REPORTS that Japan has decided to buy an atomic power station from Britain modelled on the Calder Hall installation indicate a striking victory for Harwell. For months, British scientists have found themselves alone with their French colleagues in their belief that this simple type of installation could produce electricity at more competitive prices than the elaborate reactors under development in the United States. They have had to listen while it was described as a "Model T" among reactors, the poor man's plant for countries without the resources to provide the enriched fuel required by more advanced reactor types. Harwell has always maintained it was this costly fuel which would prove the economic undoing of advanced reactors and Japan, one of the few countries that both needs atomic power and can afford to pay for it, seems to have found the argument convincing.

A team of Japanese experts are expected to visit this country in September to discuss details and to see which of the four design teams in industry will supply the first power station. A key point in the early negotiations will be the terms on which fuel is supplied. Both Britain and the United States will insist, in such early sales as these, in removing the spent fuel elements, with whatever plutonium they contain, for processing at home and there have been earlier indications that Japan does not like this arrangement.

Exchanging Gas with Industry

RECENT developments in South Wales illustrate two important trends in the use and supply of gas in Britain—the success of the gas industry's campaign to promote the use of gas in industry, and the extent to which the area gas boards are relying on buying the extra gas from outside rather than making it themselves. In the country as a whole the use of industrial gas increased from 401 million therms in 1946 to 742 million therms in 1955, when it amounted to 28 per cent of all the gas consumed. What is more, this promotion of gas sales to industry has succeeded in the face of keen price competition from the fuel

On the docks of the world

—in your warehouse or plant YALE Lift Trucks cut time and handling costs as much as 50%

On the docks or in your factory, these busy YALE* Industrial Lift Trucks effect continuous savings in time, space and effort, and free men for productive work. Indeed, it is only a matter of time when each Yale Lift Truck will have paid for itself in savings. If your operations

entail the handling of materials, you owe it to yourself to investigate the full line of YALE Industrial Lift Trucks. And no matter where you buy them, you'll find world-famous YALE Trucks manufactured consistently to the highest standards of quality and durability.

On the alert in Northern skies

Jet fighters streaking across the Swedish skies remind us that traditional neutrality is no head-in-the-sand affair. Sweden's air defence force is one of the three largest in Europe; fifty powerful squadrons equipped with some of the world's fastest jets. Nearly all of these jets come from the famous SAAB works, Sweden, one of the world's pioneers of the air.

Streamlined SAAB production methods see to it that Sweden's air force is as up-to-date as any in the world. On the busy assembly lines, compressed air helps speed construction. Run from Atlas Copco compressors, thousands of Atlas Copco hand tools are riveting, drilling and reaming with precision to build aircraft to protect Sweden's freedom.

Your beer is under pressure

Compressed air is versatile. Atlas Copco provide the means for all its many applications. In many breweries the mash inside fermenting vats is now stirred by air supplied from special Atlas Copco compressors, a method found to be more efficient than mechanical agitators. Atlas Copco air compressors are also moving beer under pressure into filling machines, and bottles into crates.

Atlas Copco puts compressed air to work for the world

Atlas Copco compressed air equipment is manufactured or sold and serviced in 50 countries throughout the world by *The Atlas Copco Group*, which includes:
UNITED KINGDOM: Atlas Copco (Great Britain) Ltd., Beresford Avenue, Wembley, Middlesex; SWEDEN: Tryckluft AB Atlas Copco, Stockholm I; NORWAY: Atlas Copco A/S, Postboks 94 Oslo; DENMARK: Atlas Copco A/S (C.K. Alling A/S) Puggaardsgade 4, Copenhagen V; GERMANY: Deutsche Atlas Copco GmbH, Postschliessfach Nr. 3, Essen-Kupferdreh; HOLLAND: Atlas Copco Holland N.V., P.O. Box 6056, Rotterdam; BELGIUM: Atlas Copco Belgique S.A., 46, Chaussée d'Anvers,

Brussels; FRANCE: Atlas Copco France S.A., 29, Rue Marbeuf, Paris 8e; ITALY: Atlas Copco Italia S.p.A., Viale Marche 15, Milan; TURKEY: Atlas Copco Ticaret ve Sanayi T.A.S., P.O. Box 490—Galata, Istanbul; SOUTH AFRICA: Delfos & Atlas Copco (Pty.) Ltd., P.O. Box 504, Benoni, Transvaal; AUSTRALIA: Atlas Copco Australia Pty. Ltd., P.O. Box 54, Auburn, N.S.W.; NEW ZEALAND: Atlas Copco (N.Z.) Ltd., Huddart Parker Building, Wellington, C.I.; CANADA: Atlas Copco Canada Ltd., Montreal, A.M.F., P.Q.; U.S.A.: Atlas Copco Eastern, Inc., P.O. Box 2568, Paterson 25, N.J.; Atlas Copco Pacific, Inc., 930 Brittan Avenue, San Carlos, California.

oil offered from the many new oil refineries that have been built since the war. By contrast, sales of gas to domestic consumers have been relatively stagnant—the 1,362 million therms of domestic gas consumed in 1955 was an increase of only 47 million therms over 1946.

Equally striking has been the amount of gas purchased from coke ovens owned by the steel and coal industries, and more recently in the form of tail gas, from the oil refineries. The total purchases, collected and purified by area boards, and distributed through their lengthening gas grids, has risen from 264 million therms in 1946 to 402 million therms in 1955. In the country as a whole this represents less than 14 per cent of the total amount of gas distributed, but certain area boards rely on outside sources to a far greater extent than this. In a steel making area such as South Wales, the area gas board bought from coke ovens nearly 66 per cent of its total supply last year, and made only 34 per cent itself. Following its policy of collecting "all available gas from sources outside the gas industry . . . rather than carbonising further quantities of high-grade coal for gas production," the Wales Gas Board expects by 1960 to buy in as much as 85 per cent of its supplies. It already takes all the available gas from the Margam works of the Steel Company of Wales, and has several other long term agreements to buy coke oven gas from other steel firms and the National Coal Board.

An integrated steelworks commonly burns blast furnace gas as fuel for its coke ovens, which allows the much richer coke oven gas to be sold or to be used as fuel for steel-making. It depends largely on relative prices whether the works will use this gas itself or sell the gas and buy fuel oil for melting the iron. Though few steel plant managers admit that the price they get for their gas is reasonable, many of them evidently do consider the exchange is worth their while; and it is certainly much cheaper than most of the gas produced by carbonising coal in Britain. But one question must be continually before the gas boards that take a high proportion from outside: how far do their statutory obligations to provide a regular supply of gas allow them to become dependent on sources outside their immediate control?

The Transport Commission Speaks Out

UNTIL the railway modernisation programme bears its first major fruits, the Transport Commission faces a hard task in public relations endeavouring to correct the fashionable view that the railways are a naturally declining industry and—more particularly—to arrest the continuing decline in railway traffics. But the Commission is not neglecting opportunities to state its case. This week's tour of northern cities by the Chairman, Sir Brian Robertson, was used by him to announce some further new works planned for that area and to drive home some basic facts about his industry and its plans. He reminded his audience at Saltburn that "the small Southern Region . . . alone carries nearly as many passengers in a day as all the Class I railways in the United States"; on the freight side, too, "the density of traffic on the principal lines of the industrial areas of England is much heavier than is to be found in any other country except in a few very special areas." As Sir Brian himself pointed out "when a vast and

intricate organisation has been deprived of the means to improve or even maintain itself adequately over a long period of years it is quite impossible to transform it overnight." Nonetheless a "major revolution" was now in progress, not only in the adoption of new equipment but also in methods of operation, communications, and administration. Since building up freight train traffic is the Commission's present first priority, Sir Brian made a particular appeal to firms that have lately been acquiring large fleets of their own C licence vehicles to consider whether their interests would in future be better served by despatching more of their goods by rail.

The absolute dependence of all these plans upon continued government support for the Commission's programme of capital expenditure was emphasised by Sir Brian. This point had also been taken up by Sir Reginald Wilson, Chairman of the Eastern Area Board, at last week's opening of the extension of the Liverpool St.-Shenfield electric line to Chelmsford. Projected spending on railway betterment, as distinct from maintenance, amounts to £40 million a year; as Sir Reginald commented, this "burden" is less than one per cent on total investment already in use (measured at present values) and only a fifth of the prospective spendings on new roads and vehicles. It is difficult to see why this still relatively paltry sum should be either questioned or grudging.

Mr Clore or Mr Fraser?

MR HUGH FRASER, who has made the House of Fraser almost as synonymous with the take-over bid as Mr Clore has made Investment Registry, has now thrown his bonnet into the Scottish Motor Traction ring. Mr Clore has left his hat lying there but he has not improved on his original bid. Because Mr Fraser has thrown in a tam o' shanter, Scottish shareholders in SMT (of which Mr Fraser himself is one) may find it more attractive than the more sombre City homburg of Mr Clore, even though Mr Clore has said that SMT will remain "essentially a Scottish concern." But before they listen to the promptings of national sentiment shareholders must consider the hard facts, and they must do so by June 18th for Mr Clore has not extended the time of his offer. The directors of SMT have already rejected Mr Clore's bid and they have accepted on their own behalf Mr Fraser's offer. Have the few bawbees more that Mr Fraser is offering persuaded them that after all a take-over bid is not a sin?

Mr Clore's offer is straightforward. He has offered one non-voting 5s. "A" ordinary share in Sears Holdings, currently quoted at 15s. 1½d., for every 5s. ordinary share in SMT. Mr Fraser's is less simple. First he proposes, subject to the consent of the Capital Issues Committee, to make a 100 per cent free scrip issue of "A" ordinary shares, with limited voting rights, in the House of Fraser. Then he intends to offer three of these new shares for every four 5s. shares in SMT. The existing shares in the House of Fraser are quoted at 42s. 9d. and at current prices, allowing for the scrip issue and the limitation of voting rights, this offer is a few pence better than Mr Clore's. How much better it is impossible to say precisely until a price on the new Fraser shares is established and until the exact rights of this new class of capital are made public.

Shareholders in SMT, whose non-assented shares are now quoted at 13s. 6d., have thus the choice of accepting Mr Clore's firm offer at once or of letting it expire and waiting to see whether Mr Fraser obtains CIC consent and if so what the House of Fraser's "A" shares are worth. They must weigh the prospects of the House of Fraser against those of Sears Holdings. In the year to January 31st, the House of Fraser's trading profits went up from £1,482,609 to £1,810,259 and the ordinary dividend was 65 per cent, against the equivalent of 59 per cent. Mr Clore has already promised a Sears dividend of not less than 20 per cent and in his reply to Mr Fraser's bid he says that this dividend is covered about three times by earnings compared with a cover of about one and a half times on the Fraser dividend. Calculations of earnings always involve debatable concepts. Mr Clore reinforces his calculation with the observation that Sears is an industrial holding company while the House of Fraser is largely a drapery concern. One point that is not mentioned in Mr Clore's counter-reply is that he and Sears Holdings are actively considering a bid for two companies in the United States, adding up to the biggest deal Mr Clore has yet negotiated.

Dunlop's Own Plateau

THE modern industrialist has no love of price fluctuations. He likes steady raw material prices; he has learnt how to cope with steadily rising prices, but he abhors prices that bob up and down. A well organised and adequately used futures market enables him to iron out the major part of these fluctuations, but life would be much easier if the prices did not fluctuate.

That explains why Sir Ronald Prain's system of fixing copper prices is so popular with some consumers. It is also at the root of much that Lord Baillieu said to the shareholders of Dunlop Rubber Company this week. Lord Baillieu is not hostile to the natural rubber industry; with control of Dunlop Plantations and with big new areas now being cleared for rubber trees in Nigeria, he is deeply engaged in it; he firmly believes that rubber consumption will continue to grow, and that there is room for both natural and synthetic. But he looks to the growth of synthetic rubber consumption to produce a more stable price for natural rubber.

Certainly rising prices of natural rubber were one of the Dunlop company's main troubles last year, when the proceeds of the £12 million debenture issue, intended to cover capital expenditure for some years, were absorbed in a single year, and when (towards the end of the year) the group's requirement of working capital was increased by no less than £20 million. Lord Baillieu speaks strongly on the subject. But significantly it is not the high prices of rubber that form his chief complaint, but the wide fluctuations. What really hurts is the difference of no less than 65 per cent between the lowest price of the year (26d. per lb), and the highest (43d.).

How does Lord Baillieu, with his preference for steady prices, react towards those who arraign Dunlop for stabilising their own prices—the Monopolies Commission? His words had the quiet dignity of one accused of doing what he feels is right: "We welcome the prospect of examining any evidence which may be given (before the proposed new

tribunal) against the practices which the industry has adopted over the years, and we look forward to the reasoned judgments which the new tribunal will give, so that industry may know why, if at all, its practices are contrary to public interest."

Financing the Nationalised Industries

A LITTLE further light has dawned upon the Government's plan to finance the long-term capital needs of the nationalised industries, for the next two years, by direct advances from the Exchequer. It was shed by the Chancellor himself—shortly before 6 a.m. during Tuesday's prolonged sitting in Committee on the Finance Bill. Some hours earlier an attempt had been made to broaden the debate into a discussion of the wider relations of the nationalised industries to the state, when the House was enlivened by a neat reversal of the customary party roles—with Tory back-benchers attacking the plan, and Mr Harold Wilson supporting it, on the supposition that it might bring these industries more directly under the ægis of Government control. But Mr Macmillan wisely refused to accept this broader line of debate; he promptly returned it to the plane of technique.

The change, he reaffirmed, was designed solely to avoid embarrassment to the Government's monetary policy and its debt management in general. Since the former system of government guarantees and official support for the stock issues of the boards had in practice put upon the Exchequer the burden of providing "at least the bulk" of their capital needs, he thought it better that the Exchequer "should be in control of the whole operation." There would, he thought, be "no effect whatever" upon the control of the responsible ministers or of the Treasury over the actual capital schemes involved; and he also reiterated the Government's determination to stick to the two year time limit. The exact details of the financing procedures have not yet been settled, but, in conformity with Treasury practice for other purposes, the finance will not be afforded by maturity loans; at the choice of the borrower, repayments will be by equated annuities or by equal instalments of principal throughout the life of the advances. The periods selected will be related to the life of the assets being created, and will most probably range between 25 and 40 years—though possibly with shorter periods for the Airways corporations. The rates of interest charged will correspond broadly to those paid by the Government itself on its own borrowings for like periods. For example, on this footing, the rate charged by the Exchequer at present for loans of over 15 years is 5 per cent. The loans will probably be made at regular intervals, and will be shown as new "below-line" issues in the weekly Exchequer return.

£15 Million Iron Ore Plan

PLANS are now announced for a substantial increase in the output of the iron ore from Tonkolili, the new mining area in the northern province of Sierra Leone. It is planned to provide an additional maximum production

THE CHANGING WORLD

Changing methods and markets bring opportunity as well as risk for British industry. Engineer, businessman, scientist—each is confronted with changes in his sphere. The problem is to see the picture whole and this "The Financial Times Review of British Industry" helps every executive to do so. The Review searches out the facts and examines the many important social and economic changes of recent years and attempts an assessment of further changes which are likely in the future. It considers consumer habits and the growth of newer industries. It reviews the sources of our basic power, our transport problems and the ever present problem of overseas markets. Here is a publication which the executive in industry should read. It provides constructive criticism of present practices and gives pointers to future markets.

SOURCES OF POWER

The Tides

Man, who knows how small a stream will drive his mill or his loom, cannot but dream when he looks at those monstrous masses of moving water, the tides. Now that he knows how to turn water power into electricity, the notion of harnessing tidal power has grown into an obsession. "Only think," it reiterates. "Only think of unlimited power, at no fuel cost whatsoever!" Now, thanks to vast improvements in building and mechanical techniques, this ambitious dream may well be a fact of the near future. Before tidal power could be seriously considered, Crompton Parkinson were developing and making machines and equipment to conduct and moderate, measure and control electricity everywhere from the generator to the switch. And whatever means be used in the future to produce electrical power, Crompton Parkinson, still pioneers, will be there equipped to put it through its paces.

of 3.6 million tons of ore per year at a cost in capital expenditure of about £15 million. Sierra Leone Development Company, the privately owned company of which the shareholders are Northern Mercantile and Investment Corporation, William Baird and Company and the United Africa Company, is now arranging to extend its operations to that extent. The scheme includes the construction and equipment of 73 miles of 3 ft. 6 in. gauge railway, the necessary mining and power plants, extensions to the company's port at Pepel, with housing, welfare buildings, road and other ancillary services. Two leading city houses, Robert Benson Lonsdale and Company and N. M. Rothschild and Sons, are being consulted on the raising of the additional capital for which application to the Capital Issues Committee has been made.

Exchange Account's Sterling

THE capital resources of the Exchange Equalisation Account are this month being reduced by the return to the Exchequer of £300 million of its holdings of sterling, since these holdings have been substantially increased by the net sales of gold made by the Account in these past two years. The return of the sterling will extinguish the advance of a similar amount made by the Exchequer in May, 1954, when the inflow of "hot" money to Britain was sharply raising the gold reserves; and it will reduce the Account's total outstanding borrowings from the Exchequer to £675 million. These borrowings represent only part of the total resources of the Account; the full total is never disclosed, but it may be noted that at end-May the sterling value of the holdings of gold and dollars was just under £850 million. Since the Account must retain an adequate working balance in sterling, it is evident that even after this month's adjustment the undisclosed portion of its resources will amount to some hundreds of millions.

In future, it is intended to keep the size of the sterling holdings more constantly related to the Account's working needs; transfers of sterling to or from the Exchequer are to be made in smaller amounts and at more frequent intervals than in the past. These adjustments are of technical significance only, since the Account does not receive or pay cash at the moment when it raises or repays an advance. Any funds borrowed, or received from sales of exchange, are lent to the Treasury, normally against issues of "tap" Treasury bills, until they are needed for purchases of exchange—when the Treasury redeems the tap bills from funds raised by its market issues of tender Treasury bills or by other means. The new procedure will therefore have the effect of keeping the two processes of Exchange Account financing—the formal internal advances and the real borrowings on the market—more nearly in step. It will keep down the volume of tap Treasury bills and minimise the fluctuations in them, so that the total floating debt will conform more closely to its effective size.

ICFC and the Squeeze

THE Industrial and Commercial Finance Corporation sees every aspect of the credit squeeze. Its chairman, Lord Piercy, who is no advocate of dearer money, may

view the squeeze with an unenthusiastic eye but no one can doubt that he sees more of its effect on the small and medium sized companies than do most observers. ICFC itself, Lord Piercy explains, has been caught in a double squeeze—on one side by the tighter controls on investment by the Capital Issues Committee with an extension of its control to all amounts over £10,000 and on the other side by a restriction by ICFC's own shareholders on the provision of new money. ICFC raised a further £2 million on loan in the year to March 31st but since May 1955 it has relied on repayments and realisations (amounting to £3,153,000 in the year) as its chief source of finance for new business. The rate of these repayments will probably slow down because the enterprises it has sponsored may lose access to other sources of finance. As a result ICFC has had to "select rigidly even among propositions of a highly eligible kind" and the flow of business it has transacted has slackened.

INVESTMENTS AND EARNINGS (£'000s)

Years to March 31	1953	1954	1955	1956
New business	2,952	4,003	5,474	5,028
Repayments, etc.	2,041	2,122	3,633	3,153
Net total investments ...	26,286	27,827	28,622	32,193
Gross income	1,341	1,481	1,968	2,277
Interest	540	627	676	891
Taxation	383	388	572	590
Dividend	165	206	216	216
Retained profits	253	260	503	580

The queue of applicants was long and Lord Piercy regrets that "funds and in some cases CIC consent have, for many of them, not been available." In the year to March 31st the net new volume of business came to £5,028,000, against £5,474,000 in 1954-55, though 443 applicants, against 383, came knocking at ICFC's door. Only a handful of the applicants were deterred by the thought of having to pay higher interest rates, at up to 7 per cent on mortgage security, and when those dropped out many were waiting to take their place. Even at these rates the applicants were thinking in terms of expansion and of further investment. Lord Piercy thinks that way too. The whole tenor of his remarks in the annual report of ICFC is that the rate of industrial investment in Britain is low, possibly too low, and that a balance in the economy should be secured without "a strangulation of needed investment." He regrets the effects that the squeeze may have upon investment but, like it or not, he and ICFC have to live in its grip.

Changes in Argentina?

DISCUSSIONS between the representatives of the Central Banks have been going on this week at the Bank of England to arrange the technical details of the Paris agreement by which Argentina undertook to adopt a freer system of international payments and to consolidate and pay off its commercial debts. In particular they are concerned with associating Denmark and West Germany with the new

arrangements. But the principal architects of the new scheme, Dr Garcia, the Finance Minister, and his under-secretary, Dr Verrier, have lost their positions in the Argentine Cabinet. This reshuffle preceded and had nothing to do with the abortive revolt of last week-end. Moreover, the latest reports from Buenos Aires suggest that as far as exchange policy is concerned the move towards freedom continues. The main differences between Dr Garcia and the majority of the Cabinet concerned domestic matters, and in particular whether Argentina should retain a part of the previous structure of economic controls. Dr Garcia, a believer in complete freedom, was defeated on that issue.

The present discussions are at a technical Banking level, but a fresh opportunity for testing Argentina's new external economic policy will come soon in the Anglo-Argentine meeting at which the extension of Anglo-Argentine trade and payments arrangements will be negotiated. These arrangements come to an end on June 30th, and they must now be dovetailed into the new multilateral trade and payments arrangements negotiated in Paris. In particular the clause in the Anglo-Argentine agreement requiring immediate repayment of the Argentine debt due to the British government by reason of the utilisation of the "swing" in the payments agreement will have to be re-written in terms of the new agreement to spread repayment of all accumulated debts over ten years.

The coming Anglo-Argentine discussions will also provide the occasion for raising once again the claims of the British-owned public utilities, Primitiva and Anglo-Argentine tramways. These raise twofold problems: the backlog of financial services and compensation to shareholders. These claims have been trailing—some of them in the courts—for years. When Dr Verrier was in London recently he made optimistic references to their settlement; with his departure from the scene the outlook seems as obscure as ever. But these claims must be settled in a reasonable manner before trade and payments relations between Argentina and this country can be restored to normal.

Prescriptions for Kaffirs

SIR ERNEST OPPENHEIMER has some prescriptions for the gold share market in his address to the stockholders of Anglo American Corporation of South Africa. The two most important are addressed not to investors but to the South African Government. The government should, he argues, consider further reliefs of mining taxation; Sir

THE ECONOMIST, JUNE 16, 1956

Ernest is grateful for the small concession that Mr Louw granted in this year's budget, but he reminds the Minister that the present mining taxes were fixed in the boom years and that much more difficult times have since arrived. Secondly Sir Ernest advises his government to be more conciliatory and more moderate in its political and racial policies.

What worries Sir Ernest at the end of a year of sharply higher profits and record gold production is that the mining finance houses have been disappointed recently in their hopes of selling gold shares to the public. He emphasises that unless there is wide public interest in the gold share market enabling the finance houses to sell the shares of their new enterprises mining development must be limited to the resources of the sponsoring houses which, though large, are not inexhaustible. In 1955 opportunities for realising investments were limited and have remained so in the first five months of this year.

SHORTER NOTES

Elliott Brothers' "405" digital computer is now in full production, and is to be marketed in this country by the National Cash Register Company, Ltd. Although information is at present fed into this moderate-sized computer on perforated paper tape or punched cards, the machine can run on magnetic tape, when the auxiliary equipment becomes available to supply or receive the data in this form. One feature of the Elliott system is its flexibility, as it can be built up to suit users' requirements, using a wide variety of input and output equipment of different makes. The cost of a complete system varies from £30,000 to £100,000.

The reduction in strategic stocks will not at present apply to the stock of natural rubber, the President of the Board of Trade announced this week.

In return for the sale to Britain of \$12 million worth of American tobacco for sterling, the British Government will build houses to the equivalent value for American servicemen in this country. The houses will remain British property. This is similar to the arrangement made last year.

The directors of Thomas De La Rue have left the ordinary dividend unchanged at 30 per cent for the year to March 31st last. In that year the gross trading surplus of the group rose from £833,890 to £899,807 and its net income from £286,787 to £319,303, from which the ordinary absorbs £157,883.

Bowater Paper Corporation of North America has offered to buy the undertaking of the Mersey Paper Company of Liverpool Nova Scotia which has a present capacity of 140,000 tons of newsprint a year. If the offer is accepted it plans to build a groundwood pulp mill nearby with a capacity of 100,000 tons of pulp a year.

Representatives of the countries which have ratified the International Tin Agreement will meet in London on June 20th. They are expected to decide that the agreement should come into effect on July 1st, and that the Tin Council should meet shortly afterwards.

Company Notes

NCHANGA CONSOLIDATED.

—Through Rhodesian Anglo American, Nchanga is one of the copper companies in the Anglo American stable but unlike other Rhodesian copper producers it draws up its accounts on March 31st. Thanks to higher copper prices, which on the average must have brought into Nchanga's coffers about £100 a ton more than in 1954-55, it has had an exceptionally good year. Copper production at Nchanga is unlikely to have shown much change over the year, though probably a little more of it was in the form of electrolytic. The Company's profits before tax have jumped from £16,362,000 to £25,670,000. Taxation has risen from £6,180,000 to £9,450,000, and after allowing for the transfer of £875,000 in and out of the equalisation reserve to balance the movement in the "pipeline" stocks, the net profit on normal sales is £17,095,000, compared with £9,307,000.

Not all that profit has been paid over in dividends and £6,500,000 has been tucked away into reserves. But there has been a good increase in net dividend payments, which for 1955-56 absorb £10,500,000 (against £7,875,000). Net of Rhodesian tax, the full year's dividend is 30s. per £1 share, against 22s. 6d. Shareholders with British addresses will receive dividends less British income tax at a rate reduced by the provisional allowance for double taxation relief. Although copper is now considerably more than £100 below its peak, Nchanga as a low cost producer will continue to operate with a good margin of profit in hand.

BRITISH CELANESE. Stockholders in British Celanese were half prepared for a cut in the ordinary dividend. In November the chairman, Mr G. H. Whigham, had warned them that there had been a substantial reduction in earnings and that though the interim dividend was maintained unchanged at 3 per cent the final dividend would have to depend on the results for the year and on "a review of general conditions." And because of British Celanese's highly geared capital structure, stockholders must have been aware that dividends are vulnerable when profits decline. Then, too, these stockholders had learned of the drop in Courtaulds' earnings which confirmed the impression that margins in the rayon industry were being squeezed.

British Celanese's £1 stock was already set on a high yield, but nevertheless when the actual cut in the ordinary dividend from 10 to 8 per cent was announced, the £1 units lost a further 10½d. to 18s. 4½d., bringing other rayon shares down with them. At this price they yield 8.7 per cent. This yield reflects something more than the fall of 26½ per cent in gross profits (from £3,341,246 to £2,446,550) and of 28½ per cent in net profits (from £1,710,140 to £1,227,216), depressing though these are. It reflects

a still unresolved doubt about how far the recession has to go. The directors of British Celanese do not mince matters. They say that "while it has been a year of intense competition, with lower prices in some cases, turnover has been maintained. The main cause of the reduced profits has been the rapid and continual increase in costs, which, due to the competition, could not be recovered by in-

£1 ordinary stock at 18s. 4½d. yields 8½ per cent.

creased prices." From the preliminary figures it is evident that Celanese has felt the pinch of competition more severely than Courtaulds, but there is no reason why the two companies should move in parallel. Celanese is a producer of acetate (it does not even use the word rayon). Courtaulds making both viscose and acetate, is more of a world-wide group and to an increasing degree a producer of the cheapest of textile raw materials—viscose rayon staple.

LONDON AND OVERSEAS FREIGHTERS. This company, whose vessels carry the London County Council's coat of arms on their bows, is a progressive concern—progressive in its shipbuilding policy, for it was quick to reserve berths for new tankers when the oil companies first let it be known that they were prepared to give long charters to owners who had tankers building, progressive in accountancy, for it has not relied upon the shipping companies' exemption order and neither creates nor maintains hidden reserves, progressive also in that it is one of a mere handful of companies that produce regular quarterly statements of earnings.

	OPERATING SURPLUS BEFORE DEPRECIATION

Total	1,445	1,962	517

In the preliminary report for the year to March 31, 1956, when the company was reaping the results of its foresight with eleven modern tankers in its fleet, the chairman, Mr Basil Mavroleon, was optimistic. He "confidently anticipates, in the absence of marine catastrophes" the maintenance of the increased rate of

dividend (15 per cent, against 10 per cent) on the capital as increased by the proposed three for five free scrip issue. Last year saw a steady rise in earnings.

Shareholders had expected something extra, but were still taken by surprise. After the announcement the shares jumped 9s. to 83s. 6d. then forged steadily ahead to 100s. Allowing for the scrip issue the anticipated dividend would yield present holders the equivalent of 4.8 per cent. The dividend absorbs £215,625 of the net profit of £1,029,332 (compared with £736,936 in 1954-55). The provision for tax was £165,000; in the previous year it was completely eliminated by investment allowances, which still offset one-fifth of the cost of new tonnage. It was a good year indeed, but Mr Mavroleon many months ago warned stockholders that even long-term arrangements come to an end.

ULTRAMAR. Few companies have started with a finer array of city backing than did Ultramar, which set out in partnership with the Texas Company to exploit the Caracas oilfield in Venezuela. Yet few companies have had a more chequered career. The new oil wells in their early days produced far less than had been hoped for and the Finance Corporation for Industry stepped in to finance what looked then a slender chance of success. Now FCI's money and all the other prior charges amounting to over £5½ million have been repaid. The wheel of fortune has turned another revolution and for the first time ordinary shareholders receive a payment—not a trading dividend but a 10 per cent tax free distribution from an exchange surplus.

Ultramar owns the whole of Caracas Petroleum (CPSA), which owns a half share in Mercedes and Manapire; the Texas Company owns the other 50 per cent. Mercedes and Manapire are not yet paying dividends, but last year they earned a net income of \$2,639,964 (including \$531,886 from the sale of equipment), compared with \$914,774 in 1954. Through CPSA, the Ultramar group secured in royalty payments £1,025,430 last year (against £798,795) and its net income rose from £584,070 to £756,167. On the basis of these figures, now that the service charges on the loan stock have disappeared, shareholders will hope for a trading dividend one day. But how much it might be is anyone's guess. Their immediate hopes are more likely to be centred on the possibility of further tax free distributions from the exchange surplus.

Ultramar carries its advances to its subsidiary CPSA at \$3.89 to the £ and hence repayments at the current rate of exchange yield an exchange surplus. Last year the repayment of \$7,388,431 by CPSA (made possible in part by the bank loan of \$3,600,000 raised by CPSA in New York and in effect having financed the last part of the repayment of Ultramar's own Loan Stock) brought the exchange surplus up to £1,637,080. If CPSA repaid all its outstanding dollar advances of \$22.9 million to Ultramar, there would be a

THE ECONOMIST, JUNE 16, 1956

further surplus on exchange of £2,297,000. But this cannot happen at once. So long as the bank loan to CPSA exists—and it is being extinguished at the rate of \$400,000 every six months—Ultramar cannot pull down its advances to CPSA below \$15,000,000. And the rate at which CPSA reduces its debts to Ultramar depends upon the ability of Mercedes and Manapire to repay their advances to CPSA. In equal shares CPSA and the Texas Company have \$34,553,008 outstanding on advances to Mercedes and Manapire, about \$6 million less than at the end of 1954. There is room for a gradual reduction in the chain of advances and thus for more tax free distributions by Ultramar as the years go on. Does this possibility justify a price of 40s. 6d. for the Ultramar 10s. shares? The speculators might give a tentative "Yes." But they would be hard put to it to explain why, just as it is difficult to explain precisely why the shares stood at 84s. 11d. in 1948 and at 38s. 6d. in 1951.

FORESTAL LAND. Among the early companies to benefit from Argentina's more liberal monetary policy is Forestal Land Timber and Railways, which produces Quebracho extract for tanning. At long last Forestal Land has been able to remit a dividend from its Argentine subsidiary. The company brings into account the Argentine company's 10 per cent dividend for 1955—£133,502; it has also received £49,718 from the accumulated dividends of 1950, 1951 and 1952. The chairman, Mr Gerard d'Erlanger, hopes to get the remittances for 1953 and 1954 in the near future. In all, Forestal Land has brought into account in 1955 £183,220 (against nil) from Argentina, so that its total net profit is only slightly lower at £388,535 compared with £401,719.

Unfortunately the rest of the story is not happy. The final dividend is 6 per cent, against 9 per cent, making a total of 9 per cent for 1955 against 12 per cent for 1954. Moreover, the chairman issues a serious warning that the tanning trade on which the company depends is in for a difficult time. Heavy leather tanning is feeling the impact of leather substitutes,

and in the first five months of this year there has been a sharp drop in sales, particularly in the United Kingdom, which is one of the company's most important markets. The fruits of the company's investment policy—particularly through its African subsidiaries—seem likely to arrive in the form of increased production at the very moment when that production may, at least temporarily, intensify the pressure on the market.

ARTHUR GUINNESS. Froth on Guinness's ordinary dividend this year is unlikely. That is the clear implication of the company's half-yearly statement. The interim dividend has been raised from 8 to 10 per cent simply to make the interim and final payments more equal. Lord Iveagh, the chairman, tells stockholders that "it does not imply any increase in the total dividend for the whole year; in fact on the situation as one sees it now I am bound to warn you that an increase in the total dividend is unlikely." For the year to September 30th last the total dividend was 25 per cent.

Sales, Lord Iveagh adds, are satisfactory, but costs are still rising, and the company is still trying not to increase prices. It has not made any change in its sale prices in Great Britain since 1951 nor in the Republic of Ireland since early in 1952. But how long can Guinness hold this firm front? Lord Iveagh hopes that the company will be able to do so, but he makes no firm promise because "the matter is largely outside our own control."

Recently, the company's profits from brewing have been buttressed by earnings from the newly acquired confectionery subsidiary, William Nuttall. Lord Iveagh reveals that this subsidiary's profits before tax came to £667,000 in the year to March 31st, about 10 per cent lower than the £741,000 earned in the previous year. Here, too, higher costs are pressing against margins, for over the financial year the William Nuttall group increased its sales. If Arthur Guinness leaves its ordinary dividend unchanged at 25 per cent, the 10s. ordinary stock units yield about 6½ per cent at 40s. 9d.

LONDON STOCK EXCHANGE

Next Account begins: June 20th

Next Contango Day: June 20th

Next Settlement Day: June 26th

At the beginning of the week Government securities receded from the highest points reached in last week's rally, but revived on Tuesday after the disclosure of the overseas trade returns for May. Short-dated issues remained firm and undated stocks improved, Old Consols gaining ½ to 53½d and 3½ per cent War Loan rising to 72½. Industrial stocks made moderate gains, but business was still limited.

Bank shares were quiet, but insurance shares improved, Legal & General gaining 1½ to 27½d and Royal Exchange ¾ to 7½. Stores recovered, both Marks & Spencer and Woolworth rising 1s. 9d. to 62s. and 58s. 3d. respectively. British Aluminium were again firm; the old shares rose 5s. to 57s. and the new 4s. 4½d. to 58s. Ford recovered 1s. 10½d. to 32s. 10½d. and Rolls-Royce gained 5s. to 101s. 3d. Hawker Siddeley rose to 36s. 7½d., but later receded to 34s. 3d. Imperial Tobacco recovered to 48s. 3d. and BAT to 48s. 9d. Textiles remained depressed, British Celanese falling 10½d. to 18s. 4½d. Steel shares recovered some lost ground; Dorman Long picked up 1s. 3d. to 30s. 4½d. and Stewarts & Lloyds 1s. 6d. to 65s. 9d.

The oil market was overshadowed by the weight of dealings in Trinidad Oil, which touched 75s., but then sank back to 60s. before recovering to 71s. Other Trinidad oil stocks improved and the leaders appreciated further; British Petroleum rose 5s. 9d. to 149s. 6d., Burmah 3s. 3d. to 94s. 6d. and Shell 5s. 7½d. to 178s. 9d. Anglo American Corporation lost ½ to 7½. Kaffirs remained quiet and were generally easier. Coppers hardened this week after earlier losses, Rhokana improving 1½ to 37½, but Tanks were slightly lower at 7½. Consolidated Zinc gained 1s. to 48s. 9d. and New Broken Hill 1s. 3d. to 39s., but tins tended to ease. London Tin lost 1½d. to 8s. 10½d. London Asiatic Rubber rose 1½d. to 2s. 10d. and Golden Hope 1s. 6d. to 25s. 6d. in a firmer market.

(1) Relates to wholesale prices in Athens and Piraeus only for Greece. Figures for Ireland are based on January, 1952-100. (2) July-December. (3) Relates to prices in capital cities only for Austria, France, Greece and Turkey. Belgium excludes rent. Denmark includes direct taxes. Figures for Ireland are based on August, 1953-100. (4) Excluding rent. (5) Including direct taxes. (6) Index numbers of unit value which compare the current average value of trade with its value in 1953; they are influenced by changes in the composition of trade as well as price movements. (7) Deposit money and notes and coin held by business, individuals and foreigners. Except for Greece holdings of the issuing authority and other banks are excluded. (8) Holdings of the government and central bank at end of period; figures for Greece are gold reserves only; foreign exchange figures for Norway exclude government holdings; Norway and Sweden include foreign investments. (9) Beginning May, 1954, a new drachma equal to 1,000 old drachmas introduced. (10) Including some long-term securities.

EXCHEQUER RETURNS

For the week ended June 9th, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £46,384,000 compared with a deficit of £851,000 in the previous week and a deficit of £34,864,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £7,416,000, bringing the total deficit to £98,095,000 (£184,679,000 in 1955-56).

Financial Statistics

THE MONEY MARKET

THE discount market's rate for Treasury bills at the tender on Friday last was maintained at a fraction over 5 per cent, to which it had been raised at the previous tender, from 4½ per cent. That move stimulated a large increase in outside applications at last week's tender—total applications for the unchanged offer of £260 million rose by £32.4 million to £413.8 million—and the market's allotment fell sharply, from 53 to 43 per cent. The average rate of discount on all bills rose by ¼d. to 5s. 4.9d per cent. At yesterday's tender, the offer was cut to £240 million.

Credit supplies in Lombard Street have been continuously short. On Saturday and Monday the Bank made special purchases of bills; the prevailing rate for late August maturities has been 4½ per cent. The banks' rates for overnight loans have ranged up to 4½ per cent.

Sterling has shown a modest recovery in the past week, following the weakening early in the month; the spot dollar rate rose in the week to Wednesday from \$2.80½ to \$2.80½. The Canadian dollar has been notably strong, its premium on the US dollar rising to 1½ cents.

The price of silver in London has fallen by ¼d. an ounce this week, to 78½d. cash and 78½d. an ounce forward.

COMPANY MEETINGS

CENTRAL PROVINCES MANGANESE ORE

SATISFACTORY CURRENT LEVEL OF DEMAND

ACTIVITIES HAMPERED BY SHORTAGE OF RAIL TRANSPORT

CONTRIBUTION TO WORKERS' WELFARE

MR H. R. HOLMES ON DIAMOND DRILLING PROGRAMME

The forty-eighth annual general meeting of The Central Provinces Manganese Ore Company, Limited, was held on June 12th at Winchester House, Old Broad Street, London, E.C.2, Mr H. R. Holmes (the Chairman) presiding. Mr T. D. de Denev, ACIS (the Secretary), read the notice convening the meeting and the report of the auditors.

The Chairman said: Ladies and Gentlemen, The Report and Accounts for the year ended December 31, 1955, have been in your hands for some time, and I propose, with your permission, to take them as read. (Agreed.)

Before dealing with these accounts, I want to refer to changes in the Board of Directors. As you may know, I have held the office of Managing Director of the Company for the past 33 years, and have also been chairman since 1944. I felt that the time had come for the office of Managing Director to be in younger hands, consequently I resigned that office with effect from the end of February of this year, and Mr A. Linton and Mr W. A. Hardy have been appointed Joint Managing Directors in my stead. I shall, however, continue to act as Chairman of the Company, for the present at any rate.

Mr Linton and Mr Hardy have both been connected with the Company for over 30 years, Mr Linton first as Secretary and then as Secretary and Director, and Mr Hardy first as Mine Manager, then as General Manager in India, while in 1954 he joined the Board in London. In my judgment the wide and varied experience of these two gentlemen will be of great value to our Company in their new office. Mr T. D. de Denev, who has been with the Company since 1916, has been appointed Secretary.

TRADING CONDITIONS

The past year has not been an easy one, and you will see from the Profit and Loss Account that the Balance on Trading was down from £2,234,297 to £1,673,038. This was due to the deterioration in the rail facilities in India, which prevented us from implementing our contracts in full. In addition, the prices obtainable in 1955 were lower than those in 1954 as was foreshadowed in the report for that year. I am glad to say that higher prices are being obtained in the current year and that the demand for our ore is at present good and should continue to be so in view of the increased world production of steel, but so far as this Company is concerned, the question of railings is of vital importance, and unfortunately these still remain unsatisfactory owing to the general demand in India for traffic facilities. This is a matter that engages our constant attention and is the subject of frequent representations to the Authorities concerned. However, should more wagons be made available to us, and provided nothing unforeseen arises, I think that the prospects for the current year's trading are reasonably satisfactory, though

we are faced with rising costs including wages, royalty and railway freight.

THE YEAR'S RESULTS

Of the Balance on Trading Account, taxation takes £931,000 most of which consists of Indian Taxes. On the Debit side of the Profit and Loss Account, Depreciation of Fixed Assets amounts to £129,428 against £97,251, and this, of course, is owing to the substantial expenditure we have made in recent years on Plant, Machinery and Buildings. This expenditure has been very much worth while, and has resulted in the more efficient working of the Mines. The Net Profit for the year, after providing for Taxation and Depreciation is £646,153 as against £899,284 for the previous year. After adding the £100,000 transferred from Taxation Reserve Account and after making the customary Provident Fund deduction, your Directors recommend that the sum of £150,000 be transferred to the General Reserve which will increase it to £500,000. I feel sure that you will appreciate the prudence of this allocation, which is consistent with our policy of providing from our own Reserves the considerable sums necessary for our mechanisation programme. Your Directors also recommend that the following appropriations should be made:— to Staff Benefit Fund £20,000 and to Workers' Welfare Fund £20,000. The latter contribution is to enable us to continue to make provision for amenities for our labour and to improve the conditions under which they work and live. I am glad to inform you that our relations with the Trade Union and labour continue to be satisfactory.

An Interim Dividend of 1s. 2d. per unit free of tax was paid on October 1st last, and your Directors now recommend that a Final Dividend of 1s. 8d. per unit, plus a bonus of 8d. per unit, both free of tax, should be paid, altogether absorbing £525,000. This will leave £257,130 to be carried forward, as compared with £228,790 brought in.

BALANCE SHEET

Turning to the Balance Sheet, you will notice on the Assets side that the Leases over Manganese Properties in India stand at £137,557, as compared with £194,574 in the previous year. This is on account of our having disposed during the year of our Bonai Mines which we purchased in 1941.

Regarding our leases generally the term for which they are granted expires at various dates between the years 1961 and 1963, but all these leases contain a Renewal Clause.

Under Current Assets, the stock of Manganese Ore amounted to £1,027,327 against £835,681 and this is an indication of the lack of rail facilities to which I have referred earlier.

VISITS TO THE MINES

In January of this year Mr Hardy visited the mines in India when he made a thorough

inspection of the properties, and submitted full and informative reports to the Board. I am pleased to say that he found the Mines in good condition.

He took the opportunity of calling on certain Central Government officials in Delhi; and also State Government Ministers and officials in Nagpur. I am glad to say that our relations with these different Authorities continue on a satisfactory basis.

With regard to the Heavy Media Separation Plant, the initial difficulties to which I referred last year have been overcome and a considerable tonnage of ore of good quality has been produced during the year.

DIAMOND DRILLING PROGRAMME

Our Diamond Drilling Programme continues, and drills have been working at Tirodi, Munsar, Gumgaon and Ukwa Mines. Two holes sunk recently at Ukwa Mine indicate that there may be a very considerable tonnage of ore of very good quality in this property at comparatively shallow depths, and drilling is continuing there. Drilling at the other mines has been undertaken to prove the beds in depth in connection with our opencast operations at these properties.

The Government Electricity grid supply will reach our Tirodi and Balaghat Mines within three months or so, and all the electrical plant and equipment has been purchased and much of it will be ready for operation as soon as the supply is available. At our South Tirodi Mine a crushing and conveying plant is being installed for the raising of overburden which will considerably ease the long haul for our heavy vehicles. At Balaghat Mine a new five-compartment shaft is being sunk which will raise ore from Nos. 3, 4 and 5 levels. Nos. 1 and 2 levels are being worked from two smaller shafts, which are now being provided with two electric hoists in place of the old steam equipment. Adequate electric pumps and air compressors are being provided for the mine, which should be in a position to give considerably greater outputs of excellent quality ore as soon as this programme has been completed.

MINES IN GOOD CONDITION

From what I have told you I feel sure that you will appreciate that our Mines are in good condition, that we can produce the ore, and that we can sell it; but that at the present moment our activities are hampered owing to the shortage of railway transport from the Mines to the Indian ports. We must hope that in due course this difficulty will be surmounted.

Again I have pleasure in acknowledging the excellent work of the staff, both in India and in London, and also of the work of our Shipping Agents in India, Messrs James Finlay & Company, Limited, who have been most efficient and helpful.

I now beg to move: "That the report of the Directors and Statement of Accounts as

at December 31, 1955, be and are hereby approved and adopted, and that the profits be appropriated as recommended by the Directors." I will ask Major Herring to second the motion, and before putting it to the meeting I shall be glad to deal with any questions which Stockholders may wish to ask. Major A. C. Herring, VC, ACA, seconded the resolution, which was carried unanimously.

HIGHLANDS AND LOWLANDS PARA RUBBER COMPANY

FIFTY YEARS OF ACHIEVEMENT

MR T. B. BARLOW'S STATEMENT

The fiftieth Annual General Meeting of this Company was held at the Rubber Growers' Association, London, on June 12th.

The following is an extract from the report of the Chairman, Mr. T. B. Barlow: The past year marks the Company's fiftieth anniversary and the time is opportune to take stock of the position and review progress. For this purpose a booklet is being sent to Stockholders in the belief that it will not only be of interest to them, but that it will draw attention to a useful task efficiently done, pioneered and carried out by men of purpose.

When Highlands was incorporated in 1906 there were only a few other Rubber Companies in Malaya. The men who were sent out to develop the estates continually suffered from malaria and there was hardly a time when half the European Staff were fit enough to work. With their assistance, the way to control malaria was discovered. By 1918 this serious disease was no longer a menace. Today health on the estates is excellent and it is an achievement in which we, as a Company, have played a considerable part.

RECORD OF EXPANSION

During the past fifty years the planted acreage has increased from 2,086 acres of rubber to 9,959 acres of rubber and 3,570 acres of oil palms—a total planted area of 13,529. The paid-up Capital has increased from £188,000 to £469,000 with a balance sheet total of just under £1,300,000. Over half a million has been spent on buildings and machinery, the replacement value of which is £462,000 and the book value in the Accounts is £117,000.

We have now about 2,400 Stockholders which represents an average holding of approximately £200 Stock, and since the inception of the Company over 44,000 transfers have been registered. Dividends and Capital Distributions over 50 years have averaged 14½ per cent.

Above all we have established six thriving communities, totalling nearly 5,000 souls. To this labour force and staff, Stockholders will wish to express their gratitude for a task well done for the benefit of all concerned. A Jubilee party is being held on the estates when the 1,600 children will be entertained.

The last ten years, which covers the period since the war, give some significant figures and the following expenditure is notable:—£338,000 Malayan Export Duty; £1,200,000 wages to the Labour Force; £240,000 benefits to the Labour Force; £421,000 buildings and machinery; £253,000 replanting and new planting; £826,000 UK Taxes; £310,000 net dividends to Stockholders. Surely this is a proud record of service and good citizenship.

The Board's proposal of a final dividend of 1s. 8d. per unit, free of tax, and a bonus of 8d. per unit, free of tax, was also approved.

The retiring director, Mr. H. R. Holmes, was re-elected and the remuneration of the auditors, Messrs W. A. Browne & Company, having been fixed, the proceedings terminated with a vote of thanks to the chairman, directors and staff, both at home and abroad.

1955 ACCOUNTS

The Accounts for 1955 show a profit of £154,500, after deducting £67,500 for depreciation of buildings and machinery. Adding the carry-forward from 1954 and £23,500 Taxation Reserve no longer required, there is a total of £230,600 to be allocated. £91,000 has been transferred to Taxation Reserve, £37,000 to Replanting Reserve, and the dividend of 4s. per £1 Stock Unit requires £54,000, leaving £48,650 to be carried forward.

Perhaps the most interesting figures are those of rubber expenditure and revenue. While our net selling price was exactly 11d. per lb higher at 28.46d., our profit before depreciation, etc., was only 4½d. per lb more than 1954. This Company shares the unique position with few other Rubber Companies of having two strings to its bow. Last year the profit per acre making no allowance for replanting or amortisation—was £7 for palms and £12 for rubber.

MALAYAN GOVERNMENT REPLANTING SCHEME

The Malayan Government realises the need to replace old seedling rubber with high yielding clones and has adopted a scheme whereby Estates may claim \$400 (£47) per acre up to 21 per cent of the planted acreage on December 31, 1954, for rubber which is replanted with high yielding rubber by 1962. The payment is spread over 5 years while the area is out of production. The money to pay for this is provided by increased export taxes, which have in one year already yielded nearly two-thirds of the sum needed to cover the requirements of the scheme.

Another feature is that smallholders owning less than 100 acres are to be given \$600 (£70) per acre for replanting. This offers obvious attractions to those who may be prepared to organise the disintegration of estates and substitute groups of smallholders.

The Malayan Government is aware of the disadvantages of such action, but has not yet taken steps to discourage it. Thus after fifty years the pendulum has swung to the opposite extreme. Whereas in 1906 there literally was a queue of would-be investors waiting for this Company's prospectus so that they might invest their money in the hazardous business of developing fertile but fever-ridden jungle, there is now a list in the *Financial Times* of take-over bids for Rubber Companies. The Victorian virtue of thrift is being killed by taxation and instead there arises the spirit of Elizabethan adventure which rewards the inventor of the new or the liquidator of the old. That political uncertainty and excessive taxation should reduce rubber shares to a yield basis of 20 per cent-30 per cent on dividends and 25 per cent-50 per cent on earnings is deplorable. But those who plant trees for profit must have faith and determination, qualities that have never been lacking on the Board who take a favourable view of the long-term outlook.

The report and accounts were adopted.

A message of greeting was sent from the meeting to the Sultan of Selangor and to the Chief Minister Tunku Abdul Rahman.

WILMOT-BREEDEN (HOLDINGS)

SUCCESSFUL EFFORTS TO DIVERSIFY PRODUCTS

The seventh annual general meeting of Wilmot-Breeden (Holdings) Limited was held on June 13th in Birmingham, Mr D. L. Breeden (Chairman and Joint Managing Director), presiding. The following is an extract from his circulated statement:

Once more record levels of production and profit have been achieved. Investment in new plant was the highest in the history of the Company.

There have been two factors which have influenced the operating conditions in our Birmingham factories, and have been the cause of increased demands on the resources of the Company. First, output has had to be stepped up to supply increased quantities of components for the motor industry. Secondly, a change has taken place in the nature of many of our products. For example, bumpers have increased in size, and require larger formation presses and electroplating plants. Locking mechanisms are required to incorporate new features.

The output of components for the domestic appliance industry increased, and towards the end of the year the whole of this activity was housed in new premises in Birmingham. This move was made possible by the purchase of all the shares of J. G. Wood Limited who were a firm of trade platers.

DIVERSIFICATION OF PRODUCTS

The problem of diversification of the Company's products has for some time been receiving our attention. Whilst this is inevitably a slow process, the success of the efforts which have been made is shown in our order book for aircraft components and projectiles, which now stands at £1,400,000. This improved situation has been facilitated by the acquisition of Telehoist Limited and the new factory at Bridgwater which were referred to in my last review. At Telehoist Limited there has been an increased output of components for the aircraft industry and a greater demand for this company's range of hydraulic devices. At Bridgwater production is rising and plant is being installed for a new project for the Ministry of Supply.

Excellent progress has been made with our new venture in Australia. Recent developments, in the shape of Australian import restrictions, have already justified the steps which have been taken to establish a manufacturing unit in that country.

Two factors are relevant to future prospects. The first is the rising trend of costs, particularly wages. The second is the setback in the motor industry. Against this background, we can report an order book higher than at the same period of last year. Although output may fall temporarily, it would appear unlikely in the long run that the vast capital expenditure programmes of our main customers are based on widely inaccurate assessments of future world demand for cars.

Net income from all sources was £863,906 (against £801,734 for the previous year).

After taxation of £501,129, the amount available for distribution is £362,777 (against £346,424 for the previous year). The Directors recommend a total distribution for the year of 17 per cent on the Ordinary shares.

The report was adopted.

DUNLOP RUBBER COMPANY LIMITED

LARGER TURNOVER

LORD BAILLIEU'S SPEECH

ing machinery, and this, you will understand, means some disturbance of production.

LOWER PROFIT MARGINS

For the reasons I have just described, our profit margins were lower in 1955, and the net profit before taxation represented 1s. 1d. per £ sterling of sales, or 5.3 per cent, compared with 1s. 3d. or 6.2 per cent in the previous year. In considering our profits, particularly in the United Kingdom, you should bear in mind that a relatively high proportion of our tyre sales is made as original equipment sales to the motor, motorcycle, cycle and aviation industries. The prices at which we sell original equipment products are lower than the prices in the replacement sales market, whereas the cost of making the tyre, whether for a new vehicle or in replacement of a worn-out tyre, is the same.

This point should also be borne in mind in connection with the recent Monopolies Commission Report in which it was confirmed—contrary to belief in certain quarters—that profit margins in the tyre industry are not excessive. In fact, considering the capital and equipment involved in the production of tyres, and the effect on costs of fluctuations in the price of natural rubber, I repeat what I have said previously that profit margins are, if anything, too low.

DIVERSIFIED RANGE OF PRODUCTS

I would now like to refer to two aspects of the Company's policy which concern growth. For some thirty years now our consistent policy has been to broaden the basis of our trading, first by diversification as regards products and secondly by broadening the spread of our interests geographically.

This policy of diversifying the range of products manufactured is being pursued. In the majority of these products natural rubber features as a raw material, and accordingly, because prices did not follow the rising trend of raw material costs, the profit margins on these products have been lower than in the preceding year. However, there are other instances where raw material prices have not had such a serious effect, and these types of products are being still further developed with a view to reducing the possibility of lower margins. A great many synthetic rubber and plastics materials are now used, and we have also a wide and diversified range of products which we manufacture for the use of other industries or as component parts.

The second aspect of our policy, namely geographical spread, is with other industries at once a cause and a reflection of the inevitable growth and development in overseas territories, not only in the so-called young countries, but also in the old-established industrial countries where road transport and motoring are encouraged.

OVERSEAS ACTIVITIES

Our overseas activities during 1955 were highly successful. You will already have noted from the Report that exports from the

United Kingdom, which are very considerable, and the trading of our Companies and branches overseas, contributed over two-thirds of the profits of the Group. The maximum assistance is given to these overseas Companies in terms of research, development, personnel, and in the commercial and administrative fields. I am sure you will appreciate that this is not only a benefit from the Dunlop point of view, but it is also in the national interest. From the financial point of view we draw from these Companies, in the form of royalties and dividends, a reasonable return.

You will no doubt have noted that the proportion of their profits retained by subsidiaries, and this particularly refers to overseas subsidiaries, was again a substantial figure at over £1½ million. In this way these Companies become more self-supporting and self-reliant for their future expansion and development.

I might just add at this point that we have not only considerably extended our tyre exports from the United Kingdom during the year, but we have also increased our proportion of the total exports of the industry. This, I suggest, is a very satisfactory position in view of the increasing competitive conditions operating in overseas markets.

RESEARCH AND DEVELOPMENT

I must refer to the Research and Development work of your Group. This matter is of fundamental importance for any industry today, and certainly in the Dunlop Group is a subject constantly under review by your Board. As you know, we have an extensive Research Centre at Castle Bromwich, well equipped with high-class personnel and facilities, and these are being continuously extended. One of our major preoccupations is research into new materials—in fact, it comprises a considerable part of our research activities. Our new synthetic pilot plant at Castle Bromwich will come into production very shortly and is primarily intended for developing new forms of synthetic rubber and similar materials. In the same way a considerable section of these facilities is devoted to research on new synthetic fibres developed by the textile and chemical industries and their adaptation for our products.

In the development of new materials and processes, either for our existing products or entirely new ones, we now have a well-organised development and design section. There is a constant flow of new ideas and processes from this section which find their way into our factories and into the new products we are able to offer to our customers. I would specifically like to mention that we have developed a new method of construction for tyres which may in future be regarded as revolutionary. Put simply, this consists of winding a cord round a drum in a series of geodetic loops. Patent protection for this new process is being taken out, but it will be some time yet before it can be fully developed and applied. This new construction may, if successful, introduce entirely new methods of manufacture for a wide range of tyres in the future.

The report and accounts were adopted.

COMPANY MEETING: ANGLO AMERICAN CORPORATION OF SOUTH AFRICA LIMITED

(Incorporated in the Union of South Africa)

STATEMENT BY THE CHAIRMAN, SIR ERNEST OPPENHEIMER

ANGLO AMERICAN CORPORATION'S
YEAR OF WIDESPREAD ACTIVITY

SIX GROUP GOLD MINES NOW PRODUCING IN O.F.S.

GROUP'S INITIATIVE IN SECURING AGREEMENT ON
AFRICAN ADVANCEMENT

The following are extracts from the Statement by the Chairman, Sir Ernest Oppenheimer, which has been circulated to members:—

THE measure of the prosperity in most of the fields of our activity is to be seen in the substantial increase in the revenues and profits of the Corporation. There was an increase in profit of £953,056. General reserve now stands at £21 million.

NEW GOLD MINES

During 1955 three new gold mines in the Orange Free State in which the Corporation has substantial direct and indirect interests declared their maiden dividends. Now that the six established mines administered by the Corporation, and other mines in which we are interested, in the new gold-field are in production, it is to be expected that the revenue accruing from the Corporation's interests in the Orange Free State will increase.

Similarly, in the Far West Rand and Klerksdorp areas the Corporation's very considerable interests are rapidly becoming revenue producing, and the formal opening on June 2nd of the gold and uranium producer, Vaal Reefs Exploration and Mining Company Limited, marked for this Group the completion of a programme unparalleled in the history of gold mining.

Our Minister of Finance announced in his recent Budget some relaxation of the taxation of the gold mining industry, the relief granted being estimated at £700,000. We in the industry are grateful for this recognition by the Minister of the desirability of reducing the onerous burdens of tax payments the industry carries; and we believe there is a case for further consideration of this question. This might well bring benefits through the stimulus it would give to overseas investment in South Africa.

In another direction, too, our political leaders in this country have the opportunity of stimulating the progress and prosperity of South Africa. The extraordinarily favourable general conditions for the investment of capital in South African enterprises and in new ventures could be enhanced beyond measure by a phase of more conciliatory and more moderate political and racial policies. These would bring immeasurable benefits both in internal pacification and in external respect and approval.

For us in the gold mining industry there is much scope for action. Economy, efficiency, increasing mechanisation must continue to be our aims. But we must also recognise that gold mining is, in these days, only one of several competitors for capital, for equipment, for manpower.

This competition demands that we should do much more than we have done in the

past to publicise gold mining activities; to make known to potential investors the basic values of the industry; to impress the young men of South Africa with the opportunities that mining offers as a career. The full, frank and frequent disclosure of operating results, which has been standard for this industry for many years, is no longer enough. We must actively and positively seek public understanding and public trust.

Among the more noteworthy activities of 1955 were: the bringing to production of two developing gold mines, Lorraine and Free State Geduld; the putting into effect of schemes for providing additional ventilation and an expansion of production at several of the producing mines in the Orange Free State; remarkable progress in the preparation of the Vaal Reefs mine for production; gigantic surface excavations in preparation for opencast operations at the Nchanga copper mine in Northern Rhodesia; continuation of the preparations for the production of copper at the new Bancroft mine in Northern Rhodesia; the expanded production of the collieries and the improvement of the town at Wankie in Southern Rhodesia.

The Group's collieries, operating with a high standard of efficiency, contributed to the expansion of the coal trade in South Africa, despite the limitations arising out of transport difficulties.

RHODESIAN INTERESTS

One of the most important developments in the history of the Corporation has been the decision to expand our office in Salisbury in Southern Rhodesia. In the ten years after the end of the Second World War the Rhodesian interests of the Corporation rapidly assumed increasing importance. The difficulties of the day-to-day administration of these interests from the head office in Johannesburg multiplied; and when the transfer of the registered offices of the principal Northern Rhodesian companies of the Group from London to the Federation took place in 1954, our thoughts turned to the advantages of establishing more direct administrative machinery, with ancillary technical services, close to, or on, the Copperbelt. Almost at the same time the final decision to establish the Federation of the Rhodesias and Nyasaland was taken.

Here was a fine new country awaiting development through enterprise and offering potentially rich rewards to those willing to apply energy and technical and financial knowledge to the exploitation of the territory's known or as yet undiscovered mineral and other resources.

To the considerations that were prompting us towards some measure of administra-

tive decentralisation from Johannesburg were now added the compelling thoughts that we should not be content with exploring the mineral and other business possibilities of the Federation at secondhand or by remote control, that we should establish a strong team of fully qualified administrative and technical staff in Salisbury, the Federal capital. The decision was accordingly taken, and at the end of the year some 45 members of our Johannesburg staff moved to Salisbury where an office with a resident director was already established.

Something more should, perhaps, be said about this Corporation's links with the Federation. Circumstances have established strong ties between this Group and the territories that Cecil John Rhodes brought into the Commonwealth. An inherited tradition almost demands that the Corporation, which has dominant interests in Rhodes's company, De Beers Consolidated Mines, should continue his policy of fostering the development and settlement of the Rhodesias. Besides, it is good business. Our early enterprise has drawn, and continues to draw, highly satisfactory rewards from Northern Rhodesia.

Typical of the big ideas for the development of the Federation's resources has been the decision to proceed with the construction of the Kariba Hydro-Electric Project. This vast scheme, involving an expenditure not yet finally assessed but estimated at £113 million, and impounding waters to form a lake 140 miles long and at one point 20 miles wide, will provide power resources that will not only solve the long-standing and accumulated power problems of the copper mining industry but should stimulate the establishment of enterprises dependent upon the availability of cheap electricity.

It has, however, become clear that general industrial and commercial development in the Federation will be limited and the ambitious planning will be stultified unless rapid progress is made with the provision of greatly expanded railway transport facilities. The lack of adequate railway facilities for the transport of coal has, intermittently over a long period, adversely affected the operations of the copper mines and continues to do so, without much prospect of early improvement.

Deliveries of coal to other consumers have been similarly restricted, although the Wankie Colliery Company had fulfilled, one year ahead of schedule, its undertaking to establish an output capacity of five million tons of coal a year, a tonnage adequate for all purposes.

In June, 1955, a new company, Anglo American Rhodesian Development Corporation Limited, was formed to be the agency through which the Corporation and its associated companies could assist in the

Cosmas Bulaye, a sampler at Rhokana, with Haswell Lungue, his assistant. They are doing one of the jobs to which Africans on the Copperbelt have recently been promoted.

financing of public services in the Federation. The most practical assistance that this company could give obviously lay in the sphere of railway transport; and our own interests in the Copperbelt and at Wankie would be served at the same time.

After negotiations with the Rhodesia Railways, an agreement was reached whereby the company undertook to purchase trucks to the value of £5 million and to hire them to the railways for 25 years. In addition the new company has taken over responsibility for the £1 million loan that had already been made to the railways by Rhodesian Anglo American Limited.

Towards the end of 1955, with the Kariba power project beginning to take practical shape, the question of how this and other urgent schemes were to be financed had to be determined. We decided that our Group's business interests, combined with the general policy we have adopted of using some of the Group's resources in promoting the development of the Federation, justified our offering to lend the Federal Government large funds for both power and transport projects, and, in the result, Rhokana Corporation and Nchanga Consolidated Copper Mines, together with two companies of the Rhodesian Selection Trust Group, whose interests in Northern Rhodesia run so closely parallel with our own, have agreed to make loans totalling £20 million. In addition, all the Copperbelt producing mines will, in due course, accept a surcharge on power from Kariba until a total of £10 million has accrued from this surcharge to the Kariba authority.

HUMAN RELATIONSHIPS

We are, of course, vitally interested also in the human and political relationships developing so rapidly in the new Federation. One of these matters is the general subject of what has become known as African advancement. The African employees of the copper industry in Northern Rhodesia are emerging from their primitive existence into a civilised world in which industrial skills, wage rates, employment conditions, trade union organisation, civic duties and political rights have been developed over many generations of trial and tribulation.

To all these conditions of modern industrial civilisation the African mineworkers are newcomers; but by becoming absorbed into the concentrated industrialism of the

Copperbelt and having been given the right of trade union organisation amongst themselves, they have fallen heir to all the advantages that European initiative and enterprise have brought to this part of Southern Africa. Living now in an area where the general standard of living is probably unrivalled in any other mining community, the African mineworkers cannot but be acutely aware of the opportunities the copper industry offers them for bettering themselves and their families.

OPPORTUNITIES FOR AFRICANS

Yet they are not always equally aware that modern industry demands certain skills—skills that, in some cases, can be acquired only after long training and much experience. It is, therefore, not surprising that the aspirations of African mineworkers tend to run ahead of their individual abilities to perform efficiently this or that type of work; nor is it surprising that they become impatient of delays or hindrances that seem to them to spring out of the European miners' reluctance to grant the Africans opportunities to advance beyond their present stage of employment in the industry.

Nevertheless, it has come to be recognised that African mineworkers should be given opportunities for more responsible work in the industry; and there is evidence that, with proper training, there are Africans who can qualify for work requiring skill, judgment and responsibility.

For the European employees these developments have brought real anxiety. They have seen the emergence of unskilled Natives as competitors in their own fields of employment, as a potential threat to their own high wage and employment conditions. These European employees have had it in their power to resist these developments; by withholding their own labour and their own skills, they could make it certain that the Copperbelt mines could not operate—for there were, and there still are, no Africans who could even begin to operate the complex organisation of this very large industry.

They could also resist effectively in another way; they could passively sit back and refuse to train the Africans seeking to qualify for more responsible work, and in various other ways frustrate any scheme that was brought in without their co-operation. Few people who have not lived

in Southern Africa can appreciate the depth of feeling such circumstances can and do engender. The European employees did, however, recognise the justice of the case for some measure of African advancement.

When we first considered this complex problem, we came to the conclusion that the path of progress lay in the direction of trying patiently to persuade our European employees to co-operate in working out a practical scheme for giving African employees opportunities for more responsible work. We believed that to attempt any form of compulsion would invite a long and angry struggle, with an aftermath, whatever the result, of untold bitterness.

Accordingly we gave our European employees assurances that we would do nothing except with their agreement and co-operation; and we repeated these assurances at intervals throughout the long negotiations, during which we constantly and deliberately chose the way of persuasion and avoided anything that might savour of compulsion. It was these assurances and the final recognition by the European Mineworkers' Union that we had no intention to force the issue that led to a calm and ultimately successful discussion of a plan for introducing African advancement. An agreement between this Group and the Union was signed in July last year; and subsequently it was, with minor modification, extended to cover the whole Copperbelt industry.

In referring at the outset of this statement to the gratifying prosperity this Corporation had enjoyed in 1955, I had in mind, amongst other things, the record year enjoyed by the diamond industry, with which this Corporation has such close associations and in which its interests are very large. In 1955 sales of gem and industrial diamonds reached the record total of £74,288,695. The heavy demand for gem diamonds in particular has exceeded the present capacity of producers to supply; and there is a shortage which increased production in South West Africa and in Tanganyika during this year will to some extent alleviate.

INSTITUTE OF AFRICAN GEOLOGY

We have also established, in collaboration with the University of Leeds, an Institute of African Geology at that university which is known the world over for the high standing of its geological faculty under Professor W. Q. Kennedy. The Institute has the twofold aim of stimulating fundamental research into the nature of ore deposits generally and African geological structures in particular, and also of providing postgraduate research geologists for active field work in Africa. As part of this project, the Corporation has undertaken to endow a number of fellowships and scholarships for geological research work, and these are available to graduates from the United Kingdom, South Africa, the Central African Federation and elsewhere.

In conclusion, I should like to express my warm appreciation, and also the Board's of the loyal and efficient service rendered to this Corporation throughout the year by its administrative and technical staffs. The spirit of enthusiasm to be found in our organisation is most gratifying and is an important factor in our continuing progress.

Copies of the full statement and the Corporation's annual report and accounts may be obtained from the London Office, 40 Holborn Viaduct, E.C.1.

ASSOCIATED NEWSPAPERS LIMITED

LORD ROTHERMERE'S STATEMENT

The Fifty-first Annual General Meeting of Associated Newspapers, Limited, will be held on Friday, July 6th, in the Memorial Hall, Farringdon Street, London, E.C.4.

The following is from the statement by the Chairman:

During the year covered by the accounts your Company had to raise the selling prices of the *Daily Mail*, *The Evening News*, and *Sunday Dispatch* in order to cover the increase in distribution and operating costs and the rise in the price of newsprint.

We started the year with a loss of £400,000 caused by the newspaper strike and there were extra expenses caused by a railway strike which threatened the whole newspaper distribution system. These losses and increased costs were covered by the increase in selling prices and additional advertisement revenue so that we are able to report a profit slightly in advance of a year ago.

The increase of £3 10s. a ton in the price of newsprint dating from January 1st, will cost the Company £425,000 in a full year. Both distribution and operating costs are more likely to increase than decrease so that any advantage gained by increased selling prices may well disappear during the present year.

More newsprint has become available so that in the last few months some newspapers have been able to increase their sizes to the benefit of reader, advertiser, and publisher. Due to the great demand for advertising in the *Daily Mail*, *The Evening News* and *Sunday Dispatch* we have been able to take full advantage of this so that our revenue from advertisements has reached the highest level in the history of the Company.

The increased newsprint supplies should be maintained during the present year, with a small increase the year after, and a more substantial one in 1958. It is hoped that world supply and consumption of newsprint should then be in balance.

We believe it to be in the interests of the newspaper industry and of the country as a whole that the price of newspapers should not rise further than is absolutely necessary. I hope that the recent increase in price will last for a long time ahead, but if wages, distribution costs, and the price of newsprint were to continue to rise during the next two years it would become very difficult, if not impossible, to avoid a further increase.

It is in the interests of all those who are engaged in the newspaper industry itself, or in producing its principal raw material newsprint, to avoid any untimely increase in the price of newspapers that might lead to lower circulations.

ACCOUNTS

The Trading Profit at £2,302,606 shows an increase of £61,683 over a year ago. The income from Anglo-Newfoundland Development Company, Limited, shows little variation; the increased income from other investments reflects the large holding of Treasury Bills during the year. In the Company's Balance Sheet there are two new items to which I draw your attention. We have made a start on re-equipping our Press Rooms and consequently, in Current Assets

you will find an amount "Payments on Account of New Presses."

The second item is an investment in Associated-Rediffusion, Limited, the company formed to provide programmes on the London Commercial Television Station. As anticipated, considerable losses have been incurred in the initial stages.

The lower cash resources of the Parent Company reflects in the main this investment in television, although the Consolidated Balance Sheet shows that the financial resources of the Group remain adequate.

COMMERCIAL TELEVISION

You will recall that I told you last year of the formation of Associated-Rediffusion Limited. During the course of the year the capital was subscribed, and believing in incentives I arranged that the four Directors appointed to the Board of Associated-Rediffusion as our representatives should be offered 5 per cent of the shares allotted to this Company, and this amount they have taken up.

The new station opened on September 22, 1955, and for the first five months, with no other weekday stations with which to network, Associated-Rediffusion had to provide all its own programmes. Now there are two further stations operating, and as each new station comes into operation costs should show a progressive reduction.

When the London station first opened, it was estimated that less than 200,000 sets were capable of receiving commercial television, and although this figure has now risen to over 750,000 it is still less than half the total sets in the London area. The number is increasing daily, and with the larger cover due to the overall improvement in the programmes and programme planning, there is a noticeably growing incentive for advertisers to use this new medium.

These facts, and the results already obtained by advertisers, encourage us to view the future with confidence.

I should like to take the opportunity of thanking all those advertisers who in the early days have had faith in this new medium and were prepared to support it knowing the initial limitations both as to coverage and size of audience. I am sure that this faith will bring its own reward and the new medium, by creating fresh markets, will play its part in the development and expansion of industry in this country.

It is interesting to record that the *TV Times*, which was launched by Associated-Rediffusion Limited at the commencement of transmissions and now contains all the ITA programmes in London, Birmingham, and Manchester, has been immediately successful in every way. It has already gained a circulation of over 800,000 copies and the demand shows a steady increase week by week.

DAILY MAIL

On May 4, 1956, the *Daily Mail* celebrated its Diamond Jubilee. On that day the editorial concluded: "We have striven to present the truth, to have the courage of our convictions and to serve our readers and

generation to the best of our ability. These watchwords have sustained the *Daily Mail* through 60 tremendous years, and we are confident will carry us through many more."

Large papers have enabled us to cover the news more abundantly both at home and abroad and the *Daily Mail* has given the public many of the most interesting and exclusive stories of the year.

Just recently we have been able to make available to advertisers the famous *Daily Mail* Whole-Page Advertisement, a custom which had to be discontinued on the outbreak of war. This policy has been wholeheartedly welcomed by the advertising world.

THE EVENING NEWS

Whilst the increase in price of National morning papers had no appreciable effect on their sales, the position, as I mentioned last year, was very different with the evening papers. Although the overall drop in sales has been about 11½ per cent, *The Evening News* has fully maintained its share of the total sales and remains the world's best-selling evening newspaper, with its family appeal as strong as ever.

One of the great features of *The Evening News* is its classified advertisements, up to 1,000 of which are handled every day.

SUNDAY DISPATCH

The *Sunday Dispatch* has enjoyed the most successful year in all its 155 years' history. Advertisement revenue has reached an all-time record and sales have been maintained at a high level, despite intense competition and a further necessary increase in price last October. Writers of world-wide reputation contribute regularly to its columns and its service of news and sports reports remains unsurpassed.

DAILY SKETCH

Just a year ago I told you that the sale of the *Daily Sketch* in April, 1955, had passed the million. In April, 1956, it was 1,135,000. This is the best reflection I can give you of the manner in which the *Daily Sketch* continues to progress, for this increase has taken place at a time when most other circulations were stationary. More and more advertisers are supporting this paper with its vigorous journalism.

PROVINCIAL NEWSPAPERS

Another year's successful trading has been enjoyed by all our Provincial newspapers, and I am glad to be able to record that all their circulations have increased during the year. Each of our provincial companies now has its own pensions scheme in full operation.

STAFF

Without the loyal co-operation of all our staffs the satisfactory results shown in the Accounts could not have been achieved, and I have much pleasure in thanking them, both on your behalf and on behalf of the Board, for all their good work in the past year.

UDDEHOLMS AKTIEBOLAG

UDDEHOLM, SWEDEN

The Annual General Meeting of the Uddeholms Aktiebolag was held at Karlstad on June 2nd, where the usual report was presented by the Board of Directors:

Uddeholm is situated in the West of Sweden and its main activities are based on the traditional raw materials of the province, iron ore, forests and water power. The activities comprise the manufacture of iron and steel, hot-rolled and forged, cold-rolled and drawn; sponge-iron; ferro-manganese, ferro-alloys; rolled and drawn tubes; hard metal; carriage and other springs; wire ropes, etc.; sawn and planed timber, sulphate and sulphite pulp with by-products, paper and cardboard, electro-chemical products.

The main activities of the Company are centred on the mines at Persberg, Nordmark, Taberg, etc., the sponge iron works at Persberg, the steel works at Hagfors, Nykroppa, Degerfors, the cold-rolling mills at Munkfors, the tube mills at Storfors, the wire-ropes mill at Blombäck, the saw mill, pulp mills, paper mill, electro-chemical factories, etc., at Skoghäll and the sulphite mill at Göta.

The movement of business in 1955 showed an overall increase as compared with previous years and could have been even bigger but for a shortage of labour and water power. On the timber side prices have been steady, while prices for iron and steel have shown a rising tendency. Particularly in the export markets, however, there have been certain difficulties in attaining prices which give a reasonable margin. At the end of 1955 the supply of orders was satisfactory.

The average number of people employed by the company and its wholly owned Swedish subsidiaries during 1955 was 15,710. Salaries and wages amounted to 158.2 MKr. Investments amounted to 53.3 MKr. as compared with 44.3 in 1954.

PRODUCTION FIGURES

The total production within the Uddeholm Group of companies amounted to:

	1954	1955
Electrical power, 1,000 kWhs	829,000	671,000
Timber from own forests, cubic feet	25,000,000	25,300,000
Finished steel, tons	161,189	174,812
Sawn timber, stds.	26,823	24,408
Sulphate pulp, tons	64,862	70,208
Sulphite pulp, tons	92,763	98,910
Paper, tons	41,455	45,414
Chemical products, tons	70,619	77,682

The invoiced value within the group amounted to:

	1954	1955
Iron and steel products ..	202.6	240.5
Forestry products	180.0	199.8
Other products	23.3	41.0
Total, million Kr.	405.9	481.3

IRON AND STEEL SALES

The Company's sales of tool steel, high-grade wire rods, cold-rolled high-grade steel and manufactured goods, stainless and acid-proof steel were well maintained, and production has been directed towards constant improvement in quality. Exports rose from 10 per cent to 43 per cent of the total sales of iron and steel during 1955.

The Company's sales offices at Birmingham, Düsseldorf, Brussels, Paris, Copenhagen, New York, Cleveland, Los Angeles, Toronto, Sao Paulo and Rio de Janeiro have done well.

FORESTRY PRODUCTS

The total quantity of Forestry products increased somewhat during 1955.

About 25,300,000 cu ft were taken from about 560,000 acres of the Company's own forests, although the whole of the new growth was not utilised.

WATER POWER, ETC.

During the year 671 million kWh—against 829 million kWh the year before—were produced at the Company's own power stations. This did not meet demand from the works. The figure for 1955 was the lowest since 1948, due to the extremely dry summer of 1955. The work on the new power station at Letten has proceeded and the station will be taken into use during 1956.

GROSS PROFIT

The total gross profit rose from 63.6 MKr. in 1954 to 65.1 MKr. in 1955. The book value of the stock has risen 8 MKr., but the stock reserve is on the whole unchanged. The stock is valued at about 30 per cent.

The Profit and Loss Account includes the following items:

	1954	1955
Depreciation	28.0	27.3
Interest, etc.	3.4	4.4
Taxes	20.4	16.2
Investment reserve	—	5.0
Net profit	16.0	17.0
	67.8	69.9

SUMMARY OF BALANCE SHEET IN MKr.

	1/1/1955	31/12/1955
Current assets:—		
Cash, bank own	50.7	42.2
bonds		
Receivables from clients and subsidiary companies	56.6	76.4
	107.3	118.6

ALLOCATION OF PROFITS

The Board and the Managing Director propose that the profit for the year of Kr. 17 million and balance of profits remaining from previous years of Kr. 20,589,781 should be allocated as follows:

To shareholders, a dividend of Kr. 7.— per share against Coupon No. 63 (equivalent to 4 per cent of the Company's own Capital, 11,550,000 —
Carried forward to new account 26,039,781.—

The capital stock of the company has been raised during 1955 by Kr. 61,666,700 to Kr. 165 million. A new issue of shares amounted to 35,833,400. It was issued at 130 per cent—the paid-in surplus went to the legal reserve. At the same time Kr. 25,833,300 of the unappropriated surplus was transferred to the share capital. All shares issued during 1955 are entitled to the dividend for 1955.

At the General Meeting Mr Nils Danielson, who has been Managing Director of the Company since 1943, retired and was succeeded by Mr Wilhelm Ekman.

Uddeholm, June, 1956.

ATLAS ELECTRIC AND GENERAL TRUST, LIMITED

A SUCCESSFUL YEAR

The forty-eighth annual general meeting of Atlas Electric and General Trust, Limited, was held on June 13th in London.

The Right Honourable Lord Remnant, MBE, chairman, in the course of his speech, said: Stockholders will agree that the Revenue Account shows a most satisfactory result of the year's operations. Gross investment income of £986,356 received during the year shows an increase of £136,821 or 16.1 per cent. Then we have additional income amounting to £70,477 in respect of Double Taxation Relief.

Our total gross income of £1,064,477 exceeds, and considerably exceeds, the £1 million mark for the first time, and is no less than £203,991 greater than in the previous year. Net Revenue after taxation was £504,553, or £108,617 more than the previous year. To this is added the balance of £202,567 brought forward, making a total disposable amount of £707,120. After transferring £125,000 to General Reserve and £40,000 to Contingencies Reserve, providing £120,750 for the 5 per cent Preference dividend and £72,450 for the interim dividend of 3 per cent on the Ordinary stock, it is proposed to pay a final dividend of 6 per cent, absorbing £144,900, leaving a balance of £204,020.

Your directors are well aware that the dividend of 9 per cent is considerably higher than was expected. It has been the policy of the Board to increase the dividend year by year where results justified their doing so, but always to a moderate extent so as to ensure that the dividend could at least be maintained in future years. Last year, however, was one of exceptional prosperity for your company. In these circumstances your Board felt it to be right to make a considerably larger distribution to the Ordinary shareholders, especially as it represented an even smaller percentage of earnings than did the dividend of 6½ per cent paid in the previous year.

The Investments stand in the balance sheet at £10,888,621 and are valued at £16,071,985, showing an appreciation of £5,183,364, or 47.6 per cent. The appreciation last year was 45 per cent. The net asset value of the Ordinary stock is 47s. 1d. per £1 unit, which compares with 44s. 6d. on the previous March 31st.

THE PROSPECTS

It was never so difficult as it is today to forecast the probable course of events as affecting investors. At home we see costs, particularly labour costs, continuing to rise without anything like a fully-compensating increase in productivity. We have the paradox of extensive capital investment being necessary to improve and cheapen production, whilst the excessive demand for materials and labour, which a large capital programme involves, tends to accentuate inflation. Yet our great manufacturing industries, with much solid achievement to their credit, show evidence of great vitality and of dynamic growth. Order books are full, in some cases for years ahead.

It is reasonable to expect that the net revenue of the current year will not be less than that of last year, but it cannot be expected to show anything like the same rate of growth. Any further increase in the dividend, therefore, will probably be of modest amount.

The report and accounts were adopted.

M. F. NORTH LIMITED

The forty-fourth annual general meeting of M. F. North Limited was held on June 11th in London, Mr C. W. Black, JP, MP (the chairman), presiding.

The following is an extract from his circulated statement:

I have no doubt that the Shareholders will regard the result of the Company's operations during 1955 as being very satisfactory. The Company has been reaping the reward of the continuous work of all concerned in maintaining the high standard so long associated with the North Hotels.

The profit on trading rose to a record figure of £109,251, which was more than £16,000 above the corresponding figure for the previous year and was a record in the history of the Company.

Your Directors decided to transfer to General Reserve an amount of £18,000, which will increase that Reserve to a total of £60,000, and to increase the Ordinary Dividend to a total of 23 per cent for the year (as compared with 20 per cent) by recommending a Final Dividend of 15 per cent less Income Tax.

With regard to the future, I have no reason to doubt that the good record of the Company will be maintained. Unfortunately, rising costs and additional taxation continue to bear very heavily upon Hotels and compel reluctant but inevitable increases in Tariffs. Furthermore, a new burden has been added by the general revaluation of property.

You may rest assured that no effort will be spared to maintain satisfactory results in your Company's operations.

The report was adopted.

AB. GÖTAVERKEN

GOTHENBURG, SWEDEN

(Ship Builders, Ship Repairers, Engineers)

The Fiftieth Annual Meeting of AB GÖTAVERKEN was held in Gothenburg on May 15th, Mr Björn Prytz, Chairman, presiding. The following is an extract from the report circulated with the accounts:

Although trading was slow during the first half of the year a marked improvement in business took place in July, with numerous inquiries, particularly concerning tankers, and several contracts were signed. For the rest of the year business continued at a satisfactory level.

In order to achieve a better relationship between share capital and turnover it was decided to issue 110,000 fully paid up shares of Kr 100:—apiece partly out of taxed reserves for distribution to existing shareholders at a ratio of one share for each three shares held.

PRODUCTION

During 1955 nine merchant vessels with a combined tonnage of 154,460 dwt were delivered, viz.:

- One turbine tanker of 34,320 dwt;
- One motor tanker of 23,600 dwt;
- Three motor tankers of 17,400 dwt;
- One motor bulk cargo carrier of 13,040 dwt;
- One combined ore-oil tanker of 12,360 dwt;
- One motor cargo vessel of 10,460 dwt;
- One motor cargo vessel of 8,520 dwt.

In addition, one destroyer with a displacement of 2,750 tons was delivered to the Swedish Navy.

Nine vessels with a total tonnage of 180,550 dw were launched in 1955. Over 150 vessels were serviced in the company's floating docks.

MARKET

23 new contracts were signed, 13 with Swedish shipowners and ten with foreign companies.

The order book at present shows 886,880 dwt of new shipping, in addition to satisfactory orders for diesel engines, turbo-compressors and high pressure boilers.

Steel prices continued to rise through-

out 1955 and are now at a very high level, no doubt due to the heavy demand for plate setting in during the latter part of the year. The manpower situation has improved somewhat but can still be regarded as strained, especially in the skilled grades. However, the company is now beginning to benefit from its large scale training schemes for apprentices and older workers. The average number of workers was 4,827 and salaried employees 1,143. Wages, salaries and directors' fees totalled Kr 80,591,335, as against Kr 74,804,049 during the previous year.

SUBSIDIARIES

The following are wholly owned subsidiaries of the company:

- Öresundsvarvet AB,
- AB Göteborgs Skeppsdockor,
- Rederi AB Zenit,
- Götaverkens Fönster AB.

During the year Götaverkens Dockaktiebolag has been absorbed by the parent company.

Group profits totalled Kr 7,937,283, of which it is suggested that Kr 1,415,550, shall be set aside for reserves and contingencies. Total company-owned capital amounts to Kr 65,358,679.

PROFITS

The company's net profits for 1955 amount to Kr 6,992,675, after allocating Kr 1,300,000 to employee pension funds and social service schemes, which added to Kr 4,001,212, representing undistributed profits brought forward from the previous year and Kr 4,500,000, being taxed accrued profits carried over makes a grand total of Kr 15,493,887 available for distribution.

It is proposed to allocate this amount as follows:

	Kr
To new share capital ...	11,000,000
Reserves	1,250,000
Dividend of Kr 8 per old share	2,640,000
Balance carried forward	603,887

Total: Kr 15,493,887

The report and accounts were adopted.

ALBRIGHT & WILSON LIMITED

(Manufacturers of Industrial Chemicals)

EXPANSION OF TURNOVER

INCREASING COSTS

MR KENNETH WILSON'S STATEMENT

The sixty-fourth annual general meeting of Albright & Wilson Limited was held on June 8th at the registered office of the Company, Oldbury, near Birmingham. Mr Kenneth H. Wilson, OBE, JP, the Chairman, presided.

The Secretary, Mr C. N. Wilson, read the notice convening the meeting.

The following is an extract from the Chairman's Statement:

THE ACCOUNTS

When the Group results for the first six months of 1955 were announced last September, it was stated that the market outlook was good and the expansion of turnover was expected to continue. Reference was also made to the problem of rising costs in the United Kingdom. The final results for the year confirmed expectations, in that turnover continued to rise but profit margins tended to decline.

Trading Profit for 1955, at £3,200,000 showed only a small increase over the 1954 figure of £3,134,000. Charges for depreciation increased by £135,000 from £1,264,000 to £1,399,000, reflecting the expansion of productive facilities by our subsidiaries both at home and abroad. Group taxation rose by £32,000, an increase of £190,000 in overseas taxation being partly offset by a reduction of £158,000 in United Kingdom charges. These factors, after allowing for minority interests, left the Net Profit attributable to the stockholders of Albright & Wilson Limited almost unchanged at £859,000, compared with £860,000 in 1954.

The uncertainties of general economic conditions in this country, and the possible effects on the affairs of the Company of recent Government measures to combat inflation, combine to make it particularly difficult to predict the outcome of the present year's trading. The Group results for the first quarter, and forecasts for the rest of the year, are satisfactory, but I must add that in the United Kingdom the prices of our principal raw materials are still rising, as are other elements of cost. I feel that under these circumstances it would be unwise to express too great a confidence in the immediate future, despite the encouraging results to date.

During the year, the issued Ordinary Capital of the Company was increased from £2,028,000 to £4,564,000 by the capitalisation of reserves in June followed by the rights issue in November. An interim dividend of 5 per cent was paid in September, and it is proposed that the second interim dividend of 13 per cent, paid on May 15th, should be confirmed as the final dividend for 1955, making 18 per cent for the year. The second interim dividend is at the rate forecast at the time of the rights issue, and, as then stated, no dividend in respect of 1955 is payable on the stock resulting from that issue.

REVIEW OF GROUP ACTIVITIES

Albright & Wilson Limited.—In the manufacture of phosphorus the most important costs are those of electricity and phosphate rock, both of which increased substantially during 1955. The first was affected by the

sharp increase in the price of coal, and the second by the continued rise in Atlantic freight rates, which have doubled since the beginning of 1954. During 1955 we were also adversely affected by a strike in the Florida phosphate fields, which lasted from July until September. These factors, and the general rise in wages and prices in the United Kingdom forced us to raise our selling prices in September last, after maintaining them unchanged for eighteen months. In the short term, cost increases may often be absorbed through higher turnover; but sooner or later, selling prices must reflect the continuing pressure of inflation on operating margins.

Proban Limited, in which Albright & Wilson Limited and The Bradford Dyers' Association Limited are equal partners, is actively developing a durable anti-flame finish for textiles, which is attracting growing attention from industry and the public.

Marchon Products Limited.—The entry of Marchon Products Limited into the Group took place almost at the end of 1955 and consequently consolidated profit for the year has been very little affected by this event. A full account of this young and energetic Company is given in the Annual Report, and I will confine my remarks here to saying that the association of the activities of Marchon Products with our own will be a source of permanent strength to the whole Group.

Electric Reduction Company of Canada Limited.—Sales and profits of our Canadian Company increased substantially in 1955. With the completion of the new phosphorus works at Varennes, Quebec, we are now planning factories at Vancouver, BC, and Hamilton, Ontario. These moves are in pursuance of our policy of developing our interests in Canada to keep pace with the rapid expansion of the country's economy; and of reducing costs by siting our developments as near as possible to the centres of consumption.

Oldbury Electro-Chemical Company (USA).—I am pleased to be able to report that sales and profit of our American Company in 1955 also showed a marked rise. In particular, the new works at Columbus, Mississippi, increased its output of sodium chlorate and phosphorus pentasulphide, despite stiffening competition. The information we have for the current year indicates that this successful trend is continuing, a result the more satisfactory since our company is one of the smaller units in the American chemical industry.

Albright & Wilson (Australia) Pty. Limited.—In Australia, as in Canada, the vigorous movement towards industrial self-sufficiency has called for further expansion of our manufacturing facilities. Our factory at Yarraville, where a new phosphorus furnace was brought into operation during the year, is manufacturing an increasing range of chemicals to meet the demands of new and expanding industries.

The Report and Accounts were adopted and the dividend as recommended was approved. The retiring directors, Mr K. H. Wilson, Mr J. C. Christopherson, Mr W. E. K. Piercy, Sir Henry Tizard and Mr F. Schon, having been re-elected, the proceedings terminated.

LOBITOS OILFIELDS

RECORD PRODUCTION

The forty-eighth annual general meeting of Lobitos Oilfields, Limited, was held on June 12th in London, Mr F. C. Bowring (chairman) presiding.

The following are extracts from the circulated Chairman's Statement:

Accompanied by the General Manager, I visited Peru last February. The satisfactory development of the property continues and it was of advantage to discuss with the Field Manager and his staff the present work in progress and plans for the future.

PRODUCTION AND DRILLING

Crude Oil production continued to increase, and reached a record figure of 522,719 tons. This compares with 490,338 tons for the previous year, representing an increase of 6.6 per cent over that year.

The Peruvian Company's share of the production from the Areas of Joint Development amounted to 66,318 tons in the case of the "Strip" Area, and 58,230 tons in the case of Area "A," thus the total crude oil produced by the Peruvian Company together with their share under the Areas of Joint Development, totalled 647,267 tons.

The increase in production came from the El Alto Field, resulting from new discoveries and the successful completions of several deep wells. The extent of the deep producing area in this part of the Field has to be determined, but it is not unpromising.

The Production Department continued the programme of replacing the mechanical pumping of wells by gas displacement pumping. At the end of the period under review over 40 per cent of the production of the Field was being lifted by this method. The footage drilled during the year totalled 234,377 feet compared with 206,152 feet for the previous year.

The consumption of refined products within Peru continued to increase, but less rapidly than in the previous year. Your subsidiary company's contribution to the domestic market increased from 65 per cent of their production in 1954 to 66 per cent for the year 1955.

The Refinery operated satisfactorily throughout the year, and 188,690 tons of crude oil were processed, an increase of 10,890 tons over the previous year.

Despite the continued intense competition in the marketing of refined products in the United Kingdom and Eire, your three distribution companies had a satisfactory year and more than maintained their respective market positions.

ACCOUNTS

The Gross Profit of the Group amounts to £1,243,085 (£1,224,490 in 1954) after writing off largely increased development expenditures in Peru of £476,752.

The Gross Profit of Lobitos Oilfields, Limited is £744,603 and, after charging Taxation of £304,248 excluding Distributive Profits Tax, £440,355 is available for allocation.

Your Board recommends the payment of a Final Dividend of 8 per cent (less Income Tax) which together with the Interim Dividend of 6 per cent represents a total distribution of 14 per cent out of the trading profits of the year plus a special distribution of 2 per cent from the Investments Reserve out of profits realised on the Sale of Investments.

The report and accounts were adopted.

J. LYONS AND COMPANY LIMITED

"TINY FRACTIONS OF PROFIT ON MILLIONS OF SALES"

MR M. GLUCKSTEIN'S REVIEW

The Annual General Meeting of J. Lyons and Company Limited will be held on July 3rd at The Trocadero Restaurant, Piccadilly Circus, London, W.1.

The following is the statement by the Chairman, Mr M. Gluckstein, which has been circulated with the Report and Accounts for the year ended March 31, 1956:

The net profit for the year is £762,261 which compares with £728,366 for the previous year.

We propose the payment of final dividends on the Ordinary, the "A" Ordinary and the Proportional Profit capital at the same rates as last year which, with the interim dividends paid in December last, will absorb £406,922. Preference and Preferred Ordinary dividends paid and accrued amount to £288,264.

The balance of the net profit for the year is £67,075; to this has to be added £146,437 brought forward from the previous year and £13,206 in respect of tax adjustments for earlier years, making a total of £226,718 to be carried forward in the Profit and Loss Account.

The balance from trading account is £3,613,593 compared with £3,773,408. I referred last year to the fluctuations there had been in world market prices of tea and to our desire to be able to reduce the prices of our packet tea at the earliest possible moment. Since then reductions in prices have been made and the provision we then thought it prudent to make went most of the way towards meeting the cost, the balance being absorbed in the accounts now before you. There has also been during the year some exceptionally heavy expenditure on renovations in our catering establishments to which I shall refer later.

Turning to the Company's Balance Sheet, you will see that the issued 6 per cent Preferred Ordinary stock now stands at £650,000. 85,154 Preferred Ordinary shares, which on issue were converted into stock, were allotted during the year in part consideration for the acquisition of all the shares in W. Lant & Company Limited and its associated companies. These companies are mineral water manufacturers operating in the Midlands.

The only other item which I think calls for comment is Stock in Trade, which shows a substantial variation, being down from £11,604,758 to £7,494,477 mainly on account of tea.

We have continued the development of Sunfresh orange drink and have also introduced Citroze, a new lemon glucose drink. The acquisition of W. Lant & Company Limited and its associated companies, to which I have referred, was made particularly for the purpose of developing Sparkling Sunfresh in the Midlands.

SUCCESSFUL NEW SPECIALITY RESTAURANTS

In our Corner Houses we have continued the policy of introducing modern speciality restaurants, of which we are particularly

proud. During the year we have opened at the Coventry Street Corner House "The Grill and Cheese," at the Strand Corner House "The Bacon and Egg" and at the Oxford Corner House "The Bacon and Egg," "The Wimpy," "The Restful Tray" and "The Trolley." The cost of providing them, as I have already said, is heavy, but we are satisfied that they are essential to meet changes in public demand and their appeal is already apparent.

In our Teashops in these days there has to be considerable expenditure directed to the maintenance of the up-to-date standards of service and amenity our customers expect of us and much work is being done. We are also introducing into more of them self-service retail shop counters for customers buying goods to take away.

EXPANSION IN PRODUCTION

Since our Tea, Coffee, Chocolate and Confectionery factories were moved to Greenford in the early 1920s much further development has followed there. The growing pressure on our space at Cadby Hall that is brought about by the ever-increasing demand for our products has made it necessary to move more of our production to Greenford. Room is available there for still further expansion in production and the space released at Cadby Hall meets the need for expansion in those productive departments which remain. Some of the ice-cream production is to be moved first and other production will follow.

A BRAKE ON INFLATION

Many of you must be tired of hearing about diminished profit margins and increased costs of all kinds; but it is impossible in these days to omit reference to them. The new rating assessments, in particular, will add a further heavy burden. Both in our catering establishments and in our wholesale departments, which supply enormous quantities of foodstuffs, we continue our policy of operating at a very small margin of profit, and it is the accumulation of these tiny fractions of profit on millions of sales that makes possible the steady maintenance of the Company's annual profit. If our business had not continued to expand the profit would have been appreciably affected. Unfortunately, once again many of our prices and charges have had to be increased during the year. We feel it is right and in the long-term interests of the Company that we should continue to avoid wherever possible, and to defer as long as possible, any increase in price. We prefer to risk being a little late rather than to be premature: to be a brake on inflation and not a spur to it.

The Company's continued progress could not be maintained without the hard work and loyalty of all ranks of the Company's employees. They make a wonderful team, or rather group of teams, for there is healthy competition between the departments. I wish to record our warm appreciation of all they have done during the year.

UNION INSURANCE SOCIETY OF CANTON

SATISFACTORY RESULTS

The annual meeting of the Union Insurance Society of Canton Limited, was held on May 24th in Hong Kong, The Honourable C. Blaker, MC, the chairman, presiding.

The following are extracts from the report, and accounts and his circulated statement:

Marine. The net premiums for the year amounted to £3,413,162. After releasing £205,000 to Profit and Loss Account the Marine Fund stands at £5,582,684.

Fire. The net premiums for the year amounted to £3,752,673. £256,742 has been transferred to Profit and Loss Account. The Fire Fund stands at £2,094,699.

Accident & General. The net premiums for the year amounted to £3,595,119. £198,932 has been transferred to Profit and Loss Account. The Accident and General Fund stands at £1,689,292.

Profit & Loss Account. Interest and dividends amounted to £514,787 and transfers from Underwriting Accounts to £660,674. After charging outgoings not brought into account elsewhere, making provision for taxation, and allowing for the minority interests of the outside Shareholders of a Subsidiary Company, the profit for the year appertaining to the Society is £735,340.

CHAIRMAN'S STATEMENT

In the Marine Department the result of the year's working was satisfactory. An increased volume of business was transacted but, because of the generally lower level of cargo rates, our marine premium income remained virtually unchanged at £3,413,162. Claims paid during the year accounted for 68 per cent of the premiums, as against 74 per cent during the previous year. This improvement in the claims experience was helped by the discontinuance of certain accounts which had shown unprofitable results in the past and by the collection of recoveries in respect of earlier years of account.

The Marine fund now amounts to 163 per cent of the year's premium and is considered satisfactory in the light of present-day trends affecting marine insurance business.

Our margin of profit in the Fire Department is not unsatisfactory though rather lower than usual in relation to premium income. A small increase in premium income was achieved in the face of very keen competition which involved rate reductions in some areas.

Further expansion took place in the Accident and General account during 1955 with particularly good progress being made in Australasia. The high costs applicable to repairs and also to the settlement of personal injury claims in connection with Motor business are features of this section of the account which show little improvement over previous years. The increase in road traffic in so many countries coupled with inadequate road systems is a problem which is likely to be with us for some time yet. The attendant problem of the higher speeds of all kinds of vehicular traffic presents further underwriting difficulties in the transaction of Motor business.

The claims experience, however, of the whole account is satisfactory being relatively lower than in the previous year and a profit of £198,932 has been realised.

The report and accounts were adopted.

BAH LIAS RUBBER

SIR ERIC MILLER'S SPEECH

The forty-fifth annual general meeting of the Bah Lias Rubber Estates, Limited, was held on June 13th in London.

Sir Eric Miller, the chairman, in the course of his speech said:

Malayan Subsidiary.—In respect of the corresponding financial year of Kulai Rubber Estate, Limited, of which as you know we hold 76 per cent of the issued capital, we have received a dividend of 45 per cent, less Malayan income tax, which was adequately covered by current earnings.

At our request the Board of the Kulai Company have reviewed their financial requirements and concur with the idea that they might make an appropriate return of capital. They have been asked to proceed accordingly and when all the formalities have been completed, by about the beginning of 1957, the Bah Lias Company may expect to receive its due proportion, estimated at over £85,000.

Dealing with results in Indonesia, the net profit for the year was Rupiah 2,858,208, or almost treble that for 1953-54, after providing for Indonesian Company Tax and levy on estimated remittable profits. No permit has yet been obtained to remit any of our 1954-55 profits.

The parent company's sterling accounts show that the year's sterling profit is mainly attributable to the dividend on our investment in Kulai Rubber Estate, Limited, which has indeed stood us in good stead in recent years.

Before the recent printing dispute ended, the Board announced their intention of dealing with the dividend for 1954-55 by way of an interim and only distribution, and warrants for the dividend of 15 per cent less tax were posted a month ago.

CAPITAL REPAYMENT

As set out in the Directors' Report, the reduction of our planted acreage and the increase in Indonesian currency resources resulting from the sale of the two estates enable them to submit at this meeting Special Resolutions to effect a capital repayment of 10s. in the £ and the conversion of the remaining stock into unnumbered shares of 2s. each, a popular denomination for plantation companies.

The main purpose for which the Bah Lias Company was established in 1911, as set out in the Memorandum of Association, was the growing of rubber and other crops in Sumatra. The Directors have over the years dutifully fulfilled their mandate with reasonable success and broadened the Company's sphere of interest in 1933 by the investment in Kulai Rubber Estate, Limited, in Malaya. As we said in the supplement to this year's Report, "The generation which subscribed the money for the large scale development of the Plantation Rubber Industry some 45 years ago were consciously doing constructive work of a long-term character, and would be horrified at the current habit of assessing the companies on their 'break-up value'." Before taking an interest in the Bah Lias Company a prospective investor would surely ascertain the nature of its business and where it was operating.

Whether they would admit it or not there may well be a number of Stockholders who have acquired their first stake in the Company during the past couple of years, not with the idea of supporting the purpose for which the Company primarily exists, but with an eye on a possible capital distribution. The sale of Batang Sapongol and Gergas Estates

has brought the latter about, subject, to the passing of the Special Resolutions at our meeting today and their subsequent approval by the Court.

Shareholders' rights are protected by the Companies Act and by our Articles of Association but they also have their responsibilities towards their fellow shareholders in the corporate body of which they are members. There are many ways of making money within the law, but I submit for serious reflection that destructive policies are not in the best interests of this country at any time, least of all at this juncture when our balance of payments problem is proving so intractable.

Future developments depend on whether the new Indonesian Government are going to make conditions there reasonably attractive to foreign investors. A statement of their policy is to be issued in the near future and I hope the Directors may be spared from further pressure, which it will be their duty to resist in the interests of Stockholders as a whole and of this country's economy no less than that of Indonesia.

The report was adopted and the Board's capital proposals were approved.

CRUSADER INSURANCE COMPANY LIMITED

MR HARVEY BOWRING'S STATEMENT

The Annual General Meeting of the Crusader Insurance Company Limited was held on June 14th.

In his annual statement to Shareholders Mr Harvey Bowring pointed to progress in all branches. Although new Life Sums Assured were a record at £5,886,085, with the Life Premium Income totalling £830,347, it had been possible to show a reduction of 1.09 per cent in the expense ratio. The gross "Interest Income" in the Life Department was at the rate of £4 12s. 5d. per cent against a comparable £4 9s. 9d. per cent for 1954.

Reversionary bonuses of 45s. and 38s. per £100 assured on "With Profits" Whole Life and Endowment Assurances respectively, were declared for the year ended December 31, 1955.

Among those items calling for special mention were:

(a) the inclusion of war risks and unlimited aviation cover in the Company's Life Assurance contracts, both new and those already in force;

(b) the extension of the limiting sum assured on most non-medical proposals from £1,500 to £2,000 for men and women up to 40 years of age.

FIRE AND ACCIDENT BUSINESS

The net Fire Premium Income exceeded £100,000 by £15,272, while premiums for Sickness, Accident and Miscellaneous business amounted to £593,319 (1954: £556,389). In the weekly section alone 143,720 claims payments were handled.

GROUP

There had been a further gratifying expansion in the Company's Group service to industry, evidenced by the installation during the year of 51 "Pension and Life Assurance" and 44 "Sickness and Accident" plans.

In concluding, the Chairman emphasised that it was intended not merely to preserve but also to develop and encourage the independent, individual character of the "Crusader."

BLOCK AND ANDERSON

INCREASED GROUP PROFIT

The twenty-fifth annual general meeting of Block and Anderson, Limited, was held on June 5th in London, Mr W. E. Block, chairman and joint managing director, presiding.

The following is an extract from the chairman's circulated statement:

The results during the past financial year have been very satisfactory, the group profit before taxation, amounting to £235,793, compared with £118,216 the previous year. An interim dividend of 10 per cent was paid last November, and your Directors now recommend a final distribution of 25 per cent (less tax) on the increased Ordinary capital.

In spite of increasing competition, sales at home and abroad have made excellent progress. During the year we undertook the distribution of several new products which are showing promising results. About 60 per cent of the total number of Banda machines which we manufactured were sold abroad. Sales in Canada are increasing rapidly, and the organisation of your subsidiary company there is expanding to cope with the increase in business and to maintain efficient service to our customers.

Your Subsidiary Company in South Africa is continuing to make steady progress within the limits imposed by the import restrictions existing in that country. Many new machine tools have been installed at our Aycliffe factory, which should help to keep production on an economical basis and enable us to take care of new developments. Bar any major national or international setback the outlook for the future of your company continues to be promising.

The report and accounts were adopted.

BARTON & SONS

DEMAND MAINTAINED IN ALL DEPARTMENTS

The ordinary general meeting of Barton & Sons Limited was held on June 14th in London, Mr A. H. Redfern (the Chairman) presiding. The following is an extract from his circulated statement: The demand for our products has kept up in all departments, production has increased, with the result that trading profits are higher at £887,563 compared with £737,605 for the previous year, and there is a net profit of £358,953 compared with £290,487.

Towards the end of 1955 we acquired the balance of the shares in the Canadian company, Barton Tubes Limited. This company has made such good progress that extensions which will double our productive capacity have become necessary and will be completed during 1956. In the early part of 1956 we exchanged the minority holdings in the South African companies and although we now have no shares in Wright, Anderson (S.A.) Limited, we have 100 per cent holding in Bartons Tube & Conduits Limited.

During the year we built an entirely new factory at Walsall for The Premier Aluminium Casting Company Limited, and removed the whole of the plant from Birmingham. The new factory will give us a considerable increase in productive capacity and land is available for extensions.

With regard to prospects for the year 1956, there has been some slackening of demand in several industries but fortunately we have not yet experienced any serious repercussions.

The report and accounts were adopted and the total dividend of 20 per cent was approved.

THE UNITED SIA BETONG RUBBER ESTATES, LIMITED

PRINCIPLE OF RELATING REWARDS TO PRICE

SIR JOHN HAY'S VIEWS

The forty-seventh Annual General Meeting of The United Sia Betong Rubber Estates, Limited, will be held on June 20, 1956, at 19 Fenchurch Street, London, E.C.3.

Dealing with the domestic affairs of the Company, Sir John Hay pointed out that the capital actually employed in the business was very nearly three times greater than the originally subscribed capital, and that the net dividend calculated on that basis over the last four years was at the average rate of 5.5 per cent. The distribution of the Company's profits showed that the Malayan and UK Governments took 70 per cent of the total available, stockholders received 20 per cent, and 10 per cent was ploughed back into the business. Thereafter he went on as follows:

OUTLOOK FOR RUBBER

The rate of production of motor vehicles in the USA in 1955 was always regarded as abnormal and not likely to be maintained. It has become increasingly evident that accumulated stocks are more than can be readily absorbed and consequently further corrective measures have had to be applied in the form of a cut-back in current production. Similar measures have been taken in this country although to a less marked degree. With tyre manufacturers' needs thus diminished and an increase in synthetic production the statistical position has taken an unfavourable turn and finds expression in a steady and substantial fall in the price of natural rubber. Past experience has shown that at the present level of price the marginal producer tends to fall out and unless, therefore, there is a reversal of present trend natural rubber production is likely to be stabilised at about 1,800,000 tons per annum. There is another and important aspect to the fall in price. It has now about reached the level at which it can be regarded as competitive with synthetic. Although it would be optimistic to expect an immediate transfer of use from the synthetic to natural, it is reasonable to suppose that there will be a check to the extended use of the former which might otherwise occur and that world need for natural rubber should be sufficient to absorb the supplies that are likely to be forthcoming at the present price. The expansion and multiplication of synthetic manufacturing facilities points to a total productive capacity in excess of probable requirements for some time to come even after allowing for a continuance of USA use of synthetic at a rate of 60 per cent as opposed to only 40 per cent for natural. The release of Malayan rubber from the list of exports prohibited to China, although it may alter the location of purchases, is not likely to make any significant change in total demand.

This statistical assessment points to the conclusion that we have reached the stage at which competition between the two products is likely to become sharper and in the wide area within which they are interchangeable the choice will be largely determined by price. This is not a prospect which should dismay the natural rubber industry provided there is a readiness on the part of all concerned to face up to economic realities and make adjustments wherever necessary.

WAGES

In August last, when the price of rubber was 3s. 5d. per lb, employers and the workers' union entered into an agreement for an improved scale of wages varying with the price of rubber with safeguards against an increase in the cost of living. There are very valid reasons why wages should be so related. Of estate expenditure 60 per cent goes in wages. Rubber is a world commodity to be sold in the world's markets at a world price in competition with the new and greatly enlarged synthetic product which is free from such burdens as export duties and cesses. The rubber producer cannot, therefore, recoup himself for higher costs by an increase in price. The demand now made for a fixed wage divorced from the price of rubber and

at a level which would certainly result in loss and serious unemployment is not well calculated to promote the welfare of labour. It is only human to accept readily an increase in wages when rubber goes up and to offer some resistance to the downward trend when rubber falls. But even after the last adjustment labour's earnings are calculated to be five times the equivalent of the prewar rate. The principle of relating rewards to price is not one reserved for labour. It extends to all engaged in the company's service, irrespective of rank and a not unsubstantial part of their rewards is dependent on the profit realised. In an industry which experiences such widely varying fortune there should be a ready recognition of the fact that it is only by the continued application of this principle that stable employment can be assured.

TO THE STOCKHOLDERS OF THE SCOTTISH MOTOR TRACTION COMPANY LIMITED

The following is a copy of a circular letter sent by Investment Registry Limited to the Stockholders of the above company:—

14th June 1956.

DEAR SIR (or MADAM),

Notwithstanding the announcement that House of Fraser Limited are proposing, subject to various conditions, to make an offer for the capital of S.M.T., the Sears Board are satisfied that their offer to exchange one Sears 5s. "A" Ordinary Share for each 5s. Stock Unit of S.M.T. is a fair one and should be accepted because:—

(1) The terms of the conditional Fraser offer proposed to be made appear to be less advantageous to S.M.T. Stockholders than those of the Sears offer. In particular, if the latest dividend (equivalent to 32½ per cent.) on the Fraser shares is maintained on the increased capital, it would be covered only about 1½ times by the present combined earnings, as compared with the dividend of at least 20 per cent. forecast on the Sears shares which would be covered nearly 3 times.

(2) The Sears offer has the advantage of giving you an opportunity to participate in an expanding business which has already achieved substantial success in a wide field of industrial activities. Sears can be of considerable benefit to S.M.T. House of Fraser has no such growth potentiality as it is solely a drapery concern. Association with Frasers cannot be of any assistance to the S.M.T. businesses.

(3) Sears already have important interests in Scotland and intend that S.M.T. shall remain essentially a Scottish concern.

(4) The Sears offer is a firm one subject only to receipt of an adequate number of acceptances. The proposed offer by Frasers is subject to various conditions which may or may not be fulfilled.

You are, therefore, reminded that Monday next, 18th June 1956, is the last day for acceptance of the Sears offer and that if sufficient acceptances are not received by that date the offer will lapse.

Acceptances should be addressed to INVESTMENT REGISTRY LIMITED, 6 Grafton Street, London, W.1, and posted so as to be delivered not later than Monday, 18th June 1956.

Yours faithfully,

For and on behalf of

INVESTMENT REGISTRY LIMITED,
W. J. BOSWELL, Secretary.

Copies of the Offer and Forms of Acceptance can be obtained from Investment Registry Limited, 6 Grafton Street, London, W.1. (Telephone Hyde Park 6837.)

APPOINTMENTS

UNIVERSITY OF BIRMINGHAM

Applications are invited for the post of Lecturer in Social Administration. Applicants should preferably have a degree in Social Administration or an equivalent qualification. They should be capable of teaching at undergraduate and post-graduate level. Research experience would be an advantage. The appointment will be in Grade II (£650 to £1,350 p.a.) according to age and experience, with F.S.S.U. allowances. Applications, with the names of three referees, should be sent by July 9, 1956, to the Registrar, The University, Birmingham, 15, from whom further particulars may be obtained.

G. L. BARNES, Secretary.

UNIVERSITY OF GLASGOW

RESEARCH ASSISTANTSHIP IN SOCIAL AND ECONOMIC RESEARCH FOR THE SURVEY OF GOVANS

Applications are invited for a Research Assistantship in the Department of Social and Economic Research. The successful applicant will be required to undertake work and conduct household interviews in connection with a sociological survey of the Govan district. Salary scale: £550-£650. Initial salary according to experience and qualifications. F.S.S.U. and other allowances benefits. Applications (three copies) should be lodged, not later than June 30, 1956, with the undersigned, from whom further particulars may be obtained.

ROBT. HUTCHESON, Secretary of University Court.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited for a temporary Tutorship in Economics. Salary between £400 and £500 per annum, according to qualifications and experience. The appointment will be for one year in the first instance and may be renewed for a second year. Applications should be sent by June 30, 1956, to the Registrar, University College, Singleton Park, Swansea, from whom further particulars may be obtained.

H. M. TREASURY: The Civil Service Commissioners invite applications for (a) two posts of ECONOMIC ASSISTANT and (b) one or two posts of ECONOMIC ASSISTANT. The appointments are initially for five years (or less by arrangement).

Age on July 1, 1956: post (a) at least 30; post (b) at least 22 and preferably under 30. Candidates must have at least a Second Class Honours degree in Economics or a related subject. For post (a) experience in teaching Economics or in an economic advisory capacity is expected. Applications for post (b) should be considered from those taking their degrees this year.

Salary (according to age and experience): post (a) £2,415-£1,755 (men), £1,317-£1,625 (women); post (b) £1,580-£1,050 (men), £970 (women). Women's pay being improved under equal pay scheme. Salary scales and conditions of service are under review. F.S.S.U. applies.

Particulars and application form from Secretary, Civil Service Commission, 6 Burlington Gardens, London, W.1, quoting No. 4597/56/7. Completed application forms should be returned by June 29, 1956.

AGRICULTURAL RESEARCH COUNCIL require an Assistant Statistician in their Unit of Statistics, University of Aberdeen. Appointment in Assistant Experimental Officer grade; minimum qualification G.C.E. Science, but a degree is preferable. An applicant with better qualifications, appointment as Experimental Officer can be considered. Starting salary, according to age, in scale £328-£706 (A.E.O.) or £781-£968 (E.O.). Contrary to the usual scheme. Applications, with names of three referees, to the Secretary, Agricultural Research Council, 15 Regent Street, London, S.W.1. Within two weeks.

THE INSTITUTE OF PERSONNEL MANAGEMENT wishes to appoint a man to its Headquarters staff to organise training courses and assist the Director in planning these and other activities.

This post provides unusual opportunities to gain wide experience of current personnel practice in industry and commerce; it entails maintaining direct touch with many individual and national organisations concerned with personnel management.

Applications are invited from men aged about 30 years. Personnel management training is required and about three years' experience in personnel management. The starting salary will be in the region of £750 per annum, but may vary according to experience and qualifications. Applications, to be received by June 22nd, should be marked "Confidential" and addressed to the Director, I.P.M. Management House, 8 Hill Street, London, W.1.

MARKET RESEARCH. A number of appointments are to be made in the expanding Consumer and Retail Research Unit of a large industrial company in the provinces. The work is in a new and interesting field and there will be opportunities to contribute to all aspects of it. Essential requirements are a good academic background in Economics or Sociology and wide experience of consumer research methods in an agency or in industry. Starting salaries will be assessed on each case on qualifications and experience offered. In certain circumstances houses to rent will be available locally. Applications should be as detailed as possible; they will be treated in the strictest confidence.—Box 442.

NATIONAL TRADE ASSOCIATION with London Headquarters seeks top Executive with background high administrative experience.—Applications, giving full details, including age and salary expected, to Box 445.

WELL-KNOWN Engineering Group with world-wide ramifications invite applications from Qualified Technicians or Accountants with local experience for important appointment. The immediate vacancy carries considerable responsibility and offers unusual scope for advancement. Applicants should be 35 to 40 years of age and be prepared to travel extensively. Please state all relevant details concerning education and experience, together with suitable references, which will be held as strictly confidential.—Apply Box 669, Woolward Court, 80a George Street, Edinburgh.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of TUTOR IN SOCIAL ADMINISTRATION. The Department of Government and Administration, in connection with the Selective Recruitment and Training Scheme for Hospital Administrators in England, Wales and Scotland. Candidates should be graduates with experience in hospital administration, and the appointment is for three years in the first instance, with a possibility of a renewal for a further period. Salary on a scale £650 to £1,350 per annum; initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than July 9, 1956, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

CHIEF EXECUTIVE DESIGNATE

The Western Region Production Development Board, with the approval and support of the Government of the Western Region of Nigeria, intends to establish a Western Region Housing Trust. The objects of the Trust will be the development of Housing Estates as well as fostering the growth of home ownership on building society lines. Applications are invited for the post of CHIEF EXECUTIVE OFFICER DESIGNATE OF THE TRUST. In the preliminary stages his chief duties will be to assist in drafting legislation and in drawing up plans for the establishment and operation of the Trust. During this period he will be engaged on the staff of the Board, but subject to satisfactory performance, will become the Chief Officer of the Trust when formed.

Applicants should possess wide administrative experience in the fields of planning, development, construction and financing of housing areas and of home-ownership schemes. Academic and professional qualifications will be an advantage.

Salary will be £2,500-£3,500, point of entry depending on qualification and experience. Further details of the proposed Trust and of the Board's terms and conditions of service can be obtained from:—

The London Representative,
Western Region Production Development Board,
18 Grosvenor Gardens,
London, S.W.1.

to whom applications, giving full details of experience, qualifications, etc., should be addressed: replies to reach him not later than July 31, 1956.

GENERAL TERMS OF EMPLOYMENT: House with basic furniture provided at rental of £150 per annum; up to 10 per cent Provident Fund; Outfit Allowance £60; Free medical service; Free passages for wife; home leave at full pay at the rate of five days per month of overseas service; normal length of four 18 months.

£2,000 p.a. is the commencing salary offered to several bright young men as junior executives in a large and highly successful manufacturing group with headquarters in Manchester area (not cotton industry).

Principal qualifications required are proved intellectual capacity coupled with consistent and able application to duties.

A technical qualification of some kind is desirable, but it does not matter whether this is in engineering, chemistry, commerce or accountancy, and a University degree, while an asset, is not essential.

Age 30-35 preferred, but up to 40 considered.

These vacancies exist solely due to continuous expansion of our organisation.

We do not wish to receive applications from misundstood supermen who expect a free ride, or nepotism, would already be Managing Director, or business at present employing them, but to the right type of young man with brains, imagination, personality, and a capacity for hard work, we can offer an exceptional opportunity of successful career in industry.

Full details, in confidence, in first letter, please. Interviews will be arranged only with those who comply.—Box 14

ARTS GRADUATES FOR WORK STUDY

GEO. BASSETT & COMPANY, LIMITED, Manufacturers Confectioners, employing over 2,800, have vacancies for Arts Graduates graduating or completing National Service this year as PRODUCTION STUDY TRAINEES. These vacancies offer a good introduction into industry for non-technical graduates. After a short but intensive period of training in the factory the trainee will be sent on a suitable Work Study Course. He will then join the Production Study Department and his duties will consist of carrying out analytical studies of operations to ensure that the most effective use is being made of materials, labour and equipment. The Company has a progressive and enlightened attitude towards modern management techniques and there will be many opportunities for advancement, not necessarily in production study, for a graduate who shows the right attitude.

Necessary qualifications are a good Arts Degree with an interest in human relations and suitable personality. Excellent commencing salary offered plus profit-sharing bonus and pension schemes.—Reply in confidence, with full details of career, to the Managing Director, P.O. Box No. 80, Sheffield.

IBM UNITED KINGDOM LIMITED, manufacturers and distributors of Punched Card Accounting equipment and Electronic Data Processing Machines, require men of the highest calibre for intensely interesting work comprising investigation of accounting and book-keeping methods and systems, the preparation of reports and proposals and the subsequent installation of recommended machine accounting methods. Applicants should be under 35, preferably with a degree or professional qualification or with a wide experience of commercial and/or industrial systems and methods, or experience in a large Punched Card accounting business.

Card can be considered. Nine to sixteen months' training is given and good salaries based on individual earnings and needs are paid during this period. Subsequent earnings will be in the very high income group. Men are required primarily for the London area, Midlands, Manchester, and South and Scotland. Will applicants please give full particulars of education, qualifications and experience, as only those with first-class background will be selected for interview during the next six weeks for the course which commences on September 18, 1956, in London. Please write in the first instance to Personnel Manager, 100 Wigmore Street, London, W.1, quoting reference EAM 5.

UNIVERSITY OF THE WITWATERSRAND, JOHANNESBURG

Applications are invited for appointment to the following two posts:—

LECTURER IN MATHEMATICS
LECTURER IN STATISTICS

Duties to be assumed on January 1, 1957, or earlier if possible. The salary attached to the post of Lecturer is on the scale £850 to £1,150, plus a temporary cost of living allowance of £234 in the case of a married man.

Membership of the Provident Fund is compulsory. Membership of the Staff Medical Aid Fund is also obligatory in the case of an officer who is eligible for membership.

Applicants are advised to obtain a copy of the information sheet relating to these vacancies from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in South Africa and London, on August 31, 1956.

ACTUARIAL STUDENT FOR SOUTH AFRICA

Established Society, conducting Life and General business in the Union and the Rhodesias, is expanding and requires a young student, who has passed or about to pass Part II of the examinations, as Assistant to the Actuary. A generous commencing salary will be paid and there are excellent opportunities for promotion. All costs incidental to taking examinations and passage to the Union are paid by the Society. Pension scheme, medical aid scheme. Long leave granted every five years for holiday outside Southern Africa.—Write Box M/198, Strand House, London W.C.2.

PRODUCTION ENGINEER required for Senior Appointment with leading Motor Car Manufacturers, to be responsible for Controlling Production Planning, Machine Tool Specification, Jig, Tool and Gauge Design, and Plant Layout.

Applicants must prove a successful record in a similar capacity, and should not be over 45 years of age. Only those with experience of Modern Machine Techniques, Assembly and Layout, and of managing a large staff need apply.

The position is superannuated, carries substantial remuneration, and presents first-class opportunities for advancement.

Applications will be treated in strict confidence, should contain full particulars and be addressed to Box E.296, c/o 191 Gresham House, E.C.2.

FOREIGN LIAISON AND EXPORT; PUBLIC RELATIONS.—Gentleman of considerable business and administrative experience (R.N. background) seeks post, preferably with an organisation seeking to expand or consolidate its interests in Europe.

He is used to responsibility and possesses initiative and tact. Good negotiator. Planning and staff experience. Wide knowledge Europe, with useful business and official contacts. Fluent French, also Italian and German.—Box 446.

CANADIAN PACIFIC RAILWAY COMPANY (Incorporated in Canada with Limited Liability).—DIVIDEND NOTICE.—ORDINARY CAPITAL STOCK.—At a meeting of the Board of Directors held today, a dividend of seventy-five cents per share on the Ordinary Capital Stock was declared in respect of the year 1956 payable in Canadian funds on August 1, 1956, to shareholders of record at 3.30 p.m. on June 22, 1956.—By order of the Board, FREDERICK BRAMLEY, Secretary, Montreal, June 11, 1956.

CANADIAN PACIFIC RAILWAY COMPANY (Incorporated in Canada with Limited Liability).—DIVIDEND NOTICE.—ORDINARY CAPITAL STOCK.—At a meeting of the Board of Directors held today, a dividend of seventy-five cents per share on the Ordinary Capital Stock was declared in respect of the year 1956 payable in Canadian funds on August 1, 1956, to shareholders of record at 3.30 p.m. on June 22, 1956.—By order of the Board, FREDERICK BRAMLEY, Secretary, Montreal, June 11, 1956.

B.Sc.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE provides part tuition for the above Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts. The College, est. 1887, is an Educational Trust. Highly qualified Tutors, low fees. Prospectus of U.C.C. Courses for B.Sc. Degree and Dip.Econ., C.E.E., free from the Registrar, 60 Burlington House, Cambridge.

YOUR NEW ADVERTISEMENTS are bringing in a steady stream of enquiries, writes a manufacturer. I act as advertising dept. to smaller firms who want to grow. Complete preparation of press and other publicity. I can help you sell more, and save money.—H. G. Penman, 76 Grange Road, London, W.5.

DIRECT from the dairy Somerset CLOTTED CREAM by post 5s. per 4 lb. 9s. 6d. per lb. cash with order.—The Western Counties Creameries Limited, 10 Sherborne Road, Yeovil, Somerset.

SUBSTANTIAL investment (up to £200,000) in a well-established and expanding business is sought by an institutional client who can provide top level management if required. Send particulars to Spicer and Pegler, Chartered Accountants, 19 Fenchurch Street, E.C.3.

EXPERT POSTAL TUITION for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

Imagine a marine world without oil!

Hard to do, isn't it? Yet how much harder it would be to live in such a world. In the marine field alone, oil has contributed in so many essential ways. It has facilitated trade and commerce. It has drawn together the community of nations. It has helped people everywhere to live better, to progress and prosper. In supplying finer marine products to the peoples of 67 free nations, and through more than 350 world ports, Caltex has for years played a significant role in this dynamic industry.

VOLUME CLXXIX • NUMBER 5887

"Our wasted oil unprofitably burns"

—Wm. Cowper (1731-1800)

and Cowper went on to finish this couplet in this manner:—"Like hidden lamps in old sepulchral urns."

NATURALLY, we are not going to suggest that you have any great number of old sepulchral urns in your factory or workshops, or that, having any, you have hidden lamps inside the said urns. You wouldn't get a very good light.

But we are going to emphasise how right Cowper's first line is today. Written some 155 years ago, and part of a delightful poem called 'Conversation', it bore little hint of its enduring truth then. After the years of developments following the industrial revolution, Cowper's allegory becomes the basis for serious thought on the part of efficiency-minded managements.

In practically every industrial sphere, in

refineries, in chemical works, in power stations, etc. the conservation of heat is of great concern. For such is the scale on which many companies operate today, any economies effected result in tremendous savings and, consequently, add considerably to profits.

For over 50 years, Newalls have manufactured materials in a temperature range of minus 300 F up to over 2,000 F—and in the same period Newalls have applied their ever-increasing knowledge of thermal insulation to the benefit of industry. Whether it be pipelines, cooling chambers, boilerhouses, or administrative blocks, Newalls have the right materials available, and can take the whole job through from start to finish.

CORRUGATED boxes protect grapes from vine to market

Bring a good price, grapes must be market plump, juicy, uncrushed. Today at many South African vineyards, grapes are packed in protective corrugated boxes.

Because they're so strong, corrugated boxes can be stacked without buckling. They keep out dirt, moisture, frost, and hungry hands. Yet they're light in weight and low in cost.

Day more and more box users are turning to corrugated for an infinite variety of packaging purposes. Freely attracted by corrugated's economy, they quickly discover its other advantages:

light weight, rigid construction, low heat conductivity, and easy printability for better brand identification. Of all packaging materials available, only corrugated does so much for so little.

If you have something to package, take a tip from thousands of other packagers: think first of corrugated.

Your nearby boxmaker can lend you the assistance you need in designing your box. Have a talk with him soon.

Langston doesn't sell corrugated, only the machines that make it. Since 1902, these machines have led the field in efficiency and dependability. Samuel M. Langston Co., Camden 4, N.J., U.S.A.

Cargoes sweat too

And when they do, rust, staining and other damage may be the result. "Cargo sweat" occurs when ships pass from cold to warm climates. A change from warm to cold can cause condensation on the ship's structure, known as "ship sweat". Shipowners have found the answer to both problems is Thermotank Drihold equipment. This maintains close control of ventilation and drying

to ensure that condensation cannot occur. Control of the atmosphere for comfort or industrial processes is the business of Thermotank—on land, sea and in the air. The Company pioneered the first air conditioning of ships more than fifty years ago. Today Thermotank maintain an unequalled service covering every major shipping route throughout the world.

PERSONAL CALLS TO EXPORT PROSPECTS

IN SELLING ABROAD, it might, of course, be theoretically possible to telephone every one of your prospects in every country. But what a practical impossibility that would be. How time consuming and cost consuming when compared with advertising that reaches the right people in the right places in the right way.

And when it comes to advertising—the international editions of LIFE magazine do this every fortnight.

Because the readers of these magazines are key people—leaders in business, government and the professions—you know you are reaching individuals who are in a position to act on your selling message. You are certain, furthermore, that you are securing coverage in every free country—because LIFE INTERNATIONAL reaches the top of the market around the world, and LIFE EN ESPAÑOL offers concentrated coverage in Latin America.

And there is no element of doubt about how your advertising message will be presented because you yourself are in control. You have the opportunity of seeing that your selling message is delivered in the most effective manner—and that your product is shown to best advantage.

It is for these reasons that leading companies in Britain and on the Continent have more than doubled their investment in LIFE's International Editions in the last four years.

LIFE INTERNATIONAL—advertising rates based on average net paid circulation of 250,000 copies printed in English and distributed in 120 countries outside North America.

LIFE EN ESPAÑOL—advertising rates based on average net paid circulation of 275,000 copies printed in Spanish covering all of Latin America.

These are the INTERNATIONAL EDITIONS of LIFE magazine, with a combined current circulation that now exceeds 560,000 copies every fortnight.

A really attractive investment

NEW 4½%

DEFENCE BONDS

Yield the equivalent of

5¼%

Over 10 Years

- ★ Increased interest of 4½% payable half-yearly.
- ★ Plus 5% Income Tax Free Bonus after 10 years (or 2% if encashed between 5 and 10 years).
- ★ Total return over 10 years for anyone who is liable to income tax at the present standard rate of 8s. 6d. is equivalent to 5¼% gross—with absolute capital security.
- ★ You can hold £1000 of these Bonds in addition to any you inherit and to Bonds of earlier issues.
- ★ On sale in £5 units.
- ★ Buy the new Defence Bonds from Post Offices, Banks, or through your Stockbroker.

What goes into 5,000,000?

One thing that can is your advertising message. It can go into 5,000,000 intelligent minds—5,000,000 minds belonging to people who will *read* what you have to say. The way in is through The Reader's Digest.

Why do the men and women who enjoy this magazine each month provide such a productive market? One reason is that they are comfortably above the average in income—over a million of our readers own their own houses, and nearly a million have motor-cars. Well over two million of them are women, with the household spending responsibilities that this implies.

But more important still is our readers' *character*. The Reader's Digest deliberately sets out to please people with inquiring minds, receptive to new ideas. Its phenomenal success—over a million sale in Britain, a world

sale of over eighteen million—is the measure of the opportunity it offers to the advertiser. Its readers really *read* it—pick up each issue many times as they browse through its articles. There is ample evidence that they read the advertisements, too. And they are exactly the kind of people, better informed than most, whose example is apt to influence their friends.

It is because of the character of its readers and their pleasure in *reading* it that The Reader's Digest is one of the great advertising media of Britain.

OVERSEAS International editions, 17 of them, cover key export markets. The British exporter can book space in London and, usually, pay in sterling.

High octanes and haute couture

From the treasure store of petroleum come many wonderful substances. Especially chemicals from which the scientist, with remarkable skill, creates things even more wonderful . . .

The main intermediate material used in the new I.C.I. fibre "Terylene" is a chemical called terephthalic acid derived from para-xylene. Para-xylene can be obtained from more than one source and by more than one process, but until the advent of the 'platformer' for the production of high octane spirit it was impracticable to obtain it in the quantities required for the

large scale manufacture of "Terylene". It was a happy coincidence of timing that, when the makers of "Terylene" were seeking bulk supplies of para-xylene, Shell were building a new refinery at Stanlow for the production of high-octane spirit. An auxiliary unit was added — and the supply of raw materials for para-xylene assured.

It is by teamwork such as this that new products are created, new standards of living realised. And surprisingly often, Shell is a member of the team.

Defence is Not Expendable

NO apology is needed for returning yet again with a warning note to the subject of defence economies which is at present capturing public attention and engrossing Cabinet time. It has taken the near-disasters of twenty years of war and cold war to teach the democracies that they must stand ready and equipped to defend themselves against any threat to the balance of power. Much blood and treasure have been paid to learn the lesson. We must not decide now without the most searching debate and exhaustive public explanation to go back on these painfully trodden tracks; and we must never for an instant forget the effect of our decisions (whether on economy or conscription) upon our friends, across the Atlantic and in Europe.

There is no need to suppose yet that the primrose path is likely to be taken; the first batch of savings when they are announced may in themselves be sensible enough; in fact, the doubt has rather been whether they would be real. But in the mood of today the danger of penny-wise, pound-foolish is ever present. There are persuasive arguments for new thoughts on defence. The least persuasive is the argument which simply says that because an essential component of defence strength is economic strength—as indeed it is—defence must give way (against even the counsel of Adam Smith) to opulence. There are other candidates for savings, if the devil drives, in the welfare state; and our economic ills can be cured only by policy, not by short-sighted short cuts. The most persuasive argument is that too much of the present defence apparatus is out of date; but the answer must take due heed of the high cost and long incubation of up-to-date replacements. The most difficult and deceptive argument is the one which says that, fearful of "the bomb," the Russians and their allies have now sworn off war and turned over to economic and political warfare instead.

No doubt the communists, like the rest of us, fear destruction and will not court it. No doubt they are beginning, with high hopes of success, on a campaign across the world of trade and propaganda. No doubt we and our allies have now to turn with fresh competitive zest to this rivalry of wits and resources; and no doubt what we can fairly and safely subtract from the claims of defence should go first of all to aid us in this other effort. But these are not options between which we can now choose: defence or "competitive coexistence." Both have to be faced.

Two questions must be asked before the wrong conclusions are drawn from the apparent shift of emphasis in communist policy. To the first question—why the shift?—the answer is obvious: the communists do not want war, whether all-out or limited, because they cannot reckon upon winning it; and they cannot reckon upon winning it because the western powers have, haltingly enough, made themselves too strong. The conclusion is as obvious as the answer: the western powers must stay strong if the communist powers are not to

shift back again to the threat of war—or, more probably and insidiously, of blackmail short of war. The second question is whether the Russians and their allies themselves have suited their deeds to their more peaceful words. The answer is that, in spite of (or indeed because of) what seems to be a large and belated revision of their defence arrangements which has reduced their wasteful and old-fashioned standing armies an overload that we do not possess, they may by all accounts present, if we falter, a greater military threat in numbers and in quality than ever, with possibly an advantage in many modern weapons. The conclusion, again, is obvious.

★

The Cabinet should not weary in well-doing, but Ministers must be sure that it is well done. The case has been stated more than once in these columns for a Minister of Defence with a will of his own and teeth. The state of affairs which has seen such vast defence expenditure with such disappointingly small results is clearly capable of reform. The much talked-of savings of stocks which in modern war may be otiose can possibly be justified. The service passion for clinging on to out-moded things, at high expense, can usefully be curbed. But there are three prescriptions which, in

rooting out duplication and waste, Ministers will ignore at their, and the country's, peril.

The first prescription is that any cuts must make military sense: they must be related to the balance of power and not simply to the balance of payments, life-and-death matter though that is as well. The second, which springs equally from our military and our economic necessities, is that no cuts shall be made except in concert with our allies: those who talk of fresh positive tasks for Nato would do well to start by making the existing concert of policies and arms and the dovetailing of defence programmes and burdens the realities which at present they are not. The third prescription, which is at the core of the first and the second, is that this essential process of getting the largest effectiveness in up-to-date joint defence out of the lowest expenditure of money and resources must be conducted hand-in-hand and step-by-step with the United States. Defence economies are possible, indeed indispensable, in this "long haul"; and the progressive refashioning of the forces offers more savings than any reasonable catch-crop this year. But if the haul itself slackens, then the most hopeful feature of our times by contrast with a more myopic past is clouded, and we stand again in an old danger.

A Suggestion for Mobility

PERHAPS the most important economic problem before Britain at the moment, it was suggested in an article in *The Economist* last week, is that of encouraging the mobility of labour—out of jobs in which it is no longer required, swiftly and without impediments to production. The urgency of this problem does not arise from any expectation that increasing mechanisation is going to cause redundancies in particular industries on any very large scale: the "spectre of automation" has been exaggerated (although, if it is going to stimulate discussion about mobility, perhaps that is an advantage). But the main—and rather appalling—lesson of the present period of curtailment of excess demand needs to be taken to heart.

At the first rumour of redundancy in many factories there has been a tendency to reduce output per head in order to spread work, and this has reached its apogee in the very general transfer of affected works from a five-day to a four-day week. A cut of demand for some products by a fifth has led to an increase in involuntary leisure for everybody concerned by a fifth, instead of to a transfer of a fifth of the workers to other employments that are crying out for labour. Quite apart from the immediate loss of production to the country, this experience is injecting a dangerous muddle into current economic thinking in Whitehall. It is being said that

the weapons chosen for disinflation, monetary and (belatedly) fiscal policy, have worked too slowly, whereas the real retardation has been in the operation of the connecting rods which should be set into effect by any sort of disinflation at all. And from this it is but a short step to the thesis that, since the process of slowing down after excess expansion is uncomfortable, expansion itself cannot be risked. This is as though a baffled motorist were to determine to drive for ever on the clutch, because when the clutch is engaged, and when he pulls certain levers, funny noises that he does not understand can be heard beneath the bonnet of his car.

Swifter and smoother redeployment of labour is not, of course, a matter for Government policy alone. Employers, trade unions—and, for that matter, workers themselves—also have a part to play. But the Government seems at present to be held back by two considerations from a policy of accepting and proclaiming that speedier dismissals in times of disinflation would be in the national interest. One is its fear that such a policy seems inhuman; the other is uncertainty about how such a policy could be advanced. The time is ripe for unemotional discussion of both questions.

The first point that needs to be grasped by those politicians who sincerely believe that to introduce any element of job insecurity is inhuman is that the British

worker is much less firmly wedded to a single factory and lifetime job than is commonly supposed. Each month the Ministry of Labour publishes figures of labour turnover; they are astonishingly consistent figures and, although below United States levels, also surprisingly high. About 3 per cent of those employed in most manufacturing industries at the beginning of any month change their jobs—leave and are replaced—during that month; even allowing for a small corps of vagrants who tend to change jobs every three or four months, and thus swell the figures for the annual turnover, this suggests that the average factory may change between a quarter and a third of its labour force every year. The sort of sudden crop of 20 per cent redundancies that has recently struck the Standard works, therefore—provided the schedule of sackings is sensibly worked out—need not necessarily affect many men who would not be leaving the factory during the ensuing year in any event. There is, of course, the vital difference that when men leave of their own free will they are usually going to a better job; when they are thrown out by redundancies, they usually have to go to a worse one. There is also the point that voluntary departures from high wage companies—of which Standards is one—are much lower than voluntary departures from low wage companies. Hence, and understandably, the present friction and the fuss. But the picture so often conjured up by large-scale sackings of this sort—the picture of an inhuman interruption to the assumed settled habits of a lifetime—is, in most instances, an unrecognisable caricature of real life.

★

The second point to be grasped in assessing the pains of mobility is that travelling to work at a moderate distance is now easier than it has ever been before. The catchment area of the average factory is surprisingly large, often along a radius of thirty miles or more. The case of the man who has to move house and family when he changes his job is therefore the exception rather than the rule. These exceptions can, of course, have a painful time. One reason for this is that the British housing market is based on heavy subsidisation of squatters' rights; an essential part of policy for mobility, as of any policy for general economic progress, should be the abolition of rent restriction. (And, as regards council housing, is an organised exchange bureau between different areas wholly out of the question?) Another difficulty concerns education, particularly in the handful of very hard cases where a child may be due to take the 11-plus examination; there seems to be a need for some sympathetic flexibility by the education authorities here. But these cases are the exceptions; and the Ministry of Labour makes strenuous efforts to give dismissed men the necessary information about jobs within reach of their homes. At Coventry recently it set up a sub-branch of the employment exchange within the Standard works itself.

This last incident leads to consideration of one other point, which should be mentioned before proffering a specific proposal for reform. It is usual to say, when calling for mobility, that the Ministry of Labour should operate a comprehensive service of employment information, of retraining courses for skilled workers, lodging allowances, assistances to move, and so forth. So it should. But so, in sober fact, it does. Indeed the services it offers are so full that they are not fully taken up; and it has even been suggested that these are a field in which relatively painless cuts may be made in the Government's present economy drive. There should be caution in applying any such axe. But the history of these services strongly suggests that there cannot be much hope of solving the problem of immobility merely by expanding these worthy operations. Some much more radical re-thinking is required; and a specific suggestion can now be offered to the Government.

★

The suggestion is that it might be worthwhile to recast the whole system of unemployment benefit, radically increasing the benefit paid in, say, the first month of unemployment. Ideally, indeed, this first month's benefit might be a stated proportion—and a fairly high one—of the man's previous wage, thus varying between the skilled and the unskilled man and woman. Instead of everybody going on to a four-day week, the mass could be kept working full blast on a five-day week, while the sacked one-fifth, at a standard of living not much lower than they would have got from a four-day week, would have the free time to search round for a new job. This system would remove some of the present horror of the sack felt by steady and regular workers; and, more important, it would remove some of the sympathy for the potentially redundant that causes their workmates to spread out production among as many hands as possible. The period of searching for a job need not then appear as an inevitable time of penury, characterised by the hire purchase man taking away the telly.

There would have to be certain safeguards in any such scheme. At the one end the man who deliberately invites being sacked every three months or so must not be allowed to spend every fourth month in comfortable living at the insured population's expense; the scheme should only apply to those with a continuous record of contributions. At the other, there should be some flexibility for those who do not find a job even after a month; they should be able to continue to draw increased benefit on condition that they enter some retraining scheme. But at the same time as this increased temporary benefit was introduced, it would become politically possible to remove one absurdity from the present system: men on a four-day week should not be paid any unemployment benefit for their fifth day off. A scheme of this sort would not be exorbitantly expensive. A rough estimate suggests that

the cost of increasing "first-month" unemployment benefit, for people with a steady record of employment, to a level within reasonable reach of a normal industrial wage could be covered by adding 6d. a week to employers' insurance contributions; and that, probably, would be the right place to put it.

These proposals would not provide a complete answer to what might be called the "Government's share" of tackling the problem of mobility. Indeed, there are some people who will say that they would do precisely the opposite. In a country in which industrial dynamism is in danger of being lost as we loll upon

the many and cosy cushions of the welfare state, the main suggestion put forward here is not aimed at removing any of these cushions, but at introducing a new and easier one. But, for once, it would be a cushion in the right place. With the knowledge that it was there it might be easier to race at full throttle along the high road to industrial expansion. The case for installation of the cushion is simply this: that, when expansion goes awry, there might then be more readiness to take the necessary action—which is to kick more people, more quickly, although also no doubt with better planning, on to it.

The Commonwealth Ministers

NINE Prime Ministers of the Commonwealth meet in London on Wednesday. Like the Commonwealth itself, this institution of the prime ministers' conference continues to survive the changes in its composition and the nebulous character of its internal relationships. This year there are three personal changes from the last meeting early in 1955: Sir Anthony Eden replaces Sir Winston Churchill, Mr Strydom now represents South Africa, and Mr Bandanaraïke, replacing Sir John Kotelawala, represents the new political mood of Ceylon. The accompanying table of conferences since 1946 shows a remarkable continuity in personal membership over the years—a source of strength in the meetings, since men who know each other can speak plainly.

The next momentous changes in national composition of the conference, the entry of Ghana (the Gold Coast), Malaya, and eventually the Caribbean federation, are still to come. By 1958, with probably two of these changes realised, the conference will have taken on a different complexion again. Demolition of the colonial system, which expands the conference in numbers and reduces the area of common ground between the men who take part in it, is going on faster than most of the members can absorb all the implications; on some points a straightforward discussion between the prime ministers might quicken, usefully, the revision of some habitual ideas.

For one thing—though it seems likely that the prime ministers will touch no more than the fringe of the subject—the process of conceding independence to colonial peoples has reached the inevitable point at which it must begin to eat away at the established system of Imperial defence. In Ceylon one consequence (inevitable or not) of independence, the demand that the Navy should leave its Trincomalee base, became effective only after a delay. With India withdrawn into neutrality, and the Suez base swept away by another arm of the anti-colonial stream, what remains of the Imperial defence structure is by now very thinly spread

between the Mediterranean and Singapore. Demands for independence or self-determination at either end of this vast area of "neutral" sea and land (in Singapore and Cyprus), already half conceded in principle, raise the question whether a Commonwealth defence system in any concrete sense is to remain in being. It would be surprising indeed if the prime ministers in conclave produced an answer to such a question. They share no concept of common interest on which an answer could be based. Perhaps the most that can be hoped is that their discussions may strengthen or revive the habit of restraint and tolerance in taking up attitudes towards the fragments of a Commonwealth defence system that remain.

Defence is merely an example. Differences of interest and wide divergencies of approach are apparent on most subjects. Is there a possibility that the conference may have any positive results in any field? If it does, they will be veiled, as is understandable, behind the inevitable platitudinous communiqué; still, there are unusual circumstances, in the world and in the Commonwealth, which make it conceivable that three informal points of agreement might be reached as guides to future policy. The first and most obvious has appeared rather late in the day as a subject of discussion; indeed, not long ago it would hardly have had a place in the order of business. This is a reappraisal of economic policies in the light of the swing of world market conditions which has put the rest of the sterling area in the red just as the United Kingdom economy shows some signs of pulling itself together. What Mr Macmillan's squeeze may gain in Britain can easily be lost by the primary producers of the Commonwealth. Mr Macmillan may, in the circumstances, be brought in to expound the current sterling problem; if so, it is to be hoped that the prime ministers—and his own not least—will give him their full attention. In fact, of course, the machinery of

sterling area consultation is capable of dealing with these matters as routine, provided that the political will, which the prime ministers can record and pursue, is there. No more than a preliminary and general decision would be needed; the Commonwealth finance ministers could always, if necessary, meet again.

Second might come the recognition that the Commonwealth is about to go through its most testing period of change with the accession of the colonies as sovereign states. On the one hand, their way into the association of equals should be made as easy and fruitful as it can be made; help should flow, allowances be made, questions of racial difference and of relative maturity met with tact. Even South Africa may find here an occasion to show good will, by a frank limitation of South African policy to "apartheid in one country"; here is a chance to exercise a liberalism in external relations which might even ease the tension inside South Africa. On the other hand, the anti-colonial Asian members of the Commonwealth might now reasonably permit themselves to draw conclusions from the continuing evidence of British sincerity in the intention of letting the colonies, wherever and as soon as possible, go free. The difficulty comes in judging what is possible and what is not; prime ministers could be found to attack, and others to defend, a British inclination to separate off a class of small strategic colony (Singapore, Cyprus, Aden) to the early independence of which there are objections unrelated to its internal level of development. These continue as impediments to any burying of the anti-colonial hatchet; but, sooner or later, buried it must be.

Third and most important this time comes the place of the motley Commonwealth in the swiftly unfolding scene of world politics. Sir Anthony Eden, one of the three newcomers to the conference, and Mr. Nehru, its doyen, are the two conference members to have enjoyed (if that is the word) the personal visit of Mr Khrushchev and Mr Bulganin. Quite plainly Sir Anthony and Mr Nehru, two very different men looking at the matter from two very different national standpoints, are not going to offer their conference colleagues

an identical view of what the change in Russian politics portends. Yet they will both agree that there is a change in Soviet and, consequently, in world affairs. The Russian leaders have abandoned *apartheid*, for themselves if not, as yet, for their people: what part is the Commonwealth to play in the mobile and unpredictable world situation which results?

Any idea that the Commonwealth ought to act as a third force, or as a middleman, or indeed as a separate military or diplomatic force at all, contains risky illusions and will have to be—will inevitably be—rejected. A hunt for a mythical Commonwealth unity of action would lead nowhere. The Commonwealth as such cannot mediate, for it is in the main in the democratic camp already, and, even so, it is split on too many specific issues to act in concert. Miracles would have to be worked in the corridors of Downing Street next week to change that.

But there remain possibilities of related initiatives by the Commonwealth countries, fortified by an easier colonial conscience, and backed by a drive for economic development and friendly mutual help. Together and separately these countries exert an influence in the world. Individually, each in its own way, but exchanging views and information, the Commonwealth countries can press towards the opening up of normal dealings and exchanges with the Russian and Chinese peoples and régimes. In the general relationship between those régimes and most of the world it is, above all, the network of ordinary daily contacts that is lacking, the common interchange of the written and spoken word on all kinds of specialised or unspecialised subjects, and for which the grand state visit is no sort of substitute. Only such contacts could provide any proof of Russian sincerity, which is to be seen, not as something which will be suddenly discovered or revealed, but as a concept which eventually, imperceptibly, becomes established and accepted—or does not. In this work of testing, exploration, and interpretation, the protean organisation of the Commonwealth can be of great help, even if—as would not be surprising—Sir Anthony Eden and Mr Nehru speak with different voices next week.

Enemies of the People?

IN the clamorous great debate on socialist freedom exploded again by Mr Khrushchev's much printed and much chewed-over philippic against the late and for the moment little lamented Mr Stalin—and just brought to a new pitch by the neo-Titoist observations of Signor Togliatti (and by Marshal Tito's own new party treaty with Moscow)—the prim, proper and somewhat constipated findings of the Labour party's "working party" on personal freedom* make no loud bang. Obviously, as we knew, Mr Sam Watson and his colleagues (who included Lady Megan Lloyd George as well as Mr Crossman) stand in this matter very far to the left of Mr Khrushchev and Mr Stalin alike. What is not so clear is whether they stand to the left or to right of, say, the Conservative party.

Unlike all the communist clans—the Stalinist, neo-Leninists, Trotskyites, Titoists and Togliattists—the Labour party believes sincerely enough in the only kind of democracy that deserves the name (however much other socialist dialecticians may filch the name for baser uses). It believes in the parliamentary process and the two (or more) party system, in "full rights of opposition," in free speech, fair courts and, grudgingly, the freedom of the press (though not of television). This is the party's radical tradition: "from its earliest days the British labour movement has been concerned with personal freedom." The trouble is that its socialist and class doctrine, held no less sincerely, half chokes its liberal professions. The most famous editor of this journal once wrote that "there is nothing more painful to human nature than the pain of a new idea." For the benefit of Labour this very wise saying can be stood on its head: there is nothing more painful than the pain of old ideas too deeply embedded to be altered.

This is true of the Watson report whether its authors are looking backwards (which they do too much) or forwards (which they do too little). Like old Kaspar they are still fighting over again battles long since won, wringing rights from reluctant governments and employers for miserable and degraded workpeople. Their touchstone for liberty in the modern state is still the "full vigour and independence" of trade unions—and co-operative societies. But they do not really answer Peterkin's question—"What good came of it at last?" Not by a flicker of the pen do they admit that trade unions may now belong to the over-mighty "concentrations of power" capable of menacing the liberties of individuals or consumers and of flouting the public interest. Indeed, they present the unions (and the co-operatives), as distinct from other more obstructive groups and associations, simply as "good examples of voluntary bodies which offset excessive concentration of

State power." If the unions abide by their rules to the satisfaction of the Chief Registrar of Friendly Societies, the freedom of their members, who "freely" join them, is safe. Nowhere are the duties and responsibilities of unions and unionists in the expanding economy which alone can preserve the welfare state even examined, let alone defined. Throughout the report the Labour party is seen to be frightened of its shadow—in industry.

It is when they look forward that these honest social democrats seem to give the game away. There are, it seems, two sorts of freedom: "those 'liberal' freedoms usually called civil liberties and those freedoms that can exist only in a classless society." They do not believe now in a one-party state; they do believe, or believe they believe, in a one-class state—the "equal society"—in the future. Here, of course, is the point of departure between them and those many others who until lately have marched with them in the radical campaign to ensure, against the obstacles of undeserved privilege and undue inequalities of wealth, a minimum standard of welfare, opportunity and freedom of choice for every citizen. And here, we venture to suggest, is the point of departure between their own socialism and their democracy. "Freedom and equality," they declare, "are inseparable." Let us rather ask if, on this interpretation, they are compatible.

★

It might be argued that too much breath should not be spent in chasing an ideological hare. This report is the work, directly or indirectly, of many hands; obeisance had to be made to many ikons. Just as a censor must have sat on the drafter's pen to add friendly references to the trade unions at every relevant point, or to rub out any with unfriendly implications, so his elbow must have been jogged more than once by comrades urging him (in the spirit of Mr Benn Levy's rebuke to Mr Gaitskell in a recent issue of *Tribune*) "not to forget that we are socialists and proud of it." Even so, Mr Gaitskell himself is on record more than once as saying that equality's the thing; and it is through these spectacles (varying no doubt in strength and in hue with the wearer) that the keepers of the party's conscience tend to regard the problems of personal freedom.

Clearly, if the Labour goal really is the equal, classless society—to be reached by a continuous process of subjecting all independent concentrations of power, abolishing all unlicensed privilege and endlessly redistributing incomes and (with the aid of "common ownership") property—the generally reasonable and sometimes admirable safeguards for individual rights and liberties set out in the sections of the report on bureaucracy, public security, aliens, access to the courts, Crown privilege, administrative tribunals (with the

accent on judicial scrutiny), land tribunals and public inquiries (with the accent on publicity) and Ministers' powers (with some exemplary proposals) rate only a qualified welcome. He that giveth taketh away. In this reckoning, that is, there are, even at this far remove from the Kremlin, "enemies of the people" whose claims and pretensions, possessions and activities stand in the way of the socialist revolution, however peaceful and democratic. We are back at the original simple question: does the Labour Party, within the frame of policy and taxation at any one point of time, believe in the freedom of the individual, regardless of his means or his station, in the rights of Dockers as well as dockers, of the middle class voters (or non-voters) of Tonbridge as well as the trade unionists of Coventry,

Marginal Belgium

BELGIUM today rides high on the boom. The highest steel prices in Europe are inflating profits. The highest wages on the Continent have been raised further by the introduction of the five-day week. Last month the government was forced to rein in public works and credit. The export boom, together with growing preparations for the grandiose exhibition of 1958, had begun to strain the labour market and prices had begun to rise. Yet Belgium, as so often since 1949, wears its prosperity uneasily. The stock market has been gloomy for some months, and Professor Baudouin of Louvain, that oracle of the economic scene, utters warnings of the possibility of recession.

Belgium's unease can be traced in part to its critical dependence on foreign trade; imports and exports are equivalent in value to some four-fifths of the national income. This tight-packed kingdom, straddling the trade routes of the European coal and steel community, breathes in time with the expansion and contraction of demand abroad—the "Korea" boom of 1951, the steel slump of 1953, the boom of today; and it has been talk of American recession that has lately cast a shadow across the Brussels bourse. But more deeply disquieting is the realisation that in an expanding world Belgium prospers on the present scale only when a boom is at its peak. Much of the European economy shifted into high gear as early as 1953, but in Belgium there were few signs of recovery from the "post-Korea" slump until the spring of 1954, and there are still reserves of unemployed in some areas. It seems, in fact, that Belgian heavy industry has become marginal to the European economy. When world supplies of coal, steel, ships, and machinery are fully stretched, Belgian producers, who can offer quick delivery because of previous idleness, become busy too; but on price and cost they are often uncompetitive, the first to lose ground when demand slackens.

The source of this weakness can be partly found in

of the up-and-coming technicians, managers and adventurers as well as the indispensable coal-miners? It is the party's attitude to freedom and an even-handed justice for all kinds and conditions of citizens that matters more to electors than its precise programme.

Mr Watson and his working partners must be taken to mean what they say. In their own fashion they are bent on being democrats. But they can fairly be asked two questions. Do they really know where, politically, they are going? And can they say what relevance these cloudy prescriptions, with their talk of control and constraint, have to the enterprise (in every sense of the word) of the salvation and betterment of all the British people, which should be—and surely is—their first concern? Where is the dynamo?

Belgium's postwar "miracle." Its relative freedom from war damage (except in Antwerp), its foreign exchange earnings from allied lines of communication and from Congo exports, and above all its neat currency reform and swift bonfire of controls enabled its heavy industry, largely intact, to take full advantage of Europe's pressing postwar needs. When Britain and most other European countries were still gripped by an icy austerity, Buicks were blaring through Brussels and Belgians of all stations were demonstrating their prowess as consumers. And when the pound was devalued by a third, the Belgian franc survived a devaluation of only 12 per cent. But these achievements had their price. When the boom faltered in 1949 and finally subsided in 1952, Belgium was left with two grave disadvantages: high wages, and industries that still followed the pattern of an earlier century.

★

The disadvantage of high wages can be exaggerated, especially in the capital-intensive industries like steel and heavy chemicals which are so important to exports; and between 1952 and 1955, in an idling economy, wages virtually stood still. But the disadvantage has been clear enough in relation to Belgium's neighbours and main competitors, Holland and Germany, for Dutch wages have been held down through a national wages policy, German wages through unemployment.

A more fundamental weakness, however, has been the antique pattern of industry. The "black country" that stretches along the Sambre and Meuse still bears the dirty if romantic stamp of the 19th century, and in parts of the Flemish textile industry there lingers a medieval echo. The railways have been losing money for even longer than Britain's, and in industry there are many signs of out of date organisation and scale. Even since the war the smaller steel firms have been putting

* *Personal Freedom*: Labour's Policy for the Individual and Society. Published by the Labour Party, Transport House, Smith Square, London, S.W.1. Price 9d.

up new blast furnaces far smaller than the optimum ones erected in Britain and Germany. The labour force of the rolling stock industry, once a vital section of engineering, has dropped by half since 1947-1949 owing to lack of orders. And in the coal mines of South Belgium, where Van Gogh preached, with their crooked narrow seams producing poor quality slacks, productivity is a third lower than the European average.

Like Britain, Belgium thus badly needs high investment and reorganisation to transform its ancient industrial pattern. But, also as in Britain, investment has been low. In 1954 Britain and Belgium, at the bottom of the European class, put a mere 6 per cent of national income into net new fixed investment. Lack of savings was not the main cause of this; low profits, the result of high wages, and government demands on the capital market bulked larger, but there were other reasons. Belgians are now amongst Europe's most uninhibited consumers, but their willingness to invest still seems to be relatively low.

★

These attributes—an antique economic structure and inadequate investment—scarcely seem to qualify Belgium for the title of a “dynamic society” that was recently awarded to it in *The Times Literary Supplement*. Yet Belgium has its own dynamic. Despite setbacks since 1951, industrial output is over 50 per cent higher than before the war. This old industrial society seems to have a remarkable ability to improvise, to get the most out of old equipment and long experience, and its empiricism is little hampered by conservatism or insularity. The framework for its energies is economic liberalism. Conservative central banking has preserved the Belgian franc; low tariffs and negligible import controls enforce competition and flexibility and safeguard the consumer. The absence of state intervention has given full play to the Belgian businessman's keen eye for profit. Rents are high, but absence of rent controls and subsidised housing has at least avoided the wasteful distortions suffered in Britain.

But though the liberal framework is important, it is deceptive, for nowhere in Europe is there a more highly developed business organisation behind the scenes. A few big financial holding companies—*Société Générale*, *Brufina* and others—with power to mobilise capital, and worldwide interests, link much of Belgian business through interlocking directorships and give it flexibility and financial strength. It is these great companies, commanding interlocking groups of firms, that have opened up the Congo with such success. And during the last two years the business “establishment” has been busy. A process of amalgamation and reorganisation is adapting the older heavy industries to modern competitive conditions. Most spectacular has been the amalgamation of the two biggest firms, John Cockerill, founded by the Lancashire mechanic of that name in 1817, and Ougrée-Marihaye. With ailing pits in the Borinage, idling rolling-stock works, and steel works

which, though the biggest in Belgium, still have difficulty in competing with the Ruhr, the two separate companies embodied the weakness as well as strength of heavy industry. But the new company, which made two million tons of steel last year, should be immensely strong. For the first time it has brought together in a major enterprise the two leading Belgian holding companies, *Société Générale* and *Brufina*.

Since 1954, moreover, the Socialist-Liberal coalition government has also been stimulating expansion and modernisation, a departure from its predecessor's policy of almost complete *laissez-faire*. The slack in the economy made possible the introduction in 1954 of a major programme of public works—big new roads, modernisation of canals, and preparations for the 1958 exhibition, which will be linked with new airport developments and reorganisation of the Brussels traffic system. The government also introduced new investment allowances and 30 per cent grants toward the cost of new buildings in certain new industries, and these arrangements, though withdrawn now that the economy is stretched, bore evident fruit.

★

The government's expansive policy has been attacked from the right, but on the whole there is a remarkable lack of dogmatism about Belgian economic thinking. From time to time some trade unions call for the nationalisation of basic industries, but they carry little weight. A more characteristic alternative was found for the power industry last year when a conference of employers and unions agreed to set up a combined council to rationalise investment, rates and production methods, all badly in need of reform. But the unity of purpose between the parties and a wide section of public opinion finds its most obvious expression in the common aim to transform the economy and make it viable through the development of wider open markets—Benelux, the European Coal and Steel Community and now the projected European Common Market and “Euratom.” (The coal-steel pool has already helped to modernise the backward Belgian pits, which have been the main beneficiaries of the levy raised from Dutch and German coal.) Endeavours are being made to attract, particularly for new industries, private foreign capital and skills.

Just how “marginal” the Belgian economy now is difficult to judge, but rising costs abroad, plus the country's own efforts at improvement, still seem to be strengthening its competitive position. The prospect of rising steel demand and of a continuing European coal deficit for many years make the outlook for even the marginal producer fairly bright. A big research programme is the forerunner of a future series of nuclear power stations. The nuclear materials which she commands in the Congo may in time enable Belgium to gain, among the smaller countries, a special place as an atomic industrial power.

Notes of the Week

Time to Act on Cyprus

THE study of the Cyprus question that has been in progress in London since the Governor, Field-Marshal Sir John Harding, came home nearly two weeks ago, is at an advanced stage. A tentative plan of action, designed to recapture the political initiative which the government relinquished upon the deportation of Archbishop Makarios, has by now been thrashed out. As this issue of *The Economist* goes to press, it remains undecided whether the plan is to be announced now, or shelved, perhaps indefinitely, in deference to those Conservatives who see no point in political “concessions” at a time when the anti-terrorist drive is meeting with increasing success. There are also the views of the Greek and Turkish governments to be considered. Since any political initiative, whatever precautions may be taken, will appear to favour Greek rather than Turkish Cypriots, Turkish government opposition to virtually any course of action has to be expected.

The plan now envisaged would apparently consist of an announcement of a date for self-determination, together with the unconditional offer of a constitution for limited self-government, the clauses of which—still to be worked out in their details—would provide safeguards for the Turkish minority while (inevitably, after all) allowing the Greeks an elected majority of the legislature. Despite reports to the contrary from interested parties, there is no disposition at present to consult the exiled Ethnarch. The evidence of his involvement with the Eoka terrorists, though circumstantial, is strong, and that of his duplicity—some of it still unpublished—is beyond denial. There is, of course, no lack of precedents for dealings with nationalist leaders whose tactics are questionable; but for the time being the Archbishop is being treated as an irrelevant factor.

Despite the objections, it is greatly to be hoped that the Government will brace itself to proceed with the plan. The need for political action greatly outweighs the dangers or inconveniences of taking it. With it, the campaign against the terrorists will have much enhanced chances; without it, no campaign can achieve final success.

Libya Between Loyalties

THE Libyans, whose prime minister has been talking over his problems with the British Government in London this week, occupy an uncomfortable position. The presence on their territory of western bases, and particularly of a sizeable British force, exposes them to the disapproving exhortations of their Egyptian neighbours.

These are felt all the more keenly because of the natural pull of Arab sentiment, and because Egypt exerts a powerful influence in specific ways, notably by staffing Libyan schools with Cairo-trained teachers. On the other hand, Libya's independence is not yet five years old. The stability of the country and the resumption of its economic growth depend largely on British encouragement and the money that Britain provides in return for the bases. The Libyan dilemma has recently grown sharper. Since Jordan weakened its British connection by expelling General Glubb, Libya and Iraq, at opposite corners of the Arab world, have been increasingly isolated on their pinnacles of co-operation with the West. Hostile propaganda is likely to fasten on the fact that the transfer of the headquarters of the United States 17th Air Force from Morocco to Libya has coincided with the news that Britain has on Libyan soil an armoured divisional headquarters—the division itself being fairly widely dispersed.

In these circumstances it would not be surprising if Mustapha Ahmed ben Halim, the Libyan premier, were to make his difficulties the grounds for a plea for more financial aid from Britain. On the face of it, now that Morocco and Cyprus are each subject to its own difficulties, Libya is more precious than ever as a friendly base. It may be argued that the whole strategy of the area is changing, and that it would be better to start afresh and make Aden and East Africa the hub of future planning in the Middle East. But if it is decided that Libya still has an important part to play, then there is a case for investing a little more in the country's good will. At present the British grant comes to £2,750,000 a year (roughly two-fifths of the Libyan budget) and another £1 million is given for development schemes. There is no exact method of putting a value on a stretch of desert; yet, if Britain seriously intends to base a defence position there, willing Libyan acquiescence will be needed, as well as desert land, to make it secure and effective.

Next Week's Axe

MR MACMILLAN is expected to announce the first round of his expenditure cuts next week—not the full £100 million, but probably more than half of it. It has been widely reported that defence's share of the economies will come partly from de-stocking of strategic raw materials and partly from the postponement of weapon deliveries to the services this year (the latter step being accompanied by an export drive in armaments). Both of these measures would be of a once-for-all kind; it is impossible to de-stock and postpone weapon deliveries for ever. The presumption is therefore that they would merely be curtain-raisers to a much bigger long-term cut in military expenditure, to be decided upon, although probably not immediately put into effect, in the autumn; the dangerous turn which the Government's "new thinking" on the defence programme could be taking is discussed in the leading article of this issue.

In the field of civil expenditure, however, the Government's policy decisions, if it is to make any, should presumably be revealed next week. Broadly speaking, Mr Macmillan has two choices. If he is wise, and if he can forget the Government's current obsession that the way to check demand is to freeze prices, he will concentrate his cuts upon consumer subsidies: dearer school meals, a boarding charge for hospital in-patients, and an abolition of the milk subsidy spring immediately to mind. But if he is timid, he will presumably merely hunt round the ministries for various departmental services (especially advisory services and the like) that he thinks can be pruned or abandoned without being missed. As the Treasury is still not fully equipped with schedules of the comparative costs incurred by different departments in running the same sort of service—as it has still not got a genuine "cost investigation unit" of the sort that, Sir David Eccles revealed last week, the Ministry of Education is now wisely to set up for schools—these perennial games of slap and tickle and blind man's buff must be regarded with weary suspicion. With the best will in the world, but also with the present machinery, it will be fatally easy for Mr Macmillan merely to scratch some scattered halfpenny-worths of tar off several fragile—but not always unnecessary—ships.

Re-enter Sir Frank

IN a fortnight's time, unless there is a complete reversal of political form, Sir Frank Soskice will come back to the House of Commons as MP for Newport. His return to Labour's front bench will be timely, for now that the first flush of the Gaitskell era is beginning to wear off, some potentially dangerous weaknesses are beginning to appear. The two most serious gaps are the lack of a front rank spokesman on foreign affairs, and a shortage of skilled, experienced Parliamentarians. The first gap is not new. Mr Gaitskell plans to fill it himself on big occasions, but Labour still needs to be better served in the day-to-day handling of foreign problems. Mr Gaitskell must realise by now that he will have to look elsewhere than at Mr

Robens for his next Foreign Secretary. Sir Frank Soskice could be his answer; it would be useful, despite the hurt this would bring to Mr Robens, if he were gradually to take over the shadow job in preparation for the eventual substantive one.

The lack of skill in parliamentary tactics is the price Labour must pay for slaughtering its greybeards, and particularly for banishing Mr Morrison to the obscurity of the back benches. Mr Gaitskell may well have to pay more attention to this matter himself, at the same time looking around carefully for a potential Leader of the House in the next Labour Government. At the moment there is not one in sight. Otherwise the new team is not shaking down badly. Mr Wilson has just passed a bad week, through consecutive mistakes in too precipitately attacking the oil deal and the premium bonds; but the fact that it is now a matter for comment when Mr Wilson has a bad week is a sign of a maturity not in evidence up to six months ago. Mr George Brown looks a likely Minister of Defence—more so, probably, than Mr Stokes—and even with Sir Frank Soskice reserved for higher things, Labour has a first class potential Attorney General in Sir Lynn Ungood-Thomas. Indeed Sir Lynn might well be considered for some more political office; during the debate on the Restrictive Practices Bill he showed to much greater advantage as a potential President of the Board of Trade than Mr Jay. There remains the problem of fitting in the men of the so-called Left. Mr Gaitskell may be in for some disappointments here—there will probably be ructions if Mr Bevan does not win the treasurership—but his policy of giving young men their heads is already paying off sufficiently for him to risk pushing it even further.

Marshal Tito's Bombshell

THE Russians are collecting one of the most spectacular rewards of their post-Stalinist policy. Last year's journey to Canossa and the open admission of Stalin's wrongs towards Yugoslavia are now bearing fruit; how precious it is may be gathered from the two statements published at the close of Marshal Tito's triumphant tour of Russia. Yugoslavia is getting very close to the Soviet foreign-affairs platform, as is illustrated strikingly by the new joint stand on the German question. The Yugoslavs have had no relations with East German régime, presumably because they have not up to now considered it as sovereign. But they now suddenly endorse the Soviet view that since "two sovereign states have been formed on the territory of postwar Germany," those two must negotiate between themselves. This is explicit recognition of the German Democratic Republic. Should the Yugoslavs follow it with the logical diplomatic sequel, they will place Bonn in a dilemma, since Bonn has specifically threatened to break diplomatic relations with any country (other than the Soviet Union) entertaining relations with East Berlin. A Yugoslav initiative might furnish the precedent which some other uncommitted states might be happy to follow.

Both declarations issued in Moscow insist on the part which co-operation between the two states and the two communist parties can play in the preservation of peace and the growth of the international movement. Tito can be

extremely useful as a link between communists and socialists on the road to popular fronts. He is now called back to the communist fold on terms inconceivable at the time when he was kicked out. The declaration emphasises the advantage of many ways to socialism and condemns any attempts to impose the path to be followed. Here, even more than in the western handling of Tito on his return, lies the key to future relations between Yugoslavia and the Soviet block. When will this new principle be applied to the whole of Eastern Europe? The looser the links tying the satellites to Moscow, the nearer will Yugoslavia gravitate to the Soviet nucleus.

Big Friend for Egypt

IS it impossible, among ex-colonial audiences, to overdo the anti-colonial blarney? Mr Shepilov, on his first excursion abroad as the Soviet Foreign Minister, touched the borderline this week in Cairo, but he also touched Egyptian heart-strings. Russia, he claimed, was an "unselfish" ally. Do Egyptians seriously believe, after their centuries of subjection at the hands of powers of varying sizes, that any great power is unselfish? Yet Mr Shepilov's audiences cheered. They were induced to cheer by the skilful use of a classic propaganda device by which he put his assertion in the midst of a stream of references to western base-bagging and western exploitation that they already accept as true. In such company it, too, passed for a truth. But they cheered also because their minds are set on "equality" and because they feel more "equal" with Russians still bearing the marks of struggle with hunger and illiteracy than with sleek westerners whose approach is always a descent from the height of a teacher, lender, or donor. For the moment, any tyro from the eastern block can with mere palaver outbid not only western words, but western acts.

Some hold that the departing British should have tried to play the title role in an "Evacuation Week" in which they, after all, are doing the evacuating. The theory is that had they at the last dropped their practice of sidling out in unobtrusive groups and had they, instead, staged a parade symbolic of departure, it would have been their performance, rather than Russian promises, that held public attention. But to argue thus is to miss the point that what the Egyptians are celebrating is not an exodus but its counterpart, their own genesis as a *Herrenvolk*, a people free at last from humiliation. Russia, in the person of Mr Shepilov, fêtes this emergence to their heart's content, establishing an attraction that will last until the day when, by some "selfish" stroke of Soviet policy, the facts are brought home and the bubble of complacency pricked.

An Atomic Entente

THE atomic agreement signed between Britain and the United States is a landmark on the long road back from the MacMahon Act. It is the first occasion since the early days of the war on which the United States has offered to give any military data of any kind to this country. The

agreement stops far short of lifting the Atlantic curtain on atomic weapons, but it does provide for a full exchange of data on power reactors for military use. The practical advantages to Britain are considerable. While Harwell does not share the American enthusiasm for atomic-powered aircraft, the Admiralty has recently commissioned a design study for an atomic submarine, and the three companies involved in this project are working on it now at Harwell. If the agreement means that they will have access to data on the American atomic submarines *Nautilus* and *Sea Wolf*, it may save them as much as two years' work and lead to the launching of a British-built submarine under atomic power within three years; it took six to design and develop the *Nautilus*.

The second part of the agreement covers the exchange of atomic materials and is generally believed to do more than just make it possible for Britain to buy some of the immense quantities of enriched fuel that the United States has on offer. Big power-producing reactors are being rushed up in this country to meet military requirements and these, together with the civil power stations shortly to be built, will severely strain the capacity of the Atomic Energy Authority to handle the spent fuel as it comes out of the reactors. Under the agreement it would be possible to set up a two-way trade across the Atlantic, the United States taking the used elements, and the fresh plutonium they contained, in exchange for fresh reactor fuel sent to Britain. To work out the details of such a plan would call for the utmost good will on both sides, but it would save the Atomic Energy Authority in this country great capital expenditure on extra chemical treatment plant; plant of the same kind is standing under-employed in the United States.

Mr Nutting and M. Faure

REPRESENTATIVES of the Six meet in Brussels on Tuesday to begin the drafting of treaties establishing Euratom and the Common Market. They will hardly be encouraged in their work by the latest statement of British

Emergency Issues Reprinted for Binding

The size of the pages in five of the issues of *The Economist* produced during the recent printing dispute was overlarge. These issues (dated March 3, 10, 17, 24 and 31) have now been reprinted in normal size and are available for those who regularly bind copies of the paper. The cost of a set of the five issues is 2s. 6d. including postage. It would be appreciated if remittances could be sent with orders, which should be addressed to:

The Economist (Reprints)
22 Ryder Street, St. James's, London, S.W.1

views given by Mr Nutting to M. Maurice Faure, his French opposite number, last weekend. One of the minor mysteries surrounding the British position on these questions is the curious ineptness which, throughout, has characterised the Government's dealing with the Six. The latest episode continues the unfortunate April-shower pattern of extinguishing faint rays of hope as soon as they appear, then seeking to counteract the effect with new hopes, only to repeat the cold treatment again.

Why M. Faure had to come to London to be told that the British would not join Euratom—if that was really the reason—is not clear. The European countries had no false hopes on that score, although there has been increasing confidence that once Euratom was established the British Government would find means of associating this country with it. The British preference for the OEEC plan was well known, as was the formal position, taken by Britain and the Six alike, that there is nothing inherently inconsistent in the two plans and that Euratom can be fitted into the larger, looser OEEC scheme. What then is the explanation? A last minute French bid for support? Or simply a rather heavy-handed British way of wishing the Six godspeed by showing interest without commitment?

Regardless of motive, the effect has been to underline once again the rigidity of the British position and the unsatisfactory nature of the explanations given for that position. The three arguments most often heard in support of the Government's policy are that participation in Euratom would interfere with the British military programme, that it would lessen the chances of a satisfactory arrangement with the Americans, and that it would not be in Britain's commercial interest. None of these reasons stands up to scrutiny. The Six have never assumed that full British participation could be obtained in every respect; what they have hoped for was some form of qualified participation, and to achieve that they were ready to make concessions. There is reason to suppose that a way could have been found to enable the British to continue with the military aspects of their atomic programme without interference or supervision by Euratom. The argument that the Americans would be harder to deal with if Britain found a means of participating in Euratom is even more difficult to swallow, given the obvious American support for Euratom and thinly disguised impatience with the British attitude. This leaves the commercial argument. Here the calculation that Britain stands to gain from holding aloof is hard to understand except in the shortest of short runs. Capital, inventive genius, technological skill, and well-trained engineers are the ingredients of a successful atomic energy programme. How long is it sensible to suppose that a substantial British lead can be maintained over the combined efforts of Germany, France, Italy and the Low Countries?

Steelworkers Break the Peace

THE British steel industry has been free from industrial stoppages for many years. That record has now been broken in a way which has been regarded as sufficiently serious to attract the special attention of the Cabinet. A large output of steel has already been lost through the

overtime ban which maintenance men in the industry have been operating since April 11th. The cause of the dispute is the refusal of leaders of the maintenance men to accept the wage increase of 10s. a week which has been agreed by other steelworkers. They say they want to preserve their differentials; but this is a new departure, for they have hitherto been content to receive the same flat increase as the other steel workers. The overtime ban has developed into a strike, affecting 3,000 workers, at six steel works where the men say that members of the staff have been used to carry out maintenance work.

The decision to recommend the ban was never officially conveyed to the employers' organisations, and the unions have refused to refer the matter to arbitration. The student of industrial affairs may therefore have no difficulty in guessing the names of two of the unions principally concerned. One is the Electrical Trades Union, with a communist leadership and a policy of recognising all strikes. Another is the Amalgamated Engineering Union, where the communists have not yet gained control, but where their influence is strong. The Iron and Steel Trades Confederation and the National Union of Blast Furnacemen, for their part, are naturally out of sympathy with a strike which is costing their members substantial earnings and which is based on a claim that their wages should be kept at a fixed differential below those of the maintenance men. Many highly paid production workers resent the implication that because they have not served an apprenticeship they are therefore less skilled.

The ban is patchy in its application, and patchy also in its effect. The continuous strip mills have lost most output, particularly as their maintenance work is largely done at the weekend; but other firms, such as the United Steel Companies, are little affected as yet. The loss of output happens to have come at a time when steel stocks in consumers' hands are high; it may not therefore be quite as serious for the country as it would have been a short time ago. But those who organised this stoppage may not have been aware of that.

The New Oxford College

THE new college to be established at Oxford will not, as was reported in some newspapers last week-end, cater only for scientists. In this stronghold of the arts, where it is so often argued that the need for more scientists must not be allowed to upset the existing balance of the faculties, it would be cynical indeed if the other colleges were to preserve their character only by deliberately creating an institution in which there was no balance at all. The new college is, however, expected to house a rather high proportion of scientists and technologists—nearly half of its 300 to 400 students—against an average of only about a third for the university as a whole.

It is quite right that a new institution should take account of the sort of graduates that the nation most needs, and that, as the university population (together with the proportion of scientists in it) rises, the larger numbers should be accommodated in a new institution rather than by crowding the older colleges. This is necessary not only to preserve the special character of Oxford, but also to get

the money. The University Grants Committee can distribute its largesse, on which the new foundation would at first depend, only to the university and not to the autonomous colleges; and industry is more likely to be generous to an institution that is particularly interested in scientists. But if these excellent arguments had not existed, one has an unworthy suspicion that they might have been conveniently invented. For the creation of this new institution may mean that the other colleges can now sit back and do nothing, with a sigh of relief that they need not after all take in an inconvenient number of new science students—and make room for an even more inconvenient number of science fellows at their high tables.

The plan has incurred some criticism because of one of its subsidiary effects. Although the undergraduates of St Catherine's Society are to be hived off into the new foundation, it is proposed that that society should carry on as a postgraduate institution. It has been argued that it is a mistake to remove the middle—and steady—age group between dons and undergraduates from the confines of ordinary college life. This argument may be unduly conservative. As Mr Max Beloff has pointed out in a letter to the *Manchester Guardian*, postgraduate students derive much benefit from each other's society, and the two existing postgraduate colleges, Nuffield and St Antony's (the former has a few undergraduates too), cannot meet the heavy demand for places. Cambridge has as yet nothing of the kind, but the same sort of provision is being made in the United States where the privately endowed universities are increasingly engaged in postgraduate studies.

Israel Drops a Pilot

WEARING a puzzled look, the Israel parliament has accepted the unexplained resignation of Mr Sharett from the Foreign Secretaryship in Mr Ben-Gurion's cabinet and his replacement by another member of the Labour (*Mapai*) party, Mrs Golda Myerson. Mr Sharett says the change had "nothing to do with any specific policy matter, event, or incident"; Mr Ben-Gurion, while admitting differences of opinion, says that the two men had always had confidence in one another. What is the explanation?

For full understanding of a complicated personal crisis, it will be necessary to wait until the dust has settled. Meantime, though sealed lips always suggest a defence issue, and though the Liberals who are in the cabinet call for its resignation on grounds that a reshuffle so inexplicable must spell a change of foreign policy, it would be an over-simplification to interpret the scene as one between a champion of appeasement—Mr Sharett—and a champion of risks and sabre-rattling—Mr Ben-Gurion—and so to deduce that war is more likely. It was Mr Sharett who was premier at the time of one of Israel's most momentous forays against Egypt; more lately, it was Mr Ben-Gurion who promised co-operation to Mr Hammarskjöld.

In the months since Egypt's Czech arms deal increased the danger of an explosion, the two men have probably been as close as ever before to agreement about problems on and beyond the frontier. It is likely that their main difference is domestic. Temperamentally, two men could scarcely be more different. Mr Ben-Gurion takes decisions by intuition, Mr Sharett on a basis of hard work and

attention to detail. Mr Ben-Gurion puts faith in manna, and gets it with an "I told you so"; Mr Sharett prefers to put his faith in dollar aid. For forty years, the struggle towards statehood has caused both men to relegate the division between them to second place. A turning-point seems to have come during the lull when Mr Ben-Gurion retired from politics and into the Negev. As so often happens, the easing of a strain seems to have disclosed its intensity. While Mr Ben-Gurion was vegetating, the Sharett technique, so different from his own, kept the cabinet going; perhaps this was nettling. But during the same period, *Mapai* told Mr Sharett in no uncertain terms that he would not be premier after the next elections; this must have been nettling for him, too. Mr Sharett now discloses that when Mr Ben-Gurion resumed the premiership, he "believed that co-operation would not be successful this time." He was right. Mr Ben-Gurion is undoubtedly better than he at explaining policy to the public, especially to a rising tide of young people and new immigrants who question every manifestation of moderation by the old gang. Perhaps this was the issue on which they parted company, but the final scene had had a long, slow build-up.

Mao Calls the Boffins Home

THE Chinese leaders have made some interesting admissions about the acute shortage of scientists and skilled technicians which is threatening their development plans. Kuo Mo-jo, the president of the Chinese Academy of Sciences, has announced that a 12-year plan of scientific expansion is being formulated this month, covering a wide range of subjects from atomic energy to automation. (Similar plans for philosophy and the social sciences have already been drafted.) Millions of scientists and technicians would be needed, he said, and the available force was "far short" of what was required.

One reason for this is the failure of the communists, despite strenuous efforts, to attract home the many distinguished Chinese who prefer to live in exile rather than face the new regime. According to Kuo Mo-jo's figures nearly 10,000 scientists are working or studying abroad in non-communist countries, and only a thousand have gone home in the six years since the communists took over control. He pleaded with the rest that "it is time for you to come back . . . to the warmth of the motherland."

Signs have appeared of a realisation among the Chinese leaders that, if the call is to be answered, they must relax the rigid controls they formerly imposed on intellectuals. Appeals for more freedom of discussion and "independent thinking" have now been followed by a declaration from Lu Ting-yi, the head of the Central Committee's propaganda department, which marks a radical departure from orthodox communist thinking. Inaugurating the slogan "Let flowers of all seasons blossom together and let diverse schools of thought contend," Lu Ting-yi went on to describe as a fallacy the idea that development in the natural sciences is governed by the class structure of society. Chinese intellectuals are no longer obliged to regard the work of western scientists as "capitalist," and therefore tainted, or to assume the superiority of theories evolved in socialist countries.

Not even in Russia has the ghost of Lysenko been quite so bluntly exorcised. The motive is plain—to encourage Chinese scientists to look to the west for knowledge as well as to Russia, and to persuade the exiles that they can safely bring back to China the fruits of the work they have done abroad. Stalinist dogmas are being adapted to the hard facts.

Tensions in Holland

THE disclosure of personal differences within the Dutch royal family has drawn attention to the difficulties of cabinet-making to a degree that is, in Holland, unusual. In fact, the situation that has been disclosed does not amount to a constitutional crisis; it may contain the seeds of such a crisis in the future, but even that—given the serious sense of duty and high public spirit of the persons involved—may be avoided. Queen Juliana, who is no automatic monarch but a strong and troubled personality, has for long been relying on the opinions of a faith healer, Miss Hofmans, to a degree that her natural and constitutional advisers regret. Her sustained grief at the partial blindness of her youngest daughter, and the evident (not necessarily total) estrangement between the Queen and Prince Bernhard, contribute to a state of tension in a respected family.

Most of these facts have been known for some time to a fair number of people in the Netherlands, though the Dutch press has exercised the same kind of self-restraint as British editors observed for a time over the personal affairs of Edward VIII. As then, a sudden disclosure has created a sudden air of crisis, but the parallel ends there. It is not clear who gave the whole story to the German weekly *Der Spiegel*, or why, but the motive is not likely to have been to precipitate a major crisis in Dutch affairs; no constitutional conflict exists.

Mr Drees, the outgoing Prime Minister who has been entrusted with the task of cabinet-forming, has a difficult enough task (by the sedate standards of Dutch politics) without this complication, and it is natural and right that the political leaders should be doing their best, as they are, to insulate the immediate problem of government from the tensions of the monarchy. An apparently trifling shift of party strengths in the elections of a fortnight ago conceals a real swing of opinion not against the Catholic religion but against political Catholicism, which overplayed its electoral hand and produced a reaction in some sensitive districts. Mr Drees, a socialist of the moderate Dutch kind, is finding the balance of the next coalition a more difficult problem than normally; but even that, in a country where moderation is carried to extremes, should not prove insoluble.

Horrid Hoardings

IT is good to have a Minister of Housing who sometimes takes his æsthetic functions seriously. Mr Sandys this week reminded local authorities of their powers, under the 1947 Planning Act, to control outdoor advertisements. Under

the regulations issued in 1951 there are two different procedures: ordinarily advertisements can remain unless the local authority specifically objects to them; but the authority can also, with the Minister's approval, designate areas of "special control" where no outdoor advertising at all is allowed except by its special consent. The advertiser has the right to appeal against its decision to the Minister.

Mr Sandys finds that many authorities have used these powers too sparingly. Others, it should be added, have used them too officiously. One reason for this, perhaps, is that the charming country town or rural beauty spot is often in the area of a conservative council which may be too tender with local business interests; whereas smoke-blackened industrial towns, which would look no worse—if not rather better—with a few more neon signs, are more likely to be under the control of socialist councillors whose pleasure is to say no to private enterprise. But, with so many other media available to advertisers, and in view of the advertisers' right of appeal to the Minister, disuse of the powers is probably a greater problem than occasional abuse. In particular, there seem to be too few areas of special control. The Minister believes that one reason for this may be that the power of special control is rather too drastic. He is going to discuss with local authorities and advertisers whether the Act should be amended in any way, and later will issue some definite guidance.

Signor Togliatti Joins In

MR KHRUSHCHEV'S secret speech was loaded with dynamite. The delay in its explosion in the western communist world has not deprived it of its force. After the Anglo-Saxon strictures and confessions, the big Communist battalions of France and Italy could no longer avoid the blast by hiding their heads in the sand. Signor Togliatti was first to break the silence in a lengthy interview which may mark a date in the history of world communism as the end of Stalinist ventriloquism and the beginning of open discussion. He did not limit his criticism of the Russians to the manner in which they have handled the document, releasing it first to the "bourgeois press"; he also assailed the substance of Khrushchev's argument. It is not enough, in his opinion, to explain everything away by reference to one giant scapegoat; a Marxist explanation must be provided to show how "such errors could have crept into the evolution of Socialist society." Nor can Russia's present rulers disclaim their complicity by arguing that they had no choice in the regime of terror. They must shoulder their share of responsibility. From all these shocking "revelations" about Stalinism, Signor Togliatti firmly draws the lesson that "the Soviet model is no longer compulsory for the Communist parties outside the USSR."

No doubt these criticisms are valid. But if Mr Khrushchev and the rest cannot really plead fear as a sufficient excuse, Signor Togliatti himself is certainly not entitled to plead ignorance. This veteran leader played too important a role in the makings of Stalinism. The fact is that there are no men with clean hands throughout the Communist leadership, not only in Russia. Stalinism with its rigid structure and its witchhunts is being buried by its own favourite sons;

and the burial is the beginning of new discussions and, maybe, of new men.

In the immediate future the Italian Communist party may pay quite a heavy price for the fresh wind. Only a narrow frontier separates it from the leftist Socialist party of Signor Nenni and many disgruntled members, shocked by the revelations, will be tempted to cross over. The leaders are now hotly debating how to use their newly gained independence to save the day. Some are apparently in panic, while others think that the shock will in the long run prove salutary.

Rearguard Action by M. Thorez

FRENCH Communists are not confined to *L'Humanité* exclusively for their newspaper reading. The publication of the Khrushchev version by *Le Monde* provoked such a stir in the party cells that the leaders were forced to face the music. A statement issued this week by the Political Bureau blames the Russians for withholding the official text, and demands a "Marxist explanation." Where Signor Togliatti, however, speaks of stagnation and bureaucracy, the French insist more on Stalin's achievements as Lenin's successor and "in the formation of all Communist parties." Thus M. Thorez, the French secretary-general, even while attacking him, pays a posthumous compliment to his benefactor. For months now it has been noticeable that while Italian Communists were swimming with the tide, the French leadership was desperately clinging to any Stalinist hold which still offered.

In this rearguard action it may temporarily succeed. The party congress is to be held in less than a month; there is not much time for spontaneous discontent to concentrate. Everything is being done to stifle discussion. Demands that the anathemas pronounced on "deviationists" should be reviewed, that the French party should look at its own "cult of the individual," that leading bodies should be elected by secret ballot, have been curtly dismissed. Plans are laid for re-electing the followers of M. Thorez into all

key posts. It is easier, however, to score a Pyrrhic victory than to control permanently the resentment accumulated by thousands of devoted party workers who for years had swallowed the slogans now admitted as lies. A wide gap separates the Communists and socialists in France; the leaders need not fear mass defections, but the pressures released below will, sooner or later, find their way to the top.

How long can Moscow remain silent? It could ignore the publication of Mr Khrushchev's secret speech by the "bourgeois press," its dissemination through the Voice of America, and even the stirring appeals of Anglo-Saxon *Daily Workers*. It cannot remain deaf to the voices now coming from Paris and Rome. Should the Kremlin accept the challenge, however, it will reveal the list of Stalin's crimes to the broad Russian public much earlier than was intended. There are difficulties in destalinisation by instalments. After the dissolution of the Cominform communist parties were supposed to consult on all important matters. In this case something must have gone wrong with the wires and the situation has got out of control. The Russians themselves sowed the seed, urging the foreign parties at their last congress to speak with their own voices. They have now to gather an unexpectedly early harvest. The Cominform is dead; the national communist movements are beginning to show signs of life of their own.

Plans for Premium Bonds

THIS week's debate in the Commons on the premium bond scheme was a disappointing affair. Labour found itself committed to opposing the bonds against its better political judgment; Mr Wilson was an embarrassed man and therefore, as so often when in that position, a wild one. The church and chapel spokesmen, who had a case, made a hash of it. They are a sad shadow of their predecessors, who so brilliantly debated the Prayer Book thirty years ago; when members of this House talk religion their tone is so often that of a dull parish magazine and never redolent of the quality of, say, a university sermon.

Mr Macmillan, for his part, lacked the full courage of his new convictions. Of the impediments that he has deliberately accepted to the scheme's chances of success, there is probably a good social case for keeping the unit price of each bond as high as £1 and for setting a maximum limit of £500 (it was once going to be £250) on individual holdings; there may also be an economic case for saying that the bonds must be held for six months before they will qualify for drawing—although some members wanted this cut to three months, so that the first draw could take place before the next Budget. But the other encouragements to sales resistance in the scheme—if the principle of the lottery be accepted—seem as unnecessary as they may be unprofitable. Mr Macmillan has permitted himself one easement: to hold draws monthly instead of quarterly will help to sustain interest, especially in the vital first year or two. But the top prize remains a chance of winning only £1,000 for £1, which may not prove much counter to the pools' offer of £75,000 for 6d.; at the other end of the scale, the man who holds £500 regularly in these bonds should have an even chance of getting some sort of prize (most probably of £25) about once every two years, but this sort of investor, with this sort of luck, should be capable

of working out that he would get a higher return from more orthodox securities. This, however, is an essay in logic; and the bonds are an appeal to excitement.

Inflow from Ireland

Our correspondent in Dublin writes: The result of the partial Census of Population taken in April this year has given a severe shock to Irish opinion. It shows that in the five years since 1951, the population has fallen from 2,961,000 to 2,895,000. This is the lowest figure ever recorded for the area comprised in the Republic. The loss in these five years also represents by far the heaviest annual rate of decline since the 1880s. The impact of this fall is all the greater because it comes after a long period of comparative stability. Between 1926 and 1946 the population fell by only 15,000, which contrasted favourably with any period since the decline in population began in the 1840s. The census of 1951 showed a small increase, the first recorded since the census of 1841. There appeared therefore to be some ground for hope that numbers had at last become stabilised. It did not appear that emigration was declining; indeed it was increasing in the later forties and the Commission on Emigration carefully abstained from holding out false hopes. But it was thought that an expanding natural increase would counter-balance its effects. These hopes have been spectacularly belied.

Differences with America

Since we addressed our readers last week on the subject of our pending differences with America, two decisions have been taken, both of first-rate importance. Our Government have determined not to retaliate for the dismissal of Mr Crampton by visiting their natural displeasure on the unoffending American Minister at this Court, Mr Dallas; and Mr Buchanan, the late Envoy, has been selected by the Convention at Cincinnati as the Democratic, and therefore probably the successful, candidate for the next Presidency. . . . When to these considerations were added the further ones, that the conduct of the Government at Washington was condemned by many of the best and soberest men of their own country both in the Senate and in private life; that that Government had only a short remaining tenure of office, and might probably be succeeded by more moderate, more decorous, and more just men . . . that we cannot expect from the American people the amenities or decorums of language and proceeding which prevail in the intercourse of more settled States; and that this sending away of objectionable or unacceptable foreign ministers appears to have been by no means an uncommon practice among the Americans, and to have been usually passed over by other States as a breach of manners pardonable enough, perhaps, in rough Republicans—and finally, when it was noticed that an opening seemed to be offered, by the published instructions to Mr Dallas, for an accommodation of the Central American controversy,—we see not only that there may have been sufficient grounds for the pacific decision at which our Government has arrived, but that in all likelihood that decision was a righteous and a wise one. The result will show whether our forbearance will be appreciated as it deserves, or misconstrued as perhaps it may be.

The Economist
June 21, 1956

It is notable, however, that the expansion of the rate of natural increase has continued; it is now greater than at any time since the 1880s. (Compared with most other countries with its age structure, however, Ireland still breeds very few children—not because the average family is unduly small, but because so many Irishmen remain unmarried.) The reason for the latest loss of population must therefore lie in increased emigration; and this, of course, is a direct function of the quite exceptional opportunities for employment in Britain in the last five years.

South China Sea Bubble

FIVE governments have now claimed one or other of two disputed groups of islands in the South China Sea. An enterprising Filipino recently announced that the Nansha islets, which lie between the southernmost tip of Vietnam and the Philippines, and are scattered in the area of the eight-foot high Itu Aba, were his private property. He argues, surprisingly, that he surveyed them first, though Itu Aba itself has been marked on maps for some time; but the Filipino government has decided to support his claim, if necessary before the United Nations. The Vietnam

government has reasserted its own claim both to the Nanshas and to the Paracel islands further north, on the ground that they were formerly French and automatically became Vietnamese when France handed over power. The French agree that they handed over the Paracels, but insist that the transfer did not

include Spratley—an outpost of the Nanshas—which they say is still theirs. The Chinese Communists and Nationalists, for once speaking in unison, say that Chinese explorers and cartographers got to the islands long before anyone else; but they are naturally less agreed as to whether they are Peking's or Taipei's property.

The Paracels, equidistant from Vietnam and China's Hainan island, would advance Peking's power uncomfortably far south if they fell into its hands. If present occupation is the test, the Vietnamese claim to have a garrison in the Paracels, and the Chinese Nationalists are also said to have sent a force there. Both have been outdone in the Nanshas by the private enterprise of another Filipino, who has already issued his own set of stamps in the name of the "Kingdom of Humanity." It seems a pity that so many governments, all of which have more urgent matters to think about, should waste their energies on island-hunting. Asia's young nationalists may well feel the old Kiplingesque urge to plant their flags beyond their shores; but when too many countries start chasing too few islands, even islands as insignificant as these, the results may be explosive.

DAISEE JUTE

plays the game

A GREAT all-rounder, jute. In the West Indies even test matches have been played on wickets of jute matting. When a young cricketer wins his cap the chances are that there's jute in the lining of that. And jute helps his footwork—because there's probably jute in his boots as well.

But jute is no 'flannelled fool at the wicket'. It's one of the world's most versatile workers. When you're on the carpet you're on jute. Get the sack—and you get jute. If you know the ropes you know jute. If you've a roof over your head you're under jute's influence there.

Jute, in fact, is all over the place—yet seldom in the public eye. Look closely where the work is hardest, where the job is unglamorous but vital—and you're pretty sure to find jute. Honest, tough, down-to-earth, indispensable jute. Well played, Daisee!

—makers of jute bags and sacks; twines, cords and ropes; yarns for woven carpets; cloth for tufted carpets and needlefelts, for backing linoleum, for tarpaulins; roofing felt, damp-courses and plasterers' scrim; webbing; and cotton belting.

There may be an application of jute to your business. Why not write to us:—

JUTE INDUSTRIES LTD • MEADOW PLACE BUILDINGS • DUNDEE

MORE POWER AT LOWER COST

To add power to an existing diesel installation the simplest and most efficient way is to fit a Napier Turbo-Blower. On a 2-stroke engine power output goes up by more than 50%. A 4-stroke diesel fitted with a Turbo-Blower develops as much power as two similar, but unblown, diesels. And both power gains are made at a lower specific fuel consumption.

The Turbo-Blower is a good example of the Napier principle: more power at lower cost.

Letters to the Editor

Britain's Trade Defences

SIR—The article in your issue of June 2nd is a diaphanously disguised plea for free trade.

You put up, as wobbly skittles, the imaginary case of those who take a contrary view and then proceed to knock it down. Those of us who support a different policy do not wish to restrict special favours to a "sterling Commonwealth club," as he suggests. We should wish to see the whole of the Empire and Commonwealth, comprising both sterling and dollar territories, included in a comprehensive preferential area. It has never been our belief that Commonwealth trade should even attempt to be exclusive. But such a preferential area should be maintained in order to provide a basis of stability on which its members could rely during good times and ill.

You suggest that those who take this view are saying "that since the trade of the sterling area . . . is especially vulnerable to American recession, we should during an American recession rely more exclusively upon it." What we in fact say is that by a deliberate policy we should build up the trade of the Commonwealth area, so as to make it less vulnerable to American recession when it comes, less dependent upon the United States even in good times, and thus less precariously poised upon a too small balance of gold and dollar reserves.

We do not invite protection merely for declining industries, though there is much to be said for doing so in the case of an industry which has a good chance of recovery. We desire protection for all industries which need help both here and in the Commonwealth. Protection in the past has not only helped declining industries to recover and prosperous industries to keep their place, but has been of particular value in helping to establish young industries—such for example in their earlier days as the chemical, glass, motor car and rayon industries, to mention only a few. Furthermore, when competing with the weight of dollar exports (often subsidised) from the United States on the one hand and with goods made by cheap labour in worse conditions on the other hand, it is clearly necessary for our Governments to look after their own people, both at home and abroad.

The fallacy behind your ideas seems to be the old free trade one, which, to put it crudely, is that all countries are alike, or, if they are not, that they should be made or considered to be so.—Yours faithfully,

M. PETHERICK,
Chairman

Empire Industries Association
and British Empire League, S.W.1

The Copyright Bill

SIR—The Note in your issue of June 9th contains certain passages which as they stand might possibly give rise to misunderstanding. They are as follows:

(1) *Infringement*.—The implication is that Clause 5 (5) (not 5 (2)) introduces a new principle in providing that a person who lets premises for a performance of a work may infringe copyright. This is not so; under section 2 (3) of the 1911 Act a person who lets a theatre or other place of entertainment for the public performance of a copyright work may in certain circumstances commit a breach of copyright. In fact, Clause 5 (5) does little more than clarify the wording of the 1911 Act.

(2) *Fair Dealing*.—The reason for the provision about "ephemeral" recording is not that performing and recording rights may be in different hands but that such a provision is essential for the convenience of artistes employed to give performances for broadcasting and for the efficient conduct of the broadcasting services; as often as not the artiste will not be available at the time when the broadcast is to be made.

(3) *Licence of Right to Record*.—"Rights" in the second sentence of this paragraph seems to be a misprint for "rates."

(4) *Component Rights*.—The explanation of Clause 13 (film copyright) is not entirely accurate. The fact that a copyright exists in a film version of a novel, for example, does not mean that the owner of the copyright in the film can prevent another, different, film of that novel from being made with the consent of the owner of the copyright of the novel. The comment, in the same paragraph, about the Harry Lime Theme seems to overlook the fact that, even when the copyright in the film has expired, a musical work forming part of this film but enjoying its own separate copyright can be freely played only as part of the film.

(5) *"Copyright in the Copy Book"*.—"Clause 39," not Clause 16, is the Clause dealing with the educational use of copyright material.—Yours faithfully,
Board of Trade M. L. G. BALFOUR

Letters from Prison

SIR—Your references on page 980 of your issue of June 9th to letters from prisoners shows a lack of "inside" knowledge. I am not at the same disadvantage. Every prisoner knows from bitter experience that every official (with rare exceptions) from the Secretary of State downwards is in fact engaged in repression. I know the atmosphere of a prison, both the closed and open

variety. I have spoken to a man who has presented twenty-six petitions to the Secretary of State during three years of imprisonment, and in them made serious allegations against police officers, including charges that they "railroaded" him; and everyone of these was answered by means of the stereotype form "sees no reason."

The whole system whereby 7,000 odd petitions by prisoners disappear in a vast paper chase into the Home Office is scandalous. As the convict says, "who cares?"

Make no mistake, prison officers are as a rule reactionary domineering bullies. Those who are not shine like lamps in the dark world on the other side of prison walls. They are not harassed and certainly not overworked men. They are underpaid, I think, and yet many whom I saw manage to run motor cars—Yours faithfully,
Nottingham

ROBERT S. SMITH

Students on the Red Carpet

SIR—You rightly point out the need for more hostel accommodation for overseas students, and the need for them to make more intimate contact with our "cold, grey people." But you do not link these two objectives. When will the authorities realise that to crowd students from Nigeria or India together in special hostels is to aggravate their sense of separation from English people and English life? Rockefeller built hostels in New York, Chicago and Berkeley, but he insisted that half of the student residents should be American and half from overseas. Cannot this admirable principle be extended to whatever hostels are in blueprint in this country? The African who lives for three years with other Africans in London has missed an opportunity. Such hostels would also overcome the traditional English student's shyness in befriending his colleagues from overseas.—Yours faithfully,
London, W.2

R. G. WILSON

Pyrrhic Banking Victory?

SIR—The article on page 896 of the June 2nd issue of your magazine pays well-merited tribute to Mr Allan Sproul, but, in my opinion, it is offensively and unnecessarily derogatory to Mr Alfred Hayes. I feel that your "New York correspondent" is highly unjustified in referring to Mr Hayes as "a mild and inexperienced man" who will "do the bidding" of the Federal Reserve Board, Washington, D.C.

Mr Alfred Hayes, a man of unquestioned intellectual integrity and character, has been a well-respected member of our international banking fraternity and a deep, thorough student of the various aspects of economics and finance. I know that many others here share my own indignation at this unwarranted and unseemly article.—Yours faithfully,

ANDREW L. GOMORY
Manufacturers Trust Company,
New York

Books & Publications

Quotes—but Votes?

WHAT I THINK.

By Adlai E. Stevenson.
Hart-Davis. 228 pages. 18s.

NOTHING surely is more unreadable than yesterday's political speeches. Those delivered by the politicians of other countries would seem to enter a special category of unreadability. "Selected speeches of Herr Finanzrat Stompenhauer"—"pages culled from the addresses of M. Hercule Dubonnet"—who picks them up eagerly or feels compelled to read further? And, it must be admitted, there is often a particularly resistant quality in American political speech-making. The magic of Lincoln's oratory has created—as Gibbon did for English writing—a tradition of forced grandiloquence, of July the Fourth prose, totally unlit by its inspirer's sagacity, humanity and wit. A collection of political speeches by an American politician has, therefore, nine chances out of ten of being unreadable—unless the politician happens to be Mr Adlai Stevenson.

His collection of recent speeches triumphantly represents the tenth chance. He cannot apparently write anything that is not merely possible, but a positive pleasure to read. There is, it is true, a trace of repetition in this volume, since some of the themes were bound, by their very urgency, to recur. But this fact detracts little from the hold each separate essay—for essays they often seem, rather than speeches—maintains on the attention of the reader. Here is politics, other people's politics, in fact, largely American campaign politics. Yet one reads on. Why?

For one thing, Mr Stevenson does not confuse eloquence with pomposity. Much that he says is truly eloquent and moving, but the mood springs from sincerity, not the desire to impress. The reader never seems to catch the author's unspoken thought: "Now I will have a little purple passage"—or if he does, Mr Stevenson is a split-second ahead of him (as, at one point, in the touching address to the students at Princeton, he begins: "There is a wonderful passage in Emerson" and characteristically adds: "and happily I couldn't lay my hands on it"). For an English audience, particularly, Mr Stevenson's mastery of wit, irony and understatement is most satisfying—besides being a useful reminder that intelligence lightened by humour is no English monopoly.

These speeches are not, however, *belles lettres*. They are not carried by style. Beneath the verbal ease, Mr

Stevenson has always done his homework. A sense of historical perspective gives breadth to what he says on foreign relations. His knowledge of American history brings depth to his comments on the local political scene. The Lincolnian echoes are not oratorical flourishes, but expressions of his central thought. Yet history does not overload or exclude contemporary judgment. As early as 1954 Mr Stevenson was warning his countrymen of the switch in Soviet tactics from the military to the economic offensive—a switch which seems to be taking the Administration by surprise in 1956—and in his speech on the American economy delivered in Texas last year at the height of the boom, he pointed to the over-expansion of the automobile industry as a prelude to the dislocation suffered by Detroit today.

But perhaps the abiding interest of the speeches lies in the fact that they explore, with wit, with learning and with eloquence, the great issues of free society and the liberal tradition. The relationship between government and the individual, the possible conflict between state-provided welfare and personal liberty, the role of government and opposition in a system of ordered liberty, the duties and limits of free speech, the reconciliation of belief in truth with the acceptance of empiricism and diversity—on all these issues, Mr Stevenson not only speaks finely in the great western tradition of humanism. He does so with an urgency and fire made necessary by the McCarthy episode. What might be no more than the statement of principle in normal times of free thought and inquiry has become something more moving—a profession of faith.

Wherever, therefore, these speeches are read by freedom-loving men, the image of America will be the brighter and the leadership the nation exercises through sheer power will seem justified by generosity, reason and vision as well.

Great Campaigner

COOTE BAHADUR.

By E. W. Sheppard.
Werner Laurie. 247 pages. 25s.

TO all but a few, Eyre Coote's name means nothing. Yet he belongs to the great company of Clive, Wellington, Nicholson, Colin Campbell, and Havelock. He was prominent in the conquest of Bengal, wrested the supremacy of India from the French, and in the winter of his life saved Madras Province. He has been underrated because the career of Clive, his senior by one year, outshone his in immediately spectacular re-

percussions. His new biographer asserts that Coote should be regarded as third only to Marlborough and Wellington, and he makes out a strong case.

Coote was the first British general to cite by name in his dispatches the non-commissioned officers and privates (Indian and British alike) who distinguished themselves in battle. He was the first to adopt the two-deep line of infantry as a battle formation, the credit for which is usually given to Wellington. He fought many sternly contested battles and did not lose one: a distinction the more remarkable in that he was simultaneously conducting a paper war against an unco-operative and hostile Madras governor in his rear, was normally in straits for men and supplies, and was opposed by the ablest military leader that India ever put in the field against the British—Hyder Ali.

Major Sheppard's book is a scholarly study of a series of eighteenth century Indian campaigns, important in their ultimate results, but obscure and devoid of the glamour shed by romantic episodes or personalities. Its appeal must largely be to the student of military history. Since Major Sheppard dedicates it to the officers and men of the armies of India and Pakistan, whose ancestors Coote so often led to victory, it is a pity that he refers to European troops as "Whites" and to Indians as "Natives," long discarded terms, which keep unhappy associations needlessly alive. There are nine maps (including seven excellent sketch maps of battles) and twelve illustrations, but one regrets that Major Sheppard was unable to include the portrait (of which he gives so attractive a description) of Coote's loyal and charming wife.

Semi-Disqualified Money

THE ECONOMICS OF REPRESSED INFLATION.

By H. K. Charlesworth.
Allen and Unwin. 126 pages. 13s. 6d.

ECONOMISTS discussing inflation during the first decade following the first World War's object lesson had a comparatively simple job. It is true that they dealt already with a double-edged concept; on the one hand the process of expansion of the monetary supply, on the other the consequent fall in the value first of the monetary unit and then—in extreme cases—of the total, inflated supply itself; and analysis, classification, and the working out of causal connections and eddy-effects presented a formidable enough task. But at least they did not have to concern themselves with a money supply not merely depreciated but partially disqualified; with an accumulation of buying power dammed off from its holders' chosen outlets by a more or less leak-proof barrage of physical controls. At the commonsense level much has been written, since the second World War, about this situation; at the level of pure theory, surprisingly little. Mr Charlesworth's essay is indeed the first attempt to treat the problem rigorously at book length.

It is an ingenious, indeed brilliant

treatment. In a situation where, the measuring-rod of money being by definition only partly effective, economic behaviour might seem to be a matter of guesswork, Mr Charlesworth succeeds in disclosing the underlying rationale of behaviour by consumers, owners of factors of production, and entrepreneurs. Damped or distorted, economic motive can still be analysed. There is, nevertheless, a weakness in his book considered as a whole. His analysis provides, inevitably, no means of judging the point at which, or the extent to which, these damping or distorting effects of repressed inflation pass from a marginal and unimportant to a central and governing rôle in any particular field; and he seems unaware that his practical prognostications—such as such effects "will" follow—derive from commonsense judgment, not from logical rigour. Nothing in his argument would permit a statesman to distinguish between the plights of, for instance, Western Germany before the monetary reform and Great Britain at the same period.

In the realm of propensities, habits, psychological discounts and elasticities of demand for income and leisure, saving and consumption, the empty algebra must be given a working value by social observation and insight. Mr Charlesworth's social observation and insight are nowhere near up to his analytical ability. He has, however, made an original and thoroughly genuine contribution towards the understanding—without which social observation and insight too easily flounder—of the mechanics of inflation in the mid-twentieth century style.

Social Vistas

THE SQUIRE AND HIS RELATIONS.

By Esmé Wingfield-Stratford.
Cassell. 436 pages. 42s.
BEFORE VICTORIA.
By Muriel Jaeger.
Chatto and Windus. 222 pages. 18s.

SOCIAL history has never been the special province of academic historians, and these two volumes bear little resemblance either in style or approach to monographs on similar subjects produced inside the universities.

Mr Wingfield-Stratford, who has written a great deal about English politics and national way of life, bypasses in his latest work all the important historical controversies of the last twenty-five years. He is so anxious to dispose of what he considers to be the two main popular myths—that the squire is a cheery but insipid old buck or that he is a sinister and hard-faced tyrant—that he has no time left to face the pressing questions which modern historians have raised. He adds nothing to our understanding of the place of the squire in English history, never says very clearly just what a "squire" is, and stops short, for reasons of space, at one of the most interesting points in the story. His choice of what he admits in his introduction to be an "ambitious task" has not been followed up by the necessary re-

search. At best his book is genial and warm-hearted, sprinkled with literary allusions, and distinguished by some attractive turns of phrase. After reading it, most of his readers will no doubt join with him in proposing Dickens's toast, which he uses as a motto, "Bless the Squire and his relations."

Miss Jaeger, who deliberately concerns herself with a narrower social vista, is far more informative and suggestive. She became interested some time ago in the process whereby "the sweetness and light of the Age of Reason passed into the sombre earnestness of the Victorian Age," and as a result of what at first was "desultory" investigation has produced an agreeable and well-written study of Victorianism before Victoria. She shows, much in the same way as M. J. Quinlan did in his "Victorian Prelude," a work she does not quote, how English society under the influence of evangelicalism and Scots philosophy became more "serious" and "morally superior." The young began to rebuke their elders for frivolity, and there was something in the nature of a revolution in both manners and taste.

Miss Jaeger's themes are carefully selected and well-documented, but her artistry is more elegant than her analysis is complete. She has not looked sufficiently hard, for example, at the eighteenth-century ancestors of the "Society against Vice and Immorality"; she has not searched deep enough into the roots of evangelicalism; and, above all, in directing attention to the lectures of Dugald Stewart she diverts attention from the far more significant treatises of Jeremy Bentham. Three somewhat casual references to utilitarianism in a book on the subject she has chosen are quite inadequate. When the deficiencies are taken into account, however, much of real value and considerable entertainment remains in her pages, and she has certainly succeeded in disproving one of Mr Wiggfield-Stratford's aphorisms, that history can seldom be at the same time both objective and readable.

The Old Firm

MINDING MY OWN BUSINESS.

By Percy Muir.
Chatto and Windus. 224 pages. 21s.

THIS rambling, happy, gossipy book is called an autobiography, but Mr Muir is too modest to make it so. There is nothing at all about his personal life; this is the story of the antiquarian bookshop which he joined in the twenties, and which he still conducts. He sketches in the background of the firm before he knew it, and a strange tale it is, illustrating the psychological truth of the maxim that a company is a different person from any of its shareholders. The firm starts as a bookshop of the old style in Exeter, doing a little dull publishing on the side; then it comes up to London; joins up surprisingly with John Lane and publishes the Yellow Book; splits off in horror from its strange associate, who goes his own prosperous way; jogs along till it loses

its eponymous owner, and is then taken over by a brilliant and scholarly clergyman, who likes business too much to stay in a parish, and launches the firm on to new and bold courses of first edition selling.

This is where Mr Muir comes in, and he casts himself modestly as the one professional bookseller and quiet business man in a strange, talented and delightful crew of amateurs. And, though he is much more, it is true that he is a professional; he was then, and is now, interested in what makes a firm solvent and what does not. The result is that, after many crises and changes, much capital pumped in and lost, and the death or departure of all the brilliant amateurs, the firm still survives and Mr Muir with it.

The opening of trade to the gentry provided fine new outlets for eccentricity, and none better than the antiquarian book trade. Mr Muir's firm, in its halcyon days, could show as many ripe examples as any comparable sector of British life: all his partners and most of the customers whom he mentions were out of the ordinary. He has a sharp and amusing pen, but not a bitter one, and his book is a delight to read. His story stops at the outbreak of war, when he snatches his firm away to the country. He drops a hint that he may write a sequel about its life and his in the salubrious district which they now inhabit; his readers will all look forward to it.

The Fiscal Field

READINGS IN FISCAL POLICY.

American Economic Association Series. Selected by Arthur Smithies and J. Keith Butters.
Allen and Unwin. 606 pages. 30s.

AS the list of "Readings" of the American Economic Association grows, so, necessarily, do the difficulties of the compilers. Each volume groups under a single heading—to date, theory of income distribution, business cycle theory, theory of international trade, monetary theory, enterprise and secular change—a selection of periodical and pamphlet literature which students "might otherwise overlook or not find readily accessible." The trouble with this genuinely invaluable project is that the headings inevitably overlap, more or less awkwardly; with this volume, shoe-horned in between cyclical theory, money, and the yet-to-be compiled selection on public finance, the overlap threatens to be very awkward indeed. The editors solve their problem, as the change in title indicates, by stressing for the most part policy rather than pure theory. These essays and book extracts are as often footnotes to recent economic history as analyses of abstract situations or models.

The initial paper examines "our intellectual heritage" in the matter of budget balancing; a section, headed by Keynes's famous open letter to President Roosevelt, on fiscal policy in recovery, is balanced by another on fiscal policy and inflation, symmetrically

ended by an extract from Keynes's "How to Pay for the War." There are six essays dealing with the fiscal aspect of monetary policy, ten on instability and stabilising devices, a short section on the "burden" of public debt, and two papers—one an extract from Schumpeter's "Capitalism, Socialism and Democracy"—on fiscal policy in its relation to economic growth. (One may hope that a set of "Readings" on economic growth is on the Association's agenda; but its editors will have a terrible job.)

Inevitably, the predominance of concrete policy confronts the English reader of these mainly American essays with a stiffer task of translation, into terms of English conditions and experience, than do earlier volumes. The comprehensive bibliography (some 800 titles) should, however, make it possible for any serious student to find English counterparts whenever they are felt to be really necessary.

Pupil's Tribute

TEACHER.

By Helen Keller.
Gollancz. 224 pages. 15s.

THE story of Helen Keller's metamorphosis from a phantom without will or intellect into a young woman of cultivated tastes, high social conscience, and a radiant awareness of beauty, has become part of the bible for the handicapped and those who work for them. Yet all through her public career she has been saddened and exasperated that her own freak value overshadowed the vital, unwavering devotion and constructive labour that had made possible the restoration of a truncated life into form and comeliness. Her book is a tribute to the "Teacher" who "lent her humanity to create mine"; it is a plea to the public to disregard the phenomenon of a deaf-blind mute who graduated at college with normal contemporaries, spoke on public platforms and travelled all over the world to further the cause of deaf-blind sufferers, and to consider how the miracle was accomplished.

Anne Sullivan Macy came to the Keller homestead when she was twenty-one and the child was seven. At her own request she was segregated in a nearby annex with the little being "governed by animal impulses, not often those of a docile beast," and by dint of patience, determination and even physical force—in one battle with her wild charge she lost two front teeth—she brought her to the first stepping-stone, the cognisance of water, and instead of an antagonist she became "Teacher." But she remained a task-mistress, requiring more, not less, effort from her handicapped pupil. She was not over-protective, and was adamant in her veto of pity, the greatest stumbling-block to the sightless. But in addition to her method of teaching she brought to the task an inquiring mind, a vivid sense of beauty, a love of English literature and a fascinating personality. In her boundless ambition for her pupil she

absolutely disregarded physical limitations, including her own, squandering her failing sight freely to promote Helen's mental vision.

Almost every page of this loving appreciation reveals the breathtaking achievement of the venture. Helen Keller speaks casually of herself as a careless, happy and positive young girl; describes a colourful trip to Hawaii; revels in the immensity of earth and sky, the good fellowship and laughing talk of visitors, and "the memory pictures in my fingers." As the depth and amplitude of the experience gained by three senses are revealed, one is humbled at the paltry use one makes of five.

Naturalist's Odyssey

PELICAN IN THE WILDERNESS.

By F. Fraser Darling.
Allen and Unwin. 380 pages. 25s.

THIS is an expert's book that can be greatly enjoyed by a layman. The writer has not only an encyclopaedic knowledge of natural history, but a good sense of humour which he couples with a pleasant style.

He has sub-titled his book "a naturalist's Odyssey in North America." All odysseys have a purpose, and his was not only to see the variations of co-existence between man and nature and to study birds and beasts, but also to see what life was like in the virgin wilderness which man has, as yet, had no opportunity to spoil. His travels took him from the United Nations, at Lake Success, through the south west to Mexico, and then north to Alaska.

Like all wise men, he collects people and places, but as an ecologist he is most interested in the effect of the people on the places and the places on the people, and is as interested to analyse the structure of life of the gamblers of Las Vegas as of the Eskimos of Alaska. His writing is always good, but amusingly variable; sometimes in lyric vein, sometimes staccato and sometimes he trudges in the footsteps of Samuel Pepys.

Shorter Notices

BRITISH NATIONALITY LAW:
Revised edition.

By J. Mervyn Jones.
Oxford University Press. 333 pages. 45s.

This book is very heavy going, even for lawyers. This is less the fault of the author than of his subject, but he has contributed to its difficulty by concentrating a vast amount of erudition into a very small space. The subject is involved, because for many years before 1948 some Commonwealth countries had been formulating their own nationality laws without regard to the common code, and in the end the British Government had no option but to face the fact. The upshot has been that the United Kingdom is in the position of the long-suffering mother who welcomes to her arms all those, prodigal and otherwise, whom no one else will take.

The British Nationality Act, 1948, in conjunction with legislation and constitu-

tional changes elsewhere, resulted in substantial numbers of irate Empire builders from Burma and India being required to prove their British nationality for the benefit of passport officials, who, it must be recorded, were tolerant, amused and very helpful. Mr. Mervyn Jones in the second edition of a book originally published shortly before the Act of 1948 was passed has written an admirable guide to this legislative maze, although it is not one which can be readily understood by those without a knowledge of the subject.

LIFE SINCE 1900.

By Charles Furth. Allen and Unwin.
172 pages. 15s.

This is evidently a large subject, but the author is not overwhelmed by it; he remains alive and recognisably human all the time. "This is on the whole an unpleasant book, and we come now to its most unpleasant part." When a chapter begins like that the reader is conscious of a fellow human being at the writer's end. It is a book for the uninstructed reader, and its spiritual home is a shelf in the school library, from which it should be frequently removed; but anyone might find it good reading and learn things he did not know before. In spite of the unpleasantness, cheerfulness breaks in towards the end with an account of improved conditions in Britain, fortified with a multitude of statistics. For example, only 20 per cent of those earning £10 a week or more take a bath daily—or did so in 1947-48. We live in a statistical age, but one continues to be surprised at the confidence with which statistics of this sort are produced.

Books Received

SELECTED LETTERS OF SYDNEY SMITH.

Oxford University Press. 353 pages. 6s.
The latest addition to the publishers' "The World's Classics" has been edited by Nowell C. Smith. In a preface he says that in making a selection from 1,038 letters he has tried to present the course of Sydney Smith's life, his friendships and his interests.

THE PAKISTANI WAY OF LIFE.

By I. H. Qureshi.
Heinemann. 92 pages. 12s. 6d.

PRIVATE CAPITAL FORMATION IN AUSTRALIA: Estimates 1861-1900.

By N. G. Butlin. The Australian National University, Canberra. 172 pages. 20s.

YEAR BOOK OF INTERNATIONAL TRADE STATISTICS, 1954.

United Nations, New York. London: Her Majesty's Stationery Office. 556 pages. 36s. \$5.00.

YEAR BOOK OF THE UNITED NATIONS, 1954. United Nations, New York. London: Her Majesty's Stationery Office. 666 pages. 70s. \$10.50.

DEMOGRAPHIC YEARBOOK 1955: seventh issue.

Statistical Office of the United Nations, Department of Economic and Social Affairs, New York. London: Her Majesty's Stationery Office. 792 pages. Paperbound 50s. \$7.00. Clothbound 60s. \$8.50.

L'ENSEIGNEMENT DU TOURISME.

By A. Mariotti.
Imprimerie Corbez, Montreux. 144 pages. No price given.

● For new ideas in business...

YOU SWITCH ON HERE

and the copy comes out here

When you want to circulate copies of anything — written, typed, printed or drawn — to a lot of people or departments, hand it to the office boy and tell him to get it done on the REMFLEX. He will turn out copies at the rate of one in less than two minutes: each of them perfect, taking a fraction of the time and costing far less than is possible by any other method.

REMFLEX brings the advantages of modern photo-copying right into your office, with all the fuss and mess of photography eliminated. So, when information 'hot from the press' must be brought to the attention of all concerned, anyone in the office can turn it out on REMFLEX in practically no time at all.

REMFLEX is merely one of the many modern methods devised by Remington to streamline the day-by-day efficiency of business operations. The Man from Remington Rand will gladly call upon you to discuss their application to your own problems without obligation.

This particular Cyma
is NEW! It is the *navy star*
watertight... yet slim and so elegant

It is one of the 60 CYMA 17-jewel lever models for ladies and gentlemen, from £15 in chrome/steel and from £25 to £85 in solid gold.

CYMA *navy star* — a masterpiece of Swiss craftsmanship. Its ultra-slim stainless steel case is so designed that faultless watertight sealing is achieved without the bulk usually associated with watertight watches. 17-jewel precision lever movement. Anti-magnetic. Anti-shock.* Price £24.10.0

Other watertight models from £11.2.6

A unique spring system, designed to counteract wear, permanently seals the watch.
The main sealing material, a new alloy, retains its elasticity.
*Cymaflex — the world-famous anti-shock device fully protects the balance staff.

CYMA

*ONLY Cyma watches have the Cymaflex anti-shock device—but every CYMA has it. From Good Jewellers everywhere. Ask for a CYMA Catalogue.

Cyma for particular people

whose products include BP Motor Spirit and BP Energol ! Visco-static ! Motor Oil

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Labour Goes Slow

Washington, D.C.

THE new federation of American trade unions has put off until after the party conventions its decision on whether to endorse a presidential candidate this year. This is only to a slight extent a gesture to the two Republicans on the federation's executive council. The postponement was chiefly the result of a combination between the politically timid, who are afraid of exposing labour's leaders to repudiation at the polls by the rank and file—the Gallup survey has said that 56 per cent of union members now support Mr Eisenhower—and the politically bold, such as Mr Walter Reuther, who want to jolt the Democrats into realising that labour's support is not to be taken for granted this year.

The merger of the two great labour groups has raised again in a more dramatic form the much debated question of whether trade unions really have much influence on political elections. It is often argued that they do not, and cannot, because America is not a class conscious country, because union members resent being told how to vote by people whom they hire simply to get better working conditions for them, and that an industrial worker's life is so much fuller in America than elsewhere that union membership is only one among the many group loyalties which may determine his politics. By contrast, other critics of labour's political aspirations hold that the merger has produced a wealthy monopoly, able to manipulate a formidable urban "block vote," mainly to the advantage of the Democrats, despite the wishes of the many trade union members who are Republicans.

The only thing certain about the coming election is that it will prove neither point conclusively. The new federation may turn into a political giant, but as yet it is a most unco-ordinated one. The merger has so far taken place only at the top; except in five states it has not yet reached down to the state and local labour councils which are the effective units for most political purposes. It is possible that after this stage has been completed the more politically dynamic spirit of the Congress of Industrial Organisations may prevail. But many states are still far from this. Californian labour, for example, is still divided between Mr Haggerty's state council of the American Federation of Labour, which has a long record of co-operating with Republican state governments, and the smaller CIO, which is helping to revive the Democrats.

It is obvious that a union leader cannot "deliver" his members' votes like a sack of potatoes. Mr John L. Lewis proved that when he called on his miners to vote Republican in 1940 and West Virginia, where there is the largest con-

centration of them, gave Roosevelt his usual thumping majority. The CIO's experience in recent years suggests that, while a union may come to grief by plunging into a political vacuum, it can be very effective if it can find a suitable framework in which to act. While Michigan is always cited to prove the unions' political strength, the neighbouring industrial state of Ohio is the prize example of their political impotence. It is worth comparing the circumstances.

At first sight they have much in common. Both are expanding industrial states, with a Republican political tradition, and Democrats who have seized the Governorship and held on to it. But there are historical and geographic contrasts—Michigan, unlike Ohio, has only one major industrial complex, Detroit, one preponderantly strong union which is the most politically conscious in the country, and a relatively recent history of bitter industrial strife. Moreover there is a striking difference in the political setting. In Michigan the unions were able to achieve success under the banner of Governor Mennen Williams, who is an outstanding political leader in his own right and first captured the governorship more or less on his own. The CIO burst into politics to help him hold it for a second term by the narrowest possible margin; this gave the Democrats the breathing space they needed to build a modern party organisation, so that in subsequent campaigns the unions have been able to operate more circumspectly as its auxiliaries.

In Ohio, on the other hand, so far from the Democratic Governor, Mr Lausche, turning to the unions for help, he takes regular electoral credit for being against the "labour bosses." Since he controls what little Democratic organisation there is and does practically nothing to help other Democratic candidates, the unions felt obliged to lead openly the campaign against the late Senator Taft in 1950. In these circumstances, with the Governor barracking from the sidelines, and with only an exceptionally feeble Democratic senatorial candidate to run against a famous and widely respected incumbent, the Ohio CIO showed itself incapable of controlling the labour vote and Senator Taft was re-elected by an enormous majority.

★

In any comparison with British conditions it must be remembered that, out of a labour force of sixty-four million, well under twenty million are trade union members. Of these only a minority belonged, before the merger, to the CIO and not all the CIO unions were as politically com-

mitted as Mr Reuther's automobile workers. A recent study by Wayne University on the behaviour of the Detroit autoworkers in the 1952 election suggests that members of this advance guard are at least as loyal to union leaders as are British trade unionists. Mr Stevenson received 75 per cent of their votes, while the union-backed candidates for Governor and Senator both received over 80 per cent.

Of course this does not prove how many votes were decided by the union leaders. Perhaps the most that can be said is that there are two outstanding ways in which union resources can be used to help the Democratic candidates whom the trade unions endorse: registration drives and financial contributions. Since lower income families tend to be well above the average in Democratic sentiment and well below in registering to vote, it follows that an energetic campaign to get them on the electoral roll is likely to improve Democratic chances. This approach has added merit in that it avoids "telling workers how to vote" and that it can be represented to the world in general as a disinterested public service. Moreover, trade union funds are often the only major source to which Democratic candidates can turn to counterbalance the usual Republican financial advantage. This is becoming more important than ever in that the most expensive item of all, television, is rapidly becoming the most influential.

There is no contracting out of political dues for trade unionists in the United States. Except in a handful of states, of which Wisconsin is the most important, the unions have free use of ordinary dues to help candidates for state and local offices. This is forbidden for federal elections, so that voluntary contributions are raised by separately organised political action committees. But since a political party runs candidates for both types of election on the same ballot the distinction is rather narrow. Moreover, the federal law applies only to the campaigns of individuals. Union funds can be spent on lobbying and on "political education," which includes registration campaigns, regular union television programmes and magazines, and the circulation of voting records which show the issues on which incumbents voted "right" or "wrong."

This power of the purse, linked to the considerable power of publicity controlled by the unions, is increasingly giving labour leaders influence over the selection of Democratic candidates and the wording of their platforms. In his speech to last week's CIO state convention in Michigan Mr Walter Reuther made it abundantly clear, as he has done before, that he hopes to use this power to force a realignment of political parties, so that Democrat should always mean liberal and Republican always conservative.

Rounding Up Democrats

IT is not yet certain, for all the wide publicity given to his satisfactory progress, how soon the President will leave hospital. But the Republicans are eagerly counting on the earliest possible announcement that he feels able to run again, to dispel a nightmare they publicly ignore and to deflate the question of his health as a political issue. The lessons learned the hard way at Denver last autumn, when for a few days uncertainty ran riot, have been

smoothly applied. By securing the President's signatures to bills and access to him for Dr Adenauer and M. Pineau, the White House staff is studiously fostering the illusion that Mr Eisenhower is still in full command and that no government business is being held up by his illness.

The ablest stage management, however, will not convince the Democrats that their chances are not the brighter for the reasonable doubts about the President's ability to play his full part during the next four years. As the Democratic contenders manoeuvre to round up the uncommitted delegates to the nominating convention which begins on August 13th, it should become clearer whether the party's reaction will be to unite behind Mr Stevenson in order to make the most of their better prospects, or whether a more glittering prize will simply sharpen the appetites of his rivals. Of the 1,372 votes which will be cast at the convention, Mr Stevenson has 264 in his bag, compared with the 686 needed to win; 94 are pledged to him either voluntarily or by law, the remainder are known to favour him. The runners-up are Senator Kefauver, with 173 votes (only 62 pledged) and Governor Harriman with 102. Another 190 votes are scattered, at present, among "favourite sons," the leading political figures of individual states.

Beaten by Mr Stevenson in the primaries, Senator Kefauver has taken to the olive branch, although he disavows any interest in the Vice Presidency; he has publicly regretted his intemperate attacks on the victor. Mr Harriman, on the other hand, has set up a western campaign committee patently free of the taint of the eastern, city machine which is one of his national drawbacks. He hopes to convince enough of the uncommitted delegations from the large states that only a campaign based on the radical pattern set by Mr Truman can defeat Mr Eisenhower. Mr Stevenson's task is to corral enough delegates to force an early decision. He has shown that he can win in a rough and tumble with Senator Kefauver. What is now wanted is a reassertion of the moral and intellectual leadership he displayed four years ago. Moderation is Mr Stevenson's great attraction to such influential Democrats as Senator Lyndon Johnson and Mr Rayburn, who want to prevent any southern walkout. But it is no substitute for the ability to find issues worthy of his talents and make it clear where he stands on them.

Foreign Aid Under Fire

WHEN the Foreign Relations Committee of the Senate recommended that Congress should authorise the expenditure of \$4.5 billion to carry on the foreign aid programme, the Administration won a preliminary round in what has been, and continues to be, a difficult fight. Originally, President Eisenhower had asked for an authorisation of \$4.9 billion for the fiscal year beginning on July 1st. After a prolonged tussle, which included attempts to stop all aid to Marshal Tito, the House of Representatives cut the President's figure to \$3.8 billion. From his hospital bed, Mr Eisenhower set all his lieutenants in motion to persuade the leaders of both parties in the Senate that such a reduction would be a severe blow to American foreign policy. By a vote of 13 to 2, the Foreign Relations Committee restored some \$700 million—including \$100 million for a special

fund for Asia—of the \$1.1 billion sliced off by the House and thus arrived at a figure which the Administration had qualified as "tolerable."

But despite the large majority that backed the President in the committee room, the foreign aid programme is in for a rough time when the Senate as a whole debates it next week. The reasons for congressional opposition are various and complex. Many Senators believe that the United States must devote more money to strengthening its own military defences and somewhat less to bolstering allies, many of whom are showing increasingly neutralist colours. The Senate committee recognised this sentiment when it stipulated that \$1.6 billion of the total authorisation must be spent on weapons for American forces replacing arms of equivalent value which can then be sent to allied armies. Meanwhile, however, the Senate Appropriations Committee was independently voting an increase of \$1.2 billion in domestic military expenditure and many Senators feel that they should not call upon the tax-payer to bear the burden both of greater defence spending and of increased foreign aid. Other Senators, including such "internationalists" as Mr Fulbright, oppose the present plans for foreign aid on the ground that they are too heavily laden with military commitments and that the new Russian "line" has made them obsolete. To meet this argument, the Foreign Relations Committee voted to spend \$300,000 on an "exhaustive study" of the entire subject.

But the Administration itself is responsible for much of the opposition. In presenting the case for foreign aid, it spoke with conflicting voices and showed that deep confusion reigned over such fundamental issues as neutrality and the best forms of military and economic action. Moreover, many Democrats who have loyally supported Mr Eisenhower against his own party feel that, if the Administration has been as successful as it claims in securing peace, the case for costly foreign aid needs new and more convincing justification.

Security out of the Wood?

ON June 11th, the Supreme Court delivered a ruling which is expected to have important consequences on the entire security programme. By a vote of 6 to 3, the court held that only those government employees in positions concerned "with the nation's safety" could be summarily suspended and dismissed without the right to have their cases reviewed. Expressing the opinion of the majority, Justice Harlan said that "in the absence of an immediate threat of harm to the 'national security' . . . the justification for summary powers disappears." These powers originated in 1950 when Congress stipulated that employees in eleven government agencies should be liable to immediate dismissal on grounds of security. Congress also gave the President the authority to apply this Act to any other agency as he thought fit. In 1953, in his notorious Executive Order 10450, President Eisenhower extended it to the entire government and did away with most of the safeguards which Mr Truman's loyalty programme had provided for government employees, especially those in "non-sensitive" jobs.

One of the many men dismissed by virtue of this order was Mr Kendrick Cole, an employee of the Food and Drug

Administration. He was accused of associating with persons "reliably reported to be Communists" and of attending meetings of the Nature Friends of America, a group alleged to be subversive. He appealed to the Civil Service Commission, but was informed that security procedures barred a review of his case. Thereupon, Mr Cole took to the woods and became a tree-surgeon while his lawyers hacked their long and weary way towards the Supreme Court. Now, after a legal battle lasting three years, Mr Cole will be reinstated and receive back pay. The Department of Justice also announced that seventeen other government employees, suspended from non-sensitive positions on security charges, would be reinstated immediately, and that there would be no further proceedings against persons in this category until the Court's decision had been studied further.

Although the verdict has marked a formidable victory for those who argue that the Administration's security programme has been indiscriminate and unjust, the fight is by no means over. The dissenting Justices declared that their colleagues had "stricken down" the government's best weapon against subversion and had usurped the President's executive functions. Moreover, a group of reactionary members of Congress, led by the traditional unholy alliance of Senators Eastland, Mundt and McCarthy and Representative Walter, promptly introduced legislation which would extend summary procedures on security to all government jobs.

Steel Showdown

NEGOTIATIONS between the United Steelworkers and the "big three" in the industry—the United States, Bethlehem and Republic Steel Corporations—were broken off sharply last week. Union negotiators are now bargaining separately with eleven major steel producers, but the threat of a strike, beginning at midnight on June 30th when the present contracts expire, is again looming. After two weeks of preliminary sparring, the employers made their offer, insisting on the desirability of a five-year contract barring strikes and allowing renegotiation only in the event of a national emergency. Such a contract would be a factor for stability in the American economy and would prevent stoppages such as have taken place seven times in the past twelve years. The steel producers offered an increase of six cents an hour on July 1st and on the same date during each of the next four years, with an extra rise of 6 cents an hour for some 15,000 workers in the lowest wage group and increases in the differentials for skilled work. Furthermore, the "big three" met the union by putting forward a supplemental unemployment benefit plan, covering fifty-two weeks. The industry's proposals also contained an unexpected, although small, concession on the question of premium pay for Sunday work.

After examining this contract, Mr McDonald, president of the United Steelworkers, declared: "The Titans of industry have laboured and brought forth a louse!" In particular union leaders are determined not to commit themselves for so long a period as five years. Moreover, as is traditional in such negotiations, mathematicians for both sides came up with flatly contradictory estimates of

what the proposals would actually cost. Mr McDonald and the 170 members of his wage policy committee rejected the whole offer with the derisive comment that it represented only a 2 per cent wage increase for workers who had increased their annual productivity by 11 per cent. Spokesmen for the industry answered with pained decorum that their proposal was "final" and represented the "ceiling" of what they could offer. But on both sides, finality is a time-honoured prelude to renewed negotiation and steel users are keeping their fingers crossed. If the strike does break out, customers such as the manufacturers of automobiles and appliances will begin living off stocks accumulated for just this eventuality. It is estimated that they could carry on for a 30- to 60-day period, but some other important users of steel, in the construction industry, for example, are already living almost from hand to mouth.

Coal in the Black

AN "unprecedented partnership" between the American coal companies, the mineworkers' trade union and the principal coal-hauling railways has been formed to acquire ships for the export trade in coal. The organisers of the new corporation, which is to have an initial capital of \$50 million, point out that the foreign demand for American coal is no longer on a spot basis, but "permanent and expanding," with three- and five-year contracts already being signed. They note with relish that the OEEC expects the European demand for American coal, which accounts for over two-thirds of all American coal exports, to rise from 27 million tons in 1955 to 40 million tons in 1960 and 50 million tons in 1975. Partly as a result of the growth in coal exports there has been for some time an acute shortage of tramp tonnage, and ocean freight rates have risen to the highest point since the Korean war. It now costs more to send a ton of coal across the Atlantic than to mine it and transport it to the American port of shipment. The new coal shipping company hopes to mitigate this shortage either by acquiring ships from the government's reserve fleet, or possibly by building its own colliers.

The growing European demand for American coal is one of the main reasons for the present exuberance in the coal mining industry, almost moribund two years ago; it hopes to produce over 500 million tons this year compared with 392 million in 1954. But economic expansion in the United States shares the responsibility for this revival. Not only are the requirements of steel and aluminium producers and other industrial users of coal steadily rising, but more and more coal is needed for the generation of electricity. Both these trends are expected to continue, especially the second, for there are only limited possibilities for further expansion of hydro-electricity and coal owners look for no serious competition from atomic energy for at least twenty-five years. As a result the industry has stopped crying over the markets for railway fuel and household heating which it has lost to the oil industry.

The coal companies' chief concern today is with finding not new markets but new capacity. However, coal is still handicapped by its heavy transport costs, at home as well as abroad. The domestic counterpart of last week's shipping

scheme is the coal pipeline now being built in Ohio. If it proves satisfactory, this type of facility should develop rapidly. Coal costs will, however, probably be threatened from another traditional quarter as soon as prosperity seems firmly re-established. Mr John Lewis, recognising the community of interest between coal owners and coal miners, has been most co-operative while the industry's accounts have been in the red. But now he may well argue that it is the owners' turn to recognise the community of interest and to give the members of his union a share in the new profits. The wage contract between the miners and their employers comes up for renegotiation this autumn.

Tax Cut on the Way

THE Secretary of the Treasury is about to ask Congress to keep the ceiling on the national debt above the statutory limit of \$275 billion for yet another year. This will again be necessary, even though the budget is expected to show a substantial surplus when the fiscal year ends on June 30th, because the concentration of tax receipts in the spring and early summer means that later in the year the government cannot avoid spending more than it takes in. But this year, thanks to the surplus, a rise of only \$3 billion, to \$278 billion, is probably all that will be needed, rather than the increase of \$6 billion which has recently been usual. This will be the first time the ceiling has been lowered for ten years and Congress is therefore unlikely to make any difficulty about granting the Administration's request. But the combined effect of a reduction in the national debt, a surplus in the budget, and the Democrats' need for an appealing election issue, may be to inspire a last minute effort in Congress to over-ride both the Administration and the Democratic fiscal expert, Senator Byrd, and to cut taxes before the adjournment. Such a move would be stimulated should the present disturbing signs in the economy become more serious in the next few weeks; but, if the automobile industry is any guide, it looks as if the worst of the readjustment might already be over.

The possibility—it is still far from a probability—of a tax reduction was encouraged by a report earlier this month from the Committee for Economic Development, a research group of respected business experts, who support government action to stabilise the economy and who once argued that in times of prosperity any surplus revenue should be devoted to reducing the national debt. Now, however, they believe that tax reduction is more important, since the increase in the national income means that the national debt no longer weighs so heavily as it used to do on the economy. The group believes that the best way of ensuring that this economic growth should continue is by tax reforms which would put budget surpluses back into the "stream of private income where they can be an incentive to enterprise and a source of funds for venturesome investment." The CED report therefore advocates a reduction in taxation, to be approved before Congress adjourns and to take effect next January, provided a surplus of several billion dollars is really in prospect for next year. The details of the CED proposals, however, are much less politically attractive than is the general principle, for the tax cuts are to benefit mainly

"IMAGINE ME WITH REAL PEARLS!"

Not too long ago a string of pearls like this would have cost a small fortune. Today however... thanks to the cultured pearl process... their price is much more practical. Developed into a fine art by the Japanese, pearls are now produced in assembly-line fashion by placing small shell particles into live oysters. Returned to the ocean, each oyster will form a pearl around its "nucleus" within 3 to 4 years. Such pearls, when of top quality, are detectable from natural pearls only through the aid of special laboratory equipment.

Serving the 15 million dollar Japanese Pearl Industry... financing the importers and exporters of cultured pearls... has long been a specialty of Bank of America's International Department. By providing on-the-spot service through our branches at home and abroad, Bank of America's International Department gets the job done quickly, with a minimum of red tape. We think we could similarly serve your business or industry. Why not ask us about it?

Stopping the bus

A hand is raised, a foot goes down. Seven tons of loaded bus come swiftly, surely, safely to a standstill. It happens thousands of times a day, almost without a thought—yet not without considerable assistance from Cape Asbestos.

CAPASCO moulded brake linings, which are fitted to London buses and coaches as well as to a high proportion of all British heavy commercial vehicles, are made by The Cape Asbestos Company.

"Cape" today is a group organisation embracing factories in many countries and owning more than

250,000 acres of asbestos-producing properties. From our own South African mines come Amosite and "Cape Blue" Asbestos whose special qualities contribute to the outstanding efficiency and durability of the range of "Cape" manufactured products.

WORLD'S LARGEST PRODUCER OF AMOSITE AND BLUE ASBESTOS

To save a life

Portable packages of electricity help make our lives safer and more enjoyable

THE BRIGHT BEAM of a flashlight in the hands of an airman down at sea...the untold comfort of an almost invisible hearing aid...the pleasure of listening to your favorite music over a portable radio.

THESE INGENIOUS DEVICES have one thing in common—they all get their electric power from dry-cell batteries. Each day millions of us depend on these portable packages of power for greater safety, comfort, and pleasure.

LARGE BATTERIES furnish power for signalling and communications systems. Hearing aid batteries are now so tiny that they can hide under a dime. Other dry-cells supply power to everything from toys to Geiger counters.

OVER 60 YEARS AGO, the people of Union Carbide produced the first commercial dry-cell. From this beginning, they developed the great variety of EVEREADY batteries that now serve dependably in so many applications.

SCIENTISTS of Union Carbide are constantly working on new, improved methods of producing packaged power. Their goal is to make dry-cell batteries do even more work for all of us.

FREE: Learn more about the interesting things you use every day. Write for the illustrated booklet "Products and Processes" which tells how science and industry use the ALLOYS, CARBONS, CHEMICALS, WELDING EQUIPMENT, and PLASTICS made by Union Carbide. Ask for booklet IE-6-1.

corporations and people with high incomes, in order to stimulate saving and investment rather than consumer spending. But consumer spending comes mostly from the low income groups where the majority of voters is to be found and in which Congress is naturally more interested than is the CED.

New Guard in Maryland

Washington, D.C.

AFTER the recent Democratic primary election in Maryland came the wholesale slaughter of the victors. In the subsequent party convention everyone who had supported Mr Millard Tydings, the successful candidate for the senatorial nomination, was proscribed. The people who have replaced some of Maryland's most distinguished Democrats as the members of the state's delegation to the party's national convention are mostly unknown, small-time politicians who chose the right moment to desert their old leaders. The two most rapidly expanding counties, Prince Georges and Montgomery, which contain some of the suburbs of Washington, were punished for giving large majorities to Mr Tydings by being left unrepresented altogether.

Perhaps only in Maryland, which has one of the oddest political systems in the country, could there have been such a rapid and paradoxical reversal of fortunes. Geographically, the state is a monstrosity: on the map it looks like a snake which has been chopped into three and is still wriggling. The central and eastern portions form the opposite shores of the Chesapeake Bay. These, and especially the eastern shore, where until recently the descendants of early settlers lived a placid, backwater life, are northern projections of the American South. The western portion, a beautiful triangle in the Alleghany Mountains, is only connected with the rest by a narrow strip.

These geographic peculiarities of Maryland help to explain why power is dispersed among the counties and why politics are almost entirely a matter of personalities. The urban section of the state, which consists of the city of Baltimore and the Washington suburbs, and in which an increasingly high proportion of the population is living, has generated no liberal movement. The trade unions, for instance, are politically ineffective. Apart from the western counties, which are traditionally Republican, conservative Democrats control almost all local offices and invariably dominate the state legislature at Annapolis. Nevertheless, not only did the Republicans carry Maryland in the last two presidential elections, but both of the incumbent Senators are Republicans and so is the Governor, Mr Theodore Roosevelt McKeldin, who is in the middle of his second four-year term.

The reason for this paradox and for the recent tumultuous Democratic convention is the factional rivalry in the Democratic party. In the course of four elections since 1950 the party has been reduced to a shambles by the unquenchable ambition of one man, Mr George Mahoney, a wealthy paving contractor with a large smile, a hearty handshake, and no discernible political principles. He has never won an election but usually comes so close that it is

impossible to dissuade him from having just one more try.

Under the Maryland constitution each county has the same number of electoral votes in a primary election as it has representatives in the two houses of the state legislature and in each county the winner takes all. As the apportionment of seats in the legislature is quite out of date, it can easily happen that the candidate with the majority of popular votes loses the nomination. This is precisely what happened to Mr Mahoney in his first effort to become Governor in 1950. The bitterness generated in the Democratic primary delivered the governorship to Mr McKeldin in the November election. The story was similar in 1952, when Mr Mahoney won his party's nomination for the Senate but lost the election. In 1954, Mr Mahoney fought Mr Curly Byrd for the gubernatorial nomination in an unsavoury campaign which was so close that recounts of the poll dragged on through weeks of agony. The disgusted voters rather naturally made Mr McKeldin the first Republican Governor of Maryland ever to be re-elected.

★

This year, some members of the Democratic "Old Guard," notably the State Controller, Mr Millard Tawes—who wishes to run for the governorship in 1958—conceived the brilliant idea of getting Mr Mahoney safely out of that race by giving him a clear run for the Senate. But at the last minute, the gorges of many of the Democratic elders rose simultaneously at the thought of treating the Senate as a dumping ground for unwanted politicians. Pressure to run again was therefore brought to bear on Mr Millard Tydings, an old-fashioned southern gentleman who had been in the Senate as long as anyone could remember until his defeat in 1950. During most of his service he had a reputation for extreme conservatism. But he went out with the unlikely halo of a liberal martyr, having headed the Senate committee which contemptuously rejected Senator McCarthy's notorious allegations of subversion in the State Department. As a result Senator McCarthy's most unpleasant henchmen helped to elect the present Republican incumbent, Mr John Marshall Butler, in one of the nastiest political campaigns of modern times. Surprisingly, the campaign for the senatorial nomination in last month's Democratic primary was the politest ever known. Mr Mahoney stressed his devotion to party unity and his resolve to do nothing that would deliver the November election into the hands of Senator Butler. Once again he came within an eyelash of victory. He and Mr Tydings got the same number of county unit votes. In the event of such a tie, the actual number of individual votes is decisive. On that count Mr Tydings was nominated.

But because Mr Tydings' intervention was a last-minute improvisation, the Old Guard had neglected to organise a campaign for delegates to the state convention. Mr Tydings himself went off for a rest and failed to negotiate with his defeated opponent, who emerged with a clear majority at the convention. For all the soft words about party unity, Mr Mahoney and his ally, Mr Tawes, laid about them with a vengeance. Some Marylanders claim that the revolution has improved Mr Tydings' chances of being elected to the Senate in November, since the Mahoney forces, having at last captured the Democratic organisation, will want to prove themselves efficient party workers. But it seems much more likely that Maryland Democrats will once again show their skill at snatching defeat from the jaws of victory.

Banking Anachronism

FROM A CORRESPONDENT IN SAN FRANCISCO

WHEN President Eisenhower signed the Bank Holding Act last month he observed that it "falls far short of achieving its objectives," since it contains many exemptions and special provisions which will limit its application to a very few firms. He might also have added that, even if it achieved its objectives, it would fall far short of effecting any important change in the country's banking industry. The new law is a significant political victory for the defenders of the traditional American system of local single-office banks, and demonstrates the strength of the forces which oppose today's steady trend towards branch banking and the concentration of bank capital. But the targets of the legislation—the bank holding companies—have not been responsible for the rapid extension in recent years of multi-office branch banking. Furthermore, the one firm which the new law most affects, the Transamerica Corporation of San Francisco, has anticipated its passage by counter-moves to minimise the curbs on the company's operations.

The Act itself is a relic of the days immediately following the collapse of many vast holding companies during the 1929 crash. Stringent restrictions on public utility holding companies were enacted in 1934, but similar legislation against bank holding companies, although introduced annually, did not pass the House of Representatives until 1955; by then the importance, and political influence, of bank holding companies had diminished considerably. Much weakened from its earliest versions, the Act was further diluted by the Senate's insertion of exemptions.

★

As passed, the Act requires the approval of the Federal Reserve Board before a bank holding company may take control of additional banks, and prohibits the company from acquiring or retaining subsidiaries whose activities are "not related to banking." However, a bank holding company is defined as a firm which controls "two or more" banks; this exempts the many holders of single banks and a number of religious, charitable, educational or family trusts are also specifically excluded.

The Act adds to the broad supervisory powers now exercised by the Federal Reserve Board over bank holding companies, but it does not direct the board to prohibit their further expansion, as some wanted it to do. The board is merely given two new conditions which must be satisfied before it approves acquisitions of banks. First, it must consider whether a proposed acquisition would expand the holding company which is applying for permission "beyond limits consistent with adequate and sound banking, the public interest, and the preservation of competition in the field of banking." Secondly, a bank holding company cannot take over a new bank in a state other than its own domicile unless it has specific authority from the legislature of the state where the bank is.

Freely translated, the first condition means that the Federal Reserve Board will measure the pressures within the banking fraternity for and against a proposed acquisition by a bank holding company, and the second that certain state legislatures will be the scene of additional lobbying by competing banking groups. The actual effects which either condition will have on future expansion by bank

holding companies can be determined only in practice. The requirement of formal approval is significant, however, as a token of the political potency of the opponents of branch banking, which cannot be carried on across state boundaries and is restricted or entirely prohibited in many states. In years past, bank holding companies have antagonised advocates of single-unit banking because they have been able to escape restrictions on branch banking by acquiring a number of unconsolidated banking subsidiaries in several states and throughout states where branch banks are forbidden. Branch banking on an interstate basis is seldom seriously advocated, since it would require extensive federal and state legislation. The continuing opposition to branch banking on a limited local scale shows that interstate operations are still very far in the future.

This victory of the "independent bankers," as the advocates of single-office banking are called, may tend to strengthen their hand in those states where there is growing sentiment for a relaxation of the long-standing restrictions on branch banking. But it was a victory won without opposition (and perhaps with some covert assistance) from most of the country's large banks, whose activities are completely unaffected by the new law. In any direct contest over branch-banking, however, the independents would find many influential banks in the opposing camp.

★

While the concentration of banking capital which is so much feared by independent bankers used to be fostered solely by bank holding companies, it is now developing largely through direct mergers of separate banks (some of them former "independents") into huge systems with such portmanteau titles as the Chemical Corn Exchange Bank, the Chase Manhattan Bank and the Crocker-Anglo National Bank of San Francisco. The merger method will doubtless be utilised henceforth by the Transamerica Corporation, the aggressive western bank holding company. In a whirlwind campaign undertaken when the new law appeared imminent, Transamerica in the first four months of 1956 purchased 20 new banks in six Rocky Mountain states where it previously had no bank holdings. As a result, further expansion there, and in the five far western states where the corporation already owned banks, need not be subject to the new Act, since it can be achieved through mergers with these subsidiary banks, which are subject only to the existing regulations of the several states.

The requirement in the new law that bank holding companies divest themselves of non-banking interests will apply in practice almost solely to Transamerica, which owns about \$1 billion in real estate, insurance, consumer finance and industrial subsidiaries; other banks with large industrial interests have relied on less formal methods of control than ownership by a parent holding company. Transamerica has intimated that any such "divestiture" will be achieved by the common practice of creating two companies from the single existing one and spinning off the new one by a distribution of shares to the present stockholders. Such a device would assure a continuing community of interest between Transamerica's banking and non-banking interests, and would mean that Transamerica's subsidiaries would then be freer than at present to engage in transactions with each other. It would thus thwart the intent of the new law, which reflects another tenet of independent bankers—that banks should not dominate industry and commerce.

What the Wright brothers' plane

was to the Montgolfier balloon

Titanium

is to the

metals of today

Once or twice in a century, the curve of progress takes a sudden upward sweep.

Today, titanium — at last harnessed to practical needs — opens up vast new fields of development for the progressive engineers.

Aircraft designers have been among the first to employ titanium's special properties, particularly its high strength-to-weight ratio and its outstanding resistance to corrosion. They

have found in it the answer to some of their most exacting problems. It may provide the answer to yours.

I.C.I. are now producing titanium as a raw metal, and are also making sheet, strip, rod, tube, wire, plate and forging stock from titanium and its alloys. For full technical information about this remarkable new metal, write for the booklet "Wrought Titanium".

IMPERIAL CHEMICAL INDUSTRIES LIMITED, LONDON, S.W.1

H 408

For the construction of a large reservoir at Plessey, Northumberland, the civil engineering contractors, Sir Robert McAlpine & Sons Ltd., use the most modern type of oil-flooded rotary air compressor.

**Because this plant
has no pistons, valves,
crankshaft or clutch...**

it gives the kind of really long-term trouble-free service that puts it far ahead of the conventional type of compressor. Those moving parts which normally require frequent servicing are replaced by a simple two-stage vane type rotary compressor. The entire unit runs in oil and is oil-cooled. And new design features such as fully automatic control, centralised instrument panel, and non-detachable radiator doors are incorporated to make the CP Power-Vane the most important advance in design since the portable compressor came into general use. Certainly, this is something every Plant Engineer should know about...

ROTARY COMPRESSORS

In capacities of 120, 175, 210, 365, and 600 cu. ft.

MANUFACTURED BY CONSOLIDATED PNEUMATIC TOOL CO. LTD., 232 DAWES ROAD, LONDON S.W.6

The World Overseas

Diem's Shaky Foundations

FROM OUR CORRESPONDENT IN SAIGON

A CERTAIN complacency appears to have settled on the West about South Vietnam's future. The belief seems to be gaining ground that everything is going swimmingly south of the 17th parallel, that President Ngo Dinh Diem has communist infiltration well in hand, and that, now the Anglo-Russian talks in London have got round the snag of the elections originally scheduled for this July, the Vietnamese problem can be quietly shelved. The ultimate fate of the country depends, however, not on conference tables in distant capitals, but on the internal ferment in Vietnam itself—and particularly in the south where, despite the simplification caused by the defeat of the rebel sects and the departure of the French expeditionary corps, much is still fluid.

The drama of South Vietnam lies in the fact that it provides the most immediate test of whether the American aid programme can do what it is intended to do—to diminish and finally master communist infiltration in poverty-stricken Asia. Unfortunately, to arrive at the truth about the present situation in South Vietnam is almost as difficult in Saigon as it is in London or Paris. Almost all sources of information in South Vietnam are tainted, in the sense that they are divided between those who are determined to be optimists and those who are equally determined to be pessimists. With exceptions, the optimists consist of the government and civil service, the entire Vietnamese press, the American aid missions and the American and British embassies. The pessimists comprise the French, together with the enemies of the present regime and (it must be admitted) a considerable number of independent observers. It is extremely difficult even to get answers to questions of fact—how many refugees have actually been settled on the land, how well advanced the agrarian reform programme is, how much the pacification in west Cochinchina has improved the rice-growing prospects, and, most important of all, what the real degree of communist infiltration is in the south.

The optimists maintain that the problem of dealing with infiltration is now well in hand. They claim that purges in the Army and civil service have been thorough; that recantations or arrests of Viet Minh have been numerous and that the people are steadily rallying to the government; and that victory over the sects has been a conclusive blow to the Viet Minh, who were using them for their own ends. The pessimists reply that infiltration in the high plateaux of Central Annam via the Laotian frontier has never been more serious; that areas such as the Camau in the far south have never really abandoned their allegiance to the Viet Minh; that the defeat of the sects has

profited the Viet Minh, since the latter have taken over the rank and file abandoned by their leaders, thereby replacing open rebellion by clandestine subversion; that the administration is riddled, if not with communist agents, at best with timeservers who would work for any régime; and, finally, that the peasant in the ricefields tends to regard Uncle Ho rather than Mr Diem as the architect of national independence.

It must be remembered that the only press agency in Saigon, from which a large proportion of the news from the south originates, is not independent but an almost open organ of governmental propaganda. Furthermore, no opposition newspaper exists in South Vietnam and there are few foreign correspondents left in Saigon. The result is that most of the information now going out—especially to London and Washington—tends to have an optimistic note. To say this is not to deny the striking successes gained recently by Mr Diem. His principal achievement has been to defeat the sects, and the names of Bao Dai, Hoa Hao and Binh Xuyen no longer burden the international telegrams. It is very easy to underestimate Mr Diem. This time last year he had very few convinced backers; now he has won prestige and authority, even among his critics. He is known, and feared, in his country. He combines the skilful inactivity of Baldwin with the obstinacy of de Gaulle. He is as incorruptible as Robespierre.

Yet those who have watched him closely are beginning to doubt whether he has enough of the qualities of a popular leader. His ceremonial tours in the provinces are full of formal speeches and presentations and docile village deputations upon whom he confers his benediction, in the manner of pope or emperor rather than of revolutionary leader. He has been compared to Dr Salazar of Portugal, but the comparison fails in two important ways. Dr Salazar is a professor of economics; Diem is very much not. And Salazar does not have a crafty, ruthless and long-sighted enemy immediately across his frontier.

Certain political aspects of Diem's regime are unsatisfactory. There is too little freedom, and it is doubtful whether this is justified by any corresponding increase in efficiency. But the crux of the matter is the economic situation. Until now the government has tended to recline upon the easy sofa of American economic aid. The fact that almost the entire import programme of South Vietnam is financed by this aid is not surprising; it can be regarded as an inevitable aftermath of the long war which devastated the rich ricefields on which Vietnam's prewar export trade depended. The cumbrous mechanism

by which the aid process functions, adding about four months to normal delivery periods, is perhaps difficult to improve. More serious, and presumably more avoidable, are the abuses—the sales of foreign currency, the illegal traffic in licences, the indirect marketing of goods to the Viet Minh, the stocking or hoarding by undesirable intermediaries which prevents essential things from reaching the people who need them, and other practices which have diminished the efficacy, and also the reputation, of this great experiment. But far the most pungent criticism of the programme as it stands is that it seems calculated to do little more than supply the consumer goods which the Vietnamese, lacking foreign currency, cannot buy for themselves, instead of helping them to restore their productive apparatus at a rate which can compete with communist-aided North Vietnam.

The principal items of the aid programme to South Vietnam for the next six months are condensed milk, flour, sugar, petrol and oil, bicycles and motor scooters, textiles, tobacco, and cement. It is sometimes forgotten that if South Vietnam does not compete, economically and socially, with the north, it is in the long run doomed. Admittedly, it is difficult suddenly to start importing industrial machinery, schools, hospitals, trained technicians, skilled labour and foreign capital; and it is only too easy to criticise what is being done in these countries by American aid administrators, whose enthusiasm and skill in their difficult job are perhaps the most important contribution under their own aid programme. But the problem facing Mr Diem is urgent.

Mr Tho into the Breach

The steadily falling value of the southern piastre reflects the economic malaise of South Vietnam. Inflation is rampant, transfers of capital out of the country have reached indecent proportions, and unemployment is calculated at 300,000 out of a population of 11 million. Much, however, may depend on the performance of the new minister of economics, Mr Nguyen Ngoc Tho, an able man who recently served as ambassador in Tokyo. Mr Tho has made an excellent first impression and has already shown that he is willing to take the kind of drastic measures the situation demands. On June 13th, for instance, he announced new import regulations which should reduce the volume of unnecessary imports and discourage illegal use or transfers of import licences. Admittedly the overriding problem for Vietnam is not an economic but a political one—unification—and this is never long absent from the conversation of Vietnamese intellectuals. It is indeed doubtful how long a policy which practically slams the door on unification can be maintained. But if, as now seems possible, division is prolonged, it is highly desirable that the economic aid programme to the south should no longer be limited to a light sprinkling of useful commodities, but should start the process of reconstruction.

It has to be remembered that the Viet Minh enjoys the lustre of having fought for and achieved national independence, and of having defeated the French army in the field. Radical changes, both economic and political, are needed if the south is to hold its own. President Diem may be a big enough man to carry them out. But if he does not, then it is to General Chiang Kai-shek in the fateful days of 1947 and 1948, rather than to Dr Salazar, that he will one day be compared.

Who Runs Syria?

FROM A CORRESPONDENT LATELY IN SYRIA

WHEN the Syrian government fell last month as the result of a wrangle over the propriety of exporting wheat to the French forces in Algeria, there began a jockeying for portfolios that lasted for over a fortnight. The share-out, which was completed last weekend, once more produces a nearly-all-party coalition. But it is one in which pro-Egyptian jostles with pro-Iraqi, and pronounced left-winger with sedate member of the old aristocracy. It would be difficult to make head or tail of such a conglomeration without knowing one essential fact about current Syrian politics: they are dominated by two pressure groups, strong enough to bend any combination of the old parties to their will.

Syria's political history in the years since the Palestine war began with a revolution against the inefficiency of the old nationalist first families and an acceptance of military dictatorship. But, by 1954, this too had palled, and a wobble back to parliamentary democracy took place. As its result, the old parties are back in the saddle and a mixture of town aristocrats, tribal leaders and industro-commercial magnates is keeping a hold on government. But that hold is precarious. No matter what the grouping, the right-wing and centre factions that form the majority in parliament seem unable to overcome their personal differences in the way that would be essential were they to dominate the two pressure groups, which are the army and the *Baath* (Socialist Resurrection) party.

The army, in the five years of military dictatorship under General Shishakly, acquired a taste for public affairs and the administrative experience necessary to indulge it. Today, its voice is heard most clearly through its junior officers, many of whom hold pronounced left-wing views. These young men have an importance which extends far beyond their regimental duties. The head of the *Deuxième Bureau*—or internal security forces—is a captain. A major heads the Military Police. A naval lieutenant commands the *Troisième Bureau*, or propaganda division, which not only publishes the best and most widely read weekly in Syria—*The Soldier*, with a circulation of about 20,000—but also runs mobile libraries and a translation bureau, monitors radio programmes, co-ordinates anti-Israel propaganda and administers a vast education programme for an army which is said to number over 25,000 men.

The *Baath*, uniformed, saluting and well-led, go part of the way with the communists, but rival them in their organisation throughout the country. A combination of support by the army and the efficiency of their own propaganda department, street-mob machine and general cohesion makes the *Baath* a powerful political force. They draw their membership both from the peasantry, to whom they promise land distribution, and from the urban intellectuals, lesser officials, clerks and students.

With minor qualifications, both these forces are in favour of the closest possible links with Egypt. Not from any natural affinity to that country—far from it—but because Colonel Nasser has concentrated in his person the whole Arabic-speaking world's desire for unity, for freedom from foreign interference and for release from the evils of a landed ruling class. It is little use talking economics to the Syrian, telling him that in a generation Iraq may well be

strong and prosperous, and Egypt possibly bankrupt. A gigantic, wounded *amour propre* seems to crowd out all other considerations and Colonel Nasser looks like the only man capable of healing the wound. In contrast, Nuri es Said in Iraq symbolises for most Syrians a hated policy of military alliance with a foreign power and, at home, a feudal, illiberal regime (moreover, he spends little outside Iraq to dispel this impression, while the Saudis spend plenty to foster it). In Syria, there is little doubt that, man for man, the Iraqi is preferred to the Egyptian, but this natural sympathy towards Iraq, fostered by racial and commercial ties, is at present far outweighed by the violent opposition to Nuri's policies.

Once these facts are known, it becomes clear why a coalition government, whose main parliamentary constituents were allegedly pro-Iraqi, last October signed with Colonel Nasser a Syrian-Egyptian defence pact and has since pursued a generally pro-Egyptian line.

On both the home and the foreign fronts, army and *Baath* seem to run fairly easily in harness. For instance, it is the army, with an eye to its fuel needs in the event of war, that has been pressing for a domestic oil refinery to free Syria from dependence on imported refined supplies, and it has no objection to the current urging by the *Baath* that the refinery contract be immediately placed with Czechoslovakia, which was first in the field with a "bargain" offer. At the time of writing, the choice has not been made between tenders from Japanese, British, Italian, Czech and French firms. When cast, it will give some indication of the way the struggle is going inside the country.

The first incontrovertible sign that the *Baath* were likely to be the party to shape Syria's future came in April last year. Colonel Adnan Malki, the deputy Chief of Staff, was assassinated by a sergeant at a football match. Malki belonged to the *Baath* and his brother was one of its party leaders. His assailant was identified as a member of an all-out Fascist group, bitter rivals to the *Baath*, known as the PPS (*Parti Populaire Syrien*). The murder provided the *Baath* with a long-sought opportunity to rid themselves of the only opponents who had a catchy appeal to the public. It prevailed on the then coalition to gaoil the PPS leaders and to outlaw the party, destroying at one blow the chief organised support for the so-called Fertile Crescent project—a union of Syria with Lebanon, Jordan and Iraq. The distinguishing mark of the PPS is that they were a Syrian as opposed to an Arab nationalist party, seeing themselves as citizens of a vast greater-Syria.

The Whole and the Part

What makes "Fertile Crescent" plans wildly impractical today is not only the personal antipathy felt in Syria towards Nuri, but also the fact that their basis is Syrian, as opposed to pan-Arab, unity. No Arab politician will today admit that the "Arab nation" is divisible. Every Syrian party, along the whole political range, proclaims this unity as the first article in its manifesto. Nasser draws his popularity from it. To all, it feels like a comfortable barrier against Zionism.

The real dilemma in Syria today is that these active strivings for Arab unity, which Colonel Nasser has mobilised under Egypt's leadership, conflict both with the deep, latent sympathy for Iraqi brothers and with the old territorial dream of the PPS. It is a dangerous simplification to see this conflict as a straight fight between a left-wing Nasser and a right-wing Nuri—dangerous because it enables the

communists to harness Arab nationalism securely to their bandwagon.

No great originality can be expected from the new Syrian government. The active forces in the country—army, *Baath*, Moslem Brotherhood, students, trade unions—are all for the moment caught under the Egyptian spell. But, as hitherto, active pro-Egyptian feeling is diluted by the more traditional centre parties who are still the majority in parliament. How long these relatively static elements can continue to neutralise the young revolutionaries of the army and the *Baath* will depend on the tide of Nasser's fortunes more than on any other factor.

Black Session in South Africa

FROM OUR CORRESPONDENT IN SOUTH AFRICA

THE South African parliament has concluded a session which will long be remembered for the volume of highly contentious and authoritarian legislation passed. It started with a joint sitting of the two Houses to take the Cape Coloured population off the common voters' roll; went on to deny the Coloured people the right to sit in the Cape Provincial Council; abolished the franchise entrenchment in the South Africa Act and "established the sovereignty of Parliament"; gave the Minister of Native Affairs or a public servant unfettered discretion, under the Bantu Education Act, to refuse to register African schools; introduced apartheid and job separation and reservation in the Industrial Conciliation Act; and moved the onus of proof of nationality from the state to the individual in the Population Registration Act. It also gave a minister the right, under the new Immigration Act, to expel any alien whenever he feels like it, and to expel any citizen by registration or naturalisation who has committed an offence; it extended the Natal Native Code to the Cape Province, giving the authorities the right among other things to jail any African for three months without trial; and, in the Natives (Prohibition of Interdicts) Act, denied Africans the right of seeking an interdict against a government order before the execution of the order, thereby establishing one law for black people and another for whites.

The session ended with the Natives (Urban Areas) Amendment Act, giving over 500 local authorities the right to banish Africans from their areas if they consider their presence undesirable. This is probably the cruellest item on the list for, in theory at least, it places over 3 million Africans at the mercy of municipal officials and leaves them entirely without redress. The government's defence is that these immense powers will be used "reasonably." They are aimed at "agitators" and "trouble makers," it is argued.

But opponents of the measure point out that these are terms capable of infinitely wide interpretation. It may be true that the powers will be used sparingly, but the Act means in effect that any African who criticises the authorities or voices a protest can be exiled by an official without explanation or justification. Legislation previously in force gave urban local authorities the right arbitrarily to turn out of the areas under their jurisdiction any native who could

not prove that he was born there, that he had lived there continuously for 15 years, or had worked for the same employer for ten years. The new Act gives still more drastic powers to municipalities.

Officials are now allowed to banish without inquiry or explanation any native whose presence in the area they consider to be "detrimental to peace and order." The Act is clearly aimed at African politicians, and provides that if they defy municipal banishment orders they may ultimately be committed to work colonies. The Act does not specify where such exiles are to live once they have been expelled.

The Minister of Native Affairs justified the measure on the grounds that many local authorities had asked for such powers. They claimed that a dangerous situation existed in some of these locations, and asked the state to use its powers under the Native Administration Act to "remove the leaders of the agitation." But the state, replied Dr Verwoerd, would be in an extremely difficult position if the idea got abroad that it would remove every native about whom a local authority complained.

The new legislation, he added in a memorable phrase, was designed to counter the state of disorder existing in some locations in as gentle a way as possible, and to place greater responsibility on town councils. He thought there might be fewer bannings under the new law than under the old, because local authorities would think twice about removing African agitators "if they had to contend with public opinion themselves, and could not simply throw the onus on the state." The tragic fact, of course, is that as often as not white public opinion could not care less about such matters; and African opinion is largely inarticulate and tends to subside into bitter and lasting resentment and anger.

Critics of the new Act emphasised its inhumanity. They said that if a dangerous state of affairs in fact existed in urban areas, as Dr Verwoerd alleged, then the way to overcome it was not to take draconian powers and banish the leaders of the people. The government should rather try to win the co-operation of the African people, and seek to encourage the emergence of a responsible leadership among the more moderate elements. These people would be on the side of law and order; but the Minister was estranging the leaders and driving the irresponsible elements underground. The resentment which legislation of this nature produced could be very dangerous.

France's Hopes of Enrichment

FROM OUR PARIS CORRESPONDENT

DESPITE the rumbling of inflationary pressure as the Algerian crisis strains the French economy, the government economists evidently remain optimistic. They have just set the ball rolling for the preparatory work on the third Monnet five-year investment plan (for 1957 to 1961) with two reports that mark new departures in French economic planning. One, on Brittany, is the first of a series of regional development plans designed to combat the tendency of France's production to accumulate in a

few places like Paris or Lorraine, with the result that the advanced areas are congested and the backward ones depressed. The second is an exercise in forecasting the course of the French economy during the next ten years. It predicts an increase in the national output of between 48 per cent and 63 per cent by 1965, according to which hypothesis is accepted about the increase in productivity.

In the seven fat years since 1949 the national product has grown by a third, slightly less than the slower rate of the forecast; so this may fairly be called optimistic. But the report's value lies less in its predictions, for which the experts themselves make limited claims, than in its clear indications where the effort will have to be directed if anything like the progress of recent years is to be maintained.

Though today there is a renewed threat of rising prices and trade deficits, the planners assume, as they must, a steady growth of the economy, with full employment, a stable franc and a balanced trade account. The background is completed by the likely changes in the working population. France's teeming postwar children will probably stay two years longer at school, so the labour force will grow only moderately, 600,000 workers joining the present 19.2 million. But industry is likely to gain a million workers at the expense of agriculture, so that by 1965 there will be twice as many people in factories as in fields. This implies only a slight intensifying of the current migration towards the factories. The balance of population between agriculture and industry, which has long been one of the basic facts of French society and politics, would decisively shift.

Optimism on Productivity

The main assumption of the economists is their estimate of the annual growth of productive efficiency. They put it at 3-4 per cent annually, lower than the exceptional growth of the last two years but higher than the British average over the last ten. They think these rates reasonable for agriculture because the falling number of rural workers will be matched by a big extension of the use of machinery on the farms (large-scale mechanisation began only two years ago). They hope for equally high rates in industry, mainly on the score of recent performance and of the big investment programmes of a few leading industries (motor cars, chemicals) where productivity is growing particularly fast.

The economists have estimated how such an expansion might change the shape of consumption, foreign trading and investment. First, the demand for domestic appliances and vehicles would about double, outpacing the growth of demand for other things by several lengths. The engineering industries would have to expand accordingly.

Second, though France's dependence on foreign trade would in general continue to fall (from 11.5 per cent to 10.5 per cent of a rising national output—a low proportion compared with Britain's, and a safer one) exports of manufactured goods must more than double and agriculture must find new ways of disposing of large surpluses of cereals and meat.

Third, to meet all these requirements (and to build the essential 320,000 houses a year), investment must be raised from 18 per cent today to 19.4 or 20 per cent of the annual national product. In particular, investment in machinery must be raised by anything from 60 per cent to 90 per cent. This means a return to at least the rates of investment which

Site clearance at Padham, September 1954

From site clearance to production in 14 months

INCREASED PRODUCTION essential to National prosperity and a higher standard of living can only be accomplished through efficient team-work backed by modern methods and equipment.

Cubitts built this factory for Mullard Blackburn Works Ltd. and are pleased to acknowledge the successful efforts of their own team and their sub-contractors, who jointly enabled cathode-ray tube production to commence 14 months after site clearance started.

Architects: Messrs. Ormrod & Banister, F.F.R.I.B.A., M.M.T.P.I.
Consulting Engineers: Messrs. Hoare, Lea & Partners.

Keep it off the floor!

In the production line of a factory every component has a value which increases as it passes through each process. But while it's lying about idle, waiting to be moved by hand from one place to another, its cost starts to catch up with its value until it ceases to be an asset.

Components must be kept on the move and off the floor, not by costly and inconvenient manual methods, but by one of the many types of mechanical handling equipment that occupy little or no floor space and can move parts horizontally or vertically to any part of the shop.

It's a fact that mechanical handling can do more for production than any other factory technique. This is only one of the many ways in which Electricity is playing a vital part in the drive for greater productivity.

Electricity for Productivity

Ask your ELECTRICITY BOARD for advice and information, or get in touch with E.D.A. They can lend you, without charge, films about the uses of electricity in industry. E.D.A. are also publishing a series of books on Electricity and Productivity. Titles now available are: Electric Motors and Controls, Higher Production, Lighting in Industry, Materials Handling, and Resistance Heating. Price 8/6, or 9/- post free.

existed before M. Pinay's anti-inflationary cuts in 1952. The one major problem on which the report gives no clear lead is the need for engineers and skilled workers. Yet France has only 90 engineers per million inhabitants, against 237 in Britain.

The planners' forecast is, in theory, reasonable. Though the projected rise in productivity is high, France is behind-hand in many sectors, especially those with a future, like engineering. Unfortunately, the necessary "massive industrialisation" is handicapped because the government's share in the financing of investment has fallen since 1949 without private firms having invested more heavily instead. The government can still direct investment in the nationalised industries and, to a lesser extent, in agriculture to meet long-term needs. But, to take a single instance, it is disconcerting that, in a period of expansion, the industries producing capital goods seem to have expanded less than the average—a sign of the government's problems in setting private industry on the required foat.

Though, during 1956, industrialists have shown greater eagerness for government credits, the government's power to direct investments is unlikely to increase considerably. In any case, investment is not the only key to transforming French agriculture so that it can compete with the Danish and Dutch on the British market, or the engineering industries so that they can double their exports in the teeth of British and German competition. Agriculture must be "industrialised" and industry itself grouped in fewer, larger and more effective units. The prosperity of the last two years has helped to spread notions of productivity which most Frenchmen thought of as American barbarisms five or ten years ago. But these still represent only inroads on old habits, not a new attitude.

The barriers set up to protect a high-price economy tend to perpetuate the inefficient producer. Lowered gingerly in prosperous times, as during the last two years, a new alarm sends them up again. This is one of the insidious dangers of the Algerian crisis. For until France is opened to foreign competition, the odds are heavily on her falling, in the long run, further behind her more industrialised neighbours, especially Germany. France might gain more benefit from a European common market than many Frenchmen at present suppose.

The Capricorn Answer for Africa

FROM A CORRESPONDENT IN CENTRAL AFRICA

THE Capricorn Africa Society's concept of a community stretching over a vast area of Africa south of the Sahara, free of race discrimination, with a common citizenship, a common voters' roll and one loyalty to the Crown, has posed a question to all Africa. Can this ideal be translated into practical politics and gain the active support of the peoples of Africa, or is it only a desperate and forlorn attempt to withstand the powerful forces of racial nationalism which threaten to engulf Africa today?

Such is the intensity of racial feeling on the African continent that every serious proposal for improving the situation merits the most careful scrutiny. The Capricorn

contract is a case in point. The contract, composed over a number of years by citizenship committees of the Capricorn Africa Society in Kenya, Tanganyika, Southern Rhodesia, Northern Rhodesia and Nyasaland, was ratified last weekend at a convention at Salima, in a beautiful setting on the shores of Lake Nyasa. To this convention came 150 delegates of all races, from East and Central Africa and from the United Kingdom, to meet under the chairmanship of Capricorn's founder and president, Colonel David Stirling.

The contract consists of six precepts and five provisions. The precepts define "the basic and permanent principles which shall be written into the new constitutions of any of the (Capricorn) territories on their attainment of full self-government." They say *inter alia* that all men are born equal, that the rule of law and the system of private property should apply equally to all, and that there should be one common electoral roll; and they go on to affirm that "the vote is not a natural right, but a responsibility to be exercised for the common good."

The provisions embody "our conclusions on the means by which statutory effect can best be given to the precepts in the fields of electoral law and land reform, and on some considerations which should govern policy in the fields of labour relations, education and immigration." Universal suffrage is rejected in favour of a qualified franchise, and the principle of the multiple vote is firmly upheld. The decision to stand by multiple votes for those who can earn them is already being strongly challenged on many sides in East and Central Africa, and is certain to prove a thorny issue for the Capricorn Society. At least one prominent member and observer at Salima declined to sign the contract because of a fundamental objection to multiple voting.

So far as the convention was concerned, some of the liveliest discussion centred around the proposals for land reform and labour relations. In terms of the final decisions taken, individual land tenure is to be the general rule for all races, but where tribes wish to maintain their present systems of landholding the state is enjoined to move gradually and with great care. All land at present occupied by Europeans would gradually be thrown open to all races and land at present occupied on a communal basis by Africans would gradually be made available for purchase—by Africans only in the first place, and thereafter by persons of any race. The contract concedes that legislation to carry out the proposed land reforms will in some cases involve the abrogation of treaties and solemn pledges to various communities (the Barotse are a case in point), but it is silent about how this delicate matter is to be handled.

Provision 3, on labour relations, affirms that reforms in the field of labour relations should depend primarily on negotiations between employers and employees. If the state is to intervene, it should do so in such a way as to ensure, for example, that there is equality of opportunity of trade apprenticeship and training, that membership of trade organisations is not denied to anyone on grounds of race, and that there is equal pay for equal work. This clause was inserted despite the contention of certain delegates from the Northern Rhodesian copperbelt that "equal pay for equal work" was a bogey often used to mislead the African worker.

Many impressions remain of this remarkable gathering. The note of urgency of the "keynote" speeches preceding

the formal business ("this is not only a unique opportunity for Africa," said Herbert Chitepo, the first African in the Rhodesias to become a member of the Bar, in a speech read for him, "it is also the last; for if we cannot succeed together, Africans will be driven to adopt open racist nationalism"); the fervent loyalty of the Africans to the Crown; the unanimous decision that English is to be one official language in Capricorn territories—all these were notable. At a press conference at the end of the proceedings, Colonel Stirling set forth his programme. The present membership of 5,000 is to be augmented by a campaign for "mass membership" in all the territories. The society will not enter politics itself, but its members are free to do so in their private capacities. It hopes that one or more political parties will embrace its principles. Priority will be given to Kenya, where an intensive six weeks' campaign on behalf of the Capricorn Society will precede the European-Asian elections in September. Colonel Stirling thought there was a fair chance that the United Tanganyika Party might adopt the Capricorn contract and was confident that the society could put a better foundation to federation in Central Africa than "partnership."

The Crossed Spoon and Fork

FROM OUR PARIS CORRESPONDENT'S WIFE

FROM Whitsun onwards, France is a-shuffle with foreign tourists, heading mostly for their annual beakerful of the warm south, and bringing it nowadays about £30 million a year. France is the world's greatest beneficiary from the age of popular tourism. The Swiss in their smaller country earn more per head from tourists; but then, one can see them making the effort. France accepts its £30 million more regally as tribute from captive, migratory tribes. Until recently the French, always inclined to think that the proper study of a Frenchman is France, used—understandably enough—to travel little outside their own country, and evolved a magnificent set of instructions about how best to look after themselves there. These instructions, endless practical permutations about modest or luxurious sleeping and eating, are bound up in the fat, red, rather dowdy volumes of the Michelin guide to hotels, restaurants, and (more casually) places of interest, which thousands of Frenchmen carry as a matter of course, and which is perhaps the only guide a travel-snob should carry publicly. The Michelin is one of the few French institutions that immediately make common ground between the Frenchman and the foreigner. Two of its categories—"excellent cuisine, worth a détour" and the supreme "one of the best tables in France, worth a special journey"—confirm at once for the Englishman, year after year, that he is in another world

Where Brillat-Savarin's become
The priest, the prophet and the book
That kills the Worm by being its cook.

The Michelin has long since transcended its origins in publicity; many of its foreign devotees are quite surprised to learn that Michelin also make tyres. The guide began in 1900 as a free publicity leaflet for France's 3,000 car owners; in those days it listed hotels, mechanics and

grocers (where one bought the petrol). Its originator, André Michelin, claimed also to have invented the folding map, in 1913. By 1939, the guide was printing 100,000 copies; this year, 255,000; next year there will be 300,000. It enjoys what is probably the best-run deficit in France: its production costs are twice its selling price, and its calculated scarcity-value means that it is always unobtainable by September, so that the market is cleared for the next edition.

The compilers receive about 15,000 letters annually from tourists. Most of these are commendatory, arguments for adopting or upgrading some little place whose virtues the writer feels he has discovered. The British (with an admixture of Americans), having a much stronger tradition than the French of "letters to the editor," write as many as one-fifth of them, and those among the most detailed. Like everyone else, the British are apparently moved to write chiefly about food; and then about the nature of the welcome they receive in a place. (With philosophic resignation they do not, it seems, complain much about lavatories, and there is no likelihood of an addition to the guide's cabalistic signs about hotel appointments.)

All these letters are filed against the name of the establishments involved, and used as basic terms of reference by the guide's seven inspectors. The inspectors each take a different region of France every two years; thus the guide is revised for the whole country every two years, and in theory an inspector returns to a hotel only once in fourteen years. The Francophile's vision of these seven men, eating their way round a virtuous Cockaigne in an interesting incognito, is dispelled on discovering that they inspect, on average, ten establishments a day. At many they announce themselves, and make a quite overt, humdrum inspection. At others, they eat or stay the night discreetly and, in cases of doubt about grading up or down, may call in second opinions from their colleagues. In this way between three and four hundred hotels and restaurants change rank every year.

The compilers are aware that their verdict may make or break a *patron's* prosperity, and that their responsibility is greater because their list is, inevitably, selective. Of the 80,000 places claiming to be hotels and restaurants in France, about 15,000 reach tourist standards and the Michelin lists some 9,000. Since 1945, it has recorded, experts say, along with an improvement in hotel amenities, a decline in restaurants, where prices of the truly *haute cuisine* go beyond today's average tourist, overheads are heavy, staff wages low, and young men disinclined to apprentice themselves as chefs. The decline is relative, of course; many foreigners may not notice it. Paris and Lyons remain the great gastronomic centres; others, notably the Landes and Normandy, which has never recovered from the invasion, have fallen off.

Since 1945, even the French have succumbed to curiosity and are travelling abroad much more. The Michelin has followed them. There is now a good small guide to Spain, one to Belgium and Luxemburg which next year is to be extended to the whole of Benelux and, at the request of the Italians, a Northern Italian edition which next year will be expanded to cover all Italy. Next year there will also be a Swiss guide, but to restaurants only—the embarrassment of choice among Swiss hotels was apparently overwhelming. These are signs of the times. When will the Michelin's compilers embark on the self-flagellation of an English edition?

every way

JUNE
2

BATH AND WEST SHOW. 'Leading pigs exhibited in all classes of Large Whites,' reports the Farmers' Weekly, 'showed good type, with length, clean shoulders and well filled hams.' Such pigs, when small, are reared under B.T.H., Metrovick or Ediswan infra-red heaters. On the farm, machinery is powered by electric motors, cowsheds lit by Mazda and milk cooled by Coldrator. Tractor batteries are made by Ediswan, and Birlec heat treatment hardens the ploughshare.

JUNE
3

THIRD-CLASS TRAVEL. Third-class rail travel is abolished as from today and the days of the steam train itself are numbered. As part of the plan for the modernisation of British Railways important orders have been placed with Metropolitan-Vickers and B.T.H. for diesel-electric locomotives and power equipment.

JUNE
4

CYPRUS. Field Marshal Sir John Harding, the Governor, returned to London last night in one of the many aircraft of Transport Command to be fitted with B.T.H. magnetos and invertors. Cyprus relies almost entirely on electricity generated and distributed by Metropolitan-Vickers equipment, while Siemens Brothers have supplied the bulk of the trunk telephone equipment on the island.

Indian Chessman, part of the set once owned by Clive of India.

Chequerboard of the East

So many races . . . so many needs . . . so many markets extending over a vast area of the earth's surface. And there The Chartered Bank operates with knowledge and experience sustained by more than a century of close and intimate contact. Branches of The Chartered Bank of India, Australia and China are established in most centres of commercial importance throughout Southern and South-East Asia and the Far East. At all these branches a complete banking service is available and, in particular, facilities are provided for the financing of international trade in co-operation with the Bank's offices in London, Manchester and Liverpool, its agencies in New York and Hamburg and a world-wide range of banking correspondents. In London and Singapore the Bank is prepared to act as executor or trustee.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated by Royal Charter, 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

Finance for Industry and Commerce

ICFC provides finance in the form of long-term loans on fixed terms, or share capital, to industrial or commercial enterprises established in Great Britain. Amounts range normally between £5,000 and £200,000.

During the present period of credit restrictions, the Corporation will only consider applications for capital from firms concerned in work of national importance. Consideration may also be given to new ventures which are soundly conceived and adequately sponsored.

THE BUSINESS WORLD

Chemicals from Oil

WHEN labour politicians talk of taking "relevant sections" of the chemical industry into public ownership, they do at least admit that it is an industrial complex impossible to define. What "relevant" means they do not say; and indeed this vast, amorphous set of processes is easier to classify not by what it makes, or how it works, so much as by the raw materials that its different sections use. The group of chemicals that get their basic materials from oil is one such, and it is now in an unusual state of ferment. A second major round of investment is in progress, calling for a substantial expenditure by a variety of companies, some in the chemical business, some in the oil business, and some in both.

Petroleum chemicals cover a spectrum that takes in fertilisers, farm chemicals, textiles, plastics, paints, solvents, synthetic rubber and detergents; they provide the basic raw materials for many of these products or intermediate chemicals for their production. The main products of the petroleum chemical industry can be narrowed down, at the risk of over simplification, to the more complex plastics, synthetic textiles (which are plastics in the form of yarns) fertilisers and synthetic detergents. Many operations have for technical reasons to be carried out under one roof, yet the manufacture of petroleum chemicals, in economic terms, is a sequence of clearly defined steps. At the end of each step a manufacturer can, if he chooses, bring his own operation to a halt and market the chemicals in the particular form that they have then reached. The margin of profit becomes steadily higher with each step from the raw material towards the complexity of the ultimate product; but the marketing hazards increase at each successive stage and the manufacturer has the choice between a small unit profit and few selling difficulties or a larger profit per unit and the headaches of marketing to final consumers.

The development of petroleum chemicals in Britain mirrors two sharply conflicting views about this choice

between alternatives. On the one side stand Imperial Chemical Industries and Shell, two companies that start their operations with crude oil fractions and carry them through to the final product—textile yarns, insecticides, plastics and detergents, ready for use. Both sell substantial quantities of intermediate chemical products from the intervening operations but neither company has hesitated to follow the products of their laboratories into the final markets, however foreign these might be to their normal operations.

On the other side are companies like British Petroleum, Distillers and Esso, giants in their own fields, which have decided not to undertake the complex operation of producing petroleum chemicals from start to finish, but instead have formed associations among themselves using partly or wholly owned subsidiary companies to carry out different steps in the sequence of production so that each operation is kept compact and concentrated. An association of this kind centres around the British Petroleum refinery at Grangemouth where gases and feedstock from BP's refinery pass to a chain of chemical plants wholly or partly owned by at least five companies—British Petroleum itself, Distillers, Monsanto, the Oronite Chemical Corporation (a subsidiary of Standard Oil of California) and Union Carbide.

A similar partnership is now developing around Esso's Fawley refinery. Until this year, Esso concentrated on the completion of Fawley as a refinery, not as a source of chemicals. In the spring, Esso announced that a £9 million plant was being put up to provide chemical raw materials, much of which would be fed to the neighbouring plant to produce 50,000 tons of synthetic rubber a year that the International Synthetic Rubber Company (itself owned by the four major tyre manufacturers) is to build. Some of the Fawley refinery gases will also be fed to new plants that Monsanto will build by the refinery, details of which are still being worked out between the two companies.

These developments at Fawley open up the last source of petroleum chemicals of real size. The chemicals are made from oil fractions like naphtha and kerosene. At a primitive stage the refinery burns these for power or even to waste; at the sophisticated stage, gases from them are separated, purified and converted into chemical raw materials. One other way of getting these gases is to instal a gas cracker at the chemical plant, as ICI has done at Wilton; but a company below the biggest size often prefers to leave these operations to an oil company which can carry them out at the refinery. The Shell Chemical complex at Stanlow has been built up on the use of Stanlow's refinery by-products. Esso does not intend to go as far as this. The Fawley scheme in substance involves a highly flexible arrangement to extract and prepare refinery gases as raw materials for subsequent chemical operations—and it could offer a wide range of gases for making chemicals if the demand arises. To go beyond this first stage would involve Esso in much heavier capital expenditure than the £9 million now contemplated; the petrochemical technicians have a rough rule of thumb that for every £ invested in plant to recover the gases at the refinery, £3 to £4 must be invested in plant to transform them into chemical intermediates, and the 3 to 1 ratio holds all the way down the chain.

★

Thus the Fawley scheme will bring a basic expansion in the capacity of the petrochemical industry calling for further extensions by companies taking its products, but it is far from being the only expansion now in progress. The exact scale is difficult to measure. Much of the expansion is devoted to getting one major raw material—ethylene. Two other gases, propylene and butylene, also give chemicals; but “ethylene is gold”—the coveted gas that yields all the high profit earning chemicals: industrial alcohol; tetra-ethyl lead; styrene for synthetic rubber, paints and plastics; acrylonitrile for new synthetic yarns; ethylene glycol for Terylene and anti-freeze compounds; and that fabulous plastic, polyethylene. There is a distinct scarcity of ethylene.

Fawley's plans are flexible enough to provide an output of between 10,000 and 40,000 tons of ethylene a year (the rubber plant will take butadiene made from butylene gas). But ethylene capacity at Grangemouth, feeding the Distillers-Monsanto complex of plants, is being doubled from 30,000 to 60,000 tons a year. ICI's capacity at Wilton is expected to be doubled by the completion of a new cracking plant to between 50,000 and 60,000 tons a year; in this specialised field of petroleum chemicals ICI is one among several big producers. The biggest expansion of all appears to be planned by Shell Chemicals, which became a major producer of ethylene products following its purchase of Petrochemicals last year; very little ethylene has been

worked up at Stanlow, where operations were based largely on propylene and butylene.

Petrochemicals, like Wilton, had its own gas cracker and this has opened a source of ethylene to Shell Chemicals and brought it for the first time into the complicated field of plastics, which it has not previously made in this country. At the same time, Shell Chemicals has also gone into a large-scale venture in fertilisers, where the resources of Fisons are linked with those of the Shell Haven refinery to produce nitrogenous fertilisers. Again, the large production of ammonia at Shell Haven puts Shell Chemicals only a step away from production of quite a different type of plastics—the ureas and melamines used for hard and durable mouldings which are a far cry from petroleum chemicals as usually understood. Shell now plans, by extending partly at Petrochemicals and partly at Stanlow, to produce more than 80,000 tons of ethylene a year, an ambitious figure.

★

This simultaneous expansion by four big groups in roughly the same products shows remarkable confidence in the continuing buoyancy of the market. But it is based at least in part on knowledge of the remarkable technical properties of the products that ethylene can yield. The ICI patents on the plastic, polyethylene, have just expired. Some of the new plastics introduced since the war have proved less successful than was hoped. Polyethylene, however, goes from strength to strength. One or two washing bowls have come to sticky grief because their users ignored the fact that the temperature limits of polyethylene are something below boiling point, but apart from these misunderstandings, polyethylene is bouncing successfully from flexible bottles to insulated cables and from cables to water pipes and from pipes to buckets. The chemical industry holds the view that polyethylene and plastics like it can be built into major construction materials. Plastic pipes that neither freeze nor need joints could take the terrors out of plumbing and provide a start for much wider applications. ICI's huge plant at Wilton, sole producer while the patents lasted, will be supplemented, now the patents have expired, by a polyethylene factory that Union Carbide is building at Grangemouth; Monsanto's discussions with Esso at Fawley centre round the same subject.

Much interest in ethylene has been created by a new “low-pressure” process for producing polyethylene that will have a higher melting point than today's standard. This is the Ziegler process, bought in this country by Petrochemicals and now owned by Shell. Ziegler polyethylene can resist boiling water so that it could be used, among other things, for hot water pipes where ordinary polyethylene can only carry cold, or for milk bottles which must be sterilised between use. Shell Chemicals will have about a thousand tons to sell by next year and the improved properties are

expected to command a higher price. A comparable process developed by Philips is owned in this country by Distillers, who have not yet shown their hand.

The fight for the polyethylene market promises to be as fierce as the battle for detergents has been, although less highly publicised. With consumption now running at 200,000 tons a year, the chemical industry tends to regard the detergent market as satisfied. Synthetic textiles it regards as an inevitable development but one that may be some time coming; hence there is no serious challenge as yet to ICI in this field,

Business Notes

Hot Ice on the Plateau

IN one important sense, perhaps, the Central Electrical Authority's request to area electricity boards “not to increase their tariffs despite the latest substantial increase in the price of coal” deserves approval; it appears to be the independent act of a nationalised industry. The fact that it plainly runs counter to the price policy that the Minister of Fuel and Power has applied with marked courage and economic good sense in the case of coal is another matter. That inconsistency is only mitigated by the fact that large electricity consumers whose charges vary with the price of coal will pay more. The CEA has reserves, which it expanded last year by nearly £19 million, amounting to £60 million at March 31, 1955. Presumably it will have a smaller surplus for the year to last March, and in the current year its surplus is bound to be lower still. So the policy on which the CEA embarked of providing more of its capital needs from current earnings is frustrated—at a time when the Exchequer has undertaken direct responsibility for the whole of them. Consumers pay less than they should to meet the true costs of power, and public funds have to invest more than they should in the industry. Here is a double jeopardy for a genuine campaign against inflation. It is a macabre joke that three of the twelve area boards are forgoing increases in electricity charges that they had already announced, not to cover the latest coal increase, but the increase that was made in the summer of last year.

Among the gas undertakings, the South Eastern Board has promised not to raise its charges before March next year. The North Thames Board has announced an increase of 2d. a therm from August 1st and a number of other boards (all of which, it will be recalled, are largely autonomous, unlike the area electricity boards) have increased their charges or have made known their intention to do so. Finally, the coal board (anxious, perhaps, to get a good mark after being blamed for all the trouble) has announced that it will do exactly what it promised a month ago—not increase pithead prices in the next twelve months “unless

although Monsanto have American-developed synthetic yarns in reserve for exploitation when the market looks promising. The unbounded optimism that seems to characterise the petrochemical industry may surprise the layman who can see no visible scarcity of plastic materials in every guise on every counter. But these are not the markets that will matter in the end. The big prospect is that plastics should become accepted heavy-duty materials. They are well on the way to this in the electrical industry. The building industry may be the next target.

something quite unexpected or exceptional happens.” The increases in coal prices made at the beginning of this month were intended to cover their full costs this year and next and to recoup part of the board's accumulated losses.

It remains to be seen whether these stabilising gestures, which are bad economics and dubious psychology, will have any real effect in countering inflation and abating wage claims. To make a thing too cheap in relation to its real costs multiplies the distortions that inflation causes; it does not correct the disease at the root. It is frightening that, over such a large area of the economy (for railway charges are being similarly kept down at the Government's behest) the real costs of these staples of industry are not fully felt by consumers.

Waiting for the Government

WALL STREET has been holding its own; sterling has been less than steady against the American dollar, weakening in the week ended Wednesday from 2.80½ to 2.80¾ but gaining fractionally against the French franc and the guilder. Commodity prices have shown no clear evidence of trend. It has not been a week in which the Stock Exchange could be expected to show new signs of life, nor has it done so. The *Financial Times* industrial share index has slipped away from 179.6 to 176.9, while gilt-edged have dragged slowly downwards with only small selling but with plenty of evidence that money is still by-passing the market into local authority mortgages.

No other behaviour could be expected on the eve of a substantial refunding operation, for the line that the Treasury, the Bank of England and the Government broker take over the replacement of the £824 million of 2½ per cent National War Bonds 1954-56 must have an important bearing on the future of interest rates. Such minor entertainment as has been provided for the investor in this dull period has still been instructive. Trinidad Oil has been in

the process of changing from the most speculative counter of the oil share market into a money stock. Speculative money has therefore been coming out from it and going mainly into other oil shares, while another sort of money—the kind to which a quick tax-free profit of a net 2s. on a share costing 76s. is attractive—has been climbing in. That is one type of investment for which there is still a demand. The start of dealings in 5s. ordinary shares of Norcross, the iron ore company, showed also that investors still have a taste for the small industrial share that seems to have possibilities. The shares, placed at 5s. 3d., opened on Monday at 11s. 9d. They have since reached 19s.

But the most significant of the week's operations, small though it is, is the placing by J. and A. Scrimgeour of £1 million 5½ per cent Warwickshire County Council Stock 1964-65 at £98½. The stock with a gross redemption yield of 5½ per cent has an appeal to certain gross funds, though not to insurance companies. The cost to the Council is approximately £5 12s. per cent. Warwickshire thus borrows advantageously compared with the 6 per cent for 7 years that it might have had to pay. Two points of interest are that the 5½ per cent level in gross redemption yield has now been reached (though there is no indication that any large sum could be raised at that price), and that Warwickshire has been allowed to come forward while the queue of borrowers has been held to make way for the Government. That permission has obviously been granted because the loan is small and because no disturbance will be caused to the market.

Trinidad Oil Debated

SINCE the Chancellor announced on Thursday last week that the Government would not oppose the offer by the Texas Company for Trinidad Oil shares (subject to the furnishing of the specific undertakings he then outlined) the promised white paper has been published and the Government has survived, by 315 votes to 247, a motion of confidence. The Chancellor's speech on Wednesday was comprehensive and consistent. He could not bring himself to refuse benefits to the people of Trinidad on grounds of what he called "the old colonialism"; there was no practical alternative that other instrumentalities could be found to do what the Texas Company had undertaken to do for the island; the obvious attraction to Texas in the deal, he thought, was the development of business in the British market through the Regent organisation, and that implied more competition in the British market.

Having admitted to "a sense of regret, even dismay" when he heard of the proposal, he argued effectively for the largest flow of American investment into the sterling area—though with a touch of complacency, surely, on recent achievements in providing British capital to the outside world. That inadequacy of overseas investment is the crux of the Trinidad Oil deal; it can be partly blamed on taxes but even more on the shortcomings of economic policy that make saving absurd or impossible. If other people are prepared to do what the British people and their governments are not prepared to do, it is ill-mannered (and might be dangerous) to hold up these benefactors to public insult.

There is a postscript to all this. Mr Macmillan, two days earlier, took occasion to compare the gains made from a

premium bond with the rise in Trinidad Oil shares following the Texas Company's offer. There is, with respect, a considerable difference. The Trinidad Oil undertaking was no doubt fairly valued by the transactions in its shares before the offer was made, on what investors then knew and have since had confirmed. But Trinidad is not the only company whose shares have been undervalued in relation to its potential worth in the hands of another holder prepared to invest more money in it. The capital profits, which in the Chancellor's view carried an element of a lottery which he prayed in aid to support the morality of his premium bonds, are in truth a demonstration of the slowness of investors to recognise the real value of particular shares in an age of inflation and inadequate savings.

Reliefs for Pioneers

IN rejecting some new clauses about the taxation of overseas profits that were introduced towards the end of the Committee stage of the Finance Bill the Chancellor threw important light on the future. He committed himself and his advisers to making a decision by 1957 on the Royal Commission's proposal for exempting the profits of overseas trade corporations and specifically promised action on "Pioneer Industries Concessions" if the major proposal was found unacceptable. It was on the working of these concessions that Mr Butler asked the Royal Commission on Taxation in 1952 to furnish an interim report as a matter of urgency. Many overseas countries, particularly the Colonies, seek to attract new capital by granting some form of tax holiday, but the system of double tax relief nullifies the incentives they are trying to give, and the net result for the pioneer is that he has to pay more British tax at home. The Commission advised that the relief granted by the overseas government should redound, as intended, to the advantage of the taxpayer and not to the Inland Revenue. The point is simple and the grievance clear, but the legislation would be complicated. Should relief be limited to the Colonies, or to the Commonwealth, or extended to the world (and especially undeveloped areas)? How would the United Kingdom credit be calculated? Should the relief be given only when the exempted profits were left to fructify abroad? Mr Macmillan has now given a firm promise that the delay shall be ended and the knots unravelled next year and, further, that the relief will be available on profits earned after April 5, 1956—which is not normally the same as saying the relief will be available against 1956-57 assessments. The cost cannot be estimated but it will not be large; the benefit will, however, be valuable and the Chancellor's undertaking is welcome.

Taxing Overseas Profits

ON the larger problem of exempting the profits of overseas trade corporations, the Chancellor accepted, as sensible people must, the strength of the case of British concerns operating abroad in competition with other businesses that do not have to bear the full impact of British rates of tax. But he advanced two reasons why he could not grant relief at present: the cost of the concession, £75 million, would

completely overthrow the balance of his budget and the effect on the balance of payments would be serious. Whilst therefore he had great sympathy with the arguments behind this "tremendous recommendation" he would not go beyond a promise that it would find a firm place for consideration on his agenda for next year.

When he returns to the subject he will have to resolve a most difficult conflict. Do the practical advantages of exemption outweigh the fundamental objection that it would give preferential treatment to British residents who employ their capital abroad? Is he prepared to give a bonus to the export of capital? Taxes have no friends and a Chancellor is constantly faced with compelling arguments in favour of well-justified reliefs, but with each claim admitted the tax base is further eroded and the burden on what remains becomes heavier. The trouble is not that there are fundamental defects in our tax system but that the burden of taxes is too high. These truisms cannot be repeated too often, but, having been stated, there can be no doubt that British concerns operating abroad have staked a powerful claim; the emigration of companies which cannot afford to pay United Kingdom taxes is too present and painful a symptom to be ignored. When tax burdens are too heavy, sound, fiscal principles have to give way to expediency.

World Bank and Kariba

THE tenth birthday of the International Bank coincides with news of its collaboration in two substantial Commonwealth projects—the financing of the Kariba dam scheme in Rhodesia announced this week and the Tata steel development plan in India of which details are due in a few days. Ten years of active life have passed and so far the shadow of default has been avoided in every enterprise the Bank has financed. Since its total loans exceed \$2,500 million in 41 countries, this record speaks well for the vision and hard-headedness with which the business has been run. A hint of this commercial spirit is provided by the recent announcement that the Bank is raising its rates from 4½ to 4¾ per cent for new loans of up to 15 years and from 4½ to 5 per cent for longer periods. These rates include the 1 per cent guarantee commission. The necessary increase of ½ per cent reflects the recent tightening of rates in most of the world's capital markets.

The first of the Bank's loans to bear the higher 5 per cent rate will be to the Federal Power Board of the Federation of Rhodesia and Nyasaland towards their finance of the first stage of the Kariba Hydro Electric scheme. The loan will amount to the equivalent of \$80 million of which £10 million is being made available in sterling from the United Kingdom's subscription to the Bank's capital and the United Kingdom Government as well as the Federation Government stands in as guarantor of this 25 year loan. The first stage of the Kariba scheme is expected to cost £80 million (though the total cost of Kariba will be much greater). Of the initial £80 million, £28.6 million will come from the World Bank. The remaining contributions will come from the Colonial Development Corporation—£15 million; the Commonwealth Development Finance Company—£3 million; the Northern Rhodesian copper companies—£20 million; the British South Africa Company—£4 million;

Barclays Bank (D.C. & O.) and the Standard Bank of South Africa—£2 million each. The balance will be made up by the Federal Government. Rhodesia is fortunate in that it has already arranged with the Copper Companies to borrow their £20 million contribution at 4½ per cent.

British firms are already deeply engaged in providing the housing and road works and foundations necessary for Kariba. But British competitors are reported to have emerged poorly from the competitive tendering for the project itself. The basic civil engineering contract for the building of the dam itself is expected to go to an Italian group. The transmission work, worth about £12 million, is also likely to go to Italian firms that have been bringing power transmission lines down from the Congo to the Northern Rhodesian copper mines. It will be disappointing but not unexpected, to British electrical manufacturers that they are understood to have been beaten by Continental competitors in bidding for the heavy equipment—turbines, generators and converters—despite their advantage of duty-free entry into Rhodesia as against the 10 per cent import duty which non-Commonwealth imports have to pay. A substantial part of the total expenditure will still be in sterling and should suffice to absorb the proportion of loan facilities made available in sterling. But this does not wipe out the sense of defeat that surrounds the poor performance of the preferentially placed British firms in tendering for equipment.

Tactical Victory for Mr Clore

MR CHARLES CLORE, aided by his two staff officers Mr Leonard Sainer and Mr John Gardiner, is a formidable tactician. He possesses single-mindedness, a nice sense of timing and an ability to read the minds of his opponents. He always holds something in reserve and he takes the initiative and holds it. To these qualities can be attributed the success he claims in securing acceptances of his offer for Scottish Motor Traction from the owners of about 53 per cent of its issued ordinary capital. This figure excludes the shares that Sears Holdings already has in SMT.

Mr Clore went into this battle fully prepared and forced his opponents to conform to his moves. Just before the offer of one 5s. "A" share in Sears for every 5s. ordinary share in SMT was made, Sears Holdings had made a free scrip issue and increased its authorised capital. Before the offer, too, the price of the SMT shares had been creeping up; presumably Mr Clore was following the usual tactic of buying in front of a bid. The board of SMT, with the exception of Sir Andrew Murray, fought back until finally Mr Hugh Fraser made a counter offer, worth at the time of its making a few pence more than Mr Clore's. The worth of the two offers turned on the market price of the shares of Sears and the House of Fraser. At first Mr Clore stood pat on his original offer and the price of the Sears shares rose, tilting the balance slightly in his favour.

To put the matter beyond doubt, Mr Clore a day later said that if sufficient acceptances were received to make the offer unconditional Sears would pay a cash premium of 1s. on every SMT unit assenting to the offer before June 18th. Mr Hugh Fraser came back with exactly the same cash premium offer. But by June 20th Mr Clore was able to announce a victory. He may have won the battle, but he

has not yet occupied the territory, and Mr Fraser, who has left his offer open, and the SMT directors seem to be determined to fight to the last ditch. However long the rearguard action, Mr Clore claims effective control of SMT, and since he has left his offer including the cash premium open until Monday, June 25th, his ultimate holding should be better than a bare majority.

Scottish Motor Traction's interests in garages may perhaps form a natural link with the interests Mr Clore already has in oil importing and distributing through British Oil Shipping and Stevinson, Hardy. But Mr Clore is perhaps most interested in SMT's large liquid assets. He believes in putting idle resources to work. SMT, he has said, will remain a Scottish concern and the Earl of Elgin, whose directorships cover banking, insurance, shipbuilding, engineering and hire purchase finance, has accepted an invitation to sit on the SMT board once it is under the control of Sears. Thus another company is added to the diverse industrial subsidiaries of Sears; others from across the Atlantic may one day come into the fold. But, ultimately, the success of such a group completely controlled by one, two, or three men, whose special skills are financial ones, and covering such a wide range of interests, depends upon the loyal support that the subordinate managers, skilled in the techniques of their own industries, will give the Sears directors. It is a curious empire, more tightly controlled than other industrial finance groups. It is born of inflation that has made capital assets worth bidding for, but it is not necessarily fragile. Its strength will depend upon the dexterity of the managing hand.

Standard and Short Time

It is difficult to see what more the Standard Motor Company could have offered the trade union leaders at the two meetings that have been held since the Minister of Labour first took an active part in their dispute over the redundancy at Coventry. At the second meeting on Tuesday the company made two offers—to give the 2,640 tractor workers already dismissed or under notice the first options on jobs coming available as production builds up in the autumn on the new tractor line at Banner Lane, and to re-examine its present manpower situation to see whether still more labour might be absorbed in the meantime at the car plant at Canley. Standard would presumably have met the first point without formal commitment, and the chances that the second offer will lead to any significant change of plan must be thin. The company has already transferred to Canley 1,200 of the 6,000 workers formerly employed on tractors and it is retaining a further 2,000 assembling the old tractor model from the stock of parts specially built up. The unions' suggestion that many more workers might be reprieved by further rota shift working would appear to be quite unrealistic.

Up to a week ago 300 of the 1,325 workers so far laid off had been offered other jobs by the Ministry of Labour, and the Minister thought that more might have found jobs or expected to do so since he could "trace" only 700 claims to benefit. The prospects of finding other work in the Coventry area seem to have become even better since April when all 11,000 workers at Standard came out on strike. There are signs that unemployment and short time working

have fallen in recent weeks. For manufacturing industry as a whole the number on short time in the middle of June is estimated to have been 90,000. This figure is not strictly comparable with the last Ministry of Labour estimate of 65,500 in February; but in the motor industry the numbers have dropped from 52,000 at Whitsun to about 30,000 a week ago, and one or two other industries located in the Midlands are also working more fully.

HP Squeezed

NO doubt can now exist that the latest batch of hire purchase controls, introduced in mid February, are squeezing hard. The latest figures from the Board of Trade give the evidence. On the retail side the index number (basis December, 1955 = 100) fell just one more point to 65. This compares with 69 in January (the latest full month before the present restrictions) but with 119 in October (the first month for which official figures are available). It is now estimated that the volume of hire purchase debt outstanding on the retail side ("at least £450 million" at the end of 1955) has dropped by 8 per cent since December. Hardware, radio and electrical goods shops showed a sharp decline, their index falling from 60 to 55; furniture and furnishing shops did a steady hire purchase business though their total retail sales were declining; and department stores record a sharp increase in hire purchase trading.

On the finance house side of the index the evidence is much less conclusive. The index number for new credit extended, on the same base, rallied from the low point of 90 in March to 96 in April; this compares with 125 last October, though as a result of the earlier fall the total credit outstanding, which moves much less quickly than new credit extended, continued slightly to decline. The finance house figures are heavily weighted by the motor trade and the start of the seasonal buying produced rises for private cars and caravans. One present limitation of the Government figures is that they are too recent for a seasonal pattern to be established, but from other sources it can be inferred that the spring rise in hire purchase motor sales has this year been smaller than in recent years.

The latest restrictions have now been in force for four months though the official figures show their working for only two and a half months. The question naturally begins to arise whether traders have yet discovered legal means of avoidance. The evidence so far is negative. A conviction recently recorded against a motor dealing firm seems to establish that the maximum length of hire purchase contract cannot be increased nor the burden of payments lightened by the expedient of failing to collect the instalments regularly and promptly—though it is not suggested that a trader who had to leave an instalment outstanding beyond the maximum length of the contract because of some sudden misfortune to his customer would be prosecuted. Though no figures are available traders report a substantial increase in the credit sale agreements extending over periods of less than nine months. That was a loophole that the regulations deliberately left, and no one need be surprised that it is used. In general however the evidence suggests that the controls are working much more effectively than hire purchase traders like.

MAKING
BRITAIN
GREATER

Britain turns to Oil

URGENTLY the country needs more electricity, for industry, for the home. Within a short span one-seventh of the nation's electric current will be coming from power stations fired by — oil.

Urgently this country needs more gas, in the home, in industry. A new gas plant, the largest of its kind in the world, now being built will use nothing else except — oil.

Urgently this country needs faster, cheaper, more efficient railways. In the huge modernisation scheme newly-begun by British Railways priority has been given to dieselisation, and that means — oil.

Big decisions these, high-level decisions, long-term decisions. They confirm oil in its new status. Once used primarily for traction and no more than an auxiliary of coal in wider industrial uses, oil now becomes complementary in the fullest sense to Britain's traditional power source, coal.

It is an inevitable development. Other power sources, notably coal, though stretched to the utmost, have been unable to meet the nation's swiftly-growing demands. At this critical halfway juncture of the 20th century, oil is the only power source readily available in rapidly expanding quantities.

Oil is the key because it can meet the new obligations thrust upon it and more, much more, without risk of over-reaching its resources.

National policy, accepted by all parties, is to use more oil. In line with that policy great new refineries have been built in this country during the last ten years. Oil has taken its place alongside coal as a full partner; its permanence is assured.

Oil has to do more, considerably more, if Britain is to withstand the challenge of harsh competition from rival nations where machine-power per man is higher, where manpower is cheaper. It has to help combat waste, wasteful methods, wasted manpower.

Shell-Mex House, on the Embankment in London, where decisions are now being taken vitally important to our future.

Incredible in thinking of oil to recall that within a lifetime responsible men were disputing the Royal Navy's plans to convert from coal-burning ships to oil burning. Yet bitter was the controversy when the First Lord, then plain Winston Churchill, announced the change. That was some 50 years ago, soon after the first vessel to carry a cargo of oil to Britain had sailed into the Thames.

How many people appreciated the significance of that first cargo? It was a pioneer

enterprise, an adventure typical of the men behind it, the men who went on to build the giant Shell-Mex and B.P. organisation.

A few hundred tons of oil in that first cargo, that was all. A changed picture today when the oil brought to Britain is accounted in millions of tons. A changed world, too: a world of shortages in which there is no shortage of oil.

Down-to-earth protection

MONTEZUMA, proud monarch of Mexico, like many kings before him, was forbidden to touch the ground and had to be carried about by noblemen. In the olden days, it seems, kings were thought to be charged with virtue and they had to be insulated from contact with the earth to prevent the charge running to waste.

Today, when it comes to protection, modern industrialists have their feet firmly on the ground. The surest sign of it is that so many leading manufacturers pick "Fiberite" cases and

cartons made from "Thames Board" to protect their products and display them to advantage. Go into any small shop, any large store, in any part of the country, and the goods that command your attention are almost certainly packed in cartons made from "Thames Board". They have reached their destination safely in "Fiberite" cases.

Through long-range planning, and the enthusiasm of experienced technicians, Thames Board Mills are building up their productive capacity to meet the ever-growing needs of industry.

Trade in May

THE increase in British exports last month to a record value of £283.8 million fob was widely spread. The detailed trade returns show that exports of engineering products rose to over £119 million; even when the value of the Empress of Britain (£5½ million) is excluded the total remains a record. For the two months April and May engineering exports amounted to £112 million a month, eight per cent more than in the first quarter. Shipments of machinery other than electric, at £44 million a month, were 4½ per cent higher than in the first quarter, and shipments of electric machinery, at nearly £19 million a month, were 6½ per cent higher. Exports of cars and chassis continued to recover, and the April-May average of £10.2 million was 10½ per cent higher than in the first quarter, though still much below that of the first quarter of last year. Commercial vehicles and chassis, at £8½ million a month, were five per cent higher than in the first quarter, and for the first five months of the year were as much as 13½ per cent higher than in the same period of last year. Exports of metals rose further in May, and the average for the two months of nearly £38 million was 5½ per cent higher than in the first quarter; a big increase in shipments

of iron and steel accounted for most of the rise. The total value of British exports in the first five months of 1956 was 6½ per cent higher than in the same period of 1955, when the figures were inflated by the overspill from the dock strike of the previous October. Allowing for that distortion, the Board of Trade estimates that the real increase in value was probably about 10 per cent, and the increase in volume about 6 per cent.

Imports in May, at £329.1 million cif, were almost the same as in the previous two months. Over the first five months imports have been just 1½ per cent higher in value than in the same period of last year (and one per cent above the average monthly value for the whole of 1955); but import prices have risen by about 1½ per cent, so that the volume is unchanged. But there have been big changes among the major groups. Imports of manufactures, which include semi-manufactures such as steel and copper, amounted to £78.8 million a month in January to May, 10½ per cent more than in the same period of last year; over two-thirds of that increase was attributable to higher prices. Imports of coal and petroleum, at £35.6 million a month, were 11 per cent higher, half of that rise being the result of higher prices. On the other hand imports in the food and tobacco group fell by three per cent to £121.7 million a month, thanks largely to lower prices. In May,

Shipping Liquid Gas Across the Oceans

WHERE natural gas occurs in oil deposits, one cannot get the oil out of the ground without producing the gas as well—whether or not there is a nearby market for it. In the Middle

East, more gas than Britain uses is produced as an unavoidable by-product and has to be "flared to

waste." Venezuelan by-production of natural gas, similarly, is far more than can be marketed; and this actually limits the profitable production of oil there, since the oil law is designed to penalise oil production which wastes this "valuable Venezuelan resource" of gas.

It is not surprising that the oil industry should welcome proposals to make use of this wasted fuel in distant markets. The latest of these—the idea of shipping the natural gas across the oceans in liquid form, in insulated tankers that could hold it at the extremely low temperature of minus 260 degrees Fahrenheit—has moreover commended itself to the British gas industry, which sees coal prices rising steadily against it and is already being forced to make gas out of oil. Natural gas is about twice as high in heat value as the gas supplied through British mains.

Design of refrigerated tankers to carry liquid gas from the Middle East or Venezuela to Europe is still in the realm of ideas. Mr J. Burns and Mr L. J. Clark of the North Thames Gas Board, outlining the possibilities at a recent conference of The Institution of Gas Engineers (by courtesy of which the accompanying diagram is reproduced), leaned towards a design in which each hold of a tanker would be a "cold box," containing tanks of liquid gas packed in insulating material such as balsa wood or foam glass.

Such tankers would be likely to cost twice as much, ton for ton, as normal oil tankers: their operating costs would depend on the size of the vessel, but might be only slightly larger than for oil. Costs of liquefaction (which depend largely on the percentage of the gas fuel consumed in the process) might, on the most favourable estimate, be rather lower per therm of fuel than the refining of oil, and storage costs—in specially insulated liquid gasholders—markedly more.

Messrs Burns and Clark guess the total costs, apart from the price of the raw material, at perhaps 4d. to 4½d. a therm delivered in Britain: oil costs 3.3d. a therm over and above the price at wellhead. The economics of the scheme, therefore, depend largely on the price that the oil companies choose to charge at source. Meanwhile the experiments continue to attract eager attention from the British gas industry, and more cautious, but not less steady interest from the oil companies.

however, there was a mainly seasonal rise of two points to 103 (1954=100) in food prices, which was offset by a sharp fall of four points to 112 in prices of manufactures (mainly in copper), and a fall of one point in prices of basic materials and fuels. Prices of all the main groups of exports except metals rose by one point in May, bringing the composite index of export prices back to 105. With the composite index of import prices unchanged at 106, the terms of trade improved by one point to 101.

Bank Advances Rising

THE upturn in bank advances in these past few months is put in a new light by the quarterly figures issued by the British Bankers' Association this week. In the three months to May, advances made in Great Britain by all members of the association rose by £24 million, to £1,985 million, showing their first quarterly increase since Mr Butler's "request" of last summer. The change of trend had been apparent from the monthly figures from the clearing banks, notably those for February and March; but whereas it had been generally attributed to the borrowings of the public sector, it is now evident that the total advances of the private sector have risen too, though only slightly. During the quarter the public utilities absorbed an additional £31 million, or rather less than usual, while the local authorities made net repayments amounting to £12 million. Advances to all other borrowers therefore rose by £5 million, to £1,822 million, which is 4.7 per cent below the peak reached last August.

This stopping of the decline does not mean that the banks have dropped their policy of reducing limits and seeking repayments wherever reasonable, nor have they consciously relaxed their attitude to new borrowers. The effect of the continuing squeeze can be seen in the further decline, by £12.5 million, in the personal and professional group of borrowers (whose total shows a decline of £66 million over the year, to £335 million), as well as in several other groups. Borrowings by hire-purchase finance companies have dropped by a further £4.8 million, to £30.6 million, compared with the August peak of £45 million; retail trade has declined by £2 million, whereas in the similar quarter last year it rose by £8.5 million; agriculture and fishing has dropped by over £6 million (up by £8 million last year); and notable declines are also shown in wool and in the "unclassifiable" group of trade and industry. Increases are shown, however, in twelve industrial categories—most notably in engineering (up by £10 million on the quarter and £38 million on the year) and in non-ferrous metals (up from £8.3 to £13.4 million). Textiles, excluding wool, absorbed an additional £5.5 million, and small additions are shown by leather and rubber, chemicals, builders and food and drink and tobacco (though this last category rose much less than in the similar quarter last year). The big "other financial" group, which includes, among others, the special finance corporations as well as the insurance industry, rose by £7.8 million. These increases, so far as can be judged from the broadness of the classification, are not inconsistent with the banks' claim that the new lendings reflect the demands of borrowers important in the national interest—or are otherwise mostly due to a fuller utilisation of existing limits.

Machine Tools on Show

THE machine tool industry opened its exhibition at Olympia this weekend in an atmosphere that has lately become rather critical. Principally it is criticised for not expanding its capacity fast enough, particularly its capacity to meet the growing demands for more specialist tools, transfer machines and various types of control mechanisms. The industry may feel that the first argument is overdone, since the recent heavy surge in investment orders from tool users would appear to have taken everybody by surprise. But the bare figures of output do not spell much expansion in recent years. Although the value of the industry's output rose from £66 million to £75 million last year after remaining virtually stationary for two years the prices of many tools were increased substantially during 1955. The growth in the order book from £81 million to £100 million over the same twelve months would also reflect some of these price changes. In the first three months of the present year the value of output rose by about an eighth, and orders by rather less, though they still exceed current deliveries and the order book at the end of March reached £104 million. But this year imports have once again started to exceed exports; the last time this happened was four years ago when the Korean armament drive got under way. This time tool users are importing the more specialist tools on which home manufacturers have been quoting long delivery delays.

The industry is handicapped mainly by shortages of draughtsmen, designers, and certain grades of skilled labour. Training, which takes several years, does not meet the immediate problem and most firms do not find it possible to compete with the high salaries paid by certain other industries for the same staff. Sub-contracting helped in 1952 and 1953 and there has recently been another increase in this form of out-work, but not to any really significant extent, as most engineering firms able to do this kind of work are themselves running at full capacity. The shortage of jig-boring capacity is another limitation; this is hampering the development of transfer machines, but there are several more firms showing this kind of equipment at Olympia. Other exhibitors are demonstrating recent developments in automatic handling and electronic or hydraulic controls. The industry is showing that it can cater for these new demands though its customers may still think that it is not doing so fast enough.

Cheap Atlantic Flying

THE discussions between airlines on new air fares for the North Atlantic had still not finished when this issue of *The Economist* went to press. In an atmosphere of more open dispute between carriers than at any previous meeting of the kind, the major airlines have brought themselves to agree to a drastic change in the fare structure. Just when he has been banished from the railways, the third-class passenger appears in the air. The airlines have agreed to introduce third-class flights across the North Atlantic at fares that are expected to be about 18 per cent lower than the present tourist rates—which remain unchanged. This

DIESEL POWER AT WORK

On the farm Perkins Diesel engines offer greater power, easier starting, greatly reduced fuel and maintenance cost. This is a Massey-Harris 780 Combine Harvester fitted with a Perkins L4 TA type diesel engine.

Municipalities find Perkins Diesel engines save up to 5-11d. per mile compared with petrol engines. Here is a Dennis Gully and cess-pool emptier, fitted with a Perkins P6(v) engine.

This Royal Naval Midget Submarine, for which engine reliability is absolutely vital, is powered by a Perkins P6 Diesel engine. Perkins Marine Diesel engines range from 25 b.h.p. to 100 b.h.p.

POWER, SPEED AND ENDURANCE are three of the outstanding characteristics you'll find in every Perkins Diesel engine, at work on land or at sea. But that's only part of the story. Diesel engines start easily, and their thermal efficiency means fuel costs about half that of petrol driven engines. Fire risk, particularly important in marine application, is eliminated. Diesel reliability is a by-word. Statistics prove that they outlast any other type of engine. Whether you need power for vehicles or boats, for farm equipment or industrial applications there is a Perkins engine to suit your particular requirements.

third-class passenger will fly clasping his cardboard lunch-box (which he will have to buy) and the aircraft that carries him will serve no meals and have no bar. The elimination of the deadweight represented by the bar and the galley should make it possible to carry four to six extra passengers per aircraft.

Meanwhile, the first-class passenger is promised a wider choice—a de luxe service at today's fare or a "normal" service at about 9 per cent less. The tourist standards remain unchanged, but reports from Cannes indicated that the American carrier, TWA, was likely to get the 15-day North Atlantic excursion fare for which it was asking.

These new rates are more in line with the views of the American carriers, and particularly Pan-American, than those of most European airlines (except BOAC). The third-class fare is designed for the American tourist traffic to Europe, which is growing considerably in volume, and the dollar revenue from such tourists is no doubt balanced against any revenue problems that the lower fares will raise for national airlines less well equipped than their American competitors. The main arguments in the closing stages of the conference seem to have turned on the dates when the new fares are to be introduced. American carriers would like to start the cheaper flights as early as possible, but other carriers, who have agreed to them with noticeable lack of enthusiasm, do not want them before the summer of 1958.

Triangular Deals in Cotton

THE American government is never backward in expounding the doctrine of multilateralism to other countries, but like other governments it often fails to practice what

it preaches. In its efforts to get rid of surplus commodities the United States has unblushingly adopted expedients ranging from barter to complex triangular deals. The latest example involving this country is the sale of \$21.7 million worth of commodities to Burma, for payment in local currency. Raw cotton accounts for \$17.5 million of the total, far more than Burma can consume in its own mills. Hence Burma is taking raw cotton to the value of only \$1 million; the remaining \$16.5 million will be shipped in the form of cotton textiles of equivalent value. The textiles will be made in "third" countries, presumably because the United States does not normally sell textiles to Burma, and does not wish to tread on the toes of that country's traditional suppliers. Britain is one such supplier, although import restrictions have latterly reduced Britain's exports of cotton textiles to Burma to a mere trickle, amounting to only £522,000 in the first five months of this year.

Under the agreement between Britain and Burma announced this week, Britain will supply textiles to the value of about £940,000, and receive American raw cotton to the equivalent value in payment. The textiles will be mainly fine printed goods, much of them made in fact from Egyptian, not American, cotton. A similar triangular contract with Pakistan was recently completed, and another is in the offing with Indonesia. The arrangement with Pakistan worked quite well, despite the intricate financing procedures involved. But the raw cotton due to be imported against the Pakistan contract has not yet been fully taken up because American cotton has been dearer than other growths. That difficulty no longer applies now that American cotton is being sold at competitive prices; even so, the British system of import licencing may have to be changed to ensure that American cotton made available under these deals is taken up in reasonable time.

Second-Hand Car Prices

The table shows the average price that would have been obtained for a year-old car during the past two years, expressed as a percentage of its original cost, including purchase tax. The prices are those ruling at the end of each quarter.

More Britannia Troubles

THE introduction of the Britannia airliner has been put off for yet another two months, from August 3rd to some unspecified date early in October, while more modifications are made, to the cowling round the engines. The Britannia has been dogged by minor technical troubles, none affecting the basic structure of the engine or airframe but each serious enough to cause delays while they were put right. In this case, unexplained dousing of the flame in the engine combustion chambers led BOAC to stop proving flights that had been in progress since the first Britannias were delivered early this year. Engines were hurriedly modified and a Britannia was sent out to the regions in Africa where most of the stoppages occurred. It now appears that the trouble is due to small accumulations of "dry" ice in scoops and crevices of the engine cowling. These break off from time to time, enter the engine and momentarily raise the moisture content of the air going through the combustion chambers so much that it puts out the flame. The remedy suggested is to alter the shape of the cowling so that ice cannot take hold, and further trials will be needed after this modification.

The Britannia has been flying since 1952, but this trouble was not noticed until BOAC began proving trials early this year. Air conditions that lead to "dry" ice formation occur only in certain regions, at certain altitudes, and during certain parts of the day so that it is easy enough to miss by chance the particular combination of time and place that lead to "flame-out." When it is left to the customer, in this case BOAC, to discover unexplained faults in the behaviour of the engines of a fully certified aircraft is there not some cause for concern?

The Plight of Cotton

FEW things are so disruptive to trading as a lack of confidence in prices. The cotton trade in Britain and other countries has lacked that confidence for more than a year. Buying of cotton and cotton textiles is dominated by the policy of the United States in disposing of its huge surplus of raw cotton. The precise effects of that policy could never be foreseen, and the new directive of Congress has aggravated the uncertainty. The Administration is now obliged to sell its surplus cotton abroad at prices down to 25.50 cents a lb, basis middling 1½-inch ex-port, and to accept lower prices if that is necessary to meet foreign competition. So now the cotton trade lives uneasily from one fortnight to the next—the interval between the Commodity Credit Corporation's sales.

The results of the first sale since the directive was passed were announced this week. The CCC sold 1,587,000 bales and the lowest price accepted was 25 cents a lb for middling 1½-inch at average location. That is equivalent to about 26 cents ex-port, and it is 10 cents a lb below the current spot price in the domestic market. The range of prices is not yet known, but a substantial quantity may have been sold for more than 25 cents. The volume sold is larger than was expected, even though it was known that American shippers had made large sales to domestic and foreign buyers which would have to be covered from

the CCC's stock. (The cotton can be sold on the domestic market, provided that the seller subsequently exports an equivalent quantity.)

A price of 25 cents ex-location is equivalent to about 26½d. a lb cif Liverpool for middling 1-inch. October/November futures in Liverpool at about 25d. a lb thus more than discount the CCC's lowest price so far, but the question for Liverpool is whether it has yet seen the full extent of American price-cutting. It can be argued that the Administration, which accepted the directive of Congress with reluctance, should be able to hold prices at the present level for the rest of this year. Of the five million bales which it is hoped to export in the 1956-57 season, nearly two million have already been sold; competition from foreign producers will hardly be felt before the end of the year; and the beady eye of Congress will soon switch to the elections. But the trader can hardly be blamed for taking a less sanguine view. He can no longer hedge his risk on the New York futures market, which has now ceased to have any value for foreign operators; nor can Liverpool yet offer him a satisfactory hedge.

Forecast for Rubber

WHEN it forecasts world production and consumption of rubber the International Rubber Study Group faces more than the ordinary risks of crystal gazing. Figures of production in Indonesia, the world's largest producer of natural rubber, are suspect. The absence of Russia, China, and all the East European countries except Hungary means that the group must estimate likely imports into those countries as best it can. Finally, the forecasts for the member countries present do not represent the consensus of group opinion; estimates tabled by member governments have to be accepted. Last year the estimated outturn was very nearly right thanks to big compensating errors. Given the qualifications, the forecasts published by the group this week suggest that world production and consumption of

WORLD OUTPUT AND CONSUMPTION OF RUBBER
(thousand long tons)

	1955 Forecast	1955 Actual	1956 Forecast
Production:			
Natural	1,845	1,912	1,835
Synthetic	985	1,085	1,250
Total	2,830	2,997	3,085
Consumption:			
Natural	1,830	1,868	1,845
Synthetic	955	1,062	1,130
Total	2,785	2,930	2,975
Surplus:			
Natural	15	44	-10
Synthetic	30	23	120
Total	45	67	110

natural rubber will again be closely balanced this year, while production of synthetic rubber will exceed consumption by 120,000 tons. Despite the fall in the price of natural rubber, which at about 25d. a lb is now 11d. a lb lower than at the beginning of the year, production in Malaya is expected to drop by no more than 9,000 tons to 630,000 tons, and the drop in output expected in other countries is with one exception also small. The exception is Indonesia, where output is estimated to fall by as much as 54,000 tons to 680,000 tons.

some thoughts on fertility...

The things Wilmot Breeden make (with the exception of that old friend, your ignition key) are essentially anonymous. And properly so.

A car, after all, is a car — not just an inspired collection of Wilmot Breeden components held together by a few extras like a chassis and an engine.

It is important, however, to realise the extent to which certain components — such as bumpers, and most decidedly locking mechanisms and handles — have become a special study. As manufacturers Wilmot Breeden are faithful contributors to an entity which does not bear their name. As specialists, they are ceaselessly cross-fertilising their ideas with those of their customers, with the result that year by year Wilmot Breeden research is a factor in the steady overall development of the automobile.

Dramatic development? Not necessarily. But consistent.

It helps to explain why virtually every British car on the roads today owes some part to Wilmot Breeden.

Lubricating and
parting media
for ALL
engineering
processes

Hundreds of processes—intricate and simple—in engineering today have been quickened and improved by the use of 'dag' dispersions of colloidal graphite. Their unique properties provide a low-friction wear-resistant "graphoid surface" which solves lubrication and parting problems involving high temperatures, extreme pressures and excessive friction. Consult us about possible applications for 'dag' dispersions in your manufacturing process.

World-wide technical collaboration
in electrical engineering development

THE DRIVER-HARRIS ORGANISATION

Close liaison between the companies of the Driver-Harris world-wide organisation is a very real and active policy. It continues to yield an impressive dividend of technical progress.

The liaison is expressed in regular communication and exchange of visits between technologists, a pooling of knowledge on every fresh aspect of wire-drawing technique, and continuous research along parallel lines between the laboratories and manufacturing plants in the United Kingdom, United States, Eire, France, Italy, Austria and Spain.

The result of that collaboration is a succession of advances in the production of nickel-alloy resistance materials of profound importance to all development in the electrical engineering world.

BRITISH DRIVER-HARRIS CO. LTD
MANCHESTER 15

"The greatest name in
electrical resistance materials"

World consumption of natural and synthetic rubber is expected to rise by 45,000 tons to 2,975,000 tons this year, notwithstanding the recession in the American and British motor car industries. American consumption is expected to fall by 100,000 tons to 1,430,000 tons; the brunt of that fall is in natural rubber, consumption of which is expected to fall by 85,000 tons to 550,000 tons. Estimated consumption in Britain shows a drop of only 10,000 tons to 257,000 tons, a fall of 34,000 tons in natural rubber being partly offset by a rise of 24,000 tons in synthetic. The expected increase of 155,000 tons in consumption in the rest of the world largely reflects increased imports by Russia. Estimates for Russia, the East European countries apart from Hungary and China are not published, but the total is believed to amount to roughly 250,000 tons; that compares with official estimates of 118,000 tons last year, but actual imports are believed to have been some 30,000 to 40,000 tons higher.

Copper Prices Ease

THE most important news in copper this week came from the United States. Two major American producers have concluded a new contract with the unions and a third company has reached agreement in principle. This news greatly diminishes the threat of a strike in the American industry; it overshadowed the reduction of £20 to £300 a ton in the fixed price of copper sold by the Rhodesian Selection Trust companies and the news of labour troubles in the Rhodesian mines. When the new wage agreements in the United States are completed it is expected that the American producers will drop their price, which at 46 cents a lb (£368 a ton) is far above the custom smelters' price of 40 cents (£320 a ton) and prices in the rest of the world (the Belgian price has also been reduced this week by about £19 to £311 a ton). Cash copper closed in London on Thursday at £293 10s. a ton, a fall of £9 on the week. Thanks to a plentiful stock of copper in Metal Exchange warehouses, three months' copper now commands a small premium. If that premium can be maintained the London market will at last offer a reasonable hedge.

grian price has also been reduced this week by about £19 to £311 a ton). Cash copper closed in London on Thursday at £293 10s. a ton, a fall of £9 on the week. Thanks to a plentiful stock of copper in Metal Exchange warehouses, three months' copper now commands a small premium. If that premium can be maintained the London market will at last offer a reasonable hedge.

Troubled Waters

ONE spring morning in 1949, the whole surface of the tanks in one of the country's biggest sewage works was covered with 6 inches of white foam. A new brand of synthetic detergent had just been put on sale in the district. In the following months, foam as high as 10 feet

was reported from various sewage works, a white ectoplasm blew in dollops around the sewage works themselves and off rivers into which effluent was discharged. In 1953 a committee was set up under the chairmanship of Sir Harry Jephcott to see what was happening to the new detergents once they reached the drains and in its report published this week, the committee suggests that there are indeed some grounds for concern. The type of detergent now in general use is not destroyed by the normal sewage purification process and it is not destroyed by the normal water purification processes. It can therefore travel through the sewage plant into the rivers, and from the rivers into the drinking water reservoirs, through the purification plant and into the domestic drinking water system. Detergents are not poisonous but hardened drinkers of water will agree with the committee that it is better without them.

This is the crux of the detergent problem. The mechanical difficulties at the sewage works themselves are irritating because they lower the efficiency of the plant and slow down the process of purification. But what is to be done with an effluent that resists known purification methods and decomposes very gradually? Four of the fifteen members argued that as consumption of synthetic detergents in this country has probably reached saturation without a danger to public health, there need be no cause for alarm about the future, but the majority of their colleagues felt otherwise. It was suggested that detergent manufacturers and the local authorities should work together to see if they could find a more susceptible active agent for their detergents and that a central committee should watch carefully the detergent concentrations in water. The onus was put largely on manufacturers, with a hint that the government ought to consider arming itself with powers to take rapid action against the use of detergents in case it should become necessary.

Priorities in Road Building

THE Minister of Transport has now made clear what he meant in February when he said that he was "reconsidering priorities" in road expenditure. But the results of this reassessment are not very startling. The Govern-

ment's £147 million four-year programme still stands; so do its plans for building new motorways. But since it takes up to two years to complete the preliminary procedural work in planning a completely new motor road, Mr Watkinson intends to concentrate spending in the meantime upon works that will produce results more rapidly—that is upon removing the more notorious bottlenecks on major traffic routes and upon clearing congested approach roads on the fringe of the larger cities. The occasion for this long overdue explanation was his visit last week to Ilford where he inspected progress on the scheme to reconstruct a half-mile section of the Eastern Avenue approach road to London. This is one of the projects that are now being pressed forward under the Minister's "new" policy, and he announced several more of a similar nature on which work would start this summer or later in the present financial year (among the latter was the Birmingham inner ring road). He also gave further details about two items in the longer term programme:—

It is hoped to start work on the London-Birmingham motorway at the end of 1957 and to complete the whole stretch of 53 miles towards the end of 1960; by then, too, the connecting roads at both ends will have been completed. The Great North Road (A.1) is to be "turned into a major North-South link." Work to improve this trunk road will receive priority over the motorways, apart from the London-Birmingham road; a start will be made "very soon" on straightening and double-tracking four stretches of about 15 miles.

There are signs that the Ministry of Transport is beginning to concern itself with estimates of the economic return on investment in highways. Although the growth in traffic during a period of net disinvestment suggests that the return on these piecemeal projects to improve existing roads must be high, there is no reliable yardstick to measure the relative merits of two competing schemes. But the Minister has now set his advisers to re-examine future road requirements in the light of traffic densities expected, using the detailed returns of the August 1954 traffic census. One result of this census already is that the Ministry is now advising local authorities to design roads that will cater for densities two and a half times the 1938 volume of traffic, in place of the former general rule of 1938 traffic plus 75 per cent. It might, however, be too much to hope that this re-examination will lead the Government to increase its allocation of resources for road construction.

Fats in Plenty

SINCE 1950 world production of oils and fats has increased by over 4 million tons, an average annual increase of some 700,000 tons. That has been sufficient to provide for the growth in population and for an increase in consumption per head to a level that now appears to be higher than before the war. Will consumption per head continue to grow? Mr J. C. A. Faure, of Unilever, thinks not, painful though that conclusion may be to one who represents the world's largest user of edible oils and fats. Speaking to the International Seed Crushers' Congress in Lucerne this week, Mr Faure said that he expected consumption per head to level off for the next year or two, and total consumption to increase only as population increased. That would still require an extra 300,000 tons each year.

But Mr Faure estimates that world production will rise by nearly 700,000 tons this year to a new peak of 27.3 million metric tons. Despite the poor olive oil crop, production of liquid edible oils should rise by about 300,000 tons to 9,330,000 tons; output of animal fats should be 260,000 tons higher at 10,380,000 tons and output of coconut, palm kernel and palm oils should be 80,000 tons higher at 3,550,000 tons. World exports, however, are unlikely to exceed the record total of 6,830,000 tons of last year. An expected reduction in shipments of groundnut oil from India, of linseed oil from Argentina and India, and of cotton oil from the United States will probably be offset by larger shipments of soya bean oil and tallow from the United States and of copra from the Philippines.

How does Mr Faure reconcile this picture of plenty with the sharp rise in prices earlier this year? He considers that reports of poor crops in several countries were only partly responsible. The American government was offering its surplus oils and fats for local currencies, and also making outright gifts. The extent of foreign demand for these surpluses, he said, was quite unexpected, and a wave of optimism swept over the United States. "Conditions in fact became an El Dorado for the bull speculator." Mr Faure believes that this speculation, which spread to many parts of the world, lifted prices unjustifiably high, and that the reaction which set in early in May was due.

SHORTER NOTES

The interim ordinary dividend of Birmingham Small Arms has been cut from 4 to 3 per cent. Trading profits for the first nine months of the current financial year (ending on July 31st) are lower, partly because of higher costs and partly because of unfavourable trading in the motor section of BSA; but the machine tool, steel and heavy engineering divisions are still expanding.

Car production fell again in May to a daily rate of 2,926 units, from 3,102 in April and 3,128 in March; in the corresponding months of 1955 output was 3,656, 3,760 and 3,726 units respectively. The daily rate of exports was slightly lower than in April, and about 18 per cent lower than in May, 1955.

The Government has decided that the proposed additional crossing of the Forth should be a bridge and not a tunnel. Including approach roads the bridge is now expected to cost between £10 million and £15 million, and the possibility of levying tolls for its use has not been ruled out. It is intended to authorise a start on this scheme within the present four-year road programme, that is some time before March, 1959.

A second exchange of visits by teams from the British and Russian steel industries is to take place this year. Dr Colclough, Technical Adviser to the British Iron and Steel Federation, heads a ten-man team leaving for Russia next week. The return Soviet delegation is expected in the autumn.

Company Notes

ROLLS-ROYCE. The "tremendous challenge" facing the aero-engine manufacturers, which Lord Hives, the chairman of Rolls-Royce, discusses in his statement to shareholders, is the change from piston to gas turbine engines in the next ten years. Rolls-Royce has already accepted the challenge. The group, Lord Hives says, is in "a unique position" in having under development four different types of gas turbine engines specifically designed for transport operations. But while the directors see much that is reassuring for the future of the company, resources must be conserved to meet the heavy capital expenditure involved in meeting the challenge and they recognise the risks that always attend on new projects. Rolls-Royce's "formidable technical programme" will involve the "spending of very considerable sums of money in the

£1 ordinary stock at 10s. 3d. yields £3 7s. per cent.		

foreseeable future." How formidable is shown by the sum of £2,800,000 spent on capital account in 1955, by the end-year capital commitments of nearly £5 million, by the rights issue of ordinary shares in March raising about £4½ million and by the firm orders of over £70 million on the group's books.

Against these figures the company's trading results in 1955 pale. Even so in that year the combined turnover of the group for customers other than the British Government rose to £23 million and new orders were received at an even greater rate. But for the strike at the Scottish factories, both sales and profits would have shown an increase. Indeed the damage caused by the strike was greater than is indicated by the fall in gross profits from £4,416,315 to £3,811,369, for bigger profits were earned from the company's "increased commercial business." Presumably it was the urgent need to build up the company's funds rather than the actual trading results which led the directors merely to maintain the ordinary dividend at 17½ per cent—a rate that they have promised will be maintained on the capital as increased by the rights issue. The low yield on Rolls-Royce stock—currently only 3½ per cent—measures the confidence investors have in the company's ability to meet its latest challenge.

BOOTS PURE DRUG. Satisfaction with a job well done pervades the statement of Mr J. P. Savage, the chairman of Boots Pure Drug Company. There is reason for satisfaction. In the year to March 31st last, sales by the group rose by 11½ per cent to over £66 million, trading profits rose from £4,214,758 to £4,380,704 and effectively the ordinary dividend was raised from 13½ to 14 per cent. All this was achieved in a year in which costs were rising and in the last quarter of which trade had slackened off. Record profits were achieved, Mr Savage points out, not by increasing selling prices but by a substantial increase in sales and by greater efficiency in distribution and production. Wages and salaries were going up faster than prices and the group attempted to absorb the rise in costs by improving its distribution and selling methods. Such improvements are perhaps easier for Boots than for some other companies, for its chain of control links production, wholesaling and retailing together. Indeed, it is the only large manufacturing chemist with its own nation-wide retail chain.

But improvements are made possible only by the use of capital. About two-thirds of the capital expenditure of £2,750,000 in 1954-55 was spent on the retail side of the business in building new shops and in extending and modernising others and one-third on the manufacturing and warehousing side. Such a programme makes a continual call on retained profits and Boots entered the new financial year with capital commitments of over £1,500,000.

The directors and managers of the group

	Years to Mar. 31, 1955	1956
<i>Consolidated earnings:—</i>		
Profit after depreciation	4,213,738	4,379,706
Taxation	2,252,608	2,299,728

cannot relax their efforts to keep down the costs of distribution and to hold a tight rein on stocks, for Mr Savage says that the current year "will probably be the most difficult period" the group has faced since before the war. Costs are still rising and Mr Savage believes that "the policy of the Government to restrict spending will be felt throughout the retail trade."

BRITISH CELANESE. For stockholders in British Celanese the most significant sentence in the company's full report for the year to March 31st is the directors' comment that in cutting the ordinary dividend from 10 to 8 per cent,

they had "to take into account not only the fact that the profits are lower than those of last year but also that current trading does not show any improvement." From it stockholders, bearing in mind the fact that the group is holding money back in reserves to finance its development and research schemes on new products, can infer that restoration of the dividend may have to wait.

It can only be an inference, but nothing in the statement of the chairman, Mr G. H. Whigham, contradicts it. His statement is an exposition of the classic squeeze of competition. Competition prevents the group from raising its selling prices, so that if costs are allowed to rise margins are cut. Mr Whigham believes that the current year will repeat the pattern of the

	Years to Mar. 31, 1954	1955
<i>Consolidated earnings:—</i>

£1 ordinary stock at 17s. 3d. yields £9 6s. per cent.		

last—"a fairly steady offtake by the home market at keenly competitive prices and a further decline in fabric exports." Sales at home, without as yet any substantial contribution from new products, have been maintained, though, perforce, at smaller margins of profit. Abroad, margins are even lower. British Celanese did export a larger volume of yarn, but again only at lower prices, while its exports of fabrics continued to decline both in value and profit. Mr Whigham points out that the group has to compete with European producers of synthetic fibres whose domestic prices are higher than those of their British rivals, but who, he says, secure subsidies of various kinds of their exports.

Are there any patches of blue sky in this cloudy prospect? A dispersal of the clouds seems to depend partly on the progress the group makes in developing and marketing new textile products. Two of the most promising are "Tricel" and "Celon," but their production is still in its early stages and cannot be expected to add materially to profits this year. Their commercial success still has to be proved—and that proof will have to be demonstrated in highly competitive markets.

BRITISH AND COMMON-WEALTH SHIPPING. The report just issued by the directors of British and Commercial Shipping does not contain in the true sense of the word formal accounts. It contains a consolidated income statement and balance sheet, drawn up on December 31st, as if the merger of Clan Line and Union Castle had completely taken place by that date. The strength of the group is revealed and,

with some possible minor exceptions, the hidden reserves have been dragged out into the light of day. When the tussle between Clan Line and some Union Castle shareholders took place it was estimated that the profit before tax in 1955 of Union Castle and Clan Line combined would be about £5,225,000 (£3,425,000 from Clan Line and £1,800,000 from Union Castle). The *pro forma* accounts now show that the combined profit was £5,399,928 (£3,464,716 from Clan and £1,935,212 from Union Castle).

The value of the combined fleets at cost, including payments on account of ships under construction, is put at £64,060,817, from which £30,991,380 has been written off in depreciation. Capital commitments at the end of last year came to £13,550,000. Against this commitment stockholders can set £12,188,589 in quoted investments and £14,921,371 in short-term liquid assets. Current assets are entered at £30,425,374—a figure which may underestimate their full worth because of conservative estimates on the value of stores—and current liabilities at £10,091,607. The future tax reserve stands at £8,973,637 and the total of capital reserves at £34,799,589.

*

FINE SPINNERS AND DOUBLERS. The trading results of Fine Spinners and Doublers for the year to March 31st disclose a reduction in the ordinary dividend from 12½ to 10 per cent, following a fall in gross trading profits from £2,287,629 to £1,540,462 and in net profits from £467,096 to £214,552. Especially to those whose connection with the cotton trade is not close this must seem to follow oddly on the interim report issued by the directors at the end of December when they reported that after a very dull six months' trade to September 30th trading conditions had "substantially improved." The directors then said that they did "not accept poor trading conditions during the first half of the financial year as indicative of prospects for company and confidence in the future is shown by the comprehensive modernisation policy designed to match changing pattern of the industry." It was the

general impression also that the recession in Lancashire had hit the finer end of the trade less severely than the coarser counts. But clearly there was a further deterioration in sales and profits soon after the publication of the interim report. All investors welcome the growing practice of issuing half-yearly reports, but this one shows that in such an industry as cotton, where changes in fortune are sudden, these reports must be carefully worded. Had they been addressing a purely Lancashire audience the directors might indeed have felt that some degree of recession was so widely known about as to require no special comment.

The smaller dividend of 10 per cent absorbs £321,424. Thus it is short earned and its payment is made possible by the non-recurring credits of £233,291 (including £210,461, written back from tax, a windfall that might be expected after a year of declining profits). After the announcement of the dividend, the £1 ordinary stock units lost 9d., to stand at 16s. 3d., offering the unimpressive yield of 12½ per cent.

*

ALLIED IRONFOUNDERS. A decline of only about 7½ per cent in the gross trading profit of Allied Ironfounders for the year ended March 31st is reasonably satisfactory. Group trading profits dropped from the previous year's peak of £2,615,717 to £2,416,370, despite the inclusion this year of a full year's profit from a subsidiary that yielded only 6 months' earnings last year. The net profit attributable to the parent company fell from £1,092,563 to £926,512, a figure which covers the maintained final dividend of 8½ per cent (again making 13½ per cent for the year) handsomely.

Since the announcement the £1 shares have risen by 1s. 6d. to 35s. 3d. at which price they yield £7 16s. 5d. per cent. The iron castings industry, of which the company is a leading and progressive member, has been enjoying long term expansion, but the movement of costs has presumably been upwards and the company's products include durable items of household equipment. It will be surprising if the curb on hire purchase has not had some effect.

LONDON STOCK EXCHANGE

Next Account begins: July 4th
Next Contango Day: July 4th
Next Settlement Day: June 26th

THE coming Government refunding operation discouraged buyers of gilt-edged this week and prices drifted lower. 3 per cent Savings 1955-65 lost ½ to 84½ and 3 per cent Gas 1990-95 lost ½ to 68½. Undated stocks declined, 3½ per cent War Loan falling 15s. and old Consols ½ to 52½. The short-dated stocks held firm. The *Financial Times* index of industrial ordinary shares receded 2.7 to 176.9, but there was a sharp revival in gold shares in later dealings on Tuesday, and sizeable gains were made on Wednesday. German bonds rose and Potash Syndicate 7 per cent stock jumped 15½ to 251½.

Ohlsson's Cape Breweries rose 7s. 6d. to 47s. 6d. on the merger, and Teacher (Distillers) rose 4s. 9d. to 28s. 9d. Ford Motor held the recent improvement, but BSA declined 10½d. to 28s. British Aluminium rose 1s. further to 58s. but London Aluminium fell 1s. 6d. to 6s. Norcross placed at 5s. 3d. opened on 11s. 9d. on Monday and rose to 20s. at one stage. C. A. Parsons and Reyrolle were both 2s. 6d. lower in a poor market for electrical stocks. On Wednesday SMT non-assented were 15s. 7½d. and the assented 1s. lower. Both Bowater and Eburite declined 2s. after the merger agreement. United Molasses rose from 40s. 9d. to 44s. 3d. during the week. London & Overseas Freighters gained another ½ to 5½ xd, but P & O lost 6d. to 28s. 6d. and Cunard 3d. to 21s. 6d.

Oil shares were again active; British Petroleum rose 7s. 4½d. to 156s. 10½d., but Shell remained at 87s. 8d. Trinidad Oil advanced to 76s.

Of the gold mines, Vaal Reefs gained 1s. 9d. to 31s. Hartbeestfontein 1s. 4½d. to 38s. 9d. and Harmony 1s. to 24s. 3d. Free State Geduld rose to 89s. 4½d. OFSIT gained 3s. 9d. to 58s. 3d. and WRIT a similar amount to 35s. xd. Tins improved, London Tin rising 3d. to 9s. 1½d. and Beralit 3s. 3d. to 46s. Consolidated Zinc gained 1s. to 49s. 6d., but Coppers remained quiet. Hopes of tax relief led to a rise in Beralit and Consolidated Zinc.

THE MONEY MARKET

LOMBARD STREET enjoyed a bout of relief from the credit stringency in the middle of this week. On Wednesday, market funds were actually in surplus, and the Bank of England acted "in reverse," making small sales of bills. Around the week-end, credit was very short. Rates paid for overnight money have ranged from 5 per cent to 3½ per cent; dealings in two months bills have been at 4½ per cent.

At the Treasury bill tender on Friday last, the discount market maintained its bid at £98 14s. 11d. per cent for the third week in succession. The offer was reduced by £20 million, to £240 million, and as total applications fell by less than £18 million, to £396 million, the market's allotment declined further, from 43 to 41 per cent. The average rate of discount on all bills was down by about ½d. to £5 os. 4.2d. per cent. At yesterday's tender, the offer was £260 million.

The price of silver has declined, in sympathy with New York. On Monday the spot rate fell by ½d. to 78½d. an ounce, compared with 79d. an ounce a week before.

The Treasury bill rate in New York dipped below 2½ per cent this week, marking a decline of over ½ per cent since the increase in rediscount rates in mid-April.

Right off the beaten track

Take one towpath. Lay rails on a foundation of ashes. Next, place one steam travelling crane on track. If you now begin loading and unloading, the chances are your crane will end up end-up. (See illustration.)

What Vulcan say about it

Poor track formation is too often the cause of accidents to travelling cranes. Once again, prevention of disaster means scrupulous inspection and maintenance of all temporary rail tracks. Once again, Vulcan are the experts to turn to.

Engineer-Surveyors from Vulcan Insurance spot the danger before the trouble starts, and industrial machinery is their happy hunting ground. Cranes, lifts, hoists, boilers, vacuum vessels—any and every plant comes under their eagle-eyed scrutiny, and gets the specialist going-over for which Vulcan is renowned. In a sentence, safety first is Vulcan first.

COMPANY MEETINGS

MARKS AND SPENCER
LIMITED

TURNOVER AGAIN A RECORD—OVER £118 MILLION

CONTINUED EXPANSION AND MODERNISATION OF STORES

“ST MICHAEL” A GUARANTEE OF GOOD VALUE
AND HIGH STANDARDS

The thirtieth Annual General Meeting of Marks and Spencer, Limited, was held on June 14th at 82 Baker Street, London, W.1.

Sir Simon Marks, DSc (Chairman and Joint Managing Director), who presided, said: Ladies and Gentlemen, may I take it that, in accordance with customary practice, the Directors' Report and Accounts as circulated to you be taken as read?

DEATH OF THE RT. HON. L. S. AMERY, CH

Before we pass to the business of the meeting, it is my sad duty to report formally the death of one of our senior colleagues, Mr Leo Amery.

Leo Amery's association with the Company goes back nearly twenty years. He joined the Board in January, 1936, and, apart from the war years, when he held ministerial office as Secretary of State for India, he remained a member of the Board until his death last September.

Leo Amery was a man of rare vision and great charm. The vigour of his mind, expressed in speech and in his many writings, remained undimmed by age. He will be sorely missed in our deliberations.

PROFIT AND LOSS ACCOUNT

Our profit for the year, after tax, amounts to £4,955,000—an increase of £486,000 on last year. Provision for taxation requires £5,175,000 against £4,800,000. With £2,515,000 brought forward, there is available for distribution £7,470,000.

The Board recommends a final dividend on the Ordinary and “A” Ordinary Shares of 32½ per cent, which, together with the interim dividend of 17½ per cent, makes a total of 50 per cent for the year, against 45 per cent last year.

Two million pounds is to be transferred to the General Reserve, bringing it up to £10,536,000. After an increased allocation of £150,000 to the Staff Benevolent and Pensions Fund, and the payment of dividends, the balance carried forward will be £2,628,000. The total Reserves of the Company, Capital and Revenue, will amount to £33,886,000.

PROPERTIES

Our freehold and leasehold properties and their equipment stand in the Balance Sheet at £43,454,000, against £38,966,000 last year—an increase of nearly £4,500,000.

SUBSIDIARY COMPANIES

Our advances to Subsidiary Companies have increased by £505,000 to £2,624,000,

due to higher stocks of materials essential for our business.

GENERAL SURVEY

There was a further substantial increase in our sales during the year. The turnover exceeded £118 million, against £107 million last year.

The history of our business since the end of the war is a record of uninterrupted progress, which has kept pace with the rising prosperity of the community. Ten years ago in the first full year of peace, 1946-47, our turnover was a little over £26 million, and the profit, after tax, £1,176,000. Today we are able to report a sales volume four-and-a-half times as large, and a profit that has increased in a like proportion. The properties and other fixed assets of the Company, which in March, 1947, stood in the books at £8,250,000, now stand at £43,500,000 after the revaluation of our properties carried out early in 1955. Our stock of goods and materials at cost have risen from about £1 million to a little over £12 million.

Many factors have contributed to this remarkable expansion of your Company, but above all, it is due to our concentration upon the simultaneous development of our merchandise and our Stores. The character of our goods has been changing along with the character of our Stores.

MERCHANDISING POLICY

Throughout the postwar period, our merchandising policy has been governed by official schemes affecting the manufacture and the sale of textiles. The Utility Scheme dominated the scene until 1952. It was succeeded by the “D” Scheme, which had the effect of releasing our initiative to develop our own materials, specifications and original styles of garments.

Our achievement, during this short period of four years, in raising the quality, value and attractiveness of our goods to the public is the result of a combined effort on the part of many members of our organisation, in close co-operation with our Manufacturers.

We set high standards for our goods, which we seek not merely to maintain, but to improve. We, therefore, are engaged in a continuous study of developments in the textile field which will enable us to bring better and finer materials as rapidly as possible into the service of our public.

We specify or control the production of our fabrics, both woven and knitted, throughout all the phases, from yarn to finished materials, and so to the final garment. We are thus very much concerned with any new developments which may lead to improved or

more desirable fabrics. This task devolves upon our scientific and technical staff, who co-operate with our Executives responsible for the production and the distribution of the finished goods.

NEW TEXTILE TECHNIQUES

Many changes are taking place in the textile field. New techniques are being evolved to improve the traditional fabrics, such as cotton, wool and rayon. Of special interest to us is the growing influence of new man-made fibres upon our textile goods. Nylon and terylene, with their unique properties, are now making their appearance on a commercial scale. Until quite recently their share in our total sales was small, but it is now steadily growing. Nylon in particular, is becoming a most important factor in our increasing business.

We thus have at our command a great variety of fine attractive materials which are the basis of essentially new goods and values, and which our customers welcome.

It is with pride that we can state that 99 per cent of our textile goods are made in Great Britain from yarn to garment. Our brand-name, “St Michael,” is a household word, and a guarantee of good value.

FOOD DIVISION

Our Food Division, which is an important section of our business, specialises in a highly selective number of food items. This is particularly so in our Bakery produce department and Fruit department, which are growing in public favour.

We aim to satisfy the large and growing demand for quality foodstuffs at reasonable prices. In this policy we enjoy the co-operation of leading producers.

As the public well knows, we attach the greatest importance to hygiene and cleanliness in the production, handling, and counter display of foodstuffs. It is pleasing to report that our customers are most appreciative of the care we take in this regard.

PRICE POLICY

In the emergency Autumn Budget of last year, the “D” Scheme was superseded by a straight purchase tax of 5 per cent on the wholesale value. The effect was to increase the proportion of our textile merchandise bearing tax from 30 per cent to 80 per cent. The new tax was in operation for only five months of the last financial year, but our tax payment was £750,000 higher than it would have been under the former scheme. We bore a considerable proportion of this tax ourselves by maintaining our prices un-

changed for some months. We estimate the cost of this tax in the present year will amount to some £4,500,000 or £1,750,000 more than under the “D” Scheme.

We were much concerned with the effect of the purchase tax on our prices. We decided that a prompt re-examination of costs was called for in order to see how, despite the tax, we could maintain our prices at the pre-budget level at least.

A continued upward drift of prices, if unchecked, could only lead to a further inflation of the national economy. The vicious circle of prices and wages would continue with its baneful effect on our economy, and on the internal, as well as the external, value of the pound.

We, and our Manufacturers, have a common interest at all times in maintaining our values, and most certainly in countering upward price trends, which would have the effect of narrowing our market.

I am glad to report that our discussions with our Manufacturers have shown that they are in agreement with us as to the wisdom of this policy, and they are co-operating with us most readily. Our efforts have met with some success, and we have been able to lower our prices to the public over a wide range of goods. In so doing, we have maintained the same standards of quality upon which our reputation has been built. The reaction of the Press, and the response of the public to this policy, has been both gratifying and encouraging.

STORE DEVELOPMENT

In my speech last year, I told you that we had set in motion a considerable programme of building and development work. The lifting of building controls in the previous Autumn had enabled us, for the first time since before the war, to draw up a systematic plan for the extension and improvement of our Stores. I said that the investment required would be large, and, in order to ensure that the programme went forward at the pace we considered desirable, some additional funds would be needed.

We were, at the time, negotiating with the Prudential Assurance Company to borrow an additional £4 million. The loan, which was to take the form of a Debenture Stock Issue on most favourable terms, was finally agreed in the middle of July, 1955.

CHANCELLOR'S APPEAL

Our formal application for approval to make the Debenture Issue was submitted to the Capital Issues Committee on July 22nd, three days before the speech of the Chancellor of the Exchequer in the House of Commons on the balance of payments situation. He appealed to business firms to slow down investment not of the greatest national urgency, and asked all those embarking on investments projects to consider whether they could not postpone their initiation.

In their reply, the Capital Issues Committee asked us whether, in the light of the Chancellor's appeal, we needed to raise the proposed sum at the present time. After careful consideration, the Board decided that we should not proceed further in the matter of the Debenture Issue, but that we should revert to our long-standing policy of financing our development from our own resources.

CAPITAL EXPENDITURE

We had, however, embarked on the first stage of an extensive programme, which would necessarily take some time to re-phase. In the past year, we actually spent some £6,500,000, the largest sum we have ever

invested in Store development in any one year. There is a balance of work, amounting to approximately £2,500,000, to be completed during the current year, and we shall shortly be examining new projects for inclusion in the next stage of the programme.

In the past year we have rebuilt and reconstructed some 25 Stores, and in every case have substantially increased their space and facilities. This year we hope to complete the rebuilding of the last 3 of our bombed Stores. The 15 Stores which were destroyed by enemy action will all be in full operation during the present year. They now represent an important and imposing part of our chain.

POSTWAR DEVELOPMENT

Since the war, the sum spent on our development exceeds £25 million, all of which has been found from earnings. The bulk of this expenditure represents the cost of rebuilding and reconstructing many Stores on much more spacious lines. They have all been completely re-equipped with counters and display racks. Our properties have been maintained in good order and condition. Some £3,500,000 of this sum has been spent on the enfranchisement of a number of our leasehold properties, and on the purchase of additional land and sites. We have thus a substantial reserve of land for future development.

Modernisation has given our Stores a new look and a character more in keeping with the specialised goods we are selling. Our volume of business indicates that the millions of customers who throng our Stores each week find them pleasant and attractive places in which to do their shopping.

TRIBUTE TO MANUFACTURERS

We have, over the years, developed with our manufacturers a spirit of mutual understanding and confidence. We have learned to appreciate each other's special problems, and to deal with them in the most practical and helpful way. We have noted with pleasure their parallel growth with ours. Thanks to their investment in new factories, machinery and equipment, they have so increased their productive capacity as to be able to meet the growing demands of our public.

In our policy of up-grading the quality and the value of our goods, we have found in them most willing and able partners. In the search for better goods and values, our technical staffs work in harmony with each other, notably in agreeing on specifications and quality control. This team work and joint effort are important for the future development of our business, because it is mainly by pursuing modern methods that we can hope to find a still wider acceptance of the goods we sell.

It is therefore with great pleasure that I express, on behalf of the Board, our appreciation at the splendid co-operation of our manufacturers.

TRIBUTE TO STAFF

Each year I am privileged to ask you to join me in paying tribute to our staff. Our continuing success owes much to their loyalty and devotion, and to the skills they bring to their daily tasks.

In the past year substantial increases in wages have been awarded to our Staff, new scales have been introduced which have given much satisfaction. Apart from high standards of pay and annual bonuses, your Board is always concerned with the happiness and the well-being of the staff. We endeavour to provide the appropriate amenities, which help to create pleasant working conditions; com-

fortable lounges where they can rest and relax, attractive dining rooms where good meals are available at very low prices, are all at their disposal. To this service alone the Company contributed some £750,000 in the past year.

Our welfare work covers a wide field. We encourage and support all kinds of activities, social, cultural and athletic. Our staff organise this work for themselves, for their hours of leisure and pleasure. We believe that such activities help to cultivate a strong feeling of comradeship with each other, as well as to foster a sense of attachment to the firm, which your Board greatly prizes.

The report and accounts were unanimously adopted and the proposed dividend was approved.

The retiring directors, Mr Michael D. Sieff and Dr E. Kann, FRIC, were re-elected; the remuneration of the auditors, Messrs Deloitte, Plender, Griffiths and Company, was fixed, and the proceedings terminated with a vote of thanks to the chairman, directors and staff.

THE METROPOLITAN
RAILWAY SURPLUS
LANDS COMPANY
LIMITED

IMPROVEMENT IN REVENUE

The twenty-third Annual General Meeting of the Metropolitan Railway Surplus Lands Company Limited will be held on July 5, 1956, at Winchester House, Old Broad Street, London.

The following is an extract from the Statement circulated by the Chairman, Sir Bernard Docker, KBE:

The steady improvement in our revenue from rents, an average increase of 10 per cent each year since 1950, is again a welcome feature of the accounts for the year to March 31st last. Gross rents improved by £27,241 to £282,154. Net rents at £217,311 were up by £17,002. This year we received £50,000 from Ortem Estates Limited, our principal subsidiary, compared with £68,750 the previous year and £25,750 in 1954. In the result, we have £58,063 to carry forward, compared with £290,279 in the previous year. The provision for taxation takes £141,000, and we recommend a dividend of 6 per cent—the same rate as last year. On this basis we are left with £58,063 to carry forward, compared with £56,417 brought in. The consolidated balance sheet discloses a small expansion of assets of £161,708, bringing the total assets to £3,274,684 reflected in a bank overdraft compared with a credit balance at the bank the previous year.

CURRENT YEAR'S OUTLOOK

After referring to the affairs of subsidiary companies and reporting agreement to purchase the Littlehampton Estate, Sussex, on behalf of Ortem Estates Limited, and agreement to sell certain War-damaged sites in London at close on £120,000 expected to be received during the current year the statement concludes:

In the current year we shall have to meet a further increase in profits tax. Nevertheless, our rents continue to expand steadily and our principal subsidiary has good and active business in hand. These factors give us solid ground for feeling that over the next few years in the normal course of events we shall be able from time to time to make modest increases in the dividend.

BRITISH CELANESE LIMITED

MR G. H. WHIGHAM'S STATEMENT

The Thirty-seventh Annual General Meeting will be held at The Great Hall, Winchester House, 100 Old Broad Street, London, E.C.2, on Thursday, July 12, 1956, at 12 noon.

The following statement to Stockholders by the Chairman, Mr G. H. Whigham, has been circulated with the full Report and Accounts for the year ended March 31, 1956:

The net profit of the Group for the year, before taxation, is £2,446,550 compared with £3,341,246 for the previous year.

The net profit after deducting tax is £1,227,216 as compared with £1,710,140 for the previous year.

In arriving at the total taxation charge for the year of £1,219,334 credit has been taken for £185,000 in respect of Investment Allowance relief.

This relief has now been withdrawn by the Government as regards capital expenditure commitments incurred after February 17, 1956, and the amount which will be taken into credit in the financial year ending March 30, 1957, will apply only to orders outstanding at February 17, 1956; Investment Allowance relief as such will disappear altogether as regards contracts placed thereafter and Initial Allowances, which do not afford the same permanent relief, will be granted in substitution.

The Distributed Profits Tax, which was already a burden on equity stockholders, has been further increased. This tax also applies to Preference Dividends so that all the extra tax has to come from the equity earnings and further reduces the amount available for the equity stockholders. It is therefore most unsatisfactory to see this charge against them further increased.

Certain matters in respect of which it was considered desirable to provide for taxation in past years have been settled satisfactorily and as a consequence provisions amounting to £230,000 are now no longer required and have been transferred to the credit of Profit and Loss Account. We deem it prudent, however, to make some further provision towards the difference between the cost and the market value of our holding of British Government securities and we have accordingly transferred this amount of £230,000 to an account included in the Balance Sheet under the heading of "Other Provisions," which, together with the amount of £114,352 set aside last year, makes a total of £344,352 for this purpose.

After providing for dividends as shown in the Accounts and transfers to Reserves of £500,000, the carry-forward of the Group is slightly lower at £846,931.

I would again remind you that we have to spend large sums on the continuing modernisation of our existing plants and the development of new projects. Your Board, therefore, considers it vital to maintain the strength of the Company's Reserves especially in view of the unsettled economic condition of the country.

TRADING

Trading results for the year are disappointing and in giving you an explanation I would like to preface my remarks by reminding Stockholders of the position in

which the textile industry of this country has found itself during the past year.

Although we also sell chemicals and plastics, we are primarily a textile company and more than three-quarters of our turnover comes from textiles. During the past year, public attention has been so much directed towards the over-busy economy of the country as a whole, that it may not always be remembered that the textile industry has not been sharing the boom conditions. Falling exports, rising imports, increased dependence on sales in the home market, continually rising costs, have together created conditions of such difficulty that it is not surprising that the results so far published this year by many textile firms show substantially reduced profits.

While it has been for us a year of intense competition with lower prices in some cases, I am glad to be able to report that we have succeeded in maintaining our turnover, and as yet, without any substantial contribution from new products.

THE HOME MARKET

The home market, as I forecast last year, has remained a steady outlet for us. It is interesting to note the important place held by acetate in apparel textiles, since of all the continuous filament man-made fibres produced in this country for apparel (as distinct from industrial) purposes, acetate now represents about 40 per cent.

EXPORTS

I referred last year to the poor margins on export business as compared with Home Trade. There has been no change in this respect, and whilst we have exported a larger volume of yarn at lower prices, our exports of fabrics have continued to decline both in value and profit. The impact of Japan upon our overseas cloth markets and our problems in competing with the low wage costs of Far Eastern producers in general have been mentioned so many times that there is no need to elaborate further on this point, but I feel strongly about the type of competition from European producers. Although there is in Europe a large production of man-made fibres, we do not believe that in the main those producers are any more efficient than their British counterparts. Certainly their domestic prices are very much higher, but when it comes to exporting they seem to be able to sell at prices as much as 40 per cent below their domestic levels. It is established that in many cases they are assisted by what have been euphemistically termed "aids to export"—more bluntly, subsidies of various kinds. We have no such arrangements in this country, and while we can and do compete in quality and style, meeting their assisted prices makes textile export business extremely difficult and unattractive.

Last year I referred to the fact that we had acquired knitting plants in the Union of South Africa and in New Zealand. As I then said, these were acquired to ensure the regular consumption of our yarn in these countries. These factories are undergoing modernisation and reorganisation to suit our requirements, and although their own opera-

tions are not yet on a profitable basis, they are fulfilling their basic purpose.

COSTS AND PRICES

The main cause of our reduced profits has been the rapid and continual increase in costs which, owing to intense competition in the industry, we have not been able to recover by increased prices.

Although this has been said before, the position wants restating—there has been no increase in the price of continuous filament yarn since 1951. In the five intervening years the repeated wage and salary increases have outstripped the improved productivity and economies for which our workers, managers and research staff alike deserve credit. The costs of coal, oil, electricity, maintenance, packages and transport have gone up unrelentingly. The fall in imported raw material costs, which in our case represents only a small proportion of the cost of the resultant product, has long since been absorbed.

FUTURE OUTLOOK

The year that faces us seems to me at the moment to be similar in pattern to the last; a fairly steady offtake by the home market at keenly competitive prices and a further decline in fabric exports.

Quantities of our new yarn "Tricel" for bulk trial have been made and distributed to our manufacturing friends. These have been well received and are being commercially evaluated by them as well as by ourselves with every indication of success. The next phase of our production of this yarn, which will come into operation in the autumn of this year, will enable us to assess more closely the potentialities of this new product.

Our spun-dyed yarns are meeting with increased popularity and our sales are increasing.

As regards "Celon" (our nylon-6) yarn, the production is still in its early stages and we are consuming the output in our own textile sections.

Since last year we have taken steps to clarify the position of customers for our "Celon" products, particularly in the export markets. We have been in negotiation with British Nylon Spinners Limited who have agreed to grant a non-exclusive licence to the Company for the manufacture in the United Kingdom of nylon-6, and this will enable our customers to be entirely free to sell throughout the world their fabrics and garments made from "Celon."

As mentioned in my Statement last year, we have devoted much time and money in order to expand our interests, not only into new textiles, but also into chemicals, and we are continuing to do so. In this way we expect to improve earnings, but development of our new products, which are very promising, takes time and we cannot expect them to add materially to our profits this year.

In the meantime, in view of increasing costs and static selling prices already referred to, current trading gives no indication of any improvement in profits over those of last year.

WREXHAM

I am glad to state that our vinyl acetate plant began operations last April and it is turning out a product of excellent quality.

The new spinning plant at Wrexham came into commercial production on a progressively increasing level during the year and is now running at designed capacity. I am glad to inform you that the results of the operations at this factory have come up to our highest expectations both as regards quality and costs.

RESEARCH AND DEVELOPMENT

Steady progress has been made in the technical work which necessarily accompanies the introduction of yarns and fibres having new properties so as to ensure satisfaction in the hands of the user as well as to establish economies in their production. No one fibre, whether natural or man-made, can be a universal fibre. Already it is seen that some of the newly commercialised fibres are rather limited in their application. On the other hand, cellulose acetate fibres in their several forms continue to widen their fields of application.

Our studies continue in the fields of chemicals and plastics with a view to extending the range of our products and we are taking within our province the newer forms of plastic and fibre-forming polymers.

Throughout the Company's history it has been one of the important functions of the Research Department to enable us to effect economies by shortening or cheapening processes, increasing yields and improving qualities. If such functions were not efficiently carried out in these days of increasing costs from every direction we should be showing less favourable results. It is, of course, disappointing, and could be discouraging, that the economies we can make in an already efficient industry are so often more than offset by the increases in costs forced upon us.

In chemicals especially we are making more remunerative use of by-products and there are further opportunities for progress in this direction.

As far as is practicable we are still pursuing the aim of being self-supporting in the matter of raw materials.

In plastics, we are applying techniques, originally designed to deal with cellulose acetate, to some of the newer polymers, although we do not, as yet, make all these new polymers ourselves.

PERSONNEL

Last year I stressed the necessity for continued Government action to increase the supply of suitably qualified graduates for industry, and I am glad to observe from the recent White Paper on this subject that considerable attention is being given to this and allied problems. Industry has itself meanwhile made a valuable contribution by the creation of The Industrial Fund for the Advancement of Scientific Education in Schools which is designed to encourage at school level the entry into industry of a higher proportion of young people drawn from those schools not in receipt of public finance.

Our relations with our workpeople continue to be satisfactory and the responsible attitude of the relevant Trade Unions plays a substantial part in achieving this happy position. In a progressive industry such as ours changes in methods and procedure are constantly

being introduced in order to maintain our competitive position and the willing adoption of these changes by our workpeople is a welcome feature of our relationship.

Our employees at all levels, and in all departments, have given of their best during this past year and I should like them to know that their endeavours are appreciated by us all.

During the year we were fortunate in obtaining the services of Sir Eric Speed as a member of the Board. You will note that he retires in accordance with the Articles of Association and offers himself for re-election.

AMALGAMATED DENTAL COMPANY

RESULTS AGAIN SATISFACTORY

The fifty-first annual general meeting of The Amalgamated Dental Company Limited was held on June 15th in London, Mr Aiken Watson, QC, chairman of the company, presiding.

The following is an extract from the statement by the chairman circulated with the report and accounts:

I am happy to report another year of sustained effort with satisfactory results.

As manufacturers and distributors of virtually everything which the Dental Profession needs, one of our big postwar problems was to meet the world shortage of dental products without embarking on grandiose expansion likely to collapse under normal trading conditions. We have been faced with this problem not only at home, but also overseas where, operating alone or in conjunction with others, we make a substantial portion of our profit. We are now emerging from that stage.

Our manufacturing problems are in their way as complex as those facing manufacturers supplying a wider market. This is not always realised. If we are to maintain our lead, and to this end we are determined, greater research than ever is necessary. To meet this you will observe that we have set aside a substantial sum this year for this purpose.

RIISING LABOUR AND MATERIALS COSTS

Your Company cannot hope to escape for all time the natural consequences of rising costs in labour and materials. Our policy of maintaining stable prices at the expense of economies in production and distribution cannot be continued indefinitely. Equally, we are bound to feel the effect of national policies designed to protect the general economy both at home and overseas. The sudden re-emergence of import restrictions in Australia, where under a free economy we enjoy substantial exports, is a case in point.

With these factors in mind and the general effect of financial stringency now emerging in various parts of the world, you will appreciate I am sure the need for caution in any forecast of the immediate future. Subject to that proper reserve, I am happy to say that the course of current trading, while presenting a challenge to our enterprise, leads me to hope that the results for the current year will prove to be not unsatisfactory.

Annual thanks to our management and staff at home and overseas tend to become stereotyped but I am very sincere in thanking them once again for their loyalty and for the year's work well done.

The report and accounts were adopted.

W. T. HENLEY'S TELEGRAPH WORKS

RECORD BUSINESS

The seventy-seventh Annual General Meeting of W. T. Henley's Telegraph Works Company Limited was held on June 14th in London.

Sir John Dalton, MIEE, FCIS (Chairman), in the course of his speech, said: Our business in 1955 reached an all-time record considerably in excess of that in 1954, and although the year was not without its difficulties, nevertheless our Group trading profit reached the very satisfactory level of £1,898,000, as compared with £1,047,000 for 1954. The final dividend on the Ordinary Stock recommended by your Directors is 9 per cent, making 11½ per cent for the year; this is one per cent more than in recent years.

A great factor in our success for 1955 was the very much larger turnover, exceeding by some millions the figure attained in any previous year. We have again had to face considerable fluctuations in the prices of our principal raw materials. Following the decision of the Cable Makers' Association to implement the recommendations of the Monopolies Commission, new terms were introduced for rubber and thermoplastic insulated cables and other items in the home market.

Our Contract Organisation has also had a very successful year.

THE FUTURE

Our ability to maintain the good trading results achieved last year must, of course, depend very largely upon the demand for our products continuing at a high level. We began this year with a fairly substantial order book and the total value of orders received to date has been well maintained in relation to the corresponding period of 1955. Nevertheless, there are certain economic trends which might adversely affect prospects.

On the other hand, these adverse influences may be mitigated to some extent by the Government's programme of Main Line electrification scheduled for the Railways and its plans for the extended electrification of the Collieries; also by a continuing heavy demand for cables for Shipbuilding as well as by the continued expansion of those industries mainly concerned with exports which are receiving official encouragement.

As regards export business, it appears probable that World markets will continue to expand in 1956, and we anticipate being able to maintain a satisfactory volume of overseas sales.

Three weeks ago I had the honour of presiding over the British Electrical Power Convention—the largest Convention of its kind anywhere, so I am told. It embraced both the private enterprise and the nationalised sides of the Electrical Industry—probably now the greatest Industry in the Country and certainly an Industry which is a contributor of magnitude to the Nation's economy.

The reflections on the Convention leave no doubt that the Industry is dynamic and full of plans for the future. Its record of exports for 1955 of over £245 million is an outstanding achievement, and, on the basis of the statement made in the Government's Economic Survey for 1956 that "a high rate of productive investment remains an important national objective," it must follow that electrical plant, machinery and cables are vital to the achievement of that objective.

The report and accounts were adopted.

SPILLERS LIMITED

(Flour Millers and Animal Feeding Stuffs Manufacturers)

LARGER PROFIT AND DIVIDEND

SERVICE TO AGRICULTURE

REMOVAL OF BREAD SUBSIDY

MR WILFRED D. VERNON'S STATEMENT

The sixty-ninth annual general meeting of Spillers, Limited, was held on June 15th at the Abercorn Rooms, Great Eastern Hotel, London, E.C., Mr Wilfred D. Vernon, chairman of the company, presiding.

Mr Henry Reeve, MC, of Messrs Impey, Cudworth and Company, read the auditors' report.

The following is the chairman's statement circulated with the report and accounts for the year to January 31, 1956:

As is our custom the more detailed comments on the accounts are contained in the Directors' Report.

The trading results for the year show a profit before taxation of £3,759,000 (as against £3,414,000 last year) and an available balance after taxation of £1,616,000, compared with £1,488,000 a year ago. The Board are recommending to the Stockholders that the total distribution on the Ordinary Stock be 12 per cent as against 11 per cent last year. This, together with the dividends on the Preference Stock and to minority interests, would absorb £676,000, thus retaining in the business £940,000 in addition to the provision for depreciation and obsolescence of £1,230,000. I might add that reserves were further augmented during the year by certain receipts from the Ministry of Food and the War Damage Commission and other adjustments not related to the trading operations of the year totalling in all some £583,000 net.

MORE CAPITAL EMPLOYED

The improvement in the trading results has to be related *inter alia* to an increase in the Capital employed of about £2½ million. The Consolidated Balance Sheet shows that at the year end the total capital employed in the business had risen to some £22 million. This is on the basis of the written down book value of the fixed assets which is very considerably below their actual value today. In terms of real value the capital employed is much greater than that shown in the accounts.

It is of the first importance that industry in this country should maintain and increase its efficiency. A primary prerequisite towards this end is capital investment in the modernisation and expansion of operating equipment. It is a source of anxiety in the milling industry, as in others, whether at today's level of capital costs a reasonable return can be obtained on an investment in new works. So far as flour milling is concerned it is apparent that current margins can only support major new construction if it is combined with assets installed before the onset of inflation and the ability to do this must clearly diminish as time goes on.

FLOUR TRADE

While our flour trade showed a further small decline over the year as a whole, it improved in the latter part of the year, and this improvement has since continued. I

cannot say with any certainty whether this will be maintained since there is strong competition from imported flour which, in our opinion, is being offered at prices that can hardly be economic to the manufacturer and perhaps might come within any reasonable interpretation of "dumping."

In the field of agriculture we have continued to render considerable service. During the year we have used in our mills some 300,000 tons of home grown grain, and have played our part fully in honouring the pledge that the flour milling and compounding industries gave to the Government in this respect. This grain was purchased through merchants who are a most important and useful link between the farmer and ourselves. I think it is worth recording that the deficiency payments system for wheat has now been tried out both under conditions of a bad harvest and a good harvest and has proved to be satisfactory and fair to purchasers, processors and farmers.

The modernisation of our buildings and plant for the manufacture of compound animal foods is constantly engaging our attention, and the major extensions to our plants in London and Birkenhead will, I hope, be completed during the year.

ANIMAL FOODS

While a drop in the pig population, coupled with the record home barley harvest, brought about a general decline in the demand for pig-fattening foods, there has been further progress in our poultry foods, in which record deliveries were achieved. In keeping with our desire at all times to give the farmer the best and most economical service, we are taking a lead in the development of the delivery of animal foods in bulk as we did in flour.

Although our feeding stuffs are marketed through merchants, we continue to keep in close touch with farmers through our Advisory Service. The high quality of our animal foods is maintained by a continuous programme of research at our animal foods Nutrition Laboratory at Middle Aston, Oxfordshire, in conjunction with feeding trials at the Farm. This ensures that the latest scientific developments are applied in the manufacture of our animal foods. This programme of research and testing is supported by strict control of quality by our Central Laboratory at Cambridge, which ensures that only ingredients of a suitable quality are used, and that our finished products are of a consistently high standard.

The popularity of our dog foods continues and their high quality is being increasingly recognised by all dog lovers.

BAKING INTEREST

Last year I indicated to the Stockholders that we had decided to increase our financial interest in the baking industry. The various baking units which we have acquired have now been grouped under a new holding

company named United Bakeries Limited the whole of the capital of which is held by Spillers Limited. Mr H. W. Pratten, who for many years past has been our Chief Accountant, has been appointed Managing Director of United Bakeries. Mr Colbourne and Mr Harrison, the Managing Directors of two of the principal underlying companies, who have had great experience in the baking industry, have also joined the Board of United Bakeries.

It has been our policy that the day-to-day management of the individual companies should continue substantially unchanged and we are fortunate in having the direction of these companies in the hands of able and energetic men who, in most cases, have spent the whole of their business lives in the trade. The new organisation has naturally to face some initial problems but it is running smoothly and the earnings of the baking group have contributed to the improved results for the year.

WHEAT AND GRAIN SITUATION

I now refer to one or two features in the wheat and grain situation. It is satisfactory to note that the Government decided that this country should not become a party to the recently re-negotiated International Wheat Agreement. If I may say so, I am sure that this decision was right as preserving freedom of action in the acquiring of this country's wheat supplies and I venture to predict that these will in consequence continue to be obtained more economically than would have been possible under the Agreement.

The fob price of imported wheat again remained relatively steady throughout the year. There was, however, a further general and substantial advance in ocean freight rates thus increasing the landed cost in this country. The effect on freight rates of the pressure on dry cargo shipping due to increased movement of commodities and in particular to shipments of coal from the USA to Europe is disturbing.

The arrangements for marketing home-grown wheat have generally operated smoothly, and all available supplies have been taken up. Prices of maize and barley, which fell during the year, have since risen steeply.

It is gratifying that the considerable capital expenditure incurred during the past year on both modernisation and extension of existing plant and the acquisition of new subsidiary companies was financed wholly from our own resources. It is worth recording that over the last ten years we have expended some £17 million on fixed assets and increased working capital without recourse to the capital market or temporary borrowing.

TWO IMPORTANT MATTERS

It is appropriate that I should mention two matters of importance to the flour mill-

ing and baking industries and, indeed, to the public generally, which have occurred since the close of the financial year. The first concerns the Government's decision to withdraw the subsidy on bread, and the second the conclusions of the Cohen Committee set up to determine the differences in the composition and nutritive value of various flours and to advise whether these differences were significant from the point of view of the health of the population.

Over a long period much controversy has surrounded the question of whether it would be in the interest of public health that bread should be made only from long extraction flour. It is therefore eminently satisfactory that this can now be regarded as decided by the independent and authoritative pronouncement of the Cohen Committee. They

consider that bread made from either 80 per cent extraction flour or 70 per cent extraction enriched flour is an excellent food. They further conclude that the available evidence does not reveal any ascertainable differences which would significantly affect the health of the population in any foreseeable circumstances between National Flour and flour of a lower extraction rate enriched as specified in the Flour Order, 1953. It would therefore appear that the public can, with confidence, consume bread made from any of these flours according to the individual taste.

The removal of the bread subsidy will not only relieve the Exchequer of a considerable burden and remove artificiality from the price structure, but in the narrower field of milling and baking will give the public a wider choice.

THE INDUSTRIAL AND GENERAL TRUST

REVENUE SURPASSES ALL RECORDS

The sixty-eighth annual general meeting of The Industrial and General Trust, Limited, was held on June 14th in London.

Sir Edwin Savory Herbert, KBE, LLB (the chairman), who presided, said:

Before proceeding to the formal business of the Meeting I must refer to the grievous loss we suffered earlier this year by the death of our colleague, Mr Stuyvesant Henry Le Roy-Lewis. He was first appointed to the Board in February, 1931, and his many and varied interests made him an invaluable colleague. We greatly miss his advice and shrewd judgment.

Since the end of the financial year your Directors have appointed Mr John Lindsay Eric Smith to the Board. His father, the late Captain Eric Smith, was a Director of the Trust and was held in high esteem and respect in the City of London. We welcome him as the son of his father, but it is his own abilities and experience which will make him so valuable a member of the Board. A proposal for his re-election will be submitted to you later in the Meeting.

THE YEAR'S RESULTS

As the Report and Accounts have been in your hands for some three weeks, I presume it is your wish that we should take them as read. (Agreed). Nevertheless, there are one or two points with regard to them to which I should like to draw your attention.

Once more the gross revenue of the Trust has surpassed all previous records. The increase over the previous year is £210,000 and this increase, incidentally, takes our revenue comfortably over the £1½ million mark for the first time. Although we received about £4,000 less arrears of income during the year, this was more than offset by an increase of about £15,000 in our recoveries through double taxation relief.

Our liability for income and profits taxes has increased by £72,000 to £642,000, but we have been able to offset against it £8,000 over-provided for profits tax in previous years. After deducting our tax liability and all other expenses, the net revenue for the year was £714,534, which is about £142,000 more than in the previous twelve months. Adding the amount of £348,000, brought forward, there is a total of about £1,090,000 to be dealt with.

It was decided to repeat last year's appro-

priation of £150,000 to General Revenue Reserve, making a total of £1 million in that Reserve, and to place another £5,000 to Contingencies Reserve. The Interim dividends paid last November of 2½ per cent on the Preference Stock and 7½ per cent on the Ordinary Stock absorbed £173,000, leaving a balance of £762,000. The Directors now recommend the usual payment of 2½ per cent on the Preference Stock and a Final dividend on the Ordinary Stock of 17½ per cent, making 25 per cent for the year. The Final dividends, if approved, will require £375,000 and will leave a balance to be carried forward of £386,000, an increase of £38,000 over the amount brought in.

Stockholders will no doubt agree that these results can be considered very satisfactory; the recommendation of an increase in the Ordinary dividend is after substantial transfers to Reserves, the total of which is now £1,700,000.

The proposed Final dividend of 17½ per cent on the Ordinary Stock compared with the Interim dividend of 7½ per cent, emphasises the disparity between these dividends. The Board feel that Stockholders would appreciate a more even distribution and they therefore intend, providing circumstances warrant it, to increase the Interim dividend normally paid in November. I make this statement now so that no Stockholder will be misled into thinking that an increase in the Interim dividend is an indication of a higher total payment for the year.

The Balance Sheet requires no special comment from me. I would only mention that the valuation of our investments shows an increase of some 5 points over that of last year.

COUNTRY'S ECONOMIC CONDITION

The results of an Investment Trust are sometimes misleading in so far as they do not immediately reflect fully any change in the country's prosperity. We may therefore find that the results of the current year are not very different from those before you today. Nevertheless, the economic condition of this country, since I last addressed you, has worsened. It is not easy to decide where the fault lies. The answer is probably that a number of factors have joined to upset our economic balance.

Whatever the cause, there is no doubt that

TRIBUTE TO STAFF AND WORKPEOPLE

I would again express our warm appreciation of the services of the management, staff and workpeople throughout the group. I should in particular like to express the hope that all those concerned with the organisations which have joined us during the year will be happy in their association with us.

The report and accounts were unanimously adopted; the proposed dividend was approved; the retiring directors, Mr Humphrey B. Vernon, MC, and Mr C. Paslew Rishworth, were re-elected; the remuneration of the auditors, Messrs Impey, Cudworth and Company, and Messrs Deloitte, Plender, Griffiths and Company, was passed, and a special resolution was adopted increasing the fees of the chairman and directors.

the economic position of this country is now serious. Inflation must be halted but although some measures to this end have been taken, one cannot help but wonder whether they are far-reaching enough to obtain their objective. There are ominous signs that another round of wage increases is going to be demanded regardless of, and certainly without full appreciation of, the consequences. The export market is today more intensely competitive than it has been at any time since the war and any addition to our present costs will tend to price this country out of that market.

These problems are not entirely new. They have been with us in some degree ever since the end of the war. It is the solution of them which is the difficulty. It cannot be found through the placation of any one section of the community at the expense of another, it must come as the result of an intensified national effort directed to the benefit of the country as a whole without over regard for particular sectional interests. Only in this way can we hope to maintain our standard of living, quite apart from any question of doubling the standard in the next twenty-five years.

Nevertheless, the remedies lie in our own hands. I have faith in the future of this country based on the fundamental good sense of my fellow countrymen. No matter to what extent extremists of one kind or another appear, from time to time, to influence affairs, the moderate views of the ordinary man will eventually triumph, as they have always done.

Fortunately the Trust's investments are widely spread so that in any but exceptional circumstances we may expect to find a decline in revenue from one source offset by an increase in that from another.

TRIBUTE TO EXECUTIVES AND STAFF

It is no mere formality when I offer, on your behalf as well as that of the Board, our thanks to our Managing Director, Mr Ockford, Mr. Bussy, our Secretary, and to all the Staff for their consistently hard work during the year, which has helped to make possible the results now before you.

You will, I know, be interested to learn that next week Mr Ockford will complete 40 years service with the Trust and I am sure you will wish me to offer him our heartiest congratulations on this record, which he will share with our two previous Managing Directors, Mr Poole and Mr L. A. Stride. This is an achievement of which he may well be proud and we sincerely hope that we may have the benefit of his accumulated store of knowledge for many more years to come.

The report and accounts were adopted and the other formal business duly transacted.

ROLLS-ROYCE LIMITED

EFFORTS TO SECURE NEW BUSINESS NULLIFIED BY SCOTTISH STRIKE

FORMIDABLE TECHNICAL PROGRAMME TO MEET CHALLENGE OF THE FUTURE

The forty-ninth annual general meeting of Rolls-Royce Limited will be held on July 10th at the Midland Hotel, Derby.

The following are extracts from the circulated statement of the Chairman, The Right Honourable Lord Hives, CH, MBE, LLD, DSc:

There is little doubt that but for the strike at our Scottish factories the turnover within the group during 1955 would have established yet another record. Production in Scotland, however, was at a standstill for seven weeks. In other respects the output must be regarded as satisfactory because it was achieved in spite of changes in government programmes and the inevitable difficulties associated with the changeover of models in the Motor Car Division. The loss of turnover which resulted from these causes was to a large extent offset by satisfactory increases in commercial work, particularly in the Aero Engine Division and also in the Oil Engine Division.

It would be misleading to interpret the real cost of the strike only in terms of immediate loss of profit, though even by that criterion the cost was substantial. Not only was there the loss of profit on the normal turnover, but there were the high costs of maintaining the establishment—including the payment of salaries to 4,000 members of the staff—so that work could be resumed as quickly as possible. The effect of these costs on the trading profit for the year is obscured by the improved trading results from our increased commercial business, and it is a great disappointment that the efforts which have gone to securing this new business, bringing in its train greater stability of employment and, indeed, work for more people, should be so nullified.

As a result of a relatively lower provision for taxation, the profits available for appropriation show little change from the previous year. Your Directors have already announced their intention to recommend a final dividend at the same rate as last year, namely, at the rate of 12½ per cent on the capital as it was constituted at December 31, 1955.

There is much that is encouraging in our assessment of the future, but we must continue to conserve our resources to meet the heavy expenditure involved and there are the inevitable risks attendant on new projects; your Directors have no hesitation in recommending that a further substantial appropriation should be made to general reserve.

WORKERS' SHARES

At our last meeting the stockholders approved proposals that 10 per cent of the issued equity capital should be constituted as workers' shares, and £600,000 in workers' shares of 10s. each were created. Since then the issued capital has been increased by £1,100,000, and the Directors recommend that in pursuance of the policy approved last year a further £110,000 of the unissued capital of the company should be designated workers' shares.

Last year an offer of workers' shares was made to all employees having more than five years' continuous service—some 18,000 people—and as a result 619,234 workers' shares were issued, although applications received were considerably in excess of this figure.

These shares are now held by 6,600 employees. It is the present intention of the directors to make an issue of workers' shares each year until the total amount has been taken up. In this way it will be possible to offer a participation to employees as they become eligible year by year, and also to reserve shares for those who may not immediately be in a position to pay for them.

STRENGTH OF COMPANY'S POSITION

The strength of the company's position continues to grow from the experience gained in the use of its products throughout the world. Many thousands of gas turbine engines and vehicle engines of all kinds are being operated under a wide variety of conditions. There is no substitute for experience of this kind, and it is against this background that we are constantly effecting improvements which enable us to probe new markets and move into new fields of technical development with confidence. After outlining the steps taken by the Company to contribute to the government programme for the development of power plants for guided weapons, and in connection with studying the application of nuclear energy, the statement continued:

These, however, are only examples of the way in which your Company is continually looking ahead. For the present and the immediate future we continue to supply by far the largest proportion of engines required by the Royal Air Force, while our business for other customers, and particularly the civil airlines, continues to expand steadily.

The combined turnover of the group for customers other than the British Government expanded still further to a figure of £23 million, and new orders were received at an even greater rate.

In Canada our subsidiary company had a busy year and can look forward to a high level of activity derived from the growing use of our products, particularly by airlines in both Canada and America.

Our company in Australia has established a good reputation for the work which it has set out to perform.

DIVISIONAL ACTIVITIES

Aero Engine Division.—Our production factories were fully occupied throughout the year with programmes for the British Government, for foreign governments, and for civil aircraft—the Viscount in particular.

Last year I told you of the decision to provide a facility for testing engines under high altitude conditions. This project has been prosecuted with great energy because the information to be derived from such a plant is vital to our future plans and is becoming impossible to obtain by any other means. It is clear that the total cost, at the present level of prices, will be in excess of £4 million.

Our business with foreign governments has been well maintained, and Rolls-Royce engines are being installed in aircraft built in America, Australia, Belgium, Canada, France, Holland, Italy, Spain and Sweden.

Civil Aviation.—The steadily growing output of Vickers Viscount aircraft has, of course, to be matched by our output of Dart

engines. In last year's report I recorded that 300,000 engine-hours had already been flown in scheduled service. This figure has now increased to nearly a million hours, and it is being added to at a steadily increasing rate.

Great prominence has been given in recent months to the aircraft and engines being considered for future airline operation, and there will, undoubtedly, be much competition for the available business. The Dart engine, however, is still the only gas turbine engine in the world operating scheduled services, and is the only turbine propeller engine in quantity production at the present time. The future of this engine is already assured, and there are still further developments in increased power and reduced fuel consumption to come. Your Company is in a unique position among the aero engine builders of the world in having under development four different types of gas turbine engines specifically designed for transport operations.

The International Air Transport Association have issued figures which show that in 1954 only 8 per cent of the engines used by the members of the Association were British engines. At present their fleets are powered largely by piston engines. The inevitable change to gas turbine engines which is going to take place over the next ten years clearly presents a tremendous challenge to all concerned with the development of British aero engines to obtain a larger share of the business and at the same time make a significant addition to national exports. In accepting this challenge, and at the same time maintaining the pressure on development work for future military requirement, your Company have undertaken what is, indeed, a formidable technical programme and one which will involve the spending of very considerable sums of money in the foreseeable future both by way of private venture developments and the provision of the necessary equipment.

It is clear that our future, and, indeed, the future of the British aircraft and engine industry, depends upon obtaining a larger share of world markets.

Motor Car Division.—In my statement last year, I said that the new Rolls-Royce Silver Cloud and "S" Series Bentley models which, at that time, had been recently announced, had met with great approval. This view has been confirmed by subsequent and fuller experience. At the time of writing this report the Crewe factory is producing cars and also exporting them at a higher rate than at any previous time in the company's history.

The output of "B" range petrol engines for use in military and commercial vehicles has been well maintained.

Oil Engine Division.—The world markets for the products of this division continue to expand, and at present Rolls-Royce oil engines are operating in 53 countries extending from the Arctic Circle to New Zealand.

On the manufacturing side, the planned output in 1956 will be more than twice that of 1955, and for 1957 a further 50 per cent expansion is envisaged.

The Chairman then reviewed the overseas activities and the progress of the Associated Companies.

MILK MARKETING BOARD

RECORD OUTPUT

MR THOMAS PEACOCK'S SPEECH

The Annual General Meeting of the Milk Marketing Board was held on June 15th in London.

Mr Thomas Peacock, CBE, JP, the Chairman, in the course of his speech, said:

Output of milk in each month of 1956 has been a record and taking the five months January to May together, 39 million gallons more milk have come from the farms than the record totals of two years ago. Quite apart, however, from the favourable season, there has been a small increase in the number of cows on dairy farms and we believe there has been a renewed upward movement in the yield per cow, which now stands at about 685 gallons. This is an estimate of the yield of all cows on milk selling farms and it compares with the figure of about 560 gallons before the war—an increase of more than 20 per cent. This is only one measure of the great rise in efficiency which has taken place in milk production in this country.

GRADUAL UPWARD TREND

Reviewing all the measurable factors, we believe that there are signs of a gradual upward trend in total milk supplies which will become apparent in the next few years if production conditions are favourable. For this reason I want to take this opportunity of making it very clear to milk producers that if supplies continue to rise, then the effect will be clearly felt in the lower prices paid to producers. It is still not generally understood that the guaranteed price decided by the Government following each Annual Review is a price which is guaranteed only for a certain standard quantity of milk, which for England and Wales at present is 1,651 million gallons. Milk which is sold from farms over and above this standard quantity is also guaranteed by the Government but only at the manufacturing realisation price, so that for this milk, producers earn only what the market pays.

The real point is that the greater the proportion of the total output of milk which is in excess of the standard quantity the lower will be the average price per gallon paid to producers for the whole of the output. The guarantee arrangements provide for an immediate effect on producers' prices without any direct loss to the Government if supplies rise above the standard quantity. I will illustrate this by saying that if total output in the year is the same as the standard quantity then the price paid for all milk will be the same as that guaranteed at the Annual Review. If, however, output is 50 million gallons in excess of the standard quantity then this will reduce the average guaranteed for all milk by maybe a penny a gallon at present prices. If the excess quantity is 100 million gallons which is likely this year then the price payable might be as much as twopence short of the Review Price.

COST OF PRODUCTION

Our great liquid milk market is the foundation of our industry—it is our only profitable market and do not let us forget that its size is 76 per cent greater than pre-war and its cash value annually is around £400 million sterling. Any recession in this market, even a small one, will have serious consequences for producers and distributors. This is why, of course, the dairymen and

ourselves must be prepared to use every endeavour continuously to expand its scope. The amounts which we allocate to publicity and sales development in this market are already considerable. But in relation to turnover they are still small. I feel sure that the Board will not hesitate to increase this effort if the situation seems to call for it and I feel quite sure that we shall have the full support of the great body of the producers of milk.

We realise that to expand the liquid market to the present level is no easy task. Indeed, I must say quite plainly that it is most unlikely that the liquid market in the next few years will expand at the rate at which total supplies of milk at this moment appear to be increasing. In the circumstances, therefore, we must face the prospect that unless total output of milk keeps in step with the trend in the liquid market, the average price that the Board can pay to producers must, as long as the present guarantee arrangements operate, tend to fall, in relation to the guaranteed price decided each February at the Review.

It follows that costs of production will need to be further reduced if profitability is to be maintained. We attach great importance to the improvement in efficiency in production of milk on farms which has already led to substantial reductions in real costs per gallon.

MARKETING PROBLEM

We have experienced considerable difficulties in the last few weeks when the Board have had to dispose of the largest quantity of milk ever produced at the peak of the year. The task we have is a familiar one in the marketing of most agricultural commodities—it is to bring the produce of small units, widely dispersed, to large concentrated urban markets. Our problem is, of course, aggravated by the standstill arrangements which existed during the very long period of Government control. The milk producing side of the industry is still predominantly an industry of small farms. Last year we asked milk producers to give the Board certain details of the size and composition of their herds. The figures show that the average size of the herds on milk-selling farms is still only 17 cows and that one half of our milk supply comes from herds of less than 24 cows. There has been some tendency for dairy herds to increase in size since the last time we asked milk producers for this information but the general pattern of the industry is still largely based upon large numbers of these small herds.

PRODUCTION BONUS

In this connection I want to mention the Board's decision to abolish the production bonus gradually over the next three years. As much as the Board wish to help the small producers they do not believe that a policy of differential prices is either the proper or the fair way of giving such assistance. The Board up to now have believed that each milk producer should receive the same price as his neighbour, within a region, providing he gives the same service. Differential prices should be related to the different services. Having said this I wish to make it very clear that we are very conscious of the problems of the small producer and most of the producers of milk are small men. Recently we have

done our best to persuade the Government to extend to milk producers who are situated in livestock rearing areas the benefits of the Livestock Rearing Act which is to be renewed this year for a further period.

So far our efforts, in which the National Farmers' Union have joined, have not been received with as much sympathy as we expected, but it is our earnest belief that if milk producers in these areas of poor land can have assistance in improving their farms then we shall have a much sounder foundation for our industry. Here is an opportunity for the Government to assist the industry. In any scheme of capital re-equipment, reorganisation and rationalisation in these milk-producing areas the Board would be happy to assist, because in the long run our industry would be healthier and milk production more economic.

In line with the Board's belief in paying producers a price related to the service they perform we have continued to pay those producers who satisfy the conditions a twopence premium for milk of Tuberculin Tested standard. The Board have decided to continue this arrangement for another year and they have undertaken to give twelve months' notice to producers of any change whether up or down.

BOARD'S POLICY

It is the Board's clear policy to continue to provide incentives for the improvement of milk quality for there is no doubt that the first essential in the expansion of the liquid market is to be sure that the quality of our product is good and is improving and that it satisfies the consumer.

I am not in a position today to say finally what the Board propose to do further on this subject of varying the price payable according to compositional quality of the milk. It is clear enough, however, that we must insist on a substantial improvement in total solids content in a proportion of our supplies which are sold to the Board at or below the existing legal minimum, particularly at certain seasons of the year.

On the manufacturing side, markets are now free and our products compete with imports from New Zealand and Australia, Denmark and Holland.

GOVERNMENT'S PROPOSAL

It is appropriate that I should refer to the proposal of the Government to increase the maximum retail price for milk from July 1, 1956. This is a step which the Government have already announced and, of course, the purpose of it is to reduce the amount of Treasury subsidy on milk. I wish to make it clear that none of this price increase will come into the pockets of producers or distributors—the whole benefit will accrue to the Exchequer. Much as we deplore this rise in prices, we cannot object to the action of the Government, because in the long run the consumer must bear the full cost of the milk service and this next rise should enable the Treasury subsidy to be reduced to quite nominal proportions in England and Wales.

We naturally hope that the suggested rise in price will not retard the gradual rise in consumption which has been apparent in recent months.

The report was adopted.

BOOTS PURE DRUG COMPANY LIMITED

SALES EXCEED £66 MILLION

CONTINUED RETAIL EXPANSION : EXPORT ACTIVITIES REORGANISED

MR J. P. SAVAGE ON THE PROBLEM OF RISING OVERHEADS

The sixty-eighth Annual General Meeting of Boots Pure Drug Company Limited will be held at Nottingham on July 19th. The following, in an abridged form, is the Statement by the Chairman, Mr J. P. Savage, which has been circulated with the Report and Accounts for the year ended March 31, 1956:

Our Company has suffered a great loss through the death of Lord Trent. We shall miss his great leadership, his vision and drive, but all of us have derived great benefit from the experience of working under his guidance.

TURNOVER AND PROFITS

Our sales exceeded £66 million, an increase of 11½ per cent.

Our profit shows a further increase this year from £4,214,758 to £4,380,704. After making provision for tax, the net profit of the group is £2,029,454 compared with £1,912,142 last year.

Profits retained by the Subsidiary Companies amount to £293,439 compared with £276,298. The net profit of Boots Pure Drug Company Limited thus amounts to £1,736,015 compared with £1,635,844.

The balance brought forward amounted to £272,450. We are also in a position to bring in £61,382 tax provision no longer required. This makes a total available of £2,069,847.

Although we have had a record year for profit, it must be emphasised that this has been achieved, not by increasing our prices to the public, but by a substantial increase in total sales, and by greater efficiency in distribution and production. In fact, wages and salaries have advanced at a considerably greater rate than the rise in retail prices, and our policy has been to endeavour to absorb the growth of these expenses by improvements in our methods of distribution and selling.

DIVIDEND

We have paid two interim dividends of 3 per cent each on the capital as increased by the bonus issue. The total paid last year was equivalent to 13½ per cent on the present capital. We now propose a final dividend of 8 per cent, making a total of 14 per cent for the year.

Your Directors recommend that £750,000 should be placed to general reserve and £130,000 appropriated for depreciation on freehold properties. We also propose placing to capital reserve the tax relief in respect of Investment Allowances, amounting to £53,300 for the parent company and £73,300 for the subsidiaries. After deducting dividends paid and proposed this leaves £256,596 to be carried forward.

CAPITAL EXPENDITURE

Capital expenditure for the year has amounted to £2,750,000. About two-thirds of this has been spent on the retail side of the business in building new shops and

extending and modernising existing shops, and one-third on the manufacturing and warehousing side.

As a result of the rise in our capital expenditure and in our stocks, the cash balances have shown a fall of about £1,400,000.

There was an increase in our stocks—from £14,289,132 to £15,318,054. We increased our rate of turnover of stock in all three main groups—Branches, Warehouses and Manufacturing Departments—which means that we have made even better use than before of the money invested.

RISING OVERHEAD CHARGES

In my opinion industry has responded magnificently to the appeal from the Government to refrain from passing on to the consumer all the mounting costs of production and distribution. But when we need to buy services or raw materials from the Government and Nationalised Industries we find that this policy operates in reverse, and rising costs are immediately passed on to the consumer. While we are asked to keep our prices down, the Government increases purchase tax and postal and telephone charges. The rating Revaluation, the ultimate responsibility for which rests on the Government, falls with exceptional severity on a Company largely engaged in retail trading: this year our Rates will go up by over £250,000. There is no justification for this transfer of the rating burden to commercial property.

The nationalised industries are also putting up their prices; coal and electricity show big increases and we are threatened with substantial rises in rail charges. If it is right that private industry should endeavour to keep its prices down and absorb its increased costs, the same is true of the nationalised industries and it is equally the duty of the Government to fashion its policy in a way which does not drive prices up.

RETAIL EXPANSION

During the year we opened eighteen new shops and closed eleven. The outstanding event was the opening of our new store in Southampton, replacing the one we lost in the blitz in 1941. This is generally agreed to be one of the most beautiful shops in the country. We are continuing to modernise and improve our older shops.

Retail sales were an all-time record and one particularly pleasing aspect of last year's increase was that every Department contributed to it, which shows that our efforts to maintain a reputation for good service and quality are appreciated by an ever increasing proportion of the population.

EXPORT AND WHOLESALE SALES

Our export activities have been reorganised by the creation of a new International Division. The pattern today is governed so much by the restrictive import conditions of other countries that we are encouraging the manufacture of our goods in foreign and commonwealth countries. We can no longer

regard these restrictive conditions as abnormal and we must shape our business accordingly. Despite these changing conditions we exported a greater volume of goods than ever before both to our Agents and to the Subsidiary Companies.

We are paying considerable attention to the sale of our agricultural and veterinary products in world markets. Wholesale sales at home continue to increase although price competition has been very keen.

RESEARCH AND DEVELOPMENT

In the field of chemical and pharmaceutical manufacture the present climate is one of continually increasing competition. We must keep our manufacturing processes at the highest possible point of efficiency; we must also strive to improve the products themselves and to introduce new products. This responsibility lies to a large extent, of course, on the technologists and technicians in our Research and Development laboratories, and it is essential that we should provide them with adequate facilities to do the job. We have just re-housed the research division of Antibiotics and Fermentation in a fine new block of specially designed laboratories. Work will shortly begin on the construction of a large new laboratory building in Nottingham for our pharmacological and bacteriological research units.

STAFF

The staff (now over 36,000) have worked with great enthusiasm and we have decided to repeat the special "Prosperity" Bonus of one week's wages or salary to all employees in Great Britain and the Channel Islands, who joined the Company before October 1, 1955. This will cost us much more than was paid out last year, because wages and salaries have advanced in the meantime, but we are very happy to be able to do this, for we recognise their loyalty and hard work in helping us to achieve records both in sales and net profit. Whether we shall be able to continue to do this will necessarily depend on future results.

FUTURE PROSPECTS

The present year will probably be the most difficult period we have faced since before the war. The policy of the Government to restrict spending will be felt throughout the retail trade at a time when expenditure continues to mount at an alarming rate.

We must keep down our prices to the public to the lowest possible level and, therefore, we have to concentrate upon increasing efficiency to meet the changing conditions. Consistent with our policy of giving the best possible service and value to the consumer, we shall endeavour to reduce our costs of distribution to a minimum and constantly review our stock investment position.

We shall carry out a programme of expansion within our financial capacity and I have no doubt we shall be able to make a satisfactory showing despite the difficult problems which lie ahead.

SPICERS LIMITED

(Paper Makers, Paper Merchants and Manufacturing Stationers)

SATISFACTORY YEAR'S WORKING

MR LANCELOT SPICER ON PROBLEM OF RISING COSTS

The sixty-eighth annual general meeting of Spicers Limited was held on June 15th in London, Mr Lancelot Spicer, DSO, MC (the Chairman), presiding.

The following is an extract from his circulated statement:

Taken as a whole, 1955 has been a satisfactory year for your Company. Profits of the Group before taxation amount to £1,035,565 as compared with £1,045,661 in 1954. The net profit of the Group after taxation attributable to the stockholders of Spicers Limited was £455,509.

The half-yearly statement which we issued showed a profit of £616,429, and it will therefore be noted that there was a contraction of profit in the second half of the year. This was due to a variety of causes. The rise in the bank rate and the Chancellor's request to the Banks for a restriction of credit did not seem to have an immediate effect on our trade, nonetheless Government action of that kind is bound to have a restricting influence. Secondly, in certain sections of our converting activities competition has been particularly keen with the consequential narrowing of profit margins. Thirdly, the cost of the move of our Union Street factory to our Sawston area in Cambridgeshire in terms of temporary loss of production was incurred mainly in the second half of the year. Finally, as we all know from personal observation there was a rise in all expenses during the latter half of the year.

The continual rise in expenses in all industries is a matter of general concern. We have reached the stage at which, unless production is greatly increased, we shall find our costs have risen so high that we shall not be able to pay for the raw materials and food we must have in order to enable us to maintain our present standard of living. Increased production can be secured partly by management devising improved methods of production, partly by much greater application on the part of the worker, and partly by keeping machinery in continual production.

In the past heavy industries have worked continuously, but most light industries in this country have only worked by day. The high capital cost of modern equipment in light industry surely necessitates that a machine shall be kept in continual production and not as at present for only about forty hours per week of 168 hours. To achieve this may mean a social revolution. "Working round the clock" may have to become the normal mode of life for all of us including the public services, the retail trade and the entertainment world. I am not advocating longer working hours, indeed it might well be a forty-hour week, but those forty hours would not necessarily be performed between 8 a.m. and 6 p.m.

PROVISION OF WORKING CAPITAL

Since 1950 our turnover has increased by more than fifty per cent. This considerable increase, which is partly due to a larger volume of business and partly due to the rise in prices resulting from inflationary causes, has necessitated continual capital expenditure on property and plant and has also required

increased working capital. Up to now these requirements have been met out of the Company's resources, indeed mainly from undistributed profits. The growth of the Company has now gone beyond its capacity to provide by this means all the funds required. We have therefore asked the ordinary stockholders to invest fresh monies in our business by an issue of 1,500,000 £1 shares at par. We realised that this was a considerable increase in the ordinary capital, and that many of our stockholders might have to sell some of their "rights." We were therefore concerned to see that before stockholders came to any decision they should be given as clear an indication of future prospects as we as a Board felt it in our power to give.

Your Board gave earnest consideration to the proper action to take, and eventually decided that in issuing the new shares at par, we must not only do so after announcing in advance the dividend to be recommended for 1955, but must also give any indication we could as to the possible rate of dividend which we would hope to recommend on the increased capital in 1956. Your Board was attempting to do this at a time when grey clouds had begun to cover the clear skies of the internal economy which this country has enjoyed for three years, when even the motor car industry in the USA and this country had pulled up sharply, and before the new Chancellor had introduced his Budget. So we were faced with a difficult question. What indication of the future could we give?

After reviewing the generally sound financial position of the Company and the trading prospects for the current year, and remembering that a large part of the new money would be used to reduce overdrafts, and would therefore be "earning its keep" immediately, we were prepared to say that, subject to the paper market remaining reasonably prosperous and subject to unforeseen conditions, we anticipated being able to recommend a dividend of 10 per cent on the increased capital for the year 1956.

HOME AND OVERSEAS ACTIVITIES

The Merchanting and Distribution of paper which has for more than 125 years been the mainspring of our business continued profitably last year.

I have already referred to the move of our stationery factory from Southwark to our Sawston Mill Estate in Cambridgeshire to be concentrated with the conversion unit already established there. The output of the combined unit is now running at a higher level than that of the two independent units.

At our paper mill at Sawston we have since the war done a large amount of reconstruction. Both our machines there are small by today's standards, but they continue to turn out a sheet of high quality paper for which there is a good market in this country and they are particularly suited for the making of certain speciality industrial papers. Our Board Mill at Retford, which produces high quality Board, has had a successful year and still has a good order book. In the Waxed Paper field, our important subsidiary British

Waxed Wrappings, despite increasing competition, has maintained its position.

In Australia the turnover of our Company has considerably increased, but the percentage of gross profit is somewhat reduced. Nonetheless we have enjoyed a reasonably satisfactory year.

In South Africa the shortage of skilled labour and the unsuitable quality of unskilled labour in certain areas makes it difficult to reach maximum output in our manufacturing plants. We hope that we shall soon see the removal of the import restrictions on paper into South Africa as we are unable to satisfy all the demands of our customers for many of the better-class papers which are not produced locally.

In the export field one of our most important markets is Singapore, Malaya and the Far East. In that area we have expanded considerably during the last five years and, subject to political conditions not interfering, the strong hold we have established should prove valuable. Our export trade generally has been reasonably maintained.

During recent years we have developed a substantial business as overseas agents in many markets for various types of printing machinery and this is already proving profitable and combines satisfactorily with our paper business.

I am hesitant to make any prediction as to the immediate future, but my confidence in the long-term prospects of the paper trade and of your Company in particular remain firm. Your Company is in a sound position to weather any temporary adverse winds.

The report and accounts were adopted.

THRELFALL'S BREWERY INCREASED PROFITS

The sixty-ninth annual general meeting of Threlfall's Brewery Company, Limited, was held on June 14th in London.

Mr F. Cornwall (chairman and managing director), in the course of his speech, said: The profit from trading and income from investments, after paying over £3,500,000 in respect of Excise and Licence Duties and Taxation, is £940,443, compared with last year's figure of £869,570, and the net profit is increased from £301,311 to £357,703. Your board considers that these results are very satisfactory.

We were fortunate enough in having an exceptional summer which created an increased demand for our products, also whilst the malt used in the manufacture of our beers was, as always, of the highest quality, we derived quite a considerable benefit from the reduction in its price.

At the Brewster Sessions held earlier this year six new Full Licences were granted to the Parent Company and its Subsidiary subject to agreed payments of Monopoly Value—three in respect of existing premises and three for new Hotels already in the course of erection or shortly to be commenced in new housing areas. Today nine Hotels are being erected, or re-built entirely, and a number of others are being altered and enlarged.

We do not intend to rest content with what has been achieved in the past and hold the firm view that continual progress must be made. This aim has been carried an important step further during the last twelve months, and I am convinced the development of the Company through its licensed houses is much greater today than at any time in its history.

IMPERIAL CHEMICAL INDUSTRIES

EFFORTS TO ABSORB RISING COSTS BY INCREASED EFFICIENCY

SIR ALEXANDER FLECK ON AUTOMATION

The twenty-ninth annual general meeting of Imperial Chemical Industries Limited was held on June 14th in London.

Sir Alexander Fleck, KBE, DSc, LL.D., FRS (the Chairman), presided, and in the course of his speech said:

The Company made record sales and profits during the past year. The increased turnover, together with the continuing improvement in manufacturing efficiencies, might well have been expected to result in a further increase in profit margins. The manufacturing and trading profits have, however, not risen as much as could be expected from the increase in sales, because of the heavy additional costs incurred during 1955 on freight, raw materials, wages and salaries. The policy of the Board is to absorb increased costs where possible, and to pass on to customers a substantial share of any savings in costs due to improved efficiency. The prices of "Terylene," titanium and some of the newer organic chemicals were, in fact, reduced in 1955, but price increases for many of our older-established products could not be avoided.

EXPORTS

As has been emphasised in the Report, competition overseas was even keener than in former years. Although the value of the Company's exports was again a record, prices were in the main below the level of those ruling in 1954.

We are proud of the extent to which the Company has been able to expand export business in the face of growing competition, but a serious warning is necessary. It is clear that the continuing expansion at which we aim will be jeopardised if there are further substantial increases in the prices paid by us for materials and services which cannot be counter-balanced by improvements in our manufacturing methods.

THE FIGHT AGAINST INFLATION

You will appreciate our concern at the continuance of the inflationary trend which has persisted in this country for over fifteen years. In the fight against inflation, many of the factors, including the important cost item of purchased materials and services, are outside our control. Our concern, therefore, must be with the level of our own efficiency in using in our business not only these materials and services but also our total personnel.

In the Report for 1955 we show our cost of wages and salaries per unit of output in comparison with Treasury figures for industry as a whole. These indicate that, comparing 1948 with 1954, there was no change in the cost of wages and salaries per unit of output in ICI, although for industry in general there was an increase of 21 per cent over this period. I would remark, too, that this result was achieved in spite of the fact that between the same two years the average annual remuneration per employee increased by 54 per cent, against 44 per cent for all industry, while the retail price index rose by 32 per cent.

Between 1948 and 1955, the number of our employees in the United Kingdom rose from

99,000 to 115,000; and this increase of 16 per cent may be compared with a growth of our index of output volume of 95 per cent. While we take some pride in these figures, there is no magic in the rise in efficiency which they represent. It is due to many causes, including the vigorous application of research, heavy capital expenditure, and improvement in management techniques, backed by the energy and keenness of our employees at all levels.

TECHNICAL DEVELOPMENT

While on this subject of productive efficiency, I should like to comment, in the light of our own experience, on the arguments and fears which, as judged by the many comments recorded in the Press from all types of sources, centre in that ungainly word "Automation." Although the word is new, the ideas behind it are not. For decades we have been applying schemes of advanced mechanisation, backed by effective instrumentation, together with increasing use of automatic controls. Many of our processes already operate continuously and it is largely by developing the application of the most up-to-date technical knowledge that we have been able to raise our productivity so rapidly. Without the continuance of such advances in general efficiency we could not hope to compete in the markets of the world and expand our export trade.

With full employment, it is self-evident that any broad advance in standards of living must depend upon a reduction in human effort relative to the results achieved. In general, this can only come by applying new methods, of which electronic equipment and servo-mechanisms are recent examples. I stress again, therefore, that automation is not new, but merely the continuing extension of a process which has for long been a normal feature of our operations. In our industry we certainly do not regard these changes as revolutionary, nor do we think they are likely to cause unemployment or other major difficulties. The steady growth of employment which has taken place in the Company confirms this view. For the country as a whole I would go further. Employment will only be maintained if British industry keeps abreast of the world in technical efficiency. This means not only the extension of automation but continued heavy capital expenditure.

It is axiomatic that progress must involve change. We believe it is possible for management to ensure that the necessary adjustments are so made, and so timed, that individual hardship is avoided, or at least minimised. It is for management and the leaders of organised labour to explain fully what is taking place, so that these progressive changes are made as smoothly and effectively as possible, to the benefit of all.

In this connection I regard the proper and adequately full use of joint consultation at all levels in our organisation to be of the greatest importance.

From the figures given in our Report, and from my remarks today, you will realise that in the Company we regard the long-term future with confidence and look forward to the profitable expansion of the Company's business.

The report and accounts were adopted.

ALLEN WEST & COMPANY

A SUCCESSFUL YEAR

MR M. W. H. LANCASTER ON CAPITAL EXPENDITURE PROGRAMME

The forty-seventh annual general meeting of Allen West & Company, Limited, was held on June 19th at Brighton, Mr M. W. H. Lancaster, MC, FCA (the chairman), presiding. The following is his circulated address:

The Accounts for the year ended January 31, 1956, show an increase in profit of £29,300. The year has been a successful one in that we have produced more, sold more and finished with a larger order book than last year and we have paid higher wages and salaries to more people.

We have spent during the year £95,000 on buildings, mainly the No. 4 Factory I referred to last year. Owing to the severe Winter, the building programme ran late, but we hope to be in occupation shortly. You will notice we have started an Amortisation Fund for buildings because the cost of present-day building is so much more than when we built Factories No. 1 and 2 and building costs might fall. However, I can assure you that "Freehold Land and Buildings" as shown in the Accounts at £571,430 is a conservative figure.

During the year we purchased £147,000 of new Plant. As I have said almost annually, only the best and latest plant is good enough for Allen West & Company, Limited. There is a new word "Automation" which really means re-equipping a factory with the most modern machine tools and handling appliances to suit its products. We have been steadily re-equipping our factories in this way for years, and at the same time employing more and more people.

Our net current assets exceed those of last year by £158,000 and the total Capital employed in the business is also up by £304,000.

As you know, we have formed a company in Rhodesia to deal with the increasing business expected in the Federation.

DIRECTORATE

My Vice-Chairman, Mr L. A. Stride, who should have stood for re-election at this Annual General Meeting, notified me that in view of his advancing years, he wished to retire. Your Board accepted his resignation with very great regret as Mr Stride had been a member of the Board for many years and before that had taken a considerable part in the building up of the success of this Company.

I am very happy to welcome Mr M. A. Stride as my new Vice-Chairman. Mr G. H. Cann, MBE was co-opted to the Board to fill the vacancy created by the resignation of Mr L. A. Stride.

TRIBUTE TO EXECUTIVES AND STAFF

The relationship existing between management and employees remains excellent and I thank all those whose efforts, in whatever sphere, have helped to produce the results disclosed in our Statement of Accounts.

I conclude by saying it is our fixed policy to keep strictly to the trade we know, namely the manufacture of electrical control and switchgear, but within that field we continuously and vigorously press on with development and improvement.

The report and accounts were unanimously adopted.

SUEZ CANAL COMPANY

FURTHER SUBSTANTIAL INCREASE IN TRAFFIC

M. FRANÇOIS CHARLES-ROUX'S SPEECH

The annual general meeting of the Suez Canal Company was held on June 12th in Paris. M. François Charles-Roux, the President, in the course of his speech, said:

A steady rise in traffic is, once again, the outstanding feature of the past financial year. The first five months of this year lead us to expect the increase to continue in 1956. The average number of ships passing through the Canal daily is more than 45, which means that there are peaks of 50 and 55.

This fact brings out the importance of the Suez Canal as an economic factor, and its usefulness to the world. It also throws into relief the part played by your Company, for it stands to reason that the Canal is only as good as the organisation managing it.

The rise in traffic has fully justified the decision which we took two years ago of devoting considerable sums to large-scale works for the purpose of improving the flow of traffic and the crossing of convoys and also of allowing vessels of deeper draught to navigate the Canal. It also proves the rightness of our decision to carry on with these works until final completion.

The present shortage of pilots, despite a current strength of 200, is a cause not only of inconvenience to Canal users but also of delays and additional expenses. We have been powerless to avoid it; we have done all we could to prevent it. We have recently concluded an Agreement in this connection with the Egyptian Government but it is unlikely that this will meet the situation for very long and the same question will therefore come to the fore again.

I have also to refer briefly to another Agreement, which is of a financial nature. In the matter of exchange control, we have been operating since 1947-48 under an Agreement waiving in our favour certain provisions of Egyptian law on the subject. In September, 1955, we were informed by the Egyptian Government that this Agreement was regarded by them as no longer valid and that it had lapsed. We have now reached an agreement embodying generous concessions which we had to make to the Egyptian Government's claims. In return, we obtained recognition of our financial freedom in the use of our funds outside Egypt. This arrangement, backed by a decree, is an appreciable benefit to us, for it confirms and consolidates the basis of the special financial status we require to exist.

DIRECTORS' REPORT

The following are extracts from the Directors' Report:

The rapid growth of traffic constantly gives rise to difficult problems concerning the enlargement of our installations and increases in personnel. We have done our utmost to solve these problems to the best advantage of the users of the Canal and of Egypt. The difficulty is particularly acute when it comes to the pilotage staff.

Conversations with Egyptian Government Departments, prompted by the desire on both sides to settle the problem for this year, led to the signature of an agreement last March, the effects of which will unfortunately not make themselves felt usefully for several months, but which will no doubt bring about an improvement in the situation by the beginning of next year. But the problem will remain for the next 12 years and will become

all the more difficult to solve, as increases in traffic will necessitate corresponding increases in the pilotage strength.

FINANCIAL AGREEMENT

It was also the concern to preserve until the end of the Concession the freedom of action indispensable to the management of an undertaking such as your own which, last autumn, prompted your representatives to enter into financial negotiations with the Egyptian Government. The latter, anxious that the Egyptian economy should have plentiful funds at its disposal, regretted that since the setting up of the Egyptian Exchange Control in 1947 the Company had been able to collect and keep a proportion of its receipts outside Egypt and use them as it wanted. The Egyptian Government considered that the Company, being Egyptian, should in future be subject to the strict application of Egyptian exchange law.

Final agreement with the Egyptian Authorities has now been reached. The conceding Power has agreed to recognise the freedom enjoyed by the Company in the use of its funds outside Egypt. The Company has undertaken from now on to keep larger funds in Egypt than hitherto. These funds are to reach a total of Egyptian £10 million before the end of 1956, Egyptian £13 million during 1957 and Egyptian £15 million in 1958, and, from 1959 to 1963, will be increased annually by an amount equal to the allowance made to the Egyptian Government under the provisions of the 1949 Convention, namely, on the present basis, approximately Egyptian £1 million. Taking into account the transfers effected during the past six months, a total of approximately Egyptian £16 million will have to be transferred to Egypt between now and 1963.

The Company will be able to use these funds as it wishes, for the constitution of part of the guarantee fund for pensions after 1968 and for the investment of reserves. The Company will retain full freedom to dispose of these assets, of which the Egyptian Government has promised to authorise the re-transfer after the end of the Concession.

These are the provisions of the convention which establishes your Company's financial freedom for the remaining years of the Concession.

Traffic in 1955 showed a substantial increase, the number of transiting ships having risen by 11 per cent and their tonnage, at over 115 million tons, by 12.9 per cent.

This continued increase in traffic now makes it necessary to put in hand very shortly the second portion of the works programme, authorised last year to enlarge the capacity of the Canal. This will consist of a general widening and deepening.

Accounts: After the various allotments have been made, there remains available a sum 10,822,035,004 francs. We propose the distribution of 10,704,225,352 francs, which corresponds to a gross dividend of 9,500 francs, 250 francs more than the previous year. To this must be added statutory interest on capital shares amounting to 1,429.28 francs.

The full report, in French, will be sent on application to the London Agency, No. 6 Bishopsgate, E.C.2.

AGRICULTURAL MORTGAGE CORPORATION

FURTHER EXPANSION

The annual general meeting of this Company will be held on July 4th in London.

The following is an extract from the statement by the chairman, Mr Evelyn J. Bunbury, CBE, MC, circulated with the report and accounts:

I am pleased to report a further expansion in our business. New Loans, aggregating £3,498,513, were completed during the year, an increase of 23 per cent over the comparable figures for the previous year.

The average amount of loan granted during the year was £4,389, which compares with £3,950 for the previous year, and with the overall average loan of £3,736. The security for our loans consists of freehold agricultural and horticultural properties widely distributed over the whole of England and Wales. Our borrowers have continued to meet their repayment instalments promptly, 96.1 per cent of the payments which fell due having been received.

The balance of Mortgage Loans outstanding is £27,726,885, secured by first mortgages on agricultural land and buildings valued at £47,411,216. In addition, Improvement Loans outstanding of £108,824 are secured by means of Rent Charges under the Absolute Order of the Minister of Agriculture, Fisheries and Food, of £7,812 per annum as first charges on agricultural properties of an estimated rental value of £34,524 per annum. Total loans outstanding at £27,835,709 show an increase of £1,950,953 over the previous year's figure.

The amount available on Profit and Loss account is £52,158. Of this £8,400 has been transferred to Special Reserve, £25,105 has been written off the item for expenses of issues of Debenture Stocks, and £15,374 has been written off the discount at which various debenture stocks were made, leaving a balance of £3,279.

GOOD FARMING YEAR

The farming year of 1955 will long be remembered as one of the best for the industry for a considerable time. After an unpromising start with a late Spring and a cold, showery May, conditions, at haytime and harvest enabled good crops to be secured without waste, and at low cost. Few harvests have been more straightforward—a pleasant change from the difficulties experienced in the previous year.

Figures for the past 12 years indicate a steady growth of our business up to 1953, which included the period of our highest lending rate. A recession occurred in 1954, and has been followed by a period of steady rise up to date.

The average loan to borrowers has remained comparatively stable. The annual Loan or Grant from the Ministry has lately shown a sharp downward trend. Administration cost per £100 of loan shows a satisfactory percentage. As for the future, all present indicators point to greater demand for our credit in the coming years.

A further point should be mentioned. The Corporation has not paid a Dividend to its Shareholding Banks since 1935. A limited Dividend is written into our Constitution, and I hope that when we are able to dispense with our annual Loan or Grant, it may be possible to pay a modest dividend to our Shareholders.

WEBB'S CRYSTAL GLASS

HIGH STANDARD OF EFFICIENCY MAINTAINED

The thirty-sixth annual general meeting of Webb's Crystal Glass Company, Limited, was held on June 19th in London.

Mr R. E. N. d'Abo, the chairman, presided and in the course of his speech said:

We, in common with all other companies, have been faced with ever-increasing costs, although we have been able to cover these partly by increased prices.

The group profit for the year, before taxation, amounts to £121,591, a decrease of some 7½ per cent on the 1954 figures. Taxation absorbs £66,726, or 55 per cent.

During the year we have maintained a high standard of efficiency and our products continue to enjoy a world-wide reputation.

In the home markets we have in 1955 seen purchase tax on our lighting glass increase from 25 per cent to 30 per cent and on the majority of our Durographic products from nothing to 30 per cent. Despite this we have been able to maintain and, in fact, expand our sales of those products. The levying during the year of a 30 per cent purchase tax on domestic and hotel glassware was a serious blow to us, but we have benefited by a reduction of purchase tax from 50 per cent to 30 per cent on certain of our products.

With regard to the future, as yet there is no sign of any easing of the difficulties, but we are sparing no effort to improve the efficiency of our manufacturing methods.

The report was adopted and the dividend distribution of 15 per cent was approved.

OFFICINE VIBERTI S.P.A.

TURIN, ITALY

(Industrial Coach Manufacturers)

The Annual General Meeting of Officine Viberti was held on April 26th in Turin, with Dr Angelo Viberti, sole Managing Director, in the chair. The following are details of his report:

During 1955 the Italian market for our products showed a continued tendency which has been apparent of late: a relative decline for goods-carrying vehicles and an extremely marked improvement for passenger carrying vehicles.

As to goods vehicles, it would be going too far to say that the market is saturated. But it can certainly be said that a limit has been reached as regards output of many of the items with which we are concerned, especially trailers. Sales are no longer increasing and competition has brought prices down in some cases below the cost of production. The same applies to tippers and tank trucks.

Our Monotral bus has in fact achieved great success. It is the first Italian bus with an integral chassis-less body to run in Italy. For some years now hundreds of them have been on the streets and roads, giving excellent service, and the tendency for tramcars to be replaced by rubber-tyred vehicles offers a fairly safe prospect in sales for some years to come.

Last year we increased our output of

THE ECONOMIST, JUNE 23, 1956

buses. For this purpose our works at Bolzano enabled us quickly to meet a part of the demand. Even so, in spite of the increase in output at both Turin and Bolzano the demand exceeded our capacity.

We also arranged to join with certain other interests in setting up a plant in a rural area, at Caluso, so as to meet the demand for Monotral bodies.

Our 1954 programme was at the rate of one bus per day. By the end of 1955 it was up to 35 a month; and in 1956 the combined output of Turin and Bolzano will reach 50 per month, being equal to 25-30 per cent of the total Italian production.

The growth in output has entailed a need for more finance, amounting from 1,900 to 2,188 million lire.

We have decided to start building at Naples and have arranged to apply for financial assistance under Law No. 1598 of December 14, 1947. You have, moreover, approved the issue of 250 million lire of bonds; this is needed to fulfil the financial programme.

As to the profit for 1955, we have aimed at achieving a high output in the face of higher costs for labour, taxes and raw materials. Growing competition has forced further cuts in prices. This does not apply so much to buses, but the position has been especially difficult for trailers, tippers and tank trucks. Thus, the company's net profit has been somewhat on the low side.

Nevertheless, we continued during 1955 to aim at perfecting our products. We further improved the equipment of our plants through extensions, modernisation of buildings and purchases of machinery.

CASSA DI RISPARMIO DELLE PROVINCIE LOMBARDE

(SAVINGS BANK OF LOMBARDY REGION)

Established 1823

MILAN, ITALY

At a meeting of the Board of Directors of the Cassa di Risparmio delle Provincie Lombarde, held under the Chairmanship of Prof. Giordano Dell'Amore on March 26, 1956, the balance sheet at 31st December, 1955, which closed with a net profit of Lit. 554,532,276, was approved.

Savings deposits and current accounts—with a percentage of 20·14% against 19·41% in 1954—reached an increase during the year not only higher than the national one but also above the average figure for Lombardy. In fact, at the end of 1955, the Cassa di Risparmio delle Provincie Lombarde held deposits totalling Lit. 237,800m., an increase of nearly Lit. 70,000m., compared with the figure at the end of 1954.

The total of credit investments rose to Lit. 309,000m. by the end of 1955, out of which Lit. 82,600m. had been allocated to commercial credit transactions. Foreign exchange business doubled its turnover compared with 1954, especially in the field of documentary credits and documentary collections.

Chairman: Prof. Giordano Dell'Amore; Vice-Chairman: Prof. Cesare Chiodi; Director General: Dott. Giovanni Monti.

THE ECONOMIST, JUNE 23, 1956

APPOINTMENTS
UNIVERSITY OF GLASGOW
RESEARCH ASSISTANTSHIP IN SOCIAL AND ECONOMIC RESEARCH FOR THE SURVEY OF GOVERNANCE
Applications are invited for a Research Assistantship in the Department of Social and Economic Research. The successful applicant will be required to undertake field work and to organise household interviews in connection with a sociological survey of the Govan district of Glasgow. Salary scale: £550-£850. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.
Applications (three copies) should be lodged, not later than June 30, 1956, with the undersigned, from whom further particulars may be obtained.
ROBT. T. HUTCHESON,
Secretary of University Council.

UNIVERSITY OF BIRMINGHAM
Applications are invited for a Temporary Lectureship or Assistant Lectureship in Statistics in the Faculty of Commerce and Social Science either from social scientists who have specialised in statistics or from mathematicians who have worked in social or economic statistics. The post will be for one year only.
Applications, which should contain the names of two referees, should be sent by July 2, 1956, to the Registrar, The University, Birmingham, 15, from whom further particulars may be obtained.
G. L. BARNES, Secretary.
The University, Birmingham, 15, June, 1956.

UNIVERSITY OF BIRMINGHAM
CHAIR OF PHYSICS
Applications are invited for a Chair within the Department of Physics (Head of the Department, Professor P. B. Moon, F.R.S.).
The duties attached to this Chair will include responsibility for a substantial part of the Department's research in the field of nuclear physics.
Applications (three copies) should be sent by July 15, 1956, to the Registrar, The University, Birmingham, 15, from whom further particulars may be obtained.
G. L. BARNES, Secretary.
The University, Birmingham, 15, June, 1956.

UNIVERSITY OF BIRMINGHAM
Applications are invited for a Temporary Lectureship or Assistant Lectureship in Economic Theory for the academic session 1956-57.
Applications, which should contain the names of two referees, should be sent by July 2, 1956, to the Registrar, The University, Birmingham, 15, from whom further particulars may be obtained.
G. L. BARNES, Secretary.
The University, Birmingham, 15, June, 1956.

CHIEF EXECUTIVE DESIGNATE
The Western Region Production Development Board, with the approval and support of the Government of the Western Region of Nigeria, intends to establish a Western Region Housing Projects of the Trust to be the development of Housing Estates as well as fostering the growth of home ownership on building society lines. Applications are invited for the post of CHIEF EXECUTIVE OFFICER DESIGNATE OF THE TRUST. In the preliminary stages his chief duties will be to assist in drafting legislation and in drawing up plans for the establishment and operation of the Trust. During this period he will be engaged on the staff of the Board but subject to satisfactory performance will become the Chief Officer of the Trust when formed.
Applicants should possess wide administrative experience in the fields of planning, development, construction and financing of housing areas and of home-ownership schemes. Academic and professional qualifications will be an advantage.
Salary will be £2,500-£3,500, point of entry depending on qualification and experience.
Further details of the proposed Trust and of the Board's terms and conditions of service can be obtained from: The London Representative, Western Region Production Development Board, 18 Grosvenor Gardens, London, S.W.1.

Applicants, giving full details of experience, qualifications, etc., should be addressed; replies to reach him not later than July 31, 1956.
GENERAL TERMS OF EMPLOYMENT: House with basic furniture provided at rental of £150 per annum; up to 10 per cent Provident Fund; Outfit Allowance £60; Free medical service; Free passages for wife; home leave at full pay at the rate of five days per month of overseas service; normal length of tour 18-24 months.

FORD MOTOR CO., LTD., of Dagenham, has immediate vacancies with exceptional prospects for young men of high calibre preferably aged about 25. Graduates in Engineering, Cost Accountants and others with notable experience in Commerce, Industry or Public Service are required for appointments which cover all aspects of financial work including management accounting and the analysis of commercial problems. Specialist qualifications are less important than proved ability and determination.—Write to Salaried Personnel Department, quoting reference CCC.

CHAPPIE LIMITED invite applications for the post of Statistical Officer.
This is a new position and the successful candidate will be directly responsible to the Chief Statistician and will be concerned both with general commercial and industrial statistics and with particular problems. Preference will be given to graduates with good honours degrees in mathematical statistics or in mathematics with a recognised qualification in statistics. Postgraduate experience in the application of contemporary statistical techniques to practical problems in industry or research is desirable but not essential. The starting salary will not be less than £1,000 per annum plus non-contributory pension, life assurance and sickness benefits under a comprehensive Social Security Scheme. Assistance will be given with housing.
Applications, giving details of career to date, should be addressed to the Chief Personnel Officer, Chappie Limited, Melton Mowbray, Leicestershire, and the envelope should be endorsed "Statistical Officer."

Australia: £8.5s. (sterling)
Canada: \$21.50 or £7.14s.
East Africa: £5.5s.
Egypt: £5.5s.
Europe (except Poland): £4.15s.
Gibraltar, Malta: £3.15s.
Hongkong: £7.
India & Ceylon: £6.
Iran: £6.
Israel: £6.
Japan: £9.
Malaya: £6.15s.

UNIVERSITY COLLEGE OF THE GOLD COAST

Applications are invited for Lectureship in Economics. Salary scale £950 x £500. Family allowance £100 p.a. per child (max. £500 p.a.). Outfit allowance £50. Passages for appointee, wife and maximum of 5 children, on appointment, normal termination and leave. Part-furnished accommodation at rent not exceeding 7.5 per cent of salary.
Detailed applications (6 copies), naming three referees, by July 14, 1956, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

THE UNIVERSITY OF MANCHESTER
Applications are invited for the post of TUTOR IN SOCIAL ADMINISTRATION in the Department of Government and Administration, in connection with the Selective Recruitment and Training Scheme for Hospital Administrators in England, Wales and Scotland. Candidates should be graduates with experience in hospital administration, and the appointment is for three years in the first instance, with a possibility of a renewal for a further period. Salary on a scale £650 x £850, plus 10 per annum; initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than July 9, 1956, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF SHEFFIELD
DEPARTMENT OF EXTRAMURAL STUDIES
Applications are invited for a post of STAFF TUTOR to be principally concerned with the teaching of Industrial Relations/Economics to trade union students. Candidates should have a good Honours degree in an appropriate subject and must be graduates with experience in industrial relations. Further particulars should be obtained from the Registrar, to whom applications (6 copies) should be sent by July 7, 1956.

CITY AND COUNTY OF KINGSTON UPON HULL

TOWN PLANNING DEPARTMENT
SENIOR PLANNING ASSISTANT (RESEARCH)
Applications are invited from suitably qualified persons for the position of Senior Planning Assistant, Grade APT. V. £2,795 p.a. for hard work. The person appointed will be responsible to the Town Planning Officer for the collection and analysis of data relating to population, industry and land use, and for the supervision of a continuous survey of trends in population development. He should have had experience in organising such work and should possess an Honours Degree, preferably with specialisation in Statistics, Geography or Economics, or be a Corporate Member by examination of the Town Planning Institute. Housing accommodation will be provided in appropriate cases.
Application forms may be obtained from the undersigned and should be returned not later than Saturday, July 14, 1956.
H. F. ALSTON, M.T.P.I., A.R.I.C.S.,
A.M.I.Mun.E.
Guildhall, Kingston upon Hull, Town Planning Officer.
June 15, 1956.

COMMONWEALTH GOVERNMENT OF AUSTRALIA

APPLICATIONS ARE INVITED FOR APPOINTMENT AS: COMMISSIONER OF THE EXPORT PAYMENTS INSURANCE CORPORATION
The Corporation is a statutory body set up under an Act of the Commonwealth of Australia to promote trade with countries outside Australia by providing insurance against the risk of non-payment in export trade. Its functions will be generally similar to those of the United Kingdom Export Credits Guarantee Department. The Commissioner will be responsible for the establishment and subsequent operation of the Corporation. He will be required in the course of promoting the business of the Corporation to create a high standing for the Corporation and its officers with leaders of industry and commerce and export trade throughout Australia.
Applications will be judged on qualifications and experience, not necessarily in the field of insurance.
The Commissioner will be appointed in the terms of the Act by the Governor-General for a period of seven years and will be eligible for re-appointment.
Salary will be commensurate with the responsibilities of the appointment and the qualifications and experience of the successful applicant, and appropriate allowances will be paid.
The headquarters of the Corporation will probably be situated in Sydney and every assistance will be given in obtaining a suitable residence for the successful applicant.
Applications will be treated in strictest confidence. They should be marked "P.I." and be received not later than Monday, July 2nd, with the Official Secretary, Australia House, Strand, W.C.2, London, from whom further particulars may be obtained.

MARKETING
An international company in London which has until now sold exclusively to industry through its own sales force, requires a man (28-38) with wide experience of marketing. He will be responsible to the Home Sales Manager for developing wider distribution through wholesalers and dealers and to the mass market. Eventually he should assume complete control of these new aspects of the company's expansion.
Please send fullest possible details of education and experience, preferably typewritten, to Box 434.

SENIOR PERSONNEL OFFICER required by Richard Costain Limited, Building and Civil Engineering Contractors, operating from their Head Office in London. The person appointed will be responsible for personnel administration and recruitment of Home and Overseas Staff up to a Senior level. It is essential that applicants should have the ability to deal with all levels of staff. Previous experience of selection and recruitment is essential, preferably a knowledge of modern techniques in this field. Age preferably 28-40. Salary up to £1,250 per annum according to experience.—Applications to Chief Personnel Officer, Richard Costain Ltd., 111 Westminster Bridge Road, London, S.E.1.

BUCKINGHAMSHIRE EDUCATION COMMITTEE

SLOUGH COLLEGE OF FURTHER EDUCATION
Applications are invited for the post of Senior Lecturer in Management Studies. Candidates should be prepared to offer at least two subjects in the Management Diploma range.
Salary will be paid on the Scale for Senior Lecturers in the Report of the Burnham Committee on Scales of Salaries for Teachers in Establishments for Further Education at present £1,065 x £25 to £1,215.
Application forms and further particulars may be obtained from the Principal, William Street, Slough, to whom completed forms should be returned not later than June 29, 1956.

UNIVERSITY OF CAMBRIDGE, Department of Estate Management.—Applications invited for two posts of Assistant in Research from October 1, 1956, or as soon as possible thereafter. Pensionable stipend £500-£700, subject to certain variations. Non-pensionable children's allowances. Applicants must hold either an honours degree in Economics, History, Economic History, Agricultural Economics, or Law, or a degree with a high class in Estate Management. Those appointed will be required to undertake research in economic, legal and social problems related to the ownership, tenure and development of land.—Further particulars of duties and stipend from Secretary, Board of Estate Management, 74 Trumpington Street, Cambridge, 1, from whom applications should be sent not later than July 20, 1956.

£2,000 p.a. is the commencing salary offered to several bright young men as junior executives in a large and highly successful manufacturing group with headquarters in Manchester area (not cotton industry). Principal qualifications required are proved intellectual capacity coupled with consistent and able application to duties. A technical qualification of some kind is desirable, but it does not matter whether this is in engineering, chemistry, commerce or accountancy, and a University degree, while helpful is not an essential.
Age 20-35 preferred, but up to 40 considered. These vacancies exist solely due to continuous expansion of our organisation.

We do not wish to receive applications from misunderstood supermen who, except for prejudice or nepotism, would already be Managing Directors of the business at present employing them, but to the right type of young man with brains, imagination, personality, initiative, for hard work, and a keen desire for an exceptional opportunity of a successful career in industry. Full details, in confidence, in first letter, please, as interviews will be arranged only with those who comply.—Box 44.

PETROLEUM ECONOMICS LIMITED invites applications from young graduates, male or female, with a degree in Economics, Mathematics or Physics, for the post of Research Assistant. Duties will consist initially of selection, analysis and preparation of data and statistics for studies on a variety of subjects. Previous experience is not essential. A knowledge of languages an advantage. Salary according to age and qualifications.—Write Box 447.

BRANCH MANAGER FOR GERMANY

Hamburg merchant with excellent team invites foreign principals resolved to utilise the German market potential to negotiate appointment. Prefer group of manufacturers or strong merchant firms. Wide technical experience in industry, shipping, export, also licensing arrangements, successful sales promoter. English, Spanish fluently, working knowledge Russian, Portuguese, Dutch. You will meet a manager of 47 years of a perfect career characterised by world firms as a man of integrity, pioneering spirit and abilities.
Bank and other references available.—Please write to Box 448.

GRADUATE, age 35, seeks appointment as economic adviser or in executive capacity. Eight years' experience as economist with large industrial organisations at top management level, and earlier in government departments.—Box 449.

SUCCESSFUL TUITION FOR THE B.Sc.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for Lond. Univ. B.Sc.(Econ.) (three if Entrance is included). Moderate fees: instalments. Over 1,000 Wolsey Hall students have secured this valuable degree since 1925. Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

NIGERIA IN THE NEW COMMONWEALTH—Lecture by the Minister of Communications and Civil Aviation for the Federation of Nigeria, The Honourable Dr. K. O. Ozuomba, M.B.E., after the lecture a short period will be devoted to the answering of questions. On Thursday, June 28, 1956, at 6.30 p.m., at Church House, Westminster. Chairman: Professor Kenneth Kirkwood, Rhodes Professor of Race Relations, University of Oxford. DOORS OPEN 6 P.M. ADMISSION FREE.

SPANISH DANCERS whose footwork lacks fervour: retain your inspiration with a glass of Duff Gordon's EL CID Amontillado Sherry. Putz zip in your zapatos. Ole!

SUBSTANTIAL investment (up to £200,000) in a well-established and expanding business is sought by an institutional client who can provide top level management if required. Send particulars to Spicer and Percier, Chartered Accountants, 19 Fenchurch Street, E.C.3.

THE Economist's Bookshop has the world's widest range of books on Economics, Politics, History, Anthropology and the Social Sciences. World-wide mailing service. Second-hand books bought.—11-12 Clements Inn Passage, Aldwych, London, W.C.2.

EXPERT POSTAL TUITION for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4.

DISTILLATION

We are proud to announce

that we have recently been awarded the contract for the design and procurement of the largest single addition to crude throughput capacity ever made in the history of the world's refining industry. This contract is for two 80,000 BPSD crude distillation units to be constructed at Mena-al-Ahmadi for the Kuwait Oil Company Limited. In addition to these plants we are engineering three crude distillation units for other clients.

The combined throughput capacity of the five installations exceeds 400,000 barrels per day.

Sheet Metal Fabrication

WOODWORKING & JOINERY. We design, manufacture and supply timber buildings of all kinds, standard builders' joinery (such as windows, doors, cupboards and gates), also agricultural and horticultural requisites including glasshouses, poultry houses, pig huts and garden seats. All are made to the highest standards.

Enquiries will be welcomed from Architects, Consulting Engineers, Municipal Authorities, Builders and Farmers.

magnesium

Magnesium, the world's lightest structural metal . . . offers new opportunities to designers, is a very practical metal in production. It brings new efficiency to airplanes and autos, new convenience to everything you lift.

... Another example of Dow at work with industry to make better products for you.

Dow is the world's largest supplier of primary magnesium and magnesium alloy to the fabricators who make products for you. As a major chemical company Dow also supplies plastics and basic chemicals to manufacturers throughout the world. Thus chemistry works with industry in the continuing search for improved methods and materials, improved products for you.

For more information about Dow products, contact your local representative, or write to Dow, Dept. 316-N, Zurich.

you can depend on DOW MAGNESIUM

THE HIGH FASHION LOOK IN SELF-WINDING WATCHES

So very tiny, so very chic, your Mido is ready to sparkle brilliantly on the most gala occasion. Yet, Mido is a watch that wants no pampering. Shock-protected, anti-magnetic, 100% waterproof, your Mido is a faithful companion through a full day of bustling activity into an evening of starry glamour... without once losing its fashion-right look. And the beauty of it all — Mido gives you the widest choice of self-winding watches in the world. See these fabulous miniatures at better jewellers everywhere.

Mido
 Powerwind

The Watch You Never Have to Wind

• SELF-WINDING • 100% WATERPROOF • SHOCK-PROTECTED • ANTI-MAGNETIC • UNBREAKABLE MAINSPRING

Mido watches are sold and serviced in 65 countries throughout the world.

OIL BUSINESS

This Company is **Esso**

People have all sorts of ideas about the finances of companies in the oil business. Some of them are rather flattering.

The facts on ours are available for everyone to see, in the Annual Review for 1955*, just published. Here are a few of them.

All told, we took in £197,339,000 during the year. The net profit that resulted (£6,319,000) represented 3.2% of turnover; the dividend paid (£1,725,000) represented 3% of shareholders' funds employed in the business.

We spent £8 million last year out of our earnings on new plant and equipment. £11 million was spent on wages, salaries and benefits for the employees.

We exported £18 million of petroleum products and other goods to countries overseas. We paid nearly £4 million in taxes and collected £66 million for the Government in Customs Duties.

We fuelled the plane that broke the world speed record, many of the great liners, Britain's latest power station, thousands of agricultural tractors, and possibly your local bus.

We sold you a gallon of petrol, whenever you wanted it, for 1/8d without the tax (in some areas, 1/7d), which is threepence more than it cost you in 1913.

And the overall net profit from all the products we made in 1955 worked out at just over a halfpenny a gallon.

Any questions?

The Man who never Grew Up

Sure enough there goes Peter to sail his yacht in the lake in the park. Every second is precious. There's a breeze around the corner that must not be lost. A breeze as important to Peter as a following Trade Wind. A breeze to thrill ageing eyes with white-billowing sails. A breeze to carry his craft over dreams and oceans, as he stands there watching—a man among boys, a boy among men. Freedom, security, peace, and for his old age, happiness—these are his right by birth. It is the aim of the Hawker Siddeley Group of Companies to see that his country has the armed strength to let him enjoy them.

The Chancellor Goes Shrimping

THERE are three broad points to be made after reading Mr Macmillan's "interim announcement" of the first £76 million of his promised £100 million of public savings this year. Two of them stem from a pardonable cynicism (which is not mere carping) about his arithmetic; the third is more fundamental.

The first point is that fully three quarters of the £50½ million of defence economies that Mr Macmillan announced appear to derive from a running down of stocks or from other forms of consumption of capital. No doubt some of these are bloated or squirrel-like stocks that deserve to be permanently depleted, and that the services were just about ready to cut in any event; but others are stocks of currently-used materials which will presumably have to be replaced, possibly at higher prices, next year. The suspicion must be that these are to be run down now not because market conditions suggest that this is a good moment for destocking, but because Mr Macmillan has staked his reputation on reaching his target of £100 million of economies. To that extent it seems a pity that he ever mentioned this haphazardly determined target figure in his budget speech.

The second reason for cynicism about Mr Macmillan's measures is that more than half of the £25½ million of civil economies which he detailed on Tuesday were economies that had been revealed before; they arise from last February's reduction in the bread and milk subsidies, as amended by subsequent increases in agricultural subsidies and family allowances. Mr Macmillan did not make it clear in April that he was going to take credit for these in his £100 million; in fact, some may now suppose that he made it deliberately unclear, so that he could include or exclude them according to the difficulty or ease of his search for genuine new economies.

The Chancellor has evidently had considerable difficulty in that search. Of the £11 million odd of genuine new civil economies, about £2½ million are what look like rather mean little cuts in overseas aid and lending; the other £8½ million are the result of an exhaustive shrimping expedition. In one respect that shrimping has been successful: the increased charges for school meals, driving tests, passports and county court fees are the sort of measures that have been regularly disregarded in the framing of ordinary annual estimates—and they might with advantage have been extended. But, for the rest, Mr Macmillan seems merely to have trawled a net over each tempting vote in the ten classes of the civil estimates—over prison administration, scientific research, the forestry commission, government stationery and the like—and sieved between 1 and 4 per cent of their money somewhat indiscriminately off each of them. This is not an inspiring procedure. Where these departments have been run efficiently in the past, these tiny cuts will probably do real though marginal harm; where they have been extravagant, the cuts should surely have been made at the time of the ordinary framing of estimates last winter.

The third point that needs to be made is more serious. Mr Macmillan declared on Tuesday that his interim list of economies has no direct relevance to the broader reassessment of the defence programme in which Britain is now engaged. That is a necessary disclaimer, for this broader reassessment should be made only after very careful study and in concert with our allies. But there are at least two ways in which Mr Macmillan, in the small part of his cuts which do look genuine, seems to have foreshadowed the reassessment to come. One is in the weight of the economies that has fallen on civil defence; it is difficult to disentangle exact figures from the Chancellor's statement, but every department within his reach seems to have been obliged to make a cut in its air-raid precautions. Is there a hint here that the Government is now half-inclined to write off as a waste of money any serious

civil defence effort in the face of thermo-nuclear war? That grim decision might be the right one, but before any irrevocable steps are taken the matter should be laid open to informed debate. The other cause for apprehension that weighty decisions may be being allowed to creep up on Parliament and the country unawares is the announcement that various orders for aircraft and arms are being "deferred." As a Business Note on a later page points out, the pattern of these deferments is expected to confirm that the Government wants to move towards a more economical "standardisation" of arms—and, especially, of the aircraft programme. Any such assembly of eggs in single rickety baskets might be very dangerous; if the RAF had had to choose any one type of fighter for standardisation two years ago, for example, it would probably have picked upon the abortive Swift.

Germany Contemplates Conscription

DR ADENAUER has ground for confidence that the Bundestag will approve in the next fortnight or so the Bill to reimpose the duty of universal military service on the west German citizen. To him the acceptance of this duty is a political obligation owed by the Federal Republic to its allies in Nato. Avoiding, as far as he can, arguments about its domestic expediency, Dr Adenauer has treated the speedy passing of the Bill as a necessity of foreign policy.

Other politicians at Bonn take a different view, as might be expected. The primacy of foreign policy has had a long run in west German affairs under Dr Adenauer, and has been justified by the successive improvements in the status of the Federal Republic, culminating in sovereignty; but it is not in the natural order of things, and a point is bound to come at which it will be upset. To introduce universal military service in any state which has enjoyed freedom from it is a far-reaching step in domestic affairs, just the kind of issue on which, except under pressure of unquestionable need, foreign policy is liable to have to take second place.

Dr Adenauer's authority, though it is being increasingly questioned on many matters (by supporters as well as opponents), will probably suffice to get the military service Bill through the Bundestag before the summer holiday starts in July. But the Bill has suffered a vital amputation. A majority, though a narrow one, can be found for the general principle of conscription, but no sure majority has been found yet for any specific term of military service; therefore, the chief government party has decided to strike out the clauses which would fix the term, inserting in their place a provision that this matter will be settled in a special Act later.

Politicians in Germany, as in other countries, when they have to say for how many months the young men should be obliged to serve, feel a strong, all but irresistible, pull towards the more lenient course. The

Bundesrat (the upper legislative house, which represents the Länder of the federation) decided that they favoured twelve months instead of eighteen. In the Bundestag the opposition parties from their various points of view have declared themselves against the Bill as a whole and in favour (if it must be) of the shorter term against the longer. Not all of the government's supporters have fully convinced themselves yet that eighteen months are necessary. They are to be spared the unpleasant choice until the autumn. The Bill when it is passed will be, in consequence, of not much more than declaratory effect. True, it will establish the obligation of military service, and the administrative system to apply it, in all legal form; but it will still not enable a single conscript to be called up.

The device is not quite as pointless as it looks. A twelve months' term would in the federal government's view (and, almost certainly, by any military test) be all but useless. The government can hope to scrape a majority for the general principle of military service in the Bundesrat, where it could not get one for eighteen in preference to twelve months. The lawyers have advised it that if this were obtained, then the second Bill settling the all-important detail would not require the assent of the Bundesrat at all, since it could be held not to affect the rights and interests of the Länder; the Bundesrat would be entitled to raise an objection if it wished, but in the procedure laid down for such a case the Lower House could then overrule the Upper House by a simple majority. By this means, assuming that the whole government strength can be mustered in favour of eighteen months in the autumn, the matter should be settled by the end of the year.

Conscripts could then begin to be called to the colours next spring. In form, this should mean that by, say, the end of 1959, the Federal Republic will be making the contribution to western defence which the

planners of Nato envisaged when the programme was first worked out in 1950: twelve divisions, together with corps and army troops, a navy of light craft, and a fighter air force. (Whether in 1950 the military planners would have troubled to recommend a German defence contribution, if they had known that it would take nine years to bring to the point of usefulness, is a separate question.) This target, which formed the basis of negotiation and planning through many painful years, and which would have been the subject of formal and binding agreements if the European Defence Community had not been rejected by France, still furnishes the assumptions on which military planning is based at Bonn.

In fact, however, it would be rash to count on any such result; in so far as the western defence plans depend on the German contribution, the only wise course is to keep them, for the present, flexible. The conclusion flows only partly from the growing uncertainties of political life in the Federal Republic; it is dictated, equally, by the evident fact that the Germans themselves have not yet thought out their military problem. Herr Blank's officers have been at work for many years, it is true, in the vacuum into which they were thrust by the decision—understandable during the Korean war—to plan an army before the political conditions for raising it were established. But the planning remained wholly hypothetical until May 5, 1955, and German opinion at large has only in the past year begun to address itself to the problem of defence in a concrete way.

Up to now, the Bonn government has not had much in the way of reasons to offer for conscription, beyond the fact that its Nato allies expect it, and that they concluded the Paris treaties in that expectation. But indications have appeared that the Nato allies are beginning to reconsider for themselves whether they must necessarily endure conscription much longer in their own countries. On the one hand the perhaps treacherous sensation of reduced tension with the Russians, and on the other the still undigested lessons of nuclear warfare, have set new trains of thought working. If Britain may bring conscription to an end, is Germany inexorably obliged to introduce it at the same moment? Or can the German defence problem, too, be reconsidered in the light of new factors?

★

It is too much to expect of the west Germans that they should consider their defence simply as a Nato problem. If they are to raise an army they will want it to serve not only the west in general, but the German Federal Republic in particular. They are still keenly aware that there was a time when their country was thought of, unavoidably, as little better than a field of manoeuvre for a delaying action; this will not do for them now. They will think, too, of the effect on their peculiar relationship with the hostile German state on their eastern border: of the likelihood that conscrip-

tion in the west would be followed by conscription in the east, and of the possibility that a law of compulsory military service may push both states nearer to a concept, which they have so far avoided, of two German nationalities. Even the most strictly western school among them, having observed the experiments in new-model organisation which the American, British, and French armies have been conducting on their soil, asks whether the twelve divisions of 1950 are exactly what will be needed in 1960; and one question leads to another.

★

Necessary or not, conscription is not going to be popular in Germany; and the indications are growing that it may furnish the major issue at the general election, which is only fourteen months away. Pressure is strong in the Social Democratic party to fight the election on the basis of a pledge to repeal it. This would be a pity: it is bad for a party, in the event that power or a share of power should come its way, to have its hands tied in advance. The Social Democratic leaders realise this.

One thought which influences them is that they may find themselves in the autumn of next year seeking to form a coalition government. The possibility is one which the Federal Republic's partners in Nato need to bear in mind, too, from now on. Dr Adenauer, in spite of his age, appears to have every intention of leading the Christian Democrats and governing west Germany for another five years yet, and he may well emerge from the next election as still the leader of the strongest party in the Bundestag; but he has lost many allies, some of whom he has bitterly alienated. Though he may yet succeed in forming his third coalition government, there can be no certainty of it. If conscription is working by then, and the Social Democrat leaders are pledged to repeal it, they may find that this debars them from forming an alternative coalition. Well aware of the possibility, they are bracing themselves for a struggle at their party congress at Munich next month to keep their hands free.

In any foreseeable state of German politics the search for national unity, with its complex of subsidiary arguments—relations with Moscow, relations with east Berlin, the future of the link with Nato—will be one of the dominant political issues. Defence policy is, for the present, the other. The interest of the western powers is not tied to either party in these debates. It is that Germany should remain a good and willing ally. This will be difficult enough to secure: the manner in which the German contribution is to be made to the alliance will in the end have to be left for the Germans themselves to decide. The western powers cannot influence the outcome of the elections or choose the next German government, but when it is there they will have to work with it; they will be wise to avoid aligning themselves with one side in west German politics between now and then.

Labour's Public Houses

THE Labour party is making a mess of its rethinking of policy. After its statement on personal freedom, which was sadly cautious and vague, comes its statement on housing, which is almost comically sweeping and specific. The recommendations emerge with an orthodox rat-a-tat-tat. "To cope with the slums and the general problem of repairs and improvements, houses and flats that were rent-controlled on January 1st, 1956, and remain tenant occupied, should be taken into public ownership." To encourage house ownership, local authorities should lend intending house purchasers all the money they want without deposit; and this process could be helped by turning a back on the main economic lesson of the past five years and re-instituting a policy of cheap money. In order to cope with the problem of tied houses and cottages, on which there has clearly been an intra-party row, tied houses should be divided into two categories, according to two definitions of good and evil which look as if they would be well-nigh impossible for any workable Bill to incorporate. Labour will offer leasehold enfranchisement to leaseholders of all houses that "would normally fall within the provision of the Rents Acts"—Acts which may not by then exist. The working party recognises that difficulties arose in the administration of the 1947 Town and Country Planning Act, but says that the Act of 1954 has benefited landowners and developers, which it vaguely feels must be a bad thing. Labour will therefore do something about this; it is not quite sure what.

★

That is a fair summary of the things that are in the report. The things that it leaves out are staggering. At what rent will these publicly owned houses be let? Not one of the fifteen thousand words in the statement deals with this. The reader is told merely that Labour is opposed to "extortionate" rents (which almost certainly means that it does not believe in rents determined by the market) but supports "reasonable" rents (which ought to mean that it does). In the report's comments on repairs, economic considerations are even more specifically thrown aside. It notes reprovingly that private landlords will improve houses only when they can make a profit; the principle on which a local authority should deploy its wider command over the country's scarce building resources is apparently that it should utilise them in order to make a loss. The only implication for personal freedom drawn from this policy of making the much-criticised local authorities "the largest landlord in all areas, and the only landlord in some" is that "it is essential that public landlords should have a close personal interest in both the property and the tenants." Labour is convinced that the local authorities "can undertake this great new respon-

sibility" in a "project which will enhance individual happiness and which will dwarf into insignificance all other such [public ownership] measures yet undertaken." It does not say why.

It is therefore only too easy to get the measure of this report. It is one of those documents that Labour is always apt to produce while in opposition, and always regrets when in office. Fortunately, this time, the regrets may not cost it or the country very dear. For the most important sentence of the whole statement comes in its preface: "The Tory Government may repeal or revise the Rent Restrictions Acts; matters of detail may have to be dealt with differently." They may indeed. By the time that any Labour Housing Act could reach its vesting day—which would not be before 1961—the greater part of the Rents Acts, and the whole system of shortages and controls that have sprung from them, is likely to have been dead for four years; and entirely different tenants, under different contracts of rent, will live in many of these houses from those living in them on the report's base date of January 1, 1956. A proposal to return to a system of controls and subsidies should then be about as practicable, and as popular, as a proposal to return to food rationing would have been in 1955; and a proposal for municipalisation without controls and subsidies would be recognised, even by Labour voters, as municipalisation without meaning.

It is, therefore, highly probable that any Labour government, whatever this report may say, will in practice be wise enough to restrict the embrace of compulsory public ownership to houses still subject to the Rents Acts in 1960 (if there are any) and to houses that fall below a stated standard of repair (thus achieving, as Mr Herbert Morrison once accused the Tories of trying to achieve, a municipal slum monopoly). For the rest, like the mutualisation of insurance in 1950, like the project for socialisation of Mr Cube, like earlier Labour proposals for nationalising the banks, this "largest measure of public ownership yet undertaken in this country" seems specially designed to wither on its stalk.

For this reason "Homes of the Future" deserves to be read as a case study of Labour's organisational weakness rather than as an awful presage of what might some day be attempted. But as a case study, it is depressing. The Labour party, for all the real idealism in it, for all the real common sense of the leaders now in command of it, can still, when its eager amateurs concentrate in inexpert committees, turn out sixty-three pages of earnest and sweeping nonsense of this sort. It looks as if the party will have to do some furious rethinking about this system of policy propagation through rethinking committees; all that the system has put on show so far has been the arthritic tendencies of its elderly trade unionists and the dogged zeal of its doctrinaires.

Standard Reactions

The redeployment troubles of the British motor industry have taken a new turn this week, with the abrupt announcement that the British Motor Corporation is to dismiss 6,000 men. Our Special Correspondent visited Coventry this week to examine what the dismissals mean to men already dismissed by Standards.

AS we stood on the dusty cinder yard outside the hall, the voices of shop stewards, hoarse with passion, rasped through the open windows. National officers of the nine unions concerned in the redundancy dispute at Standard had come to Coventry to meet the shop stewards, in order to decide what action should be taken. There was no doubt what those outside thought should be done. They were some of the 1,300 men who on June 7th were laid off by the Standard company as a result—or rather partly as a result—of the introduction of labour-saving machinery in the tractor plant. These men wanted to spread the work that remained in both the tractor and car factories by means of a three-day week for everyone. And if the management refused this demand, as it already had done once, they were in favour of a strike of all Standard workers.

As the meeting progressed, it seemed that most of the shop stewards were in favour of this course too—even the two-thirds of them still in work. Theirs was a fine display of oratory, traditional stuff. To hear it you would think that the 1,300 had been tramping the streets for months, that they had pawned everything they had, that their wives and children were starving. This oratory was interrupted only by a policeman who temporarily broke up the meeting by complaining that many of the shop stewards had parked their cars in unsuitable places. One speaker worked himself into a passion about the "filthy" behaviour of the Standard company, and most had strong words about "this most reactionary of all Governments" whose policy was to attack the living standards of the workers, and to bring about mass unemployment.

No one accepted the company's objection to a three-day week on grounds of efficiency. It was, as one speaker put, merely "fomenting a red herring." More than one declared that it was impossible for the dismissed men to get jobs; the employer had only to hear that this was a man from Standard and he was no longer interested. Another argued that such jobs as they could get were not worth having—only £8 a week; they could earn more than that in three days at Standard, and get unemployment pay for the other two. The men outside loudly endorsed these sentiments, and one of them remarked that if the unions were defeated on the issue of redundancy through automation this time, it would be the finish of trade unionism in this country. Another said that the company had cheated them all along the line. "A year ago," he said, "they promised us everything." He refused to consider the credit squeeze and the drop in the demand for cars as any excuse for the failure to absorb the tractor

men into the car factory. The demand had not dropped so much, he said. It was perfectly clear to him that Standard wanted to throw men out of work for the sheer pleasure of seeing them unemployed.

These views left your correspondent open-mouthed. The Standard company has been the most indulgent of employers. It has led the way in pay and conditions and it even has a non-contributory pension scheme. Its present troubles, indeed, are due to that very fact. Unlike the British Motor Corporation which, indefensibly, seems to have sprung upon the men dismissals which it had been considering for five months, Standard informed the unions of the change-over in tractors some fifteen months ago. But at the time it thought that, by stopping recruiting and by transferring tractor workers to cars, redundancy could be avoided.

As for hardship, a painstaking investigation failed to bring any to light. Of the 1,300 men dismissed on June 7th, whose misfortunes inspired so many moving speeches, about 700 had, at the time those speeches were made, found themselves other jobs—either by their own efforts, or with the help of their unions, or through the local labour exchange. Most of them accepted wage rates somewhat lower than they had been getting at Standard—though a good deal more than the £8 quoted by the shop steward. But Standard pays exceptionally well; it does not belong to the employers' federation and pays higher basic rates, together with large output bonuses. Of the 425 dismissed men who remain on the Ministry of Labour's books the majority are semi-skilled machinists, and it is difficult to find them jobs at which they would get anything like as much as at Standard.

Most of the men who have got jobs, however, seem to have stayed in their own trades—in machine tools, light engineering and so on. Some, it is true, seem to have changed industries altogether. It may not be a coincidence that the Post Office, which for a long time has been very short of postmen, succeeded in recruiting 40 of them last month. A handful of men have gone back to the mines, whence they came a few years ago. But the majority of ex-Standard men have gone to the smaller employers who, in the days of fuller employment, had given up all hope of getting the labour that they needed and could afford.

But what of the remaining 400? They can still be "choosy." They have left Standard with £70 or £80 apiece. (The company has given each of them two weeks' pay, a severance gratuity of £15, and two more weeks' holiday pay; and they have also got the rebate on pay-as-you-earn and unemployment pay.) Many

of them will also have some savings from their recent wages of £15 to £17 a week, and they are still hoping to get back to Standards. So they have not yet seriously considered applying for one of the 1,300 jobs on the books of the Coventry labour exchange that are not strictly in their line—although there are plenty of vacancies for policemen, firemen, miners, railway workers and clerks. Nor do they seem to have considered the possibilities outside Coventry.

The eloquent shop stewards made much of the plight of the man who must leave home and friends, just as he has a new house and his wife has made it nice, just as things are beginning to come up in the garden. If and when that sort of thing happens it will indeed be unpleasant. But it has not happened yet in Coventry. Many of the people on whose behalf this plea was made are not Coventry people anyway; they came to the Boom Town after the war, and have homes and friends elsewhere. But a job outside Coventry, in any case, does not necessarily mean a home outside Coventry. There is excellent transport to Rugby, Birmingham, Northampton or Leamington. One Rugby firm recently said that it had a thousand vacancies; although many of these would no doubt be for draughtsmen and other jobs unsuitable for the Standard men, its offer is an indication of the opportunities at the end of half an hour's journey. This is important, for there is a grain of truth in stories about a prejudice against Standard men. Perhaps employers feel that they have been too subject to communist influence, and that having been so "spoiled" they will never settle down anywhere else.

Some travelling may become necessary when the second instalment of 1,150 men is laid off. This was to have happened on Thursday, but as a result of the meetings on Tuesday the notices were deferred for a week or ten days while production of the old tractor continues. The delay is presumably merely an earnest of having explored every avenue, and the 1,150 will

certainly lose their jobs. But even so, that still will not produce any serious unemployment in Coventry. The skilled men, at least, will find work at once.

If this is the true situation in Coventry, how have the men and their local representatives got such a distorted picture of it? The company in this case took pains to make its position clear, and no doubt the union officials understood its difficulties. But for fear of seeming management stooges, they do not argue forcibly against the fiery shop stewards under their communist leadership. Union politics also play their part. The district officials of the two unions principally concerned, the Transport and General Workers' Union and the Amalgamated Engineering Union, are both reasonable men. But if either soft-pedalled the redundancy issue he would be liable to lose members to the other.

In the chair at this week's meetings was Mr Harry Nicholas, who is national officer of the Transport and General Workers' Union. He and his colleagues cannot have wanted a strike, if only because it would probably be long and costly and would end in failure; they cannot have approved a three-day week, if only because men who started working three days now would probably find themselves on two days in the autumn. They know that the shop stewards are more militant than the people whom they are supposed to represent. Yet all they did was to try to play for time. Far from deflating the militants or teaching them some of the facts of life, they tried to bluff the management that the men who still have jobs were overwhelmingly in favour of a strike. This the company knows to be untrue, and it abruptly broke off the talks. With the worsening situation in the car industry a strike may not be called. But this will not be due to any wise guidance from the leaders. Those who spoke such whirling words in that hall in Coventry have learnt nothing, and will continue to greet each new situation with the same old catchwords that have long since lost all meaning.

How Many Assemblies?

M. SPAAK drew sympathetic laughter from the Consultative Assembly of the Council of Europe when he implored them last October not to invent a fourth European assembly. He was describing the then embryonic plans for Euratom and the European common market, and was arguing not against the principle of parliamentary control but against the proliferation of parliamentary bodies. So far his warning has been heeded, and the report of the committee set up by the Messina conference recommends that the common assembly of the Coal and Steel Community, somewhat increased in size, also serve as the parliamentary assembly foreseen for Euratom and the common market. It is to be hoped no new assemblies creep in during the drafting of the implementing treaties

which began this week. But it is not enough simply to have stopped making the existing state of affairs worse. It has to be frankly asked what these various parliamentary bodies are really worth, and whether they might not be reshaped with profit.

Today western Europe is served (if that is the right expression) by three parliamentary bodies: the consultative assembly of the Council of Europe, the assembly of Western European Union, and the common assembly of the Coal and Steel Community. The degree of common membership in the three is shown in the accompanying table. It is fair to say that an effort has been made to cut down duplication of effort and wasteful journeying about Europe by holding most of the sessions of all three groups at the *Maison de l'Europe*

a. Strasbourg, by having many of the same parliamentarians attend all three assemblies, and by trying to arrange sessions consecutively. Although this is commonsense economy, the resulting stacks of verbatim records, reproducing in slightly different forms the words of the same people, strengthen the impression of a three-ring circus with the same performers riding their particular hobby horses around each ring in turn.

And more of the same is in prospect. A conference of parliamentarians from the fifteen Nato countries (of which 12 are members of the Council of Europe) met

in Paris last summer and agreed that there should be such a conference annually; it appointed a standing committee, with a small staff, who are now busy preparing for a more ambitious session to be held at the Palais de Chaillot in November. Parliamentarians from Canada and Norway took the lead in organising last year's conference, after suggestions from the ministers of those two countries for a parliamentary body formally linked to Nato had been coolly received by the other members of the Nato Council. Although the conference is sponsored and run by parliamentarians, and has no formal link with Nato, it shows every sign of receiving "unofficial" Nato and government support. Since Mr Pearson and Mr Lange are two of the three "wise men" appointed by the council to examine the non-military aspects of the alliance, it will be surprising if the question of parliamentary participation in the organisation of the Atlantic community escapes further—and perhaps sympathetic—attention.

The right place for parliamentary bodies in western Europe and the problem of what should be done in Nato are pieces of the same puzzle. Seven years of experience with European assemblies have made one thing very clear: there are two broad types of situation in which assemblies of parliamentarians can be useful, and their character and function are quite different in the two cases. Where, as in the Coal and Steel Community (and in the Euratom and common market plans), governments have agreed by treaty to give an international organisation some sovereign powers, the analogy between the international organisation and the situation within a single state has meaning. To that extent it is logical and necessary to establish a parliamentary control over those functions which, having been delegated to the new organisation, escape from the normal control of the national parliaments. Among the few powers held by the common assembly of the Coal and Steel Community, for instance, is the power to force the collective resignation of the High Authority; and its sessions have been at their most useful and sensible when the discussion centred upon the report of the High Authority (and when the High Authority's report made clear what questions of policy were before it), and at their most ineffectual when, as earlier this year, it met to debate, without any responsibility, various reports prepared by its own members relating to the Euratom and common market suggestions.

Neither the Council of Europe nor Western European Union has attributes of sovereignty, and their assemblies have no right of censure. Each assembly can send recommendations to its council of ministers and can badger them in public and in private, but that is all. Confusion and ill-will arise when such bodies try to act as legislatures, which they are not, rather than as conferences of well-informed legislators, which is what they should be. The assembly of the Council of Europe has never fully reconciled itself to this. The assembly of WEU is still finding its feet, but it already shows signs of impatience at being an assembly with no laws to make or governments to bring down. This sense of frustration is bound to continue until it is clearly recognised that these assemblies are not, cannot be, and should not try to be legislatures. That is not to say that they have no use. Properly organised, this kind of body could have far more prestige and far greater influence on public opinion and on governments than either assembly on present showing seems likely to achieve. But the road to this prestige and influence does not lie in seeking to interpose the sanction of an international parliament between national governments and the parliaments to which they are responsible; and the fear that any parliamentary body which was officially part of Nato would soon seek such powers for itself (and would become disgruntled if they were not accorded to it) has been a principal stumbling block to the creation of an Atlantic assembly.

What is the function of an assembly of parliamen-

tarians in the second case, where the governments have yielded no sovereignty? And is there room and need for such a body both on a "European" and on an "Atlantic" basis? Although it is clearly a mistake to seek to interpose mandatory consultation in situations where there has been no formal transfer of sovereignty, there are strong reasons for parliamentary discussion of much of the work of organisations such as OEEC, WEU and Nato. Increasingly, the business of foreign relations is done by international committee, not by *aide-mémoire*. And many questions, for example the level of defence expenditures, which once were sacred matters of domestic policy, have become the grist of international discussion. Governments, once they have negotiated with fifteen or so countries, are understandably anxious that the agreements they have reached shall not be upset. But if a group of parliamentarians had the means and the incentive to keep themselves better informed of the day-to-day work of these international organisations, questions could be asked while there was still time to influence decisions. The Council of Europe annually debates the report of the OEEC, but that is too retrospective. The Assembly of the WEU has tried the bolder approach of asking the Council for written answers to a number of questions about the lack of progress towards the standardisation and control of armaments, and then using the somewhat perfunctory replies as the basis of further probing. But the right formula for parliamentary scrutiny of the work of these international executive organisations has yet to be found.

Do distinctions of geography, and therefore of membership, require a separate assembly for the WEU, for the Council of Europe, and for Nato? So long as Soviet policy cuts off eastern Europe, the vital community of interest runs between western Europe and North America; pan-Europeanism today has no real political meaning. North America and western Europe, including the neutrals, have already found an acceptable means of association in the OEEC. Might not a single body serve the parliamentary needs of Nato, the OEEC, WEU and the Council of Europe if full use were made of the device of special standing committees for particular problems—defence, arms control, trade liberalisation—which might concern some but not all of the members?

As things are, proliferation is debasing the currency of parliamentary consultation. Consolidation, coupled with a clearer understanding of the purposes of such bodies—and of their limitations—might provide a new, firmer footing. If one could sweep with a clean broom it would be tempting to suggest that there should be two, and only two, European-Atlantic parliamentary bodies. The first would be a European parliament in name and function serving the European Coal and Steel Community and any other analogous organisations that may be established; the second, a European-Atlantic Community Conference of Parliamentarians (with, let us hope, a simpler name), would serve the community in its largest sense. Unfortunately, those who wield the brooms will find them full of dead hopes and dusty answers. Even so, a little sweeping should be possible.

Notes of the Week

Return to Earth for Nasser

BY five and a half million votes to 2,857, Colonel Nasser became President of the Egyptian republic on Tuesday. The *junta* is dissolved; martial law is ended; until the National Assembly comes into being in the autumn he is responsible, alone and without a scapegoat, for all aspects of Egyptian policy. After a week floating on air—mostly the hot air of double-talk and flattery—it may be difficult for him to steel himself to taking any decision that might be unpopular. Perhaps he can stave off the sterner side of his job by travelling abroad during the hot weather. But it cannot be delayed for long.

The final communiqué on his talk with the Russians seems to have been nebulous because they were ingratiating only in word, and, once down to deeds, made conditions

different from but no less arduous than the International Bank's for helping with Egypt's development. Till now, western reactions to Soviet overtures had suggested to Colonel Nasser that neutralism would automatically produce two suitors, each vying for favours. If, instead, it produces two business associates, each stipulating rigid terms, does it come up to the expectations he has fostered?

At the other end of the Middle East the Shah's doings suggest that even those who commit themselves to partisanship can command attention from both sides. The Shah has led Iran into the Baghdad Pact, yet, where six months ago he was the butt of Soviet invective, this week he has been fetched by their aircraft for a trip round Russia as their honoured guest. President Nasser, who is booked for a similar trip in August, has till then to reason why, though one took the high road and the other the low road, the Shah is in Moscow before him.

Too Many Friends

IT is not only President Nasser who is discovering the complexities involved in an abundance of friendships. The Russians, too, are beginning to find how hard it is to remain friends with people who are at loggerheads with each other—a difficulty with which western diplomats are painfully familiar. By being nice to Iran in hopes of wooing it away from its allies, they risk the collapse of their approach to other Middle Eastern countries, which has been based on the simple invitation: "Stay neutral and see how nice Russia will be to you." By taking up a less hostile attitude to Israel, they have lost some of their former *kudos* in the Arab world. And in regard to Algeria they are finding it hard to appear as champions of Arab nationalism without hopelessly alienating France.

The new Soviet foreign minister, Mr Shepilov, found himself struggling in these cross-currents as soon as he ended his triumphal visit to Cairo and went on to Beirut. The Lebanese presented a written request for a clarification of the Soviet stand on Palestine and Algeria. On the same day Mr Sobolev, the Russian representative in the Security Council, had to skip rapidly from an unsuccessful attempt to postpone taking a decision whether to debate Algeria, to support of the Arab-Asian bloc's demand for an early debate. Having first argued that governments needed more time to study the matter before getting down to it in the Council, he then had to insist that they must hear the Arab-Asian case before they could reach any conclusions.

These embarrassments are not likely to deter the Russians from continuing their effort to woo and win the Middle Eastern world, an effort of which Mr Shepilov's tour is symbolic. But the Soviet diplomats concerned must turn with relief to such simpler aspects of the campaign as the feting of the Yemeni crown prince in Moscow, an event which *Pravda* felt it could safely hail with a leading article which emphasised "the traditional friendship and mutual understanding" between the Soviet Union and the United Nations' most secluded member state.

Freeing the Air

PRECLUDED by its terms of reference from scrapping the fourteen-day rule altogether, the Select Committee on Broadcasting has done the next best thing and recommended its curtailment. If the Government agrees—which presumably it will with relief—then radio and television discussion of any subject will be barred only for seven days before a Parliamentary debate upon it, there will be no ban on discussing a Bill once it has passed its second reading, and the rule preventing MPs from broadcasting about current legislation will be dropped entirely. This new formula will end some of the more obvious anomalies, and some of the worst illiberalities, of the present system. The Select Committee has not been brave enough to recognise that the responsibility for seeing that the rule is enforced should rest solely with the governors of the BBC and the ITA; but its recommendation that a small committee of MPs should advise the Postmaster-General about the details of enforcement is vastly preferable to throwing the job

open to the whole House. The committee should be sensibly enough staffed to enable it to go to sleep.

A sorry story of Parliamentary arrogance therefore seems to be drawing towards a not unsatisfactory end. The evils of curbing free speech on the air have been seen in other broadcasting restrictions beside the fourteen-day rule. The Select Committee said that it was satisfied that the party machines have not exerted any improper pressure on the BBC, yet one Labour MP claimed—and it was not denied—that when he broadcast on sport, the Tories insisted that one of their MPs must do the same; and at one time Transport House actually claimed that because the MP concerned was a Bevanite, there must be five balancing broadcasts by non-Bevanites. The Select Committee concedes that "somewhat narrow decisions" were taken in certain cases, but the truth is that such fatuous incidents will always arise so long as Parliament insists on keeping a foot in Sir Ian Jacobs's door. To judge from the whole tone of this report, however, it is now starting to withdraw that foot, as expeditiously as ruffled dignity permits.

Polygamy in Ethics and Practice

IS neutralism moral? Mr Dulles says not. Prince Moulay Hassan, heir to the throne of Morocco, disagrees, founding his argument on logic so simple that it all but settles the hash. "We are Moslems," he said last week in Cairo, "and have a right to be bigamous. We can marry East as well as West and be true to both spouses."

Yet the Prince's piece of reasoning stamps its author with the mark of his upbringing and income group. Only in circles that are fast dying out is it still possible for the master of the house to shut the door of a harem, box up its jealousies, backbitings and quarrels, and dip into it only at his pleasure. All over Islam, a modern combination of emancipated women and the cost of multiple wiving has already wrecked most husbands' chances of living care-free. The analogy between domestic and political polygamy needs, on examination, to be labelled "perishable."

Anticipating the Next Budget

THE Chancellor has been in a surprisingly informative mood during the committee stage of the Finance Bill. He has followed his undertaking (discussed on pages 1210-1211 of *The Economist* last week) to grant some relief next year to pioneer industries overseas by equally frank indications of how his mind is working on two matters of domestic taxation. On Monday, he intimated that he had little sympathy with Tory backbenchers' proposals to give a tax rebate to those who educate their children at their own expense instead of sending them to state schools; he believes that other ways should be explored of meeting the problem that "the larger families carry rather a heavier strain" of taxation than before the war, and indicated that one of these possible other ways is the Royal Commission's proposal that children's tax allowances should increase with

(Continued on page 1269)

Economic Guesses for 1956

IMEDIATELY after the Budget in April, the Study Section of the Royal Statistical Society invited 111 leading economists and statisticians to forecast the movement this year of certain key indices in the British economy. Of the 72 economists who replied to the questionnaire, 48 also set down detailed forecasts of the changes in real supply and demand this year. The averaged figures of their wide-ranging guesses are shown in the second column of the accompanying table; the first column shows the changes in these quantities in 1955.

Since April, however, much water has passed under the bridge; there is more temptation now than there was then to take part in the guessing game. In the third column of the table, therefore, *The Economist* sets down its own, very tentative, guesses for the outturn in 1956. For convenience of reference the items in the table are numbered from (1) to (7), and are discussed in this order below. It should be emphasised that the exercise is not really a forecast that we expect to prove correct; it is, rather, a hazardous attempt to translate the present trends and "feel" of the economy into quantitative terms.

(1) *Gross Domestic Product.* The study group economists' guess of a £340 million increase in gross domestic product this year appears to have been based on an average guess that industrial production might increase by 2.9 per cent over the 1955 level. In the first five months of 1956, however, the industrial production index has run at almost exactly the same level as in the equivalent period of last year; very disappointing figures for May were published this week. To suggest a real increase of even

£100 million in gross domestic product this year—as we have done in the third column of the table—is therefore to assume that there will be some improvement in the present trend.

(2) *Consumers' Expenditure.* The study group economists thought that consumers' expenditure might increase (in real terms) by some 1.6 per cent this year. In the first four months of the year, however, retail prices were 6 per cent above their early 1955 level, while retail sales were only 5 per cent above it; this suggests an actual fall (in real terms) below the 1955 level in this period, especially in consumer durables. In the holiday season ahead this fall seems unlikely to continue, but sufficient restraint to keep the year's real increase to as low a figure as £100 million seems plausible.

(3) *Government Current Expenditure.* Although, even after the latest economy cuts, the estimates for the central government's current expenditure on goods and services in 1956-57 are considerably above its actual expenditure in 1955-56, this rise is more than accounted for by price increases in the meanwhile; in real terms there seems certain to be a fall. Moreover, local authorities' current expenditure may be slightly more usefully pinched than appeared probable in April, and the "new thinking" about the defence programme may cast some small shadow before. A cut of £100 million, in terms of 1954 prices, seems plausible.

(4) *Gross Fixed Investment.* The official estimate is that this will again increase this year, though not by as much as in 1955. There is only a marginal difference between our guess and that of the study group here.

(5) *Stockbuilding.* Here we differ drastically from the average forecasts of those who answered the study group's questionnaire. It must be remembered that the figure required here is the *change in the rate of stockbuilding between 1955 and 1956*; last year stocks were run up by some £350 million, so that if the study group's estimate of a fall of only £35 million in the rate in 1956 is correct stocks will still run up by over £300 million this year (a slight adjustment must be made for the difference between 1954 and 1955 prices). But, if industrial production is only going to increase by 1 per cent or less this year, the increase in that part of stocks which consists of "work in progress" will be very small compared with 1955; and, although this is always a difficult figure to guess at, we doubt if there will be any great net increase in raw material stocks—there may even be a fall. On the assumption that the total increase in both types of stocks may be only about £50 million, the rate of stockbuilding would decrease by about £300 million; that is the figure we have suggested in the third column of the table.

(6) *Domestic Demand.* Our guesses therefore suggest that there might be an actual decrease in domestic demand (i.e. in the sum of items (2) to (5)) this year, of the order of £150 million. If demand falls by £150 million and supply increases by £100 million, there will be resources of some £250 million (in terms of 1954 factor cost) available to strengthen the balance of payments.

(7) *The Balance of Payments.* An accretion of £250 million of resources (in terms of 1954 factor costs) to strengthen the balance of payments would not automatically turn last year's deficit of just over £100 million into a surplus of just over £150 million. Allowance must also be made for changes in prices since 1954, and for any change in Britain's investment income from abroad; thanks partly to the favourable prospect for British oil revenue from abroad, there is a chance that both these factors may work in our favour.

The sort of estimates made here would not therefore be inconsistent with a balance of payments surplus of around £200 million this year. As has been argued in *The Economist* before, it is not inconceivable that a surplus of this sort will in fact be attained; the trade figures for the first five months of the year can be squared with such a hope. But nobody should think that Britain's economic troubles will be over, even if, thanks mainly to low stockbuilding, such a surplus should be temporarily snatched.

CHANGES IN REAL SUPPLY AND DEMAND
(£ million at 1954 factor cost)

	1955 Actual (Change from 1954)	1956 Forecast (Change from 1955)	
		Royal Statistical Society Study Group's Guess	<i>The Economist's</i> Guess
(1) Gross Domestic Product.....	+ 525	+ 340	+ 100
(2) Consumers' Expenditure.....	+ 290	+ 170	+ 100
(3) Govt. Current Expenditure.....	- 55	- 60	- 100
(4) Gross Fixed Investment.....	+ 185	+ 130	+ 150
(5) Rate of Stockbuilding.....	+ 210	- 35	- 300
(6) Domestic Demand.....	+ 630	+ 205	- 150
(7) Left over to weaken (-) or improve (+) the balance of payments.....	- 105	+ 135	+ 250

(Continued from page 1267)

their parents' income. This is broadly the right emphasis. Then, on Tuesday, Mr Macmillan was even more specific about his views on entertainments tax. He gave the deliberate pledge that he hopes that "this will be the last occasion on which it will be necessary . . . for Treasury Ministers to defend the tax upon the living theatre, or, indeed, the entertainments duty in its present form." This did not mean that he thought that "the entertainments duty as such, which brings in £40 million, is necessarily a very high claimant for total remission." But he does want to recast the tax, remembering that "new forms" of entertainment are not as heavily taxed as their older-established rivals. This presumably means that he is considering some sort of additional impost on television.

There are some dangers in the Chancellor's tendency to think aloud so readily. A review of the entertainments duty is clearly only one of several reviews that Treasury experts are conducting behind the scenes; an even more important study, to which Mr Butler referred last October, should be whether purchase tax can be replaced by a flat rate sales tax (this replacement, like the recasting of the entertainments duty, need not necessarily be done in a way that would cause a net loss of revenue). And, in the field of direct taxation, the recommendations of the Royal Commission await action. It would be a pity if the reforms that are incorporated in the next Budget, and those that are left out of it, should be determined by the extent to which Mr Macmillan has allowed himself to be drawn into premature public statements instead of by a dispassionate review of priorities. But the best remedy, of course, would be to put all the desirable reforms into operation together. There is a case here for careful planning of the next session's timetable; room should be reserved now for lengthy discussion of a mammoth Finance Bill in 1957.

Nenni on Liberty

IT is in Italy that the Khrushchev version has created the greatest intellectual ferment. After Signor Togliatti's challenge to Moscow, it was the turn last week of Signor Nenni. His essay in *Mondo Operaio* is probably the most balanced assessment to have come as yet from a leftist political figure. Signor Nenni criticises Mr Khrushchev for not providing any historical interpretation of Stalinism and shows the contradiction between the achievements of the Soviet Union and the portrait of the maniac who apparently presided over the country's destiny. For him, Stalin's heirs cannot find an excuse in terror, because "they had been placed in positions of responsibility . . . precisely to face difficult situations." Finally, he traces the progressive substitution of the Bolshevik dictatorship for that of the proletariat, and of Stalin's rule for that of the party, and concludes that what Russia now needs above all is a change of institutions in the direction of democracy; he thus ends with a measured plea for personal liberty.

What lesson for the future Signor Nenni draws from all this is less clear. His essay is not a mere attempt by a former Stalin Prizewinner to extricate himself from a predicament. He and his party are likely to benefit from

the new situation. They may well gain from both sides: the Communist disarray should bring them some fresh support on the left, while their new emphasis on democracy and liberty could win them the sympathy, not only of Signor Saragat's Social Democrats, but also of the left wing of the Christian Democratic party. How will Nenni manoeuvre in the circumstances? He can use his stronger position to influence Communist policy. He may also look increasingly to his right and progressively relax the "pact of action" now uniting him with the Communists.

His decision will be fateful for the international working class movement. For the moment he merely claims that new relations will have to be worked out. The end of the Cominform and the dethronement of Stalin mark, in his opinion, the end of an era in the international movement as well, and this would indicate that he thinks of creating a new united international rather than of joining the existing anti-communist one. Signor Nenni has aces up his sleeve, but nobody can tell whom he will choose as partner in the game.

One More Chance in Iceland?

THE outcome of Iceland's elections is not in every way as black for its Atlantic allies as it seemed when the first results were announced. The independents, the only party that wants to retain the American base at Keflavik, lost two of their 21 seats, but won a bigger share of the votes than in 1953. They gained support in Reykjavik, and the seats they lost were in constituencies outside the capital which they had held with marginal majorities. At the other end of the scale, the most vehemently anti-American parties hold fewer seats than before. The neutralist "National Defence" group has been swallowed up by the alliance between Communists and left-wing Social Democrats, and this alliance now represents the extreme Left in the Althing with only eight seats out of 52. The Communist and National Defence parties alone previously held nine seats. The gainers are the centre parties—the rightwing Social Democrats and the Progressives. But the Progressive leader, Mr Jonasson, has declared himself unwilling to compromise about the future of the base.

The Icelandic representative on the Nato Council is setting in motion this week the machinery which, if no fresh agreement is reached, will remove the Americans by the end of 1957. Unfortunately, if naturally, the first American reaction to the election has been a strengthening of the tendency to cut clear of unreliable allies. Yet it seems worth while trying to save Iceland from dropping out of Nato for all effective purposes. It may be possible to arrange for the three radar stations on the island to be manned by civilian technicians. This would plug the gaping hole that would otherwise be punched in the North American early warning screen, while recognising the Icelanders' dislike of seeing too many foreign uniforms. But the Keflavik airfield can hardly be kept in full readiness by civilians, and Iceland has no armed forces of its own. The Americans have now to discover on what terms, if any, the Icelanders might allow a skeleton staff to be stationed there. They will almost certainly have to withdraw a good many men, and some of the 90 fighters

reported to be at Keflavik. They might also promise not to take labour away from the fishing industry to work at the base, and to waive their forces' claim to exemption from customs regulations. It is to be hoped that their first understandable indignation will give way to a readiness to negotiate for what can still be retained.

M. Pineau's Homecoming

M. PINEAU went to Washington primarily to shake western diplomacy free from its routine reactions to changes in the Soviet world. For once a French minister did not cross the Atlantic in search of kudos; and on Algeria M. Pineau could not expect more than guarded American support for French strivings "towards a peaceful solution." Yet even in his main task he probably failed: he certainly has not convinced Mr Dulles of the need for a radical revision of western strategy. Coming after Dr Adenauer's plea for vigilance and *immobilisme*, M. Pineau's evocation of a future in which the Big Four might regain something of the spirit of their wartime alliance must have struck many Americans as a dangerous mirage. They may have been impressed by his sincerity and reassured by his declaration that none of these ventures involved betrayal of the Atlantic alliance, but they were not convinced. When M. Pineau took over the Quai d'Orsay, he had the reputation of a staunch anti-communist and a mild "European." The files which he found and his many travels—to Delhi and Cairo as well as to Moscow—persuaded him that western strategy could not remain static while the world was moving into the post-Stalin age of nuclear stalemate. Hence his periodic bombshells and schemes such as the plan for channelling aid to under-developed countries through the United Nations. Above all, he feels that the evolution inside the Soviet block is of the utmost importance, and everything must be done to speed it up. A French saying has it that you cannot catch flies with vinegar, and in M. Pineau's view the West should cover its propaganda pill with the sweet coating of trade and wider contacts.

His journey to Washington coincided with a brisk reshuffle in the Quai d'Orsay, including the retirement from the post of general secretary (the equivalent of the British permanent under-secretary) of M. Massigli, who made many friends here during his long embassy in London. It is difficult to discern a political pattern in the reshuffle, and the appointment of M. Hervé Alphand, an apostle of the EDC, as ambassador to Washington is enough to dispel the silly charge that this is a case of "plums for neutralists." Right-wing critics are particularly displeased with the appointment of M. Louis Joxe to succeed M. Massigli. Not that even his opponents would question the ability of this brilliant postwar recruit to the diplomatic career. Rather they cannot forgive him that, as ambassador in Moscow after Stalin's death, he was the first to sense the changing climate and to insist on the importance of the thaw. Must an independent mind always be held suspect? Western politicians ruffled by a new initiative from Paris would do well to ponder whether, for once, it is not the product of French intelligence rather than of Gallic fickleness.

Aid for Malta

MR MINTOFF, Prime Minister of Malta, appears to be seeking a quarrel with the British Government. It arises from the amount of British financial aid in the present year, which has been fixed at £5 million, with a similar ceiling for each of the four succeeding years. These estimates were based on the opinion of the round table conference last year; but Mr Mintoff declares that the conference was wrong, that his government's own estimates entailed a contribution from Britain of over £8 million for the present year (which by spreading out the development schemes it had since managed to reduce to £7 million), and that any lower figure would oblige him to dismiss a large number of workers from government employment. This he is not willing to do, and if agreement is not reached by the end of this week he says that he "will have no option but to advise dissolution."

Under the plan agreed last March, the next Maltese election was to have been held on the sole issue of integration with the United Kingdom, after an integration Bill had been passed by the Parliament at Westminster; if an election were held now, and on a quite different issue, the whole question of union with Britain would be returned to the melting pot. There is not really enough evidence available to pass judgment on the purely financial ingredients of this quarrel: the Colonial Secretary may have been unwise to try to fix a limit for Britain's aid for so long ahead (although, at the time that Mr Mintoff made his statement, it was thought in London that the precise terms for aid were still open to negotiation). But the overriding impression to be drawn from the affair is that, politically and diplomatically, Mr Mintoff is making a clumsy mistake. "I am essential to your policies, so you must give me £2 million more money." That is how his attitude is being interpreted in London. Cannot he see how difficult this makes it for friends of integration to persuade the British Government not to adopt the natural British reaction, which is to throw the book back in his face?

No Share-owning Democracy

TWO Liberal amendments to the Finance Bill this week provided an opportunity to test how far the Government's vague enthusiasm for profit-sharing schemes, which the Prime Minister himself so unexpectedly expressed just after the last general election, has cooled in the intervening twelve months. The answer seems to be that it has cooled quite a lot. Sir Edward Boyle dutifully assured the Liberals that Ministers "have by no means lost their interest in this extremely important subject," and that the Inland Revenue will continue to help any firms that want to go ahead with such schemes; but this help will be confined "within the framework of the existing law." The most important of the Liberal amendments would have removed a disability from genuine share distribution schemes, as distinct from the milder and more usual form of scheme where employees get a cash bonus when and if their firms' profits go up; Mr Grimond thought that employees should not pay tax

on the value of any shares distributed to them until and unless they sell these shares and receive cash for them. The Government turned this proposal down flat.

Figures recently published by the Ministry of Labour have traced 310 profit-sharing schemes now in operation in British industry, excluding schemes run by co-operative societies; of these traced schemes, 259 provide cash bonuses (the average addition to annual earnings is 6.3 per cent) to 321,064 workers, and only 51 distribute shares to 23,728 participants. The Ministry has also done some research into the history of the 605 profit-sharing schemes that have terminated since its records began. As might be expected there has been an inevitable mortality from the failure of businesses or their absorption into others—one-third of the schemes disappeared for these reasons. But of the remaining two-thirds, apathy and discontent and "want of success" accounted for the greater part; and it is significant that 75 schemes ended by the substitution of higher wages or shorter hours for the shared profits. Although there will probably be a continuing growth in the number of firms that pay cash bonuses when their profits rise—a sensible form of additional wage payment for expanding concerns—it seems probable that, in the absence of Government encouragement, last year's heightened interest in share distribution schemes may prove to be a flash in the pan. As the Liberal amendment would have been an incentive to saving instead of spending, it is a pity that the Government did not let it go through.

Cut-throat Competition

TWICE in the last fortnight cases have been reported of men sentenced to seven years' imprisonment for malicious wounding. Since then there have been more arrests, in one case for murder, and the public is naturally wondering, since all the cases appear to be somehow connected, what the police are doing about it. In his summing up in one case last week, the judge said that the facts sounded more like Chicago in the worst days of prohibition than London in 1956.

That was an excusable judicial exaggeration. But in London, as in Chicago, the background to the crimes is prohibition of an activity that is nevertheless widely carried on. Gangs are apparently slashing each other in order to protect their share in the "protection" market: the flourishing business by which a gang demands large sums of money from a bookmaker under threats of breaking up his stand on a racecourse—and possibly his business and home town—if he refuses. A bookmaker's reluctance to seek the protection of the police when he is threatened in this way possibly arises from reluctance to tell them that he himself has been carrying on an illegal street gambling business; it is notable that, although the racket has been spreading to blackmailing protection of some cafés and clubs in the West End, the sort of clients the "protectors" really prefer are those who are not in the best odour with the authorities.

The other deterrent to giving evidence about attempts at extortion is, of course, fear of the gangs' own retribution. The police have new powers to help them in combating gang violence—the Prevention of Crime Act of 1953, which enables a policeman to arrest without warrant a person he

believes to be carrying, without reasonable excuse, an offensive weapon in a public place. But this legislation was designed against the casual "cosh-boy" rather than members of organised gangs. The police's best ally in breaking up gangs would be the co-operation of anyone threatened by them, even if he himself was within the shady side of the law. Are the police being sufficiently flexible in trying to enlist this?

More Supreme Soviet?

IT is a sign of the times that the *Daily Worker*, which has long lauded Soviet democracy, should now splash on its front page an exclusive report that Russia is apparently to take a step along the road towards parliamentary government. An elementary, but also revolutionary, electoral reform is to be discussed by the Supreme Soviet at its session opening on July 11th. Hitherto citizens going to the polls, whether in elections to the republican or to the All-Union soviets (i.e., councils), have had the right only to vote, not to choose. Though various organisations can officially put forward candidates, only one is nominated, leaving the elector the risky alternative of spoiling his vote. Now, according to the *Daily Worker*, several candidates will probably contend for a seat, which "would also mean election campaigns of a different character from those of the past."

These pointers to a revival of parliamentary life coincide with violent strictures in the press upon past performance. The indictment of the republican soviets published in the legal journal, *Socialist State and Law*, is also applicable to the Supreme Soviet. The journal accuses these soviets of having such short sessions that they are merely a parade. Speakers are designated weeks in advance; often they read from other people's lines. The right of interpellation is not exercised and, instead of being legislative bodies, the councils, it is admitted, have become institutions for endorsing decrees passed on by the presidium.

COMMODITY PRICE INDICATOR
1952 = 100 MID-MONTH FIGURES

Such outbursts seem to indicate an intention to put some life into these rubber-stamp institutions. Since Stalin's death many parliamentary commissions have been set up and they may well witness lively debates, though little is heard about it in the outside world. But it is not to be supposed that the new regime can travel far on the parliamentary road. To make any sense the presence of several candidates must involve differences of opinion; in other words, it postulates the existence of opposing factions, if not actually of opposition parties. Stalin's heirs certainly do not intend to run such a risk now in the country at large. It has just been officially reasserted that the Communist party rules the Soviet Union. It is within the party rather than on the parliamentary stage that one may expect departures from Stalinist orthodoxy.

Foreign Schools and Egyptian Standards

WHILE Egypt as a whole is rejoicing at emancipation from foreign military influence, one small group within the nation views with misgiving the prospect that all foreign establishments are going to be squeezed out regardless of their value to Egypt's development. Disquiet is great among the fraction of the population that sends its children to foreign schools for the sake of the good education they get there. There are 284 foreign schools in Egypt, principally of French, British, Italian and American origin, and having some 96,000 pupils.

The schools, as well as their patrons, are in dismay. Their immediate cause for alarm is a new education law prescribing that all schools shall teach pupils only their own religion. At first glance, this prescription does not look exacting. Egyptian state schools give Islamic and Christian teaching respectively to the two groups among their pupils, and the secular foreign schools—such as Victoria College, Alexandria, and the American School at Maadi, which charge high fees and reckon to pay their way independent of support—will no doubt be able to do likewise.

But the denominational and mission schools are differently placed. Run by sects and orders that range from Jesuit to Presbyterian, they depend for at least half their maintenance on gifts from the faithful in their countries of origin, who give for the teaching of Christianity. Yet they have many Moslem pupils and more queueing to get in, not with a view to becoming proselytes (there are no recorded conversions except as between Christian sects) but because of the high standard of the schooling. If these Christian foundations are faced with a choice between teaching Islam and losing their Moslem pupils, many will have to close down; few could make ends meet were their entry confined to Christians.

Danger signals are beginning to appear. The newspaper *al Goumhouriya* has described missionary societies as "spearheads of heinous imperialism," and, this month, two mission teachers have had their residence permits withdrawn for instructing the children of Moslem parents in Christianity. Taking time by the forelock, the Scottish Mission School at Ismailia and one or two others have decided to close their doors. The Jesuits and Franciscans are consulting the Pope.

The principal sufferers by a general closure will be

Egypt's Christian minorities—principally the Copts, but also the Orthodox and Catholic communities of Syrian and Greek origin. But Moslems will suffer, too, because the same standard of teaching is not easily to be had. Indeed, for some years it will be attainable only abroad, where it will be expensive to get, and where Egyptians will have to acquire it among Christian influences anyway.

Franco in the Middle

GENERAL FRANCO is demonstrating once again his talent for patient manoeuvre. Recent developments in Spain indicate that he is working out a compromise with the Falange in order to prepare the way for a peaceful restoration of the monarchy. Many of General Franco's followers and old companions in arms view this restoration with misgiving. They have few illusions about the qualities of the Spanish royal house, and fear that the re-establishment of a royal court will bring with it some of the weaknesses that have characterised Spanish dynastic history since the seventeenth century. To allay these fears, and to enlist the Falange in support of his policy, General Franco is allowing the party to increase its role in Spanish life, and has agreed that it must retain its special position even under a constitutional monarch.

Under the constitution which is being considered, the Falange would be assured of a majority of seats in the Cortes and there would be provisions making the formation of an organised opposition exceedingly difficult, if not impossible. Moreover, the Falange would be given a legal or "juridical" basis as a permanent part of the Spanish state rather than as a political party in the ordinary sense. The head of the government would be chosen by the Cortes for a term of three or five years, but it is not yet clear whether there might not be a special office, such as "head of state," above the premier and below the throne. Locally, the Falange is attempting to widen its popular appeal and to include non-Falangists in some of its activities. A branch is to be set up in each municipality, and the secretary-general of the movement, Sr Arrese, is trying to persuade both his followers and the public at large that the Falange can and must co-exist with whatever regime succeeds the Franco era.

The entire process of gradual transition from the Franco government to a monarchy resting on Falangist support

INDEX

The Index to *The Economist* is published quarterly. The subscription rate is 5/- a year; single copies are priced at 2/- each. The Index to Volume CLXXVIII (January to March, 1956) is now available from:

The Publisher, 22 Ryder St., St. James's, London, S.W.1.

Window on Wall Street

National Provincial Bank Limited has a representative in New York who has proved extremely helpful to the Bank's customers and others. He is able to supply information and advice on subjects ranging from the prospects for British exports in the U.S.A. to the American way of life.

Many people make a point of calling on him at 44 Wall Street (Room 1000) as soon as possible after landing.

There is, however, no need for you to visit America to make use of our New York office. Your local National Provincial Bank manager will be happy to get information on your behalf. It's all part of the National Provincial service.

Everyone with a

National Provincial

cheque book gets service.

On stretching a leg

No one will deny the pleasure to be gained from sliding slightly down in one's chair and stretching one's legs 'way beneath the boardroom table during an interminably long conference. It's quite unnoticeable, and it somehow helps to bring a wandering mind to heel. At Heal's we make a boardroom table that should prove a boon to confirmed leg stretchers everywhere. Here you'll find no heavy supports. Just an eye-catching simplicity of design.

If you would like to see more examples of furniture for boardrooms and offices, please pay us a visit or have your secretary write for our leaflet "Furniture for Special Needs".

Telephone: MUSEum 1666.

Fear not, dear lady. A mod. kitch. always looks thus when it is bg. blt. One day soon, glue-pot, sawdust and long-suffering joiner gone, you will find that the architect was right after all: it will be a dream kitchen. Nowadays such dreams are made, to a large extent, of hardboard, a most workable building material that is seen—and taken for granted—in shelves, partitions and cupboards at home, the office and the factory. But this versatile board is only one of the things that Bowaters make. The full catalogue runs from delicate tissues to newsprint rolls $4\frac{1}{2}$ miles long. For the enjoyment of living, Bowaters provide paper for magazines and books, for wrapping sweets and biscuits. For the business of living, Bowaters provide packages for commerce and industry, even building material. Directly or indirectly all benefit from the diversified activities of the Bowater Organisation.

 The harvest of the forest is given many forms by **BOWATERS**

may, however, be endangered by the army. There are increasing signs that the army is satisfied neither with the slowness of the negotiations between General Franco and Don Juan—whom certain generals tend to prefer as a potential ruler to his son, the Infante Juan Carlos—nor with the efforts of the Falange to perpetuate its powers. Small groups of officers have formed discussion circles in such centres as Valencia, Seville, Valladolid and Barcelona, and these groups—over-hastily labelled “juntas”—are providing a natural nucleus for dissenting opinions. The army, moreover, is letting it be known that it considers itself as the legitimate guardian of tradition and national destiny. This complex and even dangerous situation will not necessarily disturb General Franco's equanimity. He is at his finest when playing off two hostile forces, be they the Axis and the allied powers or the army and the Falange.

Awakening in the AEU

MR WOODROW WYATT'S television lesson about elections in the Amalgamated Engineering Union seems to have been well learned. In the run-off for the union's presidency Mr W. J. Carron has beaten Mr Reg Birch, the communist who topped the poll in the first ballot, by 83,847 votes to 35,400. At the first ballot only 9 per cent of the membership voted; at the second ballot 12 per cent did—still a tiny turn-out by most standards, but, for AEU elections, a record. The extra 3 per cent were presumably those who woke up to the issues involved.

This may not be the last shock for the communists in the AEU. Mr Carron's decision to stand for the presidency created a vacancy on the executive council. The communist candidate for it is Mr H. Ulliyatt, who even in his own branch of Sheffield has won a majority of only 14 over Mr P. R. Hanley, a comparative stranger from Lincoln, who is the strongest non-communist candidate; and returns from some other branches in the district are showing a majority for Mr Hanley. Another vacancy on the executive, this time for the London division, has been caused by the decision of Mr Joe Scott, a prominent communist, to stand for general secretary. Mr Claude Berridge is the communist nominee, a strong candidate. But his non-communist opponent may yet break the tight grip that the communists have maintained over London branches of the AEU for almost twenty years. A short time ago the communists were fairly confident that, by a successful election of Mr Ulliyatt, they would secure an actual majority on the union's executive. Now it looks as if they might be about to lose one of the minority seats they already hold. Mr Scott does not seem likely to get the general secretaryship in compensation; his opponents for this office are Mr John Boyd and Mr Cecil Hallett, who is one of the union's two assistant general secretaries.

What the Press Council Can Do

IN the eyes of the public, the Press Council's sole function is to reproach some editor from time to time for lapses of taste in newsgathering and reporting. PEP, in its latest

broadsheet,* reminds press and readers alike that the council, as envisaged by the Royal Commission on the press and as is implied by its objects, has two other purposes to serve besides that of a tribunal: it was intended to be an institute and a trade association as well.

Whatever views may be taken about how efficient the council is as a tribunal, PEP is clearly right in saying that it has done virtually nothing about fulfilling its other functions. The broadsheet points out that the council has been silent about independent television, in spite of the direct participation by the press in the companies; nor did it comment on the newspaper strike last year. Of greater long-term importance, it has not concerned itself with the recruitment of journalists, although this was ranked by the Royal Commission with the formulation of high standards of professional conduct as the two outstanding problems for the council to solve.

With an expenditure restricted by its constitution to the derisory figure of £3,000 a year, the Press Council could obviously do very little about its non-tribunal purposes, even if it wanted to. But it is surprising that, its composition being what it is (eight editors, seven journalists and ten representatives of management), it has shown itself so zealous as a tribunal. When it has considered a newspaper at fault it has not hesitated to say so, just as it has not hesitated to uphold an editor when it has considered a complaint pompous and unjustified. Whether the inclusion of a lay member on the council, which the Royal Commission proposed and which the proprietorial organisations firmly opposed, would strengthen it is, PEP thinks, not

* Planning. Vol. XXII. No. 397. 2s. 6d.

Limited Liability

We cannot say that the Legislature now, or at any time, in making new regulations as to companies, with which it has occupied itself off and on for about a quarter of a century, has meant to place impediments in the way of the formation of companies to carry on business; but certainly the effect of subjecting them to heaps of cumbrous regulations to which private business cannot be subjected, places them in relation to it at a disadvantage. We shall be surprised if encouragement be really given by this act [establishing limited liability] to the formation of companies. The Legislature, from some old and, we believe, unfounded prejudice—for there is no reason why men should not be fully at liberty to carry on honest business of all kinds by means of convenient associations as by single hands—and many reasons why they should—may have endeavoured to preserve advantages to private traders as against companies; but certainly, under such complicated and often changed laws as ours, it is surprising that such associations have flourished at all in competition with tolerably free private enterprise. They must be very suitable to the circumstances of the age, or rather they must now be necessities of society, to succeed in spite of all the impediments sometimes, perhaps, designedly laid in their way by legislation since it began in 1826 to sanction means to promote their establishment. The superiority of private management, and the success of private enterprise, as general rules, are not doubted; and when associations, encumbered by minute legislation, flourish in spite of it, they must be very much needed.

The Economist

June 28, 1856

proven—at least, for the time being. There is something to be said for the suggestion in the broadsheet that, when the council has given enough decisions, it should publish a professional code of conduct embodying them. But in the last resort the effective maintenance of such a code depends on the quality of the men and women it is supposed to bind. If the council can ever give serious attention to the question of recruitment, it may, in the long run, find itself with less to do as a tribunal.

Germany Cuts Tariffs

THE announcement of unilateral tariff cuts by a major trading nation is a rare event, and the cuts approved by the West German Bundestag deserve a hearty welcome. Tariffs which brought in about 13 per cent of last year's customs revenue will be cut for a period of eighteen months, to encourage imports and press down prices. Making use of his vast foreign exchange reserves, Professor Erhard has thus once more taken as his main weapon against inflation liberal, expansive measures which will benefit world trade and, not least, the British exporter.

The tariff cuts, however, are a good deal less sweeping than the 30 per cent reduction which Professor Erhard proposed a few weeks ago. The farmers' lobby succeeded in mutilating his proposals within the Cabinet and thus depriving them of most of their effect in the most vital sector—the cost of food. Not for the first time Professor Erhard was forced to sit glumly through the debate, whilst Opposition speakers echoed the arguments he had put forward in the Cabinet and loudly supported his own original proposals. One other proposal of Professor Erhard's for meeting inflation has also disappeared, this time in the face of opposition

UK TERMS OF TRADE
1954 = 100

from industry. The investment allowances which permit producers to write off as much as three-fifths of the cost of new equipment against tax within three years, and which he wished to cut, are to remain in force: an immense stimulus to expansion. Some other useful measures are still proposed—incentives for saving, restrictions on hire purchase, and a valuable promise to cut state investment, other than in housing and defence. But in the course of the long discussions which have followed Dr Adenauer's attack on his Ministers last month, their programme has been a good deal watered down. And it is still not clear how much additional demand is to be created by tax reductions.

Nevertheless, recent weeks have given reassuring signs of German ability to meet inflation. There have been mild indications of an easing in demand, possibly the result of the tightening credit squeeze. Lately, too, it has become evident that a wide cross-section of opinion supports vigorous action to preserve the purchasing power of the mark. The press has almost unanimously defended the independence of the Bank deutscher Länder, which Dr Adenauer had seemed to attack, and a surprisingly large section of industry (as well as the traders and consumers) backs Professor Erhard's tariff cuts.

Wings Over Lhasa

THE Chinese have opened up regular air communication with Lhasa. Pictures of an airliner swooping past the famous Potala palace have brought home more effectively than any other recent evidence from Tibet the fact that the seclusion of this once mysterious and inaccessible country is a thing of the past. It has not been easy to develop this new air link. Not only has it been necessary to prepare and equip airfields with supplies brought great distances over mountain roads, but there have been the technical problems of taking off at high altitudes, since most of Tibet is more than 12,000 feet above sea level. But Peking's hold on Tibet will now be greatly strengthened, and the effects of this may soon be manifest; the Chinese will be less dependent on the co-operation of the lama hierarchy and may be expected to proceed to fresh measures of "liberation" with the aid of young Tibetans who have been to China for indoctrination.

Externally, too, the strengthening of Peking's control in Tibet may raise questions which have not hitherto been urgent. Long stretches of the frontier between Tibet and India, and between Tibet and Nepal, have never been demarcated. The members of a Himalayan climbing expedition who were arrested by Chinese frontier guards a few months ago were on ground which is regarded in Katmandu as a part of Nepal, but Nepalese views do not appear to have carried any weight with the Chinese. Such incidents are now likely to become more rather than less

frequent. Even though there may be a will for peaceful co-existence in Delhi, Katmandu and Peking alike, it is difficult for powers to respect one another's sovereignty if there is no agreement where those sovereignties begin or end. The Himalayas form a massive natural barrier between the two worlds now in contact in the heart of Asia, but they are not an exact frontier. The policies of both India and Nepal are apparently based on the principle of letting the no man's land stay as it is, but conditions are changing, and they might be wise to seek now an agreed border demarcation with China before incidents in the zone of unrecognised claims give rise to disputes that might prove dangerous and untractable.

Private New Town

SINCE the war fifteen new towns have been developed by public corporations. Richard Costain Limited, the big private building contractors, have recently produced the first scheme for a new town to be built primarily by private enterprise. The site is on the Thames estuary at Allhallows-on-Sea in Kent; the plan is to create by stages a commercial—and reasonably self-sufficient—town of about 25,000 people, following broadly upon the principles that have brought a fair measure of success to the public new towns round London. Allhallows will in fact have the services of the former general manager and of the architect-planner of Harlow. Their intention is to build the town in a series of neighbourhoods, which will eventually be linked to a new town centre, and to attract new industries to supplement the employment that is already available in the nearby British Petroleum oil refinery.

The experiment should be well worth watching. The great difference from Harlow or Crawley is that most of the houses at Allhallows will be unsubsidised and built for owner-occupiers. How far will the elegant security of Harlow-style architecture have to be changed to meet their tastes? And how many industrial workers will be willing to buy their own houses? The last question is crucial. If industries and workers are not attracted in sufficient numbers, then Allhallows is likely to be colonised—as it almost certainly would have been before the war—by London office-workers. This would destroy the proposed town's purpose—a purpose which, if faithfully implemented, deserves the support and co-operation of the local authorities and of Mr Sandys.

The Price of Enosis

THE "voice of the Fatherland" (Athens radio) excelled itself in a recent bizarre excursion into economics. "Field-Marshal Harding and his assistants have drawn up a plan for the economic destruction of the Greek Cypriots," it declared; and went on to list two main forms of repression—the £1,500,000 included in the budget to pay for the emergency (of which the Greeks, it said, would pay 80 per cent), and an alleged £240,000 worth of damage to Greek property done by Turkish rioters in the last three months. This, together with £60,000 of collective fines,

"represents £2,400,000 a year," the broadcaster declared, "or an increase of 34 per cent in individual taxation."

The arithmetic is certainly remarkable and the "taxation" can scarcely be called direct, but the lament for the economic plight of Cyprus does touch on the skirt of truth. Terror and the counter-measures against it have struck cruel blows at the economy of Cyprus. Retail trade stagnates; stocks are being reduced by shopkeepers who fear violence. Imports, except for the British forces, have been reduced to a trickle. But heavy military spending, far from crippling business, is the blood transfusion which is keeping Cyprus alive.

At the same time, the economic argument is about the most transparent which any advocate of enosis could put forward. True, Cyprus perhaps received less attention than other colonies until the emergency induced the British Government to put forward hastily its £38 million development programme. And the steady stream of emigrants to Britain (9,251 between 1952, and August, 1955) is as much a comment on Cypriot poverty as on the attractions of the "mother" (step-mother, to Greeks) country. But despite past neglect, enosis could scarcely be expected to bring economic benefits to Cyprus. Cyprus has none of the mass unemployment which causes such ugly poverty in Greece, nor such heavy defence costs. If enosis took place, Cyprus would have to carry some of these burdens, through higher taxation. The Cypriot peasant would also lose his small but significant tariff preference in the British market; the potential restaurateur his opportunity to emigrate to Soho. And the Cypriot merchant (though not the peasant) would probably have to borrow money at high Greek rates of interest (at least 12 per cent) instead of the 7 to 9 per cent which British-backed banks offer him today. Much of the Cypriot banking system, indeed, might be endangered, through flights of capital. These arguments do not confound convinced enotists; many are willing to pay the price. But if Cyprus did ever join with Greece, one strange economic implication would emerge. The British base, already the driving force of the island's economic life, would become more vital to it than ever. Fortunately, the Greek government seems aware of this.

Fiscal Master

TREASURY CONTROL.

By Samuel H. Beer.

Oxford University Press. 145 pages. 15s.

IN a modest compass Professor Beer has written an important and readable book. Hitherto no work has adequately described the immense changes in Treasury structure and outlook which have taken place since 1939 and which reflect the growth of the British government's responsibilities in the fiscal and economic fields. General studies have been unable to devote sufficient space to give an adequate account of the new arrangements, while Sir Edward Bridges's Stamp Lecture in 1950 was also inevitably limited in its scope. Besides, much has happened in the last five years. It is especially illuminating, too, to have a report by a sympathetic outsider, who is an American, on such a peculiarly British type of revolution as that in question. And it is especially appropriate at the present time, when a number of British overseas territories are looking about for a substitute for the traditional colonial form of budgetary control, as they move forward along the path to self-government. (Thus Kenya, following Southern Rhodesia, is just going over to the Treasury system.)

One of Mr Beer's most important contributions is his pertinacious attempt to unravel the nature of Treasury control. He sees, as so many outsiders fail to do, that while Parliament has given the Treasury vital duties, first of interpreting Government policy as it gradually matures over the year, and, secondly, of co-ordinating it within the possibilities of the nation's resources, Treasury control is never positive direction. If it ever goes beyond what can be achieved by bringing all interested parties into the discussion at all levels, a process which normally ends in a reasonable compromise, what "direction" occurs is inevitably negative; such and such a proposal is not consistent with existing commitments. It is this, of course, which earns for the Treasury the reputation of being "inverted Micawbers," ever waiting for something to turn down.

The most solid part of Mr Beer's book is the long chapter on financial co-ordination. In this, particularly important are the appraisal, first, of the nature of "prior approval," and, secondly, of the position of the accounting officer, "a major reform of the interwar years." Prior approval is shown to be not only essential to the effective co-ordination and balance of policy, but also an important contribution to flexibility. It enables the British executive to incur liabilities in advance of appropriation in

a way that is impossible under the American system. Indeed, the Treasury now obtains estimates of departmental plans two years ahead. Such flexibility is especially useful for the control of continuing projects, such as occur both in defence and development, whose very nature cuts right across annual accounting. There is another side to this, however, which Professor Beer perhaps brings out insufficiently: Parliament is faced less squarely with the total cost of a scheme (and hence of the cost of variations after it has been started) than under the American system. This is a point that has repeatedly worried the Select Committee on Estimates.

Professor Beer's analysis of the position of the head of a department in his capacity of accounting officer should go far to disabuse outside observers, especially in the United States, of the belief that accounting officers control their ministers, are themselves controlled by the Treasury, and that hence *de facto* the Treasury runs the country. The relation between the accounting officer and his minister is a subtle, and sometimes a delicate, one; but the accounting officer is the lynch pin of the whole system of control. In a country where representative government is in course of development the institution can also be of vital importance in the process of political education. Mr Beer makes it clear that a determined minister can bypass not only his accounting officer, but also Treasury co-ordination, by going straight to the Cabinet; but the Chancellor will probably insist on consulting the Treasury before action is taken, and, generally speaking, the Cabinet will call for a Treasury memorandum before placing a proposal on the agenda.

The succeeding chapter on economic co-ordination may arouse higher expectations than are justified; it is somewhat sketchy and unsatisfactory. This is perhaps inevitable, since it is not possible to do more than describe in broad terms a process of experimentation which is still going on. The account of British experiments and changes in the mechanism for the "formulation of general economic policy" (which outside the Treasury would probably be called planning) contains, however, one extremely important hint for countries now establishing statistical and economic departments. In the long run it is quite essential for these to be subordinated to the department that has the continuing responsibility for the co-ordination of expenditure and revenue in general. Fiscal policy cannot work if it has two masters.

The End of the Peace

DOCUMENTS ON GERMAN FOREIGN POLICY 1918-1945: Series D, Volume VI, *The Last Months of Peace*. Her Majesty's Stationery Office. 1,242 pages. 50s.

THIS volume of documents contains a great deal more, and more important, material than Adam Trott's comments upon a weekend at Clivedon or the revelation of leaks in Foreign Office security. It is indeed a volume of singular interest, covering the period from March 16 to August 8, 1939, about which we had already had the British and much of the Italian evidence. It is a volume for which all students of events leading up to the outbreak of the war had been waiting with impatience. Nor will they be disappointed.

Technically, this publication is of value in making it possible to see exactly what the Germans omitted, in their White Books, about their quarrel with Poland that precipitated the war. Here, too, we find much fuller evidence, of course from the German side only, than was provided in "Nazi-Soviet Relations," about the preparation of the Nazi-Soviet Pact.

Complementary to the conversations leading to the Russo-German rapprochement is the abortive attempt made by the western powers to achieve their own military understanding with Russia. About this Dirksen was able to inform Ribbentrop so fully that Ribbentrop pushed on his approaches to Moscow faster than he might otherwise have hazarded. Simultaneously the attempts to build up a triple German-Italian-Japanese alliance merged, thanks to the negative attitude of the Japanese, into the negotiations that reached their climax in an aggressive, military dual alliance between Germany and Italy—the Steel Pact signed in Berlin on May 22, 1939.

The volume opens on the day after Hitler's occupation of Prague. Although German-Polish conversations were at first stimulated by this sinister event, they soon came to a standstill in deference to popular sentiment in Poland, which sensed that Hitler was as much the Poles' enemy as that of the Czechs and that he intended their turn to come next. The reader is made aware of a background of nervous excitement in eastern Europe. Against this Mr Gafencu, Rumanian Foreign Minister, made the European tour which he long ago described in his "*Derniers Jours de l'Europe*." Now we find here the German minutes of the conversations he had with Hitler and Ribbentrop at his first port of call, Berlin. These records, and indeed many of the documents in this volume, give the reader a distastefully different impression of his attitude from that conveyed by his own account. But perhaps the Germans misunderstood or twisted his remarks, or perhaps his fear of Russia obscured his fear of Germany for, like most people at the time, he did not realise that Hitler and Stalin were already tentatively preparing to come to terms.

Finchden Manor

MR LYWARD'S ANSWER.

By Michael Burn.

Hamish Hamilton. 288 pages. 21s.

BEFORE Mr Burn wrote his book the existence of Finchden Manor was known to only a few, apart from the 250 or so boys who have lived there for varying periods over the last twenty-five years. It has now been placed well and truly on the map, for he has achieved the difficult aim he set himself—to write a full-scale account of the treatment there of maladjusted adolescents that is intensely interesting to the general reader.

Mr Burn lived at Finchden Manor himself for many months while he was gathering the material for his book, and being a journalist he has made skilled use of his experiences and observations. The reader will find himself forming a substantial picture of the staff (mostly ex-pupils themselves) and the boys and of the community's activities, including the highly unorthodox lessons. Curiously, however, the person who remains least real at the end of the book is Mr Lyward himself. One grasps the fact that he is an exceptional man, highly intuitive, with a wonderful gift for treating unhappy and distorted adolescents, many of whom come to him with records of violence and all of them with histories of conflict with authority in the shape of parents, school or the law. Mr Burn makes much of various clues to Mr Lyward's methods which he picked up from his conversations and writings: the boys' lives had been "usurped" by grown-ups; they needed a "respite" to recover their childhood and be "weaned" before they can start to become mature; treatment has to be "unfair," because what may suit one boy at one time will not be what another needs—a proposition so contrary to orthodox English doctrine that it is astonishing to learn how readily the Finchden boys accept it.

But these clues still seem to leave Mr Burn, and consequently his readers, guessing at the inner core of Mr Lyward's secret. Mr Burn nevertheless goes on trying, to the very end of his book, and his persistence—his determination to explore Mr Lyward's gift from every possible angle—tends to make his narrative somewhat repetitive. His experience at Finchden might have been even more fruitful had he accepted Mr Lyward's personality as defying analysis and obtained fuller accounts of some of the boys. Only one case is given in any detail, and even here the reader is still left wondering why, with a family history not all that bad as family histories go, young Alastair should have become such a problem boy. An attempt might, too, have been made to explain the failure of Flynn, a boy whom Mr Burn liked and whose final outburst he witnessed, to respond to Mr Lyward's methods.

For Mr Lyward's answer is not always the right one; or, rather, it does not always produce the desired results, though his successes far outnumber his

failures. Mr Burn records the failures honestly. But his uncritical acceptance of all he found at Finchden, and his wonderment at it, will exasperate some workers in this field who, for all their admiration for Mr Lyward, know that while his methods may be unique his vocation is not. Finchden Manor is outstandingly successful with boys of a particularly difficult age—the average is 17½—but possessing a relatively high intelligence—at least grammar school standard. But it is not the only place on the map where devoted and valuable work among the maladjusted is being undertaken.

The Changing Tycoon

THE BIG BUSINESS EXECUTIVE.

By Mabel Newcomer.

Columbia University Press. London: Cumberlege. 176 pages. 32s.

THE entrepreneurs and the capitalists depart; the professional administrators arrive. In place of the Vanderbilts and Goulds and Rockefellers, and the whole swashbuckling range of the business tycoons who featured in "The Hundred American Fortunes," and who led the vanguard of American development, there comes the college trained, career executive, graduating from level to level and department to department in the corporation hierarchy. Ambitious, power-seeking he may be—but only to find, in modern business, that when he has achieved his ambition, and takes control, the great corporation moves by momentum in predestinate grooves—that he is a motorman, not an emperor. Professor Newcomer, writing from Vassar, has little use, however, for impressions or descriptive social history; she is the scientist, pinning her subject to the board by statistics. She compares a representative sample of executives of 1900, 1925 and 1950 according to their identifiable attributes—social and racial origin, father's profession, education, age of starting work, stock ownership, even professed religion and so on; and she reduces the changes over fifty years to neat percentages. The result, however, simply confirms a general impression widely held, and valid in Britain as well as in America: managers are replacing business men, as private companies become production units in "the private sector."

Just how rapidly the old type of entrepreneur, the head of the family firm, is being superseded by the new type is shown with precision in this careful statistical study. The trend is roughly as follows. The American big business man is increasingly a "company officer," bred in the organisation he ends by leading; he tends to hold more outside directorships than he did in 1900 or 1925; he is less likely to have got his start because his father ran or owned the firm than in 1925 but more so than in 1900; he is a little less likely to have come from a wealthy or well-off family, though wealth still tells heavily in his favour; he is far more likely to have been to graduate school or college; he

is much less likely to have got where he is by creating the firm, much more likely to have been helped by his success in another firm, and most likely to have got where he is by working up in the firm. He is far less likely to have started work before he was 20 than in 1900; he is more likely to have been an administrator than an engineer, an engineer than a lawyer; he is most unlikely to have been an entrepreneur or capitalist as he would probably have been in 1900; he is more likely to have come from the production than the sales side. If he is a retiring vice-president, he has served about seven years and is 59 years old; he will retire at 67; he will have risen to a salary of between \$50,000 and \$100,000 though he has a big chance of more; he is probably an episcopalian or presbyterian and votes Republican.

These are the broad trends of a mass of detailed statistics, divided up by industries and sizes of firm, disclosing results sometimes surprising, often what one would expect—and the whole rounded off by a useful essay on the "professionalisation of business." It tells all that figures can; it is a surprise to realise that it really does not tell us what sort of a man the big business man is at all. The statistical mesh is too big to catch his soul—or even his psychology.

Adapting Diplomacy

FOREIGN POLICY AND THE DEMOCRATIC PROCESS.

By Max Beloff.

Johns Hopkins Press. London: Cumberlege. 134 pages. 15s.

THEORIES of diplomacy are under adaptation in the mid-twentieth century: adaptation to what? To the limitations of democratic government or to the changing relationships of nations to one another? The successive states of conflict, dominating the diplomatic history of the last twenty years, between the relatively free western world and two authoritarian systems tended for a time to focus attention on the advantages which a dictatorship is supposed to enjoy in diplomatic manoeuvre—ruthlessness, speed and immunity to public opinion, together with those advantages of secrecy and perseverance which Tocqueville recorded as long ago as 1835.

In his four lectures delivered at the Johns Hopkins University eighteen months ago, Mr Beloff pursues this by now familiar examination a stage further, to a point at which he shows it as "a curious illusion" to suppose that modern totalitarian governments do not suffer from the disabilities that hamper the diplomacy of democratic leaders. Absolute and democratic governments alike can only have the foreign policy for which they are prepared to pay. Each has exemplified in recent times, and sometimes in a glaring form, the faults classically attributed to the other: thus, the United States government has laid traps for itself by relying exclusively, in some vital matters, on the information

which its leaders wish to hear. Soviet diplomacy, Mr Beloff surmises, does not enjoy the advantage of the empiricism which the Russian rulers bring to their domestic problems: blinded by ideology, it mistakes the intentions of foreign countries and misjudges their capacities.

Mr Beloff is concerned primarily on this occasion with American foreign policy and its conduct. But his inquiry leads him to two questions of the most general bearing. What is to be the future form of national conflicts, and what their future weapons and techniques, when the nuclear weapons have removed (if they have removed) the sanction of total war? The question is posed, not answered; after indicating a vast field of uncertainty he turns aside to examine another development of today, the urge (or the pressure) towards supra-national communities: "Modern societies tend towards interdependence, while their institutions, particularly their representative institutions, are designed for self-sufficiency." From this simple principle he derives some lessons for American diplomacy in western Europe, which neglected to apply to foreign countries a rule that would be axiomatic in the United States: a major political change (such as is implied in European integration) cannot be produced by bargains between governments alone, but requires "effective popular support elicited by constitutional processes." These lectures are a valuable further stage in a debate to which no end is in sight.

Letters to the Editor

Kashmir and Goa

SIR—Miss M. da Silva presented persuasively the Portuguese case in her letter of June 16th. Her case would, however, be even more persuasive if she could give a satisfactory answer to the following questions:

1. How can she be so certain that the majority of Goans feel themselves to be Portuguese, since there is no freedom of self-expression in Goa any more than in the Portuguese "motherland" itself?

2. Is there any compelling reason why a Goan Catholic should want to remain under Portuguese rule, particularly in view of the fact that in India Christians enjoy the rights of full citizenship?

3. If Goans feel themselves as foreigners in the Indian Union, why are Goans settling in large numbers there?

According to Miss da Silva the Goan problem reveals Mr Nehru's two faces. But what about the two faces of Dr Salazar: one of the devoted Catholic trying to invoke the support of the "super-national" Church in the pursuit of his territorial claims; the other of the ultra-nationalist, brushing aside even the mildest criticism from Vatican sources warning against Portuguese intransigence over Goa?—Yours faithfully, London, N.W.1 GEORGE A. FLORIS

Cyprus Out of Date

SIR—Your interesting review of my book "Cyprus Challenge" in your issue of June 16th ends with the sentence: "But the cold fact is that, Greek emotionalism apart, Cyprus never at any time formed part of a Greek state." I shall not here recall the period when there were Greek city states in Cyprus, because I wish to draw attention especially to the rest of the sentence, which goes on (my italics):

and, despite Mr Arnold's Enotist friends, the culture of the Island today is not Hellenic but Byzantine.

Although poetic licence might permit us to say that the Byzantine empire began in York, it is difficult and rare for those reared west of Ravenna to realise the vastness, the duration and the continuing influence of an empire which has vanished. True, the Byzantine empire vanished almost exactly five hundred years ago, under the Ottoman onslaught; but it had lasted, with its final vicissitudes, more than one thousand years, long enough to leave some consequences. It was, surely, in the Byzantine empire, as it became less and less Roman and more and more Greek, that, until the final dissensions, Greeks (with their old city states long vanished), found their expression, their glory and their villainies. All that lasted a long time and

over a wide area. Today, Byzantine culture does not divide the Greeks, it unites them. Without it they might have perished completely.

Cyprus is today strewn with signs of that Byzantine culture, of which the Church, although even older, is the most conspicuous. To say that Cyprus is more Byzantine than Hellenic is debatable, may be an over-statement, may even be a misstatement. But the last thing it does is to confute Enosis. To point to the Byzantine culture in Cyprus is to point to one of the island's strongest links with all Greece and all Greeks.—Yours faithfully, Percy Arnold Westerham, Kent

Disquiet Over Kenya

SIR—The danger in Kenya is that, should the local electorate be unable to solve the vast problems immediately ahead, this must not only ruin a potentially prosperous country, but might well hole the British Commonwealth. The Kenya settler has done magnificent constructive work and should be able to look confidently into a future where his place as a farmer is assured. Unfortunately, pioneers and statesmen seldom flower on the same tree.

Two points need stressing. First, the late Lord Delamere's dream of a White Dominion has taken deep root. Lord Delamere is the only outstanding white personality in Kenya's history and such men leave their mark. Secondly, Kenya settlers have for many years received much unfair criticism from home which has had the effect of hardening their hearts.

Is it not time that the home government, realising its responsibility in opening up Kenya to white settlement, undertook the political education of the white electors? It does seem curious that, through the British Council, vast sums are spent in explaining Britain's ideals and practice to foreigners, whilst we stand superciliously watching our own people charging at a precipice without trying to turn them. Particularly as when we (for I belong to Kenya) go over the precipice, the already shifting ground on which Britain stands may well crack.—Yours faithfully, Philip S. Mumford Minehead

The New Oxford College

SIR—May I correct one small factual error in your paragraph of last week? It is St. Antony's College not Nuffield College that has a few undergraduates. This college was designed as, and will remain, purely post-graduate.—Yours faithfully, Max Beloff Nuffield College, Oxford

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Court in Politics

FROM A SPECIAL CORRESPONDENT

FOR the last four months the United States Supreme Court has been under a mounting barrage of attacks in Congress, in the press and among the public from those who feel strongly that the internal security of the United States is menaced by a pervasive domestic Communist conspiracy. Indeed it would appear from these attacks that the Republic has been saved only by the court's timely adjournment for its summer recess. Bitter and violent criticism is no new experience for the present Justices, who for the last two years have been living through the southern reaction to the decisions on Negro education. This censure continues, although there have been no important new decisions on race relations during the term which has just ended. But the court's more recent decisions on sedition, subversion and national security have given the southern critics of its rulings on desegregation in schools allies from all parts of the country.

On these subjects, in contrast to the school decision, the court has been unable solidly to present a unanimous front. It is inevitably concerned with major political issues and the major issue of the last few years has been how to reconcile the idea of freedom with the pressures of a cold war. While Justice Reed has continued this term to form the nucleus of a wing, which usually includes Justices Minton and Burton, that pays high regard to the convenience of government, the main surprise has been the alignment of the new Chief Justice, Mr Warren, with Justices Black, Douglas and, more often than not, Frankfurter, men who have always given a high value to individual freedom. The remaining two, Justices Clark and Harlan, have wavered uncertainly between the two wings, ensuring that first one and then the other prevailed in a series of split decisions.

The judgments which have brought down the new rain of abuse have been few in number and relatively unspectacular. On its first Monday of decision in April, the court reversed the conviction of Mr Steve Nelson, a Communist party organizer, under the Pennsylvania Sedition Act, a state counterpart of the federal Smith Act. The court found that the Pennsylvania Act was unconstitutional, not because it conflicted with the federal constitution itself, but because Congress, in approving the Smith Act, intended to prevent the states from punishing seditious activity against the federal government. This decision outlaws anti-sedition legislation on the statute books of forty-two states, but its effect is mitigated by three factors: prosecutions under state laws of this kind have been relatively

infrequent in recent years; prosecutions would still be in order under state laws punishing sedition against the states themselves; and Congress can and may shortly overturn the court's decision by a statute specifically authorising the states to share the responsibility—and the glory—of pursuing subversives.

A week after handing down the Nelson decision, the court ruled on the case of a professor in a municipal college in New York who had been dismissed automatically because he refused to answer a question put by a congressional committee, relating to his official conduct, on the constitutional ground that he would incriminate himself if he replied. The court's order for his reinstatement was roundly denounced on the floor of Congress as gross interference with the city's control over its employees. But what the court decided was only that the mere plea of self-incrimination was not sufficient justification for his dismissal; the city was required to examine his status independently before discharging him. Three weeks later, the court sent back to the Subversive Activities Control Board, for reconsideration, a proceeding against the Communist party under the Subversive Activities Control Act, which requires so-called Communist-action organisations to register with the board. The case was sent back because of doubts cast on the testimony of three witnesses before the board, including the notorious Mr Matusow, by revelations about their conduct as professional informers. Nevertheless, the court was criticised for temporising at a most critical time in world history. Finally, on its last decision day in June, the court limited the operation of the government's security programme to so-called "sensitive" jobs, but it did so again by construing the intention of Congress as expressed in a statute, and not by invoking constitutional prohibitions.

★

The court is always hesitant, and understandably so, to strike down a congressional enactment as unconstitutional. Since the great legal battle of the mid-thirties, when the entire legislative programme of the New Deal was subject to attack on constitutional grounds, the court has seldom exercised its ultimate power. This year, however, it did exercise that power, when it intervened in the dramatic case of an ex-serviceman who was seized by the military police from his job in a Pittsburgh steel foundry, and whisked off to Korea to stand trial by court martial for a murder he

bad allegedly committed while on military duty there. The court held that the applicable provisions of the code of military justice were inconsistent with the constitutional guarantees of trial by jury, but the decision, although drastic in form, was not in fact controversial, largely because of the heavy-handed policy pursued by the military.

To a large extent the court decides for itself which cases it will hear. On most questions there is no absolute right of appeal to the highest tribunal, and fewer than one in ten of the petitions filed with the court are permitted to be argued on their merits. In the regular weekly stint this term were ten tax cases, six of them construing the federal internal revenue code, and four dealing with the taxing powers of the states; thirteen cases involving other aspects of government regulation of business; fifteen labour cases, most of them interpreting the complicated federal machinery for regulating the collective bargaining process, and a miscellany on such matters as Indian rights, copyright, eminent domain, and the technicalities of federal judicial procedure.

In very few of these cases did the court break new ground. In the only major anti-trust case of the term, concerning the Du Pont Company's alleged control over the output of cellophane, a good deal of the ground was cut from under the positive anti-monopoly policy infused into the Sherman Act since the end of the war; the decision defined the market in which monopoly had to be proved to include not only that for cellophane itself but also for a variety of competing substitutes.

But by far the largest single group of cases (twenty-seven) deal with the guarantees afforded by the Bill of Rights, chiefly the procedural guarantees for persons accused of crime. In a number of these, the court rejected the claim of constitutional protection. Notably, it affirmed the constitutionality of the Immunity Act, which permits Congress to compel a witness to testify in exchange for a guarantee of immunity from prosecution, even where self-incrimination is involved. It found no constitutional, or statutory, objection to the use of confidential informers in certain phases of the deportation procedure where discretion has by statute been vested in the executive branch of the government. And it found no substantial constitutional question in the decision of the California Supreme Court that employment contracts with a Communist may be abrogated on grounds of public policy.

The court will face new challenges at the outset of its next term, one of them involving the question of whether mere membership in the Communist party may in itself constitute a crime. By next autumn, the clamour over recent decisions should have abated, and the Justices may feel more free to follow, if not to lead, in the slow reinvigoration of constitutional guarantees.

Winged Victory

THE foot which Mr Charles Wilson, the Secretary of Defence, once again put into his mouth last week kicked the Air Force straight into a higher income bracket. By calling the Senate's attempt to add about \$1 billion to the Air Force's appropriations for the coming fiscal year a "phony," Mr Wilson annoyed that easily-insulted group of legislators so much that the addition became a certainty.

The resentful Republicans virtually abandoned the attempt to hold the increase down to the \$500 million which the Administration had reluctantly agreed to accept. The Senate then approved a total defence appropriation of \$34.7 billion, \$1.1 billion more than had been voted by the House of Representatives and \$600 million more than the President had asked. Cuts elsewhere offset part of the extra \$960 million given to the Air Force which, if the Senate has its way, will now have about \$17 billion for the 1957 fiscal year, as much as the two other services put together.

The additional money is to be spent almost entirely on B-52 intercontinental bombers and the Air Force's victory is a tribute to the effectiveness of its spokesmen. For weeks they have been telling a committee headed by the Democratic Senator Symington that the United States is lagging dangerously behind the Soviet Union in the development of long-range aircraft capable of delivering hydrogen bombs. It will be interesting to see whether General Twining, the head of the Air Force, reinforces this argument when he returns from his present visit to Moscow. There is still a possibility that the House of Representatives may not accept the increase in funds voted by the Senate. In any case, although the President has said that he will not actually refuse the extra money, he cannot be forced to spend it. Indeed, he will not be able to spend it if it is true that, as the Administration claims, the output of B-52s is already being stepped up as fast as is practical.

The real objection to this week's move is not that additional funds are to be provided for the Air Force but that they are to be provided at the expense of America's allies. Before the week is out, the Senate is expected to cut the sum requested for foreign aid by almost exactly the same \$1.1 billion; since the House has already made a similar cut, there will be no chance of restoring the funds in conference between the two groups. Whether or not all this helps the defence of the United States, the Democrats are sure it will help them next November. Not only will they have gained prestige by punching holes in two of the programmes with which the President himself is most closely associated, but they will please the voters who are thought to be even more anxious to spend more on their own Air Force—largely as the result of Senator Symington's propaganda effort—than they are to reduce spending for the benefit of other countries.

Medicine Men

JUST now, millions of Americans would do rather well in an examination for a degree in gastro-enterology with special papers on terminal ileitis and regional enteritis. Each hour has been bringing a new interview with yet another eminent physician and detailed anatomical drawings illustrating President Eisenhower's internal affairs have been spread wide over newspaper pages and flashed on a million television screens. But although most Americans now realise that the President's health is uncertain, the latest Gallup poll suggests that 73 per cent of all potential voters still believe that Mr Eisenhower will stand for a second term and that 67 per cent wish him to do so. The categorical statement by outstanding medical experts that

Speed your defence against FIRE!

Give your premises the fastest fire protection in the world. Equip them throughout with Nu-Swift extinguishers.

All Nu-Swift extinguishers are pressure-charge-operated for instant action. There is no waiting for a chemical reaction to build up pressure.

High-speed recharging is another Nu-Swift feature. With all 2-gallon models, it takes as little as 30 seconds.

Nu-Swift extinguishers give your premises the world's most reliable fire protection too. The sealed pressure charges will not leak, evaporate or cause corrosion.

Nu-Swift are also the only extinguishers designed to a standard system. They are all used in the commonsense upright position, and there are distinctive colours for the models for different fire risks.

Nu-Swift put an end to time-wasting confusion—fight fires faster.

FOR FIRST-AID FIRE FIGHTING YOU CAN'T BEAT

Unhappy Chandler

Washington, D.C.

BY naming Mr Lawrence Wetherby as the Democratic candidate for the late Mr Barkley's seat in the Senate, the central committee of the Democratic party in Kentucky has served notice that it will offer no quarter to the Governor, Mr "Happy" Chandler. This, perhaps, is rough justice, since the central committee is controlled absolutely by Senator Earl Clements, whose career Governor Chandler cheerfully promised to ruin at the time of his own triumphant return last August. The Republicans, who, with the present knife-edge balance of power in the Senate, could do with every seat they can pick up, would feel happier about the state of this celebrated feud if their most redoubtable champion, Mr John Sherman Cooper, were in the field.

Although Kentucky is normally run by the Democrats, who invariably swamp the state legislature, there are two Republican strongholds: a part of the south-eastern mountain area which remained loyal to the Union in the Civil War and the city of Louisville, where a midwestern urban conservatism has impinged on the older conservatism of the South. A Republican candidate for state office normally polls between forty and forty-five per cent of the vote, but in some years factional fights among the Democrats can be exploited to secure temporary Republican successes. Mr Cooper has twice been elected to the Senate for short terms in this fashion. But no other Republican approaches his popularity throughout the state and his party's chances have been dimmed by his announcement that he will finish his job as Ambassador to India rather than try to regain the seat he lost to Mr Barkley in 1954.

It was doubtless with this in mind that Senator Clements and Mr Wetherby decided that they could afford the luxury of ignoring the last-minute overtures of the deflated Mr Chandler. The dramatic reversal of fortunes since last August, when Mr Chandler seemed to hold Kentucky in his hand after routing the "political machine" of "Clementine and Wetherbine," is thoroughly typical of his melodramatic career. In a state famous throughout history for its feuding, mud-slinging has now for the most part replaced sharp-shooting. By all consent Mr Chandler is the best mud-slinger of them all. Loud and gregarious, several times larger than life, he has had Kentucky in an uproar for the last twenty years. Despite recent economic advances there are few states with more disease, illiteracy and downright poverty. For dispirited folk in drab conditions a Chandler campaign is a splendid circus.

Mr Chandler's ambitions have been boundless and his pace hectic; a state Senator at thirty-two and Lieutenant Governor at thirty-three, he could not wait for the ordinary course of advancement. In 1935 he attacked the official Democratic candidate for Governor in the primary election and won. Then he tried to use the Governorship to break into the Senate at the expense of the incumbent Democratic Senator, Mr Barkley. After a brutal campaign, in which scandalous stratagems were used on both sides, Mr Chandler was badly beaten. Everyone thought he was finished, but a year later, in 1939, the other Democratic Senator died and Governor Chandler appointed himself to fill the vacancy.

Once in Washington, Mr Chandler's thoughts turned to

the recurrence of ileitis "is distressingly high" has been met with equally categorical denials from the bevy of doctors hovering around the President's bedside. The whole spectacle of physicians issuing contradictory statements in a highly political context is lamentable, but it seems to have left the average voter unmoved.

The Administration and the Republican organisation, moreover, are doing a brilliant sleight of hand to convince all and sundry that Mr Eisenhower's "bellyache" is over. Vice President Nixon called on the President and revealed coyly that he had discussed with him a national conference on the Physical Fitness of American Youth. Mr Eisenhower also signed a number of Bills, telephoned to Mr Dulles and accepted one resignation. But above all, he conferred with his chief Assistant, Mr Sherman Adams, about arrangements for the Republican national convention

"I Feel Fine, Doc. I Just Want an Analysis of the Political Situation"

which will open in San Francisco on August 20th. This, more than anything else, was interpreted as a strong sign that Mr Eisenhower had made up his mind to run again. Even though the President himself has said nothing whatever, Mr Leonard Hall, chairman of the party, does not admit to "the slightest doubt" that the names of Mr Eisenhower and Mr Nixon will once again stand on the ballot.

Less partial observers are not so sure. The President has had to put off the vital talks with Mr Nehru scheduled to begin on July 7th; on the other hand his fiesta with the heads of other American republics in Panama has only been postponed to July 21st. But according to his press secretary, the President has been reading the papers. These informed him that insurance firms will grant life insurance to victims of a heart attack followed by ileitis only under exceptional circumstances. This is a fact which Mr Eisenhower may be pondering over more seriously than is Mr Hall.

the Vice-Presidency. Although he had been the chief amateur critic of Mr Roosevelt's war strategy in the Senate, he convinced himself in 1944 that he was the inevitable running mate for the President. His mortification at being passed over for Mr Truman was intense and, being bored with the Senate, he accepted as a consolation prize an invitation to become Commissioner of Baseball, a job involving the supervision of the national sport and the eating of many banquets.

By all the rules Mr Chandler's political career was then over. While he was running baseball Mr Clements, first as Senator and then as Governor, and his chief lieutenant, Mr Wetherby, who succeeded him as Governor, were running the state. Their competent, rather unexciting regime would have continued indefinitely but for the owners of the professional baseball teams, who tossed Mr Chandler out of his commissionership and back into Kentucky politics.

Last year he repeated his old tactics by swamping in the primary election the colourless judge whom the party leaders had put up for the Governorship. Unfortunately for his reffloated reputation, Mr Chandler had vowed to bring about the defeat of Senator Clements, who was due to seek renomination this year for a further term. More imprudently still, Mr Chandler had committed himself to Mr Joseph Bates, a disgruntled former Congressman, as the instrument of his revenge. Last month Mr Chandler struck by proxy and failed to kill. Either because Mr Bates lacked the necessary magic or because the Governor's own lustre had been tarnished by the need to ask for fresh taxes, Senator Clements won renomination by a handsome margin.

★

Governor Chandler was therefore not well placed when Senator Barkley's death ensured that both Senate seats would be at stake in November. As Governor he had the right to name a replacement until election time but, since it was too late to hold a primary election, the selection of a Democratic candidate for November fell to the central committee, which is dominated by Senator Clements. Mr Chandler's only hope of saving face was to propose that, in the name of party unity, he appoint and the committee endorse the same person, who would thus gain a little extra seniority in the Senate.

With a flash of the old optimism Mr Chandler last week appointed his own campaign manager, Mr Leary, apparently under the impression that the committee might accept him. Next day the committee brought him down to earth by unanimously nominating his old enemy, Mr Wetherby, whom he had lambasted from one end of the state to the other. Mr Leary returned the "empty honour" of being a Senator for six months to Mr Chandler, who passed it on to another of his followers, Mr Humphrey. In this bitter frame of mind the two sides are now frantically lining up support for the party in the national convention in Chicago and will also name a new central committee to run the state party during the next four years.

For Mr Chandler this fight is crucial. He is convinced that if he goes to Chicago at the head of a delegation loyal to him he will stand an excellent chance of the nomination for the Presidency in the event of a deadlock. This is a view shared by no one else. But, even apart from this fantasy, control of the party machinery is a serious enough

stake. For all the setbacks to his prestige, the Governor's strength among the party workers in the counties should not be underestimated, for his office enjoys substantial powers of patronage.

However much they hate him, the leaders might be unwise to handle Governor Chandler too roughly. The Republicans have named one fairly strong candidate to the Senate, Mr Thruston Morton, a former member of Congress and recently an Assistant Secretary of State, and they are waiting before naming the other until the Democratic state convention is over. If this turns into a Donnybrook it could conceivably be a Republican year in Kentucky, even with Mr Cooper away in India.

Motorists' Promised Land

BY the end of this week President Eisenhower is expected to have signed the Bill to give the United States a national system of superhighways fit for the age of the automobile, with all the savings in time, money, temper and lives that this implies. By 1969 the motorist should have a wide choice of free coast to coast and north to south express highways linking all the major cities. With the minimum of traffic lights and from four to eight lanes for cars, these will provide the maximum in speed and safety. The federal government, which up to the present has only matched the spending of the states on roads, will provide \$25 billion, 90 per cent of the \$27.7 billion needed for the new interstate system; it will also step up its contributions toward subsidiary roads. The total spending authorised by the Bill is \$32.8 billion over the next thirteen years. In fact, because the federal contributions toward interstate roads cover only those for the first three years, the final figure is not likely to be very different from the \$52 billion originally proposed by the House.

This creates, as Senators exultantly noted, "the largest public works project in the history of the world"—one many times more costly than any of the New Deal schemes. The prospect of increased federal spending on roads already has helped to lift the estimates for construction this year to a record level, despite the fall in home-building. If harder times lie ahead, it might provide a substantial cushion for the economy. Moreover, Americans take pride in the insistence of Congress that new taxes on road users, estimated to bring in \$14.8 billion by 1972, should accompany the spending authorisation. This display of financial responsibility, so commendable in an election year, may well have been carried too far, with the adoption of a Treasury-sponsored provision which limits disbursements in any one year to the amount of money in the highway trust fund in which the revenues from both old and new taxes on motorists are to be segregated. Because the new taxes are to be collected over sixteen years, while the plan is to complete the interstate system in thirteen, deficits are likely during the nineteen-sixties and may apply an unwelcome brake to the scheme. However, this provision, like the formula for allocating funds among the states, which inevitably causes heartburning, may be subject to alteration later on.

From A to V—from Argentina, round the world and back again to Venezuela, wherever trade flourishes, you will find a branch of the First National City Bank.

The extensive organization of the First National City Bank offers an important service based on a network of sixty-six overseas branches, offices and affiliates covering the whole globe. Completing the system, and ensuring up-to-the-minute news of world market conditions, are banking correspondents in every major centre of commerce—three thousand five hundred of them.

The experience and resources of such an organization are clearly invaluable to the businessman with foreign interests. Wherever your interests lie, it will be very well worth while consulting our London offices. You will find our staff experienced and most anxious to help.

C.P.V. and the British exporter

WHEN we talk about the C.P.V. World Organisation, we mean just that; for the maps at our London headquarters are flagged in unexpected, as well as in obvious, parts of the globe.

In Fiji, for instance, it is perfume that C.P.V. advertisements are selling: in Istanbul—sewing threads and air services; in the great native markets of Africa and Malaya—a host of things, from toothpaste to silver polish. There is hardly an overseas country where we are not working, with our own on-the-spot organisation or an associate, to market and advertise the varied products of our British clients.

To market them, we say. For though C.P.V. advertising weapons are tactically powerful, it is marketing strategy which dictates their use. We do not regard export marketing as a hit-or-miss affair—a casual matter of sending translated advertisements through the post, or leaving things to the man-on-the-spot. We believe it is a serious business. And we know a good deal about it; as our clients, and their sales, will testify.

To help the British exporter to market his products in almost any part of the world; indeed, to advise him whether, where and when he should market them at all; that is one of the chief purposes for which C.P.V. exist. Can we help you?

Third Party Liabilities

Washington, D.C.

IN a round robin letter to southerners in Congress, Governor Bell Timmerman, of South Carolina, has proposed that Democratic state conventions in the South should "stand in recess" until after the national convention has picked the party's presidential candidate and drafted the platform on which it will go to the country. This was precisely the procedure that was followed when the Dixiecrats bolted from the Democratic party and ran their own presidential candidate in 1948. Recipients of Mr Timmerman's letter could, therefore, be forgiven for thinking that what he had in mind was the formation of a third party. All the Governor has had for his pains, however, is an immediate and hostile response from Senator Kerr Scott, of North Carolina, followed by a magisterial rebuke from Senator George, of Georgia.

Although the South deeply resents the attitude of northern liberals on the whole question of race relations, disloyalty to the national Democratic party has never been popular for long anywhere outside South Carolina. In the past, such disloyalty has taken two forms. In 1948 there was the third party, the "Dixiecrats"; in 1952 several leading Democrats openly backed Mr Eisenhower. But this year in Alabama, the only state which kept Mr Truman's name completely off the ballot in 1948, all candidates for delegate to the Democratic national convention had to take a pledge affirming that they would abide by its decisions. Moreover, in Florida and Mississippi, two former Dixiecrat Governors—one of them the organiser of the Dixiecrat convention in 1948 and its vice-presidential candidate—sought re-election and were utterly defeated.

★

Of President Eisenhower's three leading Democratic supporters in the South in 1952, only Mr Byrnes, of South Carolina, now retains any influence; though in retirement, he acts through his handpicked successor, Governor Timmerman. Mr Shivers, the Governor of Texas, has lost control of the party machinery and of the Texas delegation to the loyalists. Mr Kennon, the Governor of Louisiana, tried to determine his successor this year, but his candidate ran a bad third to Mr Earl Long, brother to the late Huey Long; Mr Long is completely loyal to the party and is in many respects a liberal.

One of the strongest reasons why southern Democrats remain loyal to the national party is that little would be accomplished by disloyalty. The historical dream of a third party is to deny an absolute majority of electoral votes to any presidential candidate, so that the presidential election would be transferred to the House of Representatives; a third party could then hope to hold the balance and exact its own terms. But most people expect that (unless, of course, he has to withdraw) President Eisenhower will have a large majority anyway this year, so there does not seem much point in further weakening the Democratic vote.

Moreover, as Senators George and Scott quite plainly inferred, the South obtains great practical advantages in terms of government contracts and patronage when the Democrats are in office. Finally, since the chairmanships of congressional committees are allotted by length of service,

and since southern Democrats tend to stay in office once they have been elected, they enjoy virtual veto power over unwelcome legislation when their party has a majority in Congress. This advantage would be forfeited by disloyalty or continued threats of a walk-out. For as southerners in Congress are well aware, liberal Democrats are itching for an excuse to get rid of some of their more reactionary leaders, and thus to clarify the distinction between Democrats and Republicans.

Red List for Blackmail

THE massive "Report on Blacklisting," issued this week by the Fund for the Republic, sheds a lurid light on the inroads which McCarthyism made into the American entertainments industry. A world is revealed that was a mixture of Alice in Wonderland and the Inquisition. There, former members of the Federal Bureau of Investigation, a concern called Aware Incorporated, anonymous "talent consultants" and a host of informers and private citizens took it upon themselves to determine whether an actor, a director, a dancer, a musician or a film star had the right to earn his or her living. The criterion was whether or not the individual in question had ever been tainted—in however remote and insubstantial a way—by the brush of Communism or "subversion." Through publications with such melodramatic titles as *Red Channels*, *Counter-Attack* and "File 13," self-appointed guardians of the American way of life stigmatised several hundred directors and artists with frequently unfounded allegations of disloyalty. And what is worse—the corporations which finance television and radio programmes meekly submitted to this blackmail.

As the Fund for the Republic has shown in its careful study, blackmail is what it was: for a suitable fee, an unfortunate actor or ballerina could often get "clearance" papers from one of the accusers and thus obtain re-employment. Only the theatres on Broadway had the courage to hire people on their merits. But the film industry was particularly vulnerable to witch-hunting because actors, producers and script writers—many of them refugees from Germany—were active anti-fascists in the nineteen-thirties and because many of them continued to display sympathy for the Soviet Union during the war. Unquestionably there were Communists in Hollywood; between 1951 and 1954 congressional investigators named 324 persons as possible subversives and of these 212 were active in the film industry. But as "Report on Blacklisting" shows, their influence on the content of films was negligible and, as Mr Ustinov would put it, most of them merely sent a food parcel to the wrong side in Spain.

As the Fund for the Republic would be the first to admit, matters have improved during the past year or so and it is no longer necessary to be a full fledged "fighter against Communism" in order to be allowed to sing a commercial. Moreover, the radicals are fighting back and last week one of them captured the very citadel of Americanism: while being questioned by the Congressional Committee on Un-American Activities, Mr Arthur Miller, the well-known playwright, admitted that in the past he had "supported" a number of dubious causes. But he then announced that in the future he would help to support Miss Marilyn Monroe.

OUR SHOWROOMS FOR IDEAS ON BUSINESS FURNISHING

The World Overseas

Jugoslavia Rides High

FROM OUR SPECIAL CORRESPONDENT IN BELGRADE

THE marble halls and crimson carpets in the offices of the Communist central committee of Yugoslavia do not provide a particularly suitable setting for the huge murals of bloody revolutionary struggles on the walls; but they do justice to the ebullient self-confidence that Yugoslavia's rulers enjoy today. Among many ordinary people, however, President Tito's visit to Russia has provoked quite opposite feelings. Last year they feared the consequences of the Russian visit to Belgrade, but fear tended to be driven out by other emotions—surprise, gratification, and amusement at the clownish performance of the Russian visitors. Today, the formal resumption of party relations between the Soviet and Yugoslav communists has revived apprehension. Although it would be difficult for the Yugoslavs to turn the clock back when they are urging everyone else to turn it forward, these fears are understandable.

But, for the men at the top, this is their hour of triumph, however much the West may reproach them with falling for the Soviet line on Germany, and however much they may privately suspect that the Russians are trying to lead them further than they are prepared to go. Marshal Tito's tour of Russia has proved even more triumphant than was expected—and the expectations were not low. The Russians have spelled out in detail their admission of last year that there are different roads to socialism. They have also accepted Yugoslav views on how inter-party relationships should be regulated. These are to be equal, frank, allowing full freedom of action, and "accessible to world public opinion"; in other words no more one-sided anathemas are to be concocted behind closed doors as in 1949.

Moreover, by implication the Russians concede that they, too, may have something to learn from Yugoslav experience. To the Yugoslav communists this is obvious. The Russians may have torn up their misleading Stalinist textbooks and gone back to the Leninist primer; but Lenin wrote nearly fifty years ago, and although he remains a fundamental source of communist thinking he is out of date. Yugoslav communists believe that they are successfully adapting him to modern conditions, and that they can teach the Russians—and the Czechs, the Poles and the rest—a thing or two about this. They believe that a process of change has started in Russia. It has not yet gone far enough, but it cannot now be reversed, and they feel a crusading urge to point the way ahead. President Tito has lost no time in inaugurating close contacts with the east European communists. During his visit to Bucharest on his way home, the Yugoslav and Rumanian parties agreed to establish "comradely co-operation"; President Tito defined this as "mutual, moral,

political and cultural, as well as material, assistance." And on Wednesday, when he reached Belgrade, he administered a rap over the knuckles to those east European leaders who fear that their prestige may suffer from a *rapprochement*.

The missionary fervour of the Yugoslav communists is turned inward towards the communist world. With the rest of the world they simply want to keep on good terms. It is significant that Mr Khrushchev's strictures in the Dynamo Stadium at Moscow on the nature of the West's friendship for Yugoslavia were not published or broadcast here; and that the joint communiqué on party relationships nowhere mentions "the socialist camp." The Yugoslavs have not abandoned their dislike of blocs—even though they owe their singular position largely to the existence of two rival blocs. They are developing far-reaching, and perhaps far-fetched, ideas about co-operation with any and every party that is genuinely working to improve the lot of the masses. In India, for example, they put their money on the Congress party, not on the ineffective socialists or the communists.

They are still ready to admit the dangers of tying their economy too closely to the Soviet camp, although less so than six months ago. But the Soviet bloc is providing cheap long-term credits, and sending essential raw materials in return for non-essential Yugoslav exports which are hard to market elsewhere. The Yugoslavs hope, however, that these exchanges will not go beyond the "normal" level—whatever that may be—and they would like trade to be more multilateral and currencies more convertible.

They still mean what they say about friendship with the West; but they do not seem to realise that it is not enough to be convinced of the purity of their own intentions. The Russians clearly hope to use the Yugoslavs to further their policy of infiltration among democratic socialist parties. The Yugoslavs are convinced that even though they do not pay the Russian piper they can call their own tune. But can they really dance safely on their tight-rope?

When President Tito got back to Belgrade on Wednesday night and addressed the crowds at the station, his words conveyed as much confidence as his brisk bearing and his elegant uniform. But they were obviously directed as much to the West as to his own people, and meant to reassure it about his intentions and the consequences of his policies. He will find it easier to be reassuring about the first than about the second. But it is significant that he should take the trouble to try as soon as he sets foot in his own country again. Perhaps, after all, the Yugoslavs have not yet become completely dizzy with success.

Ben-Gurion's Free Hand

FROM OUR CORRESPONDENT IN TEL AVIV

THE difficult security position demands complete harmony between the ministries of defence and of foreign affairs. . . . This time this harmony was lacking." These two short sentences from the long speech delivered by Mr Ben-Gurion in the Knesset are the key to Israel's recent cabinet reshuffle. They reveal why so much pressure was brought to bear on Mr Sharett to leave an office which he had long held with distinction.

By "complete harmony" Mr Ben-Gurion means freedom from interference by cabinet colleagues. Although, as was explained in *The Economist* last week, he had never lately been at variance with Mr Sharett on the main lines of foreign policy, it is an open secret that he had more than once been prevented from launching schemes of "active defence" by a cabinet majority centred on the foreign minister. By installing Mrs Golda Myerson in Mr Sharett's place, Mr Ben-Gurion has secured complete freedom of action, for Mrs Myerson has obviously been selected mainly for her loyalty to the prime minister.

Lack of the wanted "harmony between the ministries of defence and of foreign affairs" was forcefully demonstrated last summer, when Mr Sharett was in Washington desperately trying to convince the State Department of the need to offset Soviet bloc arms shipments to the Arabs by supplying Israel with adequate defence equipment. At this very moment, Mr Ben-Gurion ordered the spectacular raid on Syrian gun positions on the eastern shores of Lake Tiberias. If his aim was to assure the fishermen on the lake of a quiet fishing season, he succeeded. But he spiked the guns not only of the Syrians but of Mr Sharett, and furnished an excuse for inaction to all Americans who were loth to ship arms to Israel.

If Mr Sharett had then resigned, he would probably have had the support both of a majority in the coalition and of a wide public, for, momentarily, consternation about the startling action on the lake was widespread. But he preferred to remain loyal to cabinet and party and not to quarrel openly. Mr Ben-Gurion suffers few such qualms. He bided his time and turned Mr Sharett out when he thought the moment had come.

He has gained a personal victory. He won it first in the conclave of his own party, Mapai, where a large number of Mr Sharett's followers abstained from voting when the issue was decided. He then won in the cabinet, where he refused to take his colleagues into his confidence as to why Mr Sharett must go. Finally, he won in the Knesset, where he kept the members guessing as to his intentions, and secured a comfortable majority for the cabinet reshuffle. With the help of the "law of transition" which regulates cabinet changes, he was able to avoid the resignation of the cabinet as a body. He was the strongest man in the government even before he gained his complete control of the foreign ministry, and has played himself into a position in which he can give commands without seeking advice.

The questions every thoughtful Israeli is asking today are why Mr Ben-Gurion needs this free hand now, and how he means to use it? Thoughts turn first to the ever-

present problem of frontier defence. With conditions in Jordan fluid after General Glubb's dismissal, and discipline in the Arab Legion deteriorating, the danger of a flare-up is obvious. Even the lull in the guerilla warfare on the Egyptian front (which is Mr Hammarskjöld's main achievement and is here rated a blessing) is thought to be fragile. Was Mr Ben-Gurion's move made in order to be able to strike a more "activist" note in repelling infiltration? Or is there more to it? Eyes are also turning to the few kilometres in the north where Israel is growing impatient about continued stoppage of work on its Jordan river project—a situation described in an immediately following article. If Mr Ben-Gurion wants to be able to give the green light at this point, he can be sure of fairly broad support; for completion of the project spells big progress in agricultural development, and this has an almost magic appeal in Israel.

The way in which these two issues—frontier defence and the completion of the Jordan channel—are handled may well be decisive at a juncture when things look quiet but are nevertheless so delicately poised that the application of one ounce too much pressure might destroy the balance altogether. Mr Ben-Gurion has gained freedom to apply half-ounces as and where he thinks best. It is significant that he recently told a foreign correspondent that he found the need for constant preparedness "invigorating." He thrives on states of tension.

Speculation as to what course he has in mind centres on these local issues because nobody sees any room for wider political manoeuvre. Israel could not turn exclusively to the East even if it wanted to. Yet Mr Ben-Gurion has more than once proved his ability to spring surprises on the public. There are even people who believe that he acted because he is better able than Mr Sharett to steer a course of restraint, since he can afford to be unpopular.

Enigmas in Israel—II

Timing the Water Plan

FROM A CORRESPONDENT LATELY IN ISRAEL

IT is two and a half years since Israel undertook to stop work on its scheme for diverting half the flow of the Jordan over the Galilean hills and south through the coastal plain into the Negev desert. That undertaking was never intended to be permanent. It was given, in the first place, because the Jordan problem was not immediate. Israel had, at the time, other unexploited sources of water, particularly the Yarkon and the Kishon rivers, which would enable it to carry on with agricultural expansion for about seven years. It was given, secondly, because the United States was toying with the idea of financing a scheme for "the unified development of the water resources of the Jordan valley region"—an idea personified by Mr Eric Johnston, who has paid four visits to the Middle East and begotten three plans since 1953.

For the Israelis, a scheme that realised their prime objective—Jordan water for the Negev—within an international framework, had the political advantage of being a step towards recognition by the Arab states, the physical advantage of being more efficient, and the financial advantage

of being subsidised by America. Therefore Israel waited. It had, at that stage, constructed part of the diversionary canal, including two of the three kilometres that run through the demilitarised zone on the Syrian frontier. From the autumn of 1953 until the summer of 1954, no work was done on any part of the Israeli project. Thereafter work continued on parts of the canal south of the demilitarised zone, on the smallest of the tunnels to take the water through the hills, and on one or two local schemes. But over the last three years not more than £3 million has been spent on the main Jordan project. Thus, though the United Nations assumed control only over the demilitarised zone, the Israelis in fact went slow on the whole project—because Mr Johnston asked them to and because it seemed rash to invest in something that might never come off.

Nevertheless, they now propose to start investing,

although Mr Johnston still wants them to delay and the Syrians say, with more precision than before, that they will fire the moment the Israelis start digging in the neutral zone. For the year 1956-57, the Israeli development budget provides £10 million for the Jordan-Negev scheme. The estimates specify that this is to be spent on: (a) completing the section of the canal that will run from the southern end of the zone to a terminal in the hills, already built; (b) starting on the power station that will pump the water uphill and out of its natural basin; (c) constructing the two main tunnels through which the water will pass from a hilltop reservoir into the coastal plain; (d) building a factory to

produce the 108-in. pipes; and (e) cutting the one kilometre inside the neutral zone. For the record, therefore, the Israelis have decided to delay no longer. But they have probably not yet decided the two things that matter: whether they will turn their excavators north into the disputed kilometre; and whether they will part company altogether from Mr Johnston.

The third and last Johnston plan, accepted last summer by Syria, Lebanon, Jordan and Israel at the technical level, but only by Israel at the political level, would have allowed the Israelis to take 40 per cent of the Jordan waters (400 million cubic metres a year) and to use it wherever they chose. Thus the Israelis agreed to less water than they originally claimed, while Mr Johnston (and, in theory but not in practice, the Arab states) conceded the principle,

so vital to Israel, that the water could be taken out of the Jordan basin. (An American survey had shown how little irrigation the soil in the Jordanian sector could support.)

Thus the main construction works which the Israelis contemplate will in fact be necessary whether they operate within the third Johnston plan or outside it; and it is hard to tell which they intend to do. They insist that they have no intention of prejudicing the Johnston plan. On the other hand, their latest "Master Plan" for water (dated December 1955) is ambiguous. Lip service is paid to Mr Johnston; but, if there is to be no international supervision of water withdrawals, there would seem to be nothing to stop the Israelis diverting into their system all the water they can lay their hands on when the pipelines are complete in 1965.

The answer is that Israel could, and probably would, fall in with the third Johnston plan at any point during the next few years; but if no agreement is reached, it could revert to something very like its pre-Johnston scheme without much modification to the construction. It will not, however, be able to implement either scheme unless the two ends of the diversionary canal can be joined in the demilitarised zone. To prevent this is the purpose of the Syrian veto. Will the Israelis defy it? Mr Ben-Gurion refused to give Mr Hammarskjöld a promise not to force the issue. But Mr Hammarskjöld is one thing; western powers, bearing arms, might be another. Israel will not, after all, need that one kilometre immediately. It needs arms and diplomatic support today.

In the long run, however, Israel has to face the fact that all available water, other than Jordan water, will be fully exploited by 1960, and that this will still leave about half the northern Negev unirrigated. Responsible economists say that imports and exports must be approaching balance within the next seven years, when German reparations will be exhausted and American aid speculative. Even on paper, this will only be possible if every acre of the northern Negev is being intensively cultivated by that time. No one in Israel now believes that the southern Negev can be made to blossom like a rose; but they do believe that, with selective cultivation of the northern Negev, Israel could feed a population of 2½ millions by 1965 and produce cotton for an expanding textile industry. As one Israeli remarked: "The idea of reclaiming land in the south is the only guarantee against the idea of expansion in the east."

Indonesian Outlook

FROM A CORRESPONDENT IN JAKARTA

INDONESIA'S first elected government seems to be settling in for a long innings, although it unites political parties which have been wrangling together for more than three years. Pessimists among Indonesian politicians—and many of them have an inclination to pessimism as far as home politics are concerned—thought it barely possible that the Nationalists and the moderate Islamic Masjumi could work together after all that the leaders of both parties had said and done to harm each other's prestige.

It would be an overstatement to say that it is all roses

and raptures among the government parties, but at least they are working harmoniously together and are united in thinking that their first task is to settle Indonesia's relations with the Netherlands. Little, however, has been done so far. A state commission, headed by the finance minister, has been studying the economic and financial consequences of Indonesia's abrogation of the Dutch-Indonesian Union; but no further action can be expected until the Dutch government has been reformed after the recent elections and has settled down again.

Back to 1945

Dutch business interests still control important parts of the country's economy and its communications system. The Indonesian rupiah is still more or less tied to the Dutch guilder; and the larger part of Indonesian exports comes from Dutch-owned plantations. Many prominent Dutch businessmen were at first relieved to hear that Indonesia's special ties with Holland had been abrogated. They felt that these ties had hardly any value in practice but caused the Dutch in Indonesia to be stigmatised as the cause of all the young republic's difficulties. They were satisfied by Indonesian assurances that Dutch business would be treated on an equal footing with other foreign capital. Lately, however, they have been watching with growing concern the further deterioration of the relations between the two governments, which have now reached a very low ebb. A few weeks ago the Dutch government at long last decided to accept an Indonesian offer, made last March, to exchange ambassadors who would replace the high commissioners appointed under the annulled Dutch-Indonesian Union; but Indonesia icily announced that the establishment of a Dutch embassy was "inopportune" for the time being.

If an increasing number of politicians had their way, Dutch-Indonesian diplomatic relations would remain in the air until the Dutch changed their attitude towards West New Guinea. The struggle to obtain possession of West Irian—as the Indonesians call the territory—is the second point in the government's programme. It maintains that with the abrogation of the 1949 agreements the Charter of the transfer of sovereignty to Indonesia is no longer valid, and that, in the words of a high-ranking Indonesian official, "We are back now to the situation which prevailed after the Proclamation of Independence in August, 1945. This proclamation concerned the whole of the Dutch Indies, including West New Guinea, which was excluded from the transfer of sovereignty." Now that it finds itself, with some surprise, being wooed by both East and West, and strengthened by the support of the Afro-Asian governments, which met at Bandoeng last year as its guests, Indonesia will undoubtedly press its claim on New Guinea with more self-confidence than ever.

Indonesia's first elected government was born under a lucky star. For years Soviet Russia exported nothing but pictures of Stalin to Indonesia; but now it is trying to make friends by offering economic aid and by inviting the Indonesian President and a parliamentary mission to visit Moscow. The offer of aid was made a few weeks after Indonesia signed an agreement with the United States on the purchase of surplus commodities. The country needs money—it has embarked on a five-year reconstruction plan—and the government has already repeatedly said that it would welcome aid from West and East alike, provided no political or military strings are attached. Meanwhile the govern-

ment is doing all it can to stimulate trade. It has lifted the embargo on the export of rubber to China, and will shortly send an economic mission to Peking; and economic ties with Germany and Italy are being strengthened as a result of President Sukarno's visit to those countries.

Moscow's overtures perhaps account for the accommodating attitude of the Indonesian Communists, who have 39 seats in the parliament but were excluded from the government coalition. So far they have not—as they might have done—hindered the government's reconstruction efforts by inciting the trade unions, which they dominate, to make trouble. They seem to prefer a more subtle type of opposition. According to the Jakarta newspaper, *Pedoman*, which is the influential mouthpiece of Sutan Sjahrir's Socialist party, the Communists decided at a secret meeting to try to split the cabinet from within. They are to do this by campaigns directed against the Masjumi and its ministers, particularly the sedate first vice-premier, Mohammad Roem, and the prudent finance minister, Jusuf Wibisono. They reasoned that in this way they could maintain good relations with the Nationalists and the Nahdatul Ulama, and at the same time sap the present government's power. So far, however, there have been no signs that this policy has scored any successes.

Australian Form for the Trade "Test"

FROM OUR CORRESPONDENT IN SYDNEY

THE Australian Federal Cabinet held very long discussions about the course to adopt in the trade talks with Britain this month, and Canberra has been buzzing with hints of an element of surprise in the final tactics. It appears, however, that no hard and fast line was laid down in the Cabinet room. The finishing touches were left to be worked out at sea, in the tropic waters between Colombo and Port Said, while the Minister for Trade, Mr McEwen, was temporarily a fellow passenger of Mr Menzies. The Cabinet evidently decided to give its two most influential members an unusually free hand to negotiate in London. The real cartridge in their belts is the authority to say, for the first time, that Australia will have to scale down some of the preferential tariff advantages enjoyed by most British products landed here.

Almost to the end, a minority of Cabinet members resisted the idea of going so far. Sentiment against doing anything "to hurt Britain" is not extinct. There are hopes still that the United Kingdom may propose an acceptable alternative, in the shape of undertakings to buy more of Australia's primary products. But the great difference between Australia's latest attitude on the Ottawa tariff schedules and the line it was taking two years ago is that nobody expects Britain to restore the balance by giving new tariff preferences to Australian products. It is recognised that the rules of Gatt prevent this. In any case, tariff duties would hardly be applicable to some of the primary export markets that Australia is concerned about. Any lingering hope that Britain may open its doors wider to Australian exports rests mainly on the chances of per-

suading it to see the case against buying the subsidised exports of countries like Argentina. A second prong of the Australian argument is that Britain itself should not subsidise a greatly expanded home production of food-stuffs in a period of world surpluses.

To distinguish a "subsidised" primary export from the Simon-pure variety is admittedly an intricate matter these days, and Australian realists acknowledge that the Conservative Government in Britain is not likely to reverse its general policy of leaving the free play of market forces to determine the pattern of commodity purchases. Nevertheless, it is suggested, Australia naturally grows some of the cheapest wheat in the world. Admitting the limitations in the range of grains produced, and possible deficiencies in selling techniques which must be corrected, there is something wrong in a system that prevents that wheat from enjoying its natural advantages in overseas markets. It is argued that there would be nothing inconsistent with the spirit of Gatt if Britain took some kind of anti-dumping action against foreign grains to ensure that the Australian product came into its own.

However, many hard heads inside and outside the Australian Cabinet accept the probability that Britain will not be able to open the doors wide enough. From that point, their reasoning is fairly terse. Australia's trading position is becoming desperate; the Imperial preferences are now working much more to Britain's advantage than Australia's, and that is not fully offset by separate trading agreements between the two countries in commodities like sugar, meat and copra; were it not for the tariff preferences, Australia could import some items more cheaply from foreign countries; besides the saving in the imports bill, Australia would be able to re-negotiate mutual tariff reductions with those countries (inside or outside the regular Gatt conventions) so as to secure itself better export markets; in its present condition it must be free to "shop around" in this way.

Gulliver Raises His Voice

That is the argument and that is the sense in which Mr Menzies has said he will seek a new trade agreement to replace the Ottawa schedules. The idea is not to abolish Imperial preferences—Australia is conscious of its own advantages from them—but to fix a more accurate *quid pro quo*. There will be no attempt to work out the details in London now. That will be left to departmental officials of both countries, and it is rather hoped they will assemble in Canberra for the job. One suggestion is that Australia may seek to convert many of the tariff rates on British products from an *ad valorem* to a fixed-duty basis. It was because the Ottawa pact left Australia enjoying fixed-duty preferences and Britain *ad valorem* ones that the scales came to be tipped so heavily in Britain's favour during the inflationary years that followed.

If Australian trade spokesmen have not been notable for the understatement of their grievances in recent years, it may be mentioned on their behalf that they have had simultaneous troubles over American quasi-dumping of food surpluses. There was only one thing for little Gulliver to do about that—to shout at the top of his voice into those Brobdignagian ears; and perhaps it is natural that the same technique has sometimes, consciously or unconsciously, crept into discussions of trade with Britain. It is not claimed that Imperial preferences are a principal cause of Australia's present trade difficulties, or that a revision of

them alone will avert the ugly threat of a siege economy. This is simply a time when—as the import cuts announced this week show—no kind of alleviation can be neglected.

There is still regret that Australia should have to take the negative course of reducing purchases from Britain, instead of the positive course of expanding sales to Britain. There is a faint air of puzzlement that the Imperial concept seems, in a sense, to have shrunk under Britain's Conservative regime. Overseas trade cuts across politics, and it is inconsistent of a non-Labour Government in Canberra to hanker after the bulk-buying policies of Earl Attlee's Ministry. But, so far as the purchase of subsidised foreign products is concerned, not a few Australians would be inclined to echo a recent remark of Mr T. H. Strong, the director of the Federal Bureau of Agricultural Economics: "It just does not make sense that there should be a near-crisis in the sterling area's gold and dollar reserves, and severe restrictions in Australia on imported goods, while grains lie idle here."

Bolivia's Aided Revolution

FROM A CORRESPONDENT

BOLIVIA, where the ruling *Movimiento Nacional Revolucionario* (MNR) won the elections on June 17th, is notoriously a land of contrasts and contradictions. "La Paz," wheezed a breathless Frenchman in the 12,000 feet high capital, "La Paz, c'est la guerre!" Ancient Inca customs survive among the Indians; the supercilious llama on the high *Altiplano* tableland is not of our world; and there are other strange survivals, such as a Trotskyist party. But Bolivia also has orthodox communists; and the world's ideologies and interests meet and clash on its barren heights and in its steaming valleys.

It is nothing unusual for the government's candidate—in this case Señor Hernán Siles Zuazo—to be victorious in South American presidential elections. Nor is it sur-

prising that a government which has nationalised the foreign-owned tin mines, begun to divide large estates among the peasants, and broadened the franchise to include every adult citizen, should retain popular support. The striking feature of the situation is that for three years this revolutionary régime has received generous American aid, without which, indeed, it would have gone bankrupt.

General Perón backed the revolution which brought the MNR to power in 1952. For the previous six months America had refused to buy Bolivian tin (which normally accounts for at least 60 per cent of the country's earnings of foreign currency), claiming that the price demanded was exorbitant; there was intense "anti-Yanqui" feeling in La Paz; and it seemed obvious that neither Dr Paz Estenssoro's Peronista connections nor his nationalisation policy would be well received in Washington. Therefore it seemed in 1952 as though relations with the United States would become increasingly strained. The contrary occurred. American purchases of tin were resumed, and have been maintained. Point Four assistance has been provided in a most enlightened manner: peasants are now being taught by North American experts to cultivate efficiently the land they receive under the agrarian reform programme. Meanwhile, as Bolivia still cannot grow enough food, substantial grants of rice and other foodstuffs have been made from American agricultural surpluses. In three years, Washington's economic aid has amounted to about \$56 million. Thanks to the relative stability thus created, American capital is now being attracted to Bolivia, especially for exploring and exploiting the country's oil resources (Bolivia is already an exporter of petroleum). And the political consequence of the collaboration between Washington and La Paz was apparent in this month's elections, when the communist vote was negligible.

Discontent and Communism in West Bengal

BY A CORRESPONDENT

AT various times during the era of British rule in India, Bengal earned a reputation as the country's biggest centre of terrorism and revolutionary sentiment. Nor has it lost this reputation since independence; its industrial and urban areas, together with the discontented intellectuals of Calcutta university, are still regarded as communism's natural recruiting grounds. Moreover, throughout India, the middle classes, with their large proportion of "Failed BAs" and unemployed graduates, have been widely held to be safe bets, sooner rather than later, for the Communist party. The fact that, in the general election of 1952, the party obtained only six per cent of the total of 103,592,000 votes cast throughout India did not destroy these beliefs. It was argued that the ruling Congress party could not long retain the unity and the prestige it had gained during the years of the struggle for independence, and when it fell apart under the impact of economic and other issues, the Communists, cashing in both on the grinding poverty of the masses and on the discontents of the middle classes, would come into their own.

With the formation of the Indian Institute of Public

Opinion, these assumptions have been subjected to statistical tests, with surprising results. The Institute's first survey in West Bengal last year indicated that support for the Congress party in that state had risen from the 38.9 per cent revealed in the 1952 general election to 53 per cent, that the Socialist party's popularity had fallen from 11.9 to 2, and the Communist party's from 10.8 to 7 per cent. Remarkable, too, were the answers given to the specific question "Would you say that prospects in general, and your prospects in particular, could be better improved by gradual reform, or by sudden and violent change?" Of the sample of 1,500 persons questioned, no fewer than 78 per cent believed in gradual reform, 18 per cent "didn't know" and only 4 per cent preferred sudden and violent change.

Focus on Middle Classes

Whatever percentage for error must be allowed, the probability that these figures represent the broad trend of West Bengal opinion seems to be upheld by subsequent polls, the most recent of which was focused on Bengal's middle classes. This established two outstanding points. Economic discontent prevailed among no less than 61.6 per cent of the 760 middle-class persons interviewed in rural areas and small towns, and 65 per cent of the 229 interviewed in Calcutta. Yet, of the discontented outside Calcutta 51.7 per cent put their faith in the Congress party and only 5.8 in the Communists, while of the Calcutta discontented 36.9 per cent were for Congress and only 7.4 for the Communists. By comparison with the votes recorded at the general election, the opinion polls suggested that revolutionary sentiment in Bengal's middle class is lower than the average for all classes in Bengal. It is also striking that among the Calcutta discontented only 8.7 per cent hoped for improvement by sudden and violent change, while as many as 77.9 per cent were ready to put their trust in gradual reform.

The Institute polls uphold the traditional view that intellectuals are natural sources of communist recruitment only to the extent that in the specific categories of students, school teachers, clerks, and self-employed, communist sympathies were shown to run slightly above the average for the state as a whole. Noting that the Communist party gets negligible support from Bengalis in business, even in the lowest income bracket, the Institute hints that this "might conceivably warrant the conclusion that one factor in stabilising political opinion is the expansion of private business."

As far as they go, these statistics are reassuring to all who pray for a strong democracy in a flourishing India. But experience in other countries has repeatedly shown that, while communists have no objection to securing votes, they excel as a minority party in gaining power by devious methods. Among the questions put by the Institute to Bengalis was, "Do you enjoy discussing political questions?" To this 16.6 per cent replied, "Very much," 51 per cent "somewhat," and 31.4 per cent, "not at all." These figures suggest that, together with communist readiness to take every advantage of the average citizen's good-natured apathy, there is no room for complacency on the part of the Congress party.

Skipper of Tomorrow

It's man-size work in the Distant Water Fleet, with a premium on courage. But this is the challenge for a young lad with the sea in his blood—work crammed with adventure and the promise of big rewards.

Here under the watchful eye of his father is young Ken Evans at the wheel. By the time he is 30, he has every chance of following his father's footsteps as skipper of a trawler, and with a generous share from each catch, earning anything from £5,000 to £7,000 a year according to skill and good fortune.

Fishing in the Distant Waters is a highly paid job; but, more than that, it is a highly skilled one. That is why so much importance is attached to starting the young recruit on the right foot. Joining as deckie-learner, a lad of sixteen spends up to 100 days at sea to make sure that he likes it.

If he does and he's worth it, he is sent to a Nautical School, where he is paid £3 a week to learn. After a month he can then qualify as a fisherman, leading to deck-hand about two years later—a job which pays between £20 and £25 a week at the age of 18. Next step is back to the Nautical School to study for Third hand, with his Mate's Course following soon afterwards.

This is the last stage before his Skipper's Ticket and it includes a thorough training in radar. Chances of getting command of a ship at an early age depend entirely on the young man's qualities and not on seniority. Promotion however is normally much faster than is the practice in the Merchant Navy.

All fishermen who join the Royal Naval Reserve are exempted from National Service—a recognition of the vital, nationally important work by the men who bring back our fish—the cheapest first-class food money can buy.

The first South American cable was laid between Pernambuco and Lisbon in 1874—twelve years after the Bank of London & South America had opened its doors in Brazil.

Since then, commerce with Latin America has increased enormously, and with it have grown the influence and interests of the Bank. Today, the Bank holds a unique position as the *only* British bank in Latin America. It has Branches in most of the important trading centres of that vast Continent.

Up-to-date reports on local markets, trading regulations and general economic conditions, are received regularly from branches overseas and are summarised in the Bank's *Fortnightly Review*, which is distributed to customers and made available to those who have business in Latin America, Portugal or Spain.

THE BUSINESS WORLD

Unfreezing the Railways

THIS week the British Transport Commission has given its own definition of the terms on which it will join with other nationalised industries in the so-called "freeze," from which Ministers expect so much and the British economy, so far as can be judged at present, stands to gain so little. "Freeze" is coming to have distinct and delicate shades of meaning. Last week the National Coal Board honoured its observance by repeating that the increase in coal prices from June 1st would cover its costs this year and next and provide a surplus towards the elimination of the board's accumulated losses and that no further increases need be expected unless something exceptional happens. This week the Gas Council has pointed out, very properly, that the twelve area gas boards have a statutory duty to balance their books, but that after they have made any necessary revisions of their prices to meet their increased costs at June 1st—the most important being the higher price of coal—they will make no further price changes at least until the end of March next year "unless something quite exceptional and unforeseen occurs to frustrate that intention." In these industries—and to some considerable extent in electricity too—prices are being solidified at around the temperature of current costs.

By comparison, the railways present a contrast that is dramatic and frightening. They have in effect been frozen both in their freight charges and in their passenger fares since the middle of March, when the Minister of Transport (after declaring that "the strict application of the Government's present economic policies requires that, in fixing their charges, all the nationalised industries should seek fully to reflect their costs") found it expedient to give the Transport Commission only half of the 10 per cent increase in freight charges which it had sought (a decision that brought a demurrer from the Transport Tribunal when they came to consider it later). At the same time the

commission withdrew applications for increases in certain fares on London Transport and the railways. The commission had asked for increases in charges to provide £37 million in a full year; they were allowed increases worth £20 million in a full year, pending the outcome of six months heartsearching, up to mid-September, to discover ways of improvement.

THE COMMISSION'S REVENUE
(£mn.)

	1952	1953	1954	1955
<i>Working Surplus:—</i>				
Railways	36.9	33.0	14.7	0.2
Road Services	1.6	8.9	8.7	4.3
Buses	3.8	4.8	5.0	5.4
LTE	1.0	0.6	2.3	3.5
Other	12.5	12.1	14.8	16.1
	55.8	59.4	45.5	29.5
<i>Central Charges</i>	<i>61.3</i>	<i>55.2</i>	<i>57.4</i>	<i>60.1</i>
Net Surplus (+) or Deficit (—) ..	+4.5	+4.2	—11.9	—30.6
Accumulated Deficit	31.5	27.3	39.1	69.7

Thus the Transport Commission can be said to have started the "freeze"—or to have had one thrust upon it. It has since been caught by the ante-freeze increases in coal (costing £4½ million in a full year) and in other commodities. In these circumstances the statement that the chairman of the commission made on Wednesday goes to the very limit of what the most ardent devotee of the policy of "freezing" could have demanded. First it will make no general increase in passenger fares on the railways or London Transport this year—local adjustments excepted. Secondly, the railways will not increase their freight charges this year. To this, there is one important proviso, and a series of footnotes. The decision on freight charges has been made "provided that, as a result of the reassessment of

their financial position now being made, a course of action consistent with their statutory obligation and a proper development of their undertaking can be worked out and adopted." To break through this barrier of words, the statutory obligation is to secure enough revenue to meet its charges; and the proper development of the undertaking is bound up with the modernisation plan, now in its early stages, and with the provision of new capital under the new arrangements that Mr Macmillan introduced in April for financing the nationalised industries. The footnotes point to the improbability that any effective increase in freight charges could have been introduced between mid-September and the end of the year, even if the Minister had approved. As for the new freight charges scheme, on which the decision of the Transport Tribunal has yet to be given, it is now quite evident that even with early approval it could not be introduced at the beginning of next year.

For nine months, the railways will have held their charges constant while other industries have been able to increase theirs. The result (as the commission's report for 1955 has shown this week) is that railway charges in terms of other commodities and the general level of incomes are as cheap as they have ever been. Last year's deficit of £30.6 million (after meet-

charges to match increased costs, plus a further £50 million of increased and uncovered costs that it carried through these years. In these terms, six years of inflation have cost the commission £100 million, and against that an accumulated deficit of a mere £70 million almost ranks as a proud achievement. But the very size of this deficit (against which the commission is not entitled to borrow) is a hideous impediment to straightening out its finances. It has not been allowed (and perhaps the task would be commercially impossible at present) to attempt to recoup part of the deficit, as the Coal Board is doing. It has never been capable of making any consistent surplus over and above its central charges. Since it has no net earnings, and is draining away its cash assets, there would be a kind of hard commercial logic in defaulting on its interest payments and leaving the Exchequer to implement its guarantee. But any adventitious relief of this or any other kind would be tantamount to an explicit subsidy. It would mean that all hope of commercial viability for the railways had been thrown out of the window; it would bring the commission under even more detailed supervision in everything that it did; it would invite wage claims wholly unrelated to the financial ways and means of railway transport and destroy any will to resist them.

BRITISH RAILWAYS

Shortfall (or surplus) of net receipts to meet Central Charges.

(a) Wages increased (b) Coal increased (c) Railway Rates increased

ing interest charges) was not wholly due to the lag in adjusting charges to meet higher costs; the railway strike probably cost about £12 million net, and the impact of higher costs is put at £13 million. On a calculation of this kind, the financial deficit does not seem to argue an unremediable economic instability. But this latest deficit has raised the commission's accumulated deficit to £70 million; and the current estimate of this year's shortfall is put optimistically at £45 million and pessimistically at £55 million. By the end of the period to which the commission has committed itself, therefore, it will be in the red to the appalling tune of £125 million.

Given this figure, what "course of action" can be made consistent with the commission's statutory obligation? Certainly not the course of inaction that since 1949 has prevented it from recouping, as it estimates, £50 million through delays in increasing

It would be optimistic to suppose that the six months review will bring to light remarkable new ways of railway operation that have hitherto remained undiscovered. The commission's report again shows (with due allowance for last year's strike) an improvement in broad operating efficiency; and the new capital expenditures of 1955, which gathered momentum "after long years of capital attrition" hold the promise of further improvement to come. But although there is promise in what has been begun towards reorganisation and re-equipment, the report does not conceal the fact that progress towards the railway revolution implied in the 15-year modernisation plan is bound to be slow at first.

What, then, is to be done to put the railways on their feet? There are no special financial tricks that could be prayed in aid that would not, at the same time, destroy such commercial independence as the commission now has. It might, for example, be an act of poetic justice if the accumulated deficits caused by policies of stabilisation and delayed increases in charges were temporarily covered by the Exchequer, since governments have been largely responsible for them. But the price of such temporary relief would be subordination. There remain two directions along which it is possible to conceive (though by no means possible to be certain) of advance towards better railway service and good financial results. Neither is new. The first is the vigorous prosecution of the modernisation plan—an act of faith for the Exchequer, which has to provide the money on a prospectus that honestly admits that tangible returns lie some years away. The second is

the realisation of the greater commercial freedom that was promised to the commission in 1953, and which has still to be delivered.

Even if these things are granted, the commission will be in a painful financial predicament for some years to come. It is failing to attract traffic, partly because of the competition (as it would assert, often the wasteful competition) of privately owned transport. The only

Mr Clore's Victory

DR JOHNSON called the high road to England the noblest prospect that a Scot ever sees. The majority of the former directors in Scottish Motor Traction, disagreeing with him, were not willing to take a road that led to Grafton Street and Mr Charles Clore. But struggle as they might, the SMT directors had in the end to concede complete victory to Mr Clore. He is the new chairman of SMT, its fourth within a matter of weeks. The Atholl transactions, which clouded the issue last week, are repudiated. A new board directs the company's affairs. On it sit Mr Charles Clore, his two close associates Mr Leonard Sainer and Mr John Gardiner, the Earl of Elgin and Sir Andrew Murray. Sir Andrew, the only former director of SMT left on the board, must feel some consolation, for at an earlier stage he was turned out of the chairmanship of the company for taking a more favourable view of Mr Clore's bid than did his former fellow directors.

The SMT case will surely rank with the Sears and the Savoy Hotel disputes as one of the leading examples of the take-over bid. In it all the ingredients of prejudice against bidders, *ex parte* statements, counter bids, and counter moves by directors were spiced by the gathering of the clans in national pride and sentiment. Most of the noise obscured the real point. It is that whoever wishes to make a bid because he thinks assets are being under-employed has a right to make that bid, and if he is successful to have a clear, unfettered title to the shares, with the rights that go with them unimpaired.

Mr Clore now controls a majority of the SMT ordinary capital; and as director he can modify the use to which the company's assets have hitherto been put, for the benefit of the company, and of its shareholders, including himself. What are these assets? On September 30th, the consolidated balance sheet of SMT revealed, in round terms, the following items:

Ordinary capital	£1,509,000
Reserves	£1,795,000
Total liabilities	£3,873,000
Net fixed assets.....	£657,000
Liquid assets	£2,070,000
Total assets	£3,873,000

In the first skirmishes with Mr Clore, the directors of SMT said that the business of Alexander Findlay had

answer for a railway system that has been starved of new capital and short of some important grades of labour for several years is to give modernisation a fair chance to show its possibilities of providing improved service to railway users, and of yielding what promises to be an economic return. Only on such conditions can the creeping glacier of deficits and despair be unfrozen and become a torrent of energy and enterprise.

been recently purchased for £650,000. Roughly, this purchase would seem to change the composition of the assets to the following:

Net fixed assets	£1,300,000
Liquid assets	£1,420,000

Even after this purchase SMT remained rich in liquid resources; its businesses centred on the distribution of Vauxhall and Bedford vehicles in Scotland, through SMT Sales and Service, and upon atomic developments, through Alexander Findlay. That was a tempting bait for Mr Clore. There was cash; hidden untapped reserves in the unrealised value of freehold properties; and assets employed in businesses which might form a link with his own interests in oil distribution and engineering.

Mr Clore's original bid was one 5s. "A" ordinary share in Sears Holdings for every 5s. ordinary share in SMT. Mr Hugh Fraser countered with a similar offer in the shares of the House of Fraser, the relative attractions of the two bids turning on small variations in the prices of the shares. Mr Clore then added a cash premium of 1s. a share to his offer, and Mr Fraser immediately followed suit. On June 18th, Mr Clore announced that he had gained control, after owners of 53 per cent of SMT's ordinary capital had accepted his offer. Mr Fraser did not immediately withdraw his offer and, on June 19th, the directors of SMT (apart from Sir Andrew Murray) assented to it for the shares they owned. Mr Clore, aiming at something bigger than a bare majority, left his offer, including the cash premium, open until the close of business on June 25th. On June 23rd, Mr Hugh Fraser, following the revelation of the Atholl transactions, which he said were entirely unknown to him, withdrew his bid "with great regret."

The Atholl transactions were a mine suddenly sprung by the directors of SMT. They seemed to have changed the face of the battlefield overnight, and it was contended that they might have prevented Mr Clore from gathering in the trophies of victory. Since they have been withdrawn, they will not be submitted to legal test—which is a pity, for they seemed to raise important points about the responsibilities of directors towards the disposal of properties and the interests of shareholders. The sparse details of these transactions

were first revealed in a statement issued on June 21st by Sir Andrew Murray, who throughout this affair seems to have been at variance with his former colleagues on the SMT board. This was immediately followed by a statement from the SMT directors, summarising the transactions. Briefly they were:—

(1) SMT agreed to purchase from Mr R. N. Scott the whole of the issued capital of Atholl Houses, a private building and construction company, for £850,000. Of this, £250,000 was to be paid over at once and securities representing the balance were to be lodged with the Commercial Bank of Scotland, pending a confirmatory valuation by the chartered accountants, Messrs Wyllie J. Guild and Ballantyne.

(2) SMT's wholly owned subsidiary, SMT Sales and Service, granted an option for £14,000 to Atholl Developments, a private company with which Mr R. N. Scott is associated, to purchase properties owned by SMT Sales and Service for £1,400,000. One clause of the option was that Atholl Developments should grant SMT Sales and Service 99-year leases on the properties sold.

(3) In consequence of these arrangements, Mr R. N. Scott was appointed a director and the chairman of SMT.

All this was decided at an SMT board meeting at 9 pm on Wednesday, June 20th. Thus new companies and new names were introduced to the struggle. One of them, Atholl Houses, is a private company, engaged in building and construction, registered in 1944. On December 31, 1954, the date of its last balance sheet on the companies' file, it had an ordinary capital of £61,000, reserves of £133,000, fixed assets, less depreciation, of £27,000, current assets of £552,000, work in progress of £262,000, and sundry creditors of £265,000; in 1953 it earned a gross profit of £36,000, and in 1954 of £184,000. Its board was entirely reconstituted early this year, and is now made up of Mr R. N. Scott (registered at a London address), Lord Sempill, Sir Alfred Beit, Mr H. J. Guntrip, Mr G. A. Henderson, Mr J. K. McCreery and Mr S. E. Bushell. Atholl Developments was incorporated as a private company on April 4th, with a capital of £100; its directors are Mr Bushell and Mr Guntrip, each holding 50 shares.

The transactions between these companies and SMT seem to have been arranged in some haste. Mr Fraser, whose counter-offer the SMT directors had supported, seems to have been taken by surprise. Sir Andrew Murray was summoned to the meeting only an hour before it took place, and in commenting on the Atholl Houses purchase he is reported as saying:

This was the first time this matter had been mentioned to the board although there had been a meeting two days earlier and the board had no information or expert advice before them to give the matter proper consideration.

On June 26th Sir Andrew Murray sought and secured an injunction in the London courts putting until June 29th a restraint on the transfer of securities in connection with the Atholl Houses purchase. In the course of his argument, counsel read an affidavit from Sir Andrew in which he said that four of the SMT

directors had entered into the proposed transactions with the object of causing loss to the company and the stockholders by disposing of, or purporting to dispose of, assets for a grossly inadequate consideration. They sought to put the assets beyond the control of the majority of stockholders and a future board of directors. They were in breach of their fiduciary duties to the stockholders.

These, it must be emphasised, are words used by one contender in a bitter struggle, and when the Court gave the injunction it did no more than find a *prima facie* case. While Sir Andrew sought an injunction in London, two petitions in connection with SMT and the Atholl transactions were lodged in the Court of Session, Edinburgh. They were then withdrawn on the same day, June 26th, for "by mutual agreement" the Atholl transactions had been cancelled.

★

These transactions now become a six days' wonder, and until the legal dust has finally settled on them there would be neither point nor propriety in hazarding guesses at their real purport. But the episode has raised once again difficult and still largely unresolved questions about the fiduciary responsibilities of directors towards shareholders. It may go against the grain when directors are faced with aggressive buying of shares by "outsiders" to put this responsibility first. But put first it must be. It is legitimate for directors to resist a bid for shares within all proper bounds. But bids are usually made because directors have not been doing as much for their company and the shareholders in it as the bidder promises to do in future. To say at that stage that anything the bidder can do, they can do better, is to admit failure to do so in the past. To attempt to get out of this dilemma by such devices as radical changes in the nature of the assets, or even by attempting to put them beyond the reach of shareholders, is certainly objectionable.

The Atholl transactions were announced after June 18th, a date by which a small majority of the original shareholders in SMT had accepted Mr Clore's offer. They can have accepted it only because they thought he was offering a fair price for their shares and because they were convinced by his arguments that the assets were not being fully employed and that the shares were previously undervalued. These shareholders, by accepting Sears shares, intended, in effect, to put the management of SMT into the hands of Mr Clore, presumably because they thought he would make a better job of it. However much this vote of no confidence must have hurt the original board of SMT, the directors should have heeded it and held their hand. They had lost the argument by June 18th. Then was the time for them to withdraw. A lost battle demands grace from the defeated, as well as mercy from the victor; and as things were, Mr Clore, whether on grounds of equity or of economic common sense, had a right to his triumph.

Business Notes

Plymouth Tests the Market

Two types of local authority issue have been permitted to come forward in advance of the Government's own refunding operation. One involves no interference with the market—Warwickshire's £1 million of 5½ per cent stock 1964-1965 at £98½ which has been firmly placed with just enough stock available to make a market. The second is Plymouth's issue of £3 million 5½ per cent stock 1964-1965 at £99—which is, in fact, a necessary conversion operation to replace £732,252 of Plymouth's maturing 3 per cent stock 1956; lists for the conversion offer will remain open until July 5th, but the bulk of the issue is new money. The terms that Plymouth has been able to obtain look distinctly slimmer than Warwickshire's. The flat yield on the Plymouth stock is 5½ per cent compared with 5½ per cent on the Warwickshire stock and the gross redemption yield is 5½ per cent against 5½ per cent. Moreover, the sum required is larger. The true comparison, however, is between the cost of the Warwickshire stock to its guarantors—£98½—and the cost of the Plymouth stock to underwriters if they have to take it—£99. Plymouth is therefore slightly dearer to underwriters. Whether and how far they have been called upon to take it will not be known until the conversion lists have closed and dealings start next Friday.

Both these authorities are doing substantially better with quoted stocks than are the large number of corporations that are perforce doing their borrowing through the mortgage and short money markets. Active business goes on in these markets and large sums of money continue to by-pass the Stock Exchange. For temporary money from seven days to one month and seven days, a rate of 5½ per cent per annum is being paid; for longer periods up to one year the prevailing rate is 5½ per cent. In the mortgage market the rate is a firm six per cent for periods of two to five years and the same rate is frequently, though not quite invariably, paid on seven-year mortgages. From that term of years onwards the rate shades away, as the mortgage lengthens, to 5½ per cent, 5½ per cent and for the longest mortgages of all 5½ per cent. An exceptional feature is that some local authorities are finding it necessary to agree to pay 5½ per cent for periods as long as 30 years—a sure sign that the supplies of mortgage money are less than the demand and that the institutions that use that form of investment can call the tune.

The market still has its bright spots; the active buying of oil shares, including a strong American demand for British Petroleum that has hoisted the price by 23s. 9d. to 180s. 7½d. in a week, is the most obvious of them. The modest revival of activity among gold shares is another, but as a whole the markets have been without a firm trend, gilt-edged stocks dragging downwards and industrials marking time. The Government's funding operation must now coin-

cide fairly closely with the start of the second half of the year, which itself usually brings a little life to gilt-edged. The time for market stagnation to be resolved in one direction or the other is approaching.

Bill Rate Jumps

THE behaviour of the Treasury bill rate has troubled the gilt-edged market during the past week. At last week's tender the discount houses cut their application price by 4d. per cent, with the result that the average rate of discount rose to nearly 5½ per cent; the three preceding tenders were at just over 5 per cent. The downward drift that persisted while sterling held firm seems to have been clearly reversed. From the peak of 5½ per cent touched just after the mid-February increase in Bank rate, the Treasury bill rate had sagged almost to 4½ per cent by early May, and then stood unchanged until sterling came under fire at the end of that month. The latest increase is associated with renewed weakness in sterling, but it also reflects technical operations at the end of the half-year.

The prospect that money stringency on June 30th would force the discount houses heavily "into the Bank" for seven-day loans at Bank rate would have tended to force bill rates up in any case, but this time the fear of stringency was sharpened by the fact that the half-year ends on a Saturday, so that all the bills offered at last week's tender had to be carried through the difficult period. Although it reduced its bid sharply, the bill market secured a large allotment; that normally would have underpinned the higher rate; but on this occasion it did no more than offset the rather low allotments secured in the two preceding weeks. The cause of the unexpectedly large allotment was a striking decline in "outside" tenders—total applications dropped from £396 million to £359 million, easily the lowest since the corresponding tender before end-1955—but there is no reason to regard this as a lasting change in the recently strong appetite for bills. The "outside" houses were obviously also preparing for the June 30th stringency. This suggests that the latest rise in the rate will not be maintained.

The more pronounced weakness of sterling in the past few days may retard the readjustment, and is indeed a ground for a further increase; but the City has doubtless noted the support that Mr Macmillan has lately given to the view that monetary policy will not get significantly tougher unless Britain faces a major crisis. "In circumstances of extreme emergency," he said last week, "it might be right to accept temporarily an even stiffer dose of monetary deflation than we have now." But such a course, he thought, would have disadvantages: "if we keep our nerve we can surely find the way out . . . without recourse to the most

extreme monetary measures." Such an utterance is bound to weaken the psychological force of the money weapon he is wielding.

Sterling Below \$2.80

STERLING has this week crossed the psychologically important line of its dollar parity. At the beginning of the week the rate on New York in the official market was \$2.80½. But sterling came under further pressure and as the Exchange Equalisation Account apparently offered no resistance the line of \$2.80 was crossed on Tuesday. By Thursday the quotation was \$2.79½. A good commercial demand for dollars has persisted, notably from oil companies, and the demand for sterling is at a low ebb. This is partly seasonal, reflecting the passing of the wool and cocoa selling peaks, partly due to special influences such as the shearers' strike in Australia which has seriously impeded movements of wool, and partly the result of falls in the prices of some sterling area commodities including copper and tin. Those three influences together do not, however, amount to a full explanation of sterling's weakness. End-of-month balancing of books was also important. Now that sterling appears to be under suspicion by many Continental merchants and bankers, there is a tendency at the end of each month for any balances to be sold.

The foreign exchange market in recent weeks has, however, been largely dominated by the exceptional strength of the Deutsche mark, which paradoxically has gained from the recently announced measures to temper the strength of the German balance of payments. The impending reduction in import duties into Germany should in the long run lead to increased imports into that country, but the immediate effect of the announcement has been to hold up many import orders until the benefit of the lower duties can be secured. Vague talk from German ministers about the desirability of reconsidering the structure of exchange rates in Europe has inevitably been translated into rumours of a possible revaluation of the Deutsche mark. Against sterling the mark rate has this week touched 11.67½, which is almost the extreme of the range of permissible fluctuations.

The London foreign exchange market will welcome the decision announced by the Bank of England this week to allow individuals and firms outside the sterling area to transact business in the London market for both spot and forward transactions. Hitherto direct access to the London market by residents outside the sterling area has been restricted to recognised banks. This was a relic of the days when the British exchange control authorities insisted that currency transactions should be related to genuine commercial operations and therefore demanded a counterpart of unquestioned "respectability" for any deal.

PWLB Limits Cut

THE authorised limits upon the issue of funds to the Public Works Loan Commissioners are being reduced in conformity with the steep reduction that has occurred in new lendings by the PWLB as a result of the new

policy of requiring the local authorities to finance themselves as far as possible through the market. In the financial year to date new lendings by the PWLB have amounted to only £29 million, compared with £90 million in the corresponding period last year; over the eight months since the change in policy occurred they have totalled £133 million (compared with £298 million). The new Public Works Loans Bill accordingly fixes lower limits for the provision of finance to and by the Loan Commissioners. Issues to them during the period before the passing of a further Act must not exceed £300 million, compared with £500 million fixed for the period now ending. More significantly, the limit upon the PWLB's aggregate commitments outstanding at any time during the period, together with the amount of its new advances, is now to be fixed at £400 million, whereas previously it was £1,000 million.

Meanwhile, the Treasury has made a rather puzzling change in the Board's lending terms. It has reduced the rate for loans of less than five years from 5½ per cent to 5¼ per cent. The proportion of total borrowing from the PWLB for such short periods is small. But if the Government were working on the principle that changes in PWLB charges ought to conform to those in its own costs of borrowings for like periods, this adjustment would be reasonably explicable, since the yields on short bonds have fallen considerably in the three months since the previous change in PWLB rates. But those rates are still substantially above the bond yields; moreover, the criterion for PWLB charges now is supposed to be the rates at which local authorities of good credit standing can borrow in the market. None of the authorities has attempted a market issue of stock for a life of five years or less—but in the mortgage market the rate for short borrowings is the highest of all, and substantially above even the former 5½ per cent rate of the PWLB.

Redundancy at BMC

THE dismissal of 6,000 workers by the British Motor Corporation on Friday—nearly an eighth of its total production labour force—did not come as a complete surprise. The weakening of the car industry's markets in Britain and overseas has taken place just when BMC was making substantial additions to its production capacity. Last year the group increased its sales by 27 per cent to 463,000 vehicles, of which about 200,000 were exported, and it was putting the finishing touches to its preparations to expand capacity to an annual rate of about 500,000 vehicles by the spring of this year and to 600,000 by mid-summer. Although the company claims that its total exports and its share of the home market have grown since last August, the end of its last financial year, any growth in total sales must clearly have been far below the one-third increase on which its output plans had been based. This must have eaten heavily into the company's operating margins and, significantly, BMC held out until March before following the price increases other manufacturers made last October, presumably in the hope of stimulating demand for its products. The short-time working that broke out amongst car manufacturers in January, too, has never shown much subsequent improvement at the Austin plant. Recently

about 7,000 of the group's employees have been working a four-day week and, according to the company's statement this week, it will still be necessary, even after the dismissals have taken place, for an unspecified number of the remaining employees to work a three- or four-day week.

Although the Government's policy of squeezing resources out of home consumption into exports and investment has contributed to the industry's, and British Motor Corporation's, present troubles, car sales have been falling away more markedly in overseas markets, particularly in the traditional "winter" outlets in Australia (where a further round of import cuts was announced this week). But this will not stop pressure being put on the Government—and on the company—to prevent these changes in employment taking place. Although the BMC dismissals are the biggest single batch yet, they are straightforward redundancies unclouded by emotive associations with automation that have confused the issues at Standard. But BMC might have drawn at least one conclusion from the Coventry dispute; giving its redundant workers (many of whom have lately had one extra day of leisure each week on which they might have looked for other jobs) and their unions only two days' notice of the dismissals may yet prove to be a more costly way of handling the redundancies than if the company had taken them earlier into its confidence. It might also profit from the other car manufacturers who appear to be weathering the industry's troubles less uncomfortably; a good half of the redundancies arise in the Austin part of the group and it is no secret that Austin models have lately been faring relatively much worse than other makes of car on the restricted home market.

The New Air Fares

THE new air fares announced during the week-end apply at this point exclusively to the North Atlantic route, but it is only a matter of time before they spread over the whole international network. With this prospect before them, many operators find some of the reductions more drastic than they would have liked, though the impact of the cuts is softened by being spread over approximately two years, which gives them time to reconsider the size and composition of their fleets. Airlines have been placing vast orders for aircraft to be delivered in the early 1960s. The new fares, and the new kind of traffic they are designed to attract, will force them to order additional equipment for delivery in the period 1957-59—and raises for many the serious problem of how to finance the deals. The reductions come into effect in the following stages:

October, 1956: a new 15-day return fare costing roughly 20 per cent less than the standard tourist fare will be introduced. This device was proposed first by Trans-World Airlines to attract holiday traffic across the North Atlantic and at the same time to reduce the seasonal peaks that holiday traffic causes.

April, 1957: first class fares will be cut by about 10 per cent, while a new de luxe first class service, costing roughly the same as today's standard first class, will be introduced simultaneously.

April, 1958: "third class" air travel will be promoted

with a cut of about 16 per cent in the standard tourist fares. To make this reduction pay, the airlines will have to pack the maximum number of seats into their aircraft, cut cabin service to the minimum, probably by eliminating the bar and all meals, and use the maximum number of re-fuelling stops in the North Atlantic crossing.

It is the spartan standard of this new low-rate service that makes the purchase of new equipment desirable, if not essential. As the recommendations now stand, it seems impossible to fit them into the present arrangement of carrying two classes of passenger, first and tourist, on the same aircraft. When the original tourist fares were introduced in 1952 competition between carriers produced a higher standard of comfort for passengers than was originally intended. Will the same happen to the third class service between now and its introduction in 1958? The technical regulation of the new service—what it means in terms of the size, density and pitch of seats, lunch boxes and fuelling stops—will not be worked out until the airlines meet again in the autumn.

Passing the Cap Round

DETAILS of the cuts in defence spending strongly suggest that when the Chancellor passed round his cap the Service departments put in the loose change they happened to find in their pockets. Their contributions—£17 million from the Army, £11 million from the Navy and £9 million from the RAF—represent over half of the new saving announced by Mr Macmillan, but it can hardly be called the outcome of planned and deliberate economies in defence spending. Chance plays a big part in it; so do reorganisation policies set in hand by the Services some time before Mr Macmillan asked them to put anything into the kitty. One reason why the RAF is now able to run down its spending on pay, clothing, works and supplies to the tune of more than £4 million is that its strength has fallen some few thousands below the level provided for in the 1956-57 estimates; the same is true of the Navy and the Army. Men who do not stay in the Services do not need to be fed, clothed, housed, paid or trained, but their absence is unplanned and unpremeditated and so are any savings that arise from it.

Almost all the savings contributed by the Navy arise from a running down of stocks and repair work that forms part of a streamlining programme begun in the Admiralty several months ago. The Navy expects to save some part of £3 million by slowing down the rate of delivery of its aircraft, and the balance by reducing its machinery requirements. Such reductions in stocks and stores, which make up the lion's share of the Army and Navy economies, represent a once-for-all contribution at the expense of working capital. The real cuts in planned expenditure by the Services as distinct from the civil defence departments that can be traced in the figures seem to amount to less than £5 million. These arise from the cancellation by the RAF of some of its outstanding orders for Hunters and Valiants; but these cuts had been decided upon some time earlier because the Hunter was becoming out of date and the Valiant was being replaced by the newer and bigger Victor and Vulcan bombers.

Grey Skies for Aircraft

THE bulk of defence production consists of aircraft, their engines, accessories and armaments. No overt cuts have so far been made in the aircraft production programme that cannot be wholly justified on technical grounds, but some savage root pruning has been going on inside the Ministry of Supply that could have serious consequences for the aircraft industry. During the past year a philosophy has been developing which aims at paring down the number of projects supported by the Ministry to the bare minimum required to maintain the fighting strength of the RAF. Thus, future development seems likely to be narrowed down to work on (a) a supersonic bomber to replace the V-bombers in the 1960s; (b) a basic day and all-weather fighter (the one design being developed into two marks for the separate roles); (c) a small interceptor fighter; and (d) probably less than half a dozen guided weapons for firing from air to air, ground to air, or as long-range ballistic missiles. There is little room in such a programme for ancillaries to military striking power like helicopters, or for aircraft tailored to specific applications. Under this philosophy civil airliners would get Government support only if they could first win commercial backing in firm orders from one or other of the British air corporations.

The Ministry would be wholeheartedly commended for pruning the luxuriant growth of development projects that it so happily cultivated up to a year or so ago if it were not for the fear that it is now going to the opposite extreme. For this spartan plan allows for only one of these projects in each category to be developed at any one time. The contract for the supersonic bomber, for example, is held by A. V. Roe and no similar contract is likely to be placed with any other manufacturer; the day fighter contract is held by English Electric for its P.1 fighter, and Saunders-Roe are building the only rocket interceptor that the Ministry is likely to sponsor. If there is one lesson to be learnt from the chequered record of the past ten years, it is that the most promising projects on paper can fail somewhere along the seven years or so that it takes to bring them into service. That the RAF is at least able to hold its own today is due to the fact that it had more than one type (though sometimes, indeed, far too many) under development from which to choose its final equipment. There is no reason to suggest that the Ministry's experts are any better able to judge an aircraft from the drawing board than they were a few years ago. The new system implies that they are able to choose with absolute certainty the right makers capable of producing the few types that are contemplated. Are conditions in this industry now such that it is quite safe to extinguish the last flicker of competition and rely on two or three chosen instruments?

Sugar Conference Adjourns

THE International Sugar Conference in New York adjourned last week without making much progress towards its main objective of enlarging the membership of the International Sugar Agreement. It is expected to meet again in Geneva in the first week of October. Even

after a month of discussion the quotas desired by the exporters were still much higher than the likely requirements of the free market. There were no formal negotiations on the range of prices (at present a maximum of 4.35 cents a lb for Cuba and a minimum of 3.25 cents), but possible revisions to the method of administering the price range were discussed and two proposals were left for further examination. The real need is to bring into the agreement at least two of the major exporters now outside it—Peru, Indonesia and Brazil. If that can be done—and the conference showed that the door is not yet closed—technical questions will matter little.

Who Wants Standard?

THROUGHOUT the automation dispute, and throughout Standard Motor Company's lengthy and at times difficult discussions with the unions, there has been persistent and heavy buying of Standard Motor Company's 5s. ordinary stock units. From a low point of 6s. 6d. earlier this year they touched 9s. 3d. last week before falling back to 8s. Latterly they have been about 2s. per unit above British Motor Corporation's 5s. units, whereas normally a difference of about one shilling per unit in the opposite direction is expected. About three million units out of a total of 27,700,000 have passed into the names of four nominee companies. The great majority of these purchases have been made at prices not above 7s. 3d. per unit. The buying stopped significantly when that price was passed and the last part of the advance was the work of small speculators who had read of the buying.

It is fruitless to try to nominate the buyer if it is a single buyer, but it is not quite so difficult to see why he should be buying. The Standard 5s. unit at 7s. 3d. was one of

MARKET CAPITALISATION PER VEHICLE

Share price	Market capitalisation*	Vehicle output 1955	Capital price Unit of Output
Ford (£1) 33s. 3d.	67.8	356	£190
BMC (5s) 6s. 4d.	49.7	463	£106
Standard (5s) at 7s. 3d. .	13.1	171	£77
Standard (5s) at 8s.	14.0	171	£82
Rootes (4s) 5s. 6d.	7.7	120	£64

* Including preference capital at par.

the cheapest ways into motor manufacturing capacity through the market. In fact Rootes's capacity measured in the same way is a little cheaper but any substantial buying would quickly reverse the relationship. That does not make Standard the best company or the best investment for the average investor. But if the object is to control or even to influence production then Standard is a cheap purchase and one of the few companies with a substantial tractor output. The table shows the relation between vehicle production in 1955 and the capitalisation as valued through the market. It has been necessary to leave out Vauxhall, whose ordinary capital is unquoted.

One further deduction may be made. The buyer has invested roughly £1 million and has now between 10 per

Staying-Power!

BICC Erectors secure one of the twelve steel stays anchoring the 750 ft. BBC Television Mast at Sutton Coldfield. Some of these stays have a breaking load of over 200 tons, sufficient to keep the structure stable even against extreme wind forces.

This mast has the "Staying-Power" characteristic of all BICC Telecommunications products, ranging from television transmitting masts as shown above to telephone and radio frequency cables for every purpose, moulded polypole couplers and winding wires for all types of coil. British Insulated Callender's Cables Ltd., 21, Bloomsbury Street, London, W.C.1.

Immaculate...

An immaculate pen the Sheaffer; distinguished, well-groomed, meticulously clean. Balanced to your hand, the Sheaffer Snorkel Pen moves across the paper like a bird across the sky, slender, smooth and silent. Just to hold a Sheaffer is to know the feel of a perfect writing instrument. The slender lines, the exclusive tubular nib and the unique filling method* all contribute to the superb quality of this, the finest pen in the world. The gift of a lifetime—for a lifetime.

pneumatic filler
A flick of the finger—and pen flushes and fills in one swift downstroke.
***the world-famous Sheaffer Snorkel Pen filler**
Wiping nib, wiping barrel—a thing of the past! Sheaffer filling tube reaches down beyond nib, drinks the ink, retracts!

14-carat gold feather-touch nib
A marvel of delicate precision and strength.

matching sets

cent and 15 per cent of the company's equity, too little to control but enough to influence. It would not have been possible to buy on that scale unless the market had been well supplied with stock. The merger with Beans Industries had produced some of those shares, because after an operation of that kind there are always a number of shareholders whose intention is to sell. It may seem surprising that anyone should be seeking control or influence over motor manufacturing capacity at a moment when most manufacturers are suffering the pangs of an adverse market, but such a buyer could only operate by taking a long view.

The Switch In Output

INDUSTRIAL output, which up to the end of April had been running fractionally above the level of a year ago, fell in May. The forecast of the index of industrial production for that month published by the Treasury this week is 135.6 against 140 for May last year (1948=100). Although the Whitsun holidays fell inside this month in both years, there was one fewer working day in May this year, so the drop in output would have been a little more than the four per cent suggested by these figures. Through the first five months of 1956 therefore the index has shown virtually no change on the corresponding months of 1955 and, seasonally corrected, it has fallen somewhat below the level reached in the second half of last year.

INDEX OF INDUSTRIAL PRODUCTION
(1948=100)

	All Industries		Manufacturing	
	1955	1956	1955	1956
January	135	140	140	143
February	140	141	145	145
March	143	140	148	145
	139	140	144	144
April	134	136	140	140
May	140	135.6	146	...
June	137	...	144	...
	137	...	143	...
	1954	1955	1954	1955
July-Sept.	122	127	125	131
Oct.-Dec.	137	143	141	148

This the Treasury Bulletin for Industry described last week as "part of the necessary cost of adjustment, as resources move from one use to another." There are signs of these shifts taking place—and indeed in the right direction. The volume of exports has grown, deliveries of plant and machinery are up, and real consumption seems to be lower. Output of coal, steel, building materials, and sulphuric acid has been rising, but steel output fell last month by 1.3 per cent—for the first time for a very long time—largely as the result of the maintenance workers' dispute.

Italy Eases Exchange Control

A MASSIVE consolidation and simplification of the law regulating exchange control in Italy has taken place. A hundred laws and innumerable decrees have been consolidated into a single basic law, with the object not only of simplifying but also of liberalising the exchange control. The main effect is that the market in foreign banknotes, which previously was restricted to Italian authorised banks, is set free. This measure, which at first sight might seem to be intended for the benefit of tourists arriving in Italy when banks are closed, has a much wider significance. The free market in foreign bank notes becomes available for repatriation of foreign capital and for remitting abroad the income earned on it. Previously foreign capital had to remain in Italy for two years before a claim for repatriation could be considered and the remittance of dividend and profits was restricted to a maximum of 8 per cent on the capital invested in Italy. These restrictions hold for capital payments made through the official market. But henceforth additional payments on capital account may be made without restriction if they are canalised through the market for foreign bank notes.

As unlimited repatriation of capital and of profits can take place through the market in foreign bank notes, the legalisation and extension of that market may ultimately lead to a considerable increase in the price of these notes in terms of Italian lira, amounting to a veiled and partial devaluation of the Italian currency. It may also deprive the Italian exchange reserve of one of its largest sources of foreign currencies. In addition to these measures, the reform of Italian exchange control will give importers into Italy greater freedom of choice in the currencies in which they can pay for their imports. Exporters from Italy have also been given a longer period within which to bring home the proceeds of their sales. Underlying these concessions is the much healthier state of the Italian balance of payments and the fact that the Italian gold and foreign exchange reserve has now risen to a record figure of just over \$1,000 million.

Two Prices for Copper

WHEN the same commodity sells for two widely different prices there is bound to be trouble. Since the Rhodesian Selection Trust group began selling copper at a fixed price the difference between that and the open market price in London has been as much as £50 a ton, and at one time it widened to £90 a ton. More often than not, the difference has been heavily in favour of RST's customers. What this has meant to a manufacturer of copper products who was obliged to pay the open market price was described this week by the chairman of Richard Johnson and Nephew.

The more Selection Trust copper a firm was able to obtain, either directly or indirectly in semi-manufactured form, the better its chances of obtaining business. Buyers obviously could not afford to overlook so substantial a gap [in prices], which often amounted to a figure very much greater than the manufacturer's cost of conversion. Old standing connections were broken up; the regular flow

of business ceased, and had it not been for the delivery factor, the dislocation would have been worse still. . . .

The effect of the two-price system has been to encourage buyers even further to hold back the placing of orders until the last possible moment, and to carry the minimum stock. This places a heavy burden on the few firms such as ours who actually finance the importing of copper. . . . Who knows when we are buying our copper for shipment how the Selection Trust and London Metal Exchange prices will compare by the time we receive it? The position may be such that the copper will be unsaleable. In recent months, as Mr M. A. T. Johnson pointed out, the boot has been on the other foot, with the open market price usually below the fixed price. Buyers in both camps will be glad when the open market price settles down, and the price fixed by the RST group keeps more closely in line with the market. Until that time comes—and it may not be very far away—each set of buyers by turns is likely to feel aggrieved.

Canadian Dollars in Demand

THE Canadian dollar has again been strong in the foreign exchange market this week rising to 1½ cents premium over the US dollar and to \$2.74½ against sterling. The latest published figures of Canadian external trade hardly fit into this picture. Both March and April returns showed Canada with the worst visible deficits for six years. Since then, however, the St. Lawrence has unfrozen and visible trade has turned strongly in Canada's favour. European buying of grain has until recently been unusually heavy. Some of the most persistent buying of Canadian grain has come from the Netherlands and significantly the guilder has been comparatively weak in recent weeks.

The most important factor in the strength of the Canadian dollar is not, however, current trade but capital transactions. Apart from the continued inflow of American funds into Canada and some transfer of capital from Europe, there has been an appreciable volume of Canadian borrowing in the United States market. The most recent shift towards easier money in the United States, in conjunction with the continuing tightness of credit in Canada, has induced some borrowers, including the Province of Columbia and the City of Montreal, to make issues in the New York market. The amount raised by these two borrowers alone was \$60 million and some of this substantial sum has recently been going across the exchanges.

"Motor Business"

The June issue of this quarterly research bulletin for the motor and allied industries includes:

- The demand for motor tyres.
- The "Specialist" car market in the United Kingdom.
- The Belgian market for Vehicles and Tractors.
- Stock and Sales Expectations: June–August.
- The Bulletin is fully illustrated by charts, amongst which are:
 - Price indexes of used cars and vans.
 - New registrations in Great Britain, and the hire purchase share of the market.

World Bank's Loan to Tata

TO establish a steel works or to expand one is the advice that the international experts are constantly giving to under-developed countries and that under-developed countries apparently love to hear. It may not always be the most sensible advice, but there is no gainsaying that India is now firmly set on the road of steel expansion and has written into its second five-year plan an increase in finished steel production from the present 1½ million tons to about 4½ million tons. So it happens that the World Bank's biggest loan yet for industry or for Asia is to the Tata Iron and Steel Company of Jamshedpur. It is the second loan that the bank has made for steel in India, for one has also been made to the Indian Iron and Steel Company. The loan to Tata is for \$75 million in various currencies and is for 15 years. It carries interest at 4½ per cent, is guaranteed by the Indian government with Baring Brothers as trustees and is secured by a first mortgage on the Tata company's immovable property. As has been arranged with many of the bank's recent loans, private American institutions—First National City Bank, the Irving Trust Company and the Manufacturers Trust Company—are participating. They take a total of \$2,355,000 of the first maturing tranche of the loan due for repayment in December 1959. The loan will cover part of the Tata company's financial needs for its second postwar expansion programme, which is to raise output from 800,000 tons of finished steel a year to 1½ million tons. The company's total investment between 1955 and 1960 is estimated at \$250 million. American engineers—the Kaiser Engineers Division of Henry J. Kaiser Company—have been engaged to design most of the plant, but the world bank states that "all orders for imported equipment are being placed on the basis of international competition to the fullest extent practicable."

Reactor Sales to Germany

THE future of the order placed by Germany for a Merlin research reactor designed by the AEI-John Thompson Nuclear Engineering Company depends on the course of negotiations between the British and German governments about the supply of atomic fuel. A German team has recently been discussing the details of an Anglo-German atomic agreement with the Foreign Office and the German minister for atomic energy, Herr Strauss, is expected to return shortly to settle the final arrangements. The two main points in the agreement, Mr Butler told the House of Commons on Wednesday, cover the supply of fuel and the re-processing of the spent fuel elements.

The order is a land-mark in British industry's atomic progress. The first British reactor to be sold abroad, to Australia, is a copy of one of the heavy water research reactors designed at Harwell. The Merlin reactor, on the other hand, has been designed entirely by the AEI-John Thompson engineers. The original Merlin is being built for the AEI laboratories, and the German order thus ranks as the company's first commercial atomic sale. The price is about £75,000, excluding the cost of the fuel, which comes

HE KNOWS that a one-year guarantee is sufficient with a fine Swiss watch.

from the Atomic Energy Authority, and delivery has been promised within 12 months.

It is also possible that Germany, like Australia, will buy a replica of the Harwell heavy water reactor, Dido. This is a much bigger undertaking, costing between £2 and £3 million; where the small Merlin is useful for research, Dido is needed to test materials for full-scale atomic plants. These and similar sales are limited by the amount of enriched uranium that the Atomic Energy Authority can supply from its diffusion plant at Capenhurst. Merlin alone needs 30 kilograms of uranium enriched to 20 per cent of U235, and there is heavy pressure on Capenhurst to provide pure U235 for military work. The recently signed Anglo-US atomic agreement, however, now makes it possible for Britain to buy uranium enriched to as much as 20 per cent from the United States. Such a concentration is of no military use and it costs too much to be used as a fuel for commercial power station reactors. But its availability from the United States has now lifted the limit on the number of research reactors that can be sold from this country with an assurance of a regular atomic fuel supply.

"Personal Choice" and Tax Allowances

IMPORTANT implications seem to follow from the decision of Mr Justice Vaisey, dismissing an appeal by G. H. Chambers (Northiam Farms) Ltd. against a decision of the General Commissioners to reduce the gross capital allowance for a Bentley car owned by the company from £1,749 by £1,020 ss. on the ground that this car was bought not solely by consideration of the company's business but also by consideration of "personal choice." The case was brought under Section 289 of the Income Tax Act 1952 which refers only to capital allowances on plant and machinery which are used partly for business purposes and partly for private purposes; it is therefore of limited application and should be distinguished from the general rule governing the allowance of expenses under Schedule D. The Schedule D rule for the allowance of expenses in computing income tax is based on "wholly and exclusively" whereas section 289 provides for an apportionment of such expenses as may be "just and reasonable." Comparative words such as just and reasonable always cause difficulty as the excess profits tax legislation so clearly showed during the war.

In its context the provision in Section 289 seems intended to govern the apportionment of the expenses between private and business use. In the case under appeal it was agreed that one-twelfth of the gross allowance should be abated to cover the private use (as distinct from the business use) of the car. But the Revenue have for some time sought to introduce the idea of "personal choice" and to have regard to the quality of the asset as distinct from the quantity of its use. The point arose in 1952 in *Kempster v McKenzie*, where a farmer had bought an Alvis car for £1,284. The Revenue's claim was rejected by Mr Justice Danckwerts not on the ground that personal choice was irrelevant, but that there was no evidence on which the General Commissioners could find that a £1,200 car was unreasonable. This week's decision is not, at first sight, fundamentally different in its essence. What has happened,

however, is that Mr Justice Vaisey has found a £7,000 Bentley more than was acceptable and that the buyer exercised a "personal choice" beyond the strict needs of a farming business. By rejecting the tax-payer's claim he impliedly accepts the Revenue's view that Section 289 enables regard to be paid to the quality of the asset. It should be remembered that Section 289 applies only to the allowances to be given on an asset used partly for business and partly for private purposes. If an asset can be shown to be used wholly and exclusively for business purposes, no consideration of "personal choice" enters into its purchase—at least not for the purposes of income tax law.

Licensing Dollar Cotton

FROM next Wednesday, imports into Britain of United States cotton will be placed on open individual, instead of open general, licence. Imports will remain unrestricted; the reasons for the change are purely technical. In the year ending today the American government granted Britain about \$24 million under the Mutual Security Act (Public Law 665) for the purchase of cotton, and another \$5.2 million worth was provided under the Agricultural Trade Development and Assistance Act (Public Law 480) as payment for cotton textiles supplied by Britain to Pakistan. Because United States cotton has until recently been dearer than other growths, Britain has bought little this season, and importers have not always gone to the considerable trouble of documenting such purchases as have been made, so that they qualified for aid. Only about one-sixth of the funds provided this year under P.L. 665 have been used, and only about one-third of the cotton made available under P.L. 480 has been imported so far.

Dollars have therefore been spent unnecessarily, and there is a risk that future grants under P.L. 665 will be cut. Moreover exporters of cotton textiles under the triangular deal with Pakistan have had to wait for their money or pay interest charges on a bank advance. Similar delays could occur in the triangular deal just arranged with Burma (described on page 1219 of *The Economist* last week) and in those that are pending with Indonesia and with Pakistan again. Henceforth importers will be obliged to document their purchases so that American assistance will be used to the fullest possible extent. The new American selling policy for raw cotton, whatever its demerits, should at least ensure that aid is not wasted in future.

Rising Oil Consumption

THE continued sharp increase in the consumption of petroleum products in Britain—figures for the first quarter of 1956 are 12 per cent higher than for the corresponding quarter last year—was due mainly to the rising demand for fuel oil, deliveries of which rose by almost a quarter. The 6.5 per cent rise in motor spirit deliveries clearly reflected the demand for premium grades, which rose by over 13 per cent, compared with a rise of less than

one per cent for the regular grades; premium grades accounted for nearly half of all petrol deliveries. The consumption of derv fuel, increasingly preferred to petrol in

U.K. DELIVERIES INTO INLAND CONSUMPTION OF PETROLEUM PRODUCTS— JANUARY-MARCH

	1955 ('000 tons)	1956 ('000 tons)
Motor Spirit	1,319	1,406

lorries, and burning oil deliveries, which were boosted by the cold weather in February, also rose faster than the average for all products.

Looking at Pension Funds

THE Association of Superannuation and Pensions Funds has published some statistics of the pensions funds movement drawn from answers to a questionnaire sent to its members in May, 1954. The statistics cover 682 privately administered schemes and 220 life office schemes; they analyse by percentages about 80 per cent of the member funds of the Association, which includes between one-sixth and one-fifth of all the funds in this country, though its members are responsible for about one-half of all pensions funds assets. The statistics are thus strongly influenced by the big privately administered schemes of the large companies, nationalised industries and co-operative societies.

Total accumulated funds of the 682 private schemes in 1954 amounted to about £716 million and the total annual contributions to them were about £75 million (£49 million from employers and £26 million from employees). The 902

schemes covered 1,168,000 men and 314,000 women, and 168,000 people were already receiving pensions; the division of the funds by the numbers covered for retirement benefits, shown in one table, emphasises that the life offices have undertaken a higher proportion of the work of the smaller funds, though the Association's figures are not perhaps

A World Food Reserve?

THE cruel paradox of privation amid plenty troubles the conscience of rich nations and drives the needy to despair. The problem is always prominent in the United Nations' discussions and has been studied in detail by the Food and Agriculture Organisation. But action lags, the surpluses grow still larger, and the United States once more adopts the dismal expedient of paying farmers not to raise corn. Eighteen months ago the United Nations' General Assembly tried a new approach: it requested the FAO to report on the feasibility of a world food reserve that would have four main objects:

- to raise low levels of food production and consumption, and fight chronic malnutrition;
- to relieve famine and other emergency situations;
- to counteract excessive fluctuations in commodity prices;
- to promote the rational disposal of intermittent agricultural surpluses.

It is tempting to suppose that a world food reserve could tackle all these four objectives. But as the painstaking

the 902 funds according to the basis used for calculating retirement benefits.

The sources of contributions, shown in the larger table, are muffled by blanket percentages. But the Association does make the additional point that the 50-50 joint contributory schemes are popular with the co-operative societies and operate for 30 per cent by number of the co-operative schemes analysed, against 22 per cent of the number of industrial and commercial funds. Similarly, 58 per cent of the number of co-operative society schemes consists of funds where the employer contributes the bigger slice, against 13 per cent in other industrial and commercial schemes. But the 282 funds started since the war show a growing tendency, notably in the life office schemes, for the employer to contribute more than the employee. These figures whet the appetite for a further and more comprehensive examination of the pensions movement; already it controls about £2,000 million of investments and it is wielding ever-increasing importance both for the Stock Exchange and for the economy.

METHOD OF CALCULATING BENEFITS

Wherever you may be . . .
HERCULES
is there!

IN THE WORKSHOP...

The handles of the very tools you use may be finished with paints based on Hercules products—or may be made from Hercules plastic raw materials.

AND AT THE FIRST-AID POST

That adhesive dressing you hurry to find when the chisel slips will stay on, probably because Hercules speciality resins—produced for that specific purpose—are doing their job.

BUT THESE ARE ONLY TWO of the countless common tasks in which Hercules chemicals serve the community—invisibly but well.

If you have a problem in industrial chemistry Hercules may have the answer. Address your enquiries to the Technical Service Department.

Dear money

How much does it cost to collect your money?

Whether you sell goods or services, run a business or control the finances of a local authority, the preparation of invoices, bills, demands (call them what you will) involves costly clerical effort.

Powers-Samas punched card methods make light work of the job. Machines do the arithmetic and produce the finished bills — swiftly, at low cost and with machine accuracy. Then they fill in their time with other accounting, costing and statistical tasks.

What does punched card equipment cost? Powers-Samas have matched their ranges of machines to the needs and budgets of the small, the medium and the large organisation. And you can rent the machines or buy them outright, as you prefer.

POWERS-SAMAS

mechanical, electro-mechanical and electronic accounting machines

Powers-Samas Accounting Machines (Sales) Ltd., Powers-Samas House, Holborn Bars, London, E.C.1.

and commendably realistic report now published by FAO* shows, they tend to be mutually conflicting.

Malnutrition, it points out, is caused by poverty, which can only be overcome by economic development. It could not be cured by a world food reserve operating on a self-financing basis and acting as a buffer stock at the same time. The reserves would soon be depleted unless they were constantly replenished by gifts in money or in kind, or unless the food supplied to needy countries could be paid for in part from the additional economic development that the food could help to finance. Moreover the operation of a reserve as a means of stabilising prices poses great political and practical difficulties. As to famine relief, the report concludes that the main problem is not to ensure that food stocks are available, but to organise in advance the supply of that small portion of total stocks that might be needed. The speed and flexibility needed in relief operations could be provided more efficiently by an international relief fund with sufficient resources to make *ad hoc* purchases as required. The report suggests that the needy nations could best be helped by the establishment of a "world food capital fund," which could be linked with the proposed Special United Nations Fund for Economic Development (Sunfed), and which could use surpluses of food to stimulate their economic development. Agreement on the use of surpluses in this way could also diminish the danger of disruptive disposals.

Potash Agreement Near

IT seems that at long last agreement on the resumption of the service on the Potash Syndicate of Germany's bonds has been reached. An offer was made as long ago as February, 1954, to resume the service on the bonds, on terms not quite equivalent to those applied to the German state bonds. Detailed negotiations between the Potash Syndicate, Messrs. J. Henry Schroeder, the Royal Exchange Assurance and the bondholders' committee for putting it into effect have been protracted; legal processes have been involved in several countries, and in this country even a special Act of Parliament, under which a special meeting of bondholders is required to be called to approve the agreement.

Investors, assuming that that meeting must be near and the resumption of interest also close at hand, have been buying the potash bonds and the two 7 per cent tranches have this month risen from £237½ to £256 while the series "C" 6½ per cent bonds have risen from about £216 to £229½ in the same period. The bonds are not easy to value, especially when the full details of the agreement have still to be revealed, and the first actual cash receipts have still to come, but it is arguable that at current prices they may be fully valued. The £100 bond was reduced to £79 11s. nominal by a £35 10s. cash payment of 1951 deemed to have reduced the outstanding capital by £20 9s., but the arrears and interest on arrears since 1940 are added to the bonds. The nominal rates of interest are to be cut from 7 per cent to 5½ per cent and from 6½ per cent to 4½ per cent, but investors receive the benefit of a dollar clause at \$4.86 to the £1 which for British residents means that the apparent rate of interest can be multiplied by 1½.

* Functions of a World Food Reserve—Scope and Limitations; HMSO, 5s.

Help for Jute Goods

THE Indian Jute Mills' Association, with the government's approval, has now decided that half the looms brought back into production last February will be re-sealed on July 16th. The looms to be stopped account for 2½ per cent of the industry's total looms, making 7½ per cent stopped in all, and output should fall by some 2,000 tons to 95,500 tons a month. The mills will be thankful for this small mercy, for many have been producing at a loss. The large orders that were expected from Russia have not yet appeared, and Argentina, a major customer, is buying less this year than last. Stocks of jute goods have been rising, and prices have fallen; since March a 10-oz 40-in. hessian cloth, for example, has dropped by 4s. to about 58s. per 100 yards, fob Calcutta, and weakness in prices has itself encouraged consumers to hold off. It remains to be seen whether the cut in output is enough. The market is evidently sceptical, for prices have hardly changed.

SHORTER NOTES

The regular inquiry into industry's investment intentions begun last year by the Board of Trade is being supplemented by a special preliminary survey of investment plans for 1957. The 600 firms in the sample have been asked to list expected purchases of new (but not second-hand) buildings, new and second-hand plant, machinery and vehicles. No allowance is to be made for sales of assets as this will be done later by the Board of Trade on the basis of the latest production census. The forecast of investment by all manufacturing concerns in 1956 (on the basis of last September's inquiry) was 17 per cent higher than the forecast for 1955.

★

The Australian government has announced further restrictions on imports, designed to reduce imports by £32 million in a full year. Imports of fully assembled motor vehicles are to be cut by 50 per cent of the current rate, and unassembled vehicles by 30 per cent.

★

Associated British Picture Corporation announces a final dividend of 10 per cent making a total of 20 per cent for the year ended March 31st compared with 20 per cent and a bonus of 10 per cent in the previous year. Group trading profits fell from £2,988,093 to £2,024,948 and net profits applicable to the parent from £1,011,013 to £570,704. A reserve of £750,000 (including a transfer of £650,000 from the general reserve) is created against initial losses subsequent to March 31st this year in the television subsidiary.

★

The Anglo-Hungarian financial and trade agreement signed this week provides for the payment by Hungary of £4,050,000 in full and final settlement of certain British claims, and Hungary will pay £450,000 to short-term creditors and Hungarian Treasury bill-holders. Payment will be in annual instalments beginning on March 31, 1957. The rights of bond-holders are not affected by this agreement, which will be published as a White Paper.

Company Notes

METAL BOX. By paying an ordinary dividend of 10 per cent, the directors of Metal Box Company effectively left the distribution unchanged. The dividend was paid on a capital of £13,098,855 as increased by a free scrip issue of £5,374,474 and a cash issue—at £2 a share—of £2,349,907. On this dividend the £1 shares yield only £3 17s. at a price of 52s. xd. The yield is low because the net dividend absorbs £753,184 from a net income three times greater. But this is not the only reason. Investors have been attracted to the shares by their growth potentialities. They have a chance of assessing these in the company's full report, which crammed with charts and figures serves as a model of its kind.

If they look first at the results of the year to March 31st, they will note that the sales and investment income of the home and overseas group has risen from £52½ million to £61½ million, that the trading profit of the home group has gone up from £3,586,818 to £4,054,755 and the profit of the overseas group from £1,306,653 to

Sales and income:—	Years to March 31, 1955	1956
Home and overseas groups:—	£000's	£000's
Sales, etc.	52,603	61,225
Profit after tax	2,472	3,005
Home group:—		
Sales, etc.	41,166	47,422
Supplies, services, etc.	27,844	31,941
Wages	7,848	9,170
Other employee payments	1,057	1,249
Depreciation	830	1,007
Trading profit	3,587	4,055
Taxation	1,677	1,862
Net income	1,932	2,178
Retained profits	1,247	1,348

£1 ordinary share at 52s. xd. yields £3 17s. per cent.

£1,708,158. Then they should note from the report of the chairman, Sir Robert Barlow, that each of the company's "product groups" at home and each of the subsidiary companies of Metal Box Overseas has made a contribution to the improvement. One limiting factor is the supply of tinplate. Sir Robert describes supplies in 1955-56 as adequate, but though the second mill at Velindre is expected to start operating very soon, he says that "unless the hand mills can also be kept in full production it is open to much doubt whether the supplies from South Wales will be adequate or whether importations will need to be resumed next year."

The company's progress, measured by an increase in sales of £45 million in the last ten years, reflects the £21½ million spent on building and equipment in that period. The group still has outstanding capital commitments at home of £5,200,000, the bulk of which will be spent this year, but which will not become "fully profit earning during the year." Growth makes continual demands on capital and Metal Box's market is still expanding. Pre-packaging, as is popular in the United States, may grow steadily in popularity in this country and in overseas

countries improvements in living standards should bring more business to the company's local factories. Shareholders may well be justified in basing their assessment on the assumption that long-term growth is still in prospect. But immediately, Sir Robert says, "it will be difficult to maintain our percentage of profit, but we hope that increased volume will offset lower profit margins."

BRITISH NYLON SPINNERS.

The public is interested in British Nylon Spinners only indirectly. Its capital is held half and half by Courtaulds and Imperial Chemical Industries. This indirect holding has now become important to the shareholders of Courtaulds: even for ICI the half share is not chicken feed. British Nylon Spinners returns a profit before tax in 1955 of £10,837,966, compared with £7,291,584, and the net figure after tax was £5,392,966, compared with £3,546,548. Thus Courtaulds' share of the Nylon profit would approximate to the cost of Courtaulds' own 10 per cent dividend and ICI's half would equal roughly a third of the 10 per cent dividend that ICI pays on its £142 million of ordinary capital.

That may be an extreme expression of the importance of British Nylon's earnings. Neither parent consolidates them, for British Nylon Spinners is not a subsidiary. Nor is there any likelihood that in the near future it will be able to pay out all its earnings as dividend. Big expansion of nylon productive capacity will still have to be paid for out of retained earnings, and will no doubt be occasionally matched by increases in the issued nominal capital as it was a year ago when the ranking capital was raised from £8 million to £12 million by a 50 per cent free scrip issue. This year the dividend is 20 per cent, compared with 25 per cent, but it is in effect modestly increased, since it is paid on the larger capital. The cost is £1,380,000, against £1,100,000, and £4 million, against £2 million, is added to reserve. The growth possibilities do not yet appear to have been exhausted. Last year's results must include a full year's income from Pontypool, where production has been running at over 30 million lb of nylon a year; they include a little, but nothing like maximum potential, from Doncaster, where production of nylon staple was started on a small scale a year ago, but production there is still far short of maximum capacity. Nothing yet save small distributors' earnings has come from Australia. Last year's profits were earned in spite of price reductions of around 10 per cent in continuous filament and around 5 per cent in staple fibre made last October to keep British nylon prices as a whole low in relation to nylon prices in other countries. Output must expand further and as it rises there will gradually be less certainty of unsatisfied demand for

the product; but there must be a long way to go before the company saturates its market.

BLEACHERS' ASSOCIATION. Investors must get used to lower profits from the cotton industry this year. Cotton price uncertainty, Indian and Hongkong competition, and the fall in exports call for a new yardstick to measure the company results. By that new yardstick the results of the Bleachers' Association may be judged not bad. The parent company's trading profit for the year ended March 31st was naturally lower, amounting to £760,466, against £1,158,658, but investment income was higher at £329,952, against £127,745. The net taxed profit was moderately lower at £360,784, compared with £414,840, and the total distribution of 12½ per cent (a dividend of 10 per cent and a bonus of 2½ per cent) is unchanged.

What the group has done, as the chairman, Mr Philip L. Wright, explains, is to extend its activities outside the textile field. Beyond mentioning one of these ventures—Greenwich Plastics—he has little, perhaps too little, to say about the group's non-textile activities. But the

Consolidated earnings:—	Years to March 31, 1955	1956

10s. ordinary unit at 9s. 10½d. yields £12 13s. per cent.

principles on which the board is working are made clear enough. Some contraction in the cotton textile industry is accepted as inevitable and the policy is gradually to buttress the company's textile activities with other ventures. It is an obvious tactic for the cotton textile industry and might be more widely copied. It is encouraging to know that other companies are taking similar action. Bradford Dyers recently took a big interest in the production of non-woven textiles and British Cotton and Wool Dyers last week broadened its articles to permit it to undertake a wide range of non-dyeing and even non-textile activities as though "Slubbers" is under less immediate pressure than Bleachers, for as the chairman, Mr Peter Caldwell, shows, the woollen side of its activities has been far less depressing than the cotton side. Indeed, the net profit for the year ended March 31st was slightly up at £47,943, compared with £40,967, the dividend remaining unchanged at 6½ per cent.

Though Mr Wright sees the need for Bleachers to widen its activities, he does not tie that view to the present recession in Lancashire. He does not believe that the "present very reduced activity will persist throughout the year." Nor does he accept as inevitable the open door policy to Indian and Hongkong cloth. On the contrary, he is strongly—and obstinately—protectionist, believing that eventually restrictive action will be taken against these cheap imports. The choice as he sees it is between the "haphazard contraction of the industry which is now going on" and a "more calculated reorientation." For shareholders the moral of what the board is doing seems clear. Investment income from non-textile sources is already beginning to rise and must doubtless rise further, but the process will take time and textiles are still much the group's largest source of income. Earnings therefore remain vulnerable. Meanwhile the company will have to retain large sums from its earnings for investment in the new fields. On last year's earnings the 12½ per cent distribution was still well covered, though profit retentions were lower than in the previous year despite a tax refund of £75,000. It looks as though the scope for dividend increases, even if the chairman is right in thinking that the present recession may ease, is limited.

ALBERT E. REED. In Great Britain, where it is not normally necessary to instal pulping plant, a machine—complete with ancillary equipment—capable of producing 60,000 tons of paper and board costs between £4½ and £5 million. It is a figure that investors should keep in mind in looking at the cash issue of £6,571,970 of ordinary shares at par by Albert E. Reed. The figure, too, must be borne in mind in weighing the dividend payment—£944,721 in 1955-56—against retained earnings of over £2½ million and a depreciation provision of over £750,000. It is a figure, moreover, which goes a long way to explaining why over the next four or five years the Reed group will spend about £25 million on capital account. Most of that sum will come from ploughed back profits.

The group is prepared to spend that sum because it feels that the demand for paper products "is likely to go on increasing for as long as one can foresee." All possible steps are being taken to ensure raw material supplies and productive capacity to meet the increasing demand. Better living standards and greater literacy should ensure the growth of the market. Albert E. Reed is preparing to compete in this market not only by adding to its own capacity but also by adding to its interests in other paper-making concerns, of which its investment in Tasman Paper and Pulp is probably the most significant.

Although the Reed group produces some newsprint, it is not really challenging Bowater Paper's predominance in this

	Years to March 31, 1955	1956

field. Instead it is concentrating on wrapping and other papers. The group already looms large in this industry. It is, Lord Cornwallis says, the largest purchaser of woodpulp in the world. Of the annual production of 3½ million tons of paper and board in this country it produces over 12 per cent—and this represents only half of its business. The other half is concerned with the conversion of paper for various purposes. It converts over 200,000 tons a year and manufactures at least 30 per cent of all the corrugated cases and multi-wall sacks made in this country. Against this background investors must place the addition of £2 million to fixed assets, the advance of about £500,000 in trading profits, and the forecast dividend of 16 per cent on the new capital of £13,143,940. On that dividend the £1 ordinary units yield £5 9s. per cent at the current price of 58s.

LONDON STOCK EXCHANGE

Next Account begins: July 4th
Next Contango Day: July 4th
Next Settlement Day: July 10th

GILT-EDGED stocks were exceptionally weak on Friday of last week, when 3 per cent Redemption 1986/96 and 3 per cent Treasury lost £1 and medium-dated stocks were often 10s. lower. The *Financial Times* index of Government securities fell to 84.53, a fraction higher than the lowest point recorded. Buyers came in on Monday and the index recovered to 84.94, but the subsequent decline of sterling caused further losses. Short-dated issues remained firm despite the raising of the Treasury bill rate last week. On Wednesday the index stood at 84.70. Throughout the week industrial stocks were making small gains until news of the dismissal of motor workers checked the recovery on Wednesday, and on Thursday the market fell further. Oil shares were again the most active market, British Petroleum advanced a further 23s. 9d. to 180s. 7½d. Foreign bonds were firm; Greek, Hungarian and Czech issues improved and Potash Syndicate were again higher.

Among the breweries, Bass declined to 110s. xd, but Watney rose 2s. 3d. to 56s. xd. Teacher reached 30s. Associated Cement gained 2s. 3d. to 103s. 6d., but English China Clays lost 2s. to 36s. 9d. BSA fell 2s. 6d. to 25s. 6d. following the reduction in the interim dividend, and the dismissals at BMC caused a fall to 6s. 4½d. Standard receded to 8s. after reaching 9s. 3d. Courtaulds recovered 1s. 9d. to 35s. 6d. xd following the announcement of higher profits from British Nylon Spinners, but British Celanese lost 3d. to 17s. xd. Paper shares weakened; Bowater fell a further 3s. 3d. to 49s. 3d. and Wiggins Teape 3s. 6d. to 52s. Steel shares were near their lowest points for this year, Dorman Long losing 7½d. to 28s. 9d.

Kaffirs eased on Tuesday after a strong advance, but most of the gains were held. President Brand rose 2s. 9d. to 59s. 3d. and Vaal Reefs 2s. 3d. to 33s. 3d. Harmony were 1s. higher at 25s. 3d. Coppers were firmer, Rhokana gaining 1 to 38, but movements in base metals were small.

Germany excludes West Berlin. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxembourg. Italy includes Trieste. (3) New drachmas introduced May 1, 1954 (1 new drachma = 1,000 old drachmas). (4) Thousand million drachmas. (5) Bizonal area. (6) Average fourth quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended June 23rd, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £13,802,000 compared with a deficit of £30,860,000 in the previous week and a deficit of £27,343,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £3,586,000, bringing the total deficit to £168,739,000 (£266,029,000 in 1955-56).

THE MONEY MARKET

THE Treasury bill rate rose by $\frac{1}{8}$ per cent at the tender on Friday last, to $5\frac{1}{8}$ per cent. The discount market reduced its bid by $\frac{1}{4}$ to $98\frac{1}{4}$ p.c. per cent, and the average rate of discount on all bills rose by $\frac{1}{4}$ p.c. per cent to $95\frac{1}{4}$ p.c. Total applications fell steeply, by £37 million to £358.7 million—the lowest this year. In consequence, the market's allotment rose from 41 to 62 per cent.

The rise in the bill rate, discussed further in a Business Note, was partly in anticipation of the seasonal stringency at the half-year end. In the days preceding the tender, credit conditions were unusually comfortable, and the ease continued through the first half of this week. The only intervention by the Bank has been "in reverse"—on Thursday before the week-end it sold bills to mop up a credit surplus. It may be significant that the market did not adjust commercial bill rates following the Treasury tender.

The price of gold in the London market has risen sharply in sympathy with the weakening in sterling below par. At Thursday's fixing the gold price was quoted at 250s. 2d. a fine ounce, compared with 249s. 7d. an ounce a week before.

The first big outflow of notes for holiday spending occurred in the week to Wednesday, of £14.3 million. The fiduciary issue is raised by £50 million, to a new peak of £1,950 million.

COMPANY MEETINGS

ANOTHER SUCCESSFUL YEAR'S TRADING

PRODUCTS AN AID TO BUSINESS ECONOMY AND PRODUCTIVITY

MR FRED T. JACKSON ON RECORD VOLUME OF NEW ORDERS

The Twenty-seventh Annual General Meeting of Telephone Rentals Limited was held on June 25th at the Caxton Hall, Westminster, London, S.W.1. Mr Fred T. Jackson, OBE, CompIEE (Chairman and Joint Managing Director), presiding.

The Secretary (Mr W. J. H. Ainley) read the notice convening the meeting and the report of the auditors.

The following is the statement by the Chairman, which had been circulated with the report and accounts for the year ended December 31, 1955:

You will have seen from the balance-sheet and profit and loss account before you that we have had another successful year and the profits have again increased.

The new business taken during the year under review constitutes a record in the history of your company. The results arising from this new business will be apparent in 1956.

Looking ahead as far as the current year is concerned, business taken during the first four months of 1956 is considerably in excess of that taken during the corresponding period in 1955.

The service rendered to subscribers by your company has a great bearing on productivity, and the increase of business is partly due to the fact that industrialists are becoming more production-minded.

I might point out to you that the whole of the business carried out by your company is a very great aid to business economy and productivity. We have only one subsidiary company which does not carry out business under the heading of telecommunications, and that is engaged in the supply of cold rooms and deep-freeze equipment for butchers, restaurants, and food purveyors generally. That subsidiary is doing an increasing business, and it is doing valuable work as far as the economy of this country is concerned.

You will realise that, taken as a whole, the activities and the services rendered by your company necessitate a very considerable capital outlay and this, in due course, will receive the consideration of your directors.

OVERSEAS ACTIVITIES

As I did last year, I will review the activities carried on in various parts of the world, although the bulk of our business lies in the British Isles.

South Africa, with its headquarters in Johannesburg and a subsidiary in Cape Town, continues to earn satisfactory profits and is now financially self-supporting.

Our business in Canada is centred in Toronto and for the time being we concentrate on the Toronto area. We find that

Canada is a hard furrow to plough, but the business continues to expand and each subscriber we obtain acts as a recommendation to other firms in the area. There is no question that Canada as a country has a tremendous future industrially, and we can confidently expect that we shall build up a very valuable business there.

As I explained at our last meeting, we took a 50 per cent interest in an Australian business which operates in all the principal towns in that continent. The annual rental derived from the company there is quite substantial and the business is making great progress under an able manager who was trained in our business here.

Consequently, we have built up a substantial export trade.

My colleague, Mr W. Stuart Philcox, visited Australia, South Africa and Canada towards the end of last year and was very satisfied with the progress that had been made.

Our companies in Paris and Brussels have both made a small profit, but neither of these companies has made a substantial contribution towards the result now before you.

PROFIT-SHARING SCHEME

I would once more emphasise that our profit-sharing scheme is very successful, and I think that is indicated by the accounts before you. We always have in mind that the thanks of the directors cannot be put into the pockets of the employees, but I would take this opportunity of thanking them all for their loyal and good work during the year under review. The good work is reflected in the profits earned, and is recognised by the employees' participation in those profits.

ACCOUNTS

I will now refer to the accounts and explain the major changes as compared with the previous year.

PROFIT AND LOSS ACCOUNT

The Gross Profit of £745,844 shows an increase of £55,091 over the previous year. This is partially accounted for by the increase in the dividends from the subsidiary companies amounting to £6,003 and in dividends and interest receivable of £10,152. The increase in the interest received results from the investment of our surplus cash resources in Treasury Bills, Tax Reserve Certificates, and on deposit account.

Income tax and profits tax are down by £13,374 on the previous year, and the net profit at £425,643 is substantially greater by £91,734. Of this sum, £23,269 is accounted for by the adjustments of all our old tax reserves. I would explain here that before

we amalgamated all the subsidiary companies operating in the United Kingdom with the parent company on January 1, 1946, the tax assessments of the individual companies were dealt with by various inspectors throughout the land, consequently the wear and tear and capital allowances varied quite considerably as between one area and another. Since the amalgamation we have been negotiating with the Inland Revenue and have at last agreed a new basis of capital allowances and all assessments on the profits of the years 1946 to 1953 have been agreed, and by the time this is in print we shall probably have settled the 1954 assessment. We have therefore credited back to the profit and loss account the surplus on all the old tax reserves, and created a tax equalisation reserve to cater for the deferred liability due to the capital allowances. The net result of these adjustments, together with the crediting to profit and loss of the EPT postwar refund suspense account of £31,439, is an over-all surplus of £23,269. The details of the adjustments have been shown in full in the profit and loss account.

We have again this year transferred the sum of £200,000 to the general reserve and have transferred a further £50,000 to the contingencies reserve. This contingencies reserve, which now stands at £100,000, more than adequately covers the accumulated losses on our Canadian companies and we have provided the additional sum this year to cater for the further losses which we can expect before they achieve a profit-earning basis.

After providing for these transfers to reserves and the dividends on both the Ordinary and Preference shares amounting to £136,850, we are left with an unappropriated balance of £159,637 to be carried forward to the current year.

BALANCE SHEET

The issued capital remains unaltered, but the capital reserves have been depleted by the transfer as already mentioned of the EPT postwar refund suspense account to the profit and loss account. The revenue reserves now total £1,250,000, and the shareholders' interests consisting of capital, reserves, and unappropriated profit balance amount to £3,675,175, as compared with £3,419,633 at the end of 1954.

The reserves for future taxation now stand at £880,500, as compared with £278,000 in the previous year, and this is attributable to the creating of the tax equalisation reserve of £620,000.

The current liabilities have decreased by £292,543, chiefly on account of the adjustment on the tax reserves of all years prior to 1955. Sundry creditors and accruals, however, show an increase of £52,260, which is mainly accounted for by amounts due to our suppliers for increased stock purchases.

Turning now to the assets side of the balance sheet, the net value of the revenue-bearing installations is £2,860,506, which is equivalent to 1.42 year's rent.

The total amounts invested in our subsidiary companies show some marked changes. The investment in the capital of the subsidiaries is up by £157,898, represented by an increase in the capital of the Paris company of £41,459, and of £116,439 in Canadian Telephone Rentals. It was necessary for us to place more finance at the disposal of the Paris company in order to clear their bank overdraft, and to allow them some working capital, for, despite inflation and the various devaluations of the franc, they had been attempting to work on a prewar capital, bolstered up by borrowings from the bank. The increase in the Canadian share capital is the result of the capitalisation of the loans, both in the form of cash and in goods supplied. It is proposed to fund any further loans in a similar manner towards the end of each financial year.

The loans to subsidiary companies have been reduced by £36,676, which is accounted for by the conversion of the Canadian Telephone Rentals Loan into shares. The amounts due from subsidiary companies also show a reduction of £25,258, which again is accounted for by the capitalisation of the debt owed by Canadian Telephone Rentals Limited for goods supplied.

The stock and work in progress at £562,653

LONSDALE INVESTMENT TRUST, LIMITED

AN ACTIVE AND PROFITABLE YEAR

MR T. L. MC. C. LONSDALE'S STATEMENT

The annual general meeting of the Lonsdale Investment Trust, Limited, will be held on July 19th in London.

The following is the Statement by the Chairman, Mr T. L. Mc. C. Lonsdale, circulated with the report and accounts:

The Accounts of the Trust and its wholly owned subsidiary, Robert Benson, Lonsdale & Company Limited, for the year ended February 29, 1956, again indicate an active and profitable year.

The Balance Sheet of the Trust reflects the changes in the Capital structure which were approved last year, the Issued Ordinary Share Capital, which now stands at £1,755,000, having been increased by £585,000 and the Share Premium Account correspondingly reduced.

INCREASED REVENUE

The gross revenue from the Trust's general investments increased by £55,157 to £263,923. This increase is partly attributable to the receipt of a full year's income from the investment of the proceeds of the issue of £500,000 4 per cent Debenture Stock 1979/84 which was made in the course of the previous year, and partly to higher rates of dividends received from investments. After adding the gross dividend of £120,000 received from Robert Benson, Lonsdale & Company Limited, the same as last year, and other income, the Trust's total gross revenue amounted to £388,710 against £334,258 the previous year. After deduction of all expenses, Debenture interest and taxation and the dividend on the Preference Stock, the amount available for the Ordinary Stock was £170,527. Of this, the interim dividend already paid and the final dividend now proposed on the Ordinary Stock, making a total

shows the substantial increase of £135,874, of which approximately £40,000 is represented by increased work in progress, and the balance represents stock which it is necessary for us to carry in order to cater for our increased business.

Our liquid resources in the form of Tax Reserve Certificates, Treasury Bills, and cash, both in London and Australia, have increased from £792,432 in 1954 to £873,496 in 1955. Although this looks extremely healthy, I have to tell you that we have already used Tax Reserve Certificates to the value of £255,450 this year in payment of the tax due on January 1, 1956, and that our commitments for purchases of materials during this current year are on a very much heavier scale than previously, so these cash resources will be quite considerably depleted by the end of the year.

CONSOLIDATED BALANCE SHEET AND PROFIT AND LOSS ACCOUNT

The Consolidated Accounts having been prepared on an identical basis to that of the parent company, the material changes have already been dealt with in the foregoing remarks.

The net profit for the Group before taxation is £790,548, compared with £725,941 for 1954. After providing for taxation, the transfers to reserves, and dividends, the

of 12½ per cent, for the year, will absorb £126,141, leaving an amount of £46,454 of the Trust's income during the year to be added to the carry forward, making that figure £216,778. The total dividend paid last year on the old Ordinary Capital amounted to 16 per cent, which was equivalent to 10½ per cent on the present Capital, as compared to the 12½ per cent proposed this year.

ROBERT BENSON, LONSDALE & CO.

The profits of Robert Benson, Lonsdale and Company Limited, though not as high as those of the previous year, were very satisfactory and were sufficient to pay, after taxation, the same dividend to the Trust as last year, to put £100,000 to Reserve, and to carry forward slightly more than last year. The Reserves and carry forward of Robert Benson, Lonsdale & Company Limited (including its subsidiaries) are now approximately £600,000 as compared to £114,000 when the Trust acquired the Company in July 1947.

VALUATION OF INVESTMENTS

It is satisfactory to note that, taking the unquoted securities at cost, the general investments of the Trust were £1,568,217 in excess of book value.

The classification of the investments shows that the Trust's general portfolio remains predominantly in Ordinary Stocks and Shares and that the proportion invested in North America on the present valuation has increased during the year from 27½ per cent to 31½ per cent.

In the first quarter of the current year the income from the Trust's general investments has been well maintained. Although it would be prudent to view the nearer term with some caution, the rapid developments in automation and the application of electronics and nuclear science, which must involve great demands for capital and new equipment, should, without doubt, provide opportunities for profitable operations and investment and the Group is well equipped to take advantage of them.

CONCLUSION

I am sure you will agree with me that the accounts as presented reflect a sound and healthy position, and provided wage demands and inflation in this country are halted, and production and exports increase, I see no reason why we should not look forward to equally good results in this current year. It is not, however, going to be easy, for already wage awards in both the engineering and contracting industries have resulted in increased prices of materials and in increased cost of our own labour. To our employees this is a direct challenge to increase their productivity, and if only the same could be said for all workers throughout the length and breadth of the land, we should have little cause to worry about the balance of payments, or the standard of living of our people.

The report and accounts were adopted, and the final dividend of 7½ per cent, making 12½ per cent for the year, was approved.

The retiring director, Sir Leonard Browett, KCB, CBE, was re-elected, and the remuneration of the auditors, Messrs Chas. W. Rooke, Lane and Company, having been fixed, the proceedings terminated.

RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED

SIR ERIC MACFADYEN'S STATEMENT

The Forty-seventh Annual General Meeting of The Rubber Plantations Investment Trust, Limited, was held on June 27th in London.

Sir Eric Macfadyen, Chairman, in the course of his speech, said: The Accounts for the year to March 31, 1956, show earnings of £278,263 and, after taxation, net revenue of £151,851; the gross earnings yield on the Trust's Issue Capital of £1,728,569 being 16.10 per cent (11.85 per cent). Net revenue is higher than that of the previous year by £46,017 and, including the £105,115 brought in, we have £256,966 available for appropriation; of this amount the Directors have transferred £25,000 to General Reserve and they recommend a dividend of 12½ per cent which will cost £124,241 (net), and leave £107,725 to be carried forward.

At March 31st the net book cost of the Trust's investments was £1,835,742 (an increase of £123,243) and their net valuation at March 31st came out at £1,796,856; the depreciation at £38,886 compares with £82,384 a year before and £263,038 depreciation the year before that. The break-up value per stock unit is 2s. 4d. (2s. 3d.). Our liquid funds are held mainly in Treasury Bills and near-dated Government Securities and afford readily available resources for employment as suitable market conditions present themselves.

As with many other Investment Trusts the Rubber Trust has a high proportion of small investors among its list of Members at date we have 8,409 names on the register of members and in the last analysis of it make-up more than one-half of these (4,400 held £100 Stock or less—6,697 Member held £250 Stock or less).

The report and accounts were adopted.

FRIED. KRUPP

ESSEN, GERMANY

YEAR OF PROGRESS AND EXPANSION

IMPROVED EARNING POSITION

FINANCE FOR EXPORT TRADE NECESSARY

HIGHER GROUP TURNOVER ACHIEVED

REVIEW OF PAST YEAR'S OPERATIONS

The following are details of the report issued by the Krupp concern on developments during the year 1954-55.

REVIEW. TURNOVER

The Company's progress during the year was in keeping with the general expansion of business, which determined the state of the home market and influenced world markets. As a result, existing capacity could be fully utilised. In some sectors output did not keep pace with increasing demand, and the level of orders in hand rose accordingly. Turnover during the year, including AG Weser (a shipyard in which Fried. Krupp holds 82 per cent of the shares), amounted to approximately DM 1,600 million, as compared with DM 1,200 million in the preceding year. This figure was shared equally by the concern's producing units, and by its trading companies.

During the same period, Hüttenwerk Rheinhausen and the coal properties, separated from Fried. Krupp by Allied decartelisation measures, had a turnover of approximately DM 1,100 million, bringing the figures for all the Krupp properties to some DM 2,700 million.

PRODUCTION PROGRAMME

The Company's production programme was further diversified during the year, diesel engines, machinery for the production of man-made fibres, heavy presses for the motor industry, and the extraction of titanium from titanium sponge (semi-processed ore) being outstanding among the new ventures. The titanium process was first demonstrated at the Hanover Industries Fair in April-May, 1955.

INVESTMENT

The degree of competition met with today, and the need to absorb higher costs by suitable rationalisation measures in order to hold prices, led to considerable capital expenditure during the year. Investments totalled more than DM 70 million, and were largely financed by decartelisation sales.

SALES

Great efforts were made to improve the Company's sales organisation in the Federal Republic. Offices were opened in Frankfurt, Mannheim and Hamburg in order to streamline existing facilities in all economic sectors. Further offices are to be opened in Stuttgart, Freiburg, Nuremberg, Hanover and Bremen during 1956.

EXPORTS

Fried. Krupp's business relations in foreign markets were further expanded during the year. Export turnover figures reached approximately DM 280 million, most of which was accounted for by AG Weser, Bremen.

Increasingly severe competition adversely affected foreign business, however. In addition many countries of particular importance to the Company's export trade were forced to safeguard their balance of payments by establishing import quotas or by cutting off imports altogether.

In the case of large-scale foreign projects German exporters are handicapped by the lack of capital on the money market. It seems vital to find new ways of providing long-term export finance if Germany's export trade is not to limp behind foreign competitors who can draw on far more substantial capital resources.

An outstanding feature of Fried. Krupp's foreign operations during the past year has been the expansion of its own "Point IV 1/2" programme in underdeveloped countries. Extensive metallurgical projects are being planned in Pakistan, Greece, Brazil, Turkey, French Morocco, Yugoslavia and Bolivia. These "Point IV 1/2" projects are in addition to others already under way, such as the 1 million ton steel mill at Rourkela, India, which is being built jointly with Demag, a 300,000 ton steel mill at Multan, Pakistan, and a smelting plant at Larymna, in Greece.

ASSOCIATED COMPANIES

Encouraging progress by departments, subsidiaries, and associated companies can be reported.

KRUPP-TECHNIK :-

Further expansion took place in this field. The furnace sections in Rheinhausen and Essen were combined into a furnace division, and now supply furnaces and ovens for solid, liquid, and gaseous fuels, as well as for electric operation.

An extensive metallurgical research installation is being built.

Apart from projects already under construction, steel mills at Rourkela (India) and Multan (Pakistan) and a smelting plant at Larymna (Greece), new orders were secured in the following countries: Pakistan,

Greece, Brazil, Turkey, French Morocco, Yugoslavia and Bolivia.

The reconstruction of the direct-process plant for special ore processing at Watenstedt, dismantled after the war, deserves special mention. This project is being handled on behalf of a consortium including eight of the largest West German steel producers. The first stage, to be completed during 1956, provides for 3 furnaces with a total daily capacity of 2,000 metric tons of iron ore.

The Capito & Klein rolling mill was taken into service during the year.

Further progress may be expected in this field. The demand for direct-process plants and steel mills is increasing, and a number of large-scale projects in Central and South America, the Near East and Far East, as well as in South-East and South-West Europe have already reached an advanced stage.

FRIED. KRUPP MASCHINENFABRIKEN ESSEN :-

This company was formed on January 1, 1956, and includes the Krupp locomotive plant, the electrical plant and Essener Maschinenbau. After reorganisation, two divisions were established:

Division I

Capacity of the locomotive plant was only utilised to the extent of 70 per cent, owing to a reduction in business, and the partial conversion of the plant for other work is proceeding. Progress is reflected by a 21 per cent rise in turnover, and a 70 per cent increase in the volume of orders received.

Licence agreements were concluded for the production of large presses, the manufacture of marine diesel engines, and for the construction of particularly efficient steam locomotives with pre-heaters.

In most sectors the upward trend may be expected to continue, although strong competition on foreign markets exerts a severe pressure on prices.

Division II

Existing capacity was fully utilised, with occasional three-shift working. Turnover in electrical machinery rose by some 20 per cent, in pneumatic tools by 66 per cent, and in track-laying machinery by as much as 222 per cent. Electrical plant for August-Thyssen-Hütte and Gutehoffnungshütte was particularly important. Two hundred and sixty track-laying machines were bought by the Federal German Railways.

Judging from the volume of orders in hand a further rise in turnover is likely, and a corresponding expansion of capacity is being planned.

FRIED. KRUPP HEAT TREATMENT DIVISION :-

The foundry, forge, and spring manufacturing sections were combined into a single

THE ECONOMIST, JUNE 30, 1956

division during the year. Capacity was almost fully utilised, and turnover rose by between 70 per cent and 80 per cent over the preceding year's figures.

Further plant extensions were completed according to plan. The new cupola furnace in the foundry section was of particular importance, and enabled considerable reductions in costs to be achieved.

Fresh advances were made in foundry technique, and new fields of application could be opened up.

After research extending over several years, various types of titanium were exhibited at the Hanover Industries Fair for the first time. Similar displays were arranged for the Chemical Exhibition (ACHEMA) in Frankfurt and the International Aeronautical Exhibition at Le Bourget, Paris. This new material, outstanding on account of its low specific gravity and its resistance to corrosion, is now being used experimentally in a variety of fields.

The year 1956 opened with orders in hand 70 per cent up on the figure at the beginning of the preceding year.

FRIED. KRUPP WIDIA SINTERED CARBIDES PLANT :-

All sections were working at full stretch during the year, and turnover in sintered carbides, tools, and magnetic materials rose considerably. A number of new installations and machines were taken into service, with a consequent increase in production capacity.

A new research institute is to be erected, and the administration building is to be extended.

If present trends continue a further rise in turnover during 1956 may be expected.

FRIED. KRUPP MASCHINEN-UND STAHL- BAU RHEINHAUSEN :-

Turnover rose by some 13 per cent during the year, and the labour force increased proportionately. The export ratio amounted to approximately 40 per cent.

Capacity was fully utilised, and there was some three-shift working. Demand could not be fully met, and some sub-contracting became necessary. Expansion of capacity and modernisation entailed considerable capital expenditure. At Goddelau a third shop with a 10-ton travelling crane was put into service.

New items in the production programme include:

- Cableways
- Washing Plant
- Light Metal Construction.

A number of large-scale projects are being undertaken by this company, either alone or

jointly with other concerns. They include:

- Oil refinery in Greece;
- Extension of Opel Works at Rüsselsheim;
- University Bridge in Cairo;
- Rolling mill for Gusstahlwerk Witten;
- Rolling mill in Austria;
- Numerous cement factories, processing and crushing plants, and large dredgers.

AKTIENGESSELLSCHAFT "WESER" :-

Capacity both at Bremen and at Seebeck was fully taken up during the year. The number of people employed rose by nearly 1,500 to 10,265. At Seebeck, the fiftieth trawler and the hundredth newly built ship since the war were completed in 1955.

Twenty-seven ships with some 150,000 tdw were delivered during the year. They included 10 vessels of 126,000 tdw built at Bremen, and 17 vessels of 24,000 tdw at Seebeck. The export ratio exceeded 50 per cent. The largest ship built was the tanker *Esso Frankfurt* of 26,500 tdw. Specially important, however, was the delivery of two passenger ships to a Turkish shipping line for operation in the Black Sea. They indicated the resumption of the old tradition of passenger ship construction.

Orders in hand comprise 60 ships of some 660,000 tdw, with delivery dates well into 1959.

KRUPP-ARDEL GMBH :-

Capacity was fully utilised during the year. Turnover rose by 30 per cent, and expansion became necessary.

Particularly remarkable among new developments was a self-propelled heavy crane exhibited at the Hanover Industries Fair, with a tyre diameter of 2.25 m (7.4 ft) and an unsupported lifting capacity of 35 metric tons. It was one of the most interesting exhibits at the Fair.

Some especially important deliveries were made during the year: further luffing cranes to Chile and Bangkok; railway turning cranes to Egypt, Beira and Norway; large loading bridges for Amsterdam and Brake.

The orders in hand ensure full employment for more than a year. They include 48 luffing-turning cranes for Karachi harbour, Pakistan.

FRIED. KRUPP DIESELMOTOREN GMBH :-

This company was founded on April 1, 1955, and absorbed the former diesel engine division. Apart from looking after the spare parts business, which assumed increasing importance, the company proceeded with the development of new engines of its own design. At the end of 1955, a licence for large marine diesel engines was acquired from the Danish company of Burmeister & Wain, and orders for such units have already been secured.

Further advances are expected to be made during the current year.

FRIED. KRUPP MOTOREN-UND KRAFT- WAGENFABRIKEN GMBH :-

Reorganisation and streamlining of production proceeded. Capacity was greatly expanded as a result of the installation of additional machinery and an increase in the labour force. Since capacity was fully taken up, the turnover rose by some 40 per cent.

The increase in sales may be attributed to the growing appreciation among buyers of the advantages of the two-stroke diesel engine and of the compressor brake developed by Krupp.

A further type has been added to the com-

pany's production programme, a light-weight 5-ton vehicle with a 3-cylinder engine, which has proved particularly suitable for short-haul traffic.

TRADING COMPANIES :-

Developments during the year were encouraging, and rises in turnover figures were reported by all companies. The number of people employed rose to approximately 2,200. New types of merchandise included plastics (particularly plastic tubes and fittings), light metals, non-ferrous metals, and plastic-covered wires. Exports through Krupp Eisenhandel GmbH, Düsseldorf, made satisfactory progress. Further rises in turnover are expected for the current year.

PERSONNEL

The labour force at the beginning of 1956 was made up as follows :-

Fried. Krupp	24,663
Participations	20,908
Fried. Krupp Total	45,571
Decartelised undertakings	39,549

Grand Total 85,120

In view of the increasingly difficult problems involved in planning and preparing for production runs, the staff ratio increased during the year; by the end of 1955, one in four of the Company's personnel was a member of the technical and administrative staff.

Following an increase in the number of people employed on the one hand, and rises in wages and salaries on the other, labour charges rose to DM 216 million during the year. Statutory and voluntary social security expenditure reached DM 32 million.

Special attention continued to be paid to apprentice training schemes, in order to counteract the ageing of the labour force, and with a view to promoting rationalisation. Apprentices at the end of the year 1954-55 numbered 3,455.

Progress was also made in unifying and revising pension schemes, and resulted in an increase in expenditure of more than DM 4 million a year in respect of Essen pensioners alone. Company hospital accommodation now comprises 600 beds, and more than 70 out of every 100 in-patients are ordinary citizens of Essen unconnected with Fried. Krupp.

Housing accommodation continued to be provided by Kleinwohnungsbau Krupp g. GmbH. Building work for DM 14.6 million was carried out during the year, of which some DM 5 million was borne by Fried. Krupp. By the end of 1955, dwelling-units provided totalled 11,021. Work on a further 984 units was begun during the year, and the 1956 programme envisages the construction of 1,268 units.

OUTLOOK

Generally speaking, the Company's earning position improved during the year, although pensions payments to former employees of dismantled plants, the capital levy for the Equalisation of Burdens, and other capital taxes on non-operating plants continue to bear heavily upon income. The following excerpt from a speech by Alfred Krupp to high executives at the beginning of this year aptly points the way to the future:

"A true living community of all who work with us, coupled with a firm determination to achieve further progress, should be our goal. If we all feel and act in this spirit, there is no need to fear the future."

RICHARD COSTAIN LIMITED

SATISFACTORY RESULTS DESPITE DIFFICULTIES

WELCOME CONTRIBUTION FROM OVERSEAS CONTRACTS

SIR RICHARD COSTAIN ON LONG TERM PROSPECTS

The twenty-third annual general meeting of Richard Costain Limited will be held on July 17th, at 111 Westminster Bridge Road, S.E.1.

The following is the statement by the Chairman and Joint Managing Director, Sir Richard Costain, CBE, which has been circulated with the report and accounts for the year ended December 31, 1955:

You will note from the Consolidated Profit and Loss Account that while Trading Profits have increased, the net balance available in Richard Costain, Limited, £56,000 is less than that for 1954. This has been an exceptional year's trading involving both special profits and losses as referred to in Note 1 attached to the accounts. First, we have at long last received compensation for loss of development rights on land under the provisions of the Town and Country Planning Acts amounting, with interest, to £213,000. Secondly, we have provided in full for the considerable initial loss, £146,000, incurred by our Canadian subsidiary, which latter provision has to be made out of taxed profits. Our ultimate net profit is sufficient to cover our normal dividend requirements after leaving no less than £129,000 profits undistributed in subsidiary companies.

There is one further exceptional item which is not dealt with in the Profit and Loss Account. We have a 50 per cent shareholding in Costain-John Brown, Limited. This company has had a successful record since its incorporation in 1948, but has recently had an unfortunate experience (partly due to circumstances over which it had no control), in regard to a large contract in the Middle East, in which it was concerned together with Iraqi partners. It is not yet possible to ascertain the loss, but we have appropriated £100,000 from our realised capital profits as a provision against our 50 per cent interest in this company.

In my statement last year I explained that bad weather in the first three months of 1955 had delayed progress on the Home Contracting side; this early disadvantage was not fully overtaken and our profits were affected, apart from the fact that certain contracts proved somewhat unsatisfactory. On the brighter side our Overseas contracts made a welcome contribution to Group profits.

During the year we have made further capital profits on sales of Fixed Assets amounting to £102,103 (compared with £29,568 last year) which have been added to the General Capital Reserve Account out of which £100,000 has been appropriated in the manner I have referred to above. A further capital (tax free) bonus of 3 per cent was declared in 1956 out of capital profits.

You will notice that the Group overdrafts have increased. This has mainly been caused by house building for sale and the opencast mining contracts which latter have necessitated heavy expenditure on plant in addition to the moneys required to finance work in progress. The overdraft on opencast mining will, over a period of years, disappear, and in speculative estates it is a well-known principle that house building for sale uses more finance than normal contracting work, but it is hoped that the use of money for this purpose will show a reasonable return.

Returning to the Profit and Loss Account, the net balance available in Richard Costain Limited (after retaining £129,000 in subsidiary companies) is £56,000, to which must be added the balance of profits brought forward of £223,880. After providing for the Preference dividend and the proposed Ordinary dividend of 10 per cent, the balance carried forward amounts to £229,405.

I will now deal in detail with the various activities of the Group.

AT HOME

Home Contracts.—1955 was a difficult year for contractors in the United Kingdom. As I have pointed out already the weather in the first three months made a bad start. During the rest of the year the very great volume of new work in the country caused severe competition for labour and especially for skilled craftsmen. Since construction work must be very carefully phased these shortages caused dislocation, particularly because, from a long-term point of view, your company wished to maintain its reputation for completing work within the required time. I am glad to say that the results of contracts started in the last twelve months show a distinct improvement although there may be a shortage of skilled craftsmen again this summer. The Credit Squeeze, too, is beginning to have its effect upon construction work in general, and I believe by 1957 will reduce the volume of work quite considerably.

The Civil Engineering Division has almost completed our Garry contract for the North of Scotland Hydro Electric Board and undertook a number of major contracts during the year, including two power stations for the Central Electricity Authority.

The Opencast Mining Division is ahead of schedule on its very large contract for the excavation of 5 million tons of coal. During the first year of operations we have excavated 6½ million yards of overburden from the initial cut, which in itself is no mean feat and required a very high degree of organisation and technical skill. This contract extends over some years and its results are not yet reflected in the figures of the Group.

The Building Division has been fully occupied during the year under review. Although the division has undertaken some considerable housing schemes recently the preponderance of its work has been on industrial and commercial buildings, so that it should not be unduly affected by the reduction in housebuilding for local authorities. The division had 15 factories and 7 office blocks under construction during the year, the largest being a factory of 547,000 sq ft.

Our Area Branches continue satisfactorily. The Plymouth Branch has recently been awarded two major contracts, one for Lloyds Bank and the other for the Royal Naval Engineering College.

Properties.—The revision of the Rent Restriction Acts has caused a very slight increase in the property income. We have purchased a number of estates on which to build houses for sale, and this has made a small contribution to your company's activities during the year which should increase in this and subsequent years.

ties during the year which should increase in this and subsequent years.

Costain Concrete Company, Limited.—The company's results showed an improvement during the year. The production of sleepers continued during the year and following a considerable amount of research the pilot order has been placed for an improved type of sleeper.

WORK ABROAD

Work abroad during the year compensated for the difficult conditions at home and your company has, with the exception of its Canadian subsidiary, had a satisfactory result during the year from its work abroad.

West Africa.—You will already have received a copy of the company's staff magazine, "The Bulletin," devoted mainly to the Queen's visit to West Africa. As you will have read there we are proud to report that Her Majesty The Queen opened two of our major contracts which were completed during the year, the Apapa Wharf and the Ijora "B" Power Station. Her Majesty also visited the Oji River Power Station, a current contract of Richard Costain Limited and the Ibadan Teaching Hospital, a current contract of Costain (West Africa) Limited. I am glad to report that your company has recently been awarded a further major contract in West Africa for the construction of the Ebute Metta Causeway and Costain (West Africa) Limited has also been awarded a major contract for the construction of bridges between Lagos and Mando. Following Colonel P. McA. Sinclair's appointment as a director of the parent company, Mr D. W. C. Shaw, who has been a director of our associated company in Liverpool for 21 years, has been appointed Managing Director of Costain (West Africa) Limited.

Middle East.—The balance of the profits which have been earned on the Power Station in Kuwait have been taken into the Group Accounts during the year.

The completion of this building in record time has enhanced our reputation for work in the Persian Gulf Area where we have now been operating over a period of 20 years. We are undertaking work for the State of Bahrain and two major oil companies in the area.

In addition our associated company Costain-John Brown Limited is ahead of schedule on the construction of the 350 miles of pipeline to which I made reference in my report last year.

Canada.—On the conclusion of initial contracts in Canada, our subsidiary company has shown a loss of £146,000. Although we realised that these contracts were taken at a time of severe competition and that we had yet to gain experience in Canada, nevertheless we had not anticipated a loss of this magnitude. Steps have been taken to rectify this situation and the Canadian companies have entered into the Property Development field in partnership with Canadian interests. We consider that their extensive local experience together with our own knowledge of property development will prove profitable.

Rhodesias.—The Rhodesian subsidiary companies continue to make their contribution to the Group.

tion to the Group. Richard Costain (Southern Rhodesia) Limited has recently been awarded a £3½ million contract for the construction in eighteen months of a town to house the thousands of workers who will be engaged in the erection of the Kariba Dam across the Zambesi. Our latest reports are that, after three months, this contract is already ahead of schedule.

Costain (Northern Rhodesia) Limited continues to be fully and profitably engaged.

STAFF

Your Directors are as always fully conscious of the contribution made by the staff both at home and overseas and wish to record their appreciation of the continued loyalty and support received.

BOARD CHANGES

During the year we were sorry to lose two members of the Board. Mr R. B. Minto felt that the time had come for him to retire from

business. During his period of service on the Board he has built up a personnel department of which we are proud. We would like to thank Mr Minto for all he has done and wish him enjoyment in his retirement.

For some time Mr R. M. Wynne-Edwards has been fully engaged in the management of Costain-John Brown Limited, and during the year we felt that it would, with the increasing size and complexity of that company, be fairer to him and to our partners, John Brown and Company Limited, if we agreed to release him from his commitments to your company. I would like to place on record our appreciation of his very valuable service to the company and say that we are glad that we will still be working in close co-operation with him.

Colonel P. McA. Sinclair was duly elected to the Board at the Annual General Meeting last year.

FUTURE PROSPECTS

As I have already explained, 1955 has been an unusual year in which we had some

GILL & DUFFUS LIMITED

POSITION OF CONSIDERABLE STRENGTH

MR J. I. MURRAY'S STATEMENT

The ninth annual general meeting of Gill and Duffus Limited will be held on July 16th, at 23, St. Dunstan's Hill, London, E.C.

The following is the Statement by the Chairman, Mr J. I. Murray, which has been circulated with the report and accounts for the year ended December 31, 1955:

The Report and Accounts are this year submitted in a new form designed to give a clearer picture of what the Company's business actually is and the kind of assets which it possesses. The Board trust that the information given in pictorial form will be of interest and assistance to Shareholders and Stockholders and also to the investing public in assessing the worth of the Undertaking—by no means an easy task in a business such as ours.

During the past year two new Directors were appointed and their re-election falls to be confirmed at the Annual General Meeting. Mr Pearson has been Secretary of the Company since its reorganisation in 1947, and he and Mr Byles have served the Company with loyalty and distinction. Their promotion is a just and natural recognition of the valuable services which they have rendered.

PRICE OF COCOA

I would like first to refer to the price of Cocoa. In January, 1955, it was between £375 and £400 per ton, but the price declined steadily during the year and by the end of December, 1955, it had fallen to £250 per ton. This further decline unfortunately left consumers with stocks at considerably higher prices which, because consumption was falling, could only be worked off gradually. In such circumstances, it was not surprising that the market for cocoa products became more competitive and margins tended to narrow.

In spite of these conditions and the lower prices which obtained in 1955 as compared with 1954, the Group's turnover rose substantially both in volume and in value—in cash the value of the turnover was £32,500,000 as compared with £30 million in 1954. This can largely be attributed to

the fact that our organisation is now a worldwide one, the strength of which lies in the way it combines both trading and manufacture. Diversification has also played its part and this is something which we are continually striving to promote.

The Group profit for the year before taxation was £870,188 as compared with £907,128 for the previous year—a decrease of £36,940, but this was after charging £145,023 for Interest as against £31,691 for 1954—a reflection of the increases in the Bank Rate which took place in 1955 and the cost of financing our contracts to which I referred last year. After making provision for all taxation which, including Profits Tax and allowing for adjustments in respect of the previous year, required £474,348 and deducting Profit attributable to minority shareholders and the increase in the amounts retained by Subsidiary Companies, the net profit available to members was £346,826.

The Preference Dividend and the Ordinary Dividend, of which 11 and two-thirds per cent was paid in December, 1955, takes £165,370, and after bringing in the amount brought forward from last year, the balance to be carried forward to next year is £621,285, compared with £439,928 as at December 31, 1954. Of this balance of £621,285, £359,605 is attributable to the Parent Company and £261,680 is retained by Subsidiary Companies.

ESSENTIAL OBJECTIVES

These balances are undoubtedly substantial and with the Replacement and General Reserve give a picture of considerable strength. It should, however, be emphasised that there are certain essential objectives, the conflicting claims of which have to be reconciled year by year and which can never be forgotten by the Board in formulating policy. These are:

- (1) The need to generate cash if possible;
- (2) The need to keep our plant and machinery in first-class order and absolutely up to date;
- (3) The need to give the Ordinary Stockholders a fair return on their Capital.

exceptional problems to deal with. I am happy to say that long-term prospects are by no means unsatisfactory. At home our contracting business is soundly based, although there are certain less satisfactory old contracts to be completed, and on the building side we should realise satisfactory profits from the development schemes commenced in 1955. Our very large opencast mining contract in the North was only in the development stage in 1955. Overseas our business in the Rhodesias and West Africa should continue to prosper; as I have mentioned above we have secured an important contract at Ebute Metta in West Africa and the contract for the construction of the camp for the Kariba Dam project. Prospects for our Canadian subsidiary are good after its initial reverses and we have entered into a partnership arrangement with Canadian interests to develop property which appears most promising.

While 1956 may be a difficult year, I have always perhaps erred on the side of caution and conservatism in past years, and now regard long-term prospects with cautious optimism.

BALANCE SHEET CHANGES

The Consolidated Balance-Sheet reveals certain changes to which I should like to refer in some detail. First of all, the Ordinary Capital has been increased from £500,000 to £825,000 by the issue of £50,000 of new Stock and the subsequent 1-for-2 capitalisation issue passed at the Extraordinary General Meeting held on July 14, 1955.

Once again there has been an increase in Fixed Assets and this in turn has caused a slight deterioration in our working capital position. Land and Buildings at Cost have increased from £261,334 to £340,401—an increase of £79,067, due to the erection at Hull of a new Bonded Warehouse and Bean Store and a building to house the new Brazil Nut Cracking Plant.

Plant and Machinery at cost has risen from £606,631 to £878,155—an increase of £271,524, which represents the cost of the

Nut Cracking Plant, the cost of improvements to the Cocoa Mill at Hull and also the cost of various renewals and replacements which could not properly be charged to revenue.

Investments in Subsidiary Companies not consolidated and Allied Companies refers to the investment which we have made in Basra Processors Limited, a Date Processing Plant mentioned in Note 5 on the Accounts and necessitated by our recent entry into the Date trade in North America and of course also to the shares which we now hold in N. V. Cacaofabriek De Zaan. The whole of this capital expenditure represents and underlines our constant efforts to improve efficiency, reduce costs and diversify our business.

As you will see from Notes 1 and 2 on the Accounts, Share Premium Account which amounted to £212,848 at December 31, 1954, has been capitalised in connection with the capitalisation issue made in July, 1955, and has disappeared, but has been replaced by the premium on the shares issued to N. V. Cacaofabriek De Zaan amounting to £240,000.

The largest changes have, of course, taken place in Current Assets and Liabilities. Stocks are down by £1,077,739 at £3,645,887, and, as is customary, they are covered by forward sales. On the other side Bank Advances have been reduced by £1,778,034 to £1,392,222. These changes have, of course, arisen from the decline in the price of Cocoa, and at present price levels we should have no difficulty in working within the reasonable limits fixed from time to time by our Bankers to whom we are much indebted for the consideration and help which they have given us. High interest rates alone should be sufficient incentive to keep our borrowings at the minimum and to ensure that we make the best use of the facilities available.

OVERSEAS ACTIVITIES

In March Mr Spice and I visited the United States and had an opportunity of studying on the spot the organisation and prospects of the American and Canadian Subsidiaries. We came away with the firm impression that while it would take time to build our Organisation in the North American Continent on sound foundations, the possibilities for the future were promising. In this connection I would like to acknowledge the debt we owe to Mr Thatcher Brown, the President of Gill & Duffus Incorporated, and to our American Bankers for their co-operation and help.

I am glad to be able to report that since the close of the year the plant of the West African Mills Limited at Takoradi has been reopened and, though the position is at present somewhat obscure, we hope that it will be possible to keep it working. The prospects for the Saw Mill at Takoradi have also improved since the close of the year.

The prospects for the current year are not unfavourable. The problems arising from the violent fluctuations in the price of Cocoa have largely been worked off and with the advent of lower prices the position is more healthy and the consumption of Chocolate is tending to rise once again. This should help those departments of our Companies, whose function it is to provide raw materials for Chocolate Manufacturers. We hope that 1956 will prove to be a year in which we can balance our operational efficiency, our need for generating cash and our duty to our Stockholders. In conclusion, I would like to pay a sincere tribute to the work of our Managing Directors and our Staff both at home and abroad. There's was not an easy task in the conditions which existed during the past year. To all of them I would like, on your behalf, to say "Thank you."

ARTHUR BALFOUR & COMPANY LIMITED

CONTINUED VIGOROUS DEMAND

The fifty-seventh annual general meeting of Arthur Balfour & Company Limited was held on June 25th at Capital Steel Works, Sheffield, 3, The Honourable R. A. Balfour, JP (Managing Director), presiding in the absence of the Chairman, the Right Honourable Lord Riverdale of Sheffield, GBE, LL.D.

The following is an extract from the Chairman's circulated statement: The results for the trading period under review show a marked improvement on the previous year.

Demand has continued vigorously throughout the period. Most of the manufacturing sections of the organisation were working to capacity and the volume of business resulting has counteracted increasing costs, though it is true that some trading, particularly overseas, was on a narrower margin. We have benefited, however, by a tendency to utilise more of our resources on the higher class ranges of our products.

The profits of the Group this year amount to £350,287 before taxation and after loss on exchange, and compare with £215,544 for 1954. This year £170,506 is absorbed by taxation. There have been the customary relative movements in overseas markets and varied results from subsidiary companies, but the net effect has been an increased contribution to the results of the Group.

The substantial extensions in the Tool Division are not complete and no result from these is apparent in this period. We do not anticipate any considerable benefit from them during 1956. It is our intention to continue re-equipment and improvement to the limit of our resources, but we are heavily committed by the programme already on hand and by the increased capital absorbed in amounts due from customers and in stock and work in progress. Plant and premises are well maintained and the quality of our products is under constant control.

The Board recommend the same rate of dividend as for the year 1954, i.e. a final dividend of 5½ per cent, which, together with the interim dividend of 2½ per cent already paid, makes a total of 8 per cent for the year. It is proposed to transfer £20,000 from Stock and Contingencies Reserve and to appropriate £100,000 to General Reserve, leaving a carry forward of £175,717 as compared with £146,831 in 1954.

CONTINUALLY RISING COSTS

The continued rise in costs gives us even greater concern than last year as it proceeds unabated, with particular impact on wages and the supplies and services from the Nationalised Industries. We have no measure of control over these except in so far as we can offset them by increased efficiency and economy, and we are now less able to recover such increases in our selling prices, particularly on our extensive overseas trade.

Considering the general trading position as it is today, we find little change from that existing at the close of 1955—a good demand, a satisfactory order book in most sections, a similar distribution in sales between home and overseas markets, and a wide spread in our trading. The present indications are, towards a continuance of these conditions, and unless there is a fall in the level of demand, some unforeseen detrimental factor, or further rises in costs, similar results for the current trading period may be anticipated.

The report and accounts were adopted.

GENERAL MINING AND FINANCE CORPORATION LIMITED

(Incorporated in the Union of South Africa)

SUMMARY OF CHAIRMAN'S ADDRESS TO SHAREHOLDERS

At the Annual General Meeting held on June 26, 1956, the Chairman, in the course of his address to shareholders said that the year to December 31, 1955, was the first full year following the merger of Strathmore Consolidated Investments Limited with the Corporation. For the first time net revenue from dividends on investments, from supervision of Companies and from other sources had exceeded £1,000,000, but profits on share transactions had been negligible. This was not dissimilar to the experience of some other Mining and Financial Houses in Johannesburg, and might be attributed to an inactive stock market for which there had been many reasons not arising solely from conditions within the Union. The Bank Rates, both in the United Kingdom and in South Africa, had been raised during the year and other restrictive financial measures had been adopted, with the result that the volume of capital circulating had declined, noticeably in the gold share market.

At the end of the year it had been necessary to write down certain of the Corporation's quoted investments because of the decline in market prices, and also to provide for reductions in the estimated values of some of the unquoted investments. In all £540,000 had been provided, £475,000 from Reserves and the balance of £65,000 from profits for the year. The market value of quoted investments at the close of the year, as shown in the Consolidated Balance Sheet, was in excess of £13,700,000, while in the opinion of the Directors the aggregate value of the unquoted investments was substantially in excess of their book value. The ordinary dividend had been maintained at 5s. per share.

The low level of activity in the market had resulted in difficulties in the finance of new ventures and expansion programmes, but so far the gold mining industry had succeeded in finding the necessary funds. In so far as the Corporation was concerned the Accounts disclosed that its resources were fully employed and consideration would have to be given to the provision of funds to meet the commitments which had been undertaken.

As the President of the Chamber of Mines had said the previous day, the importance of an inflow of capital into the country could not be over-stressed and conditions attractive to foreign investors included freedom of movement of capital and absence of any hint of control. The imposition of controls was never an inducement to confidence and it was to be hoped that such measures would be relaxed as soon as possible and that nothing would be done to hamper the inflow of capital.

The Gold Mining Industry was

peculiarly placed in world affairs as the price of its product was not subject to the laws of supply and demand, but was governed by statutory actions and by International agreements. In inflationary circumstances it followed that gold mining was the most adversely affected of all mining activities, but there were signs that the tempo of expansion throughout the world was reaching a stage where a period of consolidation would set in. If that trend continued, a lowering of commodity prices could be expected, which in turn would mean a reduction in mining costs, but not accompanied by a fall in the price of gold.

Some of the older mines on the Witwatersrand were experiencing difficulty in operating at a profit, and the attention of the Union Government had been drawn to the problem. New legislation had been introduced increasing the benefits provided under the Silicosis Act, part of the cost of the improvements being borne by the Government. The formula tax, applicable to the taxation of gold mines, had been reduced and it was estimated that the relief to the Industry would total £700,000. These two actions were very much appreciated as showing the desire of the Government to assist the Industry where possible.

There were many new mines either reaching production or increasing their capacities, and the foreign currency which would become available to the Union through the sale of gold and uranium should steadily increase.

The major mining interests acquired by the Corporation as a result of the amalgamation with Strathmore, were Stilfontein and Buffelsfontein. Stilfontein had reached the dividend paying stage but was still increasing the capacity of its reduction plant. Development had commenced at Buffelsfontein and was highly satisfactory. The Corporation could look forward to increasing dividend income from these two sources.

It had been necessary to reassess the value of the Ellaton Gold Mining Company, which had been considered to have good prospects at the time of the amalgamation, but adverse factors had indicated a serious reduction in the life of that mine. Provision had been made in the Corporation's Accounts against possible losses.

The West Rand Consolidated Mines continue to be one of the Corporation's main sources of income. Operations were mainly directed towards the production of uranium, under an agreement current until December 31, 1964, but he was not in a position to discuss the possibility of the agreement being extended. By that time the South African uranium producers might well be favourably placed to

compete in world uranium markets, especially as the loans obtained for the erection of the uranium plants would have been fully repaid and the plants thus fully amortised.

At South Roodeport Main Reef Areas, operations continued to be very satisfactory. Dividends declared during 1955 had been increased by 3d. to a total of 1s. 9d. per share, and the dividend declared in June 1956 had been further increased by 3d. per share over the dividend declared twelve months previously.

The Chairman was able to inform shareholders that approval had been given earlier that morning at a meeting of stockholders of General Exploration Orange Free State Limited, to an agreement for the cession to Riebeeck Gold Mining Company Limited of mineral rights held respectively by General Exploration Orange Free State Limited and Middle Witwatersrand (Western) Areas Limited in the van den Heeverstrust area of the Orange Free State.

The Riebeeck Company would apply for a mining lease over an area of approximately 2,415 claims. Very encouraging results had been obtained in the course of an extensive drilling programme, particularly in a series of Upper Reefs which had not yet been found to exist elsewhere in the Orange Free State goldfields. In the opinion of the Directors, the Riebeeck Gold Mining Company would be an attractive mining venture, and the arrangements made provision for the possibility of two separate Mining Companies to work on a lateral division of reefs. Twin crosscuts would be driven by Loraine Gold Mines Limited from their No. 2 Shaft towards the proposed lease area, and the Chairman was looking forward with great interest to the detailed information which would become available as development proceeded.

The Corporation had substantial interests in a number of other mines in the Orange Free State and dividend income was bound to improve as those Companies proceeded towards their contemplated full production programmes. The Corporation was also interested in copper, platinum and coal and in industrial interests.

The Chairman referred to the commencement of excavations for the new building at the corner of Main and Holland Streets. He also thanked Messrs P. H. Anderson and W. M. Frames for their services to the Corporation whilst members of the Board.

Copies of the full speech may be obtained on application to the London Office.

BLEACHERS' ASSOCIATION LIMITED

STATEMENT BY THE CHAIRMAN,
MR P. L. WRIGHT

The Annual General Meeting of Bleachers' Association Limited will be held on July 20th, at Blackfriars House, Parsonage, Manchester.

The following is the statement by the Chairman, Mr P. L. Wright, which has been circulated with the report and accounts for the year ended March 31, 1956:

The profits of the Association for the year, after taking into account dividends received from Subsidiary Companies, but before taxation, amount to £765,000—a reduction of £178,000 compared with the previous year. Income Tax and Profits Tax absorb £404,000 against taxation last year of £493,000, and provision for Superannuation Fund this year is nil against £35,000 last year. The net profit after taxation is therefore £361,000 and compares with £415,000 a year ago. This figure is increased by £75,000 in respect of taxation provisions no longer required and, together with the balance brought forward from the previous year of £198,000, there is a balance available in the Association's Accounts of £634,000 against a balance last year of £612,000. Out of this sum which is available for appropriation the Board have applied £100,000 to General Reserve Fund and £100,000 to Fixed Assets Replacement Fund and, after providing for Preference Dividend, your Directors recommend a dividend at the rate of 10 per cent and a Bonus of 2½ per cent on the Ordinary Stock for the year. These Preference and Ordinary dividends will absorb £215,904, leaving £218,397 to be carried forward to the next Accounts.

CULTIVATION OF NEW FIELDS

The Association's figures have been fortified by dividends declared by those of our Subsidiary and Associated Companies which operate outside the field of textiles. We intend to continue the policy we have followed during recent years in building up those interests in order to sustain our earnings from the finishing of textiles, which may well be affected by the industry's contraction. The cultivation of new fields must, of necessity, be a gradual process which will not bear full fruit for some years to come, while there will no doubt be ups and downs in the process. Inevitably this policy must also entail the strengthening and retention in the business of adequate reserves and we have this in view, as well as the modernisation of our existing plant, in recommending transfers to Revenue Reserves.

The liquid position of the Association is satisfactory, despite an increase of £95,000 in our investments in Subsidiary and Associated Companies and considerable expenditure on certain of their buildings and plant. At the works of Greenwich Plastics Limited, where the improvements I mentioned last year are nearing completion, they will shortly be bringing into operation machinery capable of producing the highest grade of thin plastic sheet and also, as the result of an agreement with a leading German firm, they will become the first in this country to manufacture a new type of plastic film, which has properties for which there is a growing demand.

HOME AND EXPORT TRADE

When I reported to you last year I told you that demand for cotton cloth was falling off and that the immediate prospects were less favourable. In point of fact there has been a slow but steady decline in the amount of business available to us during the year, and our earnings from this source are affected accordingly. In the home market there has been a tendency to purchase goods only when they were urgently required, while the export trade has diminished still further, due largely to the combination of self-sufficiency and rapid industrial progress which has taken root in almost every country to which we formerly exported our finishes.

MENACE OF FOREIGN IMPORTS

Two underlying factors have influenced the cotton piece goods trade during the last twelve months. Firstly, extreme lack of confidence in the price of raw cotton; secondly, invasion of the home market by cheap imports from India and Hong Kong. Both subjects have been so widely and publicly ventilated that those inside and those outside of Lancashire must be well acquainted with the details. In neither case is any control within the power of the industry. Only the United States Government can solve the difficult situation created by its vast accumulation of stocks of raw cotton, and only our own Government has the power effectively to deal with the menace of these importations of cloth and made-up articles. Both India and Hong Kong can sell at prices much below Lancashire's cost of production and there seems no reason, unless early steps are taken, why their competitive range should not widen. National dependence on supplies from the Far East is strategically unthinkable and yet, if the present tendency is allowed to continue without restriction, that is the position which may be reached. That the cotton trade can do more than it does to help itself in several ways may well be true, but here is a situation which can only be dealt with by Government intervention. A well-stated case on the implications of these cheap imports has recently been presented to the Board of Trade, but has failed to elicit any apparent appreciation of the real dangers involved. Eventually, without much doubt restrictive action against this growing menace will be taken by a Government of one shade or another, but meanwhile the more efficient firms as well as the less efficient will be forced out of business and a more calculated reorientation of the industry (which has such a high degree of specialisation) may well be prejudiced. There is, moreover, a serious danger that haphazard contraction which is now going on may cause the withdrawal from the industry of more plant and machinery than might be found necessary in the long run.

FUTURE PROSPECTS

Although the outlook for the current year cannot be described as cheerful, changes in the cotton trade can come suddenly, and it seems unlikely that the present very reduced activity will persist throughout the year. But, come what may, I am sure that we can con-

tend successfully with any difficulties which are within our control.

DIRECTORATE

You will see from our Report accompanying the Accounts that Mr J. C. Guinness retires and is not offering himself for re-election to the Board. Mr Guinness has given devoted service to the Company for forty-three years and has been a member of the Board since 1933. We shall greatly miss his friendly personality, and I am sure that you will join with me in wishing him a long and happy retirement on pension.

You will also see that the Board have elected Mr E. G. Gould to join them. Mr Gould was appointed Secretary to the Company in 1951, and we are well assured from our knowledge of him, and our experience of his energy and ability, that his appointment to our Board will be of material advantage to the Company. You will be asked to confirm this appointment at the forthcoming meeting of Stockholders.

TRIBUTE TO STAFF

We are immensely indebted to all those who direct and work in the Company's business for the willing and enthusiastic service which is so vital in bringing success to the Association. I would particularly like to include in this expression of thanks the fifty-one old employees, ranging in age from sixty to eighty, who have left our service during the past year with an aggregate of 2,433 years' service, and to whom I have recently had the pleasure of presenting Long Service Certificates. With such a loyal body of men and women, Stockholders may rest assured that their interests are well looked after.

ROCK INVESTMENT COMPANY, LIMITED

FURTHER PROGRESS

The thirty-seventh annual general meeting of this Company was held on June 20th in London, Mr C. W. Black, JP, MP, FRICS, FAL, chairman, presiding.

The following is an extract from his circulated statement for the year 1955:

The past year has seen further progress in the rebuilding of the fortunes of your company. We have received dividends on the share capital of our wholly owned subsidiary, The Oak Property Company Limited, at the rate of 5½ per cent on the Cumulative Preference shares, and 25½ per cent on the Ordinary shares, in each case subject to deduction of income tax. It is proposed to pay a dividend for the year of 4½ per cent, less income tax, which compares with 3½ per cent, less income tax, in the previous year.

The consolidated accounts of the company and its subsidiaries indicate the substantial progress which has been made during the past year. Property and general revenue after charging ground rents and other expenses has risen from £37,477 in 1954 to £44,944; profits less losses on sales of property in property-dealing companies from £16,132 to £12,578 and profits before taxation from £25,400 to £26,197.

After deduction of mortgages and other liabilities which will then be outstanding, the company will hold at the end of this year on the basis of a recent valuation, net assets of a value of over £530,000. I feel confident that stockholders will share the pleasure which your Directors feel in the satisfactory progress which has been achieved.

The report and accounts were adopted.

NORTH CENTRAL WAGON AND FINANCE COMPANY LIMITED

RECORD NEW BUSINESS

The Ninety-sixth Annual General Meeting was held on June 26th at Rotherham, Mr E. Duncan Taylor, Chairman of the Company, presiding.

The following is an abstract of the Directors' Report circulated with the Accounts for the year ended December 31, 1955:

The Group profit for the year before taxation amounted to £924,634 as compared with £731,210 for 1954.

ORDINARY DIVIDEND AND CAPITAL BONUS

The Directors again recommend the payment of a final dividend of 9d. per share less tax making a total dividend of 1s. per share less tax and also recommend a distribution out of realised accretions to capital of 7½d. for each Ordinary Share, as compared with 4½d. last year.

Based on book values of assets the total distribution to Shareholders represents approximately 8½ per cent, subject to Income Tax, on the paid up capital and reserves at December 31, 1955. Restrictions upon bank loans and the raising of permanent capital have emphasised the value of ploughing back a substantial part of our profit. Such a policy affords increased protection to those who provide us with the means of carrying on and developing our business and at the same time assists in maintaining and increasing its earning capacity.

TAXATION

The amount set aside for taxation on the profit for the year, including £141,889 in respect of Profits Tax Non-Distribution Relief, absorbed £577,771 or 12s. 6d. in the £ on all our earnings. The sum of £50,000 has been provided out of the unappropriated profit at December 31, 1954, to meet the estimated liability to Excess Profits Levy for the two years to December 31, 1953, which has not yet been agreed.

CAPITAL AND RESERVES

The total of capital, reserves, interest of outside shareholders and amounts set aside for future taxation and pensions amounts to £3,271,921, an increase for the year of £478,369. A resolution will be submitted providing for the capitalisation of £375,000 of the Company's reserves by paying up 5s. per issued Ordinary Share at present paid up to the extent of 5s. per share only.

EXPANSION OF BUSINESS

New business accepted during 1955 was a record and is reflected in the increase of £547,545 in the book value of the assets of the Group to £19,731,188. The proportion of revenue from hire purchase agreements relating to the period subsequent to the Balance Sheet date amounted to £2,570,306, an increase of £835,098.

PROSPECTS FOR 1956

The Group profits for the years 1956 and 1957 will be adversely affected by hire purchase controls which came into operation in February and also by the successive

increases in Bank rate during the past eighteen months.

Our earnings depend much more upon the business on our books at the commencement of the year than upon new business accepted during the year and unless at December 31st next the aggregate amount receivable by the group under agreements then current falls short of the figure of approximately £14,678,000 at December 31, 1954, it is unlikely that our earnings during 1956 before charging interest on borrowed money or taxation will be materially less than last year. Any reduction in new business this year will be reflected in decreased earnings next year.

It is not always realised that our agreements are entered into for fixed periods and that we are unable to pass on to our existing hirers any increased interest charges which become payable to bankers and others following a change in Bank rate.

An increase in Bank rate is quickly reflected in the rates of interest payable on our borrowed money and the importance of this factor will be appreciated when it is remembered that an average increase of 1 per cent in the rate of interest payable on borrowed money may cost the group £150,000 per annum. Although our earnings during 1956 may be maintained our net profit after providing for interest on borrowed money will be reduced if the present high rates of interest continue.

OFFICE ACCOMMODATION

The extension of our head office premises at Rotherham is nearly completed and will provide us with much needed accommodation. Progress is also being made in our plans to increase the office accommodation of our subsidiary companies at London, Brighton and Canterbury.

SELIGMAN BROTHERS

Seligman Brothers, in which we have a substantial interest, have had a successful year and have made a useful contribution to the group profits.

EXECUTIVE AND STAFF

The shareholders will, I feel sure, desire to join with the Directors in paying a well deserved tribute to the executives and staffs of the parent and subsidiary companies and to our representatives throughout the country who have so loyally and efficiently served the Company's interests.

DIRECTORATE

On June 30, 1955, Mr W. F. Peet and Mr W. C. Thorne resigned from the Board on medical advice after serving for 23 years and 11 years respectively and their colleagues desire to place on record their appreciation of the services which they rendered to the Company.

Mr C. W. A. Ray was appointed a director to fill one of these vacancies.

The Report and Accounts were adopted and the resolutions submitted to the Meeting were approved.

ASSOCIATED AUTOMATION

The twenty-eighth annual general meeting of Associated Automation Limited was held on June 28th in London, Rear Admiral Sir Alex D. McGlashan, KBE, CB, DSO, MIMechE, chairman, presiding.

The following is an extract from his circulated statement:

Firstly, in September, 1955, the issued capital was increased from £322,560 to £700,000. Secondly, the re-conditioning and equipping of the Cobbold Road, Willesden, factory. Thirdly, an increase in sales of some 20 per cent over the figure for 1954. Unfortunately, costs also increased in relation to prices obtainable for our products, with the result that the net profits differ little from those of 1954. The amount allocated for the proposed Dividend, £20,125, is covered by Group earnings for the year (after tax) of £33,026, compared with a dividend of £18,547 and earnings of £21,278 in 1954.

The parent Company's name has been changed to Associated Automation Limited, while the name Hall Telephone Accessories Limited is retained in the Group. As to the future, automation is of paramount importance in this country especially, because of our dependence on overseas trade.

The Vending Machine market is believed to be ready for large scale development, and to this we are alive. GPO and Admiralty Contracts continue to play a significant part in your business. In the Business Machine field we are creating more capacity to meet the rapidly growing demand for the products of this division. The current trend in figures for output and orders on hand is good.

The report and accounts were adopted.

DAVIS ESTATES

ENCOURAGING PROGRESS

The twentieth annual general meeting of Davis Estates Limited was held on June 28th in London, Mr A. F. Davis, chairman and managing director, presiding.

The following is an extract from the Chairman's circulated statement:

The Group profit before providing for taxation is £349,345, a decrease of £33,396 from the 1954 figure, which is very largely due to the increased provision for depreciation. The charge for taxation (excluding the Profits Tax Distribution charge on the Preference Dividend) is £167,143, leaving a net profit of £182,202.

The resources employed in the Company's main activity, namely Estate Development, again show a considerable increase as compared with last year, the figures being £861,532 as against £576,745.

In addition to the building of houses, the Company is also building flats and maisonettes for sale, and continues its development of shopping sites in selected areas.

The improved results for 1955 have enabled the Company on September 30, 1955, to pay off the five years' outstanding arrears of Preference Dividend and a further half-year to June 30, 1955. In addition, the Dividend for the second half of 1955 has been provided for in the accounts before you and was paid on January 1, 1956.

The Board are pleased to inform you that the year under review has been one of continuing progress for your Company. Subject to no unforeseen circumstances, we look forward to another successful year.

The report and accounts were adopted.

LICENSES & GENERAL INSURANCE

The Sixty-sixth Ordinary General Meeting of the Licenses & General Insurance Company, Limited, was held on June 20th in London.

Mr Victor Thomson, chairman, who presided, said: Students of Insurance accounts will have realised that the general experience of 1955 has been somewhat mixed and on the Accident side of the business results in the main leave something to be desired; poor underwriting profits, attributable to the general experience in Motor, has left Accident accounts with very thin profits.

Turning to the Life Department, the 4th Quinquennial valuation reveals an excellent position. During the period of development in this account we have made quiet but consistent progress. It is our anticipation that the advance will continue unabated.

The Fire account gives an increased profit of £20,526 more than in 1954; the underwriting profit is most satisfactory. The Miscellaneous account repeats last year's profit.

Then let me refer to Marine, with the transfer to Profit and Loss of £35,000. There is an increase of income this year with an accompanying improvement in the experience.

In the Profit and Loss accounts we get an available £105,160 of which to dispose. We propose to add to the General Reserve, which will then amount to £296,237, to provide for the final dividend of 15 per cent and to carry forward £32,785.

It only remains for me to call your attention to the increase of assets to £6,226,725—the indication of a forward step.

The report was adopted.

INTERNATIONAL PAINTS (HOLDINGS) EXPANSION OF EXPORTS

The forty-eighth annual general meeting of International Paints (Holdings) Limited, was held on June 21st in London, Mr Charles R. Petrie (chairman and managing director) presiding. The following is an extract from his circulated statement for 1955:

In the Export field, our turnover showed a most encouraging expansion, but here again the profit margin was materially affected by increased costs which it was impossible to recover owing to foreign competition, and unless a halt is called to the ever-increasing rises in operating costs, coal, gas, electricity, rates and frequent wage increases, then it will only be possible to maintain exports at unremunerative prices with a considerable sacrifice of profit.

The Consolidated Balance Sheet shows the total assets of the Group at £8,917,604, comprising Fixed Assets of £1,873,257, Trade Investments £79,310 and Current Assets of £6,965,037, whilst Current Liabilities and Debentures total £2,258,222, leaving a net worth of £6,659,382, the Minority Interests in this being £741,589.

Since the beginning of the year, I am glad to say that further progress can be reported, both at home and abroad, and all indications are that this year's results will compare favourably with the past.

The Company, founded in 1881, is just completing its seventy-fifth year, and we shall be celebrating our seventy-fifth Anniversary suitably with our employees later in the year.

The report and accounts were adopted.

JOHN BRIGHT & BROTHERS, LIMITED

The thirty-third annual general meeting of John Bright & Brothers, Limited, was held on June 27th in London.

Dr E. P. Andreae, chairman of the company, reminded Stockholders of what he described as the outstanding event of the year, viz the purchase of the entire issued Share Capital of James Stott Limited, of Oldham. In the course of his speech he said:

The purchase consideration was satisfied by the issue, credited as fully paid, to the Shareholders of James Stott Limited of 800,000 of the unissued Ordinary Shares of 5s. each in the Capital of your Company and a cash payment of £1 million.

Against this the net current assets of Stotts amounted to £1,333,599. This means, in effect, that of the total consideration paid, the sum of only £466,401 was attributable to the fixed assets of Stotts, which included the land, four Mills and their machinery and equipment. Since the acquisition a recent professional valuation assessed these fixtures at £986,460. Nothing was paid for the valuable goodwill of the Company.

As far as the parent Company is concerned, this year's profit on Trading, viz, £1,025,513, compares with a figure of £1,033,010 for last year. The net profit, however, shows an increase of £17,759 on last year's figures, and is due mainly to credits in respect of taxation adjustments. Your Directors again recommend the payment of a dividend of 15 per cent on the Ordinary Stock, making a total of 25 per cent for the year.

The combined fixed assets stand in the Balance Sheet at a written down figure of cost of almost £2 million and the current assets exceed current liabilities by almost £3 million. This, I think, shows an impressively strong position.

Output has been remarkably close to that of the preceding year. The Gross Trading Profit, however, shows a slight reduction of some £7,500, indicating the falling trend of margins, which became increasingly pronounced towards the end of the year.

CURRENT YEAR'S OUTLOOK

I regret to say that since the publication of our Accounts prices have again suffered a very substantial cut which will undoubtedly make itself felt in the current year. It will be our endeavour to meet this new challenge and I feel confident that we shall, in the long run, be successful.

The new Tyre Fabric Factory to which I referred last year is nearing completion and should be in full production by the end of this year.

As we only came into possession of the Stott Company as a Subsidiary during November last we have chiefly been engaged on the task of streamlining the production of that Company with a view to closer co-operation. It is already obvious that considerable economies can be effected by this means.

As to the current year's prospects, at the moment at any rate it is very difficult to gauge the effect on our Profits of the most recent cuts in price margins. We are doing our best to offset their effect by reducing costs where possible and we are in this respect looking forward to advantages to be gained by streamlining production with that of our Subsidiary. Taken over a 12-month period the volume of business has been steady and satisfactory and I think on the whole we may look forward to the future with confidence.

The report and accounts were adopted.

F. FRANCIS & SONS LIMITED

INCREASED TURNOVER DESPITE RAW MATERIAL DIFFICULTIES

MR FRANK COX'S STATEMENT

The fifty-fifth annual general meeting was held on June 26th in London, Mr Frank Cox (Chairman and Joint Managing Director) presiding.

The following is an extract from his circulated statement:

Profit of the Group is £408,438. Provision for taxation is £195,800. After adding the amounts brought forward we arrive at a total of £460,383. We have transferred to General Reserve £40,000 bringing this to the satisfactory figure of £400,000. Your Board recommends a final Ordinary dividend of 16 per cent making 20 per cent for the year. The balance of unappropriated profits is increased from £247,745 to £349,371.

The general position from a trading point of view shows a considerable increase in turnover from the previous year, but it has been the policy of the Company to absorb to a very considerable extent the increases in wages and costs of materials without increasing prices. How long this can go on it is impossible to say, and as it is at the moment it can only be done by strict attention to management on an increasing turnover.

The order book and prospects are good, and unless unforeseen circumstances arise I think we shall very well hold our position in those fields in which we operate.

The report was adopted.

SOCIÉTÉ ANONYME DES AUTOMOBILES PEUGEOT Paris

ANNUAL ORDINARY GENERAL MEETING

NEW PAY AGREEMENT CONCLUDED

The ordinary general meeting of The Société Anonyme des Automobiles Peugeot was held in Paris on June 21, 1956. M. Jean-Pierre Peugeot presided.

The meeting approved the report and accounts for the financial year 1955 and fixed the dividend at 1,387 Frs. 50 gross per share of 7,500 Frs. This will be payable on June 23rd at the rate of 1,147 Frs. net (cp. No. 9).

RE-APPOINTMENT OF M. FRANÇOIS PEUGEOT

M. François Peugeot's term of office was renewed for a period of six years and the appointment of M. Roland Peugeot as a director was approved by the meeting.

The report of the board summarises the various activities of the Company—commercial, industrial, financial and also labour relations. With regard to the latter an agreement on pay has been concluded with the employees, linking their interests more closely with those of the Company. Thus over and above wages the bonus that will be paid for the financial year 1955 will virtually amount to 60 per cent of the net dividend distributed to shareholders.

GODFREY PHILLIPS TRADING PROFIT MAINTAINED

The forty-seventh annual general meeting of Godfrey Phillips, Limited, was held on June 26th in London.

Mr P. A. Godfrey Phillips (chairman and managing director), in the course of his speech, said: The Trading Profit, after charging £325,287 in respect of Exceptional Advertising Expenditure to Development and Contingencies Reserve, shows a slight increase over that for 1954, but higher charges for Interest and to a lesser extent for Depreciation combine to effect a substantial reduction in the Group Profit for the year before Taxation, which amounts to £206,657 compared with £314,189 for the previous year.

This is a great disappointment to your Board, who had hoped to be able to show some improvement in the accounts now before you and as a result of persistent effort and the steps taken to meet the highly competitive situation in the Home Market it was anticipated that 1955 would prove to be the turning point. A sharp set-back to our fortunes in Australia nullified the advances we had been able to make in other directions. Nevertheless, the Trading Profit was maintained, but Interest charges of £275,359 compared with £184,732 in 1954 had a most adverse effect. Two factors have been responsible for this: the sharp increase in money rates and the high level of tobacco duty.

THE HOME MARKET

I will now turn to the position in the Home Market, in which over the last two years we have made a vigorous and sustained effort. This has mainly been directed to establishing Red & White Cigarettes as a leading seller in the higher of the two main price classes and De Reszke filter tipped as a serious runner in the lower price class. De Reszke filter tipped has established a firm bridgehead and is moving forward, but the sale achieved for Red & White is still considerably short of our hopes. It would appear that the role of the smaller manufacturer lies in the field of speciality cigarettes such as filter tipped, the sales of which are steadily growing both to men as well as women. The improved home sales trend during 1955 has continued during the present year.

THE DOBIE ACQUISITION

With a view to broadening the basis of our Home Trade and to take full advantage of our selling and distribution organisations, we entered into negotiations towards the close of the year for the acquisition of the Goodwill and Trade Marks and Subsidiary Companies of the old established business of George Dobie and Son Limited, and these were successfully completed in January last and are already making a valuable contribution. This includes the world rights to the Four Square brand, which enjoys a sale wherever British tobaccos have a market, and the goodwill of Pritchard and Burton, Limited, whose Boar's Head tobacco has for long had a steady and profitable sale.

In other respects also, there are encouraging signs in our Home Trade. Sales of De Reszke Filters which I reported last year were showing a steady improvement have continued to expand, and our main tobacco brands maintain their popularity.

In Export markets generally we have maintained our trade, and although competition is very severe and margins of profit are not always entirely adequate, the overall position must be considered as satisfactory.

The report was adopted.

ARGUS PRESS HOLDINGS MR H. C. DRAYTON ON RESTRICTIVE PRACTICES

The twenty-seventh ordinary general meeting of The Argus Press Holdings Limited was held on June 27th in London.

Mr H. C. Drayton, the Chairman, in the course of his speech said: Our profits, before tax, were £248,000 as against £269,000, and after expenses and income tax we have £82,000 as against £95,000. Your Directors recommend a 20 per cent dividend on the Ordinary shares.

During 1955 the whole industry was engaged in wage negotiations and we also had a railway strike. The result was that our expenses went up and our circulations, in certain instances, went down.

During 1955 we acquired a controlling interest in Industrial Newspapers Limited. The reason we bought Industrial Newspapers is that their publications fit in with a number of ours. We can run those publications together more efficiently, and they have a very big printing account; we are hopeful that as we get closer together the two organisations on the printing side will show economies and reflect, we hope, more profit for your Company.

We had a labour dispute this year and that went on a great length of time. In this industry today we are faced with rising costs and we are faced with restrictive workings. These are to no one's benefit, either to the men on the floor or the shareholders. These restrictive practices are going to react on everyone in the industry, who suffer as a whole.

The report and accounts were adopted.

THE ZAMBESIA EXPLORING COMPANY

The Annual General Meeting of The Zambesia Exploring Company, Limited, was held on June 27th in London, Captain The Right Honourable Charles Waterhouse, PC, MC, DL, MP (Chairman), presided.

The Chairman's circulated Review stated that the profit before taxation for the year ended March 31, 1956, was £68,820 for the Parent Company and £121,665 for its wholly-owned subsidiary, The Zambesia Investment Company, Limited, making a total of £190,485. After providing for current taxation, allowing for adjustment of taxation of previous years, transferring the sum of £50,000 from General Reserve, and bringing into account the balance brought forward, a balance of £119,872 remained available for appropriation in the Parent Company. An interim dividend of 4 per cent less tax had been paid, and provision made for a final dividend of 13½ per cent, less tax, making a total of 17½ per cent for the year. The profit of the subsidiary Company after taxation, which amounted to £63,933, had not been distributed but had been added to the balance carried forward, which had been increased thereby to £226,715. The total reserves of the parent and subsidiary companies taken together had increased from £557,661 to £605,832.

£45,429 of the unissued share capital had been offered to stockholders at par in the proportion of one new share for every complete £20 of Ordinary Stock held at April 27, 1956. The proceeds of the issue would assist the Company to play its part in the development of Central Africa.

The Report and Accounts were adopted.

LAMBERT BROTHERS LIMITED

A SUCCESSFUL YEAR'S TRADING

The fifty-third annual general meeting of Lambert Brothers Limited was held on June 28th in London, Mr. R. Rattcliff Steel (the Chairman) presiding.

The following is an extract from his circulated statement:

The accounts for the year 1955 show a net profit for the Group of £509,619 after charging taxation, £340,759. Deducting dividends paid and proposed, £86,789, and bringing in the balance of £768,490 from the last account there is the sum of £1,191,320 for further appropriation.

The sum of £75,000 has been put to Provision for Pensions, making a total of £153,274, which just covers the contingent liability at this date. A further sum of £380,000, of which £296,024 comes from the year's trading profits, has been transferred to Fleet Replacement Reserve, which now stands at £1,680,000. The sum of £362,500 has been transferred to General Reserve, making the total of £1,062,500.

You have received details of the proposed scrip issue of shares on a one-for-one basis. This capitalisation will take £562,500 out of the General Reserve, which will then stand at £500,000.

The additions to Capital Accretions Account have arisen in no case from the sale of our ships, but chiefly from the sale of our interests in foreign coaling depots where that trade has ceased. This has involved a diminution in the earning capacity of the Company, although in a successful year such as 1955 it is concealed by higher profits from other activities. In these circumstances it is no easy task for your Directors to weigh up the relative advantages to Stockholders of immediate distributions from the account and the retention of funds with which to embark on fresh ventures of which they are always in search. They hope that by making the special distribution of 10 per cent in December and repeating the final distribution of 3½ per cent, making 13½ per cent for the year, they have followed a course which will in the long run prove to be in the general interest of Stockholders.

After reviewing the Company's shipping interests, the statement continued: On the subject of taxation it is difficult to say anything fresh, but this is a matter which continues to cause us grave concern. The existing tax allowance may be adequate to replace a ship at the end of its life on the basis of its actual cost, but allows of no provision to be made towards rising costs—which continue to rise at an alarming rate.

Whilst it is gratifying that the Chancellor has recognised the special position of shipping by continuing the 20 per cent investment allowance when it was withdrawn from industry generally, this small concession to our shipping industry is negligible compared with the preferential treatment accorded to shipowners in other countries with maritime traditions, where practically the entire profit earned is permitted to be used for replacement. It is with such owners that we have to compete in the world freight markets and unless British shipowners receive more favourable treatment than at present it seems inevitable that our country's share of the total mercantile tonnage must continue to shrink—and in the not very distant future, almost to extinction.

The statement concluded with a review of the Company's activities at home and overseas. The report was adopted.

ISTITUTO MOBILIARE ITALIANO (IMI)

(Italian Finance Corporation)

Rome, Italy

The Annual General Meeting of the Istituto Mobiliare Italiano (IMI) was held in Rome on June 14th under the chairmanship of On Stefano Siglienti, and the following are details of the report presented by the Board of Directors:

During the fiscal year ended March 31, 1956, IMI has given a considerable contribution to the Italian policy of economic development, both by granting increasing financial aid to the Italian industry and by making continual efforts to improve foreign capital investments in the country. In this particular sector, in fact, IMI has enlarged its usual sources of financial supply to foreign markets, borrowing considerable amounts from Switzerland. Moreover, it contracted new loans with Export-Import Bank of Washington, thus renewing the good relations already established with this American bank in 1947.

With regard to export financing, IMI has signed this year an important agreement with the Mexican Bank "Nacional Financiera" to promote Italian export of capital goods towards Mexico, and a similar agreement has been signed now with the "Banco Nacional do Desenvolvimento Economico" of Brazil.

The report goes on to underline the remarkable development of loans granted during the twelve months period ending March 31, 1956, which reached the amount of Lire 105,456 m. with an increase of 48.3 per cent on the preceding period. Said amount has been distributed as follows: ordinary loans Lit. 73,235 m.; Export-Import Bank loans Lit. 10,040 m.; loans granted by means of special State Funds Lit. 18,931 m.; loans granted on behalf of the European Community of Coal and Steel Lit. 3,249 m.

Ordinary loans outstanding therefore increased, after deduction of repayments, by Lit. 52,062 m. from Lit. 228,458 m. on March 31, 1955, to Lit. 280,520 m. Including the total of Lit. 290,607 m. outstanding for special operations at March 31, 1956, the aggregate amount of IMI financing on the same date, reached as high a figure as Lit. 571,128 m. (app. £326.3).

New bonds issued during the year amounted to Lit. 55,001 m., so that by March 31, 1956, the total of outstanding bonds had reached Lit. 249,648 m., with a net increase of Lit. 36,446 m. for the twelve months period. Liabilities bear moreover two new items, "Bonds issued abroad" and "Loans in foreign money," which appear on the balance-sheet for the total amount of Lit. 14,581 m.

The soundness of IMI economic and financial standing—which is already pointed out by figures mentioned above—is finally confirmed by the steady growth of reserve funds—from Lit. 15,100 m. to Lit. 19,218 m.—and by further increase of net profits, which reached Lit. 1,447 m. as against Lit. 1,139 m. in the previous fiscal year.

As a result of this further expansion in its activities, IMI has been able once again to distribute a dividend of 8 per cent on the paid-up capital, and to transfer the balance to the reserves raising them to more than Lit. 20,500 m.

The report and accounts were unanimously adopted.

THE BRITISH EMPIRE TRUST COMPANY, LIMITED

(Trustees, Registrars, Secretaries, Transfer Agents, Industrial Financing)

LARGER GROUP REVENUE

The Fifty-fourth Annual General Meeting of The British Empire Trust Company, Limited, was held on June 25th in London.

Sir Charles J. Hambro, KBE, MC, the chairman, after stating that he had been elected a director and appointed chairman on the retirement of Mr E. Ronald Crammond, said:

It is with pleasure that my first meeting with you coincides with the submission of satisfactory results. The total Group revenue at £203,487 has increased by £27,084; after deducting increased expenses, mainly due to higher charges for rent, the profit before taxation amounted to £162,360. The net profit of the Group for the year, after providing for taxation, amounted to £73,567 and your directors decided to recommend that dividends at the rate of 15 per cent be paid on the "A" and "B" Ordinary stocks. These dividends, together with the dividend on the 5 per cent Preference stock, will absorb £58,231, leaving a surplus of £15,336 to be retained in the Group.

The chairman referred to some changes in reserves and to the further increase of £175,326 in the appreciation of investments and said:

A geographical analysis of the investments valued at £2,808,978 as at April 30, 1956, showed that approximately 52 per cent was invested in Canada, 10 per cent in the United States, and 38 per cent elsewhere, mainly in the United Kingdom and Commonwealth. The proportion invested in Ordinary stocks and shares at the close of the year was 86 per cent.

The Canadian subsidiary, Betrust Investment Corporation Limited, again had a successful year and contributed both to the revenue and to the appreciation in value of the Group's investments.

During the year a group sponsored by Messrs Wood, Gundy & Company of Toronto, Hambros Bank Limited, London, and the Locana Corporation of London and Montreal have taken a large interest in the company. Your directors feel that through these connections our traditional links with Canada can be expanded, so that we may hope for an increase in our Registration Representation and Trustee business with that country.

The chairman continued:

During the last three years nearly every country, with the exception perhaps of the United States, has been over-spending on capital account. This has had the effect of creating over-employment followed by an excessive demand for consumer goods. The resultant rise in prices has caused acute economic indigestion. This has got to be cured, especially in a country such as the United Kingdom, which is dependent on its imports for nearly all forms of raw material and 50 per cent of its food. The so-called credit squeeze is one of the means by which this is being done, but, in addition, it will require a complete change of attitude with regard to effort and reward on the part of all if the prosperity of this country

is to continue and full employment maintained.

THE CURRENT YEAR

Lately, inflation has also appeared in Canada and the same correctives are being applied there. There is no doubt in our minds about the future prosperity of Canada and the United States, but it may be that 1956 will prove to be a year when the effects of over-prosperity will bring about a temporary recession of business. As a result, it is necessary to sound a note of caution about prospects for the present year.

An estimate of our income, however, shows that in the absence of any unforeseen developments some further improvement in the revenue from investments may be anticipated, and provided we can keep down our expenses, it is hoped that a satisfactory report can again be submitted.

The report and accounts were adopted.

COMPAGNIE GÉNÉRALE DE TÉLÉGRAPHIE SANS FIL

(Paris)

The annual general meeting held on June 15, 1956, with M. Robert Tabouis presiding, approved the report and accounts for the financial year 1955.

During the year the industrial turnover increased by 47 per cent, while the total turnover shows an advance of approximately 40 per cent.

The gross industrial and commercial revenue rose from Fr.1,081,394,114 to Fr.1,207,700,029. With an investment revenue of Fr.115,363,930 and miscellaneous receipts, gross profits have risen to Fr.1,345,230,997. The net profit shown in the profit and loss account amounted to Fr.370,679,008, against Fr.355,015,670 for the financial year 1954, after deduction of general expenses and capital charges, and allowing for an appropriation of Fr.428,491,936 for amortisation and other provisions, as well as for extraordinary expenditure totalling Fr.34,329,488.

A dividend of Fr.342 gross 6,275 (net Fr.300) was agreed, payable as from June 16th. It should be remembered that the dividend will be paid on a capital of Fr.2,370 million instead of Fr.1,580 million in the preceding year.

In its report the Board draws attention to the fact that the Company's profits have not matched the increase in turnover, this being in the main due to the restrictive effect of the steps taken to stabilise prices in France.

In his speech the president spoke of the expansion of the Company and the efforts which it had made towards the industrial exploitation of the results of its research.

In particular, he confirmed that negotiations, undertaken at the end of 1955 with American and French groups, had resulted at the beginning of the current financial year in the forming of a Company named "Intercontinental Electronics Corporation." It is intended that the Company should manufacture and sell in the United States plant and spare parts designed and developed by "La Compagnie Générale de T.S.F." The President also reviewed actions taken by the Company and associated companies in the field of atomic energy and in that of sound and vision broadcasting equipment.

APPOINTMENTS AUSTRALIA—UNIVERSITY OF NEW ENGLAND

ARMIDALE, NEW SOUTH WALES

Applications are invited for the position of Senior Lecturer in Economics. Commencing salary will be within the range £A1,800-£A2,150 per annum, according to qualifications, with annual increments of £A70. There is, in addition, a present cost-of-living adjustment of £A34 per annum for males and of £A26 per annum for females. The salary is subject to deductions under the State Superannuation Act.

The Senior Lecturer will be expected to undertake research and to assist in the administration of the Department, as well as to engage in normal teaching duties. Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in Australia and London, is August 13, 1956.

VICTORIA UNIVERSITY COLLEGE

WELLINGTON, NEW ZEALAND

The Council of Victoria University College proposes shortly to appoint a Lecturer in Comparative Social Administration and invites applications from graduates in Social Administration or allied subjects. The salary will be £985 per annum, rising by annual increments of £50 to £1,235 per annum. The initial salary will be determined according to the qualifications and experience of the applicant. An allowance is made towards travelling expenses, and the successful applicant would be expected to take up his duties on February 1, 1957, or at such earlier or later date as may be agreed on by the College Council. Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in New Zealand and London, is September 14, 1956.

CHIEF EXECUTIVE DESIGNATE

The Western Region Production Development Board, with the approval and support of the Government of Western Region of Nigeria, intends to establish a Western Region Housing Trust. The objects of the Trust will be the development of Housing Estates as well as fostering the growth of home ownership on building society lines. Applications are invited for the post of CHIEF EXECUTIVE OFFICER DESIGNATE OF THE TRUST. In the preliminary stages his chief duties will be to assist in drafting legislation and in drawing up plans for the establishment and operation of the Trust. During this period he will be engaged on the staff of the Board, but subject to satisfactory performance, will become the Chief Officer of the Trust when formed.

Applicants should possess wide administrative experience in the fields of planning, development, construction and financing of housing areas and of home ownership schemes. Academic and professional qualifications will be an advantage. Salary will be £2,500-£3,500, point of entry depending on qualifications and experience.

Further details of the proposed Trust and of the Board's terms and conditions of service can be obtained from: The London Representative, Western Region Production Development Board, 18 Grosvenor Gardens, London, S.W.1.

to whom applications, giving full details of experience, qualifications, etc., should be addressed. Replies to reach him not later than July 31, 1956.

GENERAL EMPLOYMENT: House with basic furniture provided at rental of £150 per annum; up to 10 per cent Provident Fund; Outfit Allowance £60; Free medical service; Free passages for wife & home leave at full pay at the rate of five days per month of overseas service; normal length of tour 18-24 months.

CENTRAL ELECTRICITY AUTHORITY require an Information Officer in Public Relations Branch. Headquarters, W.I. Preference will be given to candidates possessing an Economics Degree or comparable qualification. An ability to write clear, simple English, experience of administration, information work, including collection, classification and indexing of material, preparation of information papers and abstracts, would be an advantage. Salary £740-£819 per annum.

Applications, stating age, present position and salary, full details of qualifications and experience, should be forwarded to: Moffat, Director of Establishments, Winsley Street, W.I. by July 6th. Quote Reference AE.840.

SALES ENGINEER

Due to expansion of our activities in India an exceptionally attractive opportunity arises for an unmarried man 26/35 years old who has had commercial experience following sound technical training preferably in mechanical engineering. Based on our Calcutta Office, the successful applicant will be responsible for application problems and sales in the wide field served by the mechanical power transmission products of the Fenner Group.

This is an important appointment with excellent prospects. Salary will be commensurate with qualifications and experience and there will be a generous Overseas Allowance. A Staff Pension Scheme is in operation. Applications, which will be considered in strict confidence, should give full details and be addressed to: The Sales Manager, J. H. Fenner & Co. (Overseas) Ltd., Warwick, Hull.

STATISTICIAN REQUIRED for Research and Development. Applicants should have good degree in either Mathematics or Physics. Good salary and prospects for suitable applicant. Pension scheme. Applications, stating age, qualifications, experience and present salary, should be addressed to: Personnel Manager, British Enka Limited, Alntrce, Liverpool, 9.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

(UNIVERSITY OF LONDON)

Applications are invited for an Assistant Lectureship in Social Anthropology. Salary scale £600 x £50-£700 per annum, with superannuation benefits and family allowances. In assessing the starting salary, due consideration will be given to age and experience. Applications, with the names of three referees, should be received not later than September 15, 1956, by the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2, from whom further particulars may be obtained.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

(UNIVERSITY OF LONDON)

Applications are invited for appointment in October, 1956, to an Assistant Lectureship in Economics. Salary scale £600 x £50-£700 a year, with superannuation benefits and family allowances. Due consideration will be given to age and experience. Candidates are invited to indicate their special interests in the field of economics. Applications, with the names of three referees, should be received not later than August 30, 1956, by the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2, from whom further particulars may be obtained.

UNIVERSITY OF CAMBRIDGE, Department of Estate Management.—Applications invited for two posts of Assistant in Research from October 1, 1956, or as soon as possible thereafter. Pensionable stipend £500-£700, subject to certain variations. Non-pensionable children's allowances. Applicants must hold either an honours degree in Economics, History, Economic History, Agricultural Economics, or Law, or a degree with a high-class Estate Management. Those appointed will be required to undertake research in economic, legal and social problems related to the ownership, tenure and development of land.—Further particulars of duties and stipend. The Board of Estate Management, 74 Trumpington Street, Cambridge, to whom applications should be sent not later than July 20, 1956.

THE ASSOCIATION OF BRITISH CHEMICAL MANUFACTURERS

requires a successor to the present Director, who has reached retirement age. The position is one of consequence in a progressive industry of considerable national importance, and would be attractive to a man of good personality, with some knowledge and experience in the chemical industry. An academic qualification in chemistry or chemical engineering would be an advantage, but not essential. The Director is required to organise and generally to direct the activities of the Association. An important part of the Director's work is the maintenance of close contacts with member firms throughout the country, with representatives of other industries and with Government departments.

Applicants should be about 50 years of age. Salary will be of the order of £4,000 per annum; actual salary will depend on the age and experience of the successful applicant. A pension scheme is available. Applications, with full particulars of experience and references, should be addressed in writing to: The Chairman of the Association of British Chemical Manufacturers, 16 Graham Street, London, N.1, not later than August 13, 1956.

ASSISTANT STATISTICIANS required by N.C.B.'s Statistics Branch at London Headquarters, with either (a) a degree in mathematical statistics or equivalent qualification, and experience in the application of statistical techniques (including punched cards) to practical problems (SS/325); or (b) a degree in economic statistics or equivalent qualification, and experience in drafting reports on statistical material (SS/326).

Appointments (superannuable) on the following inclusive scales: for (a)—(two posts), £770-£898 male, or £676-£824 female; (b)—£770-£898 male. Good promotion prospects. Write, with full particulars of age, education, qualifications and experience, to: National Coal Board, Staff Dept, Hobsart House, London, S.W.1, marking envelope with relevant SS reference number, before July 14, 1956.

INTERNATIONAL FINANCIAL SERVICES publishers, Headquarters New York, want collaborator in Europe with later opportunity to join American top executive staff. Requirements: fluency in English, sound knowledge of international finance, contact with financial markets, ability to establish personal contacts with leading personalities in banking and trading circles, organisational ability. After a period of collaboration trial position at New York office, and if mutually satisfactory, contract with salary and profit-sharing bonus is offered.—Box 455.

THE NATIONAL INSTITUTE OF ECONOMIC AND SOCIAL RESEARCH has a vacancy in the grade of Research Officer (salary in the range of £700-£1,100, research officer) in connection with the statistical analysis of published company accounts. The appointment would be for one year in the first instance. Applications, with two references, should reach the Acting Secretary (from whom further particulars of the post may be obtained) at 2 Dean Trench Street, Smith Square, Westminster, S.W.1, by July 22nd.

STATISTICIAN (male), fully qualified required by City Shipping Office. Write stating qualifications, experience, age and salary to Box 2769, Deacon's Advertising, 36 Leadenhall Street, London, E.C.3.

GALLUP POLL: Research Assistant required.—Write in own handwriting, giving qualifications, experience, etc., 59, Brook Street, London, W.1.

The Economist: Annual Air Subscription Rates

Australia: £8.5s. (sterling)	Gibraltar, Malta: £3.15s.	Japan: £9	Rhodesia (N. & S.): £5.10s.

Printed in Great Britain by ST. CLEMENTS PRESS, LTD., Portugal St., Kingsway, London, W.C.2. Published weekly by THE ECONOMIST NEWSPAPER, LTD., at 22 Ryder Street, St. James's, London, S.W.1. Postage on this issue: Inland 3d.; Overseas 24d.—Saturday, June 30, 1956.

NORTH-EAST DIVISION

Applications are invited for the vacancy of Organisation and Methods Officer in the Staff Department at Sheffield. Salary scale £1,700 x £35-£1,475.

The duties involve the study of organisation and methods at Divisional, Area and Colliery offices and the preparation of reports and recommendations thereon. Previous experience of O. & M. work and/or professional qualification is desirable and a knowledge of the organisation of the Mining Industry would be an advantage.

Applications, stating age, qualifications and experience, etc., should be forwarded to the Staff Director, National Coal Board, North-Eastern Division, Holmwood House, Ecclesall Road South, Sheffield, 11, by July 16, 1956. Envelopes should be marked "Staff Vacancy".

THE INTERNATIONAL LABOUR OFFICE invites applications for a post of Member of Division in the Labour-Management Relations Division in Geneva. Qualifications required: Nationality: United Kingdom; Age: 23-40; Languages: English, good knowledge of French or Spanish; Education: University degree or equivalent in experience.—For further particulars and application form, apply, enclosing stamped addressed foolscap envelope, to the International Labour Office, 38/39 Parliament Street, London, S.W.1. The closing date for the receipt in this office of completed application forms is July 14, 1956.

TWO GRADUATES IN ECONOMICS, with "first" or good "second" Honours degrees, required for research work in Department of Economics, International Wool Secretariat. One should have specialised in Statistics and will take part in econometric research. Starting salary, £500-£600, according to qualifications with superannuation benefits. The other should have specialised in economic analysis and should, preferably, have had several years' research experience. Starting salary, £750-£850, etc.—Apply in writing, giving full details of qualifications and experience, to the Secretary, International Wool Secretariat, Dorland House, 18-20 Kent Street, London, S.W.1, marking cover "E.C. Confidential".

IBM UNITED KINGDOM LIMITED requires a young Market Research Executive who will be responsible for market analysis and research in the Business Machine Industry. Experience of market assessments and analysis is necessary, together with a knowledge of available data and the ability to interpret and apply this to the Company's equipment and area development.—Full details, please, to Personnel Manager, 100 Wigmore Street, London, W.1, quoting Reference M.R.2.

NATIONAL COAL BOARD invite applications for a superannuable appointment as Head of Research, Economic Intelligence and International Affairs Section, of their Industrial Relations Dept. at London Headquarters, to be responsible for research on human relations problems in the industry, including experience on social or economic problems and, preferably, of the organisation and administration of research programmes required. Knowledge of coalmining industry an advantage. Salary, according to qualifications and experience, within inclusive range, £1,454 to £1,820 male.

Write, with full particulars of age, education, qualifications and experience, to: National Coal Board, Staff Director, Hobsart House, London, S.W.1, marking envelope SS/328, before July 26, 1956.

A MANAGING DIRECTOR

some months before negotiating new service agreement is taking the passing opportunity to consider a change. An experienced, middle-aged, responsible, and reasonable position, based in U.K., for family reasons. Qualified economics, commercial law, accountancy.—Box 453.

EXPORT MARKET RESEARCH

Export Executive of many years' experience; fluent French and German; Russian; wide knowledge of Europe; seeks post connected with Market Research on the Continent or with international organisation.—Box 452.

THE UNIVERSITY OF BIRMINGHAM

FACULTY OF SCIENCE

The University is making special arrangements to provide training for boys and girls who will be qualified for admission to an Arts course to enable them to take an Honours degree in either Pure or Applied Science after four years of study. The course commences in October, 1956, and is intended to help towards meeting the national need for more scientists and technologists. Applications should be made as soon as possible to the Registrar, The University, Edgbaston, Birmingham 15, from whom further particulars can be obtained.

June, 1956. REGISTRAR.

SUBSTANTIAL investment (up to £200,000) in a well-established and expanding business is sought by an institutional client who can provide top level management if required.—Send particulars to Spicer and Pegler, Chartered Accountants, 19 Fenchurch Street, E.C.3.

FOR SALE—The Economist July 1940/June 1950. War years bound.—Any offers?—Box 450.

EXPERT POSTAL TUITION for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (C972).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4.

We work for the New Age

THE RECENTLY ANNOUNCED agreement between Mitchell Engineering Ltd. of London and AMF Atomics Inc. of New York, will undoubtedly have far-reaching effect in applying atomic power for the benefit of mankind.

Created for the joint design and construction of nuclear power plant in the Commonwealth and other countries, it is private industry's first international agreement in this field—and the logical outcome of Mitchell's exceptionally wide experience over the past 35 years in all branches of engineering and electrical supply.

MITCHELL COMPANIES—active in the atomic sphere since 1950—are at present engaged on three important contracts for the United Kingdom Atomic Energy Authority.

AT CHAPELCROSS *Annan, Dumfriesshire, where work is beginning on one of Britain's biggest atomic power stations, the Mitchell Construction Company are the main civil engineering contractors.*

AT CAPENHURST *near Chester, where work at the Authority's diffusion plant is in progress, the same Company is building six cooling towers. Here, also, Mitchell Engineering Limited has been awarded a substantial contract for piping and plant installation.*

Business Hero

FOR some years now publicists for American business have voiced concern that the American novel paints so uniformly unfavourable a picture of the American business leader. From Dreiser and Upton Sinclair to John Steinbeck and Taylor Caldwell the rogues' gallery lengthens depressingly. Even when the brushwork does not delineate the complete scoundrel, devoid of morals or public spirit, the canvas still tends to be unflattering—philistine "regular guys" like Babbit, disintegrating drunks like Dos Passos's Charlie Anderson, slimy two-timing Uriah Heeps like J. P. Marquand's Willis Wayde. The demand for something more in keeping with the boardroom's own idea of what it sees in the mirror when shaving every morning has—primed by the interest of magazines like *Life*—called forth more admirable commercial characters like Cash McCall, the best-selling made-to-measure figure of business chivalry by Cameron Hawley. But output, in terms of literary units, is not satisfactory. Business heroes in shiny magazine stories may be models for the rising executive; but, as *Fortune* showed, it is the stuff arbitrarily labelled as literature by college professors that gets into the hands of the innocent and hero-worshipping young and warps their idea of the captains of industry.

It might be supposed that, if this is the position in America's literature, it would be a good deal worse in Britain's. For Britain is the home of the industrial revolution, where Marx sowed and the Hammonds reaped. Dickens certainly made an ominous beginning with Gradgrind and Josiah Bounderby. But these reprobates were reformable, as was the merchant-banker Dombey, whose obsession with the problem of management succession led to such regrettable results. On the other hand the Cheerful Bros. mellow the picture of office life early in the gaslight era. But Dickens's lead was negligently followed up. At a time when the British business man was conquering the world, Victorian novelists saw little of interest in him. "John Halifax, Gentleman" (the title is significant) is a full-length study; but one has to search Meredith, George Eliot, or even Disraeli to find a substantial business man. Here and there in Thackeray or Trollope a business man—usually a merchant—is seen struggling to rise in genteel society. Aristocrats and farmers; the learned

professions and the artists; soldiers, seamen, politicians, schoolmasters—all appear in the gallery of Victorian portraiture, their background often rendered with a fine knowledge of the technicalities involved. But the factory, even the bank or export house, hardly appear at all.

Nor did the novelist respond quickly when King Edward brought the first rank of South African millionaires to Court. But in so far as the theme was attempted, the results were not very flattering to the business man. The novelist tended to take Horatio Bottomley as his model rather than Alfred Mond. The immortal Uncle Ponderevo messed up a perfectly sound business and landed himself in court by ignorance of accountancy ("It's cruel, they asked me questions. They kep' asking me questions, George"), though his place was later taken by the more solid figure of William Clissold. Arnold Bennett produced "The Card"—again rather a financial than manufacturing type. Later, in spite of (or because of) his sound business instincts, Bennett went in for hotels rather than basic industry. It was left for Shaw to score easy Shavian points with Undershaft, the arms man.

The interwar years raised a small crop of novels about business. It may be significant that so many were about textiles (or coal). The rise and decline of the textile industry was a ready-made frame for a family novel on the clogs-to-clogs in three (or six) generations style. The north and its slump also provided a convenient region in which to group characters interacting from several walks of life by the new sociological school of novelists. These schools found exponents in Phyllis Bentley, Thomas Armstrong, A. J. Cronin and Howard Spring. Into the rise and decline of the textile trade could be woven not only the fortunes of a family but also the transmutation of the small master into the industrial magnate; and the slump of the thirties could be at once the nemesis of personal greed and pride, and of industrialism itself. Most important of all it permitted the writer to fuse business life with the English novelist's traditional concern—class and caste.

This is perhaps the key to the novelists' treatment of the British business man so far. In Victorian times he was still at the tradesman's entrance, as unimportant an "extra" as the servants who fetched and carried for the main characters. At most he provided a pretty daughter to tempt a baronet.

from the path of duty. The turning point was reached when belatedly the novelist realised that the business man was not only rising into society, but the new industrial order was displacing the old country house rule with which he was for so long familiar. The clash between the new and the old managerial classes produced the situation in Galsworthy's play *The Skin Game*; and the theme has been much elaborated since.

Yet the business man remained for the novelist a far more inscrutable figure than the squire and the Duke of Omnium. He left the country house reluctantly and has revisited Brideshead whenever possible. Because business was the motive power of American culture the American novelist, whatever his purpose—romantic, satirical, reformist—had to get under the skin of the senior executive if he was to portray the contemporary scene accurately. The English novelist tried to treat the British business man simply as a special case of the ruling class whose foibles he and his readers knew and loved so well.

Literary traditions die hard. Though the scene is changing fast, the English novelist continues, in the main, to reenact Vanity Fair in modern dress—to squeeze the last drops of literary juice from artistic and literary life. His knowledge of business is still scanty and he prefers the more flamboyant business figures—the advertising tycoon, the film magnate, the press baron. So far, his main interest in business life has been in the struggle for power at boardroom level. This was the main theme of J. B. Priestley's "Daylight on Saturday," and

Nigel Balchin's "Sundry Creditors"; both these novels suggest that a factory is a manageably small frame for getting characters together, as was country house or village life.

The struggle for power is perhaps the obvious approach to the joint stock institution from the novelist's point of view. The business man may not be quite happy about it, though he should be thankful that the predatory swoop of the shady financier in Mr Priestley's "Angel Pavement," for example, gave place in "Daylight on Saturday" to a fight at least on issues of principle. The trouble seems to be that the incidents of British business leadership today—the installation of a new assembly-bay, the opening of the sportsground, the brainwork that went into marketing potato peelers in Ruritania—have not caught the storyteller's imagination. Nor does he feel that steady promotion from the trainee scheme to the head of the Miscellaneous Products Marketing Division (an important and well paid post) offer such promising material as the rise of Tono-Bungay. In industrial relations there has been little advance on Galsworthy's *Strife*. The nationalisation of steel has not started a postwar trilogy of business life.

In contrast to the American business man, in fact, the British executive is not so much caricatured as ignored. This may not worry him. Indeed, he may not even agree that it is so. Has he not, in such time as he can give to reading mere fiction, often met the likeness of his fellow directors foully done to death on the library floor in chapter one?

Larger than Life

VICTOR HUGO.

By André Maurois. Translated by Gerard Hopkins. Cape. 540 pages. 30s.

MAUROIS describes this as the largest in scale and the most difficult of his many biographies. Everything about Victor Hugo is rather larger than life: his talents, his energy, his loves and even the documentation which he left behind him. The biographer's problem is one of selection: all that he describes can be illustrated at length from Hugo's own letters, from those of his wife, his family and his mistresses, and above all from his poems. It scarcely needs saying that M. Maurois has met the challenge superbly; the story is enthralling, and all the characters who clustered round the poet emerge as clear and developing personalities.

Lytton Strachey said that Hugo "had the powers of a great genius and the soul of an ordinary man." This is a biography, not a work of criticism, and is therefore more concerned with his soul than with his powers. Strachey's judgment is shown to be too harsh, and yet there is truth in it. M. Maurois says, more justly: "He had, more completely than anyone else, voiced what all had felt." He was a middle-class Frenchman drawn on a heroic scale. His virtues and vices were those of his contem-

poraries, but clearer and more forceful. His ideas were unoriginal, but he expressed them with force and nobility. This is illustrated by his political career. It is a tribute to the man and the epoch that he should have been a legislator, by sheer force of personality and poetry, under the liberal monarchy and the third republic. As a practical politician he did not count; but he spoke nobly and consistently, both in France and in exile, for the great moral ideas in which he believed with passion.

This book, for the English reader, has one fault. Sex and poetry were the two driving forces in Hugo's life, and sex is the main theme of the biography. His writings are not ignored and his poems are quoted (sometimes, alas, incorrectly); but, as his greatness rests in his work, and as he is one of the least accessible of poets to contemporary English taste, one would have liked to have much more about it. If one turns to the French text, there is what one wants: there is more about Hugo as a writer, and many more poems are quoted. True to the curious convention that allows translations to be silently abbreviated, the English text has been skilfully but ruthlessly cut, in all that concerns Hugo's writings. The result is a partial picture, but a magnificent one; and it will suffice for those who are more interested in the man than in the poet.

Churchill's England

A HISTORY OF THE ENGLISH-SPEAKING PEOPLES: Volume I, *The Birth of Britain*.

By Winston S. Churchill. Cassell. 437 pages. 30s.

THE reader approaches this book with a sense of awe and a certain apprehension: with awe at the indomitable energy of mind which could contemplate and carry through such a task in the midst of a sea of secular cares; with apprehension, lest the success of the enterprise should not come up to the fame of the author and the expectations which this necessarily arouses. It is after all a far cry from the fields in which he will be for ever famous to the intricacies of Anglo-Norman and Anglo-Saxon land tenures and institutions. Yet how can an enterprise such as this succeed without immersion in the great and growing technical literature of the last eighty years? The first volume of Stubbs's "Constitutional History" appeared in the year in which Sir Winston Churchill was born, and it has proved a fountain-head of new researches ever since; but presumably Sir Winston has had other things to do than to keep pace with them. Moreover, as an understanding of mediaeval history has become more refined and complicated, it has perhaps become less and less of a national heritage and increasingly the preserve of experts and antiquarians. The old stories sound now a little hollow; yet there is nothing of equal human interest to take their place. One is therefore a little apprehensive about the result of this labour.

Needlessly, however. It does not take very long to discover that the qualities which this book exhibits are very little affected by modern research. Like a prudent campaigner the author has chosen his ground where he is strongest. Though he does not decline all battle over the Constitutions of Clarendon and the Jury of Presentment, yet he is not here at his happiest; and he bases his main attack on a foundation that has been little altered by the researches of recent scholars—namely, an understanding of human nature. He sets before himself the men and their situation; he makes himself sufficiently familiar with their story, passes it through the capacious chambers of his mind, and then writes. The result is masterly. The story never flags. It retains and increases its vigour and significance as it goes on; and it is illuminated by those Churchillian touches which everyone looks forward to with pleasure and digests with satisfaction. On all kinds of subjects and persons there are memorable phrases in plenty. These are not the core of the book, but they add a piquancy to the narrative which it would be affectation to overlook. What, for instance, could be better than this simple explanation of the family loyalties so prominent in early politics:

The family tie, though frequently failing, gave at least the assurance of a certain identity of interest. Statistics

had not been collected, but there was a general impression in these primitive times that a man could trust his brother, or his wife's brother, or his son, better than a stranger.

But the real power of the book lies elsewhere. Partly it lies in a quality which Sir Winston Churchill with great insight and perhaps a certain fellow-feeling attributes to Hubert de Burgh:

Here is a soldier and politician, armed with the practical wisdom which familiarity with courts and camps, with high authorities, ecclesiastical and armoured, may infuse into a man's conduct and even nature.

Everywhere in this book we are in the presence of one experienced in camps and courts, interpreting to us the minds of men for whom the life of camps and courts was their daily experience. It is for this reason that there is probably no better portrait-gallery of mediaeval kings than is to be found in this volume. Henry II, the "hard, violent, brilliant, and lonely man" whose "passion and policy flowed so buoyantly together" is particularly well-drawn; and it is only to be expected that Alfred with his "lively comprehension of the great world" and his will to resist, which saved England nearly a thousand years before Hitler was heard of, should have due justice done to him. But the most remarkable historical achievement which comes from an understanding of courts and camps is in the pages dealing with the Wars of the Roses. After remarking "that it has been in fashion to disparage this period," Sir Winston Churchill proceeds to "set forth the facts as they occurred." The story is brilliantly told; it is even made to seem significant. The wretched battles are accorded the dignity due to actions in which many men were staking and losing their lives, and the sordid tale of bloodshed and treachery is relieved by pity for a generation going so helplessly to its doom.

The first necessity for great history writing is eloquence, and of this quality there is an abundance in this book. The next requirement is experience of men, and of this too there is no lack. The third quality which this book displays in an outstanding degree is compassion for the sufferings, ambitions and delusions of both the oppressed and the oppressors. This compassion embraces Henry V and Boadicea, as well as the victims of persecution and of baronial oppression. It gives a unity to the book more profound than that of the statesman or the orator.

Whether or not this is a great book time alone can show, but that it is the work of a great man is stamped on every page. No one will go to it for the finer points of historical scholarship, and scholars will not be slow to detect minor errors and misconceptions, especially in some of the earlier sections. But these do not seriously detract from the merits of the book, which for its qualities of judgment, vigour and humanity and for its poetic vision of great events deserves a long life.

The Communist International 1919-1943 Documents

Volume I: 1919-1922

Selected and edited

BY JANE DEGRAS

'What makes it rewarding to study these documents now is that they represent Communism in its pure state, naked and self-avowed, before the concealment of top-level working became a matter of strategy. . . . Modern Communist policies on almost every question can be studied here, some of them in embryo, others already in an advanced form.' *The Scotsman* 55s. net

JOHN MURRAY

Pathetic Enigma

ROGER CASEMENT: a New Judgment.
By René MacColl.
Hamish Hamilton. 328 pages. 21s.

IN the first sentence of his foreword Mr MacColl states his belief that Casement was one of the most extraordinary men of the present century, and we may well agree. As a member of the Consular Service he achieved sensational exposures of tropical iniquities in two continents. Then he reappears on the public scene, for no easily discoverable reason, in the role of British traitor and Irish martyr. Mr MacColl thinks that he would never have taken up Irish "treason" if he had not felt himself snubbed by the mandarins of the Foreign Office, but he was a man whom one was obliged to snub, an incorrigible and cantankerous bore. Being devoid of what are called hobbies he spewed forth his soul on paper in correspondence of incredible volume, official and unofficial. The more Mr MacColl quotes of it the more one dislikes the man, and one is gratified to find that the biographer agrees about its singular unattractiveness. Yet Casement had devoted friends, including men and women of distinction, who have testified to his personal charm.

And then there is the matter of the "Black Diaries," interest in which has been revived by the publication of Sir William James's life of Sir Reginald

Hall, who made use of these captured diaries to damp down the movement for Casement's reprieve. Mr MacColl has no doubt whatever that Casement was an actively practising homosexual and that the diaries were his own record and not, as has been fantastically suggested, a copy (or translation?), in Casement's handwriting, of the diary of a scoundrel he encountered in one of his tropical campaigns. And here is surely the greatest oddity of all. That the man should have been a homosexual is no great wonder, but that he should set down his experience in records hundreds of pages long, and leave them lying about in suitcases. . . . The explanation seems to be that he was proud of himself and regarded homosexuality as the mark of a superior being.

The British are traditionally generous in retrospect to their enemies. Saint Joan and George Washington are among the few unsullied heroes of our history. Gandhi is regarded with more reverence than the Viceroy who imprisoned him. But Casement can never be more than a pathetic enigma.

Mr MacColl's book is an admirable piece of work, and an immense amount of disinterested research has gone into it. He occasionally goes wrong on matters lying on the fringe of his subject. He might, for example, correct a mistake about Sheehy Skeffington; and some others too.

In Search of Charity

UNPROFESSIONAL ESSAYS.

By J. Middleton Murry.

Cape. 191 pages. 15s.

MR MURRY'S mature demands from literature would appear to be lucidity and charity; the best of his recent books is on Swift, a supreme master of the first and a desperate seeker after the second. In much contemporary writing, whether creative or critical, neither quality is prominent. Mr T. S. Eliot, for instance, is a very difficult poet; and Mr Murry has not found the books that expound his work at all helpful. If, however, one begins with the plays, which are simpler in diction than the poems, one has a better chance of penetrating to the underlying ideas.

Making this approach, Mr Murry finds, in the first place, a nausea of physical sex; and in the second, as a sort of philosophical generalisation from this, a conviction that all love between mortals is doomed to disillusion and decay, "degenerating into a resigned acknowledgment of mutual misunderstanding and impenetrability." Mr Murry, who believes that human love is in origin a vision of the eternal in the perishable, and that the vision can be kept and deepened, concludes of Mr Eliot that "the superhuman difficulty of so much of his writing is causally connected with his almost inhuman detachment from the most exalted experience that falls to the lot of the common man." But this searching diagnosis is not intended as dismissive of Mr Eliot's poetry,

which Mr Murry finds as beautiful as it is almost intolerably sad.

It is a far cry from "The Waste Land" to "Tom Jones." But in defending Fielding against the "chilly depreciation" of Dr Leavis, Mr Murry is pursuing basically the same theme. The notion that Fielding is devoid of that intense moral preoccupation which is the essential endowment of novelists in the great tradition does not stand up to investigation. It is born of the same distrust of natural goodness as Mr Eliot's and fed by simple semantic misunderstanding—as, for example, of what the term "good nature" implied for the novelist. One has only to read "An Apology for the Clergy" to realise from what a deep well of moral conviction Fielding drew for the sustenance of his fiction.

He believed that Christian love and human friendship and the love between man and woman were intimately allied by the tenderness they had in common; he believed, too, that this tenderness could impart a grace even to a casual sexual relation; he believed that there was a generosity of the body.

After this, it is scarcely surprising that Mr Murry goes on to expound Walt Whitman's belief that "the immediate apprehension of an infinite significance in all existences was within the natural capacity of the common man." Finally there is an essay on the poetry of Clare, dealing both with its mystical element and with its "precious and unique" picture of the effects of enclosure on the English rural community.

All for Love

ENCHANTING BELLAMY.

By Cyril Hughes Hartmann.

Heinemann. 350 pages. 25s.

BIOGRAPHIES of minor historical characters are rarely of such absorbing interest as this story of an actress of the mid-eighteenth century. It is a delight for several reasons.

First, it is very well written, and secondly it gives such a vivid picture of the times. Its account of standards of behaviour among the quality is somewhat hair-raising. Georgiane Bellamy was the natural daughter of Lord Tyravley, a middle-aged soldier, and of a Miss Seal, who ran away from school to live with him at the age of fourteen. He had no doubt promised to marry her, but a few years later, in order to improve his finances, he was secretly courting the daughter of Lord Mountjoy. Rumours about Miss Seal had reached Mountjoy, and he wrote to her asking whether they were true. Furious, she replied by sending him a packet of her lover's letters, including an unopened one which had come that morning, in which Tyravley gave the first news of his projected marriage. In it he explained that his prospective bride was so plain that there was no danger of his falling in love with her, and that he would return to Miss Seal as soon as he had secured her fortune. Lord Mountjoy tried to stop the marriage, but it had already secretly taken place. All he could do then was to disinherit his daughter; whereat Tyravley, not wanting the plain wife without the money, immediately left her. Students of Foreign Office methods of promotion in the Burgess and Maclean affair will note that these and other notorious episodes did not stop Lord Tyravley from filling some important posts as ambassador.

Miss Seal soon decided that she had better accept an offer of marriage from a Captain Bellamy. Much too soon after the wedding she gave birth—"to his inexpressible astonishment and dissatisfaction"—to a daughter, and he in his turn promptly left his wife, never to return. The daughter who arrived thus untimely was not much luckier than her mother in her relations with men. Her education was well provided for by Tyravley, who made a point of recognising all his numerous illegitimate children and of assembling them under one roof in the intervals of his service abroad. Georgiane, however (or George Ann as she had in error been christened), offended him by following her mother on to the stage. She was not a great actress, but she was beautiful, charming and confident. She had no lack of admirers, but it seemed to be always her fate to be tricked into liaisons on false promises of marriage. She had three principal lovers, one she loved, one she hated and one she was fond of. She lived several years with each, quite openly doing the honours at their tables, but always longing for them to marry her—even the one she hated.

The book gives, too, an excellent picture of the London theatre. There were

only two playhouses of note, Drury Lane and Covent Garden, and there was fierce rivalry between them. Like the present time, these were days of fine acting—the days of David Garrick, Peg Woffington, Kitty Clive, James Quin, Thomas Sheridan—and of a meagre supply of plays. The repertoire consisted of such works as Otway's *Venice Preserved*, Dryden's *All for Love*, Steele's *Conscious Lovers*, Rowe's *Jane Shore*, and the plays of Shakespeare "improved" by Otway or Colly Cibber. These were days when stage jealousy could lead Peg Woffington to act a stabbing scene so realistically that Bellamy fled from the stage. But they were days, too, when stage comradeship was so great that time after time Georgiane's former colleagues found money to rescue her from the squalor and the sponging houses to which her extravagance and the early decline of her talents had reduced her.

Palace of Pleasure

VERSAILLES.

By Ian Dunlop.

Batsford. 240 pages. 30s.

MANY visitors to Versailles today must be disappointed with their first sight of that rather sombre pile of buildings in a quiet suburb of Paris. From the front, only the gateway seems to offer a glimpse of that magnificence which made this royal court the most famous in Europe. In this book Mr Dunlop has tried to recapture the spirit of the days when Versailles was the heart of France. Yet inevitably a feeling of sadness filters through the pages and the pomp and elegance of the past is somewhat dimmed by the lifeless backcloth of today.

This is not a guide book to the palace. Mr Dunlop has chosen to describe it by making a study of the life of the French courts in the seventeenth and eighteenth centuries. It is an account of extravagance and splendour, of an insatiable zeal for rebuilding and refurnishing, of constant alterations and additions, of changes to satisfy every new whim and taste of king and mistresses and courtiers. Some of the most interesting descriptions are of the obstacles that had to be overcome in construction at that time, not least of which were the problems of obtaining workpeople when there was no money to pay them and of getting a supply of water to the beautiful gardens of the palace. Nothing was allowed to stand in the way of change.

Was it all designed to serve only for the distraction of boredom? More often than not—this is the impression left with the English reader of French history of that time. But Mr Dunlop has managed to convey, not without casting his net rather wider than might be expected in a study of Versailles, the French capacity for enjoying the pleasures of life. Boredom did not often seem to get the upper hand in those days. Not all of it was in the best of taste by today's standards, and it is easy to be shocked by its pointlessness; yet how many exquisite things were made in that age.

Elizabethan Profiteer

AN ELIZABETHAN: Sir Horatio Palavicino.

By Lawrence Stone.

Oxford University Press. 364 pages. 45s.

THE Genoese Christopher Columbus has been called the last of the great medieval Italian entrepreneurs, who for five centuries had developed and dominated the capitalist enterprises of Western Europe and the Mediterranean. But even in the sixteenth century the inherited capital and skills of the Italian financial houses enabled them to play an important, though no longer a dominant, part in the west. Horatio Palavicino was a member of the merchant aristocracy of Genoa and of a family which from 1566 to 1578 farmed the great papal monopoly of alum. As head of the Antwerp branch of the firm, Horatio in 1578 advanced a large loan to the Dutch rebels, which was underwritten by Elizabeth. Thus drawn into the English orbit, Palavicino spent his remaining years as a financial and diplomatic agent of the government, the friend of Burghley, the creditor of Leicester and the correspondent of Walsingham. He was knighted by Elizabeth in 1587 and died at Babraham in 1600, an unusual but established member of the Cambridgeshire squirearchy.

Mr Stone does not claim that Palavicino was more than an agent of secondary importance. But the variety of services which he performed for the government, and the diversity of his own speculations, investments and law suits, have enabled Mr Stone to make Palavicino's career the thread connecting a series of skilfully constructed studies of finance, diplomacy and social change in the Elizabethan period. Mr Stone's object is "to construct a picture from which to judge the moral and intellectual atmosphere and political interests that dominate a given society." War finance, espionage, litigation and speculation are seldom very edifying and Mr Stone is perhaps too concerned with emphasising his hostile judgments on the age. "Your honour," Palavicino wrote to the Earl of Shrewsbury, "may not compt it ill if in the point of profit a man honestly every waies regard his own commoditie." But Mr Stone does count it ill, writing of "more effective methods of robbery than the truncheon and the footpad." Sometimes he over-dramatises Palavicino's activities. Palavicino twice bid for the cargoes of captured carracks containing large quantities of pepper, but it is hard to see these as "serious attempts to monopolise world pepper." Sometimes the biographical thread is too thin to take the strain of Mr Stone's learning, particularly in the long chapter based on Palavicino's two missions to Germany.

But despite the disappearance of Palavicino's papers and ledgers, Mr Stone has been remarkably successful in reconstructing his career in England and in using it to illuminate aspects of Elizabethan society and government. He writes with a vigour and trenchancy that effectively convey his sharp awareness of the issues of the period.

Literary Letters

ELIZABETH BARRETT TO MR BOYD.

Edited by Barbara P. McCarthy.

Murray. 338 pages. 35s.

WHEN Elizabeth Barrett was twenty-one she came into contact with H. S. Boyd, a middle-aged man who lived in the country not far from the Barretts. Their point of contact was enthusiasm for Greek literature, and he supplied her with a stimulus and encouragement which she badly needed. She was delicate and kept almost in purdah by her father; he was blind: so they seldom met, but corresponded constantly. For five years she wrote to him as a devoted pupil. Then followed a period during which they were able to see each other regularly, and after that the tone of the correspondence alters. She was rapidly maturing, and the time which they spent together changed her attitude. She learned his limitations (which were many) and dropped her rather schoolgirlish and emotional admiration for him, though her affection and gratitude never lessened. Thenceforward her letters to him were more adult and far more worth reading today. They continued regularly till she married; after that there were only a few more before he died, two years later.

This edition of Elizabeth Barrett's letters is scholarly, well introduced and attractively produced; but one cannot help feeling that the editor has fallen between two stools. She aims to serve both the student and the general reader. The former should be content, but the latter has some cause for complaint. Miss McCarthy has explicitly rejected the idea of a selection, which would have suited him best. With a few unimportant excisions, she prints all the letters whose whole text has not hitherto been published, but omits the others. This means that two-thirds of the book is occupied by the earlier period; and, although they often give evidence of Elizabeth Barrett's taste and charm, these letters are little more than raw material for the student. Why reproduce all the outpourings of her immaturity? Pedantry and sensiblerie are the notes as she and Boyd plough through the early fathers together and chronicle small beer fermenting in a hothouse. In the later period, almost everything she writes is charming and interesting; but the cream was skimmed sixty years ago by Kenyon in his judicious selection of her letters, and Miss McCarthy omits all that he published in full.

Nothing that throws light on Elizabeth Barrett's development is without value, but it is doubtful whether these letters deserve publication in full. As Wellesley College, which owns the letters, houses the editor and financed the publication, has decided in its favour, the ordinary reader who is content to skip can get much scattered pleasure from the book, and many fresh examples of Elizabeth Barrett's goodness, sense and learning.

Livingstone and Stanley

I PRESUME.

By Ian Anstruther.

Bles. 220 pages. 18s.

THE ZAMBESI EXPEDITION OF DAVID LIVINGSTONE, 1858-1863: Volume I, Journals and Volume II, Journals, Letters and Dispatches.

Edited by J. P. R. Wallis.

Chato and Windus. 517 pages. 84s.

WHAT Nelson is to the British Navy so is Livingstone to the generations of Britons who have given their lives and their hearts to Africa. Difficult, unsympathetic, lacking in the arts of "man-management" so essential to the leader of an exploratory expedition, he yet remains the archetypal hero-figure. To the native African, whom he understood as he never understood the men of his own race, he seemed little short of a demi-god. In September, 1858, he returned to the little band of Makololo porters who had been waiting for him at Tete through two weary years shadowed by sickness and sudden death. "Now our hearts will sleep," the survivors cried out to him in greeting, "we have seen you."

"The very name of Livingstone has a charm in it for me," wrote Henry Morton Stanley, whose life-story is a curious illustration of the strength of the Livingstone legend. Stanley's achievements as an African explorer were second only to Livingstone's own; he was to open up the whole vast Congo region and to present Belgium with a brand new colonial empire, yet today he is remembered simply because he once pronounced the immortal words, "Doctor Livingstone, I presume?" Stanley came to wish most heartily that he had never uttered this masterpiece of understatement. The phrase dogged him to the end of his life, but nevertheless Mr Anstruther is wrong in describing its utterance as "a personal tragedy." The workhouse waif, whose real name was not Henry Morton Stanley but John Rowlandson, was born with a thirst for fame, and fame was to be his in good measure because of those four words.

The story of Stanley's life is a fascinating one and "I Presume" is a fascinating book—as far as it goes. There is little to be said for the modern fashion of writing sectional biographies rather than a full-scale life. Nobody's life can be neatly divided into watertight compartments, least of all Stanley's. His moment of high dramatic contact with Livingstone influenced the whole of the rest of his career. Why then must we stop short with no mention of the Congo Free State or of Enim Pasha?

"I Presume," although a thoroughly workmanlike and well-documented book, is primarily intended for the entertainment of the general reader. The Oppenheimer series, on the other hand, is performing an invaluable service to the serious historian by making available the material to be found in the Central African Archives. "The Zambesi Expedition," which forms number nine of this series, consists of journals,

letters and dispatches relating to Livingstone's ill-fated expedition of 1858-1863. The format of these two volumes is a joy to the eye, particularly the illustrations which are reproduced from the water-colours of Thomas Barnes, who accompanied the expedition as its official artist. The book was planned to commemorate the centenary of Livingstone's discovery of the Victoria Falls, and both editor and publishers are to be congratulated on this worthy memorial of a great achievement.

Printer's Pride

PRINTER AND PLAYGROUND: an autobiography.

By Oliver Simon.

Faber. 171 pages. 27s. 6d.

THE revival of the printer's and the typographer's arts from the middle of the nineteenth century onwards is a story with many fascinating chapters; and the late Mr Oliver Simon's contribution is not the least interesting of them. In this short autobiography, published just before his death, his long love affair with printing—which by no means precluded a happy marriage—is charmingly set forth. In the early twenties the printing muse proved a difficult mistress to win, especially to those with no connection with the trade and a capital hardly exceeding £100; but Mr Simon's mind was made up from the day he wandered by chance into Sotherans' bookshop, an ex-officer from General Allenby's army vaguely contemplating a business career. In the end he had his way, and through his work for the Curwen Press made his distinguished offering to typography and illustration.

Mr Simon was the moving spirit in the publication of *The Fleuron* in the interwar years and later editor of *Signature*, which did so much to put Britain in the *avant garde* of typographical design. Fine printing has, in this respect, proved to be to commercial printing what the live theatre has been to the films: the basic source of talent and ideas. The Monotype Corporation produced versions of the many beautiful types which the "fine printer" first introduced, or reintroduced, in books printed in limited editions.

No book on printing would be acceptable without specimen pages, and "Printer and Playground" is satisfyingly documented with examples of Mr Simon's work, which was always particularly original in its use of illustration and typographical ornament. This is what one would expect from the originator of the Curwen Press type specimen book. The union of printing with the other civilised arts is fittingly symbolised in the reproduction of the menus of dinners over which printers and artists discussed their obsession with design in the twenty years when Europe could still be a playground, and Bloomsbury was still the new Athens, the leading city-state in a world made safe for aesthetic adventure.

HAMISH HAMILTON

Woods and Burns

THE RUSSET COAT.
By Christina Keith.
Robert Hale. 235 pages. 21s.

THIS study of Burns's poetry and of its background is not designed for the Burns clubs, for Miss Keith writes from as lively a sense of the poet's limitations as of his genius. Burns is blind to far too much in the Scottish character—its ambition, its love of scholarship, its love of roaming—to be easily reckoned a fully national poet. His range is narrow. "For him Scotland was always the beggars, the toppers, the church goers of the Lowlands and the girls you met with them, the woods and burns they walked beside." Neither Highland Ben nor Border Peel had any meaning for him; and it was left for Scott to show the effect upon Scottish life and character as a whole of all the poetry they stood for.

But if Burns is a child of the Lowlands which he loved, he is equally a child of the Calvinist tradition which he hated. Miss Keith, whose feelings are Highland, aristocratic and (broadly speaking) Catholic through and through, writes with remarkable force and conviction of the long horror of Scotland's domination by the Kirk. Knox's Reformation—grisly, sour and sulky—tortured and burned thousands of supposed witches; worse, it so degraded and brutalised the position of women that romantic love and its expression became

impossible. In the society amid which Burns grew up only a brutal sexuality was operative between the sexes; and as a consequence Burns never was in love—which is a handicap in a love-poet.

If you can only regard a woman from the physical standpoint—which thanks to Calvinism, was the only way Burns ever knew—you are not going to be able to write love-songs to her, however great an artist you are, that will compare with the best work of those who regard her as their equal and who see in her much more than an animal.

We may feel that all this is a little one-sided. A strong sense of the sinfulness of sex will always conduce to carnality; the mediaeval church subscribed to it; and it bedevilled the love-poetry of the Catholic-born Donne as much as it ever bedevilled the love-poetry of Burns.

In what then, according to Miss Keith, was Burns fortunate? He had the luck to be born in the eighteenth century, when the horrors were only a sadly crippling memory. More important, he had the luck to visit the Highlands. This was the turning-point in his life. He made little of the glens and mountains—but he heard the music, he heard Neil Gow fiddling. The Highland tunes knocked the "sense" out of him; and at the same time his Lowland head controlled the Highland rant. So something of a synthesis was achieved after all, and Burns made his incalculable gift to Scottish song.

Genes for the Million

GENETICS IN THE ATOMIC AGE.
By C. Auerbach.
Oliver and Boyd. 113 pages. 8s. 6d.

BETWEEN them, socialism and psychoanalysis have largely shaped the philosophy of the educated layman of this century, with the result that first place in the moulding of people's growth is given to emotional and material surroundings. Genetics has thus become an unfashionable subject, and the notion that all, with the exception of identical twins, are born unequal seems, or used to seem, both distasteful and somehow untrue.

Only since scientists began to warn the world of the peculiar dangers of atomic explosions have genes begun to attract interest once more; even so most people's knowledge of the subject has been too meagre for them to appreciate precisely what these dangers are.

Dr Auerbach has therefore started from the very beginning of her subject and in simple language, using as few technical terms as possible, she has covered the basic facts and concepts—chromosomes, dominant and recessive genes, cell division and mutation. In two final chapters she describes the effects of radiation and makes it plain that the formidable dangers do not include only such obvious ones as the wiping out or sterilisation of populations exposed to heavy doses. Even more important perhaps are the

more subtle effects of smaller doses, which lead to an increase in the pool of harmful recessive genes in the human race.

The author's text as it stands is easily intelligible, but the numerous and entertaining drawings (one of which is reproduced here), some in colour, help her argument. It is a pity that room could not be found for a simple exposition of some of the advances that the last few years have seen in genetic chemistry. For it is in this strange and complex

Shirley Ann

Heredity and Environment.

Identical twin sisters, with the same genes for freckling, but growing up under different conditions of life.

world inside the nucleus of the cell, with its nucleic acid spirals, its rich variety of enzyme systems, and its self-replicating chemicals, that life seems to emerge from the non-living and genetics become less abstract. Perhaps someone soon will try to write an easy book about it.

Whaling Life and Labour

OF WHALES AND MEN.

By R. B. Robertson.
Macmillan. 260 pages. 21s.

LIFE and labour in modern factory ship whaling have long deserved an honest book which, with sympathy but without embellishment, would examine the complex world of the withdrawn, ship-imprisoned communities of the south, where technological marvels combine with fishermen's luck, and rough action and bloody toil proceed beside the white flocs and the pure birds, and where the variety of men is endless. "Of Whales and Men" is not this book. The author, who sailed as doctor on a pelagic expedition in the antarctic season 1950-51, has been too much tempted by the great myth-making regions of the Southern Ocean, and he has written just another yarn about whaling, lively, melodramatic, and even sensational in its self-conscious "exposure" of South Georgia.

Starting modestly on the *Acushnet* in the preface, then boldly transferring—because of the company he keeps—to the *Pequod* in the first chapter, Dr Robertson sees himself as a latter-day Melville, and the reader will find some good characterisation. Dr Robertson's characters are but thinly disguised, and the best-drawn among them, the lovable and unique Mansell, will certainly be enjoyed by all who know, afloat and ashore, the southern whaling scene.

But they will be irritated by misleading factual inaccuracies, about whales, whaling history and whaling methods. Modern pelagic whaling, for instance, was made possible by Sørle's patent slipway and not, as Dr Robertson says, by the Gjelstad whale claw (wrongly attributed to Andersen in this book): the claw was first used by Andersen in the *Kosmos* in 1932-33, by which time pelagic whaling was in full swing. But the author's favourite method of conveying information is by the reported statement. There are some who, reading the conversation pieces which jeer at the Discovery Expedition (to whose devoted work we owe most of our knowledge of southern whales), will note with interest on the facing page a photograph of several very obvious fin whales described as blue whales. Reported conversations doubtless assist Dr Robertson to protest against criticism, but they can be as misleading as direct statements in a subject which continues to be served worse than most in contemporary popular writing.

Few who have worked in South Georgia, and who work there still, are likely to be impressed by Dr Robertson's verbose disgust with conditions there; nor would they, in their independence and hardihood, welcome his welfare officer. The common reader will certainly find in this book an impression of whaling, though lurid and exaggerated: he may also, on being told at great length that all whalemen are psychopaths, share this reviewer's conviction that Dr Robertson enjoys robust mental health.

One to Criticise

HERBLOCK'S HERE AND NOW.

By Herbert Block.
Simon and Schuster, New York. 280 pages. \$2.95.

"I'M not one to criticise, but..." is an indirect approach spurned by America's most influential political cartoonist. Herblock positively is "one to criticise," as has been obvious since 1946 to readers of the *Washington Post* and for the last few years to readers of 150 other newspapers, mainly American, but including *The Economist*. His statistically minded publishers are as proud of the "30,000 words of text" as they are of the "250 cartoons" in this, his second book, a distillation of his views on Washington under the Eisenhower Administration.

They are the views of an independent liberal who has been deeply troubled by the attacks on freedom, the confused

Albert Einstein Lived Here

Herblock in the Washington Post

allegations and unsubstantiated suspicions which permeated Washington during most of the three years, from 1953 to 1955, covered in this book. Herblock refuses to bow to the resentment of criticism, the suggestion that it is disloyal, that characterises so many members of the present Administration, nor was he ever afraid to hit out at Senator McCarthy. The improvement in the American atmosphere during the last twelve months proves that such criticism can be constructive.

Herblock's astringent comments on these subjects supply much of his material, but the book contains also examples of his sympathy for the underprivileged, especially the children in overcrowded schools, of his bitter warnings on the hydrogen bomb, of his doubts about Mr Dulles and of his reactions to developments in the Soviet Union. There, not surprisingly, he is less at home, for he has not the familiarity with his subject which is essential to good satire. Herblock's words, talks rather than essays, are nearly as graphic and as pointed as his drawings, but both require a close knowledge of the current Washington scene

to be comprehensible. "Why does he put in St. Paul's?" inquires the British reader about the Capitol dome that indicates Congress. Or "what is that elephant doing?" of the animal which symbolises the Republican party. But as often as maybe comes the brilliant cartoon, with general human significance, such as this, just a year ago, on the death of Einstein. These are indeed the "small pearls of wisdom" which Herblock hopes to produce.

Compressed Flowers

POCKET GUIDE TO WILD FLOWERS.
By David McClintock and R. S. R. Fitter.
Collins. 464 pages. 25s.

THIS book will be a great boon to all those, young and old, who have the itch to identify the plants they find growing wild in Britain but fight shy of the more scientific floras. The authors have aimed at including all the British native species, all the commoner aliens, and as many rare aliens as they could. By systematically reducing the textual information to a bare minimum they have been able to compress all this, covering some 1,800 species, into a volume of really pocketable size.

It is a remarkable feat. Their task would have been of quite another order, perhaps, had it not been for the publication in 1952 of Clapham, Tutin and Warburg's *Cambridge Flora*. By basing themselves on this and accompanying almost every entry with a reference to it, they have provided the user with an absolutely up to date and easy introduction to British botany. In their method of arrangement they have frankly accepted the fact that, however much they may be advised to the contrary, the unsophisticated among users of flower books normally turn to the pictures first, trying to pick their plant out by eye—unless they are already fairly sure of its genus. Of the 1,400 plants illustrated here, only those with coloured flowers are shown in colour, those with white or green flowers in black and white, and the ferns, grasses, sedges and so on in line drawings. In addition some rarer species, which look much the same as one of those illustrated, are described in the text without being illustrated. The coloured drawings are grouped, unbotanically, by colour and it is intended that the user, unless he already knows enough about his plant to use the index, should turn to the pictures first. A great deal of trouble has been taken over the illustrations, which are on the whole extremely good.

When neither pictures nor index will serve, the user is provided with a number of keys of varying generality, the value of which could only be tested by a beginner in the field. They seem sensible enough but may in some cases be too abbreviated. One departure from botanical practice which seems mistaken is the exclusive use of English names on the illustrations. These names are not only arbitrary but as often as not conceal generic relationships; many of them are less familiar to a nation of gardeners than the Latin.

----- LONGMANS

From Wool to Corn

TUDOR AND STUART LINCOLN.
By J. W. F. HILL.
Cambridge University Press. 268 pages.
32s. 6d.

THE study of English history has been greatly enriched during the past two or three decades by the work which is being done on particular regions, families and towns; and Lincolnshire has been especially fortunate in its archivists and historians. In "Medieval Lincoln" Dr Hill traced the rise of the city from its Roman origins to the peak of its prosperity in the thirteenth century and the decline in the later Middle Ages when the cloth workers had left it and its wool trade dwindled. In this volume Dr Hill is dealing with a shrunken community attempting to preserve the privileges of a county borough with the resources of a small market town. Its sixteenth century population was less than half what it had been at the time of the Norman Conquest; its thirty-eight parishes were reduced to nine; and frequent but ineffectual attempts were made to reopen the Fossdyke, once a major channel of trade linking the city with the Trent. At the close of the seventeenth century corn was growing where formerly buildings stood. Lincoln had suffered more than most provincial towns from the economic dislocations of the later Middle Ages, and, though it shared in the slow recovery which began under Elizabeth, it suffered more sharply from its frontier position in the Civil War.

The history of Lincoln, struggling to defend its chartered rights and to reduce its expensive overheads, exhibits with peculiar clarity the ascendancy of the county magnates and gentry. Dr Hill is particularly effective in showing the influence of these families on the parliamentary representation of Lincoln and in emphasising the political weight of a closely-knit group of Puritan gentry in Lincolnshire in the decades before the Civil War. Puritanism and reform in Lincoln were fostered from outside. By the 1580s there was a vigorous party conflict between reformers and conservatives, the former urging the provision of a preacher, an efficient school, poor relief, Sabbath observance and control of alehouses, the latter, as Dr Hill puts it, preferring "to have Lincoln free than Lincoln sober and strictly regimented."

Dr Hill has used the very full sources with admirable care and scholarship, neither distorting nor dramatising his account by confining it to the impact of national issues and policies. Poor relief and fen drainage, the appointment of schoolmasters and preachers, gild restrictions and corn prices, the habits of the organist who sang during sermons and of the Lincoln ladies who usurped the bishop's throne—these, rather than the crises of the risings and civil wars, were the continuing substance of life in a provincial town. But Dr Hill's account would have gained if he had adopted a bolder arrangement, if he had assembled

his evidence on population, prices and parliamentary representation, and if, as Dr Hoskins was able to do in his study of sixteenth-century Leicester, he could have used the lists of admission to the freedom of the city to analyse the changing occupational structure of the city.

Gastronomic Journal

GOOD APPETITE MY COMPANION.
By Victor MacClure.
Odhams. 240 pages. 15s.

THIS book is described on the dust cover as "the journal of a self-confessed gourmet at large... a lifetime's history of gastronomic lore garnered from all over the world." It consists of reminiscences interspersed with recipes, and is illustrated with black and white drawings by the author (one of them is reproduced here). One cannot but admire such versatility, but it does not save this book from falling between two stools—three, perhaps, since the illustrations, although competent, do not add much to the total effect.

As a book of reminiscences and anecdotes it is only mildly entertaining, and much of it seems rather trivial. As a recipe book, on the other hand, although it is well indexed, its usefulness is limited. The publishers claim as one of its advantages that Mr MacClure can relish a dish of tripe as well as a *poularde de Bresse demi deuil*. But one demands of a recipe book either that it be simple and standard, or *recherché* and expensive, or that it be entirely comprehensive. A more satisfactory result might have been obtained by making this first and foremost a book of notable recipes, with as a secondary feature some comment about the origin of the dish, or where the author ate it, or different ways of preparing it.

Food is a fascinating subject, but a book so exclusively devoted to what one ate, where one ate, and what one said about it at the time inevitably gives the impression—which is no doubt quite false—that the author is a bore with a single topic. It is nice that Mr MacClure has had fifty glorious gastronomic years, but it is a pity that the pleasures of the table should be so difficult to impart in writing.

**Homeliness in Literature**

THE HERO IN ECLIPSE IN VICTORIAN FICTION.
By Mario Praz.
Oxford University Press. 478 pages. 45s.

PROFESSOR PRAZ has written a series of studies of the major Victorian novelists, loosely organised round the discovery that they were rather a bourgeois crowd. The Romantics had gone this way before them, evincing "a slowing-down into a quiet conformism, a dissemination of Romantic ideas in such a way as to make them accessible to the middle classes." This makes them Biedermeier—a now familiar term in cultural history on the origins of which, incidentally, Professor Praz provides an instructive note. Coleridge's *Fears in Solitude* may "well be termed Biedermeier"; the Lucy poems display "the true soul of Wordsworth, a Biedermeier soul"; in the life of Lamb "we are face to face with a typical Biedermeier." So we learn without surprise that "the Swiss professor, Friedrich Brie, in applying the term Biedermeier to England, found the essential requisites of this bourgeois type in Dickens."

What follows is for the most part a large deployment of critical commonplace, marshalled with all the erudition that the author, an almost encyclopaedic scholar, can command. The book would be dull but for a single transforming fact: Professor Praz's mastery of what he calls the "game of exchanges between literature and art." On this he has often written before—notably on Milton and Poussin—but never so entertainingly as at the beginning of this book. Breughel's *St. John the Baptist preaching* is a work, like *Vanity Fair*, "without a hero." Dickens and his fellows, in concentrating on setting and on lesser figures, proceed like Jan Steen in *The Marriage of Cana*, interested not so much in the miracle as in the picturesque figures crowding the staircase at the top of which the table is spread. And the resemblance is not, of course, fortuitous. The bourgeois society of the Low Countries in the seventeenth century is substantially akin to the Victorians, and it is thus possible to trace common principles at work in the predominant artistic medium of each. As Pater said of the Dutch painters: "Those innumerable *genre* pieces—conversation, music, play—were in truth the equivalent of novel-reading for that day."

It is unfortunate that this rather expensive book has been in some particulars thoughtlessly produced. When a painting is mentioned there is no indication whether it is reproduced or not, so that we have to hunt through the list of illustrations to find out. And the author might with advantage have revised and excised. The greater part of page 449 has already appeared in small print on page 385. But these are trifles; and Mr Praz ends, as he begins, strongly—with an amusing and revealing survey of the Victorians' views on Rome. Only Mrs Proudie is missing. She had heard, it will be recalled, that Sabbath observance was in eclipse in the Eternal City.

**The King who only Loved
France?**

LOUIS XIV AND MARIE MANCINI.
By Monica Sutherland.
Cape. 213 pages. 16s.

THIS story of the young Louis XIV's love for Marie Mancini, niece of Cardinal Mazarin, Richelieu's political heir, is sympathetically told by Mrs Sutherland. She admits the dynastic objections to a marriage which Louis sincerely desired, but reveals the strength of the feelings which he had to sacrifice. Despite his seduction at eighteen by the elderly Madame de Beauvais (an experience arranged at his mother's request) his affection for Marie was uncontaminated by that sensuality which Athénais de Montespan exploited later on.

The Cardinal's motives in fetching his nieces from Italy were mixed: his wish to help his relations combined with a desire to fortify his position by marrying them to influential nobles. He considered Marie's charms inferior to her sister's; but she had more brains than the brilliant Olympe, who became a countess but was involved in the sorcery scandals that terminated the Montepan's career; or the beautiful Hortense who deserted a duke to win notoriety in Restoration London. Described as "having a face like a prune," Marie nevertheless captivated Louis by her magnetic personality and lively mind. His education had been interrupted by the anti-Mazarin rebellions; and he was a shy and awkward youth, dominated by Anne of Austria, his mother, and by Mazarin.

Marie lay in wait for Louis during his formal visits of inquiry about her mother's fatal illness, and skilfully nourished the friendship by providing antidotes to his boredom: she interested him in her musical and literary tastes and shared his love of the open air. The Queen Mother and Mazarin for long thought it a family friendship that need not be restricted; others regarded it as a romantic game played in the courtly fashion of the age. Marie's uncle was a subtle opportunist—but he wanted a Spanish Infanta for Louis to guarantee his peace with Spain; and Anne was determined that no competitor should jeopardise a match of such strategic importance.

The story, treated with scrupulous fairness, comes near tragedy as Louis and Marie realise gradually that his promise to marry her cannot be kept. But his heart was ruled for the first time by that royal instinct which was to govern his life. Despite her success in educating him, as she believed, for kingship, Marie did not understand what it meant to be king of France—and Louis did. This book gives an unsentimentalised picture of a king still young and vulnerable, but learning to be the Grand Monarch of whom it has been said, *on peut affirmer, en somme, que Louis Quatorze n'a jamais aimé que la France*.

Sense and Sensitivity

SIR ROBERT WALPOLE: *The Making of a Statesman.*

By J. H. Plumb.

Cresset Press. 422 pages. 30s.

DR PLUMB'S first volume of his life of Walpole is of major importance for eighteenth century scholarship. Although the structure of politics in that age of patronage and management is becoming familiar, an understanding of it has not hitherto been applied to political narrative or to the careers of the leading personalities. Dr Plumb's book is a brilliant study of the personality and the rise to power of Walpole set in the context of a sparkling narrative and an acute social analysis. Walpole was twelve when James II fled the country, and he learnt the trade of politics at a time when the stakes were being raised very rapidly. The need for parliamentary majorities made office the main political lever at Westminster; while the ostentation of the age demanded golden rewards if Palladian houses were to be built, daughters endowed in accordance with the new rapacious conventions and reputation maintained in the county. Dr Plumb shows that the reigns of Queen Anne and George I saw a startling rise in the cost of borough seats, testifying to the competition for the rewards of office and influence. Politics became envenomed, and the disappointed or decaying gentry succumbed readily to Jacobitism and the lures of Bolingbroke.

Walpole's career was supremely successful. The son of a Norfolk squire, inheriting an encumbered estate, he entered and eventually dominated the narrow circle of the Whig aristocracy. He had a superb instinct for political timing, great administrative ability, tenacity in the Commons, and luck. Dr Plumb ends this volume with the sudden death of Sunderland, against whom Walpole had been fighting for control and against whom the battle was by no means won. Walpole's long struggle for the power he felt he deserved and could use shows how the strength and limitations of his nature matched the intense and restricted political life of the period. He was a dexterous politician within the orbit of the court and Westminster and tireless in cultivating his interest in Norfolk, but was insensitive to the larger movements of public opinion and largely unconcerned by them. Instead he relied, as Dr Plumb puts it, on "an intuitive appreciation of particular men." He knew when to oppose and when to come to terms. He was ruthless in breaking the Tory party in 1714; and in 1720, when working for equal status with Sunderland, he defied public opinion by screening the directors of the South Sea Company and the ministers implicated in the crash.

Dr Plumb devotes one of his most important chapters to exposing the myth that Walpole alone appreciated the dangers of the South Sea scheme and alone had the sagacity to rescue the country from the crisis. He shows that Walpole did not question the soundness

THE ECONOMIST, APRIL 28, 1956

of the scheme and that he speculated heavily and at the wrong times in South Sea stock. That his losses were not greater was due to the prudence of his banker, Jacobbe, who was the author of the remedial measures later advocated by Walpole. It is also a myth that Walpole made his extensive land purchases when prices slumped after the bursting of the Bubble: instead he bought recklessly at the top of the market. But although Walpole showed no financial foresight he exhibited superb political skill, both in exploiting the crisis to make his bid for power against Sunderland and in his fabian tactics in the Commons, which enabled the ministry to survive and gave time for the restoration of confidence in the City.

Although Dr Plumb warms to Walpole's ebullient temperament and robust common sense, he shows that Walpole was unprincipled in opposition, setting the tone for the factiousness that characterised oppositions throughout the century. If Walpole was remorseless to treason he was tender to peculation. His own wealth sprang from office and his extravagance made him voracious. As Paymaster-General he possessed the key office for acquiring a fortune. On his appointment in 1714 he immediately employed Vanbrugh to embellish Orford House; in 1720, when reappointed, he proceeded to add to his estates and to pull down his father's house to make way for a great Palladian mansion. The attraction of his career lies in the drama of his gambles against formidable odds and unprincipled intrigue. Its explanation lies, as Dr Plumb shows with insight and originality, in the rich complexity of Walpole's personality. He was coarse, confident, immensely capable; but he was also endowed with an extraordinary sensitivity revealed both in his aesthetic taste and in his handling of the personal relationships on which political success so largely depended. As Dr Plumb puts it, "his eye for proportion in a building or a chair was complementary to his certainty of judgment in affairs."

Crème de la Crème

'MY DEAR DUCHESS': *Social and political letters to the Duchess of Manchester, 1858-1869.*

Edited by A. L. Kennedy.

Murray. 254 pages. 21s.

THE Duchess of Manchester was as intelligent as she was beautiful, and she was as keenly interested in politics as in the social round. Mr Kennedy has collected some of the most interesting letters written to her in the golden years of mid-Victorian England. Most of them came from Lord Clarendon, who moved in the highest circles of Whig politics at home and European courts abroad. Fifty years ago Lord Fitzmaurice remarked that, in a complete collection of Lord Clarendon's letters, the world may some day enjoy a record of the time equal in interest to the "Letters of Lord Chesterfield." This small sample suggests that the remark was amply justified, and proves

THE ECONOMIST, APRIL 28, 1956

convincingly that the Duchess of Manchester brought out the best both in his style and in his willingness to impart titbits of gossip and speculation.

Mid-Victorian England is often judged in terms of its middle classes. These letters are concerned instead with a private, exclusive world, parallel to that which in Vienna was known as *la crème de la crème*. Clarendon was a man of the world, whose natural inclination to remain "a gentleman at ease" was usually qualified by an irresistible urge to transact public business and do his "duty to his country." He paid little attention to "showers of newspaper abuse," which occasionally intimidated that the exclusive world was being invaded from outside. His judgments were always patrician, and in consequence he could write of the royal family far more critically than a radical agitator. His judgments, however, were by no means as sound as Mr Kennedy suggests in his interesting introduction. If Clarendon occasionally "saw through" Napoleon III, and prophesied the Franco-Prussian War of 1870, he was misguided about Italian unification and the American Civil War. His distrust of both Gladstone and Disraeli showed how little he understood the dynamic forces in the domestic politics of his day, and his attitude towards the extension of the franchise, while consistent, lacked the precision of men as different as Russell and Bright, Lowe and Salisbury.

It is not for political prescience that the historian should turn to these pages, but for shafts of social insight and useful marginal comments on many important historical episodes. There are fascinating remarks on the state of the Queen's mind just before the death of Prince Albert, on rank-and-file Tory opposition to Disraeli, on day-to-day events at the courts of Prussia and France. The general reader will need no such considerations of utility to guide him. This is a delightful book to read just for its own sake. Some of Lord Clarendon's remarks are worth remembering; "a little Royalty goes a wonderfully long way in a country house," for example, or "how strange the desire is in some men for the places in which they are sure to fail." There are good stories, too, many of them printed here for the first time. It is to be hoped that Mr Kennedy will disinter more of the letters, or perhaps even some of the Duchess of Manchester's replies.

The Fellow-Farmer

OUR SAMOAN ADVENTURE.

By Fanny and Robert Louis Stevenson.

Edited by Charles Neider.

Weidenfeld and Nicholson. 287 pages. 21s.

THE title and attribution of this book are the only things about it less than excellent. RLS and Fanny did not, as it suggests, settle down to collaborate on a joint record of their island life; and one doubts whether, even had they done so, they would have chosen to call it an "adventure." In fact, the bulk and

backbone of the story consists of Fanny's hitherto unpublished diary of the three years 1891-1893. This is supplemented, where there are gaps in the narrative or where an alternative version seemed likely to be especially valuable, by extracts from Louis's letters and by an admirably succinct minimum of editorial summary and comment. The result is delightful—informative, illuminating, entertaining, everything that such a document should be; but it is not a collaboration, even posthumous.

Fanny Stevenson—the "fellow-farmer true through life" of her husband's tribute—was very much a person in her own right and had moreover a genuine literary gift of her own. It is likely, in the editor's opinion, that the chief purpose of her diary, apart from her own pleasure, was to enable her "to refresh Louis's memory of events and places for the benefit of his various literary projects." It is, however, much more than a mere mass of raw material. Even had Louis been a nobody and Fanny's diary consequently no more than the record of any other moderately uncomfortable, modestly successful pioneering venture, it would have been well worth publishing—if only as an object lesson to all feminine writers bent on turning domestic tribulations to account.

It is transparently and magnificently honest. When Fanny is proud of an achievement, she says so; when Louis says something that hurts her feelings she records that "my vanity, like a felled tree, lies prone and bleeding." When she thinks the local banker a brute she calls him a brute; when her "family" of Samoan houseboys and estate workers behave like imbeciles, with ruinous effect on treasured plants, livestock, or the domestic peace of Vailima, she pretends to no superhuman gifts of humour and forgiveness. There is not an ounce of gamesmanship in her makeup; the now familiar play of presenting oneself ostensibly as a well-meaning contented incompetent and between the lines as a grossly ill-used, superhumanly resilient heroine would, one feels, have roused her to vitriolic comment.

Honesty, however, is not her only literary quality. She can sketch a character, describe a scene, narrate an incident, in a manner which is not at all put to shame by juxtaposition with her husband's writing. The Vailima household, Apia society, Samoan neighbours, island officialdom, "come out" like a successful film: the voices speak with sharply individual intonation; face and gesture jump from the page. The brief "war" of 1893, seen indeed from the sidelines but uncomfortably close to, is brilliantly reported with fiercely indignant comment and a partisanship so intense as to draw from Louis (who shared it) an accusation of "arrant mad quixotry." The record is rounded off, after the diary peters out at the end of 1893, with the familiar, sad and dramatic story of Louis's death and burial on the hilltop of Vaea, as told in his mother's letters. Twenty-one years later, Fanny's ashes were interred in the same spot.

NELSON

David Hume:

Writings on Economics

edited by EUGENE ROTWEIN 'The essays', says *The Economist*, 'have a unity and purpose that transcend their 18th century setting... can be re-read today with great profit'. The book consists of nine of Hume's essays and twelve extracts from his letters. 30s

The Historia Pontificalis of John of Salisbury

edited by MARJORIE CHIBNALL John of Salisbury's only historical work is an account (many of the events described he saw as an eye-witness) covering the years 1148-1152, of Western Europe during and after the Second Crusade; it is of the first importance for English affairs at the time, and for the character and policy of Pope Eugenius III. The author was not only a trustworthy historian; his mastery of words gives this narrative a lively style which makes it of special appeal to students of the period. *Nelson's Medieval Texts* 20s

Old Stones

STONEHENGE.

By R. J. C. Atkinson.

Hamish Hamilton. 225 pages. 16s.

FOR over eight hundred years Stonehenge has attracted the attention of chroniclers and antiquaries, but it is only during the last few decades that it has been subjected to serious archaeological research. Mr Richard Atkinson is one of the small team of prehistorians engaged in the engrossing task of trying to discover the historical meaning of the assemblage of stones and earthwork Britain. In this lucid and essentially modest book, he tells us, with the help of an admirable series of new illustrations, what has so far been discovered about the monument.

Much of his space is concerned with sequence. The earliest structure, which dates from near the beginning of the second millennium BC when late Neolithic culture still prevailed in Wessex, comprised a circle of ritual pits enclosed by a penannular bank and ditch with possibly some kind of wooden erection in the middle. Next, two concentric circles of bluestones from the Prescelly Mountains of Pembrokeshire were set up in the middle of the enclosed area, the entrance to which was connected by way of an avenue, bounded on either side by bank and ditch, with the river Avon. It was not until around 1500 BC that the original bluestone circles were dismantled and the familiar lintelled circle and horseshoe setting of trilithons of sarsen stone from the Marlborough Downs were erected with their matching arrangements of bluestone uprights.

How the various stones were brought to the site, shaped and erected are topics that may well tempt readers to experiment for themselves. But the most pressing problem with which Mr Atkinson presents us is why and under whose auspices this astonishing structure, with its many sophisticated details, came to be erected on Salisbury Plain. Quite evidently there must have been some inspiration, to say the least, from outside, and archaeology points unambiguously to Mycenae. Some years ago Professor Piggott showed that many of the richer graves of the Wessex Bronze Age contained objects showing traces of Mycenaean fashions and techniques as well as actual trade-goods, like the famous faience beads, of east Mediterranean manufacture. Then, quite recently, Mr Atkinson himself noticed a delineation of a dagger of Mycenaean type on one of the great sarsen trilithons of Stonehenge. The Mycenaean context of Stonehenge has been established, but beyond this sober archaeology does not yet allow us to go.

At this point Mr Atkinson steps down into the field of conjecture in company with Stukeley, Geoffrey of Monmouth and the rest, distinguished in their day, but a trifle out of keeping with modern scientific temper. Day-dreams can often be a vital element in research, yet it may still be questioned whether they are in place in a popular work, even

THE ECONOMIST, APRIL 28, 1956

when labelled as such by their author. It is a little ominous that some have praised Mr Atkinson for his fiction and taken his facts for granted. The public appetite for archaeology may well be satiated prematurely if deprived too consistently of the stimulus of being confronted by the fact of the unknown and even on occasion of the unknowable.

Northern Lights

THE CHALLENGE OF SCANDINAVIA.

By William L. Shirer.

Robert Hale. 437 pages. 21s.

MR SHIRER has attempted the virtually impossible, even for a journalist of his distinction—to make something glamorous and gripping out of the worthy, respectable and well-intentioned Nordic social democracies. Only those who sympathise with their politics will appreciate the "challenge" in his thorough but necessarily brief account of the four countries. But the four are sisters under the skin, though they spend much of their time being catty about one another; and English bookshelves have lacked a good single volume that deals with all four as they are today.

The Scandinavian group of nations is unique. Everywhere the Social Democrats are in power, though often in coalition; the flag of the welfare state was raised long ago, though the welfare state has been erected on the foundations of a capitalist economy; everywhere, save possibly Finland, foreign policies are idealist and plain-spoken. The clear air and austere Nordic landscape seem to have entered into the temper of the people, who have realised more of the social goals of liberal humanism than any other people in the world.

Mr Shirer looked enviously at this refuge of sanity while he was in Berlin, and in the last few years has spent some time in finding out about it for himself. Though his book is still the work of an "outsider looking in," it is (in the motto of a newspaper not his own) to a high degree reliable, realistic and readable. In some sections—Finnish foreign policy in the war years, for instance—he moves with lucidity through a murky subject; and he has the good journalist's knack of making the reader constantly surprised at the amount of heavy matter he has put painlessly behind him.

It is difficult to fault him. He does not seem to emphasise enough how close to double-dealing the venerated Marshal Mannerheim came in his relations with Churchill in 1941 and the Germans in 1944. A book of comparisons is bound to underplay the differences between the four countries; but there is a vital distinction between Sweden and the rest, since one is a social democracy in a rich and industrial society while the others are social democracies in poor or chiefly agrarian ones. But as a compact and trustworthy account of a too often overlooked corner of the world this deserves a prominent place on the bookshelf.

THE ECONOMIST, APRIL 28, 1956

Wars Apart

HENRY CLIFFORD, VC: *His Letters and Sketches from the Crimea.**Michael Joseph.* 288 pages. 42s.THE FREMANTLE DIARY: *An Eyewitness Account of the American Civil War.**Deutsch.* 335 pages. 21s.

LESS than a decade in time separates the siege of Sevastopol from the siege of Petersburg. But in spirit they are a century apart. The Crimea, despite the railway at Balaclava, is a hideous reflection of the Peninsula in a distorting mirror. In its later years the American Civil War, despite the muzzle loading rifles, looks forward to the long agonies of the trenches in the Great War. Clifford was a witness of the criminal blunders of one of the last of the old wars. Fremantle, though the only battle he witnessed was the great set-piece of Gettysburg, was on the fringes of modern war. This is the first contrast between the two. The second is how they look through their field glasses. To a soldier engaged in it, as Clifford was, war seems a nasty, bloody muddle where mistakes are paid for in lives and in pain. To an outsider, as Fremantle was, war has the glitter of courage and a certain nobility about it where mistakes in one battle may perhaps be set right in the next. At Gettysburg he watches Lee and Longstreet, but he does not count the dead on Cemetery Hill.

Clifford is the more vivid. His letters home, from which the book is compiled, are written before the dead have been buried and before anger has given way to numb despair. Brave, intelligent and sustained by his firm Catholic faith, he gives in his letters a critical account of the whole of the campaign. As a member of the staff he saw all the major actions, served in the trenches and endured the winter that killed an army. This is revealed in intimate detail in his letters while his sketches expose the horrors and the miseries. Through Clifford's eyes the reader is brought as close as perhaps he will ever be to that strange war of a hundred years ago.

The Fremantle Diary, though it is supplemented by an able introduction by Maurice Ashley outlining the course of the war, covers but a few months. But in these few months this rather absurd figure of a British colonel met most of the Confederate commanders, wandered on the outskirts of the Vicksburg campaign, was present at perhaps the most decisive battle of the war and in the end, despite his hatred of slavery, found himself in sympathy with the gallantry and defiance of the South. So impressed was he by the bearing of Lee when he rallied Pickett's division after its repulse and by the morale of the Confederate army (made up of probably the finest infantry of the day) that he assumed that the South would gain its independence. But then he did not meet Lincoln, Grant or Sherman. Because it is so precise and limited the diary can only find a place on the shelves of those who have some familiarity with the war. To that audience the book can be recommended unreservedly.

A "Royal" Swindler

THE SUMMER KING.

By Aylmer Vallance.

Thames and Hudson. 212 pages. 16s.

CARDINAL ALBERONI'S "political Testament" of 1753 credits Baron Theodore von Neuhoff, a minor Westphalian noble, with "the boldness to make pretensions to the sovereignty of Corsica and cause himself to be made king." And *l'audace, toujours l'audace* might well have been his motto. He would have been at home among the adventurers—Jabez Balfour, Whitaker Wright, Hooley and Bottomley—in an earlier book of the late Mr Vallance, *Very Private Enterprise*; but he was more romantic and less harmful—even to his Corsican "subjects" whose suspicions reacted more dangerously than the average shareholder's.

His six months' kingship, which ended ignominiously in November, 1736, exhibited most of his peculiar qualities: financed by the Jewish communities of Leghorn and Tunis, his failure was as much due to his criminal follies as to Corsican feuds. He was a liar, a thief, a callous seducer, and a coward; yet seven years later the English Government sent him in a frigate round the island to find out if his subjects wanted him back.

This was the last of a series of enterprises which began with his misappropriation of Swedish secret service money in 1715. Expelled from Tuscany in 1747 Theodore came to London. But English

interest in Corsica had evaporated; and after living for a few months on the curiosity excited by his reputation, he was arrested for debt and lodged in the King's Bench Prison. There he remained till released by the passing of the Act for the Relief of Insolvent Debtors (he offered his kingdom as his security) in May, 1755. But despite a somewhat cynical "Public Appeal" by Walpole and a "benefit night" by Garrick, King Theodore's career declined rapidly. His grave in the paupers' corner of St. Anne's, Soho, would have been forgotten as soon as his monarchy, but for an inscription erected by Walpole, whose ironic moralisings provided an edifying epilogue to a picturesque impostor's tragi-comedy.

Mountain Pictures

MONT BLANC TO EVEREST.

By Gaston Rébuffat.

Thames and Hudson. 158 pages. 35s.

THE AGE OF MOUNTAINEERING.

By James Ramsey Ullman.

Collins. 384 pages. 30s.

THE literature of mountaineering has been copiously illustrated, from the days of Whymper's drawings to the photographs of the present era. But the reproduction of the illustrations, especially of photographs, has too often not been as skilled as the work of the photographer. "Mont Blanc to Everest" is a shining exception and it should set a standard by which future pictures of

mountains will be judged. The photographs themselves are of the very first order—in itself not an unusual event—but they are reproduced in photogravure of a quality that is a delight to see. Too frequently the work of the printer goes unacclaimed, and it is with gratitude that we pay tribute to the French printers, Etablissements Braun et Cie of Mulhouse, who were responsible for the photogravure plates. No better photogravure reproduction is likely to be seen for a long time to come. Fortunately, the printing of the pictures is matched, in the English edition, by the excellent typography and press-work of the text, for which Jarrolds of Norwich were responsible. Gaston Rébuffat, a Marseillais by origin who became a Chamonix guide, has contributed a highly sensitive commentary which has been most successfully translated—and the translation can have been no easy task—by Geoffrey Sutton.

"The Age of Mountaineering" is based on the author's previous "High Conquest" but continues the story of mountaineering up to the ascent of Everest. Mr Ullman's book should be judged as popular history and not as a serious contribution to the literature of mountaineering. For British readers the most useful section is probably that dealing with the American continent, though the chapter on British mountains (contributed by Mr W. H. Murray) contains some excellent advice to those whose experience has been confined to the British Isles.

The Reluctant Squeeze

IN the sphere of domestic monetary policy, the experiences of this past year have been among the most eventful, and certainly the most contentious, in recent history; and to many people they have also been not a little disappointing. Twelve months ago it seemed reasonable to claim that the effectiveness of the traditional monetary weapons of restraint had again been demonstrated. But these weapons, brought into play for only the second time in a generation, had then been in operation for little more than four months; and when that claim was made for them in the last of these surveys of British banking it was explicitly based upon their effects within the monetary sphere, because it was then too soon for their "real" effects to be measurable. Unfortunately, those effects are not clearly measurable even now, because of the impossibility of assigning particular changes to particular causes, and because the monetary restraints have had to contend with some important contrary influences—notably the optimism of Mr Butler's first 1955 budget and the strength of wage pressure throughout the year.

Whatever degree of disinflation has been achieved up to date, it has certainly been less than many people, not excluding the monetary authorities, at first expected the monetary measures to achieve by themselves. Yet those measures have since been supplemented by others—notably the restrictions upon hire-purchase, the increase in purchase

tax, the driving of the local authorities into the capital market, and the efforts to slow down the capital outlays of the public sector. Since there is no sure and objective means of assessing the relative effectiveness of the monetary and non-monetary restraints, different observers suggest widely differing conclusions, often with equal plausibility. But almost everyone agrees that the monetary action has exerted its effects much more slowly than had been hoped—which has led some people to demand "improvements" in the monetary apparatus, others to insist that existing techniques must be used more toughly, and yet a third group to conclude that monetary policy is impotent and should be supplanted by physical controls.

This annual survey is not the place for attempts to penetrate this fog of controversy. The arguments about the role of monetary policy, and the methods by which it should operate, will not be settled this year or next; but the study of these problems will certainly long dwell upon Britain's experience in the phase that opened with the increase in Bank rate in January 1955. Therefore the best contribution this year's survey can make is to bring the factual story up to date, and to confine deductive analysis to matters of technique that are amenable to objective tests.

The first point to observe is that, whether monetary policy has or has not been firm enough, the authorities

it's an Anglepoise!

themselves obviously feel that they have been operating it both courageously and forthrightly. And in the opening phase, at least, the purely monetary results fully justified this view. The increase in Bank rate from 3 to 4½ per cent early last year actually had stronger effects than had been foreseen. Because the higher rate was made technically effective by keeping a tight rein upon credit supplies in the short loan market, the Treasury bill rate was forced

up closer to Bank rate than it had been for many years. The unusually wide margin thus opened up between bill rates and deposit rates, illustrated in the first of the accompanying charts, caused a severe drain upon bank deposits and simultaneously cut down the banks' share in the supply of bills. Hence, at this stage, the classical instruments of Bank rate combined with open market operations proved to be the means of putting a sharp pressure upon bank liquidity. The banks were forced to make unprecedentedly large sales of investments on a falling market in order to meet the then still rising demand for advances. But, despite the discomforts thus caused to the banks, the authorities then reinforced the squeeze by assaulting bank liquidity more directly, by themselves selling gilt-edged in order to keep down the volume of bills.

Credit Contraction Slackens

By the standards of the previous twenty years this array of measures represented very salutary action indeed—and action that conformed strictly to the rule book of orthodoxy. By mid-1955, when this first phase ended, the technical results looked highly impressive. In the first half of 1955, although overseas sterling balances were contracting, whereas in the first half of 1954 they had been sharply rising, the liquid assets of the clearing banks were reduced by no less than £420 million—or by £116 million more than they had fallen in the similar period of 1954. In consequence, the long upward trend of bank deposits was abruptly reversed: in the four months to mid-1955 the seasonally-corrected index* compiled by Lloyds Bank dropped by 3½ per cent from the peak reached on the eve of the increase in Bank rate to 4½ per cent.

In these past twelve months nothing approaching that intensity of pressure has ever been attained again. The deposits index dropped by a further 2.4 per cent in the five months to last November, then turned upwards again, and at the latest make-up, that for mid-May, was only

0.8 per cent lower than in November. The total of net deposits, at £5,860 million, is £244 million or 4 per cent lower than in May 1955. Its decline since last November amounts to £250 million, in contrast with the decline of £330 million achieved in the similar period of 1954-55. The contrast between the three-month periods following the February increases in Bank rate (to 5½ per cent this February and to 4½ per cent in February 1955) is even more striking: deposits have been reduced in these past three months by only £39 million, whereas last year they were reduced by £153 million.

This contrast appears the more remarkable when it is recalled that in the corresponding phase last year bank advances were still rising strongly, whereas this year they have been subjected to the arbitrary constraint of Mr Butler's "request" of last July. The behaviour of advances in February and March—they rose in each of those periods by roughly £40 million—suggested at first glance that this constraint might be losing its force; but the fact that total advances have since risen by only £5 million despite the continuing borrowings by the public utilities shows that the credit extended to the private sector is still contracting. Over the six months since last November, a period that included some repayments by the utilities out of the proceeds of market issues, total advances have fallen by £4 million, whereas in the corresponding months of 1954-55 they rose by no less than £244 million. In the period since the last rise in Bank rate, which has carried charges to marginal borrowers up to, and even beyond, 6½ per cent, they have expanded by £45 million (£103 million last year). At £1,910 million, they are £194 million below their level of May, 1955, but almost 30 per cent of this decline must be attributable to net repayments by borrowers in the public sector, so that advances to the private sector have probably been reduced over the year by about 7 per cent; the decline from the peak reached at the time of the "request" would be somewhat greater than this.

It should be added that there are some grounds for believing that the sanction of high rates has played a bigger

part in bringing about this decline than is often supposed. In general, the banks' attitudes towards borrowers have been firm rather than really tough; and a substantial part of the decline in private-sector borrowings reflects a falling away in demands, as distinct from refusals by bankers or their pressure for repayments. The latest rise in Bank rate, unlike the rise in February 1955, may therefore have had a

more perceptible effect upon bank advances than upon the volume of credit as a whole.

The key to the contrary behaviour of deposits and advances is to be found, of course, in bank liquidity. In the period since mid-1955, although individual banks have at times suffered fairly considerable pressure upon their liquidity, there has been no such strain as that imposed in the opening phase. In the second half of 1955 there was an astonishing transformation from stringency to ease. Total liquid assets expanded by the extraordinary amount of £509

million, to £2,471 million, in contrast with a growth of only £226 million and £268 million in the corresponding halves of 1954 and 1953. The liquidity ratio thus mounted during the six months from 30.1 to 37.4 per cent, whereas in 1954 it had risen only from 32.9 to 34.3 per cent and in 1953 from 34.8 to 36.8 per cent.

The authorities contended at the time that the "request" for cuts in bank advances was intended simply to reinforce and accelerate the effects of the orthodox credit squeeze, and would not be regarded as justifying any abatement of the orthodox pressure. They would doubtless further argue that there never was any deliberate abatement—that the extent of the replenishment of bank liquid assets was an undesired consequence of influences that proved too strong to be resisted. The most important of those influences was the need to float in the summer the two funding issues, totalling £297 million, for the gas and electricity industries—since it was argued that unless these means had been provided for the repayment of bank advances by the public sector, the banks would have found it difficult if not impossible to squeeze borrowers in the private sector. In addition, the Treasury had to refinance the £524 million of Serial Funding stock that matured in mid-November.

Shifting Focus of Policy

Especially during the summer the "departments" were persistent sellers in the gilt-edged market, but it is evident that their total net sales during the second half of the year, together with whatever "genuine" subscriptions were received for the autumn refinancing issue (which was believed to be relatively successful), must have fallen far short of the sum needed to finance the official take-up of the utility stocks and the unconverted residue of the Serial Funding stock. During this phase the decline in the gold reserve abated the need for domestic borrowings to the extent of £200 million. In terms of bank liquidity, however, some two-thirds of this effect was probably neutralised by the simultaneous reduction of £133 million

in Britain's short-term liabilities overseas—which must have diminished the competition of overseas monetary authorities for Treasury bills and thus released bills correspondingly to the domestic banking system.

In retrospect it seems evident that, consciously or unconsciously, the authorities had in this second phase shifted the focus of their policy from deposits to advances: in the first phase they were concerned to exert a general credit pressure, whereas in the second their primary concern was to curtail advances. And although they may not have deliberately abated the orthodox pressures, it is evident that these would have had to have been much stiffened if they alone were to have produced as substantial a decline in advances as has been achieved with the aid of the "request." The sales of gilt-edged would have had to be much more vigorous, and the 5½ per cent Bank rate would doubtless have come much sooner. In other words, the orthodox measures were not keeping in step with the arbitrary one, and by the end of 1955 this lack of alignment was threatening to set in motion influences that would neutralise much of the restraining effects exerted by the advances squeeze. One of the big five banks had already begun to absorb part of its increased liquidity by venturing anew into the gilt-edged market. Recollections of the pains administered by the authorities in the first phase, coupled with the supposition that these strong and orthodox tactics might be repeated in the "revenue" quarter of this year, were keeping other banks from following suit—but this was an undependable sanction.

These inherent weaknesses in the second-stage tactics seem to have been acknowledged by the authorities since the turn of the year. The increase in Bank rate last February was the most overt sign of this change, but there have been many other indications that policy is groping its way to a new version of orthodox principles. The whole sequence of efforts to minimise the recourse to bill finance—from the autumn change in procedure for local authority financing to Mr Macmillan's premium bonds and his new plan for the nationalised industries—is designed to save the monetary authorities from the sort of paradoxical dilemma in which they found themselves in the second half of last year. The focus of policy, if it has not been clearly switched back again to the behaviour of bank deposits as such, is very clearly directed upon bank liquidity. The professed principles of policy are, for the present, quite plainly orthodox again—though whether practice will fully match the precepts is still open to question.

The increase in Bank rate has evidently had much less effect upon bank liquidity than did the 1955 increases (thus fulfilling a forecast made in this Survey last year). Hence, in the absence of really tough tactics in the gilt-edged market, the net decline in bank liquid assets since the beginning of the year has been slightly less than in the similar period of 1955, in spite of the markedly stronger trend in the domestic finances of the Exchequer. One subsidiary reason for this has doubtless been the decline that was permitted to occur in the Treasury bill rate—not to mention the associated, and even steeper, decline in yields in the short bond market—from the peak reached in February. The slight corrective movement that has developed since end-May is therefore welcome—for this is no moment to encourage the recent City chatter about the possibility of a Bank rate reduction. But it is upon control of liquidity that official policy should now mainly rely.

Strains on the Sterling Area

THE transformation last year of the sterling area's balance of payments from a surplus in 1954 of £47 million (before crediting Britain's receipts of defence aid) to a deficit of £225 million was attributable almost entirely to Britain itself; and the fall in the gold and dollar reserves occurred in spite of an increased contribution from the overseas sterling countries—and especially the colonies. Now, it appears likely that the conjuncture in 1956 may be in neat and disturbing contrast. While Britain's own balance of payments has shown tentative signs of recovery—as yet disappointingly small, but probably big enough to restore a surplus for the year—the balance of the overseas sterling area seems to be swinging into deficit. Australia and New Zealand, the two countries that have been in exchange difficulties for some time, have hardly yet succeeded in checking the excessive levels of their imports, while the surpluses of the other sterling territories are being eroded by a major adverse swing in their terms of trade.

Since the beginning of the year a number of sensitive commodities of key importance in the sterling area's earnings of foreign exchange have been falling in price—and in some cases the fall has been precipitate. Rubber prices, for example, have been more than halved in the past eight months. Copper has fallen in little more than two months from a high record price of £435 a ton to under £300. In addition, such other dollar-earning stalwarts as cocoa, tea, jute and zinc have fallen in price, though wool has recently shown a slight upward trend. At the same time, moreover, many of the commodities of which the sterling area is a substantial net importer have been rising in price. They include wheat, timber, newsprint, nickel, aluminium, coal, steel and, most important of all, though its precise impact on the payments balance is difficult to ascertain, oil.

These unfavourable price movements explain in part the disappointingly small increase in the central gold and dollar reserves during the phase of seasonal strength. In the first five months of this year the increase has been \$249 million—compared with \$467 million and \$475 million in the corresponding months of 1954 and 1953. In May of this year the monthly gain tailed off to \$41 million, and towards the end of the month and in early June sterling sagged close to the dollar parity. This is a poor augury for the months of seasonal pressure ahead—particularly as the pressure is likely to be intensified by a bigger demand and higher prices for dollar grain, following the harsh winter and the dry spring in Britain and Europe.

Finally, a further possible source of danger is that the present pause in the American boom might develop into a modest recession—which would inevitably lead to some curtailment of dollar purchases of sterling commodities. In one sector, indeed, the movement has already begun: the downturn in production in the United States car industry has already led to a notable fall in purchases of rubber.

This ominous list of apparent and possible threats to sterling in coming months should not be interpreted as a calculated forecast of crisis, or even severe strain. It does not by any means complete the reckoning of the sterling prospect. The technical position is good: foreign working balances of sterling have been rebuilt only to modest levels, and there seems to be relatively little scope for speculative

capital movements through the "leads and lags" in payments and receipts that caused so much damage in 1955 and in earlier "odd" years. The deterioration in the sterling current account that could result this year from an adverse swing in world prices and demand does not seem likely to be unduly large—by normal standards. The closeness of the watch that needs to be kept today is attributable to the exiguous level of the reserves. They have been run down in the good years. It is this more than anything else that is responsible for the present strain on sterling and on the cohesion of the sterling area. When the cushion is inadequate, every bump can be serious, and demands search for and remonstrance of the major culprits.

In the recent phase of strain, as has been intimated above, the chief culprits were Britain and certain dominions

—notably Australia and New Zealand. The heroes, indisputably, were the colonies. A summarised picture of the performance of the main groups in the sterling area is shown in the accompanying table. In 1953, the gold and dollar reserves rose by £240 million. In the first half of 1954, fortified by favourable seasonal influences and by the inflow of foreign funds to London, the trend was still well upward: the reserves rose by another £179 million. Then began the decline—by £92 million in the second half of 1954 (of which most however was attributable to special capital repayments); by £29 million in the seasonally favourable first half of 1955; and by no less than £200 million in the second half of that year.

The largest single element in the deterioration last year was the increase in Britain's deficit in its transactions with the dollar area. The deficit in current payments rose from £137 million to £251 million; receipts of defence aid dropped from £50 million to £44 million; and net receipts

HEAD OFFICE

14 George Street, Edinburgh,

General Manager: Ian W. Macdonald

Modern banking services are available at the Bank's Branches throughout Scotland and in London. Credit facilities for commercial, industrial and farming development, on convenient payment plans, are also available through the Bank's subsidiary,

THE SCOTTISH MIDLAND GUARANTEE TRUST LIMITED

Indian Chessman, part of the set once owned by Clive of India and now in the Museum of Indian Art.

Chequerboard of the East

So many races . . . so many needs . . . so many markets extending over a vast area of the earth's surface. And there The Chartered Bank operates with knowledge and experience sustained by more than a century of close and intimate contact. Branches of The Chartered Bank of India, Australia and China are established in most centres of commercial importance throughout Southern and South-East Asia and the Far East. At all these branches a complete banking service is available and, in particular, facilities are provided for the financing of international trade in co-operation with the Bank's offices in London, Manchester and Liverpool, its agencies in New York and Hamburg and a world-wide range of banking correspondents. In London and Singapore the Bank is prepared to act as executor or trustee.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated by Royal Charter, 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

THE Mercantile Bank of India Ltd

For many years The Mercantile Bank of India has been intimately associated with the principal trading centres of the East and can supply to all interested exporters and merchants on-the-spot information relative to the state of markets, agency representation, financial and currency exchange problems.

on capital account from £73 million to £19 million. Hence, the net deficit in direct trade with the dollar area rose from £14 million to £188 million.

This deficit was exactly matched by net receipts of gold and dollars from the overseas sterling countries (the fall of £229 million in the reserves being accounted for by the sterling area's net payments to non-dollar countries). The colonial territories continued and increased their net contribution of dollars—from £101 million in each of the years 1953 and 1954 to £120 million in 1955. This praiseworthy performance was aided by high commodity prices, notably for tea and cocoa—and now that these prices have fallen this contribution may be expected to diminish. The direct dollar account of the sterling dominions showed a steady deterioration, the deficit rising from £14 million in 1953 to £75 million in 1954 and £108 million in 1955; but this deterioration was almost exactly matched by an increase in gold sales in London (from £78 million in 1953 to £166 million last year). The offsetting movement reflects in part simply the action of some countries, above all South Africa, of selling more of their gold in London and financing more of their dollar imports through it—though South Africa at least has also increased the total value of its gold sales, from higher production.

Within a few weeks of its reopening in March, 1954, the London gold market had again become by far the most important of the free gold markets of the world, and drew in supplies that in the earlier postwar years had filtered into the quicksands of the premium markets of the East. The boom in the manufacture of gold bangles and ashtrays was punctured by the disappearance of the premium in 1953. Correspondingly more gold has come into the recognised channels that feed the monetary reserves, and most of it has come to London.

The deterioration in the sterling area's gold balance with non-dollar areas, from a net surplus of £58 million in 1953 to deficits of £63 million in 1954 and £229 million in 1955, reflects to a large extent the swing to deficit with the European Payments Union. It should be noted, however, that since the widening in 1954 of the area in which sterling can be transferred without formality to embrace the whole non-dollar world, the EPU deficit has reflected not simply the sterling area's balance with European countries

but to a large extent its balance with the whole non-dollar world, and on capital as well as current account. There can be no question, for example, that the substantial deterioration in the EPU balance last year resulted not only from a worsening of the sterling area's current balance of payments with EPU countries, but also from the channelling of surplus sterling into the EPU settlement as a result of the running down of working balances by residents in countries within the EPU area and outside it.

These speculative pressures, as has been suggested earlier, need not recur to any substantial extent this autumn. For the rest, the prospect indicated by the recent experience is by no means wholly unfavourable, even for the overseas sterling area. The dollar earnings of the colonial territories, as has been seen, will probably fall off. The sterling dominions however may improve their performance. South Africa, which has no link with the central dollar pool, may sell more gold in London from the proceeds of its increased production in order to replenish its sterling balances. These were run down in 1955 by transfers for investment on the London market, which became so large that the South African authorities have this year subjected them to control. While a larger gold flow may be expected from South Africa, a smaller drain should—though by no means certainly will—be suffered from the Antipodes. In both Australia and New Zealand exchange reserves have been run down to rock bottom. So far imports have shown little response to earlier cuts in quotas; but these have now been supplemented by fiscal and monetary measures. In Australia, a supplementary budget has been introduced, interest rates have been raised and official support has been withdrawn from the bond market—action that should in the long run prove far more effective than the largely abortive restrictions on imports. In New Zealand, too, the authorities have tightened their monetary pressure, as a subsequent article explains. In the sterling area as a whole there has hitherto been a half-hearted quality about the efforts to secure that "soundness of domestic conditions" that was to be the first condition to be satisfied in making sterling safe for the advance to formal convertibility. The turn for the worse in the sterling area's terms of trade underlines the danger that any persistence of this half-heartedness would involve.

How Hire Purchase is Financed

WHILE hire purchase has grown to respectability in Britain, the same cannot yet be said so surely of its finance. A large part of the financing side of the business remains shrouded in statistical obscurity—and in euphemism. Even in the sphere of consumer credit, most of the numerous specialists unwarrantably scorn the only accurate style, "finance house," and prefer to dignify their activities as "industrial banking."

The £400 million or so of hire purchase credit now being made available each year is extended by a very large number of finance companies, retailers, wholesalers, manufacturers and nationalised corporations. The commercial banks, subject to the single exception of the Commercial Bank of Scotland, do not directly engage in it, though a substantial but unknown proportion of the total is furnished by them indirectly. At mid-February, the latest date for

which a classification is available, total bank advances to the finance companies reached £35.4 million—compared with the peak of £45.1 million in August last, but only £11.2 million in February, 1954. But these advances by no means comprise the full extent of the banks' ultimate finance of hire purchase, which flows unidentifiably also through their general advances to retailers (£185.7 million in total at mid-February) and indeed through those to manufacturers, who can and do use bank funds as a prop to permit the granting of their own credits to retailers, who can in turn pass the money on to their customers in hire purchase facilities.

Ever since the acquisition by the Commercial Bank of Scotland of a large hire purchase finance business in the autumn of 1954, observers have watched for signs of a parallel move by any other bank, and in particular by any

of the big clearing banks. There has been no definite evidence of any such move; nevertheless, it is thought in some circles that the question of direct bank participation in this field is no longer whether but when. The experience of Britain and still more of overseas countries shows that, contrary to the opinion widely held before the war, hire purchase generally grows in importance with the standard of living. Britain is in fact one of the few countries in which the commercial banks in general have resisted the attractions of direct participation in this ever-growing sphere of business. In Australia one of the largest stakes in hire purchase finance is held by the central bank itself.

The first official measurement of the streams of hire purchase finance in Britain was published by the Board of Trade in April, in a new series of estimates, as yet tentative and incomplete. These suggested that at the end of 1955 the amount of hire purchase debt owing to retailers (including co-operative stores and the Gas and Electricity boards, but excluding garages) was between £250 and £300 million. In addition, £169 million was owed to the 262 finance houses embraced by the inquiry. But no estimate was considered possible of the credits extended by the smaller finance houses that did not make returns—and the total number of houses has recently been stated to run into "literally thousands." Moreover, the official estimate of the retail credit covers only furniture, hardware, radio and electrical shops and department stores—which account for the great bulk, but by no means all, retail hire purchase business.

★

The finance for a hire purchase sale made by a retailer may be extended in one of three ways. The retailer may finance the transaction from his own resources. Secondly, he may immediately pass the transaction on to a finance house which from the outset acquires title to the article and makes its own credit arrangement with the purchaser. Thirdly, the retailer may initially make his own hire purchase contract with the customer and subsequently discount the paper with a finance company—which for this business, as distinct from that transacted direct with purchasers, thus retains a right of recourse against the retailer in the event of default. The amounts granted by the finance companies through such "block discounts" are in practice far larger than those granted direct to retailers' customers. But the mainstay of the finance companies' business appears to be provided by the customers of the motor dealers. Virtually all hire purchase business in cars, commercial vehicles and other capital goods is financed direct by the companies.

The area of competition between retailers and finance houses in the extension of hire purchase credit is not in fact very large. Their respective "spheres of influence" are illustrated in the official estimates of the distribution of the credits extended by the reporting finance companies direct to hirers—excluding, that is, credits granted to retailers on block discounts. At end-1955 nearly one-third of the companies' direct credits financed non-consumer goods (commercial vehicles accounting for 21 per cent of the total, industrial and building equipment for 7 per cent and tractors and other farm equipment for 3 per cent); private cars accounted for a further 43 per cent, motor cycles and caravans for 8 per cent, and furniture, radio, television, domestic appliances and miscellaneous goods

together for only 18 per cent. In March last, the latest month for which official estimates are available, the credit granted by finance houses on household goods was only £169,000, compared with £54 million of hire purchase sales (i.e., including the value of the deposit) by retailers. However, the shares in the actual finance of household goods are considerably less divergent, since the figures make no adjustments for the retailers' subsequent discounts of their paper with finance houses.

Most of the larger retailers conduct their hire purchase business through a separate, specialised department, whilst some important chain stores have gone so far as to incorporate subsidiary finance companies (to this extent the official figures understate the true share of the retailers since they group these retail subsidiaries with the finance companies). But, particularly in the electrical trade, much of the hire purchase business is transacted by small firms, financed by the family and friends.

The commercial and financial practice of hire purchase business naturally varies appreciably within this heterogeneous range of operators, specialising in different classes of goods. For instance, the small retailer who furnishes credit from his own resources may be reluctant to grant contracts for periods much over twelve months, whereas the finance companies, before the extension of the statutory control last year, were willing to extend credit for certain expensive items of industrial equipment for considerably more than two years (which is now the legal maximum period of repayment on nearly all goods save a few sold mainly by the nationalised Gas and Electricity boards).

On the other hand, the size of the initial deposit demanded by the smaller retailers and some of the youthful finance companies—likewise before the tightening of restrictions, which now demand a minimum deposit of 20 per cent for furniture and certain domestic appliances and 50 per cent for all other goods—was generally distinctly smaller than that asked by the more prudent of the finance houses. The proper criterion is that the amount of credit extended should always exceed by a safe margin the resale value of the goods. The appropriate size of the deposit thus depends on the rate of depreciation. On many consumer goods, such as furniture and some household equipment, this is clearly much larger than was allowed for, in the days of freedom, by the terms offered by many retailers and companies. But so far, at least, the default rate on all hire purchase business has been extraordinarily low—a fact that has enabled at least two enterprising insurance companies to offer, at very low premiums, policies affording cover against the risk of default.

★

The sources from which hire purchase finance is drawn are likewise very diverse. The retailer finances himself from trading profits or banking and trading credits; the small finance company from initial capital, loans from friends or associated companies and from whatever other sources it can find; the large finance company from the regular channels of the capital market—when the authorities permit. In addition, virtually all companies accept deposits from the public, attracted by high interest rates (ranging at present from 6 to 8 per cent) and, by some but not all companies, by advertisement—the legality of which has yet to be tested in the courts. The finance houses commonly also draw funds through three further routes:

East of Suez

East of Suez! A phrase that quickens the imaginative pulse, evoking images of a strange, exciting world—the mysterious Orient, the exotic East of Stevenson, Kipling's India. Life would be dull, indeed, without fiction, and Kipling and Stevenson will always find a welcome from the armchair traveller; but for those concerned with the sterner stuff of eastern commerce, information of a more realistic nature is required. This explains why so many businessmen and traders consult the National Bank of India for accurate and dependable information on conditions in the East. Through their long-standing associations the National Bank of India have established an unrivalled knowledge of the many problems peculiar to eastern trading, and can supply up-to-date information on the prevailing conditions and trends in your particular market.

A comprehensive service is available at the Bank's branches in INDIA, PAKISTAN, CEYLON, BURMA, KENYA, ZANZIBAR, UGANDA, TANGANYIKA, SOMALILAND PROTECTORATE AND AT CAMP AND STEAMER POINT, ADEN.

THE ECONOMIST, JUNE 16, 1956

the issue of debentures (less favoured now than in former days); loans from the commercial banks; and acceptance credits—under which they draw their own bills on an accepting house for discount in the market.

With the single exception of the acquisition of funds on deposit, each of these sources of finance is subject to stringent controls imposed by or at the instance of the monetary authorities. The most rigorous control is that over the issue of new capital. Since 1945, except for a brief interval in 1954-55 (from August to February), the Capital Issues Committee has been instructed to maintain particular stringency in examining proposed issues for hire purchase finance. Before last March, when the limit of exemption from CIC control was reduced from £50,000 to £10,000 of borrowings in any one year, the effect of this virtual ban upon capital issues for hire purchase was largely to stimulate the formation of small finance companies, uncounted numbers of which are now bestrewn over the field. How successful the lower exemption limit will be in keeping down further growth is still uncertain. Judging by recent practice, some companies by no means consider a capital of £10,000 or less to be inadequate as a backing for the raising of deposits from the public.

Official control over short-term money other than deposits used in hire purchase finance is exercised through the Treasury "requests" governing the lending policies of the joint-stock banks and the accepting houses. At the end of 1946, the banks were asked not to increase credit lines for hire purchase finance above existing levels, and that curb was relaxed only in 1954-55. Moreover, on two occasions, in 1952 and last year, the banks agreed to enforce an actual reduction in facilities. In spite of this, the balance sheets of the larger finance houses suggest that actual bank advances (as distinct from limits) have grown very con-

siderably in the last few years. By the second half of last year however the banks, as noted earlier, had succeeded in checking advances to finance companies, and by the year-end achieved their agreed cut of 15 per cent. At present, the finance companies are unable to secure any new facilities from either the banks or the accepting houses.

Notwithstanding the shortage of funds and the sharp increases in the general level of money rates since the beginning of 1955, the charges for hire purchase finance have risen only moderately. The spread of charges by finance houses at present generally ranges between 7 per cent per annum (signifying a true charge of nearly 14 per cent on average debt outstanding) for industrial goods and new cars to a maximum of around 12 per cent for most household goods. Some large retailers and the Gas and Electricity boards offer considerably cheaper terms. In general, the increase in quoted charges in the period in which Bank rate has risen from 3 to 5½ per cent appears to have been not more than 1 per cent.

The smallness of the rise is due in part to the fact that the charge represents not only interest but also, and especially, the costs of collection, card-indexing and inquiry (which are high) and payment for the risk of default (which, as has been noted, is at present low). A more important factor, however, is probably the artificially wide margin that has existed between the finance companies' charges and the rates at which they secure their funds. The ensuing attraction of an ever-growing number of companies into the field has for some time been tending to put pressure on the level of charges; and once the present financial stringency and special restrictions on the supply of funds to the finance companies are relaxed, the force of competition may be expected to result in a considerable cheapening of hire purchase credit.

Liquidity Controls in Canada

BY OUR CORRESPONDENT

THE Canadian monetary scene has been dominated for twelve months by a continuous and considerable expansion of bank loans to business and individuals. A year ago at this time the rapid rise in bank lending was hailed as the first decisive sign that the pace of business was picking up after the mild recession of 1954 and a winter of unusually severe unemployment. This year the same phenomenon is taken as a much more dubious pointer. Fears are entertained in many quarters, not least official quarters, that the credits available to business will exceed the physical rate of growth that the Canadian economy, and the labour force in particular, can sustain. Accordingly, the credit brakes are on.

Canada was slower than the United States to pick up after the 1954 recession, and the early part of 1955 was marked by the unusual conjuncture of Canadian money rates falling below those in the United States. For a short time in early February three-months Treasury bills yielded less than one per cent; and in mid-February the Canadian Bank rate was reduced to 1½ per cent. It was raised again to 1¾ per cent in April; by mid-year bond prices had turned downward and the chartered banks were increasing their general loans rapidly. At least since early August

of last year, when the Bank of Canada again raised its re-discount rate, to 2 per cent, the efforts of the monetary authorities have been directed towards restraining the demand for money. One pipeline after another has been blocked, or at least obstructed. Nonetheless, the flow of loans by the chartered banks has continued to increase.

The persistent, though cautious, efforts of official policy to resist excessive credit expansion have—as in the United States—involved a long series of increases in the rediscount rate, culminating in the move to 3 per cent in April this year. But Canada, like the United Kingdom, has found that Bank rate alone is not enough. The authorities now find themselves warning the public that its effect should not be exaggerated. Supporting measures have been taken, and together the restraints have all but checked the expansion in the money supply. But during the first three quarters of 1955, bank deposits rose by more than \$850 million, or 9 per cent; loans bounded upward, whilst holdings of government securities continued to increase, until August. In the last quarter of 1955, however, the chartered banks' sales of government securities reached \$486 million, which nearly covered the increase in loans and mortgages. Since the turn of the year, too, the Bank

of Canada has succeeded in keeping the banks on a tight rein. Between the end of the year and mid-May, bank deposits increased by less than \$70 million. At the same time general bank loans increased by over \$430 million.

The eventful course of Canadian banking in the last twelve months may be seen as a continual search by the banks for new sources of funds from which they could meet the heavy demand for loans. It may be recalled that the dozen chartered banks of Canada are highly competitive, and always under some temptation to gain new customers by lending more freely than rivals. During the summer of last year, the first resort of the banks to secure loanable funds seemed to be to run down their liquid assets in the form of day-to-day loans to the money market and Treasury bills. By November, the banks' ratio of liquid assets (defined as cash, day-to-day loans and Treasury bills as a proportion of deposits) had declined on average to just over 11 per cent, compared with 14 per cent a year earlier.

★

Canadian law provides no statutory ratio for liquid assets; and until last year there was no convention or recognised operating principle applying to it. The only legal requirement is that each bank must maintain its cash ratio at a monthly average of 8 per cent. But last autumn the Bank of Canada took the initiative in urging the chartered banks to adopt by agreement an additional minimum ratio for all liquid assets. The new Governor, Mr James E. Coyne, maintained that, in the absence of some such limitation, policies of monetary restraint could be nullified, as the chartered banks could then meet a rising demand for loans by running down liquid assets, instead of having to face the discipline of selling government bonds, probably at a loss. But eventually, the Governor argued, the time would come when liquid assets would have to be restored, and then bonds might have to be unloaded more suddenly, and with greater effects on the market, than if the process had been spread out by adherence to minimum liquidity ratios.

After some blunt and not entirely harmonious exchanges between the Bank of Canada and the chartered banks, agreement was reached in November for the establishment of a conventional ratio of 15 per cent to which all the banks would conform. This means, in effect, the addition of 7 per cent of deposits in liquid assets to the statutory minimum of 8 per cent cash. The liquidity ratio, like the cash ratio, will be calculated as a monthly average and not as an immutable daily requirement. It was agreed in November that the new ratio should come into force in June this year. The banks were thus given rather more than six months to replenish their stocks of Treasury bills, which they have been doing consistently. By April the ratio of liquid assets of the banking system as a whole had reached 16 per cent of deposits, though certain banks may still have been below the 15 per cent average they are now bound to maintain.

In the competitive attempt to meet last year's upsurge in business demand for loans, the chartered banks evoked the disapproval of the authorities in another way. As in past periods of boom, they started to finance commitments officially regarded as outside the proper scope of banking accommodation. These included notably the loan of large capital sums for fixed and somewhat lengthy terms, and, as a variant of the same practice, the acceptance of corporation securities in effect by private treaty.

Again, the Bank of Canada stepped in to close the loop-hole in its monetary control. In September it sought from

the chartered banks information about the extent of such advance commitments; and at the meeting in November it was able to show them that future commitments already amounted to more than \$400 million, and that they were growing at the rate of \$50 million a month. Agreement was accordingly reached that the banks would make no further commitments to grant term loans or to accept privately placed corporation securities. Exceptions are made for sums of less than \$250,000, in order to accommodate small businesses that might have difficulty in going to the market; and there is no ban on loans granted pending an issue provided they are refinanced within a year. A similar agreement between the banks was in effect in 1948-49 and in 1951-52. In both periods it was regarded as a temporary anti-inflationary measure, and it lapsed when the immediate pressure had passed. This time, however, the monetary authorities would like to regard the ban on term loans as a permanent limitation of banking practice, though it is by no means certain that all the chartered banks share that view.

In view of the double sanction of these agreements, and the stringency maintained by the Bank of Canada in the money market, there has been some surprise, and some disappointment, that bank loans have continued to climb so rapidly during 1956. Part of the increase no doubt reflects the implementation of commitments made before November. Part must be due to the normal needs of business at a time of rapid expansion. The banks have been willing to make further large sales of government bonds—both to find the necessary loan funds and to buy Treasury bills to meet the new liquid assets requirement. Between the end of 1955 and May 9th, the chartered banks sold Government of Canada securities to a total amount of \$625 million. They increased their holdings of Treasury bills by \$345 million, and their general loans by \$432 million. Since the Bank of Canada has not on balance increased its own bond holdings, prices have edged downward. The effect has been to restore a yield differential of $\frac{1}{2}$ per cent in favour of Canadian against United States Government bonds.

★

This relationship is always a major factor that the Canadian authorities must consider when they try to influence the Canadian economy through monetary means, since the movement of funds between the two countries is uncontrolled. When Canadian interest rates are higher than United States rates, there are always some American investors, in particular insurance companies, who are ready to take immediate advantage of a switch. Evidently the risk of an unfavourable movement of the exchange rate provides no general deterrent. At the same time—and here, perhaps, is a more important consideration still for the Canadian authorities—there are plenty of Canadian borrowers ready to go to New York for their money whenever the rate looks more advantageous there.

In phases of such rapid economic development as Canada has experienced in the past few years, the inflow of capital is the prime condition of expansion. The physical imports of capital goods, components for Canadian manufacturers and raw materials represent the essential safeguard against an uncontrollable inflation. And they are possible only so long as the deficit in the current account is at least matched by inflow of capital. So far, the balance still appears to be

on the right side. The prospect is that the record deficits on commodity trade that Canada has been running since the beginning of 1955 will be more than offset on capital account. Last year, however, the increase in the deficit on current account led to a running down in the premium on the Canadian dollar, and for a short time in the autumn the exchange reached par.

In influential quarters there is a section of opinion, which may be growing, inclined to the view that a slower rate of

Stronger Medicine for New Zealand

AT 7 per cent, New Zealand's Bank rate is higher than that of any other principal commercial country. The Reserve Bank has reinforced it with other measures to secure credit restriction. Ministers ceaselessly reiterate the need to contain domestic demand in order to restore balance in the country's external accounts. Yet within two years the exchange reserves have been halved; at end-1955 they reached a trough of £65 million—sufficient to purchase imports at the current rate for less than two and a half months. The Royal Commission on the country's monetary system, which reported in April, would have none of the arguments for an easier money policy that were loudly put forward by social credit groups and others: it concluded on the contrary that the medicine administered to the economy had been both too mild and too late.

The disease in New Zealand's economy has much in common with that in Britain's. High taxation, subsidised housing, and other social spending have indirectly discouraged saving. Full employment has encouraged wages to rise steadily. These pressures have been aggravated by the inflationary impact of industrial development. New Zealand has been investing heavily in great long term projects in power, transport and secondary industry, investments that take years to yield results. Most of the equipment for such schemes must be imported, and though New Zealand has been able to finance some of it by raising external loans, an inflationary gap has remained—reflected in the fall in the reserves and in the rise in domestic prices.

New Zealand's troubles have been further complicated by its heavy dependence on world markets for its farm products. Export earnings and farm incomes have fluctuated violently in step with world prices. The result has been to produce a most damaging cycle in the external balance. One season farm incomes and internal prices and wages rise. Big orders are placed in Europe, New Zealand's main supplier of consumer and capital goods; but by the time these goods arrive, at least some four months later, farm earnings may be dropping sharply. Such a process occurred in 1951-52, when the post-Korean wool boom sent New Zealand's earnings soaring; by the time a massive flood of imports began to flow through the customs in 1952, the wool market and New Zealand's earnings had collapsed. A similar though rather milder cycle occurred in 1954-55.

In the early postwar years the New Zealand authorities attempted to deal with these problems by physical controls on prices, wages and imports. In the circumstances of the time the policy was successful, and in 1948 the New Zealand pound was revalued, from £NZ125 per £100 sterling to

development and a smaller inflow of capital from abroad might be in Canada's best interests. But this is not official Canadian policy, and the monetary authorities at the present time, preoccupied with the short term problem, are bound to regard the high rate of imports as anti-inflationary. The corollary is that the high rate of capital inflow must be maintained. If it is not, the authorities would have to restrain Canada's expansion considerably more forcefully than they have in the past year.

parity. In 1949-50 controls were gradually relaxed. The dramatic deterioration in the external balance in 1952 necessitated the reintroduction of tight import controls, but it was clear that some new weapons would have to be found to replace the discarded internal controls. In the three years to March, 1952, bank advances had more than doubled. The requests of the Reserve Bank for a selective reduction in credit had proved ineffective.

Nevertheless, the Reserve Bank was slow to swing to an active policy of monetary control. In August, 1952, it raised the minimum reserve that the banks were required to deposit with it from 7 per cent of demand deposits to 10 per cent. But the move was quite ineffective, as the banks still had ample liquid resources to finance advances. For some time the credit supply was kept down by the recession in domestic demand; but late in 1953 bank advances, investment and prices began to rise again more rapidly. Though payments were still in surplus, the Reserve Bank, mindful of the experience of 1951 and influenced to some extent by the return to orthodoxy in Europe, took its first really effective steps to curb credit. It raised the minimum reserve ratio to 25 per cent of demand and 12½ per cent of time deposits, and thereafter made adjustments to offset the effects of seasonal fluctuations in the banks' liquidity on their available cash margins. In April, 1954, the rediscount rate, which had stood at 1½ per cent since 1941, was raised to 3½ per cent, and in November to 4 per cent.

★

The influence of the rate was small, however, and the internal boom continued. Further, an external deficit emerged. Imports rose from £188 million in the first half of 1954 to £247 million in the second half, and climbed higher still in 1955; and exchange reserves fell. In 1955 the monetary pressure was intensified. In three steps between July and October, the rediscount rate was brought to 7 per cent and the reserve ratio tightened further. Moreover, the rediscount weapon was made more effective. By the first quarter of this year consumption, bank advances and imports were at last falling, and the exchange reserves turned upward, though to a disappointingly modest extent.

Quite evidently, the Government's measures have been unduly slow to take effect. That was clear even a year ago; and it was to find out why, to suggest remedies, and to deal with criticisms of even the mild measures that had then been taken that the Royal Commission was set up in

March last year. Its general finding is that while the Government and the Reserve Bank have begun to use orthodox monetary weapons, they have used them insufficiently and belatedly, and have failed to realise that a rise in the rediscount rate means little unless combined with other measures of monetary restriction.

The commission's first main recommendation was that the Government should decide in advance how far it wished to contract or expand credit, inform the banks of its decision, and then put imperative pressure on them to execute it. It found that the use of the reserve ratio and the rediscount rate had been ineffective in the past, at first because the central bank had been too tender in forcing the banks to have recourse to rediscounts and then because the interest paid on them had still amounted to less than the profits made by the banks from higher advances. The commission recommended much more vigorous and speedy variations in the minimum reserve ratio; it seemed to imply indeed that this should be the Reserve Bank's chief weapon.

Another fundamental weakness of policy found by the commission was that notwithstanding the higher discount rate, many types of loan are still available at low rates. It recommended that the artificially low rates on bank deposits and on housing credits should be made flexible. To make the banking system more responsive to central bank action, the commission advocated the establishment of a money market and the granting of permission to the trading banks to hold Government securities. Above all, the Government's financial policy as a whole—its budgets, its public issues and its market operations—should be aligned and framed on the basis of the needs of the economy as a whole, and not merely of fiscal convenience.

Even the implementation of all these reforms, plus wisdom and forethought, could not of course free New Zealand from the problems stemming from its unusually large dependence on world markets. But the commission put forward valuable suggestions for mitigating the effects of the fluctuations. While it rejected pleas for variable exchange rates and for guaranteed prices for exports, it

suggested that farmers' earnings should be smoothed by a system of flexible price supports and by some sort of export tax in time of extreme boom. It rejected any idea of excessive long term borrowing overseas, but it did suggest that New Zealand should ask the United Kingdom to grant short term loans to deal with minor fluctuations. Finally, the commission recommended that New Zealand should join the International Monetary Fund and the World Bank. "No evidence was brought before the commission," it explained, "to support the allegation that the Fund or Bank were dominated or controlled by Wall Street" (a fear that played a part in keeping New Zealand out of these institutions on their establishment at the end of the war). With due solemnity the commission likewise recorded that it had found no evidence that the Washington institutions were under the sway of "a conspiracy of international financiers, either independently or in association with Communists." Given fulfilment of all its recommendations, the commission felt, there was no reason why physical import restrictions should not in time be abandoned completely.

The gist of the commission's words of wisdom has been often heard elsewhere. But its clearly argued analysis should be of particular value in New Zealand. There, monetary tools are unfamiliar, prejudice about their use is rife, and flexible economic policy is still in its infancy. The New Zealand Reserve Bank was set up only in 1933, so that its new course is not a return to traditional methods but an apprenticeship in new ways. The commission has shown how. Its cool cross-examination put to flight the Social Credit witnesses whose original thesis was that New Zealand's difficulties stemmed from a lack rather than an excess of purchasing power. The Government has thus been given not only valuable practical recommendations but also useful moral support for a bolder economic policy. It has now made a further tightening of credit and promised that import liberalisation will be maintained. If stability and freedom are to be achieved in New Zealand's vulnerable economy, the authorities will certainly need to accept and carry out much of the commission's advice.

Pakistan after Devaluation

ON the last day of July, 1955, Pakistan devalued its rupee from a sterling parity of 2s. 2d. to 1s. 6d.—a devaluation exactly equivalent to that undergone by sterling and closely associated currencies in 1949. The Pakistan rupee has thus been restored to parity with the Indian rupee. The decision to devalue was taken reluctantly and only after a long and expensive rearguard action had been fought in defence of the old parity. The operation was neatly executed and, because devaluation had been so often canvassed in the past, its implementation came as a complete surprise to all except the handful of officials directly concerned. The devaluation was actually carried out in the midst of a mounting political crisis (though it was in no way connected with it). Eleven days after announcing the new rates of exchange the Finance Minister, Mr Chaudhri Mohammad Ali, became Prime Minister of Pakistan. It was left to his successor at the Finance Ministry, Mr Amjad Ali, to consolidate the new exchange and to garner the fruits of the promised improvement in competitive strength.

The government furnished to the public a detailed explanation of its action. It attributed its abstention from the general devaluations of 1949 to the fact that exports at that time consisted of a small range of primary products, easy to sell abroad; the primary need in foreign exchange policy was to stimulate the import of capital goods to promote agricultural and industrial development. That policy, the authorities claimed, had served its purpose, and given rise to new requirements. A significant expansion in local industry had been achieved: the country had become self-sufficient in food, cloth of coarse and medium grades, jute manufactures, sugar and matches, and nearly so in cement and paper. Further, output of some of these products was more than sufficient to meet domestic needs; and it was necessary to find markets overseas for the growing surpluses. In particular, devaluation was expected to increase export proceeds of jute manufactures—as well as exports of cotton, tea, hides and skins.

Other important results of devaluation expected by the

government were not openly cited. One was a slowing-up in the development programme—which many people believed to be running too far ahead of the country's real resources—as a result of the higher cost of imported capital goods. Another hoped-for effect was revival of foreign confidence in the currency: for some time the entry of foreign capital had been discouraged by the possibility of imminent devaluation. Finally, many people felt that devaluation would pave the way for closer trade relations with India, and remove one of the incentives to the flight of Hindu capital from East Bengal.

These expectations have been realised to a reasonably satisfactory extent in the past year. In his Budget speech in March, the Finance Minister stressed that the country was becoming increasingly export conscious. He showed that foreign exchange earnings had increased substantially—from £139 million in 1954 to £161 million in 1955. At the same time, foreign outgoings, at £137 million, were £22 million less than in 1954. The upshot was a surplus of £24 million compared with a deficit of £20 million in 1954. The reserves of gold, dollars and sterling rose from £68 million at the end of 1954 to £75 million by the middle of 1955 and, under the stimulus of devaluation, climbed by a further £12 million, to £87 million, by the end of the year. But the Finance Minister rightly pointed out that the improvement in the external accounts could not give grounds for complacency. Imports continue to be held down by a stringent licensing policy (imports on commercial account fell from £87 million in 1954 to £67 million in 1955); and there remain large unfilled requirements for the development programme.

★

The stimulus given to exports by the devaluation was strongly felt by raw jute and cotton; and the Government recouped some of the adventitious devaluation profits by raising the export duties. But the most spectacular advance in exports has been in manufactured jute goods. Figures taken from an authoritative Indian source put Pakistan's output of jute manufactures for the twelve months ending March last at £11½ million, of which £6½ million was exported, largely to dollar countries. It is only in this past year that Pakistan's mills have begun to produce to capacity. In the absence of devaluation its jute manufactures would evidently have been outpriced in world markets. The same is true of exports of cotton yarn and also to some extent of the older export staples such as tea, hides and skins, wool and rice. It remains to be seen how long the tonic effect will last. Recently, the outlook has been clouded by a sharp rise in internal prices, accentuated by a serious rice shortage in East Pakistan. Certainly there will be no exports of rice from Pakistan for some months to come.

Among the serious problems facing Pakistan is the continuing threat of inflation. During 1955 the total money supply rose by Rs 58.39 crores to Rs 436.60 crores. This was attributable to the increase in the rupee value of foreign trade transactions resulting from devaluation, to the favourable balance of external payments, and to the growing pace of internal development, which involved considerable Government disbursements. The inflationary effect was enhanced by last year's floods. The impact of these factors is reflected in the sharp rise in food prices.

The Pakistani authorities have not yet succeeded in evolving a strong and purposeful monetary policy. The

Government's borrowing policy has been timid. Two small 3 per cent loans were floated during 1955, bringing in rather less than Rs 17 crores. Sales of Treasury bills "on tap" yielded Rs 18.27 crores, the bulk of which was subscribed under a deferred payments scheme; sales by tender were introduced in May, but yielded no more than Rs 3.50 crores by the end of the year. In the current fiscal year, to March 1957, public loans are expected to bring in Rs 16.60 crores, small savings Rs 11.59 crores, and tender sales of Treasury bills Rs 15 crores; commitments to repay maturing loans amount to Rs 13.40 crores. Receipts of foreign aid are estimated at no less than Rs 78.60 crores. But these will still leave a gap in the Government's domestic financing account. The five year plan recently announced contemplates an outlay of more than Rs 1,100 crores over the period. The need for new and more determined methods of tapping the people's savings is evident.

★

The activities of the commercial banks in Pakistan have not been significantly extended in the past year; but they have responded to the expanding needs of Pakistan's commerce and industry. The Pakistani banking scene is largely dominated by the State Bank of Pakistan, which is the central bank, and the National Bank of Pakistan, a government sponsored bank that engages in commercial operations. The National Bank accounts for 64 of the total of 251 commercial bank branches operating in Pakistan, and it also has three offices abroad. The bank plays a major role in financing the movement of the raw jute and cotton crops. During 1955, no less than half of its total advances of Rs 34.32 crores were granted to one customer—the Government of East Bengal. The bank has succeeded in attracting a high proportion of the business in foreign bills: the value of foreign exchange dealings transacted by it rose from Rs 39.08 crores in 1954 to Rs 72.02 crores in 1955. The foreign exchange banks, with their international connections and specialised knowledge, continue to be an indispensable element in Pakistan's foreign trade, but they naturally fear the encroachment of their state sponsored rival.

The activities of the State Bank have frequently been criticised in business circles on the ground that its branches in East Bengal seem to possess very little independent authority or autonomy in their own territory. Transactions involving anything more than a routine decision have almost always to be referred to Karachi, with consequent loss of time (and sometimes loss of the relevant papers as well) and a considerable dissipation of effort and energy. There is a yawning gulf between the trader and industrialist in remote East Pakistan and the official in Karachi, who determines remittance rights, allowable foreign exchange expenditure and the score of other matters that have to be referred to the State Bank for sanction. In theory the eastern and western wings of Pakistan are supposed to enjoy administrative and political parity. In practice, as least so far as banking controls are concerned, the State Bank has delegated far too little power to its offices in the Eastern province. Yet the export industries of that region make a substantial contribution to the country's earnings of foreign exchange. A more enlightened policy in this matter, and the extension of branch banking services, could do much to further the economic cohesion of this somewhat precarious political entity.
