Man

FROM OUR TOKYO CORRESPONDENT

PLUS ÇA CHANGE. . . . To few countries does the saying apply more forcefully than to Japan. Before the war, Big Business nakedly made and unmade governments. Despite the blessings of democracy conferred since the war, Big Business continues, scarcely less nakedly, to do exactly the same. The businessmen made and broke the Yoshida government, and the Hatoyama government now is threatened with a like fate.

If there is a difference, it is that few governments, even in Japan, have called out quite so loudly to be unmade, and few Japanese prime ministers have tumbled so fast from a high peak of popularity as has Mr Ichiro Hatoyama. The Japanese, who normally hedge their every remark with courteous platitudes so vague at to suggest—misleadingly—vacuity, can also be cruelly outspoken. They are being so now about Mr Hatoyama. The Prime Minister who so recently was cheered in the streets is jeered at as Japan's *hirune shuso*—the nearest translation is "afternoon-nap-prime-minister"—or scathingly referred to as "the robot."

Mr Hatoyama is, self-confessedly, a sick man. But there has been nothing quite like his loud and constant preoccupation with his health since the heyday of Mohammed Mossadegh. This naturally feeds the rumours and swells the legends, already legion, about his physical and mental state. It is not too much to say that the Japanese people have ceased wondering when the Prime Minister is going to make up his mind, and are now chiefly concerned about whether he has a mind to make up. Like Dr Mossadegh, Mr Hatoyama when he appears in public often disconcerts

The case of

Thaumetopœa pityocampa...

In Spain, where soil erosion is a major problem, pine trees are grown extensively to aid conservation. As mature trees are felled for timber young trees must be planted to replace them, in order to maintain the cover on the steep hillsides. The young replants are often destroyed by the larvæ of the pine processionary moth, *T. pityocampa.*

'La processionaria' as the insect is known locally, has earned its name from its habit of invading the forests in columns.

As winter approaches, groups of larvæ spin hibernation nests in the tree tops. The traditional method of control has been to collect these nests by hand and destroy them, but inevitably many were missed and only partial control achieved.

Now a fresh approach has been made to the problem. The plantations of young trees are sprayed with the new Shell insecticide endrin, applied at very low concentration, either by air or from the ground. The effectiveness, persistence and economy of endrin are such that it has become the standard control when 'La processionaria' threatens Spanish pine forests with destruction.

Endrin, aldrin, dieldrin . . . these three advanced insecticides developed by Shell are complementary to each other. Between them they control most of the major insect pests which menace agricultural production and public health throughout the world. Have you an urgent pest problem in your area?

endrin

endrin, aldrin and dieldrin are SHELL insecticides for world-wide use

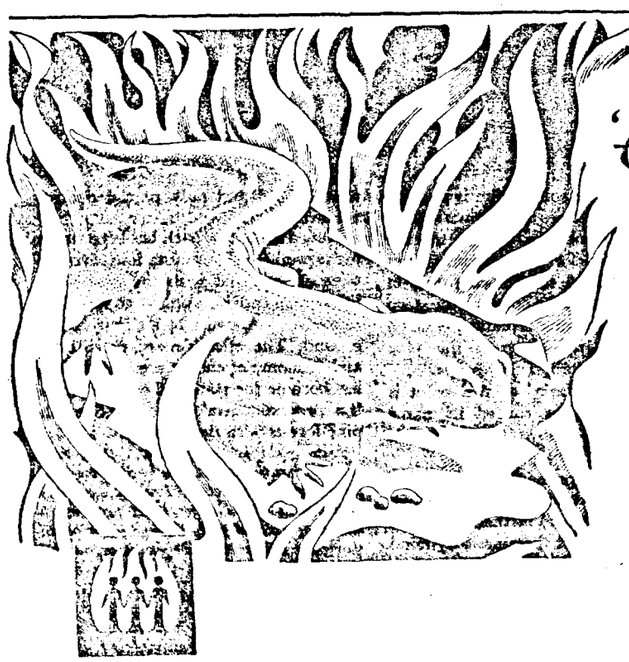
TOTTENHAM COURT ROAD, LONDON, W.1. MUSEUM 7777



'Ever in the fire and never consumed'...

THIS IS ONE of those legendary associations that bear no real relation to the truth. Salamanders are amphibians, the black and yellow species 'Fire Salamander' being common still throughout North Africa and Central Europe. Far indeed from being fireproof, he is found only in the dampest places.

There is nothing mythical however about the fire-resistant properties of ASBESTOLUX, one of the most up-to-date manufactured products of The Cape Asbestos Company. Non-combustible and therefore widely used in modern building practice, this asbestos insulation board is mainly composed of Amosite asbestos fibre, from the Company's own South African mines. It is this Amosite, with its high specific volume, i.e. millions of long, thin hair-like fibres per pound, that gives to ASBESTOLUX many of its outstanding qualities—high insulating efficiency, good strength/weight ratio, and extreme durability due to its indifference to temperature, moisture, chemicals, insects and fungi.

THE CAPE ASBESTOS COMPANY LTD

114 & 116 PARK STREET · LONDON · W.1

WORLD'S LARGEST PRODUCER OF AMOSITE AND "CAPE BLUE" ASBESTOS

his audience by bursting into tears, either of sorrow or of joy. When the veteran conservative politician, Bukichi Miki, died this year, the Prime Minister called a press conference, during which he wept copiously. And, when a public meeting applauds him, or children greet him with well-drilled "*Banzais!*", Mr Hatoyama also weeps. This tearful habit has an unnerving effect on all present.

Even more worrying to the Japanese is that Mr Hatoyama now spends an increasing part of his day tucked up in bed. This attracted so much unfavourable comment that it evoked a public explanation, which few people found very consoling. "The Prime Minister, when he goes to bed in the afternoon, does not sleep all the time," an official explained; "sometimes he stays awake to read a little." Another disconcerting Hatoyama habit is to stay away from Cabinet meetings as much as possible; his Cabinet colleagues however are less perturbed by this than they might reasonably be, because, when Mr Hatoyama does attend, he is apt to agree with everyone who speaks, even when the speakers are in violent opposition to one another. This habit of cordially agreeing with people who offer him quite contradictory advice frequently causes great confusion: on one recent occasion, Mr Hatoyama warmly endorsed the choice made by the Foreign Minister, Mr Shigemitsu, as to who should be Japan's ambassador to the Philippines, then later in the same day no less warmly approved the quite different choice suggested by someone else.

Honourable Retirement

In these melancholy circumstances, the business groups who put Mr Hatoyama in power would now be glad to be rid of him. What restrains them is that they cannot agree among themselves who his successor from within the Liberal-Democrat Party should be. The party is composed of various contending factions who were forced into an uneasy merger after the Socialists succeeded in healing their own schisms: fear of the Socialists holds them together, but otherwise they have no agreed policy. As one Japanese politician explains it, with revealing candour: "Mr Hatoyama should be allowed to make an honourable retirement, but he cannot be asked to come off the stage, because there is no one to arrange the next scene."

One man who would like to combine the roles of scene-shifter, stage-manager and star is Mr Ichiro Kono, who is nominally Minister of Agriculture and Forests, and is actually Mr Hatoyama's chief adviser and effective foreign minister. A recent cartoon in the *Asahi Shimbun* showed Mr Hatoyama seated in a chair and a maid packing his suitcase; the maid asks: "How many shirts shall I pack, sir?", and Mr Hatoyama replies, "Please ask Mr Kono." Mr Kono has considerable ambition, but so far he has preferred manipulating Mr Hatoyama to risking the vengeance of the other factions by trying to get power directly.

Matters have, however, been brought near a head by the Russo-Japanese talks. After the failure of the Shigemitsu-Matsumoto mission, Mr Kono encouraged Mr Hatoyama to announce that he would proceed to Moscow himself accompanied, of course, by Mr Kono. This incensed the powerful business groups, as well as a large section of the Liberal-Democrat Party, including Mr Shigemitsu, who feels himself to be in an impossible position, holding the post of foreign minister while Mr Kono in fact dictates foreign policy. The former prime minister, Mr Yoshida, wrote an open letter to Mr Hatoyama in which he resoundingly demanded: "Inexperienced and ailing Prime Minister, why are you going to Russia and taking the rash step of inviting the red menace?" When the business groups made it emphatically clear that on this point they supported Mr Yoshida, the government hastily announced that Mr Hatoyama's Moscow trip would be deferred, at least until Mr Matsumoto had revisited Moscow to try to find out if Mr Hatoyama would really be able to achieve anything.

Whatever the final outcome of the prolonged Russo-Japanese negotiations, it seems unlikely that Mr Hatoyama can hold on to the premiership very much longer. Mr Kono is therefore being impelled to seek a continuation of his power through a new medium, Mr Kishi—since he still shrinks from an open bid in his own name. But there are other contenders for the premiership who are now sharpening their political swords in preparation for the battle. The Socialists hope that the ensuing struggle will entirely disrupt the Liberal-Democrat Party, thus enabling them to form a government; and the Communists, thinking along the same lines, are busily denouncing "left-wing adventurers" who preach outmoded violence, and are making united-front overtures to the Socialists. Perhaps the most disturbing factor in the whole confused situation is that the ultra-nationalists have suddenly emerged from a long period of obscurity to express loud disgust at the sorry spectacle, and are threatening to assassinate politicians who refuse to mend their ways. The Japanese business groups can make and break governments, but have yet to demonstrate their ability to make them work. *Plus ça change . . .*

Problems for Dutch Politicians

FROM OUR CORRESPONDENT IN HOLLAND

THE Dutch cabinet crisis drags on. Each party in turn has tried to form a new government; the latest attempts have been frustrated by disagreement over the scope of economic controls and now the Labour party's turn has come round again. But in spite of the political crisis, Queen Juliana opened Parliament last week with all the traditional ceremony. The first official attendance of her daughter, Crown-Princess Beatrix, made the cortège with the golden coach even more colourful than usual; but the ceremonial could not conceal the public's concern that three months after the elections, a government still could not be found. In her opening speech, the Queen stated with great emphasis "that it had not yet appeared possible" to resolve the crisis; this was taken to be a reproach to the politicians.

Since the outgoing cabinet could not lay down the lines of future policy the Queen's speech could not be of much significance. The budget, too, suffered from the effects of the crisis. The Minister of Finance bluntly described the dangers in Holland's economic position but showed no concern about the future; he optimistically remarked that the present boom would probably continue for at least the next six months. The budget deficit is around 900 million guilders (nearly £86 million) but the minister could give no indication whether it would be met by higher taxes, cuts in expenditure or by some other means. An appeal for an internal loan is unlikely to be successful. But more taxes are unacceptable to all the right-wing parties.

Two main features of the budget were the increased expenditure on education and housing and the apparent determination to press ahead with developing the welfare state at all costs. About one billion guilders (4.6 per cent of Holland's national income) has been allocated to public education. Housing is to get 300 million guilders, an increase of about 50 million over last year's figure. The building programme provides for 75,000 new houses; this will be the highest number ever reached but it is still not high enough to meet the urgent need.

The difficult question of whether or not to raise the rents of prewar houses has still not been answered. Maintenance costs have increased much more than rents which are still too low to encourage private ownership. The gap between the rents of new and prewar houses is steadily increasing. The outgoing government and all the political parties agree that there must be a drastic increase in prewar rents; this is bound to have inflationary effects because the socialists will not allow increased rents without compensating wage increases. Social services are also devouring steadily growing amounts of public money. Next January every Dutchman who is 65 years old will be granted a state pension, and this too will have an inflationary effect. None of the political parties dares to oppose further wage increases and these may well upset the precarious balance between production and consumption. This balance is already in great danger as a result of the general wage increase of last March. The politicians lack the courage to tell the voters that consumption is already too high and that more wages can be justified only by increased output and higher productivity. The budget produced by the outgoing cabinet shows clearly that the new government will have some difficult decisions to take. The Dutch are consuming more than they earn and the vital question is not how to divide the national cake but how to enlarge it.

Chinoiseries in South Vietnam

FROM OUR SAIGON CORRESPONDENT

A BOLT recently fell out of the blue sky on to the Chinese minority in South Vietnam. It was "nationalised" by President Ngo Dinh Diem, much as President Nasser nationalised the Suez Canal. On August 21st a decree published by the South Vietnamese government declared that all Chinese children born in Vietnam were Vietnamese, and must take Vietnamese names. One peculiarity of the decree—apart from the fact that it concerned only the Chinese—was that it was retrospective, so that not only all Chinese children born in Vietnam in the future become Vietnamese, but also all Chinese children born there in the past. Since some families have lived in the country for several generations, octogenarian Chinese are finding a new nationality thrust upon them without option in their declining years. This is undoubtedly the most decisive step yet taken by any South East Asian country to assimilate its Chinese minority.

The Chinese in Vietnam number just under a million, of whom about 800,000 live in the Nationalist south. Under the French colonial regime the Chinese were attracted in large numbers from South China to the fertile rice lands of the Mekong delta, where, with the commercial acumen for which they are renowned, they soon took the bulk of the rice trade, and indeed many other trades, under their almost exclusive control. Under the 1930 Treaty of Nanking between France and the Kuomintang government, the Chinese in Vietnam enjoyed a special status which to a large extent combined the privileges of distinguished foreigners with the advantages of resident natives. They had their own schools, far-reaching economic rights, and a commercial and administrative autonomy which made them almost a self-sufficing community. This state of affairs was always resented by the Vietnamese nationalists.

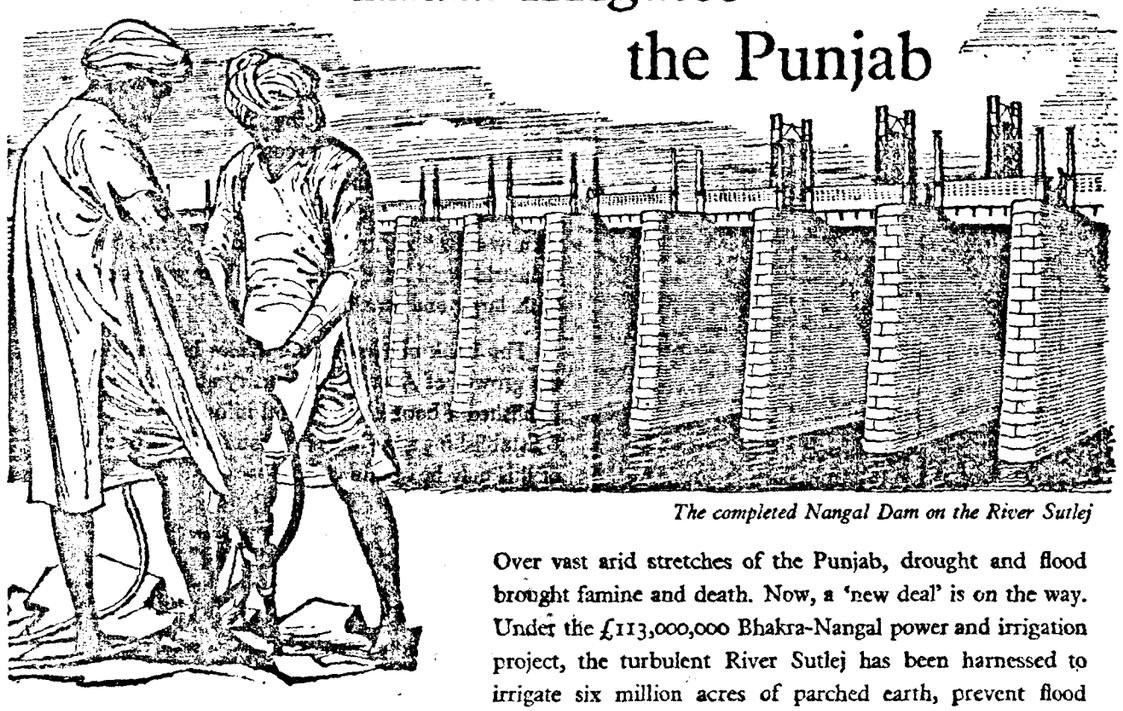
But the situation since Vietnam became independent has been delicate. To dismantle the Chinese commercial structure overnight, on top of the drastic modifications already made to the French trading system, would demolish an already shaky economy. The Chinese must be got rid of, to please the nationalists; but they must be kept in being to satisfy the economists. The way in which the South Vietnamese government has tried to resolve this dilemma is worthy of remark. In addition to the law which "vietnamifies" all Chinese children ever born in Vietnam a second, more usual, edict prohibits the practice by foreigners of eleven professions. These involve most of the retail trade and almost the entire intermediary rice trade, both the especial province of the Chinese. The effect of the first law is of course to allow all the Vietnam-born Chinese (they are estimated at 500,000) to continue in the jobs from which the second law would otherwise have excluded them. In this way, it would seem, the demands of nationalists and economists are brilliantly reconciled.

A Mortal Affront

There is, nevertheless, some uneasiness in Saigon about this apparent masterstroke—and not merely among the Chinese, whom it most closely concerns. The 300,000 Chinese not born in Vietnam will presumably have to abandon their professions unless some way round the edict (such as operating under the name of a Vietnamese member of the family) can be found. Some Vietnamese traders fear that the Chinese who become Vietnamese will acquire "official" commercial advantages they never had before. But economic considerations are not the only ones. The Chinese, who for about 5,000 years have regarded themselves as superior to all the other nations of the earth, consider it a mortal affront to be saddled with the nationality of a state which in the past they have thought of as a dominion of the Chinese empire. Chinese sentiment is not mollified by the official attitude of the Vietnamese government that they are conferring a favour on the Chinese by taking them into the bosom of the body politic.

Meanwhile Taipeh has registered "deep concern" at the South Vietnamese action, and recalled its Saigon representative for consultation. Peking—which under the communist constitution regards all overseas Chinese as Chinese nationals—has so far remained silent. Many of Vietnam's Chinese, who are basically non-political, may feel they can continue their business under the fiction of being Vietnamese, as did the Jews of mediæval Spain under the fiction of being Christians. Those that do will at least escape some of the disadvantages of belonging to an alien, and often resented, minority.

India irrigates the Punjab



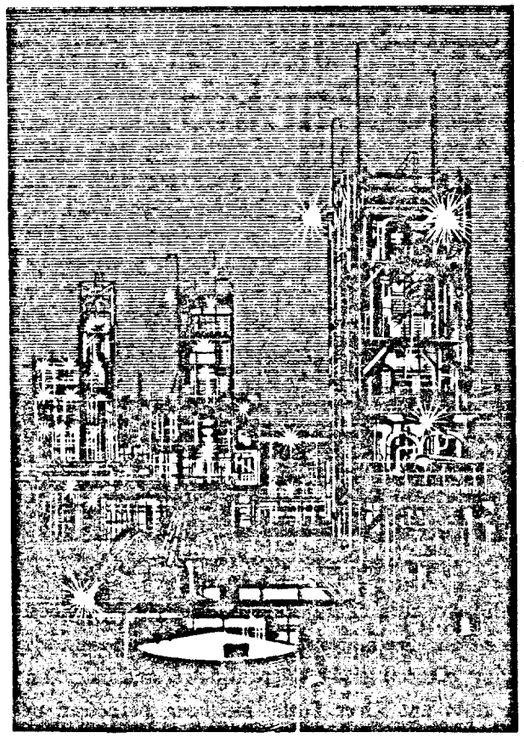
The completed Nangal Dam on the River Sutlej

Over vast arid stretches of the Punjab, drought and flood brought famine and death. Now, a 'new deal' is on the way. Under the £113,000,000 Bhakra-Nangal power and irrigation project, the turbulent River Sutlej has been harnessed to irrigate six million acres of parched earth, prevent flood disasters and provide enough electricity for over 100 towns. The Bhakra-Nangal project means an immense construction programme: the huge, 680-foot-high Bhakra Dam on the Sutlej—one of the highest ever planned; a smaller dam, the Nangal, eight miles downstream; five power plants; a 3,000-mile network of canals; new roads, railways and towns. With compressed air equipment, the project is taking shape. Atlas Copco rock drills and air compressors are in action drilling tunnels, excavating dam sites and building mountain roads to raise life above the existence level for millions in the Punjab.

Helping polio victims to breathe

Compressed air is versatile. Atlas Copco provide the means for all its many applications. In a Scandinavian hospital, respirators of a new type that pump air under pressure into the lungs of polio patients to help them with their breathing, are run off a small Atlas Copco compressor centrally situated in the building.
The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world.
Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world



Night view of a chemical factory, New South Wales

AUSTRALIA *to-day . . .*

This installation producing rayon acetate was recently completed at a cost of £6,000,000. It illustrates the great industrial strides being taken by Australia. With the help of overseas capital and "know-how" Australia is extending her secondary industries and offers attractive opportunities for both large and small enterprises.

The Bank of New South Wales has assisted in the growth of Australian industry and has recently published a booklet of factual information entitled "Establishing a business in Australia". A free copy of this may be obtained from —

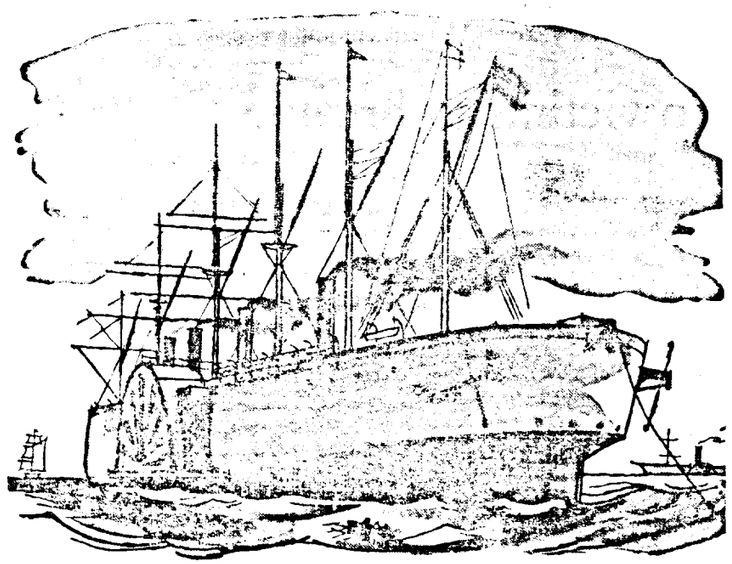
BANK OF NEW SOUTH WALES

MAIN LONDON OFFICE: 29 Threadneedle Street, E.C.2
D. J. M. Frazer, Manager

(INCORPORATED IN NEW SOUTH WALES WITH LIMITED LIABILITY)

GB.5505.C

Twelve years before Cable Contact



The first South American cable was laid between Pernambuco and Lisbon in 1874 — twelve years after the Bank of London & South America had opened its doors in Brazil.

Since then, commerce with Latin America has increased enormously, and with it have grown the influence and interests of the Bank. Today, the Bank holds a unique position as the *only* British bank in Latin America. It has Branches in most of the important trading centres of that vast Continent.

Up-to-date reports on local markets, trading regulations and general economic conditions, are received regularly from branches overseas and are summarised in the Bank's *Fortnightly Review*, which is distributed to customers and made available to those who have business in Latin America, Portugal or Spain.

THE BUSINESS WORLD

Bretton Woods Triplets

IT has become a familiar and even monotonous convention in commenting on the annual meetings of governors of the International Monetary Fund and the International Bank for Reconstruction and Development to make the contrast between these Bretton Woods Twins—to draw attention to the pale cheeks and functionless life of what Keynes called Master Fund and to the vigorous, purposeful activity of Miss Bank. The contrast remains. But before returning to that theme it would be well to note that the family has been enlarged and that Miss Bank, with a certain precocity for so young a lady, has produced an offshoot—the International Finance Corporation whose first appearance was made at Washington this week.

It was a notable appearance, not as a record of achievement (for the IFC is only two months old and has not yet done any business) but for the promise contained in the remarkably sane, level-headed speech of its President, Mr Robert Garner who, until called to the IFC, was Mr Eugene Black's Number Two at the World Bank. Mr Garner's first point was that the IFC is going into the private enterprise business and will help to finance projects which, because they are not governmental or do not rank for governmental guarantees, are outside the scope of the bank. In choosing its partners it will look primarily for good management. Technicians, argues Mr Garner, are plentiful; good managers are rare. In his words "there must be 'know what' as well as the 'know how'." The new corporation will not be an easy lender—"we must earn returns commensurate with the risks we undertake"—and it will lend on participating terms. But the exercise of the rights of conversion attached to its fixed interest loans will not occur until the IFC sells its holdings, as it normally intends to do, to private investors. It will, as a general rule, go into partnership with local investors in the countries where it does business.

Finally, with a highly topical eye on recent developments, it will look in its ventures on "standards of business conduct, the treatment by public authorities of private investment whether local or foreign, respect for the validity of contracts." As Mr Garner said, metaphorically looking President Nasser in the eye, "confidence is a plant slow to grow but easy to kill." If the IFC lives up to this overture it has a constructive and beneficial life before it; it will be a valuable supplement to the activities of the World Bank.

★

The bank goes from strength to strength. In the past year, which saw the tenth anniversary of the day on which it began operations, it made loans to the equivalent of $396 million and brought the total of loans made in this first decade to $2,720 million, spread in 150 separate operations over 42 different countries—so far without a falter of default. Meanwhile, an ample cushion of resources has been accumulated to take the impact of losses which sooner or later, even in the most ideal of conceivable but realistic worlds, are bound to occur. By steadfastly levying its 1 per cent per annum guarantee charge on all loans and ploughing back profits, reserves against losses have been built up to $227,658,769 which represents more than 10 per cent of the effective loans of $2,001.8 million held by the bank (which has sold some securities to private investors and in many cases has not disbursed the full amount lent). The position is one of impressive strength and prompts the question whether orthodoxy and caution have not been sufficiently satisfied to allow a considerable diminution in the guarantee commission of 1 per cent—a figure which adds appreciably to the cost of borrowing from the bank and which swells the international demand for US dollars.

The tale of the IMF is best told in the figures showing its activity and capacity to make ends meet:

	Years to April 30th		
	1954	1955	1956
	$	$	$
Income	4,985,199	2,346,426	1,675,335
Expenditure	5,009,159	4,989,371	5,341,601
Deficit	23,960	2,642,945	3,666,268
Currency sold by fund	231,290,000	48,750,000	38,750,000
Currency repurchased from fund	145,106,000	276,275,000	271,661,333

For the past two years the fund has steadily been unwinding its business. At the end of April the outstanding facilities made available by the IMF had been reduced to a mere $278 million. After all the fanfare with which the new technique of "stand-by" credits was announced more than two years ago, it is disappointing to learn that last year no drawings were made under such arrangements. The result of this inactivity is all too clearly reflected in the income and expenditure figures. They show a steadily widening deficit. Far from providing a positive contribution to the supply of scarce currencies in the world, the fund on its own account has become an appreciable net consumer of dollars.

It would be more than unfair to blame the fund for the miscarriage of those hopes of a relatively rapid return to the normality of a free and truly multilateral system of international payments on which the Bretton Woods blueprints were drawn. The inability of the world to recapture that logical balance and inherent equilibrium of international payments which was undermined by the first world war and shattered by the second, is due to deeper causes than the mere insufficiency of a technical piece of mechanism. But there must be something profoundly wrong with the constitution or management—or both—of an institution which has in ten years of life failed so obviously to adjust itself to the world and the conditions in which it has been called upon to function.

The fund was to have been a fount of constructive advice, a wise counsellor that would not only be listened to but heeded. That advisory function could not be dissociated from the active work of the IMF in making available to its members the currencies they might need to tide them over temporary balance of payments difficulties. For reasons that may have been outside the fund's control, but to which it should have adjusted its operations and techniques, there has been no substantial demand for its facilities to which it was able to accede. Deprived of any practical day-to-day business activity, the fund has inevitably been equally barren in its advisory role, in the confidence and respect it has been able to command from its member countries, and in its impact on monetary policies throughout the world.

It may mean a major operation to transform the fund into an institution that will do more than draw up the admirable reports and the compilation of statistics that flow from its experts. If so, a promising chance of achieving such a metamorphosis is provided by the appearance of a new broom, Dr Per Jacobsson, who is to succeed Mr Ivar Rooth as managing director and chairman of the Executive Board. Dr Jacobsson needs no introduction to Europe or, indeed, to the world, for there are few capitals that have not felt the intellectual and emotional impact of this peripatetic emissary from the Bank for International Settlements. His appointment carries with it an ironic echo of the Bretton Woods Conference. It was at this meeting in 1944 that the United States delegation, led by Mr Morgenthau and Dr Harry White, bulldozed through the conference a resolution to the effect that the Bank for International Settlements should be wound up at the first opportunity. The ostensible reason was that the International Monetary Fund could be presumed to do in future all that the BIS had been doing, and more. The true reason was the almost pathological aversion which the New Dealers in the United States had developed for an institution which, for them, represented the combined power of central banks and which had dared during the war to remain in contact, studiedly correct though it was, with the Reichsbank and its President, Dr. Schacht. That resolution, though passed, was never implemented and there is poetic justice in the fact that it is the man from the BIS who should now be called upon to breathe life into the rigid, atrophied limbs of the IMF.

*

Whether he can do so will depend first and foremost on his ability to remove the fund from the orbit of politics into which it was thrust by the decisions of the Savannah conference and, in particular, by the influence vested in the executive directors, men admirable in themselves but whose allegiance is owed in the first place not to an international institution but to the countries they represent. As it emerged from Bretton Woods and Savannah, the World Bank had the same defect of birth imprinted upon it; but thanks to the influence and vigour of the Wall Street bankers who were called upon to administer it, that handicap was soon overcome and the politicians were relegated to the comparatively subordinate position which, in an institution such as this, they should hold. If Dr. Jacobsson can secure the same victory for the IMF and can break the suspicion that this institution is no more than a minor desk of the US Treasury and State Department, he will have taken the first step towards making it a real power, an influence for good and an active participant in the business of supplementing that cushion of international reserves without which the ideal of multilateral convertibility of currencies will be a mirage ever receding with the horizon.

It will, however, need more than a change in its Articles of Agreement or in the manner in which it is operated to bring to life the world for which the IMF was intended. At Bretton Woods most of the progenitors of the fund, and Keynes in particular, were still dominated by the fear of unemployment and depression and by a repetition after World War II, of the "boom and bust" sequel to World War I. The latest annual report of the fund and most of the speeches made in Washington this week acknowledge how wide of the mark those fears were: they recognise that the major problem is that of inflation—that as Mr George Humphrey, the US Secretary of the Treasury, said, it is "peace and prosperity that has caused the real trouble." As long as this persists and, in particular, as long as there is no inevitable unanimity in the rate at which inflation proceeds and in the effectiveness of the steps to counter it, it will be inordinately difficult to achieve the Bretton Woods ideal of a world of convertible currencies and stable exchanges.

More Golden Fleece

FOR the first time in five years wool prices have risen sharply at the start of a new season. Since the 1956-57 auctions opened in Sydney on August 27th prices of merino wools have risen up to 15 per cent above the closing values of the season which ended in mid-July; the drop in prices last July has been more than made good, and merinos are now at their highest point for two years. Though crossbred prices will not be fully tested until the New Zealand sales begin at the end of next month, fine crossbreds are up to 15 per cent dearer than at the end of last season, while medium crossbreds are over 10 per cent dearer. The fleece that lost some of its lustre in the last two years once more has the golden look.

The strength of the market has gladdened hearts far from the rolling pastures of the outback. Wool is the most valuable export of the whole overseas sterling area. To Australia, the world's largest producer, it has given a badly needed boost to the Commonwealth's earnings of foreign exchange; to Australia's suppliers, among whom Britain comes first, it offers the hope of some relief from repeated import cuts—at the cost naturally of some adverse pressure on Britain's own terms of trade.

A firm opening to the sales was expected. World consumption was buoyant, stocks were rather low in Britain and other countries, and floods and delays in shearing had held up the movement of Australian wool to auction. Bradford buyers, traditionally bearish at the start of a new season, were for once mildly bullish. Yet few buyers can have expected prices to rise as far—and as fast—as they have. Competition at the auctions has been widely spread—Japan, after a slow start, has been buying more heavily—and almost all the wool on offer has been sold. War scares, rather than the small delay in shipments that would be caused by the closure of the Suez Canal, probably stimulated the bidding; the cancellation of the Brisbane sales certainly did. But will the advance be held?

Some decline in prices may well come in the next few weeks. Buyers should soon have met their most pressing needs for wool, and then they can play a more deliberate hand. There were signs of weakness in some merino wools this week, and the decline in futures no doubt reflects a belief that a reaction is due. That view could go awry if war clouds gathered again over Egypt, or if the Brisbane sales, now scheduled for the first and third weeks of next month, ran into trouble. The unions have refused to handle the "black" wool lying at Brisbane, a legacy of the shearing dispute, and statements made by the Commonwealth government suggests that it may intervene. A clash is possible, and could spread to other wool centres.

What of the more distant prospect? The wool industry is well served by statistics, but they suffer from the common defect—they tell only about the past. The Commonwealth Economic Committee's latest figures for eleven main consuming countries show that consumption of virgin wool in the second quarter of this year continued to run at the high rate of the first quarter; for the first half of the year as a whole consumption was 8½ per cent higher than in the same period of last year. If that rate of increase is being maintained—and the demand for wool hardly suggests a decline—consumption in those countries is running at an annual rate of some 1,880 million lb. Taking consumption in the rest of the world at no higher than last year's figure of 925 million lb, the world total amounts to about 2,800 million lb.

THE DOMINIONS' WOOL CHEQUE

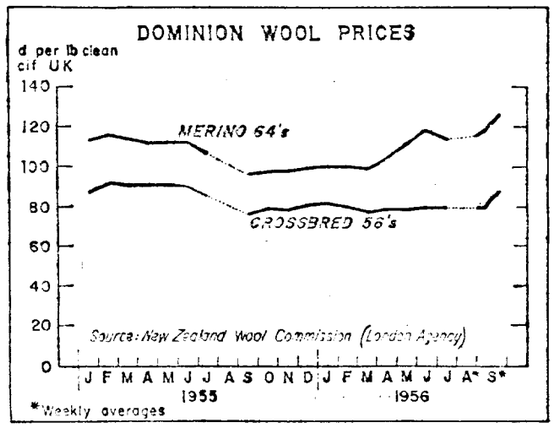
	1953–54	1954–55	1955–56
Australia :—			
£ million	312	282	267
lb „	1,144	1,189	1,299
New Zealand :—			
£ million	88	93	88
lb „	408	437	443
South Africa :—			
£ million	64	59	53
lb „	268	290	296

The forecast of world production in 1956-57 just matches this projection of demand, at 2,800 million lb clean, a new record and an increase of three per cent over 1955-56. Once again that increase mainly reflects a further rise in the Australian clip, this time of six per cent to 830 million lb. Production in New Zealand and South Africa is expected to increase by about two per cent to 320 million lb and 160 million lb respectively. The decline in production in Argentina is expected to be reversed by the recent incentives to farmers, and a

rise of perhaps five per cent to 220 million lb has been forecast. As the carry-over into the new season was no larger than normal, the only other sources of supply are the 35 million lb of surplus wool that the United States government will offer to the market, and the running down of the British strategic stock; this might add 10 million lb, making about 2,845 million lb in all.

Though the figures on both sides of the equation are tentative, they suggest that supply and demand for 1956-57 should be as closely balanced as anyone has a right to expect. That prospect does not rule out some decline from the present level of prices, but nobody would expect it to go far.

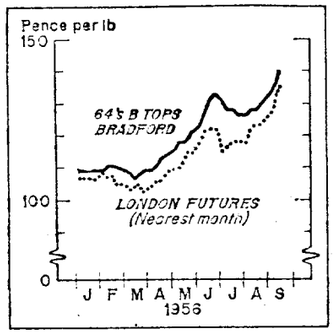
The rise in world consumption seems to be mainly the result of increasing activity in the worsted section of the industry. The steady narrowing of the premium for merino wools up to the end of last year served its purpose. Merinos became more attractive and consumption revived. Fashion, too, played a part. Whether prompted solely by the need for a change, or by the relative cheapness of merino wools as well, women's



fashions began to swing back to worsted cloth, and therefore mainly to merino wool, and away from woollen cloth, and therefore from crossbred wool.

The switch is illustrated by the latest figures of consumption in the British woollen industry. In July the rate of consumption was only slightly lower than in June and six per cent higher than in July last year. The rate of consumption in topmaking (the worsted process), however, was slightly higher than in June and 13 per cent higher than a year ago; consumption of merino wool was nearly 25 per cent higher than a year ago, whereas consumption of crossbred wool showed no change. The rate of consumption in the woollen section, in contrast, was three per cent lower than in June, and nearly eight per cent lower than a year ago. Demand for fine wools as a whole suggests that a similar shift has occurred in other countries.

The revival in the fortunes of the worsted section has also been helped by growing consumption in China, India and other eastern markets. These countries, at least for the present, are content to import the bulk of their tops from the older-established industries in the West, and now rank among their largest customers. World exports of tops in the second quarter of this year were nearly 15 per cent higher than in the first quarter and over 125 per cent larger than in the same quarter of 1955. Exports from Britain were 13 per cent higher than in the first quarter, and reached the highest quarterly rate for several years. China has become by far the largest market for British tops, with India in second place.



But the western industries do not have the worsted field to themselves. The phenomenal expansion in the Japanese industry, which has now drawn close to Germany—the fourth largest consuming country—presents a formidable challenge. Japan often dominated the bidding for fine wools last season; it was mainly Japan's withdrawal from the market that caused the sharp drop in prices of Australian wool last July. Japan's purchases are only one of the unknowns that could give the expected balance between supply and demand an unexpected tilt. There are others that could be thrown on to either end of the scale, and when the balance is so fine, a small weight can make a bumping difference. On what view will the trade buyer base his policy? He will hardly expect a big fall in prices, and obviously will not wish to leave himself uncovered, but the risk of being over-bought may seem greater. The season opened under troubled skies. When they disperse the credit squeeze, wage demands and competition in wool goods will seem all the more obvious. Wool prices are comparatively high and the buying season is still young.

Business Notes

Less Capital for Electricity

DURING 1955 the Central Electricity Authority brought into commission 1,665,000 kilowatts of new generating capacity, and spent in all about £213 million on capital account. This was more new capacity in a year than ever before, and twice as much as in any prewar year (it was, indeed, rather more than the authority had had Government permission to bring in, performance for once having outrun expectations). This year, having cut its capital budget twice, CEA expects to spend only about £195 million; up to 1960 its capital programmes run fairly level, though in 1960-63, with the nuclear plants beginning to come in, the capacity to be commissioned reaches about 2,350,000 kW a year. These are still vast programmes for the plant makers; but electricity supply industry's claims on national investment resources will grow from now on at nothing like the rate they have since the war. This easing of pressure on the extra production that plant makers manage to achieve is already being felt directly by other industries that need heavy electrical equipment, such as steel. In a wider sense, it means that for the next few years, in which the resources available for total industrial investment in Britain can probably be counted upon to continue rising, electricity will be taking a more moderate bite out of them.

The industry's plans to finance more of its investment from revenue appear to have been halted this year by the decision to freeze its prices until March, 1957; they were not in fact being pursued any too vigorously last year. In 1955-56, as its annual report published this week points out, CEA set aside £11.7 million for the replacement of fixed assets over and above its normal depreciation provision of £56¼ million, showed a consolidated surplus of only about £12 million (as against nearly £19 million in 1954-55) after paying nearly £40 million in interest, and provided about 30 per cent of its capital expenditure from internal resources. That is less than it provided in 1954-55: this year the finance from within will fall even farther short of what the board would consider really necessary. The decision to freeze prices, says the report, was taken by the authority, having regard

> to the condition of the national economy and to Government statements about the need to stabilise prices. The added burden will seriously reduce the industry's financial working margin, will involve a number of Area Boards in individual deficits, and at the same time will reduce the internal resources available to finance the industry's capital requirements.

It is true that Lord Citrine said this week that "there will be no deficit for the industry as a whole in the current year." But this cold counting of the cost raises the question whether such decisions ought even nominally to be taken by nationalised boards. Ought they not to run their own industries, and let the Government make its own mistakes?

What Power Costs

IT cost the Central Electricity Authority about £368 million in 1955-56 to generate, transmit, and distribute 69,449 million units of electricity from its 274 power stations, which have a total output capacity of 18,845,000 kilowatts. Fuel—nearly 41 million tons of coal and coke breeze, 222,000 tons of oil and 61,000 tons of other fuels—accounted for £147 million of its costs. Capital charges—depreciation and interest—took £99 million. Salaries and wages took £77 million (leaving out those of employees concerned mainly with selling appliances or working on CEA's capital construction programmes). Materials, goods and services bought out cost £27 million; rents, rates and insurances £18 million. Since the electricity it sold brought in £380 million, the nationalised electricity industry as a whole showed a surplus of £12 million. On the average, the power it sold had risen only 32 per cent in price since 1937-38.

Only increased technical efficiency can stem the wave of rising costs. This industry's structure of costs is unlike those of most other industries; moreover, it has changed radically in the last 30 years. Until the war, fuel was a steady and relatively small element in electricity costs, little more than a quarter of the cost per unit sold as much as capital charges; today it is significantly higher—though nuclear plant will eventually begin to increase the relative weight of capital charges again. For the moment, measurements of thermal efficiency are probably the best indices of productivity in electricity supply, since they show what use the industry is making of the factor of production that counts most. Thermal efficiency in CEA plants is gradually increasing as more and more modern plants are commissioned and take over the bulk of the load—it was 24.35 per cent in 1955-56, as compared with about 21 per cent in 1947-48, just before nationalisation. But these figures are not particularly high by international standards; nor have they enabled the authority to keep pace with mounting fuel prices, and thus hold fuel costs per unit level. The same is true of "capital productivity," of which one measure is the industry's load factor; though this improved fractionally during the year, it could not offset the rise in the value of the industry's capital equipment, so that capital charges per unit rose also. The "labour productivity" that the authority has recently been singling out—sales of electricity per employee—did in fact rise more than wages and salaries did, so that labour costs per unit sold actually fell. Unfortunately in the electricity industry labour costs and labour productivity matter comparatively little.

Motor Outlook Worse

VEHICLE output in August was severely affected by the BMC strike and by a greater concentration of annual holidays in that month than in previous years. But the drastic drop of more than 50 per cent, from 55,865 cars and 22,219 commercial vehicles in August 1955 to 25,706 cars and 11,626 commercial vehicles last month—the lowest August output for four years—seems to be more than can be explained merely by strikes and holidays, particularly as the industry had begun to show rather better figures in June and July. Although September can hardly be as bad as August, credit restrictions at home and import cuts overseas will mean that the autumn as a whole is unlikely to show the customary revival in car sales. So far this year home and export markets have been equally poor. Home registrations to the end of July were down by 10 per cent on 1955 and overseas shipments—including August—were 13 per cent lower; but since output for the eight months was as much as 14 per cent lower there has presumably been some reduction of the industry's stocks.

Individual experiences of the manufacturers are still rather varied. Ford has now raised its daily production rate to 1,500 cars, lorries, and tractors, broadly the same as a year ago. The company's output dropped earlier this year while production was built up on the new Consul, Zephyr, and Zodiac models. More than half of these cars, and of Anglias and Prefects, are exported and there are waiting lists in a number of overseas markets. Rootes also claims that "sales demand, at home and abroad, is good," but it announced this week that 500 workers would have to be sacked, giving "shipping difficulties" as a major reason. Vauxhall, on the other hand, has had to lay off about a thousand workers—six per cent of its labour force—in the last few weeks and the rest will start to work a "nine-day fortnight" this week. Cuts in home and overseas sales of both cars and trucks have now reduced the company's production to about a fifth below its level in the spring. There has been little change at the BMC factories, although a few of the dismissed Austin workers have been re-engaged and Morris thinks that it may soon be able to resume a five-day week. Most of the 49,000 now employed by British Motor are on a four-day week with some working only three days.

Standard, moreover, has run into further trouble. Both its maintenance electricians and its draughtsmen are on strike because some of them have been dismissed. This week the company decided to stop work on cars for five days to check its electrical equipment, then start up again. Standard is also worried about production of its new Ferguson tractor: it has told its workers that delay in introducing the new tractor into world markets might seriously affect "long term plans to employ the maximum number of people on this product."

Advances to State Boards

THE Exchequer last week made a second series of advances to the nationalised industries, under the new financing arrangements specified in this year's Finance Act. The latest advances, made to the Central Electricity Authority, the Gas Council, the British Transport Commission and the Scottish Electricity Boards totalled £35.5 million, bringing the total advances since mid-August to £62.7 million. These Exchequer funds replace bank and market money for the capital requirements of the boards, and in addition finance the repayment of the bulk of the boards' existing bank overdrafts. Those repayments are now being made on the 17th of each month; the September statement of the clearing banks, due to be released in the coming week, will reflect both the first and the second of these repayments, since the banking period runs from August 15th to September 19th. Simultaneously with the publication of the bank statements, the Treasury will publish the total indebtedness of the seven state industries affected by the new arrangements (which include the two airways corporations in addition to those shown in the table). At August 15th, this was £123.4 million; and the plan is to reduce it to around £60 million by March next. Before the revenue season opens in the new year, however, the rate of repayment is expected to be limited to around £5 million a month.

£14¼ million for General Electric

THE institutions, it is believed, now have a little more money to invest, and there will certainly be no shortage of drinkers at the well so soon as word gets round that it is no longer dry. General Electric Company is fortunate to be at the head of the queue. It proposes to raise £14¼ million to finance its increased stock and work in progress. It will do so by a two-pronged operation underwritten by Morgan Grenfell and Company which is addressed to stockholders only but is obviously designed with the big institutions in mind, most of whom doubtless hold one or other of the company's stocks.

First, the company invites all classes of stockholders to subscribe at par for £6 million of 6 per cent unsecured loan stock dated 1976-81. The new stock is redeemable at £101 between 1976 and 1981 or at par in 1981. With a yield of 6 per cent for a minimum period of 20 years and a premium on redemption between the first and the last dates tending to hold the price up towards the end of the stock's life, it should be attractive to insurance companies and pension funds—more attractive probably than the company's existing 4 per cent unsecured loan stock 1975-80 which stands at 80. So long a run at 6 per cent cannot easily be obtained elsewhere.

There is also a small plum for all ordinary shareholders. The company also offers as rights to ordinary stockholders 4,285,320 new ordinary shares of £1 each at £2 per share in the ratio of three for ten. Against a market price of around 45s. 3d. for the existing ordinary stock when the issue was announced the value of the rights was modest. It is more modest now that the price has fallen to 42s. 9d. Unfortunately the prospectus does not include an estimate of future dividends. Nor did Sir Harry Railing, the Chairman, go much further at the meeting on Thursday, though he thought that profit margins might shrink. The directors point out that in the first four months of the current year sales have increased; costs have also continued to rise and sales of certain classes of consumer goods are still conditioned by government restrictions. This is a reference to hire purchase controls; these probably affect General Electric with its emphasis on consumer goods at least as much as they affect other electrical manufacturers. Indeed the Chairman on Thursday emphasised the company's policy of expanding on the capital goods side. Shareholders will probably assume that they are buying the new stock on the basis of an unchanged 14 per cent dividend to yield 7 per cent. The company has been at pains to spread the payments for the new stocks over a long period; half the purchase price of the ordinary shares is payable on January 4th next year and the final £50 on the loan stock on January 11th.

Bill Rate Up Again

THE Treasury bill allotment rate has risen for the third successive week. Last week's tender was complicated by the fact that the bills on offer will span the Christmas holiday, and thus included 90 and 92 day maturities as well as the standard 91 day bill. For the standard bill the discount market cut its application price even more sharply than in the two preceding weeks—by 4d. to £98 14s. 2d. per cent, equivalent to a rate of discount 3s. per cent higher than that accepted at the last tender in August.

Profits—ICI and the Others

IMPERIAL CHEMICAL INDUSTRIES announces a group half-yearly profit for the first six months of 1956 of £20,325,000, compared with £20,855,000 in the first half of 1955. After allowing for taxation (£9,915,000 against £8,880,000) the net income, assuming—though naturally there is no such promise—that the profit-sharing bonus will again be based on a 10 per cent dividend, the net profit after tax was £10,410,000, compared with £11,975,000 in the first half of 1955.

The interim dividend is maintained at 4 per cent. The market took the news of the fall of about £500,000 in the gross profit and of about £1½ million in the net figure in its stride. The £1 stock units rose from 41s. 9d. to 42s. 6d. after the announcement, notwithstanding the indication that profits tax and the change from investment allowances to initial allowances must bear sharply on the company. The group turnover that produced these lower profits was sharply up at £221 million, against £206 million, so that the ratio of profit to turnover has been sharply squeezed. The directors point out that the group's stable price policy will continue to affect profit margins in the current half-year; but they hope that total turnover will be somewhat increased.

With the publication of the half-year's figures from Imperial Chemical Industries on Thursday the main crop of half-yearly profit statements from British industry is gathered in. The figures from Ford Motor Company, the only representative of the motor trade among the regular half-yearlies, is chief report still to come. As a whole the crop is light—too light to approach a fair sample of what British industry has achieved in the first half of 1956—but it contains a few pointers. These are the most up-to-date reports on earnings obtainable. And they are roughly conterminous. All the manufacturing companies are reporting for the first half of the year and the retail companies for the six months February to July.

Profits of the manufacturing companies have remained high, but there is evidence that net earnings and the ratio of profit to turnover have, with some exceptions, been squeezed. That conclusion is supported by warnings from various other companies whose figures could not be tabulated. Such a warning has come from Brotherton and Company, the chemical manufacturers, whose trading profits were substantially below those of the first half of 1955. But the shrinkage in earnings has not been uniform. John Dickinson has reported a six months' profit before tax well above that of the first half of the previous year, though below that of the second half. As far as the figures go the retailers seem also to have escaped punishment. Both United Drapery and the John Lewis partnership report higher profits. But had the sample included stores with a different emphasis in their merchandise the showing might well have been different.

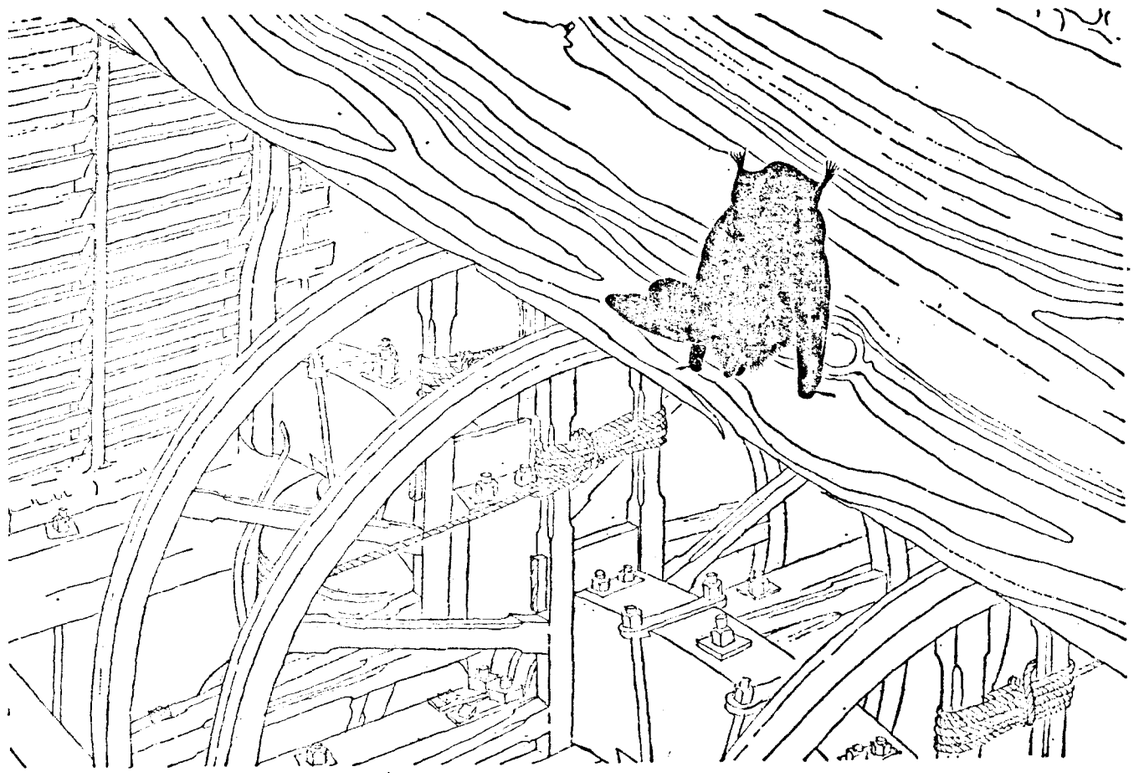
* Half of full year. † Year ends January 31st.



'To me,' said the Bat, 'it seems quite topsy-turvy that British farming, which is both highly-skilled *and* the country's biggest single industry, should get so little credit for its enterprise and achievement. Are you not with me?'

BUT TOWN MOUSE SAID

You talk above my head

'For,' he continued, 'my mind is filled with the idea that shoving something in the ground and selling what comes up is a pretty easy way to earn a living!' Which provoked, as it should, an indignant squeak.

BAT 'EASY! When a season's profit can be written off by a run of unseasonable storms? When half your life is a constant battle against fickle British weather? You say "easy" at crack of dawn one morning next winter when there's work to be done and the wind's like a knife!'

TOWN MOUSE 'So! They chose the life didn't they?'

BAT 'And where would you be if they hadn't? Just think of the hill farmers, for instance, carrying on producing plenty of splendid lamb in spite of fluctuating prices, and snowdrifts ten feet deep!'

TOWN MOUSE 'They're subsidised, aren't they?'

BAT 'Subsidised! Farm subsidies have stayed virtually put since 1951 although costs have rocketed—yet production's gone up 10%. There's more land under the plough, more tractors to do the ploughing, more . . .'

* * *

But Town Mouse had turned away. He was determined not to be confused by facts once he had made up his mind. He was resolved never to admit that the British farmer, in return for only a fair living, does us really proud.

FORD MOTOR COMPANY LIMITED · DAGENHAM

Hence the average rate of allotment on the whole issue rose over the week from £5 2s. 0.77d. per cent to £5 3s. 4.86d. per cent, the highest rate since early April, when the rate-structure was still in process of settling down after the shock of the mid-February increase in Bank rate to 5½ per cent. On the eve of the Suez crisis, the average allotment rate was slightly under 5 per cent.

This stiffening of bill rates may have owed a little to the rise in New York rates—the US Treasury bill rate rose from 2.770 to 2.908 per cent last week, and to the new peak, since the early 'thirties, of 2.985 per cent this week—and it may also have reflected psychological influences, notably the sustained pressure on sterling. But the main cause, unquestionably, was the persistent shortage of credit supplies in the short loan market. The credit tendency has been easier in the past few days, but last week discount houses were "in the Bank" for seven-day loans at Bank rate on three successive days; although the authorities gave assistance by buying bills some very high rates were paid for new loans in the open market. This tightening of money rates has, indeed, extended at times to the renewal of "old" money (other than the "good" money portion that is still charged at the basic rate of 3¾ per cent) as well as to new overnight loans. The principal cause of this stringency seems to have been not so much any deliberate toughening of official tactics as the technical effects of the pressure on sterling. When the authorities are selling exchange, the first effect is to take sterling funds off the market—and although the authorities may return the funds without undue delay, by buying bills, the return occurs only after stringency has been experienced. It seems possible, too, that gilt edged operations have worked in the same direction. Despite the quiescence in the gilt edged market, the authorities seem to have succeeded in selling stock on balance. Yesterday the market was tendering for bills that included the much-sought end-December maturity; that special influence, and the easier tendency of money, may have given pause to the rise in bill rates.

Tourist Tales from an Expert

It was rather stupid of the Federation of British Industries to issue an official rejoinder to Mr Francis Rogers's unbuttoned remarks about British products this week; he may congratulate himself on having stung a pachyderm, if on little else. What Mr Rogers had to say—informally, after a farewell lunch on his return to the United States—was not particularly unfair; it was simply not as useful as one might have hoped from someone who had been head of a productivity and technical co-operation mission to British industry for the past six-and-a-half years. Anyone can hear the same kind of complaints from some of the American tourists one meets as Mr Rogers apparently has from hundreds, and they are partly justified, though usually annoyingly unspecific. What one had hoped to get from Mr Rogers were much more penetrating comments, favourable or unfavourable. One did not.

The American tourist footloose in a market deceptively like his own but in fact stratified altogether differently often does find the goods he thinks of buying to take home "shoddy, lacking in style, and generally over-priced." The tourist would rarely think of buying a car or a refrigerator over here, things in which the United States obviously leads: he expects to get more of those for his money at home—and does. He may not be able to afford the expensive hand-made luxury goods in which Britain competes fairly well, if conservatively, with other countries in Western Europe, and in which the United States has no chance to compete at American rates of wages. What he does not appreciate, and complains about, is that here the vast array of goods in between does not present the variety, the ingenuity of styling, and the range of competitive prices that he gets in the department store, the super market and the discount house back home. Some of the varieties he could find in that middle range at home, moreover, are to be had in Britain only at a much more expensive level. The British market is still largely led from the top, not the middle: the design effort and the quality go in there. The things we mass produce are not the best value for money that we make, as America's are.

In the long run, it is perhaps to be hoped that the emphasis of our market for consumer goods will shift towards the American pattern. In the meantime, the tourist's complaint about quality that Mr Rogers quoted has perhaps more direct relevance to British industrial practice. Inspection is an aspect of quantity production that many British firms have not mastered, and to which some pay insufficient attention. Mr Rogers had a good point there—though he might better have illustrated it from his own experience than from tourists' tales. That experience gave him more time and opportunity to see British industry whole than most foreign observers get. There was little to indicate that he had taken the chance.

The Contracts Britain Did Get

Most of the publicity about British contracting overseas is reserved for the ones that got away: on big Commonwealth jobs like Kariba, perhaps it should be. The Board of Trade this week, in a review of British contracting overseas during 1955-56, observes that there are growing opportunities in Australia, where a large number of buildings

BUSINESS DONE BY BRITISH OVERSEAS CONTRACTORS
(£ million)

	Sterling	Dollar	Non-Sterling		Total
			OEEC	Other	
Contracts obtained in year ending:					
31/3/55	54·8	6·8	9·3	1·0	71·9
31/3/56	69·7	22·6	5·8	10·8	108·9
Work done in year ending:					
31/3/55	65·6	2·7	1·6	0·4	70·3
31/3/56	59·0	19·0	5·3	3·9	87·2
Work outstanding on:					
31/3/55	55·5	4·7	7·7	0·9	68·8
31/3/56	82·9	15·7	8·7	7·8	115·1

and civil engineering projects are under way or being planned, and "it is disappointing that British contractors are not, as yet, more active there." The decline in Britain's share of orders from projects financed by the World Bank, again, is similarly depressing.

Even so, reports the Board, the value of work done during the year ended March, 1956 by 55 building and civil engineering firms operating overseas was £87 million, against £70 million in 1954-55; and they obtained contracts totalling £108 million last year, against a total of £71 million the year before. It is difficult to estimate at all accurately the proportion of British and local labour used in these contracts, and the costs of labour and of materials rose differently in different areas; but an allowance of, say, 5-10 per cent for the general rise in prices would still mean an increase of about 15 per cent in the volume of work done. Except in the dollar areas, contractors have generally rather more than a year's work outstanding. The share of this work done in dollar areas rose from 5 per cent in 1954-55 to more than 20 per cent in 1955-56, as the result of successful tendering in Canada, and British contractors have good chances of further contracts there.

Lloyds Bank Capital Changes

LLOYDS BANK took the bank share market by surprise this week by coupling a decision to raise its dividend with a plan for streamlining its capital. The present paid-up capital comprises £17,966,000 in £5 "A" shares, 25s. paid and subject to a "reserve liability" of 75s., and £1,437,000 in fully paid "B" stock, the dividend on which is limited to 5 per cent, but is not a prior charge—it ranks up to that amount *pari passu* with the "A" capital. The object of the scheme is to simplify and improve the marketability of the capital by getting rid of the reserve liability and merging the two classes into a single fully paid, full-equity category. Since the "A" capital has been receiving a gross dividend of 3s. per 25s. paid-up, and the "B" capital 1s. per £1 unit, the merger is to be achieved by first reducing the nominal amount of each £1 "B" unit to 8s. 4d., and then by consolidating both classes into £1 fully paid shares. This will produce a total paid-up capital of £18,565,000, or £838,000 less than the present capital; but this difference, representing the reduction in the nominal amount of the "B" stock, will naturally pass to capital reserve. In addition, the directors propose to transfer £1,162,000 from inner reserves to the published general reserve, so that total published reserves will be raised for their end-June total of £15,000,000 to £17,000,000.

This plan, which is subject to approval by the Court as well as by shareholders, seems to hold the balance fairly between the two classes of capital. The "A" capital will benefit by relief from the uncalled liability (and from the slight impairment of marketability that this liability involves); against these advantages it will suffer the minor loss of 3 per cent of the equity and 1 per cent of voting power. The "B" capital will have an even clearer advantage in marketability—because of merger with the much larger "A" capital—and will henceforth rank for any increases in dividend. The 7 per cent (actual) final dividend that the directors intend to pay for 1956 (compared with the 6 per cent previously paid each half-year on the "A" shares) will, if the plan is approved, have the effect of raising the current year's return on the "B" stock to £5 8s. 4d. per cent. The "A" shares will get the equivalent of 13 per cent this year in any case—for the 7 per cent final will be recommended for them even if the scheme does not go through.

On the whole capital, the increase will cost roughly £185,000 gross and £105,000 net, compared with last year's total net cost of £1,281,000. The decision to make this increase, which is not an inseparable part of the scheme, may seem a little surprising in a year in which the bank has shown a substantial depreciation in its government securities: the difference between book and market values disclosed at June 30th last was £13 million, or 4¼ per cent. The bank affirms, however, that the absence of writing-down is a matter of policy, not of necessity, and recalls that, since all the securities have fixed dates (the majority within ten years) the difference will disappear if the portfolio is held to maturity. The present year of high money rates has certainly been one of buoyant revenues for the banks—and this increase in dividend by Lloyds Bank will still leave it as the only big bank that has not quite restored its distribution to the level that obtained before the reductions made in the early thirties. In 1929 Lloyds paid 16⅔ per cent, and in the three following years came down to the 12 per cent that obtained until 1953; on an equivalent basis, the new rate on the "A" shares will be 16¼ per cent.

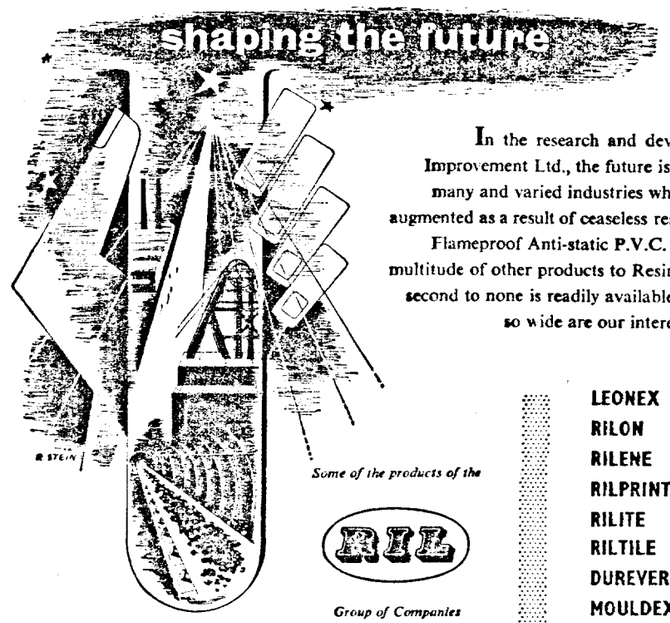
Roads into Cities

THE conference on urban motorways held last week by the British Road Federation had several useful results. It caused, first of all, a considerable amount of useful material on urban road problems to be collected and presented by a number of traffic experts from different countries. Similar problems are being faced in most countries, different perhaps only in degree. But the discussion and some of the papers showed that urban motorways—or express highways, with restricted access, running right into the heart of big cities—are by no means a solution by themselves to urban road congestion. A student of these papers might perhaps feel that no combination of palliatives, urban motorways, ring roads, off-street garages, or parking meters, will in fact provide a complete solution; perhaps congestion downtown will ultimately have to be relied upon to choke off further traffic that may want to come in.

But at least in Britain these palliatives have yet to be tried, and the closing address of the Minister of Transport showed that he was aware both of the need not to build national motorways that begin and end in urban bottlenecks and of the need to apply the price mechanism in some form to street parking:

> The free right of one man in one large motor-car to occupy 80 or 90 square feet of the Queen's highway in the inner zones of our cities has got to stop. This means that the flood of one man car commuters has got to be regulated by the price mechanism, and that is why we are going to have parking meters, and we shall have to charge for this right.

The special report on street parking space in central London, prepared by the London and Home Counties Traffic Advisory Committee, is expected to be completed



In the research and development laboratories and factories of Rubber Improvement Ltd., the future is being shaped, not only for ourselves, but for the many and varied industries which use our products. These products, constantly augmented as a result of ceaseless research, cover a wide field ranging from Multi-ply Flameproof Anti-static P.V.C. Conveyor Belting through Vinyl Flooring and a multitude of other products to Resin Rubber Shoe Components. A technical service second to none is readily available to help you with your problem—it is possible, so wide are our interests, that it is already under active consideration in the R.I.L. Laboratories and Research Centre.

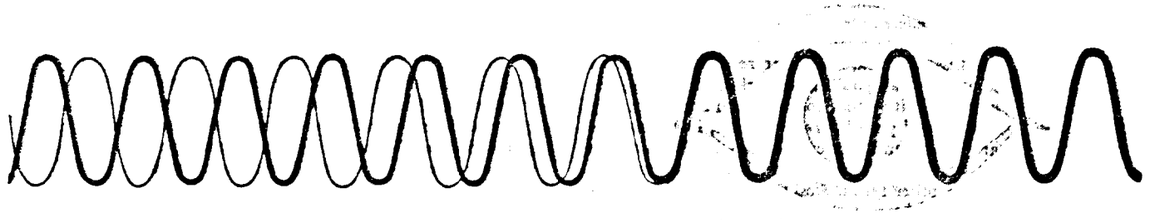
Electronic control does it quicker

Automatic control cuts out innumerable hold-ups in production and adds valuable time to every working day. It can be applied in a great many different ways, from a simple timer that stops and starts machines, to the complex feed-back devices that regulate machines against a standard reference while they are in action, as in register control on colour-printing presses.

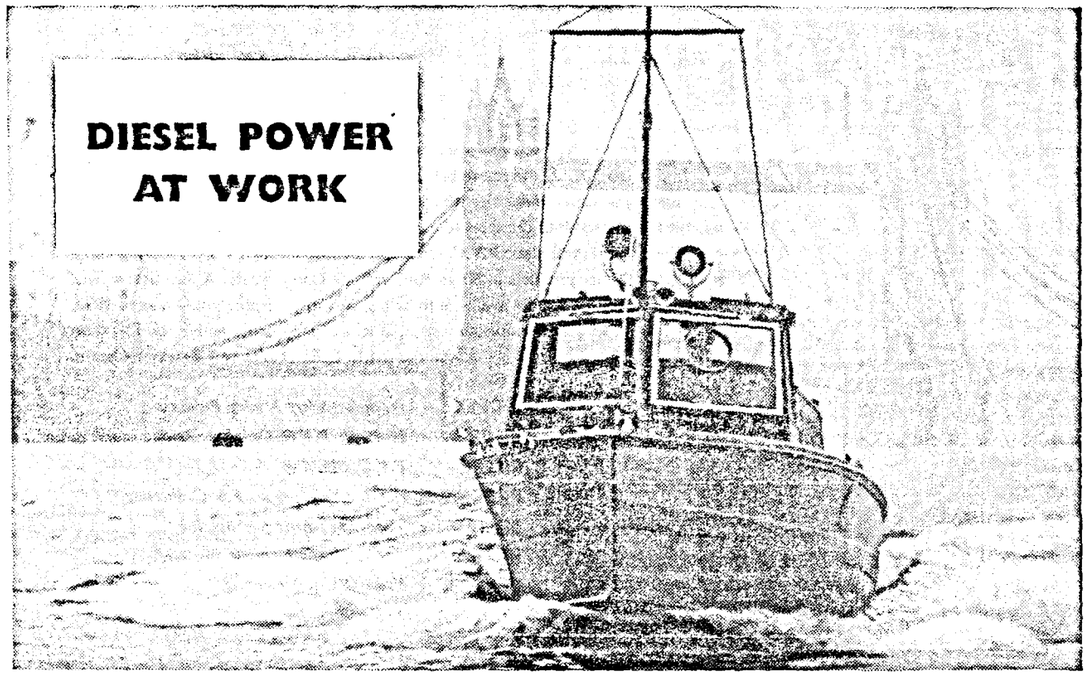
Whatever your process you would find it well worth while to consider automatic control in one form or another. It is more exact than is humanly possible; rejects are reduced; quality is improved; the flow of production is quicker and smoother; it uses little current and calls for little maintenance. In fact, you get higher production at lower cost. This is only one of the ways in which electricity is playing a vital part in the drive for higher productivity.



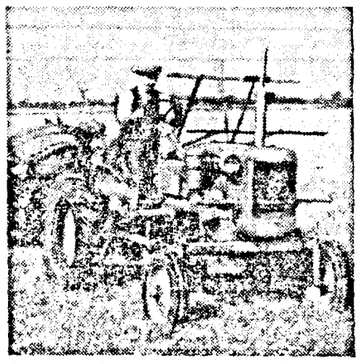
Electricity for Productivity

Issued by the British Electrical Development Association, 2 Savoy Hill, London, W.C.2

Ask your ELECTRICITY BOARD for advice and information, or get in touch with E.D.A. They can lend you, without charge, films about the uses of electricity in industry. E.D.A. are also publishing a series of books on Electricity and Productivity. Titles now available are: Electric Motors and Controls, Higher Production, Lighting, Materials Handling, and Resistance Heating. Price 8/6, or 9/- post free.



Police launch or fishing boat, Royal Navy submarine or private yacht—they all use Perkins diesel engines. Powerful and economical, diesel engines help to eliminate fire risk at sea. Perkins marine diesels range from 25 b.h.p. to 100 b.h.p.



Farmers find Perkins diesel engines offer greater power, easier starting in all weathers and greatly reduced fuel and maintenance costs.

Long distance transport work calls for diesel power, reliability and economy. Perkins diesel engines are available as first equipment or as conversion packs for commercial vehicles of all types.

ON LAND OR SEA, wherever reliable economical power is vital, you'll find Perkins diesel engines at work. With a fuel consumption approximately half that of petrol driven engines, low maintenance costs and longer life, diesel reliability is a by-word. Statistics prove that diesel engines outlast other types. And they completely eliminate fire risk, particularly important in marine applications. At work in 143 different countries, Perkins diesels are fitted as standard equipment by 170 different manufacturers and are in use for 423 varied applications. Whatever your power problem, there's a Perkins diesel engine to suit your particular requirements.

Perkins HIGH QUALITY DIESELS

...FOR AGRICULTURAL, VEHICLE, INDUSTRIAL AND MARINE APPLICATIONS

The Diesel Engine with the Clean Exhaust

F. PERKINS LTD., PETERBOROUGH. PHONE: PETERBOROUGH 5141

this week. This survey and the legal authority of this year's Road Traffic Act should give Mr Watkinson the basis for the first introduction of parking meters in this country.

Cycles in Trouble

THE recession in the cycle industries in the last few months has become even worse than in the related vehicle industries, though—so far—it has not led to such widespread sackings. The major cause of the decline, moreover, is the squeeze at work on the home market, rather than poor export performances. By the end of July home deliveries of bicycles had dropped like a plummet to just a half of last year's level—which presumably allowed some reduction of stocks. Exports had fallen by only 5 per cent; total output had declined by 19 per cent. The motor cycle makers have fared no better. Home deliveries up to the end of August were 38 per cent lower than last year, exports were just about holding their own, and total production had dropped by 23 per cent.

In the last few months the cut in home deliveries of both types of cycle has been really drastic. Between June and August motor cycle supplies were 65 per cent down on last year; and in June and July, bicycle deliveries were cut by as much as 80 per cent. Some of the industries' sales overseas have been disappointing too. Bicycle exports to the United States, where the industry had scored a major postwar success, have fallen by 44 per cent in number so far this year, and by £1 million in value. Increases recorded by other European bicycle makers in the same period suggest that prices rather than the recent increase in the American import tariff are to blame, and the £500,000 increase in British motor cycle sales there this year is no consolation.

Apart from the seasonal fillip that Christmas gives the home market, the industries face a long, bleak winter before sales can be expected to improve. Most manufacturers must be reviewing their labour requirements. Short time working and redundancy first appeared about six months ago and several firms, including BSA, are now working a four day week. Tube Investments, the largest bicycle manufacturer, has announced that up to 1,250 of its cycle workers—a tenth of the total—will be dismissed over the next six months as a result of the reorganisation of its four cycle subsidiaries into the British Cycle Corporation. Although the company has offered compensation similar to that agreed in the BMC dispute and has given this advanced general warning, local union officials are at present opposing the sackings on the grounds that the compensation is too little and the individual redundancy notices—one week in most cases—are too short.

August Trade

THE detailed trade figures for August suggest that the claims of the seaside were largely responsible for the sharp deterioration in the balance of British overseas trade. Exports amounted to £253.4 million fob, nearly £13 million less than in July, but the average of the two months, at £260 million, was 6¼ per cent higher than in the same months of 1955. Last year's figures, however, were swollen by the overspill from the transport strikes in earlier months, while this year's figures are swollen by a capital item—the repayments of silver to the United States. Allowing for these distortions the Board of Trade believes that exports in July and August were probably about 10 per cent higher in value and over 6 per cent higher in volume than in the same months of 1955, thus broadly maintaining the rate of increase in the first half of the year. Though prices of engineering exports rose by two points to 108 (1954 = 100) last month, a fall in prices of metals and "other manufactures" left the composite index unchanged; with import prices as a whole also unchanged, the terms of trade remained at 97. The decline in exports was fairly widely spread, though particularly marked in shipments of road vehicles and aircraft, ships, tractors and textile machinery, steel and cotton textiles.

Imports, which tend to suffer less from the holidays, rose by £2.2 million to £322.3 million cif in August; for the first eight months of the year imports have remained notably high, being 1½ per cent higher by value and a little higher by volume than in the same period of 1955. Imports of iron and steel, despite the recent decline, were still over £21 million higher than in the first eight months of last year, and imports of non-electric machinery were nearly £12 million higher. Among basic materials a rise of £16 million in metal ores and scrap and of £9½ million in rubber partly offset declines in timber and wool. In the food group, a rise of nearly £40 million in meat, dairy products, fruit and vegetables virtually cancelled out the decline in beverages—a decline in value rather than volume—and in feeding stuffs. Petroleum imports showed a rise of £34 million.

Shipping Through Suez

THE Far Eastern Shipping Conference lines have rescinded the 15 per cent surcharge on Far Eastern freights just one week after it was imposed. It was cancelled for two reasons. The increase was unpopular with some of the shipowners and perhaps with higher authority too. Secondly, the traffic through the Suez Canal has proceeded in a volume and with a smoothness that had not been expected. Freight rates beyond Suez are thus back where they started for no change had been made in Australian Conference rates or in those of the Indian Conferences where not only Indian but some other shipowners also have rigidly opposed any increase.

Three convoys a day—two southbound and one northbound—were passing through the canal last week, with an average of about 35 ships a day. This rate is not much lower than is usual at this time of the year. In May an average of just over 45 ships passed through each day, in June 44 and in July 46. Undoubtedly the diversion of some vessels around the Cape has helped Egypt with the problem of canal pilots. These re-routings have affected mainly the big passenger liners and cargo ships on the Australian run—where the Cape voyage adds only a day or two to the journey. The number of cargo vessels that have been diverted on the Far Eastern, Indian, and East

African trades has been much fewer. But whether the new "Authority" will be able to cope with the seasonal increase in traffic—if it appears in the canal this year—remains to be discovered.

For the shipowners there are enough problems already. The ultimate costs to the liner owner of diverting his vessels around the Cape are still quite incalculable. They depend partly upon how much intermediate cargo and passenger revenue is lost by the diversion. For an example, there is the loss of Middle Eastern and Indian passengers and freight on the P & O vessels travelling to Australia via the Cape, although P & O are retaining the 20 per cent increase in fares to passengers on the *Chusan,* which is to go to India round the Cape as announced. The final cost will also depend upon the disorganisation and awkward positioning of ships that will inevitably result from these diversions. As the result of arrangements already made, liner schedules will be put out for at least another month.

A Bombshell for Tin Shares

CAMP BIRD, the mining company of which Mr John Dalgleish, the investment adviser, obtained control last year threw a bombshell into the tranquil backwater of the tin share market this week. The board proposes to make takeover bids for no less than eighteen tin mining companies not associated with any big management group, including some of the best and strongest, and, if 75 per cent acceptances are obtained, to give Camp Bird shares in exchange for the shares of these companies. Camp Bird would thus turn into a sort of mining finance house and investment trust for tin. The residence of the tin mining companies would be transferred to Malaya. The idea of a strong financial group doing what London Tin, British Tin Investment and the Tronoh group do for their associates is not in itself bad. Big groups can afford the best technical advice and can pool certain costs. But shareholders will want to look at the details of the offer with some care before deciding whether this particular plan for a merger is one they want to accept.

* Allowing for return of capital.

Camp Bird proposes to take over the shares on the basis of average market prices from July 27th to September 21st this year, giving in exchange shares of Camp Bird taken on the same basis at 13s. 10½d. Before approaching the boards of the companies and making formal offers Mr Dalgleish proposes to increase the capital of Camp Bird by 5,380,000 shares of 10s. each. Though it proposes to give shares, not cash, Camp Bird would be buying a great sum of cash. On the board's own showing the cash and quoted investments of the tin companies amounts to £2¼ million and it is the redeployment of that cash that presents one of the big attractions for Camp Bird. Another is the high yield, often in the region of 20 per cent, that can be obtained from these tin shares. Will the Chinese shareholders that are quite numerous in some of these companies care to sacrifice their high yield basis for an unknown fate but almost certainly for a lower yield basis? What would the price of Camp Bird ordinary be if there were several million additional shares about, many of them in the hands of potential sellers?

Mr Dalgleish tells the tin shareholders that his proposals are an "alternative to the threatened series of liquidations and waste of assets." But these assets are not bankrupt—they are well managed and successful companies. Their market value on his own counting is £4.4 million and their gross dividend payments £900,000 a year. Nor is tin a depressed industry. With a regulation scheme just starting it is looking forward to a more stable future. But as the table shows the basis proposed by Camp Bird is for most companies less than either their net assets or the present market price.

Styrene from Shell

SHELL CHEMICALS is investing a further £1,750,000 in an installation at the Petrochemicals plant to produce styrene monomer. Styrene is the essential ingredient in the plastic material, polystyrene (which gives clear, translucent mouldings as well as certain high-duty products) and also in synthetic rubber. The Shell plan involves using part of the styrene output to produce moulding powders (in a plant already built on the Petrochemicals site by the former management, against the day when a styrene plant would be erected there to feed it, which has worked hitherto largely on imported styrene). A substantial tonnage of styrene will also be taken up by the International Synthetic Rubber Consortium for its 50,000-ton rubber plant being built at Fawley next to the Esso refinery. Esso, in turn, is in process of building a chemical plant to provide the rubber factory with its other essential raw material, butadiene.

Few companies undertake the whole gamut of chemical processing from raw material to final product. Expansion of the chemical industry in Britain is characterised by a series of interrelated plants owned by different companies, each of which carries out a certain number of chemical reactions before passing the product to the next process stage. The International Synthetic Rubber Consortium, which will be one of the principal customers for the new Shell plant,

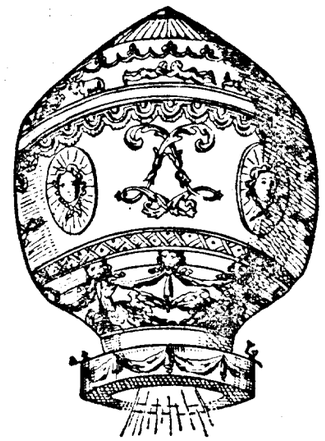
was to the Montgolfier balloon



Titanium

is to the metals of today

Once or twice in a century, the curve of progress takes a sudden upward sweep.

Today, titanium — at last harnessed to practical needs — opens up vast new fields of development for the progressive engineers.

Aircraft designers have been among the first to employ titanium's special properties, particularly its high strength-to-weight ratio and its outstanding resistance to corrosion. They have found in it the answer to some of their most exacting problems. It may provide the answer to yours.

I.C.I. are now producing titanium as a raw metal, and are also making sheet, strip, rod, tube, wire, plate and forging stock from titanium and its alloys. For full technical information about this remarkable new metal, write for the booklet "Wrought Titanium".

Nuclear power for the nation's future

AN EXAMPLE of industry pooling its resources to prepare for a mighty project is the linking of the A.E.I.—John Thompson Nuclear Energy Company with two important firms of Civil Engineering Contractors—Balfour, Beatty and Co. Ltd. and John Laing and Son Ltd.

To the strength of the A.E.I.—John Thompson Nuclear Energy Company and its constituents (British Thomson-Houston, Metropolitan-Vickers and John Thompson) is added a fund of knowledge in the civil engineering field.

The Balfour Beatty Group has a world-wide reputation in all forms of engineering and construction work and is at present carrying out major contracts for the Central Electricity Authority. John Laing and Son Ltd. has carried out building and civil engineering work at the first Government Atomic Energy Establishment at Windscale and is at present engaged in the construction of power stations in the United Kingdom, as well as in major development schemes in Canada.

RADBROKE HALL · KNUTSFORD · CHESHIRE

is itself owned by four of the major tyre manufacturers who will use its product. The principal supplier of styrene until now has been Forth Chemicals, which is part of a chemical complex established by British Petroleum, Distillers and Monsanto and in which several other chemical producers now have part. Capacity at Forth Chemicals has been expanded several times over to meet demand, but the supply of the basic raw material, ethylene gas, from the British Petroleum refinery at Grangemouth is not big enough to enable Forth to make the 12,000 tons or so of additional styrene a year that the Fawley rubber plant will need. Shell's ethylene capacity, both at Petrochemicals and at Stanlow, is undergoing a major expansion that will make Shell one of the largest ethylene producers in the country.

Until the Fawley plant begins production in 1958 Britain will continue to import the bulk of its requirements of synthetic rubber. Consumption of synthetic this year may amount to some 40,000 tons, twice as much as last year, and imports will probably fall short of the 70,000 tons authorised. The import quota for next year was announced this week. The total is 80,000 tons, of which 20,000 tons will be special purpose rubbers, the same as this year; the quota for general purpose synthetic is increased to 60,000 tons.

The New Air Fares

LITTLE was said at the annual meeting of the International Air Transport Association last week about the reduced fares for the North Atlantic which were agreed at a stormy meeting at Cannes during the summer and the first of which are intended to come into force next Monday. The reason for this silence is that some governments have still to ratify the new rates and until they do, the airlines cannot put them into effect. Next Monday's reductions (if governments make up their minds) are not drastic. They amount to a new 15-day excursion fare that will save roughly 20 per cent of the price of a return ticket to North America. The really big cuts, involving the introduction of a third-class fare approximately 16 per cent cheaper than today's tourist rates, is not due to come into force for another 18 months, and the 10 per cent cut in first-class fares is intended for next April.

Until they know whether the governments involved have approved the changes, the airlines cannot get down to deciding whether they will run services at five different fares over the North Atlantic or whether one or more of them will be dropped. The tariffs so far agreed provide for: two kinds of first-class service, one standard and the other de-luxe; a tourist class; a 15-day ticket; and finally a third-class. There is a good deal of discussion whether both third-class and tourist services can be operated simultaneously and there is a possibility that today's tourist class may go.

Some indication of the reserve with which some North Atlantic operators must view these fare cuts lies in a revealing speech this week by the president of the Dutch airline, KLM. M. Aler made no secret of his view that it was touch and go whether the airlines did not put their fares up rather than down. He took a frankly critical view of the cost of operating the big American jets; competition for deliveries has forced KLM to order these before it would wish, for hitherto its practice with new types of aircraft has been to leave their proving to more thrusting operators. An undercurrent of doubt about future levels of traffic ran fairly persistently through the IATA meeting that M. Aler had just left; airlines are afraid of a cut in international postal rates for air mail which could eat into their narrow profit margins and they are looking round for means of cutting operating costs through improved ground control and fewer formalities that consume so much time and manpower at airports. But the pace-setters of the airline industry are troubled by none of these inhibitions; they are pushing ahead with preparations for the introduction of new fares and new aircraft.

Competition, *à la* Citrine

IT is not easy to know how seriously to take Lord Citrine's announcement this week that the Central Electricity Authority intends to invite tenders from three American companies, as well as the plant makers in this country, for certain very heavy transformers. This might be counted as moving some way towards the recommendations of the Herbert Committee that tendering for CEA's huge equipment purchases in this country should be opened to international competition. The Herbert Committee felt that though the electricity supply industry here wields huge countervailing power, it needed wider competition among its suppliers than was afforded by British makers who on occasion quote uniform prices. This has never appeared to worry CEA—at the Duke of Edinburgh's study conference this summer, Lord Citrine went on record as seeing some merit in the practice.

Has the authority now changed its attitude towards competitive tendering? It would be premature to think so. In fact, this week's announcement seems to have originated from an approach by the three American companies concerned: CEA is prepared to invite tenders from them, but has no plans at present to go any wider afield. Heavy electrical equipment embodies a great deal of labour; with American rates of pay about three times those in Britain, and a 20 per cent duty on foreign equipment of this kind, "unless special arrangements are made," these three outsiders are not likely to offer very sharp competition to the allied British manufacturers. Such equipment, which can certainly be had here, hardly qualifies for entry under duty-free arrangements. Even if it did, the competition seems likely to be very mild indeed. If it were Swiss, Italian or German manufacturers that CEA is inviting to tender, it would be a different matter.

Cocoa Unstirred

IT would take a major calamity nowadays to upset the placid tenor of the raw cocoa market. For months prices have remained within a narrow range, and the violent fluctuations of recent years are a mere memory, painful though it may be to some. The Suez troubles left the market almost unmoved, and the first official forecast of

the 1956-57 Gold Coast crop, which was rather lower than expected, caused hardly a ripple. The forecast is for a main crop of 205,000 tons, compared with an actual output of 218,000 tons in 1955-56. Prices rose slightly after the announcement but quickly dropped back, and Accra cocoa for November-January shipment is now about 218s. 6d. a cwt, cif UK. The British West African marketing boards are asking about 6s. 6d. a cwt more.

Manufacturers of cocoa products, having suffered severely when prices fell, are sitting comfortably. Prices are stable and relatively low, and stocks are large enough to take care of any interruption in supplies or fall in output. Hence manufacturers have no need to follow the market up; they are content to buy when prices ease. World production in the 1955-56 season that ends this month is estimated by Gill and Duffus at the record figure of 835,000 tons, an increase of 40,000 tons over 1954-55. Even if world consumption rises this year by some 10 per cent to 770,000 tons, that would still leave another 65,000 tons to be added to stocks. The producing countries, whose income from cocoa has dropped sharply, are less happy. But their long-term interest lies in a steady expansion of world consumption and that is best encouraged by low prices.

SHORTER NOTES

Applications for the East Africa High Commission's issue of £3 million of 5½ per cent stock at £98 10s. were allotted in full up to £100,000, the larger applicants receiving 94 per cent of their applications. Dealings started on Monday and a discount of ⅛ was established.

★

After more than six months' negotiation, agreement has now been reached on piece-work rates for the use of power-loading equipment in South Wales coal mines. A number of power loaders have been idle while the discussions have gone on: when they come into use it will greatly increase the proportion of Welsh coal output that is loaded as well as cut by machine.

The Transatlantic telephone cable came into operation this week, two months ahead of schedule. This 2,000-mile double cable link has taken just under three years to make and lay: it will carry 35 simultaneous speech circuits and a number of telegraph circuits to supplement the existing telegraph cables and the radio telephone links.

★

The pensions provided by London Assurance shown in Table A on page 980 of last week's issue of *The Economist* include in the event of prior death the return of premiums with interest at 3½ per cent. Since the tables were prepared Legal & General Assurance have revised their schemes to offer larger benefits.

★

At the meeting of Triplex Safety Glass Company the stockholder's resolution proposing that £10,000 be voted to the directors was defeated after the chairman, Sir Graham Cunningham, had said "in no sense do the board support this motion but it would be churlish if they did not express their thanks to this elderly stockholder."

★

The Rio Tinto Company has formed three new subsidiaries to undertake its exploration work in Africa, Rio Tinto Mining Company of Central Africa with a capital of £1 million, Rio Tinto (Northern Rhodesia) with a capital of £300,000, and Rio Tinto (Southern Rhodesia) with a capital of £50,000.

★

A useful survey of the sources and nature of domestic banking statistics has been made by Mr Manning Dacey in the current issue of the *Journal of the Royal Statistical Society* (Part 2, 1956, price 15s.). The survey does not extend to government finance or interest rates, but deals comprehensively with sources for deposits and assets of the clearing banks and Bank of England, note circulation, advances, and bank clearings, scrutinising charges on definition and series and other factors relevant to proper interpretation. It includes valuations of some of the main statistics, generally by annual averages.

Company Notes

CALICO PRINTERS. For a cotton textile company to produce sharply higher profits is now rare enough to attract surprise, pleasure, and a second look at the figures. Calico Printers' Association, with a net profit in the parent company of £538,041 in the year ended June 30th, compared with £394,973, and an unchanged dividend of 15 per cent, has done remarkably well. If the consolidated profit figure of £691,424 against £1,092,646 does not seem to bear out that favourable impression it is because of the inclusion of tax credits of only £144,479 compared with £666,948. Excluding those recoveries consolidated net profit showed a healthy rise of £211,247 at £546,945.

This rise in earnings does not imply that the group has somehow acquired immunity from the troubles of the cotton textile industry. The preliminary statement makes it clear that the group suffered a loss of bulk orders for commission printing for the export markets and that its volume of commission printing declined. Speciality printing and the group's range of special finishes have filled, and apparently more than filled, the gap both in the print works and in the merchanting end of the business. Indeed, in spite of declining business to some export markets the merchanting turnover increased. Calico Printers is also the royalty owner of "Terylene" the patent for which is due to expire in mid-1958 unless an extension is agreed to cover the lost time that the war years represent. And with Terylene coming into much greater production its royalty income increased by the modest figure of £75,000 gross. As a whole, the figures point to a vigorous and successful effort by the group to restore its fortunes and it is not surprising that the £1 shares rose by 2s. to 35s., at which price they yield £8 11s. 5d. per cent.

JOHNNIES. Although the production of gold in the Union of South Africa continues to rise, its source is being redistributed. As a South African would argue, the stable price at which the American Treasury converts gold into dollars will compel many of the old mines on the Rand to suspend operations if the costs of production continue to rise—production from the new mining areas more than compensating for the decline. Johnnies is not over-represented in the new areas and its main stake in the Orange Free State has proved a costly investment, from which the return remains problematical; the southern section of Freddies was closed down at the end of March and the northern section is being worked in the hope that future developments will enable the mine to be profitable. The balance sheet at June 30th shows that a further £974,769 was needed to write investments down to their market value, but the right to claim tax relief in respect of individual investments, while the aggregate market value remains above the book value, has resulted in the company again being virtually free of UK taxes. The rising production of uranium, which is likely to provide sufficient revenue during the life of the ten-year contract to offset losses in gold production by the low-grade producers, has brought considerable benefit to Randfontein and East Champ d'Or, two of the mines under Johnnie's management, but operations ceased at the end of last year at New State Areas, and the continuance of mining operations at Government Gold Areas, the directors say, depends upon the level of working costs. Other spheres in which the company has an interest include platinum, diamonds, coal and base metals, all of which contribute to the increase in investment income. Prospecting for gold in the Rand was intensified during the year. The dividend has been restored to 17½ per cent after being cut to 15 per cent last year. At market values the £1 shares in the company, standing at 41s. 9d. to yield £8 7s. 8d. per cent, are backed by assets of £4 1s. a share.

★

LONDON TIN. To the average investor the company balance sheet and profit and loss account of London Tin Corporation, largest of the investment and management groups in tin mining, has more meaning than have the consolidated accounts. That is because management is exerted through shareholdings that normally amount to less than 50 per cent and the companies of the group are usually not subsidiaries. The company this year has brought itself nearer to that typical mining finance house pattern by selling, principally to the public in Malaya, part of its investments in Lower Perak Tin Dredging and Berjuntai Tin Dredging, both of which ceased to be subsidiaries. From those sales came most of the investment profit of £478,602, against £216,202 that the accounts to April 30th shows. The transfer to general reserve of £400,000 compared with £75,000 represents the bulk of the share dealing profit. The net income after tax of £883,642 against £687,833 handsomely covers the dividend which at 30 per cent, against 28 per cent, costs £624,146 net.

The company has recently been building up its interests outside tin mining and outside the tin-bearing areas. The chairman, Mr J. Ivan Spens, now tells shareholders something more of these outside investments. They amount to £1,299,122, a sum approximately covered by the general reserve of £1,200,000. They comprise 24½ per cent of the group's total investments and 20½ per cent of them are in American and Canadian stocks. The transatlantic spice together with the fact that the group's quoted investment portfolio with a book value of £5,022,984 has a market value of £8,060,978, gives the 5s. shares at 10s. 3d. a long-range interest.

LONDON STOCK EXCHANGE

Next Account begins: October 3rd
Next Contango Day: October 3rd
Next Settlement Day: October 9th

PRICES of both Government stocks and industrial shares were again stable this week, but business has been small. The new East African loan, which was just over-subscribed last week, has remained steady at ⅛ discount.

The decline on Wall Street caused leading industrial shares to ease slightly on Wednesday, though the London demand for transatlantic stocks remain strong and the official dollar premium reached 7 per cent. Associated Portland Cement were quoted ex the scrip issue at 40s. 3d. with the new shares at 41s. The announcement of the terms of the £14½ million GEC issues caused electrical equipment suppliers to weaken further; GEC lost 4s. 6d. to 42s. 9d. and AEI 4s. 3d. to 63s. William Doxford rose 3s. 3d. to 70s. 6d. on the results and Harland and Wolff 2s. 6d. to 29s. 9d. after receiving the £15 million order from Royal Mail, but other engineering stocks declined, Babcock and Wilcox losing 4s. 3d. to 76s. 9d. Steel shares again drifted lower, Stewarts and Lloyds falling 2s. 9d. to 59s. 9d. Although textiles were generally depressed, Patons and Baldwins rose 2s. 6d. to 32s. 7½d. and Calico Printers jumped 2s. to 35s. after the results had been announced. The rise in shipping shares was checked by profit-taking, but Furness Withy gained 9d. to 57s. 6d.

Fluctuations in British Petroleum have been smaller this week; on balance the stock closed 9d. lower at 143s. Other oils turned easier; Royal Dutch dropped 4 to 80¾ and "Shell" Transport 3s. 6d. to 151s. 6d., but Shell Trinidad gained 3d. 9d. to 65s. Kaffirs were again dull after an earlier rally, but SA Land rose 1s. 3d. on the purchase of adjoining property. Malayan tins continued to advance up to the announcement of the Camp Bird plan; Kinta, which had gained 2s. 10½d., then lost 1s. 7½d. to 17s. 3d. xd and Tanjong lost 1s. 9d., remaining 2s. 3d. higher on balance at 23s. 9d. xd. Rubbers were firm and tea shares improved.

(1) The Alexandria spot quotations for Karnak and Ashrams cotton have been replaced by the current month futures quotation at Alexandria. (2) Figures up to July, 1955, relate to delivered prices and subsequently to ex-warehouse prices of H.C. electrolytic copper; from May, 1955, onwards the proportion of copper sold at fixed prices has been taken into account. (3) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (4) New series based on January 17, 1956=100. (5) Surveys made twice a year; annual figures relate to October survey. (6) Revised series based on Liverpool spot market prices, as from July 1, 1954. (7) Revised figures for August 7th, 14th, 21st and 28th respectively: fibres 80·4, 81·3, 81·3 and 83·1; August 28th, food 92·5. (8) Figures relate to April.

(1) This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark excludes mining; Greece, mining and manufactured gas; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. Italy includes Trieste. (3) New drachmas introduced May 1, 1954 (1 new drachma = 1,000 old drachmas). (4) Thousand million drachmas. (5) Bizonal area. (6) Average for first quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended September 22nd, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £35,405,000 compared with a deficit of £44,844,000 in the previous week and a surplus of £5,450,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £11,651,000, bringing the total deficit to £486,356,000 (£507,265,000 in 1955-56).

THE MONEY MARKET

Following the sustained stringency of credit, the discount market raised the Treasury bill rate for the third week in succession at the tender on Friday last. The bills on offer were those spanning the Christmas holiday, and Tuesday's bills were 90-day maturities and Wednesday's 92-day. For these, the market bid at £98 14s. 6d. per cent and £98 13s. 11d. per cent respectively; for the 91-day bills it reduced its bid by a further 4d. to £98 14s. 2d., representing a discount rate of over 5⅝ per cent. This compares with a rate of only a fraction over 5 per cent four weeks previously.

Total applications for the £280 million on offer at last week's tender dropped by £24.2 million to £380.0 million; and the market's average allotment on all maturities rose from 61 to 65 per cent. At yesterday's tender, for the December 31 and new year maturities, the offer was further reduced, by £20 million to £260 million.

Credit supplies have been somewhat more plentiful this week. A small amount of special help was needed on Monday, but on the following two days conditions were comfortable, notwithstanding repayments of seven-day loans at the Bank.

The Treasury bill rate in New York rose further this week from 2.908 to 2.985 per cent.

The price of silver on the London market rose, from 78¾d. an ounce on Monday to 79¼d. on Wednesday.

AN ANNOUNCEMENT BY
CAMP BIRD LIMITED
TO MALAYAN TIN SHARE INVESTORS

IN ORDER to prevent undue speculation and rumours concerning CAMP BIRD and the MALAYAN TIN MINING COMPANIES listed below, the CAMP BIRD Directors wish to announce as widely as possible our intention to lay before investors in these companies our proposals for the consolidation of the many interests involved, OUR OFFICIAL OFFERS TO SHAREHOLDERS IN THE INDIVIDUAL COMPANIES WILL BE CIRCULATED IN DUE COURSE.

Our REASONS for making these proposals, and the METHOD whereby we propose to implement them, are given below. May I ask all interested shareholders to study these facts most carefully?

BACKGROUND

THERE are now three major European-controlled tin mining groups in Malaya: The London Tin Corporation Ltd., British Tin Investment Corporation Ltd., and the "Tronoh" Group.

However, 18 tin mines listed below are financially separate companies, although some have interlocking boards of directors, and some have a common administration and management. Operational management, however, is carried out by professional management concerns in Malaya, under contract to, but not owned by, the tin companies.

IT IS THESE 18 MINES, WHICH CONSOLIDATED WOULD FORM A NEW, LARGE AND STRONG TIN MINING GROUP, WHICH ARE THE SUBJECT OF OUR PROPOSALS.

It is our belief that unless steps are taken to consolidate these individual companies, with their large unemployed cash reserves, and to bring them into a common financial group, we shall see very soon a series of despairing liquidations of these tin mining properties in Malaya, which may easily lead to the ruin and total loss of a great and profitable industry to the British investor.

The companies with which we are concerned have amassed liquid assets totalling over £2,250,000. These are not being remuneratively employed.

Today, because of the extremely low market price of tin shares, there is an increased attraction to persons looking for a short-term capital profit by demanding the liquidation of these companies. The appeal to shareholders to secure capital repayments is also strong when no constructive alternative employment of stagnant assets is put forward.

However, it is the experience of the Camp Bird Directors that shareholders do not seek capital repayments—and the consequent problem of re-investment—when management invests their money with skill and dynamism. In illustration, Camp Bird shareholders recently refused a capital repayment of 9*s.* per share, and in the past few weeks have applied for more than 2 million new shares in a rights issue involving the issue of only 1,377,000 shares.

The purpose of this Notice is to lay before investors the constructive alternative to the threatened series of liquidation and waste of assets.

STATISTICS

The estimated life of the tin mining properties concerned varies from two years to 45 years. Other available areas are held which have not yet been fully explored.

It should be realised that we are discussing one of the largest mining industries in the world, currently enjoying high profitability. This is not some collection of worked-out properties.

The aggregate statistical picture of the 18 companies in question shows the following:

Market Valuation of Shares at 13th September, 1956	On basis of latest published Accounts		
	Nett Cash and Quoted Investments	Gross Dividends	Yield on Market Price
£4,400,000	£2,250,000	£900,000	20.4%

If the above nett cash and quoted investments are put to active use, earnings will be substantially increased. Until this is done, however, it is not surprising that the liquidation threat overhangs these companies.

PROPOSALS

Camp Bird proposes a more constructive solution to what is, after all a PROBLEM OF PROSPERITY AND HIGH EARNINGS, not the liquidation of a bankrupt industry.

Three essential demands of the situation are:

1. That the surplus liquid assets held in London by the tin companies be invested in Western Hemisphere industrial and other fields (not excluding the dollar area) **so that investors are no longer dependent entirely on the fate of the Malayan tin industry.**
2. That the operating tin mining companies shall be domiciled in Malaya; and that, **after allowing for suitable dividends and the repatriation of original capital, future surplus profits shall be invested in Malaya,** in developing either the tin mining industry or other Malayan commercial and industrial developments. These changes will bring a closer integration of the companies concerned in the Malayan economy and make available new investment opportunities for investors resident in Malaya.
3. **That the individual companies shall be grouped into a single powerful company, with finances centralised and cash assets fully employed.**

METHOD

The following is our proposal for meeting the above situation:

CAMP BIRD proposes to offer its own Shares in exchange for shares in the tin mining companies, on an equitable basis, subject to 75% or more acceptance by shareholders of the individual companies.

It is intended to approach formally the directors of these tin companies forthwith.

ADVANTAGES TO SHAREHOLDERS

I CAN summarise the benefits which this consolidation will bring to investors in these Malayan tin companies:

- ★ **A more realistic market valuation for your investment.**
- ★ **By holding Camp Bird shares you will enjoy maximum profits from the tin companies, and also the greater security provided by a wider diversification of investment.**
- ★ **Increased overall earnings following the re-investment of surplus funds in Western Hemisphere interests, and the proposed redeployment of surplus profits arising in Malaya in future.**
- ★ **Upon domiciling the operating tin mining companies in Malaya, we can expect these companies to be able to pay higher dividends than now possible, because of the current taxation basis in Malaya.**

ADVANTAGES TO THE TIN MINING INDUSTRY

THESE are technical factors of importance to the industry itself—but which nevertheless are likely to result in immediate and direct benefits to shareholders:

- ★ **Substantial economies in the U.K. direction and administration.**
- ★ **Prestige as one of the largest tin mining groups in the world.**
- ★ **Ability to afford and employ the highest standard of direction, management and mining technology.**
- ★ **Diversification of interests through re-investment of future surpluses in Malaya.**
- ★ **Power to negotiate with the Malayan authorities with a single voice as to the conduct of the existing and the future development of the tin mining industry.**

CONCLUSION

Investors in CAMP BIRD can expect to enjoy an exceptionally high rate of income from the consolidated tin mining properties.

It should be possible, with proper management, fully to employ the combined assets of these 18 tin mining companies so that the stock market values reflect their earning capacity.

We believe you will recognise the merits of these proposals and will give us your support, and I would welcome the comments of any shareholders of the following companies:

Chenderiang Tin Dredging, Ltd.	**Kinta Kellas Tin Dredging Co., Ltd.**	**The Renong Tin Dredging Co., Ltd.**
Gopeng Consolidated, Ltd.	**The Kinta Tin Mines, Ltd.**	**Selayang Tin Dredging, Ltd.**
Hongkong Tin, Ltd.	**Malaysiam Tin, Ltd.**	**Sungei Kinta Tin Dredging, Ltd.**
Ipoh Tin Dredging, Ltd.	**Meru Tin, Ltd.**	**Tanjong Tin Dredging, Ltd.**
Kent (F.M.S.) Tin Dredging, Ltd.	**Pengkalen, Ltd.**	**Tekka, Ltd.**
Kiilinghall Tin, Ltd.	**Rambutan, Ltd.**	**Temoh Tin Dredging, Ltd.**

COMPANY MEETINGS

UNITED DAIRIES LIMITED

A SATISFACTORY YEAR'S TRADING

EXPANSION IN A NUMBER OF DIRECTIONS

FURTHER INCREASES IN COSTS

PROGRAMME OF MODERNISATION OF LONDON SHOPS

CAPITALISATION OF RESERVES

MR LEONARD MAGGS'S STATEMENT

The forty-first annual general meeting of the members of United Dairies Limited was held on September 21st at The Connaught Rooms, Great Queen Street, London, W.C., Mr Leonard Maggs (Chairman and Manager Director) presiding.

The secretary (Mr Ernest Evanson, ASAA) read the notice convening the meeting and the report of the auditors.

The following is the Statement by the Chairman to the Members which had been circulated with the report and accounts for the year ended March 31, 1956, and was taken as read:

Once again, I am happy to be able to report a satisfactory year's trading, and expansion in a number of directions.

The published accounts give a clear picture of the state of the company's affairs, but I would add a few comments.

The Profit and Loss Account reveals an amount of £470,069 brought into profits from operations in previous years. This occurs mainly because the prices received for products sold to the Ministry of Food between October 1, 1952, and the end of control were provisional: final prices have now been agreed, and the resulting excess has been credited to the Profit and Loss Account. That account has received also the benefit of payments for the year ended September, 1953, from a scheme designed to adjust manufacturing costs of milk products according to throughput.

These transactions extinguish, except to a small extent, our outstanding accounts with the Ministry of Food.

DEPRECIATION ALLOWANCES

The depreciation to buildings, plant, machinery, transport and other items amounts to £1,188.571, equivalent to £3,256 per day. This amount, which is, of course, well in excess of the Inland Revenue's wear and tear allowances, is increasing each year and reflects the higher costs of replacements in this age of inflation. As you may recall, we adopted a straight-line basis of depreciation in 1946-47; as this is at the rate of ten per cent per annum for plant and machinery, the installations made in the year ended March 31, 1947, are now written off.

Our industrial freeholds are depreciated at the rate of 2½ per cent per annum, and non-industrial freeholds at the rate of 1 per cent per annum. The bulk of our freeholds are industrial, and they have now been written down to just over half the cost.

A provision of £200,000 for advertising has been created in the subsidiary companies, and is shown in the Profit and Loss Account. It is necessary in these days to keep brand names in front of the public and we have made, therefore, this comparatively modest allocation for our milk products now marketed under the name of "WILTS."

RESERVES

The reserves of the group at March, 1956, were £11,486,268 against a total at March 31, 1955, of £10,330,224.

These reserves now exceed the issued share capital.

COSTS AND PROFITS

During the year under review there were further increases in wages, fuel and transport costs. These are the main direct costs of milk distribution and manufacture, and reflect in all other items of expense.

In the current year we have to face a very substantial increase in our contributions to local rates because commercial premises have had to bear the brunt of the alterations brought about by re-assessment.

The Ministry of Agriculture, Fisheries and Food continues to control the purchase price and the maximum retail selling price of milk for liquid consumption.

During the period of inflation distributors have suffered from the lag arising between increases in costs and the adjustment of margins, but I am glad to say that arrangements have been made to ascertain more quickly the effect of increases and make adjustments for them in the margins.

As I pointed out last year, the diminishing concentration of population in urban areas, and in London in particular, adds to the cost of distribution, as the quantity that can be sold on individual rounds decreases.

We have continued our efforts, therefore, to sell orange drink and chocolate drink ("Lactachoc") as a means of combating rising costs.

MILK PRICES

The prices of milk for manufacture into milk products are now negotiated directly between the trade and the Milk Marketing Board, both in England and Wales and in Scotland. As no agreement on prices could be reached in respect to certain important products for the year beginning October 1, 1955, it fell to Consultants, under the arrangements mentioned to you last year, to determine the prices.

During the year under review we benefited considerably, although fortuitously, from rising prices in the markets for butter and cheese.

I mentioned last year that with the co-operation of the Milk Marketing Board there had been a revival in the export trade in condensed milk, but I am sorry that the new prices of milk are less favourable in relation to world prices, and in consequence we are less able to hold our own against foreign competition, particularly from Holland.

The stocks of milk products held on government account have now been cleared, but the trade has had to undertake the responsibility of selling a large quantity of tinned skimmed condensed milk to manufacturing users, thereby restricting the market for current manufacture.

MILK SUPPLIES

The summer of 1955 was one of high temperatures, and was a testing time for deliveries of milk from farms. The keeping quality of the milk was good, and credit for this improvement must be given to the schemes which are worked jointly by the English and Scottish Milk Marketing Boards and the trade.

Attention is now being given similarly to the compositional quality of milk, which has shown a tendency to deteriorate in the last few years. In time, no doubt, there will be a scheme of differential payment according to quality.

The railway strike in May, 1955, caused some difficulty, as London is dependent to some extent on rail-borne supplies, but thanks to the efforts of all concerned, the supply of milk in London was maintained. In outlying areas, where manufacturing facilities are not equal to the full supply of local milk, our people undertook prodigies of improvisation in their efforts to overcome the temporary dislocation.

PRODUCTION OUTPACES LIQUID CONSUMPTION

In spite of the efforts of the National Milk Publicity Councils—joint undertakings of producers and purchasers of milk to foster increased liquid consumption—the rate of milk production continues to outpace liquid consumption, and this has resulted in an increase in the manufacture of milk products to a record level.

The present system of price guarantees by the Government is somewhat obscure and many of us would like enlightenment on the operation of the plan of payment. It is apparently designed to place a ceiling on milk production in Great Britain, as the Government no longer guarantees the full price for milk produced in excess of the target figure. Manufacture in excess of this figure will therefore presumably have some depressing effect on the overall return per gallon to the producer. With the great improvement in breeding and feeding of dairy cows, lactation yields have risen markedly in recent years. In consequence, producers have found that higher production, although it involves increased manufacture, by no means signifies a reduction in net farm incomes. How much further milk producers will pursue this policy is impossible to forecast, but the uncertainty in the present position makes it difficult for the industry to make satisfactory plans for the future.

DEVELOPMENT

When there has been opportunity and advantage we have continued to absorb other concerns into our business.

We are pursuing our programme for the modernisation of our London shops, and are pleased with the attractive appearance of those re-modelled. A few have been adapted for self-service in specially selected neighbourhoods, but we are adhering mainly to the classes of goods we have always sold.

In the country, the two small milk collecting depots at Wrexham and Dunchurch have been closed as a result of a re-arrangement of milk supplies.

Our factory at Hemyock in Devonshire, which manufactures spray process milk powder, has been re-equipped with modern plant of greater capacity. It may be recalled that this factory was the first in the country to make this particular product.

At two of our cheesemaking factories—Bailey Gate in Dorset and Ellesmere in Shropshire—new cheese stores, with the most modern systems of temperature and humidity control, have been erected. We hope that these measures will help to put our cheese on the market under the best conditions.

When Ministry of Food control ceased a voluntary grading scheme for butter and cheese was inaugurated. I am proud to say that with very few exceptions (and those only minor) all manufacturers of butter and cheese in the country agreed to become members. Undoubtedly grading of these products has helped to improve the quality of the home manufacture.

TRANSPORT AND ENGINEERING COMPANIES

Dairy Supply Company, Limited: The Dairy Supply Company, Limited, has had another most successful year, sales having reached the highest level ever recorded during their 75 years' trading.

Continuing their policy of developing specialised machinery for the dairy industry, they have recently put on the market a new machine which automatically salts, mixes and cools the curd in the manufacture of cheese. This latest example of mechanisation is giving a good account of itself, and was awarded a Silver Medal (highest award) at the London Dairy Show held last October.

Mickleover Transport Limited: Mickleover Transport Limited, in addition to work for other subsidiary companies, has continued to receive orders from commercial and government undertakings, particularly in the field of design and manufacture of highly specialised types of vehicle, the production of which constitutes a record in the history of this company.

The research and development of fibreglass plastic components for vehicles continues, and the experimental production of vehicle bodies from this material is now proceeding.

The road haulage undertakings which this company operates have, in spite of rising competition, maintained their progress, and have satisfactorily met the increased demands for their services.

UD Engineering Company Limited: During the year the manufacturing facilities of UD Engineering Company Limited, including the extension to which I referred last year, have been kept fully occupied; in fact the period has been one of record achievement, including, among other things, the successful completion of the second contract received from the USSR.

The past year has also seen an increase in demand for the company's de-crating and re-crating machines, which, originally developed for dairies, are now being manufactured for other industries and for service in many countries overseas. Other development work is in hand, and during the current year there will be further additions to the company's wide range of bottling and mechanical handling equipment.

New industrial techniques are providing fresh outlets for our specialised refrigeration knowledge and plant, whilst the demand for conventional equipment—for example two 50-ton ice-making plants at present being erected for Iran—continues at a satisfactory level.

There are signs that the credit squeeze at home and in some countries abroad may temporarily reduce the level of orders, but our engineering products enjoy a high reputation, and in the knowledge that there is a need for them in the world markets we can look forward to the future with confidence.

OVERSEAS INTERESTS

Australia.—Conditions in Australia are much the same as I reported to you last year. The results are appreciably better this year than last, but it still looks like being some time before we can expect a satisfactory return on our investment in that country.

During the year under review our subsidiary company has been of assistance to us by shipping to the United Kingdom milk powder to satisfy a demand which was greater than our ability here to satisfy.

New Zealand.—Our subsidiary company has again had a satisfactory year, and has made a useful contribution to the profit of the group. The recent expansion of our main factory there has lowered production costs.

DIRECTORATE

To the general regret of his colleagues, Mr J. H. Maggs has decided not to seek re-election as a director.

Mr Maggs has been a Member of the Board since United Dairies Limited was incorporated in 1915 and was Chairman from 1922 until 1942 when he retired from management. Since that time he has continued to help us with the benefit of his wide experience and has kept a great interest in all the activities of the subsidiary companies.

He has occupied the office of President of the Long Service Corps from its inception and has had close to his heart the well-being of the old servants of the associated companies.

During his term of office he saw introduced a measure of compulsory pasteurisation of milk, and contributed largely to the campaigns to secure this very necessary piece of legislation.

The large scale bottling of milk after pasteurisation, the introduction into the milk industry of the six day working week, the transportation of milk in bulk, were all brought to fruition during the days of his leadership and he bore the principal burden in regard to the company's finances.

You will want, no doubt, to join with his colleagues to wish to him, and to Mrs Maggs, health and happiness, and to congratulate him on the completion of 41 years as a director of your company.

Mr J. G. Stokes, before his appointment to the board of the company in 1929, was the managing director of our subsidiary company Salter & Stokes Limited, of which the principal business is butter and cheese. His knowledge of these markets has been of immense value to the company.

THE INFLATIONARY SPIRAL

Some years ago I referred in my remarks to the inflationary spiral, and the need for reaching a state of some stability. Prices and costs have continued to rise disconcertingly, and we seem to have reached a situation when what goes up does not come down, but goes up further.

I welcome, therefore, the attempt by the nationalised industries to secure a period of stability in the costs of goods and services.

TRIBUTE TO THE STAFF

On behalf of the Board, and I am sure I may include the members, I should like to thank the management and staff for their loyal co-operation and devoted service, which have contributed so much to the prosperity of the company.

The report and accounts were unanimously adopted and a final dividend on the Ordinary Stock at the rate of 10 per cent actual, less tax, making 15 per cent for the year, was approved.

The retiring director, Mr J. Gordon Stokes, was re-elected and the remuneration of the auditors, Messrs Peat, Marwick, Mitchell and Company, was fixed.

At a subsequent extraordinary general meeting resolutions were passed approving (1) the conversion into Stock of the unissued shares of the company on being issued and fully paid up; and (2) the capitalisation of £591,360 of the reserves and its issue to stockholders in Ordinary shares in the proportion of one new share for every £10 stock held.

The proceedings terminated with a vote of thanks to the chairman, directors and staff.

GOLD MINES OF KALGOORLIE (AUST.)

PROGRESS OF MERGER

The fifth annual ordinary general meeting of Gold Mines of Kalgoorlie (Aust.) Limited, was held on September 10th in Melbourne.

Mr G. Lindesay Clark, BSc, MME (the Chairman), presided and, in the course of his speech, said:

(All figures are quoted in Australian currency.)

In the year under review the companies taken over in the Kalgoorlie field were placed in liquidation, and their properties transferred to Gold Mines of Kalgoorlie (Aust.)

Limited. The amalgamation of the operations of the South Kalgurli, Boulder Perseverence and Kalgoorlie Enterprise mines, with those on our original leases, has required a great deal of work which is not yet completed.

From October 5, 1955, all production has been treated in the Gold Mines of Kalgoorlie mill on the Company's property. Operating experience has shown the mill to be capable of a throughput in excess of that designed and since the close of the year the average treated per four weeks has been 41,400 tons.

Company ore treated amounted to 452,070 tons, from which 119,531 oz of fine gold were recovered in bullion and concentrates, equivalent to a recovery grade of 5.29 dwts per ton. Net profit was £239,249 compared with £102,922 for the preceding year.

The transfer of treatment to Gold Mines of Kalgoorlie mill resulted in a fall of costs of 3.3s. per ton, cost of mining was held steady, and development redemption charge was raised .9s. per ton. The overall result was a fall in total operating costs of 2.5s. per ton. This trend has continued into the current year and it is hoped, provided the Australian cost structure does not continue to rise, that average costs for the current year will be lower than those for 1955/56.

The Company maintained a steady dividend programme during the year, dividends being paid at the rate of 9d. per fully paid share at October 27, 1955, and May 4, 1956. The Board will be considering the next dividend within a month.

ORE RESERVES

Ore reserves at March 31, 1956, were estimated to be 1,574,000 tons at 5.9 dwts per ton grade compared with combined reserves of the Company and subsidiaries at March 31, 1955, of 1,558,000 tons at 5.8 dwts grade.

Last year, of 25,278 feet of development 30 per cent was in ore which assayed, as sampled, 8.1 dwts over 63 inches. Since the end of the year 13,280 feet of development has been done of which 23 per cent was in ore assaying 9.9 dwts over 63 inches.

PYRITES PRODUCTION

Part of our pyrites production is being railed to Fremantle for production of acid and subsequent recovery of gold. This will provide an attractive economic source of sulphur for the manufacturers of acid and, in due course, added income to the Company. It has led to the locking up of gold in pyrites and calcines which have been roasted and not yet cyanided. This gold, already included in production reports, amounts to approximately £160,000 in value, and the accumulation has only now ceased. It is expected that this gold will be recovered within the next nine months. In the interim, this delay in receipts from gold, together with the expenditure needed on capital account and for renovating the mines, has led to a temporary severe strain on our cash resources.

The report and accounts were adopted.

LONDON TIN CORPORATION

CHAIRMAN'S STATEMENT

The Thirtieth Annual General Meeting of London Tin Corporation Limited will be held on October 23rd at The Chartered Insurance Institute, 20 Aldermanbury, London, E.C.

The following is the statement by the Chairman, Mr J. Ivan Spens, OBE, which has been circulated with the report and accounts for the year ended April 30, 1956:

ACCOUNTS

The net profit for the year ended April 30, 1956, after providing £955,000 for taxation, was £883,642 compared with £687,833 in the previous year.

The dividend of 30 per cent less tax at 8s. 6d. in the £ paid on June 29, 1956 (compared with 28 per cent less tax at 8s. 6d. in the £ for the previous year), took £624,146, leaving a balance for the year of £259,496. This balance represents approximately the profits less losses on investments realised during the year less taxation and, with £339,514 brought forward from last year, brought the balance on Profit and Loss Account to £599,010. The sum of £400,000 has been transferred to General Reserve, leaving £199,010 to be carried forward.

A substantial part of the total profit on the sale of investments was derived from the sale of shares in Lower Perak Tin Dredging Limited and Berjuntai Tin Dredging Limited. The shares were sold in the ordinary course of business mainly to the general public in Malaya but a substantial shareholding in each Company has been retained. These Companies, as explained in the Directors' Report, have ceased to be subsidiaries of this Corporation.

GENERAL RESERVE

The General Reserve is now raised to £1,200,000, which approximates to the total book cost of investments outside the Tin industry held by the Corporation and its wholly-owned subsidiary The Anglo-Oriental and General Investment Trust Limited at the close of the year.

At August 31, 1956, 24½ per cent of the total group investments was invested outside the Tin industry. The total amount so invested at that date was £1,299,122 of which 20½ per cent was in USA and Canadian stocks.

PRICE OF TIN

The average London cash price of Tin metal during the year under review was £770 per ton. This figure is within the range where the Buffer Stock management would not enter the market under the International Tin Agreement. The average London cash price last year was £723 per ton.

The International Tin Agreement came into force on July 1, 1956, and the first meeting of the International Tin Council was held in London on July 2, 1956

MALAYA

Malaya is expected to reach Independence within the Commonwealth during 1957, and the observations of His Excellency the High Commissioner in the course of an address during November, 1955, should be noted. After referring to the part played in the development of Malaya by external capital and private enterprise His Excellency continued:

"It is therefore, and will remain, the policy of the Government to accord such industry and enterprise fair and considerate treatment; to foster an atmosphere in which the overseas investor who is genuinely concerned with the development on sound lines of the country's productive resources can invest and conduct undertakings in this country without fear of discrimination or unfairness; and last, but not least, to continue the present policy whereby the overseas investor can, after payment of local taxes and obligations, remit to his country within the framework of ordinary and reasonable Exchange Control requirements, funds for the payment of dividends and for the repatriation of capital"

Of the 40 dredges under the management of Anglo-Oriental (Malaya) Limited, at the end of the year under review there were 30 in operation and ten were idle. There is no suitable mining land at present available for five out of the ten idle dredges. The remainder included two which were being transferred to new areas, one being rehabilitated, one closed down for security reasons, and one being specially equipped to deal with clay. The total output during the year under review was 17,003 tons of tin concentrates, compared with 17,595 tons during the previous year.

The security situation continues to improve, but prospecting is still restricted.

THAILAND

The output from the dredges under Anglo-Oriental (Malaya)'s management in Thailand increased to 1,278 tons during the year compared with 626 tons in the previous year due to two more dredges having been brought into production.

BURMA

No active mining was possible during the year: but since the close of the year it has been possible, although difficult, to visit the mines and examine the plants in order to see which, if any, can be rehabilitated. It is thought that, if security can be restored in the areas concerned, one or two small dredges might be brought into production in a reasonably short time.

NIGERIA

The mines under the management of A. O. Nigeria Limited produced 4,707½ tons tin concentrate during the year, compared with 4,441 tons in the previous year. Columbite production was 882½ tons as compared with 1,102¼ tons in the previous year.

Prospecting continues actively in Nigeria and every endeavour is made each year to bring in new reserves of tin ore to replace as much as possible of those extracted.

During the year under review special attention has been given by A. O. Nigeria Limited to the problems of ore dressing and the possible need for larger capacity plant.

NYASALAND

Since the close of the year we have disposed of our interest in London Nyasaland Mining Corporation Limited, our operations having been abandoned and the cost having been written off as incurred in accord with our usual practice.

STAFF

Our thanks are due to the Management and Staff throughout the organisation for the work carried out during the year.

NYASALAND RAILWAYS LIMITED

MR W. M. CODRINGTON'S STATEMENT

The twenty-fifth annual general meeting of Nyasaland Railways Limited was held on September 26th in London, Mr W. M. Codrington, CMG, MC (chairman and managing director), presiding.

The following is an extract from his circulated statement:

Operating receipts amounted to £891,843 compared with £855,861 in 1954. Operating expenditure rose from £651,580 to £728,767, leaving a net operating surplus of £163,076 compared with £204,281 for the year 1954. The ratio of expenditure to receipts was 81.71 per cent compared with the 1954 figure of 76.13 per cent.

After providing £61,060 for interest on the 3½ per cent First Debenture Stock and £127,550 for interest at the agreed rate of 4 per cent on the Consolidated Income Debenture Stock, we have been able to increase the recommended distribution to the Ordinary Shareholders from 2½ per cent to 3½ per cent.

Last year I mentioned the intention of the Board to raise further prior charge capital in order to provide for much needed additional facilities to cope with our increasing traffics. We hoped that the legal formalities involved in such an operation would have been quickly completed. In this we were disappointed. As a result, the rise in the bank rate and the credit squeeze intervened before we were able to raise our new money. We have, therefore, had to conserve as much of our cash as possible in order to meet the cost of new works, new rolling stock, etc. It is on the strength of our own cash resources that we have placed orders for two more "G" class locomotives and four African passenger coaches.

INDUSTRIAL DEVELOPMENT

Though some mineral exploration is taking place in Nyasaland, no valuable minerals which would carry remunerative rates have so far been discovered. Increases in low-rated agricultural products such as maize, or the carriage of low-grade minerals, might be of little direct value so far as an increase in net receipts is concerned; and while we should doubtless benefit—through increased imports—from any intensification of economic activity, we must bear in mind that a higher proportion of low-rated traffic, often involving increased capital expenditure, is a doubtful blessing. There are, however, signs of industrial development which indicate that the advantages of Nyasaland for certain types of "secondary" industries is being increasingly recognised. Progress in this direction would undoubtedly be stimulated as soon as cheap power became available in quantity; but we understand that though a start is being made on a coffer-dam or barrage which will have the effect of helping to stabilise the level of Lake Nyasa, it is unlikely that a start will be made with the big hydro-electric scheme in the near future.

LAKE SERVICE

The loss on operating the Lake Service during 1955, including provision for renewals, amounted to £45,465, which was somewhat less than the previous year's loss of £53,591. As I reported to you last year, the reduction in the rate of interest from 5 per cent to 4 per cent on the Consolidated Income Debenture Stock—a saving to the Company of nearly £32,000 per annum—was agreed with the Federal Government in return for which the Company undertook to continue to operate the Lake Service. The cargo handled rose slightly from 9,427 tons to 9,917 tons during the year under review. The number of passengers carried on the Lake increased from 6,907 in 1954 to 23,664. This was due to the Ilala having been in service the whole year, whereas in 1954 she was out of commission for a considerable period while undergoing repairs as a result of extensive damage to her hull. The new vessel which we are erecting for account of the Federal Government was recently launched and should be in service by the beginning of next year.

The report was adopted.

HACKBRIDGE CABLE HOLDINGS

SATISFACTORY TRADING

The eighth annual general meeting of Hackbridge Cable Holdings Limited was held on September 21st in London, Sir W. Wavell Wakefield, MA, MP (Chairman), presiding.

The following is an extract from his circulated statement:

For the first full trading year, ended March 31, 1956, of our enlarged Group, I am pleased to be able to record another satisfactory period of trading in all sections. Although, as anticipated, the exceptional results achieved last year by the newly acquired subsidiaries have not been maintained, they are still substantially in excess of the average profits for a normal year anticipated at the time of purchase. Their contribution during the past year to the total Group trading profit, before taxation, is more than one-third of the purchase consideration paid to acquire them. Last year the acquisition showed a capital surplus accruing to the Group on consolidation in excess of £200,000.

The trading profit of the Group is £472,937. After providing £56,353 for depreciation and £229,479 for taxation, the net profit is £187,105. Your Directors recommend a final dividend of 20 per cent, less tax, making 30 per cent, less tax, for the year.

The Revenue Reserves—apart from the substantial Reserve for Future Taxation—have increased during the year by £98,264, making a total of £413,900, against £315,636 at March 31, 1955.

Trading since the end of the year has continued to be satisfactory, and it is expected that the results for the current year will again be satisfactory, provided no exceptional unforeseen circumstances arise. I am again able to report satisfactory progress in our development work, including further improvement of the sheathing of cables with aluminium by the direct extrusion process as an alternative to lead.

CHANGE OF NAME

It has been felt for some time—and particularly so since the acquisition of the new subsidiaries—that our present registered name is misleading in regard to the general scope of our activities. A special resolution at an Extraordinary General Meeting will therefore be proposed that the word "CABLE" be deleted, so that the registered name of the Company will become "HACKBRIDGE HOLDINGS LIMITED."

The report was adopted, and the special resolution, changing the name of the Company to "HACKBRIDGE HOLDINGS LIMITED," was approved.

PYE LIMITED

NEW COMPANIES' CONTRIBUTION TO GROUP

CONTINUED EXPANSION AND RECORD PROFITS

The Twenty-seventh Annual General Meeting of Pye Limited was held on September 26th in London, Mr C. O. Stanley, CBE (the Chairman), presiding.

The following is an extract from his circulated statement:

Last year I forecast that the new companies we had purchased during the year would this year contribute to the Group's profits not less than a quarter of a million pounds. The new companies actually contributed more than this amount, and you would therefore have expected our group profits to be increased by this amount. They have, however, fallen below our expectations by over £100,000 because of the increase in Purchase Tax on television and radio sets from 50 per cent to 60 per cent imposed by the Chancellor of the Exchequer in October, 1955. We decided not to increase our television prices to cover the increase in tax, consequently our margin of profit was considerably reduced.

Serious manufacturers reflecting on the present press propaganda for the stabilisation of existing prices, must feel that for them to give any undertaking on this issue would be unrealistic when they are dependent on a vast number of suppliers of services and materials from telephones to tungsten. What I can say now is that it is our intention to reduce our margin of profit on domestic radio and television sets, and, if prices on which we are dependent remain firm, not only could we stabilise our existing prices but we might well be able to reduce them. In addition, we are devoting an ever-increasing proportion of our effort in consolidating our hold on world export markets. These two actions will to some degree result in a reduction in profits, but we are fortunate that our dividend is covered so many times.

DEVELOPMENT OF OTHER INTERESTS

Last year I told you we were concentrating on building up those sides of our business which are not based on the popular television and radio set market, and I am glad to say that we have made considerable strides in these directions. Our scientific instrument companies have expanded and have shown an increase in profit contribution. Our television camera and Transmission Division has grown and has had outstanding success in underwater television application.

There is a great increase in the demand for television cameras for industrial purposes and it is now obvious that as automation evolves, the industrial television camera will play an ever increasing part in many automation schemes. Our Communications business has had considerable success and has gained a great reputation for the scientific advances incorporated in its designs.

Group earnings at £2,331,848 before Taxation are at a record high level, being some £130,000 in excess of the previous year, whilst Profits after taxation of £1,083,321 are some £45,000 in excess of the previous year.

The report and accounts were adopted.

PURNELL & SONS, LIMITED

(Printers and Bookbinders)

INCREASED TURNOVER OFFSETS RISING COSTS

The Twenty-second Ordinary General Meeting of Purnell & Sons, Limited, was held on September 28th in London.

The following is the statement by the Chairman and Managing Director, Mr W. Harvey:

I have pleasure in submitting to you the Accounts of the Company for the year 1955.

The Profit of the Group for the year, before providing for Taxation, is £627,357, as compared with £603,962 in 1954, an increase of £23,395. From this Profit has to be deducted Taxation £342,788 and added Interest of Minority shareholders in a Subsidiary Company's Loss of £2,216, leaving a balance of Profit for the year applicable to the Shareholders of Purnell & Sons, Limited, of £286,785, as compared with £301,572 in the previous year. To this year's Profit has to be added the balance brought forward from the previous year of £653,909, making a balance available for allocation of £940,694. From this amount your Directors have provided £100,000 as a Reserve for Contingencies, which together with Dividends to Shareholders amounting to £125,263 leaves a balance to be carried forward of £715,431, which compares with £652,119 brought forward from 1954. It will be seen that the Group Profit of the preceding year has been maintained for the year under review, and additional costs incurred during that year have been offset by increased turnover. You will observe from the Balance Sheet that the Fixed Assets have increased by £151,756, which is represented by additional Factory space, Houses for Employees and New Plant. During the year under review your Directors have acquired a substantial interest in the British Coated Board and Paper Mills, Limited, which Company produces a range of paper that your Company is now using and having regard to the importance of maintaining adequate supplies of its raw materials your Directors are of the opinion that this investment will be of much value to your Company in the future.

GROUP FULLY EMPLOYED

The early part of this year has seen a major dispute in the printing industry, largely turning upon the question of wages differentials between the many unions involved, and the result of the protracted negotiations between the printing employers and the unions have culminated in new agreements involving a substantial increase in costs. Even now these claims have not entirely culminated and the new wage rates are subject to a sliding scale related to the cost of living index. Whilst, therefore, I am able to report that our Group this year has been fully employed and I anticipate the Company's results in 1956 will be satisfactory the position must be regarded against this background of greatly increased costs. It is neither possible nor desirable, nor in my view in the long run in the interests of your Company that these substantial increases in wages should immediately be reflected in increased prices beyond the point that is absolutely necessary, and the ratio of expected profit must for the time being be affected accordingly. It has consistently been the policy of this Company to absorb its additional costs by increased turnover and we are making every effort to continue this policy in the Company's many printing and publishing activities.

Once again, I wish to pay tribute to my colleagues on the Board, all of whom give their full time to the Company and to express my thanks to the Staff and workpeople for their services during the year under review.

The report and accounts were adopted.

WESTERN MINING CORPORATION

PROBLEM OF CONTINUING INFLATION

The twenty-third annual ordinary meeting of Western Mining Corporation Limited was held on September 13th, in Melbourne.

Mr G. Lindesay Clark (the chairman) presided and, in the course of his speech, said:

(All figures are quoted in Australian currency.)

Net profit for the year was £291,536 which is approximately £77,000 higher than for the previous year.

Dividends from Central Norseman Gold Corporation and Gold Mines of Kalgoorlie comprised just over three-quarters of total revenue and was £31,608 higher than for 1954/55; due to our increased investment in Gold Mines of Kalgoorlie. Administrative expenses totalled £21,921 compared with £18,569 in 1954/55.

No call was made during the year on the 931,450 partly paid shares which were issued to members in November, 1954. The uncalled balance of these shares is 6s. 6d. (2s. 6d capital and 4s. premium). The intention is not to call up these funds until it becomes necessary. Maximum notice of the call, compatible with requirements, will be given.

The Company has maintained a steady dividend programme, Dividends Nos. 16 and 17, each of 6d. per fully paid share and 3d. per partly paid share, having been paid on August 19, 1955, and February 24, 1956, respectively.

Gold mining companies, in general, faced rising costs during 1955/56 as a result of the continuing inflation throughout the country. Only Gold Mines of Kalgoorlie was able to reverse this trend by effecting substantial reductions in treatment costs following extension of its mill to treat ore from all the mines purchased by it during the past two years.

The only change of significance in the Corporation's investments was the exchange of the 534,062 fully paid shares held in New Coolgardie Gold Mines No Liability for 149,537 fully paid shares in Gold Mines of Kalgoorlie, which company acquired the whole undertaking of New Coolgardie Gold Mines in October, 1955.

The Commonwealth Government announced, last March, that it would extend for a further three years to June 30, 1959, the provisions of the Gold Mining Industry Assistance Act. Under this Act companies whose costs of production exceed £13 10s. per ounce of fine gold produced are entitled, subject to certain conditions, to receive three-quarters of that excess by way of government subsidy with a maximum subsidy of £2 per ounce. This subsidy has been of marked benefit to high cost and marginal producers in the industry including companies in this group.

The companies of the Group in Western Australia produced and treated 1,117,527 tons of ore for a recovery of 300,080 ounces of fine gold.

The report and accounts were adopted.

CRYSTALATE LIMITED

RECORD PROFIT

The annual general meeting of Crystalate, Limited, was held on September 26th, in London, Mr Jack Lesser, chairman and managing director, presiding.

The following is an extract from his circulated statement:

The consolidated accounts of the Group show a profit of £111,688 as compared with £86,617 for the previous year. The taxation charge is £58,343 as compared with £35,750 to March 31, 1955. The taxation charge for this year is proportionately higher than for the previous year because for the year ending March 31, 1955, reliefs were obtained in respect of taxation losses brought forward.

Both the Balance Sheet of Crystalate Limited, and the Consolidated Balance Sheet of the Group continue to show a sound financial position. The optimism expressed in my speech last year has been confirmed by the results of this year's trading. Output and profit of the Group has been the highest yet achieved. The directors recommend an increase in the dividend to 12½ per cent as compared with last year's dividend of 10 per cent.

In thinking of the future the prosperity of those sections of the Plastics Industry in which your companies are engaged is sensitive to and dependent upon the conditions prevailing in the industries which they supply. The policy of your Board of steady expansion of both plant and factory space has already justified itself as shown in the results. These expansions should permit of even further increased output. Therefore, stockholders can retain full confidence in their Group's future. The report was adopted.

BRITISH HOMOPHONE

IMPROVED OUTPUT

The annual general meeting of The British Homophone Company, Limited, was held on September 26th in London, Mr Jack Lesser, chairman and managing director, presiding.

The chairman in the course of his speech said: The profit of the Group for the year under review is £47,444 compared with £28,819 for the previous year. The taxation charge for this year is £23,318, leaving a profit of £24,126 as compared with £13,271. The Consolidated Balance Sheet continues to strengthen and shows a very healthy position.

In the year under review the turnover and trading profits of the British Homophone Company were similar to those of the previous year. In my last year's speech I stated that steps were being taken to increase the volume of production. During the first four months of the current year these measures have borne fruit; the company's output has improved and a consequential increased profit is resulting. In 1937 your company entered into an agreement not to engage in the manufacture of commercial gramophone records. This agreement expires in March, 1957, and will thus permit us to enlarge the field of the company's activities.

With regard to Ebonestos Industries, Limited, it is gratifying that the trading figures confirm the information I gave you at the last annual general meeting. In point of fact, both turnover and profit for this year are the highest since the formation of the company.

I am glad to be able to report that to date the turnover and profit of Ebonestos Industries, Limited, are being maintained.

The report and accounts were adopted.

APPOINTMENTS

UNIVERSITY OF GLASGOW

APPOINTMENTS COMMITTEE

The University Court hope shortly to appoint an Appointments Officer. Salary about £1,000 per annum, according to experience and qualifications. F.S.S.U. and children's allowance. Further particulars may be obtained from the Secretary of the University Court, The University, Glasgow, W.2.

ROBT. T. HUTCHESON,
Secretary of University Court

THE UNIVERSITY OF LEEDS

SENIOR AGRICULTURAL ECONOMIST

Applications are invited for the post of Senior Agricultural Economist for general duties in the Provincial Agricultural Economics Service. Salary: Men, £1,070 x £45-£1,175 x £40-£1,260; for women the scale is at present slightly lower. It is expected that the Service will shortly be assimilated into University salary scales, which include family allowances in appropriate circumstances.—Applications (three copies), stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds, 2 (from whom further particulars may be obtained), not later than October 15, 1956.

SPERRY GYROSCOPE COMPANY LIMITED will be opening a new factory in the Bracknell new town, Berkshire, in the Spring of 1957. It is proposed to appoint a Chief Accountant to take charge of accounting functions in this new unit. Applications are invited from Chartered Accountants to fill this senior position. Applicants should be in the age group 30-37 years, and have at least five years' experience in a responsible commercial position. Experience of mechanical accounting is also very desirable. The person appointed will be expected to train his own staff and be capable of acting on his own responsibility. The salary range will be £1,500 to £1,750 per annum, according to experience. Housing facilities may be available. The successful applicant will be expected to spend approximately three months in the Head Office of the Group at Brentford, commencing at the beginning of 1957.—Applications, which will be treated in strict confidence, should be addressed to the Controller, Sperry Gyroscope Company Limited, Great West Road, Brentford, Middlesex.

THE NATIONAL FEDERATION OF BUILDING TRADES EMPLOYERS

invites applications from consultants with experience in making surveys and advising on costing, work study, clerical methods, planning and programming, and capable of taking charge of, and developing, the new Advisory Service for the Building Industry. Experience in supervising and directing the work of specialist consultants is essential. Work involves an appreciable amount of travel in the U.K. Salary according to age and experience. Contributory Pension Scheme.—Write, giving details of age, education, experience and present salary, to the Director of the Federation, at 82 New Cavendish Street, London, W.1.

APPLICATIONS FOR PRODUCTION TECHNICAL posts are *limited to men and women meeting the* following specification: Graduate (Science-Grafton Calibre-Equivalent qualifications); *subjects*—Science, Maths or Engineering; Ability to consider problems quantitatively with the drive, tact and personality to influence the adoption of the results of their work. Selected candidates will be trained in the technical background of the problems and will then be given responsibility (under the guidance of senior management) for particular projects. There are four vacancies—*three in the Home Counties and one in* Scotland. Successful applicants will probably be in the £ 600 range, 24-30. The positions are pensionable; the organisation is rapidly expanding and holds out interesting prospects of promotion.—Please apply Box 524.

APPLICATIONS ARE INVITED from men or women with a degree in science, who have experience of modern techniques of sales promotion and preferably some knowledge of printing. The successful applicant will be required to promote the sales of a number of learned journals for an experimental period of two or three years, and will receive a substantial salary. *Applicants up to sixty years of age will be eligible for* the post.—Box 522.

EXCEPTIONAL OPPORTUNITY FOR EXECUTIVE SALESMEN

FOR LANCASHIRE, YORKSHIRE AND SCOTTISH TERRITORIES

A large, successful, internationally known American manufacturing company, firmly established in Great Britain, requires top-flight executive salesmen of outstanding calibre to work with top retail executives in the above territories.

If you are between 25 and 35, and possess the following qualifications, *send a summary of your personal* particulars, education, and past and present employment.

(a) A successful record in sales and sales management in fields *requiring creative merchandising*, as well as sales ability.
(b) The flexibility to learn and apply new merchandising techniques, and the *understanding* that one must follow orders before being able to give orders.
(c) A desire to build a successful career with a large, powerful and *rapidly expanding company.*
(d) The ambition to work *for financial security* for yourself and your family.
(e) A good *education and personality*, energy and enthusiasm, ambition, a capacity for hard work and an excellent character.
(f) Present residence *in, or intimate knowledge of the* above-named areas.

All applications will be treated as strictly confidential, and should be sent to *Box 515.*

INTERESTING POSITION in large organisation concerned with advertising, for person capable of preparing economic and statistical *reports. Would suit B.Sc.* Economics or Associate-Fellow of the Library Association. Experience would rank equally with qualifications.—Box 516.

MANAGER OF INSURANCE DEPARTMENT required in world-known manufacturing business at Accrington. Attractive terms and *conditions.* Fully pensionable. Permanent situation.—Write, stating age, experience and present salary, to Box 517.

THE QUEEN'S UNIVERSITY OF BELFAST

The Senate of The Queen's University of Belfast invites applications for the post of Tutor in Practical Work in the School of Social Studies from January 1, 1957, or such later date as may be arranged. Initial placing on the salary scale of £650 x £50 to £1,000, plus F.S.S.U. benefits, *will depend on qualifications and experience.* Candidates should hold a University degree and have had practical experience in a family case work agency recognised *for training*, but arrangements to gain such experience can be made for a successful candidate who is otherwise well qualified. Post-graduate qualifications in specialist fields of social work would be an advantage. Applications *should be submitted by November 24,* 1956. Further particulars can be obtained from G. R. Cowie, *M.A., LL.B.*, Secretary.

WOOLWICH POLYTECHNIC

LONDON, S.E.18

Principal: J. S. Tait, Ph.D., B.Sc., A.R.T.C., M.I.E.E., M.I.Mech.E.

Applications invited for Assistant Grade II to teach Economic History, Political History and Economics. Candidates should be Honours Graduates, research and teaching experience an advantage.

The proposed salary scale is within £650-£25-£1,200, *plus* London Allowance of £30-£45, *according to* qualifications and experience.

Particulars and application form from Clerk to Governors, to be returned by October 13, 1956.

MILK MARKETING BOARD FOR NORTHERN IRELAND

APPOINTMENT OF GENERAL MANAGER

The Board invite applications from suitably qualified persons for the post of General Manager of the Board.

The salary scale is £2,000 x £100-£2,500 per annum, and the commencing salary will be determined by reference to qualifications and experience.

Applicants, who must be of British nationality, must have had wide experience, in a senior administrative capacity, of the problems involved in the management of a large-scale marketing organisation, preferably in connection with milk. The successful applicant will be responsible, subject to the direction of the Board, for the general control of all the Board's activities.

Preference will be given to suitably qualified ex-Service candidates.

The appointment will be subject to the Conditions of Employment laid down by the Board, which include a provision that eligible staff shall contribute to the Northern Ireland Local Government Officers' *Superannuation Scheme.*

Applications must be made on the prescribed form, copies of which may be obtained from the Secretary, Milk Marketing Board for Northern Ireland, Castlehill Road, Belfast.

The closing date for the receipt of applications will be Saturday, October 27, 1956.

MARKET ECONOMIST—*A leading firm of Seed-crushers, Edible Oil Refiners and Feeding Stuffs* Manufacturers requires the services of a young man to study and advise on market *trends of raw materials.* He will be required to obtain and summarise relevant information from official and non-official sources, both in the U.K. and overseas. He will also have to collect, analyse and present statistics. Applications are invited from men aged 25-35 who are able and willing to spend at least three *months of the year travelling abroad.* Previous experience in the Oilseed, Oil, Oilcake and Grain Markets or of statistical work relating to these markets, is desirable. An honours degree in economics is an advantage, but not essential. The starting salary will be £1,250-£1,500 per annum, according to age, qualifications and experience. The post is pensionable.—Please apply in writing to The Secretary, J. Bibby and Sons, Ltd., King Edward Street, Liverpool, 3.

MARKETING MANAGER, age 30-40, required for interesting *permanent* post in Southern Rhodesia with young and vigorous company. Candidates, who should have sound educational qualifications and dynamic personality, must be thoroughly experienced in sales planning and promotion of consumer goods and possess proved successful sales record in highly competitive *markets.* Previous African or other overseas marketing experience an advantage. Agricultural background preferred. *Outstanding opportunity for right man.*—Applications (Quoting No 1277), *stating* salary required, to Personnel Manager, Fisons Pest Control Limited, Bourn, Cambridge.

ECONOMIST—Foreign Petroleum and Petrochemical Industries—*wanted* by major U.S. company in the chemical and petroleum industries. We are seeking a *man* with broad experience in foreign economic and market conditions in the petroleum and petrochemical fields. He must have sound analytical mind and be thoroughly *experienced in guiding management* on basic economic market and technological trends, particularly as applied to areas outside the U.S. To qualify, applicants should have had formal education in economics. Sound experience in chemical engineering would be helpful, but is not essential. This is a demanding, responsible position on a staff level, *providing a five-figure* salary. All inquiries will be treated with confidence. Write complete *details* of background and experience to Box 620, Room 1201, 230 West 41 Street, New York 36 N.Y.

ENTHUSIASTIC YOUNG MEN, preferably not over 30 with real zest for a challenging Sales career, offering high rewards, promotionally and financially. Should apply at once to The Personnel Director, Burroughs *Adding Machine Limited*, Avon House, 356-366 Oxford Street, London, W.1 (quoting Ref. A 10/56). Enthusiasm and zest, however, must be combined with proved knowledge and business experience. Good School Certificate or G.C.E. (O) certificates essential; H.S.C. or G.C.E. (A) preferable. Accounting Qualification and *experience* are desirable, but sound knowledge of the subject is essential. Branches will be arranged at *the nearest* Burroughs

AUSTRALIA—UNIVERSITY OF QUEENSLAND

Applications are invited for the position of Lecturer in History. *Applicants* should possess an Honours Degree in History, and should indicate their special fields of interest, experience in teaching and research, and any published work.

Salary £A1,300-£A1,750 per annum.

Further particulars are obtainable from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on November 16, 1956.

THE ECONOMIST Intelligence Unit requires an Economist able to write simply on economic and other current affairs subjects. *Starting* salary up to £750 a year.

Apply to the Managing Director,
5 Bury Street, London, S.W.1

Applications are invited for a

SENIOR APPOINTMENT

in the Secretary's *Department of*
RICHARD COSTAIN, LTD.,
122, Westminster Bridge Road, London, S.E.1.

Candidates should be aged 30-45 *and possess* one of the following qualifications:—
A.C.A., A.C.I.S., A.S.A.A., or A.A.C.C.A.

Experience in qualifying must include at least five years in the Secretary's department of a group organisation. A sound knowledge of U.K. *Taxation is necessary.*

A commencing salary of up to £1,300 per annum will be offered.—Applications should be addressed to the Chief Personnel Officer.

A STATISTICAL ASSISTANT *(woman)* is required in the Market Research Department of a Nationally known manufacturer of consumer goods in South London. Candidates should be graduates or possess a qualification in statistics. Salary from £450 per annum, according to qualifications and experience.—Apply Box No. 510, Dorland Advertising Ltd., 18-20 Regent Street, London, S.W.1.

THE IMPERIAL TOBACCO COMPANY have an opening for a young graduate with a *good degree* in Economics in the Economic Section at the Company's Head Office in Bristol.—Applications, giving details of academic background, should be addressed to *The Staff* Secretary, The Imperial Tobacco Co., Ltd., Bristol 3.

WELL-KNOWN CITY INVESTMENT BANKERS require trained Statistician-Economist with some experience. Good salary and prospects.—Write, giving *details, to Box E.726, c/o 191 Gresham House*, E.C.2.

A VACANCY OCCURS in the Head Office of The National Mutual Life Assurance Society for an actuarial clerk, to be deputy to the Head of *Department.* The position calls for a student who has passed at least Part II and Part IIIA of the Institute, or the *equivalent* Faculty, examinations. The successful applicant will have every opportunity of obtaining a wide experience of life office work, which should be of considerable assistance to him in his later examinations. A good salary will be paid to right applicant.—Apply to the Actuary and Manager, 39 King Street, Cheapside, London, E.C.2.

LADY HONOURS GRADUATE in Economics, Accountancy and Commerce, desires position in which keen interest in Economic Survey and Statistics could be beneficially utilised.—Box 521.

GOOD ADMINISTRATOR (30s), *knowledge of publicity*, seeks fresh opening.—Box 514.

MANAGEMENT EXECUTIVE (40), F.C.W.A., A.C.A., A.C.I.S.—five years' specialist experience on Management Accounting in light electrical and mechanical *engineering industry*—seeks permanent progressive position offering wide scope. Present salary £2,250 p.a.—Box 520.

DEPUTY SECRETARY (40) of large institution, legal qualification, *administrative and commercial experience*, seeks Executive post. Salary required £2,500.—Box 513.

SUCCESSFUL TUITION FOR THE B.Sc.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two *examinations for* Lond. Univ. B.Sc.(Econ.) (three if Entrance is included). Moderate fees, *instalments.* Over 3,000 Wolsey Hall students have secured this valuable degree since 1925.—Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

FRUSTRATED FLAMENCO SINGERS: Nothing opens the throat more than *the sight* of a bottle of Duff Gordon's H.L. *Old Sherry. Try a glass*, with or without guitar accompaniment. Olé! Olé!

LARGE AND SMALL collections of *books and* pamphlets on Economics, Politics and Sociology of any period urgently required. We view by appointment in any part of the country.—Box 519.

B.Sc.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE provides postal tuition for the above Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts. The College, established 1887, is an Educational Trust. Highly qualified Tutors. Low fees. Prospectus of U.C.C. Courses for London Degrees and Diplomas, G.C.E., free from the Registrar, 60 Burlington House, Cambridge.

THE Economists' Bookshop has the *world's widest range* of books on Economics, Politics, History, Anthropology and the Social Sciences. World-wide mailing service. Second-hand books bought.—11-12 Clements Inn Passage, Aldwych, London, W.C.2.

EXPERT POSTAL TUITION for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, *General* Certificate of Education, etc. Also many non-examination courses in business subjects.—Write today for free prospectus—and/or advice mentioning *examination or subjects* in which interested, to the Secretary (6912),
METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4.

SOME FACTS ABOUT ATOMIC POWER . . .

[for peaceful use]

▸ ELECTRICITY	The electricity produced by atomic power stations is exactly the same as electricity produced by any other means. The nuclear reactor simply replaces the conventional coal or oil burning plant which produces heat in thermal stations.
▸ EFFICIENCY	Uranium 235 is theoretically capable of producing 3 million times the energy obtained from an equal weight of coal. At the same time it can save the cost of haulage, storage and handling and plant maintenance as well as the cost of ash disposal.
▸ SUPPLY	The world's store of atomic fuel is virtually inexhaustible — whereas coal and oil supplies are limited and insufficient to meet future world needs.
▸ CONVENIENCE	Nuclear fuel is compact and easily transportable. It can be carried to parts of the world where the transport of conventional fuels is impossible or where means of transport do not exist.
▸ SAFETY	Boiling water reactors are safe and in the United States are being built in centres of population. There they are also being erected at various universities for training students in this all-important development.

MITCHELL DEVELOPMENTS in the field of atomic power are the logical outcome of 35 years' exceptionally wide experience in all branches of engineering and electrical supply.
The agreement between Mitchell Engineering Ltd and AMF Atomics Inc of New York will undoubtedly have far-reaching effects in applying atomic power for the benefit of mankind.

MITCHELL COMPANIES are at present engaged on three important contracts for the United Kingdom Atomic Energy Authority.

Duties go with Engineering Leadership

In engineering on a world-wide basis as in all large scale international activities, it is the duty of the leaders to open new frontiers. Also, it is incumbent on the leaders to share the benefits of their advanced position with others.

One important way of recognizing this duty of leadership is placing engineers, chemists, metallurgists, pilot plant time and laboratory time at the disposal of technical committees of professional societies and associations. At present Kellogg personnel are engaged with the activities and development of over seventy scientific and engineering committees and working sub-committees. Many of today's accepted advanced design concepts were first introduced to the engineering profession by Kellogg engineers serving on these committees.

Authorizing time and encouraging personnel to prepare papers for technical societies is another way of fulfilling this duty. Permitting personnel to share knowledge by writing for the industrial and technical press is another facet of acknowledging the duty of leadership. Sponsoring technical books such as the recent volume authored by Kellogg entitled "Design of Piping Systems" is still another way of respecting this duty.

The technical staff at Kellogg House are part of this international engineering leadership. They bring to their clients the most advahced engineering in the field of petroleum and petro-chemicel plants. To keep this technical staff fully abreast of advances in refinery and petro-chemicl process engineering, metallurgical developments; equipment design, corrosion prevention and other specialized engineering areas, department and section heads as well as group leaders periodically are rotated to the M. W. Kellogg Company offices and research laboratories in the United States. Equally important in maintaining scientific and technical leadership are the constant revisions of the Kellogg manuals on design practices, engineering procedures, and material equipment specifications. This leadership has been seasoned by the opportunity and experience of serving the leading oil and chemical organizations throughout the world.

When considering petro-chemical plants or oil refineries it will be to your advantage to consult with Kellogg International Corporation.

Shipping bicycles in CORRUGATED boxes saves cost, simplifies delivery

Easy as a British bicycle is to ride, it presents a major problem as an article for shipment. Large size, protruding elements, damageable parts are a challenge for any packaging material. Today, the best answer is found in individual boxes of corrugated board.

Bicycles packed in corrugated boxes require only a minimum of disassembly. Then shippers and dealers don't have to handle the bicycles themselves—only the boxes.

Corrugated's light weight makes handling easier all the way from packing to unpacking. And it saves a significant amount of shipping cost. Yet it's strong enough to permit stacking without buckling—for worth-while space economies in both shipping and warehousing. In transit, display printing on the sides makes every box do extra duty as a traveling billboard.

Whenever you have something to pack—bulky, heavy, light or small—think first of corrugated. And have a talk with your nearby boxmaker.

Langston doesn't sell corrugated, only the machines that make it. Since 1902, these machines have led the field in efficiency and dependability. *Samuel M. Langston Co., Camden 4, N.J., U.S.A.*

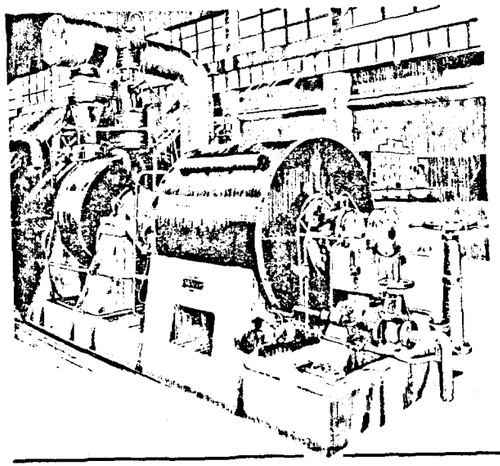
BOILER FEED PUMPS

Electrically Driven

meet every requirement of modern power station practice. They are inherently stable, unaffected by large temperature changes, in perfect hydraulic balance, and have effectively cooled glands. In design and construction, Weir Electrofeeders are based on unrivalled technical and practical experience. We specialise in boiler feeding and can advise on all power plant auxiliaries and type of pump most suitable.



Turbine Driven

are designed on thoroughly scientific principles; noiseless in operation, and free from vibration. Exhaust steam contains no oil and is available for process work or for direct contact feed-heating.

The Chairman speaks . . . on

AUTOMATION

'Although the word is new, the ideas behind it are not. For decades we have been applying schemes of advanced mechanisation . . . Without the continuance of such advances in productivity we could not hope to compete in the markets of the world.' *Sir Alexander Fleck, Chairman of I.C.I. Ltd., in his annual report published in The Birmingham Post, June 15th 1956.*

'The prevalent idea that we are on the eve of displacement of large numbers of workers by automatic brains and robot-manned factories is unrealistic to the point of being fantastic. To me the problem seems to be whether the older industries can lessen their demands for workers rapidly enough to permit new industries, which grow up year by year, to satisfy their demands for manpower.' *Mr. John Pascoe, Chairman of British Timken Ltd., in his annual report published in The Birmingham Post, May 31st 1956.*

Companies wishing their reports and statements to reach a wide and influential market throughout the United Kingdom's most important manufacturing centre, publish them in . . .

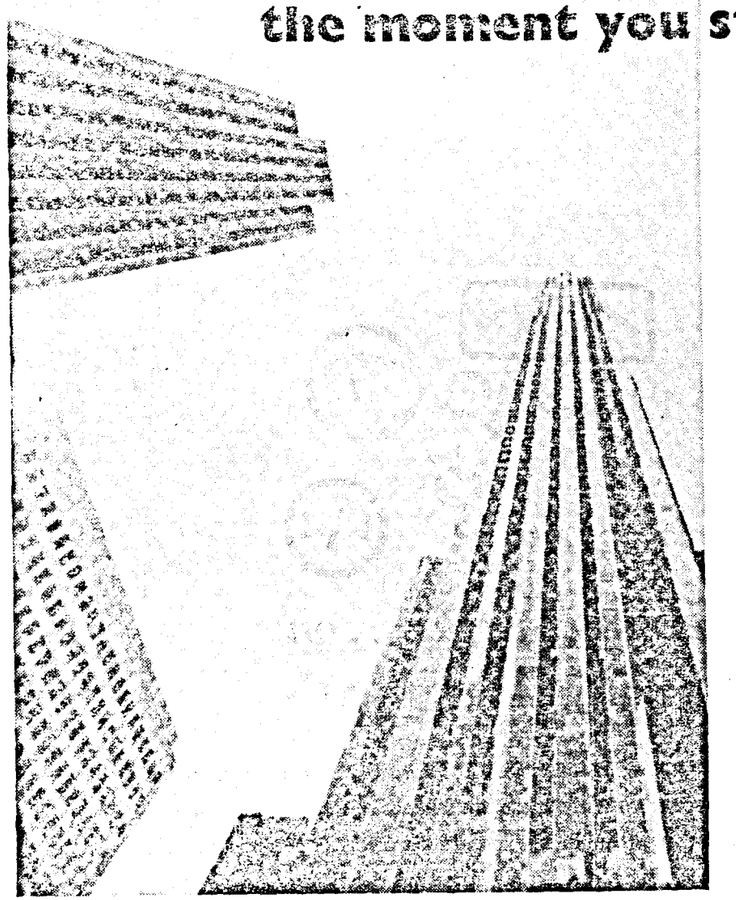
You can start your business trip at Southampton...

...you're in America the moment you step on board



*IN THE PERFECT ATMOSPHERE FOR BUSINESS CONTACTS**

ALL THE THINGS that say "America" — the easy courtesy of the Deep South, the streamlined efficiency, the glamour, the glitter, the heart-warming friendliness—all these are yours only two hours away from London!

Over the fifty feet of gangplank onto the famed "United States" or her running-mate the "America" and you're *in* America; the luxury, the hospitality and the gaiety of this friendly country surround you.

And if you're a businessman, remember that here is the perfect atmosphere to lay the foundations of a really successful business trip. In informal, friendly surroundings you meet the men who might make all the difference. The extra reserve of speed of the "United States" (the Blue Riband holder) helps you, too, for it means that she has an outstanding record for punctuality. And if you have a business appointment soon after you land, that's important!

But there's fun aboard, too, lots of it. You'll find unexcelled food and superb wine, magnificent cinemas equipped with CinemaScope, top-grade orchestras, every "keep-fit" facility, well-stocked libraries, and, of course, just rest and relaxation if you prefer. Yes, the few days that separate you from New York pass all too quickly. You travel fast in the utmost comfort when you travel by United States Lines.

***IMPORTANT**

MEMO TO A BUSINESSMAN

As a British businessman, you have great advantages to reap if you travel by United States Lines. You have time, first of all, to adjust yourself to the American atmosphere and the American *tempo* before you arrive in New York.

And, most important, a fresh contact is more easily made under the sociable conditions aboard ship than over an office desk; the people you meet may turn out to be more than just good friends—they may be useful friends.

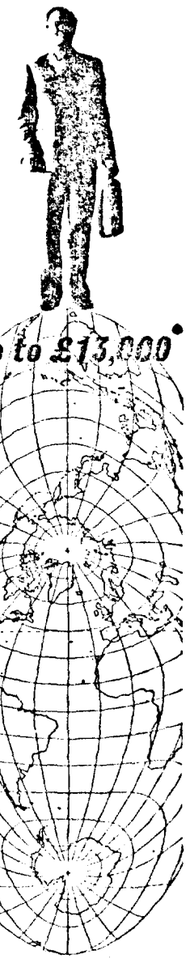
they saw this man—



built exports from zero to £13,000

'Why don't we go into the export field?' A firm of weaving equipment makers began asking that question in 1950—and they went the right way about getting a sensible answer. They saw the man from E.C.G.D. He told them bluntly that there were big risks as well as big profits in export—and that some of those risks couldn't be insured against commercially. Then he explained *how* an E.C.G.D. policy would give them the *comprehensive* cover they needed. They took out a policy—and took the plunge. They've never regretted it. In the first year their export turnover was £1,000. Four years later it had multiplied 13 times to £13,000! How much did they have to pay in premiums? *About 2/11d. a day over the four years.* Are *you* thinking of branching out into export? Then get on to your local E.C.G.D. office and ask for the E.C.G.D. man to call. If you're already an exporter, he'll be calling on you anyway. Don't you think you'd better see him—and listen to what he's got to say?

With acknowledgement to John Bentley Illustrations & Son Limited.

This is a true story, but because business between E.C.G.D. and exporters is strictly confidential any details which could identify the exporter have been left out.

E·C·G·D

E.C.G.D. is a Government Department set up to help exporters. Its services are fully explained in the booklet 'Payment Secured'. Write for a free copy.

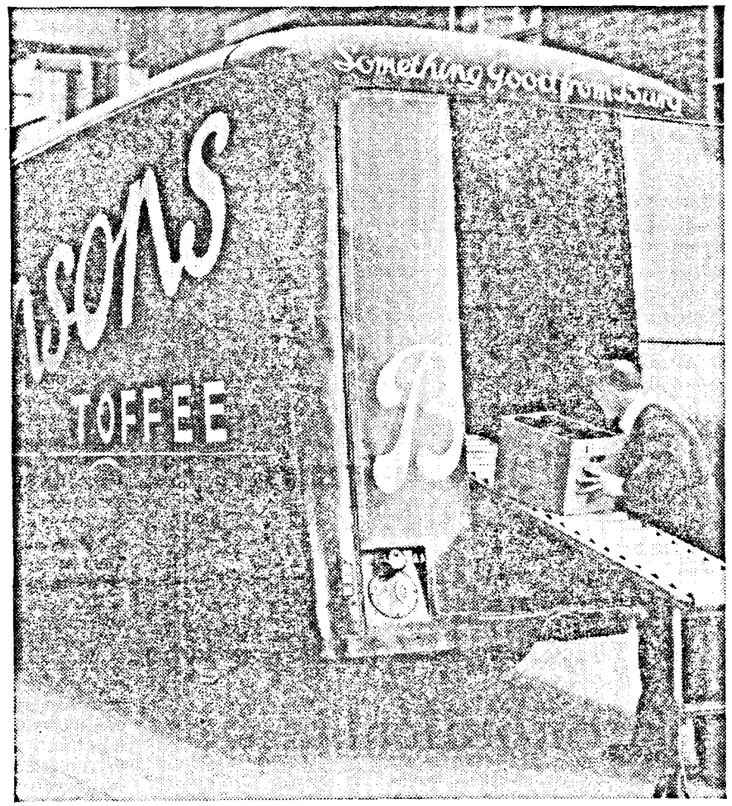
One man helped this confectionery firm to overcome invoicing delays



Bensons' deliveries sometimes had to wait for invoices—but the Burroughs man, Mr. R. Sudall, was able to suggest a quicker system using Burroughs Sensimatic accounting machines.

Bensons Confectionery Ltd., of Bury, have a large home and export trade in toffees and boiled sweets. Last year deliveries were hindered because loaded vans were kept back while invoices were being prepared. More staff were put on the work, but there were still delays during peak periods.

Bensons contacted Burroughs, who sent one of their team of accounting experts—Mr. R. Sudall. Together with Bensons' accountants he made a thorough analysis and suggested a system using two Burroughs Sensimatic accounting machines.

Now, these machines prepare invoices in *one operation* direct from travellers' orders—and accumulate the grand total of all invoices. Each machine prepares 30 to 40 invoices an hour, and loads now go out as fast as they can be packed. Bensons are already coping with a 50% increase in activity, and anticipate further orders through their prompt deliveries.

WHATEVER YOUR BUSINESS

If you have an accounting problem, the Burroughs man can help you. He is an expert on modern accounting systems, and well able to work with your accountants or auditors. Backed by Burroughs' world-wide experience, he will make a full analysis and suggest the most economical, *workable* solution. If he thinks no change advisable, he will say so; if he does recommend a change, he will make a detailed plan and help you get it working smoothly. Call in the Burroughs man—you're committed to nothing. His advice is free.

Burroughs make the world's widest range of business machines. You'll find your local Burroughs office in the telephone book.

Pilot plant development is essential for the rapid, efficient and economical transition of research results from laboratory or bench scale to factory scale. But few firms have the facilities, the space or the trained personnel to undertake this work without dislocating normal production

Pilot plant development is one of the most important services offered to industry by Sondes Place Research Institute. Over 4,000 square feet of floor space are available in buildings supplied with steam, gas, water, compressed air, vacuum lines and electrical services. Removable roof sections and floor pits allow large units such as distillation columns and scrubbing towers to be accommodated

2+2=5

When chemists, chemical engineers and mechanical engineers work together (as they will for you at Sondes Place) their combined service to industrial research and development is greater than the sum of their isolated efforts... May we send you our booklet about our services?

OVERHEARD AT THE LOCAL NEWSAGENT'S SHOP

What kind of people read the News Chronicle?

"Well, let me see now. There's Dr. Fothergill and there's Mr. Darlington. He's the Works Manager in that factory at the top of the road. Then there's Mrs. Rolandson. She's a buyer for one of the big stores. Then, turning to the new housing estate, we've got Mr. Harris. He's just started his own building firm. Next door to him lives young Mr. Edwards. He's a factory foreman. And three doors up the road the News Chronicle is delivered every day to Mr. Hawkins, who teaches at the Grammar School."

"So by and large, the News Chronicle is read by people of responsibility. The sort of people who like to make up their own minds about news."

"Oh yes, no getting away from it. And of course, demand for the News Chronicle is increasing too."

"It certainly is. Do you know the average net sale of the News Chronicle for the first six months of this year was 1,441,438. That's 188,660 up on the same period last year. No other national daily newspaper in the country had an increase as big as that. As for readership, according to the independent Hulton Survey, the News Chronicle has gone up by 680,000 since the 1955 Survey was published. This is a percentage increase of 27.8 and it also beats that of any other national daily. Just now I asked you what kind of people read the News Chronicle. Your answer confirms my belief that News Chronicle readers are probably the most valuable part of the mass market. And I'll tell you something else, the News Chronicle carries more financial advertising than any other popular national daily. This is the advertising which is aimed at investors."

"That suggests News Chronicle readers have money to spend, too."

"That's just what I told my advertising agent."

What goes into 5,000,000?

One thing that can is your advertising message. It can go into 5,000,000 intelligent minds—5,000,000 minds belonging to people who will *read* what you have to say. The way in is through The Reader's Digest.

Why do the men and women who enjoy this magazine each month provide such a productive market? One reason is that they are comfortably above the average in income—over a million of our readers own their own houses, and nearly a million have motor-cars. Well over two million of them are women, with the household spending responsibilities that this implies.

But more important still is our readers' *character*. The Reader's Digest deliberately sets out to please people with inquiring minds, receptive to new ideas. Its phenomenal success—over a million sale in Britain, a *world* sale of over eighteen million—is the measure of the opportunity it offers to the advertiser. Its readers really *read* it—pick up each issue many times as they browse through its articles. There is ample evidence that they read the advertisements, too. And they are exactly the kind of people, better informed than most, whose example is apt to influence their friends.

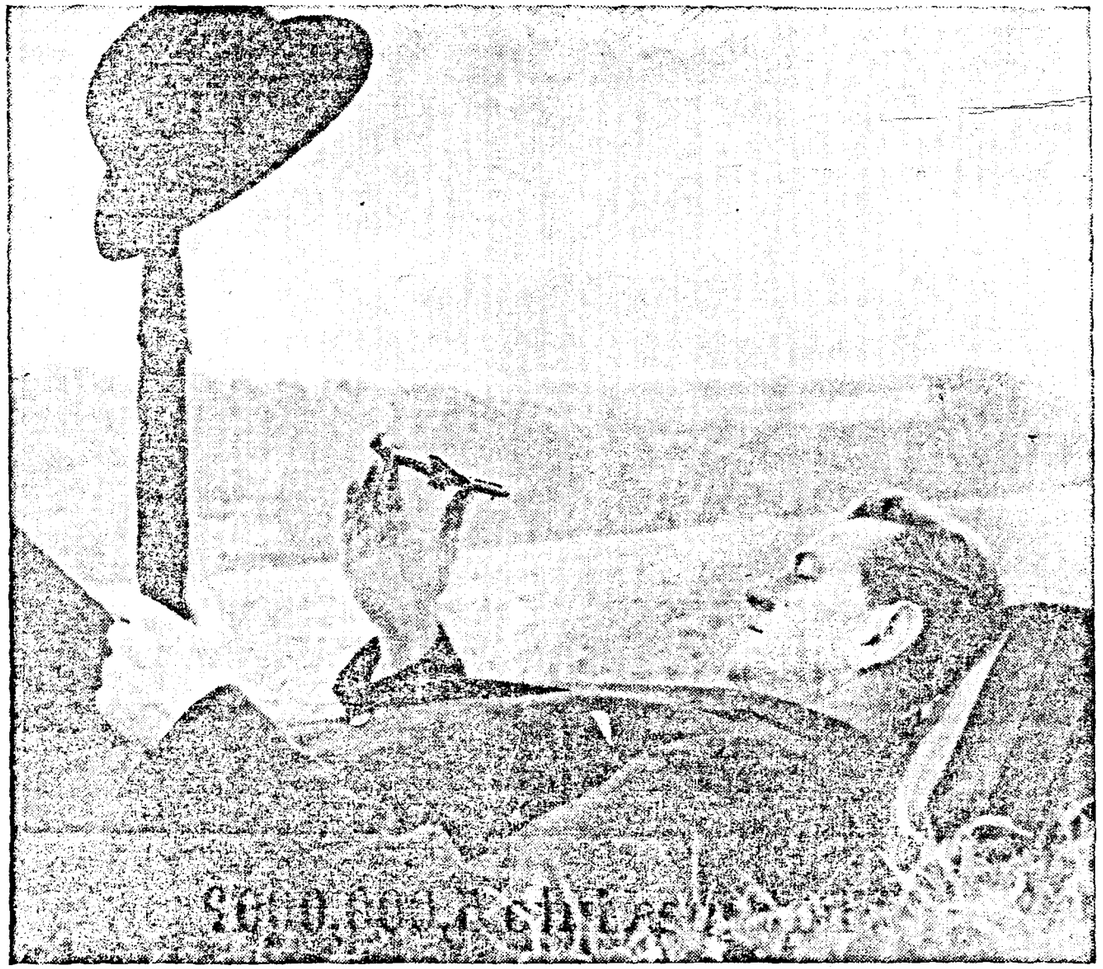
It is because of the character of its readers and their pleasure in *reading* it that The Reader's Digest is one of the great advertising media of Britain.

OVERSEAS *International editions, 27 of them, cover key export markets. The British exporter can book space in London and, usually, pay in sterling.*

NO WONDER IT'S CALLED

The Reader's Digest

A MAGAZINE FOR *READERS* WITH A GUARANTEED 1,100,000 SALE



A challenge to alert minds

The great and swiftly growing petroleum chemicals industry, in which the Shell Chemical Company has always played a leading and pioneering part, is the one industry essential to practically all other industries. It is now supplying the major share of the nation's chemical needs and opening up a new age of more efficient processing and better products. As Shell scientists delve ever deeper into petroleum, new base materials are being developed—materials that reveal fresh worlds of possibility for questing minds, that are stimulating new ways of thinking in dozens of industries, from surface coatings to agriculture, from laundering to electronics. Here, for the adventurous, is the inspiration for new departures, to capture markets and enrich living standards. In this new world of chemicals... *you can be sure of Shell.*

Channel Crossing

"ANGLO-FRENCH friendship has never been so firm," said Sir Anthony Eden last week; and the communiqué issued after his talks with M. Mollet restated this claim at length. Certainly the *Entente Cordiale*, now in its fifty-second year, has a far from decrepit look at the moment. The Prime Minister's own visit to Paris, and the news that the Queen will visit France next spring both testify to its present health; and so does the Government's new enthusiasm for free trade arrangements with Europe, though here the connection with the *Entente* may not catch the eye at first glance. But this clasping of hands across the Channel at an uncomfortable moment in the development of the Suez crisis inevitably evokes, on many sceptical faces, a certain smile. Sir Anthony's visit—and even the Queen's—could so easily be seen as no more than an attempt to revive France's confidence and regain its goodwill after the recent strains. And the way the Franco-British appeal to the Security Council was announced—just after Mr Dulles's return to America—might be taken to imply that the Government felt so strongly obliged to underline its solidarity with France that it was quite prepared to underline its lack of solidarity with the United States. It is not surprising that some should claim to discern, behind all the heartening talk, merely the sight of "two aged colonialist ladies" standing skirt to skirt the better to wield their brollies against their young persecutors.

If that suspicion were justified, there would be little to say in favour of maintaining the *Entente*. The modern world has no place for a pair of petulant old ladies, unwilling to admit that they are no longer strong enough, even in concert, to take on all comers, united only when challenged by Asian-African nationalism, and blind to the fact that by aligning their crinolines they simply provide a better target for anti-colonialist catapults. Britain and France were once known as champions of nationalism against the sterile legitimist dogmas of the Holy Alliance; they would be false to their own best traditions if they sought to shape a new Holy Alliance today. True, their original *Entente* was an agreement about spheres of influence in Africa and elsewhere; but it was an agreement intended to remove points of friction between two nations which were no longer expansionist, and it was neither anti-nationalist nor in any other way opposed to the trend of the times. In later years, developing into a flexible, organic bond, it helped to rally democratic Europe in the face of danger in 1948 as in 1914. But since 1948 it has been perhaps overshadowed by new multi-national instruments and groupings, defensive and economic, European and inter-continental. Is there still a worthy role for a mere *au pair* arrangement in the age of the North Atlantic Treaty and the OEEC, the six-nation coal-steel community and common market, the Baghdad and Manila pacts, and the towering military strength now concentrated in the hands of two new "super-powers"?

There is indeed such a role. Unity at this moment between Britain and France as the two nations whose interests were most directly affected by President Nasser's action at Suez is, admittedly, natural and desirable. The absence of a forehanded policy and programme for the Middle East—concerted between these two, between them and the United States and with the Middle Eastern countries—is the most lamentable aspect of the Suez crisis. But the crisis is in itself no basis for the *Entente* of the future; and, certainly, to extend that basis now in the direction of a rigid resistance to every Asian and African claim would have disastrous results. Moreover, those who want to see the *Entente* survive have no need to scratch around to find work for it to do. An urgent task lies close at hand: a task that is positive, not simply defensive, a task which calls for close Franco-British teamwork, but which is of the greatest importance not only to the real interests of the two partners themselves, but also to the wider community of nations to which both belong.

★

Several current developments, not all of them at first sight connected, indicate the nature of this task. For the past six months the Nato allies have been anxiously wondering how to put new life into the Atlantic idea, but their search has been unfruitful; the Pearson committee set up by the Atlantic Council, which has just been reviewing its findings in Paris, does not seem to have mustered many encouraging suggestions. And the primary task of military readiness remains. The chain reaction set off by American and British talk of smaller armed forces has produced predictable results in Western Germany, where the Federal government has announced its decision to limit conscription to twelve months. Almost simultaneously Dr Adenauer launched in a speech at Brussels a new formula for West European unity (embracing Britain), derived from the argument, a novel one in his mouth, that the United States may sooner or later decide its attitude to Europe quite arbitrarily and with scant regard for European feelings. And now the Government has announced a firmly positive—and wholly commendable—approach (which is discussed in a note on page 25) to the idea of a European free trade area built around the proposed six-nation common market. Political as well as economic reorientations are ultimately implied in this new attitude

To many minds, there will seem to be a natural connection between the idea of a "third giant" economic grouping, big enough to meet the competition of the dollar as well as that of the rouble, and the idea of a West European "third force" with defence and political as well as economic aims and mechanisms. But it is vital here to make very clear distinctions between the desirable and the dangerous. The idea of building up a "third giant" obviously contains the seeds of both hope and disaster. The motives involved, like most human motives, are mixed. Britain's new attitude to the European economic projects may stem partly from fear of the economic consequences of inaction, in face of a closer association of its continental competitors and clients, partly from the desire to help France to get over the shock of Suez; but it springs, too, one must earnestly believe, from a realisation at last of the priceless invigoration that freer trade and a broader competition can bring both to Europe at large and, particularly, to the still soft-muscled British economy. France's present enthusiasm for the *Entente* may largely reflect a sense of being let down by the United States—and so may Dr Adenauer's new European initiative; but they reflect, too, the "European idea."

Whatever the mixture of motives, there seem now to be new possibilities of drawing together the resources of continental Europe and of Britain, backed up in some degree by the Commonwealth. But the alternatives that confront the West must be frankly faced. On the one hand, there is the danger, which should not be blinked, of a plunge into a new European experiment motivated by anti-Americanism and by hostility to Asian-African nationalism. On the other, there is a fresh chance, which should be seized, to erect on this side of the Atlantic the sturdy pillar which Americans themselves have long wished to see bracing this end of the oceanic bridge. It is worth noting that Mr Dulles during his press conference on Tuesday, gave strong expression to this wish and a hearty blessing to those of the new projects that would help to realise it.

The first of these alternative courses would satisfy two of Moscow's dearest aims: the isolation of Western Europe from America and from the "Bandoeng" world. The second, far from alienating the United States, could transform into reality the vision which internationally minded Americans have begun to think delusive—the vision of a self-respecting Western Europe, a friend and partner of the United States, not its perennial suppliant. This is not only the path of idealism; it is the path of interest, too.

★

Here lies the real task for the *Entente*. Britain and France can prove that their partnership of half a century still has a unique value. United, not merely in defensive but in constructive action, they can help continental Europe and the Commonwealth to build a solid edifice that will support the Atlantic bridge, not strain it. Divided, or associating only fitfully and without forethought when their narrowest interests happen to coincide, they can do little or nothing to check the growth of shortsighted, corrosive, parochial, "third force" neutralism on the Continent and of disenchantment in America. The task before them now is to remould the *Entente*—whose outstanding characteristic is precisely that it has been regularly remoulded throughout its existence to meet a series of fresh challenges—so that it will answer to the needs of tomorrow, not those of yesterday.

Report from Blackpool

Mr Gaitskell scored a quiet triumph at this year's Labour conference; Mr Bevan marked up a very noisy one. The despatches below are from our special correspondents attending the conference. They discuss how far there seems to be a firm foundation for the hopes that have been expressed this week that Labour may have found a new unity—or for the opposing stories that the party may face a new period of internal strife. They also discuss what effect the conference is likely to have on Labour's policies.

THE first thing one needs to say about the Blackpool conference is that Mr Gaitskell handled the task of leadership, especially in the crucial opening debate on Suez, quite magnificently. The second thing one will be asked to say is whether Mr Bevan's election to the treasurership seems to presage a new period of unity on the left—or something quite the opposite. Here the observer from Blackpool can only report a personal opinion. Unfortunately, that opinion must be that the Mr Bevan who has been seen in action this week, despite his good behaviour at the *Tribune* meeting on Wednesday, did not look precisely like a prospective player of happy families. It seems only too possible that familiar pressures may now again be about to crowd in upon Mr Gaitskell; what is unfamiliar is the quiet confidence that one is beginning to feel about his capacity to control them.

On arriving at Blackpool on Sunday night one found that talk of these pressures was already more widespread than most pre-conference comment had anticipated. The apparently desperately close running in the Brown-Bevan battle for the treasurership, and the rather too smooth operating that was going on in the tap-rooms to pick up odd shavings of woodworkers' and shopworkers' votes, had first rattled the factions' nerves and then rattled their tempers: the old split between Bevanite and non-Bevanite leered uncomfortably across the lobby and lounge of the Imperial Hotel. Not, admittedly, that the split approached the bitterness of the civil war of some recent years; but the atmosphere was marked by what Mr Nigel Dennis would call the "rustle of withdrawing woollens." Down the middle of the split, moreover, walked two imposing figures. One was that of Mr Frank Cousins, busy agreeing with nobody in particular but reportedly doing so in a sufficiently uninformative way to give both factions the willies; the other was that of Lord Attlee who, on what he regarded as a purely social visit, was buttonholing Bevanites and ex-Bevanites with just sufficient abandon to remind people that the old leader was considered to be less identified with the right than is his successor. "Attlee's lobbying for Nye as treasurer," said one libellous cynic; and the point of that remark lay several layers deep.

It is difficult to say how far these tensions were merely a smoke-room miasma, how far they had communicated themselves to the mass of delegates who streamed out of their boarding houses into the Winter Gardens next morning. Looking back, however, even though most of the newspapers have not agreed with this, it seems fair to say that the crux of the conference was reached in this opening session; it was reached because for the first two hours the leadership looked as if it might be heading for disaster. The story of that critical opening debate on Suez is told in one of the notes on page 21. Here it is only necessary to say that when Mr Gaitskell rose to speak, with the floor in far too full cry on Colonel Nasser's side, it looked as if the whole machinery of the conference might be rearing away out of Mr Gaitskell's hands; when Mr Gaitskell sat down he had not only restored the conference to responsibility, but had turned its ovation towards himself.

Thus, at twelve-thirty on the first morning, the conference reached what was really its climacteric. The major apprehension one had felt before the Blackpool meeting was whether Mr Gaitskell, who had surprised so many people in the past year by the firmness of his control over the Parliamentary Labour party, would be able to exert a similar magnetism over the party conference; the latter task looked harder, even if not—do not let us fool ourselves about the real seat of power in the Labour movement—quite so basically important. Now, in the most difficult circumstances possible, Mr Gaitskell had succeeded before the conference; he was to repeat this success, though in a much easier atmosphere, in his speech on equality on Wednesday. It is in the light of this that one can turn to examine his likely relationship with the two "awkward men in his life," of whom so much has been written both before and from Blackpool.

★

To deal with the lesser personality first. The problem of Mr Frank Cousins—the "chap the Tories have been building up as a bogeyman in case Nye turns sound"—continued to diminish at Blackpool. The speech that he made on Monday—despite his almost defensive interjection that the "old type of Socialism" still looked good to "some people"—was really a continuation of the process of affable back-scratching with the old guard on which he has been engaged ever since the first awkward weekend at Brighton; Mr Cousins's moderation was the more impressive because the left wing on the floor was waiting to acclaim any militancy from him with a roar. Two hours later, when the vote of his union saved the executive from defeat on a motion about "secret police" powers, Mr Cousins's role in the party seemed to be made clearer still. He may be going to be one of the voices urging that more nationalisations should be put into the Labour programme; but he does not look at all likely to kick over any buckets that Mr Gaitskell chooses to set up, least of all if Mr Bevan should now start kicking too. There were also some signs at Blackpool that Mr Cousins's union may be rather more moderate during the coming wage struggles than appeared likely just after Brighton: this is discussed in a Note of the Week on page 25.

What, then—the six hundred and thirty seat question—of Mr Aneurin Bevan? Here one can only set down what seems to be the best authenticated guess, without any certainty that it is the right one. The best authenticated of the many stories now circulating about Mr Bevan's intentions is that he wants the shadow foreign secretaryship. The best authenticated of the many stories now circulating

about Mr Gaitskell's likely reaction to such a demand is that he will not at present accept it. If this reading is correct, a battle of tactics may lie ahead. Mr Gaitskell's best tactics are obvious: to welcome Mr Bevan as a powerful personality back into the higher counsels of Labour (he did this by implication on Wednesday), but to say that great bitterness would be caused by any sudden displacement of Mr Robens. It is even possible that he has started upon the second part of these tactics already. One has certain suspicions that the "Society for the Prevention of Beastliness to Alf" which sprang up among Mr Gaitskell's young men from Tuesday onwards ("Well, anyway, you can't say he's worse than Selwyn Lloyd") was not a wholly spontaneous foundation.

It is much more difficult to judge what Mr Bevan's reaction to such tactics would be. His wisest course would be to agree to Mr Robens' temporarily continued caretakership with showy magnanimity, and to try to work his passage into the job by another year of good behaviour; if he is capable of another year of good behaviour he might, incidentally, also be capable of being a very good Foreign Secretary indeed. But Mr Bevan, to put it mildly, has not always been the coolest of tacticians when his ambitions are at stake. If he makes it plain that he wants the shadow secretaryship immediately after the parliamentary party reassembles at the end of this month—and says that otherwise he will enter the contest for the leadership—the Keep Calm group of MPs (who are getting very excited about this) will urge Mr Gaitskell to let Mr Bevan replace Mr Robens. But if Mr Gaitskell stands firm he will almost certainly find a majority from the rest of the parliamentary party to support him; and, of course, he will win any contest for the leadership by a street.

That, then, is the best report one can make on the apparent situation, as of Thursday morning, from Blackpool. It is a report that may seem to be concerned too much with personalities, and too little with policies; but, apart from one new influence upon Labour policies which is discussed in the note immediately below, it is the balance of personalities that will tend to determine what sort of policies Labour has. And on this balance it seems possible to reach a fairly definite conclusion. On the three other occasions since the war when Mr Bevan's star has appeared to be rising, fears have been expressed in these columns that the Labour party might be going to embrace Bevanism. This time, the defences against that look much stronger than before. Indeed, the real question may be whether—to the detriment of Labour's election chances but probably without any real danger to its policies—another dreary display of prima donnaism is about to commence; or whether—and this would be by far the best result both for Labour and the country—Mr Bevan is now going to allow himself to be absorbed, painlessly and profitably, into Mr Gaitskell's party. It is a party that urgently needs Mr Bevan as lieutenant. Some of his former associates would be willing to show him the way.

* * * * * * *

From Equality to Nationalisation?

THE main influence upon the development of Labour policy in the coming year may not be the strengthening of Mr Bevan (if he has been strengthened) so much as the almost accidental effect of a decision taken twelve months ago at Margate. When it was decided there that the most important of the four Labour policy statements to be drawn up during 1955-56 would be that on equality, the intention was that equality should thereby be thrust into the forefront of Labour policy for the next election. In fact, however, it now looks as if a more likely result is that those documents that have been written first will be the first to be partially forgotten. Although the weird and unwonderful housing statement was sharpened this week (by an executive proposal that leaseholders should be enabled to buy the freehold of their houses during any period of their lease), the equality statement fortunately had water, not spirit, surreptitiously added to it. Labour now seems likely to enter its next period of office with two rather vague feelings about taxation policy. One of them—and this is, at bottom, a respectable feeling—is that a man's income tax and surtax burden should be determined by the totality of new purchasing power that becomes available to him rather than by what the inland revenue at present defines as his income; this may lead either to acceptance of Mr Kaldor's proposal to replace surtax by an expenditure tax (if this proves administratively possible) or else to a capital gains tax and to an attempt to check expense accounts (if the Tories have not done something to check them already). The other vague Labour feeling is, of course, that death duties should be increased; but it now looks less likely than it did a short while ago that a driving force behind the next Labour government will be the desire "to do another 1909." Mr Gaitskell specifically stated on Wednesday that, with the sentiments in the equality document accepted, the details of any action must be left to decision by the next Labour Chancellor immediately before his first (or subsequent) budgets. It will be of advantage to Labour if this means that some of the dreary passions it has aroused in its own breast by this debate on higher taxes for Lady Docker can now be temporarily laid in limbo.

The spotlight may thus turn to the policy documents projected for 1956-57, of which the most widely publicised look like being those on education and nationalisation. When a Labour study group draws up a document on nationalisations, it is inevitable, for appearances' sake, that it should begin by saying that it wants a lot more of them; in the climate of today, however, it seems less likely to name specific industries than to expound a policy of setting up state investment trusts to take up a part share in industry in general. This idea, like the ideas in the equality document, is capable of being made to look very radical and frightening at first sight, and then watered down in practice into nothing much more than an inactive and unimportant new finance corporation for industry. But the period of making the idea look very radical and frightening may lie just ahead, and this may please "old fashioned socialists" like Mr Cousins and Mr Bevan. Mr Gaitskell may conceivably have the opportunity of appearing to appease, without actually appeasing, his awkward new allies in high office at the right time.

Mr Gaitskell's Suez Triumph

THE most important moment in the conference was not when Mr Bevan's election to the treasurership was announced on the Tuesday morning, but when Mr Gaitskell carried off his remarkable triumph in the Suez debate on the day before. The initial proceedings were ominous. After a chairman's address by Mr Gooch, which showed just how dull a worthy right winger can sound, and some more than usually irritating pedantry about conference arrangements, the emergency motion on Suez was moved from the floor by delegates from the City of London and from Harrow.

These two delegates were a great misfortune; the best that can be said for them is that they proved to be the sort of people that the task of keeping socialism alive in the City and in Harrow presumably turns one into. The gentleman from the City thought that all Colonel Nasser had done was to nationalise a profit-making company which had drawn large dividends from the canal and which had for many years exploited Egyptian workers; his seconder from Harrow said that there was no doubt that the Labour party stood on the side of the Egyptian people in this dispute. The conference roared its applause. On the platform Lord Attlee doodled, but other faces were burning; any reasonably marginal voter at the conference must have found his temper burning, too. From this bad start, matters quickly turned to worse. As the debate was taking place on a motion too broad for a meaningful vote, the attitude of the Labour party was likely to be judged solely from the balance of applause; and the applause at this stage was wholly for Colonel Nasser. Even the representative of the Jewish Socialist party seemed to temper his speech tactfully to the prevailing wind, at any rate compared with his very effective counterpart at the Trades Union Congress; he was eloquently pro-Israel rather than emphatically anti-Nasser. When Mr Gaitskell stood up, to an extremely perfunctory welcome, for his first speech as leader to his assembled party, he faced one of the most awkward situations of his career.

All who have criticised Mr Gaitskell in the past, and who will undoubtedly do so on occasions in the future, should pause to consider the dilemma he faced at this moment. If he had retreated before the fire of the floor, the results would have been appalling both for the country and his party. But unless he did retreat it was very difficult to see how he could protect his standing before the conference; it should be remembered that if he had got even the mild form of the bird that was handed out to Mr Griffiths in the debate on civil liberties that afternoon—and if the press had had to contrast this with the rollicking ovation that was to greet Mr Bevan's triumph in the treasurership next morning—then we would all have been writing very different things about the implications of Blackpool. Up in the gallery one searched mentally for the key phrases one would use if in Mr Gaitskell's position—and searched in vain.

It is a measure of Mr Gaitskell's seed of genuine greatness that he seized upon the most tactful approach apparently by instinct, and thereby turned the political tables in a trice. He suggested to the party that it was in danger of doing the "very thing that the Tories wanted it to do": the Tories were trying to confuse the issue by making Labour look unpatriotically pro-Nasser. Instead, Mr Gaitskell insisted, the real issue to concentrate upon was that the use of force in this dispute would be disastrous. The proper course was to try to solve the problem by negotiation, on the analogy of collective bargaining in the industrial field, although, as in collective bargaining, if negotiations failed it was right to hold the option in the last resort to call a consumers' strike against use of the canal. In this speech Mr Gaitskell finally came home to alliance with most moderate opinion on the Suez dispute in this country; more immediately important, however, he also got home to the conference. As he spoke, one could see the log jam of emotions breaking; as he sat down, two full minutes of cheering came up to greet him. In Lord Attlee's day the leader used constantly to be met by tumultuous applause at the beginning of his speech, and by polite clapping from the faithful at the end; it is a sign of real progress that, under the new leader, things now go the other way round.

* * * * * * *

How Many Votes to the Left?

RIGHT up to the last unofficial call-overs round the breakfast tables, neither of the two main candidates for the treasurership was given more than an even chance, and no one expected a margin of more than 100,000 either way. Mr Bevan's victory by 274,000 was therefore more convincing than expected: of the many explanations offered the two most plausible were that Mr Brown failed to get as many constituency votes as he expected and that Mr Bevan pulled in some unexpected small craft unions. It was even whispered that at the last minute some leading figures on the right took fright at the prospect of what might follow a Bevan defeat and surreptitiously let it be known that it might be better if he won after all. Technically, Mr Bevan won only on a minority vote—3,029,000 out of 6,470,000—but the terrific ovation which greeted the result left no doubt that his supporters saw it as decisive. He himself has interpreted it as a definite sign that voting strength within the party conference has swung to the left.

How pronounced has the leftward swing really been? The purest test of it can probably be found in the elections for the women's section—the only other office, apart from the treasurership, voted for by the whole conference. Apart from Dr Summerskill, the ladies concerned were sufficiently nonentities to be regarded as pieces of political litmus. The five right-wing ladies in possession held their seats comfortably with around 5 million votes each, but they dropped on average some 800,000 from last year. The two left-wing runners-up—Mrs Jeger and Miss Jennie Lee (Mrs Bevan)—just topped the 2 million mark. Had Mr Bevan done no better than his wife he would have been beaten by nearly two to one. The extra million votes he

got came from the centre, which was willing to give him another chance, but would almost certainly turn sharply against him if he starts any real trouble again.

Provided he does not start any such trouble, however, his position as treasurer should be secure for some years. He now has two props beneath him besides the narrow margin of his vote. One is that the Amalgamated Engineering Union certainly will not be able to put up Mr Pannell as a diversionary candidate again, so that, if Mr Bevan is challenged next year, he can presumably count on the AEU's additional 630,000 votes. The other is that the sitting member in Labour elections clearly has a great advantage, because some delegates appear to vote for mass re-elections on principle (or on a lack of it). This has been confirmed by the other elections to the executive this week. The most extraordinary result on Tuesday was not Mr Bevan's margin for the treasurership, but the confirmation of Mr Casasola, who had got into the trade union section in mid-year only because of Mr Cousin's elevation to the general secretaryship of his union. Mr Casasola, of the AEU, moved the famous resolution against "German rearmament" at Scarborough and is certainly to the left of Mr Bevan. Another new arrival among the trade union members was Mr Walter Padley, of the shop workers. The right puts at least an uneasy question mark against his name.

In the constituency section, the same names appeared—with Mr Silverman confirmed in *his* temporary seat—but the order was intriguingly changed. Mr Wilson, whose chumminess with Mr Gaitskell has pained the left, dropped from first to third and shed nearly 200,000 votes. Mr Crossman, another who is regarded as a renegade, dropped 150,000 votes. This, however, was partly because the former Bevanite vote was split by a new arrival. Mr Zilliacus, who was not elected, got 235,000 votes; one can guess from whom these came.

* * * * * * *

On Young Heads and Old Ones

"YOU will have noticed," said the good party man as we bumped our way into the Winter Gardens, "that we have got more young delegates this year." We ricochetted off a teenage carbon of Mr Michael Foot, but with a red scarf as well as a red tie over his blue suit, six pens or pencils in his outside breast pocket, and carrying Mr Aneurin Bevan's book "In Place of Fear." "And some of them," added the good party man, "look pretty horrible." It is unfair to argue from the particular to the general. But one of the two main impressions that emerged from observing the speakers this year was the welcome increase in the number of younger men on the floor. The other was the quite appalling drop in the oratorical calibre of Mr Gaitskell's supporters on the platform.

This latter point is important. A year ago, with Mr Attlee and Mr Morrison there and with Mr Gaitskell as third reserve, the Labour platform presented an impression of experienced defence in depth. This year, Mr Gaitskell's main lieutenants were Mr Griffiths and Mr Wilson. Mr Griffiths, by riling the floor with an inconsequential speech on security procedure on the first day, got a bad reception which he unfortunately did deserve; while Mr Wilson got a good reception which he unfortunately did not merit. Mr Wilson—and Mr Greenwood in the housing debate—seem to have taken over the role of doing for Labour's re-thinking what Mr Liberace has done for Brahms; they strive to make it acceptable to the mass audience by skating quickly over most of the things that are worthwhile in it. In addition, one of the most widely used and affection-inspiring right wing trade unionists on the platform is unhappily becoming inaudible. As far as the conference is concerned, this lack of experienced spokesmen may not matter so much, but it does matter for Labour's strength on the front bench in the House of Commons. One of Mr Gaitskell's new session resolutions should be to try again to bring Sir Frank Soskice and Sir Hartley Shawcross into more active politics.

And another reflection raised by this week's performances is, of course, that if only Mr Bevan could be as faithful a lieutenant as he is a fiery leader he would be able to fill many of Labour's most aching voids.

Comparative Tyranny

Extremes meet. Despotism and Republicanism are both upon their trials, and for the same crime, and with every apparent probability of a precisely similar result. In the two hemispheres, in two countries which, both in position, national character, social condition, and political institutions, present the widest discrepancies, a violent tyranny rides rampant, and tramples alike upon law, justice, and decorum. We have long been taught to regard the United States as the land *par excellence* of freedom. . . . We have always been accustomed, on the contrary, to regard the kingdom of Naples as the scene of the stupidest and harshest oppression, where free speech and free movement are alike prohibited, and where every subject is a slave to three several tyrants, the monarch, the policeman, and the priest. . . . Yet, if anything, the Slave Party in America take precedence, in the degree and character of their tyranny, over their fellow despot of the Two Scilies. . . . The Pro-Slavery Party in Kansas have overpowered the free settlers by force of arms, and violently overthrown, or rather prevented the formation of, the Government according to prescribed regulations: they have in fact destroyed the Constitution of Kansas—just as Ferdinand destroyed that of Naples. . . They, like him have prohibited free speech, and made difference of opinion a punishable crime. They, like him, have superseded the ordinary tribunals, and have imprisoned, flogged and banished their opponents at their own arbitrary will. They have burned, pillaged, slain. . . The truth is, we fear, as Tocqueville long since pointed out, that in no country do the theory and reality of liberty so little harmonise as in the United States. Nowhere is the ruling party or the ruling power so intolerant of opposition or dissent. . . . The "tyranny of the majority" is substituted for the tyranny of a monarch. . . . Of all tyrannies it is of necessity the most unchecked, the most inescapable and the most irresistible.

October 4, 1856

The Newer China

PEKING has just witnessed two triumphal occasions —the annual parade on October 1st, and the eighth congress of the Communist Party. The congress did not take the form of a procession through the streets, but it was nevertheless a victory parade. There had been no party congress since 1945, and the Chinese communists' successes in the intervening eleven years gave them plenty of scope for self-congratulation. It is their claim that they have carried out two distinct revolutions within a decade. They have, first, in Marxist-jargon, "completed the bourgeois-democratic revolution" by overthrowing the Kuomintang (though it may be objected that this neither benefited the bourgeoisie nor established democracy); and they have gone on to carry out the "socialist" revolution which was always their real goal.

Liu Shao-chi, who delivered the main report to the congress, asserted that the decisive victory in the process of "social transformation" had already been won. The past twelve months have certainly been months of dramatic change. A year ago the Chinese economy strongly resembled that of Russia during Lenin's NEP period; only the "commanding heights" of heavy industry, finance and foreign trade were firmly in the government's hands. Even the rulers themselves seemed at that time to envisage a fairly slow erosion of private property, but since last autumn it has been engulfed at a startling speed—a process which, with the prospects it opens up for China's second five-year plan, is further discussed in an article on page 60.

The "social transformation" may very well not be as far advanced as it looks on paper, and the peasants, in particular, may lose some of their docility if lean years follow the recent bounteous harvests. But there is clearly a need to survey the "newer China" that is now taking shape, and the party congress has provided ample material for such an analysis. For the world at large, the key question must be "What is China's likely course in external policy?" But the answer is dependent on a number of factors, some of them purely domestic; and it may be wisest to begin by trying to assess what kind of a communist state China now is. Is it moving away from Stalinism, or towards it? Or is its nature so different as to make that question irrelevant?

The reaffirmation of Mao Tse-tung's unique eminence as head of both party and state was perhaps the most striking feature of last month's congress. Mr Mao, who brought the party to power through revolution and civil war, may be compared to Lenin rather than to Stalin; but his personal cult has been so built up in the Stalinist manner that his colleagues could not now throw doubt upon it even if they wished to do so. In fact they have shown no such inclination. The dogma of his infallibility is blandly reconciled with the fashionable stress on collective leadership by the easy argument that he embodies the collective will. In the words of a brief history of the party published on the eve of the congress, he

> not only knows how to integrate the universal truth of Marx-Leninism with the actual practice of the Chinese revolution, but also firmly believes in the strength and wisdom of the masses, initiates and advocates the mass line in party work, and steadfastly upholds the party's principles of democracy and collective leadership.

In his speech, Mr Liu claimed that since Mr Mao secured full control over the party in 1935, it had never made a mistake. It is admitted that in recent years certain leading communists have disputed this claim; but how wrong they were is proved by the fact that they are now dead. Mr Mao has managed to remove his opponents much more quietly than Stalin did; even the chief among them, Kao Kang, was never tried, but was reported to have committed suicide in a fit of remorse. His fate is periodically recalled as a warning to others; and a further reminder, of a truly Stalinist type, was given at this congress when Li Li-san, who led the party in 1928 and fell out with Mr Mao, was publicly produced and duly reviled himself for misdeeds caused by "the foul traits of the petty bourgeois which ran through my blood."

It seems that even loyal communists find it hard to reconcile the dogma of Mr Mao's democratic instincts with the fact that there has not been a party congress since 1945. While firmly denying that there has been any lack of "inner-party democracy," the leaders have now produced a new party constitution, which provides for congresses at both local and national levels at least once a year. The promises now given that there will in future be real opportunities for rank and file members to have their say suggest that there has been a certain muttering. Whether these promises will be honoured is another matter.

In other respects, too, the Chinese communists' speech patterns make it hard to tell if they now contemplate any "thaw" on the lines of the latest communist proceedings in Russia and Eastern Europe. In Russia, the communists never seriously pretended that the propertied classes could be converted into enthusiasts for "socialist transformation." At the Peking congress, however, Mr Liu dwelt at length on the party's success in converting capitalists by "helping them to solve their ideological problems." (In passing, he added that an "important practical education for them" had been the regime's action against "unlawful bourgeois activities"; the reference was to the "five antis" campaign of recent years, in which thousands of businessmen were executed or imprisoned, while heavy fines were levied on most of their fellows.) Mr Liu likewise claimed that many "middle peasants"

now recognised the superiority of co-operatives and were applying to join; he did not mention that what got most of them in was official discrimination against non-members in such decisive matters as credits and supplies of tools and fertilisers.

"Education and persuasion," Mr Liu insisted, were the regime's main instruments; "compulsory methods of reform" were applied only to the "few individuals who adopt a hostile attitude towards socialism." Even convicted counter-revolutionaries were dealt with by "combining punishment with leniency" (a phrase that still rings harshly in the ears of Britons and others who fell into Chinese hands in Korea); a mere "handful" had to be executed "in response to public indignation." There was nothing new in these statements, and although the head of the political police admitted to the congress that a few innocent people had been wrongly arrested, there is no sign of any purging of police bosses such as has become *de rigueur* in Eastern Europe; nor has a Chinese Beria been named against whom popular anger could be diverted. The only suggestion of relaxation came when the head of the Supreme Court said bluntly that "We lack some urgently needed basic laws, such as a criminal code, a civil code, a labour law. . . ."

Against this background, it is difficult to take seriously the address to the congress by the head of the Italian Communist delegation, Signor. Scoccimarro, who declared that

> to those who refuse every common action with the communists, accusing them of calling for democracy today only to destroy it tomorrow, of wanting common action with other parties in order to eliminate them and set up their own party dictatorship, we shall now be able to reply by telling them of your experience, which disproves such charges with the eloquence of facts.

It is true that the Chinese communists have allowed certain other parties to survive in form and name, for sound tactical reasons; but, like their counterparts in Eastern Europe, these "parties" are mere wraiths, profuse in their praise for every communist move. The Peking rulers themselves seem almost indifferent to the idea that their technique in this respect should inspire others; indeed, they gave the impression at the congress that they were quite unruffled by the present discontents of western communism. The goal they emphasise is that of industrialisation, with its direct appeal to every backward country. It is their economic performance, not their political methods, which they proclaim to the world; and despite the praise lavished upon them by western comrades, it is, naturally, to the under-developed countries that this still predominantly peasant nation, even less suited to Marx's original pattern than Russia, presents itself as holding the keys of salvation.

There are signs that the Peking rulers are now realistically accepting some of the essential conditions for success in their economic struggle. Birth control, only lately reviled as a capitalist-Malthusian sin, was discussed at the congress and is now officially approved —although the emphasis is not on the danger of over-population, but on the damage done to productivity by untimely child-bearing. The reduction in the size of the army was presented by Marshal Peng. the Defence Minister, as a contribution to the economy rather than to international relaxation. Not only, he said, had the army released many of its men; it had also switched 31 divisions and eight regiments on to constructional and other work (so that China both benefits from their labour now, and keeps them mobilised in their normal formations, ready for any military need that may arise). And the government has shown increasing anxiety to reassure the millions of Chinese settled in other countries, many of whom have evidently complained bitterly about the treatment meted out to their relatives in the homeland. Their importance is obvious; the overseas Chinese, if they can be won for Peking, represent a ready-made network not only for propaganda and political infiltration but also for the expansion of foreign trade essential to China's economic future.

*

What does all this imply in terms of Peking's external policy? It is always rash to assume that preoccupation with big domestic projects will necessarily prevent a nation from giving trouble to its neighbours (in China's case, the Burmese can testify to this today). The Chinese communists show no sign of insulating themselves in a hermit kingdom; on the contrary, they are working hard on Japanese opinion, they have recently called for a new conference on Indo-China, and they took the occasion on Monday to demonstrate their military might to such opportune visitors as the President of Indonesia and the Prime Minister of Nepal. Their utterances about Formosa remain in the somewhat muted key adopted last year at the time of the Bandoeng conference; but connoisseurs of the diplomatic scene must have noted the resemblance between Peking's current formula—to try all peaceful means of getting what it wants, but not to renounce the use of force in the last resort—and certain declarations lately made in connection with Suez.

China's evident inclination to attain hegemony in Asia not by war but by economic and political pressure is, however, based on a firm foundation of reasoning. At present, to experiment with open violence, for Formosa or any other objective, would not only involve the risk of disastrous conflict with the United States and the collapse of many cherished economic plans; it would also wipe out the Chinese communists' recent political and diplomatic gains, for they would frighten their Bandoeng friends into fits, and smudge the shining image of peaceful progress with which they now seek to dazzle the eyes of the whole under-developed world. They have gripped their own country with an iron frame, and they can afford patience. Mr Mao—like Stalin before him—is in much less of a hurry than Mr Khrushchev.

Notes of the Week

Open Door to Europe

THE meeting of Commonwealth finance ministers last week and the statements made by the Chancellor of the Exchequer and the President of the Board of Trade on Wednesday were momentous occasions. The Government, it is clear, has realised the immense advantages Britain could gain from the creation of a free trade area in Europe. The Chancellor carefully pointed out that no decision had yet been taken, that industry, the trade unions, and the Commonwealth governments had yet to give their views, and that technical problems had yet to be solved; but he made it clear that the Government is looking with both courage and imagination at this project, which may open a new era in Europe's economic, and perhaps in its political history. The Commonwealth ministers, too, he said, had shown great sympathy for an idea which could so increase the prosperity of Europe, their vital market and source of capital. And, he observed, if Britain goes into the discussions with the six Messina powers, it must go "looking for an answer," not "hoping to find no answer." The Government, so long blamed for dragging its feet in Europe, has awoken to the urgent necessity of giving a lead.

The scheme outlined by the Chancellor was not unfamiliar. Contrary to the reports from Washington last weekend, he did not put forward any grandiose scheme for a free trade area embracing both Europe and the Commonwealth. The ideas the Government has been considering, which have been known for some time and which were discussed in *The Economist* two weeks ago, are more limited. Britain alone, without the Commonwealth countries, would join the continent in a free trade area. In such an area internal tariffs would be gradually abolished, but Britain could preserve its special tariff arrangements with the Commonwealth and with them the whole system of preferences which binds it. Agricultural products, the special interest of the Commonwealth, would be excluded from the scope of the free trade area with Europe—a price which, at least for the present, has to be paid for a bold British initiative towards a wider European market.

The most encouraging aspect of the ministers' statements is their evident awareness that Britain must do this, not merely because a continental European customs union would damage British trade in Europe, and give our European competitors an overwhelming economic strength which would drive us from other markets, but because of the immense possibilities that a wider free market opens up for Britain. The fruits of new industrial methods and sources of power can be reaped, the Chancellor pointed out, only by large economic units. The little markets of Europe are becoming parochial, and will slip farther and farther behind the industrial giants, the United States and Russia, in efficiency. But Europe, which has lately shown such remarkable economic vigour even in the straitjacket of its present frontiers, will face wholly new perspectives if it becomes an open market of over 200 million people. For British industry, such a market opens up a great future. To shirk it is to invite senility. And the Government which offers a lead in creating such a market may be taking a step historically as decisive and valuable for both Britain and Europe as Marshall Aid.

*

Rifts in the Wages Cloud?

THE Labour Party conference is a meeting of leading trade unionists as much as of politicians. When delegates at Blackpool could take their eyes off Mr Bevan this week, there was a great deal of quiet talk about the prospect of wage disputes this winter. Over the claim that most people have expected to be the crucial one—the claim for a "substantial increase" by the Confederation of Engineering and Shipbuilding Unions, with which Mr Cousins's Transport and General Workers' Union, the Amalgamated Engineering Union, and thirty-eight other unions are associated—the talk was much more of possible means to peace than of likely resorts to war.

The confederation's leaders think they can see two possible ways ahead. First, and most simply, although they recognise that they have not much chance of an early offer of a straight wage increase, they think that they might get one "once things start moving on other fronts." The "other front" of which there was most talk at Blackpool—and it is a front, of course, on which the union side is also represented by Mr Cousins's transport union—is the claim of the busworkers. Although London Transport is trying to stand firm against a wage increase on its buses, the unions believe that there are some other bus companies up and down the country that could not only afford an increase, but would actively welcome one—in order to attract more drivers. There is some justification for the argument that it was the busworkers' increase of 14s. a week last October that was the original pacemaker for last year's round of wage increases. The union leaders do not expect such a large round this year, but some of them are still convinced that they will get something. The immediate importance of this belief is that the confederation seems unlikely to bring its dispute to a head until the bus talks either break down or else start moving.

Secondly, however, if a straight wage increase is still refused, some of the confederation's wiser leaders—and Mr Cousins himself may be being gradually hoisted into this category—now seem much more willing to talk about the possibility of an increase in "fringe benefits" instead. The

most topical of these possible benefits are those concerned with redundancy agreements: something of a split may be emerging between those union leaders who still think that the proper response to a fall in demand is to spread work across a three- or four-day week and those who are at last beginning to play with the idea of "let the employers sack people straightaway, but with generous severance pay and a guaranteed five-day week for the rest." Mingled with these views about redundancy policy is a desire for greater pensions benefits (although these are not a popular alternative to wage increases with younger workers), and for a very wide reassessment of piece work possibilities (which would involve moving some workers who are still on time rates to a system of payment by results). Complicated arrangements of this sort might seem difficult to work out on a national level, but the unions are now more willing to try. If the engineering employers, while still turning down a flat rate wage increase, were to offer discussions on these matters, one's impression is that the confederation would at least give the proposal consideration. This might be the employers' best course now.

Third Thoughts from Mr Dulles

JUST as the users' association was setting up its flimsy mechanism, and as everyone was flying in for this week's Security Council meeting, Mr Dulles gave his Suez kaleidoscope one more shake, and produced a pattern that is not altogether to British taste—although, since (according to a message from our Washington correspondent on page 43) it is satisfying to the average American eye, it would perhaps be narrow-minded of Europeans to feel too indignant about it.

He said, for instance, that there was "no detectable change" between the users' association as first conceived and the one now contemplated. Yet what he first conceived was—if his impassioned plea at the opening of the second Suez conference meant anything—that there must be a solution "in conformity with justice and law," by which he seemed to mean that, while western sabre-rattlers must not use force, President Nasser must not get away with forcible destruction of the international basis on which the canal was worked. Today, having discarded all major bargaining points, Mr Dulles is saying that only time and chance can bring President Nasser to repentance. The difference is very great.

He also incensed British opinion by striking the pose of an honest broker between colonial powers and dependent or formerly dependent peoples. Most Britons do not feel they need such an intermediary between themselves and, say, Mr Nehru or Dr Nkrumah. They also believe that these two, and others like them, feel the same way.

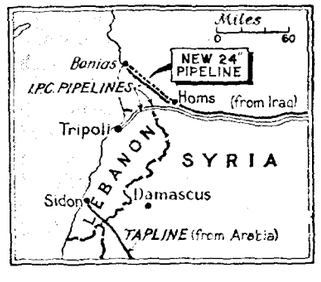
But a more serious and more constructive criticism needs to be made of Mr Dulles's and indeed of all current statements on the Suez issue. None, at present, refers to the original cause of the trouble—which was Afro-Asia's need for development, and the West's interest in seeing this materialise in all countries that want it and are prepared to turn themselves into good investment risks, and to pay as much attention to domestic development as to the delights of xenophobia. A re-injection of this point into the Suez debate is more important, at the present stage, than preaching to Britain about the need for "peaceful constructive evolution" in the Commonwealth; granny at Westminster has been sucking that egg for some time. Perhaps some member of the Security Council will speak up during the debate now under way.

When The Pipe Turns . . .

GRIMM'S *Fairy Tales* tell of a motive for killing the goose that laid golden eggs, but one that was not worth the weight of an egg in gold. Perhaps the Lebanese government, in holding to a course that has turned away a lucrative pipeline, had some valid reason for its decision but neither this journal nor certain influential members of the Lebanese opposition can see it. By sticking to its plan to tax the Iraq Petroleum Company prohibitively in breach of a previous agreement, and to take over the company's assets if the tax demands are not met, it has—after multiple warnings—deflected new company investment. October 1st was the zero hour at which, for seasonal reasons, the IPC had to decide whether its new pipeline from Homs to the coast should emerge at Tripoli in Lebanon or Banias in Syria. Inevitably, it has opted for Banias.

Lebanon had been "promised" (though only by its own Minister of State, Saeb Salam), that Syria would support its stand. But the Syrian Premier said in Damascus on Wednesday merely that Syria would not countenance a transfer of existing pipelines; he said nothing of any promise to bar the building of a new pipe. The Iraqis, who live at the producing end, do not mind where the pipe emerges so long as exports keep on going up.

The incident coincides with an interesting development farther east—a realisation on the part of oil-producing states that safe passage for their export to its chief market is as vital to them as to Europe. The sudden spectacle of export routes in jeopardy at Suez and in Lebanon prompted the thought that oil was thicker than bad blood. The Kings of Iraq and Saudi Arabia put their heads together, and King Feisal and the Ruler of Kuwait are talking of regular "exchanges of information." In addition, the American-trained Director of Oil Affairs in the Saudi Ministry of Finance has visited Iraq and gone on to Iran. In Baghdad he exchanged information with the Iraqi Minister of National Economy, "in conformity with the agreement for a unified oil policy between Iraq and Saudi Arabia." He also discussed a proposal for convening an Arab oil conference, the first of its kind, and said that the governments of Iraq and Saudi Arabia were anxious to work out a unified oil policy for all the producing countries. Hence, clearly, his visit to Iran. If the outcome of all this were a producers' association, while Europe gave birth to an oil consumers' association, the states that merely control transit (*via* canals or pipes) might find themselves between two fires.



Egypt Claims its Dollars

ONE of the very few items of hard news to emerge from last week's Bank and Fund meetings in Washington was the announcement that the International Monetary Fund had allowed Egypt dollar facilities to the tune of $15 million. In some western capitals the timing as well as the nature of this news were calculated to jangle even nerves that had been dulled by the recent balancing feats of the State Department and its chief; the Fund is not an instrument of the United States, but its offices are in Washington, and at first sight the deal looked to some people a little too fair. But it is perfectly understandable; and the suspicions were unworthy. In the ordinary course of business any member country, when not in debt to the Fund, is entitled to buy from it foreign currency up to the value of 25 per cent of its own original contribution in any one year. Egypt, before this transfer, was not in debt to the Fund. Its withdrawal of $15 million was its maximum entitlement for this year, one-quarter of its quota of $60 million.

Admittedly, according to the Articles of Agreement of the Fund, the facilities it provides are intended to enable members "to correct temporary maladjustments in their balances of payments without resorting to measures destructive of national or international prosperity." Further, the basic purpose of the Fund is "to facilitate the expansion and balanced growth of international trade." It can hardly be said in this case that the automatic working of the Fund has much relevance to its own objectives. But among all the members Britain has been one of the most insistent that the right to draw 25 per cent is indeed automatic. Objection would scarcely have been possible.

Leader of the Liberals

PENSIONING off an old servant is a sad business, but when the Liberals have paid their tributes to Clement Davies, they are bound to feel relieved that their leadership, like that of the two main parties, has now moved into the next generation. Mr Grimond should suit them well. He is intelligent, a likeable personality, an effective speaker and free from the pretentiousness which is the bugbear of small parties. He should be realist enough not to set the party's sights too high, and able enough to hold out some hope of hitting the modest targets in range.

Unfortunately, however, last week's Liberal Assembly did not help him very much in suggesting what those targets should be. The assembly duly shrilled its appeal for the early abolition of conscription. It set up committees to keep co-ownership under review, to produce a Liberal solution to inflation and to "restate" the free trade doctrine in modern terms. More practically, it also called for the end of de-rating (as a half-way house to the rating of site values) and was more courageous than the other two parties in suggesting that the farmers, as well as industry, should be at least partially subject to this reform; but the row which accompanied this was a reminder that the few scattered constituencies the Liberals think they may have a chance to win are mostly agricultural ones. The most constructive speech in the assembly came from Mr Grimond himself. Speaking nominally on automation, he restated Liberal economic ideas in modern terms and urged that all brakes on competition and progress should be whipped out; by keeping up this sort of fire, but also by making it a little more specific, Mr Grimond can both perform a useful service and feather his own political nest.

Settlers' Choice

THE white settlers in Kenya have moved slightly to the right. The Asians, though the results in their constituencies are harder to assess, seem to have moved slightly to the left. Both of the settlers' extreme wings were defeated—the apartheid-minded Federal Independence Party along with the Capricorn Society candidates. The Blundell group has come out of the election one down, and the Briggs Independent group, which opposes the Lyttelton plan, one up. This does not mean that the Governor must seek unofficial European ministers from the Briggs group, though he will have to find at least one new minister as the result of the defeat of Mr Wellwood. The Blundellites now number six, the Briggsites eight.

Broadly the Kenya electors—those that bothered to go to the poll at all—voted for the men they knew. Personalities counted most with them. But it does not follow that policies did not count at all. Group Captain Briggs disavowed any intention to try to overturn the Lyttelton settlement, and Mr Blundell disavowed any intention to make any further radical changes before 1960. Since, even so, he lost Mr Wellwood, while the other minister, Mr Havelock, only scraped home, he probably feels that his refusal to espouse a dangerously liberal line was well justified. But it has caused him to be dubbed "just another white man" by leading Africans and Asians. It will be surprising if the result of the election is not used by strongly nationalist African leaders at the African elections next March against moderate policies and personalities—such as Mr O'Hanga, the able African member of the Council of Ministers.

The final result of the election may therefore be to provide anti-white politicians of the other races with a platform, without providing the white settlers with a policy. Mr Blundell has failed to give them a realistic lead towards an inevitable sharing of power with the other races. Group Captain Briggs has merely won support for sniping without fighting. The low poll among the whites suggests that large numbers do not consider themselves as permanent residents at all, but as short-service immigrants who cannot be bothered either with Briggs or Blundell, reckoning the Africans will get the place anyway—by which time they will be out for good. It is not a cheerful picture.

Soldiers of the Queen

THE Suez crisis has put a temporary damper on off-the-cuff statements about national service by politicians of both right and left; they know guiltily well that the army has been stretched once more to the limit. This however

has given a breathing-space to examine the effect of the differential pay code, which came into force last April, on regular recruiting. Last week the Minister of War gave some rather general figures of progress. He said that army regular recruiting to July this year was 8 per cent up on the corresponding period of 1955. This means all regular recruits—everyone except national servicemen. It includes the "quasi national serviceman," doing three years with the colours and four with the reserves for the extra pay, as well as the man with a nominally longer period of service who is reserving the right to opt out after his first three years. These categories cover 90 per cent of the "regular" recruits.

The really important factor is, of course, the numbers engaging themselves for 6 or 9 years. These are the true professionals, now ten per cent of the total; but to them may safely be added another 5 per cent of the three-year men who, after a few months, now change to longer service. The number of these enlistments is now in all about 420 a month, or 5,000 a year. This is not an impressive showing, and it is precarious. If it were assumed that men only take on a three-year engagement now because it is a better-paid alternative to national service, and would cease to enlist if the alternative was not national service but no service at all, the position would be grave; for, on an average service for the rest of 8 years, the regular strength of the army without the three-year men would be 40,000. The usual answer to this pessimism is that without the discouraging influence of national service many of the three-year men would extend their service or engage for 6 or 9 years at the outset. But how many?

Between the wars, on a lower population, regular army enlistments steadily averaged 30,000 a year, making easily possible a purely professional army of over 200,000. Applications were around 75,000 a year, and did not vary with unemployment, though in 1937-9 they were tending to decline. The RAF was not then a competitor with the army for volunteers. There is a theory that this is, or was, the basic proportion of the male population which wants a service career, irrespective of inducements. If so, and if the proportion is still unchanged, national service is today inhibiting 20,000 to 25,000 would-be regulars from accepting more than a three-year engagement. That looks too big a figure to be true. The basic fact remains that, if conscription goes and if we are to provide an army of even 130,000-150,000 men, we would need 10,000 to 12,000 more volunteers a year than we are getting now. Would they come forward? The plain fact is that nobody knows. But it does not look very likely.

Tito's Crimean War

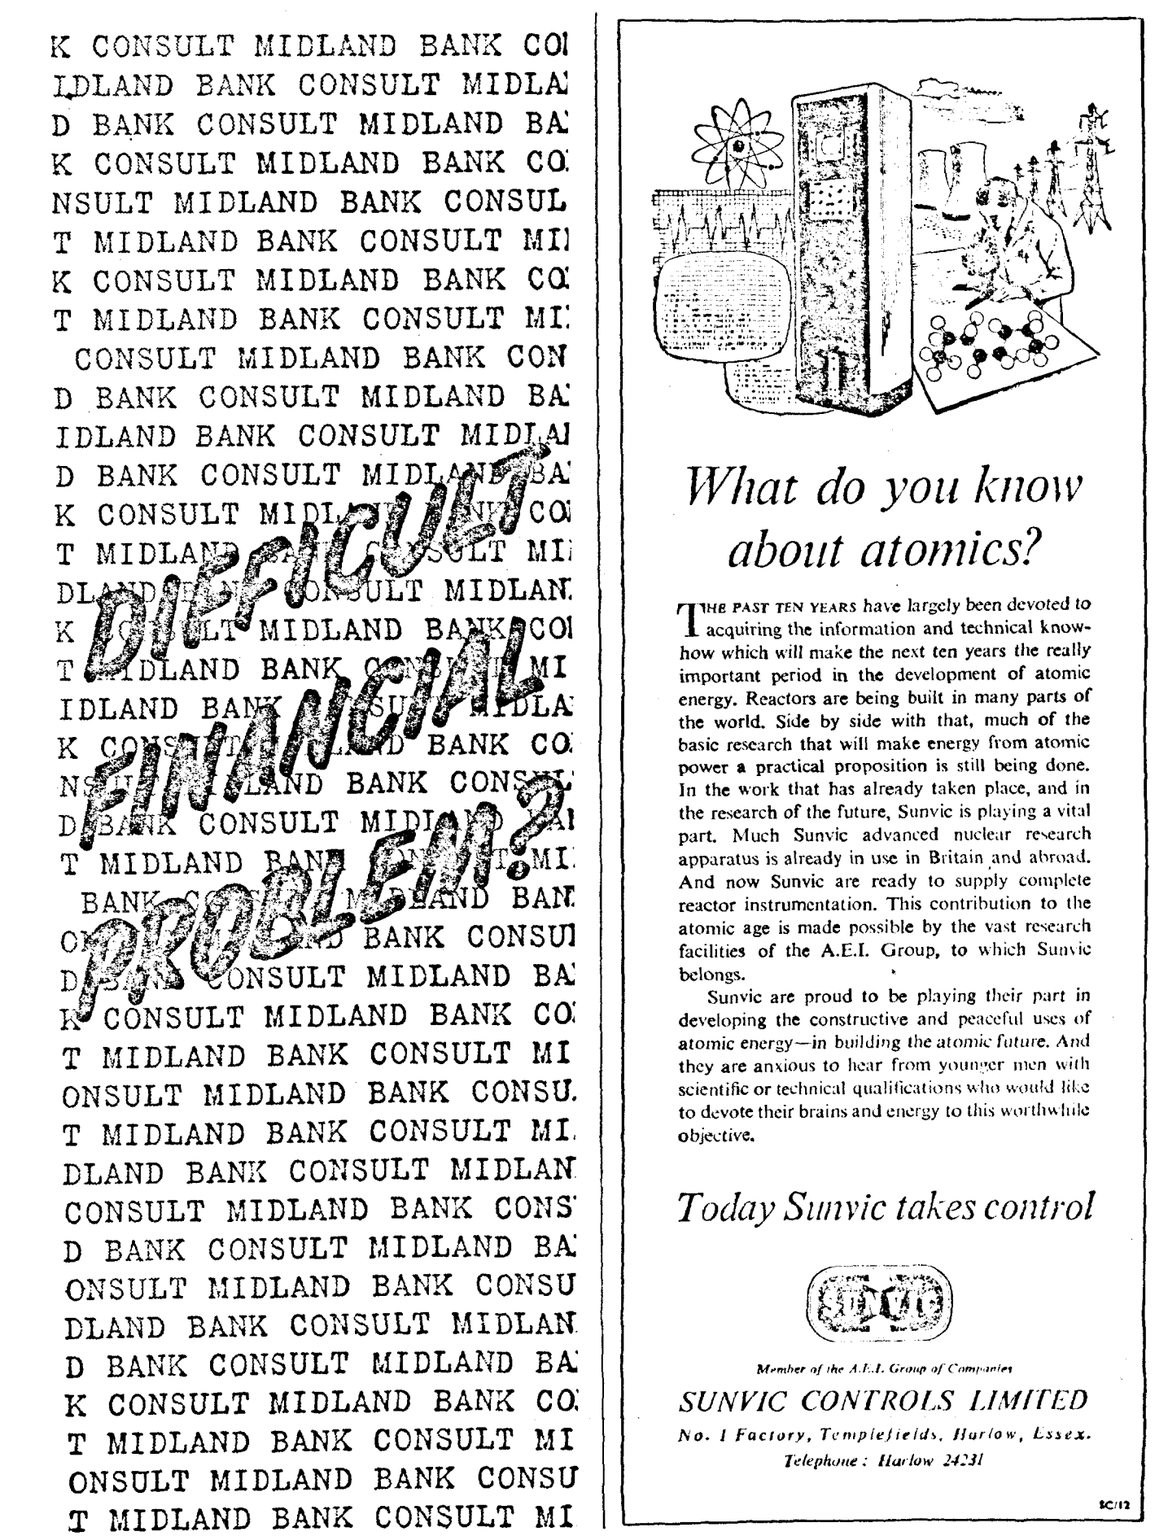
A DENSE sea-mist seems to shroud the activities of the Russian, Jugoslav and Hungarian leaders now "resting" on the Crimean coast, although sometimes they can be glimpsed going for walks together. Moscow has been the most cagey about what is going on. The official Jugoslav spokesman insists that everything—even, surprisingly, the famous Soviet letter to the satellite communist parties warning them against Jugoslavia—is quite "normal"; but he does admit that there are "outstanding questions and differences of view" between Belgrade and Moscow. On Wednesday, however, *Pravda*, without directly mentioning the Crimean talks, insisted that these differences had been "considerably narrowed." Budapest radio is the most outspoken; it has stated flatly that Mr Gerö, Mr Rakosi's successor as Hungarian party secretary, has gone to the Crimea to have talks with Marshal Tito about Hungarian and Jugoslav "co-operation in building socialism"—a polite euphemism for the marked differences that still exist between Belgrade and Budapest.

In such a misty atmosphere speculation and rumour naturally thrive. Differences within the Kremlin about "destalinisation" in general and Tito in particular no doubt exist. But it is probably much too melodramatic to suggest that Mr Khrushchev is seriously imperilled (although he may be inconvenienced) by his advocacy of more liberal policies and that Marshal Tito flew to the Crimea with him primarily to help bolster his position. The fact is that, after all their back-slapping in Moscow in June, both the Russians and the Jugoslavs are now suffering from disenchantment. The Jugoslavs are disturbed—and it seems were on the point of saying so openly—by the apparent determination of the Russians to maintain as far as possible their dominant position in Eastern Europe, and disgusted by the timidity with which all the satellite leaders (except the Poles) are eyeing the bright new trail that the Jugoslavs feel they have blazed. The Russians, or some of them, are worried lest "destalinisation" in Eastern Europe should get out of hand, and they are put out by the Jugoslav's obvious determination to retain complete independence.

In this situation the doubts about the correctness of Soviet-Jugoslav relations felt within the Russian leadership (and perhaps also within the Jugoslav) were bound to grow. It is not surprising if the earlier talks on Brioni island were prickly rather than cosy. And if Mr Khrushchev came to feel that he had taken on more than he could safely tackle by himself, Marshal Tito, who has committed himself so strongly to the view that Russia has genuinely changed course, may equally have come to feel that the issues at stake were too important to be settled with only one member of Russia's "collective leadership."

A Regime on Trial

POLITICAL trials in communist countries used to be a complete travesty of justice; until recently the odious pattern set by Moscow before the war has been the model for all Eastern Europe. But the first trials of those involved in the Poznan riots last June look at first sight as if they may mark a break with the past—though it is early days yet to say. Two years ago the Polish authorities might well have dispensed with legal niceties and resorted to mass executions; and in cases like that of the three youths accused of joining in the brutal murder of a security policeman, it would have been easy to let the dead man's colleagues take justice into their own hands. But it was decided otherwise. The trials have been held in public, in the presence of unbiased foreign observers and correspondents. Defence counsel have been allowed to argue hotly with the prosecution, and many unpleasant things have been said about the regime. Last, but by no means least, defendants have been allowed to



What do you know about atomics?

THE PAST TEN YEARS have largely been devoted to acquiring the information and technical know-how which will make the next ten years the really important period in the development of atomic energy. Reactors are being built in many parts of the world. Side by side with that, much of the basic research that will make energy from atomic power a practical proposition is still being done. In the work that has already taken place, and in the research of the future, Sunvic is playing a vital part. Much Sunvic advanced nuclear research apparatus is already in use in Britain and abroad. And now Sunvic are ready to supply complete reactor instrumentation. This contribution to the atomic age is made possible by the vast research facilities of the A.E.I. Group, to which Sunvic belongs.

Sunvic are proud to be playing their part in developing the constructive and peaceful uses of atomic energy—in building the atomic future. And they are anxious to hear from younger men with scientific or technical qualifications who would like to devote their brains and energy to this worthwhile objective.

Today Sunvic takes control

withdraw confessions made under police interrogation from fear of physical punishment. (It must, moreover, be remembered that in Poland extorted evidence was not a novelty introduced by the communists.)

By making this new approach, the communists evidently hope to draw a distinction between rioting workers, whose grievances are admitted, and trigger-happy hooligans. (So far there has been no talk of foreign agents.) Yet, in a sense, the regime's treatment of a whole generation is now on trial in Poznan. The youngsters now in the dock were barely in their teens when the war ended. Since then, the regime has clearly not succeeded either in winning their sympathy or calming their tempers. The fact that they acted during an outburst of long-accumulated collective anger against the security police, who symbolise the most hated side of the regime, was openly put forward as an extenuating circumstance on behalf of the accused.

Poznan has confronted the regime with the dilemma inherent in the post-Stalinist relaxation drive: how far can the lid formerly held down by the strong arm of the police be lifted without risking an explosion? Most communists seem to have drawn from Poznan the lesson of caution; but the Poles seem to see in it a challenge to experiment with bolder moves and quicker reforms.

Productivity in Hospitals

THE more efficient use of hospital beds, described by the Ministry of Health a year ago, was continued in 1955. According to the department's latest annual report (Cmd 9857), the number of available beds was almost exactly the same at the end of the year as at the beginning —481,563; but the waiting lists for beds showed another big reduction, from 474,000 at the end of 1954 to 453,000.

More Struck Against Than Striking

COVENTRY people are proud of Standard Motors' record as an employer; trade unionists rather smugly compare them with the British Motor Corporation in Birmingham. But in spite of their willing co-operation with the unions, and in spite of their efforts to keep their employees at work by running a three-day week, the Standard Company faces a strike of 105 electricians which has threatened to shut down their whole plant and put 5,000 workers out of their jobs. The motives for this strike are malicious and petty; but it is having some unexpected effects on workpeople's minds which bear watching.

In their first panic at the realisation that the days of motor factory work for anyone and everyone were over, some trade unionists took up the attitude that nobody anywhere should lose his job. The leaders of the unions at Standard are more sensible and have stated that they accept the right of management to dismiss redundant workers, provided that they are consulted about the details of its application, and that those sacked are given sufficient compensation to tide them over until they can find work elsewhere. On August 23rd the company announced at a works meeting that a number of workers would have to be dismissed, and the unions asked for a delay of forty-eight hours, to consider cases of individual hardship. The stay was granted; the Electrical Trades Union, however, submitted no names, but its members walked out on strike. Although they say they are not striking against the need to dismiss workers when there is no more work for them, it is hard to see what else they can object to, as the company fully complied with its agreement about prior consultation. Two days later they returned to work, saying they had a plan whereby all sackings would be made unnecessary. This plan was never produced, nor is there any evidence of its existence. Shortly afterwards, the electricians (most of whom belong to the ETU, although there are a few members of the Transport and General and Amalgamated Engineering Unions) walked out once more on strike, and are still out. The strike has not been recognised by either the TGWU or the AEU, and the district secretary of the Confederation of Shipbuilding and Engineering Unions, to which all three unions are affiliated, has urged the men to go back to work. The ETU has, however, followed its usual practice of declaring all strikes official.

After some four weeks without electrical maintenance, the company decided that continued working of the factory might be no longer safe or efficient—the closing of the factory would have deprived all the workers (except the ETU members, who draw strike pay) of their earnings. In agreement with the other unions, the management therefore decided that their own electrical engineers should overhaul the equipment, and that after five days the factory would start again working its normal three-day week. This means that workers will be able this week to work only one day less than usual. The company has a large stock of finished cars which they would be only too glad to run down before restarting production; continued working is an asset to them in goodwill rather than in hard cash.

This is, in fact, strike breaking by Standard, but the other unions, putting the interests of their members first, are conniving at it. A strike of the company's draughtsmen has been settled by agreement, which would be unthinkable if the draughtsmen had any conviction of the justice of the electricians' case. Standard workers are reacting angrily against the men who are jeopardising their jobs, and plainly feel cordial towards the management in their obvious efforts to help. Bitterness towards the electricians is increased by rumours that some of those ostensibly on strike have already found themselves jobs elsewhere—electricians are still in demand in Coventry—and it is also said that they are demanding preferential treatment in the painful business of losing jobs, and thus indulging in craftsmen's snobbery.

No secret is made of communist power in the ETU. Normally they are very ingenious in putting themselves at the head of a hopeful strike, in order both to appear as the spearhead of the progressive working class, and to put some spurious life into the class war—but here they have underestimated the goodwill between Standard and the vast majority of its employees. In fact the strike is for once greatly improving the state of labour relations. Its most harmful effect is to delay the installation of new plant for the Standard tractor, which was to have absorbed some of Coventry's unemployed—this delay is a further grievance held against the communists. The other workpeople even say that if the factory can run for four weeks with no regular electricians, it is reasonable to think that many of them are unnecessary. If this meant a reduction in the power of the ETU, nobody would be more pleased than most of their fellow trade unionists.

Allocated to the different specialties, the waiting lists show that the longest delay in getting a bed is in the ear, nose and throat departments and for general surgery. These two specialties between them account for 256,000 of the total number of people waiting for hospital beds, so that even quite small percentage reductions that they are able to record from year to year in their own waiting lists have an appreciable effect on the total. As against this, the really spectacular reduction in the waiting list for a bed in a sanatorium (54 per cent between 1954 and 1955) has little effect on the total, but is obviously of great social importance. Owing largely to the big advances in the treatment of tuberculosis in recent years, the demand for hospital beds for the disease has fallen rapidly, and many of them are being put to other purposes.

But waiting lists of themselves are not a very reliable measure of a hospital's efficiency: they are often inflated for one reason or another, and big reductions can be made in them merely by a weeding-out process. A better indicator is the number of patients treated in a year. With roughly the same number of beds, the hospitals treated 42,000 more in-patients in 1955 than in 1954. This was only half the increase that last year's Ministry of Health report recorded; but it again reflects the tendency to reduce the length of a patient's stay in hospital, which enables each bed to receive more patients in a year. The importance of this factor is, however, bound to diminish gradually, and further improvements in the hospitals' productivity will probably have to come from an increase in their "bed occupancy rate"—that is, by reducing the time for which a bed remains unused between the discharge of one patient and the admission of another.

Dr Adenauer's Tactical Retreat

THE West German government's decision to fix a call-up period of twelve instead of eighteen months came as a painful shock to Nato headquarters. Such a retreat by the faithful Dr Adenauer, so long the champion of a strong western policy, is bound not only to disquiet the military planners but also to encourage other West European countries to question again the need for a long call-up. But Dr Adenauer argued that this move was forced on him by American talk of reductions in ground forces. Political pressure in Germany against a long call-up has been growing rapidly. Apart from the Socialists, who oppose conscription altogether, both the Free Democrats and the Bavarian CSU have recently spoken up for a twelve month period of conscription. Dr Adenauer, already widely portrayed as the last defender of an outdated and unpopular policy, had to make some concession if he was not to approach next year's election at a hopeless disadvantage.

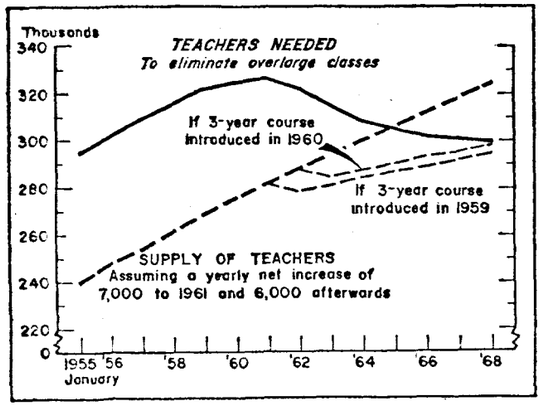
★

The decision may not in fact prove very damaging. Though the call-up is to be cut, the West German government has promised to fulfil its obligation to provide half a million men for Nato by enlisting 70,000 more regulars to make up a force of 300,000 men. Such a large regular force may prove better adapted to future military needs, as well as to the special German possibility of civil war, than a larger conscript force. And the new plans have narrowed the difference of view between the German Socialists and the Christian Democrats, a factor which may make it easier to construct a coalition after the next election.

Dr Adenauer's decision will no doubt also have the desired electoral effect. Two months ago much of the German press seemed to feel that the political problem of the day was what sort of coalition should be built upon the Chancellor's grave. But his prestige has now begun to revive, partly because of a vigorous party press campaign. Talk of coalitions next year still tends either toward the idea of a Christian Democrat-Socialist coalition, perhaps under Dr Arnold, or of a Socialist-Free Democrat coalition; but Dr Adenauer is showing remarkable signs of life. His latest concession is a political retreat, *pour mieux sauter.*

Longer Training for Teachers

DO we need and can we afford better-trained teachers? A report of the National Advisory Council on the Training and Supply of Teachers (HMSO 1s. 3d.) recommends that serious consideration should be given to lengthening from two to three years the course for teachers at general training colleges, suggesting 1959 or 1960 as a possible change-over date. Of the merits of longer training there are probably few doubts: it was recommended as long ago as 1919 and is already in force in Scotland and Northern Ireland. But in England and Wales, about 14,000 new teachers enter the profession each year and only about 4,400 of these are graduates or specialist teachers from three-year



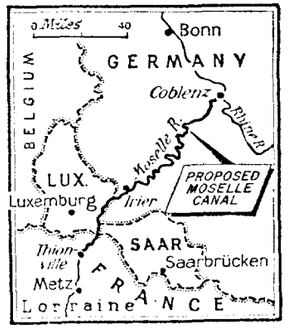
colleges. The balance is, therefore, heavily weighted on the side of quantity rather than quality, but policy has to be guided by supply and demand. The contention is that this picture will soon change radically.

Recruitment into teaching has been better than had been expected and, more important still, wastage has been less because more women have been staying on after marriage and more married women have returned to the profession than had been envisaged. Over the last five years the number of teachers in England and Wales has grown by some 6,000 or 7,000 each year. But 55,000 additional teachers are still needed to get rid of overlarge classes; by this it is intended that no junior class should have more than 40 children and no senior class more than 30, the averages, of course, being far less. The accompanying chart shows that, if the teaching profession continues to grow as of late, the situation will improve only slightly up to 1961, when the "bulge" in the school population reaches its peak, but as the numbers of schoolchildren fall off after that, there could be a surplus of teachers by 1966. The introduction of a three-year training course would put off this state of affairs by another three or four years, but would only slow down and not interrupt the improvement in size of classes after 1961.

There are, of course, a lot of assumptions in this reasoning and there is no guarantee that new teachers will go where they are most wanted. A policy of wait-and-see seems right for a little longer; but there is general agreement that at least two years' notice should be given of the change, and unless the situation deteriorates in the meantime there would seem much to be said for planning to introduce it by 1960.

The Saar Settled?

THE new agreements reached by Dr Adenauer and M. Mollet represent a settlement of all the remaining important points at issue between France and Germany. In Luxemburg last June the basic bargain was struck: the Saar would return, politically, to Germany; in return the Germans agreed to the Moselle canal project, so vital to Lorraine, and to French claims on coal from the Warndt mines in the Saar. But several questions had still to be settled. The first was how the francs in circulation in the Saar would be converted into marks. France hoped to convert them at the present official rate, Germany, bearing in mind the strength of the mark and weakness of the franc, at a free rate. Germany has now given way on this, but to avoid a speculative flow of francs into the Saar the exchange will take place on an undisclosed date.



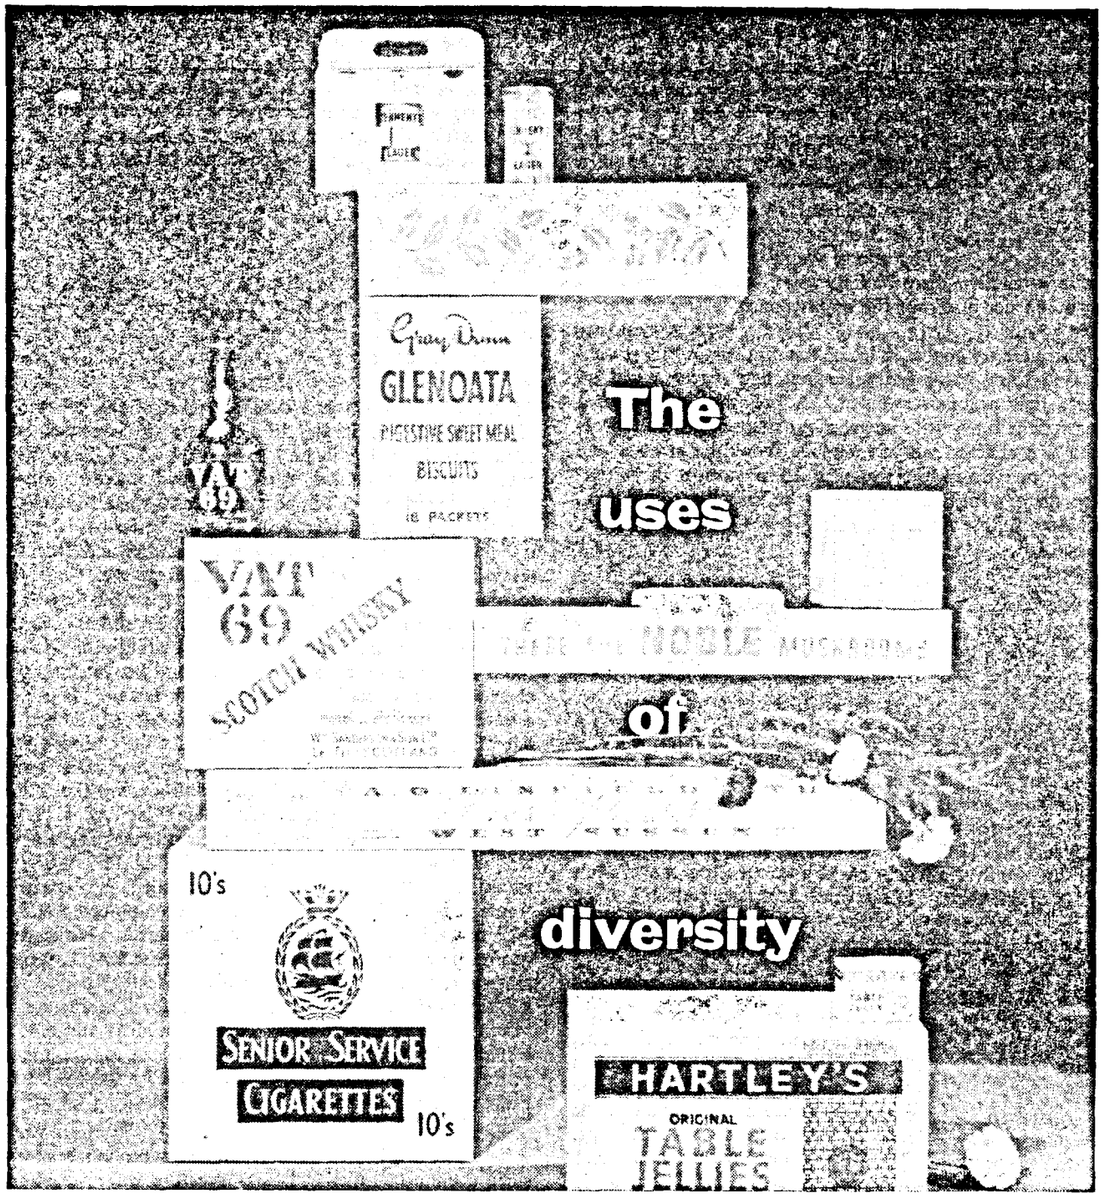
The second problem was that the Moselle canal may well cost more than the sum agreed in June. Once more Germany has agreed to pay the extra cost, though France for its part will pay for rail, electricity and canal works in Luxemburg. More detailed arrangements have also been made about the supply to France of 90 million tons of Warndt coal, and provision has been made to assist Saar industry by importing German capital goods duty-free in the three years before the economic union with Germany. An undertaking to prevent future political discrimination has also been exchanged.

These agreements, although not yet signed or ratified, seem to promise an end to the Saar problem at last. The sizeable German concessions reflect Dr Adenauer's continuing realisation of the need for European unity as well as his present political insecurity at home and disenchantment with the United States. M. Mollet's own will for a settlement has perhaps been increased by France's troubles in North Africa. But, as in the past, the instinct to unite in time of need may prove the foundation of lasting European edifices.

Third Force

THE Third Programme deserved most of the tributes it received on its tenth birthday; its begetters and controllers have legitimate cause for pride. They have created and maintained a civilised and civilising organ whose general and all-important merit—transcending the merits of any particular broadcast or series—is that of upholding the truth that excellence matters and that the minority which desires excellence matters too. But the temptations that beset all minority movements have not been entirely resisted by the Third. Freakishness and the breeding of pedigree hobby-horses can be forgiven. Rather more serious is a certain ambiguity in the Programme's conception of its audience, especially for talks. "It can be assumed," says the memorandum of July, 1946, quoted in the BBC's anniversary publication, "that the audience will include the most intelligent, receptive people of all classes." But Mr (now Sir) George Barnes, introducing the Third Programme to the public, equated these "intelligent, receptive people" to those who prefer their concert programmes without notes and who dislike anything in the nature of exposition. "Compromise on this issue," he asserted, "antagonises all." There has in effect been no compromise. The result has not been altogether fortunate. While it is good manners and, on the Third, good sense for a specialist to assume that he is addressing his intellectual peers, it is neither good manners nor good sense for him further to assume that he is addressing fellow-specialists any one of whom could not merely read, but contribute to, the appropriate learned journal. Yet that is precisely what the Third Programme's shuddering distaste for "hearing aids" or "exposition" too often encourages him to do.

These two mistakes probably account for much of the steep decline in listening figures over the ten years of the Programme's life. Another mistake, not confined to the Third, is a propensity to put over the air matter which would do better in print. A highly literate audience is also an audience that can read many times faster than any lecturer can talk, and is likely moreover to prefer the further advantages of print—ability to re-read, to ponder a knotty passage or skim a familiar argument—to that illusion of personal contact which impresses the unsophisticated. The moral is not, certainly, that the Third Programme should either lower its standards or diminish its output of the spoken word. It is that it should concentrate on doing what its medium can do better than print—live discussion, the topicality which no learned journal can achieve, and that element of personality which so triumphantly enriched the very first performance, when Sir Max Beerbohm spoke on "London Revisited."



Sweet they may be, or bitter, for corrugated cases are equally adept at carrying jam or beer. They take one shape to supply sauce to the village store, another to deliver a cathode-ray tube safely to Hong Kong. Their diversity is part result, part inspiration of the great growth of demand by manufacturers. But corrugated cases do not rest on their laurels—the future holds greater diversity still. A further stimulus to diversity has been the merging of the corrugated case interests of Bowaters with the manifold packaging activities of the Eburite Group of Companies. Users of packaging can now take full advantage of the pooled experien.e and manufacturing and marketing resources of...

Letters to the Editor

Other Eden?

SIR—Two things have passed almost unnoticed in the discussion of the Suez crisis. First, the problem of Nasser is not only the seizure of the canal, but years of bitter anti-French and anti-British propaganda aimed at destroying our interests in Asia and Africa: we had to face this sooner or later and the seizure of the canal provided a concrete instance of aggression which would enlist the support of much of the world. Secondly, Nasser badly mis-timed his coup, which did not come at a moment dangerous for Britain or helpful to Russia. If it had come during an economic depression in Britain, or at the height of the Mau Mau crisis, or during a revolt in Aden and the Gulf States, or timed to coincide with Russian pressures in Central Europe, such a seizure would have been strategically serious. It has, in fact, conveniently confirmed our need to stay in Cyprus, even in the eyes of those Labour speechmakers who are so busy dismantling the British empire for lack of any intelligent policy to advocate at home or abroad.

The bold policy of Sir Anthony Eden has already yielded the following dividends, plucking triumph from what less courageous minds deemed to be disaster:

1. An effective check to a wave of nationalising hysteria from the Tigris to Tripoli, which Labour timidity would undoubtedly have precipitated.

2. The United States has awakened to the fact that the vital interests of her allies are menaced and is, at long last, aligning her Middle East policies with us instead of against us. This, alone, would have justified Eden's policy.

3. Nasser, in Arab eyes, has forfeited the support of the United States, France, Britain and the West for the dangerous and dubious company of Russia and the Communist world, a situation far from the liking of all other Arab States.

4. The sham peace campaign of Khrushchev and Bulganin, on which Soviet Russia has lavished so much effort, has been halted and easily exposed for what it was worth, a remarkable achievement in clarifying the political situation and greatly to Russia's chagrin.

5. Our military precautions have kept Nasser pegged down; there have been no mob riots, and the pilots and families have come away in safety. He has not dared to close the canal to 60 per cent of the ships which refuse to pay him for passage. He has been unable to maintain military pressure against Israel, so that Syria and Jordan have had a taste of the unreliability of Egyptian military aid and have turned to Iraq for help. In all this, and many other things, Nasser has had to swallow far too much to be able to pose as the conquering hero.

6. The Arab States recognise in him a dictator without oil who is trying to seize control of their oil-route to Europe and so make himself and Egypt master of the Arab world. The Egyptians will soon realise that he has thrown away the support of the West to become a beggar for the favours of Soviet Russia.

On balance Nasser has lost ten times more than he has gained during the past two months: this was Sir Anthony Eden's purpose in "ensuring that aggression should not pay."—Yours faithfully,

ARTHUR DAVIES
University of Exeter

Town, Gown and Mr Sandys

SIR—Your note in *The Economist* of September 29th did less than justice to the amount of relief for central Oxford which could be afforded by new internal (as opposed to inner or central) link roads. Outside the central area there is a wide belt of industrial, business, hospital, school and, above all, residential areas, which intercommunicate only through the central bridges. The case for internal links for these areas—the "intermediate relief ring"—rests on the extent to which they would be used by (*a*) traffic for which they provide an alternative and more convenient route into the centre, and (*b*) traffic not seeking the centre.

There are no up-to-date figures of origin and destination of Oxford's internal traffic, but at the recent public inquiry the city's planning officials estimated that the "intermediate road" then under review, linking east and south Oxford, would attract 19 per cent, and the "Lamb and Flag" road 27 per cent of the traffic now crossing Magdalen Bridge, by their mere existence, with no restrictions on the use of the bridge. Part of the 27 per cent must be reduced if the "Lamb and Flag" road is replaced by a link further north (at the Norham area, as you suggest), but not very much. Thus the provision of these two relatively uncontroversial roads, together with the outer by-pass road (whose relief for Oxford is estimated at 12 per cent), would take half the present traffic out of the High. Car parks associated with these internal roads, and their integration into a ring system, would attract even more road users to them.

The same point can be made by another set of figures, for the destination of traffic using Magdalen Bridge:

Traffic not stopping in the central area ...	40 per cent
Traffic aiming at the central area	36 per cent
"Stopping - through" traffic	24 per cent

If an up-to-date survey were carried out, the usefulness of the intermediate ring might be even more strongly borne out by statistics.

The Minister has too readily despaired of bringing relief to the High by intermediate roads. They would not, it is true, enable him to close the High to all motorised traffic, but even his own plan does not do that. If you support the Minister's road in the Meadow, you must weigh it, not against all the traffic at present in the High, but against such traffic as cannot be attracted away from the High by other methods.

Another point, you argue that intermediate roads do not bring enough benefit to the amenities of the central area. Have you asked yourself why, if the Norham link supplemented Magdalen Bridge and adequate car parks were provided, the whole university area between the Parks and the High should not have the traffic-free "peace and dignity" which the Minister, by other means, wishes to give it?—Yours faithfully,

CHRISTIAN HARDIE
Oxford

★

SIR—The many readers of *The Economist* in Oxford will have been as shocked as I was to find that, in the matter of the Oxford roads, it was now prepared to regard Mr Sandys's decision as final.

It is unnecessary to rehearse once more the objections to the scheme, though it may be worth emphasising the peculiar dishonesty of offering to block Magdalen Bridge as the price of a road across the Meadow when the Minister is perfectly well aware that local opinion will never allow the bridge to be blocked or, if it is blocked, will never allow the interruption to remain in force for any length of time. Only a group of innocent and unworldly dons could fall into so obvious a trap.

What surprises me much more is that *The Economist* should on this matter abandon its normal belief in the virtues of local self-government. It would seem obvious that the best people to decide on how the University can be preserved are those who have made their working life within it. This scheme was overwhelmingly repudiated by the University's constituted organs. Nor, on this occasion, did Town differ from Gown, since the scheme has also been rejected on more than one occasion by the municipal authorities. It is difficult to believe that when Parliament passed the Act, it meant the Minister's power of direction to be such as to enable any opinionated philistine who happened to be in office to override the wishes and

The first escape story of a German in England

THE ONE THAT GOT AWAY

by KENDAL BURT & JAMES LEASOR

All who have been stirred by the many stories of British wartime escapes from enemy prison camps must have wondered whether German prisoners in our hands made equally valiant attempts at escape, and what were the chances of success from a sea-girt island. *Illustrated 16s.*

COLLINS & MICHAEL JOSEPH

Trimming a Bad Egg

SIR—It is perhaps carping to point out that your Note in your issue of September 22nd errs somewhat regarding the conditions to be incorporated in the producer's licences. Probably as a result of the promoters' reticence in their press handouts, referring to the licence to sell wholesale, you say, "the conditions for which do not seem very onerous," and to that permitting retail sales, "more or less without conditions at all."

In fact, producers may be divided into different classes and different conditions applied to different classes of producers. Both licences may contain conditions that, in respect of his trade under the licence, the holder shall furnish to the Board such estimates, returns, accounts and other information, and keep such books, accounts, records as the Board may prescribe, and produce them to any person authorised by the Board; and fulfil such other conditions as the Board may prescribe, not being such as they may not prescribe by reason of paragraphs 64-68 both inclusive.

Holders of B licences will have to apply to the eggs some specified mark to indicate their origin, and must notify the Board of the names and addresses of retailers to whom they propose to sell eggs. Holders of either type of licence will have to pay a levy of one-half of the maximum rate charged on any other class of sales and not exceeding one farthing per dozen when no levy is made on other classes of sales.

Any producer who is registered at any time during the twelve months preceding the winding up of the Board may be called upon to pay 2d. per head of poultry, based on the maximum number of birds on his land at any time during that period.—Yours faithfully,
C. BARCLAY
The Egg and Poultry Producers' Association, W.1

★

Sir—Your Note brings home the point that the modifications to the proposed egg marketing scheme leave a thoroughly bad scheme only slightly less obnoxious.

No considered case has been made for the necessity for this scheme, which will merely perpetuate an unnecessary hoard of officials who will have to be paid for by either producers, consumers or taxpayers. It is to be hoped that the scheme will be laid before Parliament as a bill and not as a statutory instrument; that both Houses will be given adequate time to consider the bill; and that the Government will permit a free vote.—Yours faithfully, JACK MERRICKS
Icklesham, Sussex

Unforgettable People

SIR—May I express my sincere appreciation for your article last week. As an Albanian emigré journalist I have had an opportunity to visit some of my fellow countrymen living in refugee camps and I can readily subscribe to everything you say, with only one exception. You speak of a "band of Epirots who fought their way south into Greece, bringing with them the Albanian frontier guards who at first tried to stop them and then decided to come along too." I submit that the use of the word "Epirot" is misleading. Athens Radio, which first gave the news about this escape, said this: "Over sixty *Albanians*, mostly shepherds with their flocks, have crossed into Greece in the frontier area of Epirus. Before reaching Greek territory, they attacked and disarmed some Albanian frontier guards and made them cross into Greece with them. The refugees have asked for political asylum."—Yours faithfully, T. ZAVALANI
London, W.11

★

SIR—Your article jogging our consciences concerning the refugees in Europe today was most timely. Some of your readers may not be aware that this month the United Nations Association is launching a nationwide appeal for funds to help these unfortunate people. The bulk of the funds will be devoted to the "permanent solutions" programme of the UN High Commissioner for Refugees—for homes, medical care, vocational training, loans to enable refugees to undertake employment, guidance by social workers, etc. Donations will be gratefully received by the UNA Refugee Fund, 25, Charles Street, London, W.1.—Yours faithfully, DAVID ENNALS
United Nations Association, W.1

Turnover in Trinidad

SIR—In your issue of September 29th you refer to the defeat of Mr Albert Gomes, "with his entire party." Mr Gomes never had a party; in fact it was only a year ago that he was co-opted by the Party of Political Progress Groups (the Chamber of Commerce's political organisation) as a candidate for this year's elections. Several other candidates were put up by this organisation and all were defeated. If you are referring to the Ministerial party, then only three Ministers lost their seats, two being returned as members of other parties.

Then it is stated that "there are also 12 nominated and ex-officio members in the legislature." This is incorrect as there are only five nominated members and two ex-officio members in the new legislature.—Yours faithfully,
London, S.W.5 G. V. DE FREITAS

Books & Publications

Foundations of Africa

LUGARD: *The Years of Adventure, 1858-1898.*
By Margery Perham.
Collins. 765 pages. 42*s.*

IT may fairly be asked which is the more extraordinary—the mood in which Britain is withdrawing from Africa, or the mood in which it went in. Reluctant as it was to take African responsibilities on, and eager as it now is to let them go, the shortness of the intervening period should perhaps be no wonder. Yet wonder at its extraordinary brevity is rekindled by the first volume of Miss Perham's life of Lord Lugard. When Lugard arrived in Africa, full of the Victorian sense of principle, trained from youth in Victorian spiritual exercises, but reacting in a rather less-than-Victorian way from an entirely uninhibited and un-Victorian love affair, Britain had half a dozen footholds on the West Coast, Rhodes in Cape Colony, a few score missionaries dotted about the interior, an influential consul in Zanzibar and a naval patrol ineffectively checking slavery. From these beginnings, the Empire in Africa, Lugard's career, and the twin principles of the dual mandate and indirect rule, were to grow. Lugard died a couple of years before India's independence put before African nationalists, already active and articulate, a glittering goal of power achievable in their own lifetimes.

In that period, modern colonial Africa was made. Miss Perham's first volume traces the vast change in British feelings about expansion in Africa which occurred between 1887, when Lugard first landed, penniless and neurotic, at Zanzibar, and 1897 when Chamberlain appointed him Commissioner and Commandant of the West African Frontier Force with orders to add as much extra territory as was reasonable and possible to the northern territories of the Gold Coast and Nigeria in the teeth of the French. Lugard settled some of the last frontiers to be delimited in the scramble for Africa. By then he had saved Nyasaland and Kenya and Uganda as British spheres of influence, made sure that Nigeria should stretch to the Niger bend, and prospected the Kalahari. In painting the map red, he was second only to Rhodes. Miss Perham makes it very clear that but for his efforts Kenya would have been as small an enclave in German East Africa as Sierra Leone was in the West—and Nigeria would have been perhaps little larger. For under the rules of spheres of influence there had to be "effective occupation." Lugard not only ensured this, with his long and arduous treks, toting his unreliable Maxim, signing treaties, and drawing maps; but by hard campaigning at home in the press, in public meetings and in conclave with ministers, he also did much to compel the government to claim for Britain the bounds that he and his column of ragged soldiers and sweating porters had beaten.

Most of his expeditions were undertaken for one or other of the chartered companies which opened up Africa at private not public expense. They hoped to make some legitimate profits, and some did. But profit alone would not have brought or kept them there. Empire in Africa was founded on the destruction of the slave trade—in the west, from Sierra Leone, the main anti-slave trade base; in the east, upon the crushing of Arab power. Lugard outfought and outwitted the slavers, Arab and African, in every area; but the new rule for which he paved the way was not as heavy-handed as that which followed the expulsion of the Arabs at the hands of the French, Belgians or Germans. From his first efforts to break slavery and introduce law and order in Nyasaland, Lugard conceived the idea of working through existing African institutions and authorities, as modified by western ideas of law, and the missionaries' ideas of morals. Except in Buganda there was little enough to build on; African society was in ruins as the result of slaving, inter-tribal warfare and depopulation. Either the missionaries were in peril of their lives from Africans in their unregenerate state or they were introducing the blessings of nineteenth-century sectarianism to Africans as soon as their regeneration had progressed enough to allow it. The celebrated civil war between Anglican and Roman Catholic Baganda factions loses nothing of its fascination in Miss Perham's telling of it, with Lugard as the central figure.

Into the unconditional Darwinian struggle for survival which determined African existence, Lugard strode, whether to rescue missionaries, slaves or refugees or to preserve struggling chartered companies. Many men of the same mind worked with him—though it was his peculiar fate just to turn the wavering scales everywhere he went in favour of civilisation and British control. He never undervalued Africans and he perceived all along that personal example was decisive for the African attitude to white men; it deeply grieved him that from the first it was not only Arabs in East Africa, but white men also, who sowed the perennial crop of African suspicion. In the condition of the country, he hardly conceived that Africans would ever come to take western political institutions rather than individuals as their example. In working through tribal authority he looked as far ahead as he could. It was his personal example that gave the concept of indirect rule an authority that was, in the end, perhaps, too absolute.

For, as Miss Perham's narrative shows, native society was already decayed, and to attempt to freeze it at any stage was a mistake. But Lugard at least laid down the principle from the first that the African should be encouraged to develop his own initiative, and even out of the limitations of indirect chiefly rule, African national consciousness and desire for self-government grew. The break with chiefly rule, when it comes, is now perhaps too violent; and an artificial tribalism has nourished other evils. But Miss Perham holds up a mirror to Africa as Lugard first saw it, and saw in indirect rule a means to give Africans some security and political *lebensraum* on the one hand, administrators an instrument through which to rule on the other. In British Africa this device, which will no doubt be discussed in Miss Perham's next volume, provided the bridge between the torn and depopulated Africa of the slavers and that of the African nationalist leaders today, who expect to inherit modern states from the departing white men.

On the experience gained in the partnership between tribes and district commissioners, plus a few years' cramming in the practice of representative government, Britain now expects Africans to display a good many Victorian private as well as public virtues. It is optimistic—just as it was optimistic to expect that men like Lugard could be sent in to suppress slavery, and protect missions, without turning "spheres of influence" into imperial dominions, chartered companies into colonial civil services. But Africa and Africans would be infinitely the poorer but for the British interlude, and for the stamp given to it by a founder like Lugard.

Permanent Under-Secretary

HOME AND ABROAD.
By Lord Strang.
Deutsch. 320 pages. 21*s.*

"TO be born," Lord Strang writes, "into a Scottish household in a rural English environment is to be faced with a need for adaptation and adjustment, conscious or unconscious, going beyond what is normally called for in the formation of personality." To enter the Foreign Service without aristocratic connections or education at a public school or an ancient university does not, on the other hand, seem to have presented him with any problem at all; "the transition was smoothed with the perfect consideration with which we newcomers were welcomed into the

Service and made immediately free of the liberties of the fraternity of which we were now to be members . . . for the rest of our working lives." Far from feeling anxiety the young Strang felt a new confidence. This was in 1919 and reminds us how often we tend to mistake the social transformation precipitated by the first world war for that induced by the second. In 1945 a trade union leader became Secretary of State for Foreign Affairs; it was perhaps no mere coincidence but a natural part of the evolution of the century that Lord Strang, as his Permanent Under-Secretary, felt a particular sympathy for Ernest Bevin.

Social change apart, "Home and Abroad" is a fascinating record, not least because of the author's recurring experience of the Soviet Union. He became Counsellor of Embassy in Moscow in 1930 and was profoundly concerned with the arrest and trial of the British engineers in 1933; he was thus versed in the methods of Soviet interrogation many years before they stirred the conscience of the world at large. In 1939 he played an important part in the negotiations by which the western powers hoped to bind the Russians to their side against Germany. "The physical conditions in which these talks were conducted deserve some mention," he writes. "Molotov sat at a large desk in the right-hand corner of his room (as you entered), with the windows on his left. His desk was raised from the floor on a dais, and we sat in a semi-circle below him. . . . We had to nurse our papers on our knees and make our notes as best we could. . . . Behind the table on our left front was an always open door which I found faintly disturbing, as though there was somebody listening. . . ." Towards the end of the war Lord Strang was the British member of the European Advisory Commission with Gusev as his Russian opposite number; it is in his chapter about this commission that he remarks: "The Soviet Government have imposed their pattern of diplomatic negotiation upon those who have dealings with them, and have constrained the rest of the world to acquire their negotiating technique." As Political Adviser to Lord Montgomery in Germany from 1945 to 1947 and then with Bevin in London, Lord Strang was never to escape from wrestling with the Russians until he retired to Oxfordshire in 1953. It is noteworthy that he should nevertheless write in his foreword in 1956, "The Soviet system, cruel, evil and tyrannous as it shows itself to be . . . springs, however remotely, from a moral idea . . . for Nazism, on the contrary, there was and is, it seems to me, nothing to be said."

Lord Strang's admiration for Bevin is linked with belief in the solidity of his achievement: up to the moment at which he finished writing this book he felt the international organisation—and especially Nato—which followed the second great war to be more convincing and workable than that which followed the Treaty of Versailles. His readers will wonder whether the Suez crisis has left this opinion unshaken. Lord Strang is optimistic, too, about the future of the Foreign Service, and, more tentatively, about the future of Germany. The vitality of India and the Far East impressed him on his tour of inspection in 1949: only the Middle East seemed to him decadent, still blighted by the effects of Tartar and Turkish domination, as he conventionally, but no doubt correctly, diagnosed.

Majority and Tyranny

A PREFACE TO DEMOCRATIC THEORY.
By Robert A. Dahl.
The University of Chicago Press. London: *Cambridge University Press.* 166 pages. 22s. 6d.

MR DAHL is Professor of Political Science at Yale, and the contents of this book were given as lectures at the University of Chicago for the Charles R. Walgreen Foundation for the Study of American Institutions. The general theorising of this book has therefore the political system of the United States in mind, and the only serious references to other countries are two to Great Britain and one to France. But, given this limitation, Mr Dahl has written a most interesting book. He stands back from the system far enough to state and to examine as precisely as possible the two competing theories of democracy that have been influential in forming it: "Madisonian democracy," emphasising liberty and concerned with obviating "tyranny" by a majority by preventing the accumulation of power in the same hands; and "populistic democracy," emphasising equality and concerned with securing that the will of the majority should prevail. The present American system, Mr Dahl maintains, is a "hybrid," in which the original careful balancing of powers designed by Madison and the other founding fathers was readjusted by the increased role of the President after Andrew Jackson. "To assume that this country has remained democratic because of its Constitution seems to me an obvious reversal of the relation; it is much more plausible to suppose that the Constitution has remained because our society is essentially democratic." And American society is essentially democratic because of a sufficiently general agreement upon conditions, which Mr Dahl examines in some detail.

Choice between different political objectives depends upon the preferences of the various people concerned, and Mr Dahl devotes a good deal of attention to the question—with which moral philosophers and welfare economists have been much concerned—how to measure, or even to compare, such preferences. He decides that political science must take behaviour as the criterion for preference—how much trouble one will go to in furthering one's political end—just as economics must take purchasing behaviour as a criterion for the consumer's preferences.

A difficult problem for democratic theory is raised by "severe asymmetrical disagreement" among preferences; this occurs when most of a majority supporting a course of action only slightly prefer it to an alternative course, whereas most of the minority strongly oppose it. Here it would be reasonable to speak of a "tyranny" of the majority, so much feared by Madison, and it might be reasonable to allow a minority veto in certain cases. The American constitutional arrangements are too haphazard to protect minorities only in those cases in which they ought to be protected, and Mr Dahl attaches much more importance, for avoiding such "tyranny," to the overlapping membership of different social groupings.

> If most individuals in the society identify themselves with more than one group, then there is some positive probability that any majority contains individuals who identify themselves for certain purposes with the threatened minority. . . . Some of these sympathisers will shift their support away from the majority alternative and the majority will crumble.

Mr Dahl thinks that this "hypothesis" is "highly plausible": to an Englishman it certainly appears to be the principal means by which political objectives, desired strongly by a minority, have been achieved in Great Britain. The faculty of sympathy, which for the eighteenth-century moralists was the root of all virtue, would seem to provide the effective way by which peaceful changes can be brought about in a democratic society.

Retreat from Moscow

PAN-AFRICANISM OR COMMUNISM?
By George Padmore.
Dobson. 463 pages. 25s.

THE most recent of Mr Padmore's books (and by far the best) suffers from all the faults of its predecessors. Its material is polemical, often superficial, sometimes irrelevant. Its range is far too wide. It is amateurish—not the work of a professional politician, historian, or economist. Yet with all its faults it is an important book, and its immediate impact on African politics may be great.

In the first place, Mr Padmore's book is an announcement that whatever has happened in the past, African nationalist politicians have now rejected communism. Their aversion is complete. They have flirted with communism—many have probably been members of the Communist Party—but as Mr Richard Wright puts it in the Foreword, "Today nobody is more immune to the call of communism than black men who found, to their bitter sorrow, that they were being used for ends that were not theirs. . . ." The communist is white, and therefore as repugnant as any imperialist. Mr Padmore asserts, and brings chapter and verse to prove, that "None of the African independence movements is influenced by communism." "Directed" would be a better word, as Marxian influence on African political movements is both extensive and admitted; but it may at any rate be accepted that the dynamic of African politics today is African, not communist. Mr Padmore makes a bid on behalf of Africa for uncommitted black socialism, after the pattern of India. (Throughout West Africa today there is a very great admiration for India and Mr Nehru. Once a Nigerian student audience booed the editor of a British left-wing weekly. The same audience cheered an Indian leader to the echo when he said exactly the same things.)

Not communism, then, but Pan-Africanism, is the solution in Africa that Mr Padmore and his many associates now advocate. Pan-Africanism means first a common citizenship for all races in Africa on the basis of absolute equality for Africans, and secondly the ultimate amalgamation of regional African self-governing countries into a United States of Africa. Mr Padmore has converted "Pan-Africanism" from a slogan into a programme. But he also gives a warning—not a threat—that if the European colonial powers impede or retard African progress towards self-government, Africans will certainly turn to communism as the only source from which they could get help. In those circumstances, he argues, the struggle for the mind and soul of Africa would be between black and red, not black and white.

Looked at from Europe, African political movements always seem fragmentary, fissiparous, Mr Padmore indicates that diverse as these movements are, the degree of continuity and coherence, throughout Africa—east, west, central and south—is not inconsiderable. If Mr Nkrumah, Prime Minister of the Gold Coast, organises the next Pan-African Congress in the Gold Coast, as is suggested, with delegates from all parts of the continent, this unity of aspiration will be demonstrated.

The tragedy is that African politics are based on black nationalism—a blend of politics and pigment—and this is basically a reactionary and illiberal conception. It is not an answer to Malanism, but *apartheid* in reverse. Mr Padmore quotes Marcus Garvey, the black showman politician—"I believe in a pure black race just as how all self-respecting whites believe in a pure white race." This racial purity is not Mr Padmore's philosophy. He gives a more enthusiastic imprimatur to a sentence from Dr DuBois, another Negro leader, "A belief in humanity means a belief in coloured men." It would be tragic indeed if Africans were moving away from a belief in humanity while the western world was moving towards a belief in coloured men. Mr Padmore himself, an African from the West Indies, not Africa, still believes in and hopes for terms of friendship between Africa and the West. But he is fifty-three, and it is the nature of nationalism that its guidance perpetually escapes from the hands of the middle-aged.

The Last Whig

PORTRAITS FROM MEMORY.
By Bertrand Russell.
Allen and Unwin. 227 pages. 16s.

BERTRAND RUSSELL'S style and personality impose unity on this collection of essays, talks and lectures on many subjects: his own intellectual development, his friends, his political beliefs and even (in popular form) philosophy. They are undated, and only in one or two cases is their origin or occasion given, but they all seem to be fairly recent. They look back to his earlier life as a logician, and treat it as something past; his preoccupation with public issues grows with the years, and shows no flagging in his ninth decade.

In one of his essays he says that "most of us go about the world with . . . subconscious presuppositions which influence our beliefs more than explicit arguments do, and in most of us these presuppositions are fully formed by the time we are twenty-five." This book is the proof of it. Bertrand Russell is the inheritor of the age of reason. He was brought up by Lord John Russell, who was born in the eighteenth century and all his life was a reformer, an optimist and a moralist. His grandson has emptied out Lord John's wine, but the bottle is the same and the new vintage is recognisably from the same vineyard. And he labours in that vineyard for the same reasons:

> My family during four centuries was important in the public life of England, and I was brought up to feel a responsibility which demanded that I should express my opinion on political questions. This feeling is more deeply implanted in me than reason would warrant.

He has rejected most of the Victorian values which he was taught as a child, but he retains a strong strain carried over from the eighteenth century—a belief in reason as the proper guide to conduct, and the assumption, stated rather than argued, that man's aim is general happiness and tolerance. With that, one hopes, most younger readers will agree; but what marks him out as a salutary voice from the past is his invincible optimism. "Hatred, folly and mistaken beliefs alone stand between us and the millennium"; and he hopes that they may be swept aside. He thinks that "fanatical dogmatism . . . is primarily an intellectual defect" and does not reckon with it as a complex of emotions which large parts of the human race would not admit as a defect. But those who do not share his optimism or believe much in his remedies can still admire the view that he gives of the good life.

Bertrand Russell's accounts of his friends are among the most witty and attractive things in the book. The great figures of Cambridge and Shaw, Wells and the Webbs get astringent and sympathetic treatment; Santayana is described less sympathetically; D. H. Lawrence with no sympathy at all; and Joseph Conrad, in a fascinating essay, with deep affection.

In these latter days we may be thankful that we have with us so brilliant an example of past virtues, still active and still looking hopefully forward.

Applied Mercantilism

THE ENFORCEMENT OF ENGLISH APPRENTICESHIP 1563-1642
By Margaret Gay Davies.
Harvard University Press. London: *Cumberlege.* 329 pages. 48s.

THIS is undoubtedly the right time to rewrite the history of mercantilism. We can appreciate the problems of the last great attempt of the state to regulate economic affairs much better than our *laisser-faire* predecessors. In this lucid and scholarly book Mrs Davies has examined in detail the enforcement of certain provisions of the most important piece of English mercantilism, the Statute of Artificers of 1563. It is the first full and detailed study of how a specific item of Elizabethan economic legislation worked out in practice, and it sheds considerable light on administrative and legal processes in the sixteenth and seventeenth centuries. It also provides a good deal of information about apprenticeship, the main means for the transmission of technical skills. One result of Mrs Davies's labours is that we are now better informed about the working of this institution in the England of Elizabeth I than in the England of Elizabeth II. It is high time someone followed

suit with a study of English apprenticeship today.

But the scope of the book is wider than its title suggests. Since the enforcement of the statutes depended primarily upon private informers taking offenders to the court, a systematic study of the distribution of prosecutions among counties and occupations reveals many facts about the location of industry, the peculiarities of different occupations and even fluctuations in business activity. The prosecutions are sometimes too few to enable one to judge how much significance should be attached to variations in their number over time and place, but Mrs Davies uses her statistics with skill and discretion, and each speculation is given its due allowance of reservations. In using prosecutions as "tracers" for economic changes she has provided an example that might fruitfully be followed in the case of other pieces of legislation, such as the laws against middlemen and usury.

Twenty Years After

THE HEART HAS ITS REASONS.
By the Duchess of Windsor.
Michael Joseph. 381 pages. 30s.

THIS might have been an embarrassing and objectionable book; in the retelling of its story any taint of glossy vulgarity, any note of rancour, any whiff of exhibitionism would have been disproportionately disastrous. That it should have been written at all is already in some eyes an offence; the plea that a much-criticised character on a historic stage deserves the right of reply could so easily serve as a specious excuse for cashing in on a twenty-year-old sensation. No such criticism survives a reading of "The Heart Has Its Reasons." Whatever indignant memories it may stir, it has the essential flavour of honesty; a straight story, told indeed without literary distinction or subtlety, but also without self-justification, malice or pose. No attempt is made to pluck at the reader's heartstrings nor to build up a picture of a uniquely fascinating heroine of an Empire-shaking romantic drama. These are negative virtues, but virtues not, in this context, to be underrated.

The early chapters—growing up in Baltimore in the care of a widowed mother dependent on the slightly erratic goodwill of prosperous relations, schooling, the excitements of "coming out"—have a period charm; and both liveliness and self-knowledge mark the record of the first impetuous youthful marriage and its failure, and the chronicle of the travels, house-hunting, interior decorating, and social contacts of that well-to-do Anglo-American couple, the Ernest Simpsons. Naturally, however, it is primarily for the light they cast on later events that they will be read. They cast a good deal. Their writer emerges in the round—buoyant but insecure, gay, independent, adaptable, venturesome, good at people—and about as capable of looking beyond tomorrow as an average ten-year-old. Acquaintance with the Prince of Wales ripened into close friendship, not unaffected—the admission is disarmingly open—by the glamour of his position and apparent power; the "indefinable boundary" of the emotions was crossed almost unawares; the King spoke of marriage; and at no stage did this alert and perceptive woman ask herself, in any consecutive way, what the upshot would be. Then came the landslide: the hastily decided flight, the tragi-comic scurry across France, the nerve-racking attempts, over defective provincial telephones, at a renunciation which the King, his honour as inflexibly engaged as his emotions, refused to accept; the Abdication; the months of separate exile; and the making of a new life.

There is little to be gained by thrashing over yet again the controversies of the crisis itself. But the concluding chapters of this book, carrying on the narrative from where "A King's Story" left it, unmistakably call for comment. It is now close on twenty years since the Duke of Windsor, a highly trained, uniquely experienced, devoted and successful servant of his country, left the British Isles. He had renounced the throne; that he should for the time being eclipse himself completely and leave a fair field to his successor was mere elementary wisdom and decency. But that the eclipse should be permanently enforced, that he should spend the rest of his life, apart from the brief wartime interval in remote Nassau, on an anonymously imposed one-man blacklist, barred from any form, direct or indirect, of public activity and service, reduced to the status of an ornament of international café society and an amateur landscape gardener—this argues on the part of whatever powers are responsible a distasteful blend of vindictiveness and funk. The Duchess puts matters more restrainedly; but the facts speak for themselves.

Shorter Notices

ENGLAND'S PRECEDENCE.
By William McElwee.
Hodder and Stoughton. 304 pages. 21s.

Mr McElwee, the author of a spirited work on the murder of Sir Thomas Overbury, has now produced a shrewd and lively narrative of English history between the accession of James I and the flight of James II. He is at pains to point out that his book is not the product of research, but an attempt to bridge the gulf between "the work of researchers and experts and the textbooks and historical romances which give the less expert student and the general public their access to history." He takes his title from Milton's words: "Let not England forget her precedence of teaching the nations how to live." This indicates his main theme, the "establishment of a workable system of representative government and of the essential political freedoms," which he sees as the supreme achievement of the seventeenth century.

The emphasis is therefore upon political history, and he tells the story with robust common sense. Moreover, he makes effective and extensive use of the letters, diaries, memoirs and histories of the period. But Mr McElwee is disposed to represent the sequence of events as inevitable, and he is happier in narrative than in analysis. On some issues he ignores the recent work of professional historians. Studies of the sectional interests in Stuart parliaments have revealed a more complex political structure than Mr McElwee's account recognises. His treatment of social and economic issues is the weakest part of the book, and he might have drawn attention to the controversy on the role of the gentry which now so agitates historians. But within the older tradition of political and constitutional history this book is a pleasant and reliable introduction to 17th century English history.

★

ADVERTISING AS A SERVICE TO SOCIETY.
By John McEwan.
Macdonald and Evans. 129 pages. 12s. 6d.

Readers of this book who can get past its question-begging title and an embarrassing "historical" beginning will find useful sketches of the present organisation of advertising business, of the work of agencies and of the various kinds of study grouped under the heading of "scientific" advertising—statistics, market research, psychology and industrial design.

The more argumentative parts of the book in which the author considers such questions as the case for advertising agencies, the net effect of advertising on production costs and whether advertising should be treated as a profession or a trade are of more doubtful value. In fact such value as they have arises not so much from the reasoning set down in the book as from the amiable good sense and experience which evidently lie behind it but are seldom translated into complete and explicit statements. This kind of approach is quite inadequate to support the formidable thesis with which the book ends—the argument for a new machinery of advertising in which practitioners would all be professional men paid by fee and not by commission.

★

LAW AND STRUCTURES OF SOCIAL ACTION.
By Kenneth S. Carlston.
Stevens. 300 pages. 35s.

The blurb says that this book is "an attempt at specialisation in non-specialisation," and perhaps that is what is wrong with it, though the author's efforts encourage no belief that his work would be better if he stuck to his last. He is an American professor of law who has lost his heart to American sociology. Equipped with what he can get from the sociologists, he sets out to discuss power and authority in modern society, discussing the nature of law, authority, the state as a concept, world society, and the individual and the organisation in their relations with authority. The peculiar superficiality of his approach to these large questions may be gauged from the fact that, although he puts the history of Roman law in a few pages, he does not mention the work of Hobbes, Austin or Bentham. He is full of scorn for political philosophers, submitting the unfortunate Laski to biting criticism, but seems to think that when he has shown up the defects of a formal view of the state he has exorcised the sovereign state as a force in men's minds, a source of loyalty and an instigator of commands. Nor do the chapters follow logically from one another; we skip from macro-analysis to micro-analysis, from fact to theory and back again without pause or explanation.

Iraq Petroleum Company

STATEMENT ON ITS POSITION IN THE LEBANON

THE IRAQ PETROLEUM COMPANY LIMITED has for some time been preparing to increase the capacity of its pipeline system by laying a new 24-inch pipeline from a point east of Homs to the Mediterranean coast, as a part of its plan to export an additional 9 million tons of Iraqi crude oil each year. The Company had planned to construct this new pipeline to Tripoli and had informed the Lebanese Government accordingly as far back as the 21st April, 1955. However, in view of circumstances arising out of certain actions of the Lebanese Government, a decision has now had to be taken by the Company to construct the pipeline to Banias in Syria and not to Tripoli. Construction work towards Banias has now started.

The loss of this pipeline to the Lebanon means that the country will not now receive the additional oil revenues which, on the basis of the Company's offer to the Government early this year, would have amounted to nearly LL.7 million (£800,000) annually. The new pipeline would also have brought more employment and more expenditure by the Company, particularly in Tripoli, and would have added considerably to the prosperity of that town and of the country generally.

If the present policy of the Lebanese Government towards the Company is continued, it is difficult to see any other result than a serious reduction in the scale of the Company's existing operations in that country, which in turn will cause widespread unemployment and economic distress in Tripoli. This is a result which the Company can contemplate only with the greatest reluctance in view of the loyal service and co-operation which it has received from its employees during more than 20 years of operation in the Lebanon.

The following facts are relevant to the present situation :—

1. In January, 1955, the Company entered into an agreement with the Lebanese Government which more than trebled its previous payments in respect of its pipeline operations, and undertook in certain circumstances to review that agreement. In fulfilment of this undertaking the Company initiated discussions with the Lebanese Government in December, 1955. These negotiations continued for several months.

The Company proposed to share 50/50 with the Government the profitability of its transit operations in the Lebanon. In terms of money the Company offered to pay the Lebanon nearly LL.6.4 million (£700,000) per annum on its present throughput of 7½ million tons of oil. After the completion of the new pipeline, bringing an additional 9 million tons of oil each year to Tripoli, the total annual payments to the Government would have amounted to about LL.13 million (£1,500,000). If, later, the former and now inoperative Kirkuk-Haifa pipeline system were to be diverted to Sidon, the total annual payment to the Government, on the basis of the Company's offer, would have amounted to about LL.18 million (£2 million).

2. The Company believed, and still believes, that its offer was a fair one, the acceptance of which by the Government would have brought great advantage to the Lebanon. It was explained to the Government negotiators that any increase in the amounts of money offered by the Company would mean that oil passing through Tripoli would become more expensive than similar oil passing through Banias terminal, and that in such an event Iraqi oil at Tripoli would not find any purchasers.

It was also explained that the Company's capital investments and the scale of operations in the Lebanon were very much smaller than in other neighbouring countries (e.g., a capital investment of £2¾ million sterling in the Lebanon as against an investment exceeding £40 million sterling in Syria, of which the greater part does not relate to pipelines which terminate in the Lebanon). These factors must obviously be taken into account when comparing the oil revenues offered to Lebanon with those paid elsewhere. However, the Government negotiators appeared to have disregarded these considerations and they rejected the Company's offer, demanding payment on a scale which would have made oil transit operations in the Lebanon uneconomic. After several months of discussion the Lebanese Ministerial Committee for Petroleum Affairs finally wrote to the Company on 27th June, 1956, stating that they did not wish to continue negotiations. Since then the Government has taken no initiative to resume discussions.

3. In the January, 1955 Agreement, the Government undertook to revise the conditions under which Tripoli Refinery is operated by the Company. It may not be generally known that the I.P.C. has been obliged to operate this refinery for several years past at an annual loss now running at the rate of about LL.3 million (£330,000), due to unfair restrictions on the price which the refinery is allowed to charge for its products. This is because retail prices of petroleum products in the Lebanon have been frozen since September, 1950, in spite of the fact that prices of nearly every other commodity have risen since that time. Notwithstanding their undertakings to the Company to remedy this situation, the Government has so far failed to do so.

4. With regard to the proposed new pipeline to Tripoli, the Company could not be expected to proceed with its construction without knowing what transit payments it would be called upon to make. Therefore, the execution of this project became conditional upon the conclusion of a comprehensive agreement with the Lebanese Government. Early this year the Company informed the Government that financial and technical factors made it necessary to decide by the 15th June whether the pipeline could be built to Tripoli. When by that date there had been no conclusion to the negotiations, the Company, at considerable expense to itself, readjusted its engineering programme and thus enabled the final decision to be postponed until the 1st October.

The decision could not be postponed later than 1st October because the decisive area, which must determine whether the new pipeline terminates in Lebanon or Syria, lies in the Bekaa Valley, a low-lying area near the Syrian-Lebanese border. This area is for most of the year under rice cultivation and, therefore, work must be done after the harvest (September) and before the winter rains (late October or early November). Failure to work during this period would mean a further delay of a year.

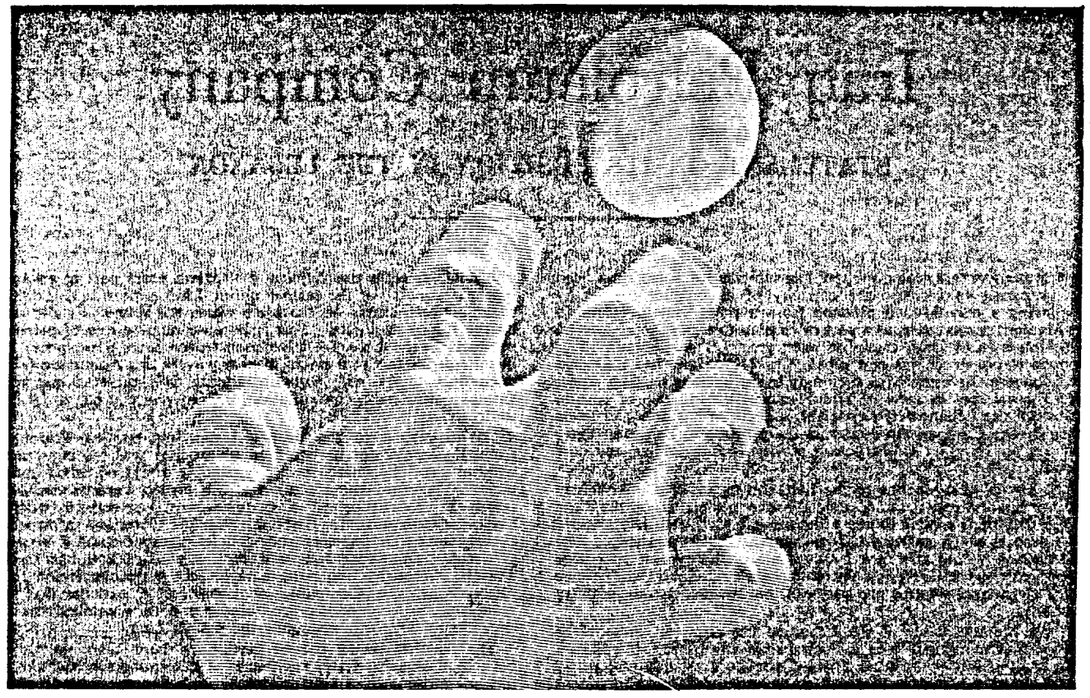
The Minister of State was accordingly informed by the Company's representative on the 27th June that a final decision regarding the new pipeline had been postponed until the 1st October. However, immediately afterwards the Government broke off negotiations and introduced a new law into Parliament on 29th June with the aim of subjecting the I.P.C. to all forms of taxation in violation of the exemptions to which it is entitled under its 1931 Convention. The Company does not recognise or accept that taxation can legally be imposed on the Company in this way, and in accordance with the method prescribed in the Convention for the settlement of disputes the Company has called for arbitration. Meanwhile the Company would only wish to say here that it feels sure that the Lebanese people, with their world-wide commercial connections, would be insistent in their support of the principle of sanctity of contracts.

5. Introducing the tax law the Minister of State contrasted the Company's offer with the offer of Tapline to conclude a 50/50 agreement with the Lebanon. But the Company's offer was in fact to share equally with the Government the profitability of its operations in the Lebanon. In this connection the Company can only comment that, to the best of its knowledge, no agreement has yet been reached between Tapline and the Government on the question of revised oil revenues and the Government cannot, therefore, know what oil revenues it will eventually obtain from Tapline.

Misrepresentation of the facts continues and certain senior Government personalities have made, and continue to make, threats of extreme measures against the Company which, if executed, could only mean a suspension of the Company's operations in the Lebanon and the mass discharge of its 2,500 employees.

6. In addition to the oil revenues payable by the Company to the Government, the I.P.C. has brought and hopes to continue to bring many other benefits to the Lebanon. At the present time its annual expenditure in the Lebanon is running at the rate of LL.25 million a year (nearly £3 million), this sum being made up of wage payments, local purchases, payments for work carried out locally by Lebanese contractors, and many other items on which expenditure brings benefit to wide sections of the Lebanese commercial community.

In conclusion the Company wishes to reaffirm its continued good-will towards the people of the Lebanon and its sincere desire for a settlement of the difficulties which have arisen between itself and the Government. But these results cannot be achieved in an atmosphere of misrepresentation and threats, which are incompatible with the position of the Lebanon as one of the most important commercial centres of the Middle East, where foreign business enterprises have hitherto been encouraged to operate in confidence and security.



Reaching for the moon

Once it meant the impossible...today it's a progress report on scientific research

WHO DARES call anything impossible today? Not when research scientists are constantly seeking and finding new wonders to improve the way you live.

ONLY A DREAM YESTERDAY...reality today. A generation ago, Union Carbide scientists began taking oil and natural gas apart and putting the pieces together again in ways unknown to nature.

The result? A steady stream of entirely new chemicals... an average of one a month for the past 25 years. The benefits of these petroleum chemicals are everywhere—man-made textile fibers, amazing plastics, life-saving wonder drugs, enduring paints and enamels...the list is endless.

NOT ONLY CHEMISTRY has felt the touch of Union Carbide research. Alloying metals that make possible stainless and other fine steels, oxygen from the air for medical and industrial use, a variety of carbon products—all have been developed, made better or more abundant through Union Carbide's research.

AND THE MOON? The work of Union Carbide scientists in new metals such as titanium, in rocket fuels, and in the beneficial uses of atomic energy, is helping man reach in that direction, too.

FREE: *Learn more about the interesting things you use every day. Write for the illustrated booklet "Products and Processes" which tells how science and industry use the* ALLOYS, CARBONS, CHEMICALS, WELDING EQUIPMENT, *and* PLASTICS *made by Union Carbide. Ask for booklet 1E-10.*

Union Carbide's Products include

SYNTHETIC ORGANIC CHEMICALS • EVEREADY Flashlights and Batteries • NATIONAL Carbons • ACHESON Electrodes
UNION CARBIDE Silicones • Dynel Textile Fibers • ELECTROMET Alloys and Metals • UNION CARBIDE and VINYLITE Plastics
HAYNES STELLITE Alloys • LINDE Welding and Cutting Equipment • PRESTONE Anti-Freeze • CRAG Agricultural Chemicals

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Ambivalence Over Suez

Washington, D.C.

A RECENT Gallup Poll asked Americans what they thought were the most serious problems facing their country. It may come as a surprise to sceptical Europeans that no fewer than 46 per cent listed what Dr Gallup summarised as "the threat of war, Suez, foreign policy." This finding is borne out by some of the journalists who are circulating around the country in this election year. Though there may be a certain amount of "apathy," there is at the same time, apparently, a widespread feeling of interest, and sometimes of concern, about events across the oceans. Yet the Democratic candidates for President and Vice President have scarcely referred in their speeches to the Suez crisis, in spite of their almost desperate search for an issue or issues to inspire the voters. The probable reason for this restraint is that most Americans undoubtedly approve of the way their government has performed in the crisis, or at least can see no clear reason for disapproving.

This approval, what is more, is not limited to the mass of uninformed people whose whole interest, theoretically, is in the avoidance of war. There is a surprisingly widespread view among sensitive people in and out of Washington—people who criticise this or that tactical phase of American policy, who are no admirers of Mr Dulles, and who feel a deep sense of foreboding about the matter—that Mr Dulles's basic position in this case has been the right one. This casts a somewhat dubious light on the theory, widely held in Europe, that American policy on Suez has been dictated predominantly by the fact that this is an election year. An excellent case can be made that the policy, as Mr Dulles himself has somewhat defensively argued, would have been precisely the same if the canal had been seized in 1955 or 1957.

It is certain, in any case, that the European picture of Mr Dulles rubbing his hands in satisfaction at having avoided war, and primarily interested in pushing the problem under the rug, is a false one. He has from the first been extremely concerned about the problem and all its implications—not only the implication of war, but the implication of a powerful and hostile Arab world working against the West. If he reacted almost instinctively against a solution by force, so did most Americans; and the chief reason was simply that in this particular situation war seemed a frustratingly poor instrument for preserving even vital interests. From the very first, thoroughly non-political officials in the State Department were describing the American dilemma in terms of deterring Britain and France from an action that would prove in the end to be to the disadvantage of these countries, while at the same time emphasising the Atlantic Alliance as the prime element in American policy.

This has been a unique problem for American diplomacy. Directly, Communists were neither attacking nor threatening anybody; and direct American interests in the canal itself were limited. Yet, in a dramatic demonstration of the new American role in the world, Mr Dulles found himself not only constantly crossing the Atlantic but listed as the author of this or that proposed solution and as the man who, in the end, had to make many of the key decisions for the western world. Meanwhile, the Americans found themselves from the beginning recalling that there is more to the modern world than Britain and France, that Indian and Arab and even Communist opinion counts, too.

★

There were two important consequences of the unique nature of this situation. The first was that Americans, mostly to their discomfort, had serious doubts about the merits and justice of the British and French case. They wished that case were stronger, but found it rather weak. A commonly heard phrase was that the British and French were wanting "to fight against something that might happen, not something that has happened." The Nasser-Hitler analogy never seriously caught hold in the United States. Whether the European case was in fact weak—and Mr Dulles himself has from the beginning believed it to be strong—is not relevant; the Americans sympathised with their allies for their frustrations, but saw no reason for war.

The second consequence was the one that no doubt bothered Europeans most: a seeming ambivalence in the performance of the United States. Mr Dulles at most stages has backed the British and French position far more solidly than some of the inspired articles in the American and foreign press have indicated. Yet this backing was sometimes rendered less than fully effective by the constant emphasis on "peace" in the remarks of the President at his press conferences. The Americans arrived at the first London conference with such a strong sense of the possibility of reaching an accommodation with the Russians and the Indians that Mr Dulles was never able to get full marks for the fact that he stuck firmly in the end to his allies. When the users' association scheme for applying pressure broke down—in large part because of inherent weaknesses which Mr Dulles himself had failed to realise in advance—the pent-up ire of the British and French burst upon him.

The ambivalence in the American mind and in the

American performance has left almost no one satisfied—except, perhaps, the American people. It is nevertheless difficult to see what else Mr Dulles could have done. It is perhaps a fair assessment that in this crisis more than in any other since the war informed American opinion has been dominated by an awareness of the frustrating nature of the problem rather than by a strong sense of either approval or disapproval at the government's efforts to solve it. What there has not been, either in or out of the State Department, is a feeling that Americans are not involved and that the matter had best be left to those who are.

At the moment both Mr Dulles and his assistants appear to have run out of ideas, and the ambivalence continues. The sense of dejection in the State Department is inescapable. The policy for the moment, as outlined by Mr Dulles, is one of " patience " in the hope that " inevitable " economic consequences will fall upon Egypt because of her violation of the rules of " interdependence." But there is no great confidence that these consequences will amount to much more than a halt to Egyptian economic development; whether they will produce much real discomfort in Egypt, either literally or figuratively, remains to be seen. Behind the policy of patience there remains an apparently unquenchable hope that somehow, some day, a satisfactory solution can be negotiated. The Americans are at the moment trying to prevent the debate in the United Nations from producing positions on both sides that are completely irreconcilable. American aid to Egypt is continuing, and some junior officials account for this with the astonishing explanation that the American aim is " not to rock the boat."

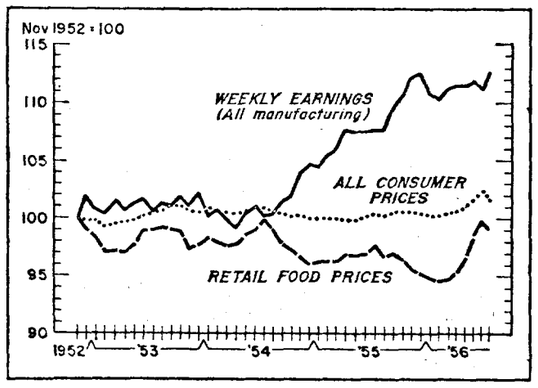
Mr Dulles usefully reminds the world that peace is not enough, that a solution in conformance with " justice and international law " is just as important as peace, and that " you can't go on forever asking nations to refrain from force " if they cannot achieve a just solution in any other way. And yet he refuses to state unequivocally that a solution " in accordance with justice and international law " involves international operation of the canal. The height of ambivalence came at his press conference on Tuesday. His original remarks said unmistakably that American policy departs from that of Britain and France because the United States plays an " independent role " in colonial issues; later, in a highly unusual move, he formally amended the official text in an effort to remove the linkage of Suez with colonialism and to put the admission of a policy split in the past tense.

Informed Americans have been deluged in the past two years with scholarly and not-so-scholarly books and articles about the tide of nationalism in the world. Most of the time the authors have argued that the United States must identify itself with this tide, and not oppose it—that it is irresistible in any case. This sort of feeling was, no doubt, a major reason for the initial American approval of Colonel Nasser, and equally contributed to American hesitation about adopting what M. Mollet calls a " vigorous riposte " to Colonel Nasser's act of piracy. Yet in the face of this feeling, the great weight of United States influence has, after all, come down on the side of its European allies; perhaps in the end history will find cause for wonder in the degree of American support for France and Britain, rather than in any lack of it.

Statistics to Order

TO the Democrats, thirsting for campaign issues in a desert of ideas, the recent rise in the cost-of-living index is as welcome as an oasis. According to the Republicans, the Democrats have found not an oasis but a mirage. It looks real enough, though, to the voters, and the Democrats will see that it does not fade until after the election. The Democratic statisticians have a free way with base years, but they need not stoop, as the Republicans allege they have, to deliberate falsification of the figures. What they have done, as the Republicans themselves are doing, is to indulge in the politician's privilege of telling only half the truth, selecting only those figures which make their case, and carefully ignoring the rest.

The first and obvious point of attack for the Democrats is the fact that in July the consumer price index reached the highest point ever recorded. They feel safe in ignoring a subsequent slight fall in August, because they are confident that the September figures will show a renewed rise. Retail



food prices are no higher now than they were when the Republicans came to power, but, apart from a seasonal drop in August, they have been going up rapidly in the recent months which voters remember best. And the Democrats naturally emphasise those prices—rents, medical care, clothing, cars, electrical appliances—which are now rising fastest, and ignore those which remain steady. Finally, every housewife is convinced that prices in her neighbourhood are going up much faster than the statisticians admit. Moreover, for the Democrats, a gain on the roundabouts need not mean a loss on the swings. Retail food prices have stayed up (which is bad for the consumers) but the prices received by farmers have fallen by nearly 20 per cent since the Republicans took office (which is bad for the farmers). The gain, the Democrats allege, has all been absorbed by the packers and processors, the " big business " middlemen who have fewer votes than either farmers or consumers.

Against this emotive barrage, the Republicans can oppose only the defence of objective statistical analysis. After rising rapidly under the Democratic Administration (helped by a war) retail prices remained virtually unchanged for three years after the Republicans came to power. Even in the last year they have risen by only 2 per cent. Meanwhile earnings have risen by over 4 per cent in the last 12 months,

CONFIDENTIAL

PLANT LOCATION FACTS

Where to find plenty of the right kind of WATER

New York State has water in great quantity and of the right quality for industrial operations.

We can provide the answers to all your questions on water supply at any New York State location and without cost to you. We have complete details on all the municipal water supplies in New York State. We can provide measurements of the quantity or rate of flow of most of the State's important surface waterways based on records kept for periods up to nearly half a century. In the case of ground water supplies, we can provide data concerning the probable yield and fluctuations in the water table at any New York State locality.

The character or quality of New York State's water, both surface and underground, has also been determined. Analyses are available which show the content of various mineral and other materials, hardness, pH range, temperature and many other factors. The water available for use at any given location can be specially sampled and analyzed for you.

Water won't be your only problem in deciding on a new plant location. You will want complete facts on labor, markets available sites or buildings, power, fuel, transportation and raw materials to mention just a few. And you will want information on these as they apply to the successful operation of a specific plant.

A tailor-made report

Any or all of the factors important to your analysis will be covered in a confidential report to you—tailored to your needs. It will be prepared by a professional and experienced staff to cover either New York State locations of your choice, or, if you wish, sites which we will select on the basis of your needs.

Our booklet, "Industrial Location Services," explains what we can do for you. To get your free copy, write me at the New York State Department of Commerce, Room 691, 112 State Street, Albany 7, New York.

A wink built for speed!

The speed of a wink varies, depending upon its purpose . . . and its target. The femme fatale's provocative wink from the dim recesses of a cocktail lounge may pack the wallop of a Sabre-Jet, yet its speed is a languorous one-tenth of a second. Imagine a wink five hundred times as fast! Fairchild Camera and Instrument Corp. has produced a camera that does just that. Its shutter speed is 1/5000th of a second . . . a speed made possible only by using Titanium shutter leaves. Such shutter speeds are essential in guided missile research and the development of supersonic devices.

Titanium had the necessary light weight, rigidity, fatigue resistance, corrosion resistance and capability of being rolled to a thickness of 0.0022" with a tolerance of ±0.0001".

Just one of the many jobs being done better with Titanium.

TMCA is the world's major supplier of Titanium bar, billet, sheet, strip, wire, extrusions and tubing to jet engine, guided missile, atomic energy, chemical processing and marine industries.

. . . FIRST IN Titanium

TITANIUM METALS CORPORATION OF AMERICA, 233 Broadway, New York 7, N.Y.

so that real income is now higher, not lower, than it was last year. Even on the farms, although prices have fallen, incomes are recovering. Statistically, the Republicans have the better of the argument; but the Democrats have the psychological advantage, and will be sure to press it in the weeks remaining before the election.

President Takes the Reins

WITH a month to go until polling day, President Eisenhower is himself climbing on to the Republican bandwagon. Until last week he had been watching it from on high in Washington, occasionally cheering in a statesmanlike way from the television screens. But now he is coming down to drive it himself all over the country and to whip on local Republican candidates and workers with the encouragement of his smile and enthusiasm. This change of plan is the result of reports, now almost unanimous, that the Democrats will draw far ahead if the Republican campaign does not pick up speed. Mr Eisenhower does not want to be beaten and he is still the only man who can drive his party to victory.

But the President's willingness to take over the Republican reins is also an answer to one of Mr Stevenson's main charges against him. The Democratic candidate does not discuss his opponent's health but he insists that, even before his illnesses, Mr Eisenhower consistently rejected "the positive responsibilities" of his office and that strong leadership is essential if the American system is to work effectively. By this accusation Mr Stevenson is hoping to identify the President with his Administration and his party, to win over those voters who still admire Mr Eisenhower even though they dislike what the Republicans have done in Washington. Mr Stevenson opened this slashing line of personal attack in Kansas City, Mr Truman's home town, and was heartily praised for his new aggressiveness by the ex-President. Mr Eisenhower on his side is also hitting harder with every speech and grows more partisan each day. Perhaps more important he is taking the newspaper headlines away from Mr Stevenson, who was able to monopolise them as long as he toured the country while President Eisenhower stayed silently at home.

Stanley Plan on Stage

FROM A CORRESPONDENT IN VIRGINIA

"I THANK God, there are no free schools nor printing, and I hope we shall not have, these hundred years." With these words, Virginia's Royal Governor, Sir William Berkeley, replied to a question from the Lords Commissioners of Foreign Plantations in 1671. The Old Dominion's present Governor, Mr Thomas Stanley, might well repeat them, should he be asked about today's educational prospects in Virginia when he arrives in England next week to commemorate the three hundred and fiftieth anniversary of the founding of Jamestown. For the Stanley plan and its related measures, which have just been passed into law by a special session of the Virginia Legislature after a confused month of hearings and debate, establish a complicated procedure which will cut off from state funds, and shut, any publicly financed school in Virginia in which a move is made to integrate white and Negro pupils, whether voluntarily or by order of the courts.

Two Virginia communities—Arlington and Charlottesville—though they have both appealed against the decisions, are under court order to mix the races in their schools. The new legislation therefore serves primarily to choose the ground for the coming contest between federal and state sovereignty. Since the Stanley plan puts the responsibility for maintaining segregation directly on the Governor, it may mean that the federal government, in proceeding to enforce the decision of a federal court, will now move against the Governor, the chief executive of the entire state, instead of against the school board or the local government of the district failing to comply.

★

In the State Senate, the votes on the measures were close—the issue was decided by margins of from four to six in a body of thirty-nine. The struggle was between those who wanted some degree of local option, to take account of the very different racial ratios and public attitudes that exist in various parts of the state, and those who wanted to present a united, state-wide front against segregation. In Southside Virginia, where Negroes generally outnumber whites, in some counties by two or more to one, and where incomes are mostly derived from a traditional pattern of agriculture, white citizens, faced with a choice between maintaining the public school system without segregation, and closing the schools, would be likely to choose the latter. But in the area west of the Blue Ridge mountains, where the Negro population has always been small and the public school system a source of great pride, there would probably be a popular reaction against the closing of the schools and the withdrawal of state funds. In some of the larger cities, such as Richmond, the state capital, and Norfolk, for whose school budgets two dollars or more are raised locally for every dollar received from state funds, schools cut off from the state system might be continued under local auspices. And in the northern part of the state, the dormitory area around Washington, it was evident earlier this year that residents were willing to attempt to integrate the small Negro population whose living standards are comparatively high as a result of government employment. The attitudes of Southside Virginia have thus dominated the other regions.

Factional and party politics have been similarly prominent. The Stanley plan has been master-minded by Senator Harry Flood Byrd, Virginia's aristocratic Democratic boss. He repeated his demand for "massive resistance" to the Supreme Court decision against segregation at his annual picnic for his supporters just before the special session. Some of the lesser figures in the Byrd organisation have let it be known that they think the race issue provides a solid basis which will ensure their political power for another generation. But the machine was unable to hold its supporters in line. On the other side of the close votes in the Senate were men who in the past have been stalwarts of the organisation. During the hearings, Mr Colgate Darden, a lifelong member of the machine, Governor of the state during the war and at present President of the University of

Virginia, testified against the Stanley plan and for local option. This, he said,

> touches the genius of Virginia in that it leaves the localities to deal with a local problem . . . I don't believe there is any plan short of closing the public school system which will prevent all integration.

A Richmond banker, who is a member of the State Board of Education, added : " Any time you people contemplate an end to the public schools, you are going to destroy the future of the youth of Virginia."

Delegates returning from the session all agreed that what has happened is only a curtain-raiser. The stage is now set a certain way ; but the action is still to come. No one thinks the play will be a comedy.

The chief actors are not likely to be moderates ; as one homeward-bound assemblyman put it : " I'm going to get out of politics. Why should I spend a third of my time just pickin' my heart out tryin' to talk sense ? " In the two years since the Supreme Court's original decision, most moderate men, white and Negro, have been reduced to silence or ineffectiveness. A Negro moderate is classed by his associates as an " Uncle Tom." A white moderate is challenged by the instant question : " You don't believe in mixin', do you ? " and a reply suggesting that this is not the issue can easily lead to the epithet : " Nigger-lover ! " The Norfolk *Virginian-Pilot* commented on the recent burning of a fiery cross :

> Those leaders at the top who create the climate which inspires an ugly act at the bottom cannot escape the moral responsibility for this and other assaults on human dignity.

On the other hand, the current attitude of the churches is in marked contrast to that of the eighteen-fifties, when southern preachers were quick to supply Biblical authority for slavery. Today, a plucky fight for moderation is being kept up in many a pulpit, by ministers who have been given to understand that, in the view of some of their substantial vestrymen and elders, the church is no place for contemporary reference. At the hearings in the Legislature, a witness testifying " As a minister of the Christian faith, I might say that Jesus Christ . . ." was cut short by an assemblyman with a curt : " Tell me about Jesus later."

★

The legislative effort to nullify the Supreme Court decision raises several questions. Was the Court wise to allow an interval of time, and an indefinite one at that, between the announcement of the fundamental principle in 1954 and the date on which specific compliance will be required ? With national leadership lacking, local leadership has decided how this time should be used. Where, as in Louisville, Kentucky, it was used as a period of preparation, the interval has been of undoubted advantage. But where, as in Virginia and most of the Deep South, it has been used to explore the most advantageous method of resistance, possibilities of compliance that existed two years ago have been lost in a hardening of attitudes.

That is a question for the past. A question for the future is: What will the federal government do next ? While the matter was being argued in the judicial branch, the other two branches of government were temporarily inactive. Now, on the state and local levels, executive and legislative authorities are busy again, some sustaining enforcement, some organising resistance. Federal action cannot be long postponed, yet there is no certainty at all about how the federal government can uphold the court's decision—short of the use of force, which all sides are agreed to avoid. Because the Stanley plan is the most precise school programme a southern state has yet offered in resistance, the answer is not unlikely to be supplied in Virginia.

Protection for Winter Woollies

THE beleaguered defences of the State Department against the spate of demands for import quotas were breached only partially last week when President Eisenhower imposed higher duties on woollen fabrics imported in the last quarter of 1956, providing the imports exceed a quota of 3.5 million lb. The higher duties, the practical effect of which is discussed in a Business Note on page 75, will remain in force only until the end of the year but, if market conditions warrant, they may be reimposed next year. They had been foreshadowed in the " Geneva reservation," an escape clause written into the General Agreement on Tariffs and Trade, which permits the United States to raise its import duties on woollen and worsted fabrics if the volume of imports in any year exceeds five per cent of the average domestic production during the three preceding years. Imports in 1955 were 14.3 million lb, and in the first half of this year reached 9.4 million lb, nearly 40 per cent above the corresponding period of 1955.

In exercising the " Geneva reservation," the President has done something—as he could hardly avoid doing before the election—to fulfil the pledge in the Republican party platform to give more protection to domestic industry. But the special escape clause for wool has enabled him to do it without laying the field wide open to a flood of quota concessions on other imports. The Administration has also succeeded, for the time being, in placating the cotton textile manufacturers without conceding the need for legislation to impose quotas, by persuading the Japanese to limit unilaterally their exports to the United States. This " voluntary " agreement, which formerly covered cotton cloth alone, has now been extended to cover cotton clothing and other cotton manufactures ; in 1957, Japanese exports of these products to the United States will be " determined by the level of trade in 1955." The agreement does not, however, include woollen goods.

This Japanese expedient, which is in any case not fully trusted by American textile producers, offers no solution for the many other industries lobbying for protection by quota. A group of the most vociferous protectionists recently had another opportunity to present their case to a House subcommittee, under the chairmanship of Representative Boggs, a Democrat from Louisiana, which has been holding wide-ranging hearings on the foreign trade policies of the United States and their effect on the national interest. The Republican Administration has not been helped, in the weeks before the election, by these attacks on the mild way in which it has implemented the various escape clauses and defence provisions which Congress has insisted on writing into foreign trade legislation.

Two's A Crowd

Eugene, Oregon

WITH relentless ardour the two vice-presidential candidates—the " new " Mr Nixon and the same old Mr Kefauver—are flying around the country displaying their wares. The new Mr Nixon remains a quick manipulator of words which leave in the listener's memory a more extreme impression than can be demonstrated from the text. But this time he has to combine the partisan vigour that will stir up sluggish Republicans expecting to coast home on the President's popularity with the new gentility that is meant to establish him as a fit heir to Mr Eisenhower's suprapartisan establishment.

It is a difficult combination to manage, but it is made a little easier by the fact that Democrats are at last making frontal attacks on the President. Nowadays Mr Nixon starts by acknowledging the " character and integrity " of Mr Stevenson, even adding gallantly that Mrs Roosevelt is " a fine lady," before leaping as a young knight to the side of his traduced leader. Invariably he gets his loudest applause when he exclaims how wonderful it is that parents can now hold up the President of the United States with pride to their children. At repeated intervals he refurbishes the widespread superstition that Mr Eisenhower has an exclusive patent on the elixir of peace.

★

Meanwhile Mr Kefauver bumbles along much the same route, although his " motorcades " wander farther from the airstrips than do Mr Nixon's and his arrangements have a last-minute appearance when compared with the minutely planned Republican operations. The Senator provides a fascinating study in the conservation of human energy. Even when walking he appears to be immobile. His famous handshake requires the minimum of effort ; its owner goes through the routine with a somnambulist's stare, uttering a standard banality in a barely audible voice. A tall, solid, but gentle-looking man, he stands foursquare on the upper steps of the picturesque western courthouses like a wise sheep and talks without any concession to oratory, in a voice which would be wholly monotonous if it were not for a slight southern inflection.

The people crowd around the courthouse steps as if at a town meeting in the old pioneering days. They applaud little, since it is always difficult to tell when his speech has reached the right moment for applause, but they stay absolutely still watching the Senator and identifying themselves with him, almost as if hypnotised. While he was in the north-west Mr Kefauver talked mainly about economic issues. He told his audiences in detail how badly off they were and it was clear from their respectful attitude that they believed him. Like many of the local candidates in Oregon and Idaho, he seems to be campaigning for the most part against the Federal Reserve Board's credit policy. Since much business in these states is small business, which is feeling the pinch of higher interest rates, and the largest industry is lumbering, which is suffering from the decline in house building caused by the difficulty of obtaining mortgages, the Senator's call for cheaper money found a ready echo.

Senior Voters

THE first of Mr Stevenson's " blueprints for a new America," called a " Programme for Our Elder Citizens," raises a problem of rapidly growing social and political importance:

> In this age of abundance, in this land of plenty, a person should be enabled to maintain, when life's regular duties are completed, his or her accustomed standard of living.

And the " blueprint " also urges a greater provision of services to meet " the special needs of older people " and, more vaguely, the giving of " purpose and significance to the evening of people's lives."

There are now nearly 15 million people over 65 in the United States, of whom 2,523,700 had to be given public assistance from various social security programmes last year. By 1975 about an eighth of the population will be " senior citizens " compared with just under a tenth today. Mr Stevenson states that a third of the people over 65 have no personal income at all ; a third have an income of under $1,000 a year ; and only a third have more than that. His programme, however, looks forward to an era of psychological and social problems, more than it deals with what he sees as a passing phase of economic hardship and political discrimination. But it is really an eloquent raising of such questions rather than an answer to them. It has little specific to say about social policy in relation to the conventional age of retirement, the increase in life-span, and the tendency for the working week to be shortened.

When Mr Stevenson and Mr Kefauver were fighting each other for the Democratic nomination in California earlier this year, they both went out of their way to appeal to the elderly. For California, the great state of advancement for youth and of retirement for the old, has long experienced, like Florida, a powerful old people's lobby in state politics. And both are pivotal states in the coming presidential elections. Last week Mr Nixon strongly warned an audience of old people in Florida against " the irresponsible promises " and the " pie in the sky " offered to them by Mr Stevenson ; but the warnings stirred no visible enthusiasm. He did remind them, however, of the existence of a body set up by the President this April to " achieve a more effective government-wide approach to the needs of our elder citizens "—the advisory Council on Aging. It seems likely that more will soon be heard about this hitherto rather quiet and retiring body.

A Question of Partnership

FROM A CORRESPONDENT IN OREGON

THE English Electric Company has to thank a taxpayer in the state of Washington for its latest dollar-earning contract ; this is for electrical equipment, at the Priest Rapids dam on the Columbia river. The commissioners of the Grant County Public Utility District* which is undertaking the project had decided to buy more expensive

* A PUD is a local subdivision of government organised specifically and exclusively for the distribution, and in some instances the production, of electricity.

American turbines because their manufacturer was supposed to have more experience of the work. But a local taxpayer brought a suit to prevent his money being wasted in this way and the commissioners capitulated in order to avoid delay. Altogether the scheme is to cost about $300,000,000 and will have a capacity of more than one million kilowatts of electricity, twice as much as the well-known dam at Bonneville and much more than is needed by Grant County. Private utility companies in the area have contracted to buy the surplus power.

Congress has not yet agreed to pay the part of the cost of the dam which is allocated to facilitating navigation, conserving fish and controlling floods—all charges which may be assigned to the federal government. Nevertheless the Priest Rapids project has advanced farther than any other example of the "partnership" approach which the Eisenhower Administration advocates as a method of developing the country's waterpower and other natural resources. Under the Democrats such developments were underwritten entirely by federal funds, but the Republican proposal is that the money should be found jointly by the federal government and by local agencies which may be owned either privately or, as at Priest Rapids, publicly; municipal electricity undertakings are other possible partners from local government. These local interests are to foot the bill for "reimbursable" functions, such as the production of electricity, which produce revenue and can thus pay their own way eventually. The federal government would still provide the funds for the traditionally "non-reimbursable" functions, such as flood control and improvement of navigation.

In the Democratic era the costs of the big multi-purpose dams, such as Grand Coulee and Bonneville, were also divided into reimbursable and non-reimbursable categories. But then the federal government provided the capital for both and set up marketing agencies to distribute the money-making product and earn revenue to reimburse the taxpayer. The intention of the Eisenhower partnership policy is to limit, if not to eliminate, the "creeping socialism" of these government activities. The Democratic critics of the policy argue, in the face of Republican denials, that partnership does not permit the comprehensive development of a river basin by one co-ordinating agency as does their method. The interests of the various users—producers of electricity, farmers irrigating their land, owners of steamers and barges—are bound to overlap and clash. Furthermore, the Democrats maintain, where electricity output is involved, this conflict will be manipulated for the benefit of the local distributors, mainly the private power companies.

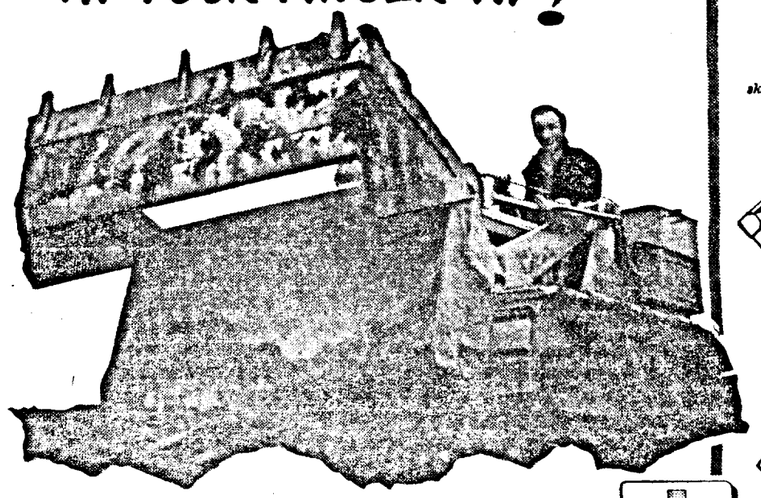
This view is supported by the details of the most important partnership project proposed so far by a private agency in the Pacific northwest—the John Day dam on the Columbia river between the Dalles and McNary dams, both built by the federal government. (The controversial series of dams at Hells Canyon, about which so much has been heard, is strictly a private affair.) A combine of private electric companies in Oregon plans to raise about $273,000,000 to pay for the reimbursable features of the John Day project. This is approximately 90 per cent of the estimated cost. In return, the sponsoring companies want first claim on the output of electricity for fifty years. Opponents of partnership complain that such an arrangement, if approved by the government, would in effect negate the long-established policy that public agencies should have priority when electricity produced from federal dams is sold. The alternative is that the John Day dam should be built as an all-federal project. Congress in its last session appropriated nearly $1,500,000 for preliminary planning at the site. Once planned, the dam could be constructed either on the partnership pattern or by the federal government.

But one of the attractions of partnership is that recent Congresses, whether Republican or Democratic, have been reluctant to initiate new federally-financed dams on the Columbia river and its tributaries. The last Congress, responding to its Democratic leadership, did nudge this jam slightly by authorising starts on several projects, including Cougar dam, a partnership undertaking proposed by the Eugene Water Board. The advocates of partnership point out that there has been a growing reluctance on the part of the members of Congress from other sections of the country to appropriate huge sums for the development of the Pacific northwest. But Democrats in the northwest scoff at this justification of partnership. They contend that the Upper Colorado river project, which was endorsed by the Administration and approved as an all-federal development by the Congress this summer, will cost several times as much as any Columbia project on the drawing boards and that its benefits will similarly be confined to one region.

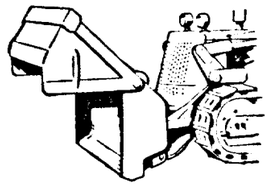
It is generally agreed that electricity from partnership projects would cost slightly more than power from federal undertakings if for no reason other than that interest rates are lower when the government is borrowing the money. The construction and operating charges should be much the same. Partnership projects would be built, as are all-federal projects, by contractors under government supervision. The Republicans claim that this higher cost would be more than offset for consumers by savings in taxes. This viewpoint does not give much weight to the fact that such all-federal projects as the Bonneville and Grand Coulee dams have already returned to the federal Treasury substantial payments on the portions of the original and the operational costs allocated to electricity production.

Meanwhile, the expansion of hydro-electric power in the Pacific northwest has been slowed by the conflict between the Republican theory of partnership and the Democratic insistence on all-federal development. Neither will let the other make headway. Each is powerful enough to block the other's projects, but not powerful enough to push its own programme to fruition. However, the election campaign in the northwest has crystallised around this issue; at stake are two closely-contested Senate seats, now held by Democrats, in Washington and Oregon, as well as a fair number of presidential votes and congressional seats. If the electors of the northwest give a resounding answer on this question of partnership, whether "yes" or "no," it could break the deadlock and be the signal for renewed advance, whether by the federal government or by private and local agencies.

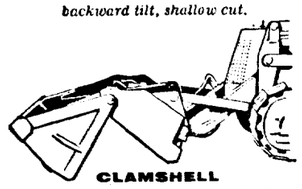
4 DIFFERENT EARTHMOVERS AT YOUR FINGER-TIP!



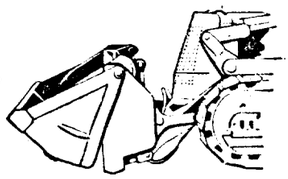
With the Amazing 4-in-1 Attachment DROTT Does The Lot!



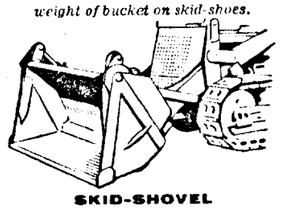
BULLDOZER
Blade moves forward, resting on skid-shoes. Forward tilt gives deep cut; backward tilt, shallow cut.



CLAMSHELL
Loose material gathered by simple clam action; transported with weight of bucket on skid shoes.



BULLCLAM
After cutting, dirt is gathered by clam action, then transported with weight of bucket on skid-shoes.



SKID-SHOVEL
Powerful pry-action break-out rolls bucket back on skid-shoes into non-spill position, ready for transporting

International Drott Skid-Shovel MODEL B-6-K3

Mounted on the rugged new BTD-6 crawler, the Drott Skid-Shovel is the fastest, toughest, handiest front-end loader in existence! When the unique 4-in-1 attachment is fitted, in place of the standard bucket, the Drott is instantly convertible to bulldozer, clamshell, bullclam or skid-shovel by the adjustment of a single lever, and can unload by bottom-dump method where extra height is needed. See the Drott as soon as you can—there's been nothing in the dirt-moving line to touch it. Also available with regular 1¼ yard bucket, 1 yard heavy duty bucket or bullangledozer attachment.

A battery of driers in the Marchon phosphate plant.

IMPORT to EXPORT at Whitehaven

Whitehaven harbour saw the last armed invasion of the United Kingdom (by Paul Jones in 1778). Today ships arrive peacefully from North Africa bringing phosphate rock for the Marchon plant at Whitehaven. There the rock is treated with sulphuric acid, itself produced from anhydrite mined by Marchon on the spot, to yield phosphoric acid which in turn is transformed into the complex phosphates used in manufacturing detergents. Detergents and detergent intermediates from the Marchon plant are shipped from Whitehaven harbour all over the world. The Marchon plant, in conjunction with the adjacent Solway sulphuric acid plant, forms one of the major industrial units of the United Kingdom.

The World Overseas

East German Realities I.

BY OUR SPECIAL CORRESPONDENT

IN the past twelve months the face of East Berlin has taken on a slightly brighter look. A year ago its grey rubble and peeling paint, gashed only by the endless red streamers—"Be watchful against saboteurs," "Marxism is truth; therefore it must win"—gazed glumly at the visitor and provided a miserable contrast with the sparkling world of West Berlin. Today there are fewer absurd posters on the walls and there is a little more variety in the shops. Last month a bright new fashion magazine appeared, with pictures from Paris. A few rather mediocre jazz bands play to packed halls and clubs, for jazz is now accepted as "culture," if it is "seriously studied." Elsewhere in the Soviet zone the picture is not so encouraging. In Dresden, for instance, the destroyed centre of the city is still a sad grassy plain except for one lonely cluster of buildings; and the housing situation is only bearable because 150,000 fewer people live in Dresden than before the war. Elsewhere in Saxony, one can walk through a small town where the streets are dirty, there is no traffic except for the peasant's horse, the doors and windows have been unpainted for fifteen years, and the people are shabbily dressed.

Yet on the whole there has been a gradual but steady improvement in the health of the frail East German economy. Food is no longer so scarce, except at times in winter, though there is little variety or fresh imported fruit, and poor distribution often brings local shortages of vegetables. Some textiles are abundant and fairly cheap. Most household goods are no longer difficult to get, even if design is out of date and quality poor. But the larger durable goods, like radios and motorcycles, are still exceedingly expensive and are only within the reach of the key worker, the manager or the bureaucrat.

Private enterprise, so cruelly ground down until 1953, has been allowed to play a part in the recovery of consumer goods production, above all in that of textiles. Taxes are still painfully high; the concessions granted in 1954 have been revoked. But for a while at least some private firms, with their invaluable export contacts, are tolerated, just as the private craftsman has been allowed to play a small part in the recovery of the traditional crafts—porcelain, printing, musical instruments—where little of his traditional skill has been lost.

Over the economy as a whole the lumbering plan mechanism has been slowly gaining in efficiency. Each year the central plan is prepared a little earlier, so that the annual changeover is carried out more easily. The larger factories at least are developing a smoother rhythm of production and working according to long-term plans. In the building industry, where planning delays have year after year slowed down the start of the season, there were still areas where this occurred this year. But here, too, the flow of planned work has become smoother. Profitability is steadily gaining larger emphasis in comparison with the old emphasis on production at all costs. All over Eastern Germany party members and officials are saying "we have made mistakes; we must learn from them. There is too much bureaucracy." And they *have* learnt a little.

Yet the system still carries an enormous bureaucratic load, despite tentative efforts to decentralise. The handicap of poor quality is still aggravated by the delivery of the best products to Russia from some factories. The economy runs without reserves of stocks and hence any mistake or mild emergency, like the cold snap last winter, produces a chain reaction: coal shortage holds up steel and transport and these injure other industries. Material shortages, both the basic shortages of bricks and steel, and the constant local shortages due to the planning system, continue to handicap expansion and raise costs. Without a free market, the problem of deciding what goods to produce remains insuperable.

Technically, too, though successive Leipzig fairs have witnessed the recovery of "world standards" by some of Eastern Germany's traditional products, like optical equipment and certain machinery, the products of the zone as a whole remain behind the West. The leaders of the regime themselves recognise that much of their industrial equipment is out of date. Despite massive investment in technical education, the zone has not got the resources or enterprise to keep up with Western Europe.

But the weakness of the economy is most evident in the wide differences of wealth and in the human cost of the slow economic advance that has been achieved. Management, key officials and workers in certain key industries, above all in mining, have living standards which approach those of Western Germany. The clever peasant can also live reasonably well and so can some handicraftsmen, who are not taxed so heavily as private industry. But the old age pensioners, with their pension of less than 100 marks per month, the small shopkeeper hanging grimly on to a declining trade, the lower paid workers, suffer badly. Standards of living and prices are difficult to compare, but with the vital exception of rationed sugar, fats, coal, rents and his annual holiday the average worker in the east, it seems, may have to work two to four times longer than his western counterpart to buy any given commodity; and the price of low rents is rapid dilapidation of houses

and appalling overcrowding. Moreover, the drive to work seems as fierce as ever. Twelve-hour shifts in a 36-hour cycle, with a break every few weeks, are common for women as well as men, "because of labour shortage." "Norms" vary from factory to factory, but they seem, on the whole, to be the maximum that can be extracted from the man and his machine.

At great cost and effort Eastern Germany has succeeded in raising new basic industries, steel, brown coal and machinery, out of the earth. Since 1953 the more excessive ambitions of the first plan, in steel, for example, have had to be modified, but the system has gained in balance and efficiency throughout the last three years, and in the second five-year plan further fundamental improvements, above all in fuel supply and in further strengthening and broadening of the engineering industry, should be achieved. Yet the rate of growth of industrial production last year was only half that of Western Germany; and industrial investment per head is still a good deal lower despite the absolute priority which it is given by the planners. Debilitated by loss of skilled manpower to the West as well as by reparations, driven forward by clumsy pressure from above instead of by enterprise from below, it is a tired economy that is staggering to its feet in Eastern Germany.

(To be concluded)

Social Credit in the Canadian West

FROM A SPECIAL CORRESPONDENT

AT the provincial election in British Columbia on September 19th, the Social Credit party was returned to power. The result itself was expected; but not, perhaps, the extent of the victory, for the party won 38 out of the 52 seats in the newly enlarged Legislature and increased its total membership there by ten. It annihilated the Progressive Conservative party representation, reduced Liberal party representation from four to two, and that of the CCF (Labour) from fourteen to ten. As a result, the Social Credit Premier, Mr W. A. C. Bennett, is talking of putting up "Socred" candidates in every federal constituency in the province in the federal general election, still expected next June. This year and last the Social Credit party has fought a full-scale campaign in three provinces in Canada, in British Columbia, where it has been in power for four years, in Alberta, where it has been in power for over twenty, and in Saskatchewan, where it has never held office at all. This year, in British Columbia, it polled 46 per cent of the vote and in Saskatchewan 21 per cent. In Alberta the percentage last year fell from its previous figure but it was still 46 per cent of the vote. All this provokes further discussion in western Canada on the prospects and intentions of the party.

In general terms it is fair to say that in both British Columbia and Alberta the party has provided an active conservative-type government, fully conscious that the growth of the province must depend upon expansion in the development of its natural resources. Mr Bennett's government has spent money on roads, hospitals and schools; what is more, it has stopped the provincially-owned Pacific Great Eastern Railway from being a major white elephant by extending it southwards to Vancouver and so giving the province its first useful north-south line. But in each province the party, so its critics say, has shown a contempt for what some would call the niceties of government behaviour and others the unwritten but fundamental ethics of public administration; it regards the Press as a malicious nuisance, the opposition as factious and unnecessary, and the electorate as an amiable imbecile, fit to be led by the nose and content with that fate. In British Columbia this year the provincial government promised the electorate a "dividend from natural resources," a cash payment of $28 to each house-owner, in aid of the local taxation on his home, and the public seems to have responded on election day, despite the fact that the money so disbursed can only have come out of its own pockets and even that "dividend" still leaves the province about the most heavily taxed, in terms of provincial taxation, in the Dominion. Further, Mr Bennett fought the election at a time when an allegation of corruption was hanging over his former Minister of Lands and Forests, Mr Sommers; the reaction of the electorate to this was to return Mr Sommers with an increased majority.

What Is It All About?

Social Credit has now torn to ribbons the Conservative and the Liberal parties, provincially, in both British Columbia and Alberta. It has inflicted serious loss on the CCF in British Columbia and in Saskatchewan, where the CCF is still in power. It is impossible to escape the question: is it the future right-of-centre party in provincial western Canada? There must be very few people left in Canada today, members of the Social Credit party not excluded, who retain any clear idea of what the theories of Major Douglas, the originator of Social Credit, really were. There must be even fewer who understand what Social Credit either does, or could, stand for, again in theory, in the expanding economy of Canada today. No Social Credit member in Canada has ever attempted any comprehensive or coherent explanation. Originally the party was an agrarian reaction against the deflationary policies practised in Canada 25 years ago in the days of the depression. Its basic tenet is that there is a "gap" between the value of what is produced and the money available to purchase that product. This "gap" is to be bridged by the "social dividend," and Mr Bennett's bonus of $28.00 to the house-owners of British Columbia is called, by the faithful, a first instalment of this gap-bridging allowance. But, if there is a gap to be bridged, it is probably being more adequately filled in by the federal family allowances, which provide house-owners with a cash payment at least twice the amount of the British Columbian instalment.

But, then, no one in Canada would be disposed to argue Social Credit in terms of theory alone; many would regard the theory as irrelevant. Mr E. C. Manning is the leader of the "Socreds" in Alberta and the "Socred" premier longest in office. He has never been anything but a Social Credit party member. He has the reputation of being a good organiser, an astute provincial politician, and the brains of his Cabinet. He has made a series of good bargains, provincially speaking, with the oil companies working in Alberta and has left them with a feeling of reasonable political security about the rights they have paid for. The province has prospered whilst he has been in power, and he has left it to his followers to make the brassiest claims that

it has prospered because he has been in power. He has given no impression that he himself wishes to move on to Ottawa. In short, his party has ridden the wave of prosperity that followed the depression that gave them power and Mr Manning has made no political blunder big enough to unseat them.

Mr Bennett, of British Columbia, does not fall into quite the same category. He is a former Conservative. His party succeeded to office comparatively recently because the present opposition parties were, provincially, divided and discredited. He has ambitions to federal office, which in his case means an ambition to head the federal government. Like Mr Manning, he is a good showman, but a more blatant one. He would spend money on the obvious in provincial development where Mr Manning would be content to retire existing provincial debt. What is worse, in some eyes in Canada, he would have sold to an American concern, for cash, a natural resource, the waters of the Columbia River, on terms which Mr Manning would have been shocked to see in his mail.

At least six of the provincial premiers of the ten Canadian provinces can be said to be men whose parties now hold office because of their leaders rather than the reverse, and the two Social Credit premiers are amongst those six. But, unless Mr Frost, the Premier of Ontario, makes a bid to succeed Mr Drew as leader of the National Progressive Conservative party, of only one of these six, Mr Bennett, can it be said that he intends to be prime minister of Canada if possible. It is this fact which gives the British Columbia election result, and the Social Credit party in the west, its present importance and interest.

Hongkong Lowers the Boom

FROM OUR CORRESPONDENT

AFTER the expected forced and somewhat hollow protests, Peking seems to have accepted Hongkong's decision to revert to the old quota system under which Chinese arrivals are balanced by Chinese departures at the border. So ends the curious six-month interlude during which the treaty frontier of the colony in the rugged mountains of the New Territories was the solitary point of relatively free contact between the communist world and the free world. It was the only point at which communist authority technically approved the movement of subjects into the free world and apparently did not care if they never returned. One uses words like "relatively" and "technically" because the communist authorities operated some sort of screening system at Canton and issued passes which were formally available for three months' absence, after which the visitor was supposed to return. At the same time, unauthorised refugees attempting the desperate river swim to Macao were being shot in the water or clubbed with oars by guards who then exhibited recovered bodies at railway stations to discourage the rest.

The explanation for Hongkong's close-down is as plain and simple as a sardine-tin. The rush of mainland Chinese who refused to return forced the government's hand in the colony. There is literally no room for more people in Hongkong. The population is 2.5 million and has a natural Oriental increase of 75,000 a year. There are horrible, jammed, old-Shanghai-like slums behind the brave front of white, air-conditioned buildings and beneath the hanging gardens and terraces of gracious villas on the Peak. It is estimated that a wretched army of 110,000 squatters are living "illegally" in tin-and-rag shelters on roof-tops; the authorities, in unfortunate officialese, have described this tragic open-air ghetto as "an eye-sore." There are active and admirable housing and water conservation projects, but as the Governor, Sir Alexander Grantham, says, "there is standing room only in the colony."

Accordingly, it was only a matter of time before the flood of "visitors" from China was perforce dammed. Since Hongkong lifted the restrictions in February and the communists began affably issuing passes, 82,000 Chinese entered the colony on their three-month permits by the land route, but less than 16,000 returned. In addition, there was an excess of arrivals over departures from Macao of 19,000, of whom 12,500 held Peking permits. All told, 81 per cent of the "visitors" remained, presumably living with and on families and relatives in Chinese style, or setting up their shingles on the roof-tops. The communist authorities were apparently not at all worried about their non-return; the great majority, anyway, were old, enfeebled and of a type which the comrades refer to realistically as "useless mouths." The Hongkong authorities could not enforce their return; no one seems to have known or cared where they went or what they did. Conversely, only 4 per cent of the 345,000 Hongkong residents who paid reciprocal visits to China in the same period succumbed to the attractions of the new utopia or for other reasons failed to come home.

Unfraternal Cold Shoulder

In sharp contrast to the communist pique at Hongkong's lowering of the boom against "visitors" with passes is the strong and sustained pressure which has been exerted to lure back the 4,000 sturdy fishing folk, who, largely in rebellion against the tyranny of fishery co-operatives, sailed their junks away from the Kwantung coast and tried to establish themselves in the Hongkong island villages. They have been bombarded with sorrowful "come-you-back-to-Temple-Bay" appeals, personal letters of entreaty from friends and relatives, assurances that a warm welcome awaits them and even pledges that the more irksome goads, seizures and penalties of the co-operative system will be tempered or removed. These appeals, combined with an unfraternal cold shoulder from the local fishermen, who want no more competition in the heavily-fished Hongkong waters, have already resulted in the up-anchoring and withdrawal of about 30 per cent of the junk-borne refugees. American representatives in Hongkong privately criticise the colony's administration for not making greater and more sympathetic efforts to help and hold the fishermen.

The restoration of the quota system at the frontier may affect two other matters of current but quiet negotiation between Peking and Hongkong. One is the request by the Chinese Prime Minister, Chou En-lai, for the establishment of an official communist representative in the colony. Hongkong shuddered away from this proposition, which was forwarded to Downing Street, where, it was piously hoped, it would be allowed to moulder in a dark and bottomless pigeon-hole. The other is the restoration of the old through railway service between Canton and Kowloon, now broken awkwardly at the frontier. Hongkong has no objection to this, now that the quota system is a protection against the continued flood of "useless mouths." There is implacable

BP DRILLS 1,000,000 FT. IN BRITAIN

TWENTY YEARS AGO The British Petroleum Company started the search for oil in Britain and began production in 1939 to make a timely addition to wartime supplies. Now more than a million feet have been drilled in Britain by the BP Group.

Two of our producing oilfields were discovered since the war. These are at Plungar in Leicestershire and Egmanton, Nottinghamshire.

In 1955 some 53,000 tons of crude oil came from Britain's 223 producing wells—most of them in the Nottingham area—bringing up the total quantity produced from English oilfields to 900,000 tons. A very worthwhile contribution to the ever-growing need for oil and oil-products.

The BP Shield is the symbol of the world-wide organisation of

whose products include BP Super Motor Spirit *and* BP Energol 'Visco-Static' Motor Oil

official silence in Hongkong, but it is known that cordial discussions between communist and colony representatives have smoothed out general agreement on technical railway and migration details for the resumption of the old pre-liberation service.

Apart from the argument over the quota, relations between Peking and Hongkong continue harmonious. The local *hongs* have recently been extended the same credit facilities for trading with the mainland which were previously restricted to communist agents in the colony. The evidence indicates also that the communists are encouraging the restoration of old friendly and traditional ties between the colony's trading concerns and Shanghai, Tientsin and Canton. Nor is any attempt being made to stir up labour troubles in an "imperialistic" outpost even more vulnerable to organised internal disorder than harried and harassed Singapore.

Rebels in Indonesia

FROM A CORRESPONDENT IN DJAKARTA

VIOLENCE and lawlessness remain sources of as much concern to the present Indonesian government as to its predecessors. Before leaving for Moscow, President Soekarno made one of his periodical appeals to his people to "exterminate at once" the terrorism which is still rampant in the young republic.

There have been successes. The present government can claim, indeed, that one rebellious movement has been finally crushed since it came into office in April. The rebel "Republic of the South Moluccas" received its death blow when troops recently killed its leader, Dr Soumokil, in the jungles of Ceram. The South Moluccan "republic" proclaimed its independence in May, 1950, in protest against the central government's rapid liquidation of federal relationships between the sixteen members of the United States of Indonesia to which the Netherlands had transferred sovereignty in December, 1949. The "republic" had its headquarters at Amboina, and its soldiers were former members of the Royal Dutch Indies Army. After months of stiff fighting the Ambonese were defeated. The remnants fled to nearby Ceram, the wildest of the Moluccan islands, whose inhabitants still use bows and arrows. Since then, the South Moluccan leaders who had gone to plead their cause in the Netherlands and the United States have caused successive Indonesian governments more headaches than the bands in Ceram and adjacent islands have ever given the army. Every now and then, however, their existence has come in handy in the dispute with the Netherlands over West New Guinea. Accusations that the Moluccan insurgents were supported by the Dutch were frequently made until about a year ago, when the movement had already lost most of its importance.

The main source of internal insecurity that now remains is the Darul Islam, a fanatical Moslem movement. Its founder, Kartosuwirjo, has his headquarters in west Java. Dissatisfied with the course the revolution was taking in 1949, when its leaders were discussing a Dutch-Indonesian Union under the Netherlands Crown, he proclaimed his crusade and has fought his compatriots ever since. His movement has spread from west Java to Achin, the northern-most part of Sumatra, and to south Celebes. In its name thousands of villagers have been murdered, tens of thousands of houses have been burned down, and hundreds of thousands of people have abandoned their homes.

The sphere of influence of Kartosuwirjo's army was confined to parts of west Java until in September, 1953, the former military governor of Achin, Daud Beureuh, started a rebellion there. Kahar Muzakkar, a former guerrilla fighter and comrade of the president, followed suit by proclaiming south Celebes part of Kartosuwirjo's "Islamic state" some months later. It was not only the ideal of an Islamic state that caused their rebellion. Dissatisfaction over neglect of their regions by the central government, fear of communism, fear of Javanese domination and desire for more regional autonomy have also played their role. Moreover, many gangs which operate under the flag of the Darul Islam actually consist of plain robbers to whom the life of small farmers did not appeal any more after years of guerrilla warfare against the Dutch.

No one has calculated precisely the total number of casualties and the total damage inflicted by the insurrection. But it has been stated that in Achin alone there have been 10,000 casualties up to April this year. The state railways recently announced that they had suffered a loss of a hundred million rupiahs (about £3 million) in that area. Material damage since 1950 in west Java is estimated at several hundreds of millions. It is not possible now to travel in south Celebes except in convoy, whereas five years ago one could drive safely by night between Macassar and other centres a hundred miles apart or more. There are, however, some signs of improvement. In July four leaders

of armed gangs in south Celebes pledged loyalty to the republic, and there are indications that other insurgent chieftains may follow their example. Late in August a number of rebel leaders in Borneo agreed to negotiate terms of surrender. Last month the brother of one leader met the Indonesian army chief of staff, and said that from then on the 5,000 rebels in the band would co-operate with the government.

In his recent speech Dr Soekarno advocated the quelling of the disturbances by the use of both reasoning and armed force. According to some independent observers in Indonesia, the only kind of reasoning that will convince the rebel leaders will have to provide assurance that the government will grant autonomy to their provinces and give them a fair share of the public funds. In this connection, the announcement a fortnight ago that autonomy is to be granted to Atjeh, in Sumatra, is a move in the right direction.

Mao's New Long March

ECONOMIC themes featured prominently in the eighth congress of the Chinese Communist party. Most of Liu Shao-chi's lengthy report was an analysis of the achievements and prospects of the country's economy. Mr. Chou En-lai, in turn, outlined the expected pace of the national economy on the second lap, to be begun in 1958, of the race towards industrialisation, which is scheduled to last over three five-year plans (1952 to 1967). Such emphasis on economics is not surprising. The Peking congress was held after "the high tide of socialism" had been sweeping the country for over a year, leaving behind only vestiges of private property. In the countryside, only 10 million out of China's 120 million peasant families now remain outside the collective system. In the towns, private industry has been taken over wholesale under joint state ownership. Craftsmen have been grouped in cooperatives, and even in the distribution system only a quarter of the turnover is outside direct state control. These are the achievements that the Communist leaders proudly proclaimed. They were able to add even more. Last year's bumper crops provided agricultural surpluses which, used both in foreign trade and in domestic capital accumulation, made possible a big jump in industrial production ; and the first five-year plan, scheduled to end next year, will be completed ahead of schedule. The objectives of its successor have been boosted accordingly.

Social changes have been most revolutionary in the countryside, and one is left wondering how Mao Tse-tung has succeeded in advancing bloodlessly where Stalin's path was strewn with corpses. Were tax relief and other incentives for the cooperatives and heavy taxation for private farmers enough to push 500 million Chinese peasants into the system? Out of the 110 million families now within the system, less than one-third are still in looser units, where

CHINESE AGRICULTURAL PLANS
(million tons)

	1955 (actual)	1956 (revised estimate)	1957 (original plan)	1962 (new plan)
Grain	184	194	193	250
Cotton	1·50	1·55	1·65	2·4

a rent is still paid to them ; the remainder are grouped in collective farms which approach the Soviet model. True, a good deal remains to be done to bridge the gap. There are a million collective farms in China against some 90,000 *kolkhozy* in the Soviet Union, and the difference cannot be explained merely by the size of the rural population and the character of Chinese farming. Quite a lot of consolidation and amalgamation still lies ahead. The Chinese, however, are in no hurry in this respect ; a decade will elapse before they even get the tools necessary for mechanisation. In the next five years the planned 35 per cent increase in agricultural production will have to come from a more rational use of existing resources, from local irrigation schemes and a fuller utilisation of natural fertilisers. Only afterwards are vast plans of irrigation and land reclamation to pave the way for the tractor.

The pace of agricultural development largely depends on industrial supplies, and the efforts of the planners are still concentrated on these. Industry will continue to absorb over half of the total investment. The bulk is still earmarked for heavy industry, though more will have to be devoted to quick-yielding consumer projects if farmers are to be coaxed to supply foodstuffs and raw materials. Total industrial production is to be doubled over the five years and by 1962 the Chinese industry should be able to provide 70 per cent of the country's needs in machinery. It is intended to spread industry from Manchuria and the coast —now providing some three-quarters of the total output— to central China and Inner Mongolia, and to move generally

CHINA'S BASIC PRODUCTION
(million tons)

	1952	1955	1957 (original target)	1957 (new target)	1962 (target)
Coal	63	93	113	120	190-210
Electricity*	7·6	12·1	15·9	18	40-43
Crude steel	1·35	2·85	4·1	5·5	10·5-12

* Billion kWh.

westwards, developing Sinkiang and preparing the ground even in Tibet. The aim is desirable strategically as well as economically and some 5,000 miles of new railways, which are to be laid during the period, should help in the opening-up process.

Chinese planning as well as industrialisation are still in their infancy. The results depend on Soviet aid and the vagaries of nature. The poor harvest of 1954 apparently prompted the planners to cut construction unduly, while last year's good one gave rise to over-optimistic estimates leaning too heavily on the available steel resources (not long ago the Chinese talked of 17 million tons of steel by 1962 ; now this has been cut to 12 million). Yet, even if they advance in a somewhat haphazard way, the planners must have an order of priorities. In a poor country it is difficult to put aside more than one-fifth of the national income for investment ; and since heavy industry is the key to further progress, while the light branches are indispensable to encourage agricultural accumulation and transport is vital to expand the basis of production, some other sector will have to get a reduced share of the national cake. The reduction of the armed forces by 2.7 million men from the 1949 peak is claimed as a pointer. Defence and administration, which absorbed a third of public expenditure in the current plan, are to get only one-fifth in the next one. This relative cut need not involve a reduction in absolute terms or a diminished efficiency of the Chinese forces, but it seems to indicate that to gain the leadership of Asia Peking will rely more on Fushun coal or Anshan steel than on foot-weary soldiers.

National income is to be raised by half over the five-year period, industrial output increasing twofold and agricultural by over a third. Workers who at first benefited little from increased production are, like the peasants, promised a 35 per cent increase in their real income. It is a second Long March on which Mao is leading China's millions. Collectivisation will have to be consolidated and pay its way. The "proletarian" revolution, moreover, hitherto sustained by the peasant, will have to create its proletariat ; six to seven million new workers are required to join the industrial labour force during the next lap.

Out of the office on time...

thanks to the DICTABELT RECORD

Five o'clock and secretary's off home... boss heads for a dinner engagement.

Dictaphone's exclusive DICTABELT record helps them both get the day's work done on time—easier, faster and better.

Some unique DICTABELT advantages: 1. Unbreakable and flexible—can be mailed or filed like ordinary letters. 2. Dictation always visible—so the boss can't lose his place. 3. DICTABELTS can't be erased purposely or by accident. 4. DICTABELT's real cost is less than any other dictating medium. 5. They're used just once.

With DICTABELT, both boss and secretary work at top efficiency—without the interruptions, errors and waste of shorthand dictation. When the boss wants to dictate, he just picks up the microphone of his Dictaphone TIME-MASTER dictating machine and thinks out loud. DICTABELT gets every word crystal clear.

Your local Dictaphone office will give you more facts—plus a free TIME-MASTER trial on your own desk. Or write to the Dictaphone Co. Ltd., 17-19 Stratford Place, London W.1.

The words DICTAPHONE, TIME MASTER and DICTABELT are registered trade marks

MIDAS, son of the goddess Ida, was rewarded for looking after the drunken Silenus, with a gift of his own choosing. Being a greedy monarch, Midas chose that all he touched should turn to gold. It did so, including food and drink as soon as they touched his lips, which greatly inconvenienced him.

It is no use being irresponsible about metals as Midas was. They play an important part in our lives, especially aluminium and its alloys which, although not generally considered a substitute for three square meals a day, may be used in a multitude of other ways and possess such qualities as lightness, durability, resistance to weather and great strength.

THE BUSINESS WORLD

Why Productivity?

THAT economic expansion depends mainly upon increasing productivity, and that increasing productivity depends mainly upon using more efficient machinery, are platitudes of Britain's postwar industrial plight. Mainly is the word, not wholly. The growth of the working population, and the movement of labour into activities where productivity is relatively high, play their parts in expanding the national output; but increases in productivity have accounted for probably two-thirds of Britain's economic growth since the war. Productivity, again, may rise because workers work harder (when work is operator-paced), because managers organise it better, or because machines are used closer to their full capacity. But such improvements are ultimately limited by the machines and methods of production, which determine how great that full capacity will be. The platitudes, that is to say, are true.

How to get more mechanisation in British industry—and higher productivity, and greater growth—is generally discussed in terms of securing the necessary savings and investing them properly, and of translating advanced scientific knowledge into techniques for the workshop. These, certainly, set the broad limits. But within them, what is it that determines the nature of the machines and methods that industry actually decides to use, out of the variety of alternative ways in which it could pursue a fresh production objective—using more or less advanced machinery, costing more or less capital? Ordinary business common sense and orthodox economic theory, in their different languages, come up with broadly the same answer to this question. A somewhat unorthodox American industrial economist has just published a book, in which he deliberately simplifies and compresses that answer into a new explanation of changes in productivity.

In choosing how to achieve his objective in production, a businessman or his "hyphenated engineer" selects the combination of volume of output, methods and materials that he thinks likely to bring him the most revenue at the least cost. Which of the alternatives he picks will depend partly upon the technical efficiency that different combinations of factors of production offer him at various volumes of output, and partly upon the prices of the different factors. The technical ideal is often not the best commercial choice, when the relative prices of labour, machinery and materials are taken into account; and changes in the relative prices of the different factors may make it worth while to choose methods employing a different combination of factors. If, for example, the price of labour tends to rise without a corresponding rise in the price of machinery and mechanical power, it will pay industry to substitute more mechanised methods for less.

★

The thesis of Mr Seymour Melman, of Columbia University, in his book, *Dynamic Factors in Industrial Productivity*,* published in Britain this summer, is that this example sufficiently and accurately describes what has happened, is happening, and is likely to go on happening, in industrial economies such as the United States and Western Europe. He argues

- that the degree of mechanisation in industry depends mainly upon the relative prices of labour and machinery, "alternative labour to machine cost";
- that labour productivity depends mainly upon the degree of mechanisation; and hence
- that labour productivity is directly related to the ratio of relative labour and machine prices.

It may be noted that "mainly" is again the operative word, though Mr Melman does not lay stress on it. He does not argue that this relation between the price of men and machinery to do the same jobs is the only factor that affects the level of industrial productivity;

* Basil Blackwell, Oxford. 238 pages. 22s. 6d.

but he does argue that it is the dominant factor in setting that level—in different countries as well as at different times in the same country.

Mr Melman seeks to demonstrate this bold thesis with direct observations both from the British motor industry, of which he has made a first-hand study since the war, and also from "global" statistics of earnings, machinery and power costs, installed horsepower and productivity in manufacturing in Britain, the United States and other countries. He begins by costing alternative ways of doing a handling job in the British motor industry in 1938 and in 1950—showing the different items of cost involved when a man did this with a wheelbarrow, with a powered industrial truck, and with a fork lift truck. These mechanical methods, obviously, offer progressively higher rates of labour productivity. He has no difficulty in showing that by 1950, because earnings for the operator had risen much more than capital charges on the machine and the cost of fuel, it paid the industry much better to mechanise this job than in 1938. Costing a similar handling job in the United States, where labour costs far more than in Britain, he shows that both before and after the war it paid the American industry to adopt much more mechanised methods than the British. Indeed, he argues, only by 1950 had the rising ratio of man to machine costs made it economic for the British industry to invest in methods as mechanised as those which paid the American industry as far back as 1938; and from his own observation he says that the British motor industry was in fact investing in much the same degree of mechanical handling just after the war as Detroit had been installing in the thirties.

★

From this convenient (and, within its limits, effective enough) snapshot of his argument, taken at a particular point in a particular industry, Mr Melman moves on to a much less direct and much more elaborate statistical exercise. Taking the price which industry paid for electric power as a possible indicator of the "cost of mechanisation," he points out that in Britain, for fairly long periods up to 1950, this price rose much less than earnings per man-hour in manufacturing industry; and that since 1938 an index of "alternative cost," showing the number of kilowatt-hours that industry could buy for the price of a man-hour, has risen roughly in step with the growth of output per man-hour in British manufacturing. He widens the argument to show that "alternative cost" and labour productivity may also be correlated in the United States. Finally, he argues that between the United States, Britain and several other industrial countries, the number of kilowatt-hours that could be bought at different times for the cost of a man-hour seems to have been quite closely correlated with their different levels of labour productivity.

Common sense suggests that there is a good deal in this argument when one compares labour productivity in different countries. It is obvious—though some of the official prophets of productivity in this country do their best to ignore it—that the relative costs of labour and machinery in different countries largely settle the extent to which it pays industrialists there to invest in labour-saving equipment—that is, to buy higher labour productivity. American wages are something of the order of 3-4 times those in Britain; American machinery seldom costs even twice as much; one would expect, and one gets, a higher level of mechanisation and of labour productivity there. It follows, incidentally, that it is only where higher mechanisation offers dramatically increasing returns in output that America can show anything like the same advantage in cost that it can show in labour productivity. The time at which an industry began large-scale mechanisation, the relative importance of labour costs in it, the degree of protection it enjoyed, and many other factors must affect and modify the effects of relative labour and machine costs on international comparisons of labour productivity—and of final costs—but in general this does seem likely to be a major determinant.

★

Mr Melman's data illustrate this generalisation effectively enough. But they are inadequate to demonstrate the other half of his argument—that the relation between labour and machine costs, over long periods, is the main factor in setting the growth of labour productivity in any one country. A fork truck, which was hardly manufactured on a commercial scale in Britain before the war, is utterly unrepresentative of industrial plant and machinery; its price may have gone up by only about 20 per cent between 1938 and 1950, but that of most industrial machinery has doubled or more. Electric power certainly plays a part in the "cost of mechanisation," if a small one in most cases; but the price of a kilowatt-hour has risen far less over the years than the cost of industrial plant to use it.

Adequate data simply do not exist, in truth, to confirm or disprove whether in Britain, at least, the ratio of labour and machinery costs can be directly related over time to the growth of labour productivity. The various extremely shaky indices that exist can be used to suggest that earnings may have risen more than machinery prices since just before the first world war until now; that between about 1924 and 1938 neither showed any significant change; and that since 1938, a little more certainly, earnings have risen more. It is possible to concoct certain prewar indices of labour productivity, but none such that would bear the weight of proving or disproving anything. Since the war, labour productivity has risen, along with "alternative cost," but the period is far too short to demonstrate or deny a significant correlation. More direct comparison of the "cost of mechanisation" and of labour than Mr Melman has offered to set alongside productivity, therefore, is not out of line with this part of his argument over the short run of postwar economic growth; but, like his own evidence, quite inadequate as a base for generalisation.

But this confident and deliberately over-simplified argument has political as well as economic overtones. Only its statistical sophistication and tortuous language mask the common ground it shares with the "high wages policy" of Henry Ford and more recently of Lord Beaverbrook. (It can boast, admittedly, much more respectable ancestry: did not David Ricardo write in 1821 "machinery and labour are in constant competition, and the former can frequently not be employed until labour rises" — the interpretation of which, in more esoteric senses, involved eminent British economists of the left, right and centre in some controversy about 15-20 years ago?) And in 1956, Mr Melman might well have tailor-made his economic theory for Mr Cousins.

★

It is worth noting, however, that this argument, which explicitly writes down wages restraint as hampering the further growth of labour productivity, is not ordinarily put forward by trade unionists in Britain, though it may be in the United States. It was the industrial engineering productivity team, men concerned with methods of production from the managers' side of the bargaining table, who observed in 1954 that the high labour costs of postwar Britain sometimes produced "the wrong reaction: that is, an attempt to restrain wage increases without giving sufficient thought to the need to increase the efficiency of labour because of high wage costs." It is the industrialist beset by dogooders who sometimes wryly comments that he "will buy as much PMH as pays me"; and echoes of the "high wages policy," even in 1956, are still, on occasion, to be heard, if rather *sotto voce*, from the FBI.

Mr Melman is, as no doubt he is entitled to be, sublimely unconcerned with the larger problems of internal inflation and the external balance of the British economy. For the long run, his simple theory has, of course, an intrinsic plausibility—the relative price of labour has obviously something to do with making labour-saving worth while. For international comparisons, he has illustrated a point that can too easily be overlooked. But as to his explanation of the development of productivity in any one country's industrial history, the verdict must at best be "not proven." Labour and machine costs may well be a factor, but one among many: and the evidence is quite inadequate to show how important. And it has little relevance to this country's economic ills and remedies in 1956—save this. It might serve as one extra reminder that the dismal refrain which tells how wage increases must automatically increase prices and make Britain helpless to compete in world markets is not a foregone conclusion. Whatever may or may not have caused it to be installed, more new and efficient machinery than ever before will be coming into commission in British industry this year and next: and it does offer the chance of higher productivity to offset higher costs. So far, that chance is hardly being taken. That may be the fault of labour, or management, or both. But there is no doubt that the responsibility lies with management. That is what managers are for.

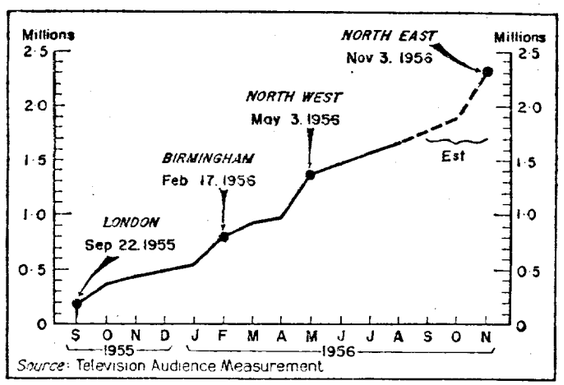
ITV's Financial Future

ON reading the second annual report of the Independent Television Authority this week a director of one of commercial television's programme companies commented wryly that, while the companies were making losses that varied between the mild and the staggering, the ITA seemed to show a comfortable profit out of the rents they paid it. It is ironic that the ITA should be able to set aside sums as big as £105,000 for provision against future taxation during the first six months of commercial television, while the programme companies may have been incurring losses amounting to ten times that figure; but this merely illustrates the "landlord and tenant" basis of commercial television in Britain. The ITA's main financial preoccupation as landlord is to find the money to build new transmitters when the initial government loan of £2 million that launched commercial television has been exhausted. There is only one way it can do this, by starting to save out of current earnings from the outset; this has meant extracting a swingeing rent for the use of the transmitters already in operation. The programme companies, freed from responsibility for any capital expenditure not directly concerned with programme production, are interested only in covering their immediate heavy daily outgoings and have little sympathy for the squirrel-like thrift of the ITA.

The rents they pay work out, very roughly, at a halfpenny a day for every dozen people living within reach of the transmitter—regardless of how many have or want to have television sets. These rents, fixed throughout on a rough population basis, yielded ITA £423,500 from the start of commercial transmissions in the London area on September 22 last year, to March 31 this year when the authority's financial year ended. By that time the Birmingham area transmitter had been working for about six weeks; since then the first of the two Northern transmitters has begun sending programmes west of the Pennines and the second transmitter, on the eastern side, is expected to start next month. Before this financial year is out, the ITA's income from rentals will be running at a rate approaching £1,750,000 a year.

No programme contractor has yet announced how it has come out of commercial television's first year:

none is expected to show a profit in the first year's operations. What has surprised most observers is the very real likelihood that some of them will show a profit before the current year is out, and that all of them will be within sight of it. Some credit for this is due to the internal reorganisations that were carried out during the black days of the summer. This turned into a period of attrition, during which the enthusiastic advertisers of the honeymoon period drew back to mull over their experience of six months' television advertising and the companies' own administrators took a thoughtful look at their programme costs. A peak programme can cost the contractors £4,000 for a half-hour, while a cheap one works out at about £500 for the same period. Some of the most expensive programmes were the "balancing" programmes—counterweights to independent television's predominantly light entertainment—and several of these disappeared in the effort to bring costs more into line with financial resources. This lay behind the ITA's request to the Government for the £750,000 grant the Television Act appears to permit for the subsidy of programmes of this kind. The proportion of "balancing" programmes dropped by a third during the summer; it has fallen still further with the new autumn schedules. Their demise is generally regretted, because when they are well (which means expensively) done, these programmes attract big viewing figures.



Number of ITA Receivers

Sheer shortage of talent for television continues to discourage and bewilder programme managers, who watch helplessly while promising acts founder in the demoralising atmosphere of the television studio—"their mouths fall open and you see their brains drop out." But the difficulty of filling 50 hours of transmission time a week has been eased substantially by the development of networking this autumn. This is the major factor behind the contractors' present optimism. If a programme can be seen on three stations at once, its cost can be divided between three contractors instead of being borne wholly by one company. This being so, it seems surprising that the contractors, financially pressed as they were, spent the entire summer arguing how the cost of a networked programme should be divided among them. By the autumn they had agreed, and the system began working in September. It has led to savings in staff, studio space and equipment, and is the first real economy to be made in the expensive, extravagant and initially very wasteful operations of the programme companies. It now seems possible that a networked system could break even on an income of £10 million (some observers would say this figure was on the low side), whereas the separate programme contractors, working as they were doing to September, needed a much bigger annual revenue than this to see them through.

★

In the first year of commercial programmes, that is, up to the middle of September, it has been estimated that advertisers did indeed spend about £10 million on commercial television. But expenditure during the second year may reach £13-14 million. This raises the question of present advertising rates. From the basic simplicity of three rates, divided between peak, standard and off-peak times, with which the commercial transmissions started, rates have been divided and subdivided until they may vary every 30 minutes of the television day. During the summer, programme contractors outbid each other to offer bonus times and bulk discounts to advertisers. Now it is the advertisers who are competing between themselves for peak booking times, and it is taking great ingenuity to honour the bonus undertakings.

As the chart shows, the growth of the television audience, measured by the number of sets that can get ITA programmes, as well as BBC, has continued steadily, barely interrupted by the credit restrictions that originally savaged television sales. ITA viewing figures show that a set is likely to be switched on for three to four hours a day even in summer (was the weather really so bad?) The ITA's share of this audience is almost always substantially higher than the BBC's, and has recently touched 80 per cent of the total. The cost of television advertising is thus reckoned to have dropped from roughly £4 10s. per thousand viewers when the service opened, and advertisers booked on trust, not on audience figures, to well below £1 per thousand, which is roughly what advertisers had originally thought might be a reasonable fee to charge. Even so, television is by no means a cheap advertising medium. It calls for steady, regular insertion and an appearance three times a fortnight would cost £120,000 a year for peak-time bookings and still as much as £80,000 for less ambitious times. The production costs of the commercials can be formidable for advertisers, but they are reduced if the commercial will stand constant repetition, as many do.

Advertisers have come back this autumn to support television in greater numbers and heavier bookings even than at the hopeful beginning of the services; whether they should be expected partly to withdraw again next summer is something that the programme companies would dearly like to know, although should this seasonal pattern recur in 1957, they will be less likely to panic. The major uncertainty left seems to be the further growth of the audience, which is the key factor in deciding the attitude of advertisers. Today's audience for commercial television is growing fast because new stations are coming into operation at regular six-monthly intervals. But when the sets are all converted and the stations all established, what will the viewing curves do? The chart shows the estimated growth up to the end of this year, when ITA services will then be available to 60 per cent of the population. Further growth is closely dependent on the rate at which the ITA can bring new transmitters into operation and strengthen the power and range of its existing transmitters. This, in turn, will depend on its financial resources at any one time, and as this depends on saving today, its present thrift is in the direct interest of the programme contractors who express themselves so out of sympathy with it. The ITA says in its report this week that it still plans to complete 11 stations by 1960. But it is already noticeable that programme contractors for smaller stations, such as Scotland, will not accept the sharing principle used on the bigger English stations. The Scottish station has been given to one contractor for the whole week, and the same will probably happen in Wales and Northern Ireland. The big stations may be in sight of paying their way within 18 months of operation; it is not so clear that the smaller stations can count on as easy a passage.

Business Notes

Trinidad Pay-off

THE heartsearching that accompanied the sale of the Trinidad Oil company to American interests must now be followed by thankfulness for the timeliness of the receipt of the dollars. Without the $177 million paid early last month the sterling area's reserves would have fallen by $125 million, only slightly less than the fall in August. As it was, they rose by $52 million. Now, the lean season for sterling is nearing its end, the Suez fears have largely abated, and it is reasonable to hope for modest gains until the instalments of $181 million on the North American loans fall due at the year-end.

Nevertheless the sterling area's gold and dollar accounts remained heavily in deficit in September. Excluding the Trinidad receipt and $3 million of defence aid, the deficit was $128 million. Of this $34 million was paid to the European Payments Union in settlement of the 75 per cent gold portion of the August deficit of £16 million; and as last month's deficit dropped to £12 million, involving a gold payment of $25 million next week, the true deficit attributable to September is $119 million (and of this $8 million comprised the quarterly instalment on the Canadian wartime loan). The comparable deficit for August was $102 million. Both figures are well below the deficits sustained in July, August and September of last year. Given the addition of the Suez uncertainties to the seasonal commercial demands, the experience of the past two months cannot be considered disappointing. And by the second half of September the performance of sterling suggested that the drain had been checked.

Rush of Rights Issues

EVEN if the Bank of England is not prepared to take risks with the rate of passing borrowers through the turnstiles, the amount of borrowing already contracted for in the near future is substantial by recent standards. This week has seen one small issue in the gilt-edged market, Cambridgeshire County Council's issue of £1 million 5¼ per cent stock dated 1961. The terms are similar to those of the recent Croydon issue. The stock which has been placed at £99 per cent was well received in the market. It is in effect an alternative to mortgage market borrowing with the advantage of a quotation and almost certainly with financial advantage to the borrower as well.

In addition a large number of rights issues have been announced, several of them by large companies and for substantial amounts. Among the big ones is John Brown and Company's plan to raise over £1.9 million by the offer of 1,292,336 ordinary shares to existing ordinary shareholders at 30s. per share. Automatic Telephone and Electric Company will raise £1.6 million by the offer of 700,000 new ordinary shares to shareholders of those classes on the basis of one new ordinary share at 46s. for each three ordinary and/or deferred shares now held. The Eagle Star Insurance Company as part of its capital rearrangement plans will be issuing 1,215,512 new 10s. ordinary shares at 50s., and the Continental Industrial Trust is offering existing ordinary stockholders 275,000 new £1 ordinary shares and 275,000 of 3¼ per cent debenture stock dated 1965-80. The offer is made in parcels of one £1

ordinary share and £1 of the debenture stock together costing 40s. in the ratio of one parcel for each £5 of ordinary stock now held.

Sterling Gains Strength

ON Monday, the first of October, sterling staged a sudden rise. This lifted the official dollar rate from $2.78¼, at which it has frequently had to be supported since the onset of the Suez crisis, to $2.78½. Continental currencies moved with the dollar, the mark in particular falling against sterling from 11.69¼ to 11.71¼. The whole of this regained ground has not been held, owing in the main to the recurrence of some commercial demand for dollars, but rates remain well above the level from which they began their recovery at the beginning of the week. One argument for greater confidence in sterling can be based on the British Government's constructive attitude towards association with a European common market. This was felt to be a mark of confidence and of dynamic initiative which has too long been wanting. Significantly, the recovery of sterling occurred on the first day of the month, and that is after a day when positions are being taken. This time there was clear evidence of bear covering, some of which may have been induced by the fact that the Suez dispute is dragging on without resort to force. One of the most significant movements in the foreign exchange market has been the strength of transferable sterling. This had to be supported on a substantial scale at $2.75 last month. It has been dealt in up to $2.76⅞ this week. The narrowing of the discount on forward sterling is further evidence of the favourable turn of the speculative tide.

Marshalling the Queue

BIG companies, one after another, have been making their arrangements to seek more capital through the issue market. After Caltex came General Electric and after General Electric will come Esso and rumour mentions ICI. A number of important companies have in the last week announced rights issues. The need for the sinews of investment is urgent and the market offers just a modicum of encouragement. Industrial stocks and gilt-edged both roughly held their own this week, the *Financial Times* government security index rising from 83.43 to 84.06 and the industrial index dropping from 180.5 to 179.4 in the week ending on Wednesday. It is small wonder that the borrowers, finding that institutional investors had a little more money, are anxious to push ahead.

The marshalling of the queue in the new issue market has, however, recently become stiffer. It has for some time been normal form that consents from the Capital Issues Committee have been issued with the condition that an acceptable date must be agreed with the appropriate authority For issues involving less than £1 million that means that the broker to the issue can make his arrangements with the Stock Exchange Council. For sums over £1 million the broker to the issue is required to consult the government broker who automatically consults the Bank of England. Thus the queue for big industrial issues and the queue for gilt-edged issues are under the same ultimate control and when the turnstiles are clicking for one class of borrower they are often not clicking much for the other. Brokers with big industrial issues in prospect have recently discovered to their chagrin that for a large section of the present month further dates are not being made available.

That means that some of these issues, Esso for example and perhaps ICI, will be coming a little later than the market had generally assumed. It also opens up a fascinating field for guesswork. What is the reason for the toughness about dates? The commonest market guess is that the traffic is being held for Australia. Australia has one compulsory maturity, just under £7 million of 3¾ per cent stock 1952-56 due for repayment in December, and its replacement is now urgent, but unless Australia intends to borrow substantially more than the amount of the stock maturing it seems that something else as well could be tackled within the same period.

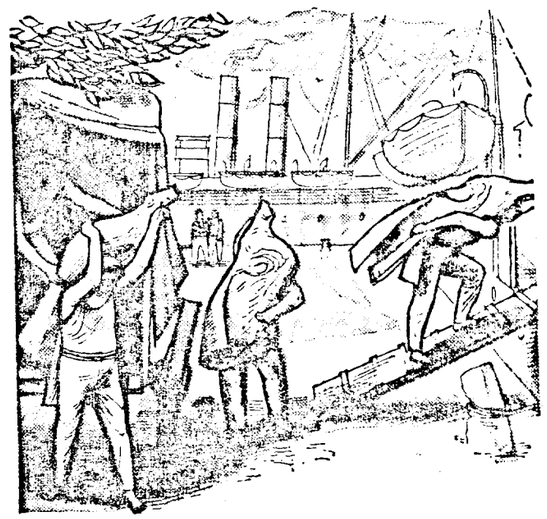
Bids for Atomic Power

ON Monday, four engineering groups sent in their tenders to the Central Electricity Authority for the first two commercial stations in the world to run solely on atomic power. The importance of the step is reflected in the immense detail demanded by the CEA, far more than it would ask for in a tender for a conventional thermal station. The contracts are likely to be awarded not on fine competitive points, or even on cost, but on the confidence that CEA engineers have in the ability of the tendering groups, headed by AEI, English Electric, GEC and C. A. Parsons, to carry out their designs.

There is a fine balance between what is desirable by nuclear standards and what is possible by engineering standards, and the balance is being struck by the different groups at different points. They vary noticeably in their views of how thick a sheet of steel the welders can weld on site into pressure vessels to hold the mass of graphite and concrete that forms the reactor core. The steel at Calder is only 2 inches thick, but English Electric is prepared to attempt more than 2½ inches; General Electric and AEI, 3 inches; and Parsons, as much as 4 inches. The welds are critical, but so is the thickness because that decides how big and how powerful the reactor is going to be. The contracts will be judged on how successfully this balance between enterprise and recognition of engineering limits has been struck across the whole complex design.

The Atomic Energy Authority has been surprised how substantial are the improvements that the groups have made in their tenders on the Calder Hall prototypes that served them as primers. It is of great importance to the country that all four groups should master the rudiments of atomic engineering for although much prestige is attached to winning the first two contracts, the volume of atomic building planned is so big that all four will be employed to the limit of their resources. On November 1st, bids must

Fifteen years before Frozen Meat



Frozen meat was first shipped from the Argentine in 1877—fifteen years after the Bank of London & South America had opened its doors there.

Since then, Latin American trade of all kinds has increased enormously, and with it have grown the influence and interests of the Bank. Today, the Bank holds a unique position as the *only* British bank in Latin America. It has branches in most of the important trading centres of that vast continent.

Up-to-date reports on local markets, trading regulations and general economic conditions are received regularly from branches overseas and are summarised in the Bank's *Fortnightly Review*, which is distributed to customers and made available to those who have business in Latin America, Portugal or Spain.

go in for the first Scottish atomic station—these will be *identical* to those sent this week to CEA, with modifications made to suit the more attractive Ayrshire site. Within a few months, CEA will then be inviting bids for its next two atomic stations, which are likely to be much bigger affairs than envisaged when the revolutionary White Paper on Atomic Power was published little more than 18 months ago.

The New "Ferguson"

THE new Ferguson tractor which was at last shown in Britain this week is the first new tractor to have been produced by Massey-Harris-Ferguson since Mr Harry Ferguson severed his connections with that organisation—although it was on the drawing board for some time before his departure. But it retains all the basic features of the revolutionary Ferguson system of tractor-implement design. It is somewhat bigger and rather more powerful than its predecessor, the TE 20, which has now been in production for ten years, and improvements to the hydraulic system and additional controls make it a more sensitive and efficient machine.

This extra power and the greater flexibility of the "Ferguson 35" has been provided at increases of about 10 per cent in its weight and initial cost. It has a 37 brake hp four-cylinder engine, which develops about 40 per cent more power. It has six forward and two reverse gears, giving a choice of speeds up to 14 mph, two different power take-off drives—engine speed or ground speed—and a dual clutch for stopping either the main tractor drive or the power take-off drive. The improved hydraulic system now offers position and response control of implements as well as the previous control of depth and lowering or lifting. Although the operation of the tractor and the implement attached to it has thus been made somewhat more complicated—a point that might prove troublesome in certain overseas markets—the new model has clearly been made more attractive to the Western farmer and, with certain modifications, to the industrial tractor user as well.

Production of a broadly similar model has been in progress in the United States for nearly a year, but manufacture at the Banner Lane plant of Standard Motor Company has only recently started. This plant has been completely re-tooled at a cost of £4¼ million, and is now a most impressive semi-automatic assembly line. Its capacity is 100,000 tractors a year against 70,000 before, but present output is only about 100 models a day planned to reach 250 a day by the end of the year. Just how soon Standard will be able to take back some of the men it declared redundant six months ago when re-tooling started, at present depends largely upon the company's current dispute with its maintenance electricians.

Sharp Fall in Advances

BANK advances are again falling steeply. In the five weeks to September 19th the advances of the eleven clearing banks dropped by £70.7 million. This was the biggest reduction since the record £123.1 million in the September period a year ago—most of which represented repayments by the gas and electricity boards from the proceeds of public issues. In the latest period, the nationalised industries were again making repayments, this time from the proceeds of Exchequer grants under the new financing arrangements. Those repayments reached £29.7 million (and in addition £3.4 million was repaid to the Scottish banks). That was substantially more than had been expected. The September banking period happened to cover two instalments of repayments by the nationalised industries but the monthly rate of reduction in their borrowing had been generally put at not much over £5 million.

Even so, the greater part of the latest fall in advances represented repayments by borrowers other than the State boards. Such advances dropped by £41.0 million—a quite unusually large reduction, which brings the fall since mid-July to £103 million. This represents a welcome reversal of the upward trend in bank borrowing by the private sector that emerged in the early months of this year.

LONDON CLEARING BANKS

	September 19, 1956 £ mn.		Change on Month £ mn.	Change on Year £ mn.

Further confirmation of the impression that some banks have been nibbling in the gilt-edged market comes in the rise of £28.8 million in investments that the September returns show. This restored less than two-fifths of the decline in the preceding period, resulting from the liquidation by the Midland and Westminster banks of their substantial holdings of maturing War Bonds, but there is evidence that some banks have bought a little more gilt-edged since September 19th. At that date the Westminster had made good three-quarters of the August decline in its portfolio, but the Midland had elected to stay liquid. As a result, its liquidity ratio, which in past months has generally been substantially below the clearing banks' average, rose from 32.7 per cent in July to 39.2 per cent last month—compared with the average movement from 34·4 to 36.9 per cent.

Exchequer Light and Shade

THE Exchequer accounts for the first six months of the fiscal year reveal substantial divergences from the Budget estimates; but these do not warrant any conclusion that the basis of the estimates has been destroyed. The

revenue prospect can hardly yet be assessed, with only just over one quarter of the year's income tax collected; the mosf significant features are the lag in customs revenue (so far up by only £12.6 million compared with an estimated increase of £55.4 million in the year as a whole) and in excise (up £30.2 million out of an estimated rise of £88.9 million). The sluggishness in these receipts seems attributable largely to the slower pace of sales of durable consumer goods. Total revenue at September 30th was £115.8 million up, against an expected increase in 1956-57 of £305 million.

Of more significance is the unexpectedly large increase in current expenditure. At September 30th this had reached £233.5 million, absorbing all but £30 million of the increase for the full year budgeted in the original estimates, —subsequently shorn by the "economies" of £76 million.

£ million

	At Sept. 30, 1956	Change on Sept. 30, 1955	Estimated Change in Full Year* on 1955-56 Out-turn
Total Ordinary Revenue....	1,932·7	+115·8	+305
Total Ordinary Expenditure.	2,269·0	+233·5	+262
Above line surplus or deficit..	−336·3	−117·7†	+43‡
Below line deficit.....	−180·6	+141·0§	−265†
Net deficit	−516·9	+ 23·3§	−222†

* Original estimates; not providing for subsequent net cuts of £20 million from reductions of bread and milk subsidies and increase of farm prices and family allowances. † Increased deficit. ‡ Increased surplus. § Reduced deficit.

It should be noted however that in 1955 ordinary expenditure—and particularly defence expenditure—was running well below the estimate. The upshot is that the above line deficit is now up by £118 million whereas the budget envisaged for the full year a surplus raised by £43 million to £440 million.

In the capital accounts, the discrepancy between the budget estimates and the half year's out-turn is in the opposite direction. The net deficit was expected to be raised by £265 million to £803 million; so far it has been reduced by £141 million, to £181 million. The explanation is twofold: the financing of the nationalised industries directly by the Exchequer has only just begun, issues having reached £62.7 million against a budgeted £350 million in the full year; and the Exchequer's loans to local authorities have fallen still more sharply than anticipated—from £217.3 to £54.2 million in the half year, compared with the estimated cut from £331 million to £220 million in the full year. These accounting savings do not represent equivalent cuts in aggregate spending in the economy. It is the course of ordinary expenditure that needs to be most closely watched.

Cars for 30 Per Cent Down

THE Board of Trade has moved rather more quickly in trying to plug the hole in the Government's controls over the home market for motor vehicles created by the recent crop of new rental schemes than it did over radio and television set hire earlier in the year. But it is doubtful whether this latest curb will be as effective. Car hire is still a relatively small business, confined by some firms to industrialists and professional people: it may yet grow much larger. Moreover the new control order, which came into force on Monday, and requires the first nine months' rental and service charges to be paid in advance, was immediately countered by the rental firms. By lengthening the period on which they based their calculations from two years or so to three, they have sharply reduced the total payments to be made in the first year.

Thus the scheme offered by Industrial Rentals now includes a down payment of £307 for a £1,000 vehicle, in place of one of £150, but on the other hand a total charge for the first twelve months (including the deposit) of only £410, instead of £570. The second year the hirer pays £410, slightly more than before, and in the third year also £410, instead of £270. Thereafter, if the contract is continued, the hirer pays £20 a year, in place of the former declining scale of £120, £60, and then a flat £20 in the sixth year and later. Most other firms have made similar changes. Lex Garages has extended its standard hire period for a £1,000 vehicle from 29 months at £34 7s. 3d. a month, with an initial payment of £184 7s., to 36 months at £34 3s. 4d., with a first payment of £310. This makes the charges in the new Lex scheme virtually the same as those of Industrial Rentals and both firms now offer to rent all makes of cars and commercial vehicles; the important difference comes when the hire ends. Lex takes over the car and pays the hirer the full "current market valuation" whereas Industrial Rentals pays (or charges) the hirer the difference between the current valuation and a standard scale of "retention values" that diminish with the age of the vehicle.

To businesses able to claim nearly half of the cost of this hire in tax allowances these changes may mean little. The higher down payment may cause the small operator to think again, but the road haulier will have noticed that goods vehicles with a payload of more than 30 cwt have been exempted from the new order. Bicycles, motor cycles, and passenger vehicles designed to carry fewer than 12 passengers are included. But taxis and tractors are not; and at least one firm has already put out a new scheme of tractor hire for the farmer.

Small Bakers' Revolt

IT is not often nowadays that the small buyer turns against his big supplier, but it happened last week: small bakers up and down the country sent Ranks' flour salesmen away with empty order books and stinging ears. The small bakers considered that Ranks, which also has baking interests, was mainly responsible for the decision of the big bakers to sell bread at 10d. for a 1¾ lb loaf in the port areas when the bread subsidy ended on September 30th. The decision followed a cut in flour prices of 3s. to 99s. for a 280-lb sack (exclusive of the quantity discount of up to 4s. 6d. a sack). Cheaper flour might seem to be in the interest of the small bakers, but it meant that their rivals, the plant bakers, would be under-cutting them by 1d. a loaf. To vent their displeasure many small bakers refused to buy from Ranks. Last Monday Ranks cut the price of flour by 3s. and then

...who me?

Yes, you on the ladder. Life seems pretty good now, doesn't it? A new job, some responsibility, a decent salary now and perhaps a better one ahead. But, what do you really know about the big problems . . . the problems of your industry? When it comes to the big issues are you the man who knows what he thinks, or just the man who knows what he heard someone else say?

You need THE FINANCIAL TIMES. Read its industrial news. Read the reports of the markets your firm sells in, the techniques your competitors use, the new products that could increase your productivity. Read the articles on economic and financial affairs. They will help you to develop a sounder business judgment . . . broaden your vision . . . prepare you for the new responsibilities you can see ahead of you.

THE FINANCIAL TIMES provides all the facts a business man needs. Try reading it every day for a week. It's the only way to keep up with the man who means business.

Men who mean business read

How to recognise fine Brandy

V·S·O·P

The finest brandy comes from the Grande and Petite Champagne districts of Cognac. Only Cognac originating from these two areas, at least half of which must be from the Grande Champagne, is entitled by French law to be called Fine Champagne Cognac.

Remy Martin produce Fine Champagne V.S.O.P. Cognac and *nothing less good*. They only offer for sale Brandy which has reached perfection. That is why when you insist on Remy Martin you can be sure of getting *a really fine Cognac*.

V·S·O·P

PRIDE OF COGNAC

REMY MARTIN

When whippoorwills call

WHEN WHIPPOORWILLS CALL, watch out! To many people in Eastern Canada and New England, a whippoorwill calling near home at night was an ill omen. The old-time safeguard was to find where the bird perched and shoot it, symbolically, by pointing the fingers and saying, "bang". Then, however shrill the whippoorwill's call, the house and its contents were safe for twenty-four hours.

For modern manufacturers taking realistic steps to safeguard their products, a mere twenty-four hours' protection is not enough. They require long-life packaging materials — robust containers well able to protect their goods through all the chances and changes of transit, right to the pantry shelf. And that is why so many world-famous products go to market in "Fiberite" cases, and in cartons made from "Thames Board".

As our expanding industries strive for a greater share of world markets, Thames Board Mills will continue to increase the production of reliable packaging materials — stout protection for the nation's products.

THAMES BOARD MILLS LIMITED

THE LARGEST MANUFACTURERS OF BOARD AND PACKING CASES IN BRITAIN

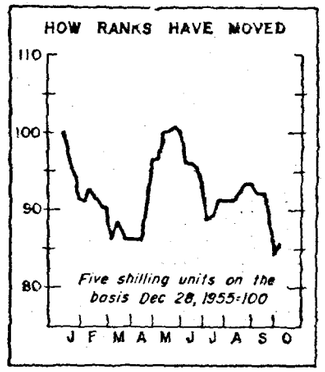
TB 40-670-70

by a further 1s. Spillers and the other millers were obliged *to follow suit, and Canadian flour prices have also been cut.*

The reduction makes the 11d. loaf more profitable for the small bakers, and the 10d. loaf more profitable to the *plant bakers too* (some of whom, apparently, thought that price too low). Thus placated, the small bakers are buying from Ranks again. There has been no fall in wheat prices to justify the fall in flour. Ranks are no doubt taking a view of the market, and their margins will suffer if it goes wrong. At present prices the big mills can be making little profit and small mills may be losing money. Investors realised that, and milling shares have fallen over the last ten days. Over that period Ranks 5s. ordinary have fallen 7½d. to 16s. 3d. and Spillers £1 shares 1s. 6d. to 39s. 6d. As the chart shows, the trend of milling shares has been downwards since May. For the moment the revolt has been quelled, but this is not likely to be the last engagement fought in the baking and milling trades before a new equilibrium is found.



Japan's Ebbing Sterling

DISCUSSIONS for a new trade and payments agreement between Britain and Japan got off to a good start in London on Monday. The object is to maintain a reasonable balance of total payments between Japan and the sterling *area in the coming year—not to discuss exact schedules and* quantities of goods to be exchanged. Both sterling and the yen hold their own in a multilateral world and the time for *such detailed bartering has passed. What has now to be* done is to ensure that each side does its best in its trade policy to maintain equilibrium and, in particular, that it does not put specific restrictions on trade when these are justified neither by the balance of payments nor by the existing state of the sterling account.

It is the state of Japan's sterling reserves that is giving the present negotiations their main interest. At the beginning of this year Japan was reputed to hold sterling balances *of about £100 million. This figure has since fallen to a* level of around £40 million, whereas the Japanese authorities normally regard about £60 million as a necessary level for their working sterling balances. Direct payments between Japan and the sterling area may have been running slightly against Japan this year but the main explanation for this fall in the sterling balance is the extent to which Japan has been using sterling to meet its deficit with other transferable sterling countries. In addition the relative rise *in interest rates in London which has induced Japanese* bankers, and traders, to repay sterling indebtedness wherever possible. Lack of confidence in sterling over the past few months may well have speeded those repayments.

Blow for British Wool Textiles

THE American government's decision to raise the import duty on apparel wool fabrics (the American background of which is described on page 48) will chiefly injure *British exports. Britain is the largest exporter, accounting* for about two-thirds of total shipments to the United States, and its trade is of a type that will suffer particularly from the method of applying the higher duty. The President has discretion to raise the duty when the volume of imports in a calendar year exceeds 5 per cent of the average annual domestic production of these fabrics in the three preceding years. The *ad valorem* duty on the excess imports can then go up by four-fifths, from 25 to 45 per cent (this duty is additional to the specific duty of 37½ cents a lb). In the following year the *ad valorem rate reverts to 25 per cent* until the new "peril point" is exceeded. The higher duty takes effect when imports in the fourth quarter exceed 3.5 million lb. This is equivalent to an annual quota of 14 million lb, which compares with actual imports last year of 14.4 million lb.

As the bulk of British exports, and those of other countries except Japan, are specialities ordered to meet requirements of fashion and season, the importer will be reluctant to leave his consignment in bond until it can enter at the lower rate of duty in the New Year; by then the goods may have missed the market. Alternatively the importer risks having to pay the higher duty or he orders his goods so far in advance that he risks misjudging his market. The result will certainly be—as intended—to check American demand. *The Japanese trade, on the other hand, which has increased* sharply this year, is mainly in stock lines which can be shipped at any time. Hence Japan will probably be able to *increase its share of the market at other countries' expense.*

The loss of British trade this year will be marginal. The higher duties may not take effect until the beginning of December, and a delay of one month in taking delivery will probably not matter much. But next year Japan will no doubt try to ship a year's supply in six months, and exporters of specialities will accelerate their shipments as far as they can. The peril point will be reached much earlier, and trade in the off season will be confined to the few specialities that can stand the higher duty. The growth in British exports, which have risen by 16 per cent so far this year, may be sharply reversed. The uncertainties created by this means of checking imports are thoroughly disruptive to trade, and the decision will unfortunately strengthen the feeling among many British exporters that it does not pay to succeed in the American market.

Hawker's Canadian Issue

THE £1 units of Hawker Siddeley Group have attracted steady investment buying this year even when the share market as a whole was at its dullest. From a price of around 36s. early in the year they moved up to touch 49s. in recent weeks. The reason for the buying was not particularly a faith in the aircraft manufacturing industry. It was to be found in the group's Canadian interests. It was known *that A. V. Roe Canada—the most important of this*

group's Canadian subsidiaries was doing a growing business and would soon need money ; investors had an appetite for transatlantic growth stocks and a few of them even entertained hopes that shareholders of the British parent might be given preferential rights in the Canadian issue. The event has now happened ; A. V. Roe Canada has made its issue—500,000 common shares at $16 per share. The new shares are being dealt in at $16¼-$17¼ Canadian terms (and at about $34½ London basis). Shareholders were not offered preferential rights, and those who wished to buy have had to pay the dollar premium. The gilt being off the gingerbread, the shares of the parent company are back to 44s. 6d.

The event could hardly have happened otherwise for the object of the issue was to raise dollars—not sterling, and to spread interest in the group's affairs among Canadian investors—not among British investors who already know it well. But the marketing, and the Canadian prospectus have left investors in the parent company with a knowledge of the group's affairs that they did not possess before. No less than 45 per cent of the group's turnover comes from its Canadian businesses now to be amalgamated in a new holding company called Racair, and even allowing for the eventual exercise of the considerable share options held by certain executive directors the parent group will retain 4 million common shares (82.9 per cent of the equity) of the Canadian company. Those share options for 321,500 shares (6.7 per cent of the equity) at $12½ run until 1966. They represent a not inconsiderable fortune for the Canadian executive directors and particularly for Sir Roy Dobson. But the Canadian investment still held by the parent company remains most important. On a basis of $17 for the A. V. Roe Canada common shares, the Hawker Siddeley holding is worth £24.7 million. That on the 23,289,400 ordinary shares in issue is over 21s. per share and is nearly half the present market price. Investors with a faith in Canada can still look at Hawker Siddeley as a share that is nearly half Canadian.

Rhodesian Acceptances

GREAT strides have been made this year in establishing a capital market in the Federation of the Rhodesias and Nyasaland. The key move was the transformation on March 15th of the Central African Currency Board into the Bank of Rhodesia and Nyasaland, with Mr A. P. Grafftey-Smith as its governor. The new bank is not yet performing all the functions it intends to perform. In particular, it is not yet taking statutory deposits from the commercial banks, doing discount and rediscount business, publishing a minimum discount rate or maintaining a clearing house. But all that is on the way, and in due course the Rhodesian Treasury bill will replace the present Rhodesian Statutory Commission Bill. It follows, and must be accepted, that in the course of time Rhodesia itself must absorb an increasing part of its own investible surplus, for instance the large liquid funds of the copper groups, most of which are at present deployed in the London capital market, but the process will doubtless be slow.

Meanwhile, a merchant bank, with Mr H. F. Oppenheimer as chairman and Mr T. H. Brand, of Lazard Brothers, on the board, has opened for business in Rhodesia. Rhodesian Acceptances will perform the functions of an acceptance house, a merchant bank and an issuing house, underwriting issues, accepting bills and providing finance for external and internal trade. In that it follows closely on the lines of the Merchant Bank of Central Africa, the formation of which early next year, with Sir Ronald Prain as chairman, was foreshadowed a few months ago, so that Rhodesia will have two merchant banks, each associated with but not excessively tied to one of the big copper mining groups ; both will be doing business as it turns up quite independent of the copper companies. The £1 million capital of Rhodesian Acceptances is understood to come partly from British, partly from South African and partly from Rhodesian sources. Three of the directors are from the Anglo-American stable, one from Lazard Brothers, with Sir T. Ellis Robbins, vice-president of the British South Africa Company, and two Rhodesian business men. The model of Union Acceptances, the similar acceptance house cum issuing house in South Africa, has been followed. In the South Africa Company, however, Lazard Brothers trained some of the staff but were not actually partners, and Barclays Bank (DCO) were partners.

More Water Wanted

WATER consumption in Britain since the war has been growing at a rate of about two per cent a year. Consumption by industry has been growing more rapidly still ; it now takes almost a third of the total daily usage in England and Wales of some 2,000 million gallons—against an estimate of about a quarter seven years ago. In several areas postwar shifts and growth in industry and population have placed some strain upon local supplies, necessitating schemes to tap more reserves or pipe water from outside. At Luton and Dunstable, where a £320,000 scheme to supply an extra 3½ million gallons a day was opened last week, industry has been growing very rapidly. Since 1930 Luton's water needs have doubled, and Dunstable's have trebled. Recently the Minister of Housing and Local Government suggested that present water supplies might place a limit of about 190,000 on the population of those areas. The new scheme will take care of the area's " immediate " needs, but further new works will have to follow soon.

The Luton and Dunstable industrial area is one rather notable example of several where growing local water needs are making substantial investment in new waterworks necessary for an association of neighbouring authorities. Last week's new pumping station at Friar's Wash was provided jointly by the Luton Water Company and the Eastern Gas Board. But industry's swelling demands for water are not the main reason for the Minister's forthright circular to water authorities last week requesting " substantial progress in the next twelve months in the process of regrouping and amalgamation of water undertakings." The Minister wants to see more undertakings in rural areas that lack piped water joining together to do this ; his engineers have now virtually completed their survey of the country's water resources and have recommended what might be suitable areas of common supply. Since 1945 about 14 authorities have disappeared each year through absorption and amalgama-

You'll meet the most interested people . . . in TIME

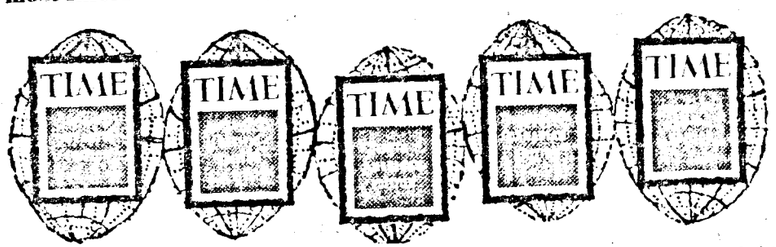
You're looking over a most important shoulder when it belongs to a reader of TIME. He's a *leader* in business, government or the professions.

And he's doubly important to you. As the man who decides what his nation or company buys—and who, at the same time, handsomely provides for his family's needs—he is a *most interested* prospect for both industrial and quality consumer goods.

The most informative and enjoyable news source available to people like these are the five separate (English-language) editions of TIME.

Each week, hundreds of thousands of copies of TIME are bought in the major market areas of the world. All carry the same current news; the advertising differs in each edition.

In TIME, you can advertise to those areas that interest you most . . . through *one* edition, *two*, *three*, *four* or all *five* of the world-ranging editions of TIME.



The Important Magazine Everywhere

TIME—The Weekly Newsmagazine, Time & Life Building, New Bond Street, London W.1

tion, and others have helped to form joint boards. But there are still more than a thousand separate undertakings, although the 150 or so largest organisations now supply about three-quarters of the population between them.

Dunlop Feels the Squeeze

IT was not to be expected that the Dunlop Rubber Company could pass through the stiffer trading conditions of the first half of this year without suffering some shrinkage in its profit margins. The half-yearly statement issued on Thursday shows just how devastating that shrinkage has been. Characteristically the board blames chiefly the fluctuations in the price of natural rubber for the company's misfortune. In the accounts for 1955 the company showed that it had suffered severely from the rise and subsequent fall in the price of rubber. In 1956 it blames lower rubber prices. Substantial inventory losses have been suffered while costs and margins have also been adversely affected by higher labour costs, compared with last year. Even so, the board concedes that part of the group's troubles are a reflection of the difficulties of its customers. Sales were lower because of reduced demand from the vehicle, cycle and

	1st half, 1955	2nd half, 1955	1st half, 1956
		(£ million)	
Turnover (including intergroup sales)	144	158	147
Trading profit (before depreciation)	9·13	8·38	5·73
Net profit (before tax)	6·27	5·23	2·23

furniture industries, and trading conditions in some overseas countries have so far been less satisfactory than last year. Turnover including inter-group trading was not down compared with the corresponding half of 1955.

As the table shows, the fall in trading profit and in net profit before tax has indeed been sharp over the last three half years. The board has found it necessary to cut the interim dividend from 4 per cent to 2½ per cent, and also gives a clear warning that the final dividend, which was 10 per cent last year, will probably be reduced. The board expects that the results for the second half of 1956 will show an improvement, but that the available profit of the parent for the full year will still require a reduction in the final dividend. Following this unhappy announcement, the 10s. ordinary stock units dropped from 18s. 4½d. to 15s. 6d. closing at 16s.

"MOTOR BUSINESS"

The September issue of *this quarterly research bulletin* for the motor and allied industries includes:

The long-term growth in domestic passenger car demand.
The domestic and export markets for agricultural tractors.
The South African market for vehicles *and tractors.*
Notes on the East German motor industry.

The Bulletin is fully illustrated by charts, amongst which are:

Price indexes of used cars and vans.
World exports of vehicles.
Vehicle exports by countries of origin.

For full particulars of this Bulletin, apply to:

Minding Each Other's Business

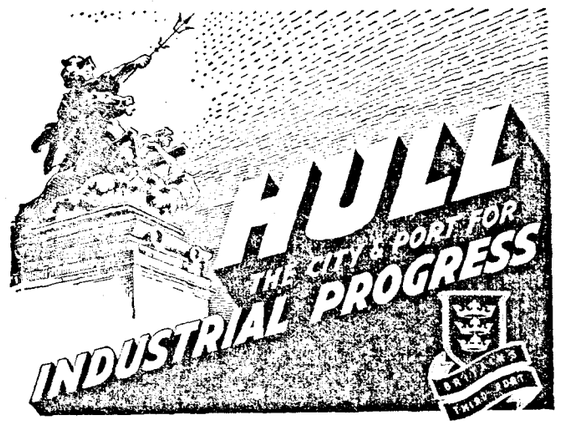
FOUR of Britain's main firms of industrial consultants this week announced they had formed the Management Consultants Association to pool their experience for research purposes, to develop techniques of improving management, and to improve their service to clients. These companies—Associated Industrial Consultants, Personnel Administration, Production-Engineering, and Urwick, Orr and Partners—handle a very significant slice of all the industrial consultancy business done in Britain. Since their formation they have served more than 3,000 industrial and service organisations in Britain and abroad; their staff at present adds up to over 800 professionally qualified consultants.

The firms say that "accelerating technical progress" is now demanding particularly rapid solutions to fresh problems of management. The association will enable them to conduct joint research into some of the newer problems, and to exchange their findings on older ones. But the four groups of consultants are to remain "independent and competitive" in seeking new business.

The Co-op's Trade

SALES by the co-operative retail societies came to a total value of £823 million last year. That was 6.6 per cent higher than the year before, a good deal better than the co-op's performance in either of the two previous years, as measured by their returns to the Chief Registrar of Friendly Societies. Last year's improvement was nearly double that in 1954. For some years, the co-ops have seemed to be losing ground to other types of retailers. Comparisons are made difficult by the fact that the Board of Trade's retail figures show only the movements in the value of sales made by different types of retailers and never the actual value of the sales themselves. In 1953 and 1954 this sales index showed that except in the food departments, the co-ops were not taking in as much extra money as their competitors, but last year the fall seemed to have been checked.

The official figures of retail sales indicate that so far this year the co-operatives have increased their turnover 8 per cent, against an increase of only 5 per cent for retail trade as a whole. Their food departments seem to be busier than the average; so do those sections selling household goods, although this could be due to the fact that the co-ops did not share in the general boom in household goods sales that took place last year. If the Registrar's returns are compared with the figures for personal spending in shops—the money spent on food, drink, tobacco, household goods and clothes last year—then the co-operatives seem to be doing roughly 10 per cent of the retail trade of the country.



Advantages for the Location of New Industry

RAW MATERIAL SUPPLY. — World-wide shipping services and direct access to inland waterways.

LOCAL SUPPLIES — Chemicals, solvents, pigments, adhesives, oils (mineral and vegetable), chalk, cement, leather, engineering services, fish, grain and wood products, packing material.

LABOUR — Immediately available.

MARKETS — HULL serves an inland population of 14,000,000 and exports to all parts of the world.

For reconstruction work on the L.C.C. Northern Outfall, Beckton, Richard Costain Limited use the most modern type of oil-flooded rotary compressor.

These oil-flooded Rotary Compressors cost far less in upkeep

Plant engineers now specify this new revolutionary design—the CP "Power Vane" Rotary Compressor. By dispensing with clutch, crankshaft, valves and pistons, the cost and time loss on maintenance is virtually eliminated. This simple, two-stage vane type rotary compressor gives greater power for its size and weight, and smoother operation. "Power Vane" Rotary Compressors run entirely in oil and are oil-cooled. Other design features include centralised instrument panel, fully-automatic safety controls and non-detachable radiator doors. There is a "Power Vane" Rotary Compressor for every type and size of job. Ask for Catalogue 58-C for a full description of models from 120 to 600 cu. ft. capacity.

SHORTER NOTES

Few indications of any quickening of industrial output can be drawn from the official indices of production published last week; when allowance is made for seasonal variations, total output in industry still seems fairly steady at about the level first reached eighteen months ago, with output in manufacturing perhaps fractionally lower than a year before.

★

Shell Petroleum announced last week that it will spend £6½ million on a new crude oil distillation unit for its refinery at Shellhaven, on the Thames Estuary. The new unit, which is due to come on stream by the end of 1958, will raise the crude oil throughput capacity of Shellhaven from 3.7 million tons to 7.7 million tons a year. This means that all of the three largest refiners in Britain—Shell, BP, and Esso—are now engaged on a second round of refinery expansion, which will add almost 10 million tons a year to the country's refinery capacity. In all cases the main emphasis is on the production of fuel oil.

★

The Associated British Picture Corporation has decided to close down about 25 of its cinemas that have been losing money, mainly those in provincial areas that are regarded as outmoded and unsuitable for modernisation or reconstruction. This follows a similar decision by the Rank Organisation to close down some its least profitable cinemas.

★

Guardian Assurance Company is to make a share exchange bid for the £260,000 capital of Licences and General Insurance Company. The basis is four £1 shares of Guardian for 11 10s. ordinary shares in Licences and General.

★

Sales of diamonds through the Central Selling Organisation continue to run at a high level. De Beers Consolidated Mines announce that sales in the third quarter amounted to £18.8 million, a decline of only £450,000 compared with the second quarter and over £2 million higher than in the third quarter of last year. Sales of gem diamonds were £330,000 higher than in the second quarter, at £12,720,000, while sales of industrial diamonds were £780,000 lower at £6,076,000.

★

Burmah Oil Company on Thursday declared an unchanged interim dividend of 5 per cent.

Company Notes

GLAXO. In a stock market growing used to declining profit margins the advance report of Glaxo Laboratories for the year to June 30 came as a pleasant surprise. Net profit rose from £1,556,000 to £1,765,000, and the dividend from 12½ per cent to 14 per cent. A one-for-two free scrip issue is proposed. Since these figures follow a slight fall in profits in the half-year ended December 31st, reflecting a keenly competitive market abroad and rising costs at home, it must be the sales of new products that have since December more than made good the deficiency. The

	Years to June 30, 1955	1956
	£	£
Group profit before Tax	3,009,000	3,206,000
Taxation	1,453,000	1,441,000
Net profit	1,556,000	1,765,000
Pensions	100,000	160,000
Exchange reserve	100,000	100,000
Capital reserve	500,000	1,000,000
Revenue reserve	500,000	Nil
Ordinary dividend	228,950	256,424
Ordinary dividend (per cent)	12½	14

fact that the earnings of Murphy Chemical, which recently became a subsidiary, are included in the latest figure only is not believed to be significant. Following the profit statement the shares jumped 4s. 6d. to 35s. 3d. so that the yield returned to £3 19s. 6d. The dividend at 14 per cent will absorb £256,424 out of the net profit almost seven times as large, but in a company such as Glaxo which invests heavily in research and sells in the highly competitive pharmaceutical and branded foods market, it is never quite certain how much of the total earnings could be paid out without harming the business.

Last year the larger profit was earned on capital increased by more than £1 million of earnings retained from the previous year. This year a further £1 million has been set aside, and the provisions for pensions and exchange fluctuations repeated. The directors propose to utilise £1,592,700 of the capital reserve to make the scrip issue, which acknowledges these ploughed back earnings.

★

ELLIOTT BROTHERS and ASSOCIATED INSULATION PRODUCTS. A marriage of convenience is being arranged between Elliott Brothers (London) and Associated Insulation Products. The proposed settlement is a simple share exchange, Elliott taking over on the basis of one of its 5s. shares for each 5s. share in AIP. It is easy to see what the advantage will be to both parties if the negotiations are successfully concluded. Elliott is a small but progressive firm of instrument makers with a reputation in particular for computers. Because it has large growth potentialities the shares have settled down to a remarkably low yield basis. At the time of the announcement the 5s. shares paying 17½ per cent dividend showed a yield of only 2.8 per cent. But the growth that those figures assume implies the availability of finance for capital expenditure and last December the company had cash of only £6,189 and an overdraft of £294,988.

Associated Insulation Products is also a successful company with investments in mica mining and in the electrical and plastics industries. It has recently paid 20 per cent dividends and at the price of 21s. 6d. at which the shares stood before the announcement the yield was 4.3 per cent. But the outlook seemed the reverse of that of Elliott Brothers; the company is well supplied with cash but is engaged on selling some of its less remunerative investments. Micanite Canada has been sold and there are plans to sell the investment in British Industrial Plastics. The balance sheet at December 31st shows net quick assets of £629,896 (against £645,113). Clearly the marriage settlement is a cash one: AIP gains the growth possibilities and the shares rose 6s. 7½d. on the announcement, so that shareholders will also be accepting a lower yield basis. Elliott gains the sinews of growth and though its shares fell 2s. 9d. to 28s. 9d., shareholders will hope that the next dividend will not be less than the 20 per cent to which their new partners are accustomed.

★

CALICO PRINTERS' ASSOCIATION. Mr Roger Lee, the chairman of the Calico Printers' Association, dangles a small and, unfortunately, rather intangible carrot before stockholders. He says that "in the past twelve months the income from 'Terylene' royalties has overtaken those from other sources and in future years the income from 'Terylene' royalties may have a considerable effect on the profits of the Association." The carrot is small because these royalties can

represent only a fraction of a total income of £2,704,178 (against £2,887,830). It is intangible for two reasons. First, stockholders are not told exactly or even approximately how much these "Terylene" royalties bring in; they are simply told all royalties brought in an extra £76,000. Secondly, Mr Lee gives no further information as to whether the basic patent will expire in 1958 or whether it will be extended to cover the lost time the war years represent. Mr Lee might consider giving a fuller account of that source of the group's revenue.

As for the heart of the group's business it is clear from the chairman's statement that its continuing prosperity turns on its ability to sell speciality prints and special finishes abroad, to hold its stake in the highly competitive merchanting market at home, and to continue to build up its investments in local manufacturing abroad. The group has, in recent years, shown a welcome degree of flexibility and has managed to increase its earnings at a difficult time in the cotton trade. Its £1 stock units, yielding 7.6 per cent at a price of 39s. 9d. xd on the current dividend of 15 per cent, must rank among the leaders of cotton textile shares.

★

NEDEEM TEA. Tea company results for 1955 now being published must be filling shareholders with dismay. Many companies are showing sharply lower profits and dividends. It will be well for investors to get the right perspective. Producers of plain teas are quite badly hit. Nedeem Tea is an outstanding example; it shows a loss of £83,817 for 1955 compared with a profit of £421,695 (£328,695 after tax) for 1954; there is no ordinary dividend, compared with 10 per cent tax free for 1955 and only half a year's preference dividend has been paid. That is not the end of the company's troubles. The year's loss does not include the provision of £95,000 that has had to be made for the bonus to labour for 1953 and 1954, or the contingent liability of a further £22,000 for the clerical staff. As with other tea companies, there will be some rebate of tax in some year in respect of the retrospective bonus award when the courts have decided against which year it is chargeable. But meanwhile Nedeem, like many other companies, has had to provide it out of reserve and that, together with the year's loss, has absorbed all the £150,000 of the general reserve and nearly all the £32,500 of tax refunds from earlier years; there is left a carry forward of only £997 against £26,145 brought in. Nedeem is now in the bank with an overdraft of £345,752 compared with £130,007, and apart from the 10 per cent tax free dividend that shareholders received a year ago their benefit from the boom tea year 1954 seems already to have gone.

Lest it be thought that all companies are in this unhappy plight, it is worthwhile setting the figures of Nedeem against those of two companies producing high-quality teas in Assam. It is possible to find companies there that have absorbed the retrospective bonus, not taken credit for the eventual tax refund and returned a higher profit for 1955. But it is necessary to search for them among the smaller, less well-known companies: Duamara is one. A more common result shown by several large companies in Assam is a larger total revenue, a larger profit before charging the retrospective labour bonus, but a smaller one after making allowance for that impost. Jorehaut is typical of what producers of better-class teas experienced in 1955. And this year those companies which did well in 1955 should have been doing better still, while those that fared badly are likely to have fared worse.

LONDON STOCK EXCHANGE

Next Account begins: October 17th
Next Contango Day: October 17th
Next Settlement Day: October 9th

Most Government stocks have improved steadily this week, though the volume of business has remained small; 2 per cent Conversion 1958/59 rose ⅜ to 94⅝, 3 per cent Savings 1965/75 gained ¾ to 73¼ and 2½ per cent Treasury ½ to 51⅛. There was some buying of the 5 per cent stock of 1959 and of the 4 per cent stock (1957-8), which suggested that the banks may have been small buyers. The buying broadened on Thursday and some demand was experienced for the longer-dated stocks. Industrial stocks declined up to the end of the old account, but recovered on Wednesday. The fall in prices on Wall Street caused a decline in dollar securities, although part of the loss was made good on Wednesday. The premium on dollar securities over the rate of the day held firm at 7 per cent before easing slightly to 6¾ per cent.

Among the bank shares Lloyds "A" rose to 58s. 9d. following the change in capital structure, but later eased to 57s. 3d. Dealings began in Friary Meux at 31s. and closed at 32s. on Wednesday. ICI eased to 41s. 9d., but Glaxo rose 5s. to 35s. 3d. following the results. Electrical equipment suppliers became firmer, English Electric gained 1s. 3d. to 47s., helped by the large order secured in America. GEC were quoted ex rights on Tuesday at 42s. 6d. and later rose to 43s. 6d. with the "new" at 3s. 7½d. premium. Commercial vehicle producers remained strong. ACV gained 3s. 4½d. to 60s. 7½d. and Leyland 1s. to 48s. 9d. Calico Printers jumped 6s. 6d. to 39s. 9d. xd on the rise in profits, but other textiles again declined.

Oils recovered on Wednesday; British Petroleum rose 4s. to 145s. 6d. and Shell 2s. to 154s. TPD jumped 3s. 3d. during the week to 48s. Some gold mines weakened, but the market was generally firm on Wednesday. Malayan tins weakened at first, but later recovered. New Broken Hill gained 3s. 6d. to 53s. 6d., but Consolidated Zinc was slightly lower. Teas and rubbers were firm.

(1) Electricity production for New Zealand represents about 87 per cent of total generation. (2) Copper and tin refer to metal production. (3) General trade (including re-exports) except for Canada, which is special trade only. Imports are cif except for Australia, Canada and S. Africa which are fob; exports are fob. Trade for India and Pakistan includes that going by land, except for Pakistan in 1948 when figures are for trade by sea and air only; annual figures for India are for 12 months beginning April 1st of year stated and for Australia and Pakistan 12 months ended June 30th. (4) Gold and foreign exchange holdings are those of the government and central bank; only figures for Australia include holdings of commercial banks. Cost of living for S. Africa and S. Rhodesia relates to Europeans only and for S. Africa includes direct taxes. (5) Including foreign investments. (6) Including semi-processed gold. Beginning January, 1955, including South-West Africa. (7) In July, 1948, part of holdings was transferred to the State Bank of Pakistan. (8) April, 1948—March, 1949. (9) Including some long-term securities.

Financial Statistics

EXCHEQUER RETURNS

For the eight days ended September 30th, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £18,061,000 compared with a deficit of £55,405,000 in the previous week and a deficit of £18,118,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £12,473,000, bringing the total deficit to £516,870,000 (£540,175,000 in 1955-56).

THE MONEY MARKET

After rising at three successive tenders the Treasury bill rate fell back at the tender on Friday last. The market raised its bid by the unusually large margin of 5d. to £98 14s. 7d. per cent, outside tenderers by rather less. The upshot was that despite the increase in total applications by £26 million to £406 million, the market achieved an increase in the allotted proportion of its tender from 63 to 67 per cent. The average rate of discount on all bills fell by 1s. 7d. per cent to £5 1s. 9.86d. per cent.

The easier credit conditions quickly disappeared towards the weekend. Small help from the Bank was needed on Thursday, whilst on Friday the special purchases reached very large proportions and one or two houses had nevertheless to take a very small amount at the penal rate. After the tender, December maturities changed hands at up to 5⅛ per cent (against 5⅜ per cent previously). Official help has again been necessary in the first half of this week, on Monday on a very large scale. Most of the purchases have been made indirectly through the banks, which have passed the money on at 5 per cent.

The Treasury bill rate in New York dropped from 2.985 to 2.899 per cent.

The Bank return shows a fractional outflow of notes into circulation. This follows the reflux of £98.6 million since the August peak, rather more than in the corresponding period of 1955.

What does
THE LONDON
CORRESPONDENT
say today?

THE DAY OF RECKONING—the day *after* the fire, when all that isn't burnt is soaked by the fireman's hose—is the day to be thankful. For then is the time you can be glad of your wisdom in being well assured—glad to know that your London Assurance Fire Policy will cover the damage and help you off to a fresh start.

AFTERMATHEMATICS

If a business goes up in flames, then obviously earning power and trading profits are going to go down. That's why it is always a good thing to reinforce your Fire Policy with the additional protection of our Loss of Profits policy.

GETTING THE MOST OUT OF LIFE . . .

There are a great many ways in which Life Assurance can make life fuller and more solidly secure. All are explained in our booklet 'How to be Well Assured'. It's free, and an eye-opener for anyone who's not quite sure what to make of Life Assurance.

* * *

These are three policies from a wide selection. Should you want to know more about us, the rest of our policies, or insurance problems generally, our address is 1 King William Street, Dept. 6, London, E.C.4.

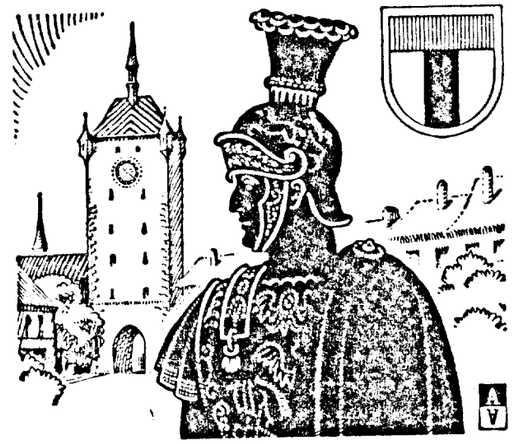
Very good people to deal with

Perhaps you didn't know that

BADEN



the famous mineral spa in Switzerland, known to the Romans as "Aquae Helvetiae," was described by Tacitus in A.D. 68 as a "much visited resort because of its health-giving mineral spring"? Today, the Baths are still as popular as they were nearly 2,000 years ago. Further, Baden has become renowned the world over for its production of heavy engineering products such as electrical machines, marine engines, turbines, etc.

But everybody knows

that the Baden Branch of the Union Bank of Switzerland is at all times ready to give you prompt and efficient service.

COMPANY MEETINGS

LA RÉGIE RENAULT

RECORD PRODUCTION IN 1955

The report on 1955 presented by Monsieur Pierre Dreyfus, chairman and managing director of La Régie Nationale des Usines Renault not only deals with the company's affairs, but refers to the problems which the automobile industry must solve. The following is a summary of his statement:

A new record was achieved, thus maintaining the company's position as the largest French manufacturer—eighth in the world. 221,785 vehicles were produced, more than 30 per cent of the total French production. These consisted of 138,629 4 cv models, 37,631 Frégate, 45,525 coaches and commercial vehicles.

Order books, although affected by the introduction of three competitive cars, were fuller at the end of 1955 than in December, 1954.

1,240,000 vehicles were registered in 1955, against about 1 million in 1954. Private cars, notably those bought by wage-earners, mainly accounted for the increase. It can be seen therefore that fluctuation in demand depends mainly on wage-earners, and it is in this category that Renault has the largest sales—60,000 out of 93,000 4 cv sold in 1955 going to wage-earners.

Sales of new vehicles are closely related to conditions in the second-hand market and here wage-earners account for 52 per cent of the transactions.

NEW COMPANY CREATED—LA SAVIEM

The goods vehicle market is developing differently from that of the private vehicle. According to an investigation made by INSEE, 1,125,000 goods vehicles were in service in 1954, one in every 39 of the population, whereas for private vehicles the proportion is 1 in 16.

The relatively high number of goods vehicles in service in France compared with other European countries explains why the increase in production is less rapid than for private vehicles, being only 5 per cent per year. New requirements are few and can only emerge as the economy expands and the average age of fleets is reduced. As 45 per cent of vehicles in circulation were sold before 1945, potential replacements are high.

In pooling all heavy production of over 5 tons with that of Latil and Somua, Renault has taken a step towards more standardised and specialised products. The sales of the new company, La Saviem, for 1955 were 2,957 vehicles, representing about 20 per cent of all registrations. Turnover from goods vehicles is nearly 40 per cent of that received by Renault for private vehicles.

HOME MARKET

There is no doubt that in the medium and long term view prospects are favourable. However, the fact that wage-earners play a major role in the development of the automobile market involves a certain risk. Increase in the fiscal charge weighing on motorists, unrest caused by political conditions in France or overseas, changes in circumstances, can quickly discourage this category of buyers, who are more sensitive than others. Thus the future is becoming more difficult to forecast. A passing reduction in orders would be a serious matter for it would hinder development in production and in turn influence the whole economic situation.

Running costs also play an important part in sales promotion and the cost in France is much higher than abroad, especially taxes, petrol and insurance.

OVERSEAS SALES

Export of vehicles from France represents an ever increasing proportion of the Renault Company's sales: 29.5 per cent in 1955 (64,747 vehicles) against 26 per cent in 1954 (52,078 vehicles).

Prospects of sales in overseas territories have been completely upset by the political situation. Nevertheless the rate of expansion of automobile and lorry fleets proves that we have to deal with markets which are full of promise: in French Equatorial Africa and Madagascar the number of vehicles regularly increases by 10 to 20 per cent each year. But foreign competitors are struggling to gain a stronger foothold in these markets, and in these regions French products receive no protection from the government.

Sales to other countries overseas are becoming more and more difficult because of extremely lively competition everywhere and increasing production costs.

How has the Renault Company been able to obtain a record level of exports under these conditions? It is because assembly factories have increased their activity that results achieved in traditional markets have been consolidated or bettered, and new markets have been established. Finally, after-sales service has been developed. The assembly factories have produced 24,940 vehicles against 16,430 in 1954. Belgium ranks first with 12,380 vehicles; then comes Spain with 4,000, Japan 3,250, Australia 2,375. Seventy-three foreign countries have imported Renault vehicles, including Great Britain with 2,346 and South Africa 1,020; this means an increase of 42 per cent in the British Commonwealth. The new sales promotion campaign in the United States is beginning to bear fruit, since 3,400 vehicles were sold in 1955. The sales network—eleven regional distributors and 130 agents—is preparing for a considerably greater number of vehicles in the years to come.

All over the world, the sales network has been improved and extended; services have been developed and stocking of spare parts has been organised. In different countries an after-sale organisation has been created to control and to help the local staffs.

In 1955 the disparity between French and Foreign prices increased by 5 per cent. A further deterioration would risk compromising the company's position in foreign markets. That is why it is essential that the support of public authorities be maintained. For their part industrialists, including Renault, realise the need for joint action to promote the sales of French products overseas.

Furthermore if France strove to obtain raw materials from regions able to offer promising markets for its finished products, instead of from regions to which it sells little, she would find new markets opened to her. It is the areas which are underdeveloped today, which tomorrow will offer the greatest possibilities, provided one sets foot in them immediately.

Nevertheless Renault is full of hope about the future, as it supports the industrial and social measures necessary for further expansion.

THE TOR INVESTMENT TRUST LIMITED

ANOTHER SUCCESSFUL YEAR

The thirtieth Annual General Meeting of Stockholders of the Tor Investment Trust Limited was held on September 27th in Swansea.

Mr R. G. Maltwood, the Chairman, in the course of his speech, said:

Our gross income from investments at £133,766, including estimated additional income arising from Double Taxation Relief for the current year and a small amount recovered from previous years, shows an increase of £16,290 compared with the corresponding figure last year. Our net income after making provision for all tax liabilities and taking credit for a net tax adjustment in respect of former years, has increased by £7,786.

The sum of £15,951 has been transferred to General Reserve which you will see from the Balance Sheet now amounts to £132,000.

At this time last year it was stated to be the intention of your Board to increase the next interim dividend with a view to reducing the disparity which existed between the amount distributed by way of Ordinary dividend in each half year. Accordingly the interim dividend was increased from 5¼ per cent to 6½ per cent. When the results for the full year became available the directors felt able to recommend a final dividend at the same rate as last year, namely 8½ per cent, which makes a total of 15 per cent for the year on the Ordinary stock, being an increase of 1 per cent over last year.

The dividends on the six per cent and four and three-quarters per cent Preference stocks and the recommended 15 per cent on the Ordinary stock will together absorb £38,507, leaving the sum of £35,680 after the provision for Reserve, to be carried forward to next year as compared with £35,245 brought in.

Allowing for the payment of the dividend on the Preference capital the year's surplus profit is equivalent to 23.14 per cent less Income Tax on the Ordinary capital as increased by the new issue made during the year under review, the proceeds of which did not fully contribute to the year's income.

The Balance Sheet value of our investments is £1,480,394. As usual a valuation of the Company's investments has been made, which shows the market value as at July 31st was £1,736,573 or an appreciation of 17.3 per cent. If the procedure hitherto followed with regard to the General Reserve had been continued, the Balance Sheet value would have been reduced to £1,348,394 on which the appreciation would have been 28.8 per cent.

As to the current year, we must be prepared for some reduction of income from certain of our investments, but viewing our portfolio as a whole, your directors anticipate that the dividend of 15 per cent on the Ordinary stock will again be covered by a reasonable margin of earnings.

The Report and Accounts were adopted.

JOHN BROWN AND COMPANY LIMITED

Engineers and Shipbuilders

TRADING RESULTS AGAIN SHOW IMPROVEMENT

FINANCE FOR PROGRESSIVE DEVELOPMENT OF SUBSIDIARY AND ASSOCIATED COMPANIES

LORD ABERCONWAY ON PROPOSED NEW CASH AND SCRIP ISSUES

THE NINETY-SECOND ANNUAL GENERAL MEETING of John Brown and Company, Limited, was held on September 28th at 4, The Sanctuary, Westminster, London, S.W.1.

THE RIGHT HONOURABLE LORD ABERCONWAY, the Chairman, presided.

The following is his statement circulated with the report and accounts for the year ended March 31, 1956:

The trading results for the year again show an improvement. The balance on Consolidated Trading Account, at £3,629,451, is higher by £1,117,288 than that of the previous year. After adding income from investments, much the same as last year, and after deducting £674,245 for depreciation, an increase of nearly £150,000, and £1,749,805 for taxation, an increase of some £450,000, the net consolidated profit is £1,318,147, an increase of £391,917.

Much of this increase is attributable to improved results of certain overseas subsidiaries and to the profits of the three companies recorded in the Directors' Report as having become subsidiaries during the year. The balance is due to improved trading results at home, in particular, as might be expected, John Brown Land Boilers Ltd. was more successful in the second year of its existence.

Your Directors recommend a final dividend for the year of 11d. free of tax on each unit of Ordinary Stock, making a total for the year of 1s. 2d., the same as last year. The amount carried forward in the Company's Profit and Loss Account is increased by £126,452, representing the excess of the income it has received from its subsidiaries and from its trade investments over its expenses and the dividends on its own capital. The balance of the year's profit left with subsidiary companies is £667,125, and this is reflected in the increased strength of the Consolidated Balance Sheet.

On the Company's Balance Sheet two items call for comment. The change in the value of Unquoted Shares in Trade Investments (Trade Investments being those where the Company has not more than a 50 per cent interest) is due partly to the subscription by the Company of further shares for cash in Costain-John Brown Ltd., and partly to the removal of the Company's shareholding in S. N. Bridges & Co. Ltd. from that account to Subsidiary Companies. The increase in the value of shares in subsidiary companies arises partly from this latter transaction and partly from the subscription by the Company of further shares in that and other subsidiaries. But while the Company's Balance Sheet thus reflects, in the value at which its subsidiary companies appear, its cash subscriptions for shares in the subsidiaries, no account is taken in the Company's Balance Sheet of the increased resources, and thus the increased value, of subsidiaries derived from the retention by them year by year of substantial proportions of their profits.

Need for Additional Finance

Despite this twofold policy year by year of permitting subsidiaries to plough back profits and of the Company making further investments as appropriate in subsidiary companies, many of the subsidiaries are, and others soon will be, short of liquid resources in relation to their current and estimated future requirements. The Company itself, with no more compensation money to come from nationalisation, has, by making its resources available to subsidiaries by loan or by investment, deployed its funds to the point at which it too needs further cash to support and finance the businesses of its subsidiary and associated companies.

The effect of inflation has been and still is to require even greater working capital to finance a given volume of business, while the renewal of fixed assets, at greatly enhanced prices as compared with original cost, has absorbed, and continues to absorb, still further finance. Developments in the enterprises to which the Company and its subsidiary and associated companies are committed have been to safeguard their businesses and to satisfy the demands of their customers, both at home and especially overseas. All the fields of activity in which the Company is concerned require that the available manufacturing equipment should be of the latest design and of the highest practicable accuracy and economy. Only in this way can these businesses remain competitive.

Board's Capital Proposals

Accordingly, permission having been received from the Capital Issues Committee of the Treasury, your Directors are proposing to raise fresh capital by inviting Ordinary stockholders to subscribe for Ordinary shares at an appropriate price in the proportion of one new share for every five units of stock held. The shares will then be converted into stock. Thereafter your Directors propose, with stockholders' approval, to capitalise from the reserves of the Company sufficient funds to issue, as fully paid up, one unit of stock for every six units held after the cash subscription. This capitalisation of reserves irrevocably committed in the Company's business will bring its issued capital rather more into line with the resources employed in the business. Ordinary stockholders will find enclosed a notice convening an Extraordinary General Meeting to be held on the day of the Annual General Meeting, to consider, and, if thought fit, to approve the appropriate resolutions.

The greater part of the new funds will be invested at an early date in certain of the subsidiary and associated companies who more particularly need it. The balance would be used to finance the general business of the group, partly by making loans available as and when required, and partly in due course by making permanent investments.

A total dividend for the year of 1s. a unit on the Ordinary stock increased by the capitalisation of reserves would require precisely the same amount as a dividend of 1s. 2d. on the Ordinary stock after the cash subscription but before the capitalisation of reserves. It is accordingly the intention of the Directors, in the absence of unforeseen circumstances, to pay in respect of the current year to March 31, 1957, a total dividend of 1s. a unit free of tax on the Ordinary stock increased by the proposed twofold operation. But in order to make the interim dividend a more appropriate proportion of the whole, your Directors intend again in the absence of unforeseen circumstances to pay as an interim dividend 4d. a unit free of tax.

Shipbuilding

Activity in the shipyard and engine works of John Brown & Co. (Clydebank) Ltd. has continued at a high level. Her Royal Highness The Princess Margaret honoured us with a visit on December 14, 1955, to name and launch S.S. "Carinthia," the high class passenger and cargo vessel built for The Cunard Steam-Ship Company's Canadian service. This vessel was delivered in mid-June of this year and has joined S.S. "Saxonia" and S.S. "Ivernia," completed in 1954 and 1955 respectively. A fourth and similar vessel, S.S. "Sylvania," is at present building and is due for delivery in May, 1957. Other contracts completed include M.V. "Whangaroa" for The New Zealand Shipping Co., Ltd., M.V. "Northumberland" for the Federal Steam Navigation Co., Ltd., S.S. "Alvega" for the Alvion Steamship Corporation, and S.S. "Stanvac Australia" for the Standard Vacuum Transportation Co., Ltd. I am glad to report that the volume of contracts arranged during the year considerably exceeded deliveries, and work is therefore assured for some time ahead. The demand for large tankers continues unabated and, to enable Clydebank to increase its output of ships of the size most suited to it, the three building berths in the West Yard will be converted to two large ones. This can be done without interfering in any way with production. Additional pre-fabrication facilities will also be provided. In the engine works the major schemes of modernisation and re-

equipment of plant are nearing completion. The new gear cutting shop, the most modern and best equipped in this country, is now in production.

Land Boilers

John Brown Land Boilers Ltd. has steamed its first four boilers for the Central Electricity Authority, two during the year under review and two subsequently. These boilers have all passed their acceptance trials satisfactorily. Including these four, the company has orders on its books for boilers, mostly for the electricity generating authorities in this country, to the value of some £20 million. In addition the South African subsidiary, whose first pair of boilers should steam late in 1956, has orders to the value of some £2 million. The works at Whitecrook, Clydebank, are being extended to ensure that capacity exists to fulfil orders in this country by their due dates.

Machine Tools and Engineers' Tools

Wickman Ltd. has during the year extended its range of multi-spindle automatic lathes. Despite an increase in the number of machines produced, its backlog of orders at the close of the year exceeded that at the beginning. On hardly any of its models can Wickman offer a delivery earlier than 1958, an unduly long period for customers to wait for machines which usually are ordered to perform particular operations as part of a comprehensive scheme of re-tooling. The extension to the company's works at Banner Lane, Coventry, is nearly completed, and equipment is being installed. The Factored Machine Tool Division of Wickman continues to give good service alike to customer and principal. The Wimet Division sold increased quantities of tungsten carbide tools and tips, and has continued to develop new grades and new applications. Most gratifying interest was shown in Wickman's various stands at the recent Machine Tool Exhibition at Olympia, and the company and its able organisation look forward with confidence to the future. Wickman Ltd. has purchased the whole of the share capital of Arthur Scrivener Ltd., manufacturers of grinding machines.

Webster & Bennett Ltd., despite the long deliveries which its extensive order book forces it to quote, continues to receive orders at least as fast as it makes deliveries. During the year it has extended its works and has installed much new equipment, and this should give next year a substantial increase in finished machines.

Firth Brown Tools Ltd. delivered a greater quantity of engineers' cutting tools than ever before. It maintained good service to its customers, both at home and abroad, though export conditions were increasingly competitive. A substantial proportion of the company's manufactures are direct exports, and many sold at home are used in the manufacture of engineering products for export. Customers for engineers' tools require prompt deliveries, which necessitates the holding of considerable quantities of finished tools in stores throughout the country; the financing of these stocks, and of the work in progress needed to support them, has absorbed much working capital. Nevertheless, Firth Brown Tools has continued to spend considerable sums on capital equipment to keep, as is essential to its business, its manufacturing facilities modern and efficient.

Other Engineering Subsidiaries

Cravens Ltd. has again achieved a new record, both in volume and in value, of output of rolling stock during the year, and has delivered to the British Transport Commission its first diesel railcar for that customer. Further orders have been received from the British Transport Commission in connection with its modernisation programme; and, despite increasing Continental competition, orders for export have also been obtained. The work on hand at present is considerably in excess of that at any previous time. Greater difficulties have been experienced in obtaining adequate supplies of steel from British mills, but supplies have been augmented by purchases of steel from overseas. Cravens' engineering division has made satisfactory progress during the year. The manufacture of hydraulic presses under licence from the Hydraulic Press Manufacturing Company in America has been undertaken and production of injection moulding machines to its designs commenced. The first Brown-Riley coal pulveriser manufactured in Cravens' works was installed at the Stepney power station and has now been in operation for some time with highly satisfactory results.

Markham & Company Ltd. of Chesterfield has maintained the output of its varied range of engineering products. In particular it has continued to supply and install new equipment for the National Coal Board, and has delivered several new large winding engines, all of which have been commissioned to programme. The company continues to effect major adaptations to the National Coal Board's coal-handling plant. All this assists the country's potential coal production. Work in the heavy engineering field is still plentiful, but the company's activities are largely regulated by the numbers of technical and skilled people available, and by the difficulty in obtaining timely delivery of the diverse raw materials and engineering products required. Markham quoted Boving & Co. Ltd. for the water turbines for the Kariba hydro-electric scheme in Rhodesia, and it is gratifying that the contract for the turbines has been awarded to Boving's, and that Markham will accordingly make them.

S. N. Bridges & Co., Ltd., achieved a splendid increase in its output of portable electric tools, the popularity of which is reflected in steadily increasing demand. Its home workshop set is particularly successful, and all its products represent excellent value for money. It is seeking additional premises in order to meet the demand for its products from overseas, to which hitherto it has not been able to do justice.

In Canada, Firth Brown Steels Ltd. has continued during the year its services to Canadian industry in the supply of stainless steels, heavy steel forgings and hardened steel rolls. A small extension to the Montreal warehouse has been completed. A. C. Wickman Ltd. has had a successful year and finds Canadian demand brisk both for the products which it manufactures, mostly tungsten carbide metal-cutting, coal-cutting and rock-drilling tips and tools, and for the machine tools and other products which it distributes in Canada on behalf of British, European and American principals.

Associated Enterprises

So much for the major subsidiaries of the Company. I now turn to the enterprises, at home and overseas, in which the Company has not more than a 50 per cent interest.

At Westland Aircraft Ltd. production has continued on the successful "Dragonfly" and "Whirlwind" helicopters and substantial deliveries have been made. The new "Widgeon" is completing its official flight trials, and work is proceeding on the "Wessex," a new Gas Turbine Anti-Submarine helicopter, for which a contract has been received. Development work continues steadily on the "Westminster" which is a large twin Gas Turbine helicopter to carry about 40 persons or the equivalent military load. Normalair Ltd. continues successfully with its wide range of oxygen, pressure control and cooling equipment.

Costain-John Brown Ltd. has made good progress in laying the trans-Iranian pipe line and in constructing the pumping stations: this work should be completed before the due date. The company has received further contracts in Britain and overseas for oil refinery and pipelining work, and is engaged in a wide variety of contracts and projects in the chemical engineering field. Costain-John Brown has recently had an unfortunate experience (partly due to circumstances beyond its control) over some large contracts in Iraq in which it was engaged with Iraki partners. The loss has not yet been ascertained, but I have no doubt that despite this setback Costain-John Brown will continue to prosper.

In Rhodesia, F. Issels & Son Ltd. has continued to meet strong competition and has been considerably handicapped by difficulties in obtaining steel supplies. The company has, however, had a satisfactory year in which it has given service to a wide range of customers in the Federation. Rhodesian Alloys (Pvt.) Ltd. has operated successfully and has delivered very high-class low carbon ferro-chrome to many customers in many countries. With a recovery of prices to practically the level prior to the slump, progress is now being made in reducing accumulated losses. The commencement of work on the Kariba hydro-electric scheme on the River Zambesi is encouraging, as Rhodesian Alloys essentially depends on plentiful supplies of competitively priced electricity.

Tribute to Employees

Stockholders will, I hope, be pleased at the progress made during the year in developing, consolidating, and keeping competitive, our various enterprises. For this success the thanks of the Directors and Stockholders are due to the management, staff and workpeople at the various establishments in which the Company is interested throughout the world.

The report and accounts were adopted and the other formal business duly transacted.

The proposed increase of capital and the subsequent scrip issue were approved at an Extraordinary General Meeting which followed.

The proceedings terminated with a vote of thanks to the Chairman, Directors and Staff.

THE GENERAL ELECTRIC COMPANY, LIMITED

RECORD SALES

The fifty-sixth annual general meeting of The General Electric Company, Limited, was held on September 27th in London.

Sir Harry Railing, the chairman, in the course of his speech said: The sales of the company have again exceeded all past records. Our total sales have increased by 13 per cent, although sales in consumer goods have declined. In spite of the increased turnover and increased efficiency, the rise in cost could not be fully recovered. Our trading profit has substantially remained the same at £9,752,774 compared with £9,889,324 for 1955 and £8,264,047 for 1954. Our consolidated net profit for the year stands at £2,759,000 compared with £3,452,000 in 1955 and £2,364,000 in 1954.

FACTORS AFFECTING PROFITS

That the company did not achieve higher total trading profits during the past year stems from a number of causes. It is, in part, due to the fact that constantly rising productive wages and distribution costs, accompanied by ever-increasing competition from countries based on lower wages, like Germany, or on lower taxation, like Switzerland, have narrowed the net profit margin. In consequence we have to achieve a greater volume of turnover to maintain the same profit as previously.

We considered it essential to continue our expansion in the capital goods field, and we have been successful in doing so. We consider it equally essential for the future prosperity of the company that we take our full share in the many developments which will lead to the opening up of new fields for atomic energy, power, traction, communication and electronics. The proportion of our turnover in capital goods compared with that in consumer goods has steadily increased during the last two decades. Further, our company has, during the past year, been affected more than some of our British competitors by Government action both at home and overseas, because our business is generally more widespread.

CREDIT RESTRICTION

The sudden change of front by the Chancellor of the Exchequer in last October, and the imposition of restrictions on hire-purchase and of additional Purchase Tax on a wide range of radio and domestic apparatus, not only caused a severe reduction in turnover in these departments but also inevitably an accumulation of stock which, with commercial prudence, we have had to depreciate at the end of the year.

It is fully understood that the fight against inflation necessitated the tightening-up of credit conditions for certain consumer articles—especially for luxury goods. It must, however, be realised that many domestic electrical appliances, in fact, represent labour-saving devices which are indispensable to national efficiency. Adequate turnover for such appliances in the home market is the basis for export business. It is clear that the normal development of this market can only be kept back for a limited period. There have lately been signs of some improvement.

Your directors have recommended a final dividend of 9½ per cent on the Ordinary stock, making 14 per cent in all—the same as last year.

The report and accounts were adopted.

LONDON SHOP PROPERTY TRUST

FURTHER PROGRESS

The twenty-fifth annual general meeting of London Shop Property Trust, Limited, was held on September 27th in London, Mr C. W Black, JP MP, FRICS, FAI, chairman, presiding.

The following are extracts from his circulated statement for the year ended April 30, 1956:

We have had another good year, and further progress has been made in restoring the fortunes of the company.

Income derivable from rents during the year under review shows no great change from the previous year. Income from rentals is naturally a reasonably constant figure varying in general only when property developments are completed and become revenue producing. During the year under review your company has had in hand the development of several important sites, and income from these should show a very considerable increase in the next year or two, as building schemes now in course of construction come to completion During the past year these have contributed little or nothing to our rental income, but when completed will make a very substantial addition thereto.

The block of flats and garages in Cape Town was satisfactorily completed towards the end of 1955, and was fully let at satisfactory rents within a few weeks of completion. This property is now fully income producing, and will undoubtedly prove a valuable asset to this company and the other companies interested in its ownership.

The report and accounts were adopted.

BRAITHWAITE & COMPANY, ENGINEERS, LIMITED

ANNUAL GENERAL MEETING

The Thirty-fifth Annual General Meeting of Shareholders of Braithwaite & Company, Engineers, Limited, was held on September 27th at Dorland House, 14-16, Regent Street, London, S.W.1.

Mr J. Harvey Humphryes, AssocICE, MIStructE, the Chairman, presided.

The nett profit of the Group, including gross dividend from Braithwaite & Company (India) Limited and before charging taxation, is £165,157 against £149,242 for the previous year. After charging taxation for the year the consolidated nett profit for the year is £74,057 compared with £60,567 for the previous year.

Resolutions were unanimously passed for the adoption of the Report and Accounts, the confirmation of preference dividend already paid in respect of the year ended March 31, 1956, and the payment of a final dividend of 4 per cent, less tax, making a total of 8 per cent, less tax, for the year on the Ordinary Shares.

The retiring Director, Mr J. Bickley, was re-elected.

The Directors were authorised to agree the remuneration of the auditors, Messrs Whitehill, Marsh, Jackson & Company, and the proceedings terminated with votes of thanks to the Chairman, staff and workpeople.

GROUPEMENT DE L'INDUSTRIE SIDÉRURGIQUE (GIS)

Paris, France

(Iron and Steel)

RECORD PRODUCTION

The annual general meeting of GIS was held in Paris on June 30th, under the chairmanship of Monsieur J. Ferry, and the following are details of the report presented by him on behalf of the Board.

REVIEW

1955 was a year of record production figures for the iron and steel industries of different countries. French industry shared in this development with the unprecedented output of 12.6 million metric tons, an increase of 18.5 per cent over the previous year. Turnover rose by as much as 25 per cent during the same period.

Although the improvement thus shown was encouraging, the French iron and steel industry did not feel the full benefit of the progress made since it was obliged—within the framework of Government price policy—to maintain its home market prices at a level below that ruling in the other member countries of the European Coal and Steel Community.

INVESTMENT

Investment activity in the industry continued during the year. Capital expenditure reached Frs.49,500 million and brought the total of funds invested since 1945 to Frs.430,000m. Plans for 1956-1960 envisage further expenditure of Frs.341,200m.

Investment on such a scale could not, however, be carried out without Government help. This assistance took the shape of loans negotiated with individual enterprises. The total of such loans granted up to the end of December, 1955, amounted to Frs.170.000m., or 39.5 per cent of capital expenditure as a whole—a percentage which should decrease noticeably during the next few years. At the same time, further steps in the field of capital increase bore fruit, and the contribution from savings funds—in the form of a debenture loan—grew considerably. The Groupement de l'Industrie Sidérurgique on its part issued a loan for Fr.21,500m. in October, 1955, and it intends to carry out a similar operation before the end of the current year.

As a result, after ten years of unremitting efforts, the French iron and steel industry last year fully reached its first objective, raising its output from 7m. metric tons to 13.5m. metric tons. This does not mean, however, that the industry can now afford to sit back and take no further steps to modernise its plant and remain competitive. In fact, further plans extending to 1961 envisage another rise in production to 17m. metric tons, i.e., an increase of 25 per cent on present figures.

CAPITAL

The organisation's capital was raised to Frs.4,343m. during the year, and a further increase on January 7, 1956, brought it to Frs.5,500m.

The report, the accounts and the proposals put forward by the Board were adopted.

COAST LINES LIMITED

The forty-third Annual General Meeting of Coast Lines Limited was held in London on September 25th. The Chairman, Captain A. R. S. Nutting, OBE, MC, in the course of his speech, said:

The consolidated profit and loss account shows that the trading profit for the year 1955 amounted to £1,539,536, which is £167,169 more than 1954 but below the trading profits of 1952 and 1953 mainly because of the steadily increasing charge for depreciation. The 1955 taxation charge against profits shows a reduction of £58,509, due almost entirely to a reduction in the provision for future surveys and deferred repairs arising from the delivery of new ships and the scrapping of old units.

The net profit of the Company and Subsidiaries amounts to £1,010,930 against £747,278 in the previous year, while after deducting amounts retained by subsidiaries Coast Lines Limited is left with a net profit for the year of £601,240.

£200,000 has been transferred to Fleet Replacement Reserve, £150,000 written off premiums on acquisition of shares in subsidiaries, and, after payment of dividends on the Preference Stock and a total of 10 per cent on the Ordinary Stock, there remains a surplus of £24,546 to be carried forward, increasing the balance to £603,001.

The total number of ships owned by the Group at the end of 1955 (excluding trawlers) was 105, of which 14 were passenger ships, 15 cattle carriers and 76 cargo ships. Five cargo ships have been delivered by the builders during the year, and two ships were purchased by one of the tramping subsidiaries.

The Report and Accounts were adopted.

APPOINTMENT

UNIVERSITY OF GLASGOW

ASSISTANTSHIP IN POLITICAL SCIENCE

Applications are invited for an Assistantship in Political Science. Salary scale: £550-£650. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (3 copies) should be lodged, not later than December 31, 1956, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

BRIGHTON TECHNICAL COLLEGE

Principal: G. E. WATTS, M.A., Ph.D (Cantab.), B.Sc.(Lond.), F.R.I.C.

Required:—

(a) HEAD OF COMMERCE AND MANAGEMENT STUDIES DEPARTMENT (Grade III).

Applicants should be graduates with appropriate experience in a technical college or similar establishment and preferably also in industry. Duties will be mainly connected with the further development of commercial courses at professional level and of industrial studies as applied to technological courses. Salary £1,600 x £50—£1,750.

(b) ASSISTANT (GRADE II) to teach *Economics, Economic History and related subjects* to Final Professional level.

Salary £650 x £25—£1,025 (men) plus graduate and training allowances if appropriate and with increments for approved industrial experience.

Further particulars and application form from the undersigned. Applications to be returned to the Principal of the College by October 18th.

W. G. STONE,
Director of Education.

24 Old Steine,
Brighton.

THE NATIONAL FEDERATION OF BUILDING TRADES EMPLOYERS

invites applications from consultants with experience in making surveys and advising on costing, work study, control methods, planning and programming, and capable of taking charge of, and developing, the existing Advisory Service for the Building Industry. Experience in supervising and directing the work of specialist consultants is essential. Work involves an appreciable amount of travel in the U.K. Salary according to age and experience. Contributory Pension Scheme.—Write, giving details of age, education, experience and present salary, to the Director of the Federation, at 82 New Cavendish Street, London, W.1.

LONDON TRANSPORT requires Actuarial Student—permanent employment concerned with staff statistics, pension schemes, and other actuarial matters. Applicants must have passed examinations of at least two parts of examinations of Institute of Actuaries, and should preferably have completed National Service. Successful candidate will have facilities (including refund of fees and expenses) for completing actuarial studies.

Commencing salary £675; additional payment for certain extra qualifications; free travel; contributory superannuation scheme.

Apply within 14 days to Recruitment and Training Officer (FEV 601), London Transport, 55 Broadway, SW1.

STATISTICAL DEPARTMENT (including Hollerith) Manager required by S.W. London Manufacturers. Salary £800-£1,250 depending on qualifications. Write, stating age, salary, qualifications and Management experience—Box 524.

A VACANCY OCCURS in the Head Office of The National Mutual Life Assurance Society for an actuarial clerk, to be deputy to the Head of Department. The position will suit a student who has passed at least Part II and Part IIIA of the Institute, or the equivalent faculty examinations. The successful applicant will have every opportunity of obtaining a wide experience of life office work. Study facilities available. Assistance given in his later examinations. A good salary will be paid to the right applicant.—Apply to the Actuary and Manager, 39 King Street, Cheapside, London, E.C.2.

MARKETING MANAGER, age 30-40, required for interesting permanent post in Southern Rhodesia with young and vigorous company. Candidates, who should have sound educational qualifications and dynamic personality, must be thoroughly experienced in sales planning and promotion of consumer goods and possess proved successful sales record in highly competitive market. Previous African or other overseas marketing experience advantageous. Agricultural background preferred. Outstanding opportunity for right man.—Applications (Quoting No. 1257), stating salary required, to Personnel Manager, Fisons Pest Control Limited, Bourn, Cambridge.

FORAS BAINISTIOCHTA NA h-EIREANN —IRISH MANAGEMENT INSTITUTE

Applications are invited for the position of

DIRECTOR OF STUDIES

to head the proposed Management Development Unit of the above Institute. The salary payable will be substantial and commensurate with qualifications and experience.

The Management Development Unit as the "educational wing" of the Institute will be responsible for running courses for management at all levels.

The post is one of the greatest importance and the man appointed to it will be in a position to play a major part in the development of Irish industry.

Applicants must have good managerial or administrative experience, and high qualifications in their own chosen field. Preference will be given to candidates holding University degrees and having a knowledge of Irish industry. Age limits 30-50; preferably 35-45.

Applications, which will be treated in confidence, should reach the undersigned not later than Monday, October 22, 1956.

P. QUIGLEY, Secretary,
Irish Management Institute.
79 Merrion Square,
Dublin.

STATISTICAL OFFICERS are to be appointed immediately by a progressive Midlands Company which is continuously expanding. Two new positions are to be filled and applications are invited from young candidates with a recognised qualification (e.g. Final A.I.S.) or with experience in industrial and commercial statistics.

The posts involve the application of up-to-date techniques to practical data under the direction of the Chief Statistical Officer, and are open to men and women under 28 years of age. Good commencing salaries will be paid, and assistance will be given in securing suitable accommodation. The company also operates a generous and comprehensive Special Security Scheme.

Applications, giving details of career to date, should be addressed to Box 526. All replies will be acknowledged.

SPERRY GYROSCOPE COMPANY LIMITED will be opening a new factory in the Bracknell new town, Berkshire, in the Spring of 1957. It is proposed to appoint a Chief Accountant to take charge of accounting functions in this new unit. Applications are invited from Chartered Accountants to fill this senior position. Applicants should be in the age group 30-37 years, and have at least five years' experience in a responsible commercial position. Experience of mechanical accounting is also very desirable. The person appointed will be expected to train his own staff and be capable of acting on his own responsibility. The salary range will be £1,500 to £1,750 per annum, according to experience. Housing facilities may be available. The successful applicant will be expected to spend approximately three months in the Head Office of the Group at Brentford, commencing at the beginning of 1957.—Applications, which will be treated in strict confidence, should be addressed to the Controller, Sperry Gyroscope Company Limited, Great West Road, Brentford, Middlesex.

MARKET ECONOMIST—A leading firm of Seed-crushers, Edible Oil Refiners and Feeding Stuffs Manufacturers requires the services of a young man to study and advise on market trends of raw materials. He will be required to obtain and summarise relevant information from official and non official sources, both in the U.K. and Overseas. He will also have to collect, analyse and present statistics. Applications are invited from men aged 25-35 who are able and willing to spend at least three months of the year travelling abroad. Previous experience in the Oilseed, Oil, Oilcake, and Grain Markets or of statistical work relating to these markets is desirable. An honours degree in economics is an advantage, but not essential. The starting salary will be £1,250-£1,500 per annum, according to age, qualifications and experience. The post is pensionable.—Please apply in writing to The Secretary, J. Bibby and Sons, Ltd., King Edward Street, Liverpool, 3.

ACTUARIAL STUDENTS—passed at least some part of Part I of Faculty or Institute Examinations—required by Australian Mutual Provident Society (the largest British Mutual Life Office). After a short initial probationary period in London office the Society will pay all moving costs to Australia. Salary at age 21 £625 Please state age. 22 £675 rising, age 23 £725 sterling. Substantial bonuses and increases on passing examinations. Excellent pension and life assurance benefits.—Apply to Manager for United Kingdom, 73/76 King William Street, London, EC4.

MALE ECONOMIST'S GRADUATE (age/early 22-28) required by trade organisation in Manchester, to assist in the evaluation and application of modern management techniques. A sound knowledge of statistics advantageous and an interest in management training essential.—Box 526.

THE G.K.N. GROUP OF COMPANIES

An experienced mechanical engineer is required at the steel and engineering works of Guest, Keen, Williams, Private Ltd., in Calcutta.

Candidates should be aged between 30 and 40 and must be graduate engineers or have served a full engineering apprenticeship. This is a permanent post carrying great responsibility. The selected candidate will in the first instance be required to assist in carrying out a large development scheme. The post carries excellent prospects and salary and conditions offered are in keeping with the exceptionally high standard required.

Applications, which will be treated in strict confidence, should give full details of age, qualifications and career to date, and should be addressed to The Group Personnel Officer, 66 Cannon Street, E.C.4.

LARGE BUILDING AND CIVIL ENGINEERING CONTRACTORS require well educated and experienced Technical Office and Depot Manager (age 30-45). Must be familiar with the administrative and managerial problems of a large organisation, able to organise and control routine work and provide analysed and co-ordinated reports for the guidance of top management. The duties in effect will be to provide the regular control link between the sites and Head Office and the person appointed must be thoroughly versed and interested in all aspects of contract planning, costing and general management. This is a unique and expanding opportunity with a company of the highest national repute. Only applicants giving the fullest personal details and career history, with names of previous employers, etc., will be considered.—Box 518.

CANADA

Competent MANAGING DIRECTOR of a well-known Public Company employing 2,500, age 40 plus, wishes to move personal residence to Canada. Companies of standing or others who may be interested in real top executive ability, please communicate in confidence.—Box 525.

MANAGEMENT EXECUTIVE (40), F.C.W.A., A.C.A., A.C.I.S.—five years' specialist experience on Management Accounting in light electrical and mechanical engineering industry—seeks permanent progressive position offering wide scope. Present salary £2,250 p.a.—Box 520.

WAKEFIELD COLLEGE OF INCOME TAXATION LIMITED offers *specialised* postal tuition for those who wish to QUALIFY in Income Taxation. Course for the Associateship Examination of the Institute of Taxation. Also can be taken as a non-examination course. Prospectus free from The Principal, Dept. E, 29 Barstow Square, Wakefield.

TRANSLATIONS

Economics, Commerce and Trade. For translations, consult the Margaret Allan Translation Service, 31 Little Horton Lane, Bradford. 'Phone: 22209.

B.Sc.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE provides postal tuition for the above Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in economics or industry, government or municipal posts. The College, established 1887, is an Educational Trust. Highly qualified tutors. Low fees. Prospectus of U.C.C. Courses for London Degrees and Diplomas, G.C.E., free from the Registrar, 60 Burlington House, Cambridge.

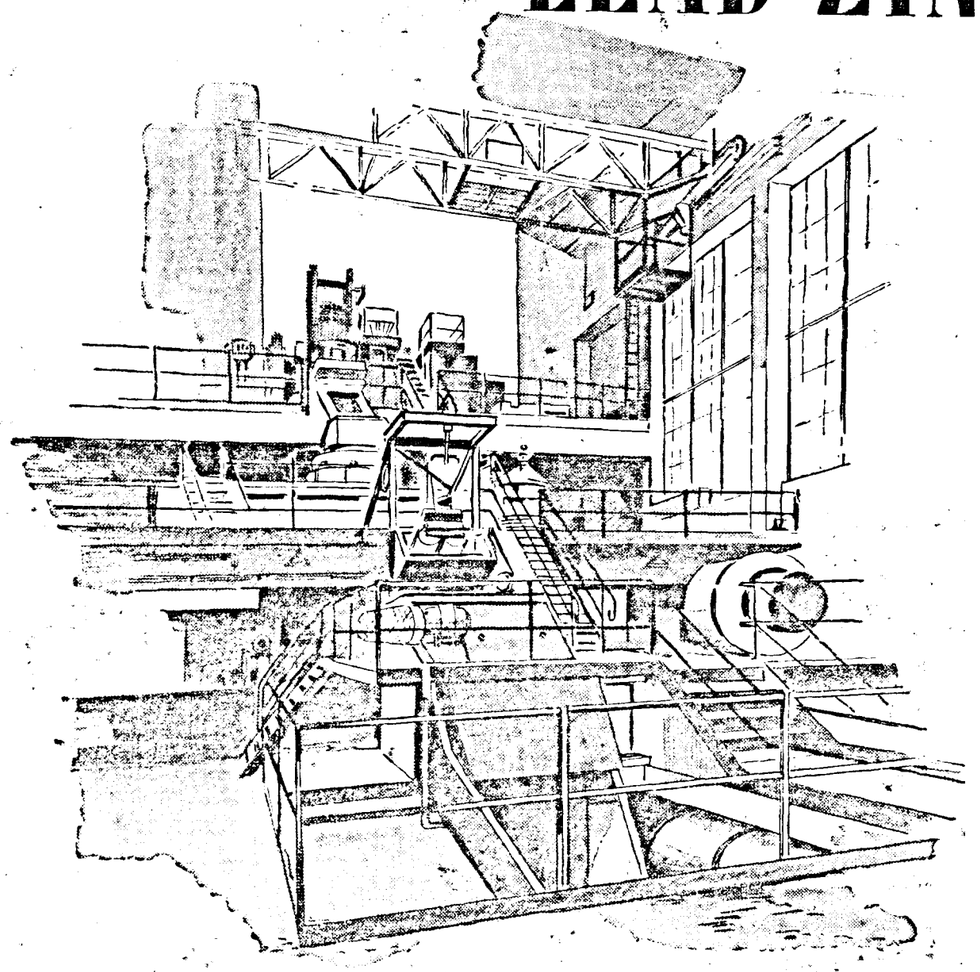
INVESTING FOR THE FUTURE IN... LEAD-ZINC



Part of the surface crushing plant at Broken Hill, New South Wales.

THIS PLANT crushes ore at the New Broken Hill mine, which has been brought to production since the end of World War II. On its output for 1955, when over half a million tons of ore were mined and milled, New Broken Hill ranks as one of the leading lead-zinc mines in the world. As a member of the C.Z.C. group it makes its proud contribution towards opening up the natural resources of Australia for use throughout the free world.

V.S.O.P

What do these famous letters mean?

NO ONE seems quite to remember. The Hennessy family in Cognac say that when they first used the symbol many decades ago, letters such as V.S.O.P. and X.O., as well as the famous * markings, were chalked on the hogsheads of brandy by the blender as his personal guide to the brandy's maturity. V.S.O.P. probably meant 'Very Special Old Pale'

Nowadays, however, as an indication of age and quality, the letters V.S.O.P on liqueur brandies have become as equivocal in the brandy trade as the description 'Final Night Extra' on an evening newspaper.

But one thing is certain. *The label 'V.S.O.P.' means nothing unless coupled with the name of a shipper whose stocks are good enough, large enough and old enough to ensure continuity of quality and age.*

Note for the Curious. Why 'Very Special Old PALE'? Because once upon a time there was a fashion for BROWN BRANDY, which was heavily coloured by the addition of burnt sugar.

An Invitation to a Memorable Experience

When you are on holiday in France, visit the Hennessy premises in Cognac. There you will learn with your own eyes and palate what V.S.O.P. was originally meant to stand for.

You will see the vast stocks of matured and maturing brandies. You will be able to taste their quality—choosing at random from this hogshead and that: and you will learn why Hennessy loses none of its brilliance as it ages, but rather gains in character as it mellows in the wood.

You will learn from such a visit why no one in the world can offer you a better choice of genuinely aged Liqueur Cognacs than—

HENNESSY

V.S.O.P – X.O – EXTRA

P.S.—Hennessy ★★★ is very often served as a liqueur, and why not? It is drawn from the very same stocks as its elder brothers and matured for many years in wood.

Incidentally, it was Maurice Hennessy who, in the year 1865, chose the star as a symbol, inspired by the device embodied in the window watch in the office. You can see it for yourself when you visit Cognac.

CALLING ALL TYCOONS AND OTHER PROPS OF INDUSTRY

If your next conference is at Torquay (20 miles), or if you are doing business at Exeter (13 miles) or Plymouth (29 miles), insure your sanity by staying at the Manor House, Moretonhampstead. At the worst, escape there for a recuperative day. This hotel has all the comfort and privacy of a large Edwardian country house. It stands at 700 feet in 200 acres of parkland. An 18-hole golf course in marvellous scenery, two hard tennis courts, two trout streams, a squash court and a covered badminton court stand by medicinally. More than half the bedrooms have their own bathrooms, and the most fatigued directors emerge from the dining-room twice the men.

FLY BEA TO TANGIER

FOR MEDITERRANEAN SUN

Special offer!

10 days 'all-in' at a first-rate Tangier hotel, including flying BEA Viscount via Gibraltar there and back, from 60 GNS

inclusive, from London

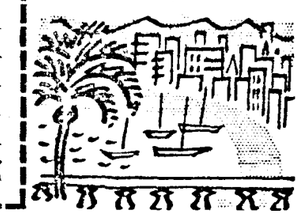
Tangier, with its warm Mediterranean climate, is wonderful from October to March. Blue skies, golden beaches, first-rate hotels. Plenty to do and see. And travel agents here are co-operating with BEA to offer this superb value-for-money holiday which includes a night in famous Gibraltar.

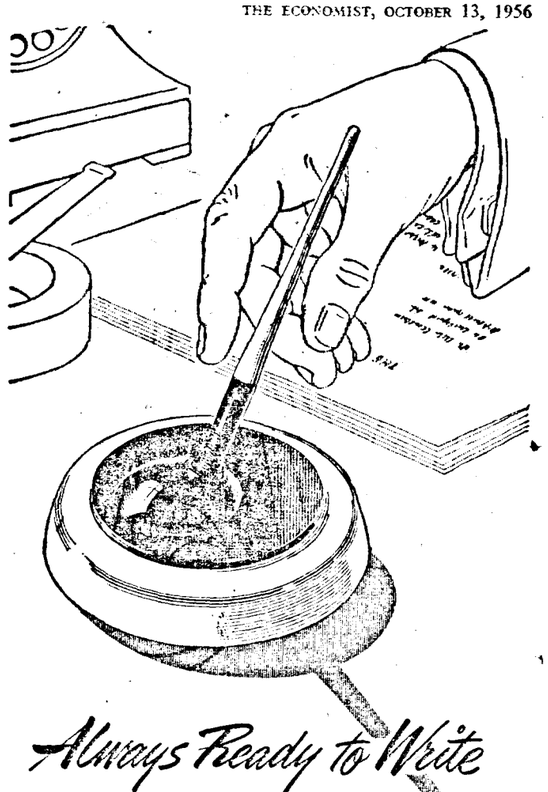
Post this coupon for full details to Tangier Dept. (B), BEA, Dorland House, 14/20 Lower Regent Street, London, S.W.1.

NAME .....

ADDRESS .....

Please send me details of these 'inclusive' holidays in Tangier.





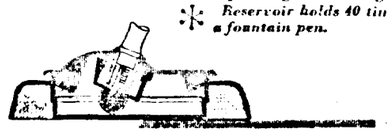
Always Ready to Write

The popular Esterbrook writing set needs no attention, no special care, and your writing glides on instantly and smoothly the moment point touches paper.
The ink fountain is in the base instead of the pen-holder. It holds 40 times more ink than the ordinary fountain pen and the pen fills itself every time you return it to the socket. It is always ready to write a full page or more whenever you pick it up.
There are 30 numbered points to choose from to suit your type and style of handwriting.
Just the gift for business friends with your name and trade mark engraved.

In Black, Grey and Ivory at 34/3 and 37/10. Also the two pen model in Black (Model 487) at 68/5 and 75/8 from all leading stationers.

CAPILLARY ELEVATOR

- *Pen seals base (which is spill proof) and thus prevents evaporation.*
- *Combined ink-feed and writing point (30 to choose from).*
- *Exclusive filling device also cushions point against damage.*
- *Reservoir holds 40 times more ink than a fountain pen.*



Esterbrook 447

WRITING SET

Add up the unproductive time spent taking dictation . . .

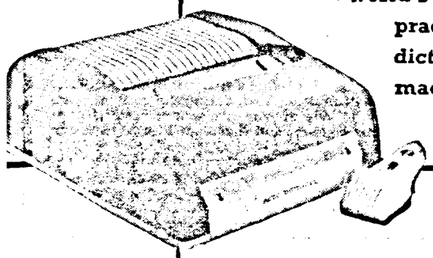
that could be profitably spent typing it . . .

and you'll wonder why you haven't stopped this waste before with the help of the world's most practical dictating machine -the ACEC-Dictorel

ACEC-Dictorel savings are real savings. They can repay the initial installation cost in as little as a year. For this machine is built to be most useful to you, most efficient for your typing staff. When it is taking the dictation (on flexible, foldable, mailable, fileable, electronically-recorded, magnetic-coated sheets), all the work can be done by a minimum pool —freeing skilled staff for other work. Ask your secretary to get the details of this thoroughly practical machine—at its practical price of 99 guineas *complete and ready to use.* Also Multidict and Telerel—telephone systems linking executive desks with ACEC-Dictorels in the typing pool.

ACEC-DICTOREL

world's most practical dictating machine



ACEC-Dictorel is distributed and serviced throughout the United Kingdom by

Do you still wind your watch?

Winding a watch is a nuisance. Outmoded. Unnecessary!

But, you never have to wind a Mido. It starts winding itself the instant you put it on, keeps winding as you wear it. Yet for all its slim elegance, a Mido wants no pampering. Swim with your Mido. Play tennis with it. 100% waterproof. Shock-protected. Anti-magnetic. Unbreakable mainspring. The worry-free watch!

Mido makes only self-winding watches —the world's largest gift selection. And, isn't it time you replaced your own watch with a modern, self-winding timepiece?

Mido gives you the widest choice of self-winding watches..... including the tiniest automatic lady's watch. See these fabulous miniatures at better jewellers everywhere. For our new catalogue E2, write

BRITAIN DESPERATELY NEEDS ENGINEERS . . . TECHNICIANS . . . TECHNOLOGISTS

HERE IS THE SOLUTION

THE B.I.E.T. Industrial Division cordially invites Managements to write for details of Special Group Training Schemes which can be arranged to meet individual requirements. Many organisations are already availing themselves of this service.
B.I.E.T. has trained some 250,000 men in their own homes. Distinguished tributes have been paid to the personal encouragement and friendly help of B.I.E.T. tutors. Of all who sat for major engineering exams., 95% have passed and are "qualified" as B.Sc.(Eng.), A.M.I.C.E., A.M.I. Mech.E., etc.

WORLD UNIVERSITY OF POSTAL EDUCATION

This huge Institute is very like a university—in size, in scope, and in the standing of its tutors. But it teaches Students at home so that they can continue in their present jobs whilst being trained for more qualified positions.
Leading Authorities consider B.I.E.T. Courses the finest of their kind. The lessons are easy to grasp and absolutely up-to-date.

OVER 300 COURSES

Subjects range from Elementary Mathematics to Automation ; Examination training from G.C.E. to Honours Degree Standard. Courses can be "tailored" to individual needs and cover Mechanical, Electrical, Civil, Radio & T.V, Aero, Auto & Production Engineering, Draughtsmanship, Management, Electronics, Plastics, Building, National Certificate subjects, etc.

B.I.E.T. helps to solve this National Problem—read what Lord Nuffield writes :—

28th MARCH, 1956

Once again, I wish to pay tribute to the great work the British Institute of Engineering Technology has done since its twenty-first anniversary in 1951.

It has expanded considerably during this time, and it now offers a very wide variety of technical courses, and, each year, more and more students are enrolled from both home and overseas.

I feel the time has now come when this great Industrial Nation has got to increase her productivity by every means known to the ingenuity of man. To make this possible, it is of the utmost importance that there is an ever growing supply of young men, well versed in the necessary technical knowledge in all its vast and varied fields.

The Institute is playing a vital part in achieving this end, and it is my conviction that, during the coming years, it will continue to help the advancement of production so necessary to our country, and those not blessed with our resources.

Nuffield

Whether you are interested in a group training scheme, special training for selected individuals or personal instruction, please write today outlining your problem to :—

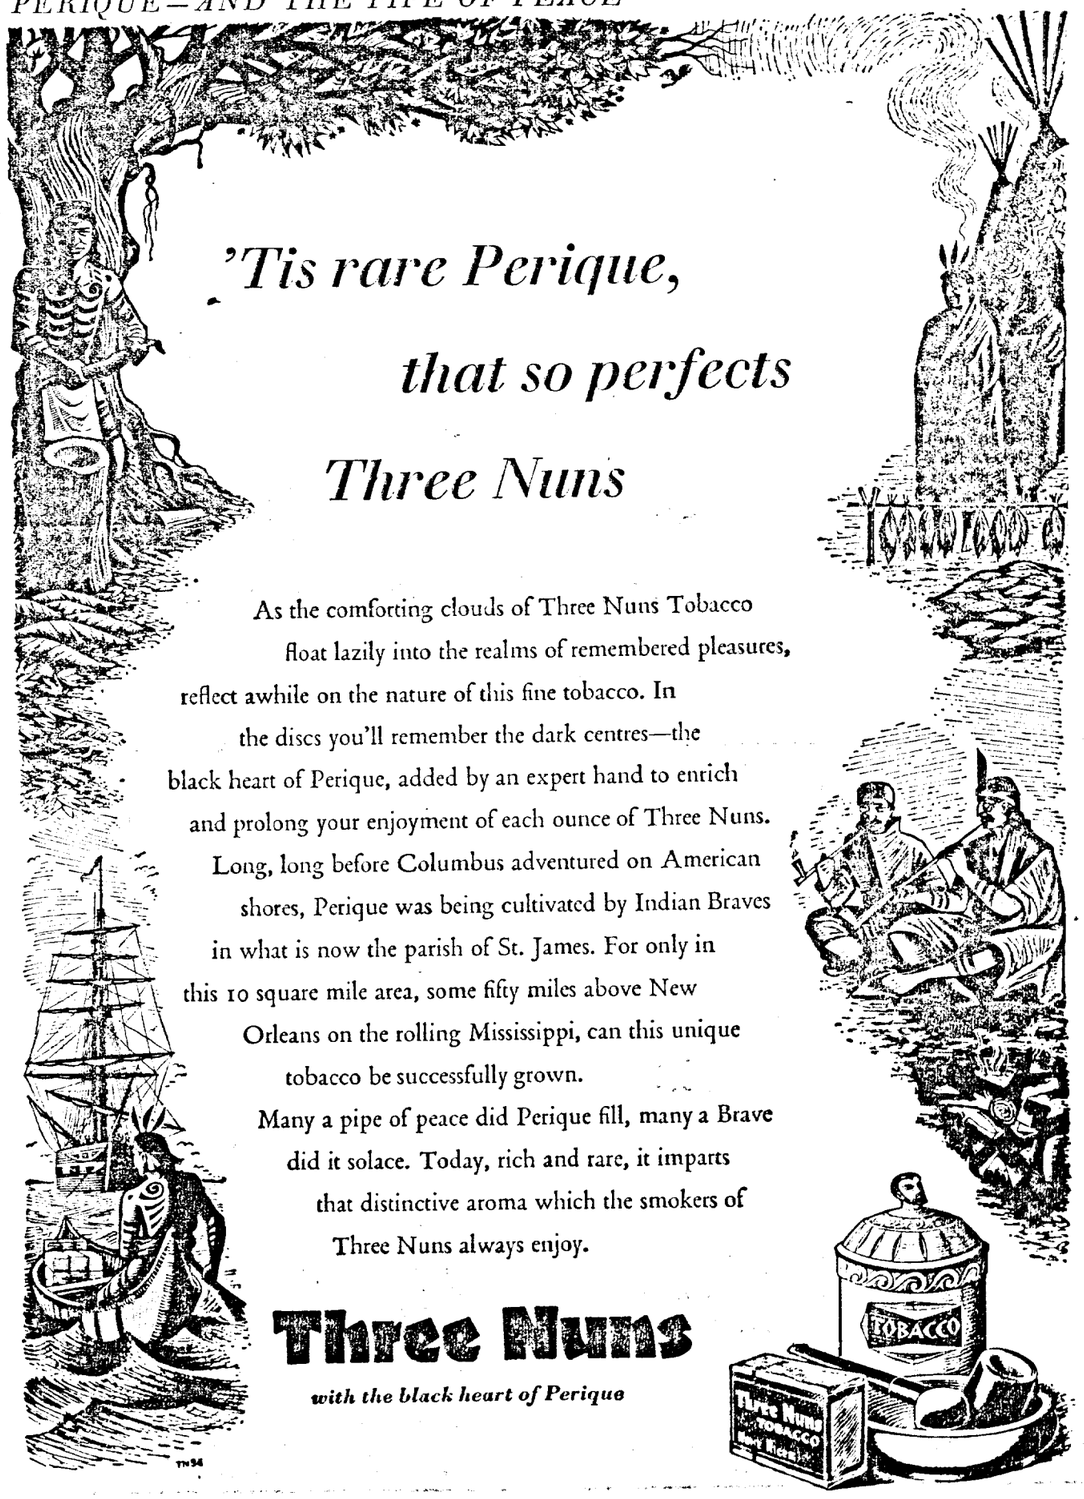
PERIQUE—AND THE PIPE OF PEACE



'Tis rare Perique,

that so perfects

Three Nuns

As the comforting clouds of Three Nuns Tobacco float lazily into the realms of remembered pleasures, reflect awhile on the nature of this fine tobacco. In the discs you'll remember the dark centres—the black heart of Perique, added by an expert hand to enrich and prolong your enjoyment of each ounce of Three Nuns. Long, long before Columbus adventured on American shores, Perique was being cultivated by Indian Braves in what is now the parish of St. James. For only in this 10 square mile area, some fifty miles above New Orleans on the rolling Mississippi, can this unique tobacco be successfully grown. Many a pipe of peace did Perique fill, many a Brave did it solace. Today, rich and rare, it imparts that distinctive aroma which the smokers of Three Nuns always enjoy.

Three Nuns

with the black heart of Perique

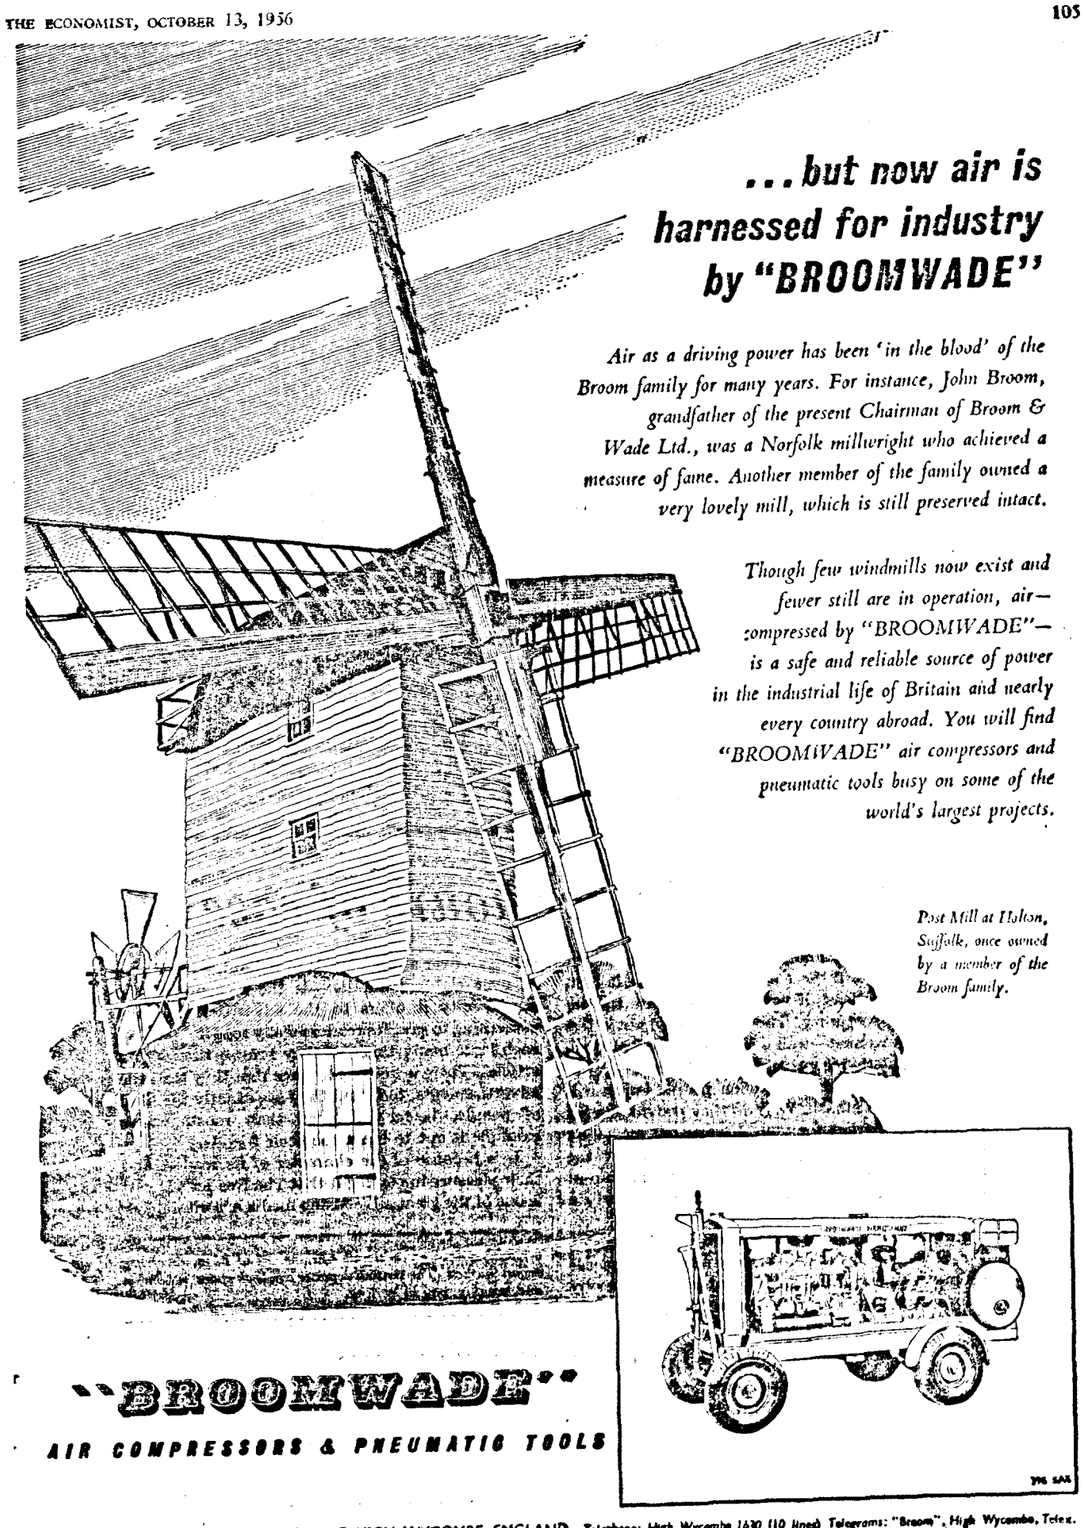
. . . but now air is harnessed for industry by "BROOMWADE"

Air as a driving power has been 'in the blood' of the Broom family for many years. For instance, John Broom, grandfather of the present Chairman of Broom & Wade Ltd., was a Norfolk millwright who achieved a measure of fame. Another member of the family owned a very lovely mill, which is still preserved intact.

Though few windmills now exist and fewer still are in operation, air—compressed by "BROOMWADE"—is a safe and reliable source of power in the industrial life of Britain and nearly every country abroad. You will find "BROOMWADE" air compressors and pneumatic tools busy on some of the world's largest projects.



Post Mill at Holton, Suffolk, once owned by a member of the Broom family.

Woman in her hours of ease...

Uncertain, coy, and hard to please, to continue the misquotation. But these hours (when she is, in fact, quite easy to please if you know how) are the advertiser's opportunity. The Reader's Digest offers advertisers women—well over two million of them—at ease, alert, receptive, and intelligent.

Altogether, some five million people enjoy this magazine each month. Why do they provide such a productive market for your advertising message? One reason is that they are comfortably above the average in income—for instance, over a million of our readers own their own houses, and nearly a million have motor-cars.

But more important still is our readers' *character*. The Reader's Digest deliberately sets out to please people with inquiring minds, interested in many things, receptive to new ideas. Its phenomenal success—over a million sale in Britain, a *world* sale of over eighteen million—is the measure of the opportunity it offers to the advertiser who has something to say. Its readers really *read* it—pick up each issue many times as they browse through its articles. There is ample evidence that they read the advertisements, too. And they are exactly the kind of people, better informed than most, whose example is apt to influence their friends.

It is because of the character of its readers and their pleasure in *reading* it that The Reader's Digest is one of the great advertising media of Britain.

OVERSEAS. International editions, 27 of them, cover key export markets. The British exporter can book space in London and, usually, pay in sterling.

LEAD flashings & weatherings

Flashings are strips of Lead Sheet used to exclude rain from the junction between a roof and another part of the structure—for example, where a roof is penetrated by a chimney stack or pipe or where it abuts a wall, and around roof lights and similar projections.

Weatherings are coverings of Lead Sheet to parts of a structure that need protection to prevent the penetration of rain—for example, coverings to cornices, door heads, canopies and similar surfaces.

the NEW 'Triple-cut' DUNLOP FORT motoring's greatest tyre value...

THE DUNLOP FORT has long been established as the best value in tyre safety, tyre reliability, tyre life. The new Dunlop Fort is designed and built to the same high standard of quality but has the added advantage of the 'Triple-cut' tread, a feature which makes for even greater safety, increased road holding, more silence on the road, longer and more even wear. For modern motoring conditions there is no better tyre and it is well worth the little extra it costs.

The Five Year Itch

GOVERNMENTS of this country are subject to a malady which might be called, with apologies to Mrs Miller, the five year itch. When they have been in office for about that time they are attacked by their supporters for being too like their opponents, and by their opponents for being too like their traditional selves. This itch is now upon the Tory party and Government. At Llandudno, this week, little Conservatives have been bracing themselves to tell big Conservatives, although in the politest possible Conservative way, that they look to them like a lot of damned socialists anyway. The complaints have not reached the un-Conservative stage of open revolt. In Thursday morning's debate on Suez the conference's only display of anger was against one brave Arabophil, and on Thursday afternoon a revived and impressive Mr Butler actually got a much better reception than last year. But the clear undercurrent of muttering at this year's conference is that, unless the Government can show itself more differentially conservative, Labour is going to win the next election. The awkward thing about this charge, from the Conservative leaders' point of view, is that the second part of it may well be true.

If the belief spreads among a sufficient margin of insecurely attached voters—as it is spreading at the moment—that there is little to choose between a Conservative and a Labour government, then Labour is almost certain to get back into power when the country next goes to the polls. This is partly because the voter who is asked to declare himself against one of two parties which look pretty much the same to him will almost invariably declare himself against the party of whose government he has had most recent experience; that is the natural law of the swing of the pendulum. But it is also partly because Britain is still, at this stage of its history, a basically Labour-inclined country. A majority of the electorate still considers itself to be working class, and this majority is not split by communist blandishments, on the one hand, or by Catholic religious loyalties on the other. The only other area of Europe of which this can be said is Scandinavia, and there socialist governments have been in the normal order of things for a quarter of a century. In order to overcome this disadvantage, a Tory government in Britain needs to set up something which it might call a Conservative dynamic, which its opponents will call a Conservative myth, but which an independent newspaper can perhaps best call a vote-winning Conservative image.

The one thing that is certain is that this cannot be a really "conservative" image in the sense that colonels at Llandudno may understand the term. To that extent the so-called middle-of-the-roaders in the present Government are undoubtedly right. You cannot create the image the Conservatives need by dreaming dreams of conserving imperial greatness. You cannot create it in foreign policy by saying with the prophet Ezekiel: "I am against thee, Pharaoh king of Egypt, the great dragon that lieth in the midst of his rivers," and sending a gunboat—because everybody knows that you jolly well cannot. And

you cannot create the image at home merely by new measures to annoy trade unionists and placate the so-called middle-class vote—because the margin of floating voters you need to attract are probably trade unionists themselves and certainly still regard themselves as working class (even though they may not do so much longer if living standards continue to improve). So it is in other fields that the Conservatives' dynamic or vote-winning image needs to be sought. Broadly speaking, there are three such fields ; and the Conservative leaders, to give them their due, now broadly recognise them. What they do not always recognise are the peculiar difficulties attached to each.

The first possible image, and the one from which the Conservatives gained great advantage at the last election, is that of the party of expansion : the party which says that it is going to double the standard of living in a generation if it is maintained in office. This is still the Conservatives' wisest, and most appealing, card to play ; certainly the party must never again fall away from this path into the narrow avenues of timid protectionism—and there are signs of its recognition of this, both in its recent monopolies legislation and in its readiness to go forward to freer trade in Europe.

The only trouble about this image as the party of expansion is that it has recently begun to clash with the Conservatives' second desirable image, which is that of the party which can do most to contain inflation. A year ago it was possible to debate the question : which would the people prefer, an economy in which real incomes continue to increase by 3 or 4 per cent a year, but in which prices also increase by 3 or 4 per cent a year, or one in which production increases more slowly but prices are held more steady ? But now the answer has been given, from abroad. If British prices continue to increase by 3 or 4 per cent a year, or by significantly more than the prices of our competitors overseas, it is going to be impossible to keep on pushing up Britain's real income, whatever happens to Britain's production. It is going to be impossible because, if British prices go on rising, then fears of a devaluation of sterling will rise too ; and once fears of a devaluation of sterling come in at the window, the foreigners' willingness to hold sterling as an international currency, a willingness on which depends a considerable part of our standard of life as a banking nation, goes incontinently out of the door. This is a relatively new, and distressingly technical, discovery ; the problem of reconciling it with Mr Butler's image of an economy kept constantly full out for expansion has been the main problem of policy before the Conservative leaders in the past year. To give them their due again, they may now be on the way towards a solution, by a process of trial and much error. A balance of payments surplus of £144 million in the first half of this year does something to suggest it.

But there remains the problem of reconciling this compromise policy, in turn, with the Conservatives' third desirable image : the image which portrays them as a more efficient and "business-like" party than Labour. And it is here, surely, that the Conservative leaders should re-examine the very obvious change in their propaganda policy since the Cabinet was reformed last Christmas. It is here that the Llandudno taunt that the Conservative leaders look exactly like the Socialists is not only a justified taunt, but a precise description of what Sir Anthony Eden and Mr Macmillan seem in fact to have been trying to do. Every time that Mr Macmillan says that he is not quite sure whether the Conservative policy of dear money really works and how undoctrinaire he might be about reimposing building or import or other controls, every time that Sir Anthony suggests that he is relying on trade union co-operation to secure wage restraint when he is really relying on the credit squeeze, one should weigh the effect not only on economic confidence among the bankers of Zurich, but also on party political attitudes among electors at home. It is to the electorate at home that the Chancellor's and the Prime Minister's speeches have been directed. Unfortunately, the main effect on them, one must suggest, has been to leave the impression (an impression that has certainly been spread overseas) that Conservative control over the economy is no firmer than Labour's was, that modern conservatism and modern socialism are much of a muchness.

★

Perhaps, of course, they are. Perhaps the image of the Conservatives as the "more efficient" party has always been a false one, and it is a service to destroy it. Certainly, too much emphasis should not be laid, even at Llandudno, on the drawbacks of the Prime Minister's and the Chancellor's recent speeches ; it is basic policies, not public relations attitudes, that really matter. But the impression remains that while policies have been moving slowly in the right direction (witness, again, that £144 million surplus), public relations have been moving too quickly in the wrong one. There is some evidence, in short, of three streams of Conservative economic thinking—and of speaking—today. There is the stream represented by the gunboat Tories of Llandudno who would like Conservative policies to be wholly different from Labour's welfare state policies in all respects, and to appear so ; that way lies Conservative electoral defeat through annihilation. There is what might be called the Eden-Macmillan stream of thought, which wants Conservative policies to be different from Labour policies, but to be made to look as emolliently like them as possible ; that way lies Conservative electoral defeat through lack of any distinctive image and through the normal swing of the pendulum. And there is what might be called (although Mr Butler might not welcome the definition) the Butlerite stream, which wants Conservative policies to be rather like Labour's welfare policies (though without the envy and distortions in them). but which wants the differences to be emphasised in all discussion ; that way, if at all, lies Conservative electoral victory. The test of the Llandudno conference is whether it has been capable of appreciating these subtle distinctions.

Moscow's Agonising Reappraisal

CURIOSITY about what really went on during the Russian and Jugoslav leaders' "holidays" in the Crimea must wait unsatisfied ; in public at least, both Marshal Tito and Mr Khrushchev are keeping their own counsel. There is no evidence that the two sides made up their minds to fall out openly ; nor, on the other hand, is there any suggestion that they reached any agreement. But even if they got no further than laying their respective cards flatly on the table, the meeting may prove to have been of great significance for communism throughout the world.

Presumably the Russians dropped some heavy hints that it might be better for all concerned if the Jugoslavs could concentrate more on cultivating their own garden. If so, the hints do not seem to have been taken. Communist party delegations bound for Belgrade to study Jugoslav methods and experience are almost treading on each other's heels. The day after Marshal Tito's return to Belgrade a Bulgarian mission agreed to renew collaboration with the Jugoslav communists ; no convenient diplomatic pretext was found to postpone the arrival of the important delegation of Italian communists that is now in Jugoslavia ; next Monday the doubting Hungarians, led by their party boss, Mr Gerö, will arrive ; later in the month the Rumanians, who ostensibly made their peace with Marshal Tito last June, will also turn up on his doorstep.

The ideas which began to burgeon in Eastern Europe after the Soviet party congress last February and have since been assiduously cultivated by the Jugoslavs are evidently surviving the douches of cold water thrown on them by the Russians. But it must not be assumed that they are having an equal success in each country. They have in fact cracked the monolithic uniformity of the block. Everywhere, it is true, there is evidence that the communist rank and file and the intellectuals are in ferment. But in the party juntas there are conflicting emotions ; after all, men accustomed to take their cue from Moscow and to the protection of the Red army or the political police are bound to view askance ideas that threaten to undermine these bulwarks of their existence. Thus, the naturally headstrong Poles, with their strong anti-Russian traditions, are boldly experimenting with startlingly fair (by communist standards) trials in Poznan, and debating hotly in Warsaw about the need to give their national parliament a bigger role. At the other end of the scale the cautious Czech bosses appear to be giving as little ground as they decently can to the new "liberalising" ideas. In between, the Hungarians, who since Stalin's death have experimented with "new courses" in a more eye-catching and erratic way than anyone else, are running true to form. They have sacked Mr Rakosi, but replaced him by another old Stalinist. In a macabre ceremony, they have just reinterred with pomp and ceremony Rajk and three others executed in 1949 for allegedly conspiring with President Tito ; but the leader of a Hungarian co-operative delegation just returned from Jugoslavia has been far from fulsome in his comments on the Jugoslav scene.

It is a confused, and confusing, picture. The ferment in the communist world really arises out of the argument about the extent to which communist regimes can follow their own bent, rather than the Soviet example, in their "socialist development." In theory this argument is carried on at a suitably elevated ideological level and to the greater glory of Marx and Lenin. In fact, however, it is not too cynical to say that the chief protagonists—the Russians, the Jugoslavs, and the satellite communist parties—are mainly guided by very much less lofty motives. For the satellite leaders it is primarily a question of how best to maintain their rule over restive peoples. For the Jugoslavs it is principally a question of ensuring the continuance of their painfully won independence. For the Russians, it is partly a question of maintaining their pre-eminence as the exponents of communist dogma, with all the more mundane advantages that accrue to this role (for if communism can no longer be spread so easily by force, the possibilities of fraud remain), but very largely a simple question of power politics ; the party bosses in the Kremlin are also the rulers of Russia, who look upon Eastern Europe as a *cordon sanitaire* that must stay under Soviet control to protect Russia's western frontiers.

★

All the parties to the argument have one thing in common—they want to preserve communism. All are agreed that any essays in "liberalisation" should stop short when they threaten the monolithic "dictatorship of the proletariat" ; there is all the difference in the world between criticism that is "Party-like" and "advantageous," and criticism that is "anti-Party," "undisciplined" and "liberalistic." All good men must still come to the aid of the Party, and there is no question of any "loyal opposition." Moreover, the Russians seem to agree that the tight stranglehold which Moscow kept on the satellites in Stalin's day was a mistake and they have removed some of the more irksome signs of their control.

Marshal Tito's desire to give the satellite leaders lessons on how to run a communist state successfully and safely (with courses on decentralisation, workers' councils, and so forth) might damage Russia's position as the fountain head of communist wisdom without weakening its position on the international stage. (Incidentally, it looks as if the Poles might now have something useful to teach the Jugoslavs about fair and open political trials.) Indeed, although the Russians seem unable or afraid to accept this, an exchange of

ideas on how to run a communist regime more efficiently and make it more palatable to the general public without risking a return to "bourgeois" politics could have the welcome effect, to the Russians, of strengthening the whole system. If, however, any of the satellites should grow so bold as to balk at their economic dependence on Moscow and to argue ungratefully that this is not outweighed by economic benefits received ; if, too, they should start to jib—as some of them are already reported to be doing—at the increasingly close integration of their economies, then the Russians might well have reason to take exception to Jugoslav activities.

★

But in the long run the crux of the matter—and this concerns the west as well as the communists—is the demand implicit in the Jugoslav case: namely, that communist countries should be free to act independently abroad as well as at home. The Russians preach the idea of "peaceful co-existence" between two rival blocks. The Jugoslavs, on the other hand, maintain that the whole idea of blocks is a mistake ; blocks are a threat both to world peace and to the independence of the smaller powers, while the right to be neutral is, in their view, a guarantee of both. Unlike the Russians, they do not brand western socialists as mere "opportunists." They claim the right to mix freely or hold aloof as they see fit. To the Jugoslavs all this is inseparable from their ideas on independence in domestic policies. Freedom to play their own neutral role is not enough—much though they no doubt enjoy the prestige this gives them. What they seem to be working for is Russian recognition of the right of all communist countries to take independent decisions in foreign policy, and they want this because nothing less will really permanently guarantee their own independence of Moscow.

Yet it is hard to imagine that even the most "liberal" among the Russians would willingly accept these Jugoslav ideas. They talk a great deal about "proletarian internationalism," but usually in a context which suggests that the phrase is simply a respectable-sounding euphemism for Soviet control over the international alignments of the regimes of Eastern Europe. But the fact is that independence in domestic policies cannot be divorced from independence in foreign policies, since a dose of one inevitably inspires a hunger for more of the other. At present the ultimate guarantee of Russian control over Warsaw, Prague and the rest is the presence or proximity of the Red Army. This is acceptable to the communist regimes because, although it adds to their unpopularity, it is also a vitally important safeguard against internal revolt.

But if these regimes really go on developing along more "liberal" lines ; if the people come genuinely to believe that the excesses of the political police are a thing of the past ; if living standards really improve, and if people no longer feel that their country's economy is being twisted to serve Soviet ends—then one of two things may happen. The regimes may collapse under pressure from the forces that their "liberalising" policies have set free ; it has yet to be proved that a "dictatorship of the proletariat" can survive without repressive apparatus. Or, alternatively, the communist leaders may come to feel that they are strong enough to stand on their own feet and that the Red Army has become more of a liability than an asset ; they may come to feel that their forcible alignment with Russia on the international stage remains a major stumbling-block to their acceptance by the people they govern.

All this is, necessarily, speculation. But it does suggest some of the reasons why the Russian leaders—or some of them—view the spread of Jugoslav ideas and influence in Eastern Europe with such misgivings and why they are anxious to go slow on "destalinisation" in the Soviet block. So far they have doubled the roles of Russian power politicians and missionaries of communism. But under the pressure of Jugoslav ideas, an incompatibility between the two roles is becoming more apparent. Although the attitude of the under-developed countries of Asia towards communism is most strongly influenced by the success or failure of the Chinese communists, there is no doubt that the visible Soviet hegemony over Eastern Europe and the consequent belief that other communist states must inevitably be subservient to Moscow (or to Peking) is a great hindrance to the further spread of communism. If this hindrance were removed the appeal of communism could be much greater.

There is, however, no evidence yet to suggest that the leaders of Russia are prepared to allow communism this advantage. The really agonising choice that the communist leaders in the Soviet block today are trying to decide concerns the future of the "destalinisation" policy. Is it safe to go on with it ? Or would it be more prudent to stand still ? Is it even possible at this stage to stand still ? If fear and reaction govern the answers to these questions, then the *status quo* in Eastern Europe may be preserved, but communism's attraction throughout the world will without doubt be diminished.

Free Trade With Europe

A number of items in this week's "Economist" *discuss the proposal that Britain should join a free trade area in Europe. A Business Leader on page* 155 *analyses the trade that would be affected. Two Notes of the Week on pages* 120 *and* 121 *examine the present reaction to the proposal in this country and in Europe ; and a dispatch from our Ottawa correspondent on page* 145 *sets out the Canadian point of view.*

Half a Nettle?

THE Government has made up its mind to be brave about rent control, but not quite as brave as one had hoped ; there is to be "progressive" instead of outright abolition of it. Just how progressive it will be was not made quite clear by Mr Sandys's statement at Llandudno on Thursday. He could not be entirely clear. He was, after all, speaking before a party conference and not before Parliament. But, according to report, the draft of the Bill to be presented to the next session of Parliament has already been drawn up. This may mean that more details of its terms will leak out in the next few days or weeks ; and some fears about its adequacy may be dispelled. Even so, the reform of rent restriction is so tremendously important a piece of social legislation that there are some things that need to be said about it straightaway.

★

The first point to make quite clear is why rent reform is necessary. Mr Sandys's speech on Thursday showed that the Government can see the nub of the problem ; but it is not so clear that it has appreciated one overriding political point that needs to be got across. The main misfortune of the fact that 10 million of the 13 million houses in England and Wales are rent-controlled is not simply that control is causing a substantial proportion of the nation's stock of houses to degenerate into slums (although that is bad enough), nor simply that the system is unfair to small landlords (although the hardships of some of them are real), nor simply that different tenants are thereby forced to pay entirely different rents for the same type of accommodation. The real social evil is that the whole pattern of housing standards, which are perhaps the most essential feature of different generations' standards of life, is being distorted by control. In Mr Sandys's own words, "people with young children have to double up with their in-laws, just because others are holding on to cheap rent-controlled houses with more room than they need."

This is the point the Conservatives should stress. The system of rent control is a wholesale subsidy against the generation which wants to get married and build up a family, and against people who have to move in an automative age—in favour of a select class of (largely middle-aged) people who are holding on to far more accommodation than they need in enjoyment of squatters' rights. It is principally for this reason, or it ought to have been principally for this reason, that the Government has decided that "sooner or later, the vicious circle has got to be broken." Unfortunately, it seems to have plumped for later, rather than sooner.

Mr Sandys's aim, as declared at Llandudno, is "progressively to abolish rent control altogether." His wish to be known as the Minister who scotched this snake cannot be doubted. The big question that remains unanswered yet is whether this progress to abolition is to be written into the Bill in Parliament's next session—as a principle of progress was written into last year's bill about council housing subsidies—or whether the Government is merely counting upon progress at the slow pace promised by the relatively minor abolitions which it has decided are already politically possible. This latter pace would not be fast enough. Under Mr Sandys's scheme the first five million houses from which rent control will be lifted are those which, although subject to control, are at present owner-occupied ; the only effect of this control has been to discourage owners from letting, and it is fantastic that this pointless discouragement to economic use of house room was not lifted immediately after the war—which is not, of course, Mr Sandys's fault.

Secondly, the Minister envisages that houses which are now let should be freed from control when they become vacant ; there is undoubtedly a real principle of progress here, but this will not in any way speed up the rate at which the houses concerned become vacant, and therefore available for letting to the house-hungry on the waiting lists. Thirdly, and very discreetly, Mr Sandys told the conference that "it may also be desirable to de-control a slice of the higher valued houses." It may indeed. It is to be hoped that Mr Sandys has not been coerced about this by the shorter-sighted wing of the cabinet. The rent-controlled houses and flats with a high rateable value are often those that are least fully-occupied at the moment ; many of their tenants are better off spinsters or bachelors or childless families from the middle class. There is both a better economic case, and a less frightening political case, for freeing them than for any other class of property.

★

There remains the "large number of houses" which Mr Sandys considers, for political reasons, "must, for the time being, remain controlled." For these, the Government has decided, "new rent ceilings must be fixed." They are to be ceilings which will "bear some reasonable relation to current values and maintenance costs," but which will contain "safeguards to protect tenants against unduly abrupt increases in rent." This may mean a sizeable increase or a very small one or (if the permitted increases are tied to rates and repairs) virtually no easing of the log jam at all. At first sight, the formula could portend just another familiar bite at the mouldy turnip—with, since the aim of eventually abolishing control altogether has now been set down, a vague promise of more bites, and with them more political clashes, progressively to come.

It may seem hard to rebuke the present Government for doing only a noticeable fraction of its duty, when previous governments have done no part at all of theirs. But the social shadows cast by rent control are still so

immense—stretching in all their injustice and waste across the whole balance of living standards as between generations, across the proper use of scarce resources as between new housing and other forms of investment, and across the whole problem of industrial mobility—that fractional measures cannot be enough. The Bill now promised by Mr Sandys will be acceptable on only one condition. This is that the parts of the reform that are interim measures should be specifically recognised to be interim, and legislatively declared to be so. In other words, the term between now and the date of outright abolition of control should be set down in black and white immediately, together with the rent increases permitted, in the clauses of the Bill itself. This is the point on which liberal pressure on the Government should now be brought to bear.

Jobs for Graduates

BOTH the civil service and the teaching profession have been protesting this week that they are not getting enough of the sorts of graduates they need. Civil servants and teachers have hurried to say why: obviously, they say, industry is skimming off more of the best young brains in the country by paying more for them. Yet, strangely enough, there is no obvious or precise information on this point. Each year some 20,000 men and women graduate from a British university—three-quarters as many again as before the war—but as far as national records go they then disappear into thin air. This week, however, a semi-official report throws some light on the matter.*

Under the auspices of Political and Economic Planning, the Government Social Survey has made a large-scale inquiry into what happened to men who graduated in arts, science or technology at a university in Great Britain in 1950. In the autumn of 1954, one out of every two of these men were invited, through the post, to answer a variety of questions about themselves—questions ranging over schooling, university record, subsequent occupations and salaries. The completed analysis relies on answers from nearly 4,000 of these men, or 30 per cent of all men graduates in the three faculties in that year. It is quite a good sample, as well as being a large one; just over a half of the men in it had read arts, just over a quarter science and the remaining one-fifth technology—roughly the same proportions as are doing these subjects in the universities today. The main distorting factor is that the effect of the war years was still being strongly felt in the university world even by 1950; half the men who graduated that year had been drawing ex-servicemen's grants, as many as one in five were aged twenty-six or over, and about the same proportion were married in or before that year. But the figures are likely to be a very fair guide to general trends.

Where did the graduates find their first jobs? They went into four main streams. Industry attracted 30 per cent of them; school teaching nearly a quarter; the civil service, the next largest employer, took 9 per cent; and nearly as many went into a commercial occupation such as retailing, accounting, insurance or banking. Between them these four main streams of employment absorbed some two-thirds of the total; Tables I and II show what kinds of graduates they took.

The picture is broadly the one that the casual observer might have expected. The civil service took more than a third of its non-science graduates, but considerably less of its science and technology graduates, from

Oxford and Cambridge; in both arts and science it got more than its fair—by which is meant average—share of graduates with first class honours. Industry drew graduates from much the same schools and universities as the civil service, but took relatively fewer arts students—and also fewer first class honours men among them; two out of every five graduates it recruited were technologists, and here it got its fair share of the best brains. The men who went into teaching were most likely to have been to a grammar school and quite likely to have taken their degree—and not got a first—at a Welsh or Scottish university. Commerce attracted mostly the public school boy who had passed out from Oxford or Cambridge with a second or lower degree.

The last two lines of Table II show an important additional point about the first class honours men; two-fifths of these top graduates in arts, and one-third of them in science, either got university lectureships or stayed in "no paid employment" (which often meant university research studentships). This was true particularly of the Oxford and Cambridge firsts, who were less attracted to industry than the provincial firsts.

What salary is required to attract a graduate? The starting salaries of all these graduates of 1950 averaged £464. As the figures do not all relate to one and the same time, there must be some caution in comparing rates paid by different employers. At the top of the list of best paying jobs, however, came the oil industry, which started 47 graduates with an average salary of £533. Second, and doing nearly as well, came schoolteachers—although presumably mostly a year later, after getting a teaching diploma. Also in the groups of employers giving high starting salaries, averaging £500 or over, came mining, the armed services and the universities. The civil service, along with manufacturing industries, ranked as an average starter. More important than these jumping off points, however, is the question of what the men could expect to earn once they were established in their jobs.

By the time the salaries of these graduates of 1950 were next recorded, in 1954, three-quarters of them had been working for at least three years. There had been some reshuffling in the pattern of employment, but no major alterations. Some graduates were doing their national service; the universities had increased their share; and so, too (perhaps rather surprisingly), had teaching, by taking graduates from industry and commerce. By this time the average salary had increased from £464 to £678; a quarter of the men were earning over £800 and a quarter less than £600. Table III shows what different employers paid.

The top name in that list is rather staggering. The slogan that appears to emerge is "join the armed forces and get rich quick"; it should be tempered with the reminder that many of these career servicemen had seen several years' war service before taking a degree. Some way below the armed services, in second and third places, the oil and mining industries which had given high starting salaries were also paying well—nearly 60 per cent more—in 1954. The rest of the picture is patchy. But although schoolmasters and university staff had started well, they had started late, their annual increments were small and they had dropped in the scale by 1954. So, too, had the scientific side in the civil service, although (an oddity this) the few technologists it employed were doing better there even than those in industry. The law and the church stood at the bottom of the list.

Within the different employments, older men were being paid more than younger men, the public school boy a trifle more than the grammar school boy, and those in employment for the full four years more than those who had gone on studying. The survey shows, however, that the class of degree affected the salary

Teachers:		
Graduates with diploma	546–821	675–1,100

* Very similar scales for Lieutenant-Commanders and Squadron Leaders.

much less than the subject in which it was taken. A first was worth about £25 a year more than a second, which in turn was worth £10 more than a lower degree. But—a significant pointer to the age—a technologist with an ordinary degree commanded more pay than a man with a first in either arts or science. On average the technologist got £741, the scientist £686 and the arts man £654.

These, then, are the figures. Since 1954, as Table IV shows, salary scales for teachers and government officials have been raised, as also have those of the apparently already fortunate serviceman. So, presumably, have average salaries for graduates in industry; but not necessarily by more than those of these public servants. How, then, can one explain last week's annual report of the civil service commissioners? This revealed, with some alarm, that although the scientific side of the civil service (which, according to Table III, is a relatively depressed occupation for new entrants) is apparently getting more or less enough recruits, the non-scientific side (which, according to Table III, pays more than the average for graduates, although admittedly slightly less than manufacturing industry) has run into a recruiting crisis.

The explanation no doubt lies partly in the sorts of people the various branches have been used to getting in the past. Scientists may still be coming forward in adequate numbers partly because of the attractions of government research laboratories for those who want to do pure research; the administrative civil service and the senior branch of the foreign service, which have so long been used to taking their pick from the cream of available talent, may have been hit not so much by relative salary deficiencies as by what might be called a change in *zeitgeist* in the last two or three years. The picture conjured up by a civil service career—security, a pension and (in the foreign service) escape from England—has grown less attractive; that conjured up by industry—limitless expansion, a technological revolution, and (more meretriciously) expense accounts—has grown more so. This is no bad change for the Elizabethan age. But as Elizabethan England needs its administrators as well as its educated industrialists, the remedy required seems obvious: it is not that Whitehall should change its standards to get a bigger share of the present pool of graduates; it is that more graduates are needed in total. It is on this, above all, that the main emphasis, after reading this report, should be laid. At every stage of our education this is the theme song: we need more of it.

Notes of the Week

Free Trade Reactions at Home

THE proposals for freer trade with Europe, which Mr Macmillan and Mr Thorneycroft so courageously launched on to the open waters of public comment last week, have picked up an astonishingly fair initial political wind behind them. It is no secret that the Government was at one time frightened of an adverse political reaction both from the right and the left. From the right had come warnings that freer trade might be a vote-loser (because of its effect on protected industries) and a party-splitter (because of its effect on imperial preference). So far, however, apart from a few cries from the cotton industry (which politicians now regard as always crying about something anyway) the sort of industrialists who are important in Tory party counsels—and finances—seem to have been on expansion's side; the opportunities and the challenge which the project presents to British industry are discussed in detail in an article on page 155. As for the imperial preference school among Tory MPs, their reaction to any trading proposal has long been unpredictable. But some of them, at least, seem to have decided that what they call "extending the well-tried doctrine of preferences into Europe" should be regarded as an emotively good thing, just as Gatt is regarded as an emotively dirty word.

The danger of opposition from the left had originally seemed to be in two factions: in the trade unions, which have hitherto been instinctively protectionists, and among the sort of Labour intellectuals who once called the Schuman coal-steel pool a "plot." To date, however, the unions' attitude to the project seems to have been rather akin to their attitude to productivity: some of their leaders have become interested in the matter (Mr Geddes and Mr Sam Watson have emerged as advocates of a full scale common market), and the rest are inclined to regard it as one of those vague pieces of liberal expansionism, which they may suspect at bottom but feel they probably cannot in general decently assail. The danger of opposition from Labour's left wing intellectuals had seemed to be increased by the fact that some of their high priests have lately come to realise that there is a D-mark problem rather akin to the perennial dollar problem, and have been inclined to want to meet it by their usual formula of restrictionism. But these ideas apparently have not bitten very deep. There is now on the table of the House of Commons a Labour back bench motion (with some eighty odd signatures) urging Mr Macmillan towards the sort of cautious advance on which he has now decided, and a Conservative back bench motion (with ninety odd signatures) urging precisely the same thing; the two motions have secured the support of a surprising number of both intellectuals and pseudo-intellectuals from the extreme left and right. Mr Macmillan and Mr Thorneycroft have handled the initial public relations approach to this project very well indeed.

Europe's Cautious Welcome

EUROPE's first reactions to the Government's proposals for freer trade with Europe have been cautious. The proposals have been welcomed in France and Germany, but with the reserve born of so many disappointments with British policy in Europe. Many commentators are waiting anxiously for the views of British industry and the political parties. Some of those Europeans who have been aware of the slow change of opinion within the British cabinet and civil service during the past year have allowed their hopes to rise a little, but until these first declarations evolve into a clear decision and action, scepticism will persist. Much will turn on British behaviour and statements at the Council of Europe and at the Assembly of Western European Union.

There need be no doubt of the welcome which will greet a positive British decision. Though the project for a continental common market now seems nearer fulfilment than it has for some time, French doubts are still painful, partly because French industry will suffer from competition even more than British, but partly too because of fear of German dominance. British participation will make it easier for France to join a wider market, for in the economic, as in the political field, France has long desired British participation in Europe to offset the power of Germany.

German opinion has none of these doubts about the common market. Industry hardly reciprocates British fears of German competition, and it looks forward to great opportunities in a wider European market. Indeed, perhaps the most significant objections from the Germans come from those who feel that a European common market does not go far enough, and look towards a wider liberal world market. It is Euratom, the other half of the European bargain between Dr Adenauer and M. Mollet, to which there is strong German opposition, both from industry and within the cabinet. There are fears that the Euratom authority, and through it, France, will strangle development and exercise an unnecessary and inhibiting control over German industry through its control of supplies of materials. Here too Britain could, if it wished, assuage doubts and at the same time acquire a still more influential position in Europe, by a bold offer and commitment to supply materials and knowledge to Euratom.

What Negotiation Means

AT last the principals in the Suez dispute are teetering on the brink of negotiation. In both Europe and Egypt diehards are dubbing this advance a retreat, but negotiation neither should nor need be synonymous with capitulation. What matters is that there should be a balance of negotiating power, and, although the Egyptians hold so good a card—the canal itself—that they may reckon flexibility unnecessary, the maritime nations are not devoid of strength. For them, the essentials are that they should stick together (which they now look like doing) and that they should acquire the support of the Asian exporters and importers via Suez who sense the danger of failure to establish some checks on an ambitious dictator. Iran, Iraq, Saudi Arabia, Pakistan and India all fall within this class now that they are sure Britain and France do not mean to use force.

The latest events in New York have added to Mr Hammarskjöld's prestige as Secretary General. By arranging a private meeting between the Foreign Ministers of Britain, France and Egypt to discuss some "points of procedure," he broke the ice for truly informal meetings. (The "secret" sessions of the Security Council are held in the presence of at least seventy people). Before this promising development, the Security Council debate had been noteworthy chiefly for two speeches. Mr Shepilov proposed that a settlement should be worked out by a committee so constituted as to imply prefabricated stalemate; all who remember frustrating postwar experiences in Berlin and Vienna must shrink from such a prospect. Mr Dulles reaffirmed his stand of mid-August that Egypt's physical act of seizure had "aggrieved and endangered" other nations, and that a means must be found—and one more practical and specific than Egypt's vague "system of co-operation"—to insulate the canal from the politics of any single nation.

Most British misgivings about the Secretary of State have been laid to rest by his speeches last weekend and on Tuesday in the Security Council; but anxiety was very real during the weeks in which, after suggesting the Users' Association, he seemed to be discarding, one after another, the various weapons at its command, ending up with the one key one: the withholding of dues. By the time he had said both that American shipowners must be free to pay their dues to Egypt if they wished, and that the United States could afford to be aloof in what was at bottom a quarrel between ex-empires and an ex-victim of occupation, many Europeans felt that he had dimmed all hope of true negotiation by discarding not only his remaining cards, but theirs. This week, they are reassured; and the essentials of the Suez problem are again to the fore.

A Soldier's Blessing

ON Wednesday, at the Royal United Services Institution, Field-Marshal Montgomery took his annual look into the crystal ball at the shape of wars to be avoided, and gave his customary forthright advice to "our political masters" on what to do. Essentially, the advice is the same as it was: the focus is on nuclear air-power, singly controlled, to restrain the enemy or strike him down if he attacks, with a shield on land of "powerful, compact fighting divisions of all arms," possessing "their own organic atomic fire-power"; a basic condition is instant readiness without reliance on mobilisation; and the emphasis for policy is on complete unity—of arms, services, allies and ideas.

It is only too easy to see how different this picture is from the present facts, despite Nato. That is Field-Marshal

Montgomery's function, as Nato's elder statesman, to be the gadfly. His recipes offer no guide to what separate allies should do with their resources—which is Britain's problem, whether to try to shoulder all the kinds of defence burdens or to leave some of the heavier loads to others. Nor had he time to do more than glance at the problem of readiness for small wars, which the comings and goings around Suez have put under the spotlight—though he does, topically enough, insist that "the disturbance to the life of the nation should be as little as possible." His assumption all the time is that, by their unity, their central control and the proper use of science, the western allies can achieve "immense economies and saving of effort."

How this "far less expenditure of wealth and effort" is to be achieved is not made at all precise. Indeed, the Field-Marshal's insistence now on the role of the navy points the other way: having given a soldier's blessing to air-power, ever since he started to look ahead to World War III, he now blesses sea-power, both to seek out and destroy submarines and to deliver nuclear missiles from "mobile bases." He does no sums, and his simple answer to the question of economy would be "unselfish solidarity" (he gives his blessing, too, to a united Western Europe). No doubt, as always, this famous commander-astrologer-gadfly's prognostications, above all perhaps his belief that most battles must now be nuclear, will provoke great argument; but, again as always, they throw into sharp relief what is not being done.

No Pence for the Farmers

It is no surprise that the Government has refused the farmers' request for a special price review. Mr Heathcoat Amory had already warned farmers during the recent wage negotiations that they could not this year expect to receive immediate compensation for a rise in the wages bill. No doubt some farmers secretly hoped that the wet harvest would soften the Minister's heart. But it is clear—and the farmers' union has itself accepted the principle—that bad weather cannot be made the excuse for increasing guaranteed prices any more than good weather (should it ever occur) would justify the reverse process.

The Government decision is being widely interpreted as a "toughening" of its attitude towards agriculture. So in a sense it is; but there is no basis at all for the "dismay" voiced by the farmers' union or the accusations that the agricultural guarantees are being undermined. All that the Minister has done is to repudiate the foolish error of his predecessors in allowing increased costs to be an automatic trigger for an immediate and equivalent increase in prices. Quite apart from present economic needs, it is time this notion was firmly knocked on the head. The farmers are not in any real sense being sent empty away. They are merely being told to postpone their claims until next February's regular price review—when all relevant factors, including the recent wages award and the effect of the weather upon farm incomes—can be taken into account in a comprehensive settlement. This is clearly the right approach, while by contrast the rush tactics of special price reviews (which ought now to be abolished) makes yet harder the tricky task of combining stability for the farmer with justice to the taxpayer. Meanwhile, Mr Heathcoat Amory has shown his good faith by offering to revise the erratic working of the fat cattle guarantees in a way which will be immediately helpful to fatstock producers. Farmers might reflect that they have for once a Minister who knows how to combine firmness and generosity.

Half-Pay on Retirement?

The Labour party conference at Blackpool faded away last Friday, still on a note of starry-eyed (if persistently nervous) hope about party unity, but once again with what may yet be the party's most attractive proposal for the next election protruding at the end. From this final session of the conference, and from the latest Fabian Society tract, has come encouraging evidence of some new and constructive thinking on retirement pensions. Mr Crossman's speech at Blackpool gave only the roughest sketch of the proposed national superannuation scheme, on which a fuller statement, probably under the title "Half-pay on Retirement," is promised for next year. The Fabian tract, written by a group of trade unionists, is more specific but still provisional. The outstanding feature of both is a breach with the flat-rate principle of national insurance; it is proposed that contributions and benefits should be related to income. The minimum "floor" provided by the national insurance pension should be replaced by an elastic cushion. The question of who should provide the financial stuffing and who should control the funds was left open at Blackpool, though the suggestion that the cost should be met by the Exchequer was wisely ruled out in advance. The Fabian writers propose a fixed rate for employers (5 per cent of the wage paid), a variable rate for employees to suit their preferences and circumstances, no Exchequer contribution, and a common fund "earmarked for use in the public interest"—an irrelevant formula imparting, no doubt, a warm Socialist glow to the faithful.

The prospect of yet another tier added to the complex structures of social security may seem rather appalling, and the details of the Fabian plan are open to criticism. (So is its curious assumption that no worker can or should be expected to do any independent saving whatever.) But the line of thought opened up by these proposals deserves to be welcomed and followed. There are two reasons for this. One is that the idea of state encouragement of saving for old age deserves to be extended and tidied up, as a priority social service. Secondly, private pension schemes are spreading, and a good thing too. But so long as they remain wholly private and watertight they form both a general barrier to industrial mobility and a particularly severe handicap to the middle-aged or elderly worker seeking employment. One may doubt whether nationalisation (with a steamroller running vengefully over the "top hats") is the best way of making pension rights transferable between jobs; but they must be made transferable in one way or another if an ageing community is to preserve the necessary minimum of economic suppleness. And the flat-rate principle for contributions and benefits is overripe for the dustbin. Looking ahead, one may hope that the shift of sentiment shown by these two Labour initiatives will go further, making possible a reform yet more necessary for economic mobility and at least as important for welfare; the provision of differential unemployment insurance, at any rate for skilled workers in the first month of unemployment.

Polish Ups and Downs

Precipitate changes in leadership throughout Eastern Europe have led to a natural but dangerous application of over-simplified labels. Thus, the resignation of Mr Minc, the Polish economic wizard, is hailed as the downfall of a Stalinist. It is expected to pave the way for the return to power of Mr Gomulka, who had been purged as a Titoist, and this in turn will no doubt be hailed as a "liberal" victory. Yet Mr Minc once had a more "liberal" reputation than his colleague; it is the postures they assumed, or were compelled to assume, at a later stage that have now been made into symbols.

Mr Minc gained his reputation for intelligence and independent thinking as Poland's chief economic planner (did he not, at first, accept the offer of the Marshall Plan?). But that very reputation made him vulnerable during the witch-hunt after the break with Jugoslavia; this may well explain why he felt it necessary to attack Mr Gomulka when he was on his way out. Mr Gomulka never forgot, and the scalp of his former colleague was apparently one of the conditions he named for his return. Though Mr Minc has been ill for some time, his official resignation is clearly part of the price exacted. It seems unfair, however, to use him as a scapegoat for the evils of too rapid industrialisation. His original plans were much more modest; the targets were raised under Moscow's dictation.

Mr Gomulka, who became head of the party as a result of the massacre of its former leaders by Stalin and Hitler, enjoyed no "liberal" reputation in his first years of power, when the Polish opposition parties, particularly Mr Mikolajczyk's Peasants, were being crushed. Yet, in eclipse, he has become a national martyr. Sincerely believing in the slogans about "different roads to socialism" to which other communists paid mere lip service, he sided with Marshal Tito after 1948 and had the courage to stick to his guns. He owes his miraculous survival to his former colleagues' reluctance to stage a trial for him and to Stalin's timely death. Subsequent changes in Moscow and the reconciliation with Marshal Tito made his return almost inevitable. Poland's rulers were aware that a man who was by now popular both in the party and in the nation at large, would be less dangerous within the government than outside. He was evidently able to drive a hard bargain.

Signor Nenni Throws a Spanner

If the two Italian socialist parties ever succeed in joining forces, one almost feels that it will be in spite of themselves. The latest spanner in the works, thrown by Signor Nenni, is a new agreement between his party and the Communists. It is a weaker affair than the 1946 "unity of action" pact which it supersedes. It is called simply a "consultation agreement"; it recognises that the situation has changed since 1946, and that the two parties cannot "co-ordinate" their activities as they used to do; the permanent machinery set up to ensure joint action is to be dismantled, and in future the two parties are merely to "consult" about common problems as they arise from time to time.

The exact significance of the new agreement is not yet clear—perhaps not even to those who signed it. Signor Nenni, it appears, was pushed into it by some of his colleagues; and, much to the annoyance of the Communists, he has since written an article in *Avanti* minimising its significance. His attitude seems to have some justification; yet it is unlikely to soothe the ruffled breasts of the Saragat socialists. They have been demanding that Signor Nenni should break his connection with the Communists completely; instead they find that this connection has been freshly spelled out and at first sight it seems small consolation that it is less firm than before.

★

Perhaps the Italian socialists' search for unity would be a less nerve-racking affair if too much had not been expected too quickly after the two party leaders met at Pralognan in August. Nearly ten years of separation, with one party enjoying the fruits of office and the other stuck in the political wilderness, have bred not only bitterness but sharp differences. Many of Signor Nenni's colleagues are extremely loth to break completely the links with the Communists which originally brought about the split between the two socialist parties. Many Saragat socialists, on the other hand, are extremely unwilling to give way to Signor Nenni's demand that they should abandon the governing coalition and join his party in opposition. Yet commonsense and the Italian political facts of life strongly impel both parties towards each other. Many of the rank and file have accepted this earlier and more realistically than their leaders. Both parties are supposed to be holding congresses next month; the rank and file may then push the leaders into more determined efforts to overcome the admittedly daunting obstacles to reunion.

African Advice for Strydom

A meeting of 400 African leaders from all over South Africa might have proved a mere platform for the airing of grievances: the remarkable thing is that it did not. The conference, which ended last weekend, was the first of its kind. Called by the Inter-denominational African Ministers' Federation to discuss the Tomlinson Commission plan for the development of the Bantu areas, it provided a representative picture of African attitudes to apartheid. Its conclusions were surprising only for their moderation.

Refuting the theory that South Africa is faced with the choice between complete integration and complete separation of European and Bantu, the conference advocated a halfway policy of inter-racial co-operation which would neither threaten the survival of the white man nor deny the African his basic human rights. Both the principle of apartheid and the plan for its implementation were rejected.

The conference protested against the policy of segregating the African within reserves and, on the practical level, considered the Tomlinson plan for intensive development of the reserves economically unsound.

On this second point, the views of the African leaders and the South African government are not far apart. The government has plucked the apartheid rose from the Tomlinson report unscratched by the financial thorns; the principle of separate development has been accepted, but the £104 million needed to develop the Bantu reserves has not been pledged. In this equivocal decision, the government has been fully supported by the Dutch Reformed Churches, who have now settled themselves comfortably on the fence with this remarkable definition of their attitude to race: the Church "accepts the unity of the human race, which is not annulled by its diversity. At the same time it accepts the natural diversity of the human race, which is not annulled by its unity." In contrast the African leaders, in calling for a united front against apartheid, need neither plausibility nor ambiguity. And although their concept of co-operation still needs a lot of clarifying, it holds more promise than do the sterile dogmas of their present rulers.

A Hole to be Filled

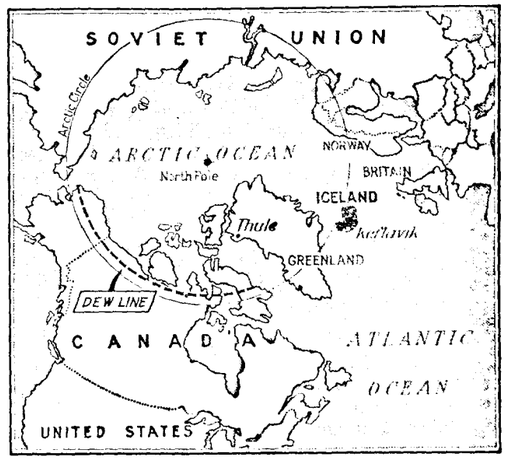
As long ago as 1944 the Teviot committee on dentistry gave what it itself called "an alarming forecast" about the number of dentists in Britain unless recruitment were improved by vigorous measures. The outstanding factor, the committee pointed out, was that the bulk of the dentists admitted to the register under the special provisions of the 1921 Act were then over 45 years of age. It would therefore need an exceptionally high level of recruitment to fill the hole that would be caused by the retirement of these older dentists, let alone increase the profession's size.

Now the remaining "1921 Act" dentists are twelve years older, and another committee under the chairmanship of Lord McNair has reported (Cmd 9861) in even more alarming terms than the Teviot committee. In the next ten years some 8,000 dentists will have retired—roughly half the register's present strength of 15,800. The increase in the number of students in the last year or two is not enough to make good both this loss and the low level of

recruits during the war. It is certainly not enough to bring the ratio of dentists to the population—at present 1 to 3,273 people—up to the level of other western countries (1 to 2,790 in Canada; 1 to 2,000 in Norway; and 1 to 1,667 in the United States).

The main obstacle to a bigger profession, the McNair committee found (like the Teviot committee before it), is the apathy of the public. People still think a dentist's work is unnecessary—until they have toothache. But though awareness of the importance of dentistry to health and efficiency is an essential foundation for an expanding profession, a bigger demand for treatment will make the shortage of dentists worse unless steps are taken immediately to find additional dental students—the committee suggests an annual entry into the dental schools of 1,000 students, compared with a maximum of 650 at present. This will be a formidable task, not made any easier by the attitude of existing dentists. A great deal of the prevailing discontent can be put down, in the opinion of the McNair committee, to the drop in the average earnings of dentists in their middle age. Payment by items of treatment works out badly for the older or more careful dentist who works more slowly than a younger man and cannot fill so many teeth at a sitting. But the committee merely recommends a review of the system of remuneration; it does not itself suggest a method that could both preserve incentives and professional independence and reward care and experience. A quicker and simpler way of finding the extra students would be to canvass the girls' schools. The committee points out that in the Scandinavian countries 30-40 per cent of dentists and dental students are women, whereas in this country the proportion is under 10 per cent. Here should be a fruitful field for new recruits given the right propaganda and the new outlook on dentistry that the committee looks for.

the Americans next month, told a press conference that "it is clear to us that circumstances have changed since 1949 and it is definitely one of the problems of today to try and cope with and meet the present situation." This is a



distinctly more hopeful line, and it seems possible that if the Americans are prepared to cut down their armed forces to a minimum and install as many civilian radar technicians as possible, the base may yet be saved.

Two Evenings in Kensington

A ROVING correspondent reports: On arrival outside the Empress Hall for the public meeting of the People's League for the Defence of Freedom last week, leaflets were pressed into the hands of the audience entitled "This is Liberalism." On the way out we received other leaflets, this time saying "Mosley Speaks." Which may or may not (probably not) be significant, but was certainly rather tactless. The main declared objects of the League are a "Fight against Trade Union Tyranny, Arrogant Bureaucracy and Government Ineptitude," to which has been added opposition to monopolistic trading: the last got almost no applause from the audience, the first a great cheer.

The moving spirits on the platform were two frustrated Liberals, Mr Edward Martell and Lord Moynihan, and one former Independent Member of Parliament, Mr W. J. Brown, who has been also a white-collared trade union leader and a Labour member before becoming a television star. The audience seemed to be predominantly upper-middle class conservatives, with a majority of stern-looking ladies in hats, a sprinkling of retired military men, and a lot of business men of the sort who always call themselves plain and blunt. Their reactions to the speeches indicated that they were those for whom the Conservative Party is insufficiently conservative: the New Poor, or those who see themselves as such if something is not done pretty quickly. The main bond between all these was dislike of the Welfare State—figures given by Mr Brown about the amount spent in recent years on public education, which might seem encouraging to anyone concerned about the country's future, were greeted with evident horror—and, much more important, real fear and hatred of the trade unions. The most specific "reforms" suggested by the League are to put back the unions to their position before 1906 with regard to the liability of their funds to damages as a result of strikes by their members, and to declare illegal all strikes not supported in a secret ballot by fifty per cent of each union involved. Unfortunately, any lingering hope that the League might develop as a genuinely liberal pressure group (in fields where the unions need a counter-pressure group) must vanish as a result of this meeting; like all such movements the League is attracting support only from the extremes. It is true that the platform stood by the official line that the reforms are for the unions' own good, but this was widely regarded as a disingenuous attitude and did not meet with very much approval.

Mr Martell dropped some dire hints that many of the more conservative resolutions put down for the Conservative conference at Llandudno were inspired by the League, and the possibility of the League's submitting candidates for Parliament was subtly implied (Mr Brown's name was mentioned here). There was a vague threat that if the Conservatives did not play ball the "anti-socialist" vote might be split. But while comparisons have been made between this group and the Poujadists in France, they should not be stressed. For one thing, the League has no leader of sufficiently low stature; for another, the audience, despite their obvious fear of the unions, had none of the power of an angry class. They are probably not badly enough off to be really militant: and as yet they have no policy, only some objectives. It remains to be seen how much of a nuisance they make of themselves at Llandudno.

* * *

Two days later the Empress Hall democratically lent itself for a very different event: a pageant and rally organised by the London District Communist Party. The pageant itself was much as might have been expected, with revolutionary figures from London's past appearing in under-rehearsed confusion. The big event of the evening was a speech by Mr Harry Pollitt, who has now become the *eminence grise* of the British reds, after for so long being their premier chameleon. He has just come back, a prophet new inspired, from a visit to China, of which he gave a glowing picture. More interesting, although not surprising, were his exhortations to the members to work as much as possible with the re-Bevanised Labour Party, as he saw it. This one-sided declaration of love will bring more pain than pleasure to the Labour Party; but it certainly cannot embarrass them as much as the adherence of the League could the Conservatives. The saddest and silliest impression left on an impartial observer by these two evenings was that of two groups doing their best to ignore each other's opinions—although each can hire the Empress Hall in one week, get a similar-sized audience and collect a similar sum when the hat is passed round (the Communists got £777, the League £635). Perhaps they should each be condemned to listen to the other's speeches for a long period. That would serve them right.

Second Thoughts in Iceland?

In spite of the victory of the advocates of complete demilitarisation in the Icelandic elections, there is now some hope that the North Atlantic Treaty Organisation may be able to keep its American-staffed base at Keflavik. At the time of the elections it was argued that the Americans ought to go because there was now little danger of a sudden war and because Iceland had joined Nato in 1949 on condition that it would be expected to provide bases for its allies only in time of war. Little weight was apparently attached to the North Atlantic Council's argument that the development of atomic warfare had made Iceland an essential link in the network of radar defence which stretches from the distant early warning line (DEW) in Canada through Thule, Iceland and Norway. Nor was the government deterred by the fear that if the Americans left this strategic air-base swept, garnished and unoccupied, the Russians might be able to move in whenever it suited them.

However, after the recent visit to Rejkjavik of Mr Lester Pearson, who no doubt expounded Canada's strong interest in the matter, the Icelandic government's tone seems to have altered. Mr Jonsson, the foreign minister, who has just visited Washington to arrange for formal negotiations with

Same Again for the Dutch

THE longest cabinet crisis in Dutch history has crawled to its end after seventeen weeks of wrangling. Unless a last-minute hitch develops, the outgoing cabinet, who as caretakers bridged the hiatus, can drop their portfolios—and pick them up again. The old and new governments came from the same pod: even the names are largely unshuffled. Dr Drees, the Labour Prime Minister of the last government, again heads a broadly based coalition of the two major parties plus two of the smaller parties. The only straw in the wind is that the Catholics have lost their lead of one over Labour: the two parties now have control over five ministries each. The sixteen portfolios of the last cabinet have been telescoped to fourteen; Professor Romme, the Catholic leader, again prefers to remain outside the cabinet; Mr Luns, a Catholic, is Foreign Minister, and —a feminine triumph in Holland at last—Dr Klompé is in charge of social affairs.

Several variants on this coalition have been put forward in the course of the long drawn-out negotiations. Extra-parliamentary cabinets were suggested; so were various coalitions excluding one or other of the major parties. Nobody had much faith in these ideas. Eventually the sheer fatuity of lacking a government, particularly at a time when major international decisions are imminent, gradually forced both Labour and the Catholics to water down their demands. Previous attempts at compromise had foundered on the basic issue dividing the two parties—whether or not

the state should assist individuals to build up personal capital. Once again it had to be recognised that as long as the electorate remains so evenly divided, each party has to compromise as best it can. Finally, Mr Burger, leader of the Labour party in the lower chamber and the fifth cabinet-maker to try his hand, had to sort out the claims of the smaller parties. The Anti-Revolutionary party held up progress by insisting on two seats in the cabinet: they have won the day but possibly at the expense of the Liberal party, who have not now joined the coalition.

Since the end of the first world war, elections in Holland have never produced more than a narrow shift in power. The country has managed very well without political landslides; but the Dutch must wish that their rulers were quicker at finding compromises.

Francs in Time

THE surprising success of the French National Loan looks at first sight like another indication of Frenchmen's regained confidence in their country's material future. The loan produced £320 million, more than twice the amount originally expected, in half the allotted time. In judging the response, however, it must be remembered that the terms were exceptionally favourable. The investor gets 5 per cent and a guarantee against inflation as well, since his bonds have been tied automatically to an official index of stock exchange prices. This may have been a greater attraction for investors than the patriotic appeal of contributing to the cost of the Algerian war. Still, the fact remains that sometimes in the past the most inviting terms have proved powerless against fears bred by inflation, while in this case the small savers apparently flocked in undaunted. (Big business investors had an additional incentive, as heavier taxes were the alternative to a successful loan.) This success should help the government in its struggle to keep the franc stable. M. Ramadier, the Minister of Finance, has claimed that budgetary expenditure will be covered until the end of the year and that short-term credit will be tight for some months.

Experts, however, are still worried about the future and some of their misgivings have actually been strengthened. One is about the growing burden of the national debt; the cost of servicing has already jumped from £132 million in 1952 to about £300 million in the current year. The other concerns the effect of this latest loan on other borrowing for productive investment. Though the government has decided to provide easier credit for investors, any loans floated in the near future will have to compete with the government's generous terms.

The greatest danger, however, is that this palliative will be taken for a cure. The idea is already spreading in the parliamentary lobbies that the loan makes it unnecessary for M. Ramadier to pursue his Herculean task of balancing next year's budget. The receipts from the loan, after all, were only equivalent to this year's exceptional expenditure on Algeria. The danger of inflation is, in fact, still mounting. Despite all the government's delaying devices, the official cost of living index rose at the end of September to within 0.8 of the figure of 149.1 which would bring about an automatic five per cent increase of the national minimum wage. In the coming weeks M. Ramadier will have to bring all his "brinkmanship" into play to avoid going over the precipice of inflation.

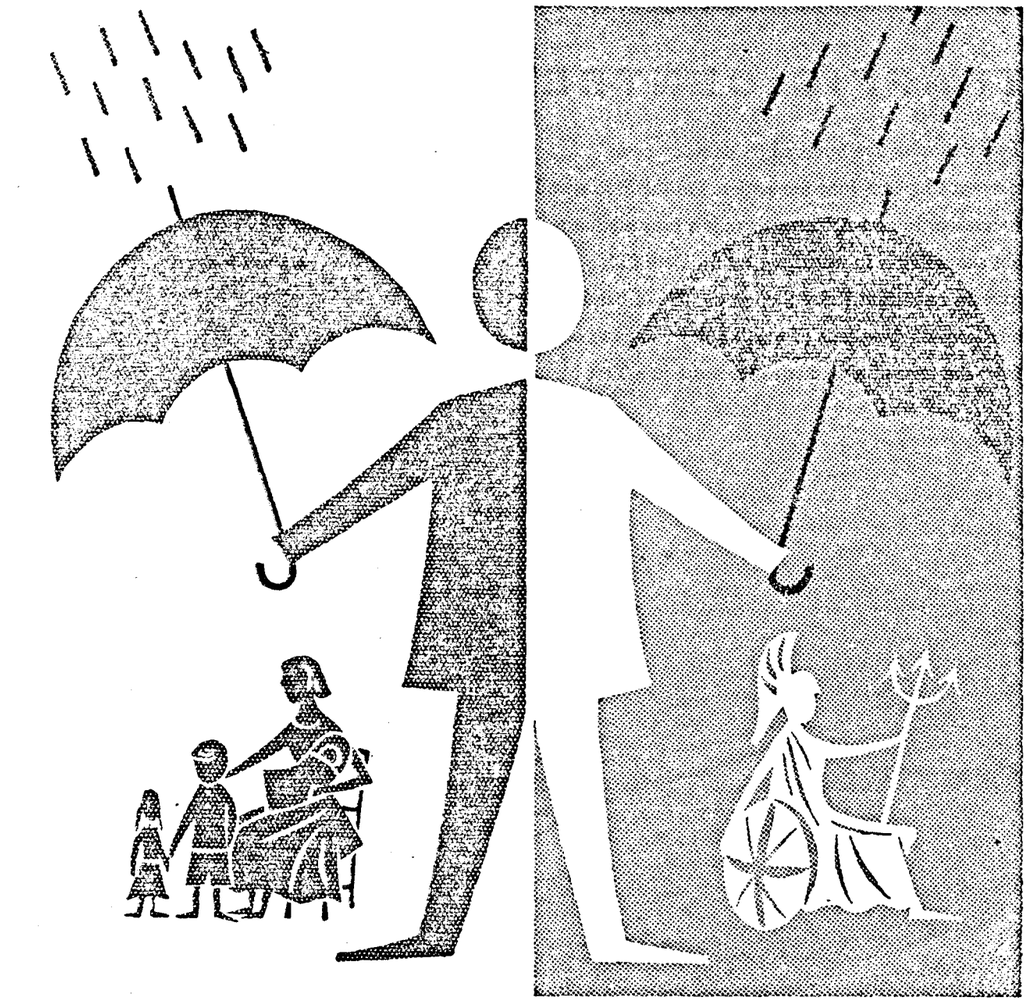
Another Way with Comprehensives

BEHIND the scenes both at last week's Labour conference at Blackpool—where education was a subject very much in the air—and, more surprisingly, at the Tories' local government conference this week, there was apparently a good deal of talk about a recent book by Dr Robin Pedley, lecturer in education at Leicester, entitled "Comprehensive Education: a New Approach."* Dr Pedley's proposals are not really new: they have much in common with those made by the national executive of the Labour Party in 1953, but withdrawn at the subsequent party conference. They also resemble the proposals which were considered, and finally abandoned, at Croydon last year.

Dr Pedley's argument is that the division of secondary schools into grammar, technical and modern should be abolished. Instead all children should go to a common secondary school until they reached the school-leaving age, whether fifteen or sixteen; and after that those who wished could go on to full-time education at a county college. Later, when continued education one day a week has become compulsory for all, the same college could take these part-time students too, for it would be good for each kind of student to be associated with the other. Dr Pedley claims for his scheme the further advantages that it would abolish selection at 11 plus, which everyone agrees can work very unfairly in borderline cases; that it would mean a more economical use of sixth form teachers than at present, when the average sixth form class consists of only seven pupils; and that young people would find the prospect of continuing their education in a "college" (consisting of both sexes) much more attractive than the idea of staying on at school. On the other hand, he claims that his schools would be much better than comprehensive schools, which he strongly defended in his last book but which he now agrees must be too big if they are to produce an adequate sixth form.

Dr Pedley's scheme does, however, have one disadvantage in common with comprehensive schools: namely, that if generally applied it would destroy much that is good. A good school is more than good teachers, good pupils and good buildings; it is also good traditions. It would be a pity to throw these into the melting pot by turning fine grammar schools (and probably public schools ultimately) into something quite different; the influence of the sixth form, and of those masters who take sixth form work, is valuable all through the school. It could only hold back the best pupils if they did not come in contact with the best teachers until they were over 15. Presumably the children would still be "streamed" according to ability, but the streaming could not be as fine as it is today because the range of ability would be wider. And if the scheme failed to get the best out of the clever, it would not even secure for the rest the "parity of esteem" that is craved. It would be no easier to claim equality for different streams of the same school than it is to claim it for different schools; it would still be true that some led to the university and to

* Gollancz. 203 pages. 13s. 6d.



Personal protection is national safety

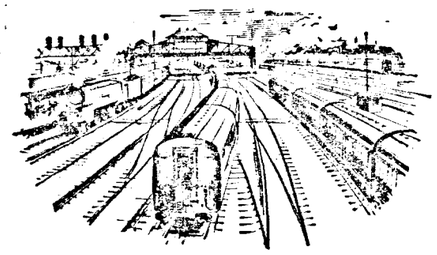
To protect his family is one of man's nobler instincts: to make provision for his old age is just plain common sense. To do these things he is turning more and more to Life Assurance—and his needs are met.

The money which the Life Offices receive in premiums is one of the principal sources of development capital for British industry and commerce. In the past four years the annual amount paid in Life Assurance premiums has increased by over one hundred million pounds. In this way the people who seek personal security through Life Assurance assist in the well-being and advancement of the Country's economy.

Life Assurance *a safeguard of real prosperity*

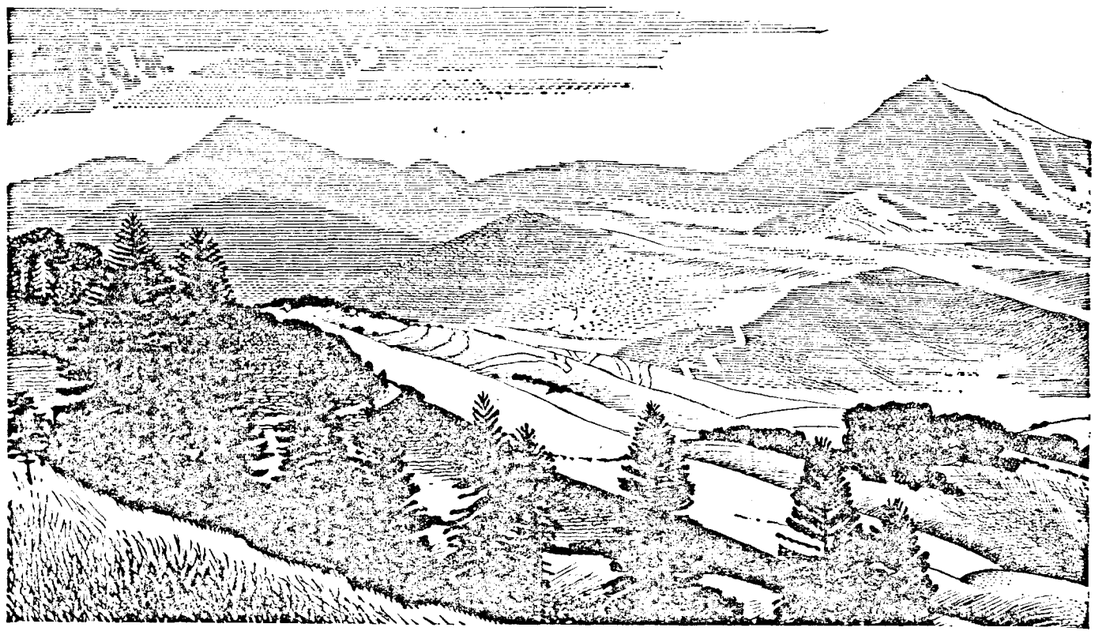
Issued by the Life Offices' Association, London. Established 1889

TRAFFIC CENTRES



CLAPHAM JUNCTION

Two thousand five hundred trains a day pass through Clapham Junction station. On the little island of Ascension, in mid-Atlantic, there is a busy station too, but the traffic is in words not trains. Here Cable & Wireless Limited have an important Relay Station capable of handling hundreds of thousands of words a day . . . news on every conceivable subject from the state of a market to the score in a Test Match.



ASCENSION ISLAND *by Rowland Hilder, R.I.*

Cable and Wireless Ltd. provides vital facilities for Commonwealth communications. It owns a world-wide network of 150,000 miles of submarine cable which it maintains with a fleet of 8 cable ships. It also owns and maintains wireless relay stations on the trunk routes, operates the overseas telegraph services of most of the colonial territories, and cable services in various other countries throughout the world. This great organisation, although it does not accept or deliver cables in this country, is always at your service overseas. It is set in motion whenever you send a cable from any Post Office which accepts telegrams, or from your telephone or Telex installation. Cabling is very easy, very swift and very sure. A Greetings cable to anywhere in the Commonwealth costs as little as 6s. 8d.

the best jobs and some did not. Nevertheless, to oppose wholesale application of Dr Pedley's plan is not to oppose single experiments on these lines in places where the advantages might outweigh the disadvantages.

Slimming in Bonn

DR ADENAUER'S coalition continues to slim. The four ministers who formerly represented the Free Democrats, and who remained in office when the bulk of their party withdrew its support from the coalition, have offered their resignations ; and the breakaway liberal party which they set up at the time of the split has warmly backed their action. Now the only party in the coalition, apart from Dr Adenauer's CDU and its Bavarian sister the CSU, is the small conservative German party, with two cabinet seats ; the refugee party, or "All-German Block," went into opposition some months ago.

The resignation of the four ministers has been interpreted by the Chancellor's opponents as a further blow to him and a mark of the government's weakness. In fact their presence in the cabinet without the support of the bulk of their former party has long been an anachronism and an irritation to the other coalition parties ; and their resignation was prompted by a request from Dr Adenauer that two at least should resign. And in the event the Chancellor may accept only two resignations and thus fulfil his purpose ; but faces will have been saved. In any case the FVP (the breakaway liberals) will continue to support the coalition with their votes.

The departure of the liberal ministers should also facilitate the general cabinet reshuffle which has been awaited so long, for it will make it easier to reduce the cabinet's unwieldy size, appease other coalition members and perhaps overcome certain personal differences. But even if the loss of the liberals is followed, as now seems likely, by other ministerial changes, this will not wholly solve Dr Adenauer's cabinet problem. It is the open differences within his own party on financial, economic and social policy, on agriculture, and on defence, and the personal differences which exacerbate them, that have given most delight to his opponents. The Chancellor must be painfully aware of the need to smooth out these difficulties well before next year's elections.

Prisons in the Public Eye

IT is no criticism of the Howard League for Penal Reform to say that much of its annual report is familiar reading. For partly perhaps as a by-product of the capital punishment controversy, which raised the question of what would happen to reprieved murderers, the conditions of British prisons have attracted considerable public attention. Thus reforms suggested by the Howard League have had a more receptive audience than would otherwise have been the case.

At the moment the league is concentrating on reforms in local prisons, where most prisoners serve their sentences. These are mainly criticised, first, for their physical conditions and, secondly, for the repressive resentful atmosphere within them. The league, though by no means ignoring the need for better lights and lavatories, has realised that in the long run morale is more important and that this depends largely on the prison officer's job being more constructive and less purely custodial than it is at present. This, indeed, is no more than the prison commissioners themselves have long been working for, and have attempted to achieve through their training schemes for new prison staff. But too often their good intentions have been defeated by the sheer size of the prisons, with the consequent rigid regimental administrative system, and by the shortage of staff.

But, as the Howard League has pointed out, much can be done within existing prison walls. Prisons, it suggests, could be broken down, for administrative purposes, into small units, in which the governor can get to know his prisoners, who can also be more carefully classified. The difficult psychopathic prisoner should be transferred to the new institution at Grendon Underwood—when it is built. Above all, prison officers should be encouraged to take a more personal interest in individual prisoners and to discuss their problems with the governors and medical officers—in others words, to do the positive job they have been trained for. There was a time when all these proposals might have fallen on stony ground both within the prison service and outside. The most hopeful thing the league is able to report is the considerable interest that has been shown in its suggestions and the willingness to discuss them further.

Kansas and the Election

The politicians of the United States have long been divided by a multitude of trivial and factitious differences, whose pettiness and unintelligibility had become almost ludicrous and very mischievous. The factions were becoming dwarfed, both in intellect and morals, down to the dimensions of the party interests and watchwords they embraced. Now that a fresh question has once more arisen to divide them, it may be hoped that the feelings and the conduct of politicians will imbibe something of the dignity and grandeur of the cause at stake. That the Slave-holders should cling with passionate vehemence to an institution with which they believe that their wealth and prosperity are indissolubly bound up, is natural enough ; and most assuredly if there ever was a cause for which it was worth while to make every effort, to meet any sacrifice, to encounter any risk, the question whether the Great Young Republic of the West shall extend the area of real Freedom or fall under the dominion of Slave-owners and be guided by a Slave policy, offers such a cause. The strife is now for the moment about to be transferred from Kansas to the Union at large. The Presidential Election will now be the trial of strength between the parties. If Fremont is chosen, his success will be owing to the reaction caused by the attack on Mr Sumner and by the atrocities of the Slave party in Kansas—and we may hope for a decisive change of the Federal Policy in future and a prompt reversal of all recent acts. If, on the other hand, Buchanan be the victor, there can be only one of two results—either an irreparable injury to the morals, the reputation, and the progress of the Union—or such a prompt severance of the Living from the Dead, as shall stay the extension of the moral pestilence, and do full and speedy justice on the evil-doer and the evil deed.

Money at War

HISTORY OF THE SECOND WORLD WAR: *Financial Policy, 1939-1945.*
By R. S. Sayers.
HMSO and Longmans. 623 pages. 27s. 6d.

NO fewer than eighteen volumes have now been published in the British Civil History of the Second World War. Their purpose, to quote Sir Keith Hancock's own first volume, has been "to fund experience for Government use," and, the interests of historians apart, their main value is as a depository of wisdom against the misfortune of a future war. This volume is of a different order. It is a brilliantly succinct record of wartime activity in its prescribed sphere and, as such, it takes its place in the total war history scheme. But it goes beyond that.

There is, in the first place, a distinction in subject-matter. Taxation, monetary policy, exchange controls and financial diplomacy, unlike the material of many of the other volumes, are matters of war and peace alike. A study of wartime activity retains a topical interest. But there is also, in this particular case, a distinction of style, and credit for this must lie with Professor Sayers himself and with the editor of the series for getting him to undertake the work. Taxation, monetary policy and the rest are Professor Sayers's lifetime study. The role of official historian has given him a run of the Treasury files, but this invaluable benefit has in no way inhibited either his analysis of the problems involved or the freedom of his commentary. He begins with a chapter of "straight economic analysis" of the problems of war finance. He considers alternatives of monetary manipulation against the method actually followed, examines the inflationary content of the Government's short-term borrowing, and passes his own verdict on the efficiency of PAYE and on the effects on sterling's long-term reputation of having ceased, in the war, to be a multilateral currency. He summarises interest rate policy since the first world war because of its influence in the early years of the second. He uses outside comment freely, alongside the observations of the Treasury and the Bank of England, to record its influence or to give point to his tale. There are briefer comments, too, to sharpen the story—and lighten the page—like those on the "best defence" for raising Bank rate in August, 1939, and on the advantage of having young men in the Bank with time to think, in "striking contrast" to the Treasury, starved of numbers from the early thirties.

All this makes for most lively and instructive reading even where, in the case of internal policies, much is already familiar: the definitive role of the 1941 Budget, the establishment of a "three per cent war," and the tight exchange control maintained from 1940. In these areas, moreover, besides the fresh insights into British financial administration, there are many points brought to public knowledge for the first time: for example, the solid appreciation of the inflation problem before the arrival of Keynes, the decision on "three per cent" actually taken in October, 1939, and the existence in the Bank of a blueprint of exchange control from as early as 1937.

Internal policies, however, occupy less than half Professor Sayers's book. Their logic was comparatively simple, and though quantities changed and administrative forms also in some degree, the policies themselves were largely settled by 1940. The external problems that occupy the remainder of the book, on the other hand, changed and grew as war went on, and were never settled. Moreover, they were highly complex. India and Egypt, the southern Dominions of Canada, as well as the United States, each presented its own special difficulties. Yet they were also interlinked and policy at one point affected policies elsewhere. At the London end, the same small group of ministers and officials handled them all. How Professor Sayers set about mastering the vast mass of resultant papers, cablegrams, minutes and records of conversations one can only guess, but that he has done so is evident. Problems and negotiations alike, for each of the countries in turn, are set out and appraised with quite extraordinary clarity and understanding. In the cases of India—on which Sir Winston Churchill receives a justified rebuke—and Canada, in particular, a large new light is shed.

Professor Sayers keeps the United States till last, though inevitably that country intrudes upon all the others in some degree and upon Canada in particular. Dollar negotiations, principally over lend-lease, occupy the whole of the final quarter of the book. Here, though the general make-up of this "strange mixture of Rooseveltian largeness and Congressional politics" may be half-familiar, there is very much in the record that is made clear for the first time.

Professor Sayers rightly defends the British point of view on the many vexed questions that arose between "the most unsordid act" of December, 1941, and its savagely abrupt ending on August 19, 1945: the harsh limitations on British exports imposed by the lend-lease administration; the Americans' restricted notions of "the pooling of resources" when they, too, had become belligerents; their lack of appreciation of our proportionately large contributions in reciprocal aid; even their crude concern to keep the South American market to themselves whatever the damage to Britain. But he accords some blame also to the British authorities for their lack of understanding of American positions and their disinclination to explain themselves fully. Above all, though negotiations proceeded endlessly, the lend-lease goods flowed and in a mounting stream: "friendship and exasperation advancing hand in hand." (The phrase, like many others in this book, is that of Keynes.)

"Financial Policy, 1939-1945" is a war history; but it is also an inside story, expertly told, of Britain's financial administration. It will be, as it should be, referred to frequently as such. Is there any good reason why it should not be followed by a "Financial Policy, 1945-51"?

The Church's Living

ECONOMIC PROBLEMS OF THE CHURCH: *From Archbishop Whitgift to the Long Parliament.*
By Christopher Hill.
Oxford University Press. 381 pages. 42s.

"THE King and the priest," Laud told Charles I, "are bound to look to the integrity of the church in doctrine and manners." But, he was quick to add, "they must be careful of the church's maintenance too, else . . . all's lost." Mr Hill's object has been to analyse the problems of the church's maintenance in the two generations that preceded the Civil War and to show why, given the magnitude of those problems, Laud's policy, "by making reform impossible, precipitated revolution."

It is a study of great learning, power and conviction, admirably organised and written. Mr Hill knows how to sharpen the edges of his arguments by quiet irony and how to illuminate the evidence of records by careful use of the literary sources. Moreover, his arguments gain in force because he appears anxious not to claim too much for them. No philosophy of history, he tells us, should be read into his selection of subject matter. All he argues for is that the economic problems of the church "seem to deserve more prominence than is usually given to them in accounts of the causes of the English Revolution."

Most readers will think that Mr Hill has more than proved this modest claim. Inadequate maintenance was the chief problem of the Laudian church. That poverty was the product, not merely of the Henrician Reformation, but also of the Elizabethan spoliation by courtiers, by bishops making large provision for their families, and by lay impropriators, who sometimes acquired as much as 98 per cent of the tithe revenue of the living. Moreover, the rapid economic changes of the period, the rise in prices and the shifts of population operated to reduce still further the church's share of national wealth. There were two courses open to the clergy. They could protect themselves by pluralism, non-residence, litigation for tithes, racking fees or taking up secular pursuits; and they thus presented the Puritans with easy targets. Or they could accept stipends from patrons or corporations at the cost of conforming to their employers' views, usually Puritan, thus weakening the control of the hierarchy. All this Mr Hill demonstrates with admirable clarity and an abundance of evidence which adds a great deal to knowledge and understanding of the period.

Both Whitgift and Bancroft recognised these problems and the difficulty of solving them; but it was left for Laud to frame and win royal backing for what Mr Hill calls "a vast programme for restoring the church to the economic and political position it had enjoyed before the Reformation." The reconstruction of the English church meant the destruction of the English monarchy. In the long run, Mr Hill observes, the men of conviction on both sides were defeated and a patched-up compromise devised.

There is, however, a startling contrast between Mr Hill's usual precision and the bold dogmatism with which he relates his period to those that preceded and followed. When taking the wider view he relates everything to "the logic of events," to "a common factor in these converging tendencies of thought"; and that common factor is the rise of capitalism and the concomitant bourgeois revolution. Crude generalisations on the Middle Ages enable him to exaggerate the novelty and the gravity of the economic problems of the church in his chosen period. Were not the personalities and policies of Laud and Charles, rather than the logic of events and the rise of capitalism, the decisive but temporary irritants? Mr Hill has two answers: the dogmatic one that there was a bourgeois revolution; and the scholarly one that "a proper answer could be given only after analysing in detail the effects of the Interregnum upon the church." In this book Mr Hill gives so many proper answers to so many big and difficult questions that it is hard to take seriously these occasional expressions of a crude philosophy of history which he himself elsewhere disavows.

Mom

THE AMERICAN WOMAN.
By Eric John Dingwall.
Duckworth. 286 pages. 25s.

NOT since Mr Philip Wylie's "Generation of Vipers" has the American Mom taken such a pasting as Dr Dingwall administers in this erudite, entertaining and rather nasty book. It is not, he explains, entirely the fault of "the American woman" that she is domineering, discontented, unsexed, sex-obsessed, immature, neurotic; a prey to charlatans commercial, cultural and spiritual; and addicted (this is a new one) to wearing hats easily recognisable by the trained eye as fertility symbols. Study of the historical evolution of American society shows how she got that way. The Puritan tradition, emptied of its genuine religious content but still exacting lip-service, is chiefly to blame. Linking sex with sin, it set up ideals of purity incompatible with any satisfying relationship between the sexes. Linking material success with virtue, it justified a frenzied devotion to money-making. Sex-starved women revenge themselves by henpecking their husbands; their husbands retaliate by escaping from them whenever possible in the masculine world of money-making and sport; growing up in homes where Father lacks prestige, children develop fixations on Mom; momism thus perpetuates itself from generation to neurotic generation; and America is consequently a pretty dreadful place. This summary, of course, over-simplifies the argument. The pioneering tradition played its part, so did the "melting pot" with its emphasis on conformity. But the central thesis—that the chief shaping or mis-shaping principle of American society is the sexual dissatisfaction of its women—remains unaffected.

The illustration and justification of this thesis, historically and in the present, take Dr Dingwall into some curious corners—using the word both in its usual sense and in that employed by booksellers. Soap opera and the idiosyncrasies of Puritan sinners; the cult of the bosom and that of luxury plumbing; behaviour in nineteenth-century female academies and advertisements for men's underwear; charm schools, "Mairzy Doats," laxatives and strip tease, all fit into the picture, along with more familiar elements such as Hollywood, dating procedures, and women's clubs; and very entertaining it is. Entertaining, and genuinely illuminating too; but Dr Dingwall really proves a great deal too much.

On the side of causes, there is nothing specifically American about Puritanism; why was its heritage so much less disastrous in the Old World? On the side effects, Dr Dingwall's portrait will probably seem oddly lopsided even to those who recognise its constituent features most readily. To see in the American zest and gusto nothing but neurotic restlessness, in the eager open American mind nothing but immaturity, in the American drive and energy nothing but obsession, and in the American achievement nothing (except the Tennessee Valley Authority) but a fevered amassing of gadgets, is a blindness hardly less remarkable than that of Main Street itself. Possibly a sense of humour, which would have done much to improve this book, is an unscientific quality. So, assuredly, is animus. "The American Woman" contains some salutary truths; but it is rather too like another sociological work, of which the same could be said—"Mother India."

Growing Cocoa

NIGERIAN COCOA FARMERS: *An Economic Survey of Yoruba Cocoa-farming Families.*
By R. S. Galletti, K. D. S. Baldwin and I. O. Dina.
Published on behalf of the Nigerian Cocoa Marketing Board by *Oxford University Press.* 783 pages. £5 5s.

WITH the publication of this book of 780 pages, the West African cocoa-farmer must have become, if he is not already, the most written-about peasant farmer of all time. The controversy about the peasant's predicament with widely fluctuating prices under the prewar system of marketing first began in 1937. This led to the adoption during the war of statutory marketing with the producer price fixed for a year ahead, a system now made permanent. Counter-criticism of the statutory system and arguments in its defence have led to a spate of articles and books in recent years, the flow of which is by no means over.

Although the present volume is not directly concerned with this issue, despite item (h) in its terms of reference, it does provide much indirect evidence upon it. For example, it mentions repeatedly that expansion of cocoa planting in Nigeria is limited by lack of suitable land, the influence of the price factor being therefore difficult to assess. It also confirms by direct inquiry the fact that cocoa-farmers in Nigeria, like those in the Gold Coast, have a firm preference for statutory marketing, despite grumbles about the Cocoa Board's price policy. But the book as a whole is less concerned with marketing than with cocoa farming by the individual producer. It contains invaluable material on the organisation of cocoa farming, planting and the care of farms, on labour employed and on other costs. It also examines the cocoa-farmer's personal budget, his sources of income, his expenditure and changes in his assets and his liabilities.

The picture presented of the Nigerian cocoa belt is quite unique in the quality of its detail. It is obviously based upon minute observation and careful recording. The authors must be congratulated upon the diligence and care of their inquiries and upon the skill with which the raw mass has been served up for human consumption. Yet, to some extent, the very readability of the work must be a criticism of its quality. The authors are frank about sources of error in the raw data, and about the highly selective methods they have used for drawing up the final list of survey "families." But in a sense they make too light of their shortcomings by giving no statistical evaluation of reliability. Nor is there enough information about field methods used in the collection of each different set of figures to warrant full confidence in their validity. To have gone further into the mechanics of field work, and to have printed the analysis of subsamples and other cross-checks referred to in the introduction,

would have made this volume less readable. The mistake, for which surely the advisory committee must share the blame, lies in trying to present material of this kind in a single volume. The detail of interest only to the specialist could have been published more fully (and more cheaply) in learned journals or as monographs. These would also have been a more suitable venue for the rather fancy superstructure of analysis, which will here escape informed criticism and discussion.

While we are thus left ignorant of the proper degree of significance to be attached to the figures presented, to anyone who knows West Africa there is no doubting the validity of the broad general picture. This study gives an excellent impression of the structure and functioning of the market economy of the Nigerian cocoa belt, and it will certainly become an important work of reference. It is unfortunate that the high cost of including so many tables and unduly refined statistical analyses has caused the book to be too expensive for the ordinary student of West African affairs.

Ruins and Cabarets

EUROPA MINOR.
By Lord Kinross.
John Murray. 179 pages. 18s.

IN an earlier book Lord Kinross described his travels in Turkey, mainly from Istanbul along the Black Sea coast and down Turkey's eastern frontier to Iskenderun. In the present book he completes the circuit, from Iskenderun along the Mediterranean and Aegean coasts and back again to Istanbul.

Lord Kinross is an experienced but unpretentious traveller, closely observant, and able to record what he sees, smoothly, vividly and with humour. As a travel writer he has few aspirations after profundity, none after cleverness; he is content to keep himself in the background. He has a happy knack of describing the look of the land (and the sea) in a simple, yet unhackneyed, way. He is conscientious, but not dull, about the ruins, and his excursions into history are clear, concise and well proportioned to the rest of his tale.

But even those who take their history and archæology most seriously might be tempted to feel that Lord Kinross is often at his best when describing his chance encounters with the living inhabitants of coastal Turkey; there was the sturdy inspector from the Ministry of Agriculture who drove Lord Kinross through part of Cilicia, spoke little, laughed sometimes, and laughed loudest when it was discovered that his passenger's baggage had jolted out of the Land Rover and "might well have vanished over a precipice"; there was the doctor at Marmaris who was proud of his clothes—"a pyjama jacket, Glenurquhart tweed trousers and grey suede shoes"—spoke "confident English" and announced that "like the English, I am a sportsmanship." And many others. There is also the memorable description of the five Turkish cabaret girls at Denizli who sat squarely in a row on hard chairs and warbled, unaccompanied "in the style of some voluptuous, profane Muezzin"; one of them wore dahlias in her hair "and at other strategic points." Not the least of the author's virtues is his ability to assimilate cabaret girls, the ruins of Troy, a fish-curing station in the Meander Valley and a multitude of other scenes and impressions into a remarkably homogeneous whole.

Unreal Conflict

CHRISTIAN THEOLOGY AND NATURAL SCIENCE.
By E. L. Mascall.
Longmans. 349 pages. 25s.

IT might be thought that nothing new could be said on the well-worn theme of Christianity and science, but in his Bampton Lectures Dr Mascall has produced a book that engages the attention from start to finish. His standpoint is unusual, for he is equally at home in quantum theory and in scholastic philosophy. There appears to be nothing on the subject that he has not read, and his wealth of illustration is not only massive but arresting. The story of the Orthodox priest-biologist who has found the chromosome whereby original sin is transmitted is *ben trovato*, even if not *vero*; and there must be buried in the archives of the Vatican an authoritative answer to one problem that is incidentally raised—the resurrection of bodies of the victims of cannibals.

These are, however, only two byways into which Dr Mascall strays from his main theme. This is that Christian theology and natural science give no real ground for conflict—though "conflict" is the word that almost inevitably follows mention of "science and religion" in the method of psychological analysis known as time-association. Dr Mascall prepares the ground by showing how many conflicts there have been within science itself, such as the age of the solid earth and the nature of light. Where tension has existed, it has usually been due to an unwarranted claim of finality for scientific theories, or an assumption that theological formulations are irreformable. Science has in history rendered considerable service to theology, as in the unification of the sublunar and supralunar realms or the supersession of astrology. Theology, for its part, laid the foundation of modern science by winning acceptance for its belief that there are regularities in the world, and that those regularities are contingent, so that they have to be sought for, not predicted *a priori*.

A detailed analysis of some modern discussions of the nature of scientific discourse shows that the theories of science are not straightforward literal descriptions of the real constitution of the world. The maps or models which science uses, whether constructed out of physical images or purely mathematical concepts, are deductive systems, whose function is to co-ordinate empirical observations and to permit predictions. There is a large margin of arbitrariness about which theory we adopt in any particular case, and there is no reason to suppose that logical necessity in the structure of a model implies any kind of necessity in the structure of the facts that it depicts.

On this basis Dr Mascall examines a number of questions that have given rise to controversy in the past. The first is cosmology and contingency. Christian thesis, he says, maintains that the universe owes its existence to a creative act exercised by a self-existent God, who is both omnipotent—and therefore able to create—and also absolutely free—and therefore under no necessity to do so. It thus stands in contrast with all views which regard the universe as necessary, and failure to recognise this fact has been a source of much confusion among philosophers. This chapter has a very valuable discussion of the theories of Eddington and Milne, who are found to be unconvincing, though they may have shown that the world has more necessary characters than was formerly thought. A second specific question is that of creation. It is well known that men of science from purely scientific considerations have now come round to the view that the physical universe had an origin so many millions of years ago, but the enthusiastic reception given to this fact by Pope Pius XII will be new to many readers. Dr Mascall himself is more cautious, holding that creation in the philosophical and theological sense has no essential connection with the question of a temporal beginning. Taken as a whole, the book is a notable addition to the long series of Bampton Lectures, and will enhance its author's already solid reputation.

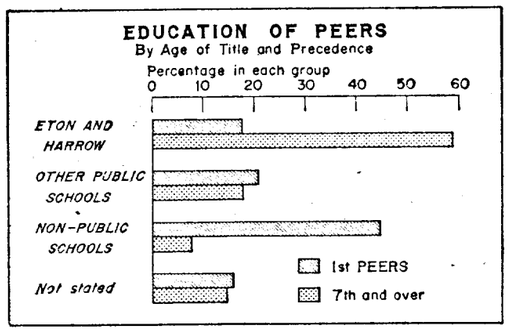
Comparative Institutions

GOVERNMENTS OF GREATER EUROPEAN POWERS.
By Herman Finer.
Methuen. 1,037 pages. 60s.

THIS is one of the weightiest works on politics to appear for a long time; the difficulties involved in handling it, for this reason, are increased by the fact that it is printed in double columns with the pages interlarded with maps, tables and diagrams and frequently broken up by headings and sub-headings in various thicknesses of print. It is an English binding-up of an American college textbook, a testimony to its author's faith that "it is wrong to treat American undergraduates as babies" and that they can be expected to assimilate far greater amounts of factual material than some of their teachers assume. Although Professor Finer believes that comparative politics is more scientifically studied if institutions are compared systematically one with the other, he has for pedagogical reasons accepted a country by country approach and deals here at a very considerable length with Great Britain and France, and slightly less exhaustively with the Soviet Union and Germany.

ermine side by side—the man of lineage along with the man who had toed the party line.

The importance of political services in raising commoners to the peerage is clearly brought out in the chart on page 200. It shows that 47 per cent of new peers have served in the House of Commons, 35 per



cent have been Ministers of the Crown, 39 per cent have worked in local government, and 57 per cent have done other kinds of political service—mostly in local party organisations. These high percentages quickly fall away for second and later holders of titles. These, of course, can serve in the House of Commons only before they succeed to their title, and perhaps it is surprising how many—12 per cent—contrive to cram in a short Commons career before they are finally debarred by a coronet from worthwhile parliamentary life. What is particularly notable—and commendable—is the way in which peers with no hope of political advancement give their time to the often thankless task of local government. Thus 37 per cent of seventh holders of a title and above have given time to local government work, most of which is unpaid.

It will be asked how far those who achieve nobility in fact come from the upper classes. The figures given on the schools of peers go some way to answer this question. Over half of all peers went to Eton or Harrow, and a further 20 per cent to other public schools. Possibly some of those who venture no information about their school careers in *Who's Who* nevertheless went to public schools. But the difference in education between newly made peers and older peers is striking. As the accompanying diagram shows, only 18 per cent of new creations went to Eton or Harrow, compared with 59 per cent of seventh holders of a title and above.

A new peer may not have been to a public school himself, but once ennobled he tends to send his sons to Eton or Harrow. Rather more than half of those who are ennobled send their heirs to those schools and another 20-30 per cent to other public schools. Thus are the old and new nobility welded together, learning *noblesse oblige*—which later comes out in local government and in other ways to be dealt with later—at academies specially fitted to inculcate it. Besides, at Eton and Harrow young noblemen feel less conspicuous than at other schools. Whether this will continue is another matter. Some indication of the economic prospects of the peerage will appear in the succeeding article.

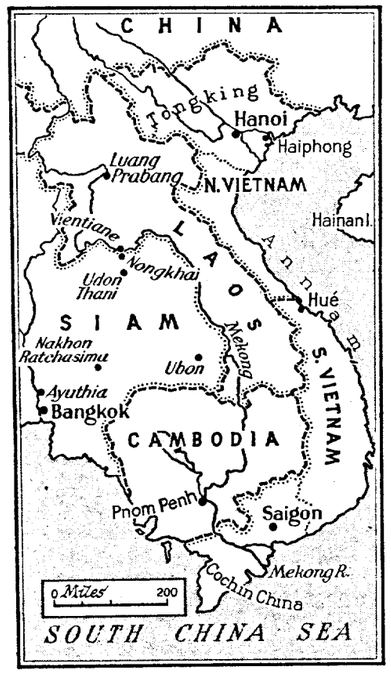
Vietnam in the Hazard

JUST two years ago M. Mendès-France had won his gamble with time: peace in Indo-China within a month, or his resignation as premier of the defeated French republic. The exhausted representatives of nine nations at the Far Eastern conference in Geneva had cast their eyes over the final draft of a declaration (issued on behalf of the conference, though none of the participants signed it), which laid down certain guiding principles designed, among other things, to preserve the peace in Indo-China and to ensure the unification of divided Vietnam. Unification was to have been accomplished this month by means of general elections throughout the country. But the elections remain hypothetical. The Geneva declaration has been a dead letter ever since Mr Ngo Dinh Diem, President of the (South) Vietnamese Republic, made it clear a year ago [illegible] he would not take part in pre-electoral consultation with representatives of the communist regime in the north from July 20, 1955, onwards, as the declaration had required.

[illegible] the height of the war in Indo-China it was [illegible]pted as axiomatic in Washington and London, as well as in Paris, that Indo-China was the gateway to South East Asia: its loss, so the argument ran, would open the floodgates to the communist tidal wave. Once the Viet Minh had gained control of the whole of Vietnam, outflanking Laos and Cambodia, they would threaten Siam and eventually join their comrades in the jungles of Malaya; the loss of Singapore would be only a matter of time. Nothing that has happened in the last two years has made this argument any less valid than it was when the agonising battle of Dien Bien Phu had brought Mr Dulles to the second of his brinks. This is true even though a Vietnam won by peaceful methods would be less threatening than a country overrun by an army avid, perhaps, for fresh fields to conquer.

But the engulfing of South East Asia by the victorious army of General Giap as the spearhead of China's hordes now seems a remoter prospect than when the ink was drying on the Geneva agreements. At one time, the probability was that if July, 1956, did not bring South Vietnam under the Viet Minh's control, President Ho Chi Minh of the (North) Vietnamese Demo-

cratic Republic would order a southward thrust which, because of the enormous superiority of his army over that of President Diem, would bring him victory in a matter of weeks. It has never been in doubt that by retaining control of two provinces of Laos through the Viet Minh-officered Pathet Lao forces—in flagrant violation of the Geneva agreements—Ho Chi Minh has been maintaining an advance base from which an outflanking attack against South Vietnam could be made more conveniently than across the narrow coastal strip of Annam at the dividing line along the 17th parallel.



While such aggression cannot yet be ruled out, it does seem to have receded from the calendar of immediate dangers. Indeed, in the Far East almost as much as in Europe, communist tacticians seem to have placed war as an instrument of policy in cold storage. Several factors have contributed to this change of tactics: the South East Asia Treaty (Seato), which drew an imaginary line over the frontiers of the Indo-China states and warned the communist countries not to transgress it; the developing fear of a suicidal nuclear war; and the Bandoeng conference, which opened the eyes of the Chinese and Viet Minh foreign ministers, Chou En-lai and Pham Van Dong, to the universal desire for peace of their fellow-Asians, making them, as it were, the prisoners of the "five principles" Chou himself had drafted with Pandit Nehru.

When, at a conference in Hanoi last September, the Viet Minh formed a "Fatherland Front" with the object of promoting the unification of Vietnam by peaceful means, and specifically renounced military means to achieve unity, it was clear that Moscow's change of policy had reached the local plane. It has indeed, long been apparent that the Russians would exert a restraining influence on their distant co-religionaries of the Viet Minh—a point that was confirmed in London in the spring, when the Russian delegate at the Anglo-Soviet conference of the Geneva co-chairman accepted the British thesis that it was more important to preserve the peace in Indo-China than to hold all-Vietnam elections at the appointed time. The replies from South and North Vietnam to the messages sent by the co-chairmen after the London conference were published this week; they give substance to the hope that there will be no outbreak of violence in the coming months.

If military action seems unlikely, there is no evidence of a change in communist purposes in South East Asia. There is a change of method: the Viet Minh will seek their objectives by other means—infiltration, subversion (culminating, if all went according to plan, in riots and attempted assassinations of Vietnamese government leaders) and economic and social competition. If this is so—and all the evidence points that way—how will the Diem regime in South Vietnam stand up to the challenge? On the power of the regime to resist subversion, there is certainly ground for tempered optimism. The very survival of the regime, in the face of apparently insuperable odds, has demonstrated its vigour.

Two years ago it was generally assumed that Mr Diem would not long remain in office. Largely untried himself, he had inherited a legacy of almost inconceivable chaos: a defeated and demoralised army, three major rebellions and several smaller ones, a flow of refugees in thousands from the north. To set against this, he could muster only two assets: on the one hand, staunch political support and bountiful material aid from the Americans and, on the other, a character of extraordinary obstinacy and single-mindedness. The first eighteen months of his regime were a constant—and in the end successful—struggle to assert and consolidate his power. Today, while the loyalty of the thousands of brain-washed ex-Viet Minh supporters who are now claimed to have "rallied to the government" must remain in doubt, it seems plain that the power of the Viet Minh in the South has been, or soon will be, broken. Indeed, if the Viet Minh had been as strong as the propaganda of its supporters or of Diem's detractors had made out, it would certainly have prevented the holding of the anti-Bao Dai referendum last October and of the Constituent Assembly elections in March.

Whether the economic and social challenge of the North will be met as successfully is still in doubt. In a sense, the battle for rice production in the Mekong river delta in the South is as important to the "free world" as was the battle for the physical control of the rice bowl of the Red river delta in the North during the Indo-China war. Only by restoring paddy output to what it was before the war can South Vietnam earn enough foreign currency to import the capital goods it needs for its economic development and to make it politically independent of American aid. The massive aid which the Viet Minh regime receives from China and Soviet nations is entirely directed towards capital development. A railway has been built to China, the coal mines and

works of Tongking are in full production again. This challenge in what might be termed the "race for viability" cannot be met by methods that succeeded in different circumstances in the past. Indeed, responsible Americans have long been aware of the need for a fundamental rethinking of the basic concepts of their aid programmes to countries like Vietnam. When Senator Mike Mansfield, the "creator" of the Diem regime, reported on his latest visit to Vietnam last October, he recommended the appointment of a special American mission to Vietnam to redesign the aid programme in order to enable the Vietnamese to stand on their own feet. And President Eisenhower—aware that countries receiving aid on a yearly basis cannot be expected to embark on long-term development projects—asked for the power to make commitments for up to ten years when presenting his aid programme to Congress in March. There has been no action on Senator Mansfield's suggestion, and Congress has turned down the President's request.

Yet it is increasingly probable that the battle will be lost or won on the economic front. It could even be seriously argued that a British grant to aid the Diem government in restoring rice production or in resettling its refugees might be as valuable strategically as expenditure on the naval base in Singapore. If the time comes when South Vietnam has a well-fed, well-housed and contented peasantry, and a "prewar" surplus of rice and rubber for export, the Diem regime, or its successor, may find that it can contemplate without fear the prospect of "co-existence" and even of reunion with the more populous North. British trade would in that event be better safeguarded than by any military alliance.

Notes of the Week

Nkrumah Wins

THE result of the general election in the Gold Coast is decisive, and for that everyone in this country can feel thankful. Dr Nkrumah's Convention People's Party, campaigning on the issue of immediate independence, has emerged with almost the same sweeping majority which it secured in 1954—69 seats out of 102 declared, with 2 results still to come. This is far larger than most commentators on the spot expected in view of the strong fight put up by the opposition in the past year. But the opposition challenge has signally failed. Not only has the CPP won a large majority for the country as a whole, but it has won a respectable number of seats in the three provinces where it might have been in so hopeless a minority as to have forfeited any claim to lead the country as a unified whole. It has won a majority in Transvolta-Togoland, well over a third of the seats in Ashanti where opposition has been bitterest and best organised, and eleven seats in the Northern Territories where one of the government's hottest critics, Mr Braimah, was unseated. Dr Nkrumah's veteran opponent in the colony, Dr Danquah, failed to regain his seat and the government made a clean sweep.

Mr Lennox-Boyd can hardly hesitate to pronounce these results a "reasonable majority" in favour of independence in a unitary state, and against any further delays by way of a constituent assembly to work out a federal solution, such as have been demanded by the National Liberation Movement in Ashanti and its ally the Northern People's Congress. It is true that the NLM may yet argue that the CPP failed to win over a third of the votes cast in Ashanti, for its 11 seats are held by narrow majorities. This is the stock retort of the beaten party in a British parliamentary system. It won't wash; and Mr Lennox-Boyd should say so. But that does not mean that it will not tempt supporters of the NLM to think that they must now organise to win their ends by other than constitutional means. They should receive urgent and immediate counsel to suppress such dangerous thoughts. But, above all perhaps, Dr Nkrumah must be generous in victory and implement the Bourne scheme for regional devolution in full. He won by superior appeal, organisation and funds—the last being a big factor. He will get independence—but he can only make a real success of it with the co-operation of Ashanti and the North.

Crisis by Zik

MR LENNOX-BOYD will have to explain what he has done, if anything, to make Dr Azikiwe, premier of the Eastern Region of Nigeria, send him—and generally release—one of the most boorishly worded telegrams the Colonial Secretary can ever have received from a colonial minister. Dr Azikiwe threatens to resign unless the governor is recalled, and accuses both the governor, Sir Clement Pleass, and the Colonial Secretary of improper interference with the region's government and of political bias. More specifically what infuriates Dr Azikiwe seems to be a move by the

governor to get the legislature to examine government finances, and especially an African bank in which the government holds deposits, after the speaker had ruled a motion on the subject out of order because certain libel cases started by the premier against people and newspapers that have been insinuating irregularities put the matter *sub judice*.

Sir Clement Pleass has been in trouble before with Dr Azikiwe, and on that occasion—when he reserved a finance bill into which clauses had been inserted to abolish certain appointments held by Europeans—he proved to be in the right. But whether he is in the right or not on this occasion the violence of Dr Azikiwe's reactions strongly suggests that more is at stake than the use of the governor's powers. This can in any case be easily remedied before long, because Dr Azikiwe has the right to claim independence for the region this year as Mr Awolowo has already done for the West. He can then dispose of the "British banking monopoly" exactly as he will—if he can find one.

The political indications are, however, that Dr Azikiwe feels in need of a diversion. He does not like the persistent enquiries that have been made about the bank with which his name was associated. He does not like, perhaps, some of the political pressures being exerted upon him in his own party, or the state of the region under his party's rule. He does not like the outlook for the constitutional conference next September where his bid for a stronger centre (which has much on rational grounds to commend it) is likely to be defeated by the strong feelings for autonomy in the other two regions and their profound suspicions of Dr Azikiwe himself—which his latest outburst will not allay. So he dumps the region in Mr Lennox-Boyd's lap. Mr Lennox-Boyd should return the chalice—it is poisoned.

Plain Words from Padiham

SIR ANTHONY EDEN just missed making a first-class speech at Padiham last week. This is a pity. By felicitous timing and the coinage of some striking phrases he contrived that the same newspapers which devoted acres of space to Mrs Miller also gave headlines to the warning that the country risked "poverty by stages." That needed to be strongly said and widely read, though whether his warning of "mortal peril" will prove salutary at home without frightening holders of the pound abroad, as it did last summer, remains to be seen. Still, Sir Anthony went a fair way to meeting what should be two main objects of the Government's public relations at the moment: to keep the picture of what will happen if inflation is not stopped before the public and to resist all attempts to stop the process of disinflation. His comment that "there is no international welfare state" helped to drive home the first point, while on the second he showed firmness in defending the Government's efforts to encourage greater mobility of labour and to give no encouragement to new wage demands; on wages he may perhaps have been heartened by the thin arguments—and thinner attendance—that he met in the House of Commons two days before when he argued that, for example's sake, restraint must begin at Westminster.

But where Sir Anthony might profitably have turned from the stick to the carrot, he faltered. It was a party occasion, and he had, of course, to take his brief from Central Office as well as from the Treasury. He made a witty and effective attack on Labour's plan for equality, but he was unable to cap it with a convincing statement of the Tory alternative—which is after all what Tory electorates the country over are waiting for. The Tory Central Office should certainly forbid Sir Anthony to use the words "property-owning democracy" again until he has explained what he means by it. Until he does the presumption will grow that he does not know; and this is one of several points on which there is an urgent need for the Tories to do some rethinking. Between dispelling the danger of "poverty by stages" through the ardours of disinflation and mobility of labour and Mr Butler's economic grail of a doubled living standard lies a long and still poorly illuminated road.

Mr Rakosi Goes

THE bullet-headed Mr Matyas Rakosi looks so exactly what he is—a tough Communist diehard of the old Stalinist guard—that his fall comes as a surprise. Yet the tide had clearly been running strongly against him. Ever since the Soviet party congress last February, opposition to Mr Rakosi within the Hungarian Communist party has been strong and at times surprisingly vocal. His position appeared to depend increasingly on the open support that he still enjoyed from Moscow. His resignation as First Secretary of the party only a few days after his return from a visit to Moscow indicates that the Russians decided to drop him. Their decision was no doubt partly a consequence of Marshal Tito's visit to Moscow; it is significant that Mr Rakosi's successor, Mr Erno Gerö, has lost no time in eating humble pie about past Hungarian "calumnies" of Jugoslavia.

Yet even without Marshal Tito's prodding, it must have been more and more obvious both in Moscow and in Budapest that Mr Rakosi would have to go. He is so clearly the kind of leopard who could not possibly change his spots. He made some effort to toe the new line; he admitted mistakes, denounced the personality cult, extolled collective leadership, rehabilitated Mr Rajk and made gestures to the Jugoslavs. But in spite of all he said and did he remained a hated symbol of Stalinist repression and a stumbling block to all those who want to make Communist rule more popular in Hungary.

The fall of Rakosi may not, however, mean any sweeping changes in Hungary—at least not yet. His successor is not Mr Imre Nagy, who last year was dismissed from the premiership and later expelled from the party for his "Right deviation," and who has since become identified with the demand for more liberal policies. It is the economic expert, Mr Gerö, an old Stalinist, who has apparently worked closely with Mr Rakosi. Mr Gerö's speech on Wednesday to the central committee suggests that the Hungarians can hope for some economic relief, but that the party will continue to stamp heavily on ebullient Communist intellectuals, like the group (known as the Petoefi circle) which was recently strongly castigated for advocating "bourgeois and

counter-revolutionary views." An interesting distinction is being made between "incorrect views," which can be tolerated, and "opportunist views hostile to the party" which cannot. The distinction may not prove easy to maintain.

Mr Zorin's Recall

WHEN the Russians nominated as their first ambassador to Bonn Mr Zorin (a deputy foreign minister, and well known as the diplomatic sapper who in 1948 blew Czechoslovakia's bridges to the west), the west German government received their choice uneasily. A less important man would have better suited the desire of Dr Adenauer and Herr von Brentano to give the quietest possible start to the new relationship between Bonn and Moscow. Now, after barely seven months on the Rhine, Mr Zorin has been abruptly recalled. His term there has not been short beyond precedent; indeed, that of M. Joxe, the French ambassador in Bonn, has almost coincided with it. But M. Joxe, as is known, is leaving to take over the highest official post at the Quai d'Orsay, and he has allowed himself comfortable time for his farewells.

Mr Zorin broke the news to Herr von Brentano on Saturday afternoon, when the federal foreign minister was preoccupied with Mr Nehru's visit; he took his leave of Dr Adenauer on Monday, and left on Wednesday. The significance of his recall cannot be assessed with any certainty until it becomes known what new duties he is taking up and who, if anyone, is to succeed him. He has said nothing to explain it. Its abruptness has come as a shock in Bonn.

Neither the Soviet foreign office in Moscow, nor Mr Zorin himself, had made any attempt in recent weeks to conceal their dissatisfaction with the state of relations between Bonn and Moscow. These were not at all what the Russians had in mind when the agreement to exchange ambassadors was made, with a fanfare of reconciliation, in Moscow in September. The new channel was not working in either direction: Herr Haas in Moscow was being starved of instructions by his government; Mr Zorin in Bonn was being kept in quarantine. Politically frozen, Mr Zorin remained socially indefatigable, travelling widely about Germany and making sure that it should be known that his reception in Bonn had been disappointing. Some Germans thought his complaint justified and the federal government's tactics mistaken. An official dinner which Dr Gerstenmaier, the president of the Bundestag, gave to Mr Zorin on the Petersberg, on the suggestion of the Social Democrat vice-president, Professor Schmid, was prompted in part by such a feeling; the Bundestag was stepping into the gap created by the government.

Mr Shepilov may merely have decided that Mr Zorin was wasting his time and might as well come home; or he may have intended a gesture. On a narrow calculation his action may suit Dr Adenauer, who, taken aback by the hostile American reaction to his agreement with the Russians in September, has been working to limit the damage ever since. But a body of German opinion is already impatient at the failure to use the new channel to Moscow in pursuit of German unity. Whether deliberately or incidentally, Mr Shepilov by recalling Mr Zorin has given fresh fuel to that discontent.

Defence and Politics

THE Commons debate on defence which looms in the week after next is building up to a very serious occasion. Can the savings, which now seem to be accepted as inevitable, make sense both in military terms and in terms of the western alliance? The Government has barely been keeping within the bounds of responsibility, and now Labour has apparently decided to step right over. The Labour MPs are reported to have decided to ask the Government to abolish the call-up by the end of 1958 and to make a big cut in defence expenditure. To make sure that no vote-catching is left untried, it is said that Labour will also suggest that the two-year period should be cut in the meantime. The one sensible idea for saving manpower at once—the adoption of a system of selective service—will evidently be sternly opposed in the sacred name of equality. To give the whole rigmarole a spurious air of responsibility a rider has been slipped in that Nato must be consulted. What if Nato objects or makes alternative proposals? Colonel Wigg is said to have protested that all this was quite unrealistic; if so, he deserves to be congratulated.

It is all too obvious that much of this new Labour policy springs from anxiety that the Government may steal a political march. If Ministers now find themselves facing embarrassing political pressure they have only themselves to thank; from Norwich onwards Sir Anthony Eden has laid a trail of momentous implications. The Government's duty in the coming defence debate, however, is clear; it must explain the big cuts it now plans not only in economic but also in strategic terms. This will be all the more important if, as seems likely, Ministers will not be in a position to bring the matter down to details. Labour's duty is equally clear: to remember that by 1960 mistakes made now will have flowered into intractable problems that could endanger the security of the country for which Labour may well be responsible. Does it want another Attlee rearmament crisis?

Arms and Fudge

"GAD, Sir, Mr Shepilov is right!" Colonel Blimp, had he not died gallantly in the war, might well have subscribed to the Soviet foreign minister's remarks on Monday about the futility of the United Nations Disarmament Commission. More patient mortals, too, will be exasperated by the sight of the commission, after a fortnight of sterile bickering in New York, simply passing the baby back to the same five-nation sub-committee that met in London in the spring. The majority group in the commission evidently feels that the world ought to recognise Soviet intransigence as the sole obstacle to agreement; but it has so mismanaged its case that in most people's eyes the issues are more confused than ever.

Ludicrously, while the western governments are each contemplating unilateral arms cuts, their spokesmen have been wearying the commission with reservations about the extent to which their countries could disarm even by agreement. They have thus handed Mr Gromyko a splendid

opportunity on a plate. Last week Mr Gromyko took it; and who can blame him? He must have enjoyed being able to say that Russia would accept the armed manpower limit of 2½ million now sponsored by the United States, but would like to press on as soon as possible to the 1½ million level originally proposed by France and Britain. When western diplomats begin to make rueful jokes about "these confounded Russians—always saying yes," and to reveal a yearning for the good old *nyet* days of Mr Molotov, is it surprising that public opinion should go sour?

The West might have used the New York meetings to explain to the world—having first cleared its own collective mind—the difference between the arms cuts that dependable international control would make possible, and those that are possible now; the fact that a "partial" control system, such as Russia proposes, would play into the hands of whichever powers proved the more unscrupulous; and the fact that unilateral arms cuts necessitated by economic pressures offer the world no lasting security against war. One resounding restatement of these truths would have stolen Mr Gromyko's thunder. Instead, the western spokesmen took the defensive and trotted out a fudgy-collection of familiar phrases. To go on like this must mean not merely losing the propaganda battle, but losing sight of the essentials of the disarmament problem itself.

Testing . . . Testing . . .

DURING the last United Nations Assembly, India tabled a proposal for the suspension of all tests of nuclear weapons. The Assembly contented itself with referring this proposal to the Disarmament Commission, and in New York last week Mr Krishna Menon asked the commission to act on it. For the United States, Mr Wadsworth argued that tests should be halted only as part of a disarmament agreement embodying effective controls; he agreed with Mr Menon that no nation had the right to endanger mankind's genetic future, and he claimed that American and British tests, staged with due warning and carefully controlled, were better designed to avoid this danger than "unheralded secret explosions in the remoter parts of the Eurasian land mass."

Mr Nutting drew on the Medical Research Council to support his argument that the only real danger lay in the possibility of an increase in the number and scale of tests, and repeated the Prime Minister's offer to negotiate a "rationing" system. Mr Gromyko showed no interest in this idea, but he gave the Indian proposal his full support; and on Monday in Moscow, Mr Shepilov gave the halting of tests a prominent place in his maiden speech to the Supreme Soviet, which duly supported his appeal.

On form thus far, there can be little doubt that world opinion will be more favourably impressed by the Soviet than by the western attitude to tests. However justified the western governments may be in arguing that they cannot afford to stop testing until controlled disarmament is agreed, and however difficult the particular position of Britain, which has not yet tested the hydrogen bomb on which it has already spent much effort, most people will prefer the simple sophistries of Moscow to the tortuous ones of the West. The only thing that is likely to make a positive impact on opinion is a positive proposal—and one lies ready to hand, in the idea of rationing. Last Thursday Sir Anthony Eden was coaxed into conceding that a rationing plan might be negotiated separately if the more general Anglo-French disarmament programme makes no progess. Is it not time to put this concept forward in bold and simple terms, instead of reluctant and qualified ones?

Radioactive Man

THE terms for the House of Commons debate on radioactive hazards were drawn so narrowly that Monday night's speakers found themselves prowling, like wolves outside a palisade, around the main issue raised by the Medical Research Council's recent report on radioactivity and its dangers. Speakers who strayed beyond the medical aspects of the subject were ruled out of order, but the report itself dismissed the main medical bogy of radioactivity—its long-term genetic effects—by calmly describing how the more deadly hazard of strontium from the pulverised fabric of H-bombs would make mankind prey to all kinds of fatal diseases long before nuclear tests and the like had raised the world's level of radioactivity to a figure capable of setting off genetic mutations. The dangers of strontium were precisely described in the report; safety depends on not increasing the rate of H-bomb trials above that current for the past few years. If these fine limits are exceeded, retribution might be expected within this generation's lifetime.

The threat of strontium assumes such formidable, shadowy dimensions that it makes the dangers associated with the peaceful generation of radiation, in factories, atomic power stations, laboratories and hospitals, seem petty by comparison, however critical to the individuals involved. A debate in which questions involving the release of more and more strontium into the atmosphere were ruled out of order was inevitably a sterile affair in which the Minister of Health promised yet another medical committee, this time to look into the disconcerting discovery by the MRC committee that the over-enthusiastic use of X-rays in hospitals has already added 20 times as much radiation to the natural level as all the nuclear explosions put together. Mr Turton also said that new safety codes governing the industrial and clinical use of radioactive substances were in process of being drafted. The Factory inspectors will not find it easy to enforce the rigorous discipline followed by the Atomic Energy Authority establishments in all the factories and power stations that will eventually use these substances.

BMC on the Eve

THE British Motor Corporation is standing firm on its refusal to discuss unilaterally the question of compensation for the dismissed workers; the most it offers is to talk locally about the way any future dismissals might be handled. The unions are bent on negotiation on compensation only, and argue that they are as much under duress by having 6,000 of their members thrown on the labour exchanges as the firm by the threat of a strike. Since the earliest days of railways, locomotives' boilers have been wrapped snugly in quilted waistcoats or "mattresses" of pure asbestos, carefully tailored to conserve and concentrate all the heat within the steam-raising area.
Asbestos can conserve other things besides heat. In atomic energy research establishments, where all risk of radio-active particles escaping into the air must be prevented, the air is purified by special filters made from Blue Asbestos and cotton. Both these uses owe much of their success to the superior properties of a certain type of asbestos from the Cape Asbestos Company's own South African mines. The Company's activities however embrace much more than mining. "Cape" today is an important group owning factories in several countries and producing a number of well-known products such as the range of CAPOSITE thermal insulation materials, CAPASCO brake and clutch linings, and ASBESTOLUX non-combustible asbestos insulation board.

of Labour has failed to bridge this gap, and unless some highly extensible formula is thought up by somebody soon, the fight will be on next week.

It is an unnecessary fight, which nobody wants. Though the company stands to win, it will pay heavily in the loss of production at a time when competition is pressing it hard and the loss of goodwill in its labour relations will be another, if incalculable, debit. The strikers will almost certainly go back, after injuring their source of livelihood and failing to help their redundant fellow workers, without the satisfaction of feeling that they have even established a new procedure in dealing with redundancy. This has already been tacitly accepted by other employers after the Standard dispute; Vauxhalls in giving 520 redundant workers two weeks' notice have earned the encomium from the union of being "fair in the circumstances."

The heaviest casualty will be labour relations generally and the government's labour policy. BMC's tactless remark that it could not give longer notice because its material prospects would be injured will be remembered not only against BMC, but against employers as a whole. It is not surprising that Sir Anthony Eden nodded vigorously when Labour speakers criticised the BMC's attitude. In a sense the BMC's position is impregnable; it observed procedure to the letter; it gave holiday pay along with the legal notice to help tide workers over; its difficulties are the result of circumstances, including government policy, outside its control; it saw what happened to Standards; it is in the right. But all this is a poor substitute for political sense and timing.

Egg Nonsense

FIRST glance at the report of the commissioner who inquired into the egg marketing scheme suggests that it is precisely the sort of balancing-trick, "economics" versus "practicability," which was to be expected after the public hearing last April. The commissioner, a former member of the National Farmers' Union, has come down in favour of the proposed marketing scheme, but the strength of the opposition at the inquiry evidently impressed him enough to decide to try to soften the blow. But it is very difficult to soften either an egg or a monopoly without breaking them. What the commissioner has really done is produce a series of what he calls "major modifications" which demonstrate that the scheme as a whole is totally wrong in principle.

The commissioner proposes to raise the exemption limit from compulsory marketing from producers with 25 hens to those with 50; he would permit casual "farm gate" sales without restriction; and he suggests that other forms of direct sale to consumers should be permitted under licence from the marketing board—which in effect is creating a little competition with one hand and handing it over to the monopoly for suppression with the other. The board would hardly permit private enterprise eggs to undercut the NFU's packing-station eggs—even if they were duly graded and stamped *en route* to the housewife. If this is the commissioner's idea of competition, then it is a naïf one

The commissioner bases his plea for an egg industry that shall somehow exist half-slave, half-free on the grounds that objectors failed to show how the market is to be kept stable unless the packing stations get enough eggs through some measure of compulsion or how the subsidy is to be paid. The short answer is that the subsidy can be paid only on graded and stamped eggs which would give adequate incentive to sell eggs to the packing stations. It is not the packing stations but the consumers that need the eggs. But one good thing has come out of this argument; the commissioner's report has been published* and this alone may cause the Government to think twice about the marketing scheme. "The case in favour of competition," says the commissioner, "is overwhelming." Let the Government accept that as his real recommendation and act accordingly.

Pig Wisdom

THE great merit of the Bosanquet Commission's report† on pigs, on the other hand, is that it rejects all easy panaceas or compromises and backs up its conclusions with a rigorous economic analysis. The pet solution for the "pig muddle" offered by the farmers' union and certain other groups is (once again) a compulsory marketing board which would pay producers fixed prices and allocate their pigs between the three main markets dealing in bacon, fresh pork, and manufactured products. The Commission rightly objects that each of these markets has diverse and fluctuating requirements, and that if the farmer's attempts to seek out his own best market were replaced by the decisions of a single board, the result would be considerable rigidity and "on occasions grave mistakes." Even the more limited planning of the bacon market on its own would entail in practice parallel controls over both the pork market and over imports—neither of which is at all desirable.

Thus the Commission turns to milder remedies for the imperfections of the pig market. In the bacon market it would terminate the near monopoly now enjoyed by the Fatstock Marketing Corporation (the company promoted by the farmers' union) and substitute a system of minimum prices which would be agreed weekly between producers and curers, but which would leave full freedom of individual contract. Conversely, in the pork market, it would like to see the development of farmers' co-operatives as a balancer to the sway of the auction markets. These measures, and the improvement of market intelligence, should help to get a healthier balance between stability and competition. But the Commission's main proposal is for the creation of a Pig Industry Development Authority, financed by a small levy on each pig slaughtered, which would undertake a comprehensive programme for the improvement of pig breeding, production, grading, and processing. The Authority would be representative of all sections of the pig industry. The only doubt about it is whether the three independent members would be able to prod their thirteen colleagues into really effective improvements. But basically the approach is the right one. Instead of seeking for a degree of stability which is not really practicable or wise, the pig industry should grab this chance to get firmly established on its own feet before the taxpayer tires of so much support.

* Cmd. 9805. †Report of the Reorganisation Commission for Pigs and Bacon. Cmd. 9795. 5s. 6d.

. . . And Nothing But Silverman

It is now very unlikely that Mr Silverman's Bill to abolish capital punishment will become law. Questioned this week about the Government's policy towards it, now that it has been rejected by the House of Lords, the Prime Minister was suspiciously non-committal. If, as he implied, the Government may not be able to make a statement before the autumn, then obviously it plans to do nothing so simple as merely to give time for the Silverman Bill to pass through the Commons again next session.

The Bill's future has always rested with the little group of Tory abolitionists. So long as they stood firm, there was a narrow majority for abolition. They have, however, been coming under intense party pressure, not least in their constituencies. This pressure will reach its peak at the annual party conference in early October, and it is known that some Tory abolitionists would now gladly jump for safety if the Government would throw them a rope. This will probably be provided in the form of a Government Bill to amend the law of murder and restrict capital punishment to certain categories.

In 1948, after winning a free vote in the Commons, the abolitionists secured nothing—not even a wider use of the prerogative of mercy. Eight years later it looks as if they will secure the sort of compromise which the Lords rejected in 1948, which a Royal Commission was appointed to examine—and turned down as impracticable—and which the Commons themselves voted against six months ago. One can only hope that the waverers among the abolitionists will stick to their guns, even if it means risking political martyrdom.

London Greets Iraq

No sooner does the policeman at the top of Constitution Hill open the special gate of the park than a knot of people gathers to give the King of Iraq a friendly wave as he drives from Buckingham Palace to some ceremony in London. Some of them simply like to look at a king, but there are other grounds for this friendly interest: some appreciate loyal friends, some have served in Iraq in one capacity or another, and wish nothing but good to this, the sturdiest of the Arab states. After many centuries of forgetfulness, heaven has blessed Iraq: in all the underdeveloped belt of the world there is no other country (except perhaps its neighbour Iran) that enjoys so rich an endowment for developing itself—money, water, room, and resources for an increase of population and a better way of life.

But Iraq has helped itself, too, spending the money it is earning from oil in a more purposeful way than any state comparably endowed. Because its main oil deposits are far from the sea, it lagged for a time behind Iran and Saudi Arabia in earning power. It is now overhauling them, but long before it has done so, it has far more than either to show for its money. Already today the oil revenues are bringing good to many; they can soon bring great good to great numbers provided that, meantime, Iraq enjoys political stability.

This advantage the country at present possesses, though at a price which some of its citizens think high. The last election, in 1954, was a rigged affair which left power in the hands of its old conservative ruling class and, in the eyes of many younger townsmen, produces a staid, even stuffy, policy far removed from the stimulating life they would like to lead—looking now east, now west, on the model of President Nasser. The more sedate and pro-western element is not confined to the generation of the Prime Minister, Nuri Pasha. It includes younger men who realise that their northern oil wells are dangerously close to the Russian frontier and who do not object to a western alliance on the Turkish model provided that this can be engineered without stigmatising them in the eyes of fellow Arabs. On this issue, the future hangs on army opinion more perhaps than on any other factor. On the home front, it hangs on the degree to which even conservative governments can bring into being the jobs and amenities that create a vested interest in tranquility at every social level. Their assignment is to spread the benefits from oil as widely as possible. They are moving fast, but so is a stream of grumbling. The contest between the two remains open, though, given time, the champions of stability ought to win.

Mr Shepilov's Debut

No striking democratic innovations, of the kind foreshadowed by the *Daily Worker*, marked the session of the Supreme Soviet which ended on Monday. Interest centred on domestic economic reforms (described in an article on page 235) though the meeting also provided the stage for the parliamentary debut of Mr Shepilov as minister of foreign affairs. This maiden speech was not actually a memorable occasion. Mr Shepilov broke no new ground. His speech, like the whole foreign affairs debate, was a routine contribution to the familiar Soviet peace campaign. It exploited adroitly two parliamentary appeals: one, for a reduction of armaments, addressed by the Russians themselves to all other parliaments; another from the Japanese, requesting the prohibition of the use, and the testing, of atomic weapons. Both enabled the Russians to parade as the unremitting champions of peace.

It was interesting that, unlike Mr Khrushchev and Mr Bulganin on similar occasions before the Supreme Soviet, he did not make a full tour of the horizon, but left many big questions untouched. He did not even mention his own trip to the Middle East, or seize the opportunity of the recent long queue of visitors to Moscow — ranging from Marshal Tito, through Prince Sihanouk of Cambodia and the North Korean prime minister to the Shah of Iran, whose plain words to the Russians are discussed in the immediately following Note—to discuss Soviet relations with these countries. Nor did he talk about Germany, though Mr Zorin had just been recalled from Bonn and the east German rulers had just descended on the Soviet capital in a body. Were these omissions a sign that important pronouncements are still reserved for Messrs Bulganin and Khrushchev? Or is it merely that on certain questions Moscow prefers to keep the world guessing?

The Shah Makes His Point

The Shah of Iran left his Soviet hosts as impressed by his quietly resolute bearing as their wives were fascinated by Queen Soraya's *chic*. With true diplomatic skill, he exploited the quandary they had fashioned for themselves when they decided that they could be nice to a member of the Baghdad Pact while maintaining their argument that they could be still nicer if it were "neutral." At a Kremlin reception before his departure, Marshal Voroshilov assured him that "our country has never threatened and will never threaten Iran"—a claim which passed rather blandly over the fact that just ten years ago the Red Army was in Persian Azerbaijan busily attempting to set up a separate communist state there—and that there were "no more disputed issues to hamper the development of friendly relations," although the Soviet government remained hostile to Iran's defensive alliances.

The Shah's reply went to the heart of these contradictory avowals. "In spite of certain events in the past," he said, his government and people had always been friendly to the Soviet Union. Iran had never "succumbed to alignments directed aggressively" at its neighbour, "and I can assure you that it never will." With twenty-five centuries of independence behind it, it naturally rejected the idea of colonialism. If it now found it necessary to take measures for its own defence, one reason for this was "our experience of the past." The Russians had no answer to this politely expressed logic.

Teachers and the Cash

On April 9th this year 198 members of the Sunderland branch of the National Association of Schoolmasters decided to stop collecting schoolchildren's dinner money; they imposed the ban as a protest against having to pay higher contributions towards their pensions. In reply, their employers, Sunderland education authority, announced that the teachers who persisted in the ban would be dismissed from the end of August, whereupon six of them brought an action to test the validity of their dismissals.

Last week Mr Justice Barry gave judgment in their favour. The wording of section 49 of the Education Act of 1944 is explicit. It empowered the Minister to make regulations imposing upon local education authorities the duty to provide school meals, and the regulations had to make provision for the services to be rendered in this connection by managers, governors and teachers; but they were not to impose upon teachers "duties in respect of meals other than the supervision of pupils." In proposing to dismiss teachers who refused to collect dinner money, Sunderland council was therefore imposing a requirement which was prohibited by Act of Parliament.

The teachers have thus won a legal victory. But they should be careful how they follow it up. The Sunderland schoolmasters immediately announced that their ban was to continue and the National Union of Teachers has sent a deputation to the Minister for a full discussion of teachers' relations to the school meals service. From statements that the union and the National Association of Schoolmasters have put out, it seems that they are trying to shake off all school meals duties and possibly other non-teaching duties as well. This is going much too far. It is surely the hallmark of a professional person that, unlike a trade unionist, he does not define his job too narrowly and willingly undertakes extra duties connected with it. The teachers' organisations should, moreover, remember that if paid workers have to be introduced into the schools as supervisors and cashiers, there will be that much less money available for other things—including an increase in teachers' salaries when they next demand one.

Schisms in the Church Fabric

Whatever the personal issues complicating the dispute between Mr Ivor Bulmer-Thomas and some of his fellow trustees of the Historic Churches Preservation Trust, an important point of principle emerges from the confusion of charge and counter-charge. Is the trust's function restricted to making grants towards the preservation only of churches that are still to be used as churches; or should it seek out and assist any church which is worth preserving on historical or architectural grounds, even if in the view of the ecclesiastical authorities it has become redundant?

Political Indifference

John Bull's peculiar characteristic of practicability, pursuing one object at one time, now seems to be common to other European nations. Like John, they are very much occupied with what is stigmatised in its excess as speculation, and have no time nor thought but how to get rich. In spite of many earnest appeals and some angry remonstrances, they will not trouble themselves about politics. They are even careless about constitutional liberty, and stand so much in dread of revolution, that rather than run the least risk of it they passively submit alike to effete and vigorous despotism. Even John himself is complained of as being no longer political. He cares nothing, it is said, about the ballot box, nothing about reform, either constitutional or legal, not even about church rates; he has his usual amusements of small crusades against tippling, and dirt, and defective water supplies, and nuisances, and ignorance of uncommon things, and sends his light troops out in all directions to keep them in practice; but his chief purpose, and to this his great strength is steadily directed, is to increase his supplies. Perhaps he is more than ever luxurious and extravagant—certainly he is more than ever industrious. He rivals foreigners in arts, festivals, galleries, and armies, but he exerts himself strenuously to raise the means of paying for them. In this his distinguishing virtue, they are now vigorously imitating him, and all are now so very closely intent on making money and spending it agreeably, that they have neither thought nor time to devote to politics. For some years there has been nothing like a demagogue in England. . . . As experience has now amply demonstrated that political changes, however well meant, rarely lead to much good, we regard this political indifference as extremely favourable to the rapid development of society, and to substantial, material, and moral improvement.

The Economist

July 19, 1856

Those who support the first view, and they evidently include the Archbishop of Canterbury, argue that a church's beauty is irrelevant if the church itself is not used for Christian worship. For them the work of the Church of England should be given priority over its buildings; if churches without parishioners may in consequence have to be declared redundant, and perhaps demolished, this is regrettable but has to be faced. Mr Bulmer-Thomas's supporters find this utilitarian argument one-sided. For them England's historic parish churches, "folk museums" in one expressive phrase, which bear witness to the culture of thirteen centuries and were often built for secular as well as for religious use, belong in a special sense to the nation itself, like Oxford and Cambridge, country houses, or the English countryside.

Thousands of people must have subscribed to the Historic Churches Preservation Trust without calling themselves Anglicans or even Christians. They did so in the faith that the trust would preserve historic churches, used or not. Their contributions will dry up if they learn that the trust relies on the advice of diocesan authorities whether a church should be preserved or not. Lord Crookshank, who has replaced Mr Bulmer-Thomas as chairman of the executive committee, should make the trust's position clear—certainly before any new appeal for funds is launched.

Honesty and Party

IF a Diogenes Club exists, its latest choice as "Honest Politician of the Month" ought to be U Nu, who has marked his retirement from the premiership of Burma by castigating both himself and the ruling party, the Anti-Fascist People's Freedom League, of which he remains president. In a long public statement he has admitted that after the party came to power it was joined by many opportunists, who "reaped a full reward and lined their pockets," while original members who had shown themselves brave and selfless before Burma gained its independence in 1948 then became "drunk with power and degenerated into scoundrels." For this degeneration U Nu takes full personal responsibility: "I, as president, am most blameworthy." If he and the party's other leaders fail to purge it of the taint of corruption, he adds, history will blame them, not the rank and file. "The leaders must accept the verdict of history. They cannot shun responsibility for their commissions and omissions."

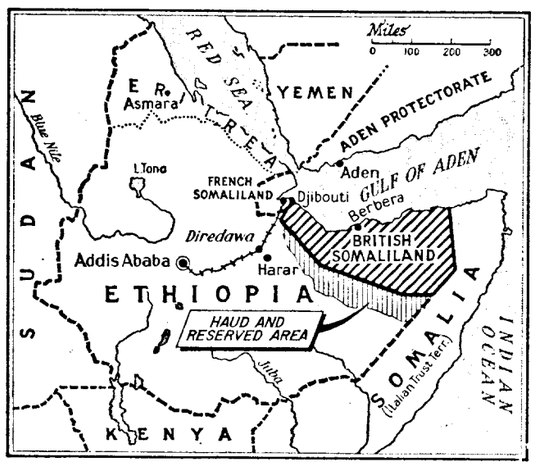
Ironically, these courageous words have passed almost unnoticed in a world deafened by the torrent of self-exculpation from leaders of other Marxist parties. U Nu issued his honest self-criticism while Mr Khrushchev was beginning to build up an image of himself as having led a "Leninist nucleus" during what the communists have begun to call "Stalin's reign of terror," and Peking was claiming that it had never been infected by "the cult of personality." (Earlier this year, the Chinese press was full of such declarations as "Even an old fool like me cannot help loving Chairman Mao.")

Luckily for Burma, its ruling party, although at first virtually unchallenged and given to authoritarian ways, has been led by U Nu along a democratic path. It has not been afraid of facing free elections, as communists have been wherever they have once won power—and as *Pravda*, explaining the virtues of the one-party state, conceded last week that they always will be. And the leaders of the AFPFL have not allowed last year's co-existentialist junketing to blind them to the real threat to Burma's freedom. U Nu concluded his statement with the warning that "if political power were to pass into the hands of the stooges and hirelings of foreign powers, we are in for a fate more dreadful than the loss of our independence—the ordeal of sending our terrified people to so-called people's courts at the whim of all-powerful masters." The need to avoid this fate, he declared, was the most compelling reason why the party he heads must be cleansed of undesirables.

Somalis Feel the Rod

THE Ethiopians are behaving badly towards their Somali neighbours in the Horn of Africa. When Britain handed over the Haud and the Reserved Area—the belt of land, containing comparatively lush pasturage, along the border of British Somaliland—to Ethiopian administration at the beginning of 1955, the nomadic tribesmen who take their animals to graze there each year voiced loud misgivings about the Ethiopians' intentions. Their fears seem to have been fully justified.

No doubt the Ethiopians have had good reason for some of the disciplinary measures they have taken since then; the Somalis are no angels, and some of them are as quick to violence as they are slow to pay taxes. But Britain can justly complain about the Ethiopians' treatment of its protégés on two scores. Ethiopian troops recently killed a large number of Esa tribesmen, and



although the massacre took place deep inside Ethiopian territory, beyond the bounds of the Haud and the Reserved Area, some of the people killed were British-protected Somalis. Moreover, the Ethiopians have repeatedly violated the promises they made under the 1954 agreement inside the Haud and the Reserved Area. They have replaced tribal chiefs and policemen with their own nominees, although they are not supposed to interfere with Somalis from over the border. They have tried to force some tribes to accept Ethiopian citizenship by threatening to withdraw their grazing rights. They have not consulted, as the 1954 agreement binds them to do, with the British liaison officer in the territories. Their troops are said to have connived at the plundering of Somali tribes by hostile Ethiopians from over the border.

It is now probably too late to try to take the problem of the Haud and Reserved Area to the International Court. Despite the Somalis' pleas, Britain refused to do so last year—not because it had no sympathy for the Somalis' position, but because it felt bound by international law to honour the 1897 Anglo-Ethiopian treaty, which promised the territories to Ethiopia. Even if Britain now changed its mind, the Ethiopians would almost certainly refuse to accept the Court's jurisdiction. Talks between the two sides have been held twice in the past year, at Harar and Addis Ababa, and only last spring the Ethiopians undertook to mend their ways. Mr Dodds-Parker told the House of Commons this week that the British Ambassador in Addis Ababa has been instructed to make a strenuous protest at their failure to do so. Within the bounds of the 1954 agreement, there is not very much more that Britain can do to guard the interests of its wards in the Haud and Reserved Area, except possibly to reinforce the British-trained tribal police up to the limit of 700 prescribed by the agreement. But if the Ethiopians continue to break their side of the agreement, Britain will have to consider how long it must feel itself bound by its own side of the bargain.

Algerian Cups of Bitterness

TWICE within a few days Frenchmen have had to swallow a dose of gall as a result of affairs in Algeria. One is the news of increased taxation, the other M. Bourguiba's intimation that the Tunisians can no longer entertain the idea of French bases on their soil. The unspoken part of his message is that they feel at one with Algerian nationalism, and would turn against him were he to advocate harbouring the forces that are fighting it.

On the economic side, the Franco-Tunisian conversations had promised well enough. The Tunisians, pointing out that their budget on current account is in balance, had asked for aid on a development account to the tune of 20 billion francs, to be paid to a commissariat attached to the Tunisian planning office, which is run in conjunction with French technicians. Paris had responded with an offer of 15 billion, but wanted to provide it through the medium of French concessionary companies. Compromise did not seem hopeless; on the matter of help with nutrition in the many areas where famine threatens, both parties had agreed to turn to the Americans, since France itself is short of cereals because of last winter's frosts.

But the defence issue has put an end to harmony for the moment. Instead of toying with notions of Nato, M. Bourguiba has crossed to the neutralist camp of President Nasser. His move will be popular with his countrymen, whose feelings about Algeria are such that, had he not made it, they would almost certainly have shifted their allegiance to the more extremist Salah ben Youssef. But for Frenchmen who thought he rated the link with France more highly, the blow is as bitter as would be the blow for London if Malta were inhabited by Greeks, and were to turn its coat out of a fellow-feeling for Cyprus.

The Algerian campaign is costing France more than £1 million a day, and France cannot, as during the war in Indo-China, count on dollar aid to foot the bill. M. Ramadier, the finance minister, has just announced a special levy in the form of an all-round increase of 10 per cent on the income tax. The bellicose Right will find this measure hard to criticise. Others will find it right that a parliament approving a policy should provide the means to carry it out. But M. Mollet's own supporters of the Socialist party, the employees and small officials earning fixed incomes from easily controllable sources, may be the hardest hit by the new measures. In the French fiscal system, with the premium it puts on tax evasion, such burdens weigh most heavily on people unable to escape the fiscal net. Their loyalty, and their support (which the Socialist congress reaffirmed) of M. Mollet's Algerian policy will in time be stretched tight.

Mr Shigemitsu Holds the Baby

EACH of the leading members of the Japanese Liberal-Democratic party has been doing his best to ensure that somebody else is saddled with the unpleasant task of renouncing Japan's territorial claims against Russia. It became clear last year that Russia has no intention of relinquishing its grip on South Sakhalin or most of the Kurile chain, although there is a faint hope that the two southernmost islands, Etorofu and Kunashir, may be given back as a sop to Japanese public opinion. Japan will have to acknowledge this fact, either by a full-scale treaty embodying territorial concessions, or by agreeing to some kind of "Adenauer formula" which would enable Japan and Russia to exchange ambassadors before signing a formal peace. The territorial question could thus be left to be settled later without abandoning the cherished formula of "no peace without agreement." Whatever the particular brand of face-saving ointment to be used, it seems clear that Russia, with its stranglehold over the fisheries, is in a position to dictate terms. True, Mr Shigemitsu announced at the beginning of this month that "Japan cannot sacrifice her territorial demands to fishery interests," and that she should be prepared to attend the talks "with a firm attitude." But he has shown no enthusiasm for the office of chief negotiator.

Since the elections the baby has been passed with increasing speed from one unwilling foster-parent to another. Mr Matsumoto pressed Mr Kono, the negotiator of the fishery agreements, and Mr Kishi, the powerful party secretary, to take on the job. Mr Kishi replied by suggesting Mr Sunada, a former director of the defence board, who immediately discovered that he could not possibly serve with Mr Sato, a diplomat who had already been selected. The final choice shows that this band of brothers has succeeded in leaving Mr Shigemitsu with the responsibility in his capacity of Foreign Minister, with Mr Matsumoto and Mr Shimoba, both of the foreign department, as his assistants. If an unpopular treaty is concluded, the politicians will know whom to blame.

Letters to the Editor

A Suggestion for Mobility

SIR—I will not be the only one among your readers to be surprised by your suggestion that redundant industrial workers should be paid, for the first month of unemployment at any rate, a higher rate of benefit more in keeping with their higher normal earnings as skilled workers—without themselves incurring higher contributions for cover. Surely this would strike at the very cornerstone of the Beveridge principle of equal contributions and equal benefit. There are, it is true, other countries (e.g. Germany) where contributions as well as benefits are scaled on a percentage basis of earnings. But your redundant workers are to have it both ways! And why? Because they have thus far been better off—which in itself should have provided greater opportunity for personal saving, sufficient, surely, to cover a gap of £20 or so during the first month of unemployment.

And why, for example, should I have to find an extra 6d. a week in respect of my poultryman who, living from hand to mouth on his £7 a week, wouldn't qualify for any generous consideration, for the benefit of those highly-paid workers, often less skilled than he, whom he already regards with a mixture of bitterness and envy? Shall I tell him there will be 6d. off his contemplated rise because of such extra expenditure? Could there not be some fund for this purpose among those industries which were able to pay such high wages?—Yours faithfully, F. B. How
Aberystwyth

*

SIR—I am surprised to see in your discussion on mobility that no mention has been made of the property-owning democrat, persuaded to buy a house in the prosperous town, now expected to move in a depression to another prosperous town and pay the agents, solicitors, removal and refurnishing expenses, and on the principle of last in first out to be a doubtful risk to a building society.—Yours faithfully,
Epsom R. C. BAKER

How Many Assemblies?

SIR—Mr Woolrych should read and think again. After all, your article in your issue of June 30th did end with a recommendation, similar to his own, for two assemblies and it is hard to see why he complains.

The assumption that Austria, Eire and Sweden would be disfranchised is quite unwarranted. These countries have remained happily at the Council of Europe and could be similarly at home in a European-Atlantic community which, even if it were not an expanded form of the first, would strongly resemble it in shape and in scope of discussion. The very thing to be avoided is a membership limited to the Nato club, and we should look not only to the inclusion of northern and mid-European countries, but also to Commonwealth representation.

The basic misinterpretation, however, is the assertion that a European-Atlantic conference would be primarily concerned with defence and the cold war. Has this been the experience of the Council of Europe? Surely the primary aim is to increase the Atlantic-European peoples' awareness of one another and understanding of common problems. It would certainly be regrettable if this did not have the effect of enabling these peoples the better to withstand subversion and subjection by evil tyrannies, but this would be a consequence in which all peoples would wish to share.

In Europe itself—whether the Council of Europe remains and other assemblies arise or whether there is a general merger and a European parliament is created—it does not seem to have occurred to Mr Woolrych that whichever body exists when the time comes may be extended to include the present Eastern satellites, if they really belong in it.

Your article covers Mr Woolrych's other anxieties and misconceptions adequately.—Yours faithfully,
*London, S.W.*19 J. S. WHITEHOUSE

Kashmir and Goa

SIR—I would like to reply to the three questions Mr George A. Floris puts to me in his letter published on June 30th.

1. Mr Floris asserts that I cannot be certain that the majority of Goans feel themselves to be Portuguese because there is no freedom in Goa any more than there is in Portugal If we accept this reasoning, then we cannot be certain that even the Portuguese of the motherland feel themselves to be Portuguese. In other words, when a people are not satisfied with their Government they should revolt against their nationality. I assume Mr Floris is British: if he is dissatisfied with the present Government, does he, on that account, wish to give up his British nationality? I am certain that the Goans feel themselves to be Portuguese because (*a*) for 500 years there has been no agitation or riots in Goa; (*b*) even with strong military forces you cannot subjugate a whole population against its will (look at Cyprus); there have been no forces in Goa (except, of course, for obvious reasons in the last 2 or 3 years) and those only few and lightly armed; (*c*) the hundreds of thousands of Goans abroad, even in the Indian Union, are free from any Portuguese pressure and they have been faithful and devoted to Portugal, almost to a man.

2. The Goan Catholics do not want a merger with India chiefly because of the caste system in the Indian Union, and because they do not enjoy the full rights of free worship; one has only to read the various complaints made by the Indian Cardinal Gracias, Archbishop of Bombay, to realise the hardships which Catholics face in the Union.

3. The fact that Goans have in the past settled in India does not mean, as Mr Floris insinuates, that they feel Indian and not Portuguese. There are about one million Portuguese in Brazil and half a million in the United States. Does Mr Floris want us to believe that those Portuguese feel themselves to be Brazilians or Americans? There are more than one thousand Portuguese in London, and I can assure Mr Floris that not a single one of them feels British. There are about 3,000 British in Portugal. Is it because they feel Portuguese?

Finally, may I point out that Dr Salazar has always maintained that the Goan question is not religious but political and that he has never tried to invoke the support of the Church of Rome. Dr Salazar does not pretend to be the single moral authority in the world, whereas Mr Nehru does.—Yours faithfully, M. DA SILVA (MISS)
*London, W.*1

The Varying Tune

SIR—*The Economist* is evidently not immune from the faint but persistent haze of inaccuracy which has overhung so much of the propaganda for the abolition of capital punishment. It simply is not the fact that "all the bishops . . . who spoke or voted did so in favour of the Bill." The statement, like others made by abolitionists, is nearly true, but not quite.—Yours faithfully, ELTON
House of Lords

[Ten bishops or archbishops voted for the Abolition Bill last week and one against it. The retentionist was the Bishop of Rochester, and we regret that we overlooked his vote.—EDITOR.]

Finding the Managers

SIR—It would be interesting to discover why a degree in arts is a great advantage in business as against technical training when for the past few years we have been regaled with long, detailed speeches as to the tremendous shortage of technical experts in industry and the vital necessity for ensuring that they were given special incentives.

Is not a great deal of this trouble occasioned by the still prevalent nepotism?—Yours faithfully, S. GIBSON
Lydiate, Lancashire

Books & Publications

Was Ulster Right?

ULSTER UNDER HOME RULE.
Edited by Thomas Wilson.
Oxford University Press. 253 pages. 21s.

HOME RULE was imposed on the Unionists of Ulster by the Government of Ireland Act in 1920; they did not want it. But when the provisions for a Southern Irish parliament and a Federal Council were repudiated in the fighting which followed, only the dog's temper remained—and Ulster hastily made the best of what, in due course, became Stormont. This symposium of legal, sociological and economic writers considers how far devolution has succeeded in its purpose after thirty-five years; it comes to the authentic Irish conclusion that "Home Rule can be tried with most confidence in those regions where the majority of the people do not particularly want it!" If this verdict is sound, it will indeed be welcomed by nationalists in Scotland and Wales, where precisely those conditions apply.

But what is devolution? The main value of this book lies not so much in its conclusion, as in its analysis of how devolution works in practice. Politically, Ulster is the one example of one-party rule in the Commonwealth; but this rule is sustained not by force but by the decision of both the communities that every general election shall be fought on one issue—the separate existence of the six counties as part of the United Kingdom. The attitude of the Irish Republic has the same effect; every general election is fought not on the issues of the hour—but on those of 1920. Ulster's political problem is therefore to find a way for the will of the electorate to be expressed on the issues on which it does not vote but which interests it most, such as rent restriction or children's allowances. This problem is solved by what may be called controlled cabinet crises at intervals, while prime ministers are changed by palace revolutions when the Unionist minority aspiring to power feels strong enough to take over the entire party and carry the Orange organisation with it. Although Ulster Unionists vote with the Conservatives at Westminster, Stormont, by processes which Mr John Sayers skilfully uncovers in this book, has put through all Labour's legislation on subjects which are devolved on the Northern Irish parliament. Though often disliking them—and sometimes modifying them slightly—it has put them through on the plea of "parity" in services, which is written into the *modus vivendi* with Britain. Ulster thus enjoys the full advantages of British social legislation; and at the same time suffers all the disabilities it creates by increasing costs in a remote region divided from the rest of the United Kingdom by the high price of transport and inconvenient sea-rail hauls.

The economic effects of this are dissected by Professor Isles and Mr Cuthbert, while the economic consequence for Northern Irish public finance is examined by Dr Wilson. Ulster suffered from heavy unemployment before the war, and in the past decade largely because of "parity"—in wage levels as well as social services and taxation—the rate has been consistently higher than in Great Britain—today, it is about five times greater. This differential has not been much reduced by the great efforts that have been made to increase industrialisation and the equally great, though rather less commendable, efforts to keep small farmers and their families on the land. Ulster's basic policy is to bring industry to the workers and to pay farmers the incomes needed to keep them on peasant holdings—and all because they are voters and are thus needed in their constituencies when periodically the question comes up whether Ulster is British. Yet, as part of the United Kingdom, Ulster should share the normal fate of a remote agricultural region at a time of rapid industrial expansion: in brief, a steady exodus of rural workers to the metropolitan centres (London and the Midlands even more than Belfast) in search of high incomes and living standards, while agricultural productivity per head rises. This is the fate of, say, Yorkshire or Devon; and nobody worries, because neither region is in danger of being taken over by an alien culture if the process goes on.

The British taxpayer, in fact, subsidises Ulster to help it to avoid the fate of the Republic where, their standard of living unbolstered by subsidies, the people do leave for London and the Midlands. As Dr Wilson shows, the "imperial contribution" from Ulster to Britain is in fact a largely fictional item in the accounts; it certainly does not do what it purports to—cover Ulster's share of central services like defence and the interest on the national debt. Ulster is usually a deficit area; the whole of its revenue is used to support its high cost, high employment, agriculture, and to attract industries from Britain.

Many people in Ulster, watching the somewhat squalid goings on in Stormont, wish that union had won the day even after the Government of Ireland Act, and that Ulster was run by Westminster and a county council. But if Ulster had not had its own legislature, it might have lost population almost as fast as the Scottish highlands have done. As things are, Ulstermen are being kept more successfully in Ulster than Eireans are being kept in Eire. By the time the minority in Ulster is strong enough, by virtue of its differential birthrate, to vote the six counties into the Republic (which would not be till AD 2000) the Protestants may have little to fear from the remnants of Southern Irish Catholicism.

This is the paradoxical sort of reflection to which one is constantly led by the always stimulating analysis in this book. Meanwhile, from Britain's point of view, devolution has been richly worth while. The imperial contribution may not even cover the direct costs of Ulster; but in the submarine war, its importance was proved beyond all doubt when Eire denied its bases to the allies. And devolution has kept the Irish question at Westminster down to a debate a year. The Irish try hard to make time stand still—at 1920, if not 1689; but it looks as if time will solve their problems in the teeth even of Hibernian contrariness.

A Golden Age

AN EDWARDIAN YOUTH.
By L. E. Jones.
Macmillan. 249 pages. 18s.

SIR LAWRENCE JONES has done it again. Last year he gave us "A Victorian Boyhood," a wonderful picture of the growth of a boy from childhood to the end of his Eton days, written with perfect recall of the feelings of each age. Now he has carried the story on to the age of twenty-seven and the true beginnings of his adult life: his marriage, his entry into business and (as it happens) the death of King Edward. It is an admirable book, witty, intelligent, generous and above all very well written.

The main theme of the book is Balliol. He was there at a noble time, when dons and undergraduates alike were of the highest quality and produced a generation that is still remembered, no less in those who were killed in the war than in those who survived. He lived a full life, rejoiced in the intellectual society of the college and got a First in the History school, yet found time to become president of the OUBC. He was born to be a member of a team of friends, and Balliol furnished him with all that he needed. No one has given a better picture of the intoxication—the only kind that never quite fades and leaves no hangover—of being a member of a good college at a good time, when talented men of different ages live in close companionship, and heart and brain work together at a pace that, in retrospect, seems incredible.

The rest of the book, about the life of a young barrister in London with plenty of friends and the best connections, but few briefs and little money, is charming and entertaining, but less sharply focused on a single theme. Sir Lawrence enjoyed every moment, but remembers the past critically and with-

out regretful nostalgia. His last words, on the passing of the Edwardian age, are typical:

> . . . the warm contentment of so many years, stored up within me like sunshine in old wine, strengthened me to forget the dear departed and to turn, not without relish, to the funeral sherry and the cake.

Social Conflict and Harmony

CUSTOM AND CONFLICT IN AFRICA.
By Max Gluckman.
Blackwell. 182 pages. 12s. 6d.

THIS publication of the lectures broadcast by Professor Gluckman will be very welcome. His short book has a freshness and pace not common in sociological writings of so serious a character. For contrary to appearances this is a book of serious scholarship. Indeed the flow of ideas is, in places, so fast and the concentration of facts so heavy that one has to be well acquainted with the source literature to follow the argument easily. Mr Gluckman seems to have two aims in mind. One is a survey of the outstanding achievements of current research into the traditional political, familial and religious institutions of African societies. The other is an exposition of the sociological theories behind these achievements and, more particularly, his own theory of the significance of conflict in the maintenance of social order. This is indicated in the antithetical titles of the lectures: "The Peace in the Feud," "The Frailty in Authority," "The Licence in Ritual" and so forth. To blend these aims as successfully as Mr Gluckman has done and with relatively little ponderosity is a feat. But it has cost some hard sayings and some almost indigestible compression of facts. This is an expert's introduction to contemporary social anthropology presented from a controversial angle.

Therein, probably, lies the stimulating character of this book. Mr Gluckman's theory of social organisation can be broadly summarised as follows. Social harmony, whether at the level of law and government, or in the domestic life of the family, or in the moral relations of individuals, or in religious and cult groups, is always based on recognised divisions and opposition of interests. These commonly lead to conflicts; but the conflicts that take place in subordinate areas of social life are resolved at higher levels if there is general acceptance of a common set of values and uniform support for common institutions. This process works well enough in African societies because there are, in a subsistence economy and a stationary social order, few specialised relationships and no irreconcilable differences of wealth and political privilege. Mr Gluckman discusses beliefs in witchcraft and sorcery as aspects of conflict, showing how their increase under the strain of industrialisation falls into place in a social order in which insecurity exacerbates sectional divisions beyond the limits of common ideals. A glance at Nazism enables him to suggest analogies with destructive political ideologies in western civilisation. Lastly, he tries, more ingeniously than convincingly, to show that the unhappy relationship of Bantu and White in South Africa is a special case of the tendency for sectional conflicts to occur in a framework of inevitable interdependence.

There is an echo in Mr Gluckman's social philosophy of more celebrated doctrines in which a struggle between antagonistic elements is said to be the driving force of social life. Nevertheless, his way of dealing with the idea is especially thought-provoking.

Joyce Over Dublin

DUBLIN'S JOYCE.
By Hugh Kenner.
Chatto and Windus. 383 pages. 25s.

THERE is no disputing that Dublin was a part of James Joyce—that, in that sense, it belonged to him. Indeed, so deep and lasting is the influence of "Ulysses" that there is a danger that in some circles—some American literary circles for instance—an impression may have grown up that it never belonged to anybody else. But did Joyce belong to Dublin? And in what way? He left it in 1904 and, apart from a fleeting visit, he never went back, although he thought and wrote about Dublin for the rest of his life.

Mr Kenner has done more than any previous writer to sort out the exact relationship between Joyce's writings and the city of Dublin. And that is saying something—for anyone who has made a serious study of Joyce has probably read far more words about that question than there are in all the printed works of Joyce himself. What is more, Mr Kenner's book is by far the best piece of literary criticism of Joyce since Harry Levin's study, published as far back as 1942. It is a crowded book, packed full of learned allusions. Mr Kenner switches puzzlingly through Aquinas, Homer, Conan Doyle, Vico, Flaubert, Lewis Carroll, Freud and Wyndham Lewis. But careful reading (handicapped, as it must be, by Mr Kenner's rather turbid style) still reveals that he knows exactly what he is doing and what he wants to say.

Joyce absorbed certain influences in Dublin—his Jesuit education, ineffective Irish politics, the experience of his father, and that endless conversation which can indifferently be regarded as the best talk in the world or what Swift called it, "the tattle of this nasty town." But what mattered, and Mr Kenner makes this very clear, was what Joyce added to his material, the use he made of it, and the body of ideas and methods that gave his works their permanent value.

Joyce has already outlived the Dublin of 1904 and he will more easily outlive the Dublin of 1956. His books will not be read, if they are read at all, as guides to a dead city. Nor will they be read as a result of the mass of commentary and misapprehension that has gathered around them, much of it mere debris which Mr Kenner clears away. Such are in particular the writings of those who surrounded him during his later years in Paris, the impression that Stephen Dedalus is James Joyce, the assumption that his brother Stanislaus Joyce is one of the more valuable of the critics of his works, and the most bizarre idea that James Joyce loved Dublin. It was for no such reason that he, remembering Dublin, sat down by various alien waters—the Adriatic, the Lake of Zurich, the Seine, the medicinal springs of Vichy, even the English Channel—and did not weep.

Stability in Latin America

URUGUAY: *Portrait of a Democracy.*
By Russell H. Fitzgibbon.
Allen and Unwin. 311 pages. 25s.

WRITERS about Latin America have an anxious time. While their work is being printed, Dr Vargas unexpectedly commits suicide; or a *coup d'état* changes the whole situation in Colombia; or Perón is overthrown. Professor Fitzgibbon is exceptionally fortunate in his subject. His book, which was first published in the United States, in 1954, has worn well, because Uruguay is the most stable of the republics. But it was not always so. Uruguay experienced more than forty revolutions, and long periods of civil war, during the nineteenth century. In 1880 the president resigned, declaring that his compatriots were "ungovernable." The transformation of this chaotic land into South America's first welfare state was the achievement of one man, President José Batlle y Ordóñez, whose influence is still felt today, although he died twenty-seven years ago.

Professor Fitzgibbon provides a comprehensive account of the country, and his chapters on education and religion are the most thorough studies of those particular aspects of the national life that have yet appeared in print. The style of writing is sometimes inferior to the author's scholarship. A chapter on Uruguay's relations with Argentina and Brazil begins: "If you live in a neat but modest cottage sandwiched in between the great mansion of the somewhat arrogant town millionaire on one side and the vast estate of a rising and expansive industrialist and entrepreneur on the other. . . ."

To bring the story up to date, all that we need to add is that Batlle's pet idea, that presidential power was the curse of Latin America and that therefore Uruguay ought to be ruled by an executive committee, has not proved to be entirely satisfactory in practice. The social services introduced by Batlle have become appallingly expensive. Proposals that the budget should be balanced by the levying of a tax on income have been resisted (Batlle taught that income tax was undesirable). Exports have declined. Strikes for higher wages have been frequent. But the Uruguayans continue to be unperturbed, confident in their political maturity.

Cæsar's Psyche

TIBERIUS: *a Study in Resentment.*
By Gregorio Marañón.
Hollis and Carter. 246 pages. 25s.

DR MARAÑÓN is an eminent Spanish specialist in that middle mist between medicine and psychology, and by avocation an historian. Some time ago his study of Antonio Pérez, Philip II and the Princess of Eboli won wide acclaim. He has now essayed a clinical study of Tiberius Cæsar, the key to whose warped psyche and consequent cruelties he finds in an enduring state of resentment. Deprived, exiled, passed over, Tiberius at last landed, through the ravages of death among younger Cæsars, in the purple and gold sandals, at the age of fifty-five, and (as he told the Senate) too late for his nature to change. It was not a nice nature. Nor were those of most of the Claudians, in whom, notably in Caligula and Nero, but also in Tiberius, ran a strong streak of madness.

The author makes much play with psychological terms, and it is certain that young Tiberius was marked by Augustus's stealing of his mother from his father, by Augustus's preference for younger candidates in the succession, and by public slights and wrongs culminating in a self-imposed but prudent exile. Yet Dr Marañón seems unduly impressed by his subject (or should we say "patient"?), and not duly enough by the ordinariness of what to us seems fantastic and extraordinary in the everyday life of Rome and its emperors. What Tiberius suffered was child's play compared with what everybody, from senators to slaves, had long been suffering, from the time of the Gracchi a hundred and fifty years earlier and throughout the civil wars that ended with, first, the triumvirs and, then, the line of Cæsars. It is surely not enough (in Professor Syme's words in the introduction) to treat "the resentments of Tiberius as the principal clue to an enigmatic emperor and to a reign that began with fine prospects and terminated in despotism," without better analysis of the whole psyche on which this resentment worked. Everybody, adjusted or maladjusted, in that terrible epoch breathed resentment. Little else runs through the long, downward sliding of the Roman world, from the reign of the informers in the dying republic to the petty personal spites of the last emperors and senators in the west half a millennium later. Why was Tiberius different, if he was? He was surely more typical than different, until the direct and collateral lines of the Cæsars and Claudians died out and the armies took over the appointment of emperors, and so broadened the field of choice.

Dr Marañón has written a lively but slight book, provoking but hardly scientific, and in places almost illogical. He is too prone to make a generalisation in psychology, not yet agreed among psychologists; point out that Tiberius fits it; and then ride away with a sentence something like this: "Having seen that Tiberius was a case of *x*, and knowing that many cases of *x* are also *y*, we can explain Tiberius's actions in the *z* case in terms of *y*, and so on." His book is informed, ingenious, intriguing, often amusing; but it is only speculative, if probable; and it is not scholarship. It would be a pity if the respect which Professor Syme rightly accords to Dr Marañón's views led people to think them established.

Labour as an Instrument of Power

LABOUR POLICY IN THE USSR, 1917-1928.
By Margaret Dewar.
Royal Institute of International Affairs. 294 pages. 45s.

IN the period following the October Revolution labour was one of the most critical sectors in the Bolshevik leadership's struggle for survival. The Party at that time was far from monolithic, and there was a wide variety of opinion on labour policy. But Lenin had established his ascendancy and his own attitude had always been consistent. His primary interest was not in the material wellbeing of the workers, certainly not in working men evolving ideas of their own, but rather in labour as an instrument for the implementation of his political aims. Steadily his views prevailed over those of his idealist and doctrinaire associates. The history of labour policy in Soviet Russia is the story of the establishment of the role of workers in a communist state: they are shown as having first and foremost to be disciplined and then to be productive.

The triumph of Bolshevism in the circumstances of exhaustion, shortages and confusion then prevailing brought about the paradox that in the one allegedly proletarian state the proletariat had no foreseeable prospect of securing anything like the living conditions of workers in contemporary capitalist societies, and this contradiction is mirrored in much of the vast spate of edicts, regulations and pronouncements that form the subject of Mrs Dewar's book. "Labour Policy in the USSR," as its title implies, is concerned with the aims and statements of the Soviet leaders; and while a number of highly critical speeches at congresses and conferences are quoted, the book does not pretend to be an account of what was actually happening on a lower level. Kritsman's informative "Geroicheskiy Period" is not included in the bibliography. Following Mr E. H. Carr (to whom acknowledgements are made in the preface), Mrs Dewar devotes one line only to the very significant Petrograd strikes of February, 1921, the prelude to the Kronstadt rising. The reader is told nothing of the manipulation and management of any particular trade union.

But within her self-imposed limits Mrs Dewar has made a most helpful contribution to a difficult and complicated subject. A particularly valuable feature, amounting to more than a third of the book, is a chronological list, with a précis of the contents, of the relevant decrees and instructions issued between October, 1917, and October, 1928.

More About Bureaucracy

THE CIVIL SERVICE IN BRITAIN AND FRANCE.
Edited by William A. Robson.
The Hogarth Press. 198 pages. 21s.

THE civil service used to be more silent than the navy; but those days are past. The centenary of the Northcote-Trevelyan Report marked the final unlocking of tongues, and now hardly a month goes by without something written about, and very often by, civil servants. This book is a by-product of that centenary. In 1954 *The Political Quarterly* published a special number about the civil service: the articles published in it are reproduced here, in many cases revised and expanded; and some new ones have been added.

The authors are nearly all eminent: Labour ex-ministers (a pity that there are no Conservatives), civil servants and dons, plus the admirable Mr Houghton, who is a bit of everything. Most of the essays are descriptive and gently critical, in good civil service style, and from them one gets an extremely clear account of the higher reaches of civil service policy, on a rather abstract plane. The

Sterling-Dollar Diplomacy

Anglo-American Collaboration in the Reconstruction of Multilateral Trade

Richard N. Gardner

This book is a history of the ambitious effort led by the United States and Britain to reconstruct a liberal international economic system after the war. It describes the evolution of wartime planning on postwar financial and trade policy; the negotiations which produced the Bretton Woods institutions, the I.T.O. and G.A.T.T.; and the fate of these institutions in the political and economic crisis that followed the war.

Illustrated 42*s. net*

The Sterling Area in the Postwar World

Internal Mechanism and Cohesion 1946-1952

Philip W. Bell

Is there a future for the Sterling Area? The author provides the first really systematic survey of the Area's financial mechanism: his conclusions are somewhat pessimistic, but argued with cogency and scholarly objectivity.

(2 AUGUST) 63*s. net*

OXFORD UNIVERSITY PRESS

plan of the book does not admit much about the nature of a civil servant's work, and the lower reaches of the service appear mainly as massive figures. This limitation, and good editing, make the book coherent.

There are not many ideas for reform in the book, except for the theme, more deeply felt than argued, which recurs in several essays (notably not in those written by civil servants) that the service should be made more democratic and egalitarian. Professor Robson is gently worried about it, Mr Ernest Davies rather peevish and Mr Kelsall downright passionate.

The best essay in the book is by Lord Attlee, no less. He writes with immense experience and good sense on the relations between the civil service, ministers, Parliament and the public. Close followers are Mr Houghton on Whitley Councils and Sir John Woods on Treasury control. Sir Edward Bridges is learned and sensible on the Northcote-Trevelyan Report.

The title is slightly misleading, since only two essays out of fourteen are on France, both of them concerned with the comparison between the two systems. They are excellent. M. Chatenet, on the status of the civil servant, is struck by the theoretical differences, but the empirical Englishman will be more struck by the practical similarities. M. Bertrand gives a very interesting account of the elaborate professional training which the French civil servant receives.

Excerpts from Parkman

FRANCE AND ENGLAND IN NORTH AMERICA.
By Francis Parkman. A selection edited by Samuel Eliot Morison.
Faber. 548 pages. 30s.

THE author of "The Oregon Trail" can no longer be numbered in Britain, as he once was, among the least known of American historians. Yet it is open to doubt whether the many-volumed editions of his "France and England in America" are as often disturbed on their library shelves as their great merits would suggest. Aiming both at the professional historian and the interested layman, Parkman, to a degree which would be nowadays remarkable, won the applause of both. But length is a foe which not even eloquence can defeat, and there must be many who have enjoyed "The Oregon Trail" but who have flinched at the thought of accompanying Parkman on his even more impressive exploration along the Canadian-American frontier. For them Professor Samuel Eliot Morison has compiled a book of substantial but judiciously selected excerpts which amount in all to about one-seventh of the bulk of the original.

The task could not have been put in better hands. Like his hero, Professor Morison is a good Bostonian, part bookish Brahmin, part knockabout adventurer, always and wholly New Englander. "The subject has been studied as much from life and in the open air as at the library table," wrote Parkman introducing his last volume. The same could be said by the author of the "Maritime History of Massachusetts," who at the same time, in his role as historian of Harvard, finds himself not out of sympathy with the social and political attitudes of a Parkman who voted mugwump, "attended his college class functions regularly" and distrusted democracy whenever it moved to the lift of Godkin's "Nation." In fact, back in his native Massachusetts, the historian of the not-so-noble savage and the American forest is pretty much a John P. Marquand character transposed into the 1870s. As Professor Morison makes very plain, he was not "one of those faint and futile expatriates described by Henry James."

Instead, of course, Parkman was a continuously neurotic, frequently heroic, intermittently masochistic addict of the primitive. He is like one of his own *coureurs de bois,* who opens up the West not for the profits of fur or pelt but simply because it has got into his system and he cannot get it out. It is this feel for the primitive, for the virgin forest and the clash of absolutes—Indian v. Jesuit, English v. French—that he gets into his pages better than any other historian of North America. Professor Morison's selection splendidly illustrates Parkman's mastery of this theme; it also contains the best examples of his narrative art. The editor has supplied a few unobtrusive but enlightening notes, a useful bibliography and a good map.

Choice Visits

ROMAN MORNINGS.
By James Lees-Milne.
Allan Wingate. 166 pages. 17s.

TODAY the lament is often heard that the sense of classic achievement in the arts has been lost, and that the art of communicating that sense has almost vanished. The sense of the classic, of the right scale, the satisfactory proportion was never easy to describe. Where it has been lost in modern architecture, the architect has usually fallen a victim to contemporary materials and contemporary engineering, and town councillors and ministries of works accept his exhibitionisms often because they have given little attention to the study of fine architecture. Compare the attitude of earlier centuries, for instance, to this kind of drum and dome, whose

> grace and loveliness surpass all the tributes that four and a half centuries have lavished upon them . . . it was the first to be designed in spherical shape. . . . It made him at once famous all over Italy . . Michelangelo and Palladio flocked to see it, measure it, draw it, discuss it and write about it. . . . Wren reproduced it in his first design for the west towers of St Paul's Cathedral, and Soufflot for the drum and dome of the Pantheon in Paris. . . . In the eighteenth century it kept reappearing . . . in the nineteenth it was still being reproduced. . . .

That is how Mr Lees-Milne describes Bramante's Tempietto in San Pietro Montorio, but he goes further. He fixes in two sentences the horizontal and vertical sequences in Bramante's Tempietto and their perfectly balanced and corresponding relationships, sparing us the figures and mathematical calculations. He does in fact convey the sense of the classic, when he meets it, on these choice few morning visits to eight Roman monuments.

He expects his readers to cultivate the eye that suddenly sees how right a building is, and where in some detail it fails to be perfectly satisfactory. This may not happen on their first visit, perhaps not until the fifth or sixth. If they then fail he tells them who, down the ages, has appreciated and used the model, in the hope perhaps that they will try again. The result is that, whether the Pantheon, or Sant' Andrea al Quirinale, or Palazzo Massimo or the Trevi Fountain are already your favourites, or whether you come to them for the first time, your appreciation is the richer for reading his book.

Mr Lees-Milne introduces the reader to baroque architecture via Roman church history with the claim that by the seventeenth century the Roman church designed its places of worship to attract the masses: hence the gaiety of the façades of Sant' Ignazio, of the Gesu and of Bernini's Sant' Andrea. He handles the "gentle deceptions" of Baroque with skill. He always tells his readers from what point to approach his chosen buildings, and warns them that no building can be judged by illustrations. There are fourteen of these, all good.

Heinemann. 227 pages. 15s.

Fear not, dear lady. A mod. kitch. always looks thus when it is bg. blt. One day soon, glue-pot, sawdust and long-suffering joiner gone, you will find that the architect was right after all: it will be a dream kitchen. Nowadays such dreams are made, to a large extent, of hardboard, a most workable building material that is seen—and taken for granted—in shelves, partitions and cupboards at home, the office and the factory. But this versatile board is only one of the things that Bowaters make. The full catalogue runs from delicate tissues to newsprint rolls 4½ miles long. For the enjoyment of living, Bowaters provide paper for magazines and books, for wrapping sweets and biscuits. For the business of living, Bowaters provide packages for commerce and industry, even building material. Directly or indirectly all benefit from the diversified activities of the Bowater Organisation.

The harvest of the forest is given many forms by **BOWATERS**

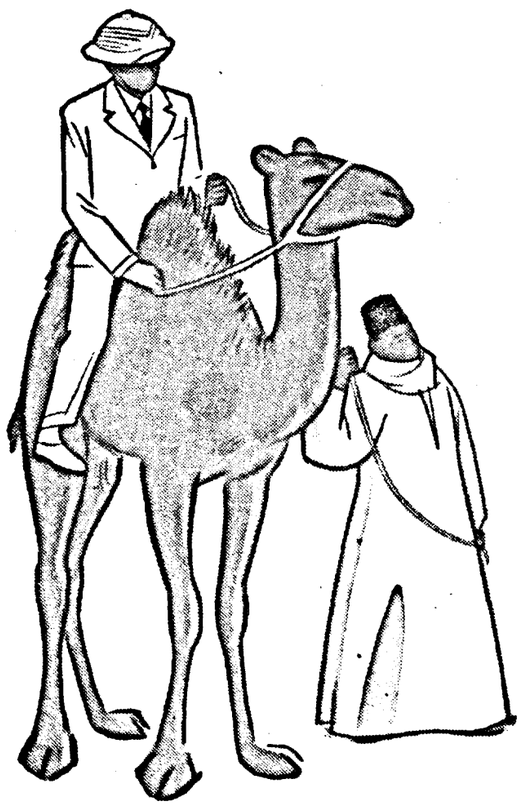
How do you reach your overseas customers?



A FUNDAMENTAL PRINCIPLE of efficient export selling is to tell the best possible message . . . to a great number of prospects . . . at reasonable cost.

In the last analysis there's nothing more effective than a personal sales call. But actually, you could hardly afford to reach your best customers or prospects month after month in this way. That's why so many companies count on advertising abroad just as they do at home. It's the most efficient and economical way to reach the greatest number of prospects.

LIFE INTERNATIONAL and LIFE EN ESPAÑOL are geared to reach your overseas prospects in just that way. Because they are read by people of influence—leaders in business, government and the professions—you know your message is reaching important prospects.

In addition, you can be certain that your message is reaching a great number of prospects in every free country since LIFE INTERNATIONAL reaches the top of the market around the world and LIFE EN ESPAÑOL offers concentrated coverage in Latin America.

Furthermore, because you yourself are in control of your own advertising message, you can see to it that the most important selling points are made in the most effective manner . . . and that your product is shown to its best advantage in the large page sizes of LIFE with its fine colour and printing reproduction.

No wonder leading companies in Britain and on the Continent have more than doubled their investment in LIFE's International Editions in the last four years. They have discovered that these magazines enable them to deliver the best possible message . . . to a great number of prospects . . . at reasonable cost.

LIFE INTERNATIONAL—advertising rates based on average net paid circulation of 250,000 copies printed in English and distributed in 120 countries outside North America.

LIFE EN ESPAÑOL—advertising rates based on average net paid circulation of 275,000 copies printed in Spanish covering all of Latin America.

These are the INTERNATIONAL EDITIONS of LIFE magazine, with a combined current circulation of over 560,000 copies every fortnight.

LIFE INTERNATIONAL EDITIONS

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Presidential Paradox

Washington, D.C.

ALTHOUGH the "cult of personality" has to be strong in the United States, because the Constitution vests executive power in one man, it has reached fresh heights with President Eisenhower. Since nearly everyone assumes that the Republican party cannot win without "Ike" and cannot lose with him, pre-election talk, with Congress entering the last fortnight of its session, is not about issues at all but about the hours the President can work, the golf he will be able to play, and the state of his ileum.

The *Democratic Digest*, the official organ of the opposition party, has accused Republican doctors and politicians of doing a "snow job" (or cover-up) on Mr Eisenhower's health, a remark which is meant to be rude and will very likely not do the Democrats much good with the people. The Roper opinion poll shows that by a large margin the electors do not agree that Mr Eisenhower is as good as new after a heart attack and an abdominal operation, but by a similarly large margin they think that, if the President feels he is well enough to carry on, he must be trusted to have made a wise decision.

Since Mr Eisenhower's popularity seems untouchable—though Governor Harriman, who will try anything, has accused him of being "naive on Communism"—most of his opponents are turning, not to issues, but to another personality, Mr Nixon. The movement to sidetrack the young Vice-President for somebody more consequential has collapsed like a cream puff, which perhaps it was. Last week the President made it clear through intermediaries that "Dick's my boy," in 1956 as four years earlier.

The question inevitably arises why Mr Eisenhower, a beloved personality, a great commander, and a tolerably successful President, feels compelled to go on. Some answers are provided by two recent books, Mr Donovan's "Eisenhower: The Inside Story," by a journalist who was given access to Cabinet minutes, and "A Republican Looks at his Party," by one of the Administration's few intellectuals, Mr Arthur Larson, Under Secretary of Labour. Mr Eisenhower's first reason is the same as that which kept Sir Winston Churchill so long in office. It is the sincere conviction that, because he provides a personal link with the wartime spirit, he can, if given time, make some great stroke for peace. The second, much less cosmic motive, according to Mr Donovan, is the President's chronic boredom at life on the Gettysburg farm, during his convalescence from his heart attack.

Finally, Mr Eisenhower has discovered that he needs four more years to convert the Republican party into a modern political instrument. When he took office he apparently thought he could cure the Republicans of the mental habits of a lifetime in one presidential term. In fact he found that Republican members of Congress, who had been taking recorded positions year after year on many of the issues he put before them, were genuine conservatives who would not abandon all they had ever stood for at his bidding.

★

To what extent has Mr Eisenhower made progress in his first term? This is a matter of personalities, of tactics and of policy. The President has said that the party needs dynamic new leaders and a dynamic conservative programme. Has it got the leaders? At the bottom level it does not seem to be doing too badly. Many of the younger leaders of the rebel Eisenhower movements in 1952 now hold positions in the official state organisations. The state chairmen who came to Washington for a campaign school last autumn included a high proportion of new men. This will have its effect over a long period on the type of candidate who is encouraged.

It is in the upper reaches that things are not so promising. Although at the time the President first fell ill Republicans made a brave show of saying that there were a great many potential candidates available, the Eisenhower Republicans are in fact still distressingly thin at the top. Of the Republican Governors whom Mr Eisenhower in the past has sometimes listed privately as possessing promising liberal talent, few remain on the horizon, apart from Governor Hall of Kansas, who has a hard fight on his hands with his own conservatives, and possibly Governor Hoegh of Iowa. In the Senate, the other main source of leadership, Mr Eisenhower has been unlucky. Of the Senators who supported his original candidacy, Mr Seaton of Nebraska did not seek election in 1952 and Mr Cabot Lodge of Massachusetts was defeated. Since then one liberal Republican gain, that of Senator Clifford Case of New Jersey, has been offset by a liberal Republican loss, Mr John Sherman Cooper of Kentucky. Senator Duff of Pennsylvania, who was much relied on as a spokesman for Mr Eisenhower's cause, has proved a disappointment, while Senator Saltonstall of Massachusetts, who is classified out of habit as a liberal, has kept his famous lantern jaw chronically locked in indecision.

It is quite possible that the President will be more favourably placed in his second term. If Governor Langlie could win Washington from the Democrats, if Mr Cooper (now

back in the running) and Mr Morton could win the two seats in Kentucky, and a suitable Republican candidate be elected in New York, there might for the first time be a firm basis for an Eisenhower group in the Senate. This thought has not escaped the President and his more progressive advisers. None of these results is individually impossible, though collectively they may be rather unlikely. Heavy pressure is being put on Mr Dewey, the former presidential candidate and Governor of New York, to run for that state. If he were elected, his presence would make a substantial difference to the balance in the Senate.

But the fact is that, even as things have been in his first term, the President could probably have done more by more consistent application to questions of tactics. When left on their own, members of Congress, particularly of the House of Representatives, simply act in the way that will annoy the least number of powerful and articulate groups among their constituents. Many of them are willing to yield to clear and sustained leadership from their President, although this is often not true of established legislative leaders who have firm positions of their own to defend.

The President's programme has suffered from his unwillingness, except on a few occasions, to supervise the organisation of unorthodox, *ad hoc* coalitions to press each of his measures through. He has relied on the "proper channels" which, because they consist for the most part of men who do not fundamentally believe in his programme, have frequently let him down. Moreover his day-to-day liaison with Congress has been entrusted to men who share the basically conservative, pessimistic outlook of the leaders with whom they are in contact.

Mr Larson identifies in his book the sudden burst in population and expansion of metropolitan living as providing great new demands on American government. Unless the President can find some way of making his party in Congress more responsive to these demands than it has been in his first term, the end of his second may find him still in his original paradoxical posture: the fabulously popular head of a nation who commands steady support for his views only from a minority faction inside the smaller of the two political parties.

Another New Look?

AT his press conference on Wednesday, the Secretary of State sat with justifiable firmness on fears that the United States was preparing to back out of its obligations to its allies in the North Atlantic Treaty Organisation, as a result of the Defence Department's latest study of long-term military policy. An enterprising reporter on the *New York Times* discovered last week that, in preparation for next year's budget, service officials were planning another three-year "new look" for the American armed forces, to follow the one they showed in 1953. According to the report the plan's chief feature so far was that the total manpower of the armed services would be reduced by 1960 to just over two million men, 810,000 fewer than at present. This would inevitably mean a large-scale withdrawal of troops from Europe and elsewhere overseas, and the report was therefore read as forecasting a return to isolation and a retreat into "Fortress America."

Mr Dulles made it clear that these proposals had not yet been considered at the top levels of the Administration, where such basic decisions on international policy must be made. But he also made it clear that he had no political objection to substantial cuts in military manpower, provided they were done in agreement with the other members of Nato. He pledged the United States to continue to bear its fair share of the burden in Europe but did not conceal his hope that this share might be reduced after Nato's coming annual review next autumn. He believes that the feeling is growing, among America's allies as well as in the United States itself, that today military planning calls for greater emphasis upon nuclear weapons and less upon ordinary manpower.

It is not only for this reason that America's allies will feel sympathetic to the Defence Department's sketch for another new look. For they are just as conscious as is the United States of the increasingly heavy costs of the present model. The basic consideration behind current American thinking seems to be that defence spending would have to go up next year by about a third, to $48 billion, if the forces were kept at their present strength and if new weapons were developed as fast as is considered vital. Whether or not it is true that the budget was only balanced this year by means of unrepeatable and undesirable economies on defence, it is certainly true that from now on expensive new equipment of all kinds will be coming into service and will have to be paid for.

But it was the other side of the argument which made the *New York Times's* report sensational. It spoke of a "revolt" against the cuts in the Defence Department, in which for once all three service chiefs were united against Admiral Radford, the chairman of the Joint Chiefs of Staff, on the grounds that the new policy would weaken the United States disastrously, by condemning its conventional forces to inferiority. It is these forces, so the argument runs, which will in fact fight future wars, for when it comes to the point neither side will dare to use its nuclear weapons. Alternatively, it is also argued, as it has been before, that the new policy will make it inevitable that all wars will be atomic wars because the United States will have no other way of defending itself. Mr Dulles dissents strongly from this view, insisting that atomic power can be used as a deterrent. But it is not surprising that President Eisenhower is understood to have postponed his consideration of, or at least his decision on, this far-reaching dispute until after the election.

Struggle for Foreign Aid

EVEN before he returned to the White House, President Eisenhower had approved a list of fourteen Bills which he would like to see Congress pass before it adjourns. But Congress has set its heart on winding up this session in a week's time; July 27th is a popular date which would give the Democrats a breathing space before their convention opens on August 13th. Of the three important Bills which are all that are likely to be passed—on foreign aid, social security, and customs simplification—the President has given over-riding priority to a foreign aid appropriation

Progress is no gamble...

In the design of aircraft engines, any form of speculative development—we think of it simply as gambling—may be not merely irresponsible, but positively destructive. Apparent but in the long run illusory success can cause irreparable loss of time, resources and initiative. That is why we cleave resolutely to the policy of systematic development which has produced such engines as the Viper turbojet, power plant of Britain's first basic jet trainer.

That is why we are ceaselessly exploring and extending the potentialities of these proven types, in constant, reliable readiness for the requirements of aircraft evolution.

equal to the authorisation of $4 billion in new money which was all the Senate could persuade the House to approve.

Given the hostile temper of the House, and the risk that, if provoked, it might make further cuts, the leaders there made no attempt to get more than a mere $3.4 billion in new money, or $3.7 billion including reappropriations, which compares with the President's original request for $4.9 billion. Instead, the Administration is relying on the Senate to accept the $4 billion in new money recommended by its Appropriations Committee, and the hope that in conference a compromise close to the President's minimum will emerge.

The Senate Appropriations Committee did its best for the President, but not without exacting terms. At the behest of Senators Knowland and Bridges, a strong warning was written into the Bill against the admission of Communist China to the United Nations. Mr Dulles, the Secretary of State, has so far staved off another project of these conservative Republicans for banning aid to Jugoslavia but, although it seems to have no legal force, he has bowed to the committee's insistence that no mutual security funds should be used to finance Egypt's Aswan dam without its express approval being sought. This project, toward which the United States originally promised to contribute about $55 million, had already been endangered by the foreign aid authorisation, which contained a flat denial of the Administration's request for authority to undertake such long-term projects, and insisted that 80 per cent of all development money should take the form of loans, rather than grants. Irritation at Egypt's flirtation with the Russians has only reinforced the sympathy felt in some quarters for Israel, and southern suspicions that the dam, by promoting the growth of Egyptian cotton, will injure American producers. Meanwhile, the money originally earmarked for Egypt has apparently been spent elsewhere. Perhaps it has only been mislaid, but Mr Dulles may not be sorry to demonstrate to the Egyptians that they cannot keep the United States dangling with impunity.

Diplomatic Appointments

ONE of President Eisenhower's first actions after returning to harness has been the appointment of delegates to the coming United Nations General Assembly. The most prominent among them is Senator Knowland, the leader of the Republicans in the Senate and a frequent critic of the Administration's foreign policy. Mr Knowland has been especially vehement on the issue of the admission of Communist China to the UN and his appointment symbolises the decision of the Administration not to yield to the mounting pressure of allied and neutralist opinion. Mr Knowland's presence at the General Assembly will underline the message of friendship which Vice-President Nixon recently brought to Formosa. In addition to Mr Knowland, President Eisenhower also nominated Mr Paul Hoffman, one of the pioneers of the foreign aid programme and now chairman of the board of directors of the controversial Fund for the Republic—which is at present under congressional investigation. These two choices obviously represent an attempt to conciliate both wings of the Republican party and Mr Adlai Stevenson cited them as glaring examples of the Administration's "impotence in foreign policy."

The President also reshuffled American representation in the eastern Mediterranean. Mr Raymond Hare has been nominated to replace Mr Byroade in Cairo. This is interpreted, in some quarters, as a sign that American policy towards Colonel Nasser is toughening. Mr Cavendish Cannon is leaving Athens to become the first American ambassador to Morocco where he will have to negotiate with the Sultan over the retention of air bases. He is being replaced in Greece by Mr George Allen, Assistant Secretary of State and one of the foremost "trouble-shooters" in such previous posts as Azerbaijan, Jugoslavia and India. Mr Allen's appointment is thought to reflect the Administration's concern over Cyprus and its possible readiness to act as a mediator. Moreover, as both Mr Byroade and Mr Cannon have been criticised at home, the new appointments may mark the Administration's desire to make a fresh start in middle eastern diplomacy.

Taking the Consumer's Pulse

I. Index of Confidence

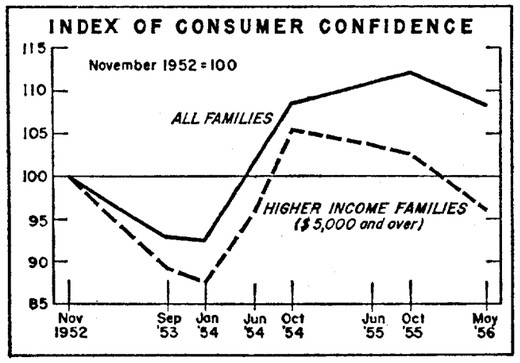
FROM A SPECIAL CORRESPONDENT

IN spite of the sharp drop in sales of motor-cars and the consequent unemployment in Detroit; in spite of a slight decline in the building of new houses; in spite of other soft spots here and there in the national economy, the confidence of the American consumer remains very high. True, it has fallen somewhat from its peak of last year but this has made little difference to the general optimism about the economic future and about personal financial prospects. Consumers are planning to buy houses and durable household equipment nearly as freely as they were at the peak of the 1955 boom, and there even seems to be considerable hope that the new 1957 cars which will begin to appear this autumn will sell well. This is the gist of the latest study of the attitudes and buying intentions of consumers, which was taken in May, before either the President's last illness or the steel strike, by the University of Michigan's Survey Research Centre. This organisation has become known in American economic and business life for its periodic feeling of the consumer's pulse.

Three times a year, squads of researchers question a sample of from 1,750 to 3,000 families, picked at random, to find out about their financial status and how it has changed over the past year, about their views on the state of the economy, and about the specific durable goods which they do, or do not, intend to buy. The results of these probings are watched very closely, for they provide clues to whether Americans are planning to spend their cash or to save it. This is a factor of considerable importance in an era when earnings are running high and the consumer has more choice than he once did about how he will use his so-called discretionary income. The wide swings in sales of motor-cars, which have ranged from as low as 4,200,000 in 1952 to well over 7,000,000 last year, and will probably be around 6,000,000 this year, offer a very clear illustration of the importance to the economy of the consumer's power to spend or to withhold his money as he chooses. That businessmen recognise this factor is obvious from their

sponsorship of the fast-growing activities of "motivations research" in the United States.

The Survey Research Centre actually runs two regular tests of consumer opinion. The first, sponsored by the Federal Reserve Board, the central banking authority, has been taken annually in the winter for the past eleven years and is the more comprehensive of the two series. The FRB survey includes data on consumers' liquid assets, instalment debts, holdings of corporate shares, and other financial facts, as well as information on the attitudes of consumers and their plans for buying durable goods. The second, newer series, the so-called "interim" surveys, are underwritten by various private firms, including the automobile manufacturers; they deal only with attitudes and plans, and are taken in the autumn and in the spring.



Although there is some debate about the ultimate value of these unique surveys as thoroughly reliable indicators of future trends, even the pessimists will admit that they are an important step in the right direction. The questionnaires that the centre's researchers take into the field are lengthy and are designed to get answers to specific questions that can be put on tabulating machines; they are also designed to elicit free opinion as well. Here are some of the key questions that the interviewers ask:

Would you say that you and your family are better off or worse off financially than you were a year ago?

Would you say that at present business conditions are better or worse than a year ago?

Do you think that during the next twelve months we'll have good times, bad times, or what?

What do you think prices of household items and clothing will do during the next year or so?

Thinking of the auto market—do you think the next several months will be a good or bad time to buy a new car?

This questioning elicits some interesting shifts in opinion. Back in the spring of 1954, the middle of the last period of economic readjustment, 50 per cent of the families interviewed rightly foresaw good times for the country as a whole over the coming year; 21 per cent foresaw bad times; 12 per cent thought they would be good in some ways, bad in others, and the remainder were uncertain. But in the spring of this year, 74 per cent looked for good times; only 7 per cent thought times would be bad; and 5 per cent that they would be mixed. The people at the centre have always insisted that one question taken by itself is not sufficient to indicate a trend, that the answers must be read in conjunction with those to other questions. Hence, the researchers have constructed an "index of consumer confidence" by taking eight of the key questions and weighting them according to significance.

This index now stands at 108.1, as against a peak of 112.1 last autumn, having been pulled down by a slight decrease in the number of people who said that their financial position had improved over the past year (32 per cent, against 36 per cent), and in the number of people who said they thought conditions generally had improved (33 per cent versus 48 per cent). Another depressing factor was the increase in the number of people who felt that prices were going to rise. The centre itself always stresses that the index is highly experimental, and that it must be interpreted with great care. What it really shows and what its true value is are somewhat doubtful questions which will be discussed in a later article.

Democrats in Step

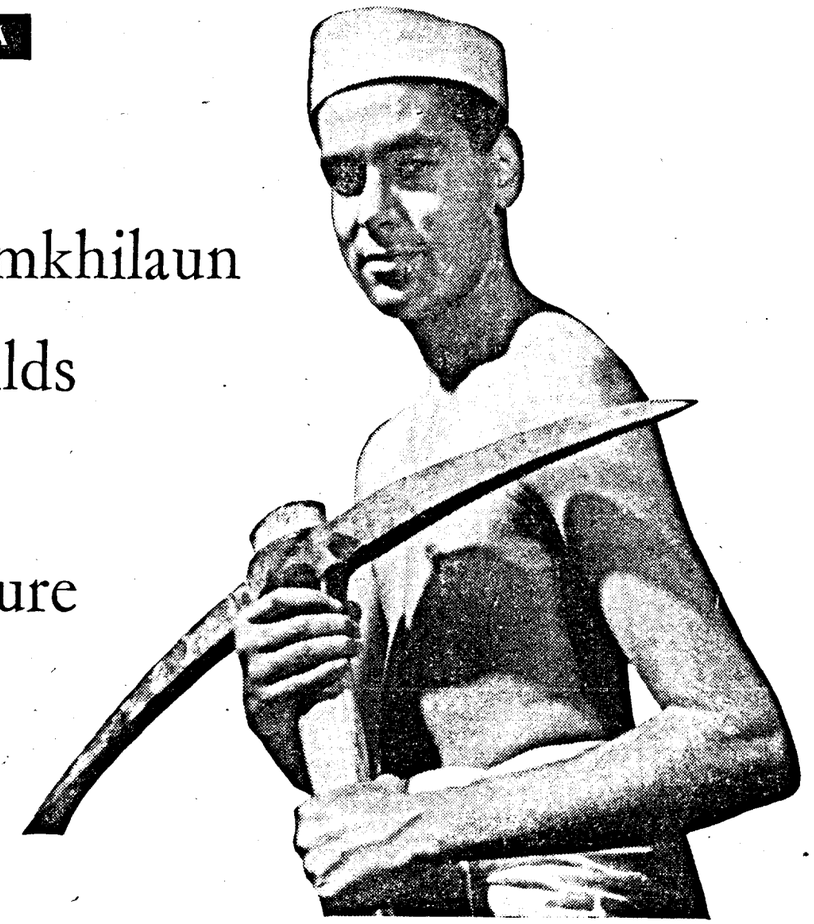
THE question of civil rights for the Negro, which is dear to northern liberals in the Democratic party and to their Negro constituents, and anathema to the South, where relatively few Negroes vote, is always a potential source of trouble when the Democrats must unite on a platform and a candidate. This week's debate in the House on the President's civil rights programme already has Southerners breathing defiance, although the Bill is doomed to certain death in the Senate. It will serve the Republicans well enough if it reminds the Negroes who their friends are, and pours salt into Democratic wounds.

At Atlanta the representatives of seven southern states have been concerting their plans for making sure that the Democrats choose a candidate, and agree on a civil rights position, which is acceptable to the South. The conference publicly disclaimed any intention of walking out to form a third party—as the South did in 1948—if southern views are flouted. But the occasion is not likely to arise. Mr Stevenson's stand on civil rights is moderate enough for the South to swallow, and all the signs are that Mr Stevenson is steadily increasing his lead over Governor Harriman, the only serious Democratic aspirant who disdains the middle of the road and would be prepared to ride roughshod over the South in the hope of carrying the North and West.

Such a sacrifice of Democratic unity would be politically attractive only if it held out reasonable hope of victory; with Mr Eisenhower in the field this can hardly be the case. Moreover, Mr Harriman has been playing his card clumsily; he has had to deny that, if he were elected, he would send troops into the South to smash segregation, and his implication that he was sounder on the Communist issue than the other Democratic candidates will not endear him to any one. The choice of Governor Clement of Tennessee, a strong Stevenson supporter from a border state, to deliver the keynote speech at Chicago is an indication of which way the wind is blowing. Mr Clement is a progressive young Southerner who has the distinction of having vetoed a segregation bill. Another sign that conciliation is to be the order of the day is that the drafting of the Democratic platform is to be in the experienced hands of Representative McCormack, who has skated skilfully over similarly thin ice at earlier Democratic conventions.

BRUSH in INDIA

Ramkhilaun builds his future



Ramkhilaun comes from the Mirzapur district in India—a land of great beauty, today clouded by hunger and disease. But the future looks more cheerful. Ramkhilaun, having finished work on the huge cement factory at Churk, is helping with the next step in a comprehensive development programme — the building of the Rihand Dam, which will supply hydro-electric power for nearly all the Eastern districts of the United Provinces.

IN THE BEGINNING

Eventually the factory at Churk will take its power from the Dam. But the vital task of supplying the initial power has been entrusted to Brush Electrical Engineering Co. Limited, Loughborough, who were responsible for supplying and installing all the electrical equipment:— three 2,400 kw Brush-Ljungstrom turbo-alternators, together with transformers, switchgear, 170 motors — *and* approximately 14 miles of cable! The entire factory power station has been designed on the "Unit" principle so that once its job is done, it can be moved to another site.

POWER FOR THE START

More and more frequently, Brush Group equipment supplies the initial impetus that brings planned progress to undeveloped areas all over the world. The Brush Group produces about a third of the total U.K. output of industrial diesel engines and generating sets — and is, in fact, the world's largest exporter of this type of equipment. The Group constantly exports over fifty per cent of its entire production and, in the past few years, it has exported as much as seventy per cent.

Prospects on the Farm

THE Department of Agriculture's latest crop reports, based on estimates and prospects on July 1st, indicate that deliberate policies and acts of nature are reducing agricultural production compared with 1955. The total acreage planted or growing for 59 crops is 351 million acres, 3.8 million below last year and the smallest since 1942. Of this, farmers are expected to harvest some 330 million, 3 million acres less than in 1955. The cotton acreage under cultivation is 3 per cent below the 1955 total and is the smallest since the early eighteen-eighties. Tentative forecasts suggest that production will run to a million bales less than last year, but the heavy emergence of boll weevils and the shortage of ties for cotton bales, caused by the steel strike, may reduce this total further.

	Acreage for Harvest (million acres)		Yield an Acre (thousands of bushels)	
	1955	1956	1955	1956
Maize	80	78	41	42
Wheat	47	50	20	18
Oats	39	35	38	32
Cotton	18	17	...	...
Tobacco	1·5	1·4	1·5*	1·4*

* Thousand 100-pound bags.

Federal crop control programmes, in the form of acreage restrictions and the new soil bank—a plan under which farmers are paid for keeping land out of cultivation, for letting acreage lie fallow or shifting it to grass or trees—are mainly responsible for the improved picture. Moreover, nature has helped the Secretary of Agriculture to give an attractive start to the soil bank. Drought and the threat of drought have persuaded many farmers, particularly in Iowa, that there is more profit in receiving payments from the government—which in the case of maize are estimated at an average of $44 an acre—than in letting their crops grow to harvest. In eastern Colorado, New Mexico, western Kansas, Texas and Oklahoma, moreover, six million acres of crop and pasture land are lying parched by six years of drought. To help meet this situation, farmers will be allowed to graze livestock on land which is technically in the soil bank and for which they have received payment.

But despite controls and drought, high yields will continue to pose a problem of over-supply. President Eisenhower announced last week that $3 billion worth of farm surpluses had been disposed of since 1954, mainly through exports. Nevertheless, the government's holdings increased sharply in the past year and are now valued at $8.5 billion. To help move these mountains, the Senate has passed a Bill increasing from $1.5 billion to $3 billion the amount of agricultural products which the Commodity Credit Corporation can sell overseas against foreign currency. The Bill approved by the Senate also includes a clause allowing the President to barter food for strategic materials with Russian satellites, but not with the Soviet Union itself or with Communist China.

Chips off Old Granite

FROM A CORRESPONDENT IN BOSTON

RELATIVELY small and sparsely populated, New Hampshire has the largest state legislature in the United States. Of the 565,000 inhabitants of the "Granite State," 424 belong to the two-chamber legislature. One day New Hampshire may wake up to the fact that this disproportion is too much of a good thing. But at the state's recent constitutional convention, rural interests re-asserted their historic control and rejected eleven proposed amendments designed to reduce the size of the legislature to a mere 336 members.

Even though New Hampshire's larger towns now contain 51 per cent of the total population, the alliance of small towns and farms held its ground. The fact that electors in some small towns are entitled to vote for a representative to the state's lower house only once every ten years does not bother New Hampshire's political leaders—most of whom are Republican. For there are enough small towns to give rural elements a constant advantage. Under the state's 172-year-old constitution every city ward or town with a population of 729 gets one representative in the lower house. If a town has slightly less than 729 inhabitants —and 108 communities do—it has a representative at every other biennial session. Even the smallest hamlet of perhaps a dozen votes is entitled to a representative once in every decade. In order to have a second representative, a town or city ward must have 2,187 voters—or three times the number required for a single representative.

★

The rural faction at the state convention was in no mood to ease its grip. It struck down by a 2 to 1 vote the major proposal for an amendment which would have cut the size of the state's House of Representatives from 400 to 300 and raised that of the State Senate from 24 to 36. No one who took a close look at the roster of 440 delegates to the convention can have been much surprised by this result. Many of the delegates were themselves legislators; some of them would have lost their jobs under the new system. In terms of monetary reward, a legislative job is worth only $200 at every session. Being a legislator gives, however, a stamp of distinction that can improve a man's economic status in both legitimate and unorthodox ways. Rockingham Park race track, for example, found it convenient in 1955 to hire 44 New Hampshire legislators as employees during the racing season. The race course exists only with the sanction of the legislature and its profits are directly affected by state taxation. Some voters may have thought this an unholy arrangement, but they did not rise in arms against it.

On the whole, New Hampshire is quite well satisfied with its lawmakers. Taxes on the race course, on liquor and cigarettes provide the bulk of operating revenue. Residents thus escape a state income tax. A similar taste for the good old ways led delegates to the convention to turn down amendments which would have permitted 18-year-olds to vote, allowed the legislature to establish a graduated income tax and given the governor a four-year instead of a two-year term. Only six minor amendments were approved, and even these must be ratified later by a referendum.

The World Overseas

A New Shape for Israel

FROM A CORRESPONDENT LATELY IN ISRAEL

ISRAELI politics have been dominated for eight years by problems of security. The government of Israel has been criticised on the grounds that it stimulated this obsession and thus confused, to an unnecessary extent, the essential problem of how the Zionist garrison of Palestine was to evolve into a self-supporting state. The criticism was partly just, and partly lacking in understanding of Israel's psychological condition. But in spite of the fact that Israel is in greater danger today than at any time since 1949, it is now embarking on a process akin to a national psychoanalysis, through which the real problems of statehood are coming to the surface for the first time.

Those engaged in the process do not necessarily see their acts in these terms; nor do they see them as a whole. The trend is barely conscious, and is not yet well-established. It may be inhibited by the pressure of events on the frontiers. But if it is not, it will in time produce a change of attitude not merely to domestic problems but to Israel's position as a small enclave in the centre of an Arab world. In the long term, it could become an influence for peace in the Middle East.

This momentum towards "normality" and away from what the Israelis themselves call "the ghetto mentality" has been provoked by several factors. There is the passage of time. The Old Guard of Mapai (the Labour party), the Histadruth (the Israeli Federation of Labour), the Kibbutz (communal settlement) movement and the Jewish Agency—the people, in fact, who commanded the garrison—are getting older. Younger men, many of whom were born in Palestine or who led the victorious armies, are growing into the generation that carries weight in politics. They inevitably have a different vision of the needs of the state. It is not in every case a pacific vision; but the underlying principle is the same: Israel as a state must modify many of the ideas and institutions that were necessary to Zionism before the state existed.

It is symptomatic of this desire to belong to a state of more "normal" shape that Israeli youth has taken to archaeology. Almost every flat in Tel Aviv has its collection of broken pots from the Canaanite city of Hazor and stones from the tombs at Beth She'arim. General Yigal Yadin, who used to be Commander-in-Chief and is now Professor of Antiquities at the Hebrew University, describes how tough young militants, trooping out to the frontiers to dig fortifications, come back with fragments for him to identify. It is an expression of their deep need to rediscover roots in Palestine, to convince themselves that there is a continuity and a permanence in their occupation of the land. They want to remember that, a long time ago, they were of the Middle East; they want to forget that their families were, so recently, rejects from Europe.

To turn to a more practical, everyday aspect of statehood, it is in new notions about handling Israel's economic problems that this urge to "be like any other state" is most easily discernible. Till now Israel has survived, like the bellman, on hope and on contributions from abroad—from the American government, the Jews of the Diaspora, German reparations. Since 1948, there have been plans, missions and more plans, all with the avowed object of developing a self-supporting economy before the contributions run out. But the new thinkers, who include some of the more active young men in the Israeli bureaucracy, are now reflecting that it would be rewarding to concentrate on streamlining, rather than letting so many planners and institutions have their head.

In various places, small offensives are being mounted against the old citadels—Histadruth, Mapai, and other vested interests—that have, like states within a state, ruled the economy according to lights that were often parochial. One disenchanted politician described the present system as "a government by coalition like no other coalition in the world because it coalesces simply to distribute the spoils." The distribution of all the odd sources of revenue, and even of functions between the vested interests, many of which owe their shape to the requirements of community organisation under the mandate, has never been decided by the Treasury or even by the Committee of Economic Ministers, but by a political bargain between the parties and the institutions which are the legacy of the Zionist garrison. The habit has become further ingrained owing to the connection between the largest political party, Mapai, and the Histadruth; and to the ubiquity of the Histadruth, which is the largest building contractor, landlord, importer and welfare organisation in the country.

It is relevant here to interpolate the disquieting economic statistics that have prompted this urge to refashion old shapes. The drive to be self-supporting is still below the level required to achieve balance before external contributions run out. Many feats have been achieved, including the absorption of about 700,000 immigrants, the control of inflation and some improvement in the standard of living. But the gap between exports and imports is not closing. In 1955 imports of goods and services cost $433 million as compared with $379 million in the previous year; exports were $139 million as compared with $135 million. Outright contributions (other than loans) were also down. These figures include about $85 million in each year on account of German reparations and about $25 million on account of American government grants-in-aid. Reparations will be finished in ten years and American government aid is already getting progressively smaller. Thus, the Israelis calculate that, by 1966, they will be exclusively dependent on exports and on such help as may still be forthcoming from Jews abroad. The failure to improve exports or to reduce imports in the past year, when immigration has not been heavy, is correspondingly depressing.

To return to the new symptoms: just as the national economy has never been costed on a national, but always on a sectional, basis, so individual entrepreneurs have never bothered (or discovered how) to cost their enterprises. They have had a sellers' market; most exports are subsidised; some imports are subsidised and others have to be bought with expensive "black" foreign exchange; there is no free competition in the domestic market, and labour is mostly unskilled. Thus there has been little incentive to practise techniques of business management.

In the last year there has been a change at the Treasury. The result is a new conception of national planning, hardly yet articulate, based on the revolutionary principle that national resources should be pooled and distributed according to national need. It has not got much further than the creation of a "bureau of the budget"; a proposal to form a central statistical office and a central secretariat for the Committee of Economic Ministers; and closer co-operation with a reinforced central bank. Of course, there is opposition from former citadels—amongst them, from the Prime Minister's office, which has tended to take to itself all residual power over planning and development. But the attempt is being made to create something more nearly like the British system of administration. If it is successful, the old slogan: "Pioneer and never mind the cost" has had its day. Some members of the Histadruth have joined forces with a group in the Ministry of Labour to make industry, public and private, aware of the need to show a profit.

The change will be slow and complicated, not least by the fact that most of the people behind it are themselves members of the Histadruth, one of the bastions of the Zionist pre-state. Officials are not party-free and they are, therefore, to some extent agents of the vested interests that have to be curbed. But slowness may not matter. In one way, the institutions of Zionism have had a crippling effect on the state of Israel. But in another, they have provided a conservative tradition and a formalism in which a young democracy has been able to grow without the violent instability which often accompanies the process elsewhere.

Morocco's First Steps

FROM A CORRESPONDENT LATELY IN MOROCCO

THE rejoicing which follows the successful issue of a long national struggle often heralds a period of disillusion. So far Morocco shows no signs of passing into this second stage. There have indeed been so many manifestations of joy that the visitor is tempted to exclaim, "Out of question, you were born in a merry hour." To which Moroccans, if they had been brought up on Shakespeare instead of Molière, would no doubt give Beatrice's reply, "No, my lord, my mother cried: but then there was a star danced, and under that I was born."

Certainly no birth ever occurred more suddenly, nor was any newborn babe ever faced more promptly with adult tasks. The first foreign minister of independent Morocco had to fly to Tangier, before he had any Moroccan staff or even an office to work in, and propose a *modus vivendi* to the powers responsible for that city. At the same time he had to prepare for negotiations with both France and Spain, each of whom had to be contented without indisposing the other. The minister of justice, looking for legal officials by the hundred, found that the school of administration could supply just three possible candidates.

Before the Protectorate, the art of government consisted largely in the management of the tribal areas. For over forty years the practice of this art had been carefully kept from the Sultan and his Makhzen. Though the tribal scene has been transformed by efficient government, the art has to be relearned. In addition, the conditions of the half million tin-town dwellers whose lot had been a standby of nationalist propaganda could not be ignored. There was no army. Racketeers and criminals, masquerading as patriots, had to be put down. As the existing *kaids* were discredited for co-operating in the repression, there was the task of replacing the majority of them by untrained men. The anxieties of the French administrators and settlers had to be allayed.

Last but not least, something had to be done about the "resistance"—the seven thousand uniformed men, more or less embodied in the "Liberation Army" who had been fighting in the Rif, and who would not give up their separate organisation till they understood what interdependence was going to mean. There was no force to disarm them except the French army; and an attempt to use this was bound to entail a new war, waged by the Liberation Army in the name of freeing the Sultan from foreign control.

But Morocco had a remarkable asset—the tremendous prestige of the Sultan, perhaps the only thing that could hold its disparate elements together. For the forty-four years of the Protectorate one man, who at the end was more than a hundred years old, had served as Grand Vizir. At last Mohammed V could fulfil his long-cherished wish of appointing a government of young and active men. As Prime Minister he selected a soldier, moderate and inde-

pendent in politics, who had served with distinction in the World War, losing a leg in the allied cause and having for the French army the sort of feelings which so many Indian officers have for the British.

With this team, the first perilous moments have been survived. The breaches of order have not been frequent, nor on such a scale that the position could not be rapidly restored. Apart from some brigandage, the incidents have been of two types. Two of them were due to popular resentment against conspicuous figures in the repression against whom the government had taken no steps. The others were due to the equivocal position of the French army and of the "Liberation Army." The former interpreted the agreement that its status would remain unchanged until the final settlement as entitling it to exercise certain police functions; the "Liberation Army" disagreed, and took action to enforce the view of the Moroccan government that since that government had been recognised as solely responsible for internal security, the French army had no right so to act without at least advising local Moroccan authorities first.

The formation of a Royal Moroccan army out of the Moroccan troops serving with the French forces could not have been achieved without French aid and understanding, but the inception and extraordinarily rapid execution of the scheme were due to Moroccan initiative and drive. The rumours before the parade of May 14th that the "Liberation Army" would participate, and Algerian flags be displayed, proved false; while the excellent organisation and the good humour of the vast crowds gave a clear impression of a will for orderliness. The presence in the provinces of detachments of this new army, which has a high percentage of French officers, has encouraged a sense of security among Frenchmen and Moroccans, as well as convincing the latter that independence is a reality. France has now appointed General Cogny as commander-in-chief in place of General Bourgund; in South Morocco, he has reached agreement with the Royal Moroccan army about a system of joint garrisoning which may work, though it is bound to try tempers on both sides as it does so.

Royal Progress Through the Rif

The "Liberation Army" is tightening its discipline and addressing itself to new tasks. It has been serving as a constabulary in areas where there is no other police force available, using its standing with the people to restore discipline among Moroccan workers in French and Spanish enterprises, to see that dues are paid, to put down the sale of "kif" and to suppress racketeers. Its best organised detachment, under its chief, Dr Khatib, has this month sworn to recognise no other leadership than the Sultan's. Other detachments have been following suit during the royal progress through the wild Rif territories where no Sultan would have ventured to pass during the troubled decades before the occupation. In some places, Algerian flags were in evidence, but the Sultan in his speeches avoided any reference to the neighbouring territory. The government is helping the growth of trade unions in both zones, and if some of their first activities have been a little naïve the idea is surely sound.

Under the protectorate, Moroccans were discouraged from forming contacts outside the sphere of French civilisation. They were, however, disposed to think well

of England, partly from memories of pre-protectorate days, partly from what they had heard of British policy in the Commonwealth and partly, it would seem, from listening to the BBC. Now that they are emerging into the larger world, their first direct impressions may well be decisive. A little sympathy and understanding will go a long way. But if they feel that they are automatically condemned on the strength of reports which nine times out of ten come from Paris, not Rabat, they will soon be feeling that "disappointment with western policy" which Prince Maulay Hassan detected in Colonel Nasser's mind. In that case it is more than probable that when they enter the Arab League, they will reinforce the antagonism to the West. Yet they are a proud people, well aware that they live on the Atlantic as well as the Mediterranean, and less willing than some Arab states to follow an eastern lead. They would rather be leaders than be led. They might well play the part of mediators between the Orient and the West, given favourable circumstances. Among the latter must be included a fairly speedy unravelling of the Algerian tangle, and agreement on the status of the portion of the Sahara south of Morocco.

OEEC, Atoms and Trade

FROM OUR PARIS CORRESPONDENT

ONCE again an OEEC council meeting will probably adjourn in a cloud of promised steering committees, study groups, working parties and reports to come. Some might see in this another sign of the loss of momentum which has been threatening the organisation; but, in fact, this session has been far from negative. The delegates came essentially to settle two questions: the nature of OEEC co-operation in atomic development and the freeing of trade. They will leave with the first launched in a way which ends, one hopes permanently, the misplaced competition between the Euratom and OEEC plans which distracted Europe's atomic ambitions last year. It has required something of a *tour de force* to avert failure on the second. But Britain's surprising eagerness to investigate how an OEEC free trade zone might be linked to the common market of the Six has roused hopes that this is not simply conjuror's patter to distract attention from the British refusal to agree to an OEEC tariff reduction plan.

A report by the special committee on nuclear energy set up by the council last February has been favourably received; its clearing of the technical ground has been useful in educating countries still little aware of the implications of atomic development. Most OEEC members have shown interest in at least one of the proposed joint installations: heavy water, gaseous diffusion and chemical separation plants. They have all accepted the principle of international security control—a revolution for some, like Switzerland, whose neutrality thus takes a new turn in the new industrial setting. They have all approved a "standstill" agreement forbidding new trade restrictions on atomic materials, pending proposals for free trade in them. The committee's work has also shown how misguided it is to think in terms of competition between Euratom and the OEEC.

It has always been clear that the poles of attraction in atomic Europe must be Britain and Euratom. Britain,

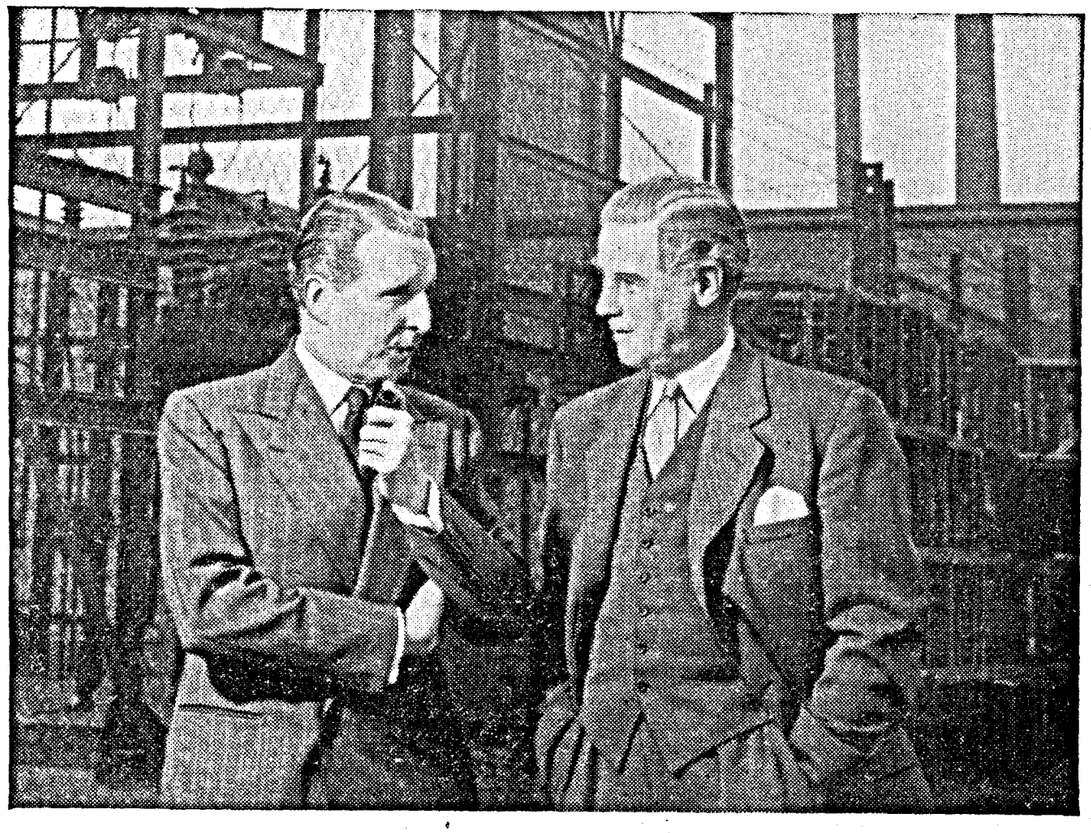
"I feel much safer since we got Nu-Swift fire protection..."



"... yes, I did read about that factory—terrible reminder that fire not only burns but *kills*. Actually, we've never believed in taking chances with fire. That's why we got the best fire-fighting equipment. What's that? Oh, you're thinking of getting Nu-Swift too? Wise man!

"As I was saying, we have quite a few small fires here—unavoidable really in a factory like this. But Nu-Swift extinguishers are just right for the job. After all, most fires have small beginnings; and it's what you do about them in the first few minutes that really counts. Remember, Nu-Swift extinguishers are all pressure-charge-operated for *instant* action—and the 95 m.p.h. jet of the Universal Extinguisher (that's the sort we've got) literally *snuffs* out the flames. What's more, Nu-Swift extinguishers are easy to use, easy to maintain—and absolutely reliable. Now you see why I feel much safer since we got Nu-Swift".

post this coupon, or ring REGent 5724

NU-SWIFT Ltd., Dept. E.2, 25 Piccadilly, London, W.1. Please let us have full details of Nu-Swift modern Fire Protection and your Rental-and-Maintenance Scheme.

NATURE OF FIRE RISK ..... (please attach letterhead)

...and so will you

because Nu-Swift extinguishers combine these four essential advantages:

★ **INSTANT ACTION** *immediately the knob is struck—thanks to the principle of pressure-charge operation.*

★ **GREATER RELIABILITY** *through extra care in design and manufacture. The sealed pressure-charges do not leak, evaporate or cause corrosion.*

★ **HIGH-SPEED RECHARGING** *thanks to easy-to-drop-in pressure-charge, pioneered by Nu-Swift. All 2-gallon models can be recharged in 30 seconds.*

★ **STANDARD SYSTEM** *throughout the range. All models are used in the commonsense upright position. Different colours show at a glance the risk for which each extinguisher is designed.*

NU-SWIFT

THE WORLD'S FASTEST AND MOST RELIABLE FIRE-FIGHTING EQUIPMENT IN EVERY SHIP OF THE ROYAL NAVY

having its own industry nine years old and its own problems, has said that it will not help to finance joint OEEC plants, but is prepared to help in the designing and building of a chemical separation plant (the joint installation in which the most members showed interest) and in training scientists. The British position makes it likely that the other countries, left to their own resources, will look to Euratom. And the Euratom powers have every interest, politically, in bringing other OEEC countries in on their projects wherever possible. The result is that little is now heard of who will "get there first." The OEEC is already far enough on with its work for "study groups" to meet in the autumn to prepare blueprints for the joint plants, and it now looks as if it really will provide the framework for the association between Euratom and the other European countries.

The trade discussions have taken a curious and unexpectedly parallel course. The countries with low customs duties came to the session hoping to obtain agreement to a plan for tariff reductions in return for "consolidating" (i.e. making permanent) the freeing of 90 per cent of intra-European trade from quantitative restrictions. The OEEC secretariat also hoped agreement could be reached on new measures to reduce further the remaining quantitative restrictions. These hopes have foundered on Britain's opposition to proposals for reducing tariffs on goods predominantly important in intra-European trade because the benefit of the concessions made would, by Gatt rules, have to be extended to non-OEEC countries from which Britain would not obtain reciprocal advantages. The British Government has clearly felt uncomfortable. True, it raised its liberalisation percentage from 85 per cent to 94 per cent, with excellent timing, on the eve of the council meeting. True, tariffs have traditionally been a Gatt monopoly. Nevertheless a more positive stand was required if momentum on trade liberalisation was to be regained. As *The Economist* goes to press it seems likely that the 90 per cent standard will not be "consolidated" but simply prolonged until the end of 1957.

The discussion of further liberalisation has been entrusted to a committee. Another committee is to consider the idea of an OEEC free trade zone. This idea was put up by the secretariat, apparently on British prompting, as an alternative to the automatic tariff reduction scheme. If the committee's study of it leads nowhere by the beginning of 1957 (when it is to report), then discussion of the tariff reduction scheme will begin again.

Soviet Social Reforms

THE Soviet Union is making a visible effort to give some substance to its early social ideals. The October Revolution proclaimed slogans of social justice and equality, but they rang hollow in the poverty-stricken Russia of the early revolutionary years. Later the ideals were sacrificed on the altar of Stalinist industrialisation, when production was the supreme goal. Inequality, introduced as a necessity, was elevated to a virtue. The social reforms launched by Stalin's heirs are now undermining the established dogma and in the present state of the Soviet economy they no longer have the quixotic air of the ambitious early schemes. The reforms were foreshadowed at the party congress earlier this year, but the first concrete measures were outlined at the meeting of the Supreme Soviet (or parliament) which has just ended.

Of all the debates, that about old-age pensions seems to have aroused the greatest popular interest. There is no reason to disbelieve Marshal Bulganin's claim that thousands of letters poured in from ordinary people, and that pressure by deputies led to amendments which raised the contemplated expenditure. The scheme concerns 50 million Soviet workers and employees as well as their families—in other words, virtually the whole urban population, together with the two million employed in state farms or Machine Tractor Stations (MTS). Only the collective farmers are not directly involved as they are supposed to be looked after in their old age by the collective. Individual farmers and craftsmen can be left out of account since they form less than 0.5 per cent of the total labour force.

More Generous Pensions

The scheme is not entirely new, but its precursors suffered in the race for production at all costs. Wages at one end of the scale were so low that a proportionate pension was insignificant; pensions in general were considered as additional income for people who had to go on working. The new plan sounds more ambitious, more comprehensive, and more egalitarian. Every male state employee at 60 and every woman at 55, who has worked for at least 25 or 20 years respectively, will have the right to claim an old age pension. Miners and other heavy workers are entitled to retire at 55. The amount of the pension is related to the recipient's last wage or salary, but the percentage is inversely proportionate to the level of that income. It is claimed that the average wage has now reached 700 roubles. People with a wage of 350 roubles will get a pension amounting to 85 per cent of it; those getting 1,000 roubles or more will receive only 50 per cent and the ceiling for pensions has been fixed at 1,200 roubles.

Additional provision is made for families left without a breadwinner, and for invalids. This must be a tragic problem in Russia, but not much is known about it; the authorities are reticent. Neither is it known how many people will benefit immediately from the new scheme. Expenditure on pensions in the budget has amounted to 25.5 billion roubles; next year it will be increased to about 40 billion roubles, about 7 per cent of the total budgetary expenditure.

Some other measures which once stood on the revolutionary agenda—only to be dismissed in the Stalinist period, when the trade unions acted as overseers rather than as spokesmen for their members—were decided or discussed at this session. Work on Saturday has been reduced by two hours and the working day cut to six hours for young people. A prohibition of heavy labour for women and the general introduction of a seven-hour day and a forty-hour week are apparently the next steps contemplated. Yet the most novel thing in the debates was the pressure from the floor for equality, expressed in the unsuccessful pleading for a further reduction of the discrepancy in pensions by cutting the maximum to 900 roubles.

This egalitarian trend is not limited to pensions, but is beginning to be felt in the wage structure, too. The first signs could be detected some time ago (see *The Economist*

of October 15, 1955) in attacks by Soviet economists on Stakhanovism, the system of highly differentiated piece-rates with large premiums for record-breakers. It was argued then that technological progress and the all-round increase in skill rendered such a cumbersome method superfluous, while the results rarely matched the outlay. The system of norms evolved in Stalin's time is so complicated that a handbook on wages in the engineering industry, covering only six branches, has no less than 1,000 pages. New, simpler handbooks are now being prepared, and the long sacrosanct system of piece-rates gets knocked about in the process. An article in the *Kommunist*, the party's theoretical organ, maintains that, at the present level of Soviet development, uniform weekly wages are a more efficient method of payment than piece-rates in many branches of industry.

Pensions as well as the general standard of life of the workers are finally determined by real earnings. The Russians claim that the real income of workers and employees is now three-quarters higher than before the war. The new Soviet statistical yearbook,* the first one in years, should allow a closer study of Soviet living standards. It confirms that housing is one of the main worries of the average Russian, who has only just over seven square metres of floor space at his disposal. Problems of housing, welfare and social reform, with their inroads on scarce resources, play a considerable part in the struggles within the Soviet leadership. It is not accidental that the new reforms co-incided with Mr Kaganovich's removal from the Manpower Commission. An instrument of Stalin's industrial policy in the past, he could no more accept the new "heresies" than Molotov could continue to preside over the new foreign policy. The performance of Stalin's heirs in seeking to reconcile the demands of social justice and production may serve as a guide to the future evolution of Soviet society.

Strikes in Norway

FROM OUR SCANDINAVIAN CORRESPONDENT

THE Norwegian strikes, now in their second week, involve 40,000 workers in the paper and building industries, and are the country's gravest industrial conflict since the great lockout of 1931. The strike in the paper industry, Norway's second largest export earner, is costing £250,000 daily, three-fifths of it in foreign currency. The building stoppage is scarcely less serious. The urban housing shortage remains acute, and the long, hard winter drastically limits the effective building season. Moreover, work on Nato projects in the north is at a standstill.

The public is unlikely to show much sympathy for the strikers. Young married couples, still homeless, are aware that the 24,000 building operatives are among the highest-paid workers in Norway. The wages of the 16,000 workers in the paper industry are also high. As the log-jams in the rivers increase, domestic stocks of newsprint fall. Oslo newspaper readers see their favourite features disappear, as formats grow slimmer; some papers will shortly be forced to suspend publication.

The Labour government and the Confederation of Trade Unions have, so far, not intervened directly in the strikes, which defy their declared policy of wage restraint. With elections on the horizon, the government is doubtless reluctant to court the kind of unpopularity incurred by the Danish government when it introduced strike-breaking legislation last spring. In the wage claims advanced earlier this year, most unions grumblingly kept demands within reasonable bounds. The present builders' strike began apparently by accident; at the time of the crucial vote, with an apathy not unknown in other countries, 80 per cent of the workers stayed away. Small building contractors are already facing bankruptcy, which spells unemployment for their workers, although on June 1st 23,000 domestic dwellings were under construction, as well as 1½ million square metres of public and other building.

Economic Stability In Danger

The strikes threaten to undermine the still precarious edifice of economic stability, painfully built up during the past eighteen months. Thanks to a series of belt-tightening operations, the balance of payments has improved this year. At the end of May the foreign currency reserves stood at £74 million, compared with £53 million at the same time last year. Exports of metals and ores forged ahead in the first four months of the year, earning a record £22 million (or £6 million more than in the comparable period last year). Simultaneously, paper and pulp, with £19 million, earned £2 million more. This year's timber yield, estimated at 7½ million cubic metres, should be a record. The new steel plant at Mo-i-Rana will, with existing capacity, ultimately produce 200,000 tons of pig-iron, nearly half Norway's present consumption. The country's biggest hydro-electric scheme yet, in Telemark, has been approved. The recently agreed Trondheim Project will bring increased prosperity to northern Norway as well as providing Sweden with a new supply route. Coal production in Spitsbergen is to be stepped up to 600,000 tons a year by 1962.

Yet investment remains at an uncomfortably high rate, while increases in productivity have been disappointing. The cost of living has continued to rise despite a plethora of economic controls. Moreover, the present strikes come at an inopportune moment, just as the government has tardily decided to increase trade liberalisation. The pattern of Scandinavian industrial unrest suggests a chain reaction; and this may not be the last explosion.

German Socialists Prepare for Battle

FROM OUR SPECIAL CORRESPONDENT IN MUNICH

WHEN, on the first day of the German Social Democrat congress, the fraternal delegate from the French Socialist party declared his conviction that the German Social Democrats could expect a great electoral victory next year, he was greeted with the murmur of modest acquiescence with which a pretty woman might take a compliment, knowing it to be true. The last congress of this party two years ago was an unhappy post-mortem on the electoral slaughter of 1953. This time an exhilarating sense that the

SPD, so long in the wilderness, is on the way to national power has been fed by the disintegration of the Bonn coalition and the feeling that Dr Adenauer is losing his grasp of affairs.

The scent of office determined the delegates not to endanger success by disunity. Herr Ollenhauer and his colleagues on the executive took full advantage of this feeling and of the sense of loyalty to leaders who had brought the party through the wilderness. Carefully avoiding the more touchy issues, they were rewarded with a series of unanimous resolutions on home and foreign policy.

A few weeks ago such a demonstration seemed, at the least, improbable. A clash with the executive was threatened not only by the resolutions on conscription (reported in *The Economist* last week) but also by resolutions demanding direct negotiations with Pankow. But the Left was convinced or shamed into line.

The main theme of Herr Ollenhauer's long opening speech and of the foreign policy resolutions was familiar—the need for a break-out from the blind alley of Dr Adenauer's "one-sided policy of strength." Russian attitudes must be endlessly explored in pursuit of German reunification within the context of a general European settlement which would be based on a dismantling of the Paris Agreements (not Nato) and of the Warsaw pact, and would be accompanied by a general disarmament. The Russian as well as the western need for security must be satisfied; a united Germany must have limited military forces not tied to either "block."

Moscow, not Pankow

The first step to such a settlement must be the full use of west Germany's diplomatic relations with Russia, a course which Dr Adenauer has shunned. Diplomatic relations must be opened with other east European countries; a relationship of trust with Poland and Czechoslovakia is essential to any European settlement. But Ulbricht remains a leper. The only rude noises heard during the congress were the jeers that greeted an intense young pastor from Schleswig-Holstein, who declared that negotiations with Pankow were unavoidable. All types of technical and personal contacts with the Soviet zone must be developed, but for the moment, at least, there must be no negotiations with the régime. Nor must west Germany's "friendly relations with the western Powers" be traded for "normal relations with Russia." Though the SPD wished to abolish conscription, it would not repudiate the Paris agreements, but would negotiate for their revision. No speaker opposed this attitude. An all-German settlement, too, could only be achieved in collaboration with all four powers.

Two years ago the party was isolated on these matters. Today it feels that the four powers are moving in the same direction. It believes that the change in Russian attitudes is profound, and it will go to the polls next year not only opposing conscription but proclaiming that in an era of co-existence and relaxation Germany, which suffers most from the division of Europe, must take the lead in the search for a general settlement.

This may be a sufficient policy for the Social Democrats in opposition, but, supposing that they come to power and that agreement is still not quickly reached with Russia: what then? "Who wishes freedom must defend it," a Dutch guest bluntly told the congress. The party's leaders base their opposition to conscription partly on the technical ground that in an age of atomic weapons a small regular army is better. They are prepared to retain small forces equivalent to those of east Germany, though no larger. But there are, of course, party members (perhaps as many as a fifth) who oppose conscription as part of a general, often emotional, antagonism to any form of German army. At the congress the executive carefully avoided discussing a permanent regular army, and its members have not scrupled to inveigh against rearmament in general. But once it is in power the difference between its views and those of the anti-militarists may well become open.

In home policy, too, rebellion threatened from the Left against the executive's support for a liberal economic policy and competition; here discussion was steered away to new and wider issues. Under the heading "The second industrial revolution," Professor Carlo Schmid and Professor Leo Brandt grappled with the problems that will arise with automation and greater leisure. The debate developed into a warm discussion of the need to improve German education and a demand for more equal educational opportunities.

A German New Deal

On economic policy Professor Schmid talked a good deal of "planning" and, rather naughtily, even dragged in references to Marx from time to time; this seemed to satisfy the Left, although he emphasised again and again that a dictated economy was anathema. And the essence of the resolutions passed was neither direct state ownership, nor controls, but that a Socialist government should develop tools for influencing the economy and pursue a Keynesian policy to combine full employment with stability. Except for atomic power there was no specific mention of state ownership. Public ownership of coal and steel are in the party's action programme, but if the industries were ever taken over it would be in the form of small companies, owned, say, by local authorities, as many German companies already are. Competition is accepted by the general body and remains dear to the party's leaders. Their ideal of reform, indeed, resembles the New Deal more than Labour's efforts in Britain. Professor Brandt chose the American combination between state and private enterprise as a model in the atomic field; Professor Schmid held up the attitude of the American unions to automation as an example. The executive conceded a few demagogic phrases to the Left on home policy, but not much more; there are internal differences still to be resolved here.

Herr Ollenhauer and his closest collaborators were re-elected to the executive by overwhelming majorities. But one personal success outshone even Herr Ollenhauer's. At the last Congress Herr Fritz Erler, the party's defence specialist, failed to get on the executive, largely because he had declared plainly that a German army might be necessary; Herr Fritz Kuhn, a pacifist, was elected instead. Since then Herr Erler has been more discreet and has won a wide following by his able conduct of the party's attacks on government defence policy in the Bundestag. At this congress his interventions have been decisive and his popularity obvious. He was swept back on to the executive, and Herr Kuhn was dropped. Herr Erler, who is an expert on taxation as well as on military matters, has had more publicity during the Congress than Herr Ollenhauer himself. We have no Bevan, said one delegate, but Erler is our Gaitskell.

French Housing: *Non Repos*

FROM OUR PARIS CORRESPONDENT

WHILE the Algerian crisis preoccupies French politicians, M. Mollet's government is pushing through an important legislative programme which, in calmer days, would have roused some vigorous opposition. Colonial reform and the old-age pensions scheme, both now voted by parliament, are only its first instalments. The committees of the Assembly will shortly be asked to examine a bill for housing reform which is the most coherent and comprehensive housing law since the Liberation. For the first time, there is a hope of overcoming the housing shortage which is one of the main material reasons for popular disaffection with the regime.

Houses in the big French cities date, on a statistical average, back to the nineties, and in the countryside to the 1850's, the period of the Great Exhibition. The situation is worst in the ever-expanding Paris area, where three thousand homes a year are condemned but not vacated; and where an annual influx of 90,000 people has been met since 1945 by 140,000 new homes in all. It is often argued that Frenchmen prefer a good meal to a good house, and would rather pay instalments on a motor-cycle than on rent. The answer is that today they want both (but, as far as housing goes, not necessarily to pay for it); and the Fourth Republic, which is producing the motor-cycles, has so far signally failed to provide the homes.

Immediately after the war the lack of building was excusable. With the limited funds available, it seemed more important to renew the rusty industrial machine. Building was confined to reconstruction, itself somewhat sentimentally unfruitful; houses were restored in every detail of their original styling, whatever their period. The failure of governments to enforce priorities, from 1950 onwards, when building, as distinct from rebuilding, began, is harder to justify: it was politically easier to subsidise private building.

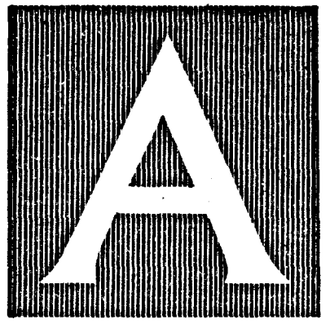
It is generally agreed that France needs 300,000 houses annually for twenty years to meet the problem; but between 1949 and 1955 it produced only 750,000 in all, against three million in Germany and two million in Britain. Most private building has gone to the rich who could raise the initial capital to get the subsidy: Avenue Paul Doumer, in Paris, a state-subsidised millionaire's row, is a monument to this absurd system. So is the fact that only 5 per cent of newly married couples live in a decent flat and 25 per cent live with their parents. Progress has been made in the last three years. Cheaper flats are rearing their heads—occasionally handsome, occasionally hideous—round many French towns, and over 200,000 families were housed in 1955. But the very increase in construction has laid bare the archaic structure of a building industry maintained by the haphazard subsidy system.

The industry has been stunted by severe rent restrictions and a static population between the wars. Geared to these conditions, it still consisted in 1955 of artisans and small builders working on dispersed sites, with only a fringe of industrial contractors. In 1955, 220,000 "firms" (many of them individual craftsmen) were involved in putting up 208,000 houses. The small financial margin on which most builders operate is such that far more houses are started in the year (to receive the first instalments of payments) than can be finished; sporadic work was in hand on 483,000 sites at the end of 1955. This excessive number of "starts" finally retards construction. It is not surprising that in 1952, the average cost of a housing unit was £3,600. Though this fell in 1955 to £3,000, it is still two-thirds higher than the cost of a three-bedroom council house in England. The upper limit of production seems to have been almost reached, if building is not considerably industrialised. Scarcities, especially of labour, are forcing prices up. Conscription for Algeria has worsened matters; the government is importing foreign labour, but the uncertainties of the situation and lack of accommodation slow up recruiting. M. François Walter, in a remarkable paper read to the French Society of Economic, Industrial and Social Studies last month, concluded that the swollen demand for private building must be deflated by cutting the subsidies if the industry is to reorganise and achieve 300,000 or more houses a year.

This is the challenge which the government's bill tries to meet. In essence, it gives a priority to cheap homes for rent built by mass production methods. By channelling very heavy state funds (£750 million in five years) on specially favourable terms almost entirely to contractors using "industrial" methods, it hopes by 1958 to raise the number of low-cost homes built, mostly for letting, from 40,000 to 100,000. This is considered the primary condition for reaching the 300,000 target from 1958 or so onwards. The bill proposes a five-year "guaranteed" programme of state financing to overcome the builders' natural reluctance to invest in equipment without having safe orders. In the extreme case of Paris, where traffic and slum clearance problems threaten to become insoluble and where 30 per cent of all "popular" flats will be built, a ten-year programme is proposed to decongest the area. These priorities imply closer supervision of building plans. Though the government does not intend to suppress the subsidy to private construction (which would "slow up building in certain regions where there is, if anything, under-employment in building") it will withhold it when it thinks necessary.

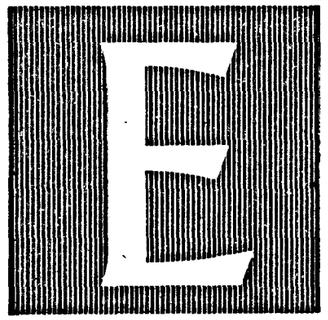
Building for the Masses

Since the proposed reforms will not, at least immediately, increase budgetary burdens, the bill should (assuming Communist support) go through the Assembly in the autumn without too much drastic amendment. Its ultimate value may well depend on the determination with which the government presses firms to divert resources from isolated to mass "social" building and, in particular, on the restrictions placed on the subsidy to private construction. Time may also show whether the working class, long used to low rents, is willing to rent "popular" flats at about £8 a month, though this falls to as little as £3 a month for needy families with children. Immediate discussion will doubtless centre round the "planning" aspects of the bill and the powers which it is proposed the state should have, for instance to expropriate land needed for building sites. The government's position is strengthened by the fact that several liberals, like Senator Pellenc, a specialist in housing, for all their free-trade scruples, have advocated reforms similar to those the government is proposing. In fifteen years or so, if the bill is fully applied, Frenchmen may find they are living in another Switzerland.



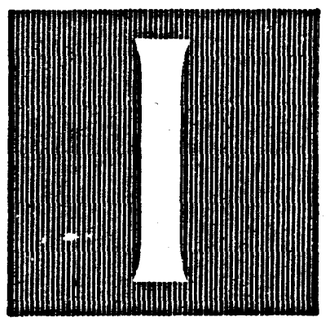
TRANSPORT. As part of the plan for the modernisation of British Railways, important orders have been placed with B.T.H. and Metropolitan-Vickers for diesel electric locomotives and power equipment. Metropolitan-Vickers produced the first gas turbine to be fitted in a ship and B.T.H. the first to power a large ocean-going vessel. A Metropolitan-Vickers gas turbine powered Donald Campbell's record-breaking 'Bluebird'. The world's first jet engine was built by B.T.H.

every day



COMMUNICATIONS. In addition to building much of the telephone equipment in use today, Siemens Brothers have developed for the first time in this country a semi-automatic telephone exchange with a cordless switchboard. Submarine Cables Ltd., an associated company, is now engaged in laying the first transatlantic telephone cable, linking London with the United States.

every way



POWER. Over 1,400 MW of generating plant built by A.E.I. companies was commissioned during 1955. Notable installations were at Los Peares and San Estaban in Spain and Waipori and Roxburgh in New Zealand. Four water-wheel generators being supplied and installed by Metropolitan-Vickers in Bersimis Power Station in Canada will be the most powerful of their kind in the world. Britain's first privately owned nuclear research reactor is being constructed by the A.E.I.-John Thompson Nuclear Energy Company at the A.E.I. Research Establishment.

Indian Chessman, part of the set once owned by Clive of India.

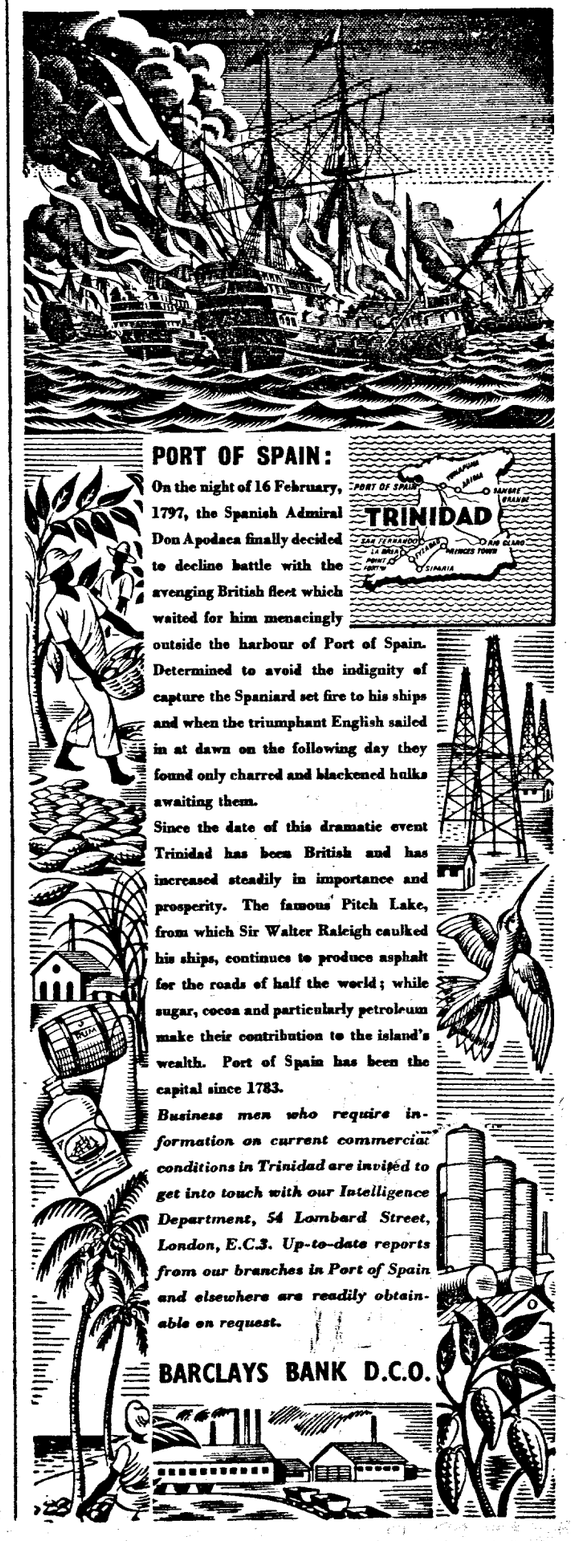
Chequerboard of the East

So many races . . . so many needs . . . so many markets extending over a vast area of the earth's surface. And there The Chartered Bank operates with knowledge and experience sustained by more than a century of close and intimate contact. Branches of The Chartered Bank of India, Australia and China are established in most centres of commercial importance throughout Southern and South-East Asia and the Far East. At all these branches a complete banking service is available and, in particular, facilities are provided for the financing of international trade in co-operation with the Bank's offices in London, Manchester and Liverpool, its agencies in New York and Hamburg and a world-wide range of banking correspondents. In London and Singapore the Bank is prepared to act as executor or trustee.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated by Royal Charter, 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2



PORT OF SPAIN:

On the night of 16 February, 1797, the Spanish Admiral Don Apodaca finally decided to decline battle with the avenging British fleet which waited for him menacingly outside the harbour of Port of Spain. Determined to avoid the indignity of capture the Spaniard set fire to his ships and when the triumphant English sailed in at dawn on the following day they found only charred and blackened hulks awaiting them.

Since the date of this dramatic event Trinidad has been British and has increased steadily in importance and prosperity. The famous Pitch Lake, from which Sir Walter Raleigh caulked his ships, continues to produce asphalt for the roads of half the world; while sugar, cocoa and particularly petroleum make their contribution to the island's wealth. Port of Spain has been the capital since 1783.

Business men who require information on current commercial conditions in Trinidad are invited to get into touch with our Intelligence Department, 54 Lombard Street, London, E.C.3. Up-to-date reports from our branches in Port of Spain and elsewhere are readily obtainable on request.

THE BUSINESS WORLD

Public Attitudes on Public Boards

AT their different levels, if the geographical solecism is permissible, the nationalised industries occupy an important area of Mr Macmillan's price plateau. All of them, so to say, are frozen, but some are more ice-bound than others. The degrees of difference are of some complication and indeed of some subtlety. They rest partly on the historical and legal background of the individual nationalised industries—on the fact, for example, that the railways inherited a judicial price-controlling mechanism from the days of the old companies and are still impeded in any attempts they make to become more competitive because the public thinks of them, quite wrongly, as a monopoly ; or, for another example, on the much greater degree of autonomy that the separate units of the gas industry have compared with electricity. But much also rests on the attitudes of ministers, backbenchers and public towards the nationalised industries. When coal was hoisted on to the plateau by the June price increase, it expected to be able to camp out there comfortably, blizzards excluded, for a twelve-month. When the railways four months ago were struggling against the cold on the lower slopes, they asked for a ten per cent increase in rates to protect them, but all they got was a thin five per cent windcheater ; they are not on a plateau at all, but have slipped through economic numbness and exhaustion of resources into a most dangerous crevasse of persistent loss and dependence on public assistance.

Between coal and the railways, one sees a sharp distinction of ministerial approach. Mr Aubrey Jones, the Minister of Fuel and Power, has defended (against considerable pressure from his own backbenchers) the principle of coal as an independent industry, as far as may be within the limits of what the law and public policy (in its widest sense) impose as a duty upon the Minister. Mr Harold Watkinson, the Minister of Transport and Civil Aviation, has implied by many of his actions that he sees the minister's role in a totally different light—to get much closer to the running of the nationalised industries for which he is responsible and to assert his authority on the way they manage their business. This may be a more popular line among his political colleagues than is Mr Jones's ; at least nobody on the Conservative benches has pointed out the possible dangers of Mr Watkinson's strikingly different approach.

Nationalisation as a political call has lost whatever power it had to sway votes. It is quite possible that there will be no more of it, even under a new Labour Government ; but it seems equally certain that the nationalised industries that now exist are here to stay. Neither of the two political parties has found a satisfactory philosophy to govern its relations with the public boards. The Labour Party is disillusioned and smells treason by managers who have changed their company hats for state ones. The more vocal among the Conservatives sometimes seem to approach the National Coal Board not as a body of responsible (though indeed fallible) people so much as a kindergarten in need of perpetual correction. The one view is composed of nostalgia for a political idea that never came up to its glowing prospectus ; and the other of political unrealism that cannot bring itself to see that coal, electricity, gas and the railways are industries that are going to stay publicly owned. A sensible Tory philosophy would not attempt to kick against these pricks ; instead it would encourage the nationalised industries to such a pitch of efficiency and profitability that a would-be bidder would think them most attractive—if only he could buy them. For Labour and Tories alike, the policy ought to be to make the nationalised industries the objects of admiration, not of contempt.

No government since nationalisation started has lived up to that principle. A succession of governments

have kept the price of coal unduly low—not by virtue of any statutory authority but by the process that Sir Dennis Robertson has so felicitously called "ear-stroking." Ears have been tweaked, too, when governments, and not the boards themselves, have decided the lines of settlement in coal and railway wage disputes. Government action throughout most of a near-decade of nationalisation has been markedly concerned to keep the prices charged by the nationalised industries lower than they should have been and not much inclined to help them to resist unreasonable pressures driving up their costs. To turn a notorious phrase upside down, Government has always been prepared in the end to will the means, but it has never got around to clear thinking about the ends.

★

What should those ends be? Surely the first, so glaringly obvious that it is often missed, is that the nationalised industries should be industries, not political creatures or cockshies. The public corporations must be accorded at least the reasonable independence of adult status. That some of them have not succeeded in earning it is partly their own fault and that of some of their leaders who have shown a remarkable capacity for absorbing public insult without any apparent thought of resigning. It is not surprising that they are held in low esteem. Although the public corporations are usually thought of as being walled empires of great power, they are much more easily challenged than modern trade unions and even some modern private industrial groups. The House of Commons is forever seeking the really effective way of making them accountable—and by that it means far more than the day's debate on their out-of-date reports and the limited opportunities for criticism that question time affords. The mere fact that it has been frustrated in its search for the ideal accountability formula is one element in the irritability that seems to pervade the House of Commons on the nationalised industries. It is undeniable, too, that the Fleck report on the National Coal Board and the Herbert Report on electricity are models of sympathetic criticism and objective reasoning that no purely Parliamentary report or discussion has yet been able to attain.

The second matter for urgent consideration is the way in which Ministers are to be expected to exercise their powers over—and their duties towards—the public corporations. On this it must be said that an appearance of bustle and the suggestion that brave new solutions can be found to long-seated economic weaknesses in a matter of months may have a certain political glamour. They may even get some things done better and more quickly. But they are only a slightly dramatised way of displaying the normal introspection and urge for self-improvement of any public board that still retains the vigour for those things. Six months for study of what is wrong on the railways seems a short allowance against the hard-working year or more that went into the Fleck and Herbert reports. The main task of ministers is not to double-bank the work of the directorates of the public boards, but to make sure that the best people are found for the jobs and left as free as possible to do them. The burdens of responsibility that the boards carry are heavy enough in all conscience, but they have been made heavier than they need be by political pressure and interference. It is not becoming for ministers to make a show of assisting the boards to cure financial weaknesses for which ministers themselves are in considerable part responsible.

★

"The best people" can only be the best people at the going price. The old railway companies held out to the ambitious recruit the glittering prospect that one day he might become general manager, with as much power as the chairman of the British Transport Commission has and perhaps twice his gross income (in pounds then worth much more and taxed at much lower rates). Young men were prepared to work hard at fairly modest pay in hope of gaining one of the few big prizes. What are the chances today in the public boards? Because of their bigness they are inevitably bureaucratic; chains of authority and salary scales to match are the necessary instruments of administrative order and common denominator "fairness." Money may not be the whole of the matter; it is possible that men with a genius for business and a limited demand for net income might be attracted into the public boards to make their mark in history. But they have not so far appeared, and all question of money apart, they are not likely to do so as long as the prevailing public attitude towards people in public industry (who work as devotedly and are not noticeably more stupid than those in private industry) is to regard them as second-class citizens who only deserve the cuffs of criticism.

A responsibility rests upon private industry to improve this atmosphere. The bigger industrial groups recognise it, for their problems of scale and good management match at many points those that confront the boards—though they are not burdened by a complaints office in the House of Commons and they can pay good people good money without having to get a Treasury minute. The smaller groups are not always so fair in their comments about the boards on whom they rely for basic services of fuel, power and transport. They are entitled to argue that these services could be rendered more efficiently; they are not entitled to demand them at uneconomic cost by bringing pressure on the boards to keep prices too low or to set aside too little from revenue to maintain their capital. They would howl to high heaven if they were under pressure to run their own businesses in that way. And when they draw attention, quite legitimately, to the shortcomings or stupidities that are inevitably committed from time to time by the boards and their staffs, they might have the grace to admit that their own arrangements are sometimes short of perfect and that, tax being what it is, mistakes are not usually very painful.

The essential thing is to get rid of the aura of hatred and contempt that surrounds the public boards. That does not mean that they can be allowed to sink into smugness and complacency; but it does mean that industry and the public should in time come to take a more objective view of the services that they are responsible for rendering to the British economy as a whole. It also means that ministers, if they are wise, will give the boards their protection against needling political interference, and will themselves refrain from acting as if they were better able to run the businesses than the men they have appointed to do the job. And the boards themselves should reflect on the moral independence that goes with efficient operation and financial success. On such terms, perhaps, it may be possible for the public corporations to rejoin British industry.

AUTOMATION

In next week's issue of *The Economist* there will be a special supplement devoted to this subject.

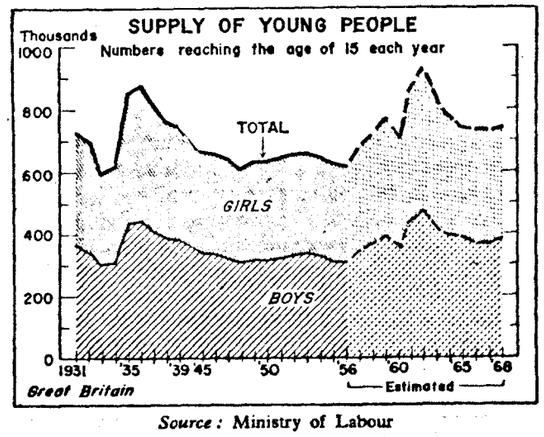
Apprenticeship for Skill

CHILDREN of the postwar bulge in the birth rate are now passing from the primary to the secondary schools. The bulge is a headache for the schools, but over the next few years it will give industry a unique opportunity to train much more skilled labour for an expanding economy. Since the war school leavers have totalled only about 600,000 to 650,000 a year, compared with over 850,000 in the mid-thirties. Next year 679,000 boys and girls will reach 15 years of age and in 1962, at the peak of the bulge, there will be 930,000. Here is the means to make good the shortage of skilled workers, for afterwards the figures fall, quite sharply to 820,000 in 1963, and then more gradually to between 700,000 and 750,000 a year.

The case for more technologists of university calibre—the innovators who largely govern the pace of technological change—is always being argued. But is the same urgency being devoted to the supply of the skilled technicians and practical craftsmen who bring the technologist's innovations to industrial fruition? For every technologist, so the white paper on Technical Education maintains, six technicians are needed. An increased demand for draughtsmen and electricians of all sorts seems certain. Men to carry out planned maintenance procedures will be needed on an increasing scale. The supervisor who watches the dials registering a series of interconnected processes will require an incisive knowledge of the whole operation, on which he can act when something goes wrong, and an infinite patience and alertness to keep watching when all is running smoothly. New tasks of these kinds call for new forms of skill, and for men who are versatile and adaptable. Their training must give them not only a complete grounding in a specific operation, but also a wider understanding of the entire system of production in the factory. It calls, in short, for a better general education.

These general criteria should influence the most important form of training for young people in industry—the apprenticeship system. An apprentice is usually defined as a young person undergoing training under some form of contract with his employer. There has been a steady growth in the number of apprentices since the war, and altogether 105 national apprenticeship schemes, covering 90 industries, have been promoted by employers and trade unions. These general schemes vary from industry to industry, but broadly they provide for three sorts of apprentices. Craft apprentices generally join at 15 or 16 and become skilled production workers such as fitters and artificers. The boys who later become production engineers or managers usually take a different route: student apprentices who may enter at a later age are given a more advanced theoretical training, and graduate apprentices enter industry after taking a degree.

Craft apprenticeships generally last for five years and the apprentice becomes a journeyman at the



Source: Ministry of Labour

age of 21. Few seven-year apprenticeships now survive; even in printing, where apprenticeship formally lasts seven years, it has been reduced to five in practice. Nor is any premium usually paid nowadays by the parents of the apprentice to his employer. Most schemes now provide for the apprentice to be paid at a percentage of the journeyman's rate, rising each year until he finishes his apprenticeship. Nearly all schemes also provide for part-time study at a technical college or its equivalent, usually under a "day release" scheme, with pay. Day release can be supplemented, and sometimes has to be supplemented as a condition of employment, by study on one or two nights a week as well. The student apprentice may be given a "sandwich" course, spending alternate periods of three or six months at college and factory (the "thin sandwich") or be released by his employer for a three or four-year course at university (the "thick sandwich").

Are there enough apprenticeship schemes, and will there be enough in future, to make the fullest use of the available talent? The Ministry of Labour estimates that of all the boys aged between 15 and 17 entering employment in 1954, roughly 35 per cent took up apprenticeships. In the industries employing highly skilled craftsmen, such as engineering, shipbuilding, motor vehicle manufacturing and building, the proportion of apprentices was over 60 per cent, and in some cases over three-quarters. But in others, the schemes recommended by industrial bodies have been implemented only sparsely. In England and Wales as a whole, only 27 per cent of the boys and 7 per cent of the girls under 18 are released by their employers for any form of part-time course; the record in Scotland is worse. And although the engineering industry in England released as many as 90 per cent of its boys (not all of them apprentices) for part-time education, in no other industry were over 55 per cent released, and in many virtually none.

★

The Government feels that the number of young people on day release from jobs should be doubled. Much of the growth in apprenticeship schemes has been due to the acute shortage of labour since the war; apprenticeships have had to be offered simply to attract good youngsters into industry at all. As this acute shortage has begun to ease, and will soon ease more appreciably, it becomes more vital to know how many apprentices each industry needs as a continuing investment in skill, rather than a general bait for labour. In this sense, even the engineering industry may not be offering enough apprenticeships. In parts of it, and particularly in the foundries, the shortage of skilled men is still acute. And there is an inevitable wastage of trained men to other jobs—either outside the industry, or within it—to firms that have no training scheme of their own. This raises the important question whether employers have any obligation to train more men than they need to meet their own anticipated demand for skilled labour. In practice some already do this by allowing for "normal wastage" in their recruitment and training programmes.

We may know little about the skills that may be needed in the future, but are present apprenticeship schemes and training imaginative enough to encourage good youngsters to benefit from them? There is, in the first place, a great disparity between the quality of the training offered by most of the large firms, which think more of the future, and that given by many small firms, which seldom plan their labour requirements far ahead. The large firm is better placed to give the apprentice an all round education by shifting him from one department to another. Many smaller firms do turn out first-rate craftsmen, but the range of experience of these men—and their adaptability to change—is likely to be limited by the small-scale or specialised character of the firm's operations. There are group apprenticeship schemes, by which a number of small firms jointly provide a fair range of experience for the apprentice by transferring him from one firm to another, but formal arrangements of this kind are generally disliked by employers, who fear that the loyalty of their employees may be impaired.

★

The value of apprenticeship depends also on the quality of the instruction at the technical college, and the extent to which firms co-operate with the college in providing a co-ordinated course of training of theoretical and practical work. Much could be done to make apprenticeships less rigid. In the first place, the all too frequent insistence on 16 as the maximum age for starting craft apprenticeships rules out a number of useful boys who may not wish to enter industry so early. Many employers look askance at apprentices over 21, for fear of wage complications. On the union side, there is determined opposition to any further shortening of the apprenticeship period, although some schemes do make a concession for apprentices who have acquired certain qualifications before they begin. Traditional union-enforced "ratios" of journeymen to apprentices, although not as restrictive as commonly supposed, could also impede the rapid expansion of training schemes. On the other hand, the steady erosion of the differentials between skilled and unskilled wages, as a result of pressure by the industrial unions, is likely to make some youngsters wonder whether it is really worth while taking this long training to become skilled.

These are all problems which lie within the power of the employers and the unions to solve, in co-operation with the technical colleges. But no examination of the apprenticeship system could omit a reference to the quality of the raw material—the educational standard of the boys who take up craft apprenticeships. Many of the most successful craft apprentices, it is generally agreed, are those who have come up through the secondary technical schools to the technical colleges. Many of these boys go on to take City and Guilds qualifications, and some the Ordinary and Higher National Certificates. But the technical schools account for only 5 per cent of each age group in the secondary schools. The large majority of craft apprentices, and of part-time students at the technical colleges, come from the secondary modern schools. Although the boy who fails to obtain even the least academic of the qualifications offered by attendance at the technical college is not necessarily a bad apprentice or useless to his employer, it is in this group that most of the wastage and general lack of interest is to be found. The remedy lies, in these cases, not with the apprenticeship system but with the schools. Keen imagination as well as technological methods have somehow to be imparted to the younger generation in industry.

Business Notes

Investors Strike Oil

INVESTORS knew that they could not learn the results of the conversion operation before Friday afternoon, and they have had plenty of time to meditate on the proposition that the greater the success of the conversion the sooner would the turnstiles start clicking to admit a long list of potential gilt-edged borrowers. So there has been every reason for quiet conditions in the gilt-edged market. The government broker has refused to force the pace and has fixed his buying price of the maturing 1954-56 bonds closely on the Treasury bill rate. The surprises have come from the industrial side of the market. In the week ended Wednesday the *Financial Times* industrial index rose from 176.7 to 182.0. The old account ended with broadening business and unexpectedly firm markets; the new one opened with further strength and still further broadened activity.

	March 8	April 18	May 18	June 18	July 18
F.T. Fixed Index	**95·54**	**96·74**	**96·92**	**94·86**	**94·0**
2½% Consols	53¼	54⅛	53⅞	52⅞	52 ⅛
F.T. Ord. Index	**169·7**	**181·7**	**187·8**	**178·4**	**182·0**
Shell	133/9	154/4½	175/–	180/–	170/7½ xc
B.P.	101/3	126/10½	148/9	156/–	181/3
Burmah	63/9	81/3	91/10½	95/7½	115/7½
Stewarts & Lloyds	63/3	70/9	68/7½	64/9	64/3
I.C.I.	42/7½	47/3	47/–	44/3	45/6
P & O.	29/6	31/6	30/–	29/–	33/–

It looked almost as though investors had made up their minds that their recent doubts were resolved. Closer examination suggests an alternative assessment. The *Financial Times* industrial index reached its low of 169.7 on March 8th and the market has since fluctuated narrowly without showing any convincing evidence of trend. But a number of individual stocks have moved up strongly through those stagnant markets. Borax deferred, again heaviiy bought on American and domestic account, have risen over these months by roughly 50 per cent from £8¼ to £13¾ in the period. The bid shares, Trinidad Oil, SMT and Robinson and Cleaver have also played a part in that selective advance. But the real force of it has been the oil share market as the table shows. This week's price of 170s. 7½d. for Shell is equivalent to approximately 213s. 3d. before the one for four bonus—more than a 50 per cent advance from 133s. 9d. early in March. Burmah, now at 115s. 7½d., has almost doubled in price over the same period. Whether or not the present general broadening of markets proves to be well founded there has certainly been a shift in investors' preferences in favour of oil shares.

Jingoes Over the Zambesi

BRITAIN'S sorry showing in the competition for contracts in the first stage of the £113 million Zambesi hydro-electric scheme at Kariba in Rhodesia was not altogether unexpected. The statement made last week-end by the Federal Power Board broadly confirmed the recent unofficial reports that Italy had walked away with the major share of the business. But this advance notice has not prevented howls of dismay and an outbreak of the economic nationalism that British overseas contractors, for example, so readily recognise as stupid when the people putting it forward are foreigners. The direct British share of the contracts is certainly small—about £16 million out of a total of £51 million, consisting of £5 million worth of heavy electrical equipment and £11 million for housing, access roads, and various preliminary work. Italian firms secured contracts for the remaining £35 million—a £25½ million contract for the construction of the dam, the underground power station, and various ancillary works, and £10 million for the transmission lines that will carry the power from the dam.

Apparently about £6 million of the business secured by Italy will find its way to this country in sub-contracts for insulators, conductors, and certain constructional plant, including a temporary power plant. Most of the major civil engineering contract, too, will be spent locally on labour and materials. Thus Britain may earn in all rather more than a quarter of the total expenditure of nearly

£80 million on the first part of the scheme, against the Italian share, allowing for its income as the main contractor, of perhaps a fifth. Contracts worth £4 million, mainly for the switchgear and certain other constructional work—for which British firms have entered bids—have still to be awarded. The rest, about £20 million to £25 million, will be spent locally.

Whining arguments that, because Britain contributed £18 million directly to the cost of the Kariba project and another £10 million through the World Bank, it should have been given an even larger share of the business, or that the tendering process should have been by-passed and contracts awarded directly are dangerous nonsense. They can bring a country as deployed in world trade as Britain nothing but international contempt. If either principle were adopted in other countries, Britain would be the first to suffer, and to complain. The Federation was fully entitled to secure the cheapest way of building this colossal scheme and, having received a number of bids from different firms and groups of firms, it had no option but to choose the lowest and most suitable tender. The difference between the successful bids and the next lowest for the two major contracts was not minute ; for the dam the cheapest British bid is reported to have come second out of five at a price £1¼ million (or six per cent) higher than the lowest. As it happened, British firms secured the contracts for making the generators and transformers, in which they have much experience, and Italian firms got the main contract for the power supply, for which many Continental and British firms could compete on a comparable footing. But these are the normal ingredients of overseas competition. Contracts are awarded on prices, not excuses.

Dollar Premium Rises

THE premium over New York Stock Exchange prices that British residents pay for the opportunity of buying American stocks in London has recently been rising. It stands now at 4 per cent over New York prices, having touched 5 per cent last week. A month ago it was down to 1¾ per cent, and at times this year it has disappeared. The rise in the premium approximately coincides in point of time with the cessation of sales by the Government broker of another block of dollar stocks that passed into British ownership with the repayment of the wartime loan from the Reconstruction Finance Corporation. These selling programmes are no longer announced in advance but it was disclosed in Parliament on Thursday that £6½ million worth has been sold since February 4th. The rise in the dollar premium does not seem to have been wholly or even mainly due to the cessation of Government selling. The premium started to rise before the Government broker had finished ; all his offers of stock are calculated at prices that as far as possible preserve the premium for the Treasury and therefore, incidentally, hold the stocks in British ownership. He has in all his selling operations so far persistently refused to sell if the premium was less than 2 per cent. The main reason for the rise in the premium seems to be the recent heavy demand for Canadian oil shares by British investors, and the premium on Canadian stocks has carried the premium on United States stocks up with it.

Credit Contraction Stops

AS expected, the full statement from the clearing banks for end-June showed that total net deposits had risen sharply in the six weeks since the previous make-up, at mid-May. Net bank deposits rose over the six weeks by £111 million, to £5,971 million. This increase exceeds by £43 million the corresponding one in 1955, though it falls short of that for either 1954 or 1953 ; according to the calculations of Lloyds Bank, however it was no more than seasonal, since that bank's index for net deposits was unchanged—for the third month running—at 104.6. Over the half-year, the decline reached £290 million, which compares with the exceptional reduction of £386 million achieved in the first half of 1955. The advances item rose very sharply over the six weeks, by £65 million, but this movement, as explained here last week, was partly—perhaps largely—attributable to technical distortions liable to occur at the end of each half year. This factor, however, ought not to mar the comparison with end-December ; and since then advances have expanded by £124 million, whereas in the previous half-year they dropped by £335 million from the peak of mid-1955. A large part of that steep decline was attributable to heavy repayments by the nationalised industries, which have been re-borrowing during the past half year.

† Ratio of assets to published deposits.

The absence during these six months of any strong pressure upon bank liquidity has enabled the banks to finance their additional advances without making corresponding sales of investments ; portfolios of these dropped by £53 million over the half year, and fully half this movement was compressed into the final six weeks, partly no doubt in consequence of writing down. The half-year's decline in liquid assets amounted to £363 million, or substantially less than the very large reduction experienced in 1955, so that the liquidity ratio, at 33.5 per cent, is two full points stronger than it was at mid-1955. The balance sheet of the Midland Bank, publication of which completed the series, showed investments again valued above market worth, at £462 million, unchanged since end-1955. Investment depreciation was only slightly larger, at £24.3 million, compared with £23.7 million six months before and £18.5 million at mid-1955.

Hire Purchase Trends

ALTHOUGH a modest increase in the volume of hire purchase trading is recorded by the Board of Trade for May, this does not mean that the hire purchase controls are losing their grip. There was a 2-point rise in the aggregate index for shops selling household goods from 65 to 67 (December 1955 = 100) and this is the first check to the fall since October last year when the index was started and stood at 119. May's small recovery is explained by the seasonal rise in furniture and furnishings business, of which 38 per cent is on hire purchase. Radio, hardware and electrical shops did less hire purchase business as their total sales continued to fall. Department stores took a sharper knock for their hire purchase index in May touched 48 compared with 63 for April, and 134 for October last year.

But May did see an increase in hire purchase commitments by the finance houses. Their index reached 108 compared with 96 in April and with 125 in October of last year. Finance house business is heavily weighted by the motor trade, and agreements for second-hand cars (not new cars, which showed no increase), commercial vehicles, motor cycles, and caravans, were sharply up. Yet the average advance was slightly lower—for used cars £185 against £186 in April, for motor cycles £74 against £75, and for caravans £267 against £279. HP Information's June figures suggest that the May rally has gone no further.

Taken as a whole the evidence suggests that hire purchase controls plus credit restriction are having noticeable effect. Despite the slight rise in hire purchase in May the volume of hire purchase debt outstanding at the end of May was estimated at about 10 per cent below the figure of "at least £450 million" at the end of 1955.

The Frozen Kitchen

THE rise in the total value of retail sales, equally, does not indicate that consumers are buying larger and larger quantities. Rising prices has much to do with the figures and the volume of goods passing across the counter is probably very little different from what it was twelve months ago. But increased purchase tax, moreover, has made the prices of the household goods most affected by hire purchase restrictions rise more than most other consumer goods. In these departments too, therefore, the value of sales compares deceptively well with 1955 ; but, in the words of the Board of Trade, "the volume of sales is appreciably less."

Retailers are pressing the advantages of the 9-month credit sale agreement, which does not entail the payment of any deposit, and they are making some headway in selling furniture in this way. Sales by the multiple chains, which saw their business halved overnight last year when "no-deposit" hire purchase agreements were stopped, were showing a 29 per cent recovery in May in value as compared with a year ago. The same can hardly be said of radio sales. The radio industry describes the sale of 53,000 television receivers during May as the lowest figure since retail returns began to be collected at the beginning of 1955. The numbers sold in the first five months of this year are 17 per cent lower than over the same period of 1955 and are still falling. A slight recovery in the sale of radio receivers, largely the result of the extension of VHF transmissions, cannot give manufacturers much comfort.

The switch to credit sale agreements has been skilfully exploited by some retailers of domestic appliances, particularly certain gas and electricity boards who have raised total sales of some items—notably coke grates and water heaters—well above 1955. But on the whole appliance sales are markedly down, although the sharp drop at the beginning of this year has stopped and sales since April appear to have levelled off at various levels of up to a fifth or more below last year. The total increase in cash and credit sales has not offset the heavy cut in hire purchase sales and, in the case of the nationalised boards, the virtual cessation of new rental arrangements since January. The falls are heaviest among vacuum cleaners, washing machines (where demand would seem to have been switched to wash boilers) and refrigerators. The summer months are the peak selling season for refrigerators, and in the past the bulk has usually been sold on credit.

Wheat Season's Happy Ending

FOR most wheat exporting countries the 1955-56 season has a fairly happy ending. The surplus has been kept off the market, prices have been relatively stable, and all the major exporters except Argentina have shipped more wheat this season than last. The price of No. 2 Manitoba wheat was 173 cents a bushel, ex-Fort William when the season began last August ; it fell gradually to 167¾ cents in December and is now quoted at 170½ cents. Shipment prices (cif) have fluctuated rather more, owing mainly to the sharp movement in freight rates and partly to speculative influences.

The largest increase in exports has been from the United States, thanks to its lavish surplus disposal programmes and to its highly competitive prices. Though that increase has been partly at Canada's expense, shipments from Canada are now well above the level of last season. Canada has sold over one million tons to Russia and other communist countries, and has also sold more of its lower grades and feed wheat to Western Europe. Canada and the United States have both benefited from the severe winter and late spring in Europe, which has led to an increased consumption of wheat for feed, and Australia in particular is benefiting from the severe damage to the

Now in its second year

The Paper Bulletin

This is a bulletin service for paper users and makers. It deals with the supply, demand and price trends for paper, paper products and raw materials. The sixth quarterly issue will shortly be available. Full details from :

THE ECONOMIST INTELLIGENCE UNIT LTD.
22 Ryder Street, London, S.W.1. Whitehall 1511, Extension 144.

French wheat crop. The fall in shipments from Argentina is the result of a smaller crop.

The increase in exports has made no inroads into the surplus. In North America, where it is concentrated, the carry-over into the new season will be as large, if not larger,

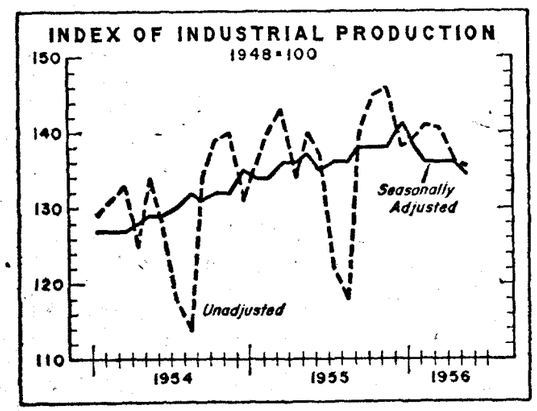
than that of a year ago. Barring natural misfortunes to the coming crops, the only real hope of reducing the surplus lies in the United States' soil bank scheme. If the Administration's hopes are eventually realised the acreage taken out of cultivation may reduce production by over 150 million bushels a year. The surplus would then have to be drawn upon by a roughly similar amount to meet current needs. If that happens the surplus in the United States could drop to a reasonable size within three years.

Production Out of Season

WITH the latest publication of the index of industrial production, the Central Statistical Office has launched a new series in which the original figures have been adjusted for seasonal variations. This is a fashionable practice in the United States, but it is the first time it has



seen the light of day with official sanction in this country, however much it may have been indulged in behind the scenes.

The index of output, as it has been published since 1950, allows for differences in the number of working days in each month so that it shows changes in the weekly rate of production. This adjustment, however, still leaves it subject to the vagaries of shifting public holidays and annual holidays taken at different times in different industries, and to other causes of seasonal variation. In the new series, which will be supplementary to the existing one, an attempt has been made to eliminate these factors, first by spreading the effect of holidays evenly throughout the year and then by smoothing out the remaining regular variations by applying corrections based on the experience of previous years.

There is nothing infallible about such calculations. The seasonal pattern in the past, although readily discernible, is not entirely clear-cut. Judgment has had to be merged into the arithmetic. Moreover, there is no guarantee that the present is behaving as the past did. And there are still some questionable features about the new series—a suspicious jump, for instance, in each of the last two Decembers which would be attributed to over-correction were it not for the fact that it did not occur in earlier years. Nevertheless, government statisticians, with their readier access to information, are better equipped to attempt this kind of correction than laymen. Their forecast for May, after seasonal correction, suggests that production slipped further downwards to its lowest level for nearly twelve months.

Liberalisation at 94 Per Cent

FROM tomorrow, imports into Britain of paper (except newsprint), paper board, woodpulp and the other main paper-making materials will be freely admitted from any source on open general or individual licence. The decision formally frees the last major group of industrial materials still imported from Western Europe under the "emergency" quotas introduced in 1951, and the proportion of Britain's unrestricted imports on private account from this area is thereby raised from 85 to 94 per cent (reckoned by reference to such imports in 1948). Thus Britain has met, some ten months late, its obligation as a member of OEEC to raise the percentage to at least 90 per cent by October 1st last year. The decision was no doubt calculated to assure the Council of OEEC, at its meeting in Paris this week, of Britain's continuing support for the liberalisation of intra-European trade, despite its opposition to proposals that OEEC should try to reduce tariffs.

Britain cannot claim, however, to have taken an adventurous step. The credit squeeze has checked the demand for paper and paper-making materials, and the quotas are in fact not being fully taken up. Between the first five months of 1955 and 1956 imports of woodpulp fell by 147,000 tons to 759,000 tons, valued at £37.4 million, and imports of paper, paper board and manufactures fell by 37,000 tons to 263,000 tons, valued at £17.4 million. Newsprint is not affected by the change: specific licences are being granted for all that the newspapers can buy. In the first five months of this year imports of newsprint rose by 39,000 tons to 186,000 tons, valued at £10.1 million. Unlike other paper and paper-making materials, Britain's imports of newsprint come mainly from Canada, not Western Europe.

How one man helped British Ermeto with evaluation and control of stocks

Mr. S. A. Gardner (*right*), director and secretary of the British Ermeto Corporation, discusses their new system of stock accounting with Mr. P. Hook, the Burroughs expert. Based on two Burroughs typewriter calculating machines, this system led to important savings by giving more accurate and frequent stock figures.

THE British Ermeto Corporation specializes in high-pressure valves and couplings; markets them all over the world. With a rapidly growing business, the management decided last year that they needed more frequent and accurate interim accounts. The main difficulty was the evaluation and control of stock; millions of parts move through the factory every year.

Ermeto asked advice from Burroughs, who sent Mr. P. Hook, one of their experts on modern mechanized accounting, to look into the problem. He discussed it in detail with Mr. S. A. Gardner, director and secretary of Ermeto, and members of their accounting staff. The solution they found was based on two Burroughs typewriter calculating machines.

The new system involves standard costing of all items of stock. The machines give the amounts of stock, with both quantity and value. Figures are now produced in record time. And Ermeto have been able to make considerable inventory savings in components and slow-moving raw materials. They are now installing further Burroughs machines to handle production control.

Whatever your business, if you have an accounting problem, the Burroughs man can help. An expert on modern accounting systems, he is well able to work with your accountants. Backed by Burroughs' world-wide experience, he will make a full analysis and suggest the most economical, *workable* solution. If he thinks no change advisable, he will say so; if he does recommend a change, he will make a detailed plan and help you get it working. Call in the Burroughs man—you're committed to nothing. His advice is free.

Burroughs make the world's widest range of business machines. You'll find your local Burroughs office in the telephone book. Burroughs Adding Machine Ltd., 356-366 Oxford St., London, W.1.

Armstrong Siddeley to manufacture Werkspoor Diesels

★

LICENCE AGREEMENT FOR U.K. AND COMMONWEALTH

Armstrong Siddeley Motors have concluded a licence agreement with Werkspoor N.V. of Amsterdam, to make and sell their high speed diesel engines for rail traction and shipping in Great Britain and throughout the British Commonwealth.

The well-known Dutch company of Werkspoor N.V. (founded 1827) have been manufacturing and designing diesel engines since 1902—the year of the beginning of Armstrong Siddeley Motors.

Werkspoor high speed engines cover a range from 300 to 3,000 h.p., having from 6 to 20 cylinders, and weighing about 3 to 13 tons. They are used all over the world to power railway locomotives and ships. The Netherlands and Argentine State Railways systems have widely adopted them, and it was recently announced that Werkspoor have been entrusted with the design and production of a revolutionary new Trans-Europe Express.

Armstrong Siddeley manufacture their own range of small diesel engines with power outputs from 6 to 33 h.p. They are also the manufacturers of the famous Sapphire range of motor cars, as well as prop-jets, turbo-jets, and rocket motors for aircraft. They are members of the Hawker Siddeley Group.

DEMOGRAPHIC YEARBOOK 1955

This issue, just published, is a population-census reference volume. It contains statistics from world-wide censuses during the decade 1945-1954, thus representing the most comprehensive compilation of census returns ever assembled.

Data of special interest include economic characteristics; population of cities and geographic divisions; urban-rural composition; distributions by locality size, by size of household, marital status and age, and by single years of age.

The regularly published statistics in this annual on live births, deaths, stillbirths, marriages, divorces, and expectation of life are included to provide continuity with previous issues. 792 pages.

Clothbound 60/- (by post 62/1). Paperbound 50/- (by post 51/11).

Obtainable from

Bigger Dividend from Distillers

THE directors of Distillers have again loosened the purse strings. In 1954-55, the total ordinary dividend was effectively raised from 15 to 16½ per cent and now, for the year to March 31st last, the dividend is set at 17½ per cent. The increase was not unexpected; the 6s. 8d. ordinary stock immediately put on 7½d. to 23s. 9d. on its announcement but quickly fell back to 23s. 3d. The bigger payment is justified by the trading results. The gross profits earned by the company and its subsidiaries from potable spirits, chemicals and plastics have risen from £19,676,368 to £21,475,308. Its income from trade investments has also gone up, from £431,517 to £1,018,441, reflecting presumably the receipt of bigger dividends from British Petroleum Chemicals. Bigger profits have attracted higher taxes, the charge rising from £9,451,347 to £10,484,301, but net profits have risen by £1,336,460 to £9,209,869—an increase which more than covers the extra 1 per cent paid out to ordinary stockholders.

Steel Ban Slows Output

WHILE a court of inquiry considers the price of a craftsman's skill in the steel industry, the ban on overtime by maintenance workers in steel plants in England and Wales, and the strike of maintenance men in Scotland are to continue. The effect is cumulative, as successive major items of plant fall due for overhaul. In the second quarter of the year, the Iron and Steel Board estimates, the ban may have cost the country about 300,000 ingot tons of steel.

Such an emergency is where the inflated stocks of steel

Electricity from the Tides

TIDAL power schemes have been talked about for many years: three official committees, for example, have reported on Britain's Severn barrage. The French Government has now begun to build the first practical tidal power scheme in the world in Brittany, which will use the energy of tides in the estuary of the River Rance, just above St Malo, to generate electricity. This involves a very heavy capital investment—costing about £1,000 per installed kilowatt, as against about £60 for a coal-fired station or perhaps £300 for a kilowatt of nuclear power. But the French engineers claim to have solved the central difficulty of tidal power—making the energy available at almost any time required.

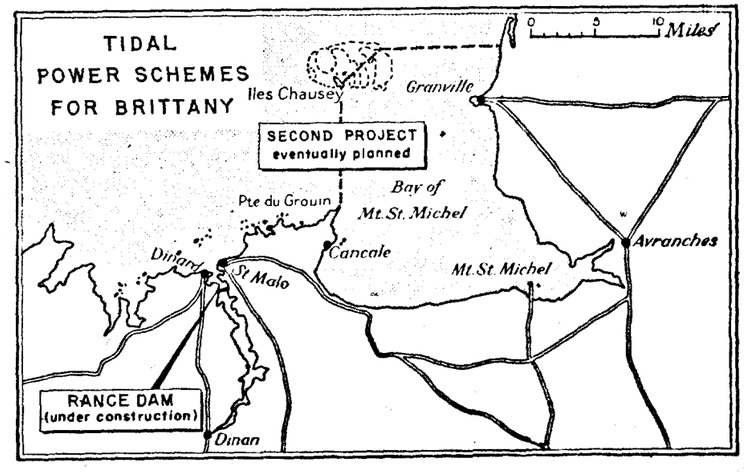
Over a number of years French manufacturers have evolved a type of water turbine, known as the "bulb" type, which can operate as a pump or a turbine, with the water flowing in either direction. It can also work under much lower heads of water than the conventional turbine. Finally, its feathering blades can be so operated as to turn it into a valve completely blocking the flow of water if required, or allowing completely free flow of water without the turbine running.

In the Rance scheme, which should be completed by 1960, the dam across the river will be 2,392 feet long and 145 feet wide, containing 38 generating units of the bulb type, each of 9,000 kW. When the tide is at high tide level on both sides of the dam, the turbines will be used as pumps to raise the water level in the estuary. As the tide falls away the machines will operate as generators, with a longer useful generating period than if the level inside the dam had not been artificially raised.

As the water level is lowered through turbine operation the turbines will be turned into simple valves, once generation is impossible, to lower the water level inside the reservoir, finally ending up by becoming pumps once more to produce an artificially low water level within the dam. As the tide rises again on the seaward side the "bulbs" will be used once again to generate power from the water flow through the dam sluices until the difference in level becomes insufficient. Then they will operate as simple valves until high tide level is once again reached on both sides of the dam, and the cycle begins again.

The most important point about this ingenious two-way cycle is that it is variable. This means that whenever pumping energy can be drawn from the national power network useful employment can almost certainly be found for it, to raise or lower the water level in the estuary, so as to make more water available for power generation from the tidal scheme at such a time as it may be required by the system peak. The plant should have an indefinite life, saving coal each year to the extent of about 500,000 tons. It will generate about 800 million units per annum.

The Rance project is in one sense a pilot scheme; not far away the French are planning work on a second enormous tidal power scheme. This envisages closing off the whole of the bay of Mont Saint Michel by a dam 23½ miles long running due north from the Pointe du Grouin to the archipelago of the Iles des Chausey, and then due east to the mainland north of Granville. The basin so created would have an area of about 300 square miles and the dam would be equipped with no less than 1,200 turbine generators, each of 10,000 kW capacity. This project, it is estimated, might produce about half of the total consumption of electric power in France.



in the hands of consumers and merchants, which have risen fairly steadily during the credit squeeze, might be expected to have come in useful. In fact, the board estimates, the reduction of steel consumption through restraint on sales of cars and metal home equipment may largely have offset the fall in deliveries, which the steelmakers have been maintaining rather better than output by cutting their own stocks of steel: so consumers' stocks, in total, may not have fallen significantly.

PRODUCTION OF STEEL, 1954–56
'000 ingot tons

	1954	1955	1956
1st Quarter	4,694	5,074	5,413
2nd Quarter	4,830	5,001	5,185
3rd Quarter	4,216	4,547	
4th Quarter	4,779	5,169	
	18,519	19,791	

During the first half of the year the industry has suffered and recovered from a reduction in shipments of iron ore from abroad, which were affected by bad weather in the Baltic and bad politics in North Africa. By the middle of the year stocks of the major raw materials for steel—imported ore, pig iron and scrap—were substantially larger than a year before.

Concord on Cotton?

THE British Government, which has long refused to protect Lancashire against duty-free imports of cheap Indian cotton textiles, has now suggested that the industry should itself try to persuade the Indian mills to restrict their sales to Britain. Whatever the ethics of that suggestion, the reasoning is clear. The Government is unwilling to put a tariff on Indian textiles lest it provoke retaliatory action harmful to British exports as a whole. But it is conscious of Lancashire criticism and of the hardship that competition from Indian imports has inflicted on many mills. Speaking in Lancashire last weekend the Prime Minister revealed that he had suggested to Mr Nehru during his recent visit that discussions on Indian imports between representatives of the two industries would be in the interests of both countries. "Personally, I should regard such talks as useful, and I think that Mr Nehru shares that view."

In the past the industry has been sceptical of the usefulness of direct talks, presumably on the ground that after British policy had been declared it would be negotiating with its hands tied. The Cotton Board has nevertheless welcomed the Prime Minister's suggestion, as in courtesy it was bound to do, and is seeking an early interview with the President of the Board of Trade. No doubt it hopes that Mr Thorneycroft will add some details to the Prime Minister's bare statement. The Indian mill owners, for their part, could hardly refuse to meet representatives of Lancashire, but would they treat kindly a proposal that they should limit their opportunity in the British market? They might argue that they would simply be giving more business to other Commonwealth suppliers such as Hongkong, or even Pakistan. But Lancashire may have one card in its hand. If imports from India were to increase much further, the British Government might be forced to impose restrictions. Could India be persuaded that it might be better business, in the long run, not to provoke such action?

The "Blue Circle" Report

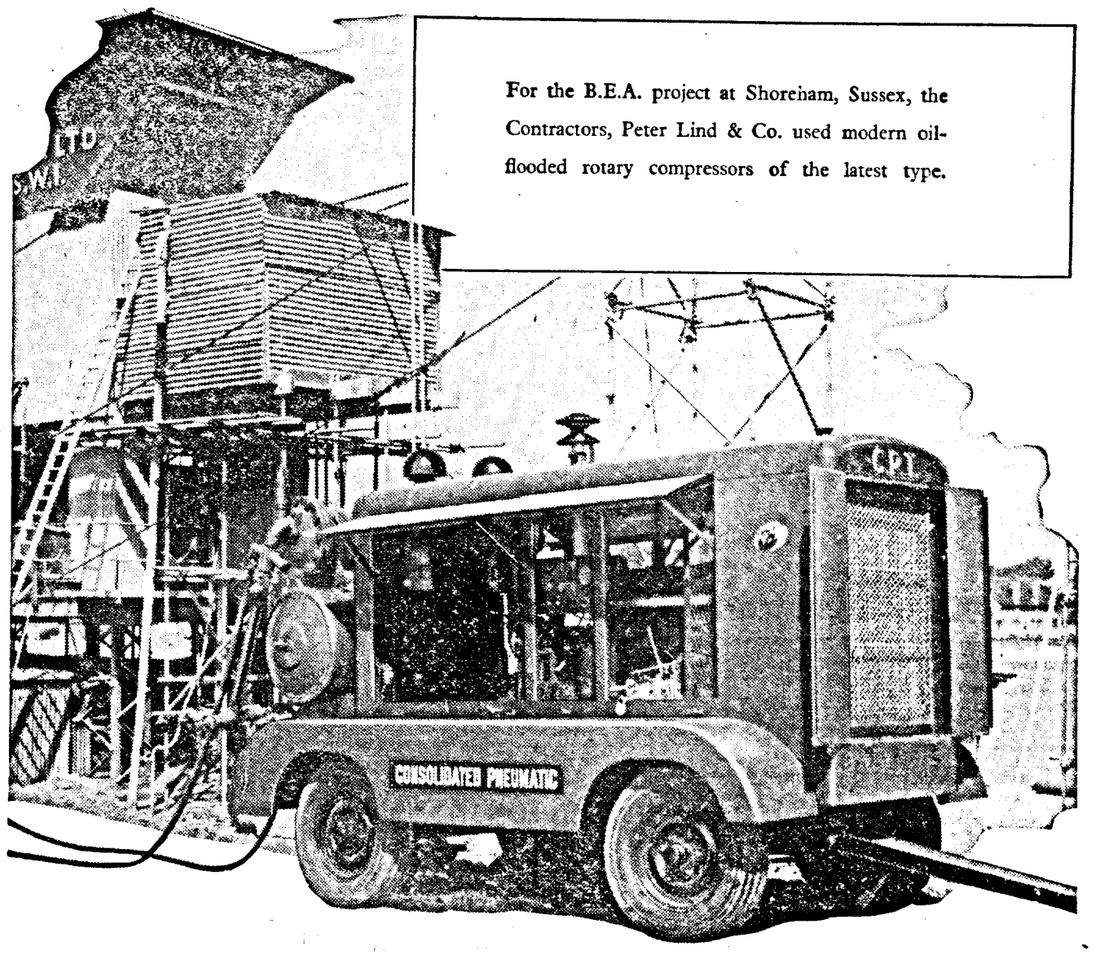
THE heart of the report of Associated Portland Cement is in Sir George Earle's assessment of the present course of trade. Last year deliveries of "Blue Circle" cement were more than 300,000 tons higher than the record figure of 1954; up to the middle of last month they were 186,000 tons ahead of deliveries in the same period last year, and Sir George hopes that this further improvement will be maintained. Indeed, he says that the group will have to run its works at full output to meet the demand and "unless conditions change this should apply to the works of the overseas companies as well." This is of the first importance for only about 29 per cent of the group's profit before tax is earned from deliveries to the British market.

Profit margins both on home deliveries and on the export trade (to which the latest increase in prices, designed to cover the increased cost of coal, does not apply) were lower last year and Sir George says that the group is working on "narrower profit margins than is normal." Yet over the last ten years it has spent nearly £32 million on capital account and as one result production per man hour in 1955 was higher than it had ever been before. Sir George defends the policy of keeping prices stable, but links the low margin of profit with the policy of holding prices down.

The group's resources are immense, as might be expected in a company whose income rose from £44½ million to £47½ million and whose profits advanced from £12½ million to £13 million last year. The revaluation of fixed assets bringing their net value up from £23.2 million to £42.8 million has put a surplus of £17.8 million into the shop window labelled *capital reserves*. This revaluation which excludes almost all the assets of overseas subsidiaries, provides ample justification for the two for three free scrip issue; but Sir George emphasises that this issue does not provide any "reason or promise that larger sums will be distributed as dividends." But his statement served as a signal for a 6s. rise to 103s. in the price of the stock units.

Unbalanced Fuel Oil

WITH consumption of fuel oil in Britain in the first quarter of 1956 24 per cent up on the same three months of last year, following on a 20 per cent increase during 1955 as a whole, this week's announcement by Esso Petroleum that it is expanding the capacity of its refinery at Fawley is no surprise. This follows the announcement earlier this year of plans to expand the production of fuel oil at British Petroleum's refinery on the Isle of Grain, and at the Kuwait Oil company's refinery in Kuwait; it would



For the B.E.A. project at Shoreham, Sussex, the Contractors, Peter Lind & Co. used modern oil-flooded rotary compressors of the latest type.

Because they virtually cut out maintenance...

these new Power Vane rotary compressors are the most important advance in design since portable air compressors came into general use. All the parts which are commonly subject to trouble in any compressor of conventional design — clutch, crankshaft, valves, pistons — are replaced by a simple two-stage vane type rotary compressor. The entire unit runs in oil and is oil-cooled. And fully automatic safety devices prevent damage in the event of mishap or negligence. These revolutionary features mean infinitely lower maintenance costs, longer life, greater convenience all round. Certainly it is something your Plant Engineer should know about...

Let Catesbys Contracts fit you up with a Boardroom!

A director's office is seldom the most comfortable or quiet place for important business meetings. If you have, anywhere in your building, a room or a bit of space likely to serve the purpose, Catesbys Contracts will quickly convert it to an impressive boardroom for you.

Catesbys' team of specialists can do the whole job, from structural alterations to decorations, furnishings and fittings.

They are unusually reasonable people who know the importance of speed, efficiency and close co-operation with all concerned. And they never seek to push you into a penny more expense than you wish.

Why not ring Museum 7777 and have an executive round to see you?

OUR SHOWROOMS FOR IDEAS ON BUSINESS FURNISHING

be surprising if other companies do not soon join in this second round of refinery expansion.

The additional plant at Fawley, which will cost £13 million, will raise the crude oil throughput of the refinery from its present 7½ million tons to 11 million tons a year. In addition to the new crude oil distillation unit, the programme includes two new autodiesel hydrofiners to reduce the sulphur content of diesel oil and improve its quality, and a second sulphur recovery unit, which will double the company's present annual output of 14,000 tons of sulphur. Although the programme is aimed mainly at increasing the supply of fuel oil, the growth of fuel oil consumption in Britain is likely to be so rapid that the additional 1½ to 2 million tons of fuel oil that the new unit will provide is unlikely to relieve Esso of the need to import fuel oil from its affiliate's recently expanded refinery in Venezuela.

The most difficult problem that the disproportionate growth in the demand for fuel oil creates at Fawley, as it does at other European refineries, is how to dispose of the normally more valuable "light ends" of distillation that have to be produced as joint products with the fuel oil. There is a limit to the flexibility of a refinery, and not much more than 50 per cent of any barrel of crude oil can be economically sold as fuel oil. Although the price of fuel oil has risen steadily relatively to the price of petrol during the last twenty years, it still only fetches about half the price of petrol. About 250,000 tons a year of the more valuable raw naphthas will be required as a feedstock for the new petrochemicals plant that Esso is also building at Fawley, but that will still leave an additional 1½ million tons of petrol and other light products to be disposed of in Britain or exported, in competition with other refiners who also have plenty of light products to spare.

More Information About Stocks

A GROWING number of manufacturing companies are now providing the Board of Trade with information about the value of their stocks and work in progress, and with the first quarterly estimate based on this larger sample the board has also published some figures of stocks of industrial materials held outside manufacturing industry. The quarterly figures for manufacturing stocks show that these rose in value by 4 per cent during the first quarter of 1956, continuing a steady rise though at a slower pace than in the first quarter of 1955. The index, taking the value of stocks at the end of December, 1954, as 100, runs:

	End March	End June	End September	End December
1955....	106	108	111	113
1956....	117			

This latest growth in value was accounted for largely by increases in the value of stocks and work in progress; stocks of materials and fuel showed little increase. The total value of stocks held in the metal-using industries increased relatively sharply, and stocks in the food, drink and tobacco trades rose more than the average, but in the chemical and allied industries stocks were reduced.

No "constant price" figures can be calculated for manufacturing stocks. During the fifteen months for which the quarterly figures of the value of stock have been published, the combined index of wholesale prices of basic materials other than fuel used in manufacturing industries other than food has risen by just under 6 per cent and the price of manufactures other than fuel or food rose by nearly 7 per cent; but this index can take no account of the changes in price, pattern, or relative volume of work in progress. Like other wholesale prices indices, this one is at present based on the prices ruling in 1949, and the pattern of sales of manufactured products and materials used to make them in 1948. The Board of Trade gave notice this week that it intends to revise all these wholesale price indices on the basis of the full census of production taken in 1954. Publication on the new basis will not begin until 1958, and in order to assist firms that use these indices for the adjustment of long-term contracts, it will "overlap" certain of the key indices for twelve months on the old basis after the new indices start.

The Robinson and Cleaver Bid

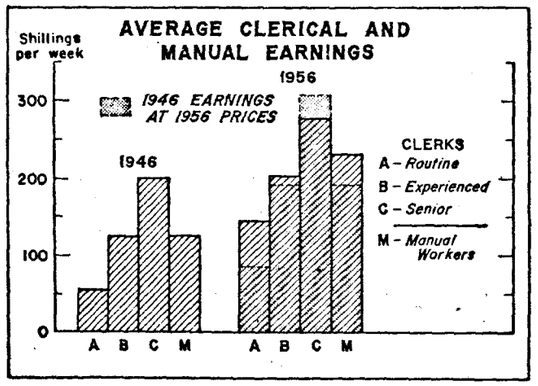
WHILE the Scottish Motor Traction battle blazed, a more decorous struggle for control began between the directors of Robinson and Cleaver on the one hand and those of City Centre Properties (formerly Chesham House, Regent Street), the bidder acting at first unnamed through Henry Ansbacher and Company. The battle this week has moved towards a climax with the outright rejection by the directors of Robinson and Cleaver of the offer of £5 a share which was conditional on acceptance by owners of 75 per cent of the capital or such smaller proportion as the bidders might be prepared to accept. City Centre Properties has left its offer open, saying that it will not raise its bid price, and has asked Robinson and Cleaver for a list of its shareholders so that it can make the bid directly to them. It is understood that if City Centre Properties gained control, the Regent Street property would be left to operate as a store without a change in the day-to-day management of the business. It is now up to shareholders to decide, fortunately in an atmosphere which so far is free of the acrimony and gusto which has characterised some other share bids.

They will have to balance the likelihood that their shares would not be standing at 94s. 6d. without the bid against the promises now outlined by the Robinson and Cleaver board in advising them to reject the offer. The directors are bent on extending their experiment of buying shops specialising in household linens in the provincial towns. The sale of the Crown lease on the Regent Street premises released cash which has been earmarked for that purpose. But, say the directors, reserves are "now adequate for all normal purposes" and they can promise a "much more liberal dividend policy." They look forward to "a substantially increased final dividend" in October. A revaluation of the group's assets reveals a net worth of more than £7 5s. per ordinary share, and they suggest that the offer of £5 a share is "totally inadequate." Shareholders will ask themselves why it took a bid of £5 a share to extract this promise of a more liberal dividend and this new estimate of the assets backing their holdings. Some ex-shareholders may recall ruefully that the price was a little over 77s. early in June when the first approach was made. But

the real question for shareholders is whether they will do better with £5 in cash offered by the bidder or with £7 5s. of estimated asset values plus the promise of a more liberal dividend policy held out by the board. And Robinson and Cleaver is one of the companies in which the general body of shareholders really will decide, for there are no dominating holdings.

The Price of a White Collar

ONE of the few specific clues to the changing level of actual salaries in this country—as distinct from official estimates that are little more than residuals from national income accounting—is the sample survey of clerical salaries that the Office Management Association started in 1942 and has been conducting every two years since 1946. This year's survey, which was based upon weekly earnings at March 1st, covered rather more clerks than previous analyses —about 82,000 men and women in just over a thousand offices. This is little more than a 3 per cent sample, since there are probably about 2¼ million people, about a tenth of the employed population, working in offices: the sample covers offices in a wide range of industries and areas, and is fairly well balanced in relation to industry, though perhaps geographically London offices are a little over-represented. The sample has also a higher proportion of women than there is in the total clerical labour force but it gives separate figures for men and women. It divides clerical



work into six different grades (of which three appear in the accompanying chart). It seems that clerical pay varies more according to the region in which an office is situated than according to the industry. But in recent years the City of London, which traditionally paid its male clerks more than they could get elsewhere, has been losing its lead to the industrial areas.

This probably reflects the higher pay now paid to manual workers in factories in these areas, and one section of the useful report by Dr O. G. Pickard that accompanies the survey is devoted to the relative changes in the pay of clerical and factory staff since 1946 and to the differentials between different grades of clerks. Both differentials have in fact narrowed appreciably during the last ten years. The average earnings of male manual workers were about £6 5s. a week in 1946, roughly the same as the average weekly salary then paid to male clerks doing fairly skilled routine work. Now the manual worker averages nearly £12 a week, almost £2 more than the skilled routine clerk, and is exceeded only by top-grade male clerks, who receive on the average £14 a week against £10 in 1946. In real terms these senior clerical employees are apparently earning less than ten years ago, whereas the salaries of those doing the simplest tasks have almost doubled in real value.

UDT and HP

DESPITE a full year of hire-purchase restrictions, United Dominions Trust, among the very big hire-purchase finance houses, has reported an advance in its gross profits in the year to June 30th from £1,780,288 to the record figure of £1,816,435. Following an increase in net profits from £739,066 to £778,772, the ordinary dividend has been effectively raised from 16¼ to 17½ per cent. The directors go out of their way to describe the dividend as "fair" and "sufficiently limited having regard to the economy and the present state of national and trading conditions," a statement that shareholders will no doubt read as meaning that the directors expect to be able to maintain this higher payment. The trust's accounts show that while "bills and notes receivable" have fallen by about £2 million to £10.7 million, its principal trading asset, "customers' balances outstanding," has risen by £7 million to £37.7 million; loans and acceptances among current liabilities have gone up from £42.9 million to £47.3 million.

Thus money has continued to flow into United Dominion Trust's coffers, but the group has not been completely unaffected by the credit squeeze and the hire-purchase restrictions. The latest increase in profits looks modest when set against the advance recorded in 1954-55. The full effect of the further restrictions imposed in February has yet to make its mark on UDT, though here its overseas business and its financing of hire-purchase contracts on industrial machinery may act as a cushion. But the biggest cushion is provided by the length of the hire-purchase contracts. Much of the trust's profit in 1955-56 must have been earned on contracts arranged before the first dose of restrictions and some of its profits in 1956-57 will be earned on contracts arranged before the last stringent dose was administered in February.

Coffee, Cocoa and Tea

THIS year fortune has smiled on coffee growers. Cocoa prices remain low, producers of common tea are losing money, but coffee prices are highly profitable. Consumption of coffee is rising, and supplies of mild coffee and high grade Brazilian coffee are barely adequate. Though prices have recently eased, Colombian coffee, at about $84½ per 50 kilos fob, is $14½ dearer than at the beginning of the year, and Brazilian extra prime, at about 507s. per cwt fob,

Nuclear power
for the nation's future

AN EXAMPLE of industry pooling its resources to prepare for a mighty project is the linking of the A.E.I.—John Thompson Nuclear Energy Company with two important firms of Civil Engineering Contractors—Balfour, Beatty and Co. Ltd. and John Laing and Son Ltd.

To the strength of the A.E.I.—John Thompson Nuclear Energy Company and its constituents (British Thomson-Houston, Metropolitan-Vickers and John Thompson) is added a fund of knowledge in the civil engineering field.

The Balfour Beatty Group has a world-wide reputation in all forms of engineering and construction work and is at present carrying out major contracts for the Central Electricity Authority. John Laing and Son Ltd. has carried out building and civil engineering work at the first Government Atomic Energy Establishment at Windscale and is at present engaged in the construction of power stations in the United Kingdom, as well as in major development schemes in Canada.

RADBROKE HALL · KNUTSFORD · CHESHIRE

Is it cricket?

USE SILENCE as a burglar alarm? The Japanese did. They kept caged crickets to protect their valuables by night. If a stranger entered the house, the cricket stopped chirping, and the sudden silence awoke the householder. A charming notion, but a pretty tenuous protection.

Modern protection strikes a more practical note. Take packaging for example. Here the products of Thames Board Mills give really substantial protection. That is why so many goods that are milled and processed, bought and sold, stored and used in these islands, are packed in "Fiberite" cases or in cartons made from "Thames Board". For this protection is sure and solid, proved beyond doubt.

As industry expands it has greater need for more and better packaging—greater need for "Thames Board" and "Fiberite". Thames Board Mills were pioneers of modern packaging in this country. And today their extensive factories—the most up-to-date in the industry—make the greatest contribution to British packaging, whether for home or export needs.

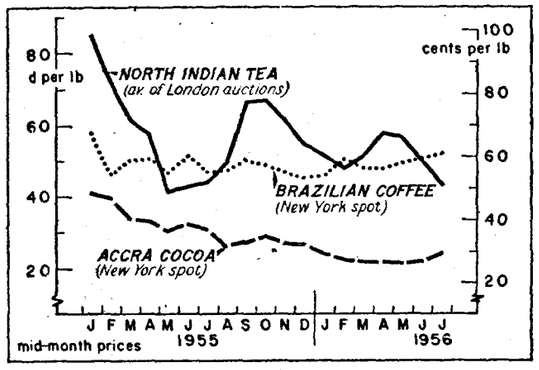
THAMES BOARD MILLS LIMITED

THE LARGEST MANUFACTURERS OF BOARD AND PACKING CASES IN BRITAIN

Purfleet, Essex (THAMES BOARD) *Warrington, Lancs*

"THAMES BOARD" for cartons, boxes, bookbinding, etc. "FIBERITE" Packing Cases in solid and corrugated fibreboard

is 60s. dearer. Supplies of mild coffee will not improve until the new crops in Colombia and Central America become available in the autumn, and the damage to the 1956-57 Brazilian crop suggests that high grade coffee will be none too plentiful in Brazil. But Brazil is accumulating a large stock of the lower grades which are difficult to sell, and is not helping matters by its policy of minimum export prices. And coffee growers generally face the risk that consumption in the United States, the largest consumer, may suffer now that retail prices are over $1 a lb.



Consumption of cocoa is recovering, but there is no lack of supplies. That is why there has been such a relatively small recovery in price. Accra cocoa for prompt shipment has risen by only 45s. to about 227s. a cwt cif UK, and is little higher than in 1949. In a new summary of cocoa statistics Messrs Gill and Duffus estimate that in the two years ending last December consumers' stocks of raw cocoa rose by 87,000 tons to 279,000 tons, equal to 4½ months' requirements. World production this year is estimated at about 820,000 tons, while consumption may not exceed some 770,000 tons; hence stocks will increase further. In tea, as in coffee, the preference is for the higher qualities, which again are short. Since the boom in tea collapsed early last year the high quality producer has come into his own, and the producer of common tea has found it increasingly difficult to sell his output profitably. The best Uvas tea from Ceylon, for instance, fetched up to 7s. 6d. a lb in London this week, while common tea dropped to a nominal price of 2s. 8d. a lb. Comparison is distorted by seasonal changes in quality, but at anything less than a London price of 3s. 6d. a lb few producers of common tea in India or Ceylon can show a profit.

Will Rubber's Recovery Last?

THE rally in natural rubber has now brought the top grade of sheet rubber (No. 1 RSS) to about 26½d. a lb in London, a rise of nearly 5d a lb since the beginning of last month. The steep decline in previous months had evidently been overdone. On this occasion the market seems to have made too much of the fall in motor car production in the United States and Britain, and too little of the fact that world consumption of natural rubber still substantially exceeded production. A recovery was due, and the removal of the ban on exports of rubber from Malaya to China provided the spark. Though sales to China did not follow the removal of the ban, speculators seized the opportunity to push prices up and that led to short-covering elsewhere. More buyers came in after the British and United States governments announced that rubber would not be released from their strategic stocks.

There is a shortage, too, of No. 1 RSS, the standard grade tenderable on the futures markets; this is the grade that the Russians have as usual been buying here. This shortage explains the sharp fluctuations in prices, and why the rise has been relatively sharper in the top grade than in the lower grades. The discount on No. 3 RSS, for example, which at the beginning of June was about ¾d a lb, has now widened to 1½d. a lb. In the sense there is now one market for the top grade and a separate market for the lower grades that compete directly with synthetic rubber.

Will the recovery be held? On paper the prospect does not appear bright; in the second half of the year world consumption tends to be lower than in the first half, while production tends to be higher. But much may depend on purchases by Russia and other communist countries. Russia bought 30,000 to 35,000 tons in London for shipment between June and August, and has also bought directly in Singapore. If its purchases continue at about that rate, supplies of the top grade may well remain tight. Sharp fluctuations in prices would then persist, together with relatively large discounts on the lower grades of rubber.

Glasspol Boards the Bus

THE ghostly caravan of old buses winding its way through Regent's Park on Monday was a fitting prelude to London Bus Week. It was held to mark the centenary of the formation of the London General Omnibus Company, but it also afforded a graphic demonstration of the changing construction of city street transport—only the steam bus and, of necessity, the tram were missing. The convoy began with the horse-drawn double-decker "Favorite" in service in 1856 and made mostly of timber, with a few metal working parts. At the rear came the new, sleek and quiet "Routemaster" introduced by London Transport, the present-day successors of London General, in February this year. For years there has been a tendency to use light alloys for the skins of buses; the "Routemaster" and the Birmingham and Midland Omnibus Company's advanced new single-decker make extensive use of plastics as well. The light alloys are being superseded, first for complicated shapes, by cold-setting resins reinforced with glass fibres, frequently called "glasspol." Both the new buses use these: and a number of suppliers have begun to offer for sale prefabricated glasspol bodies for vans (as well as enthusiasts' light sports car bodies).

Glasspol is even cheaper to handle than aluminium, which does require skilled labour. Complex shapes can be made in wooden moulds by setting a layer of chopped glass strands or a woven glass fabric in resins that produce a solid part in about an hour. The saving in cost may be as great as 50-60 per cent: the glasspol part will usually be lighter and stiffer than aluminium, and can be coloured by mixing a pigment in the setting resin. The "Midland Red" bus company began using it to repair damaged body-

work, and went on to replacement of certain body sections. The London "Routemaster" uses glass reinforced plastic for the bonnet top, wing valances, and the backing of the seats. This bus, moreover, utilises the principle of integral construction to a considerable extent, has independent front wheel suspension and coil springing in the rear, and a semi-automatic transmission that does away with the clutch. The saving in weight through integral construction gives a longer and wider bus, with four more passengers, without any increase in its laden weight.

SHORTER NOTES

The site for the second of the Central Electricity Authority's first pair of atomic power stations, at Berkeley on the Severn Estuary, was approved by the Minister of Fuel on Wednesday, a few days after the CEA received permission to go ahead with the site of the first station at Bradwell in Essex. Both installations will be of 200,000 kW capacity, the higher of the two figures tentatively suggested when the atomic power programme was announced early in 1955.

★

Trading in the new "mixed" futures contract started on the Liverpool Cotton Exchange this week. The contract is designed to offer a satisfactory hedge for users of American-type, as well as United States, cotton.

★

An extraordinary general meeting of the Birmingham Small Arms Company has been convened for 11.30 a.m. on August 1st at Grosvenor House, Park Lane. It has been requisitioned by Sir Bernard Docker and other shareholders, and will consider his proposal to remove certain directors and recommend the reappointment of himself and Mr Harry J. S. Moyses to the board. The meeting will also consider an alternative proposal by the present chairman, Mr John Y. Sangster, that the board's action in terminating Sir Bernard Docker's appointment be approved. Both Sir Bernard and the present board have this week circulated their respective cases to shareholders.

★

Britain may supply Pakistan with about £470,000 worth of cotton yarn and piece-goods for payment in United States raw cotton of equivalent value. An earlier shipment was worth £1.8 million. Similar arrangements have recently been made with Burma and Indonesia for the supply of cotton manufactures to a total value of £2.0 million.

Company Notes

PATONS AND BALDWINS. To break a long series of dismal reports from the textile trades comes an optimistic account of record sales and higher profits from Patons and Baldwins, whose products are yarns (chiefly woollen) for the hand-knitting and hosiery trades and whose factories straddle the Commonwealth. The final dividend of 7½ per cent and bonus of 2½ per cent, again making 12½ per cent for the year, and the net profits for the year ended April 28th of £1,198,332, against £1,048,924, have already been announced. The full accounts reinforce these figures with the information that group stocks are down from £10,359,752 to £9,993,088 and group cash and short bills up from £2,027,161 to £2,745,023, a degree of improved liquidity that may link with the chairman's view of the raw wool market. He is following a policy of minimum buying for two reasons: the latest rise in merino wool prices is making it difficult for the group to keep its selling prices down, and he thinks it doubtful whether present prices will be maintained when the full weight of another season's Australian and South African clip comes on the market.

The chairman, Mr. Philip A. Wright, has one unhappy story for the shareholders; it concerns the group's Toronto factory. The high standard of living in Canada is making it impossible to compete with low cost imports and the company is considering expanding the output of this factory into the wider field of yarns from synthetic fibres as a solution. But from the rest of the world Mr Wright has far better news. The Australian subsidiary, one-third of whose ordinary capital is held by local investors, has earned a substantial surplus and added a bonus of 1½ per cent to its 6 per cent dividend. Modernisation of the company's Alloa factory is proceeding satisfactorily; in conjunction with J. and P. Coats, the group has taken an interest in Fleming, Reid and Company (Scottish Wool and Hosiery Stores). The group is trying new types of fibres and machinery to ensure that it is not behind in synthetic yarns and finds the results satisfactory. Mr Wright considers the prospect that the group will be able to continue maximum production "very promising." He hopes to maintain sales of handknitting yarns and to increase those of manufacturing yarns and will be disappointed if the group does not maintain its export figures. Shareholders whose £1 units at 26s. 4½d. xd now yield 9½ per cent will feel that their chairman has brought them news as good as they could have hoped for but they will not forget that textile yields are high just because of the speed with which the wheel of fortune can turn.

BRITISH AND COMMONWEALTH SHIPPING. To build a ship these days is "an act of faith." This is how Lord Rotherwick, the chairman of British and Commonwealth Shipping (the company that merges Union Castle and Clan Lines), described it at the first annual general meeting of the new company. But he also called it a calculated risk and as the group's capital commitments of £13½ million show he has resolved to take it. Not to rejuvenate the fleet of Union Castle would be to make nonsense of the controversial merger of last year which was based on the assumption that both capital and manageme would be transfused into Union Castle ageing metabolism. Lord Rotherwic indeed, goes further in the matter of new building that the public had expected. H revealed that the new group is addi tankers to its fleet. One has been bough three more are on order and the director "hope gradually to increase this side the group's activities."

Act of faith or calculated risk, Lo Rotherwick naturally feels entitled to ca upon the Government for maximum he Grateful for the continuation of inves ment allowances on shipping, he st argues that they should be increased a that more generous wear and tear allow ances enabling a ship to be written of more quickly out of profits should b granted. And the menace of the flag c convenience is now so great that no doub Lord Rotherwick's words will reach th right address.

For the immediate future he expects the

1956 results to be better than those of 1955, when the combined gross earnings of the Union Castle and Clan fleets came to over £8¼ million. He also took the occasion of his annual address to clear up one doubt about the capital structure that seems to have escaped clarification at the time of the merger by saying that "it is not the intention of the directors of British and Commonwealth either to sell the preference stocks and shares of Clan and Union Castle or to issue further preference shares in either of these companies."

★

W. H. SMITH AND SON (HOLDINGS). Three blows fell on the newspaper distributors in the year ended March 24th, the daily newspaper strike of 1955, the railway strike of that year, and the periodical printing dispute of this year. They reduced sales without any corresponding reduction in costs, and in the final result reduced the group's income before tax from £1,774,365 to £1,475,911. Net profits after tax fell from £801,612 to £639,090, though this sum still amply covered the maintained ordinary dividend of 15 per cent, absorbing £258,750.

After such exceptional misfortunes, the current year might be expected to show recovery, but though it may do so, the path will not be easy. Like other businesses, Mr D. J. Smith points out, the group has a heavier bill of costs to meet. Since 1948-49 its wage bill has gone up by over 70 per cent; an increase of 11½ per cent in wages was recorded in 1955-56, bringing the bill up to £5,433,476, and part of the increases then made will fall upon earnings of the current year. Moreover, the group will have to pay more to British Railways for the carriage of its goods, adding £42,000 to transport costs, and it will have to pay £140,000 more in rates. Though all these increases are presumably stated in gross terms so that their effect on the net profit after tax will be approximately halved, they still require an expansion of sales revenue to meet them. W. H. Smith's policies are directed to that end. The group is always seeking to expand business, either by buying new premises or by improving and modernising its existing shops, bookstalls and warehouses. This policy has cost the group on the average about £400,000 a year in capital expenditure; and at the end of March its outstanding capital commitments were estimated at £450,000. Fortunately, the group has ample liquid assets to meet such expenditures; over the year its net liquid resources fell slightly from £3,857,514 to £3,317,177. The continual call made on resources by capital expansion is one factor investors should keep in mind in weighing the yield of 6 per cent offered by the £1 "A" ordinary shares at the current price of 49s. 6d. xd.

★

PINCHIN, JOHNSON AND ASSOCIATES. Shareholders in Pinchin, Johnson, the paint manufacturers, will be reasonably satisfied with the results for the year to March 31st. Before all charges, the group's trading surplus has risen from £2,308,712 to £2,350,913 and the dividends and interest received from trade investments are up from £94,731 to £132,251. The charge for depreciation is slightly down, from £298,541 to £286,211, but the tax provision is slightly up, from £1,077,067 to £1,092,853. After setting aside more against minority interests (£166,200 against £185,313), net profits have edged up from £659,313 to £678,572. As was expected the ordinary dividend is effectively unchanged, allowing for the 50 per cent free scrip issue. The payment of 16⅔ per cent, absorbing £378,034, on a capital of £3,944,700 is exactly equivalent to the 25 per cent dividend in 1954-55 on the smaller capital.

Those are the results of the past: investors will wish to look forward. Costs in this industry may well be higher. The slackening of activity in the motor and a few other industries will almost certainly reduce the demand for paint. Can Pinchin Johnson's important overseas interests compensate for any slackening that may occur in the home market? The yield of 7.7 per cent on the 10s. shares at the current price of 20s. 9d. indicates that investors are not looking for an increase in payments in a year which even the optimists would be prepared to admit will be difficult.

LONDON STOCK EXCHANGE

Next Account begins: August 8th

Next Contango Day: August 8th

Next Settlement Day: July 24th

INDUSTRIAL equities entered the new long account on Wednesday in good heart, with the *Financial Times* ordinary index rising another 1.8 points to 182.0 (compared with 176.7 a week earlier). Throughout the week the prices of leading industrial stocks had been rising, but the gilt-edged market, while the conversion offer still loomed over it, revealed no firm trend, though over the week to Wednesday's close the *Financial Times* Government securities index rose from 84.55 to 84.78 in a market that failed to attract increased business; the short-dated stocks moved narrowly in a quiet market.

The biggest movements in the market were in oil shares, notably on the first day of the new account. The market was short of stock and prices responded quickly to persistent local and United States demand. This was especially true of Shell, which on Tuesday rose to the new peak of 208s. 1½d. and then when trading began on Wednesday in the stock ex the one-for-four free scrip issue the price rose by 4s. 4½d. to 170s. 7½d. New "highs" were also reported on Wednesday in BP (at 181s. 6d.), Royal Dutch (at 86⅝) and in Burmah (at 115s. 7½d.). Another active sector of the market was steel shares, and on Wednesday Stewarts and Lloyds gained 1s. 3d. to stand at 63s. 6d. Among aircraft shares de Havilland rose to 23s. 3d. and Blackburn, in advance of the results, to a new peak of 17s. There was a big turnover in shipping shares and prices continued to improve. Another "high" was recorded in Borax, which touched 13½ on Wednesday.

A further general advance was made in rubber shares. Tea shares were dull. The publication of the quarterly reports of Anglo-American set the prices of the OFS issues moving forward again and on Wednesday FS Geduld equalled its previous peak of the year at 4⅛. Bancroft touched a new "high" of 49s. 6d. before closing on Wednesday at 48s. 9d.

[1] Relates to wholesale prices in Athens and Piraeus only for Greece. Figures for Ireland are based on January, 1952=100. [2] July-December. [3] Relates to prices in capital cities only for Austria, France, Greece and Turkey. Belgium excludes rent. Denmark includes direct taxes. Figures for Ireland are based on August, 1953=100. [4] Excluding rent. [5] Including direct taxes. [6] Index numbers of unit value which compare the current average value of trade with its value in 1953; they are influenced by changes in the composition of trade as well as price movements. [7] Deposit money and notes and coin held by business, individuals and foreigners. Except for Greece holdings of the issuing authority and other banks are excluded. [8] Holdings of the government and central bank at end of period; figures for Greece are gold reserves only; foreign exchange figures for Norway exclude government holdings; Norway and Sweden include foreign investments. [9] Beginning May, 1954, a new drachma equal to 1,000 old drachmas introduced. [10] Including some long-term securities. [11] Average for fourth quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended July 14th, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £23,241,000 compared with a deficit of £5,253,000 in the previous week and a deficit of £353,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £8,519,000 bringing the total deficit to £246,374,000 (£329,706,000 in 1955-56).

THE MONEY MARKET

THE recent absence of stringency in the short loan market (which persisted until Wednesday, the banks' make-up day) and the prospect of a continuing strong outside demand for bills led the discount houses last week to raise their bid at the Treasury bill tender by a further 4d., to £98 15s. 1d. per cent, actually 2d. above the level from which the bid was twice reduced in the second half of June. Total applications dropped by £19 million from the previous week's record amount, so that, although only £270 million of the £280 million offered was allotted, the market again secured 61 per cent of the amount for which it applied.

Some small "special" buying occurred on Friday of last week, but otherwise the market has been left "on its own," with new money generally available at 4½ per cent down to 3½ or even 3 per cent. But 4½ per cent was paid on the banks' make-up day, when patchiness in the money supply and in distribution of Treasury bill maturities led one or two houses to take a very small sum in seven-day loans from the Bank—the first such borrowing since the half-year-end.

The Bank return shows a seasonal outflow of currency totalling £18 million (£30 million in the similar week last year) and the fiduciary issue has been raised by £50 million to the peak of £2,000 million.

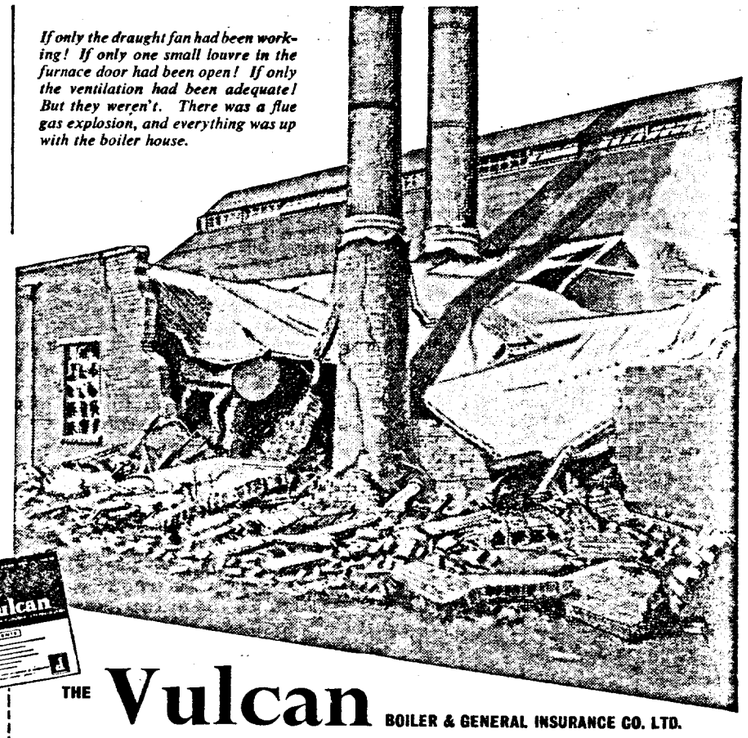
All because of a blasted boiler

If only the draught fan had been working! If only one small louvre in the furnace door had been open! If only the ventilation had been adequate! But they weren't. There was a flue gas explosion, and everything was up with the boiler house.



What Vulcan say about it

Disasters like this accent the vital need, not only for complete insurance cover, but also the inspection to hunt out the danger spot, prevent the disaster. And the people with the know-how are Vulcan.

Our Engineer-Surveyors are specialists, and nothing escapes their scrutiny. Every heating plant will be safe as boiler houses after they've seen and gone. In lifts, hoists and cranes, too: if there is trouble on the way, they'll put a stop to it. In other words, and it can't be said too often, safety first is Vulcan first.

VULCAN INSPECTS—AND PROTECTS

FREE. For news of industrial accidents and ways to avoid them, ask us now for 'Vulcan', a quarterly journal for Power users. Please write to Dept. 17.

THE ROYAL BANK OF CANADA

Incorporated with limited liability in Canada in 1869

Over 860 branches in Canada and abroad

Assets Exceed 3½ billion dollars

ICFC

Finance for Industry and Commerce

ICFC provides finance in the form of long-term loans on fixed terms, or share capital, to industrial or commercial enterprises established in Great Britain. Amounts range normally between £5,000 and £200,000.

During the present period of credit restrictions, the Corporation will only consider applications for capital from firms concerned in work of national importance. Consideration may also be given to new ventures which are soundly conceived and adequately sponsored.

Please ask for our booklet — "Capital for Business and Where to Find it".

What does
THE LONDON CORRESPONDENT
say to-day?

IT IS DIFFICULT TO IMAGINE Trafalgar Square without Nelson's Column, Landseer's lions and the fountains. But in the year of Trafalgar, St. Martin's really was in the fields. As long ago as that, The London Assurance—two miles east and already eighty-five years old—were developing, alongside their Marine business, a Life Department which since has steadily grown in stature and importance.

TAKE IT FROM US

For the highest secured income from your capital the answer surely is an Annuity—and a London Assurance Annuity for choice. Write for fuller information and explanation. We'll be happy to give it.

FOR GOLFERS

You've no idea, until the glazier's and doctor's bills come in, of the damage a golf ball can do—whether it be to a neighbouring greenhouse or a spectator's knee-cap. But a London Assurance Golfer's Policy puts paid to third-party claims and looks after you and your clubs too.

* * *

Should you want to know more about us, our other policies, or insurance problems generally, our address is 1, King William Street, Dept. 6, London, E.C.4.

COMPANY MEETINGS

ALBERT E. REED AND COMPANY, LIMITED

INCREASED PRODUCTION, TURNOVER AND PROFITS

LORD CORNWALLIS REVIEWS THE DEVELOPMENT AND PROSPECTS OF THE REED PAPER GROUP

The Fifty-third Annual General Meeting of Albert E. Reed and Company, Limited, paper manufacturers and converters, was held on July 16th in London, the Right Honourable Lord Cornwallis of Linton, KBE, MC, the Chairman, presiding.

The following is his statement which had been circulated with the Report and Accounts for the year ended March 31, 1956:

I am pleased to be able to present my annual statement to you after another successful year in which your Company has achieved further progress. Production, turnover and profits have all increased as compared with the preceding year.

Before referring to particular matters in the accounts, I should mention a change in the constitution of the Board of Directors which has taken place during the year. Mr John F. E. Coope resigned from the Board on March 1, 1956, after 11 years' very valuable service as a director of the Company. To succeed him, Mr Edward Mayall Gray was appointed a director on March 5, 1956. Mr Gray has wide experience of the newspaper world and his knowledge will be of great assistance to the Board of Albert E. Reed and Company, Limited.

PROFITS AND DIVIDENDS

The consolidated Group profit for the year ended March 31, 1956, after charging depreciation, but before providing for taxation, amounted to £6,671,182, an increase of almost £500,000 over the preceding year. This increase has been achieved in the face of continually rising costs which to a large extent we have been able to absorb by improvements in our productive efficiency and by further increasing our turnover. I shall refer later in my statement to the subject of costs and prices. The taxation charge on the Group's profit for the year again constitutes a heavy burden and amounts in total to £3,100,459 after deducting an amount of £227,210 provided in earlier years which is no longer required.

There remains available for dividend distribution and transfer to reserves the sum of £3,570,723.

As a result of what has been achieved during the year, the Board feel fully justified in recommending payment of a final dividend of 15 per cent, less income tax.

RESERVES

From the remaining balance of profits the sum of £2,500,000 has been transferred to general reserve, which now amounts to £9,500,000. After this transfer the sum of £402,433 remains to be carried forward, compared with £315,243 last year.

ASSETS

The Group's assets have been further developed during the year and this is reflected by an increase of nearly £2 million in the figure for land, buildings and plant shown in the balance sheet. The principal item of plant in this category is the No. 12 machine at Aylesford Paper Mills which was brought into operation on January 23, 1956, on a range of machine-glazed wrapping papers.

The annual output of the machine will be approximately 12,500 tons. We also have under construction at the moment a new paper machine which will be installed as the No. 13 machine at Aylesford Paper Mills and which will be a wide high-speed machine for the production of printing papers but which will also be capable of producing newsprint. We hope to have this machine installed and in production by the Spring of 1957.

The subscription of £1,500,000 for one-quarter of the Ordinary share capital of the Tasman Pulp & Paper Company, Limited, to which I referred in my statement last year, accounts for almost the whole of the increase in the balance sheet figure for trade investments. Initial construction of the Tasman Company's woodpulp, newsprint and sawmilling plant is now virtually complete and all sections of it have been in production for some time.

The capital expenditure on plant and investments has been the principal factor in the depletion of the Group's cash resources, but also stocks have increased by approximately £1,500,000 and debtors were nearly £600,000 more than at the corresponding time in the previous year. There have also been some increases in creditors, including bills payable and acceptance credits.

The effect of these changes has been a reduction in the excess of current assets over current liabilities by a little more than £1 million.

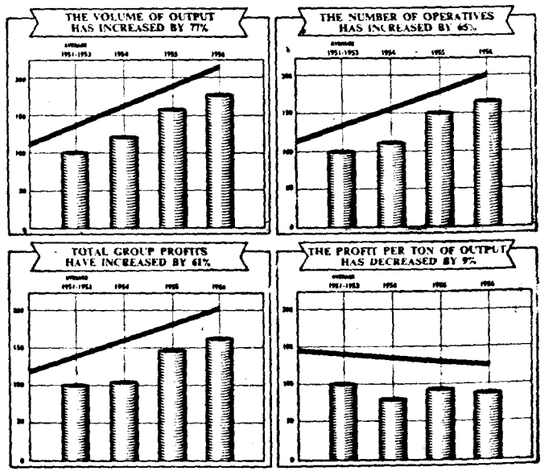
COSTS AND PRICES

Much has been heard during the last year of the problem of holding inflation in check and keeping the nation's economy on an even keel. In particular, industry has been exhorted from various directions to play its part by holding its prices. Our price policy is formulated with due appreciation of our national responsibility and in order to confirm that in recent years we have been meeting our obligations in this direction we carried out some research into the inter-relationship between our profits, production and numbers of employees. As a result we reached some conclusions which we consider to be of interest and which are reproduced in diagrammatic form (see below).

The fact that we have taken a reduced over-all profit per ton of our production while at the same time increasing our total wages, profits and dividends is an effective answer to those who proclaim that they are charged excessive prices for paper and paper products.

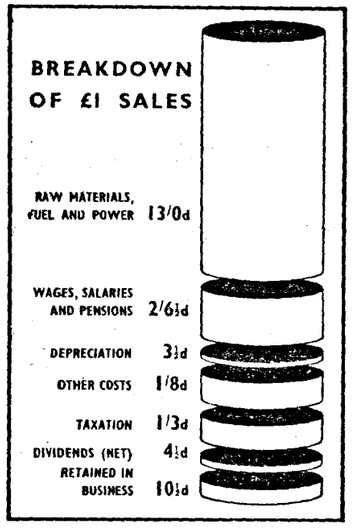
We also compared the amounts by which certain paper prices have increased in recent years with the amounts by which the cost of the woodpulp, which is such an overwhelming factor in the cost of paper, has increased.

Between July, 1953, and January, 1956, the price of unglazed pure kraft paper and machine-glazed kraft paper increased by £10. 15s. per ton. Over the same period the cost of wood fibre used in the manufacture of these papers increased by £11. 5s. per ton. Again, between July, 1953, and January, 1956, the price of machine-glazed sulphite paper increased by £12 per ton while the relevant fibre cost increased by £10 per ton over the same period. It will be appreciated that we have also had to bear increases in practically all our other costs and these amount to between £3 and £4 per ton at the 1953 level of output; it will be apparent, therefore, that these other increases have been largely absorbed and the fact that this has been achieved is due to improved efficiency and increased productivity.



How the Reed Paper Group has developed in the past three years.

Apart from the statistics to which I have just referred, shareholders will no doubt also be interested to see how each one pound of our sales income is disposed.



GROUP ACTIVITY

I have already referred to the fact that we have been able to achieve effective improvements in our manufacturing efficiencies; this has taken place over nearly all our activities and in some cases it has been possible to make very substantial increases in the productive capacity of individual sections of our plant. This is an important factor in our progress. We continually maintain our plant in an up-to-date condition and keep abreast of modern technical advance.

I will now mention some particular products in which we have become interested and for which we believe there is a great future. I referred last year to our association with the Kimberly-Clark Corporation of America and to the development, which we were then commencing, of the uses of cellulose creped wadding such as Kleenex. The British company (the name of which was recently changed from Cellucotton Products Limited to Kimberly-Clark Limited) which is carrying out this development has increased its share capital and since March 31, 1956, we have subscribed a further sum amounting to £500,000 to maintain our proportionate interest in this company.

The company's new factory has commenced production on the converting side of its operations and the installation of the new high-speed cellulose wadding machine, to which I referred last year, is well in hand and we anticipate that this machine will be in production early in 1957. A further extension of the converting plant will be ready to deal with the greatly increased supplies of wadding which will become available when that machine is in production. But the demand for creped wadding products is increasing so rapidly that already the installation of a second high-speed cellulose wadding machine and associated converting plant is being planned. This will necessitate a further substantial investment by your Company in Kimberly-Clark Limited. This project has now become an outstanding example of what can be achieved by close Anglo-American co-operation and I am delighted to repeat what I said last year, that we are proud to be associated with the Kimberly-Clark Corporation in this venture.

Since March 31, 1956, we have increased the scope of this association by transferring to Kimberly-Clark Limited our Hi-Dri paper towel manufacturing and marketing organisation. We feel that much is to be gained in improved distribution efficiency by the marketing of this consumer product through the same sales organisation which is dealing with products with such well-known names as Kleenex, Kotex and Delsey.

During the year we have acquired the whole share capital of Holoplast Limited, which has for many years occupied a modern factory on our Aylesford site. This company produces a wide range of laminated plastic products, such as structural cavitied panels for interior partitioning or external cladding of buildings, corrugated roofing and domestic furniture surfacing, all incorporating resin-impregnated paper supplied from our mills. These are marketed under the names Holoplast, Corroplast and Decorplast.

Another interesting new product is pitch impregnated fibre pipe for drainage and electrical purposes, which is marketed by The Key Engineering Company Limited, another newly acquired subsidiary. We have pioneered the manufacture of this product in this country and, after prolonged tests, it has been given a strong recommendation by the Building Research Station and has been granted a British Standard. In order to meet rapidly increasing demand, we are more than doubling the size of the factory in which we manufacture this product.

You may have seen from the Press announcements that we have now amalgamated all our corrugated fibreboard case manufacturing operations into one company —Reed Corrugated Cases Limited. This company, having eight factories located in different parts of the United Kingdom ideally placed to give the best possible service to its customers in any area, is the largest organisation in this country in its particular market. By this amalgamation we have achieved a number of operating, administrative and distributive economies as well as being able to provide improved service to customers, and it consolidates the developments we have been able to make in The Thompson & Norris Manufacturing Company, Limited, since our acquisition of that company, and in our other corrugated case manufacturing companies.

PROSPECTS

I now turn to the position of your Company in relation to the paper making and converting industries as a whole, and in so doing I will endeavour to give shareholders some idea of the facts upon which we base our confidence in our future success.

Of the annual production of 3¼ million tons of paper and board in this country, we produce over 12 per cent, and this part of our undertaking represents about 50 per cent of our activity. The other 50 per cent is in the conversion of paper for various purposes. We convert over 200,000 tons annually and we manufacture at least 30 per cent of all corrugated cases and multi-wall sacks made in Great Britain. Paper and paper products are vital to the national life and touch every aspect of the economy. Furthermore, new uses are continually being developed which constitute an ever increasing pressure of demand on the ingenuity and the manufacturing capacity of the producers.

It may be wondered whether there are sufficient raw materials available to enable the ever increasing demand to be satisfied. Ninety-five per cent of all paper is manufactured from wood. However, with the advance of silviculture promoting better growth and utilisation of existing forests, with improving accessibility to previously inaccessible forests, with the areas which can now be afforested where no forests ever existed, with the additional fire-controls, I do not think we need at present have any anxiety on this account. There is, of course, the possibility of synthetic fibres being brought more into use, but at the moment there is no sign that these are either as economical or satisfactory except for very specialised purposes.

Your Group is the largest purchaser of woodpulp in the world today and we are satisfied that our long-term contractual arrangements, together with a policy of developing our interests abroad, ensure that we are as well placed as any other British company to cover continuing and increased supplies of our raw materials.

To sum up our position, therefore, we feel that the demand for paper products is likely to go on increasing for as long as one can foresee and we are taking all possible steps to ensure raw material supplies and productive capacity which will enable us to play our part in meeting this ever increasing demand; thus we hope to continue over the coming years the steady progress we have achieved in the past.

CAPITAL EXPENDITURE PROGRAMME

The progress for which we are planning involves, of course, substantial capital expenditure and shareholders have already been informed of our proposals for raising the £6,500,000 of new capital which is now required in addition to the sums we are able to provide from our own resources. I will give you an outline of our proposals.

I have already referred to the new No. 13 machine at Aylesford Paper Mills. We are also planning to carry out in our mills and factories a programme of further modernisation and extension which will be spread over the next few years and which will increase materially their productive capacity.

The maintenance of an organisation such as the Reed Group of Companies in an up-to-date condition necessarily involves heavy capital expenditure for modernisation and development each year. This type of expenditure cannot always be planned for many years in advance, because it very often happens that modifications to plant have to be made at relatively short notice in order to satisfy changes in market requirements or in order to adopt new techniques which we have developed ourselves or which become available to us from the work of others in our industry. As far as we can now foresee, our general programme of modernisation and extension, together with the installation of particular items of plant such as the Aylesford No. 13 machine, and further investment in our associated companies such as Kimberly-Clark Limited, will involve capital expenditure amounting to approximately £25 million over the next four or five years, the greater proportion of which will, of course, be found from depreciation charges and undistributed profits retained in the Group.

MANPOWER AND MANAGEMENT

Having given you some idea of the scope and variety of our activity and of our proposals for the future, it is my privilege to refer to the motive force which makes this organisation function, namely, the management and employees. With the rate of expansion which we have achieved in the last few years, it has been obvious that very heavy calls have had to be made on the personnel responsible for management. We

have therefore given special attention to our recruitment and training, with a view to ensuring that, as the jobs turn up, the men with the requisite skill and character will be there to fill them.

There is much talk these days of automation. Whilst we consider that the paper industry will be a progressive employer of labour, we are keeping a close watch on all developments in this field, and we realise that progress cannot be made without further mechanisation wherever possible. It is always our concern to ensure that our men and women are fitted to carry out their tasks in the best possible manner with a feeling of satisfaction with the worthwhileness of their tasks and the contribution which the Reed Paper Group makes to daily life.

It is a very great honour and one which I personally regard as a high privilege to serve you as Chairman of the parent body of the Reed Group of Companies.

I can, with all sincerity, tell the shareholders that they are served by a loyal team in all grades of our organisation. The success of our operations depends in no small measure on their keenness, enterprise and friendship whether it be at work or at play.

I feel sure every shareholder will want to join with me in an expression of real gratitude to the whole of our staff, wherever they may be.

ALTERATION OF THE ARTICLES OF ASSOCIATION

Finally, I should like to deal with proposals which your directors have to put before you for certain alterations to the Company's Articles of Association. Firstly, the Articles of Association as at present constituted contain no reference to "A" Ordinary Shares, as this class of shares has, in effect, been created and the shares have been issued within the authority granted to the Board of Directors. To make the position plainer, it is proposed therefore that Article 5 be altered to bring it up-to-date and incorporate reference to the rights attaching to the "A" Ordinary Shares.

Secondly, the maximum number of directors permitted by the Articles of Association as at present constituted is nine and, as you know, directors have been appointed up to this number. In the opinion of the directors the growth of the Company has made it necessary that the size of the Board should be capable of being increased; they propose, therefore, that the maximum number of directors be raised from nine to twelve. Your directors have no present intention of recommending any additional appointments, but are merely seeking to safeguard the position. It is also felt that the present sum of £500 per annum with an additional £250 per annum for the Chairman which is fixed by the Articles as the fee payable to each director is no longer appropriate for a company of the size to which your Company has now grown and it is proposed to provide for directors' fees of increased amounts, details of which are set out in the Resolution embodied in the notice convening the Annual General Meeting.

Thirdly, it is proposed that Article 18 be altered so as to permit the Board to pass a Resolution adopting a method of mechanical application of signatures to share certificates under the control of the Company's auditors, transfer auditors or bankers. At the same time it is proposed to amend slightly the general provisions governing the use of the Company's Seal in order to ease day-to-day working.

Your directors have no hesitation in recommending these alterations for your approval.

FIRTH CLEVELAND LIMITED

A SUBSTANTIAL ADVANCE

MR C. W. HAYWARD'S STATEMENT

The Third Annual General Meeting of Firth Cleveland Limited was held on July 16th in London, Mr C. W. Hayward, chairman and managing director, presiding.

The following is an extract from his statement circulated with the report and accounts for the year as at October 31, 1955:

Since our last Meeting two additional Directors have been appointed to the Board of the Parent Company, Mr Eric S. Mead and Mr Leonard G. Oxford. Both these gentlemen have been Directors of Group companies for some years. It is our intention from time to time to appoint Directors of the Group companies to seats on the Parent Company's Board, based on my belief that in these times men of high technical and commercial ability are vital to the deliberations of the Holding Company's Board.

In support of this policy, a number of Special Directors were appointed during the year in individual Group companies—this with a view to training our younger executives in Board experience and responsibility and to encourage other young men to work towards these higher appointments.

A major problem of industry today is the difficulty of adequately rewarding (especially when promotion takes place) top executives on whom so much of the heavy burden of management falls. The incidence of taxation is such that it is often impossible, other than by paying some fantastically high salary, to compensate these men for the additional work and responsibility which they have to shoulder. The Chancellor of the Exchequer should make it possible for proper incentives to be given in such cases.

The results before you, which show a very substantial advance over the previous year, are due to the unrelenting efforts of the managing directors and executives of the Group companies during the period. We all realise, however, that the future calls for greater exertion, in order to meet competition and the more difficult times which we are now encountering. I have no doubt of the team's ability to meet these conditions, and to one and all in the Firth Cleveland Group of companies at home and abroad I offer grateful thanks for their effort.

At our last Meeting I mentioned we had recently bought the whole of the share capitals of Charles Cooper (Tipton) Limited and Richard Hill Limited. Since then there have been two additional acquisitions, one in the Retail Division, Civic Radio Services Limited, and one in the Engineering Division, Simmonds Aerocessories Proprietary Limited, Australia.

The Accounts show that the profit of the Group before taxation has increased from £900,974 in 1953/1954 to £1,379,122 in 1954/1955. The corresponding figures after taxation are £436,072 in 1953/1954 and £711,436 in 1954/1955. The profits of Civic Radio Services Limited are not taken into account as this Company was acquired after the end of the financial year.

THE OUTLOOK

Our combined activities resulted in a Group turnover of £14,250,000, and our trading for 1956 indicates that last year's turnover will be exceeded.

Our steel and engineering divisions are enjoying a high level of activity—in some cases orders are actually higher than in the same period last year—but one cannot rule out the possibility of the engineering division being affected during the remainder of this year by short-time working in the light engineering industries and a series of unfortunate strikes, particularly in the automobile industry. Our steel companies, however, ought not to feel any effects this year.

The production and manipulation of steel is a large part of the Group's activity, and it is interesting that our steel requirements exceed £3 million per annum, approximately one-third of our total material purchases.

Taking our last year's turnover and the consolidated profits, it will be seen that our profit percentage to turnover was about 9½ per cent before taxation, and after taxation, under 5 per cent, i.e., just under one shilling in the pound. This percentage rate should be higher—but we were requested by many of our customers to assist by absorbing wage and material increases in order that export prices might remain competitive. To the best of our ability we did this, but, because of further increased prices and wages I fear that we shall be compelled to raise our prices in the near future.

CAPITAL EXPENDITURE

In order to maintain our competitive position in the world markets it is essential that our plant and equipment be kept up to date, and this requires large sums of money. Our capital expenditure on new plant, equipment and buildings, incurred and budgeted for in 1955, 1956 and 1957 amounts to no less than £1,300,000. Hence the necessity for substantial profits if we are to have sufficient margin to plough back into the business. From the beginning of our new financial year in November next we should begin to reap some of the benefits of this capital expenditure, and the Group's turnover potential will be considerably increased.

Finally, I would like to offer on behalf of all the Directors in the Group and myself, our appreciation of the efforts which have been made by our employees of all ranks.

PATONS AND BALDWINS LIMITED

FURTHER EXPANSION OF BUSINESS

NEW HIGH RECORD OF SALES

MR PHILIP A. WRIGHT'S STATEMENT

The annual general meeting of Patons and Baldwins, Limited, will be held on August 22nd at Darlington

The following is the statement by the chairman, Mr Philip A. Wright, which has been circulated with the report and accounts for the year ended April 28, 1956:

I am glad to be able to report that the year under review has seen a further expansion in your Company's business, and has consequently been a year of very full employment both for workpeople and machinery. Although, as I suggested last year, it could not be expected that the rate of increase in turnover experienced during 1953-54 and 1954-55 would be maintained, the Company's sales of both handknitting and manufacturing yarns during 1955-56 do constitute a new high record.

Sales of handknitting yarns have been helped by the continued demand for thick knitting wools and the high standard of our knitting leaflets and publications. The knitting public and the manufacturers have both appreciated the efforts the Company has devoted over the past few years to the improvement of the quality of its yarns, and both sections of our trade are now reaping corresponding benefits. The benefits of this research are particularly noticeable in dyeing, where the re-equipment of our dyehouses with machinery of a type hitherto unused in this country has brought really worth-while results enabling us to produce colours of a brilliance and fastness unheard of before the war.

The woollen spinning sections of the Company have again shown satisfactory results.

PATONS & BALDWINS (AUSTRALIA), LIMITED

Before proceeding with comments upon the figures which appear in the Consolidated Profit and Loss Account, I should like to refer to the excellent contribution made to the satisfactory results of the year by our subsidiary company in Australia, Patons & Baldwins (Australia), Limited. This company increased its turnover compared with previous years and earned a substantial surplus, and has in every way enhanced its high reputation in Australia for P. & B. yarns. The Australian company has maintained the dividend on its ordinary stock, of which one-third is held by Australian investors at 6 per cent, but has this year added a bonus distribution at the rate of 1¼ per cent. A sum of £A200,000 has been transferred to reserve in the accounts of the subsidiary, and the parent company's share of this sum, viz., £106,242, is shown in the appropriation account.

THE CONSOLIDATED PROFIT AND LOSS ACCOUNT

The year's trading, the satisfactory features of which I have already touched upon, has brought a surplus into Section I. of the group accounts of £3,468,540, which is an increase of £498,422 over the corresponding figure for last year of £2,970,118. The charges shown in Section I. of the accounts follow the usual pattern, and apart from a reference to the charge for Bonus to Employees of £190,577 call for no particular comment from me. The Board are pleased that the results of the year justify the payment again this year of our profit-sharing bonus to employees. The rate of bonus distribution to employees other than those of the Australian company has been maintained at the rate of last year; employees of the Australian company have received an increased rate of bonus compared with last year when the rate was reduced because of the lower earnings of that year. This and the increased wage and salary bill on which bonus is calculated account for the increase in the charge for bonus compared with last year.

The balance carried down from Section I. of the accounts to Section II. is £2,617,234 compared with £2,091,665 a year ago.

The charges in the Profit and Loss Account for taxation both at home and abroad show increases compared with last year corresponding to the increased profits earned, and this is particularly noticeable so far as the charge for Dominion Tax is concerned. During the year two Conservative Chancellors saw fit, or were forced by circumstances, to increase on two separate occasions the charge for Profits Tax on profits distributed as dividends. The charge is now at the penal rate of 30 per cent of the gross amount distributed, whether by way of preference or ordinary dividend, although this rate only applied as from April 1, 1956, and does not therefore affect this company to any great degree this year. It is greatly to be hoped that the Government will give its early attention not only to the implementation of the recommendations of the Millard Tucker Report and of the Royal Commission on Taxation so far as the simplification of the structure of taxation on companies is concerned, but to the problem of reducing the truly appalling burden of taxation on both companies and individuals. If a reduction in the burden of taxation necessitates a pruning of the Government's expenditure both on its own account and for benefits it disburses for others, then such a pruning should take place before the industrial and social fabric of the country suffers further harm.

After a total charge for taxation of £1,422,155, which is over 54 per cent of the surplus of £2,617,234 brought in, the crediting of £121,744 for refunds of Dominion Taxation due to revision by the Australian and Canadian authorities of assessments made on the Company principally during the war years, and the elimination of £118,491 for the interest of outside stockholders in the profits of Patons & Baldwins (Australia), Limited, the balance carried to the appropriation section of the accounts is £1,198,332 compared with £1,048,924 a year ago.

THE APPROPRIATION ACCOUNT

After eliminating the amount transferred to reserve in the accounts of Patons & Baldwins (Australia) Limited and transferring £70,494 to capital reserve in respect of debentures redeemed under sinking fund arrangements during the year, the balance of the year's profits amounts to £1,021,596. The amount brought forward from last year is £539,585, giving a total balance on Profit and Loss Account of £1,561,181.

The dividends already paid on the 6½ per cent and 4 per cent Preference stocks amount to £119,809 and the interim dividend of 2½ per cent on the Ordinary stock absorbs £75,866. The Directors recommend that the remaining balance be dealt with as follows:

£303,465	in payment of a final dividend of 7½ per cent and a bonus of 2½ per cent on the Ordinary stock.
500,000	appropriation to General Reserve.
562,041	to be carried forward to next year.
£1,365,506	

The final dividend of 7½ per cent and the bonus of 2½ per cent, making a total distribution of 12½ per cent for the year, is a maintenance of the rate of distribution reached last year.

HALF-YEARLY OR INTERIM STATEMENTS OF PROFITS OR PROSPECTS

Comment is seen from time to time in the financial newspapers or heard from other quarters as to the desirability of the boards of public companies issuing at half-yearly or other intervals an interim statement as to profits or prospects. It is suggested that the period of twelve months which normally elapses between the publication of a company's annual statements of account is too long and that stockholders are entitled to more frequent indications of the course of affairs than the legal requirements of the Companies Act dictate. Although your Board is not aware of any particular desire for additional information voiced by the stockholders themselves, the Directors have considered the problem generally and have come to the conclusion that it would be undesirable in the case of your Company to depart from past practice in this matter. The handknitting and hosiery yarn trade of your Company is largely a seasonal one and raw wool, which is the Company's main raw material, is purchased from a seasonal market. These circumstances and the fact that raw material costs bulk so greatly in total costs and that stocks form so preponderant a part of the Company's working capital leads the Board to feel that the issue of interim profit figures which could be so distorted by subsequent movements of raw wool prices could be misleading or would have to be so guarded to avoid false impressions that they would be worthless. In these circumstances, therefore, your Board propose to continue their past practice of making no statement as to profits or prospects when declaring an interim ordinary dividend or at other times during the year unless in their view circumstances are so exceptional as to warrant particular reference.

THE CONSOLIDATED BALANCE SHEET

The Consolidated Balance Sheet shows the group net assets after deduction of the interest

of minority stockholders at £16,973,609—an increase of £699,192 over the corresponding figure for last year.

The programme of modernisation and reorganisation at the Alloa factory is proceeding according to plan, and it is expected that the dyeing and finishing sections will be in operation by the autumn. Thereafter it is intended to commence the replanning of the spinning sections on the most modern lines. A start has also been made during the year with a programme of modernisation and re-equipment of Rutland Mills, Wakefield, in order to bring this factory up to the Board's present-day standard of production facilities and amenities for workers. In Australia also work has been completed on a small extension to the factory and a quantity of plant has been replaced with new. Plans have now been agreed for a further reorganisation and extension at Launceston to keep the level of production more in line with the sales demand. During the year 1955-56 the net value of fixed assets has increased from £8,145,242 to £8,366,106, a net increase of £220,864. Taking into account depreciation written off during the year, this covers expenditure on capital equipment throughout the group of over £750,000. It will be observed from a note to the balance sheet on page 8 that the group's immediate capital commitments at home and abroad amount to some £655,000. The Board's long-term plans will, however, involve much greater expenditure than this.

With the exception of bank balances, cash, short-term deposits and investments, current assets and liabilities do not over the year show any abnormal change. Cash balances and investments total £3,519,954, compared with £2,303,127 a year ago, emphasising the continuing improvement in the liquidity of the group's affairs to which I referred in my statement last year.

FLEMING REID & COMPANY LIMITED

You will no doubt have observed from the Press that in conjunction with J. & P. Coats Limited your Company has taken a financial interest in the business of Fleming Reid & Company Limited, the old-established Scottish worsted spinners, who are perhaps better known as Scotch Wool and Hosiery Stores. Under the agreement the Company is entitled to and has already nominated a member of your Board to the board of Fleming Reid & Company Limited. I am confident that the arrangements made will be profitable and to the benefit of your Company. No figures appear in the balance sheet as at April 28th last as the financial side of the transaction had not been implemented at that time.

THE WOOL MARKET

During the year under review wool prices eased continuously until by October, 1955, they showed a drop of some 15 per cent. Since then there has been some recovery so that over the full year the fall in value has been about 10 per cent. Unfortunately the fall in values has been largely offset by the continuing rise in production and distribution costs and could not therefore be passed on to the public. Since the balance sheet date, a substantial advance in merino qualities has occurred, due mainly to heavy Japanese buying towards the end of the Australian selling season. This increase in price is worrying in view of the Board's anxiety to keep selling prices down. However, it is very problematical whether it will be maintained when the full weight of another season's Australian and South African clip comes on the market. A policy of minimum buying is being pursued.

SYNTHETICS

Although man-made fibres play a useful role in both the handknitting and hosiery yarn fields, particularly as admixtures, I do not think there is at present any sign of their replacing wool to any major extent. Your Board, however, are well aware of the rapid progress which is being made in the development and improvement of synthetic fibres. It is the Board's view that orthodox worsted spinning machinery is not necessarily the most suitable means of producing satisfactory yarns from these new types of fibres, and they have therefore been engaged over the past year in trying out new methods and equipment to ensure that your company is not behindhand in the spinning and marketing of synthetic yarns. I may say the results to date appear to be most promising.

CANADA

I regret to report that while general conditions in Canada are extremely prosperous, the textile industry there is rapidly reaching a state of crisis and many long established textile companies are in serious difficulties. This state of affairs is due to the simple fact that existing tariff protection is inadequate in its relationship to the internal high standard of living which prevails, thereby making it impossible for local manufacturers to compete with low cost imports. Strong representations to the authorities have been made for adjustment by both the manufacturers and the labour unions, but without success.

As a result of the general situation, the Toronto factory has for the past three years had a very difficult time, and I see no prospect of any substantial improvement occurring in the near future. Your Board therefore is giving serious thought to the practicability of expanding the productive capacity of this factory into the wider field of the spinning of yarns from synthetic fibres.

EXPORTS

The inevitable development of secondary industries in such countries as India and Egypt continues, and the quota arrangements or increased duties on imports necessary for their protection add more and more to the difficulties facing exporters—particularly of consumer goods. Britain is not alone in the battle against inflation and anti-inflationary measures, particularly in northern European countries, have increased, at least temporarily, trading difficulties.

South America still remains practically a closed market. On the other hand, sales to those countries where trading conditions are more normal have been well maintained and indeed in some cases increased. In total the volume of export sales has been maintained, a result to be considered satisfactory in the light of world conditions.

PERSONNEL

The satisfactory trading result of the year could not have been obtained without the enthusiastic co-operation, hard work and loyalty of all those who serve the Company both at home and abroad, and as is very right and proper as well as being customary your Board records at this time its appreciation of the efforts of all employees. I have already referred to the contribution made to the group figures by Patons & Baldwins (Australia) Limited and record an especial appreciation of the excellent work carried out by all our employees in Australia under the leadership of the local management team. It is gratifying that the year's results permit the payment of a bonus to employees in extra recognition of the splendid efforts made by all concerned.

MR R. W. TOLSON

As will be seen from the Directors' Report, Mr R. W. Tolson will attain the age of 65 years in August this year and retires from the Board at the conclusion of the forthcoming Annual General Meeting. Mr Tolson joined J. & J. Baldwin & Partners Limited in 1909 and was appointed a director of Patons & Baldwins Limited in 1924. Your Board wish to record their appreciation of the long and valuable service given to the Company both as a director and as a manager by Mr Tolson and extend to him their wishes for a long and happy retirement.

FUTURE OUTLOOK

The prospect for continuing maximum production is very promising. I am hopeful that we shall be able to maintain our sales of handknitting yarns and should expect a further increase in turnover in manufacturing yarns. The export prospects are difficult to assess in view of the continuing change in factors outside our control, such as import restrictions, etc., but here again I shall be disappointed if we do not maintain our figures. I look forward to another satisfactory year.

WALKER CAIN LIMITED

GOVERNMENT—PREDOMINANT PARTNER

The annual general meeting of Walker Cain Limited was held on July 12th in London. The Right Honourable Lord Brocket (the Chairman), who presided, said: Our output for the year to March last showed a very satisfactory increase in all departments. Sales of draught beer were much improved, and bottled beer sales exceeded our expectations with a record turnover.

The Wines and Spirits branch of our trade has shown an extremely satisfactory expansion.

The Autumn Budget offered the Brewing Industry no respite from the high level of taxation, and I say again that our product carries too heavy a burden of Duty.

Costs continue to mount and it has been tacitly acknowledged over a period of time that, failing some amelioration in Duty, neither wholesaler nor retailer could be expected indefinitely to absorb these imposts.

Giving an analysis of each £1 of revenue, Lord Brocket said: The Government is by far the predominant partner in our industry, deriving 38.31 per cent in Duties and 8.31 per cent in taxes, a total of 46.62 per cent, or nearly half of every pound spent by our customers. This does not include Surtax or Death Duties on our stockholders or rates, which are a local Government charge. Only 5.12 per cent is paid to Debenture-holders, Preference and Ordinary stockholders, one-tenth of the sum paid in Duties, Taxes and Rates. Wages come to 11.05 per cent, more than double the sum paid to Debenture and stockholders.

The report was adopted.

WIGGINS TEAPE GROUP

(Wiggins Teape & Co. (1919) Ltd.)

ANNUAL REPORT AND ACCOUNTS OF THE WIGGINS TEAPE GROUP FOR 1955

PRODUCTS

THE GATEWAY RANGE of

(*a*) Watermarked papers for commercial use—Writing, Ledger, Air Mail, Index Board, Blotting, Cheque, Stamp, Office Systems, etc.

Net Current Assets	16,100,899
Fixed Assets (less Provision for Obsolescence)	10,598,523
Trade Investments	831,841
Total Capital Employed (including Debentures and Loans)	£27,531,263

Extracts from Statement by Mr. L. W. Farrow, C.B.E., Chairman

SALES: The year 1955 was one of unprecedented activity in the paper trade and the volume of sales of your Group proved a record both in the home and export markets. In the home market the scheme of allocation of our product to ensure that our customers should each get their fair share continued throughout the year. Sales in the export markets again showed an increase on previous years. Directors of our Export Company maintained contact with our export branches and agents by visiting many overseas countries during the year.

PRODUCTION: The volume of the production of paper at your Group's Mills during 1955 exceeded the production for 1954 and was a record in the history of the Group.

PROJECTED NEW DEVELOPMENTS: The third machine at the Glory Paper Mills, Wooburn Green, Bucks, for the production of photographic base paper commenced successful manufacture at the end of April. Contracts have been placed for the new unit at our Dartford Mill, the main item of which is a fast running paper machine of 180 inches in width. It is hoped that production will commence in 1958. We are making progress with the placing of contracts for the new wood pulp mill which we propose to erect at a site near the entrance of the Severn Tunnel on the North West side of the River Severn. Plans have been made to receive timber this autumn so that a stock of prepared wood will be ready when the plant is expected to commence operations next year.

PROSPECTS FOR THE CURRENT YEAR: During the opening months of 1956, the paper trade has been affected by a dispute in the printing industry and by the credit squeeze. With regard to the latter, customers have been working down stocks of paper to improve their liquid position and this has naturally reduced their intake of fresh supplies. The demand for paper has undoubtedly fallen off from the high peak of demand in 1955 and in consequence very little overtime is being worked in the paper mills at the time of writing this statement. On the other hand, costs of production continue to rise. An increase in paper workers' wages has just been negotiated and we are faced with increased transport charges and increased cost of coal. However, unless trading conditions deteriorate as the year goes on, I think we should be able to report a satisfactory profit for 1956, though not as high as that for 1955.

THE BRITISH & COMMONWEALTH SHIPPING COMPANY LIMITED

EFFORTS TO FOSTER DEVELOPMENT OF TRADE

LORD ROTHERWICK ON THE TASK AHEAD

The First Annual General Meeting of The British & Commonwealth Shipping Company Limited was held on July 12th in London.

The Right Honourable Lord Rotherwick (the Chairman) presided and, in the course of his speech, said :

My colleagues and I have taken on our new tasks with a deep sense of responsibility and a determination to succeed, and I am confident that as the leader of the team, I can count on the loyalty and willing help of all connected with the various Companies in the Group. In the meantime, I should like to express our thanks to all those, afloat and ashore, who by their efforts have created a solid foundation on which to build. The Accounts for consideration at this meeting are purely formal but will enable the shareholders to appreciate the financial position of the Group.

BROAD CONCEPTION OF POLICY

My broad conception of policy can be stated very simply—to provide a first-class service and make profits. This Group of Companies can and must contribute to the well-being of the countries which it serves. It must use every effort to encourage the development of trade for, by so doing, it will help not only the economy of the country concerned but will also help to promote a better understanding among nations. In return we consider that we are entitled to receive an income to meet our needs and a reward commensurate with our effort. I make no apologies for attempting to make a profit, for today additional finance is required to maintain even a static business. But a business must either go forward or back and I shall certainly do all in my power to see that our business goes forward.

NEED FOR GOVERNMENT SUPPORT

What is left of an already depleted British dry-cargo Merchant Fleet may well be ruined by the ever increasing cost of replacement and the hampering effect of penal taxation (the heaviest in the world) and flags of convenience. Out of taxed income the British ship-owner must accumulate the difference between the actual and replacement cost of a ship, a gap only partly bridged by the Investment Allowance, whilst others taking advantage of an accommodation address may, broadly speaking, retain practically the whole of their profit.

In present conditions the decision to build a ship is an act of faith. Some may think it is tempting providence. However, if we allowed ourselves to be dismayed by the prospect we should never build another ship for always the dangers of tomorrow would outweigh the possibilities of today. I am satisfied that it is right to take a calculated risk and to proceed with an adequate policy of replacement. In this we need help and I look to the Government for support. Having regard to all the risks of obsolescence, I am justified in asking for an increase in the wear and tear allowance so that the cost of a ship can be written off more quickly out of profits. Add to this a proper recognition of the difference between replacement value and original cost which can be achieved by increasing the Investment Allowances then British Shipping will once again be able to look ahead, to plan for the future, to create new opportunities and assist in the development of world trade.

RESEARCH DEPARTMENT

With the development of the technique of a controlled economy Governments, more than ever before, have become interested in rates of freight. In this changing world the shipowner can no longer consider that he has done his job if he provides a regular and satisfactory service. He must examine trends : he must anticipate requirements : he must assess the trade potential of a particular area. In fact, he must take an ever larger part in the economic life of nations. Their problems are our problems. Our prosperity depends on their prosperity. If we approach our common problems with mutual good will and understanding, we can overcome our difficulties. Therein lies our best hope of success. In these circumstances, we propose to develop a Research Department within the Group which will be responsible for giving us an appreciation not only of trade prospects in the territories which we serve, but of world trends.

I, for my part, in order to form a first-hand impression of conditions, intend to revisit South and East Africa next January, and I could not look forward to any journey with greater interest.

Last August, a Delegation of the South African Conference Lines conducted negotiations at Pretoria with Representatives of the Union Government. We were not entirely satisfied with the revised rates which were agreed, but a friendly relationship developed between the negotiators which we hope can be broadened and extended, making possible the build up of a freight structure which will provide an ever-improving service.

Delays in port are still one of the most disturbing features of our business. In India, a welcome increase in trade has caused congestion, but the Indian Government is taking active steps to remedy the position: in Australia the Government is endeavouring to deal with working conditions in the ports: in the United Kingdom you are all aware of the strikes which took place during 1955 and which affected adversely the results for that year.

PROSPERITY DEPENDENT ON EXPORT TRADE

The prosperity of British shipping depends on export trade, and unless this is maintained at a high level the future will be dark indeed. We are in the midst of a credit squeeze. I do not dispute that this squeeze is assisting our economy. However, it is bearing very heavily on the little man who is least able to afford it, whereas a drastic reduction in expenditure by the Government would have been more effective, for it is this extravagant expenditure which is one of the principal causes of inflation. If taxation was materially reduced prices would come down, and not only would money buy more in this country but we could expect an improvement in our export trade which in the end will determine our standard of living. Money is still the most cogent argument for increased work, but it must be real money. Merely to earn more to enable you to pay more for the same article is no answer to the problem. We can afford to pay high wages if related to increased production, but the State is a grasping partner who requires anything from 42 to 92 per cent out of most increased earnings —a fact which must cause some on whose training and education much money has been spent to seek opportunities in foreign lands where they may reap a less highly taxed reward for their labours.

FUTURE PROSPECTS

You will expect me to say something about our future prospects. We are dependent on the volume of trade for our earnings and the level of costs, in relation to these earnings, for our profit. Accordingly, any restriction of imports such as those announced recently by the Government of Australia cannot be disregarded nor can we, as large users of oil, dismiss lightly the intimation of a further increase in prices. However, subject to unforeseen circumstances, the results for 1956 should show an improvement over 1955. The Group has recently taken over a 16,000-ton tanker which is on charter to one of the oil companies, whilst in addition a further three tankers, with a total tonnage of 54,000, have been ordered. In due course, if funds permit, we hope gradually to increase this side of the Group's activities.

A REAL OPPORTUNITY

In conclusion, I must refer to the Commonwealth and Empire within which practically the whole of the trade of this Group is carried on. There is far too much talk about the international situation and far too little about imaginative plans for helping Commonwealth countries to develop the untold wealth which they contain. In thinking of the Commonwealth and Empire I cannot confine myself to the benefit which the Group would obtain from an increase in trade with these countries. This is something much bigger than the prosperity of a group of companies. Our attitude to this free association of nations can determine the future history of the world. A strong Commonwealth and Empire can create stability. This is our real opportunity and, forgetting petty things, let us dedicate ourselves to this task. We are proud to carry the name British and Commonwealth as a constant reminder of our obligation.

The report was adopted.

BOVRIL-70 YEARS YOUNG

LORD LUKE REVIEWS A RECORD YEAR

Group sales higher than ever

AN all-time record in the total sales of the Company's products was announced by the Rt. Hon. Lord Luke, Chairman of Bovril Ltd., at the 59th Annual General Meeting of the Company, held in London on July 17th.

He pointed out that the Company was now in its sixtieth year. The trademark of Bovril, however, dated back to 1886, when the first sales took place in London. That was seventy years ago.

Expressing pride at the age of the organisation, he also felt that the Company, and no doubt its shareholders, were more concerned with the present and the future. It was the Company's constant endeavour to continue earning the confidence of its shareholders.

PLEA FOR REASONABLE TAXATION

Lord Luke observed that a company benefits not only its shareholders and those who work for it, but also the Government that receives its taxes. "It cannot be repeated too often," he said, "that taxation rises automatically with profits, and because of Profits Tax still much higher on those profits distributed as dividends. This is a matter which is sometimes left out when profits and dividends are being discussed in the same breath as wages and salaries. Reasonable taxation is agreed to be necessary but it is the tax gatherer who needs to be taught the true meaning of reasonable."

RECORD SALES OF HIGH-QUALITY PRODUCTS

The Chairman reported with pleasure that the total sales of the Company had been higher than ever and had created an all-time record. Several elements had contributed to this achievement. "Our products," he said, "have continued to find favour with the buying public, which indicates that in spite of Bovril itself being a relatively high priced product (a factor which we regret but cannot at the moment do anything to improve) the quality of Bovril has been maintained at its customary high standard (a factor which we can and do control). Therefore quality in Bovril, Jaffajuce, Bovril Corned Beef, Ambrosia Creamed Rice, to mention our four main lines, is as important to our customers as it is to your Company."

The Chairman thanked all employees for their loyal service and co-operation in what had been a very busy year.

STEADY PROGRESS IN EXPORT SALES

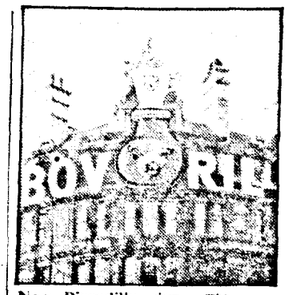
Reviewing the Company's overseas trade, Lord Luke reported steady progress in all fields. This was in spite of two extensive and greatly detrimental dock strikes.

The Chairman spoke of prosperous business on the part of Bovril (Canada), which had also made a start in establishing Ambrosia Creamed Rice on the Canadian Market. In the U.S.A. the Company had had a busy year marketing Bovril and Bovril Corned Beef. Bovril (Eire) had had record sales and also made a good start with the sale of Jaffajuce.

CONTINUING DIFFICULTIES IN ARGENTINA

Lord Luke summed up the year in Argentina as "business as usual during alterations". Reporting on the great strain under which the associated Company continued to work, the Chairman said, "The meat industry is still not operating on a satisfactory basis but the Government, in conjunction with the meat Companies, is working out a scheme of re-adjustment."

One outstanding improvement had been the much greater ease with which the Company could now ship their raw materials and Corned Beef.



New Piccadilly sign. *This new illuminated sign takes the place of the former world-famous illumination put up in 1909. Its neon lights will come on in a few weeks' time.*

MECHANISATION AND THE PERSONAL FACTOR

The Chairman reported that mechanical production in the Bovril factory had continued to make good progress and would help towards offsetting the continual rise in costs. "Production," said Lord Luke, "can only be made economical through the greater use of machinery ; in other words putting into men's and women's hands the means to increase their production for them. The adjustment of the personal factor is most necessary and we have endeavoured to carry this out satisfactorily."

Mechanisation *in the Bovril factory is progressing well. Here is one of the new labelling machines. Soon the whole bottling, capping and labelling line will be fully automatic.*

ADVERTISING AND MEDICAL LITERATURE

Lord Luke was convinced that advertising was an essential factor in converting mass production into mass sales and should be considered as one of the costs of selling and distribution. "Any effort to put a tax on advertising would be deliberately to increase the costs of production and distribution," said Lord Luke. A tax on advertising would have the effect of making the distribution of goods more costly, and would be a false economy of the first order.

The Company had continued to use Press and outdoor publicity and had also been represented on Television. Research was helping to gauge the relative effectiveness of these various publicity media.

Referring to literature of a medical nature which had been instituted during the year, Lord Luke said that some 50,000 copies of "Protein Loss and Convalescence" had been distributed to doctors in the United Kingdom and overseas. The second book of the series, "Vitamins of the B Complex", was to be distributed later in the year.

A talkiestrip, "Background to Bovril", had had a good reception with trade associations and various women's associations. Other strips were in course of production.

The Company was shortly publishing a book, "Olympic Odyssey", with a foreword by Lord Burghley and articles by medal winners. It would be sold in aid of the Olympic Games Fund.

The Chairman drew attention to the new Bovril illuminated sign in Piccadilly, which will replace the former world-famous sign erected in 1909. He said that the new sign would be in operation in a very short time.

ACCOUNTS

The Group's net profit for the year was £357,977, of which £20,745 belonging to the Parent Company was retained in the Subsidiaries. The payment of Pre-Preference, Preference and Ordinary Dividends absorbed £89,700, and the Directors recommended a final dividend of 13¼ per cent. on the Deferred Stock, making 16 per cent. for the year.

F. H. LLOYD & CO., LIMITED

DEMAND WELL MAINTAINED

MR F. N. LLOYD ON THE OUTLOOK

The sixty-ninth annual general meeting of F. H. Lloyd & Company, Limited, was held on July 19th at the registered office, James Bridge Steel Works, near Wednesbury, Mr F. N. Lloyd, chairman and managing director, presiding.

The secretary (Mr E. Allison) read the notice convening the meeting and the report of the auditors.

The following are the Chairman's circulated comments on the report and accounts for the year ended March 31, 1956:

Ladies and Gentlemen, this year we are including in the Directors' Report and Accounts, a comparative statement giving figures extracted from statements for the last twenty years. This has been done in order to illustrate the growth of the Company's operations during that period, which is still continuing.

The accounts now incorporate the one-for-one Capital Bonus Issue that was decided on at our last Annual General Meeting. The cost of this operation, as shown, was £4,772. Our net profit after tax at £419,681, is somewhat lower than last year and reflects a higher tax charge on a slightly lower profit before tax. The depreciation charge at £181,504 is increased and also reflects the extent of our net additional investment in fixed assets.

During the year, we have, on account of changing customer requirements, had to adapt our plant to making heavier and more intricate castings, and also to comply with more exacting specifications. Our total productive effort has increased, but this increase has been more than offset by reduced profit margins. So far, the demand for all our products has been well maintained, and barring any wholesale recession of trade, which would affect the whole Engineering industry alike, we expect to be operating at full capacity.

INCREASE OF COSTS

During the year, we have had to face substantial increases in the prices of most of our raw materials, as well as meet higher labour costs, and it has only been possible to recover these by increases in our selling prices to a limited extent. As there is an obvious limit to the extent to which increased costs can be recovered by higher selling prices, we are making strenuous efforts to offset these increased costs, over most of which we have no direct control at all, by raising our own standard of operating efficiency. This is the main reason why the amount to which we are committed on Capital Expenditure now stands at £443,000, whereas a year ago it was only £200,000.

The value of Capital Expenditure completed during the year was over £450,000, and we expect to feel the benefits of this expenditure and of other plant which is now about to come into operation, during the current financial year. Another reason for the magnitude of the development expenditure to which we are committed is the Iron and Steel Foundries Regulations 1953, which came into operation in January this year.

MACHINING OPERATIONS

Considerable development in machining operations has taken place at our main works at Darlaston, and we are now in a position to supply a substantial part of the castings we turn out in the partly or completely machined condition. This is enabling many of our customers to increase their own production, because of the shortening of their manufacturing cycle that it makes possible. At Lloyds (Burton) Limited we were seriously affected during the early part of the year by the recession in the automobile industry, and also by the cessation of certain armament contracts on which this plant had been engaged. However, with the coming into operation of additional melting plant in the latter part of the year, this setback was more than regained, and these works are now fully occupied on the manufacture of specialised steel castings and various grades of alloy cast irons

Rapid strides are also being made in what is known as the Shell Moulding process, which is now being applied to both steel and iron castings. At Parker Foundry (1929) Limited, Derby, production has increased steadily during the year, and the new plant referred to in our last report is now operating at full capacity. It has, moreover, been found necessary to put further extensions in hand, which will come into operation during the present year.

THE MONOPOLIES BILL

Some concern is being felt throughout our industry at present about the Government's Monopolies Bill, which is about to become law. In common with most of the other leading firms in the steel casting industry, we have for many years believed in the value of working with, rather than against, each other. Moreover, we believe that this co-operation has on balance benefited our customers quite as much as it may have acted to their detriment, in that stability of prices has prevailed and that the benefit to the customer of any extreme downward fluctuations that may have been avoided has been cancelled out because similar upward fluctuations have not taken place due to the stabilising factor of the agreements that have been in operation.

It is, as yet, too early to say what the actual effect will be on our operations, but we believe that such co-operation as can be proved to have been of value in the past could and should be allowed to continue under the new conditions which will prevail under the Act.

TRIBUTE TO EMPLOYEES

Once more I must express appreciation of the way in which our Company has been served by all its employees during a more than usually arduous twelve months. Your Company has, in its employees, a very valuable reserve of effort, experience, and skill, and the growth in the scope of our activities has only been made possible by the fact that this skill and experience is so widely disseminated throughout our organisation.

The report and accounts were adopted; the proposed final dividend of 10 per cent, less tax, on the Ordinary shares, making 12½ per cent, less tax, for the year, was approved; the retiring director, Mr A. B. Lloyd, was re-elected and the directors were authorised to fix the remuneration of the auditors, Messrs Agar, Bates, Neal & Company.

HENRY HOPE & SONS, LIMITED

AN ENCOURAGING YEAR

The fifty-eighth annual general meeting of Henry Hope & Sons, Limited, was held on July 18th at Smethwick, Mr Michael Hope, chairman and managing director, presiding.

The following are extracts from his circulated statement for the year to March 31, 1956:

We have had an encouraging year, for the drop in our trading profits at home which was such a depressing feature of the last two years has been halted. Our American subsidiary was not able to repeat last year's exceptional result, but in spite of a fall in profit they have paid us a higher dividend. The parent company's net profit, after payment of all taxes and the expenses of our Capital reorganisation, is £18,000 up at £213,990.

We recommend the payment of an Ordinary Dividend of 10 per cent on the increased Ordinary stock.

COSTS AND PRICES

Last year I referred to the efforts we had made to keep down our selling prices in the face of constantly rising costs, and this year I am afraid the story has repeated itself ominously. In February of this year, following the lead given by the Cement Industry and the appeal of the Prime Minister, the principal Metal Window makers announced that they would hold the prices of their Standard Windows until the end of June, hoping that this would encourage other groups to follow suit and act as some small check to the spiral of inflation. We had an encouraging response from many of our suppliers, but the nationalised and nationally organised bodies who control the major items of our expenditure seem to have had other views.

In March the Engineering Employers and Unions, and in February and April the Building Trades, both agreed to even higher increases in wages than they had 12 months earlier. In April aluminium went up by 3½ per cent. Rates by over 100 per cent and rail and road charges by 7½ per cent. In May steel went up by £1 16s. a ton and in June coal by 6s. 6d. a ton. The one encouraging feature is that copper has fallen from the peak of £434 a ton to about £300.

IMPORTANT CONTRACTS

During the year we secured an important contract for the aluminium windows for the new Irak Parliament Building in Baghdad. This is one of the largest overseas orders we have ever obtained and was taken in face of strong competition from foreign manufacturers. A pleasant feature of last year's business was the number of important orders we received from old customers who have been using our products for many years; these include the latest extension to the London County Hall, where we first supplied windows in 1913; a 10-storey office block for ICI Metals at Witton, Birmingham, where our windows were installed first in 1904 (and are still in good working order) and large extensions to the Ford Motor Company's factory at Dagenham and the Austin Motor Works at Longbridge. A small but interesting order received recently is for bronze wire mesh grilles to keep the pigeons and starlings out of the upper part of Big Ben Clock Tower.

The report and accounts were adopted.

BRITISH BANK OF THE MIDDLE EAST

ANOTHER SATISFACTORY YEAR

The sixty-seventh ordinary general meeting of The British Bank of the Middle East was held on July 17th in London, Sir Dallas Bernard, Bt, chairman, presiding.

The following are extracts from the chairman's circulated statement for the year to March 31, 1956:

I am again glad to be able to report another satisfactory year of continued progress. Our Public Deposits and ancillary Accounts are up £4,700,000 to £58 million. Cash in hand and Money at Call at £8 million is down by £500,000. We hold no Treasury Bills as against £6 million last year. But investments in British Government securities are up by £8 million to £26 million; all these stocks have fixed redemption dates and include a high proportion with very near maturity dates. You will notice from the Balance Sheet that these stand in our books below market value.

Loans, Advances and Bills Purchased at £26 million against £23 million show satisfactory progress.

We are continuing with our building programme and spent £124,000 during the year. We have written off £50,000 from Bank and other Premises out of our profit for the year. £300,000 has been transferred from our Reserve for Contingencies to our published Reserve Account, bringing the total of that account to £1,800,000.

The Accounts again show a strong position and give ample justification for a final dividend of 6 per cent, making 10 per cent for the year.

PROPOSED CAPITAL ISSUE

At the Annual General Meeting members will be invited to consider a resolution, the terms of which are set out in the notice of this meeting, increasing the authorised capital of the Bank to £2,500,000 by the creation of 1 million new shares of £1 each, and authorising the Directors to issue the new shares to such persons at such times and on such terms as they think fit. It is the present intention of the Directors to issue 500,000 of the new shares during the current financial year, by way of a rights issue to members. Your Board have no plans at this time for issuing the remainder. They consider it advisable to increase the capital of the Bank in view of the expansion of our business. Members will also be asked to consider a resolution substituting in Article 83 of the Statutes of the Bank the holding of shares of the nominal value of £500 as the qualification for a Director in place of the present qualification of shares of the nominal value of £1,000. It is felt that this is excessive and might prevent the acceptance of office by persons considered to be eminently suitable as Directors.

Our premises in London at Gracechurch Street have become inadequate for our needs and we have taken fresh premises for our Head Office at 6-7 King William Street, which give us all the accommodation that we need now and for some time to come. We expect to move into these new premises early in July.

MIDDLE EAST CONDITIONS

As the Bank's name implies, we are primarily engaged in that undefined area known as the Middle East. During the past year there has been much disturbing news from certain parts of it, but I would also like to say that there has been much good news which does not always find equal prominence in the press.

The enhanced prosperity and rising standards of living in the Middle East depend on the result of revenues from oil production which is principally disposed of in Western European markets. There is thus mutual interdependence between Western Europe and the producing countries, and it is a mistake to think that oil interests are immediately, or even ultimately, affected by every political incident in the Middle East that makes headlines in the Western press.

The long-term contractual obligations between the Governments of oil-producing countries and the oil companies bring very satisfactory results to both parties and their prosperity to a lesser extent spills over to benefit indirectly those adjacent countries which themselves have no direct revenues from oil. The benefits accruing to countries which provide wayleaves for pipe lines or refinery sites are quite considerable.

Oil production of the Middle East in 1955 was 161 million metric tons, against 133 million metric tons in 1954 and 118 million in 1953.

In November and December last, accompanied by Mr Musker, I visited our Branches at Tripoli, Kuwait, Bahrain, Doha, Dubai, Sharjah, Baghdad, Damascus, Amman, Jerusalem and Beirut, in that order. I was impressed by much that I saw, but particularly I was struck by the high regard in which our Bank is held in its area of operation.

The report and accounts were unanimously adopted and resolutions were passed approving the proposed increase of capital and making an alteration in the Statutes.

BANQUE D'ETAT DU MAROC

59, QUAI D'ORSAY, PARIS 7

BALANCE SHEET AT DECEMBER 31, 1955

DICTAPHONE COMPANY LIMITED

CONTINUED PROGRESS

MR C. KING WOODBRIDGE'S ADDRESS

The Annual Meeting of Dictaphone Company Limited was held on July 17, 1956, in London.

Mr C. King Woodbridge, chairman of the Board, presided and in the course of his address said:

I am very pleased to be with you at this meeting of shareholders of this company, the progress of which I follow with considerable interest, and in submitting for your consideration the forty-fourth annual report of the directors, together with the accounts for the year ended at December 31st last, I am happy to state that not only has this company maintained its position in the dictating machine world, but its parent company, the Dictaphone Corporation, over which I am privileged to preside, and that company's Canadian offshoot which is so closely linked with this company, are both able to record very considerable progress.

MAGNITUDE OF BUSINESS

Before I go into any more detail with the affairs of this company, you may like to be reminded of the magnitude of the Dictaphone business. In addition to the sales of our own products during 1955, our resources were employed in defence contracts, which made a useful contribution to a record year both in turnover and profits, in fact without question the greatest year in the history of our companies.

Our overall turnover being in excess of £11 million, resulting in a net profit for 1955 of £744,333, of which £266,961 was distributed in dividends to shareholders, the remainder being retained to finance our ever-growing business, as it is important that we should not be restricted by lack of working capital.

THE DICTABELT

It is, of course, impossible to talk about the Dictaphone "Time-Master" without emphasising Dictaphone's "Dictabelt," manufactured in our own factory, which you will appreciate is by no means a small undertaking when I tell you that during last year over 26 million Dictabelts were made and distributed.

New products and improvements in standard products have been introduced through the year.

Commercial recording and reproducing equipment, as distinguished from dictating machines, including our Dictatape four-channel magnetic tape recording machine, our Dictalog magnetic belt recording machine and other specially designed devices, have grown to such an extent that we have set up a new division, the recording machine division, under the direction of a production manager and a sales manager.

This company, as you will see from the balance sheet, now has assets in excess of £700,000, and I claim without fear of contradiction that our Acton factory is one of the most modern and efficient manufacturing units in Europe.

GROWING EXPORTS

In the year under review this company has not only increased its domestic business but retained its export sales at the very high level of 70 per cent of its production, including a very substantial amount of dollar business.

During the past year Great Britain has had to answer a formidable challenge due mainly to the difficulty of selling British products at competitive prices in foreign markets. The measures adopted in an attempt to solve the country's economic problems which include a drastic tightening of credit facilities and an increase in the burden of taxation on business enterprises may well, however, have the effect of discouraging investment in cost reducing equipment including the range of Dictaphone "Time-Master" dictating machines. Yet it is by such investment that the competitiveness of British products can be increased.

THE TELECORD SYSTEM

During the year we have introduced the Dictaphone Telecord system, which is definitely not an alternative to the standard "Time-Master" dictating machine, but nevertheless a very important part of a Dictaphone installation. The Telecord system enables an individual to dictate anything at any time without waiting for a secretary. By picking up the telephone he can think out loud. While every business can use the Dictaphone "Time-Master" with profit, many businesses can also use the Telecord system profitably, and we look for an appreciable increase in our business as a result of this very useful development

A HIGHLY INTEGRATED ORGANISATION

Ours is a highly integrated organisation, unique in its industry. It plans, designs, researches, engineers, manufactures, sells and services its own products directly. Therefore it has complete control over every phase of its business.

I am sometimes asked why we continue to sell direct to our customers. The answer is simple, and it is that this method of salesmanship enables us to give service to users of Dictaphone "Time-Master" dictating machines and Dictaphone salesmen make personal contact with our customers whereby we are able to maintain that standard of service which has made Dictaphone the greatest name in dictating machines.

CONTINUED EXPANSION

Our business is growing all the time, particularly on the continent of Europe. We now employ more people than ever before, and while we are never satisfied we are indeed proud of the results of our efforts.

In conclusion, I would like to offer my personal thanks and those of my colleagues on the Board of this company to all executives and employees of our organisation throughout Great Britain and on the continent of Europe.

The report and accounts were adopted and the retiring directors re-elected. The proceedings terminated with a hearty vote of thanks to the chairman, moved by Mr C. Harold Vernon, and seconded by Mr F. Graham Maw.

E. K. COLE LIMITED

SUBSTANTIALLY INCREASED TURNOVER

The annual general meeting of E. K. Cole Limited was held on July 19th at Westcliff-on-Sea. Mr E. K. Cole, chairman and managing director, presided and, in the course of his speech, said:

We have had another satisfactory year. The consolidated figures show that the trading profit amounts to £900,301. The net profit before deducting taxation is £773,733, an increase of £66,204. £445,000 has been transferred to taxation reserve, leaving a net profit of £328,733.

We substantially increased our turnover during the year.

Radio Division: The trading conditions of the industry over the past year on the whole remained at a satisfactory level and the division was able to take full advantage of this position. We were ready at an early stage with newly designed receivers for the reception of programmes from the first commercial television stations and others that may be initiated in the foreseeable future. Our new television, radio and car radio models were well received by our dealers and the public and upheld the company's reputation for quality products. Sales of radio receivers were maintained in volume.

The efforts of our engineering, production, sales, and publicity departments resulted in a new record in turnover for the division, although our attempt to keep the prices of our products to the public within reasonable levels, combined with increases in wages, salaries and other expenses has resulted in somewhat lower profit margins.

The long-term outlook for the radio industry is good, but the current year's prospects at this stage are rather difficult to forecast. The restrictions imposed by the Chancellor of the Exchequer through his financial measures have affected the sales of radio and television receivers throughout the industry. Nevertheless there has been an encouraging improvement in trading during the past few weeks and the directors consider that the company's high reputation will attract sufficient turnover in the domestic television and radio receiver markets to ensure that the current year will show a satisfactory return.

Electronics Division: Reviewing the activities of your subsidiary company—Ekco Electronics Limited—further progress has been made in the development and sale of electronic equipment; over two-thirds of the turnover being exported.

Your company has always played a leading role in airborne radar and the sale of military and civil equipment over the past year has been satisfactory.

Plastics Division: The division increased its turnover to a new high record and although the margins of profit were lower an overall satisfactory result was achieved.

Heating Division: The heating division increased its turnover by approximately one-third, and the profit position improved considerably.

The export turnover of the group was maintained, though trading conditions in the domestic radio field overseas remained difficult.

A major project undertaken during the year was the agreement with Associated Electrical Industries, Limited, to form the jointly owned company in Australia named Ediswan-Ekco (Aust.) Pty., Limited, with an authorised capital of £A1 million. This should be of substantial value to your company.

The report was adopted.

LAPORTE INDUSTRIES LIMITED

BENEFITS OF CAPITAL EXPENDITURE PROGRAMME

The forty-ninth annual general meeting of Laporte Industries Limited was held on July 12th in London, Mr L. P. O'Brien (chairman and managing director) presiding.

The following is an extract from his circulated statement: The Group surplus reached a new peak, and after adding interest from investments and deducting debenture interest, depreciation and audit fees, was £1,687,655, being 12.19 per cent higher than for the previous twelve months. However, necessary provision for future taxation is much greater on this occasion, with the result that we are left with £935,511 net profit, compared with £923,738 last year. In addition, during the year there was a capital gain of £58,066 arising from the sale of investments.

OPERATING COMPANIES

Laporte Chemicals Limited.—The development programme as planned is being steadily pursued. Half the Group income was derived from this subsidiary. Modifications to the older electrolytic hydrogen peroxide plant at Luton have been completed and resulted in increase of output. Additional production of hydrogen peroxide from new plant at Warrington working by the electrolytic process became available in the last quarter of the financial year. The total production of hydrogen peroxide and peroxy compounds was readily taken up by customers.

Further production from electrolytic plant should become available by August next and, according to present indications, LCL expect to be able to dispose of all the hydrogen peroxide they can make this year.

Last year, I reported that the Company would proceed forthwith to erect a large scale plant to manufacture hydrogen peroxide by an autoxidation process. It is now settling the details of design and methods, and it is expected that the new plant will be in production by the beginning of 1958. Arrangements have been made for sale of a large part of the prospective new production.

It may interest members to note that whereas LCL present selling price of hydrogen peroxide is only 47 per cent above that of 1939, wage rates paid are 200 per cent higher and we all know how much more costly are electricity (the principal cost item), fuel, transport and the other items that make up a delivered to buyers' works selling price.

This has been made possible by technical improvements in the manufacturing processes and the greatly increased scale of output notwithstanding progressive increases in the capital costs of additional plant and buildings.

The sales of barium carbonate, barium oxide and barium hydrate have been increased.

The trading prospect for the current financial year is considered satisfactory for all departments.

Laporte Titanium Limited.—LTL made the second largest contribution to Group income and as the demand for titanium oxide, both from the UK and export markets, is still unsatisfied, the Company has entered into capital commitments for plant for a third stage of development.

The present indications are that total output for the current year will be readily taken up by LTL customers.

Laporte Acids Limited.—This Company, with works at Hunslet, Castleford, Cleckheaton and Monk Bretton (Barnsley), had a successful trading year. Turnover was within close limits of the previous year, despite the temporary closing of some plants for major renewals—deferred by reason of heavy demands for sulphuric acid in recent years.

At the present time, LAL has a good customer in its fellow subsidiary, Laporte Titanium Limited at Stallingborough, and that state of affairs should continue throughout the current trading period.

The Fullers's Earth Union Limited.—On the whole, it was a not unsatisfactory trading year, but suffers by comparison with the results achieved in the previous year.

Customers' usage of activated fullers's earth diminished last year, and present indications are that during the current period demands for supplies will not equal forward estimates of requirements given to the Company a few years ago when additional plant was installed.

The Company has decided to undertake additional capital work, with the object of reducing the cost of production of activated earth, by the adoption of improved methods already established by recent research. Sales of Fulbond earth to foundries have been maintained.

After reviewing the Overseas interests and also the Group's accounts, the statement continued:

GENERAL REMARKS

When we raised new capital in November last, we thought that our available cash resources might be exhausted next autumn, but it now seems probable that the Company will not need to raise additional capital during 1956, as we have not been able to spend as quickly on capital account as we hoped.

During the previous two financial years, we have spent on capital account—

	£
1953/54	986,151
1954/55	1,166,373

We are now obtaining benefit from the capital expenditure in these years and may before the present financial year closes get some benefit from some of the expenditure in the year ended March, 1956—from which it may be noted that we have the reasonable expectation of increased earnings during this year provided the general level of national prosperity is maintained.

As the Group has not yet made inroads on the about £2 million raised last autumn, any benefit calculated to be derived from the expenditure of this new money cannot accrue during the current year.

To summarise, we expect increased earnings from Laporte Chemicals Limited and Laporte Titanium Limited, maintenance of earnings by Laporte Acids Limited and The Fullers's Earth Union Limited, and a temporary decline in earnings by Laporte Chemicals (Australia) Pty. Limited.

The report and accounts were adopted and the total distribution of 16 per cent for the year was approved.

WALSALL CONDUITS

OUTPUT AND SALES AGAIN A RECORD

MR ALBERT E. READ ON THE EXPANDING DEMAND

The twentieth annual general meeting of Walsall Conduits Limited was held on July 16th, in Birmingham, Mr Albert E. Read (chairman) presiding. The following are extracts from his circulated statement:

Output and sales have again reached record figures, and you may be interested to know that the Company's products have been exported to sixty-two different countries.

The Group Trading Profit, before providing for taxation, was £537,454, compared with £449,344 last year. After taxation, the final Net Profit was £255,649, as against £215,241 for the previous year.

Our Subsidiary Company, A. G. Hackney and Company, Limited, made a Trading Profit of £34,633 and, after full provision for taxation, there was a surplus of £18,886, compared with £20,902 for 1954.

The liquid position of the Group continues to improve. The excess of current assets over current liabilities at December 31, 1955, amounted to £1,311,233, an increase of £177,759 on the figures of a year ago.

FULL CAPACITY WORKING

During the year we were working at full capacity, within the limits of available labour, and this also applies to the first five months of the present year.

Reorganisation is at present being carried out in our malleable and grey iron foundry, which provides the most important basic supplies of material for our engineering shops. Not only will this result in greater output, but also cleaner and healthier working conditions for our employees.

I am pleased to mention that at the recent Electrical Engineers' Exhibition in London one of our products, namely, a neon plug top, received the highest award in the domestic appliance section. It is an inexpensive safety device which gives visible warning when any electrical appliance (domestic or otherwise) is in use.

The demand for the Company's products continues to expand, both at home and abroad, and we look forward to the future with confidence.

DIRECTORATE

In consequence of continued ill health, Mr A. E. Millard resigned his office as Managing Director as from October 31st last. I am pleased to say that he will retain his seat on the board and will be available in a consultative capacity. Mr L. H. Butler has been appointed Managing Director, and I am confident he will prove himself a worthy successor.

In conclusion, I wish to thank my co-directors, all the managers, staff and employees, together with our many overseas representatives, for their valuable help and services throughout the past year.

The report was adopted.

AMALGAMATED METAL CORPORATION

INCREASE IN DIVIDEND

MR WALTER GARDNER'S REVIEW

The twenty-seventh annual general meeting of Amalgamated Metal Corporation Limited will be held on August 9th at Princes House, 93 Gresham Street, London, E.C.2.

The following is an extract from the statement by the Chairman, Mr Walter Gardner, which has been circulated with the report and accounts for the year ended December 31, 1955:

The profit for 1955 before providing for United Kingdom taxation, as shown in the Consolidated Profit and Loss Account, is £1,466,535, compared with £923,347 for 1954. 1955 was a very favourable year, and the additional profits resulted both from increased trading in metals and other commodities, as well as from the sale by a subsidiary finance company of one of its own subsidiaries.

The realised profit on this sale included £89,448 net credit balance on profit and loss account of the subsidiary at date of sale. That amount, out of the net profit after taxation of £718,983, should therefore be regarded as relating to earlier years.

Dividends will absorb £286,108, and this figure includes a proposed dividend on the Ordinary shares of 10 per cent, an increase of 1 per cent on the previous year.

EXCESS OF RESERVES OVER GOODWILL

Reserves and Undistributed Profits amount to £2,568,837, the comparable figure at December 31, 1954, being £2,188,164. On the other side of the Balance Sheet there is a Group Goodwill figure of £1,439,348, mainly representing the premiums paid for the shares in The British Metal Corporation Limited and Henry Gardner & Company Limited in 1930.

When the first Consolidated Accounts were prepared at March 31, 1947, in accordance with the requirements of the Companies Act of that year, the Group Goodwill exceeded the Corporation's reserves by £640,814. At December 31, 1955, such reserves exceeded goodwill by £1,129,489, an improvement of £1,770,303 in this position since 1947.

Henry Gardner & Company have disposed of their interest in H. J. Enthoven & Sons.

The year 1955 duly fulfilled early expectations of a record high level of world industrial activity.

RISE IN METAL PRICES

World demand for several industrial raw materials rose to fresh high levels. More copper, lead and zinc were used than in any previous peacetime year and this brought about sharp rises in the metal prices. Cash copper on the London Metal Exchange rose from £295 a ton at the beginning of 1955 to £404 10s. on December 15th and finished the year at £400 a ton.

Strikes at producing plants were even more than in 1954 a big factor in forcing up the price. In 1955 they caused the loss of at least 130,000 tons of output. The great need of the copper industry now, and for some time past, is for higher output and it is to be hoped that strike losses will prove less burdensome this year. Stockpiling of copper was not a big market factor in 1955.

Spot lead rose from £106 a ton at the beginning to £120 at the end of the year and spot zinc from £84 to £101 a ton.

Cash tin rose from £695 10s. to £832 a ton during the year. The American Government contracted to buy up to 23,000 tons in the twelve months to March/April, 1956. This proved to be rather more than the surplus of world output over consumption, particularly as the rate of consumption grew in the last half of 1955. The future course of the market, as so often with tin, was clouded by political uncertainties, especially whether the American Government would buy any more tin in 1956 and whether the International Tin Agreement would come into effective being.

RUBBER, NATURAL AND SYNTHETIC

The average price for spot rubber in London during 1955 was 33 3/16d. as compared with 20½d. during 1954. The highest price was reached during September—43¾d.—as compared with the low of 24½d. during March.

World consumption of natural and synthetic rubber combined reached an all time high level of 2,885,000 tons, compared with 1954—2,505,000 tons. Of this, natural accounted for — 1,830,000 tons and synthetic — 1,055,000 tons.

A feature of great interest was the sale of Government synthetic plants to the USA to private enterprise. This was completed about the middle of the year, and from now on the US Government is no longer concerned with the production of synthetic rubber. It is too early yet to estimate with accuracy the increase in production of synthetic which will take place over the next few years owing to the uncertainty regarding the production of Butadiene. Henry Gardner & Company have been appointed distributors for The Firestone Tire & Rubber Company's synthetic rubbers in the UK.

The prospects for 1956 do not appear quite so favourable for natural rubber as 1955; but apart from temporary fluctuations in demand, the long-term outlook for natural rubber at reasonably competitive prices with synthetic remains good.

OVERSEAS SUBSIDIARIES

Shareholders may be interested in the following remarks about the activities of our subsidiaries overseas:

Africa.—Our business, particularly in asbestos, continues to expand, although both in the Union and in Central Africa the chrome business continues to be hampered by the shortage of railway trucks and congestion at the ports of Beira and Lourenco Marques.

Australia.—Government restriction of imports has made the year a difficult one, although we are well satisfied with our progress in Western Australia.

Canada.—As is well known, there is intense activity in the mining and exploration of non-ferrous metals.

India.—The consumption of non-ferrous metals is increasing and this rate of increase, particularly as regards copper and zinc, is confidently expected to rise as a result of the second five-year plan recently announced.

Malaya.—Business in Malaya has continued at a high rate, although the fall in the price of rubber towards the end of the year naturally tended to slow up activity. Moreover the uncertainties as to the future, which might be expected as a result of the demands for increasing independence both by Singapore and the Federation, have not bred confidence.

Pakistan.—Trading conditions continue to be difficult and imports remain strictly controlled. Substantial British and other investments have, however, been made in the past year in industrial enterprises, and large sums have been loaned by the United States and other countries.

APPOINTMENTS

WYE COLLEGE

(UNIVERSITY OF LONDON)

The Governing Body of Wye College invites applications for a post of Senior Agricultural Economist in the Department of Agricultural Economics. Applicants must be graduates, preferably with qualifications in Economics and/or Agriculture. Salary scale, £1,040 x £35—£1,220, with superannuation under the F.S.S.U.

Further particulars may be obtained from the Registrar, Wye College, Ashford, Kent, to whom applications should be forwarded by July 28, 1956.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

(UNIVERSITY OF LONDON)

Applications are invited for appointment in October, 1956, to an Assistant Lectureship in Economics. Salary scale £600 x £50—£700 a year, with superannuation benefits and family allowances. In assessing the starting salary due consideration will be given to age and experience. Candidates are invited to indicate their special interests in the field of economics.

Applications, with the names of three referees, should be received not later than August 30, 1956, by the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2, from whom further particulars may be obtained.

BRITISH OVERSEAS AIRWAYS CORPORATION requires an ASSISTANT OPERATIONAL RESEARCH OFFICER for Analysis of its engineering and flying activities at London Airport.

QUALIFICATIONS: Honours Degree or equivalent in scientific subjects, supported by some practical experience, preferably embracing research work. Desirable additional qualifications: knowledge of the transport or engineering industries and/or statistical experience.

Salary £865 to £1,035 per annum.

Attractive pension, sickness and holiday schemes; wide sports and social club activities.

Applications in writing, giving full details, to Assistant Staff Manager (Appointments).

PHILIPS ELECTRICAL LTD. invite applications from young men under 35 years of age with a flair for statistics and their interpretation. A degree in mathematics or statistics or economics would be an advantage. The successful candidate would conduct statistical research into a wide range of manufactured articles in the radio and light electrical engineering industries. He should have an interest in the commercial side of the business and be able to work on his own initiative, accepting responsibility for results. The post is pensionable and carries a salary commensurate with age and experience. Replies should be addressed to Personnel Officer, Century House, Shaftesbury Avenue, London, W.C.2, quoting reference No. 842.

EXPERIENCED ANALYST required for the Investment department of City finance house.—Write, stating age and giving details of experience, to Box JL/67, c/o 95 Bishopsgate, E.C.2.

UNIVERSITY COLLEGE OF THE GOLD COAST

Applications are invited for Lectureship in Agricultural Organisation and Economy. Post-graduate research experience in Agricultural Economics essential. Salary scale £950 x £50—£1,000 p.a. Family allowance, £190 p.a. per child (maximum £500 p.a.). Outfit allowance, F.S.S.U. Passages for appointee, wife and maximum of 5 children, on appointment, normal termination and leave. Part-furnished accommodation at rent not exceeding 7.5 per cent of salary.

Detailed applications (10 copies) naming three referees by August 6, 1956, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

COUNTY COUNCIL OF ESSEX

COUNTY PLANNING DEPARTMENT

Planning Assistant A.P.T.D. II (£595-£675)

Applications invited for above superannuable post at Colchester. The successful applicant will be required to undertake duties in connection with the written, statistical and analytical work necessary in the formulation and review of development plans, and candidates should have had experience in carrying out these duties. Consideration will also be given to University Graduates with no specific experience in these duties.

Application forms from County Planning Adviser, Broomfield Place, Broomfield, Chelmsford, returnable by July 28, 1956. Canvassing disqualifies.

APPOINTMENTS

RHODES UNIVERSITY

GRAHAMSTOWN, SOUTH AFRICA

Applications are invited for the posts of:

1. SENIOR LECTURER IN PHARMACY.
2. LECTURER OR SENIOR LECTURER IN NATIVE *and/or PUBLIC* ADMINISTRATION.
3. LECTURER IN ENGLISH.
4. LECTURER OR JUNIOR LECTURER IN SOCIOLOGY

from January, 1957.

Salary scales:

Senior Lecturer: £1,050 x £50—£1,400 p.a.
Lecturer: £ 800 x £50—£1,050 p.a.
Junior Lecturer: £ 550 x £50—£ 750 p.a.

In the case of married persons only, a variable cost-of-living allowance, at present £234 p.a., is payable in addition. Previous experience and academic qualifications may be taken into account in fixing the commencing salary.

Full particulars and application forms may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications in South Africa and London, is *August* 31, 1956.

THE ASSOCIATION OF BRITISH CHEMICAL MANUFACTURERS

requires a successor to the present Director, who has reached retirement age.

The position is one of consequence in a progressive industry of considerable national importance, and would be attractive to a man *of good personality*, with some knowledge and experience in the chemical industry. An academic qualification in chemistry or chemical engineering would be an advantage, but not essential.

The Director is required to organise and generally to direct the activities of the Association. An important part of the Director's work is the maintenance of close contacts with member firms throughout the country, with representatives of other industries and with Government departments.

Applicants should be about 50 years of age. Salary will be of the order of £4,000 per annum; actual salary will depend on the age and experience of the successful applicant. A pension scheme is available.

Applications, with full particulars of experience and references, should be addressed in writing to The Chairman of the Association of British Chemical Manufacturers, 16 Graham Street, London, N.1, not later than August 13, 1956.

BRITISH IRON AND STEEL FEDERATION

MANAGEMENT TRAINING

The British Iron and Steel Federation invites applications for four appointments to the administrative staff engaged in preparing and conducting *residential* courses for managers in the Iron and Steel Industry. The work would involve the preparation of material for study, in consultation with persons in the Industry, and participation in the conduct and organisation of the courses.

It is intended that the administrative staff shall collectively be representative of the main specialised branches of the Industry and experience of engineering, metallurgy, accountancy or management training and education will be of value.

The initial salary paid in each case will depend upon the extent to which the successful candidates' experience and capabilities can contribute to the work involved. It is envisaged that it will not be less than £1,400 and in appropriate cases may appreciably exceed this figure.

Application forms may be obtained from the British Iron and Steel Federation, Hoyle Street, Sheffield, 3. Testimonials and references are not required at this stage.

WORKS DIRECTOR

ENFIELD CABLES LTD. ARE SEEKING A WORKS DIRECTOR, WITH SEAT ON BOARD, TO TAKE CHARGE OF THE COMPANY'S FACTORIES WHICH ARE ENGAGED IN THE MANUFACTURE OF ELECTRIC WIRES AND CABLES. THIS IS A TOP-LEVEL POSITION AND WILL CARRY A COMMENSURATE SALARY. WRITE, GIVING FULL DETAILS, TO J. E. SUNDERLAND, DIRECTOR AND GENERAL MANAGER, ENFIELD CABLES LTD., BRIMSDOWN, ENFIELD, MIDDLESEX.

RESEARCH FELLOWSHIP AT THE

ROAD RESEARCH LABORATORY

HARMONDSWORTH, MIDDLESEX

(Sponsored by the Rees Jeffreys Road Fund)

The Rees Jeffreys Road Fund *invite applications for a* fellowship, tenable at the Traffic and Safety Division of the Road Research Laboratory, Harmondsworth, Middlesex, for a period of two years. The Fellow would be required to work on the following project:

"*To study the economic benefits* to be obtained by road improvements; in particular to study the effect of road improvements on vehicle operating costs."

Candidates should hold a 1st or 2nd Class Honours degree or an approved qualification *in economics*, physics or *engineering*. The grant associated with the Fellowship would be about £2,000 over a two-year period (inclusive of subsistence, travelling, etc.) according to circumstances. The successful candidate might be required to *travel abroad*.

Closing date July 31st.

Applications should be made to:

The Director of Road Research,
Road Research Laboratory,
Harmondsworth, Middx.

COLLEGE OF TECHNOLOGY, BIRMINGHAM

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

Applications are invited for the new post of LECTURER in the *HUMAN RELATIONS* aspects of Industrial Administration.

Salary will be in accordance with the Burnham (Further Education) Scale for Lecturers—

Present Scale
(Men) £965 x £25—£1,065
(Women) £772 x £20— £852 (Plus equal pay increment)

Prospective Scale from October 1, 1956
(Men) £1,200 x £30—£1,350
(Women) £960 x £24—£1,080 (Plus equal pay increment)

Further particulars and forms of application may be obtained from the Registrar, College of Technology, Suffolk Street, Birmingham, 1, on receipt of stamped addressed foolscap envelope. Closing date—two weeks after the appearance of this advertisement.

K. R. PILLING,
Clerk to the Governing Body.

ACCOUNTANT REQUIRED

WESTERN REGION PRODUCTION DEVELOPMENT BOARD,
IBADAN, NIGERIA

The Western Region Production Development Board has a vacancy in its accounting organisation for an ACCOUNTANT. Candidates should possess a recognised accountancy qualification and should have had several years' experience since qualifying including work on reorganisation, introduction of new accounting systems and budgetary control and, most essentially, some knowledge of costing and cost systems with the ability to design cost systems. Commencing salary excluding inducement allowance will be in the range £1,100-£1,590. The point of entry will depend on experience and qualifications.

2. Inducement allowance is £270-£300, depending upon the point of entry.

3. The terms of service include partly furnished accommodation at 8½ per cent of the basic salary (excluding inducement allowance); free medical service, outfit allowance of £60, free first-class passage for wife and also free first-class passages once each way per tour for children up to three in number not over the age of thirteen. Employees are required to contribute up to 10 per cent of their salary to a Provident Fund which is matched by equal contribution by the Board and which carries interest at 2½ per cent. Normal length of tour 18-24 months followed by home leave at full pay at the rate of five days per month of overseas service.

4. Applications in duplicate, together with details of age, experience and qualifications, and the names of three personal referees, should be sent to:

The London Representative,
Western Region Production Development Board,
18 Grosvenor Gardens,
London, S.W.1.

Closing date July 31, 1956.

BRIGGS MOTOR BODIES LIMITED

have vacancies for
(Young) Accountants or Economists
in the
FINANCIAL ANALYSIS and COST CONTROL DEPARTMENT

Applicants should have a proved interest in economic studies and cost control work. Salaries will be in line with qualifications and experience, and there are first-class prospects for men of real ability.—Write, giving details of age and career to date, to:—

SALARIED PERSONNEL DEPT.,
BRIGGS MOTOR BODIES LIMITED,
DAGENHAM, ESSEX.

COMMONWEALTH BANK OF AUSTRALIA

ECONOMIC RESEARCH ASSOCIATE

The Commonwealth Bank of Australia invites applications from persons of *professorial or near professorial* status, who have had some experience in advanced economic research, for a position of RESEARCH ASSOCIATE in the Economic *Department* at its Sydney, N.S.W., office.

Appointment would be for a term of two years at a salary of £3,000 p.a. (Australian currency) subject to renewal at the option of the Bank. The Bank would also take over contributions at present being paid to a superannuation or similar fund by a University or other employer or, alternatively, contribute towards a suitable endowment plan.

Appointment would be contingent on applicant's passing a medical examination and subscribing to a declaration of secrecy.

Bank would meet travelling expenses (for appointee and family) on appointment *and normal termination*.

Applications, which will be treated as confidential, should be made in writing and should give particulars of age, nationality, war service (if any), and academic qualifications, together with full details of research experience. They should be forwarded to reach the Staff Inspector, Commonwealth Bank of Australia, Box 2719, G.P.O., Sydney, N.S.W., not later than September 30, 1956.

RESEARCH MANAGER required by major American Company in U.K. to conduct market, product and consumer research relating to existing and new products. A substantial salary, and a very interesting present and future is offered to highly intelligent men, aged 30 to 50, of good education (economic science degree desirable) and successful research experience with medium to large size Company selling consumer goods. Other qualities necessary: energy; integrity; tact; planning and executive ability; and *ability* to get on well at all levels; leadership.—Reply to Box 471.

FOREIGN LIAISON AND EXPORT PUBLIC RELATIONS. Gentleman of considerable *business* and administrative experience (R.N. background) requires work for which his wide knowledge of Western Europe and excellent contacts, both public and business, would be an asset. He is used to *responsibility and possesses* initiative and tact. *Seasoned negotiator. Planning and* staff experience. Impeccable references. Fluent French also German and Italian.—Box 470.

WANTED by energetic Colonial Administrative Officer in early thirties, paid occupation for any part of *September/January* leave. *Some business experience*, knowledge law, economics, accounts, personnel.—Box 466.

NORANDA MINES LIMITED

DIVIDEND NOTICE

Notice is hereby given that an interim dividend of Fifty Cents (50c) per share, Canadian Funds, has been declared by the Directors of Noranda Mines Limited, payable September 14th to Shareholders of record August 17, 1956.

By Order of the Board,
C. H. WINDFELDER,
Secretary.

Toronto, Ontario.
July 17, 1956

THE ALEXANDRIA WATER COMPANY, LIMITED

ALEXANDRIA, EGYPT

PAYMENT OF DIVIDEND

NOTICE IS HEREBY GIVEN that on presentation of Coupon No. 129 a dividend of ten shillings per £5 share, less Egyptian Government and Alexandria Municipal taxes amounting to L.E. 5.9620 will be paid on and after July 9, 1956, in Alexandria, at the National Bank of Egypt, rue Toussoun, or in London, at the Midland Bank Limited, Overseas Branch, 122 Old Broad Street, E.C.2.

Net profits for the year ended December 31, 1955 £153,179 (last year £117,907)

At the same time, payment will also be made of the balance available for distribution of dividends which have been held in suspense, pending the reconstitution of the Company's accounts to conform to the terms of the new Contract with the Municipality of Alexandria. This amounts to 10/4.452717 per £5 share and will be paid after deduction of Egyptian Government and Alexandria Municipal taxes amounting to L.E. 2.72658.

BONUS SHARES

Shareholders who have not yet taken up their rights in the bonus issue are reminded that applications should be submitted to one of the above-mentioned Banks not later than March 8, 1957.

The new bonus shares, bearing Coupon No. 129 as the first coupon attached, participate in the above dividends.

ISSUE OF NEW COUPONS

Notice is also given that holders of share warrants to bearer of the following series:—

1	to	4,664
16,721	to	45,908
73,589	to	73,684
73,785	to	73,788
100,001	to	120,000

on which the last coupon attached is No. 129 should apply to the above Banks in London or Alexandria for the necessary forms for depositing these share warrants with the Bank for the attachment of new Coupon Sheets.

Dated, Alexandria, Egypt, June 27, 1956.

By Order of the Board,
ALEX. L. BENACHI,
Chairman and Administrateur-Délégué.

ASHANTI GOLDFIELDS CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN that the Board of Directors have today declared an Interim Dividend (No. 119) on the Issued Capital of the Corporation at the rate of 2s. per Unit of Stock, less Income Tax at 8s. 6d. in the £. This Dividend, which is in respect of the year ending September 30, 1956, to be payable on and after September 14, 1956, to all Stockholders on the Registers on July 23, 1956.

THE TRANSFER BOOKS WILL BE CLOSED from July 24, 1956, to July 31, 1956, both dates inclusive, for the preparation of Dividend Lists.

By Order of the Board,
E. W. MORGAN, Secretary.

Registered Address:
10 Old Jewry, London, E.C.2.
July 17, 1956.

THE ROYAL BANK OF CANADA

DIVIDEND NO. 276

NOTICE IS HEREBY GIVEN that a DIVIDEND of 45 cents per share upon the paid-up capital stock of this Bank has been declared for the current quarter and will be PAYABLE at the Bank and its branches and after September 1, 1956, to shareholders of record at the close of business on July 31, 1956.

By Order of the Board,
K. M. SEDGEWICK,
General Manager.

July 17, 1956.

SUCCESSFUL TUITION FOR THE B.SC.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for and Univ. B.Sc(Econ.) (three *if Intermediate*). *Moderate* fees: instalments. Over 1,000 Wolsey Hall students have secured this valuable degree since 1925.—Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

A NEW LOOK and a brighter look—*The Banker* this month is not to be missed. The typography and layout have been most generously remodelled to make every concession to attraction of display and ease of reading. The result is remarkable.

THE BANKER provides a regular monthly commentary on and analysis of the significant events in the economic and financial fields, both at home and abroad. Sterling, the American economy, monetary policy. . . It publishes, too, and in language unintending to the general reader, contributed articles of weight and substance, sometimes specialised, but nearly always topical. Now, *The Banker* unitedly offers this service in a luxury package. Price 2s. 6d. monthly from bookstalls, or 72 Coleman Street, London, E.C.2.

DO IT YOURSELF—a new development: get-someone-else-to-do-it-for-you. Meanwhile, sit back, in a comfortable chair. Make sure there's a bottle of Duff Gordon's EL CID Sherry within easy reach.

EXPERT POSTAL TUITION

for Examinations—University, Law, Accountancy, Costing, *Secretarial, Civil Service, Management, Export*, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to *The Secretary (19/2)*,

METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4.

Coventry Climax Electrics

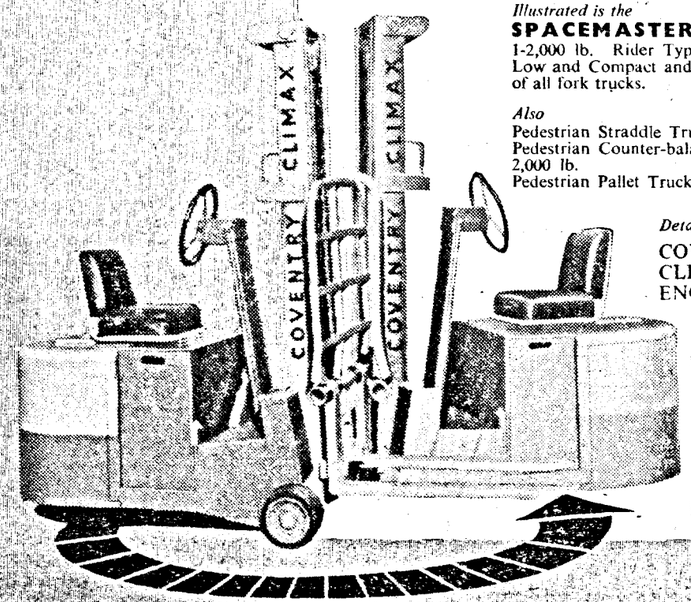
Backed by nearly a quarter of a century of electric truck experience!

The LEWIS-SHEPARD Electric Powered Handling Equipment renowned for its advanced design is now being built in England by Coventry Climax, offering all the advantages of these supreme electric vehicles for use where electric powered handling is desirable.

On the American Continent LEWIS-SHEPARD Electric Trucks are the standard against which all electric trucks are measured, a reputation achieved in manufacturing and operating experience extending for nearly a quarter of a century. This valuable experience supplements the engineering ability of the COVENTRY CLIMAX Fork Truck Organisation in the series of electric powered handling equipment now being produced by Coventry Climax.

Illustrated is the
SPACEMASTER Model "J"
1-2,000 lb. Rider Type Fork Lift Truck. Low and Compact and the shortest by far of all fork trucks.

Also
Pedestrian Straddle Trucks up to 4,000 lb.
Pedestrian Counter-balanced Trucks up to 2,000 lb.
Pedestrian Pallet Trucks 4,000 to 6,000 lb.



Details from
COVENTRY CLIMAX ENGINES LTD.
(Dept. E.) Coventry.

Wine exported in CORRUGATED boxes reduces cost, breakage, space

Shipping bottled Italian wine is a problem not greatly different from that of shipping many another fragile commodity: the contents must be protected, yet the cost of the package kept low. Today, many enterprising bottlers have found the ideal solution in corrugated boxes.

Lighter in weight than most wooden crates, corrugated boxes save 5 to 8 lb. each. They cost less to buy, less to pack, less to ship—savings which add materially to the profits in wine.

Corrugated boxes protect the contents better than wooden ones, experience shows, because they are so resilient under impact. Yet they require less space in storage, aboard ship, and at the vendor's shop.

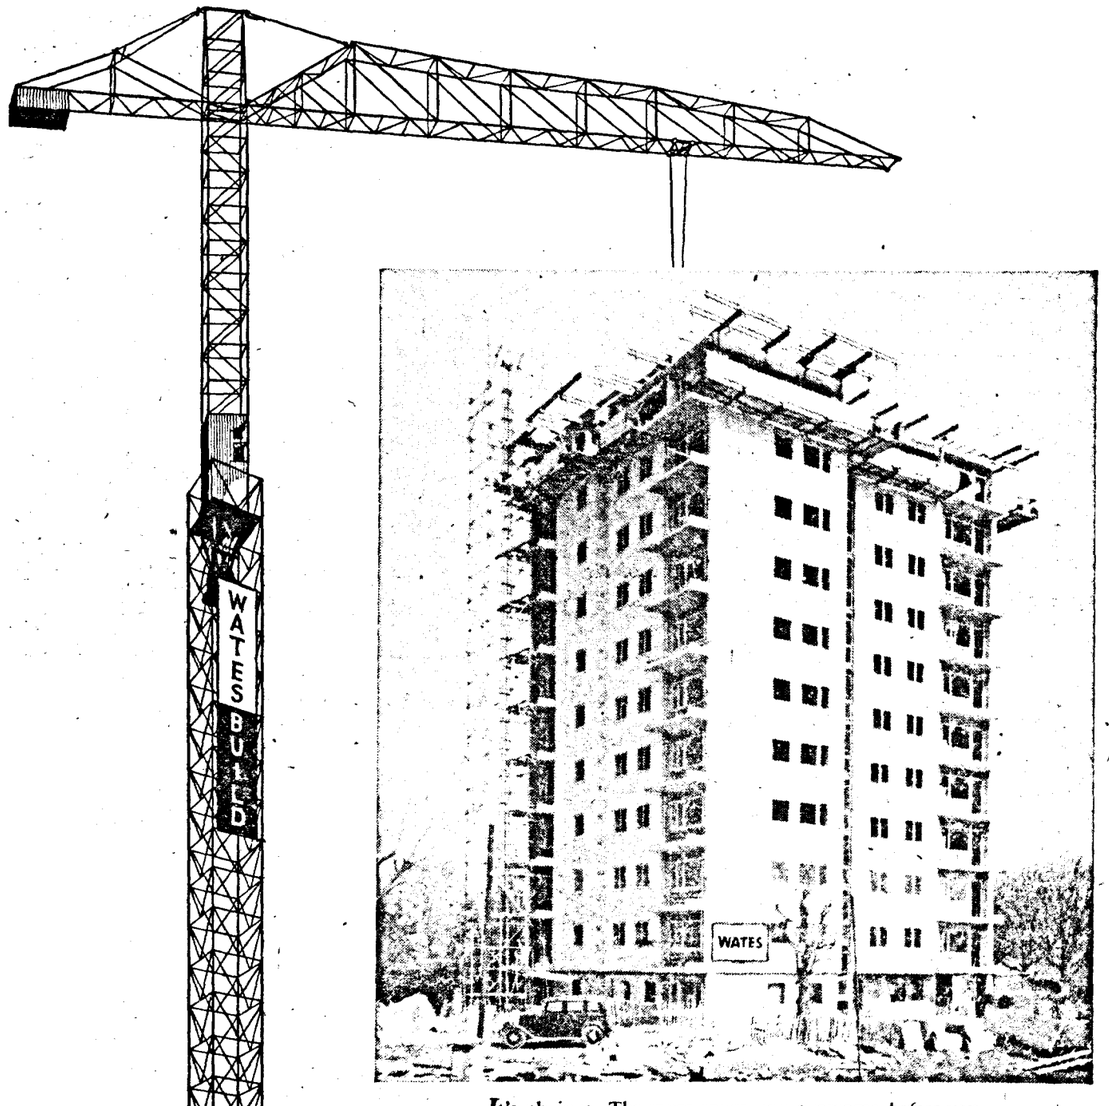
Corrugated has the additional advantage of enabling easy printing on the sides for better brand identification and easy checking of inventory.

Today, corrugated boxes are being used to package all sorts of products—for safety, economy and appearance. Can you use corrugated? Have a talk with your nearby boxmaker and see.

Langston doesn't sell corrugated, only the machines that make it. Since 1902, these machines have led the field in efficiency and dependability. *Samuel M. Langston Co., Camden 4, N.J., U.S.A.*

LANGSTON Corrugated Container Machinery

MANUFACTURED IN ENGLAND BY MASSON SCOTT & CO., LTD.



It's obvious. The more snags you overcome *before* you start building — the fewer you'll have to contend with later. We have carried this principle to its logical conclusion in our system of pre-planning. We do this in close and constant collaboration with architect and owner — and the building goes up on time.

Ideas become concrete when

Give him Air

Every ton of coal mined releases up to 5,000 cubic feet of dangerous fire-damp. Safety relies on dilution of the gas and millions of cubic feet of fresh air are drawn into Britain's mines every minute of every day. Thermotank design, build and install the great fans which perform this task.

The company has more experience in axial flow fans than any other organisation in Britain, and has carried out important mine ventilation installations, not only for the NCB but for all types of mines in every continent. This superiority is based on continuous research and fifty years' experience of air conditioning problems ashore and afloat.

that when you want staff, junior or senior, skilled or unskilled, you should get in touch with the Officers' Association. This organisation is an Employment Bureau, and it has on its books much promising material. If the Officers' Association recommends a man, you may be sure that he is a candidate of complete integrity, potentially suited for that particular job, and well worth interviewing.

Next time you have any vacancy whatsoever, why not first try the Officers' Association? Ring them at ABBey 2556 or write to The Officers' Association, Windsor House, Victoria Street, S.W.1.

It's a long road that knows no Leyland

There may be some remote highway unknown to Leyland transport, but judging from the evidence of our postbag, we doubt it.

Rarely a day passes without some tribute to Leyland ubiquity . . . high performance and low running costs.

For example, we hear from the Argentine that a Leyland diesel Comet hauling a 10-ton semi-trailer recently covered 450,000 miles over the Buenos Aires-Mar del Plata route before undergoing its first major overhaul — with an average fuel consumption of 17-20 m.p.g. That's efficiency.

From Australia: a Leyland Hippo — 17-18 tons laden weight — operating a 3,500 miles shuttle service, was stripped down after completing 197,000 miles of the toughest going. Result — the amount of work found necessary did not warrant the cost of taking down the engine. That's craftsmanship.

Add the Leyland's reputation for working full out for upwards of 15 years and it is obvious that when economy is sought, all roads, wherever they may be, *must* lead to Leyland.

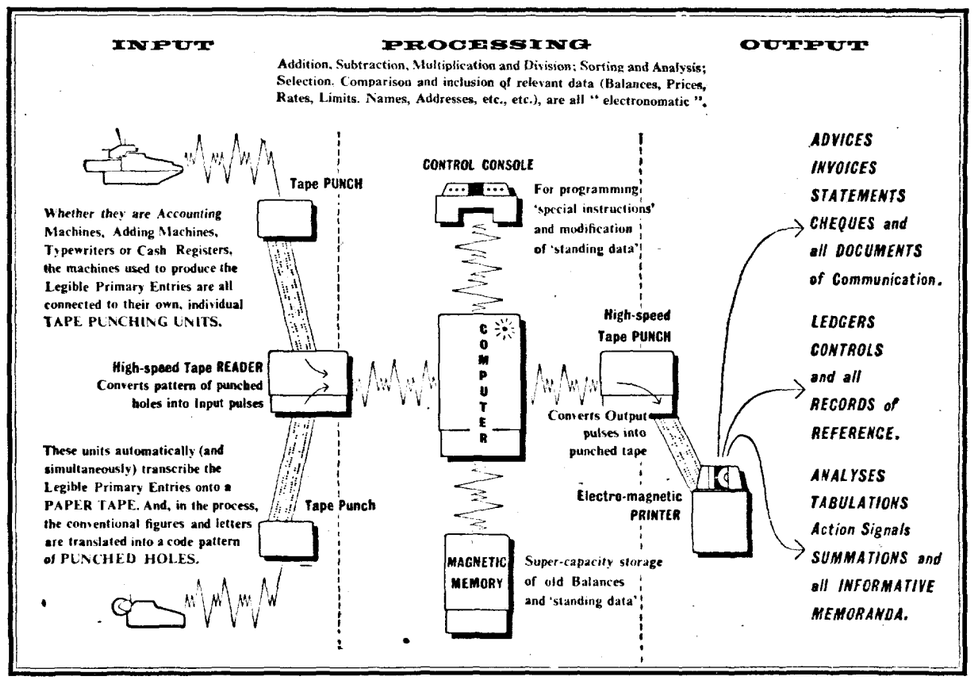
YOU NEED ROLSTORE

A FULLY VERSATILE, HIGH CAPACITY, ELECTRONIC SYSTEM OF

FINANCIAL, QUANTITATIVE & STATISTICAL ACCOUNTING

FOR MANAGEMENT CONTROL



The above diagram illustrates the general principles of an electronic business data processing system in which National accounting and adding machines are shown as the means of originating data for input into the Elliott 405 data processing computer. This system produces, as an automatic by-product of the INPUT operation, conventional, normal-language records for local day-to-day action at all points of original entry e.g. Departments, Branches, Depots, Sub-Offices etc.

As recently announced in the editorial columns of "The Economist" and all leading business journals, an arrangement has recently been concluded by which the marketing and installation of Elliott computers for business data processing applications will now be undertaken by the Electronics Section of The National Cash Register Company Limited, 206-216 Marylebone Road, London, N.W.1.

The trade mark of The National Cash Register Company is identified throughout the world with business efficiency; be it in connection with cash control systems for retail stores or complex, comprehensive accounting plans for major corporations, banks, insurance companies and all branches of government.

Elliott Brothers, on the other hand, enjoy equal fame in their own sphere as makers of high precision instruments, specially designed equipment for plant process control, and—of now special significance to the business world—electronic data processing computers of a very advanced order.

Thus, the marketing arrangement recently concluded, harmonises the special knowledge and experience of two long-established concerns, each pre-eminent in its own field.

* *Elliott Bros. (London) Limited, remain responsible for the installation of business data processing equipment which they have already sold and will themselves, continue to market analogue and digital computers for scientific applications and specially designed automation equipment for plant process control and similar purposes.*

National

All enquiries relating to the ELLIOTT 405 Electronic Computer applied to business data processing, should be addressed to: ELECTRONICS SECTION,

The ACCOUNTING and ADDING MACHINE DIVISION of THE NATIONAL CASH REGISTER COMPANY LTD,

206-216 Marylebone Road, London, N.W.1. PADdington 7070.

Deckchair Disarmament

THE holiday season is upon us, and when the Commons debated foreign affairs this week most Members seemed as intent on breaking-up day as schoolboys, their mood unshadowed by any fear that the unity of the free world might be breaking up too. Not until the second day of the debate did a front bench speaker—Mr Gaitskell—do justice to what he called "the wildest confusion among the Nato powers as to what defence policy really is." He referred bluntly to both British and American talk in high quarters about slashing defence cuts, and to the west German government's alarmed reaction; and he recalled the very different attitudes adopted by the various western governments when Russia announced cuts in its armed manpower. "What we have, frankly," he said, "is different countries each saying aloud what they expect to do."

That is all too true; and the depressing thing about the debate was that so few Members showed concern at the way national policies are now setting off in different directions as briskly and blithely as holiday-makers, or even awareness that this is happening. Fascinated by the impact of "destalinisation" on the communist world, they seemed blind to the fact that the rest of the world, too, is undergoing "destalinisation." In Stalin's day the great issues of world affairs stood out in sombre black and white; but today, shades and nuances are fashionable. (One might well borrow from the world of *haute couture* that flashing phrase, "a rainbow of beige.")

The Prime Minister ended his speech by recalling the atmosphere in early 1954, when the Berlin conference ran into deadlock. "All was rigid then," he said, "much seems flexible now." One can share his preference for diplomatic elbow room, and agree, too, when he argues that "Soviet competition" is preferable to the threat of world war; but it is difficult to share his apparent assumption that it is only the communist parties of the world that are now in a state of confusion. At the end of the debate Mr Younger frankly and fairly conceded, in partial exculpation of the Government's poor showing, that among democratic allies it must henceforth be much harder to maintain effective joint policies "than it was when we all felt ourselves to be facing a common danger." A partnership of sovereign democracies is admittedly by nature a sluggish beast to move, let alone to lead. But that does not absolve the British Government—or any of its partners—from making the attempt, if it knows in which direction it wants to herd the beast. The question left over from the debate is: does it know?

Two elements are involved here: analysis of the new world situation, and creation of a policy suited to it. Analysis, and sound analysis at that, was not lacking in the Commons this week. Sir Anthony Eden shrewdly defined the position and attitude of the masters of the communist world. Understanding that general war means general ruin, they nevertheless still proclaim the goal of imposing their totalitarian system throughout the world. Aware of pressing demands

from their own subjects—demands not only for "a more normal life" but also for free contact with the outside world—they are trying to see that this ferment is "carefully controlled"; and "it would be an exaggeration to say that the regime is being liberalised." And from the Opposition benches Mr Mayhew emphasised that what has not changed is that "the communist countries are still working as an integrated block struggling for power with the West." The tempo of their campaign has been modified. So have the tactics. But the underlying dogma of "struggle" still shapes the world situation and makes nonsense of all talk of "general relaxation."

★

Relaxation, however, can be scarcely less dangerous for the free world than immobility. Indeed, the saddest aspect of the present controversy is the extent to which it takes the shape of a tussle between two equally futile schools of thought, which might be identified as the "old guard" and the new "lower-your-guard." What we confront is neither the clumsy obviousness of Stalinist expansionism, which, whether in Europe or in Korea, called into existence the very strength and solidarity that countered it most effectively, nor a reformed and guileless communism with which free societies might co-exist without fear.

Last year, when the cartoonists had such a good time depicting the climb to the "summit," they were fond of symbolising the climbers' varying approaches by their clothes. Some sweated upwards in protective furs, while others, more optimistic, shivered their way to the top in shorts. What the democracies now need is neither of these garbs, but something like the latest type of mountaineer's nylon overalls, something which, while guarding against an international climate as fickle as an English July, permits the utmost flexibility—and this implies flexed muscles as against flabby ones. The new challenge cannot be met either by resting on our defences or by throwing them away. The free nations need to review their systems of defence, of mutual support and of co-operation not merely to see that these are up to date in the purely military sense—they must be—but to see that they are suitable instruments of the new and positive policies that have now to be shaped. It is a common misconception (which even the Prime Minister occasionally seems to share) that the communist challenge is now primarily economic. It is surely clear that the contest is essentially a political one, to which both economic and military efforts must serve as handmaidens; and it is, in Mr Mayhew's useful phrase, "unilateral political disarmament" that must now be avoided at all costs.

Disunity equals disarmament in the political field as much as in the military. The first essential for policy in an era of keen political competition is close consultation and alignment between the free nations, and the avoidance of precisely the kind of indiscretion and indifference to each other's problems that has marred the past few weeks. But unity is not just a matter of regular consultation. No amount of consultation will hold a free nation in line if it is not sustained by its friends against the pressures and the temptations which the communist block can bring to bear. Both in Germany and in the Far East the communist powers enjoy positions that enable them to blackmail other peoples, not by threatening war, but by dangling what those peoples dearly want before their eyes. And throughout the Asian and African world they exploit not only the modern belief that ancient poverty can be abolished overnight, but also the anger that western racialism has aroused.

The bare minimum for policy in the age of political "struggle" thus embraces not only consultation but also the firm sustaining of friendly nations, particularly those directly under the shadow of the communist monolith; the rooting out of racialism; and the demonstration that the economics of free societies can meet the ordinary man's needs as well as and better than communism can. Yet this is only the minimum. There must be a positive side to policy, too. This is a time for stepping up, not easing off, the campaign to reach people behind the iron curtain both with the message of freedom and with reassurances that, whatever they may have been taught to believe, the West means them no ill. To their masters, too, similar messages must be tirelessly addressed: warnings that they cannot hope to succeed in their aim of extinguishing freedom, together with assurances that the West will suit its actions to theirs and that evidence of genuine changes of policy will be met with an equally genuine increase of goodwill. The prescription should be to provide incentives for the communist rulers to mend their ways, while making it clear that the free world will not be gulled by superficial changes even if—as seems doubtful—their own subjects are.

★

It is surely along these lines that the attempt to reach an equation with the communist bloc must be made. The basis must be a sincere modification of expansionist ambitions and an adjustment of power that increases stability. Ideally, the final adjustment would take the shape of general disarmament under fully effective control. But if that is not to be had, the next best thing is a stable balance of forces that at least enables the free societies to develop in security. There are no short cuts along this road, nor are there any simple guidelines that can be fixed and then taken for granted. The free nations can no more afford to slump into armed stupor than into unarmed stupor. They are going to have to keep thinking through the deckchair days of many summers. And it is in the long perspective of this wearisome political contest, the forms of which will change many times in the years ahead, that they should consider the part that military defence must play as handmaiden of political strategy. To this the House of Commons ought to address itself next week.

Number Ten and Number Eleven

THE departure from the public service of Sir Edward Bridges, Permanent Secretary of the Treasury and Head of the Civil Service, in the autumn would be by itself a turning-point. It will leave a great gap. His silent and scarcely calculable contribution to the business of government, in peace and in war, is part of the history of our times. It is certainly no disparagement of his work that the moment of his retirement has been chosen for a major change in the distribution of the responsibilities, to the Prime Minister and to the Chancellor of the Exchequer, which he has sustained. The load has become too heavy for one man.

Comment on the changes announced a week ago in the higher direction of the Treasury has naturally been concentrated on the appointment of the present Ambassador in Washington, Sir Roger Makins, to be responsible, as Joint Permanent Secretary, for the administrative direction of financial and economic policy. This is a proper recognition of the broadened new responsibility which the Government has assumed in the past two decades; and intruder though he may seem from the Foreign Service, Sir Roger possesses qualifications in experience, natural ability and force of character, which fit him for the work. But to look only at the welcome and overdue focus which is being given by the new arrangements to the economic task is to miss more than half their significance. This moment has been chosen by the Prime Minister and Chancellor of the Exchequer to make a new and logical division of the highest Treasury functions. The Treasury is a two-headed monster—responsible, as it is, for the public service and machinery of government and for public finance—and from the autumn it will have two heads. Certainly not the least important result of the change is that the other Joint Permanent Secretary, Sir Norman Brook, stripped for the most part, though not entirely, of his departmental responsibilities to the Chancellor of the Exchequer, will be, in effect, a Permanent Secretary to the Prime Minister. As head of the Home Civil Service and still Secretary of the Cabinet, he moves, compared with his predecessor, not up or down but sideways—from No. 11 to No. 10.

★

It is always necessary not to read too much into changes of this kind. They are, inevitably, the product equally of the views of the Prime Minister of the day on government at large and of the particular persons available, at the moment of appointment, for high posts. The strengthening of the Prime Minister's office is a step in the right direction, and on general grounds of principle is much to be preferred to earlier precedents—to Lloyd George's parallel "departments" and private intelligence system or even to the unique performance of Sir Winston Churchill as the universal generalissimo, with his own personal counsellors.

In the changes the best use is probably being made of the men to hand. It may fairly be regretted that no individual in the too close corporation of the Treasury's own higher reaches was the obvious choice to perform the task which Sir Roger Makins has been brought in to do. But it is equally fair to say, looking at Sir Roger Makins's remarkable and assorted experience, that the chief risk in his appointment is by no means that he is likely to put international before national preoccupations. Indeed, it may be rather the reverse: that he may even prolong the disposition of the Treasury, with too little time and too little staff, to beg the larger questions of Britain's world role, above all in Europe, by over-defensive reference to the necessities of national housekeeping. But, however much he may still need to discover (and insist upon) the essential virtues of enterprise and initiative in this country's overseas dealings, and however much he may have to learn of the "mysteries" of domestic finance, it is hard to think of any man now in the public service better suited than Sir Roger is to supervise the country's financial and economic policy. And it is impossible to imagine a civil servant better equipped than Sir Norman Brook, from his vantage point as the trusted personal link between the First Lord of the Treasury and his Cabinet colleagues, to guide and shape the governmental machine.

★

One thing seems sure. The last word has not been spoken. Whatever the performance of the new incumbents, the Treasury, with the adoption of its modern economic responsibilities, as well as its established financial responsibilities for supply and the control of spending, has plainly burst its seams, and the new "vertical" division of authority does not complete the repairs. No doubt, if the new separation of function does not work, it could easily be undone when the new men are old enough to retire round about 1965. But it would be very surprising if a retreat were sounded by Sir Anthony Eden's successors. It would be far more logical to carry the process of separation further still. The Treasury monster has, in fact, not two heads but three at least. The sensible next step would be not to undo the division now devised between the public service and economic policy but rather to reflect in responsibility and organisation, from the ministerial level downwards, the separation in fact between economic policy and planning, on the one hand, and supply and the Budget, on the other.

Long strides have now been made to embed in the business of government what the Haldane Committee nearly forty years ago called "the duty

of investigation and thought preliminary to action," and to back it by "the organised acquisition of facts and information." This is Sir Roger Makins's sphere, and the chief features of this new world of governmental intelligence and prescience are the Treasury's admirable economic section under Sir Robert Hall and, in the Cabinet secretariat, the no less able Central Statistical Office. (The Chancellor is expected to make a statement next week on strengthening this armoury.) But there is still at the centre of public business, the old Treasury world with its outriders in the Boards of Inland Revenue and of Customs and Excise curiously detached from the main body. It is always unwise to forecast the future shape of government in any precise terms, but it would not be unreasonable if the next changes at the Treasury at last applied the principle of the separation (and consolidation) of function to the core of its oldest affairs.

Triangle at the Pyramids

I.—Order, Counter-Order, Disorder

THERE is more joy in heaven over a mistake never made than over a mistake corrected late in the day. The truth about the American and British offers to assist Egypt in financing the Aswan High Dam scheme is that they were entered into in December for reasons that were in part unsound. On balance the two governments are right now to cancel their offers while they still can; but their withdrawal does some damage to their position in the Middle East which need never have been done if their minds had been clear from the start. They cannot congratulate themselves on a brilliant stroke of policy.

Both the American and the British statements explaining the decision leave much unsaid. Reading the Washington statement of July 19th, an ordinary man would conclude that the main trouble was the Egyptian failure to reach agreement with the riparian states on the Nile south of Egypt—the Sudan, Ethiopia, and Uganda. It is true that there is about the High Dam scheme a somewhat airy assumption that the Nile waters are best stored in Egypt, or as close to Egypt as possible. True, too, the various interrelated matters on which Colonel Nasser still needs to reach agreement with the Sudan are difficult and complex. But he is nearer that agreement now than he was when the *aides-mémoire*, in which the conditions of western aid were set out, were drafted last winter. The *aides-mémoire* do not mention Ethiopia, and they mention Uganda only by way of a general British reservation of its rights. Nothing has deteriorated here; the deterioration has been on quite another front. Second place is given in the Washington statement to "Egyptian willingness and ability to concentrate its economic resources upon this vast reconstruction programme"; the ability, if not the willingness, is found to have become "more uncertain than it was at the time the offer was made."

Mr Selwyn Lloyd in the foreign affairs debate on Wednesday said that the scheme would require "the most rigorous control by Egypt in her internal economy," he pointed to the heavy Egyptian defence expenditure and to the Egyptian government's industrial expansion plans—"vehicle factories, dockyards, and the like"—as reasons for doubting whether the scheme is any longer feasible:

> We came to the conclusion that the Egyptian government would no longer be in a position to devote to the dam project the degree of priority necessary to secure its success.

Like the State Department, the Foreign Secretary added an assurance that the decision implies no loss of interest in the development of the waters of the Nile. This assurance may appear in Cairo, in the bitterness of the moment, as a polite platitude, but in fact it is sincerely meant and of great importance. Egypt is still the key to the Middle East; in the most direct possible way, the key to economic growth in Egypt, as in all the Nile states, is the conservation and distribution of the Nile waters; these two facts must continue to form American and British policy in the region.

Now for what has been left unsaid. The High Dam Scheme, Colonel Nasser's personal identification with it, and the British and American offers of assistance for it have from the first aroused mixed feelings. The scheme is grandiose, imaginative, and addressed to the relief of a real human problem of vast scope. Its economics are difficult to assess—as they should ideally be assessed—comparatively with the economics of other possible ways of controlling and using the Nile. Towards the end of last year, after Colonel Nasser had made his arms deal with the Czechs, when the danger of an Egyptian drift towards the Soviet orbit had made its dramatic appearance, but before habit had made it appear as a routine risk that must be lived with, the British and American governments persuaded themselves that they must underwrite the scheme to forestall a Soviet offer. They allowed the political fear to outweigh the economic doubts.

Since then, it is true that Colonel Nasser's spending spree on communist arms has turned out to be even wilder than had been supposed, and it is fair to say that his financial commitments on this front make Egypt look an even less attractive borrower now than then. At the same time Colonel Nasser has made

unnecessary additional difficulties for himself. The amendments to the *aides-mémoire*, on which he tried to insist to safeguard Egypt's sovereign dignity, were foolish; had he not suggested them, it might have been difficult now for the Anglo-Americans to withdraw; as it has turned out, he has himself tried to withdraw his amendments, too late. His foreign policy went through a bout of spring fever, ostentatiously "neutral" in favour of the communist powers, ostentatiously hostile to the West, childishly eager to make a show of Arab anti-western combinations. No doubt this in the end convinced the Anglo-Americans that to compete with the Soviet Union for the pleasure of financing the Egyptian regime was to waste time, money, and self-respect.

The mistake made was to compete with the Soviet Union on that basis at all. The Soviet Union is beginning to have resources to invest abroad, and it cannot be prevented from making foreign investments if it wishes, in countries prepared to accept them; western aid is far too precious to waste in obstructing the Russians, but should in general be applied on its own merits, where it is most needed and where it will be most effective. The fear that if the West does not help, the Russians may, is a bad counsellor and leads to false decisions. Since the criterion of competitive politics was allowed to prevail in December, the reversal of intention followed naturally when Colonel Nasser seemed resolved to abuse and humiliate the Anglo-Americans, and to coquet with Mr Shepilov, with the High Dam or without it. But the withdrawal was as inappropriately timed as the offer was. President Nasser for the last six weeks has visibly been working to correct his brand of anti-western neutralism, and to restore the emotional balance of Cairo.

Mr Shepilov, assuming that he has the Soviet Treasury in his pocket, now has it in his power to influence President Nasser's next move. The relative coolness towards the High Dam project which he expressed, perhaps casually, in Moscow at the weekend may express a considered judgment, or it may not outlast President Nasser's visit to Moscow next month. Like other governments, the Soviet government can have only a limited amount to spend on foreign aid; even Soviet money cannot be spent in two places at once; no doubt the Soviet government, like others, would rather not lose or waste its money. Britain and America have to learn to watch such decisions with relaxed nerves; there will be many more. President Nasser himself will have reason to look very carefully at

The High Dam Project

THE biggest of Egyptian development schemes and the favourite child of Colonel Nasser's government, the High Dam project emerged from the stage of a pipedream to that of a plan in October, 1955, when a British firm of consulting engineers was engaged, and talks were opened between Colonel Nasser's government and the World Bank. The purpose of putting a new dam at Aswan, four miles south of the existing Aswan Dam and very much bigger, is to conserve a yearly average of 32,000 million cubic metres of water by creating a vast reservoir covering 739 square miles and capable of holding the surplus water of several good years. This would enable the Egyptians to bring under permanent cultivation 2 million more acres of land, almost to double their electricity supply, and to forecast each year's crop.

Plans for storing the flood water over more than one year are by no means new, but hitherto they have concentrated on storage in lakes at the sources of the Nile and on a series of smaller dams at Roseires, Khartoum, Merowe and Semna. The Sudanese prefer the system of smaller dams, combined with a rather less high dam at Aswan. They say that these would be built consecutively, giving a quicker immediate return, a larger volume of hydro-electric power, and a longer period in which to find the money, although they admit that cost would be greater. This alternative project is of fundamental importance because it affects the Sudanese idea of what constitutes a fair share of the surplus water created by the dam.

Because the evaporation rate at Aswan is greater than that of possible reservoirs in the far south, the Sudanese claim that the Egyptians ought to carry the whole loss from the Aswan reservoir, 10,000 million cubic metres. They are therefore asking for about half of the 32,000 million cubic metres which they believe will be the gross average saved. The Egyptians deny that the alternatives to the Aswan dam would reduce total evaporation, and maintain that if Sudanese claims were allowed Egypt would in fact be the loser on the entire project. Since a Sudanese-Egyptian agreement is an essential condition of any grant of financial assistance, no start could have been made on the dam until this argument had been settled.

Estimates of the total cost of the scheme vary, but it would be somewhere in the region of $1,350 million, of which $450 million would be required in foreign exchange. The first stage was to have been financed by an outright grant of $70 million given by Britain ($14 million) and the United States ($56 million), with Egypt providing labour and materials to an equivalent value. Only when this stage had been finished would the World Bank put up the $200 million necessary to continue the work, and then only by instalments when it was clear that the Egyptian economy and balance of payments were sufficiently satisfactory to warrant an increase in debt. Colonel Nasser disliked these conditions, which, he thought, would enable the bank to dictate Egypt's economic policy. Although he and Mr Black, the president of the bank, reached a working agreement in January, no formal contract was signed. Since then, it has appeared that Colonel Nasser is not prepared to gear his whole economic policy to the dam. The budget, published on July 4th, shows that the military appropriations are to be £E53.6 million, an increase since last year from 18 to 25 per cent of the total expenditure, while only £E2.9 million is allocated to the dam.

But the bank confirmed its offer in a letter to the Egyptian Minister of Finance on July 9th, presumably in full knowledge of the Egyptian budget; a few days later Mr Ahmed Hussein returned to Washington with instructions from the Egyptian Government to accept the bank's terms if necessary. The United States Government announced the withdrawal of its offer of a grant on July 19th, and the British Government followed suit on July 20th; with this, the World Bank's offer lapsed, since it was contingent on the American and British aid.

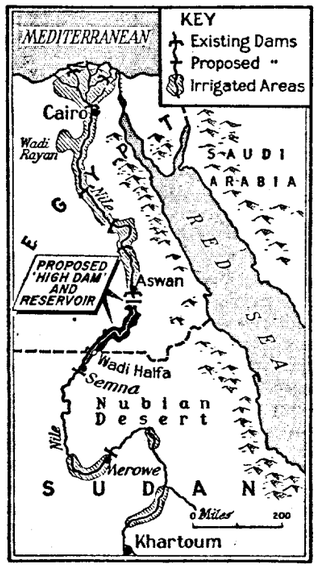
the conditions of Soviet aid, if it is offered. The Anglo-American withdrawal subjects him to a test, far more searching than if they had gone slow, or refused, seven months ago. The lesson for him is that friendship has to be earned, between nations as between men; if he learns it, the withdrawal can be the start of a relationship between the west and Egypt sounder, because more straightforward, than before. This presupposes tact and forbearance on both sides. It presupposes, too, that the Americans and the British are sincere when they say that their withdrawal does not exhaust their friendly interest in Egypt; as, indeed, it cannot.

II.—Low Water at the Dam

FROM OUR CAIRO CORRESPONDENT

THE Egyptian press has not so far revealed to its readers that Soviet Russia "does not consider the financing of the Aswan High Dam to be an urgent problem." Some papers, indeed, have deliberately misled the public by treating Mr Shepilov's offer "to try to meet any other Egyptian requests for aid in industrialisation projects" as a promise of aid for the dam. Presumably, Soviet lukewarmness was too much of a bad thing when it came on the heels of the British and American withdrawal from the financing of the project. The net benefit up to now is, therefore, for the Soviet Union, which newspaper comment has not condemned alongside Britain and the United States, although, by the standards of neutralism which the newspapers now profess, it certainly should have done. Apart from some newspapers in Lebanon which see the Anglo-American decision as the inevitable riposte to an unwise Egyptian foreign policy, the Arab world as a whole seems to condemn the withdrawal.

The financial reasons for refusing the aid have barely been mentioned. It is contended that Britain and the United States are dissatisfied with Egypt's independent line in foreign policy, and it is now recalled that the western powers wanted to give aid in stages so that pressure could be exerted on Egypt at will. But, say the newspapers, Egypt will hold to her policy, refusing commitment either to the East or the West; and it will build the dam, come what may.



Naturally there has been a lot of indignation. Colonel Anwar Sadat has made the refusal an occasion for the kind of vituperation in which he was revelling a little while ago. But comment in general has been more moderate than one would have expected in face of so great a disappointment. This probably reflects the need for thought by Nasser and his advisers, who possess the facts about Russian policy which have been denied to the public. Moreover, no work can be done on the High Dam in any event until this time next year, and the agreement with the Sudan, which must precede all financing, has yet to be reached. There is, therefore, no urgency.

The most obviously useful policy for Egypt in these circumstances would be to forget the polemics and work energetically and generously for an agreement with the Sudan, to keep a tight rein on her political opportunism, and to look into her economic position closely and carefully. None of this would close the door to ultimate aid from the West, or from Russia; on the contrary, both sides are likely to be encouraged by evidence of constructive effort.

It is unwise to assume on the basis of Mr Shepilov's remarks to pressmen at a Moscow cocktail party that Soviet assistance for the High Dam is ruled out. He was correct in saying that he had found no great sense of urgency about the dam in Cairo when he was here, for at that time Nasser was coming to the decision to get the Anglo-American aid if he could. It may well be that Russia, too, was having second thoughts about her original offer to build the dam for Egypt, measuring the immense undertaking against her own resources and the many demands upon them from other and more faithful friends. The new situation may encourage the Kremlin to seize the present opportunity by timely offers to Nasser when he goes to Moscow next month.

In any case, the British and American position in the Middle East has been weakened by the decision to withdraw the offer of aid. Neither trade nor aid to the Arab Middle East is sufficient to sustain the United States position. British purchases from Egypt—which is a key country, after all—were less than £8 million last year. Britain, on the other hand, sold £23.6 million of goods to Egypt, thus reabsorbing her sterling releases by trade. Unless Britain's buying from Egypt revives in the next few years, during which the sterling balances exhaust themselves, there will be little left of that flourishing trade relationship which existed between the two countries before the war. In short, the compulsion upon Egypt to respect British interests and co-operation is declining with the years, and the High Dam scheme was one way of restoring an important connection for more than a decade. There is no "growing" factor in Britain's relations with the Middle East outside the oil-bearing territories.

This scheme is, moreover, one which would touch the people very closely, providing work in the building of it, land for the peasants at the end of it, and hydro-electric power for the struggling industrial system of the country. Nasser considers it vital to buy a decade in which irrigation and reclamation of land will keep pace with the growth of population and, despite some current anxieties about Egypt's economic strength to bear her share of the burden, he will not easily relinquish the dam project. There are manifest advantages to the West in association with such a project, advantages which outweigh the pleasure of affronting Nasser's pride and of refusing to be held to ransom.

The Noble Classes—II

Living Like a Lord

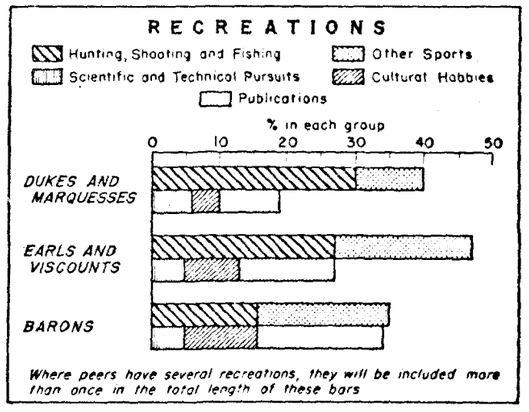
THE biographical details of the peers contained in *Dod* and *Who's Who*, on which these two brief statistical investigations are based, do not provide information from which the percentage of noblemen in each income group could be calculated. Miss Nancy Mitford, in a recent symposium*, pours cold water on the common belief of peers that they are ruined, and asserts that large accumulations of wealth remain in the possession of noble families, including 60 of the world's 100 finest diamonds. All the evidence, however, suggests that the peerage spans every standard of life from multi-millionairedom to total indigence; there are peers in doss-houses and peers in castles. Only a "family budget" questionnaire by some body (more pertinacious and better-endowed than *The Economist*) interested in social research could put the matter on a factual footing.

A high proportion of peers, in fact, prefer to give no indication of how they make a living. But the figures here assembled show that land and business predominate, with a small section of the nobility espousing the professions, notably law. The definition of landowner is inevitably vague, but 33 per cent of the peerage seem to have estates, even though many are small by now. Forty-six per cent have country residences of some sort. Twenty-nine per cent have town houses, but only 12 per cent had town houses only. Though the suburban nobility is fast growing, the peerage is still mainly attached to the land, or countryside. Death duties are reducing estates—the Duke of Norfolk, for example, recently said on TV that he was farming 16,000 acres; but in 1936 the *Complete Peerage* gave him 50,000 acres—and many country houses are held in fief from the National Trust.

*

The newer nobility may well be buying back some of the land lost by the older. As the accompanying chart shows, the proportion of nobility owning estates rises with age of title. Only 10 per cent of the newly ennobled have estates, but nearly 30 per cent of the third holders of titles, and 60 per cent of eighth holders and above. There is a close correlation between landowning and precedence. Eighty per cent of the dukes have estates—it may be higher—67 per cent of the marquesses, 50 per cent of the earls, but only 30 per cent of the viscounts and 22 per cent of the barons.

Money to maintain the nobility on the land can now, however, only be made in business, which is, after politics, a main avenue to ennoblement. Hardly any peers admit to holding business positions below board-



room level, though some do; the main index to the nobility's participation in trade lies in the proportions of peers with directorships. Twenty-six per cent of all peers have at least one; 12 per cent have four or more. These directorships, of course, are concentrated in the new nobility. Forty per cent of new creations have directorships; only 14 per cent of seventh holders of titles and above. Yet this latter figure suggests that the older nobility gets into business as fast as the newer obtains land to support the title.

The peerage shows a slight but statistically significant preference for commerce and finance, as against manu-

* Noblessse Oblige. Nancy Mitford and others. *Hamish Hamilton.* 114 pages. 10s. 6d.

facturing; but this is not great considering the social esteem that the City enjoys over other forms of business in Britain. Dukes decisively prefer commerce; for one in manufacturing there are three in the City. Barons are the least choosy: two in manufacturing to three in commerce.

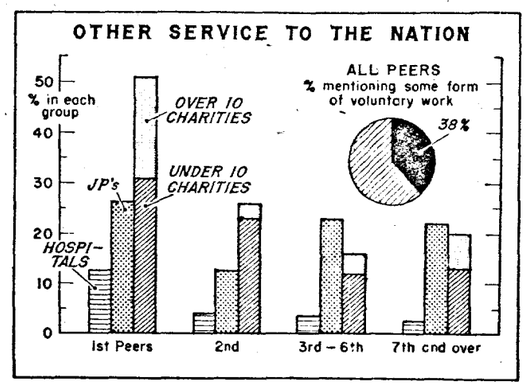
The strength of the baronage is shown in the high proportion which have over four directorships. Twelve per cent fall into this category, compared with 8 per cent of earls and 3 per cent of dukes. The business barons are now the core of the nobility's economic power; their problem is to pass their shareholding vassals on to their heirs.

Some 11 per cent of the nobility have had a legal training, against 7 per cent with agricultural qualifications and 11 per cent in other professions. The new peers are stronger in the professions—25 per cent have done law. But this position is entirely reversed in the matter of military prowess. Thirty-nine per cent of the peerage have been regulars, almost all presumably holding commissions. But only 21 per cent of the new creations have been regulars, against 53 per cent of seventh holders of a title and above.

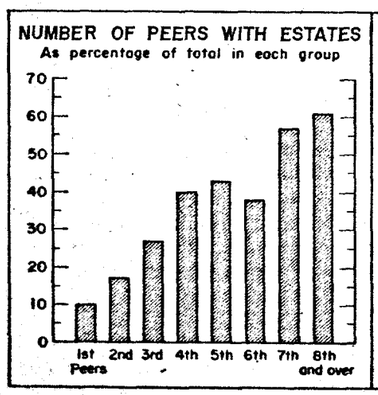
The high proportion of the older nobility which gave local government service were noted in the previous article. It is open to the peerage also to give a lead in other forms of voluntary effort; for the purpose of this investigation, these have been divided into work on the bench, work on a hospital board, and work for more than ten and less than ten charities. A fifth of all peers have been or are JPs; 5 per cent have worked for hospitals; 18 per cent have up to ten charities, 8 per cent more than ten. But it is noteworthy that the new creations are far more active in good works than the older nobility. As the chart shows, their heirs drop away very fast from philanthropy, and the position is only partially restored as a title matures.

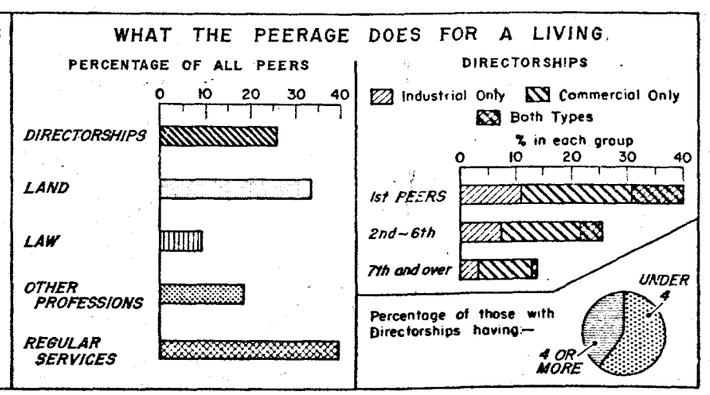
A high proportion of the peerage are evidently very busy men, whether with directorships and good works, or agriculture and local government. But they have traditional recreations. Hunting, shooting and fishing are the major pastimes of peers, and it is notable that while 21 per cent of all peers give these as their main recreation, 16 per cent of new peers do so, as against 23 per cent of seventh holders of a title and over. Nineteen per cent of the peerage give other outdoor sports or athletics as their recreation. Five per cent of peers have scientific hobbies; 9 per cent confess private addiction to cultural interests.

The divisions of the peerage emerge clearly from these figures as a whole—between the old nobility subsisting on a dwindling foundation of landownership, and a new nobility of trade, a part of which, in the time-honoured manner, resettles on patrician acres. But evidently this is not the only division; the old nobility have shown their power quickly to assimilate the



ennobled money-bags. The real problem is the ennobled politicians without much wealth to pass on, but yet with heirs; and the older peerage in the process of parting with their last farm. These two may, as Mr L. G. Pine, editor of *Burke*, suggests, become a British *hidalgos de la gutiera*—nobles of the gutter. In fact, they will fall no nearer to the gutter than the welfare state allows. We already have the peer behind the privet-hedge. It will not be long before the wholly state-educated peer makes his appearance. If what is being ennobled nowadays is political acumen and brains, he may, in the quite new fields opened to him, yet do surprisingly well.





Notes of the Week

Bungled Strike

THE strike in the motor industry is going badly from the unions' point of view. But it would be wrong to assume that all the British Motor Corporation has to do is to sit back and wait while it folds up, and the men get a useful object lesson in the futility of strikes. The BMC has lost many of its key workers, and the output it is getting from those who remain must be costing so much in wages that it might, in the end, have been as cheap to pay the compensation demanded for those dismissed. The damage, moreover, is spreading. Already Fords has issued "protective" notices to 2,000 workers, not because it cannot sell its cars, but because its supplies of parts from Fisher and Ludlow, a BMC factory largely on strike, are drying up; and 12,000 men were on strike this week in protest. The unions, too, are doing their best to spread the strike further, angry and frightened as they are at the poor response from the men at BMC.

The Amalgamated Engineering Union has told its members making motor accessories to do no work destined for BMC, and the Transport and General Workers' Union has told road transport workers and dockers to regard BMC goods as "black." The response may be uneven: the transport workers on £10 a week will not be keen to help their spoilt brothers in the motor industry who have been taking home £17. A greater danger comes from the dockers. It only needs one man to be sacked for refusing to handle black cargo to bring out first a wharf and then the whole docks; or one engine driver (whose union is supporting the strike) to be sacked for refusing a train with a BMC truck, to bring a new stoppage on the railways. The greatest danger of all perhaps is that the ever-militant Electrical Trades Union will lend its support — which could cut off power from more factories than the BMC.

Whatever the outcome, the strike will be damaging to union authority. Even allowing for the unions' claim that many of those in work are non-unionist, the fact remains that they have been able to command the obedience of only about half their members. The men on the factory floor have seen what their leaders would not see: that this is a bad time for a strike. It is a bad time in general because of falling demand, and it is a bad time in particular because engineering holidays in the midlands have just begun and workers have wanted this week's money. But when they come back, they will want to build up their funds, and it will not be easy to get the strike on the boil after a fortnight's cold storage. Some of those who joined towards the end of this week want the strike pay to swell their holiday money.

The workpeople can see, moreover, that the whole affair has been mismanaged. The leaders allowed the shop stewards to mislead them about the men's attitude to a strike—a degree of gullibility which is incomprehensible except in the light of their preconceived ideas. The AEU is bound by idiotic conference resolutions about "no redundancy" and Mr Nicholas (whose boss Mr Cousins has been in Vienna) has to show the world that the TGWU, under its new leadership, is not the employers' friend. Arthur Deakin, certainly, would not have called this strike; but he would probably have been successful in wringing compensation from BMC — not so much for redundancy as such, as for its failure to warn the union of dismissals that had long been planned.

Pushing Them Around

TO the Chancellor of the Exchequer it may well seem that his homily to the bankers this week—which is discussed in a note on page 334—was the natural sequel to his homily on mobility to the workpeople over the weekend. Bankers must co-operate by squeezing credit; workpeople must co-operate by changing their jobs; together this makes up the logic of the Government's disinflationary policy. Together, bankers and workpeople can restore flexibility to the economy. The workpeople may feel it is more uncomfortable for them than for the bankers. But Mr Macmillan rightly emphasised that there is nothing new in mobility; he pointed out that 2½ million men change their jobs in industry annually. Most, of course, go to a higher-paid job, or one that suits them better, and some workpeople undoubtedly recognise that, while motor firms may turn off well-paid men now with some appearance of inconsiderateness, those men would be the first to leave the firm without qualms if better employment offered elsewhere. It is only when changing a job means lower pay that there is discontent; Mr Macmillan might have emphasised more strongly that it is only if "all concerned" accept the necessity to make changes sometimes temporarily involving lower pay that the possibility of being offered higher wages in expanding industries occurs at all.

Mr Macmillan, as a politician, however, might have done more to recognise that while voluntary change is pleasant, even exhilarating, involuntary change is often depressing. He did stress the need for "more consultation" about human difficulties. Perhaps as Chancellor he could scarcely propose adjustments in unemployment pay for laid-off workers, or rent derestriction which might greatly ease the disabilities of moving jobs; the Government is evidently not ready to commit itself on such matters. But though the hardships of transfer from job to job may be marginal, that does not mean they are too inconsiderable for a government calling for individual initiative to seek to mitigate. The motor strike, though bungled, is a portent.

Productivity in the Commons

MR BUTLER the Leader of the House has repaired most of the damage which Mr Butler the Chancellor last autumn inflicted on the Government's Parliamentary time table. When the new Parliament opened immediately after the election, the Government decided that the session would run right round to this autumn, and the Queen's Speech promised a sufficient supply of legislation comfortably to fill the time. Then came the economic troubles of last autumn, the injection into the timetable of the autumn Budget, the Housing Subsidies Bill, and a bill to raise public service widows' pensions designed to take some of the sting out of the other measures. The Parliamentary pipeline, already flowing near capacity, became choked and to cap all the Government found itself committed to finding time for a capital punishment bill. In the early part of this year few knowledgeable parliamentarians would have forecast the session ending before Christmas.

But when Parliament resumed in January both front-benches were streamlined—Mr Butler switched to Leader of the House and Mr Gaitskell became Leader of the Opposition. Whatever their agreements or disagreements on economic policy, they are entirely at one in their distaste for Parliamentary muddle. Without noticeably diminishing the clash of controversy and personality, they have combined to make the Commons work with great efficiency. The result of this Butskellite exercise in Parliamentary "work study" is that virtually all the Government's bills will be on the Statute Book by the time MPs break up next Thursday, including such sizeable measures as the Restrictive Trade Practices, Road Traffic and Clean Air Bills, and also the bills dealing with farm workers' conditions, teachers' pensions and the disposal of the nationalised lorries.

There will be the usual short postscript in the autumn, to clear up a few measures left over—chiefly the Copyright Bill—and to work through the annual debates on the nationalised industries; but it should be possible to start the next session around the usual time, early in November.

Party Line

THE preliminary agenda for the annual Labour Party conference reveals Mr Gaitskell keeping carefully in step with his followers. The rank and file feels warmest on four topics: the call-up, housing, automation and the colonies. Recent official policy declarations on all four leave the ginger groups in the rank and file pushing at open doors. Thus over 30 resolutions call for the crude abolition of conscription; this has now been adopted as official party policy. Though Mr Head's speech this week makes that policy look more rash than ever, neither Labour's head nor tail is likely to be deterred. Protests about the Government's policy over Cyprus have already been faithfully mirrored by the party's spokesman at Westminster; while the new housing document should meet the resolutions on that subject. Only over automation is Mr Gaitskell in any danger of finding himself embarrassed. Suggestions for easing the transition are unexceptional—Labour has put some forward in the House—but the demand for "the public ownership of all automated industries" is in harsh contrast with Mr Gaitskell's own sophisticated approach to public ownership.

The conference may be lit by the drama of the Bevan-Brown clash for the party treasurership (Mr Pannell still intervening), but it promises to be a fairly mild affair. Its main function is to discuss the policy documents launched in recent weeks. The one entitled "Personal Freedom," but apparently endorsing corporate bullying, is likely to stick in the conference's gullet and amendments may be expected later. The signs are, however, that even if Labour gets round to discussing the resolutions calling for the abolition of the House of Lords and the provision of free public conveniences, it will be the Tories who will be providing the conference excitements this autumn.

Tight Little Iceland

AFTER a month of indecision, Iceland has taken what looks like a decisive lurch away from the Atlantic alliance and towards neutralism. It now has the distinction of being the only member of Nato to include communists in its government. Since the general election on June 24th, Hr Jonasson, the leading figure in the centre alliance of Progressives and Social Democrats, has been trying to put the pieces of the parliamentary jigsaw together into a government. He has now decided that his own alliance, which holds 25 seats of the 52, cannot govern by itself (despite the example of Denmark, Iceland's first cousin and ex-ruler, where a minority administration of Social Democrats props itself up on the mutual antagonism of the parties on either flank). The extreme left-wing Workers' Union has been called in to give him the necessary majority, and his six-man ministry includes one communist and one trade union leader who was expelled from the Social Democrats for straying too far left. The appointment of the communist, Hr Josepsson, to the ministry of trade and fisheries may have important repercussions on Iceland's trading policy. This has leaned heavily towards Russia in recent years, but there were hopes that it might shift back more towards the West. Negotiations were nearing a result with the British trawler owners, who were steeling themselves to reopen British ports to Icelandic fish.

So long as the communists were not included in the government—even if they gave it their votes on most issues—there was a chance that some kind of compromise might have been reached for keeping the American base in operation with a skeleton military staff. The two Social Democrats in the new ministry (one of whom takes over foreign affairs) are both men of moderate views, whose dislike of the base is grounded more on a Nordic sense of self-sufficiency than on anti-American or anti-Nato emotions. Now, however, the negotiations that are due to start next month will meet with one Muscovite foot under the table. If the Icelanders continue to hold open the door, the Americans must walk out of it as gracefully as possible, in the hope that Iceland will at least stay on the roll of Nato members and try to keep the important parts of the base in good repair with its own technicians. But in the long run Hr Jonasson is likely to find that the communists' helping hand from the left will put a strain on his own Social Democrat-Progressive alliance; on domestic as well as foreign issues, there is a vigorous antipathy between his Social Democrat ministers and the Workers' Union. He may be forced to decide before long whom he wants to keep as his friends.

Recalcitrant Poles

DISCUSSION dragged on this week in the central committee of the United Polish Workers' Party. This was the first meeting since the Poznan riots, from which, among other tasks, it had to draw the economic lessons. The long-delayed five-year plan, revised in such a way as to give more satisfaction to consumer demand, had to be finally approved. Yet this was not the only reason for the length of the debates. The central committee also had to tackle the problem of unrest and faction within the party, gaining in intensity since the revelation of the Khrushchev report. Poland has scarcely set its foot on its "own road to socialism" when its steps have caused alarm in Moscow. Marshal Bulganin himself was dispatched, accompanied by Marshal Zhukov, to talk things over. The National Day celebrations were merely an excuse.

The Russians are not only worried by the violent anti-Soviet feelings in Poland, openly admitted by Mr Ochab, the new secretary of the Polish party. There is also a clear discrepancy in the appreciation of the Poznan riots, which was illustrated in recent speeches. While Mr Ochab declared that "it would be a mistake to concentrate on the schemes of *provocateurs*" and "one should seek in the first place the social roots of these events," Marshal Bulganin went on emphasising the role played by "imperialist agents." In tone Bulganin's speech was somewhat reminiscent of his behaviour in 1944, when he was political commissar of the Red Army in Poland and had to deal only with obedient tools. Once again he has tried to put pressure on the central committee, attacking "the wavering elements within the party" and those "who undermine international collaboration." But this is not as easy as it was.

Everybody seems agreed on the need to improve rapidly the standard of life of the population. Soviet help is indispensable for this task. The Poles, however, having tasted the new freedom, seem most reluctant to relinquish its prerogatives. The partisans of rapid social and political reforms stick to their guns undeterred by pressure. The treatment of Wladyslaw Gomulka, the former secretary of the party dismissed as a "Titoist," will be a significant test of the respective strength of the factions.

Paying for Algeria

THE French National Assembly is less enthusiastic in meeting the cost of its Algerian policy than it had been in approving the policy itself. The bill for this year is estimated at some £282 million; it is still rising, and may be some £100 million higher in 1957. Funds have to be found to meet it if France is not to revert to its bad inflationary habits. In view of the deputies' traditional aversion from new taxes, a compromise is being thrashed out. A loan will be launched in the pious hope that it should bring £150 million by mid-November. Even if successful, the loan could not by itself arrest inflationary pressures. More probably, the extra taxes are merely being delayed; there is not much confidence that the loan will reach even a substantial proportion of the amount required.

France, it is said in Paris, runs the risk of "tip-toeing into inflation." It is true that the pressure on prices is not dangerous yet, and can still be largely explained by the increased cost of steel and the bad harvest. But by next year the full effects of Algeria as well as of the government's social programme (higher pensions and longer paid holidays) will be felt. The deflationary dams must be put rapidly in position if the new situation is to be controlled. Sound principles are needed for politics and not only for economics. It has just been announced that 400,000 men will be kept in Algeria "until a solution has been found." No financial wizard will straighten the accounts for long unless the search for that solution is speeded up.

162855

Farm Wages and Prices

THE letter sent by the Minister of Agriculture to the President of the National Farmers' Union on the subject of farm wages, is nothing like so sinister as Labour critics have pretended. Essentially it represents another step—and an important one—towards the evolution of a more realistic agricultural policy. For ten years, following a convention foolishly established by Mr Williams when Minister of Agriculture, the farmers have known that any substantial wage award occurring between annual price reviews would normally be followed promptly by an equivalent increase in guaranteed farm prices. The Government no longer regards this unsatisfactory convention as binding; if farm workers get the increased wage for which they are currently asking, there may be no adjustment of farm prices and certainly the adjustment will not be a complete one. That is the purport of the Minister's letter.

The timing and manner of Mr Heathcoat-Amory's announcement have been unfortunate. Despite his denials, it is plain that any change in the Government's farm price policy is bound to affect the attitude not only of the employers' representatives but of the independent members on the Agricultural Wages Board. Inevitably it looks a little as if the Government was making an opportunistic attempt to freeze the pattern of wages at its weakest (and perhaps its most deserving) point. But the Minister had already indicated his intention to make some such change of policy before the submission of the current wage claim; and whenever and however the new price policy was announced, its implications for farmers and farm workers would be precisely the same—that the only road left to higher profits or wages is through greater farming efficiency.

It may well be that the workers already have, on precisely these grounds, a sound case for a modest wage increase. Certainly the grant of a minimum wage of £7 (instead of the present £6 15s.) would smooth the introduction, at a later date, of the system of wage differentials which is now badly needed to encourage able workers to remain in

Xm56,M45EC - M45.126

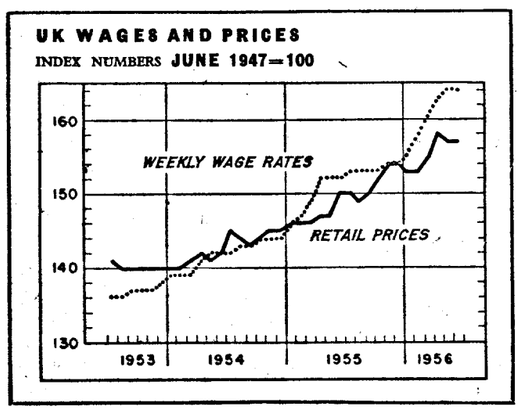
agriculture. Possibly the very hint of ministerial pressure may make the Board more receptive to the workers' case. At all events it will need to weigh very carefully whether the farmers can afford to pay some modest addition to wages out of their own resources.

Brcken Eggs

THE commissioner's report on the proposed egg marketing scheme (reviewed in *The Economist* last week) contains some curious features calling for further comment. The first of these is the approach of the commissioner to the evidence before him. Several distinguished economists opposed the scheme and no economist of any kind was found to defend it; yet "happily" Mr Baker felt assured by "the evidence of practical men" that the bulk of the economic criticism was irrelevant. But when faced with strong condemnations of the scheme by some very practical wholesalers, Mr Baker took refuge in the old suspicion that they were out to exploit the producer. In dealing with the promoters' evidence, the commissioner was less sceptical. He could not quite swallow the notion that the public must be prevented in their own interest from buying unstamped eggs. But he attempted no scrutiny of the packers' arguments despite their palpable (and not just hypothetical) interest in the scheme's success; and he did not consider how far the claim of the farmers' union to speak for the producers of eggs is affected by the very hasty and misleading way in which (at the height of the harvest) it sought approval for the scheme from its own members.

Yet the bias in the report is not so much intentional as the natural result of some strange assumptions. It is argued that this particular egg scheme is too rigid and that rather more exemptions must be allowed so as to get a little more competition and a little less illegal evasion. But it is taken as axiomatic that egg producers must be guaranteed an assured market and packing-stations an assured throughput. The proposed egg scheme does satisfy these two criteria; and the fact that it may also encourage a highly wasteful pattern of production and distribution—with producers in the Orkneys getting the same price as those in Surrey and the Egg Board pooling all transport charges—is apparently irrelevant. If the objectors do not like the scheme, then, thinks the commissioner, it is up to them (not the promoters) to find a better way of meeting the two sacred objectives.

This strange fandango not only puts the onus of proof in the wrong place. It also argues that the obligation to subsidise egg producers is a reason for accepting unsatisfactory marketing arrangements. The precise reverse is the case. The subsidy could be varied in a way which would encourage producers voluntarily to send their eggs to the packing-stations at the right times; and the obligation to provide an assured market for all eggs could be met by a "floor" price which would need to be invoked only occasionally. The details are for the Government to work out; the objectors—*pace* Mr Baker's contempt for their economics—have amply proved their case.



No Reappraisal in Bonn

THE ripple of reappraisal of defence policy in Washington, London, and elsewhere caused Dr Adenauer to bring his ambassadors home from the principal western capitals for talks in Bonn at the weekend. Evidently what they had to say did not reassure him; after the meeting the official spokesmen put renewed emphasis on the dangers involved in any inclination to cut down the conventional forces for the sake of a "one-sided" reliance on nuclear weapons. The ambassadors were sent back to their posts with instructions to make this clear; particularly, the Nato ground forces in Europe must not be hastily cut.

These remonstrances have gone out to Nato—though Herr Blankenhorn refrained from bringing them up formally before the Nato Council on Wednesday—to the British and French governments and, in addition, to Rome, because the Italian foreign minister is to preside over the council of the Western European Union. Above all, however, they have gone to Washington, where the talk of large cuts in the army, in favour of inter-continental nuclear defence, has caused all the more concern and resentment in Bonn because no whisper of it seemed to reach Dr Adenauer when he was there in June. Indeed, the Chancellor in the third reading of the conscription Bill this month told the Bundestag firmly from personal knowledge that American defence thinking, official and unofficial, was wholly unchanged; it was a "complete mystery" to him where the Opposition had got any other impression.

Bonn has since obtained, through its ambassador in Washington, the assurance that Mr Dulles thinks half a million German soldiers as necessary as ever. But it would have preferred not to have to seek the assurance. Nor, even now, does it feel confident that a chain of reductions, once in motion, would leave intact the West German planned strength of 500,000 men.

★

It is being made plain in Bonn that, whether or not the Americans and the British choose to withdraw some of their forces from Germany, any talk of cutting the planned strength of the Bundeswehr before it has even been reached will be resisted, so long as Dr Adenauer remains in power. The conscription Bill became law this week. The next hurdle, the fixing of the term of service at twelve or eighteen months, has to be taken in the autumn, but the preparations for the call-up can begin already. Some degree of political uncertainty will continue to surround the German defence programme until the elections next year. Dr Adenauer's argument, that a weakening of the conventional forces in Europe would tend to enhance the chances of a nuclear war in Europe, has to be taken seriously. Yet, not less than this, the domestic uncertainty troubles him. A major change in the defence programme now would mean a turn of the tide in favour of the opposition. His fight for the 500,000 men is a fight for his own dominance of German politics.

Trade Promises

THE Government has secured six more months in which to make up its mind about the inter-related problems of the European common market and the OEEC tariff reduction plan. It has been granted extra "time to think." The possibility of an immediate agreement on the "low tariff club" plan for tariff reduction vanished when Mr Thorneycroft told the OEEC ministers assembled in Paris last week that Britain could not agree, because the scheme would give uncompensated tariff concessions to countries outside the group. In the course of the three-day negotiations this flatly negative stand was modified. The final British position (reaffirmed by Mr Macmillan on Tuesday in the House of Commons), although it stops short of a commitment to do anything specific, ought to make it painfully embarrassing for the Government to continue to do nothing next year. Early in the new year one of two things must happen. Either the special OEEC working group that is to examine the means of associating OEEC with the common market of the Six (and specifically the possibility of linking the two in a free trade zone) will have made enough progress so that the Council can encourage it to complete its task; or it will have run into sufficient difficulties for the Council, instead, to instruct the steering board for trade to complete its plans for the automatic reduction of European tariffs. That is, early in 1957 a choice has to be made of the more promising line of action. The decision leaves it technically open to the Council to stop short of taking action, but enough has been said during and since the Council meeting to make it very hard for the study on the chosen plan simply to be shelved.

So much is clear gain. And two aspects of the decision should receive special applause. In the first place, although the studies of the tariff plan and of the relationship between the OEEC and the common market are to proceed in parallel, precautions have been taken against the study of the second being used yet again as an excuse for not taking action on the first. The other, and greater, reason for restrained rejoicing is that, with British support, the idea of a European free trade area will now have a fair hearing. The importance of this step can scarcely be over-emphasised—though, it has to be remembered, no commitment has been given.

And, at the same time, there are two somewhat disquieting aspects of the recent happenings. The first is that the Government based its opposition to the OEEC tariff plan on the fact that it meant giving tariff concessions to countries outside the system. This fact will not be altered by further study, and it is an argument that chimes strangely with the accustomed British argument that a European common market must have a relatively low external tariff. The second cloud is for the Six to dispel. It would be a major tactical error for them to halt action on the common market until the new British decisions on trade have been made. For it has been the apparent continental determination to move ahead that has made the British Government sit up.

Investigating Zik

THE Colonial Secretary's side of the argument with Dr Azikiwe, Premier of the Eastern Region of Nigeria, was given to the House of Commons this week. It is now clear enough why Dr Azikiwe is complaining so abusively of unconstitutional interference by the Governor, Sir Clement Pleass, and Mr Lennox-Boyd, in his government. Early this month the governor reported to the Secretary of State circumstances in which a government body deposited funds with the African-owned African-Continental Bank, Ltd., and which had produced a spate of local criticism ending in a libel action brought by the Premier against one of his critics, Mr Eyo. The Secretary of State then suggested to the Premier that he should appoint a commission of inquiry; the Premier refused, but the Executive Council—which is all African but over which the governor presides—proposed a commission with powers too weak, in the Colonial Office view, to elicit the facts. Dr Azikiwe's anger has been roused by the determination Mr Lennox-Boyd has shown to send a commission (though it would include a Zik nominee) strong enough to lay bare to the public everything germane to the argument about the African-Continental Bank—of which Dr Azikiwe now admits he is life chairman as well as founder.

Two questions may be asked about the proposals for this commission and the bitter clash between the Colonial Office and the Azikiwe party which has resulted from them. First, is it just? Second, is it expedient? In terms of principle, both the governor and the Colonial Secretary are within their constitutional powers; the region is not yet independent. There is a strong *prima facie* presumption that Dr Azikiwe and his government want to keep the full facts from the African (and foreign) public—to admit no more than the existing government paper on the bank does. It would be impossible to resist a demand for a full inquiry of this kind in Britain; in the Gold Coast the Cocoa Purchasing Corporation brought Dr Nkrumah for some humiliating hours into the witness-box. In so far as the Colonial Office has ultimate responsibility it feels compelled to take the matter up in good faith with that section of the Eastern Region public which is interested in, and striving for, clean administration.

On the grounds of expediency, unfortunately, there is nothing to be gained. It is late in the day to try to clean up the morals of Eastern Nigeria. The dethronement of Zik, if that is in prospect, is a matter for his own people—who may not want any help from a British-appointed commission. His resignation, on the other hand, would present great difficulties. The opportunities for mischief-making

will be immense. Worst of all, the Constitutional Conference on independence will be delayed—and it remains to be seen how far the other regions, notwithstanding their dislike of Zik, will acquiesce in a long postponement.

Platitudes from Panama

No one would be sorrier than President Eisenhower if the excitement about his health and political future, caused by his remark about a lack of physical strength, made people forget what the Panama congress was for. The meeting of nineteen presidents and presidents-elect in Panama City was intended to mark the anniversary of the first Pan-American conference summoned by Simon Bolivar 130 years ago. That Mr Eisenhower should have attended it so soon after his operation, and after postponing indefinitely an eagerly awaited visit from Mr Nehru, shows the importance that Washington attaches to Latin American affairs and to "hemispheric" solidarity. This is thought to be due, in part, to the personal interest of Dr Milton Eisenhower, the President's brother and close adviser, but in part, too, to fears that Soviet propaganda is beginning to make headway south of the Rio Grande.

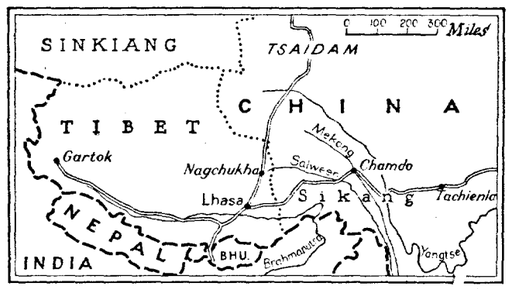
In fact, little emerged from this meeting of presidents. The twenty-one republics signed a pious declaration affirming their belief that "the destiny of America is to create a civilisation that will give tangible meaning to the concept of human liberty," and pledging their resistance to the threat of "totalitarian" forces. Such dictators as General Perez Jimenez of Venezuela, General Stroessner of Paraguay, General Somoza of Nicaragua, and General Batista of Cuba, signed the Declaration of Panama with hardly a lift of an eyebrow.

President Rojas of Colombia (whose police in February tossed opponents of the regime from the top tiers of the Bogota bullring—an atrocity which, it is true, he has since officially regretted) associated himself *in absentia* with the declaration. Ten presidents stayed an extra day for private chats with Mr Eisenhower; others hurried home. On President Eisenhower's proposal it was agreed that the Organisation of American States should set up a commission to explore the use of atomic power to improve the standard of living in Central and South America. Mr Eisenhower appointed his brother as the United States representative on this body.

Monks Militant

Buddhism is a creed of peace, but the monks of Tibet have long enjoyed a reputation as formidable fighters; and while the rest of the Buddhist world has been tranquilly celebrating the 2,500th anniversary of the enlightenment of its Founder, the Tibetan lamaseries seem to have been engaged in grimmer work. The fact that monks and even their abbots are prominent in the reports of anti-communist revolts that have trickled across the Himalayas since April makes the reports more rather than less convincing. Some of the incidental details draw a long bow—the new roads built by the Chinese army must be good roads indeed if it has managed to bring tanks along them to Lhasa, even if the tanks were trucked and reassembled at journey's end—but the evidence of widespread resistance seems conclusive.

According to the latest reports, however, the sharpest fighting has not been in Tibet proper but in the border areas to the east, and particularly in Sikang, which is nominally an ordinary Chinese province although geographically it is part of the Tibetan mountain mass. Reports from various sources agree that guerrillas have made the new Tachienla-Chamdo-Lhasa road unsafe in spite of the deployment along it of strong Chinese forces, and that the communists now have to rely on the road that comes down to Lhasa from the north-east by way of Tsaidam and



Nagchukha. Peking now has an air link with Lhasa, and it could undoubtedly push reinforcements through if its garrison there were ever seriously endangered; but the present threat to its lines of communication must be more troublesome than any rising in western Tibet, which could be put down at leisure. It is significant, too, that the resistance should be strongest in the east, where the people have had most experience of communist rule. The *People's Daily* (the *Pravda* of Peking) may have had Sikang in mind when it commented last week that the "vital lesson" of the Poznan riots was "never to relax vigilance, never to forget the existence of the enemy, the secret imperialist agents."

The Lebanon Pipeline

The Lebanese President has signed the law to impose heavy taxation on the Iraq Petroleum Company, with retractive effect to 1952. An escape clause permits the Lebanon to accept pipeline "profits" instead of taxes if agreement with the company is reached. Sir Stephen Gibson and another director of IPC flew to Beirut this week, not taking a new plan, but to investigate the situation afresh. It was reported that Saab Salam, the Minister of State responsible for oil affairs (who had threatened that the Lebanese government would regard the installations as Lebanese property if no agreement were reached), had resigned because he was not invited to be present when the President received the two emissaries. But the resignation was later denied and Mr Salam has since conferred with the Syrians, claiming afterwards that

the Lebanon had the promise of their support and that the Lebanese leaders were agreed on the steps to be taken.

From the company's point of view a solution is urgent because weather and other circumstances make it desirable to begin work on the new branch pipeline from Homs by October 1st. IPC has its hands tied by its own recent agreement with Syria on a ton-mile basis. The American-owned Tapline company's recipe for a comparable problem is to hand over to the Saudi Arabian government half the profit from the trans-Arabian pipeline (as opposed to other methods of transport) and to leave it to them to apportion the sum among the various transit countries.

It has not been revealed what agreement Saudi Arabia has made with the other three countries concerned—Jordan, Syria and the Lebanon. But if, as is supposed, it is in the nature of one-half or two-thirds to Saudi Arabia itself (on the ground that far the greater stretch is in its territory) and the rest equally among the remainder, it would seem that the rate of profit going to the Lebanon would correspond more or less to that produced by the proposal of the IPC. The Lebanon in fact has everything to gain from a reasonable settlement. It may be assisted to accept one by the consideration that though Syria has promised support, it might not wish to back the Lebanon in complete intransigence. Syria, after all, would profit heavily from the diversion to Syrian ports of the throughput of the existing and proposed Lebanese pipelines.

Pink Plans for Pale Colonies

The first instalment of the Labour party's policy for the colonies, which was published this week and courageously tackles the difficult "multiracial" territories first, falls logically into three parts. First, there is the statement of an ideal objective, consistent with Labour's political philosophy. There follows a realistic but by no means overstated appreciation of the difficulties in reaching it. Finally comes the formulation of a Utopian method of doing so. The objective is full parliamentary democracy, defined as universal suffrage on the basis of one person one vote. The difficulties are the fears of each racial community of losing power to another, or failing to gain it from another—fears rooted in differences of origin, skin-colour, culture and income. These fears take the practical form of the minorities disliking the method of "counting heads" to decide who has the power, when the heads are so different not only in appearance but in content. This problem, which is examined at some length, the Labour policy-makers propose to overcome by simply and neatly arranging for the inhabitants of these territories to "forget race and colour and to think and act as human beings."

The idea that it may be human to think and act in terms of race and colour does not appeal to Labour policy-makers. It is perfectly correct that the "withering away of racial consciousness will itself be the truest safeguard of racial minorities" (except in so far—a vital point not mentioned—as they are bred out by miscegenation). But that comes after, not before, abolishing racial consciousness. How is it to be abolished? Labour proposes to end all forms of official discrimination or segregation; specifically it proposes to make education non-racial, because "very few, if any, young children feel any colour prejudice. This feeling is 'caught' from . . . adult example and influence." But this is precisely the point at which minorities will not co-operate. For the rest, Labour proposes to ease the transition by just those transitional forms of government already being operated; but it declares that British rule shall continue until transitional measures and desegregation abolish racial feelings. Is this Labour's high-minded formula for indefinitely delaying the liquidation of the British Empire?

Go Slow in East Africa

Soon after the Royal Commission on East Africa published its radical recommendations for throwing open the economy of the area to the forces of economic change and progress, it became clear that the governments of the three territories, Kenya, Uganda and Tanganyika, had written off most of the report as a thorough analysis of the obvious interlaced with a good deal of long-haired theory. The views of governors of the three territories have now been published*, they do not suggest, at a first reading, that the

* Cmd. 9801 and 9804.

Report on the Crimea

The report of the Board of Inquiry, which sat at Chelsea Hospital, has been published, and, as was expected, it has overruled the report of the Commissioners whom Her Majesty sent to the Crimea to inquire, and pronounced a favourable opinion on all the military men there employed. Lord Lucan, Lord Cardigan, Sir R. Airey, Colonel Gordon, and others, who were at the beginning of last year so severely criticised and condemned, are all exonerated from blame. They followed the rules of the service in making requisitions, etc., and the military men who, in judging of their conduct, were guided by the rules of the service, found them faultless. The public—remembering the terrible losses of the army—remembering the heart-rending privations and sufferings of the soldiers almost within call, as it were, of our own shores, where all kinds of materials abound—will turn from the individuals to the military system, and pronounce that to be a great error, when it lands the nation in disasters accompanied by dishonour. From the system, it will go a step further to the individuals who form and support it, and whose minds are formed by it—the General Officers, the former Commanders-in-Chief, etc., etc.—and begin to doubt whether the men who make and uphold the system are worthy of confidence. From the report of the Board the public learns that all the duties of the several classes of officers are rigidly prescribed, the same as the duties of castes in India; and finding all around it, and finding every day and in all things evidence that such rigid regulations are incompatible with the changing circumstances of society and the varying duties of man, it will condemn as utterly worthless or injurious the firm and rigid martinetism which is the life and soul and pride of our military men.

The Economist

July 26, 1856

bold plans of the commission for an attack on East Africa's problems by pulling down the economic barriers between tribes (of all colours) and their reserves, urban as well as agricultural, find any favour. The governors have many experienced comments on the Royal Commission's report which need further study. But broadly their attitude is either "we're doing it already" or "any district commissioner knows the fellows won't wear that sort of thing."

The governors do not believe that it is possible to proceed more quickly in the transfer from communal to individual ownership, even by setting up the administrative schemes proposed by the Royal Commission. They cannot be "too much in advance of public opinion." But if public opinion were the only factor in making changes, there would be little change anywhere and least of all in tribal society. The fact that the governors protest that change is going on just makes nonsense of this. Already some African public opinion is in favour of this life-giving freedom to individual initiative; some is not. But which is to be backed? The suggestion that the barriers to economic expansion cannot be removed by policy changes is a counsel of despair; how else can they be removed? They are written into policy. More substantial is the detailed costing, by the Government of Tanganyika, of the development programme the region needs. For all three countries the cost of the recommendations of the Royal Commission may amount to something like £250 million for the period 1955-60. It is a big sum. But is it put forward to help frighten public opinion off bold and constructive proposals just because they frighten governments?

Italian Oil

AFTER years of bitter controversy an Italian oil bill has at last got through the Chamber of Deputies by a surprisingly large majority—386 votes to 37. If it emerges unscathed from the Senate and becomes law, it will remove some of the uncertainties that have paralysed the search for oil on the Italian mainland (except in the Po Valley) and prevented the exploitation of the few successful strikes made last year in the Abruzzi. Proved reserves on the mainland are estimated very roughly at 10 million barrels, compared with 100 million in Sicily, where oil exploitation is dealt with under a separate and more generous earlier law.

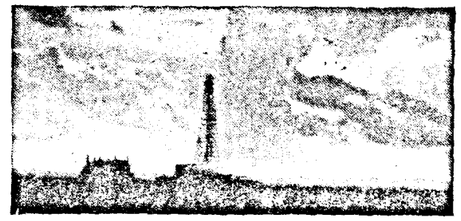
This will be a feather, although rather a tattered one, in the government's cap; the Christian Democrats are always under attack for their alleged "immobility" in economic matters. But, like all compromises the terms of the Bill remain unsatisfactory to the protagonists of nationalisation and free enterprise alike, even though in the end both combined—presumably in despair—to vote for the Bill. Private companies will be able to work side by side with the state-owned agency, ENI, on the mainland (although ENI is not permitted to go into partnership with any private concern.) But ENI retains, as everyone expected, its monopoly in the Po Valley and the attempt to strip it of its privileged position elsewhere on the mainland has not succeeded. It is not, for instance, subject to the limitations placed on the exploration areas and development concessions which private companies will be permitted to hold. But the extent to which it can make use of its special advantages depends on the complexion of the government in power; all concessions depend ultimately on the decision of the government advised by a special committee to be set up under the Bill.

One of the most controversial points of the earlier version of the Bill has been modified in a rather grudging way. The 60:40 division of profits in favour of the state, which appalled the foreign oil companies, has been abandoned. But the Bill still does not adopt the 50:50 basis on which the major international oil companies now work. Instead it introduces a graduated scale of royalties, which, when added to income tax may, in the case of the more productive wells, give the state more than a 50 per cent share of the profits; and the government has not given, as the oil companies hoped it would, any pledge that it would not in fact take more than half the profits. It remains to be seen whether on these terms the foreign companies are still interested in helping to develop Italy's oil resources.

Mr McEwen's Silent Struggle

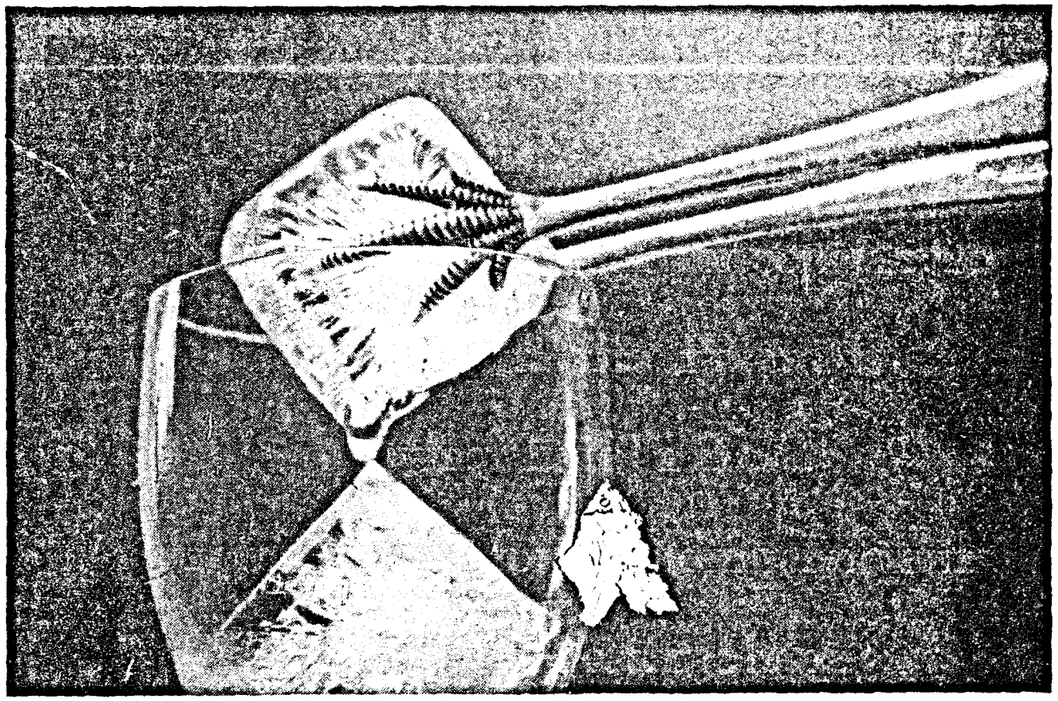
ONE piece of unfinished business lingers on from the Commonwealth Premiers' conference. Talks are still going on, behind confidentially closed doors, between Australia's Minister of Trade, Mr McEwen, and the Board of Trade. The Australians are aggrieved at the size of their trade deficit with Britain, which they say is partly due to the unfair way in which the system of imperial preferences is at present working. British exports to Australia, being largely manufactured goods, enjoy a substantial preference compared with their non-Commonwealth competitors. Australian exports to Britain, by comparison, get far less benefit—chiefly because they are basic world commodities like wheat, on which a preference would have to be punitive before it would keep Australia's competitors away from the British market.

Most of the solutions that Mr McEwen is no doubt turning over in his mind, however, are likely to raise British hackles. The Australians are most interested in getting more wheat into the British market, and would probably like the United Kingdom to impose an anti-dumping duty on French and American wheat, which they say is subsidised. But apart from the technical difficulties of fixing an anti-dumping duty—and an extremely stiff one would be needed to keep out American wheat—Britain would be reluctant to remove one source of discontent at the risk of creating two others. There is slightly more room for agreement about reducing the subsidies on Britain's own wheat production, but this depends on how much further Britain is ready to go in abandoning its policy of growing all possible food at home regardless of cost. A proposal for some kind of guaranteed price for Australian wheat is not likely to figure very high on Mr McEwen's list, since it might involve political difficulties for the British Government and in any case would probably not expand the volume (as distinct from the value) of Australian exports to Britain. Ultimately, the matter depends on how firmly Britain has nailed the colours of free trade to its masthead. If the Board of Trade refuses to shift its ground, it should not complain if Australia feels bound to lower the preferences it gives to British goods by cutting the tariffs on some non-Commonwealth imports. Free trade can be a two-edged weapon.



Drilling the desert for better ice-cubes

Through creative chemistry, Monsanto turns yesterday's dreams into present-day realities



NOT LONG AGO, ice-cubes were just ice-cubes, and everybody was glad of their very existence. Now, people want their ice-cubes made *quickly*. They're particular—not only about their ice-cubes—but about every aspect of their refrigerators. They demand a very high standard all round. And—thanks to Monsanto's Lustrex—they can get it. For this economical plastic is the making of many modern refrigerator parts, and one reason why refrigerators work so efficiently.

To make Lustrex, Monsanto take an oil derivative—Styrene Monomer*; process it into plastic at their modern Newport factory; produce seven different Lustrex grades; and sell them all over the world.

One of these grades is Lustrex Toughened II, and it's so tough you can *drive* a car over it (we've done it!). Another is Lustrex Colourant Blend; another Lustrex Hi-Flow 55; a fourth Lustrex Heat Resistant . . . and so on.

In Lustrex, manufacturers have one of the most versatile materials known to man—and one of the least expensive. They turn it into refrigerator parts, radio cabinets, picnic sets, packages, and a thousand other products. They'll go on doing so—through Monsanto's research—more attractively and economically than ever before. It's just another way Monsanto brings a better future closer.

If you (as a manufacturer) are interested in chemicals, it will pay you to get in touch with Monsanto.

*Made in Great Britain by Forth Chemicals Ltd. for whom Monsanto Chemicals are the Sales Agents.

MONSANTO Regd.

MONSANTO CHEMICALS

bring a better future closer

MONSANTO CHEMICALS LIMITED, 32 Monsanto House, Victoria Street, London, S.W.1 and at Royal Exchange, Manchester, 2.

BOWATER-EBURITE
JOIN FORCES

USERS OF CORRUGATED CASES

WILL BENEFIT FROM

BIGGER OUTPUT—

EVEN BETTER SERVICE

The merging of the corrugated case making interests of The Bowater Paper Corporation and The Eburite Group of Companies brings with it a number of advantages for users of packaging. Together, the two organisations can offer a much more flexible service than either, operating singly. Rationalisation of distribution and continuous large-scale production will lead to economies in manufacture and marketing. And since the pooled experience of both companies will be available to customers of each, a wider, shared knowledge will be brought to bear on individual packaging problems.

Both organisations have taken a leading part in the development of packaging for industry and commerce. Their corrugated cases carry an ever-increasing variety of products—from beer to biscuits, TV tubes to turkeys. Other products of the new company range from chocolate boxes to laminated baking cases.

The manufacturing plants of the company are located in key positions for national distribution:

Corrugated fibreboard containers

BOWATER-EBURITE LIMITED
PARK ROYAL ROAD, NORTH ACTON, LONDON N.W.10

ANDREW RITCHIE & SON LIMITED
CLOBERFIELD FACTORY, MILNGAVIE, SCOTLAND

BOWATERS FIBRE CONTAINERS LIMITED
PURLEY WAY, CROYDON, SURREY,
and ELLESMERE PORT, CHESHIRE (NOW UNDER CONSTRUCTION)

Fancy, rigid and confectionery boxes

ANDREW RITCHIE & SON LIMITED
JAMES STREET, BRIDGETON, GLASGOW S.E

ALFRED KENT & SON LIMITED
BEDFORD ROAD, CLAPHAM, LONDON, S.W.4

Aluminium foil ware and capsules; paper crimp cups

AUTOLEX LIMITED, WHITE LODGE, FRENCH STREET,
SUNBURY-ON-THAMES, MIDDLESEX.

Folding boxes; baking and confectionery cases

CHAS. G. DONALD & COMPANY LIMITED
28 LANDRESSY STREET, GLASGOW S.E

The linking of the resources of Bowaters and Eburite means that the existing machine power will be put more efficiently to use. Additional productive capacity will accrue to Bowater-Eburite Limited when the new corrugated case plant at Ellesmere Port, Cheshire, comes into production in 1957.

The sales forces for corrugated containers will operate in the near future from headquarters in England, at Bowater House, Stratton Street, London, W.1 and in Scotland, at the Cloberfield Factory of Andrew Ritchie & Son Limited, Milngavie, through Bowater-Eburite Sales Limited, a new company formed for this purpose.

Behind these factories will be the full raw material, research and development resources of the Bowater Organisation, augmented by the new mills and factories in hand and projected both in this country and in Tennessee and South Carolina.

BOWATER-EBURITE
LIMITED

Letters to the Editor

The Press of Our Times

SIR—You have honoured me by commenting in your issue of July 21st on the Bill I have introduced, so I hope you will afford me a little space to reply as shortly as possible to some of your criticisms.

You charge me with asking Parliament to go back to 1643, but that is precisely what my Bill does not do. Charles I aimed at political control of the press by his Government, and this sort of control can be seen today in plenty of countries in Europe and elsewhere. My and on the contrary, acts through a them unconnected with the Government, but appointed by our greatest lawyers and as independent of the executive as the judges are themselves. There is therefore no question of political control in the Bill.

Another entertaining misconception which I notice among critics, and one which perhaps you seem to share, is that the intention and effect of the Bill is that all newspapers should be like *The Times*. God forbid! That would indeed be absurd, but it is not what the Bill says. The Bill demands a "standard of responsibility and conduct," cites *The Times* as a criterion thereof, and goes on to enumerate practices which are contrary to that standard. That does not mean that newspapers should be like *The Times* in form or in substance, or in any other way, except that they should be decently conducted, and that they should abstain from doing things that no decent newspaper does do. I could have taken any one of our reputable newspapers as a guide to the authority, but *The Times* seems the obvious one.

Your article recognises the problem in a way that few other editors have done, but do not let us minimise the gravity. My post bag has shown me the immense amount of innocent suffering that is being caused. Almost every day, humble and honourable people are being persecuted and gravely injured simply because some reporter or editor thinks he can make a sensation out of their misfortune. This, I suggest, is an intolerable scandal in a civilised country, and it ought to be redressed.

You, Sir, however, having diagnosed the problem, in fact come to the conclusion that nothing can be done about it. It must be left until the public are sufficiently civilised to make this sort of thing unprofitable. That attitude does not seem to me to be either commonsense or to be right. We might as well abolish censorship of plays and of films until such time as undesirable films or plays would be no longer popular. But who can doubt that if these censorships were removed, the more improper a play or film, the bigger audiences it would attract? That would not be good for our national reputation or for the people concerned, and no one is asking for such a development. Yet the evil would be less than the one of which we complain, because little human suffering would be involved.

My Bill provides an authority which is not only non-politically appointed, and is as independent as are the judges, but which, on the other hand, is subject to precise checks at every turn, to make impossible the perpetration of any hasty or unjust decision. And an appeal to the High Court is provided for any aggrieved party. Safeguards can go no further. In fact, the only effect of my Bill would be that certain newspapers would find it to their advantage to abstain from certain practices, which they at present indulge in, but which no decently conducted newspaper would dream of perpetrating. Who would suffer from such a regulation? Since all newspapers would have to conform to the required standard, there could be no loss in circulation by any paper, but a great amount of innocent suffering would be prevented; and that is surely worth while.

May a "reactionary" beg his "progressive" friends to cease to hide behind an irrelevant dogma and face the realities of a great evil?—Yours faithfully,

London, SW1 SELBORNE

The Curse of Mephistopheles

SIR—In criticising the Labour party's policy statement on social justice you invoke the Evil One under whose curse that document is said to suffer. You imply that the party's aims are centred on the "transfer . . . of 1 or 2 per cent of the total national product and some of that through the project of higher death duties at the expense of the middle-class widows and orphans." You then go on to suggest that a policy of "a growth of production" should be supported "whereby workers might increase their real incomes by up to 4 or 5 per cent each year without anybody being worse off at all."

I suggest that your conclusion that Labour's policy consists only "in levelling down for its own sake" is in no way justified by the proposals put forward in the pamphlet. These include a positive policy to ensure equality of opportunity in education, mitigating the inequality of wealth due to inheritance (middle-class inheritance is practically free of death duties) and not merit, and eliminating the anomalies in our tax-system which have created a class of people in practice hardly subject to taxation. The existence of these anomalies is surely no longer in doubt. And it can hardly be argued that inheritance does not create privilege for those who enjoy it out of all proportion to their contributions to the common product.

Nor is this insistence on social justice a result of envy or unrelated to the policy of growth desired by you. Unless considerable unemployment is to be created—itself fatal to investment and expansion—a policy of growth can only be sustained with the free consent of the trade unions. It is, to say the least, unrealistic to appeal—as the Prime Minister has followed you in doing—to the trade unions for restraint and sacrifice while tolerating or furthering the extravagance and privilege of others in the name of incentives and the common weal. The policy of growth, indeed, is essential if British power and living standards are to survive. But it will not be promoted if the last reserve, the reduction of the arms burden, is blued on consumption through the reduction of direct taxes—just as it happened to the windfall which accrued in 1952-54 as a result of the improvement of the terms of trade. Social justice must be the foundation of a policy of investment and strength,—Yours faithfully,

THOMAS BALOGH

Balliol College, Oxford

Using Colonial Funds

SIR—The demand that profits earned overseas by United Kingdom companies be taxed in future on the local basis may be of some help to the individual companies concerned, but does not assist to the extent necessary the development of the colonies. The cost of administration of these colonies is unduly high and results in a high incidence of taxation, even compared with the United Kingdom, but particularly with those countries which compete in colonial development. Further, the colonies are in the anomalous position of being the largest earners of dollar and other balances in the sterling area, but these balances are used mainly not by the colonies, but by the Commonwealth countries of the area and the United Kingdom.

If a balance sheet were taken out over the years to counterbalance colonial funds used by the sterling area outside the colonies, against grants, loans, etc., made or available to them, I suspect the account would be heavily in favour of the colonies. This is regarded by the colonial subjects, for whom we are trustees as anomalous and indeed unfair, and must become an increasingly difficult issue as the political independence of these countries develops.

The problem needs appreciation by the Commonwealth Prime Ministers and others, who are apt to overlook the importance of the colonies in Commonwealth affairs. It is high time that the earnings of the colonies were more freely available for their own development.—Yours faithfully,

London, W.2 ELDRED HITCHCOCK

Competition in Civil Aircraft

SIR—In your issue of July 14th you quote the Minister of Transport, that "the British air corporations and the independent airlines must make it plain to the (aircraft) industry that if they cannot get the equipment they want from British factories they would buy it elsewhere." I can see no legitimate reason to quarrel with that sentiment. The Air Corporation Acts do not provide for their use as a means of launching new aircraft into operational service, with subsidy to make that possible. And if that phase of launching is not supported at public expense—at any rate for major aircraft—it will not be done at all, and Britain will just slide out of the picture. Then, the airlines will go to those other countries which, realising that an air power must have air transport of its own make, have wisely made it a public charge to see that they get those aircraft.

Russia, as you report elsewhere in the same issue, is now coming into the field: The TU 104 jet airliner, you note, comparable with the Comet IV, is offered for delivery in 1958 at half the Comet price. The Russian leaders, you add, are taking a direct interest in aviation and plan to break into the civil airliner market.

It would be surprising indeed if the Russians did not pick on civil aviation as one of the most attractive ways of building their prestige and influence in the world, for air transport is the better part of air power in this era of hot peace. Meanwhile, in Britain, it is implicit in our present policies and legislation that we think it more important that the air corporations should show a commercial profit than that they should be enabled to put our own aircraft into the air and give us the power that goes with them.

We have spent a lot of money preparing to blow the Russian Air Force out of the air if war were to come. The Russians, it now seems, are going all out to blow our airliners out of the skies. "We will show you what competition means," says Mr Khrushchev, making "the development of air communications both inside and outside Russia an economic priority." They can get more real power and prestige per rouble this way than almost any other. How they must chortle when *The Economist* wags its finger at the British aircraft industry and tells it to be more commercially minded if it wants to sell airliners! Perhaps they already dream of the day when BOAC, obliged by law to make a profit, signs up for a fleet of TU 104 jet airliners and cancels its Comets.—Yours faithfully,
M. G. IONIDES
RMA Atalanta, Over Italy

Glasspol Boards the Bus

SIR—Your Note in your issue of July 21st calls attention to the weight-saving features of the new London Transport "Routemaster" bus. At the risk of sounding ungrateful for what you have written, may I say that your Note understates the saving to be made? The new bus will take not four but eight additional passengers—64 seated against the present 56—without any increase in the total laden weight.—Yours faithfully,
R. M. ROBBINS,
Chief Public Relations Officer
London Transport Executive, S.W.1

Teachers and the Cash

SIR—The verdict in the case *Sunderland School Teachers* versus *Sunderland Education Authority* was, if one is to accept your viewpoint, case dismissed, with a warning as to the conduct of the plaintiffs in the future. In other words, you seek to advise the teaching profession in the interpretation of its duties without making any reference to the duties of education authorities, which, in this matter, was to negotiate with the teachers' representatives and not to waste ratepayers' money on lawyers' costs in a case that could only end in favour of the teachers. It is pertinent to say that, in this connection, the teachers' attempts to negotiate a settlement were arbitrarily ended with a cross reference by the spokesman of the Sunderland Education Authority to "it [the latter] being master in its own house."

However, the real purpose of this letter is to assure you that you need not be alarmed by the reaction of teachers to the judgment given in their favour by Mr Justice Barry. School football matches, athletic meetings and swimming galas will continue to be organised by teachers; extra coaching and the teaching of subjects not in the school syllabus will still go on outside normal school time. On the other hand, any attempt to bludgeon teachers into carrying out this voluntary work as part of their contract with education authorities will not be tolerated.—Yours faithfully,
C. BECK
Cardiff

Honesty and Party

SIR—Your doubts, expressed in a Note in your issue of July 21st, as to whether a Diogenes Club exists is surely misplaced. Was not Sherlock Holmes's brother, Mycroft, one of its eminent members?—Yours faithfully,
A. W. TODD
Merstham

Equal Before the Law

SIR—I note a line in your issue of June 2nd to the effect that "the Law Society's obvious view is that litigation is rather a good thing."

I very much question that any Law Society anywhere would advocate litigation. I am certain that the bar associations in America have no such point of view, in fact, in Massachusetts we are setting up conciliation boards in order to attempt to adjust cases before they go to trial.

While Massachusetts follows the English practice in many ways, the costs awarded are very small. In a recent case which arose in a District Court and was taken to the Supreme Judicial Court of Massachusetts, the costs allowed were about £10.—Yours faithfully,
WALTER J. DONOVAN
Adams, Massachusetts

Books & Publications

Not Quite Superman

BERNARD SHAW: *His Life, Work and Friends.*
By St John Ervine.
Constable. 640 pages. 50s.

MR ST JOHN ERVINE is uniquely well equipped to write Bernard Shaw's biography: a friend of forty years' standing; a fellow-craftsman of the theatre; a fellow Fabian—of a sort; and a fellow Irishman, again of a sort—Shaw's own sort. Like Shaw, he has a fine, sweeping assortment of prejudices and a splendid intemperance in asserting them, so that the clash of ideas, carried over into print, has the entertainment value of a gladiatorial display. He has a prose style capable, when set beside Shaw's own, of enduring the comparison. With devotion, gusto, discrimination and wit, drawing both on personal knowledge and unpublished material, he has produced not merely a portrait but a conversation-piece in which Shaw's family, friends, colleagues and correspondents are delineated with hardly less care than Shaw himself. If he is, at times, crashingly unfair—to Beatrice Webb or H. G. Wells, for instance—the sin is forgivable in a writer making no hypocritical pretence at detachment; and his own occasional silliinesses—as when he calls Stalin and his associates "half-baked intellectuals"—are outrageous enough to be endearing. If a forbiddingly difficult job of construction, the welding and balancing, in a harmonious narrative sequence, of several normal lifetimes' worth of various activity, has been less than quite perfectly done, leaving here and there a join showing or an incident impossible to date, such minor defects never spoil the reader's pleasure.

And yet this is a disappointing book. It lacks something more fundamental than formal excellence or even—in this context—justice: the power to get behind the *persona*, the mask, of GBS. The fact that Shaw frequently added to that mask a patently false nose or a couple of warts—claiming, with a parade of shamelessness, to have loafed nine years at his mother's expense, cultivating a reputation for stinginess, deliberately hiding emotion under flippancy at solemn moments—allows his biographer to pull off these excrescences with due rebuke to those deceived by them. But the mask itself remains. Whether from delicacy or from lack of disposition, Mr St John Ervine makes no attempt to penetrate, by imaginative reconstruction, to an intimacy which Shaw gave neither to him nor to any other friend. Dealing with Shaw's appalling decline, in his later years, into dictator-worship, capriciously discriminating callousness, and advocacy of mass extermination for "misfits," he pinpoints the intellectual confusions of which Shaw himself was intermittently aware; but he never asks what compulsions produced that obsessive internal dialogue between absolute rebel and absolute autocrat. He illuminates the topic, much canvassed since the time of the egregious Frank Harris, of Shaw's decidedly unusual sex life, initiated at twenty-nine and, after a sufficiently enthusiastic demonstration of normality, ended by a "white" marriage at forty-two—a topic the more legitimately interesting given Shaw's peculiar and emphatic published views on sex and marriage. But illumination stops at the surface; no X-ray probes the fundamental motives and conflicts underlying this curious history.

It is perhaps significant that one omission mars the picture of Shaw's human relationships. His closest friendships, says the biographer, were with Sidney Webb, William Archer, and G. K. Chesterton. Of Webb and Archer he writes at length; but GKC gets no more than a few casual, though appreciative, references. There is no hint here of the long, high-spirited, impassioned duel, a grapple recalling that of the two heroes of Chesterton's own "The Ball and the Cross," between these two polar opposites, whose very physique suggested a masterstroke of casting by a dramatist greater than either. It would be far-fetched indeed to see in that arch-anti-romantic Shaw a paladin *manqué*, a would-be worshipper dissatisfied with a faith spun out of his own intellect, an enforced expatriate from GKC's extravagantly tuppence-coloured world. But some element in him, not otherwise discernible, answered to and loved GKC and won his love in return; and whatever that element was, his biographer has not merely missed it but failed to look for it.

Probably no one will ever pluck out the heart of Shaw's mystery. Irreverent Freudian speculations might perhaps weave into a significant pattern, on the one hand, his ambivalently intense concern with Authority, the Father-figure, and, on the other, those dominating women—armed with superior physical strength, or enormous wealth, or all-conquering purpose—who stride through his plays, and the "mortal terror" with which he fled from real or fancied female pursuit, and the happy not-marriage. Less esoterically one may wonder whether, born into a normally loving and harmonious home, spared the emotional squalor and starvation of his infancy and youth, he might have been driven by a different dæmon and reached a different stature; that of a Goethe rather than a Nietzsche. For what he was, the world may be grateful enough in all conscience; and Mr St John Ervine's unsatisfying but fascinating record earns a parallel gratitude, tinged with regret for the might-have-been.

Facing America's Facts

RUSSIA AND AMERICA.
By Henry L. Roberts.
New York: *Harper* for the *Council on Foreign Relations*. London: *Royal Institute of International Affairs*. 287 pages. 25s. $3.50.

HISTORY has been unkind to Mr Roberts, the distinguished director of the Russian Institute at Columbia University. His analysis of Russo-American problems, which precedes a massive work on the history of this question due from Mr George Kennan, is admirably lucid. It stands out from similar studies by its calm acceptance of the realities of international life in the nuclear age and by its wish to see power relations as such and not as the more embarrassing aspects of alleged struggles between good and evil. But the last few months have seen cataclysmic changes within the Communist movement and dramatic echoes of these changes abroad. And because Mr Roberts's valuable analysis went to press before the days of the Twentieth Party Congress and Poznan, it reads, in certain sections, like that stalest of all genres—the newspaper of the day before yesterday.

Consequently, some of Mr Roberts's careful exposition of the objects and limitations of American policy towards Russia and the Communist block sounds curiously unreal. The author puts forward two principles of policy. The first is "the right of people to choose the regime which governs them (in effect the right of people not to be under Communist domination)." Surely, that "in effect" lets the cat out of the bag and it is a cat which looks disturbingly like Mr Dulles. For in crucial areas of the world such as North Africa, Central and Latin America and even areas of south-east Asia, self-determination is not equivalent with falling or not falling under Communist rule, and it is the belated recognition of this fact which has caused the most recent "re-appraisal" in American foreign policy. Mr Roberts's second principle is "the right of people to unite, if they so desire, to form a single government of their choosing." But as Mr Roberts himself has pointed out, this right runs directly counter to some of the most vital western interests. And is America honestly prepared to see a united, neutralised Germany, or is it willing to consult the inhabitants of Formosa on their views of the future?

That is the trouble with this kind of book. It is excellent in outlining the facts and weak in saying what can be done about them. Sometimes, there is something both funny and sad about

Mr Roberts's honesty. For example, when writing about Quemoy and Matsu he expresses the hope that their inhabitants "if it is at all possible . . . should neither fall under Communist rule nor be wiped out by bombing, from whatever side." Candide might have written that. But in this honesty lies the fine quality of the book, and it will stand as a record of the state of intelligent minds in America at an especially perplexing point in history.

Born to Command

FRESHLY REMEMBERED.
By Cecil Aspinall-Oglander.
Hogarth Press. 318 pages. 25s.

THERE were successful amateur soldiers before the great wars of our own day discovered unexpected gifts of generalship in dons and dentists and engineers. Thomas Graham, first and last Lord Lynedoch, was unusual not in beginning his soldiering as a lieutenant-colonel, at the threat of war, but in doing so at the age of forty-six and becoming, within fifteen years, Wellington's second-in-command and a national hero, in the face of the Duke of York's flat refusal, for twelve of those years, to make his commission permanent.

The merits of a plain tale, plainly told, are especially welcome when it concerns a soldier (even one who is, incidentally, the hero of two touching love stories) and General Aspinall-Oglander puts no words of his own imaginings into Graham's mouth, and no thoughts into Graham's head, that cannot be supported by letters and diaries. Both have yielded bountiful material. As a Whig and a reformer, Graham was unlike Wellington (against whom at first, in his love for Moore who was killed at his side, he was deeply prejudiced), but he was like him in his freedom from cant: he can recognise and record the "great excesses" of the British soldiers, retreating to Corunna, as he can their "invincible bravery" at Barrosa, where he himself, a sixty-three-year-old general, his horse shot under him, led them uphill on foot to capture the Peninsular War's first French Eagle.

There is better evidence than there usually is for such posthumous pieties about generals as that Graham was much loved by his private soldiers. It was characteristic, perhaps, of so affectionate a creature as Sheridan to say of him that "never was there settled a loftier spirit in a braver heart," but there must have been something especially engaging about a man of whom Cockburn could say that he was "one of the men who make old age lovely." Graham seems, indeed, to have been as set upon reaching a ripe old age as he had been to become a soldier: old enough to have fought against the rebellious Americans (had he thought of it), he lived to ride in a railway train, found the United Service Club; and take a roundabout way home from Malta in 1841, at the age of ninety-two, because there were rumours of possible war with France, and he had "no wish to spend the next twenty or thirty years in a French prison."

General Aspinall-Oglander justifies—and communicates—his admiration and affection for Graham without feeling obliged to claim military genius for a man who was simply a born commander in the field, full of common sense, courage and kindness.

Scotch Pebbles

ADAM SMITH AND THE SCOTLAND OF HIS DAY.
By C. R. Fay.
Cambridge University Press. 180 pages. 25s.

"IN some parts of Scotland a few poor people make a trade of gathering, along the seashore, those little variegated stones, commonly known by the name of Scotch Pebbles." Thus Adam Smith; Dr Fay uses the passage as an illustration of his doctrine, cheerfully introduces it with the remark that pebbles do not appear in the index to Cannan's edition of the "Wealth of Nations" though pots and pans do, and appends a learned footnote on the geology of these pebbles. The passage is typical of the book, which has the irregular and semi-precious charm of a necklace of cairngorms. It is almost wholly unsystematic, unless one counts as a system Dr Fay's rambling but scholarly interests; but it is none the worse for that. Dr Fay takes the standard biographies and Smith's own masterpiece as read; he provides anecdotes, letters, quotations, parallels and opinions to illustrate them. Adam Smith is taken so much for granted that much of the book is not about him; it is rather an anthology of characters and incidents to illustrate the time. In spite of the title, nearly half the book is not about Scotland, but deals with Smith's connection with Townshend, Franklin, Gibbon and Turgot.

There lacks any very clear analysis of Adam Smith's place in the intellectual life and development of Scotland in its golden age. It may be that the material does not justify any fuller treatment than that which Dr Fay gives it; but the Scottish part of the book is slightly cursed with the anecdotalism that afflicts most studies of that time and place; it is mostly a rehash, strongly savoured by the emphasis which is rightly given to Hume, who was among Smith's closest friends. All the old figures are there (one horribly miscalled Justice Braxfield) and many of the old stories.

These criticisms are addressed less to the text than to its appearance with a heavy-weight title in Glasgow University's series of social and economic studies. The book is a very personal and gossipy one, full of ingenious comments and parallels, more like the jottings from a lifetime of study than a set piece. The author's character and opinions are not in the background. It is very readable: quite apart from its value to serious students of Adam Smith, it serves as a small Aubrey to an interesting corner of the eighteenth century.

Shorter Notices

THE PENGUIN STORY.
By W. E. Williams.
Penguin Books. 124 pages. 1s.

THE PENGUIN ATLAS OF THE WORLD.
Penguin Books. 171 pages. 10s.

About half of "The Penguin Story," written to commemorate Penguin's twenty-first anniversary next week, consists of a catalogue of every book published by the firm since 1935. The 2,500 titles in it, 1,000 of which are still in print, amply confirm the theme of the text: that from its beginning as a reprinter of good fiction—with an immediate success that completely belied the gloomy prophecies of the book trade—*Penguin Books* has now become a "popular educator," providing specialised knowledge and the classics to the general public at an extremely low price.

The Penguin Atlas marks a new phase in Penguin's educative progress. This pocket-sized atlas (about 8 in. by 5 in.) is a remarkable feat of compression. In 80 maps the world has been covered at useful scales, ranging from 1:2 million for England and Wales to 1:20 million for other important land areas. The very high degree of legibility of these maps is a tribute both to the designers and to the Swedish printers.

Mr Keates, the editor, has courageously adopted the principles of the Permanent Committee on Geographical Names, so on the face of the maps the reader may find some unfamiliar forms of town-names (for example, Peiraievs for Piraeus, Praha for Prague) but the very comprehensive index cross-references most of the various forms, even going so far as "St. Petersburg = Leningrad."

Most atlases will not fit even into bookshelves; this Penguin Atlas will fit into a pocket and at ten shillings it deserves to be a success.

★

BRITAIN: AN OFFICIAL HANDBOOK. 1956 *edition.*
Prepared by the Central Office of Information.
Her Majesty's Stationery Office. 486 pages. 15s.

THE BRITISH COMMONWEALTH 1956.
Europa Publications. 938 pages. £5 5s.

When the first edition of this official handbook of Britain was published in 1954 it was extremely good value at ten shillings. Inflation has been at work, but the reader of the latest edition can comfort himself that he is getting still better value. Many of the sections have been expanded; the statistical material is extremely good; there are some excellent diagrams; and the book is still readable.

This new reference book on the British Commonwealth is somewhat different in content. Small sections are devoted to the history, geography and economics of each country in the Commonwealth accompanied by a statistical survey. But much of the book is given over to directories of banks, newspapers, schools, air lines, chambers of commerce, learned societies and other organisations. These will make it a valuable publication for the specialist in Commonwealth affairs and for the business man with Commonwealth connections. But it is doubtful whether the general reader will want so much detail at such a price.

AUTOMATION
Friend or Foe?

R. H. MACMILLAN

Now that the age of automation is at hand, its consequences are being urgently debated. In this clearly written and timely book R. H. Macmillan explains what automation is, its advantages and limits, and how this 'second Industrial Revolution' may affect the daily life of every man and woman. 8s. 6d. *net*

CAMBRIDGE UNIVERSITY PRESS

"Automation calls for a revolution in economic thought."

THE ECONOMIC CONSEQUENCES OF AUTOMATION

Paul Einzig

The first book to give all the facts so that each man can judge for himself the full possibilities of "a second industrial revolution" and can learn of the immediate practical problems of 1957 and 1958.

LOTTERIES
and Government Finance

In the recent controversy about Premium Bonds, the Chancellor of the Exchequer might have claimed some sound historical precedents. Official lotteries are no innovation. From 1694 to 1826 they were a regular and respectable feature of English government finance, and for years before that time they had been encouraged by the State.

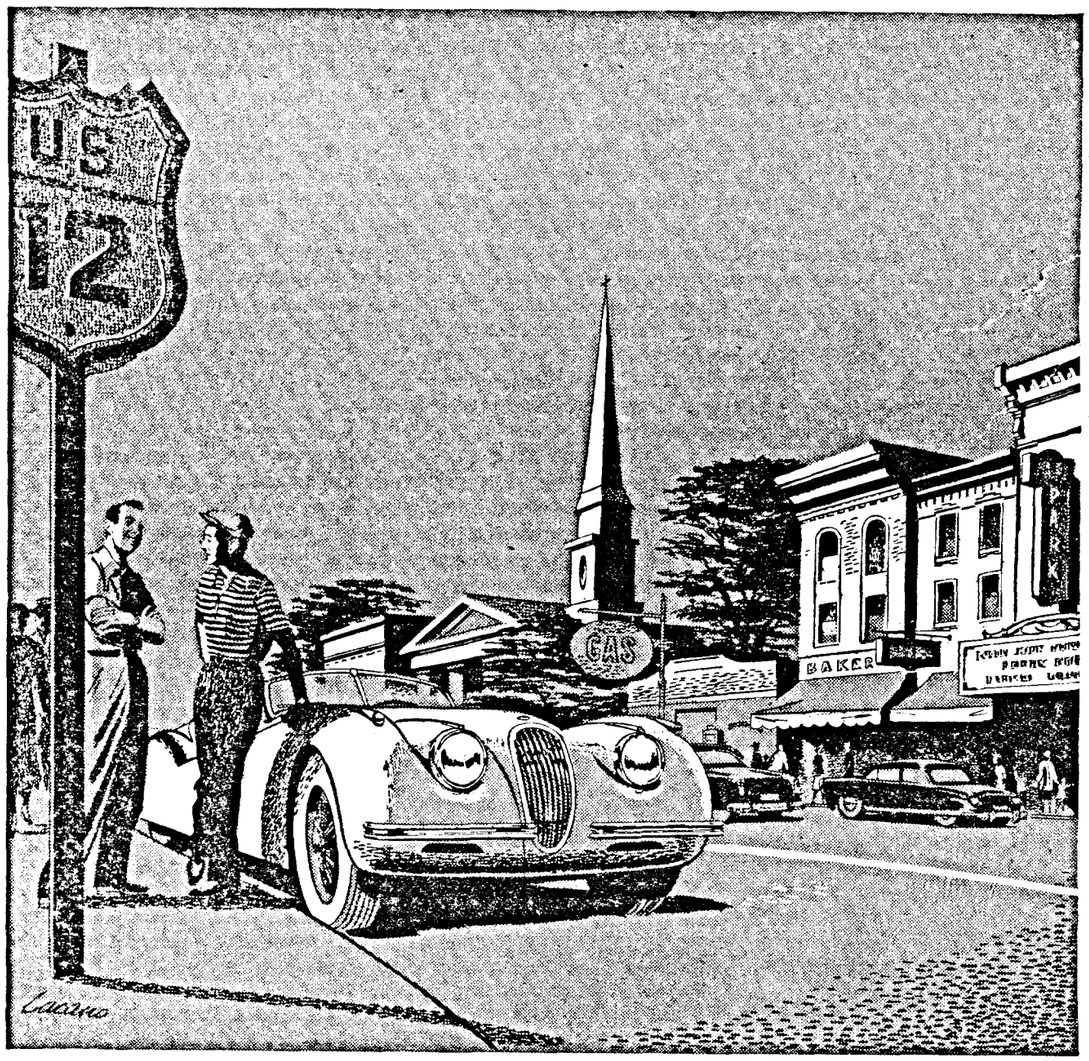
Mr. Penry Williams discusses the subject of lotteries and government finance from the historical point of view in an entertaining and topical article, published in the August issue of

History TODAY

THE ONLY ILLUSTRATED MONTHLY HISTORICAL MAGAZINE PUBLISHED IN THE ENGLISH LANGUAGE.

Other articles include an account of the *Treaty of Brest-Litovsk* in 1918; a portrait of the mathematician *Pythagoras*; and a fascinating description of *Old London Bridge.*

Edited by Peter Quennell and Alan Hodge, HISTORY TODAY is on sale at 3/- monthly, or by subscription £2 ($6) p.a. from HISTORY TODAY, 72 Coleman Street, London, E.C.2. Free specimen copy by request.



EUROPE GOES TO MAIN STREET, U. S. A.

Travelers tell us that there's a different look about Main Street's shop windows, contributed by Italian foods, German cutlery, British woolens, French perfumes, and Swiss chocolate. Even in the realm of motor cars, heretofore the exclusive preserve of Detroit, Main Street has got used to the smaller European models.

But there's more to selling the U.S. market than meets the eye, and banks abroad with customers interested in the United States will want to give them the benefit of experienced counsel and a comprehensive command of key facts.

Banks abroad desiring to win a favorable position for their customers in U.S. markets are invited to use the facilities of Manufacturers Trust. Through our complete branch coverage in New York City and our thousands of correspondent banks throughout the United States, we are exceptionally well equipped to obtain data on local market conditions in the United States and to handle all types of banking transactions.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Secret Battleground

Washington, D.C.

DURING the frantic last fortnight of a congressional session the centre of power shifts away from the open forums of the two separate houses to the mysterious "third house" of conference committees that mediates between them. With two chambers whose legislative powers are in most respects equal and with party discipline lax in both, some form of diplomatic negotiation or collective bargaining is necessary to reconcile different Bills on the same subject. Thus at this late stage, the unrivalled publicity which normally surrounds the legislative process gives way to the secret negotiations which are necessary if bargains—often on very considerable issues—are to be struck within a limited time. This week, for example, conferees have had to find a compromise between the $3.4 billion which was all the new money the House would vote for foreign aid, and the $4.1 billion allotted by the more responsible Senate. They have struck a balance almost exactly midway at $3.77 billion.

When one house "insists" on its amendments to a Bill which has come from the other, it "asks for a conference." "Managers" are then chosen by the chairmen of the House and Senate committees which have been handling the legislation. The number varies—it may be three, five, seven or nine—and need not be the same from each house. Although the committee chairman usually names the senior members of his committee from both parties, he is not bound to do so; sometimes he uses his authority to pick members who agree with his own point of view, which may, and frequently does, differ from that of the majority in his chamber. This is the case with Senator Byrd, the Democratic chairman of the Senate Finance Committee who, taking his stand with the Administration, profoundly disapproves of the liberalising amendments written into the Social Security Bill by his fellow Democrats in the Senate. But on this Bill the differences between the House and Senate versions are too small to allow much room for back-stage manœuvres.
