Our Electric Welding interests continue to grow and this expansion should be maintained against a background of increasing industrial interest in modern welding techniques.

British Oxygen Chemicals Limited is consolidating its position and may offer us a modest improvement.

Our Overseas Associated Companies report favourable current trading and good prospects. Subject to a necessary reservation as to the possible effect of political factors in certain countries, it is probable that overseas profits will again show expansion this year.

1956 has many new features for our organisation and the national background also is subject to important change. The circumstances make it unwise to try to see too far ahead or to do other than take a general view. My expectation is that the general expansion in trading which is our experience at present will find some favourable reflection in next year's accounts.

The report was adopted and the Board's capital proposals were approved.

NORWICH UNION INSURANCE SOCIETY

ANNUAL MEETINGS

LIFE SOCIETY

Speaking at the 148th annual meeting of the Norwich Union Life Insurance Society, held at Norwich on April 24th, the President, Sir Robert Bignold, reported expansion in almost all sections of the Society's business. New assurance business at over £68 million showed an increase of over £6½ million, whilst the capital value of pension business totalled nearly £30 million.

Total funds at £127 million were £11 million up, while the net rate of interest earned had risen from £4 1s. 10d. per cent to £4 4s. 4d. per cent.

Sir Robert said he was sure with-profit policyholders would welcome the very satisfactory rates of bonus which it had been possible to declare. For the United Kingdom and Eire these were as much as £2 12s. per cent per annum for fully participating Whole life insurances, and £2 2s. per cent per annum for Endowment insurances—both 10s. per cent per annum higher than those declared five years ago.

FIRE SOCIETY

At the 158th annual meeting of the Norwich Union Fire Insurance Society Limited, the Chairman, Sir Robert Bignold, said the accounts for 1955 revealed considerable expansion of premium income. The total at £16,259,538 showed an increase of £1,108,399 over 1954.

Fire premiums totalled £6,667,531, an increase of £154,310, profit in this account being £330,322. Accident premiums advanced by £892,016 to £8,366,183 and the account showed a moderate overall profit of £158,344. Marine premiums totalled £1,225,824 (£1,163,751 in 1954) and the transfer to Profit and Loss account was £100,000.

Total transfers to Profit and Loss were £588,666, whilst taxation required only £209,319 as against £727,291 in 1954. Interest earnings increased by £45,158 to £366,747 net.

Total assets amounted to £22,941,189, an increase of £706,001.

THE BRITISH WAGON COMPANY LIMITED

RECORD VOLUME OF BUSINESS

TWO-FOLD EFFECT OF "CREDIT SQUEEZE"

MR W. H. COPLEY ON COMPANY'S EVER-WIDENING INFLUENCE

The Eighty-seventh Annual General Meeting of The British Wagon Company Limited was held at the Registered Office of the Company, 23 Moorgate, Rotherham, on April 20th, the Chairman, Mr W. H. Copley, FCA, presiding. The following is the Statement by the Chairman, which was circulated with the Report and Accounts for 1955:

The Directors have pleasure in submitting the Accounts for 1955. The Net Earnings of the Group of £791,343 show an increase of £155,342 on 1954 and the Net Profit for the year of £214,820, after providing for taxation, is evidence of the record volume of business handled during the year.

In considering the dividend the Directors had in mind the importance of maintaining the strength of the Company's equity by retained profits, and this comment should be read in the context of the Report generally. In the circumstances they decided to recommend that the dividend be maintained at the same rate as last year. A first interim dividend of 5 per cent on the Paid-up Capital was paid on July 30, 1955, and a second interim dividend of 15 per cent was paid on March 21, 1956, making a total of 20 per cent for the year. No further dividend will be recommended in respect of 1955.

During the year your Company, together with certain other finance Companies and banks, was involved in an unfortunate transaction which will result in a substantial loss. Provision has been made in the year's Accounts which your Directors are satisfied will be adequate to meet the position.

YEAR OF STIMULATING PROBLEMS

We look back on 1955 as a year which had its share of stimulating problems. Initially business was running at a record pace. By February the Chancellor, already fighting inflation, decided that bank overdraft facilities must be cut back, with consequent effect of course upon our essential bank and acceptance facilities.

The natural, but embarrassing consequence of this start of the "credit squeeze" was an upsurge in the demand for our facilities, at a time when we were already considering how best to restrain the initiative of our General Managers and Branch organisation. That difficulty remained with us throughout the rest of the year, and we acknowledge the diplomacy of our Branch Managers and the understanding of our Dealer friends and customers in the light of this situation.

It is pleasing to report that we nevertheless managed to achieve record figures in all sections of our financing business, including Agriculture, where we maintained our outstanding position. The strong ties with our Manufacturer and Dealer friends contributed materially to these results.

NEW HIRE-PURCHASE REGULATION

Although it appears that the "credit squeeze" is likely to be with us for some time, the Government changed the whole

complexion of our problem overnight on February 18, 1956, with the new Hire-Purchase (Control) Order No. 180. Your Company already enjoys the security afforded by substantial initial payments on its hire-purchase transactions, but the Order stipulates that one-half of the cash price must now be paid down.

The immediate effect upon Industrial Banking Companies is two-fold. First our resources will now finance a relatively greater number of cases, and though this involves more work without relative increase in profit, it is a measure of relief and a more acceptable challenge to our men in the field. Secondly, while at least in the short term it will put many potential customers off the market, on the longer term view, it is our opinion that the "credit squeeze" must eventually bring into our business a section of Industrial and Commercial customers who would normally have bought their goods for cash, but who are now becoming aware of the wisdom of preserving cash and credit facilities as essential working capital available for the shorter term need.

You may remember that the Report last year referred to the introduction of a Hire-Purchase (Control) Order, pointing out that it did not restrict the terms for Agricultural or Industrial machinery, or Commercial vehicles, and you will probably have noted that this new Order extends to all the goods which we finance.

In these circumstances it is tempting to criticise the Government, but we may rest assured that they are well aware of the effect restricting hire-purchase is likely to have on sales and on production. The Government have exhorted us all repeatedly to exercise a measure of restraint in our private and business lives, and it is now forced upon us in the national interest.

PIONEERS OF INDUSTRIAL BANKING

In the long history of your Company many crises, including two World Wars, have come and gone. This time we face a crisis of prosperity and we are justified in maintaining our optimism in the future.

Arising from the reference to our long history, it is relevant to remind you that The British Wagon Company Limited were pioneers of what is now becoming widely known as Industrial Banking. Our financing business was not an off-shoot of wagon building; indeed, we have never built wagons, but were formed expressly to finance rolling stock on hire-purchase or simple hire. We may with modesty claim to have taken an important part in the development of industrial Yorkshire in the early days, with an ever-widening influence in the country as our organisation has grown and the scope of our facilities has extended.

There is a good deal of publicity given these days to the Deposit Loan facilities of Industrial Bankers, and to many this may appear as a new development. Our Minute Books and early Accounts, however, record

THE ECONOMIST, APRIL 28, 1956

that in the days of Mr Disraeli and Mr Gladstone we were already providing Debenture and Deposit Loan facilities on what appear to have been attractive terms. The steady development of our Deposit Banking business in the face of advertising proves once again that "good wine needs no bush"—that stability is a more vital criterion than interest rate to the prudent investor.

SUBSIDIARY'S CONTINUED PROSPERITY

The hire-purchase restrictions, of course, do not affect the business of your Subsidiary, British Railway Traffic & Electric Company Limited, and the Oil Road Rollers branch at Birmingham. Both these concerns continue to prosper and the past year has seen a further increase in the roller fleet. We are glad to report that the demand for the services of these machines is still in excess of supply and the considerable arrears of public works, particularly the road programme, should ensure continued scope for the expansion of this business.

The increased business in 1955 and its associated problems which we have indicated were handled efficiently by the Executive and senior Staff, and we are sure you will wish to be associated with the Board in expressing our thanks to them and to all Staff for their continuing loyal service to the Company.

The Report and Accounts were unanimously adopted.

The appointment of Mr E. Watson Rodger as a Director of the Company was duly confirmed.

Mr C. F. Lawrence King and Mr C. E. Copley, the Directors retiring by rotation, were duly re-elected.

The Auditors, Messrs Joshua Wortley & Sons, were reappointed in accordance with Section 159 of the Companies Act, 1948.

TIMOTHY WHITES & TAYLORS LIMITED

NEW SALES RECORD

The twenty-seventh ordinary general meeting of Timothy Whites & Taylors Limited was held on April 19th in London, Mr George Ingham Rushion, MPS (Chairman and managing director), presiding.

The following is an extract from his circulated statement:

The sales for the year 1955 constitute a new record, and the dispensing figures also show an increase. The net profit for the year, including dividends from Subsidiaries, was £451,017, compared with £431,817 in 1954.

During the year eleven additional Branches have been established and a number of Branches have been enlarged and refitted. This policy of expanding the business of the Group is being continued and the results continue to be most encouraging. We are continuing the policy of closing uneconomic Branches and during the year 23 such Branches have been closed.

In the early part of 1956 the business of the Group continues to show the upward trend which has been experienced in the last few years, but if the policy of the Government to restrict spending is successful, it is certain to have some effect on retail trade as a whole.

The general increase in all types of expenditure continues and I do not consider that it is possible at this early stage in the year to forecast the 1956 results, but as far as can

THE ECONOMIST, APRIL 28, 1956

be foreseen your Directors consider that they should again be satisfactory.

The report was adopted and the total ordinary dividend of 30 per cent was approved.

BREVITT LIMITED

IMPROVED RESULTS

MR E. S. HARDING'S STATEMENT

The seventh annual general meeting of Brevitt Ltd., was held on April 17th at the Dorchester Hotel, Park Lane, London, W.1, Mr Edward S. Harding (the chairman) presiding.

Mr C. W. Johnson, ASAA (director and secretary) read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman which had been circulated with the report and accounts: Ladies and gentlemen, in presenting to you the Accounts for the year ended December 31, 1955, I am pleased to be able to say there has been an improvement upon last year.

The Trading Profit at £78,826 (after deducting emoluments of Directors, Audit fees and expenses, Preference Share Redemption expenses and Depreciation) shows an increase of £22,195.

The position with regard to certain of the Company's Export Markets, to which I referred in my last Report, is that the measures taken by the Directors have led to a partial recovery, but this has been retarded by increases in the cost of production due mainly to wage increases, and this factor renders it problematical whether this market can be recovered to the full extent.

Other of the Company's Export Markets show a fair average year and the Home Trade has continued to expand.

The Net Profit of the Company after providing for taxation amounts to £49,242, and with £110,068 brought in from last year the balance available is £159,310.

RESERVE FUND

The Preference Dividend having been paid or provided for up to the end of the year, a sum of £1,050 has been placed to the Capital Redemption Reserve Fund as required by the Companies Act having regard to the purchase of Preference shares by the Company during the year by way of redemption, £6,000 has been placed to the Reserve for Preference Share Redemption and £2,500 to Replacements Reserve.

The Directors have recommended that the Dividend on the Ordinary Shares be retained at 17½ per cent.

I would like to add, turning to the Balance Sheet, that the increase in the value of the item "Freehold Land and Buildings" is largely due to considerable extensions to one of the Group's factories. The work has been completed and the extensions are in full use.

The Capital and Reserves of the Group now stand at £621,070, an increase of £25,365.

I take this opportunity of thanking the Management and Staff for their work during the past year.

The report and accounts were adopted and the dividend of 17½ per cent per annum, less tax, on the Ordinary shares was approved.

The retiring director, Mr T. Haddon, was re-elected and the other formal business having been duly transacted, the proceedings terminated.

THE BRUSH GROUP LIMITED

POSITION MAINTAINED DESPITE INCREASING COMPETITION

ENCOURAGING TREND OF WELL-SPREAD ORDER BOOK

The sixty-seventh annual general meeting of The Brush Group Limited will be held on May 17th at Abercorn Rooms, Liverpool Street, London, E.C.2.

The following is an extract from the statement by the Chairman, Sir Ronald W. Matthews, DL, MInstT, which has been circulated with the report and accounts:

The year ended December, 1955, was one in which we held our position in spite of increasing competition from abroad and sharply rising prices at home, coupled with severe dislocation through the dock strike. On an increased turnover in 1955 the gross trading profit before deduction of depreciation, taxation, and other charges at £2,431,228, is almost the same as the figure for 1954. The net profit before provision for taxes is £1,123,346 compared with a figure of £1,221,576 for 1954. The decrease in net profits is more than accounted for by the increase in interest charges. The net profit after tax for the year is £479,836 compared with £530,032 for 1954. After making adjustments arising from taxation provisions of previous years, and deducting the proportion of subsidiaries' profits attributable to outside shareholders' interests, the net profit attributable to The Brush Group Limited is £531,082 compared with £537,991 in 1954.

The Board recommends a final dividend of 7 per cent, making a total of 10 per cent for the year, a similar figure to that paid for 1954. The transfer to General Reserve is £300,000, and the Reserve now stands at a figure of £1,950,000.

The inflationary tendencies of the year 1955, in which we have had to face a considerable increase in the costs of labour, raw materials and supplies of components, are reflected in the figures disclosed in our Balance Sheet, both in regard to our current borrowings from our bankers and in regard to stocks and work-in-progress. Although in fact the stocks held at our factories at the end of the year are in volume estimated to be at least 8 per cent. below last year's figures, this reduction in quantity has been offset almost entirely by increased costs.

GROUP'S TRADING POSITION WELL MAINTAINED

Output has been well maintained in the Group and our order book has continued to show an encouraging trend. We have certainly maintained our position in the export market, though it has been necessary to offer extended credit facilities to many important customers, a tendency which is reflected in substantial increases both in the total of our debtors and in the advances which our bankers have made against acceptances. I wish here to pay tribute to the assistance we have received from our bankers in connection with the requirements of our export trade, and also to the help we have had, and continue to receive, from the Export Credits Guarantee Department of the Government.

At all our factories great efforts have been made to speed up deliveries and to improve our reputation for punctuality and for effi-

cient service to the customer. We have indeed received from overseas customers many complimentary references to our recent achievements in these directions, but our efforts have too often been prejudiced by shortage and delays in the delivery of supplies, particularly of steel and castings. Our output and our export achievement would have been even more satisfactory if our suppliers had been able to maintain the delivery dates which they had promised to us.

In many markets, and most particularly those of Asia and the Middle East, we are facing fierce and growing competition, particularly on price and delivery, not only from the countries of Western Europe, but from those of Eastern Europe in the sphere of Russian influence. A concerted effort, for which the utmost support of our suppliers is essential, is needed if the volume of our export trade is to be maintained.

It is, I hope, by now fully realised that the railway and dock strikes in the early summer of 1955 did considerable damage to the export trade of this country and to those whose livelihood so largely depends upon it. Inevitably, we had to suffer our share of the criticisms and resulting loss of business which were a consequence of those events, notwithstanding the great efforts which were made at all our factories to minimise the dislocation occasioned by these strikes.

Increases in costs have necessitated some price revisions, but we have resisted price increases in general so as to compete effectively with other manufacturers at home and abroad.

The Chairman then reviewed the Group's widespread manufacturing activities, comprising Brush Electrical Engineering Company Limited and Brush Traction Limited, Loughborough; Petters Limited and Bryce Berger Limited, Staines; J. & H. McLaren Limited, Leeds; The National Gas and Oil Engine Company, Limited, Ashton-under-Lyne; Mirreles, Bickerton & Day, Limited, Stockport; Vivian Diesels and Munitions Limited, Vancouver, and Petter McLaren Service Limited, Burton-on-the-Wolds.

IMPORTANCE OF GOOD INDUSTRIAL RELATIONS

Sir Ronald commented that the Board of The Brush Group had always regarded the maintenance of good industrial relations as a matter of the highest importance.

Sir Ronald continued: We have a good, well-spread order book, a keen and experienced management and a well-led and co-operative labour force. But we are to a large extent at the mercy of economic forces which are outside our control, and as costs of production rise with the inevitable increase in selling prices, we run grave risks of losing the export markets on which the livelihood of all of us depends. Only if increased wages are married to increased production, so that the cost of the product remains reasonably stable, can we count on maintaining our proper and necessary share of foreign business.

A full copy of the Chairman's statement is available on request to the company, Duke's Court, St. James's, S.W.1.

"MONTECATINI" SOCIETA' GENERALE PER L'INDUSTRIA MINERARIA E CHIMICA

MILAN, ITALY

STATEMENT BY
ING. GIUSEPPE MAZZINI

The Annual General Meeting of Montecatini was held in Milan on March 29th under the Chairmanship of Ing. Giuseppe Mazzini, and the following are details of the report presented by the Board of Directors:

The report outlines the Company's contribution to Italy's economic progress during 1955, a progress reflected by a rise in the national income, increased consumption, greater investment, and more employment. It goes on to emphasise the need for stepping up the pace of industrialisation in Southern Italy, the country's depressed area, with a view to creating new and lasting sources of wealth. It is with this purpose in mind that Società Montecatini has made, and continues to make, a solid contribution to Italy's economic advance.

In setting out the results achieved during the year in the various sectors covered by the Company, the report underlines the rise in the production of pyrites, bauxite, pitch blende, galena, aluminium, lead and zinc, and of electric power with an output of 2,600 million kWh out of a total Italian production of 37,300 million kWh.

The search for liquid and gaseous hydrocarbons was intensified, until the bill now being discussed by the Italian parliament becomes law and makes it possible to begin extraction.

Developments in the chemical industry seemed satisfactory, especially in those branches which are traditionally the concern of Montecatini: sulphuric acid (1955 output, 1,290,000 tons); phosphatic manures (1955 output, 1,380,000 tons); nitrogen (output, 201,500 tons for fertilisers alone, quite apart from production for industrial use); chemicals for industry; fungicides; insecticides; lacquers and pharmaceutical products. Moreover, a number of new plants in various parts of Italy, for the production of compound fertilisers, were taken into service during the year.

Plastics production showed a distinct increase, with particular importance attaching to "Fertene," "Rotene," "Viola," and the new fibre, "Movil." The output of super-

polyamide fibres showed a rise and production began of a new synthetic fibre, "Terital."

Montecatini was outstandingly successful, too, in building plants outside Italy for other companies; in the course of 1955 orders were secured for 43 plants in 12 different countries.

The Company's labour force expanded further during the year. Expenditure on wages and salaries rose from Lit. 39,400 million in 1954 to Lit. 41,200 million in 1955.

The balance sheet closed on December 31, 1955, with a net profit of Lit. 10,178,846,649, as against Lit. 8,640,669,225 for 1954. It was accordingly proposed to distribute a dividend of Lit. 115 per share of Lit. 1,000 nominal value, equivalent to Lit. 9,660 million, and payable from April 3rd at all the main Italian banking institutions. The Company's capital now amounts to Lit. 84,000 million.

The report and the proposals put forward by the Board were adopted.

At a Board meeting after the Annual General Meeting, in accordance with the wish of Ing. Giuseppe Mazzini to be relieved of the burden he had borne since 1948 as President of Montecatini, Dr Carlo Faiva, who continues as Managing Director of the Company, was appointed President by unanimous consent.

THE ECONOMIST, APRIL 28, 1956

ECONOMIST, APRIL 28, 1956

THE HOFFMANN MANUFACTURING COMPANY

IMPROVED ORDER INTAKE
MAINTAINEDMR J. W. GARTON ON THE
OUTLOOK

The annual general meeting of The Hoffmann Manufacturing Company, Limited, was held on April 26th in London, Mr J. W. Garton, JP (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

The profit of the Hoffmann Group for 1955 before taxation, but after all other charges, amounts to £1,079,802 and compares with £1,055,785 for the previous year. Income Tax and Profits Tax absorb £543,114 in 1955 against £546,505 in 1954. The net profit of the Group for the year 1955 after taxation is, therefore, £536,688 and compares with £509,280 for 1954.

The marked improvement in the order intake, which I mentioned in my Speech last year, continued throughout 1955 and together with the continuing drive to modernise plant and improve methods has produced this satisfying result.

The Directors recommend a Final Dividend of 5½d. per share (free of tax), which with the Interim Dividend of 1½d. per share (free of tax) will bring the cost of the distribution to £116,667 (free of tax) for 1955.

For some years past I have referred to the Group Capital equipment programme, which included a Research and Development centre. This capital equipment programme has been financed, and will continue to be, from the internal resources of the Group.

Balance Sheet: The liquid resources at the end of the year totalled £2,342,183 which compares with £2,319,875 at December 31, 1954.

Debtors have increased at December 31, 1955, by £129,090 and now total £1,188,125.

The excess of Current Assets over Current Liabilities now amounts to £3,103,150 compared with £2,994,032 last year.

Hoffmann Gloucester Limited continues to make a valuable contribution to the Group turnover and has had another successful year.

Hoffmann Tweedales Limited, in which Hoffmann Gloucester Limited has a fifty per cent holding, had a better year in 1955, but towards the end of that year its manufacturing programme had to be substantially decreased due to reduced demand in the Textile Machinery trade. Whilst the position has slightly improved in recent months, the future is somewhat uncertain.

You will no doubt expect me to give you some idea of the future prospects of the Company and particularly as we are large suppliers to the motor and ancillary industries. At the present time we have a very good order book, but based on reports that have been received over the last few weeks, we expect that there will be some slowing down in demand. On the other hand the labour situation was difficult last year and a considerable amount of overtime was worked which, after a period, results in wear and tear on both men and machines and a tendency to a fall in production. Although there are many difficulties in front of us at the present time, I have every confidence that your Company will secure a fair share of the bearing business of the country.

The report and accounts were adopted.

THE LONDON AND LANCASHIRE INSURANCE COMPANY LIMITED

THE HONOURABLE R. M. PRESTON'S
REVIEW

The annual general meeting of The London and Lancashire Insurance Company Limited will be held on May 16th at 7 Chancery Lane, London, W.C.

The Chairman, The Honourable R. M. Preston, DSO, has issued a Statement to Stockholders, from which the following has been taken:

The total premium income had increased by over a million pounds and the profit, although not so good as usual, was not unsatisfactory.

The aggregate net premium income figures for all departments for 1955 amounted to £29,200,230 as compared with £27,822,154, an increase of £1,378,076. Profit emerged at £804,602, or 2.76 per cent against £1,011,878, or 3.64 per cent of premiums.

Fire Department.—Premiums amounted to £11,545,717 as against £11,200,402. The profit was £425,325, or 3.68 per cent as compared with £293,362, or 2.62 per cent.

Accident Department.—Premiums amounted to £13,770,347 as against £12,662,809, but there was an underwriting loss of £120,723, or 0.88 per cent, as against a profit of £218,516, or 1.73 per cent.

Marine Department.—Premium income—current year—1955 £3,884,166 against 1954 £3,958,943. Profit transferred to Profit and Loss Account £500,000.

The Balance of underwriting funds for all years amounted to £5,235,774 against £5,573,250.

Life Assurance Account.—Net new sums assured, excluding Annuity business and Group Life Insurance, showed an increase at £6,809,876.

The net interest receipts and shareholders' proportion of life profits amounted in all in 1955 to £928,787, a welcome improvement notwithstanding the substantial transfer of assets to the trustees staff pension fund in 1954 and 1955. The saving of income tax resulting from the reduction in the standard rate from 9s. to 8s. 6d. a year ago had contributed to this satisfactory outcome.

The results of the year's operations might again have justified a modest increase in the dividend but the Directors, he stated, favoured restraint at the present time having regard to economic conditions.

The continuing rise in price levels gave cause for serious anxiety and the necessity for a greater volume of national saving could not be overemphasised. Insurance is one of the recognised channels of saving, more particularly through the Life Departments.

The rise in money rates during the year with a concomitant fall in the value of fixed interest securities in particular, had, of course, had a considerable effect upon the margin in the market value of those investments over and above their balance-sheet values. There was in the year, however, an appreciation on the ordinary share market here and in the United States, where a substantial part of the funds is invested, and after taking that rise into account there was left at the end of the year a still very substantial margin above balance-sheet values.

The Chairman stated that he could not conclude the review without paying a sincere and well deserved tribute to the Executive and Staffs.

UPSON'S LIMITED THE DOLCIS SHOE COMPANY

ANOTHER SUCCESSFUL YEAR

The thirty-sixth annual general meeting of Upson's Limited, was held on April 19th in London.

Mr F. J. Stratton, CBE, chairman and managing director, in the course of his speech, said: Our company has once more enjoyed a successful year's trading. The profits have increased by £70,463. This does not reflect fully the progress which has been made during the year because we have maintained keenly competitive prices for our products by absorbing higher costs instead of passing them on to the public. Our efforts in this direction have been rewarded by a healthy addition to unit sales in the United Kingdom and we have succeeded also in increasing our export business by more than 20 per cent. A large proportion of this trade is dollar and hard currency earning.

INCREASED HOME SALES

So far as our trading at home is concerned our substantially higher financial turnover arising both from increased sales and the opening of new stores has required an increased investment in stock which has enabled us to give a wider selection and greater service to our customers. We have been successful not only in our Dolcis Shoe Stores but also in the Dolores Underwear Group and the Stratford Court Hotel—to stockholders perhaps a less known part of our organisation—has contributed a greater share of profit and dollar earning for it is very popular with our American friends.

The imposition of purchase tax on all shoes except children's together with wage increases coincided with increases in the price of leather and most other components sufficiently to unbalance established price ranges. It needs both flexibility and close co-operation between suppliers and ourselves to cope with such problems.

We are convinced that the answer is not to de-grade but to give the public more value—more fashion, colour, selection, comfort and service. Never have we been in a better position to make use of our contacts in North America and on the Continent of Europe for the benefit of our customers and the stimulation of the foot-wear industry.

CURRENT TRENDS

You will wish me to offer some forecast of the possible trends likely to affect our results in the current year. I must say at once that operating expenses of all kinds continue to mount at an alarming rate. The cost of building, fuel and transport, increases in wages for manufacturing and distributive staffs, and higher interest rates coupled with the latest unfair discrimination against retailers resulting from the revaluation of their shops for rating purposes have brought into our budget for 1956/1957 the prospect of truly formidable additional expenditure most of which can be offset only by increased gross profit.

We shall endeavour to solve this problem by obtaining additional business and not by raising prices. However, we meet this challenge with our stocks in excellent order and the enthusiasm and efficiency of our staff well maintained. We are proceeding with a courageous programme of expansion and improvement and I have no doubt that we shall give a very good account of ourselves.

The report was adopted, and the name of the company was changed to Dolcis Limited.

MEETING OF BANCO DI ROMA

On the 4th April, 1956, under the Chairmanship of H.E. Professor Costantino Bresciani-Turroni, was held the meeting of the Shareholders of Banco di Roma, which, after hearing the reports of the Board of Directors and of the Auditors, approved the Balance Sheet at 31st December, 1955, the Profit and Loss Account and the allocation of the profits of the year.

These profits, which after provision for adequate appropriations and sinking funds, show an amount of Lit. 820 million 79,550, with an increase of over 147 million on the corresponding figure of 1954, allowed to rise to 9 per cent., from the precedent 7 per cent, the dividend to be distributed to the Shareholders, and to allocate Lit. 750 million to the Reserve which so rises up to Lit. 2 billion and 750 million.

The report of the Board of Directors, after having examined in a panoramic view the economic situation of the Western World in 1955 and particularly, in its various aspects, the one of this country, illustrates the most significant data of the activity displayed and of the progress achieved by the Institution during the year.

Thanks to the further increase of the means, which at the 31st December, 1955, amounted to more than 510 billion lire, it was possible to raise the level of the investments which amount to more than 342 billion, to increase adequately the investments in Government securities and to strengthen the liquidity funds by almost 20 billion on the figure at the end of 1954.

The larger volume of operations that the Bank had to cope with in all fields is reflected in the grand total of the items of the Balance Sheet which surpassed the amount of 1,000 billion lire.

The Meeting reconfirmed all the Directors who were retiring owing to completion of three years office. The Board of Directors, having soon after proceeded to the appointment of their charges, re-elected: Chairman: H.E. Prof. Costantino Bresciani-Turroni; Vice-Chairman: Baron Prof. Francesco Mario Oddasso; Managing Director: Gr. Uff. Ugo Foscolo.

BALANCE SHEET AT 31st DECEMBER, 1955

ASSETS		LIABILITIES	
Cash and Funds with Central Bank and Treasury	L. 89,329,253,140	Share Capital	L. 1,000,000,000

Chairman: Bresciani-Turroni. Managing Director: Foscolo. Chief Accountant: Nazareth.

Auditors: Matteucci (Chief Auditor), Bossi, Foschini, Mazzantini, Obber.

The dividend of Lit. 9 per share is payable, from the 5th April, 1956, at all the branches of Banco di Roma in Italy.

INTERNATIONAL NICKEL COMPANY OF CANADA LIMITED

MOST SUCCESSFUL YEAR IN HISTORY

The annual meeting of this company was held on April 25th in Toronto.

Dr John F. Thompson, the chairman, in the course of his address, said: The year 1955 marked the fiftieth anniversary of Canada's leadership in world nickel production. The combined total deliveries of this important metal by all Canadian producers were at a record high estimated at 357 million pounds, or somewhat over 80 per cent of the free world supplies.

In 1955, International Nickel enjoyed the most successful year in its history, with high deliveries of the company's two principal products—nickel and copper—and increased output of most of the other elements obtained from its ores. Net earnings and common dividend payments exceeded those of any previous year.

Net earnings of \$91,566,000 in 1955 were \$26,271,000 higher than the previous peak established in 1954. The largest single contributing factor in this substantial increase was the high price prevailing for copper, the company's second most important product, deliveries of which were at a post-war high. Also contributing to the increased earnings were record nickel deliveries, the higher price for refined nickel prevailing since November, 1954, and greater deliveries of such by-products as platinum metals and cobalt.

Reflecting the growing necessity of employing increasingly larger amounts of money in conducting a business, our capital expenditures in 1955 exceeded those of any previous year. Expenditures of \$26,894,000, compare with total expenditures in 1954 of \$22,257,000 and the previous high of \$23,737,000 in 1951.

Distribution of our nickel in 1955 was again guided by the principle that adequate supplies must be made available to meet defence production requirements and Government stockpile commitments, and that civilian customers must receive fair and equitable treatment.

OTHER PRODUCTS

Deliveries of refined copper amounted to 263 million pounds, a postwar high and an increase of almost 10 million pounds over 1954. Primary copper sold at new high prices. Deliveries of platinum metals set a new high record at 445,000 ounces, a gain of 182,000 ounces over 1954. Palladium demand increased substantially. Cobalt deliveries of 1,637,000 pounds set a new high record.

Other by-products include gold, silver, selenium and tellurium. The company's smelters and refineries again operated at capacity throughout 1955.

For our consumers, the future of nickel supply is a vital question. It is an almost impossible question to answer with assurance, since many conflicting factors play such a vital part. However, the facts that free world nickel production would probably increase, and that purchasing for stockpile may be moderated, suggest that there should be more nickel available for industry in 1956 and even more in 1957. All indications are that again in 1956 the company will make an excellent showing.

The report and accounts were adopted.

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

THE BUDGET

MR W. MACFARLANE GRAY'S VIEWS

The Fifty-first Annual General Meeting of The Association of Certified and Corporate Accountants was held in London on April 24th. Mr W. Macfarlane Gray, FACC, President of the Association, was in the chair. In the course of his address, he said:

The Budget proposals contain few concessions. They were not expected to and it has for some time been quite plain from the Chancellor's declared policy and from the several steps he had taken prior to the Budget that he could not hope to give very much away. But there will be wide and genuinely felt satisfaction at the decision to implement the recommendations of the Millard Tucker Report relating to retirement benefits for self-employed persons. Many outside commentators have said that this is no more than an act of common justice. But it need not in any way diminish our appreciation of the Chancellor's action in giving much-needed relief to the heavy burden borne by a greatly harassed, but still valiant, section of the community and providing them with adequate security. Moreover, the implementation of these provisions will assist the savings campaign and the steps to halt inflation.

It is commonplace to say that during the past few years expenditure of capital has run ahead of savings and that there is an urgent need to increase the flow of savings and to make the current rate of investment consistent with the requirements of industry and trade. The Chancellor has certainly made a determined onslaught on this problem and in so doing has sought to combine orthodox financial measures with psychological tactics.

The Chancellor's undertaking with regard to government expenditure will also be most welcome. For a long time now two of the country's main economic weaknesses have been low savings and excessive government spending, and there has been no lack of critics—both within the accountancy profession and outside it—with regard to the latter. It remains to be seen what fruit Mr Macmillan's resolve will bear and I hope he will not neglect an extremely important aspect of the matter—namely, that of keeping the public fully informed of what economies are, in fact, effected.

The key to greater productivity is incentive, and it is here, unfortunately, that the Budget notably fails—not only in relation to the executives and advisers of industry, but towards industry itself. A further increase has been made to the already excessively punitive rate of profits tax. This is a further setback to industry, following on the substitution of initial allowances for investment allowances contained in the autumn Budget and, coupled with the restrictive attitude to be adopted by the Capital Issues Committee to new issues, will hold up expansion plans. The profits tax is a penalty on enterprise. For the privilege of placing £100 to reserves, a company now has to pay something like £84 in income tax and profits tax. Profits must therefore be allowed to achieve a realistic level if they are to take care of replacement and improvement of plant. Otherwise there will be a steady decline in our ability to compete in world markets.

GEORGE BRETTE & COMPANY, LIMITED

VERY SATISFACTORY TRADING

HOME TRADE MAINTAINED

SIR HARRY TWYFORD'S STATEMENT

The forty-second annual ordinary general meeting of George Brett & Company, Limited, was held on April 20th at the registered office, Chapel Street, Belper, Sir Harry E. A. Twyford, KBE, chairman and managing director, presiding.

The secretary (Mr H. O. Randall), read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman which had been circulated with the report and accounts for the year ended January 19, 1956:

It is again my pleasure to be able to report a very satisfactory year's trading. The home trade notwithstanding a drop of 7 per cent in prices, was the same as the previous year, which, as I have already told you, was a record for the company.

EXPORT TRADE DIFFICULTIES

There was a considerable drop in the export trade, which was entirely due to our main markets, such as Australia, New Zealand and South Africa, banning imports by restricting licences.

In my statement last year I said that it was not easy to forecast the results for the current year owing to the unsettled international state of affairs and the imminence of a general election. I said, however, that I felt justified in looking forward to a continuance of good trading. In spite of the difficulties referred to, together with the period of restraint from February to July and the credit squeeze which has since taken place, I think you will agree that my optimism was justified.

DIVIDEND MAINTAINED

The profits for the year amount to £176,591, which, together with a provision for taxation not now required of £6,000 and the balance brought forward from last account—£80,102—leaves £262,693 to be appropriated. The directors recommend a final dividend of 16 per cent which, with the interim dividend of 4 per cent already paid, makes a total distribution for the year of 20 per cent, which is the same as for the previous year. Taxation calls for £89,100 against £94,750 last year.

It is also proposed to transfer £40,000 to General Reserve, bringing this reserve to £230,000. It has also been decided to provide £9,147 for special depreciation over and above the usual provision, as machinery becomes obsolete so quickly that it is advisable to write the machines off the books earlier in order to be able to replace with more modern machinery as and when required.

NEW MACHINERY

It will be seen, therefore, that the additions to plant and machinery amount to £106,500 which is mainly due to the completion of the uncompleted contracts referred to in last year's balance sheet, and after depreciation this item is only increased by £44,200.

Whilst on the subject of new machinery I may state that in the last five years we have

spent over £500,000 on new machinery, and it is very satisfactory to be able to report that this has been financed entirely from income.

Stock-in-trade is shown as £366,672, which is a reduction of some £600 as compared with last year. The directors are of the opinion that the stock is in good condition and the amount is necessary for the volume of trade done.

EXCESS OF ASSETS

The current assets exceed the current liabilities by a sum of £382,970, which is a very similar figure to that for last year, in spite of the addition to machinery and plant of over £100,000 which has been referred to earlier in these notes.

Following our usual custom, the sum of £13,343 has been allocated for staff profit-sharing and, in addition to this, all pay for

staff on fixed incomes was increased by 12½ per cent during the year at a cost of £5,000.

It would take a bold man in these uncertain days to forecast what trade is likely to be during 1956, but I am pleased to say that at the present time our order books are well in advance of what they were last year.

ALLOCATION OF £1 OF INCOME

For the interest of shareholders I append details showing how each £1 of the company's income has been expended:

	s. d.	%
Raw materials and manufactured goods	14 5½	72.18
Salaries, wages, pensions and welfare	3 1	15.50
	17 6½	87.68

Taxation	7½	3.09
New machinery and plant, equipment, etc.	10	4.11
Depreciation, all other services and expenses	5½	2.38
Reserves retained in the business	3½	1.39
Shareholders' dividends ..	3½	1.35
	£1 0 0	100.00

In conclusion I am sure it would be your wish that I should express your and our thanks to every official and member of our staff for the loyal and able service they have rendered to the company.

The report and accounts were adopted; the proposed dividend was approved; the retiring director, Mr Walter Bennett, was re-elected and the remuneration of the auditors, Messrs Josolyne, Miles & Company, was fixed.

APPOINTMENTS

THE UNIVERSITY OF MANCHESTER RESEARCH FELLOWSHIP IN ECONOMIC SCIENCES

Two are invited for the above Fellowship, one for one year with a possible extension to two years. The Fellowship is of a value within the range £200-£250 per annum, together with approved expenses involved in the research. Applications governing the award of the Fellowship and application forms may be obtained from the Registrar, The University, Manchester 13, to whom all applications should be sent, not later than May 12, 1956.

THE Co-operative Wholesale Society Limited invites applications from proved leaders of Organisation and Methods teams for the position of Head of an O. & M. Department soon to be commenced at the Headquarters of the Society in Manchester. The inception of such a department, recruitment of supporting personnel, training, and direction of assignments will require to be undertaken by the successful applicant. The position is an important one and a commensurate salary will be paid. Intending candidates should write for an application form to the Secretary and Executive Officer, Co-operative Wholesale Society Limited, 11, Broad Street, Manchester 2.

MARKET RESEARCH. Due to expansion of its activities, the Market Research Department of a nationally known manufacturer of consumer goods has a vacancy for a Research Officer experienced in the handling of all phases of consumer surveys and in report writing. This is a senior post carrying a salary commensurate with the importance of the position. Write in first place, giving details of experience, etc., and enclosing references in the strictest confidence, and should be addressed to Box 386.

AN Economist with statistical experience is required to work on industrial trends and their effects in the national and commercial spheres. Apply to the Assistant Director of Training, Investments Ltd., Broadwell Road, Oldbury, Nr Birmingham.

WORKS DIRECTOR, with seat on Board, required for large Cable Works in the London area. He will be responsible for all production and manufacturing functions; there required a well educated person with a minimum of four years' experience in the cable industry with practical experience in modern production techniques and with achievement in works management. Age 35-50. Replies to Production-Engineering Ltd., 12 Grosvenor Place, London, S.W.1.

BRITISH Cellophane Limited requires two young male graduates in Economics (with statistics) to fill vacancies in its Market Research Department at its London office. To conduct trade surveys which may involve some travelling into the current and future market potential for the Company's products and into factors influencing that potential. Ref. No. S.40T.

With the analysis of internal and external statistics, and with general economic investigations. Ref. No. S.41T. In both cases, an ability to analyse large amounts of material and to prepare clear and concise reports is required. Whilst these posts can be filled in the near future, applications are invited from individuals who are likely to become available within the next few months, including those who are studying this year. Please reply, giving full details, including salary required, to Personnel Officer, British Cellophane Limited, 11, Broad Street, Somerset, and quote appropriate reference number.

ARTERED COMPANY SECRETARY, preferably qualified Accountant, required by new carpet manufacturing company in the West Riding of Yorkshire. This appointment requires an energetic, ambitious and well-educated man, within the age limits of 30-40 years. He must be fully experienced in all industrial, financial and accounting practices, including budgetary control, standard costing systems, and production and sales control. Assistance with housing requirements will be made available. A top salary, commensurate with qualifications and experience, will be paid. Applications will be treated in the strictest confidence. Write, giving all details of experience, to Box 388.

Europe (except Poland): £4.15s.
Gibraltar, Malta: £3.15s.
Hongkong: £7.
India & Ceylon: £6.
Africa: £3.5s.
Japan: £3.5s.
S. America: £3.5s.

UNIVERSITY OF HONG KONG

Applications are invited for the vacant post of LECTURER IN ECONOMICS. Annual salary (superannuable): £1,575 x £50—£2,175 (man) or £1,200 x £40—£1,680 (woman), together with an expatriation allowance of £225 if applicable. The equivalent of income tax in the Colony is comparatively low.

Applicants should have suitable qualifications, including teaching experience, in (a) Economic History and (b) Applied Economics, preferably, in both cases, with special reference to Eastern Asia. It is hoped that the successful candidate may be able to take up duties in September, 1956.

First-class sea passages are provided for expatriate staff and their families on first appointment and leave. Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in Hong Kong and London, is June 15, 1956.

NATIONAL Industrial Organisation has a vacancy for Secretary in Provincial Branch which is capable of considerable expansion under energetic direction. Commercial or industrial experience desirable. Age range 32-48. Apply Box 406.

MARKET RESEARCH. A number of appointments are to be made in the expanding Consumer and Retail Research Unit of a large industrial company in the Province. The work is in a new and interesting field and there will be opportunities to contribute to all aspects of it. Essential requirements are a good academic background in Economics or Sociology and wide experience of consumer research methods in an agency or in industry. Starting salaries will be assessed in each case on qualifications and experience offered. In certain circumstances, a house to rent will be available locally. Applications should be as detailed as possible and they will be treated in the strictest confidence. Box 402.

SENIOR VACANCY in Commercial Department of expanding Birmingham Tube fittings manufacturer (introducing purchasing, material control, sales statistics) work and some exporting. Knowledge of German useful. High degrees of intelligence, adaptability and some mathematical ability more important than trade experience. Good salary, conditions and prospects. Box 372.

SHIPPING EXECUTIVE, Indian National with long and varied experience of five shipping acquired in U.K. and India, presently employed in managerial position in large shipping concern in India, desires more responsible position. Butcher and other Foreign concerns required well educated experienced Indian cadre for the same. Good salary, conditions and prospects. Box 376.

RETIRED BLISS EXECUTIVE—Swiss—wishes to represent London Commodity House—selling/buying. Switzerland and Continent.—Box 376.

THE CUNARD STEAM-SHIP COMPANY, LIMITED

NOTICE IS HEREBY GIVEN that the Seventy-ninth Annual General Meeting of The Cunard Steam-Ship Company Limited will be held in Cunard Buildings (Fifth Floor), Pier Head, Liverpool, on Wednesday, May 16, 1956, at eleven o'clock a.m.

(1) To receive and consider the Statement of Accounts for the year ended December 31, 1955, with the Reports of the Directors and Auditors.
(2) To sanction the declaration of final dividend for the year 1955.
(3) To elect Directors in place of those retiring but who, being eligible, offer themselves for re-election. In accordance with the provisions of the Companies Act 1948, special notice has been received of the intention to move at the above Meeting a resolution for the re-election as a Director of the Company of Mr F. A. Bates who at the date of the Meeting will be aged 71 years and who retires by rotation and offers himself for re-election.
(4) To confirm re-appointment of Auditors and to fix their remuneration.

By Order of the Board,
J. C. TOMLINSON, Secretary.
Offices—Cunard Buildings, Liverpool. April 21, 1956.
Note—A Member entitled to attend and vote is entitled to appoint one or more proxies to attend and vote instead of him. A proxy need not also be a Member.

DL CID. Do you know the name? Yes, he was a Spanish Knight of the 11th century. But DL CID is also the name of a very fine sherry supplied by Duff Gordon. You'll find it wherever good wine is to be had.

ROYAL TECHNICAL COLLEGE

RESIDENTIAL MANAGEMENT COURSES AT "CHESTERS" BEARDSDEN SUMMER TERM, 1956

Course No. 72 May 7th to May 25th (three weeks)
"PRODUCTION PLANNING AND CONTROL"

A course for men in this function who may be required to overhaul existing schemes.

Course No. 73 May 28th to June 15th (three weeks)
"WORK STUDY"

An appreciation course for management and work study technicians.

Course No. 74 June 11th to June 29th (three weeks)
"EXECUTIVE DEVELOPMENT"

A management course on the problems of control and co-ordination.

Course No. 75 June 18th to June 29th (two weeks)
"SUPERVISORY MANAGEMENT"

A course to assist "middle management" in their day-to-day work. Inclusive fee for tuition and residence, £12 12s. per week.

The one-semester Works Management course and the winter term Work Study course will commence on October 1, 1956.

Applications should be made to The Residential Centre for Management Studies, "Chesters," Beardsden, Glasgow.

SUCCESSFUL TUITION FOR THE B.Sc.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the tertiary examinations for Lond. Univ. B.Sc.(Econ.) (three if Entrance is included). Moderate fees: instalments. Over 1,000 Wolsey Hall students have secured this valuable degree since 1925. Prospectus from C. D. Parker, B.A., LL.D., Director of Studies, Dept. F.16, WOLSEY HALL, OXFORD.

THE ROYAL BANK OF CANADA

DIVIDEND No. 275
Notice is hereby given that a DIVIDEND of 45 cents per share upon the paid-up capital stock of this Bank has been declared for the current quarter and will be PAYABLE at the Bank and its branches on and after June 1, 1956, to shareholders of record at the close of business on April 30, 1956.

By Order of the Board,
K. M. SEDGEWICK, General Manager
April 18, 1956.

WISE INVESTMENT follows wise reading. The "INVESTORS' CHRONICLE" is the best informed and widest read financial weekly. For nearly 100 years it has been going sound advice to investors. Two free issues from 30A, I.C. House, Grocers' Hall Court, London, E.C.4.

EXPERT POSTAL TUITION

For Examinations: B.Sc.(Econ.), LL.B. and other external London University Degrees: Law Society; Bar; Accountancy; Banking; Secretarial; Civil Service; Commercial; General Certificate of Education, etc. Also many non-examination courses in business subjects. Write today for free prospectus and/or advice, mentioning examination (if any) or subjects in which interested, to the Secretary (G.9/2).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4.

We work for the New Age

The recently announced agreement between Mitchell Engineering Ltd of London and AMF Atomics Inc of New York, will undoubtedly have far-reaching effect in applying atomic power for the benefit of mankind. Created for the joint design and construction of nuclear power plant in the Commonwealth and other countries, it is private industry's first international agreement in this field—and the logical outcome of Mitchell's exceptionally wide experience over the past 35 years in all branches of engineering and electrical supply.

MITCHELL COMPANIES—active in the atomic sphere since 1950—are at present engaged on three important contracts for the United Kingdom Atomic Energy Authority:

AT CHAPELCROSS, Annan, Dumfriesshire, where work is beginning on Britain's biggest atomic power station, the Mitchell Construction Company is undertaking a £3,500,000 civil engineering contract.

AT CAPENHURST, near Chester, where work at the Authority's diffusion plant is in progress, the same Company is building six cooling towers. Here, also, Mitchell Engineering Limited has been awarded a substantial contract for piping and plant installation.

"A new system of architectural laws—adapted entirely to metallic construction"

— John Ruskin (1819-1900)

"The time is probably near," wrote Ruskin in 1849, "when a new system of architectural laws will be developed, adapted entirely to metallic construction."

Today, Wallspan outer walls represent a form of permanent metallic construction intimately adapted to human and industrial needs: the human need for abundant light and air indoors . . . the economic need for speedy, labour-saving construction . . . the aesthetic need for freshness and colour in design.

Multi-Story Walls up in DAYS! Wallspan is a light aluminium alloy grid formed of vertical and horizontal members. The grid is bolted to the weight-carrying frame of the building. Into the Wallspan grid go the windows and doors and it is then rapidly completed with suitable panelling material. The whole operation is so simple that the outer walls of large buildings can go up in a matter of days. A Wallspan building can even go into business floor by floor; as the walls go up.

More Beauty. An endless variety of infilling panelling is available in glass, metal, asbestos, wood—in numerous textures and colours. That means increased opportunity for beautiful and functional design. Using Wallspan, your architect can give you a building you'll be proud of.

More Comfort. You can have panelling which gives up to 50 per cent better insulation against cold—or against heat—than 11-inch cavity brick walls.

More Space. The Wallspan grid need be no more than 5 inches thick—and the panels about half that. So you can have extra rentable space all round each floor.

Little Maintenance. No pointing or painting is ever necessary: the beauty of Wallspan is permanent. Wall-cleaning can be done by your window-cleaners.

Whynot have a word with your architect about the possibilities of Wallspan for any new building you may have in mind!

ONCE YOU'VE crossed the gangplank onto the famous "United States" or her running-mate the "America" you are in America. The glamour, the luxury and the hospitality of this friendly country surround you.

And if you're a businessman, you'll find that here is the perfect atmosphere to start a successful business trip. American businessmen like to be approached, like to talk business. In these informal, friendly surroundings, you make contacts that can be of great value to you.

But there's fun aboard, too, lots of it. You'll find unexcelled food and superb wine, magnificent cinemas equipped with CinemaScope, top-grade orchestras, well-stocked libraries, every "keep-fit" facility,

and, of course, just rest and relaxation if you prefer. Yes, the few days that separate you from New York pass all too quickly.

You travel fast and in the utmost comfort when you travel by United States Lines.

***IMPORTANT!**

MEMO TO BUSINESSMEN

There are great advantages to be reaped by British businessmen if they travel by United States Lines. They have time, first of all, to adjust themselves to the American atmosphere and the American tempo before they arrive in New York.

And, most important, a fresh contact is more easily made under the sociable conditions aboard ship than over an office desk; the people you meet may turn out to be more than just good friends—they may be useful friends.

THE STANDARD
REFERENCE ATLAS**

A comprehensive, new, one-volume atlas containing a vast amount of detail in maps drawn on generous scales, invaluable for constant reference. The size of the atlas is convenient for handling and the binding of handsome appearance and lasting quality. Both political and physical maps are included and statistical data for all countries.

Size 15½ by 10½ inches, 248 pages, including 120 pages of maps in full colour, 8 pages of preliminary matter, 16 pages of statistical information. The 104-page index, giving 90,000 places by letter-figure reference to the maps will add interest to the daily news, and be of practical assistance in market planning problems. Strongly bound in green buckram and titled in gold with attractive jacket.

Price £5 15s 6d net.

Also available half-leather bound, gift, with clarifol jacket and boxed. Price £7 17s 6d net.

Please write for prospectus containing specimen map.

Automatic control

Automatic control and adequate instrumentation of industrial processes are essentials for higher productivity. This is particularly important when large quantities of fuel are used and critical time and temperature limits are essential for success. Gas is the only commercial fluid fuel of declared constant calorific value and lends itself ideally to automatic control. The Industrial Gas Engineers at your Area Gas Board have considerable knowledge of this subject, which they will gladly pass on to you.

WHATEVER YOUR BUSINESS — The Gas Industry appreciates the needs of individual consumers for prompt service and for advice which accords with the customer's special circumstances and requirements. Each Area Gas Board offers efficient service to users of gas-fired equipment and can give expert advice based upon the pooled knowledge of all the Boards and of gas users in other countries.

SEE THIS MAN

Here's a way to export *more*—at much less risk. The E.C.G.D. man will tell you about it: see him when he calls. He'll explain E.C.G.D. insurance and credit management—covering you against many risks that aren't insurable commercially, setting you free to expand your trade. You go ahead and sell more goods—

HE'LL SEE
YOU GET PAID

★ Pigment maker sees him—
exports seventy times as much!

Export turnover up by seventy times in two years—that's the record of this pigment firm. In 1951 they did under £5,000 worth of export business: then they saw the E.C.G.D. man, and in the second year of their policy exports topped the £350,000 mark.

What's behind this remarkable increase? First and foremost the exporter's own enterprise. But E.C.G.D. had a hand in it—providing, for premiums totalling under £5,000, the security the firm needed for expansion. Judge the extent of that security from this: in one market alone, where the buyer's government blocked payment, E.C.G.D. paid a claim for over £21,000.

★ A true story, but because business between E.C.G.D. and exporters is strictly confidential any details which could identify the exporter have been left out.

Petroleum Chemical Leadership...

Once again the Kellogg organisation is privileged to announce its participation in another ethylene-from-petroleum plant for Montecatini of Ferrara—the largest Chemical Manufacturing concern in Italy. In the manufacture of ethylene, process engineering by the Kellogg organisation offers many advantages over conventional systems and guarantees optimum yields and purity from economically available feedstocks. The key is the Kellogg steam-pyrolysis process. Used successfully in this country for the cracking of heavy naphtha, it permits ethane and propane pyrolysis plants to be designed for higher yields: makes possible the economic production of ethylene and other olefins from primary flash distillates, residuals, and other low-value products. The Kellogg organisation has accumulated considerable cost data on ethylene manufacture. Interested firms are invited to review these data with Kellogg International Corporation.

Steel puts a coat on—

Tinplate is thin sheet steel which has been given a protective coating of tin. This tinplate plays an important part in every household and in a great many industries.

Richard Thomas & Baldwins Ltd. are backed by long traditions and experience in making steel sheets and coating them with tin and other metals.

In order that production and quality should keep pace with changing demands, R.T.B. have always led in modernizing existing equipment and installing new plant for coating steel sheets by the latest processes.

R.T.B. were the first to introduce into Europe the electrolytic tinning process, which deposits tin on the steel strip as it travels continuously through the plant. This is only one of many examples of the leadership of Richard Thomas & Baldwins Ltd.

Part of the R.T.B.

A TWOFOOLD JOB...

AT HOME

Hard workers on British Railways, over 450 diesel-electric shunting locomotives powered by ENGLISH ELECTRIC equipment are in service or on order. One of them is seen in the Inward Marshalling Yard at Hull. ENGLISH ELECTRIC diesel-electric locomotives, to haul goods and fast passenger trains, will play an important part in modernizing Britain's railways.

How The English Electric Company is working for Britain at home and abroad

All over the world, ENGLISH ELECTRIC exports are earning both hard and soft currencies to pay for Britain's necessary imports of food and raw materials. This is the assembled speed ring for one of three 30,000 h.p. water turbines being supplied by ENGLISH ELECTRIC to New Zealand's Atiamuri hydro-electric power station.

Britain is busy now, more prosperous than for decades past. Full employment, active industries, advances in science and technology, plenty of opportunities both for firms and for individuals... this is progress to be proud of. The challenge—the need—is to maintain it.

All depends on production—and exports.

From 1949 to 1955, our total industrial output rose by 27%, and the value of our vital exports by 58%. But still higher production, still more export activity, are needed to ensure *still better living for Britain*. In both these ways, ENGLISH ELECTRIC is playing its full part.

At home, this company helps to supply the generators and other plant needed for Britain's expanding power generation programme; it also makes the electrical equipment by which our industries use this energy for production—production not only for home demand but for developing export markets.

In addition it is itself a vigorous and successful exporter; *about half the Group's business is overseas*, earning foreign currency for Britain.

With the world-wide experience of its engineers and technicians, backed by great manufacturing resources and advanced research, ENGLISH ELECTRIC is hard at work, making an important *two-fold* contribution to Britain's economic progress.

To Young Men and Their Parents

To any boy or young man considering a career in science or engineering, ENGLISH ELECTRIC offers almost unlimited opportunities—first-class training, and a choice of rewarding jobs at home or abroad. For details, please write to Mr. G. S. Bosworth, Central Personnel Department, R.D.1

The worst of the Sunday Best

There was a time when wage-earners looked their best only on Sundays. Then the one and only good suit or dress, with all the accessories, saw the light of day. The worst of this custom was that the clothing industry did small business in a big market. *The cash wasn't there so the wardrobes were bare!*

It's a very different story now: for, since those days, the living standards of wage-earners have considerably improved. This advance has transformed the DAILY HERALD's 6,750,000 readers into a vast new buying force for more clothes and footwear, and better quality at that! *They'll fill their wardrobes wisely, giving preference to branded products.* And as with clothes so with food, furniture and fabrics; household needs; enter-

tainment and holidays; cycles and cars—for, all-round improvement is the aim of these 6,750,000 who, between them, spend some £1,000,000,000 a year. What is more, over 50% of DAILY HERALD homes have two or more pay packets coming in every week. *Will your advertising influence them? YES—if they see it! And there is only one way to guarantee that—regular advertising in the DAILY HERALD!*

For apart from the fact that over 40% of the 6,750,000 do not read any other daily, they all comprise a loyal readership of a kind that is unique in the world of newspapers. They take the HERALD not merely for news, sport, and general features, but because it is an important, intimate part of their lives. It's only natural that to them there can be no finer recommendation of a product than —they saw it in the DAILY HERALD.

BUILDING CONFIDENCE

The most successful building operations today are the fruits of collaboration—the closest possible partnership of owner, architect and a widely experienced firm of builders and contractors. Wates are such a firm.

Wates believe in pre-planning, the scrupulous examination of all possible means of achieving the client's aims with maximum economy and at maximum speed. And the final drawings are those which crystallize optimum solutions to every aspect of the building problem. The Wates method invests the owner with complete control of costs: he gets his building at a price within his budget, and he gets it on time.

Architects and building owners find that Wates building operations are both economical and successful because they make full use of the latest mechanical equipment, and because they co-ordinate men, materials and machines to the maximum advantage.

These services are offered either on a fixed fee basis or at a fixed inclusive price. Consult Wates or put them on your tender list—it pays.

Wates Offer:

The advisory service of their experienced engineering, surveying and pre-planning departments.

Efficient and highly economical building to precise programmes.

A TELEX message for the Chairman

URGENT. Have you heard of Telex, the new communication system that combines the speed of the telephone with the authority of the printed word? This 24-hour Post Office teleprinter service enables you to exchange messages with any other Telex user at home or overseas and is rapidly becoming indispensable in the business world. A Telex call to a subscriber beyond a 25-mile radius costs about half as much as a phone call of the same duration. Overseas calls, too, are usually far cheaper than their telephone equivalents. Telex requires no special staff: a competent typist is an efficient operator after the briefest instruction.

Every day more and more commercial and industrial organisations become Telex subscribers. Isn't it time you were on Telex? Can you afford not to be? Should you not, at any rate, know something about it? Ask for the Telex booklet from the address below, or from your Telephone Manager; or ask your Telephone Manager to arrange for you to see Telex in action at your nearest Demonstration Centre.

Sounds, Shillings and Pence

IF SMELLS were the biggest curse of the nineteenth century, most certainly noises have taken their place as the greatest nuisance of the twentieth. In industry, noise nuisance is the unseen enemy employers have to face, contributing to inaccuracy, lack of concentration, careless mistakes and unwitting distraction from the job in hand.

Whilst the employees' need for adequate light, temperature and ventilation usually receive sufficient attention, is it not strange that so little regard is paid to the requirements of the ear? Heavy factory machinery is not the only source of noise in industry. The problem is becoming acute in offices where typewriters, adding and duplicating machines, and teleprinters are also making their own noisy contributions to unpleasant working conditions.

What can be done about this unwanted noise which so systematically lowers working efficiency? Nowadays the requirements of our hearing can be scientifically assessed so that the amount of noise reducing insulation can be accurately calculated. In many cases reduction of noise can be effected without structural alteration and without interruption to working arrangements of the factory or office.

It is worth a little thought to consider what contributions the elimination of undesired noise could make to the working efficiency of your factory and office. Newalls experience in this field as manufacturers and contractors is at your disposal on any aspect of sound insulation. *Preliminary investigation and consultation are gladly offered and will cost you nothing.*

High octanes and haute couture

From the treasure store of petroleum come many wonderful substances. Especially chemicals from which the scientist, with remarkable skill, creates things even more wonderful . . .

The main intermediate material used in the new I.C.I. fibre "Terylene" is a chemical called terephthalic acid derived from para-xylene. Para-xylene can be obtained from more than one source and by more than one process, but until the advent of the 'platformer' for the production of high octane spirit it was impracticable to obtain it in the quantities required for the

large scale manufacture of "Terylene". It was a happy coincidence of timing that, when the makers of "Terylene" were seeking bulk supplies of para-xylene, Shell were building a new refinery at Stanlow for the production of high-octane spirit. An auxiliary unit was added — and the supply of raw materials for para-xylene assured.

It is by teamwork such as this that new products are created, new standards of living realised. And surprisingly often, Shell is a member of the team.

Peace is Positive

A PARTNERSHIP of free peoples is always slow to change course; and it is not surprising that the Atlantic Council's convulsions last week brought forth a mouse. The mouse itself—Nato's second "Pearson committee"—was by no means ridiculous; but its work is unlikely to have much effect unless public attention is directed, while it pursues its task, not only to the real needs of the new situation but also to the most practical means of meeting them. The Atlantic allies have begun the search for new policies; but they have hardly got further than discovering how difficult the search will be.

Caution is certainly justifiable. The communist powers have presented the free world with its biggest poser for years. Is their "new look" worth encouraging in the hope that it will lead to more humane and really peaceful policies—or is it merely a trap? The free nations cannot just adopt a "wait-and-see" attitude, for the shadow-play behind the iron curtain looks like going on for a long time; it would be suicidal simply to relax and hope that freedom will somehow survive; and continuing doubt and disunity among the non-communist countries can have exactly the same effect as would unilateral disarmament.

There is no easier way for a journalist to fill a column than by calling for "vigorous rethinking," and leaving it at that. And piecemeal panaceas have been recommended that range from the ineffective to the disastrous. We are told that freedom is to be saved by tactful silence about political prisoners and slave camps; that neutral Asia's gratitude can be secured by making America hand over more of the aid that has to date evoked so little gratitude; and even that to gain Russia's confidence the West must scrap its alliances and leave their more exposed members to communism's newly tender mercies. To try to set out a comprehensive programme for the era of all-in co-existence is admittedly ambitious, too ambitious, no doubt, for a single journalistic piece; but is it not high time some attempt was made, if only as a starting point? Here, then, goes.

The aims of a positive policy for peace may be summarised as these: to encourage every sign that the communist system is getting (perforce perhaps) less inhumane and less menacing, and to press for more of the same; to maintain vigilance and strength unimpaired as long as the signs remain mere signs; and to demonstrate, to every human being we can reach, that the free society holds more promise than communism or any other form of despotism.

How can these aims be best pursued? One does not begin a positive policy by retreating. To suggest that, because the sun seems to be shining in the East, we should therefore dismantle our painfully acquired and still inadequate armament is obvious folly. But no less is it nonsense to suggest, as some do, that we can get our ideas across to the communists by ceasing to propagate them. Broadcasts and airborne leaflets are means of enlightenment to be abandoned only when

the Soviet rulers carry out their promise, made in London on April 27th, to permit a normal flow of books, newspapers and private letters across frontiers, and to encourage individual travel and friendship. M. Pineau's call for greater efforts to get "the propaganda of liberty" across to communist countries might also be translated into large-scale invitations for their subjects to come and spend holidays in the West; and these visitors should not be shepherd along paths approved by their masters, but allowed to see and to learn how free peoples live and think.

It will be important to make them and their rulers see that we in the West not only enjoy liberty, but do in fact hold fast to it. While it may be right that Ministers, when engaged in private discussions between governments, should not publicly demand that the communists' political prisoners be freed, it is the clear duty of all private persons to show every accessible Russian our hatred of arbitrary arrest and slave labour. The same applies to the iron curtain; there should be unflagging pressure, at all levels, for the lifting of this barbarous barrier, along which machine-gun towers and minefields still take their toll, and against the intricate devices (artificial exchange rates, refusal of driving licences, and so on) used to restrict foreigners' movements within the communist countries.

★

There is much to be said for developing direct contact with the satellites, as the French, in inviting Poland's "B and K" to Paris, evidently mean to do. The task now is to measure the real length of the rope supposedly given by Moscow to these nominally sovereign nations, to probe their rulers' cloudy talk about "different roads to socialism," and to explain to them and their subjects that the West is hardly likely to wind up its alliances while it confronts a monolithic, heavily armed bloc that is still directed from Moscow. To them as well as to the Russians it must be tirelessly pointed out that Western Europe, if it is to survive in freedom, simply cannot risk letting all Germany fall under the Kremlin's shadow; and also that they must free themselves from the quite understandable Freudian trauma left behind by Hitler's war, and recognise that the reunion in freedom of a Germany subject to the controls which the Federal Republic has already accepted will give them a degree of security which they cannot expect in any other way.

In Asia, the main tasks are to bring home to the "neutrals" that the West has no veiled designs on them, but that it cannot leave its pledged allies in the lurch just to please them; that, western imperialism being visibly in retreat, they will best safeguard their freedom if they keep a sharp watch on the new imperialism advancing from the north; and that, while we shall try to understand their motives, they should try to understand ours—in particular, to grasp the fact that our policies leave room for neutrality, while communism's leave none.

Free Asians and others will quite rightly judge us by our deeds as well as by our arguments. Their feelings towards us will very largely depend on our readiness to press on with the emancipation of dependent peoples in both Asia and Africa. But the interests of those peoples should not be subordinated to propaganda purposes. Freedom and equality for colonial peoples are goals to be sought for their own sake. We are entitled to ask "anti-colonialist" critics to look—critically, by all means—at the real underlying trend in this matter, not merely at the surface, and to remember that quiet progress on sure ground is vastly more valuable for those who benefit from it than are loud flourishes.

Much the same applies to putting in order the western countries' own houses. Social reforms devised merely with the aim of forestalling the growth of communism or the appearance of "popular fronts" are of little worth beside reforms carried out with their own positive objectives. In the long run, it is the health and stability of the free societies that will count rather than any number of spectacular gestures.

★

In the field of economic aid for the poorer countries, however, there seems one possibility which, while admittedly spectacular, might offer solid advantages to the whole world. This week it was again pointed out in Parliament that Britain, like other donor nations, cannot undertake a new and massive international aid programme until the burden of defence has been eased. President Eisenhower has reaffirmed that America cannot channel more aid through Uno in present conditions. But a means of surmounting these difficulties may be derived from what M. Faure said last July. If—as seems probable—disarmament negotiations are still likely to remain deadlocked for a long time on the crucial issue of adequate control, is it not worth examining the idea of an international aid clearing house to ensure that the communist and the western alliances each contributed equal amounts of economic aid?

If contributions were thus scrupulously balanced, there could be an end of the ironic state of affairs in which the West, and specifically the United States, provides far more aid than the communist nations, through international agencies as well as bilaterally, and yet is continually exhorted to provide still more. There would be the possibility of a genuine restraint on the arms race, for a fifty-fifty operation carried on under the arc-lamps of world opinion would put pressure upon each group to limit its expenditure on arms to an equal degree in order to meet the other's challenge in philanthropy. Neither would be able to gain kudos from making gestures costing nothing, and the receiving countries could be relied on to see that any short weight got short shrift.

Western policy, that is, should be not merely to accept the communist challenge to "compete." It should be to throw down a new gage—a challenge to compete fairly. We have nothing to fear in a peaceful contest if

it is not rigged against us. But we must insist upon fair terms, for the communists will otherwise enjoy all the political advantages of secrecy, deceit, and hypocrisy.

Any such policy must, however, represent a formidable challenge to the free societies themselves. Can a partnership of free nations stand the long strain of holding to a complex, unspectacular, positive policy of this kind? It involves a great deal of self-denial, psychological as well as material. There must be no confusing flexibility with flabbiness, no raising of hopes by "summit"-type flourishes only to disappoint them, no shirking of burdens, no truck with either impatience or defeatism. The policy suggested may seem pedestrian (indeed, it would be no bad thing to ground all Foreign Ministers while this patient, probing process of testing the terrain for peace goes forward). But diplomacy is, properly, a daily chore, both in dealing with foes and with friends.

Next Step for Television

WITH the opening of its northern transmissions commercial television has completed the first stage of its expansion; with the pollsters' finding that, out of every ten viewers with a choice, six will usually be watching commercial television and only four the BBC, the experiment has, for better or worse, settled down. This seems to be a good moment to comment on where television appears to be going; as already, in any one evening, up to a third of the adult population will take some look at the screen, it is by far the most important new social influence of our time.

The Economist's view of commercial television has always been sufficiently moderate for it to be accused of being hypocritical. On the one hand we were for long disturbed by the deadening effect of the former BBC monopoly and even more by the fact that the otherwise far-seeing people in charge of that monopoly did not appreciate what damage they were doing to the spirit of intelligent controversy in public life. On the other hand, we always wanted television to continue its tradition of an "educational mission by stealth"; the hope was that a competitive system, retaining the services of some sort of public corporation censor or mentor, could still be used to prod the captive mass audience away from uninterrupted enjoyment of all the things it bovinely wanted towards occasional and unexpected enjoyment of some of the things it ought to want. As regards advertising, it seemed clear both that advertisers wanted to spend money on this medium and that most viewers would prefer to use that money rather than pay higher licence fees; the case for advertising finance therefore seemed to be made out, though with the warning that this finance alone might not suffice to carry the balanced programmes on which a public corporation ought to insist.

Above all, the programme calls for the greatest possible degree of team spirit. There has been too much talk of the need for a common policy by politicians who, in fact, merely expect other countries to line up behind them. (Britain's particular obligation here is to review its attitude towards the European community, towards Cyprus, towards racial and other issues, in the light of this overriding requirement.) There must be no more of the current tendency for each nation, newly confident as fear diminishes or prosperity increases, to make world issues a tool of domestic politics, or to assume that it alone can handle the communist bloc.

These are tough conditions. But the attempt to carry through a positive policy on some such lines as these is not merely desirable but vital. For neither in retreating to a sterile, defensive posture nor in a suicidal loss of vigilance nor in comfortable inaction "until we see how things turn out in Russia" is there any hope of securing freedom for ourselves and peace for the world.

To those who held these views, the system outlined in the original "White Paper" proposals of 1953, for making commercial television entirely dependent on advertising money but giving it a public corporation nanny with wide powers to keep it in order, was not really frightening; it was not frightening because it seemed probable that it would either have to be modified or else go broke. The chain of events that seemed most plausible at that time was that there would be a clash between those who pressed to "popularise" the programmes, and those who were determined to maintain the censoring powers of the ITA; that as soon as the "popularisers" gained any ground there would be a clatter of resignations and the devil of a fuss; and that the ITA would then emerge with its powers utilisable as well as intact, but with the system it supervised partly financed out of licence fees instead of wholly out of advertising revenue. This was exactly the result that "moderate reformers" wanted; it never seemed necessary to accept the conclusion that the clash would force the original conception of the ITA to the wall, and that the law of the lowest common multiple of competition would then drive the BBC in emulation to pitch all its programmes to suit only the lowest and thickest (in two senses) stratum of television taste.

This was the optimists' forecast. Before looking at the one respect in which it may be going wrong, it is fair to insist that in the two most important respects it is going right. The first of these—pace the prejudiced—is the continuance of television as a stealthy educational force. It is true that the mass, captive audience can now often escape from some of the worthiest offerings of the BBC to some less worthy concurrent offering on commercial television (or occasionally *vice versa*), but this was inevitable under any system of alternative

programmes; it would have happened if the alternative programme had been produced, as on radio, by the BBC, which would have meant that the viewer was given the choice between a "home" service and a "light." The questions that the champion of an educational mission in television has to ask himself are

(1) whether present ITV programmes are of a uniformly less cultural kind than a new BBC "light" programme would have been; and

(2) whether under competition the present BBC programme has degenerated below the former "home service" type.

One suspects that he can only give an unfavourable answer to the first question if he is ridden with prejudice, as so many critics of television are; it is certain that he can only give an unfavourable answer to the second if he is the sort of person who either never looks at a screen or will not look at facts. BBC programmes have changed in the last six months, but not at the expense of the high or middle brow viewer; the things that have been thinned out of the programmes are the cheap "fillers"—partly the panel games, but especially the less expensive outside broadcasts. Mr Richard Dimbleby is no longer for ever going down a sewer to report on how sewers are made; he goes to Monaco to report on Prince Rainier's wedding instead.

The second welcome feature of the new system is that, beyond most people's expectations, there has been a marked reform in television's treatment of public affairs. The new willingness of some BBC and ITV commentators to take and state a definite view on such controversial subjects as the best British policy for the Middle East; their readiness to thrust a camera and microphone into the environs of a communist congress or the midst of an industrial dispute or the thick of controversy about conditions in schools and school teachers' pay, where off-the-cuff answers to interviewers can be embarrassing—these add up to a broadcasting revolution, and one that was thirty years overdue. They constitute a very important democratic advance.

★

Is there, then, any reason for the moderate reformer to be disappointed with the present experiment of commercial television? The odd answer is that he should be disappointed that it looks like making money soon. When the Television Bill was published two years ago, everybody knew that the initial financial position of independent television would be rickety; and it was hopefully suggested in these columns that if ITV had to reach out for public money in its early years, this would probably come from the pool provided by licence fees and that the "compensation provided to the BBC would then very probably take the form of permitting it to receive advertisements itself." This, frankly, was the outcome we wanted. Now, although some of those concerned with independent television are not going to balance their books in this first year of operation, and although the ITA will probably have to draw something

this year from the pool of public money eventually voted to it under the Television Act, profitability is within sight. The extraordinary and continuing rate of growth of the television audience, and the economies to be secured by each contractor taking relays of the others' programmes, seem to assure it. It therefore seems likely that it will be financially possible to continue indefinitely with this unplanned and almost accidentally-enacted new "British television system" in which one set of programmes, under the aegis of a speedily expanding BBC, will be financed wholly out of licence fees, while the other, under the ITA, will be financed wholly out of advertisement revenue.

If competition in television had been started from scratch, nobody would have chosen this odd separation of functions and finance; both systems would have drawn revenue from both sources. The BBC would have got some finance from advertisements, and licence fees would have been shared between it and its competitors—no doubt on some admirably biased system: for example, with more money for the more cultural programmes, special grants to the state system as the best forcing ground for experimental techniques, and so forth. When competitive television started, there was reason to hope that the tide might flow this way; in the event, however, the tide of prosperity may prove too strong, and, by causing an essentially silly system to be viable, make it look sensible to leave it unchanged.

★

This is a pity, not perhaps for the short term, but in view of the longer prospect ahead. Some time in the 1960s technical developments may make it possible to open a large number of local relay stations; indeed, the untenanted part of Band III could be made ready for a new set of programmes now, as soon as investment stringencies permit. There is no point in pretending that any new private enterprise stations that were allowed to utilise this opportunity could be much more than relay stations, choosing and paying for programmes put out by the big networks (including the BBC) for 90 per cent of their time, and producing their own programmes for only about 10 per cent of it. But, on competitive and cultural grounds, this is the development that ought to be encouraged, and it would be an excellent thing if, following the American pattern, some of these stations were controlled by universities, educational foundations and trusts. So long as any new private enterprise stations have to rely wholly on advertisements, however, any new competition with the existing system can only be of the controlled "light programme" type; if learned magazines had to rely wholly on advertisements and could not charge subscription fees, there would be no learned magazines.

This opportunity may seem a long way off. But now that the first great step has been taken, if somewhat stumblingly, towards the sort of broadcasting system that a democracy ought to have, it is time to start thinking about the next advance.

Question Marks Over Korea

SOUTH KOREA goes to the polls next Tuesday to elect a president and vice-president. Sudden death removed Dr Syngman Rhee's only serious rival last week, and the South Korean voters are unlikely to be diverted from their task of re-electing Dr Rhee by the other surviving presidential candidate, or the presence of eight would-be vice-presidents (four of them, confusingly, with the name of Lee). Well-organised "spontaneous" demonstrations have persuaded Dr Rhee, for all his 80-odd years, that it is his duty to stand for a third term on behalf of the Liberal party; his control over the police, the unions and the students should be enough to ensure that he can answer the call.

And yet this election will not be quite the same as the last one, in 1952, and the change is a measure of Korea's progress since then. Even before Mr Shinicky's death, Dr Rhee seemed sure to get his majority, and he will probably carry his vice-presidential nominee, Mr Lee Ki Poong, into office with him. But despite his power and undoubted prestige he has no longer appeared quite so unassailable as he was in 1952, when he got 70 per cent of the total vote. Virtual elimination of illiteracy has been achieved in the last few years. The opposition candidates have been able to profit from the grumblings bred by inflation, incompetent administration and unrepaired war damage. This applied especially to Mr Shinicky, whose Democratic party has the advantage of a record of organised opposition in the Assembly. It is a pity that it will now be able to test Dr Rhee's strength only at the vice-presidential level. And there is another major change from 1952: for the first time in the republic's brief but bloody history, a candidate—Mr Chó, of the Progressive party—is risking Dr Rhee's wrath by saying that the reunification of Korea should be pursued by peaceful means only.

All this marks a small but significant advance. The same kind of improvement, from the bad to the merely unsatisfactory, has taken place in South Korea's economic position in the last three or four years. But this does not mean that the fundamental problems of a divided country have come any closer to being solved. Nearly two years have passed since the first Geneva conference pushed the Korean dispute into a pigeon-hole, and meanwhile the dust has been quietly settling on three unanswered questions. Can a way be found of reuniting the two halves of the country? If not, can South Korea's economy ever stand on its own feet without the prop of American and United Nations aid? And how should the West reconcile its support of Dr Rhee with the unpleasant features of his regime?

All three question marks still hang over Korea. Peaceful reunion is as distant a hope as ever. The North Korean leaders, and their colleagues in Peking and Moscow, are unlikely to accept a settlement that would jeopardise their control over the richest mineral deposits in the Far East after Manchuria, and put

western bases on the border of Manchuria itself. They face the hard fact that the north's population, now only five million, is dwarfed beside the south's 22 million. Even if the West dropped its insistence that all-Korean elections must be closely supervised, and accepted the communist proposal of a "neutral" commission (which would be hamstrung as effectively as the truce commission is), the odds against the communists might still prove overwhelming. They know that Dr Rhee would give short shrift to any opposition in the north of a reunited Korea. In the end the choice before them would probably be either elimination or a perilous reopening of the civil war.

So the armies continue to bare their teeth at each other over the barbed wire. Occasionally tempers snap and triggers are pressed. Newspapers in the south still carry cartoons depicting a triumphant march north into the dawn, while Chinese "volunteers" are being settled in the north to strengthen Kim Il Sung's thin ranks. The tragedy is that, united, Korea could be a rich country. The south has the people, the paddy fields and the rudiments of a useful light industry; the north has the iron ore, the timber, the hydroelectric power and most of the coal. But so long as the country is divided, South Korea must forgo dreams of heavy industry and reconstruct its economy along more modest lines.

Some progress has been made. South Korea's foreign trade still limps hopelessly, with exports in 1955 accounting for less than a fifth of imports. But the domestic scene is a little brighter. By next year the construction of four new hydroelectric stations should have made the supply of electricity at last equal to demand. Coal production is rising rapidly as mines are re-equipped by the Americans and the United Nations Korean Reconstruction Agency, though Korean coal is unhappily all of the brittle anthracite type. The rice harvest is back to the pre-1950 level, and the production of the more important industries, including textiles, cement and paper, has well exceeded it.

There are two main economic tasks. One is to reduce South Korea's dependence on imports. A good start could be made on this by building up industries to supply two of the country's main needs at home—fertilisers and coal briquettes. The other is to stop inflation, and this means, above all, avoiding huge budget deficits. Last year the deficit in the basic budget came to almost a fifth of the total expenditure, and even when counterpart funds were taken into account the gap was unhealthily large. This year things are likely to be a little better; but it will be impossible to stop the upward rush of prices unless the government makes a serious attempt to balance its accounts in the coming financial year.

South Korea's problems are rearranging themselves in a different order of priority. Pace Dr Rhee, war is not an imminent danger. Mr Dulles has gone on record

as saying that he does not fear an attack from the north at the moment, and Dr Rhee's own threats are made to sound a little hollow by the firm grip that the Americans keep over his petrol supplies. The West's task now is not so much to save South Korea from the threat of immediate extinction as to encourage the germs of democracy and economic stability within it. Half a Korea is better than no Korea at all, for humanitarian as well as strategic reasons. So long as Dr Rhee's regime is under western protection, it is at least susceptible to advice from the democracies.

Unfortunately, the coming election introduces a new element of uncertainty. Dr Rhee is officially 81 (and is in fact thought to be three or four years older), and may not last out another four years in the presidency. The long Japanese occupation left Korea desperately short of men competent to administer the country efficiently, let alone keep it united during the long haul of reconstruction. Dr Rhee is often an embarrassment, but he is also a man of intelligence and energy. If he died in office, he would in theory be succeeded by the vice-president; but it is difficult to see anyone who

could satisfactorily fill his place. Mr Lee Ki Poong, his own choice for the vice-presidency, is chairman of the National Assembly and has had some administrative experience as defence minister and mayor of Seoul. Some western observers doubt whether Mr Lee is the best choice, even within the limited range available. They would have preferred a man whose ability has been more thoroughly tested, like Mr Paik Too Chin, the economic co-ordinator.

A whole new series of questions will arise if and when Dr Rhee dies. Can his successor take up his duties without being challenged by a rival? Will the ambitious young army generals submit to him? Can he tread the narrow path between the urgent demands of investment and a reasonably balanced budget? Above all, will the West be able to rely on him—as, in the final test, it can rely on Dr Rhee—not to make a suicidal plunge northwards? The free world's problems in Korea are growing more complex, not less, as the war fades into the past. It would be ironic if it one day came to prefer the Rhee it knew to the Lee it does not.

Union Boss

Any resemblance between the character in this article and a living person is entirely intentional. But it is a composite portrait not drawn from any one union leader, and the union is an imaginary one. About two score real people with this sort of background are among the most important people in modern Britain.

BEN was born in 1900, in a Lancashire cotton weaving town. He was one of seven children; his father a textile engineer and his mother a God-fearing woman who spruced up her brood every Sunday to go to the Methodist chapel, where a socialist minister—much more socialist than Ben's family—preached on such texts as the camel and the eye of the needle. When he was twelve, Ben went to work half-time in a factory. When he was thirteen, he left school altogether.

These were hard and stormy times for the working class. In 1910, according to the Board of Trade's figures, the highest wage paid was 31s. 6d. a week, and in the cotton trade nearly one quarter of the workers were earning on an average less than 15s. a week (the equivalent of £3 at today's prices). The prevailing mood of bitterness made fertile ground for the syndicalist message of Tom Mann, that salvation lay in bigger and better strikes. In 1912 41 million working days were lost through strikes and lockouts. (Last year's figure was 3½ million, and that was considered a very bad year.) Sometimes Ben's father was unemployed, sometimes he was on strike, and there was a particularly bad time in 1910 when, after a long struggle for higher wages, 100,000 Lancashire cotton workers were locked out by the employers. There was little strike pay, and the Board of Guardians kept the family barely (very barely) alive.

When war broke out, Ben went to work in a

munitions factory, where the wages were good and the way was opened to a career in the metal trades. The trade union movement—unlike the strong pacifist element in the Labour party—thought it was right to go to war, and called a truce to official strikes. But Ben was involved in many unofficial stoppages organised by syndicalist shop stewards, and was very much in sympathy with them.

After the war he started going to classes organised by the Workers' Educational Association. He studied industrial organisation and economics, and worked far into the night. He also got married. This was a hopeful time for trade unionism, for its membership had grown from 2½ million in 1910 to 6½ million by 1920. Ben enthusiastically attended branch meetings of his union, and his new-found erudition soon made its mark. Five years later he was elected branch secretary. He was at this time a bit of a firebrand, and firebrands seemed to be needed. A wave of strikes had led to defeat after defeat, unemployment was never less than 10 per cent, and it was obviously all somebody's fault.

Then came the disastrous failure of the General Strike. That cured Ben of any syndicalist faith in "direct action." From now on he supported the efforts of his leaders to co-operate with the employers in bringing about better industrial relations. He took part in local politics, but he developed a contempt for national politicians when the Labour Government of 1929

proved helpless against the tidal wave of unemployment.

By now, at the age of 31, he was a district secretary, and had left factory work altogether. There was some advantage in being a trade union official in those days. You did at least keep your job. Not that Ben was an official for that reason; it was his social conscience and his desire for power that drove him on. His wife and family hardly saw anything of him; he was always at a meeting somewhere. He played his part in bringing about the amalgamation of his union with several others in the industry to form the National Union of Metal and Kindred Trades. Just before the second world war he was appointed a regional organiser, and later was elected to the national executive. Two years later, now aged 40, he was elected assistant general secretary. By this time the status of the trade union leaders had been transformed. They were accepted as partners in the business of running the country, and had begun to steer an uneasy course between their members' interests and those of the nation as a whole.

It was a foregone conclusion that he would succeed to the general secretaryship, as assistant secretaries always do; and after his chief collapsed and died while trouncing the two communist members of the executive, he was elected by a large majority of the fraction of members who bothered to vote. Now he is a busy man indeed. He works all round the clock—meeting the employers to negotiate a wage claim, sitting on a Royal Commission or a court of inquiry, attending the General Council of the TUC or one of its sub-committees, travelling up and down the country. For all this he gets from his union a mere £1,200 a year, plus a car. When he looks at what some other leaders get, he considers himself lucky. And like most trade union leaders he is curiously free from anxiety and strain; perhaps it derives from that same confidence which, as Miss Mitford says, keeps the working class so uninhibitedly U in its modes of speech. At all events his is a time-table that would produce a crop of nervous breakdowns in any other walk of life.

Ben's wife sees even less of him now. She has not grown in stature as he has, since the day they met in the Birmingham factory. Her only contacts with his work are at the annual conference of the union and at the Trades Union Congress. This is always by the sea, so it is by way of being a holiday. She stays in the best hotel and spends much time with an inner circle of General Council wives. They observe the same order of precedence as their husbands, which has its annoying side. Ben has only got the CBE, but the year will come when, as the General Council member with the longest service, he will serve his term as chairman of the TUC, and after that he can be certain of a knighthood if he wants it. His wife certainly does.

At the congress he makes a good, closely reasoned and, by union standards, right-wing speech. He would like to be even more right-wing, but it is no good getting too far out of line with the feelings of those annoy-

ing twenty-year-old firebrands (shades of 1920) who are such noisy elements in the union. He is the soul of moderation and good sense in general discussions, whether at 10 Downing Street or on the National Joint Advisory Council. But he does not for a moment abandon his trade union line. He does not blame his own members—very few of whom have ever set eyes on him—for trying to protect their jobs; he remembers the bad times. He makes only half-hearted attempts to dissuade them from claiming huge increases; and when some of them are involved in a demarcation dispute which he privately considers idiotic, he would never go and tell them so. He is no Ernie Bevin; he is not at all sure they would take any notice.

Ben is not good at providing himself with supporting staff—for example to brief him with facts and ideas. He has been far too accustomed in his younger days to do everything for himself. He is good at grasping the essentials of a brief in wage negotiations, and very good at presenting the case. But he reads little that is not ephemeral—he has not time—and what is worse, he has not time for any thinking that is not related to immediate problems. His strength is that he is an excellent administrator—though his short, sharp way with subordinates would startle the gentle student of personnel management.

*

But what of the Bens-to-be? Arthur Deakin once remarked that if he had been a young man in the post-war world, he supposed he would have gone into the administrative grade of the civil service; Ben's own youngest son has just left London University. Therein lies a vital problem for the future. Now that all the bright boys are creamed off into the grammar schools and go on to the universities, how can the labour leaders of the future be of the calibre of those now at the top? The paucity of talent is already making itself felt at the lower levels of union office. The dearth of able men is intensified by the poor rewards that a career in the union now offers; while prosperity lasts, it is no more secure, and it is less well paid, than jobs in industry.

Paradoxically, the unions are also denuded of talent by a process which they suppose they ought to approve—the growth of industrial democracy, which makes it possible for a good workman to rise to a position of supervisor and then of management. Sometimes Ben or his district officers are asked by the bosses to recommend young men to move up the ladder; they then often find that these promoted supervisors give them the most trouble in factory disputes, and are in any case lost to the union movement. That this decline in talent should be taking place just when union power rises to its zenith is an alarming prospect. An improvement in our Bens' quality in the next two decades is really rather vital; at the moment Britain is faced with the likelihood of a marked deterioration.

Notes of the Week

Bitter Fruit in Cyprus

A HARD choice faced Sir John Harding when he was called upon to decide whether or not to reprieve two young Cypriots condemned on capital charges. One of them, Michael Karaolis, murdered a Greek Cypriot policeman on duty. He committed a particularly obnoxious type of murder and was condemned under the ordinary criminal law. His reprieve might have had a lamentable effect on the morale of the Cypriot police force. The second young man, Andreas Demetriou, shot and wounded an English businessman; but his victim did not die, and he was condemned to death under an emergency regulation for unlawfully carrying and discharging a firearm. In both cases, the Governor can reasonably argue that, if terrorism is to be defeated by the measures which have been introduced for that purpose, the law must take its course. The executions are not only the obvious retort to violence; they are of a piece with the policy which has been chosen to put down nationalist resistance in the island.

It is the policy itself, however, that has to stand the test of fact. Will it serve its purpose, which is the pacification of Cyprus? There should be no illusion that the execution of Karaolis and Demetriou will make a settlement any easier. It is likely to make it more difficult. A few potential gunmen may be frightened; some policemen and soldiers may go about their duties for a time with greater confidence. But the upshot is bound to be more tension and bitterness, and it will be surprising if the two men do not serve EOKA much better by their deaths than they could have done when alive. They will be hailed as martyrs, not in spite of but because of their crimes; and the ranks of the terrorists will be enlarged while those of the moderates shrink. In Greece still stronger feelings have already been aroused and the efforts of Mr Karamanlis's government to steer a steady course will be made still more difficult. The argument for clemency implied no condonation of these men's crimes; it rested solely on a reckoning of the consequences, balancing the exemplary punishment of murderous assault against the exacerbation of the conditions by which such assaults are bred. It is an old, and bitter, dilemma.

As things are, the Governor did not feel able to temper justice with mercy and things threaten to go from bad to worse. He is, in fact, in a cul-de-sac. The hope that a firm hand, with Archbishop Makarios deported, would prepare the way for a reasonable discussion of the island's future is being brutally dashed. With every agonising decision it becomes more evident that the only possible way out is to offer fresh proof now of the British resolve to give the Cypriots real self-government and that, in the end, a settlement will be reached only by treating with the nationalist leaders.

Nato the Unready

WHETHER last week's Nato meeting was a success or a failure is unlikely to be apparent before December. On the face of it, the meeting fell far short of the build-up it had received. It reached no major decisions, its communiqué reflected compromise rather than true agreement, and it was an object lesson in the futility of collecting fifteen ministers to discuss a basic issue without due preparation at lower levels. Nato's permanent council has had the question of Article Two, with its vague economic and social aims, on its plate since December, and it might have been expected that the ministers would have before them some clear recommendations rather than a mere catalogue of what various bodies were doing to further these aims; the evident reason for this lack of preparation was that the political pressures for actually doing something have only lately come to a head.

The meeting was in fact either too early or too late. Had the ministers been as convinced in December as they now seem to be that it is time to make Nato more than a military alliance, the permanent council would have been stimulated to feed them specific proposals in good time; while, if the ministers themselves had been convened at a later date, they might have gone to Paris with plans, rather than undigested first thoughts.

In the circumstances, the council did about all it could do. It agreed that the "political aspects of economic problems" should be periodically examined; it reaffirmed Article Two and instructed the permanent representatives to do what they could to implement it pending fresh ministerial guidance; and to study the French proposal for a new agency for world economic development. It appointed the foreign ministers of Canada, Italy and Norway to consult with member governments and then to recommend ways of developing non-military co-operation and greater unity. And it affirmed that any new ventures should supplement, not supplant, Nato's basic task of defence.

Mr Pearson's Broad Mandate

THE ball is now with Mr Pearson, Signor Martino and Mr Lange. It is tempting to say that the designation of these "three wise men" (or "three blind mice," to use Mr Pearson's own phrase) is simply a device to let public opinion down gently, and that little more should be expected of it than of the first Pearson committee, which reported on Article Two, with scant results, in 1951 and 1952. But to do so would be to ignore the fundamental changes of

the last five years. The war in Korea is over, the Nato military build-up (however poor its present shape may be) is levelling off, Soviet tactics have changed and the cohesion of fear has given way to the divisive strains of uncertainty. The second Pearson committee is, moreover, being launched on the crest of a wave of debate and soul-searching about the West's spotty record in the cold war. Healthy dissatisfaction is always a good starting point for new initiatives. Finally, the "Three" have a broad mandate; they are unhampered (if unhelpt) by much advice from their colleagues, and they have behind them not only a deep reservoir of public support in Europe, but a new willingness on the part of Americans to think about Nato in fresh terms. Mr Dulles's recent statements have not been entirely consistent; but two things emerge. First, he is thinking of the development of the Atlantic community much more in political than in economic terms. Partly this reflects his own tendency to ignore the connection between high policy and sordid economics; but in part it reflects the view, shared by British ministers, that a major economic role for Nato is seen to be set about with snares as soon as specific proposals are examined. The second thing that emerges is that the problem today is not merely how to implement Article Two, but how to marshal the resources of the West (not forgetting the essential military base) for the decade to come. Mr Pearson and his two colleagues should stretch their already broad mandate to the limit.

The Marathon Committee

THE Government's hopes of completing the committee stage of the Restrictive Trade Practices Bill by Tuesday night were not fulfilled; after seven full days of debate the House has only reached Clause 20 of this forty clause Bill. Yet this marathon of the specialists has been well worth while; the discussions have gone the right way. A small band of Labour and Liberal members have taken over the proper role of a left wing opposition on the matter, helping a willing President of the Board of Trade to tighten what he already hopes is a fairly tight Bill and taking tactical care occasionally to run a little ahead of him. On the other side of the House, the campaign threatened by a group of restrictionist Tory MPs has slowly collapsed. "I was disappointed with my right hon. friend's reply, but I appreciate his difficulty and I therefore beg to ask leave to withdraw the amendment," said Sir Lancelot Joynson-Hicks, somewhere back on Clause 8—and that mirrored the tone of the Tory "revolt." The only real moment of apprehension was when Mr Thorneycroft decided to amend the so-called "stinging tail" of the vital Clause 16. His amendment, however, when examined, merely confirms that the carefully limited arguments that can be put forward by the defenders of any restriction will be weighed in the "balance" against any detriment to the public resulting from the restriction. This is what laymen had always thought that the "tail" to Clause 16 meant; the amendment ensures that lawyers will now think so too.

The Bill is therefore over its main hurdle; provided the right sort of lay members are appointed to the new courts, it may be going to give British industry a much bigger and healthier spring cleaning than industry at present

anticipates. But there is still one way in which the Bill could be made even better. Although the remaining 20 clauses to run the gauntlet of the committee are mainly technical—and can probably be handled in one more sitting day—there is one important amendment still to be discussed; it is the only amendment of major principle that it has seemed obviously desirable to thrust through into the Bill from the start. Clauses 22 to 25 of the Bill restrict the powers of the present Monopolies Commission, in order to keep it "out of the hair" of the new courts. But the President of the Board of Trade at present tells the commission what fields or industries it is to look into; he can avoid this clash of jurisdiction, if he wants, by executive action. By incorporating these unnecessary clauses in the Bill he is throwing away a useful reserve weapon out of sheer statutory tidiness of mind. Why? Cannot those Tory members who believe in the attack upon restrictionism—and there are some—jostle an otherwise excellent Bill in the way it ought to be going by threatening to join with Labour and the Liberals in a revolt about this?

A Frogmarch for Sir Anthony?

THE Prime Minister's statement on the missing "frogman" on Wednesday was right in substance but maladroit in expression. Its cryptic melodrama has delivered him into the hands of the Labour party. In caricature of a British diplomat's normal reaction, Sir Anthony obviously considered that the Russians would give more weight to an assurance from him, than to an assurance from an under-secretary, that whatever Commander Crabb may have been up to in the waters round the cruiser Ordzhonikidze it was unauthorised by any Minister of the Crown. But the Russians are not made that way. As for the British public, especially those that know their secret service, they should already have been ready to seize, even without any statement, the obvious inference that the initiative came from somewhere lower down; it is not even impossible that it came from Commander Crabb himself and that the "disciplinary action" of which the Prime Minister spoke is directed rather towards an accomplice than a superior.

On the face of it, whoever blundered seems more likely to have done so out of rather boyish enthusiasm than out of intelligent secret service zeal. Whatever secret the Ordzhonikidze possesses the Russians can hardly rate the ship herself very highly; otherwise they would not have sent her to Britain, nor would Mr Khrushchev have humorously offered to sell to Britain ships of this kind which he considers obsolescent in terms of thermonuclear warfare. The incident was a piece of stupidity (if only because it was found out) rather than iniquitous. No doubt it was highly regrettable, but Commander Crabb paid dearly for it, and Mr Gaitskell and other Labour MPs cannot be proud of their intention to make use of it for party purposes. They did so on Wednesday because they wanted to be able to show that somebody else had been "rude" to the Russians. In the public interest, and in private decency, it would be much better if both this and the dinner incident were now to be regarded as closed.

A Saar Agreement in Sight?

FOR anyone who wants to make trouble between Frenchmen and Germans, the Saar provides obvious openings; the only question is which side to take. Last weekend the East German regime got over this difficulty by intervening on both sides. It invited the Saar and West German governments to meet with it and show the world that all Germany agreed that the Saar was German; and it told the French that it opposed the incorporation of the Saar into the Federal Republic if that meant that its industry would serve West German rearmament.

These interventions may have been prompted by the approach of tomorrow's local elections in the Saar, which have taken an ugly turn. According to French reports, a campaign of intimidation has begun against Herr Hoffmann's supporters and candidates, and last week the *Landtag*, on Dr Schneider's inspiration, refused to allow Herr Hoffmann to take his seat. France protested, and the Council of Western European Union has agreed to set up a tribunal to investigate cases of discrimination.

The political return of the Saar to Germany has, however, been recognised as inevitable by France, whose concern now is not to lose all its economic privileges there—to prolong the currency union with France as long as possible, and to retain some stake in Saar coal and steel. At present French prospects seem poor. France now seems unlikely to retain even a share in the Röchling steelworks; and it has had to retreat from its aim of extracting 130 million tons of coal from the Warndt mines between now and 1980, although the expansion plans of the Lorraine steel industry assume supplies on this scale.

Both governments, however, seem confident that complete agreement can be reached this month—one reason evidently being that the Germans have agreed in principle to the project for a canal along the Moselle valley. For the Federal government to take this step would be truly courageous, for German industry has little love for the canal scheme, which will improve Lorraine's competitive position. But, with the Saar lost, the Moselle canal seems vital to France; the Lorraine steel industry is so intent on it that French steel spokesmen have threatened to withdraw from the coal-steel pool if it is not carried out. German agreement to the canal project would indeed be a precious demonstration of good will towards both France and "Europe."

German Moods

THE abuse hurled at Sir Winston Churchill this week by some sections of the German press revealed two highly disturbing things. One is that an irresponsible journalist can count on a good many readers having such short memories that he can perpetrate a remark like "Hitler and Churchill are very similar in that they brought about a deep communist advance into Europe." The other is that the campaign of venomous attacks on Sir Winston—which no German paper of standing has joined—was initiated by a Düsseldorf organ of the Free Democratic party, a mouthpiece of the nationalistic "young men" who together with the Socialists now control the government of North Rhine-

Westphalia. The crude falsehoods published by this paper, which has also urged that Germany should make the anniversary of Sir Winston's acceptance of the Charlemagne Prize a day of mourning in future, have found their strongest echoes in the local press of the same area. Something of this spitting ultra-nationalism was reflected in the crowds that milled round British-occupied houses in the same *Land* last weekend. Their appearance had been provoked by the *Bundestag's* refusal to give the Federal government fresh requisitioning powers, and the position in regard to these houses remains anomalous and unsatisfactory, as will also the matter of support costs for allied forces until the present interim arrangements are replaced by something more definite.

The Federal government is fully aware of the power of the political "wild men" and their followers to whip up anti-western feeling and to harm Germany's relations with its friends; but it has pushed on steadily with its programme, and, in addition to the Saar and Moselle negotiations, has secured a first reading in the *Bundestag* for its conscription bill, relying heavily on the argument that without conscription Western Germany will not be able to carry out its pledges to its allies. The debate, held last Friday, revealed some unexpected developments. The Free Democrats and the refugee party did not, in the event, flatly oppose conscription. Dr Mende, the FDP spokesman on defence, again argued the case for creating a territorial militia alongside a professional army, ignoring the government's warning that such a militia could not be kept sufficiently prepared to meet the kind of threat that Germany faces. For the Socialists, Herr Erler suggested that it should be enough merely to create a force that would counterbalance the East German army. None of the opposition speakers seemed to take much account of May Day's reminder that the East German regime now controls not only an army, naval and air units, but also a network of factory "fighting groups," and a "sport and technique association" which alone has some 300,000 members and is controlled by Herr Grotewohl's ministry of defence.

New Threat to the Muslim League

THE inaugural meeting of the West Pakistan provincial assembly opens on May 19th. It will reveal whether Dr Khan Sahib has gained sufficient support for his new Republican Party to give him political mastery over the newly formed province. At present his prospects seem good. It was the Muslim League itself which provoked him into forming the new party by its attempt to oust him from the chief ministership of the province. By doing so it may well prove to have sown the seeds of its own defeat. If so, Mr Daultana, who seems to have been the moving spirit in the campaign against Dr Khan Sahib, will once again have overreached himself. There is no dearth of important recruits for the Republican Party, among them being Malik Feroze Khah Noon and Sardar Abdur Rashid, former chief ministers of the Punjab and the North-West Frontier Province. Indeed, the possibility is even being canvassed that Mr Suhrawardy and his Awami League may join up with the Republicans; the Awami League, as such, may not matter a great deal, but Mr Suhrawardy emphatically does.

What happens in the western province is particularly important in the wider context of Pakistan's first general elections under the new constitution, which are expected to be held next February. Whichever party controls the western wing will be in a fair way towards controlling the country as a whole. And in the intervening period an awkward position may develop for the present government at the centre: it is a coalition government with the League as senior partner, and if the League loses political control of West Pakistan, as it has already lost control of the East, it will be left high and dry. The League's chief asset, as things stand, is the prime minister, Mr Muhammad Ali, whose personal prestige is much higher than that of his party. The developments in West Pakistan are extremely embarrassing for him.

The Earnings Muddle

THE earnings rule for old-age pensioners is widely resented and therefore widely evaded, is complicated to administer and apt to discourage those who do not evade it from taking up part-time employment. But it is a necessary complement to the retirement condition—to the principle, embodied in the Beveridge report and the 1946 legislation, that a person must have retired from regular employment before he is allowed an old-age pension in the first five years of his reaching the minimum pension age. If the earnings rule were abolished, the retirement condition would have to go too.

Some people, notably Professor Cairncross in a reservation to the Phillips Committee's report on old age, have urged that both should be abolished, though Mr Cairncross hoped that before abolition the minimum pensionable age would be raised by three years. But the Government has always firmly maintained the retirement principle and therefore left out any consideration of it from the terms of reference of the National Insurance Advisory Committee, which was recently asked to report on the earnings rule. The committee has thus been forced to tinker with the existing provisions and has by its recommendations (the main ones have been accepted by the Government) so increased the complications of the rule that two members wrote a spiritedly dissenting note to its report.

It is quite clear why the retirement condition is still to be in force. To abolish it would cost the national insurance fund £76 million immediately. This would be the formidable price of paying pensions to the 450,000 men and women who have elected to continue at work after reaching the minimum pensionable age. But why allow this awkward barrier to block an advance for everybody else? The logical solution is surely to abolish the retirement condition and the earnings rule for all new pensioners, but not for those who are now within the first five years of the pensionable ages. They would be no worse off than they are now, and those of them who have not retired would receive the higher pensions they are entitled to on retirement. If this step could be accompanied by a decision that when next pensions are raised (and they will be raised some time) the increases should go only to men over 70 and women over 65, the aim of a longer working life—and of maximum national production—would be brought much nearer achievement than it is by the present complicated arrangements.

Fewer Conscripts Please

TWO steps seem to be under consideration for moving towards a more selective system of conscription. First, the call up of those in medical Grade III may soon cease. The army has long felt that it is unfairly singled out as the repository, under universal service in peacetime, of this annual crop of men of substandard physique or mentality. The RAF and navy declare that they can find no jobs for such men, and the army only does so by relegating them to jobs that are increasingly obsolescent in an increasingly highly-skilled organisation, or could probably be better done by civilians. There is everything to be said for raising standards of entry at once. The Government is apparently also considering, at the other end of the scale, the question of granting exemption to science or engineering graduates with first or second class honours who intend to go into industry. More caution is needed here; but the principle of selectivity is the right one. As and if the need for conscripts falls, the trend should be towards calling up fewer men but still for the present period of service.

How far is the need for new conscripts falling, perhaps even towards no need at all? The answer seems to be that figures of "prolongations" have responded most encouragingly to the new differential pay scheme, but the figures for recruitments less so. Recruiting as a whole rose by only 5 per cent in March, but the number of three-year men prolonging their engagements was up by 50 per cent compared with March, 1955. It will take some months—as it did when pay was increased in 1951—to see how far this improvement will go—or how soon it will tail off. It is certainly not large enough yet to produce the extra 100,000 long-service regulars needed to end conscription. No chickens can be counted; but the noise inside the eggs should be listened to attentively. As one sign that this is being done, the new system of organisation of the Territorial Army, announced this week, was openly stated to be preparing the way for the time when this force will again be a wholly voluntary one.

"Smoking is Deadly"?

WHEN the Minister of Health was asked about lung cancer and smoking in the House of Commons on Monday, he allowed himself to get off the fence—but not to go a single step beyond it. He quoted the opinion of an expert of the Medical Research Council that

the fact that a causal agent [in tobacco smoke] has not yet been recognised should not be allowed to obscure the fact that there is, statistically, an incontrovertible association between cigarette smoking and lung cancer.

Having said this, however, Mr Turton maintained that in the present state of knowledge a national publicity campaign about the danger of smoking "would not be appropriate." He may be right, if he was thinking of the same sort of campaign as was waged on behalf of immunisation against diphtheria. That was successful largely because it was based on instilling fear—"diphtheria is deadly"—and on the firm ground that immunisation was a well-trying means of preventing the disease. With smoking and lung cancer, the issues are not so simple. The fear is already

there; indeed, one of the most difficult tasks for health education is to convince people that fear of cancer, which deters them from obtaining an early diagnosis, gives the disease a powerful ally. Nor do the statistics show that smoking, even heavy smoking, is always deadly.

But this does not mean that the Government can do nothing. Since the case against smoking is largely statistical, and the relevant statistics are buried in medical literature, there is much to be said for a simple official version being distributed. Mr Turton promised to keep the public informed of all the relevant knowledge "when it becomes available," but he said nothing about telling it what is already known. To take an obvious example. What the man who smokes 20/30/40 cigarettes a day really wants to know is how great seems to be the chance that he will die of lung cancer in the next 10/20/30 years if he is now aged 30/40/50. It is no good leaving it to popular newspapers to compile tables of this sort, because by such means as reliance on present lung cancer rates instead of lung cancer trends, the figures can easily be biased—or suspected of being so. Let the Government call the odds.

Two Loans for Burma

THE two agreements between the World Bank and Burma signed last week demonstrate that it is still possible to lend money to a "neutral" nation on ordinary commercial terms. This in itself is an accomplishment in the new era of east-west competition in economic aid. But the limited nature of the new agreements is a reminder that the West cannot very well compete on equal terms with the Russians in helping countries that happen to have the wrong surpluses for export.

One loan is of \$14 million and will help finance the reconstruction of cargo berths and storage facilities at Rangoon and the purchase of floating harbour equipment. The other, of \$5.35 million, will go towards the improvement of Burma's railways. The first loan is for twenty years and the second for fifteen; both are at the Bank's usual rate of 4½ per cent.

Neither of the loans will meet the full cost of the programmes for which they are intended. The total cost of the Port of Rangoon development plan is estimated at \$19.3 million. The World Bank's share of the railways plan will be much smaller; the Burmese government intends to spend \$35 million on its railways in an ambitious programme which provides for the relaying of 200 miles of track, the repairing of 50 minor bridges, and the building of a new bridge across the Sittang river to replace one destroyed during the war; this last will restore rail service between Rangoon and south-east Burma. The World Bank's \$5.35 million will pay for imports of rolling stock and bridge-building materials.

★

The agreements represent a happy conclusion for the patient labours of two World Bank missions headed by Dr Antonin Basch. The first of these, which visited Burma in January, 1955, recommended that no loan be granted to Burma until it reduced the size of its development programme—considered to be too ambitious—and restored the

balance of the programme in favour of agriculture rather than industry. A second mission, which reached Burma in October, at one stage tentatively decided to recommend a loan to help its agricultural programme, but abruptly revised its plans when Burma accepted a Soviet offer of agricultural assistance.

The new loans by the Bank—35 per cent of whose capital is provided by the United States—probably represent the limit of American ability or readiness to help the Burmese economy under present conditions. Since the Burmese government rejected bilateral American aid three years ago, assistance from the United States has taken the form of Colombo Plan grants; these came to \$21 million between 1950 and 1955. Burdened with a rice surplus of its own, America has scarcely been in a position to compete with Russia in buying Burmese rice, of which Mr Mikoyan agreed last month to take a further 400,000 tons over the next four years, in return for Soviet machinery and other goods. In contrast, the United States agreed in February to sell \$20 million worth of raw cotton and other surplus agricultural products to Burma, against payment in Burmese currency. As a gesture, this may or may not have successfully matched Russia's projected gift of a sports stadium and a theatre for Rangoon.

Apartheid Behind Closed Doors

THE South African government already has extensive powers to prevent its citizens from leaving the country, and uses them; it is now taking new powers to deport persons who do not hold South African passports. This category includes settlers who have not yet qualified by six years' residence to start negotiations for South African citizenship, as well as those who prefer not to have it. The fear is that the authorities will dangle their new powers over the head of anybody who expresses more liberal views on political and racial issues than the Nationalist party. They certainly seem to be taking those powers in a strangely clandestine way, by a blanket clause embedded in a minor bill for tightening control over deserters from ships and unauthorised immigrants generally, and this inevitably engenders suspicion.

Paradoxically, the South African government is thus seeking to hold a permanent threat over the heads of its citizen-probationers at a time when South African circles are expressing concern that the spate of critical books about the Union and the bad press which it is getting overseas are choking off the intake of much-needed immigrants. The

**"You want to
cut your costs—
so do I!"**

**DOWN WITH
SUPERFLUOUS
PROCESSES**

Here is something that can save you money, and speed your production: long-run manufacturing concerns have proved it. It is a polystyrene plastic for mass production by injection moulding. Its name is Lustrex.

Lustrex can replace many costlier and less stable materials. But it is no mere substitute—it is a material in its own right... tough, handsome and time-saving.

In many trades Lustrex cuts out whole processes—does away with preparation of material, finishing, assembling and colouring, and quite a few storage problems, too. You can get from "raw" Lustrex to finished, marketable part or product in one operation.

Lustrex is versatile too. Many modern radio cabinets are attractively moulded in Lustrex—and so are toys, electrical fittings, household wares, and packages for cosmetics, toilet accessories and a thousand and one other products. In modern refrigerators, it is used to make Freezer Drawers and Doors, Drip Trays and Door Trims.

Can you afford to ignore the advantages Lustrex can bring you?

Send this coupon for more information—today.

One trip the Romans avoided

TO CARRY ONE'S BRIDE over the threshold was an old Roman custom. The aim was to thwart evil spirits who lurked at the door and tried to trip the bride. When modern grooms observe this ritual, few of them realise its symbolism of protection.

But modern men of business are well aware of the need for protection of another kind. When a product goes to market nowadays it must be well packaged. Failure of the package is as serious as failure of the product itself. So to safeguard his goods and his reputation the

manufacturer takes care to select the best packaging he can get. And his first choice is usually cartons made of "Thames Board", and "Fiberite" cases.

Every manufacturer wants his goods to reach the user in the condition in which they came off the production line. In cartons of "Thames Board", and "Fiberite" cases they stand up to the chances and changes of their journey. Nothing less is acceptable when the user's satisfaction and the maker's good name are at stake.

Union professes anxiety to get immigrants of the "right type." The Tomlinson commission, which gloomily reached the conclusion that the white proportion in the total population would tend to fall steadily over the next fifty years, nevertheless assumed that the Union would gain at least 5,000 immigrants net every year. That is not a large figure, but it seems to be thought that the only way to make sure that these immigrants are of the "right type" is to be fully empowered to deport those who by deed or word displease the ruling party. Apartheid in practice amounts increasingly to a rigid authoritarian control over all races in the Union. The new measure is not one of the most onerous of these controls; but it is an ironic reminder that South Africa, in locking the world out, is locking itself in with its problem, the explosive potential of which the Tomlinson commission admits almost as fully as the critics. At a time when Freud's discoveries are being reviewed, such an action strongly suggests a neurotic withdrawal from reality.

Troubles in Tibet

CHINA is having trouble in digesting Tibet. Five years after Peking's troops marched in to carry out a "peaceful liberation," there are reports of an insurrection in north-eastern Tibet, the massacre of a Chinese garrison and punitive bombing of villages. These events make a grisly contrast with the songs, dances and imported acrobatic displays in Lhasa that marked the recent inauguration of the committee set up to administer Tibet as an "autonomous region" of China. In a brand new pavilion outside the Potala palace, the youthful Dalai Lama and the Panchen Lama, together with at least two Living Buddhas, declared dutifully that their country's "entry into

socialism" could be achieved only under China's leadership. This was said beneath the watchful eyes of Peking's representative, Marshal Chen Yi, and a contingent of Chinese troops.

Despite these fair words, the meeting showed that Tibet would like to reach "socialism" at its own speed. A Chinese delegate gave a glowing account of the roads his countrymen have built to open up Tibet, the most important of which are those from Lhasa to the Indian border and

from Lhasa to Gartok in the far west. China claims to have spent £43 million on these and on the preparations for building a railway from Chinghai. The committee was also treated to an imposing list of new schools, hospitals and agricultural schemes. But there were frequent references to the activities of "counter-revolutionaries," and several Tibetans insisted that changes must come gradually, without infringing on the rights of the religious authorities. One speaker put these sentiments in bluntly un-Marxist terms: "The government must ensure that the political position and material life of upper class Tibetans, including upper class people in the ecclesiastical sphere, will not be reduced." This must be the only country behind the iron curtain where the building of chanting rooms for monasteries is listed among the achievements of socialist reconstruction, or where rumours of impending reform can be denounced, in the Dalai Lama's words, as a "vicious fabrication." Tibet will not lie quiescent under Peking's rule. A name worth watching is the complicated one of Ngabou Ngawang Jigme, who has been appointed secretary-general of the new committee; he may find that Peking has put him on to an uncomfortable saddle.

The Treaty of Peace

It would be tedious now to enter into any renewal of the controversy regarding the terms of peace. The subject has been fully discussed in the Houses of Parliament, and an address to Her Majesty expressive of the satisfaction of the country has been carried *without a division*—a rare, if not an unexampled, instance of unanimity on such occasions. The peace of Utrecht in 1712, the peace of 1763, the peace of 1783, the peace of Amiens in 1802, the peace of Paris in 1814, all gave rise to acrimonious discussions and protracted party conflicts. This peace stands out alone in our modern annals, as one about which scarcely any difference of opinion worth recording can be said to exist among our public men. Some grumblers, indeed, have been heard to observe that it resembled that of Amiens, which Sheridan (plagiarising from Sir Philip Francis) tersely described as one "which every one would be glad of, but which no one could be proud of." Never was comparison more infelicitous. The converse of the proposition would be far nearer the truth. This is a peace which every Englishman must be proud of, though, perhaps, many Englishmen may be pardoned if they are not glad of it. Those may not be glad of it who have lost valued friends in the strife, and were thirsty for signal and vindictive atonement. Those may not be glad of it who anticipated certain grand and indefinite but indirect results, and who believed that another year of war would have ensured them all. Those, finally, may not be glad of it who, seeing the magnificent preparations for the next campaign, were justly sanguine of distinction for themselves and of glorious triumphs for their country. But most assuredly this is a peace which every one—even these parties—must be proud of. . . . We ought to be proud of it, most especially, just because we are *not* particularly glad of it—because we have accepted it when, had private considerations guided us, we should not have been sorry to have postponed it—because, in obedience to the dictates of equity, moderation, and humanity, we have voluntarily sheathed the sword precisely at the moment when we were best prepared to strike and our foe least able to resist.

Blind Eye on Guillebaud

IT is not perhaps surprising that this week's debate on the Guillebaud report on the cost of the health service should have been so pedestrian. For the report itself has clearly pleased the pedestrian people in both parties: the Conservatives, because it did not recommend any unpopular or difficult measures; and the Opposition, because it did not find any evidence of the widespread extravagance in administering the service that the Labour government used to be accused of permitting.

Thus the debate consisted for the most part of a review by the Minister of the committee's few recommendations and what the Government was doing about them, and of comparatively minor points raised by other speakers—as might have been foretold, Dr Summerskill started the old hare about the cost of proprietary drugs. But what was sadly lacking was any speech dealing in full with the fundamental question raised by Sir John Maude in his reservation to the report: that is, the absence from the structure of the health service of incentives to administer it wisely and to economise. Those who administer the service do not have to find the money to pay for it—a divorce that has undoubtedly been a major factor in the tremendous rise in hospital expenditure since 1948.

In fact, such incentives as exist in the service are towards expansion rather than contraction. If, for instance, a hospital authority wants to close down a ward it finds itself up against the fact that the matron's salary may fall with the reduction in beds. The less people's teeth need treatment, the smaller the dentists' incomes. It is, of course, easier to criticise the lack of incentives to economy than to propose ways of providing them. But the absence of any such fundamental discussion was a reproach against the report; it is now a reproach that must also be levelled against the Parliamentary debate.

No Light on Blackpool

THE torpid calm of municipal electioneering has been disturbed at Blackpool by most unusual charges of bribery and corruption, concerning (among other matters) land transactions in which councillors are alleged to have participated. The local Liberals have been pressing the Conservative majority on the council to authorise an independent inquiry into these allegations, but have received the reply that the council ought not to spend ratepayers' money on investigations which the local police are competent to perform. An earlier attempt to secure the intervention of the Minister of Local Government failed on the discovery that it would be necessary for both Houses of Parliament to authorise the inquiry as a matter of urgent public importance.

No outsider can know whether this criticism is or is not pure calumny; we certainly do not. But this case raises an important question of principle. Ought there not to be some way of forcing a council to take seriously allegations of this kind? It is no good saying that the best safeguard against the danger of municipal corruption is a vigilant local opposition; given the British laws of libel,

it is difficult and dangerous for local critics to voice their suspicions aloud. Already writs have started to fly at Blackpool.

On the other hand, it would be absurd to set the whole majesty of Parliament and the Realm chasing after every whiff of alleged local scandal. What is needed is an opportunity for the Minister to make a few discreet inquiries and then, if necessary, to prod the local council into putting its own house in order. There is a very proper aversion to giving ministers any more powers of control over local authorities; but powers of inquiry and powers of control are two very different things. It was the lack of the first, and the existence of the second, that always made one feel so sorry for Caesar's wife.

Printers' Offer

THE London Master Printers Association has offered a general wage increase of £1 7s. 6d., to apply from April 20th, to the 8,000 compositors, machine minders and readers whose wage dispute closed down, or sent abroad, many periodicals in February and March. It has also offered to raise the minimum wage from £9 8s. to £11, an increase of £1 12s., but only those on the minimum will get all of this. The first 4s. 6d. of any merit money or house money earned above the minimum will be absorbed in the increase. This offer of £11 is 4s. 6d. above what the court of inquiry suggested, but the court's figure of £10 15s. 6d. was intended to absorb merit money and house rates up to the full amount of the increase in the basic rate. The London Typographical Society, which had asked for a minimum of £12, has thus got 8s. 6d. above what the employers originally offered for a very few of its members, and 4s. for most of them, if allowance is made for the 1s. a point increase under the cost of living sliding scale, which would have given them 5s. by now if they had closed on that original offer. The union executive has recommended acceptance of the new offer in the ballot that takes place this week. In considering these increases it should, of course, be remembered that this is an agreement that is supposed to last for three years.

The other unions concerned in printing have said they will now ask for an increase to restore the differentials (between themselves and the craftsmen) that have been upset by the employers' offer; and the employers have promised a fair adjustment. But the craftsmen partly based their claim on the need to widen those differentials. It is therefore going to be important for the employers to try to stop the merry-go-round firmly here; otherwise it will become a very sad roundabout indeed.

Even Belgium "Squeezes"

THE credit restrictions announced this week by the Belgian government are a significant landmark in Europe's inflation. Whilst Britain, Scandinavia, West Germany and other developed countries have been endeavouring to check expansion for many months, Belgium has so far done little to limit inflation. Discount rates were raised by a quarter per cent last August, but the move was

designed more as a token warning and a response to moves abroad than as an active squeeze. Other aspects of policy remained expansive. Important public works, including a major road programme, were undertaken last year, and the government continued to encourage private investment through "Butler-type" investment allowances, cheap credits, and subsidies to building costs for new industries. Now many of these expansive measures are to be modified—a basic change in policy.

The change reflects the fact that Belgium's large reserves of labour and capacity, which have been so valuable to Europe's boom, are at last nearing an end. Highly dependent on exports, but burdened with high costs, Belgium, in the three years 1952-54, had plenty of slack capacity in all its basic industries. Two years ago, when Britain's inflation was already getting under way, huge coal stocks were still piled up embarrassingly at the Belgian pitheads and many steel and engineering works, marginal to Europe's economy, were idling. But these idle resources have now been sucked up by boom conditions in Germany, Britain and other countries. Last year, for example, Belgian exports to West Germany rose by nearly 50 per cent. Now at last Belgian prices are showing signs of strain, and skilled labour, particularly in building, is becoming critically short. The Belgian economy still has much more room for manoeuvre than the British; big exchange reserves will permit larger imports, and the government is encouraging this. But the new measures are a suggestive sign that Europe's resources are almost fully stretched.

New Brooms and Ceylon Bases

THE new prime minister of Ceylon, Mr Bandaranaike, has now spent his first month in office and has made his mark. Although he came to power as leader of a coalition, in which his own Freedom party is dominant but not all-powerful, his government has settled down smoothly, and the prime minister himself shows plenty of confidence. The main opposition groups—Dr Perera's trotskyites, the Tamil federalists, and the remnants of the long supreme United National party—are in no position to unite against him. He has strengthened his team by bringing in an experienced former minister, Mr R. G. Senanayake, and has pleased the public by his initial statements of policy. It is not entirely clear why he has postponed the Colombo Plan exhibition that was to be held next February (one good reason might be that it would have involved publicising the development programmes undertaken by the defeated UNP); but in spite of his announced aim of making Ceylon a republic, he has publicly and courteously expressed his regrets to the Queen Mother, who was to have opened the exhibition.

He has been careful to speak of nationalisation as something to be carried out "progressively," and has shown less concern with ousting British planters than with ensuring that, as and when they may leave, inefficient Ceylonese private owners should not take their places. He has canvassed the possibilities of more trade with, and aid from, communist states, but has also declared that American aid involves "no strings whatever"; indeed, one of his first actions after taking office was to sign an agreement under which Ceylon will receive \$5 million worth of aid from the United States.

On the tricky question of the future of the British naval base at Trincomalee and the RAF station at Katunayake, the prime minister's attitude has likewise been firm but not fiery. On Wednesday of this week he reaffirmed his unchangeable intention of doing away with the bases, but added that he wished to do so without causing Britain any inconvenience or losing its friendship; and last week in the House of Representatives he and his supporters firmly resisted trotskyite and communist demands that the bases should be abolished without delay. When he comes to the Commonwealth conference in June, Mr Bandaranaike can be expected to listen sympathetically to Australian and other anxieties about the disruption of strategic communications, but to remain unyielding in his insistence that the bases must go.

SHORTER NOTES

When the results had been announced for the first 1,000 seats contested in this week's urban district council elections Labour showed a net gain, according to the best available estimates, of 23 seats. For what it is worth, this sort of turnover—23 per 1,000—is about the average change one would expect in a widespread British election from a one per cent swing to Labour since these particular seats were last contested in 1953; that would approximate to a 2 per cent swing since the general election of 1955, and, if true, might be about enough to bring a maddening near-equality in the House of Commons if a general election were held now. If that trend is also mirrored in the provincial borough elections—the results of which will be becoming available as this issue reaches readers' hands—they might show between 50 and 100 net Labour gains of seats; in the metropolitan borough elections, there might be a threat to Tory control of Lewisham and Paddington (and, less likely, Wandsworth). But this is cited as a measuring rod, not a forecast.

★

A wise decision was made at York by the representatives of the 10 unions involved in the Standard strike. Their chairman, Mr H. G. Brotherton, asked for a top level meeting with the management to discuss the issues involved, and this was arranged for Sunday. In return the executives have told their members to return to work on Monday and—a clever compromise—they will pay strike benefit without recognising the strike.

★

The result of the mid-Ulster by-election was the worst result possible. At this third time of asking, the unofficial Unionist got in on the splitting of the anti-partition vote; the majority against partition rose from 806 in the previous by-election to nearly 2,000, which was close to the majority that was regularly recorded in this constituency until the last general election. Most unfortunate of all, the moderate opposition candidate (Mr O'Neill, who as an anti-partition candidate prefers constitutional methods of change) lost his deposit, and the strongest opposition support went demonstrably to the Sinn Féiner. Thus the constituency is more irreconcilably split than ever into two groups, and is now to be represented by the one party that the slightly larger group has shown three times it does not want.

Letters to the Editor

Self-Criticism to Excess

SIR—The emphasis rightly placed by the Chancellor of the Exchequer on the urgency of increasing our export trade has been followed by a spate of letters to the press. They make serious, though ill-defined, criticisms of British manufacturers and of their attitude towards overseas markets. Without exception, they allege inefficiency, if not downright sloth.

Our national sport of self-denigration is a pastime little relished by British manufacturers determined to expand overseas markets. Both at home and abroad, it is tending to undermine the confidence on which our economic future depends. No manufacturer is inspired to give of his best when enveloped in a miasma of hostile yet unsubstantiated criticism.

We ought, of course, to know the facts. To be of value, however, they should include detailed criticisms of individual undertakings capable of being investigated by some body with the prestige of the Federation of British Industries. Only then can we establish how far these current allegations apply to our export drive as a whole.—Yours faithfully,
London, W.2 F. C. HOOPER

Next Step in Cyprus?

SIR—In your issue of May 5th you show some sympathy with Dr Fisher's strictures on the Government's inaction in Cyprus. Many would share your view that a fresh initiative is required on our side to break the deadlock. For the longer the Government waits the harder it will become even to negotiate, let alone to agree.

The real problem is what the next step should be. You suggest that someone should draw up a constitution based on the common ground between Archbishop Makarios and the Government, "if possible, with the advice and help of the Cypriot leaders." But there exactly is the rub. Another paper constitution will be as sterile as the constitutions prepared in 1948 and 1954 unless it is acceptable to the Cypriots. It will not stand a chance of acceptance unless it is drafted in consultation with their leaders. This, I believe, is a *conditio sine qua non* for a negotiated settlement.

There is therefore some exploratory work to be done before constitutional talks can start again. We must ascertain whether, and in what circumstances, the Cypriot leaders will be willing to co-operate. The Ethnarchy is adamant at the moment about having Archbishop Makarios as their spokesman. We should

consider, as in the case of the Kabaka of Buganda, under what conditions he might be released and permitted to return. The Cyprus Conciliation Committee feels that the best way to prepare the ground for further talks is for the Government to send out immediately a Parliamentary Commission, representing all parties, to collect the views of every section of opinion in the island. Whether or not the mission is successful, it would show the world that we are still doing our best to replace force by reason in our dealings with Cyprus.—Yours faithfully,
LISTOWEL
House of Lords

The Nuclear Power Programme

SIR—The programme so far published envisages that by 1975 the nuclear power station capacity will be between 10,000 and 15,000 megawatts and will save about 40 million tons of coal a year. The figure works up in the intervening nineteen years to this target. (Vide recent HMSO publication, "The Commonwealth and Nuclear Development.")

In view of the present very serious shortage of coal which must inevitably get worse year by year as the demand expands, and which gap is at the moment being filled by oil alone, would it not be more realistic if this programme were greatly accelerated and greatly extended? Unless this is done our economy is likely to be strangled.

It is appreciated that the development of design of nuclear power stations will probably undergo considerable modifications and improvements in the next few years, but nevertheless, having established and tried out the various prototypes, surely a more ambitious scheme could be emplaced on the present programme, which on estimated costs is involving the modest expenditure of £300 million in the first 10-year period.

In view of the fact that our future prospects as exporters of manufactured goods depend on ample and cheap power, it would seem that the size of this programme is much too meagre.—Yours faithfully,
HARRY B. PATEN
Peterborough

Teachers in the Money

SIR—The heading in your issue of May 5th seems inconsistent with your January article on the position of the blackcoated worker.

I quote from the January article: "Where the prewar salary was from £200 up to £700 or so, the present-day

salary should be about three times as large to enable the recipient to maintain his absolute standard of living, and about three and a half times to enable him to keep his place in the community."

Most men teachers in prewar days came within the stated income bracket, £200-£700. Scale III, applicable to all large towns and boroughs except London, was for men, £180 by increments of £12 to £366. If this scale is multiplied by the figures 3 or 3½ which *The Economist* declared to be necessary it becomes, either (a) £540 by £36 to £1098, or (b) £630 by £42 to £1281. The new basic scale is £475 by £25 to £900. From this it will be seen that the assistant master loses at minimum, on increment and at maximum.

The London schoolmaster fares even worse. His prewar scale was: £192 by £12 to £408. This multiplied by 3 gives £576 by £36 to £1224; multiplied by 3½, £670 by £42 to £1428. He will now get a London allowance of £36-£48 in addition to the basic scale, i.e., £511 by £25 to £948. His loss at maximum will be either £276 or £480, according to which standard is used. Can proposals which leave the schoolmaster so much worse off justify the heading "Teachers in the Money"?—Yours faithfully,
HARRY MEIGH
London Schoolmasters' Association

The Struggle for the Border

SIR—Surely it is your reviewer, and not Mr Hutchison, who is in error in questioning (in your issue of March 24th) that it was Charles II who was the subject of the famous remark "who never said a foolish thing nor ever did a wise one"? The Oxford Dictionary of Quotations confirms that this was part of Lord Rochester's epitaph on the King, who was said to have replied "My words are my own, my acts my ministers'."—Yours faithfully,
London, E.C.3 E. J. HILL

[Mr Hill and Mr Bruce Hutchison are right. Our reviewer apologises to Mr Hutchison for his error.—EDITOR.]

The Revalued Penny

SIR—Your correspondent Mr Alexander-Sinclair makes an interesting suggestion of revaluing the penny, but I think this would lead to too much confusion in getting change from a shilling. What we really need is a slight upward valuation of the penny so that we have ten in a shilling instead of twelve. The value of the shilling and the pound would be unchanged and only the price of things costing less than 2½d. would be increased by this change as long as sellers did their duty and made appropriate reductions in pence prices above 2½d. The savings in accountancy and the conduct of business from having 200 pence in a pound would be immense. At a later date we could set about improving our coinage.—Yours faithfully,
P. C. ALLEN
London, S.W.1

Books & Publications

Kenya Testimony

WE BUILT A COUNTRY.

By J. F. Lipscomb.

Faber. 214 pages. 15s.

LAW AND DISORDER.

By Peter Evans.

Secker and Warburg. 308 pages. 18s.

WHETHER Mr Lipscomb would regard Mr Evans qualified by length of residence to write about Kenya or Africans is an interesting question; Mr Evans was apparently there in 1928 and he assisted in the defence of Jomo Kenyatta. But Mr Lipscomb lays it down that nobody can write intelligently and fairly about Africa unless he has "lived in the country," which, from a settler point of view, must be held gravely to invalidate most of the members of the Royal Commission as much as it does the British MPs whom Mr Lipscomb found so uninformed when debating African matters in the House of Commons, as well as mere journalists and visitors.

This is not an idle matter. Mr Lipscomb's title goes to the heart of the settler attitude; and it is not a wholly irrational one. He himself spent the better part of 35 years converting a slab of raw Africa into a fertile farm and gracious country residence; and those who do such things are the people who live in Africa and feel that they have the final argument in all controversy about rights and wrongs in Kenya, or perhaps anywhere in the continent: "I know the African." Mr Lipscomb does not mention the anthropologists, and makes but a passing reference to the missionaries and district commissioners. He may feel that their special interests—to science, God and the Colonial Office respectively—warp their view when it is at variance with his own. But the question which the outsider must ask himself is whether the creating of a fine farm out of a slab of raw Africa—a job for which nobody need apologise and which few have the courage and industry (and capital) to perform—does not itself introduce distorting lenses between the land-breaker or home-maker and the African in the modern scene.

The outsider can thus be profoundly grateful to Mr Lipscomb, who has written a frank, personal and considered settler's testament; but having read it—and it is immensely readable—he may with some profit turn to Mr Evans. Kindliness but firmness irradiate Mr Lipscomb's pages when he describes Africans, and deep melancholy supervenes when he refers to the libels on the Kenya settlers' behaviour in the Emer-

gency, or before. Mr Evans is a lawyer and is not friendly to the settlers, but his book contains plenty of facts as well as accusations—including quotations from Mr Justice Cramm on the Muriu Wamai case, and the story of his own expulsion from the colony. He is in no doubt that there was systematic terrorism both by the Kikuyu home guard and the police and other European formations; and against his presentation of his brief Mr Lipscomb's suggestion that it was the youth of Kenya who put things right looks a bit thin. Mr Evans sees almost only the barbarity of the whites and of the loyalists; Mr Lipscomb sees only the barbarity of the Africans. Both are, however, eye-witnesses; and the outsider—especially the occasional politically-minded visitor to Kenya, whom Mr Lipscomb dislikes so much—must choose between these judgments.

The balanced view is unpopular with either side; but to accept what is truth and experience in both these books, and to face the fact that there is more barbarity in at any rate some of the gentlemen of Kenya than there should be (and certainly much too much bad law among the Kenyan lawyers) as well as the fact that Africans are still far more primitive than left-wing intellectuals care to admit, seems the only sensible deduction. Clearly the Africans require time to come to political maturity and agricultural proficiency, and need the guidance and help of Europeans in the process—but is this a job that can be left entirely to Mr Lipscomb's neighbours and friends? The reasons for a firmly negative answer are to be found in Mr Lipscomb's engaging and truthful but one-sided chronicle as well as in Mr Evans's often annoying and plainly partisan reporting.

The Terrible Ifs

GALLIPOLI.

By Alan Moorehead.

Hamish Hamilton. 384 pages. 21s.

GALLIPOLI takes on in retrospect an air of tragedy, but never one of futility. Victory always seems to be only a hilltop, fifty yards or a few lives away. Perhaps that was all that stood between the Allied Forces and Constantinople. The prize was not simply a town won or a country knocked out of the war. It might have broken the strategic deadlock in France; it might have shortened the war. In Sir Winston

Churchill's phrase "the terrible Ifs accumulate."

Because it was not an empty blood-letting, the campaign never loses its fascination. Many have written of Gallipoli and for many of them it is not smothered by the dark futility of the battles on the Western Front. But none has written so well as Mr Moorehead. He has built his book on the accounts and controversies of others, but he sees the campaign in the round, no detail has escaped his eye and his words are full of sympathy and life. The only criticism that can be levelled at Mr Moorehead is his bias—a very natural one in an Australian—towards the doings of the Anzacs, related sometimes at the expense of the equally brilliant deeds of the British and French forces. But may not his emphasis be right? This was a young man's war where hopes ran high almost to the end; the Anzacs were above all young, untried soldiers. Mr Moorehead is not merely content to recreate their exploits. He shows what they were thinking and how the subtle changes in morale occurred. He has been well served by his publishers, for the book is extraordinarily well printed, and illustrated by maps and photographs. In short, this is an excellent book. It deserves superlatives.

Failure at Gallipoli was built on a series of missed opportunities and of slightly wrong decisions. No one man, no single order was completely to blame. Perhaps the most important decision was not made at Whitehall but on board the *Queen Elizabeth* at Lemnos, where Sir Ian Hamilton and Admiral de Roebuck conferred. Accounts of the conference differ. The soldier, Hamilton, seems to have thought that the initiative in deciding that the Navy could not force the Dardanelles alone came from the admiral, while de Roebuck's message to London suggests that it was only after he had heard Hamilton's proposals on the landing of troops that he decided to abandon the naval attack. But what is clear from this incident and from the mistakes made in the land attack was that the failure was a failure of command. The senior admiral faltered; the subordinate generals lost touch with their troops and the battle. They were the wrong men; they were perhaps too old. But the final reason for defeat may lie in the elusive character of Sir Ian Hamilton. Brave and imaginative, he lacked ruthlessness. Behind him stood Kitchener, throwing too great a shadow on his actions, and Kitchener was steadily losing power in the Cabinet. On the Turkish side of the hill stood two men who did not fail, Liman von Sanders and Mustafa Kemal. Campaigns are won as well as lost and these men won theirs.

Little remains: a few memories, a few lessons on amphibious warfare and at Gallipoli, as Mr Moorehead says at the end of his book, "often for months at a time nothing of any consequence happens, lizards scuttle about the tombstones in the sunshine and time goes by in an endless dream."

Master of the Middle Way

THE AGE OF MACKENZIE KING:
The Rise of the Leader.
By H. S. Ferns and B. Ostry.
Heinemann. 368 pages. 25s.

IN the thirty-eight years since the First World War, the Liberal Party has been in power in Canada for twenty-eight. For twenty-two of these Mackenzie King was Prime Minister. In this book, the authors, both Canadians, working at the University of Birmingham, have made a study of his early formative years in an attempt to elucidate the secret of such unprecedented and tenacious political success. What were the forces that shaped Mr King's "conception of what politics is about"?

Such a study is of undoubted interest, and the authors have explored numerous important firsthand sources in search of data bearing on the fundamental questions they raise. Unhappily the air of malicious flippancy with which they seize on any fact or any interpretation discreditable to Mr King gives the reader an uneasy impression that the selection of evidence is biased and the findings unfair. This is a pity, because the writing is lively and highly readable, and the authors address themselves to problems of considerable moment in considering the special characteristics of Canada, notably the country's constant preoccupation with the "orbit of the United States"; the "presence of so many traditions" with "the absence of any tradition common to all Canadians"; and the impact in Canada of the universal problems of industrialism.

They are disappointingly less successful in conveying an impression of Mr King's mind and character, unless, indeed, he was merely the "impersonal, secretive, political technician," the featureless, political calculating machine they depict; a brilliantly effective parliamentary politician, but one, they imply, whose methods and objectives revealed deliberate and consistent hostility to wage-earners. Mr King's belief in conciliation is decried as the ultimate betrayal, a means whereby workers are hoodwinked into accepting exploitation. The case is provocative, but it is not proven. Admittedly, critics at the other extreme regarded Mr King as a "troublesome radical." Pursuing unheroically the middle way, using the arts of persuasion, "soft" instead of "hard" tactics, is not necessarily to "play both ends against the middle." It may be the necessary and useful process of democratic give and take. Notwithstanding the contrary views of Mr Ferns and Mr Ostry, there is surely value in the achievement of some measure of social harmony, of holding back a country from the abyss of antagonism threatened by the "enormous social tensions of industrialism," even if this can only be done by the "political quietism" so bitterly described: "In retrospect doing nothing looks better than doing something only because Mackenzie King's more dynamic rivals were so hopelessly bent on fatal forms of activity. Mackenzie King had no policies which led anywhere, but he

had technique. He resembled an engineer in charge of a great powerhouse. Most of the time he did nothing, but he knew how to do nothing and why he was doing it." In fact, the record of the Liberal party in Canada under Mr King's leadership is one of constructive achievement.

It seems to be Mr King's fate to evoke violently controversial books. It will be many years before his role and his quality can be appraised in true perspective in a definitive biography, but meanwhile this book whets anticipation of the official biography.

Behind the Red Tape

THE CIVIL SERVICE: *Some Human Aspects.*
By Frank Dunnill.
Allen and Unwin. 226 pages. 18s.

PARKINSON'S Law applies to books about the civil service as much as it does to the service itself. But apparently demand keeps up with supply; there has been no clipping; and Gresham's Law is not yet relevant. Mr Dunnill's book follows a known pattern, which is determined by the nature and education that make the good civil servant. It is based on experience rather than research, and thus tends to be discursive, a little short on quantities and proof, and blessedly willing to assert facts without relying on authority. There are no footnotes and few references: in such a book this is a virtue; one man states his views and takes full responsibility for them.

The book has another civil-servant-like quality: the author writes most and best of what he knows, but feels a duty to sketch in a good deal of rather second-hand background about everything else that civil servants do. This is well enough done, and accurate, but can be found elsewhere. It has not the authority of Mr Dunnill's exposition of his main theme—the origin, training and methods of work of the great middle-class of the service, the so-called Executives, the real *ronds-de-cuir* on whom cartoonists and citizens alike rely.

Mr Dunnill treats his subject with humanity and accuracy. As a skilled ecologist, he sets his civil servants in their surroundings and describes their life. He is fond of them, but aware of their faults. He analyses very clearly the origins of all that we associate with the phrase "red tape"; at times, perhaps, a little too clearly, since his categories are sharply defined and the contrasts between one kind of civil servant and another are a little more definite than they seem in real life. But, if anyone wants to see the truth behind the cartoon (or the irritating letter he has just received), he cannot do better than read Mr Dunnill.

His remedies, like his diagnosis, are undramatic. They mostly consist of more and better training, catching the executives while they are young and keeping them supple and interested in their work. The knot of red tape is not a Gordian one. But, as the service's

size and scope of work increase, it becomes more important that the public and the civil servants should understand each other, and that the word "service" should have a real meaning. This is the moral of Mr Dunnill's book.

The Lettered Amateur

THE ENGLISH SENSE OF HUMOUR.
By Harold Nicolson.
Constable. 208 pages. 15s.

SIR HAROLD NICOLSON is not only a delight to read: he is a lesson to our age. In the field of biography and literature, no one could be more professional; as a general essayist, he is the last and happiest survival of the lettered amateur. None of the trappings of research for him; yet there is plenty of learning. His sources are pleasingly secondary and selected (in a recent book he disclosed his technique of writing a personal index in each book he reads, so that a tour of his shelves provides him with chosen references on any subject); and they are used to illustrate a long knowledge of humanity. This is a collection of essays and lectures written over the last ten years. They are diverse in weight and subject, but all alike are stimulating and well written. His essay on the English sense of humour is the longest and most ambitious, but not perhaps the most successful. It quotes a number of

Announcing

MONEY, INTEREST, AND PRICES

An Integration of
Monetary and Value Theory
by Don Patinkin

The Eliezer Kaplan School of Economics and Social Sciences, The Hebrew University, Jerusalem.

Developing monetary theory by a general-equilibrium analysis of the commodity and bond markets—in preference to the more usual partial-equilibrium analysis of the money market alone—is the central concern of this book.

The text of the book is designed for the general student of monetary and employment theory. For the specialist, the book also contains a Mathematical Appendix and Supplementary Notes and Studies in the Literature.

Recent
SOVIET ECONOMIC GROWTH
edited by Abram Bergson

ROW, PETERSON AND COMPANY
Evanston, Ill. White Plains, N.Y.
U. S. A.

authorities (always without detailed references, to preserve the author's amateur status) and proves... what? Nothing very new or very unfamiliar, but it is a pleasant analysis of what *Punch* used to contain and, more dubiously, why.

In two other essays Sir Harold appears more professionally. One is a sympathetic account of Tennyson's two verse-writing brothers, Frederick and Charles—a by-product of his book on the poet. Another is a comparison between Swinburne and Baudelaire, whose life-story and circumstances showed many points of similarity. Sir Harold picks on the points of difference and concludes that Swinburne was right when, in his old age, he said that he never had really had much in common with Baudelaire.

There are brief, sensible and evocative pieces on the health of authors (a lecture to doctors on the physical and mental concomitants of inspiration), the practice of biography (a piece of lapidary commonsense) and Alexander the Great (shown to the readers of *Life*). Finally, and best of all, there is an admirable lecture on nature in Greek poetry. It is the kind of subject that shows the lettered amateur at his very best. Sir Harold knows the classics better than most of his generation (though he acknowledges his debt to cribs), and can illuminate his knowledge by a rare experience of European literature, of countries and of men. This lecture is short, but all roses.

Pious Record

THE FIRST FIFTY YEARS OF THE RHODES TRUST AND THE RHODES SCHOLARSHIPS, 1903-1953.
Edited by Lord Elton.
Blackwell. 282 pages. 27s. 6d.

AMONG the illustrations in this pious but lively record there is a reproduction of a *Punch* cartoon: across a sacred Oxford quad strolls unconcerned a young gentleman upon whom, from a dark sky, one shaft of sunlight strikes. From a pair of sober college friends, keeping well off the grass, comes the caption: "Rhodes Scholar, no doubt!" Perhaps, indeed, the young gentleman in question was one of the Rhodes scholars about whose testimonials a Balliol don once exclaimed: "Every one of these men is a cross between the archangel Gabriel and C. B. Fry." It would be more pleasant to think of him as the youthful Senator Fulbright, who has come nearer than any of his fellow scholars to matching the vision of the founder, by harnessing the powers of the United States Congress to achieve in the modern world a goal attainable in 1902 only by personal imagination and private bounty.

This jubilee history may entertain a wider public than the "old boys" for whom it is primarily intended. The contributions by Sir Carleton Allen and the late Sir Francis Wylie may answer the now traditional Oxford question: "What on earth is Rhodes House for?"

They also play gently with some of those tea-cup storms ("Which college?" "What degree?" "What about 'colour'?" "What about...") which look so minor today but which must have bulked large when a magnanimous scheme had to be adapted to the habits of a conservative academic society. Yet never from the first was there any prospect of the Rhodes scholarships figuring as yet another lost cause. The present survey is sparing of individual praise, but a record which includes one O.M., one Nobel Prize, twenty-four heads of universities and a prize-winning crop of public servants must testify to the soundness of both selection and indoctrination. Most gratifying of all, to those who nourished the Rhodes Trust in its infant years, must be the number of comparable fellowship and scholarship schemes directly or indirectly influenced by the seminal notions of that Drake-like figure so oddly referred to, in these respectful pages, as "Mr Rhodes."

Oxford readers in particular will enjoy this allusive chronicle. But Cambridge readers, too, may derive from it a certain saturnine satisfaction.

Wit and Wisdom

MISCELLANY-AT-LAW.
By R. E. Megarry.
Stevens. 431 pages. 25s.

THE best way to read this book is to turn first to the index, upon which incalculable care and wit have been lavished. Select any one of dozens of intriguing entries and then read the scintilla of legal wit or sagacity or absurdity to which it relates. For example, among the C's we find: "chameleon, bill of lading as"; "cleaver, cook's head divided by"; among the D's, "dead hand slaps living body"; among the E's "Elijah's mantle, coupons for" and "Eve not condemned unheard"; among the F's, "fish auctioneer's wedding publicity" and "full bottomed wig stopping Blackfriars Bridge." The quality remains the same down to "zoological gardens, camel's hair collected in."

Mr Megarry has performed the extraordinary feat of retaining in his mind over the years and setting down a vast corpus of legal entertainment. The humour of the lawyers, like that of the politicians, has to be heard in its environment and away from it is in danger of falling flat. Mr Megarry, who can even extract a laugh from the Rent Acts, has skillfully created the setting in which his collected gems may sparkle. It will be recalled that among those on Ko-Ko's little list was "that nisi prius nuisance who just now is rather rife, the judicial humorist." Those who have suffered from judges anxious to preserve their reputations as judicial wits will be relieved to hear that few of the real professionals occupy much space in this book and that at least one of the most trying does not figure at all. In any event, the book is not concerned only with humour. All lawyers will read it as a matter of course, but it will be

A Cynic in Europe

INTEGRATED EUROPE?

By Michael T. Florinsky.
New York and London: The Macmillan Company. 192 pages. 24s. 6d.

"EUROPEAN INTEGRATION" is a term that has come to mean all things to all men and frequently several things to the same man. Mr Florinsky, after a facile, entertaining and in places superficial survey of the origins and accomplishments of the European and North Atlantic organisations which have included "integration" or "unity" among their objectives, reaches the conclusion one would expect: that little progress has been made toward real unification, but that much has been done to solve the underlying problems that fed the drive toward unity. The programme of rebuilding the European economy after the devastation of war and the creation of organised military strength has been a success. Few would quarrel with this broad conclusion. But Mr Florinsky takes such obvious pleasure in puncturing the balloons of those who have overstated the case for European unity, and its achievements, that his strictures are apt to be discounted by those for whom they are intended.

By emphasising how far short of real integration Western Europe still is, economically, politically and militarily, and by testing international organisations not by what they have achieved but by how far short they have fallen of the most ambitious sentiments in their charters, Mr Florinsky convincingly demonstrates that enthusiasm "on the banks of the Potomac" and among a dedicated minority in Europe has far outrun accomplishment. But he has failed to give the general reader any real understanding of the radical change in the business of international relations that has taken place since the war. All kinds of problems, which not long ago were jealously guarded national prerogatives, now form the daily grist of Nato and the OEEC. Mr Florinsky's more acid paragraphs are reserved not for these two organisations, both of which he is prepared to find useful, but for the "supra-national" organisations such as the Coal and Steel Community and the stillborn European Defence Community. This is understandable, since only those organisations make any pretence of changing the basic pattern in Western Europe from one of co-operation among sovereign states to that of a new federal system. As Mr Florinsky points out, the Coal and Steel Community is a living testimonial to the difficulties of seeking to integrate two sectors of the economies of six highly industrialised states while leaving the other sectors of economic life untouched—his doubts about the merits of further

experiments with the "sector" approach would find strong support among the most ardent "Europeans." But the radical change brought about by the Coal and Steel Community, the shifting of the burden of proof so that those who want to interfere with the operations of the common market must prove their case, rather than that each step towards its creation should be the subject of prolonged inter-governmental negotiation, is buried beneath complaints about the complexity of the treaty.

"Integrated Europe?" is provocative on every page. It also compresses into short and readable form a mass of information about the jungle of European organisations that have sprouted, or come near to sprouting, since the war. But the serious student may be put off by minor inaccuracies and the heavy reliance on secondary sources for facts and, at times, opinions. And some may be perplexed by the exuberance of the cynicism.

Communication Unestablished

STUDIES IN COMMUNICATION.
Contributed to the Communications Research Centre, University College, London.
Secker and Warburg. 189 pages. 21s.

IT is not easy to decide how seriously to take the rather fashionable subject with which this book is concerned. Scientific advance sometimes occurs through the meeting of different academic approaches to a single subject, but it cannot always be expected—especially when the subject is so vaguely defined that it is only at a fairly high level of verbal abstraction that it can be said that the approaches are to the same thing. "The problems of human communication" is a pretty comprehensive heading, since communication might be said to pervade all human behaviour.

Perhaps the most defined section of "communication theory" is concerned with the quantitative description of the amount of information that can be passed along a telecommunication channel. The work of Wiener and Shannon in this field has not only had a significant effect upon the theory of telecommunication design, but has stimulated much wider discussion in other scientific fields—among which the setting up of a Communication Research Centre at the University of London, from papers presented to which the present book is assembled, may perhaps be counted. These papers, some of which in themselves are highly interesting even to the ordinary reader, include contributions from the fields of philosophy, biology, economics and management, medicine, the fine arts, ancient history, physiology and semantics.

The reader will not necessarily come away from these, however, convinced that they are talking about what could, for practical purposes, usefully be considered the same thing. Professor Ifor Evans's introduction suggests as the main aspects of human communication

the study of symbols, of the organisation of the individual for communication, of social factors in communication, and of machines that transmit, process, and store information. There may well be here, as Professor J. Z. Young has suggested, "a new field for study and research," and the new centre may indeed help to break down the excessive specialisation of faculties within the University; but one should perhaps not expect much more for some time than such desirable indirect results.

Shorter Notice

SCIENCE UNFOLDS THE FUTURE.

By J. G. Crowther.

Frederick Muller. 255 pages. 18s.

A number of books have been appearing in recent years in which scientists have attempted to forecast future developments in scientific knowledge and its exploitation. In a more specialised direction, the problems of raw material resources have been discussed, particularly food and energy. Some of these accounts have been despondent, not to say minatory, in tone, on what may be called neo-Malthusian lines. Here, from a school of belief that puts Malthus among the arch-heretics, is a work of unclouded optimism. The author, a well-known scientific journalist, surveys chapter by chapter a number of the more topical fields of scientific and technological endeavour, radio astronomy, rocket engineering, agriculture, and, of course, automation. The treatment is popular and readable without the breathless superlatives found in some works of popular science. His own sources, a list of which is given at the end of each chapter, appear themselves to be of the popular rather than the strictly scientific kind. In keeping with the prominence given to Soviet work in the text, they include a number of Soviet official publications and, oddly also, the *Daily Worker*. Like many such books, this is at its weakest in dealing with concepts—especially those at the frontiers of research—as for instance "living matter," which in a chapter on the "origin of life" is treated uncritically and without definition.

ROOK TAKES PAWN: MAN WINDS WATCH

YES, HE'S WINDING his watch as he plays. That's the marvel of the self-winding Swiss watch. It never forgets it needs winding. It picks up its own power from the smallest movement of your wrist. Can't get overwound: or unwound. And because the mainspring keeps an even tension, this watch stays superbly accurate. You never have to wind it. Take it off at bedtime if you like—the jewelled-lever still ticks faultlessly till morning!

Ask any good jeweller to show you the self-winding Swiss watch—in styles for women as well as men. See, too, all the other great Swiss models—water-resistant and shock-resistant watches, calendar watches, chronometers and chronographs. Whatever kind of watch you want, the Swiss have made it—superlatively!

Your jeweller's knowledge is your safeguard

Time is the art of the Swiss

SWISS FEDERATION OF

WATCH MANUFACTURERS

Go to a jeweller, who provides full servicing. Then you're certain of skilled advice—not only when you choose your Swiss watch but all through its long life.

the things they say!

The builder told me that the wood for our house came from Sweden. I wonder why we have to import so much timber. You'd think by now that you people who make plastics would have developed other materials to take its place.

Then we could cut down imports.

But plastics are already being used a lot.

Yes, I know — switches and lighting fittings and so on. But why stop there? What about wood for doors, for instance? If we made plastic doors at home, surely we could save a pretty penny?

You're wrong there. For that particular job what's better than wood?

What you're saying, then, is that plastics can replace ordinary materials only to a limited extent?

That's right. But there are many fields where plastics are supreme —

where their lightness, strength and beauty, and the ease with which you can work them, give them the advantage over other materials.

Well, let's hear a few!

'Perspex' for aircraft windows, polythene for washing-up bowls, nylon for brushes, P.V.C. for raincoats and curtains

I didn't know that all these were plastics. Is there enough of them?

Well, there's never enough of a good thing, but I.C.I. produced more than nine times as much plastics last year as they did in 1945. And quite a big part of their annual £8 million research and development programme is being used to keep this country ahead in plastics technology.

All right, Mr. Know-all. I should have known better than to marry a man who's in the business.

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Labour Frictions

Washington, D.C.

THE cynics who had reservations last December at the wedding feast of the two American trade union organisations, the American Federation of Labour and the Congress of Industrial Organisations, had their doubts confirmed last week. At a meeting of the Executive Council of the reunited AFL-CIO, the first to be held in the softly luxuriant board room of the brand new headquarters in Washington, there was an open dispute between Mr George Meany and Mr Walter Reuther. Since it was the willingness of Mr Reuther, president of the CIO, to serve under Mr Meany, president of the AFL, that made the merger possible, this seemed to justify predictions that the arrangement would not be happy for long.

Absurdly enough the breach has not occurred over any of the domestic conflicts which are testing the new structure but over foreign affairs. In almost all other matters Mr Meany and Mr Reuther have found themselves to be natural allies, whose personal positions have both been strengthened by the merger. Both believe that trade unions should concern themselves with wider social and political objectives than immediate economic rewards for their members. This puts them on the opposite side of the fence to, among others, Mr David McDonald, of the United Steelworkers, an industrywide union originally belonging to the CIO, and Mr Dave Beck, of the Teamsters' Brotherhood, the largest AFL union, which is fast becoming a catch-all for anybody who is open to persuasion from a lorry-driver.

The merger with the CIO unions enabled Mr Meany to press harder for his own objectives—political action by the labour movement, organising drives to extend membership, strong stands against racketeering and against race discrimination in trade unions—which the more conservative AFL craft unions find difficult to swallow. Mr Reuther also has a broader base from which to develop his ideas. Although nominally stepping down in rank, he is happier out of the narrow confines of the CIO, in which he was for ever locked in battle with his perennial enemy, Mr McDonald. With the merger the latter has now lost his pivotal status, which depended on his perpetual threat to split the CIO and make independent terms with the AFL. Moreover, within the new organisation, Mr Reuther heads the industrial union department which groups together his old CIO followers and gathers fresh strength from industry-wide unions formerly in the AFL.

In addition, the CIO's leaders have had little reason in the last six months to accuse Mr Meany of the lack of courage of which they habitually convicted the old AFL.

On two matters about which the CIO felt deeply, the racial discrimination and the criminal tendencies which were found in some of the AFL unions, Mr Meany has taken big risks in order to put his position beyond doubt. Overriding the misgivings of those of his staff who are accustomed to using the velvet glove in matters of prejudice, he has lambasted the White Citizens Councils, which have been formed in southern states to preserve racial segregation. Despite the fact that many local southern labour leaders, burning from the chronic unpopularity of trade unions in the region, have sought respectability by serving on the councils, Mr Meany bluntly described them as "Ku Klux Klans without hoods." This readiness to ride out the bitterly adverse reaction of many union members, which included threats of refusing to pay union dues and of founding a Southern Federation of Labour, and to accept the inevitable short term setback to the labour cause in the South, was found more praiseworthy by the CIO than by some sections of the AFL.

★

Mr Meany's stand against racketeering has brought him into direct conflict with the Teamsters' Brotherhood. Ironically last week's special council meeting was summoned in order to endorse Mr Meany's intention of expelling the teamsters unless they renounced their mutual aid pact with the International Longshoremen's Association, the union which is most provenly criminal and which was thrown out of the AFL for that reason even before the merger. The pact carried the economic opportunism of those who advocate limited objectives for trade unions to a logical conclusion, since it would have enabled a single unpolitical labour group to exercise a stranglehold on the distributive system of the country. In that form the pact drew support for Mr Meany's policy of tough leadership from even the most conservative and independent unions, with the result that the pact was dissolved before the meeting and time was left to discuss the more divisive topic of international affairs.

But this topic only set alight the restlessness between the two leaders, which has been growing despite their partnership. Although the CIO veterans are on most issues satisfied with Mr Meany, personally many of them are exasperated with his following in the AFL. Both the famous organising drive to extend union membership, which was to be the luscious first fruit of the main merger, and the follow-up mergers of state and local labour councils, which are essential if political activity is to be effective,

have become bogged down in the old arguments over the competing jurisdictions of various unions, with the difficulties being made in the main by old AFL members. On his side Mr Meany, who has been doing his robust best to help those causes which are close to the CIO, is becoming increasingly suspicious of the empire which Mr Reuther is building up in his industrial union department. This now has seven million members, two million more than Mr Reuther's CIO contributed to the merger. As its recent legislative conference in Washington showed, this department is developing its own political programme, its own public relations and its own foreign policy.

It is these accumulated irritations which explain the rather ridiculous schism over international relations. Moreover this is the one sphere in which Mr Meany's leadership, instead of lessening prejudice against the AFL, is causing alarm and embarrassment among its partners. The immediate dispute is over the correct attitude to adopt towards Mr Nehru. Mr Meany, who is unfortunately deeply influenced in this by his *eminence grise*, a dogmatic ex-Marxist called Mr Jay Lovestone, has publicly consigned the Indian leader and Marshal Tito to the other side of the barricades in the cold war. This has revived bitter memories of the completely contrary tactics which the AFL and CIO representatives in Europe and Japan pursued towards left-wing trade unions there. If Mr Meany's original speech shocked Mr Reuther, the latter's remarks, when he went to India to try to pick up the pieces, caused deep offence. It was Mr Reuther's repudiation of Mr Meany's right to speak on behalf of American labour on such a matter that led to the explosion of personalities in the new board room. The forces that are holding the merger together are probably far too strong to be reversed, but it would be very strange if it all came to pieces over Mr Lovestone and Mr Nehru.

Foreign Aid Review

THE President's favourite remedy for any uncertainty—a special commission to review the whole question—backfired against his foreign aid programme. For Congress thought of adopting his remedy as an easy excuse for postponing action, until after the election, on his request for the increased funds and the increased powers which he insists are essential this year. The President himself had already promised to ask a group of independent citizens to study the long-term implications of foreign aid; a similar group led by Mr Harriman provided a solid foundation for the original Marshall Plan. But the danger was that Congress would set up its own separate group, to decide whether the United States was getting value for its foreign aid dollars; this might look at the problem from a more political angle and come up with a different answer. This could only stimulate that controversy between the legislative and executive branches of the government which the commission of inquiry was supposed to damp down.

The danger was lessened, if not entirely averted, last week when the President began to use his personal influence on behalf of his request for funds and against the idea of a congressional inquiry. After he had talked to Senator George, Representative Richards and other party leaders,

and had put in a strong plea for foreign aid at his press conference, there were at last signs of real activity in Congress. There is, however, no chance that the full \$4.9 billion, nearly twice as much as was appropriated last year, will be granted. But the Administration's difficulties may be lessened now that Senator George has decided to retire at the end of this session. For he has recently been inhibited in his habitual and vital support for the Administration's foreign policy by the prospect that he would have a hard fight for re-election next autumn against a rabid isolationist.

The Administration has its own dilatoriness to blame for its difficulties. It was clear months ago that the foreign aid programme needed to be thought out again, particularly where the division between military and economic aid was concerned, in the light of last year's Geneva conference and the subsequent Russian moves. This year's programme was admittedly marking time until future policy was decided. Since so far little seems to have been done about deciding future policy, it is not surprising that Congress showed signs of preferring to mark time before handing out the money rather than after. The most interesting development, however, is that practically everyone is taking it for granted that foreign aid definitely has a future.

Primaries in Season

THE recent crop of primary elections, averaging three a week, has given voters in a number of states opportunities of indicating with more or less clarity which of their party's presidential possibilities they prefer. But no startling results have been gathered. Republicans all "like Ike," even in Indiana, where it was feared that the agricultural depression might have turned the farmers against him. Among the Democrats, Mr Stevenson and Senator Kefauver have met directly only twice, in Alaska and the District of Columbia, both holding their first primaries. In both Mr Stevenson won handsomely, and for the moment the rot in his candidacy has been checked. But the real tests come in Oregon next week, and in Florida and California after that.

The excitement has been in Texas, which holds no presidential primary, but chooses its delegates to the Democratic National Convention at party conventions held at local and state levels. These meetings began last Saturday, and at once it became clear that Senator Lyndon Johnson would control the Texas delegation at Chicago next August. His unexpectedly easy victory was over the Governor, Mr Shivers, who in 1952 refused to support Mr Stevenson and led the Democrats-for-Eisenhower who gave the state to the Republicans for only the second time in electoral history. Senator Johnson is the foremost advocate of party unity, both at home and in Washington. His triumph almost, if not entirely, removes the danger that the southern wing of the Democratic party may split off from the main body at the convention over the question of racial segregation and states' rights. Mr Johnson's success also puts him out in front of the other dark horses who are entered for the Democratic presidential nomination, even though he, like President Eisenhower, had a serious heart attack last year.

But while moderation was being confirmed in Texas, re-

Proof before prophecy

It is not our business to debate the future, but to build it. Progress in the air is won, we believe, by ruthless concentration on the present task. Our first duty is to create aircraft engines which fulfil required functions under all conceivable conditions — engines such as the compact Double Mamba turbo-prop, now successfully serving the special needs of the anti-submarine Fairey Gannet in squadron service with the Royal Navy. Our responsibility then lies, as we see it, in the searching and systematic development of these proven types, in order that they may match the evolution of aircraft design with progressive yet predictable performance.

Speed your defence against FIRE!

Give your premises the fastest fire protection in the world. Equip them throughout with Nu-Swift extinguishers.

All Nu-Swift extinguishers are pressure-charge-operated for instant action. There is no waiting for a chemical reaction to build up pressure.

High-speed recharging is another Nu-Swift feature. With all 2-gallon models, it takes as little as 30 seconds.

Nu-Swift extinguishers give your premises the world's most reliable fire protection too. The sealed pressure charges will not leak, evaporate or cause corrosion.

Nu-Swift are also the only extinguishers designed to a standard system. They are all used in the commonsense upright position, and there are distinctive colours for the models for different fire risks.

Nu-Swift put an end to time-wasting confusion—fight fires faster.

FOR FIRST-AID FIRE FIGHTING YOU CAN'T BEAT

NU-SWIFT

The world's fastest and most reliable extinguishers

For further information, write or phone: Nu-Swift Ltd., 25 Piccadilly, London, W.1. Phone: REGent 5724. Factory & Head Office: Elland, Yorkshire. Phone: Elland 2853

Unfailingly fresh

Tobacco at its best. Player's Medium Navy Cut is once again supplied in the familiar pocket tin, vacuum sealed, which means that absolute freshness is retained and enjoyment assured whenever you buy it.

PLAYER'S MEDIUM NAVY CUT TOBACCO

'The choice for a lifetime'

action was winning in another southern state, Alabama. In a contest for membership of the Democratic National Committee, the Governor, Mr Folsom, whose office should enable him to dominate the party machine in the state, was heavily defeated by a violent advocate of racial prejudice. Other candidates who had Mr Folsom's support went down with him. The issue was complicated by his personal and administrative failings, but nevertheless he was penalised mainly for his refusal to defy the Supreme Court's ruling against racial segregation in schools.

Missiles Break Through

FROM A SPECIAL CORRESPONDENT

IN recent weeks the government policy of maintaining excessive secrecy about new weapons has been replaced by something like official exuberance on the subject. Sceptics note that the enthusiasm is about future prospects rather than present deliveries and scientists insist that long-range missiles are still far from being perfected. Nevertheless, these announcements, even if based more on faith than on fact, have given rise to an atmosphere of optimism and have also—intentionally or not—taken much of the heat out of the current congressional inquiry into the "delays" and "inadequacies", particularly in long-range bombers, of the Department of Defence's air programme.

First and most significant was an assurance that it is now feasible to produce reasonably small thermonuclear warheads. This means that the engine and fuel supply needed to propel a guided missile can be substantially reduced in size; hitherto both were staggeringly large. Next came the announcement that the Convair Division of the General Dynamics Corporation, the company which has the Air Force contract for developing the projected Atlas missile, will shortly construct a \$40,000,000 plant, which will employ 6,600 workers by 1958; analysed, this means only that the company will build a plant which some day will build a missile, but the 1958 date is exciting. Then came the estimate from the Secretary of Defence, Mr Wilson, that by 1960 some of the Air Force's present wings of bombers, manned by human beings, will have become wings of missiles. He has now also announced that the new heavy bomber, the B-52, is to be produced faster and in greater numbers than had been forecast.

Even before this, the Defence Department had allowed the Air Force to make two extremely interesting disclosures about weapons not yet in production. One concerned the new Lockheed jet fighter plane, the F-104A or Starfighter, which is officially asserted to be "much the fastest" of manned aircraft, and is informally described as developing about twice the speed of sound in level flight. This is of such profound interest that the Air Force is already thinking of how this phenomenal design can be adapted for all-weather or other types of fighter, even though the addition of special equipment will presumably reduce its speed somewhat. The attainment of 2-mach velocity, that is, a speed of about 1,500 miles an hour, is of course due partly to the design of the aircraft, to its stubby and extremely thin wings, its unusually high tail elevator, and its remarkable lightness (about half the weight of comparable planes) and partly to its new and extremely powerful J-79 engine.

The experts say candidly that aircraft and engine could go appreciably faster than they do; both have come up against the heat barrier, and a greater speed would after a time cause serious deterioration in both the airframe and the engine. In other words, it is now the metallurgists' turn to produce alloys which will push the heat barrier much further back and allow aircraft to attain still greater speeds. An impressive aspect of the present development is that, when the F-104 is at maximum speed (when, incidentally, it can attain its maximum rate of climb as well), the engine gains over half its thrust through the ram-jet principle. That is, the speed with which the aircraft rushes through the air automatically compresses, or "rams", the air as it enters the engine, and so does half the designer's work for him; this helps to solve the problem of fuel combustion, which is serious at 70,000 feet where oxygen is so rare.

The other interesting disclosure has a bearing on this question of upper-air propulsion, although its prime character is quite different. This is the Rocketdyne establishment which the North American Aviation company has tucked away in the Californian mountains, where the enormous blasts of the testing-engines will disturb as few people as possible; there are no tests at night since, even in Southern California, most people get their sleep then. The main purpose of the tests, several of which were shown to selected observers recently, is the development of very long-range missiles. The mere size of the instruments provides a clue to the intended range, which of course is genuinely secret, and thus the observers were not allowed to mention dimensions at all. The frequency of the tests at the numerous test-stands—several a day—suggests that components are being produced in a considerable quantity.

★

This is a sudden development and can only be the outcome of that technological "break through" to which Mr Wilson referred some weeks ago, without giving details. He can hardly have been referring to improvements in metallurgy, in fuel combinations, and in guidance controls, which have been real but hardly radical enough to constitute a great jump forward. It is now clear that this must have been in work on the warhead itself, the whole reason for the missile. From published reports on the Germans' V-2 (the starting point of most long-range ballistic missiles), it is known that the delivery of a fairly large warhead requires a huge supply of propellant fuel; the ratio was nine to one and there has been no substantial improvement since then. To deliver a warhead a much greater distance would require a much greater fuel load—or else a smaller warhead. The atomic scientists have apparently supplied the answer by the latter route, that is, by delivering a warhead of great power packed in much smaller confines than were envisaged a year or two ago.

Meanwhile, however, research appears to be accomplishing the objective of reaching a distant target by a combination of propellant systems. A rocket engine for the Navaho missile is being produced at Rocketdyne. But the Navaho is known to be an air-breather, employing the ram-jet principle in some form. It must therefore be concluded that, in this case at least, the missile when ready will mount both a jet engine and a rocket; the latter will probably be employed for bursts of speed and even for occasional leaps into the extreme upper air where the jet cannot function.

The question of whether this method of breaking the speed barrier by breaking the height barrier can be applied to aircraft as well as missiles was raised at the F-104 demonstration, when that dazzling new plane was spoken of as one of the last aircraft of its type on the speed frontier. The intimation was that the engineers expect to achieve new speeds by new means, regardless of metallurgy, and it is difficult to see what new means are close at hand, unless it be supplemental rocket power. Protective devices for the human being, such as pressurisation of aircraft, are now so far developed that man can withstand both the strain of speed and the barrier of heat, provided that the metal alloys which safeguard him can withstand it. It is no longer the frailty of men, but the frailty of metals that limits speed in the air.

Policy for Rubber

SINCE April, 1955, when the synthetic rubber industry in the United States was transferred to private ownership, there has been a steady increase in its output. By the beginning of 1958, there should be enough capacity to satisfy the total demand which is expected in 1960 in America for both synthetic and natural rubber. These statements, contained in President Eisenhower's report to Congress last week, do not, as might at first sight appear, toll a death knell for the producers of natural rubber. For of the total American demand for new rubber, which is expected to rise at an average rate of 3.5 per cent a year,

of natural rubber. Exports of American synthetic rubber have already risen sharply from 13,000 tons in 1954 to over 70,000 tons in 1955.

In spite of the increased production towards the end of the year of the cheaper "oil-extended" variety there has been little change in American synthetic rubber prices since private industry took over. This stickiness in price in spite of a sharp increase in demand and the tendency to continue producing the various types of rubber in the proportions inherited from the government were questioned by the Attorney-General, in another report on private rubber's first eight months in power. In other respects, although it is clearly too soon to pass any final judgment, he finds little to criticise.

Of greater significance in the long run is the progress made in developing new types of synthetic rubber, in the hope of replacing natural rubber altogether. So far no synthetic in commercial production can take the place of natural in large lorry, bus and aircraft tyres. But the three major rubber companies have succeeded independently in synthesising from isoprene, a derivative of petroleum, rubbers which are claimed to have the necessary qualities. A special commission of the National Science Foundation has pointed out that this has now become a problem of industrial development, rather than one of research. While urging the government to consider whether it should, in the national interest, assist this industrial development, the special commission recommends—and the President agrees—that the government should in future confine its support to more fundamental research into polymers in general, of which rubber is only an example, and dispose of its present rubber research laboratories at Akron, Ohio.

* Synthetic capacity includes GR-S, Butyl, Neoprene and N-Type rubber; the capacity given is on the assumption that the oil content of oil-extended rubber remains as it was in 1955.

35 to 40 per cent—at least until 1960—is likely to be for the natural variety. There is, indeed, more doubt in the United States whether world supplies of natural rubber, which are not expected to increase significantly by 1960, will be sufficient to meet this American demand. Consequently, the new American capacity for synthetic rubber has the dual role of insuring against a possible shortage of imports of the natural product and of providing synthetic for export to foreign countries, thereby enabling them to reduce their claims on the limited world supply

Saving the Soil Bank

WHEN the Democrats wrote a farm Bill which the President was forced to veto, they thought they had put an unplayable shot into his political court. But Mr Eisenhower returned the ball sharply, accompanying his veto with various administrative changes which may alleviate the plight of the farmers before they vote next November. The President then took the initiative, asking Congress to approve his soil bank scheme, under which farmers would be paid for taking out of cultivation land now devoted to surplus crops such as wheat and cotton. This was the only constructive provision in the vetoed Bill, and both parties agree that it offers some hope of eventually solving the problem of agricultural over-supply.

The Democrats, after much hesitation, decided that it would be unwise to refuse to go along with the President on this. He then added to their embarrassment by pointing out that the soil bank scheme had been delayed so long that crops were already planted and it could not benefit farmers this year unless they were allowed advances against promises to put land in the bank next year. The necessity of giving immediate help to the farmers had been the Democrats' main argument in favour of their original unsatisfactory Bill. Even so, they could hardly permit the Republicans to offer the farmers a political dividend just before the election. The House has therefore now authorised the soil bank, but not the advance payments. The new Bill puts

Starch
does surprising
things

IN SUCH
SURPRISING
PLACES

Example:

STARCH IN OIL-WELL DRILLING

Among the problems that oil-well drillers have to solve are the cooling of their drill (which may be three miles or more below ground, at the bottom of a hole only a foot or two wide) and the removal from the hole of the earth and rock that the drill cuts away... The surprising answer to these problems (and to one or two others as well) is — mud.

It is special mud, of course — a thick, milky fluid which is pumped down the jointed steel tube that drives the drill. It flows through the drill itself, fills the hole outside the tube, and so flows back to the surface, carrying to the drill-cuttings with it. The returned mud is sieved, to remove the cuttings, and used again. But if the earth round the hole is porous, the mud may lose so much water by seepage that its circulation cannot be maintained.

A common way out of this difficulty is to add starch to the mud. The effect of the starch is to bind particles of clay from the mud into an impervious plaster which seals the porous surfaces.

Corn Products Company Limited, the Industrial Division of Brown and Polson, produce 200,000 tons of starch products a year: more than 400 different products, which are helping more than 80 different industries to reduce production costs, to make better products, or even to make products that could not otherwise be made at all. We have spent more than 100 years in building up this large and varied business. We have learnt a lot about the industrial uses of starch products, and our advice is freely at your disposal.

CAN STARCH HELP YOU?

When you read in these advertisements how starch products are helping other industries you may see new possibilities of turning them to account in your own business. We shall be glad to discuss them with you.

grazing land as well as cropland into the bank and contains a number of other provisions which the Administration does not like. Many of them are left over from the vetoed Bill, including an increase in price supports for feed grains. But some of these objectionable clauses are likely to be eliminated in the Senate, where the Administration will also make another attempt to get the advance payments. In any case, the farm Bill can hardly be vetoed a second time.

Hot Fight in the Sunshine State

FROM A CORRESPONDENT IN FLORIDA

ON May 29th the Democrats of Florida will vote in a primary election to determine whether they will be represented at their party's national convention in August by delegates pledged to support Mr Adlai Stevenson, of Illinois, or Senator Estes Kefauver, of Tennessee, for the party's presidential nomination. The evidence which this election will provide of the relative popularity of the two candidates will be more vital to their future than the actual number of delegates obtained and both are campaigning vigorously. The voting promises to be close, for Senator Kefauver is gaining on Mr Stevenson's original lead, but in the end, a mixed group will probably be selected, with some delegates pledged to each of the two candidates.

The sources of Mr Kefauver's strength are as mixed and contradictory as is the political atmosphere in this farthest south of all states, which is becoming steadily more northern in its outlook as a result of the economic boom and the influx of new residents attracted by the perfect climate. The Miami area now resembles a north-eastern city politically, and there the Senator will have the support of many who consider his views more progressive than those of Mr Stevenson. Then Senator Kefauver is remembered gratefully by many Floridians as the fearless crime-buster who uncovered corrupt alliances between gambling interests and local politicians in Miami and Tampa when he was head of a Senate investigating committee. In cities where Negroes vote in large numbers, such as Jacksonville, Mr Kefauver is favoured over Mr Stevenson by the powerful National Association for the Advancement of Coloured People. At the same time, some conservative Democrats who regard Mr Stevenson as still the most formidable contender for the Democratic nomination are planning to vote for Mr Kefauver, in the belief that, if the convention could be manoeuvred into a stalemate between Mr Stevenson and Senator Kefauver, a more conservative candidate than either of them could be nominated.

In spite of his support among Negroes and left-wing Democrats, the Senator also appears to be developing considerable strength in the rural counties, where the traditions of the Old South and of "white supremacy" survive. He, much more than Mr Stevenson, fits the traditional rural folk conception of the "statesman." Mr Kefauver is tall and broad-shouldered; he warms to people as individuals and in the mass, immensely enjoys campaigning, and shows that he enjoys it; he speaks in a honeyed monotone, and in both public speech and private greetings conveys an impression of diffident sincerity. For audiences in Florida he stresses his small-town southern origin and his ardent supporters argue that at long last a Southerner has a real

chance to be President and that it is therefore disloyal to the South to oppose him.

Although some of Senator Kefauver's campaign tactics appear provincial, he is a sensitive and sophisticated politician. On the basis of his long public record, he is a consistent New Deal liberal, even on racial issues. When asked to sign the recent manifesto of southern Congressmen against the integration of Negro children with whites in schools, he refused, not on the ground that a Supreme Court decision must be obeyed, but simply because he did not believe in segregation. Indeed, he is a political phenomenon—the only southern politician with a liberal record on both economic and racial matters to survive politically. Senator Claude Pepper, of Florida, and Senator Frank Graham, of North Carolina, were eliminated from public life when they aligned themselves fully with the northern liberal wing of the Democratic party. Senators Lister Hill and John Sparkman, of Alabama, have consistent records of economic liberalism, but in public both have always taken the conventional southern position on race. Senator Kefauver's success in maintaining a position of national and integrated liberalism and yet continuously surviving in a southern constituency is proof that it would be dangerous to under-estimate him.

★

When Mr Stevenson first campaigned in Florida last February, Florida's leading politicians jumped on his bandwagon because at that time they felt that his nomination was a foregone conclusion. Men injured by the Kefauver investigations of several years ago are striking at Senator Kefauver through Mr Stevenson, but the latter's basic support is coming from those who admire his high qualities, who agree with his middle-of-the-road approach to the problems of the day, and who feel he offers the best chance of maintaining a semblance of unity between northern and southern Democrats. They emphasize that his approach to racial desegregation is more moderate than Mr Kefauver's. Mr Stevenson is making a valiant attempt to "limber up," to be "folksy." He is emulating the Senator in darting into cigar factories and fruit-packing plants to say "hello," and in doggedly trekking through the orange groves and around town squares. He has even gone so far as to ride in public buses from town to town. However, to the discerning it is apparent that he does not really relish all this.

The current election in Florida illustrates the blurred and ambiguous nature of much of American party politics, particularly in the South. Whoever wins the primary, whether it be Mr Stevenson or Mr Kefauver, he will not represent the opinion of the majority of Florida's Democratic voters, who are conservatives and really want neither of these two candidates. If the present sharp contest for the nomination had been foreseen early in March, when delegates' names had to be entered, and when Mr Stevenson's nomination seemed certain, a list of people unpledged to any candidate would have been filed and, in the opinion of competent observers, would easily have won. If in the early balloting at the Democratic convention the candidate to whom the Florida delegates are formally pledged does not move towards the nomination, then they will make alliances with delegations from other southern states to vote for a candidate more nearly in line with the conservative temper of Florida opinion.

Today, Florida is probably the most solidly middle class state in the Union. The Republican party is growing there

as the Democratic one-party system slowly disintegrates; most Florida voters are still nominally Democrats but there is little difference ideologically between them and Republicans. The one-crop counties producing the staples of the Old South like cotton and tobacco have declined drastically in relative economic and political importance. These were the areas of agrarian liberalism, and today these are the areas where the chief concern is to maintain white supremacy and frustrate the Supreme Court's decision against racial segregation. In recent years the cattle industry and specialised crops like citrus fruit and winter vegetables have grown enormously in importance and there is little sympathy for the old agrarian populism among the wealthier farmers of this type. Moreover, Florida is now more urban than rural; the central and southern parts of the state are studded with chambers of commerce and civic clubs. These towns are the centres of the tourist trade and are full of transplanted *rentiers* and pensioned old people from all parts of the United States. These groups fear inflation, while labour organisations, one of the main progressive forces in the Democratic party, are weak in Florida. Indeed, there are no important social or economic groups on the side of liberalism in the state. So when the final election comes, in November, enough conservative Democrats will probably cast their ballots for Mr Eisenhower to allow him to carry Florida again, as he did in 1952.

Thumbs Up in New York

THE opening of the New York Coliseum, a massive exhibition hall surmounted by a twenty-story office building, has brought a much-needed touch of Roman splendour to one of the more dingy parts of the city. It is hoped that eventually this building, which has cost \$35 million, will become part of a large-scale redevelopment programme, to include a new opera house, concert hall, schools, shopping centre and several housing projects, in a ten-block area on the west side of Manhattan Island, just west of Central Park. The Coliseum also has the more immediate objective of enticing back to New York the many trade fairs and conventions which have deserted the city in recent years because of the acute lack of exhibition space.

The 125,000 people who visited the Coliseum on the opening day had the choice of three exhibitions running simultaneously: an international motor show, in which British car manufacturers had taken the initiative and booked 60 per cent of the floor space; an international philatelic exhibition—surprisingly enough, not yet called a "stamporama"; and a national photographic display. The four floors, which together provide over 300,000 square feet of exhibition space, are entirely air conditioned to permit comfortable year-round operation even in New York's steaming summer. A plentiful supply of lifts, escalators and a ramp which permits large lorries to drive up with ease to the first floor should substantially reduce the usual high cost of setting up and tearing down exhibits.

Credit for the Coliseum, as for many other successful development schemes, goes to Mr Robert Moses, the city's champion gladiator. His Triborough Bridge and Tunnel Authority has financed its construction, mainly through revenue from bridge and tunnel tolls. The building,

which has been leased to a private operating company, is expected to pay for itself from the start out of rentals and admission fees, and to make some contribution to the city's revenue. Judging by the reports of the many trade fairs booked for the rest of 1956, Mr Moses may once again overcome the economic lions that devour the grandiose schemes of private promoters. In any case New York's hoteliers and shopkeepers can assure visitors of an expensive Roman holiday.

News About Newsprint

IN spite of the increase of \$4 a ton in the price of newsprint last December, the consumption of newsprint in the United States during the first quarter of this year rose to record heights, and would have risen further had more supplies been available. American newspapers, growing fatter every year, are expected to consume nearly 7 million tons of newsprint this year, seven times as much as the British industry uses. In the last 15 years newspaper circulation in America has gone up by 17 million to over 57 million, and 40 pages is the average size for an issue of a daily with a circulation of over 100,000. Sunday papers, with a circulation of 48 million, now average 135 pages an issue. The annual use of newsprint for advertisements, which at present take up 60 per cent of an American newspaper as a rule, has increased by 150 per cent since 1941; the amount required for editorial copy has risen only 12 per cent during the same period. The continued increase in advertising lineage this year has shown that, contrary to expectations, higher newsprint prices and higher rates for space in newspapers have not yet driven advertisers to television.

This rise in newsprint consumption has brought higher profits to the newsprint manufacturer—but not to the newspaper proprietors. And even record advertising revenues made little impression on the gloomy newspaper publishers who commiserated with each other in New York at the end of last month over steadily rising operating costs and the continued shortage of both newsprint and skilled labour. They had, indeed, a whiff of good news from a report on the newsprint manufacturing industry in the United States and Canada, which is now expected to increase its capacity by more than a quarter by the end of 1958. The major part of the increase of nearly 2 million tons will be in Canada, but the United States is increasing its own capacity by 776,000 tons, or over 50 per cent, and by the end of 1958 should be able to supply 23 per cent of its own requirements, compared with only 19 per cent at present. Much of this new American capacity is in the South, where the relatively recent success in adopting the fast-growing southern pine for newsprint making has stimulated the industry.

This is all good cheer for the future, but newsprint capacity takes time to expand, and the present acute shortage, with the "grey" market for newsprint at premium prices, is expected to persist at least for the rest of this year. The coming political campaign will call for still more newsprint, and the question now is whether even the large expected increase in capacity will be sufficient—especially if Canadian exports of newsprint to Europe continue to rise at the recent fast rate.

The World Overseas

"Keep Going, Mr Hammarskjöld"

FROM OUR CORRESPONDENT IN TEL AVIV

RUMOUR has been busy in Jewish Jerusalem since the Secretary-General of the United Nations left Israel. Its gist is that his mission to the Middle East was only his first round; that he accepted it not only to prevent the outbreak of war but to find a way to peace; and that his talks encourage him to look ahead to another visit in the late summer. It is by no means clear on what grounds this optimism is founded, but it is gratefully seized upon by people who have been living for years under the strain and the dangers of a life pitched between uneasy armistice and guerilla warfare.

The grounds for optimism are not exactly substantial. It is generally acknowledged in Israel that unconditional acceptance of the cease-fire order by all concerned was largely due to Mr Hammarskjöld's skill in negotiation, charm and mastery of the complicated documents connected with the four armistice agreements. What he achieved, in concrete terms, was a few technical innovations—a small increase in the number of Uno observers, the setting up of observation posts on both sides of the frontier in the Gaza strip, an agreement with the Syrians on fishing in Lake Tiberias and a more comprehensive agreement between local commanders on the Jordan frontier; these are proposals and whether they will prevent new incidents depends on whether there is a will to make them work and to render the people along the borders less afraid of each other and less trigger-happy.

What has not been said, and needs saying, is that the formula of wait and see, of merely damping down the fire, has not worked. For years, Western diplomats have kept saying that the first step to comprehensive settlement of the Israeli-Arab conflict is to ensure quiet along the frontiers, and that this will bring readiness to talk peace. But these expectations have been proved wrong. In the eight years since the armistice agreements were signed, the position has not improved, but deteriorated. Infiltration has developed into guerilla warfare coming, at moments, to the brink of war. Nothing is so disastrous as the attitude of resignation which accepts a completely abnormal state of near-war as ordained by heaven. During the last eight years a generation has grown up in the refugee camps near the border knowing only a life of uselessness and idleness, while in Israel a corresponding age group takes the eternal watches and skirmishes as a matter of course.

The attitude of mind that has developed can be gauged from an incident which occurred during the last few days of Mr Hammarskjöld's tour. A young farmer from a

frontier village saw some Arabs come over the border on the outskirts of Gaza and begin harvesting the fields of his village. He rode over on his horse, as was his wont, and tried to chase them off. Some hours later the officers of the Mixed Armistice Commission got back his mutilated body from the Egyptians. On most borders this would count as a major international crisis; on Israel's, the periods in which there are only a few such incidents are counted as "quiet."

Mere perpetuation of the state of armistice does nothing to alter this pernicious attitude of mind. On the very day that the Secretary-General published his communiqué confirming general assent to an unconditional cease-fire, the Israeli press prominently displayed two other news items: one announced the supply of considerable quantities of arms by the Eastern bloc to Syria; the other held out hopes of delivery of eighty-two Mystère planes by France to Israel. The Israeli public is convinced—and the Hammarskjöld mission has made no difference to its conviction—that only a balance of arms will in the long run prevent war.

The idea of a preventive war seems now to have been finally discarded, except among the minority led by Heruth and other activists. Yet, by general consent, preparations for an emergency are pushed on as energetically as ever. The Labour Federation proclaimed May Day this year as "Frontier Day," and tens of thousands of workers were off to outlying settlements, digging trenches, stringing barbed wire and building shelters. Schools close down for a week, in turn, so that teachers and the higher forms can go off and dig trenches. The Hebrew University follows suit. Even the most peace-loving citizen dare not say that all these preparations are not necessary; he knows that tension calls for preparedness, senses that preparedness necessarily increases tension, and looks desperately round for a way of escape from a frame of mind that is becoming ingrained.

Did Mr Hammarskjöld get the feel of this intolerable state of affairs? Or was it masked because the wish for peace is less loudly voiced than the demand for arms and so is not, at present, being coupled with concrete proposals for a final settlement. (It should be noted that Mr Ben Gurion's expressed readiness to talk peace has not been accompanied by any firm plan or offer.) If during this first tour Mr Hammarskjöld seized the point that mere return to the routine of armistice leads nowhere, and that what is needed is a breakaway from convention in order to get rid of resignation to near-war, he must see that a second round of visits would be valuable.

There is one new development on which Mr Hammarskjöld can work. He would not have got what he did if his mission had not had the unanimous backing of the Powers, including the Soviet Union. When the Russians supported Mr Hammarskjöld's mission it became probable that they would use their influence in Cairo and Damascus to achieve some results. Having put its powerful foot in the door to the Middle East, Moscow may now get all it wants there without allowing war to break out between Israel and the Arab states. What still needs to be found out is whether it would welcome peace in order to exploit to the full the openings it has got.

If the answer to this key question is favourable, the outlook becomes brighter. Israel need no longer resign itself to wasting fantastic sums on armaments in order to keep in step with the communist supplies reaching the Arabs, or to an unending chain of incidents that keep numberless young men in constant readiness to die for their country. Certainly the Secretary-General knows—as Israel knows—that peace can only be had if all the Powers want it. If it is true, as is rumoured in Israel, that he now wishes to go to the Eastern bloc capitals to follow up clues he found in the Middle East, he may yet extinguish the fires which, so far, he has only been able to bank.

The Cloud on Portugal's Horizon

BY OUR SPECIAL CORRESPONDENT

PORTUGAL continues to be one of the best-administered countries of Europe; but a cloud of uncertainty hangs over the political and economic horizon. These are the main impressions of a fortnight's tour. The dominant political problem—that of the succession to Dr Salazar—does not appear to have been brought nearer a solution by the belated introduction in March of a law providing for the creation of "corporations." Indeed, contrary to some early impressions formed abroad, there seems to have been no political significance in the timing of the legislation. The decision to create the corporations upon which, in theory and according to the 1933 Constitution, Dr Salazar's *Estado Novo* is based, was not a frantic attempt to provide Portugal with durable institutions against the day of the prime minister's death or retirement. It was merely a tardy fulfilment of plans that should have been brought to fruition years ago.

As the Minister to the Presidency, Dr Marcelo Caetano, observed last month in a speech to the newly formed Foreign Press Association in Lisbon, Portugal has long had "corporations," in one sense of the word, since the *gremios* (guilds) and *sindicatos* (trade-unions) are "corporative" bodies. But the corporations that are now to be formed are different in kind in that they will unite employers' and workers' bodies within themselves. The first six corporations are to be instituted before the end of the year. They will cover agriculture, industry, commerce, transport and tourism, banking and insurance, and fishing and canning. The new corporations will elect members of the upper house, the Chamber of Corporations, which hitherto has been composed of members nominated by the government.

In principle, the corporations are to act as a check to the abuse of power by the state. They will, for instance, settle among themselves such matters as wages and conditions of work, which are now decided by the government (and by no means always in the employers' favour). In practice, however, the prudence and gradualness that are typical of the *Estado Novo* will almost certainly mean that effective government control will continue for several years. The creation of the corporations will not, therefore, in itself provide the kind of fundamental stability that would survive Dr Salazar.

In essence, the problem of the succession is psychological. There is wide agreement in Portuguese administrative circles that Dr Salazar's presence in the background, even in retirement, would have a reassuring effect on the population if his successor proved unequal to the task and had to be replaced within Dr Salazar's lifetime. The people, it is said, would then understand that a change of prime minister need not mean that the regime was bankrupt and ripe for overthrow. If, on the other hand, Dr Salazar died while still in office, a return to the old chaos might become a dangerous possibility.

Dictator Without Gold Braid

The Portuguese prime minister, who is 67, retains unimpaired both his lucidity and his full capacity for work. He has long expressed a desire to retire, but will not hear of a gradual retirement that would enable him to hand over power by stages, much less of being "kicked upstairs." Dr Caetano, the principal ideologist of the *União Nacional*—Portugal's single political party—tried to persuade Dr Salazar to stand for the Presidency of the Republic when General Carmona died in 1951, but the prime minister would not agree. Dr Salazar is unique among modern dictators in being free of megalomania and of love for the outward trappings of power: the gold-braided limelight of the Presidency holds no appeal for him.

The long-term political question-mark is made more serious by Portugal's persistent economic problem—the poverty of its hard-working population. Nowhere in Europe is the gulf between rich and poor more striking and more visually evident. This, of course, is a problem inherent in the poverty of the country's soil and of its physical resources—its lack of coal, oil and iron: it is not a reproach to be laid at the door of the *Estado Novo*. But it is a potential explosive force that must be reckoned with when Dr Salazar's restraining influence is no longer there.

Investment cannot provide Portugal's soil with the natural resources it now lacks, but it could do much to raise living standards. The present volume of investment—£93,750,000 over the six years of the development plan—does no more than maintain the present inadequate living standard of a rapidly rising population. The six-year plan, which runs for another two and a half years, was indeed introduced at a time when the income per head was markedly declining—a fact which can be explained by the increase in the population of metropolitan Portugal from less than 5½ million in 1900 to 8,490,000 in 1952. The population is now about 9 million and the fact that living standards have not declined still further is due entirely to the six-year plan. Emigration accounts for rather less than half of the annual population increase: some 40,000 Portuguese emigrate to Brazil every year, and about 10,000 to the African territories. But the preamble to the plan recognises

Inside Story

It's the hidden points about a Burberry which really put it one up on the others. Exclusive DOUBLE-PROOFING of cotton gabardines—in the yarn and in the piece, for extra weather-protection. Close weaving. Generous cutting for extra roominess. Tailored hand-sewn collars, graded to your linen-collar size for a perfect fit and 'sit'. Hand stitching, superb finishing, exclusive luxurious linings... and of course they look so good. These are the reasons why you just cannot better a Burberry. From 7 guineas.

Always look for the Burberry label—your guarantee of the genuine garment.

At Burberrys in the Haymarket and at the best shops throughout the country

that emigration is a poor remedy; in the long term, only increased investment can solve the endemic problem of poverty. To the Salazar administration, however, living within one's means is an article of faith. The government will neither borrow on the foreign market, accept foreign aid, nor indulge in deficit financing. And the means with which it intends to live are themselves restricted by the modesty of its direct taxation. The result, so far, is a static living standard; but the budget continues to be balanced.

In the meantime, the current plan is running according to schedule. The five big hydro-electric schemes are overcoming the country's power deficit, though they cannot hope to meet the rising demands of an expanding industry within the period of the next six-year plan; and the contracts will shortly be issued—probably within a few weeks—for Portugal's first steel plant, designed, with other processing plants, to yield 150,000 tons of rolled steel per year, with a minimum starting capacity of 80,000 tons on completion of the plant at the end of 1958.

In time, the underdeveloped and largely unsurveyed territories of Angola and Mozambique may be expected to make a massive contribution to the Portuguese economy. Projects for the African territories are indeed an integral part of the six-year plan. This fact alone explains the obstinacy with which Lisbon opposes Indian claims to Goa. In itself, Goa is an economic liability to Portugal; but to retreat there would be to surrender a principle whose validity—in the light of Angola and Mozambique—cannot be contested. The Portuguese may reconcile themselves to physical expulsion from Goa: they will never voluntarily leave it.

A Western View of Indian Foreign Policy

BY A CORRESPONDENT

(An article on "The Indian Point of View" appeared in "The Economist" of April 21st.)

IF an average Indian is asked what his country's foreign policy is, he is likely to bring up the *panch shila*, the five principles announced on April 28, 1954, when the Indo-Chinese treaty on Tibet was signed. These are mutual respect of each country for the other's territory and sovereignty; mutual non-aggression; mutual non-intervention in internal affairs; equality of mutual benefit; and peaceful co-existence. China's adherence to these principles has given enormous satisfaction to India and has been trumpeted abroad throughout Asia as a major triumph of Indian diplomacy. This means that the *panch shila* are sound "psychological peace-fare" because when some future crisis occurs, they must compel China to decide to what extent, if at all, it would think it worth its while to humiliate India by pursuing any course that would violate the *panch shila*. The violation of these principles would enable the Indian government to rally public opinion in support of war-like defensive measures.

The *panch shila* strike a Western observer as an admirably pious doctrine but not as a policy; for the basis of a policy must be the power to carry it out. What commitments are India's armed forces strong enough to under-

take? Against a Chinese or Soviet threat, India could only fight delaying actions until help arrived from its friends. Against Pakistan, India is, at present, strong enough to fight and win, at any rate the last battle. In other words, India's effective foreign policy is confined to containing Pakistan and to the policing of its frontiers.

Are these commitments too small by comparison with India's interests? It is vitally interested in the area stretching from Arabia, whence it gets all its oil, to Indo-China. The example of China, a country even poorer than India, which, with Soviet aid, equipped itself to withstand a strong United Nations' force in Korea, suggests that the conversion of the *panch shila* doctrine into a foreign policy covering South East Asia would not be beyond India's physical capacity. But it would mean reliance on external military aid, and the pressure of economic effort might well cause the abandonment of India's liberal democratic methods in favour of totalitarian ruthlessness in forced labour and forced saving—all possibilities abhorrent to India's ruling classes.

India prefers to concentrate its strength for a mighty effort of economic advance. Its leaders calculate that it is safe from any Western aggression and that if it were threatened by the Communist bloc the West could not fail to stand by it, if for no other reason than to prevent its vast resources from falling to the enemy. It also reckons that by refraining from building up its armed forces on an Asian scale it lessens the danger of an Asian arms race and contributes to the maintenance of a calmer Asian atmosphere.

Moral Cellophane

Out of these considerations springs the doctrine of "non-alignment," and it may be admitted without quibble that India's non-alignment has been valuable to the cause of peace and to the free countries. For instance, by securing China's confidence when no Western democracy was in a position to do so, India helped to moderate the Korean policies not only of China but of the United States, and much treasure and many lives might have been spared by heeding its warning that China would intervene if the 38th parallel were crossed. The West has a vested interest in a flourishing, independent, and democratic India and, from this point of view also, India's concentration on building up its economic strength and consolidating its democratic regime should reconcile us to its "non-alignment."

It is, however, important to note that it is at the "summit" level in London, Washington, Peking, and Moscow, that India's non-alignment applies. Below that, Western statesmen should never forget that India's effective foreign policy is limited to the containment of Pakistan. As long as India retains its present three to one superiority of strength over Pakistan, it feels safe. If this ratio is disturbed and its fears thereby aroused, it is ready to match gun for gun and plane for plane in an old-fashioned arms race, and if pushed too far might feel itself compelled to sacrifice any existing friendships for the sake of what it would regard as the necessities of national survival. This explains India's violent reactions to Seato and the Baghdad Pact. When promoting these treaties, both the Americans and the British forgot or, perhaps misled by the flowery moral cellophane in which India's non-alignment doctrine is usually wrapped, had never really grasped, what its real foreign policy is.

But if the West needs to be urged to a better apprecia-

tion of the value of India's attitude, it seems reasonable to suggest to India's leaders that they might educate their own public opinion in the underlying implications of non-alignment. The first of these is that the degree of seriousness that China and other Asian countries are likely to give to India's counsels depends not only on their estimate of its disinterestedness but also on their estimate of the extent to which there would be the devil to pay with the Commonwealth and the United States if they got tough with India. For non-alignment without the ultimate sanction of the armed forces of India's friends is not an effective policy: it remains a doctrine. Most Indians identify the political doctrine of non-alignment with Mahatma Gandhi's moral doctrine of pacifism, forgetting that a pacifist nation disarms itself but not its enemies. Nor do those whose role it is to inform Indian public opinion point out that however benevolently Russia and China may view a poverty-stricken India today, as with each decade it becomes more prosperous, its growing power and frequently divergent interests will be viewed with less amiability. The course of their relations since August 15, 1947, suggests that neither India nor the West has fully appreciated that neither can survive in a predatory world without the other and that both have still something to learn about ways and means of harmonious co-operation with the other.

Strains in Brazil

FROM A CORRESPONDENT IN RIO DE JANEIRO

THE bitter, unreconciled opposition which persists against the Kubitschek government continues to prompt a blunt question: is there support or opportunity for a movement to overthrow Mr Kubitschek? The answer so far appears to be a qualified negative.

Brazil, politically, has never been quite so unhealthy; yet if there should be any drastic change, it may not be thanks to the direct efforts of the opposition but, paradoxically, to that element, led by the army, which supports Mr Kubitschek. This faction is very much in the majority; but should it reach the conclusion that this government is incapable of establishing national unity, or that the opposition, especially in the armed forces, is gaining ground, it might act. If it does, it remains to be seen just how far it might go to carry out its proclaimed mission "to guarantee law and order above all other considerations."

The general view is that the military is unlikely to seize power. The majority of army leaders realise this would complete the cleavage between the army on the one hand and the navy and the air force, backed then by public opinion, on the other. Brazilians regard the army with respect mixed with mistrust. They acknowledge their debt to it, for more than once its restraining influence has saved them from a holocaust; but they do not want to see it with any more power than it has already.

The peculiarity of the present crisis is the attitude of the Brazilians most of whom continue to disassociate themselves almost entirely from events which politically have rocked the country. The task of the government and of the military leaders is to pacify outraged feelings, particularly in the air force where Mr Kubitschek is still seen as

the resurrector of the Vargas regime which it helped to overthrow. So long as they persist, these centres of revolt will encourage the opposition which realises that in view of the apathy of public opinion, it can do nothing on its own. But this opposition in Congress, fiercely vigilant for any opportunity to attack and backed by an equally fierce press, is forcing the government to adopt an attitude of such caution that it is incurring the public charge of inactivity. The average Brazilian today gauges the success or failure of a government very simply by the amount of his grocer's bill; he is no longer consoled by long-term plans for his welfare, which the Kubitschek government undoubtedly has in mind. Since it took office on January 31st prices of some domestic essentials have risen by about 20 per cent.

Mr Kubitschek's opponents include a good many cases of wounded *amour propre*. But they also include responsible men who are sincerely worried about the government's association with some notorious elements of the former Vargas regime. Nevertheless, the majority of Brazil's leaders are anxious to settle their differences and to put the political house in order. Above all, they want to avoid a recurrence of the recent crisis in five years' time when the next presidential election is due. Some of the less explosive changes proposed are the substitution of the presidential system by a parliamentary system; the exclusion of serving officers from any civilian post, and a change in the electoral law so that any future president must receive more than half the total votes cast. (In the October election, Mr Kubitschek received about 35 per cent of the total vote.) But real revolution is packed in a proposal prompted by the Minister of War, General Lott, who is still the strongest individual buttress of the regime and a main target for opposition animosity and plots. This is that "to make the vote in Brazil truly democratic every working Brazilian must have the right to it." This would open up the electoral lists to an estimated fifteen million illiterate, but employed, Brazilians who are now barred from the polls.

Revolt in Amazonia

The immediate task, however, is to deal with the present stultifying situation, which might deteriorate overnight into something far more serious. Although some recent manifestations of opposition have had the trappings of musical comedy, these and the apathetic, almost cynical, attitude of the masses are sadly symptomatic of the unhealthy atmosphere. Senior officers have been arrested for disobeying orders or for publicly challenging the legality of the government. The quintessence of quixotism, perhaps, was the gesture of three air force officers who flew off into Amazonia to start a revolt from the jungle. They were able to "capture" airstrips and radio beacons, to "occupy" the river town of Santarem with a population of 35,000, and disrupt air and river transport in the region for days. It took the government almost three weeks to organise its forces to "liberate" Santarem and capture one of the rebels. The others escaped to Bolivia. The affair has provided Mr Kubitschek with an opportunity to show his magnanimity. Congress has recently passed a government bill which grants an amnesty to all political offenders since the "anti-coup" of last November through which General Lott ensured that the present government could take office. But a motion tabled by the leader of the majority in Congress that the amnesty should be extended to all political offenders, including the outlawed communist party and its

leader, Luiz Carlos Prestes, was defeated by seven votes after heated debates.

Some of Mr Kubitschek's opponents are still wondering to what extent the outlawed communist party's support helped his election and what it is expecting to get in exchange. Mr Kubitschek's majority over his nearest opponent, the conservative candidate, was around 400,000. The "communist" vote is roughly estimated at about 200,000. Did it, in fact, come out *en bloc* for Mr Kubitschek, as it was directed to do? This "support" by an outlawed political organisation, plus the charge that Mr Kubitschek was helped to victory by electoral fraud in the interior makes up the opposition's case that his election was illegal. Some of his fairer opponents, however, concede with disarming frankness, that in the uncertainties of a Brazilian election campaign, a candidate can to some extent be forgiven for treating offers of support as a gift horse. But just as they fear that Mr Kubitschek may not be able to contain the aspirations of some of his more rabid *Vargista* following, they also fear that in the present swing towards greater liberalism the communists may be allowed to seize their chance.

One prediction can be safely made about this paradoxical country; that its prodigious economic development and material achievement in the face of apparently insurmountable difficulties, and above all its peculiar resilience in internal convulsions, will probably continue to confound the more academic foreign experts for many years to come. In South America, Brazil is an oasis of relative tranquillity where in every crisis so far reason and restraint have prevailed in the end. The best testimonial to its real nature is the steady inflow of foreign investment. Not only Americans, but Germans, French, Italians and Japanese are all now choosing Brazil for some of their largest long-term investments in this continent.

Timetable for Uganda

FROM A CORRESPONDENT IN KAMPALA

THE Governor of Uganda, Sir Andrew Cohen, is no doubt used to ingratitude. The reactions of the African political parties to his proposals for direct elections on a common role of the representative members of Uganda's Legislative Council by 1961, will not have surprised him. His statement, however, may have taken the parties unawares; the Uganda National Congress hurriedly put together a handout and circulated it in the Legislative Council. This flatly rejected the Governor's proposals and demanded immediate self-government. It did not question direct elections or the common roll—it merely tried, as usual, to go one better than the government. With nothing to fight the Congress would die; if there is no enemy it is necessary to invent one.

The Congress leaders, however, have given no thought whatever to the process whereby self-government is reached; their immaturity is revealed by their sheer inability to realise that there are any practical problems to be solved in a transfer of power, however rapid. Neither they nor the leaders of the other parties seem to understand that there is a machinery of government that will have to be replaced;

they have no ideas about the new machinery which is to replace it nor the stages of the metamorphosis. Yet if the future government is to be democratic—and this is the assumption of the British Government—the introduction of direct elections is a necessary first step. It can be argued—as the Progressive party here does—that the step is put too far ahead; but it would not be physically possible to speed up the process of registration which must precede the direct elections to the Buganda legislature (the Lukiko) in 1957. Yet this election does not involve the complications of the common roll which must be dealt with in all parts of the Protectorate after the Buganda experiment in elections.

Sir Andrew stressed his anxiety that "the public generally in the different parts of the country" should understand "the problems involved" and that time should be allowed "for full local discussion." A cynic might argue that direct elections would wait forever if they had to wait for "the general public" here to understand the problems involved. But four years seems the shortest possible period in which to allow the smallest possible proportion of the general public to gain enough understanding for the elections to be any sort of valid expression of the electorate's feelings and to produce a workable elected legislature.

Too Few Technicians

Uganda today, it has been said, really compares with the Gold Coast in the thirties—not with the Gold Coast in 1949 on the eve of Nkrumah's rise to power. There are in Uganda fewer than twenty African graduates in government service and the number in other occupations can hardly be greater than this. There is a dearth of professionals, technicians and even artisans; not merely in relation to the needs of the country but in absolute numbers. Although Makerere College and the technical institutes are steadily helping to improve the position they cannot provide that body of experience that is now so sadly lacking. The most noticeable deficiency, however, is in businessmen. The history of African company promotion or of trading of any sort in Uganda is a dismal one, and, although there are signs of progress, African business enterprise is in its very infancy. One hopeful aspect of this is that the African dependence on non-Africans might in practice ensure against the worst bitterness of transition to self-government. There is enough goodwill in Uganda to make this more than a pious hope but much depends on the politicians' willingness to seek out the true obstacles to their aspirations rather than picking on the most convenient scapegoats.

Uganda, moreover, faces in an even greater degree than the Gold Coast, the dangerous problem of the great disparity of development between its constituent provinces and peoples. Buganda is ahead of the rest, growing most of the coffee and one-third of the cotton, and receiving one-half of the value of the Protectorate's exports. Recently, however, the Buganda government has denied its intention to pursue a separatist policy, and the Governor has made it clear once more that the British Government feels itself to be the trustee for the central government of the future and intends to resist demands which might "encroach upon the rights, responsibilities, functions or revenues of the central government of the future." This was a statement of fundamental policy by no means directed solely at Buganda; but it underlines the fact that Uganda has a great deal of political education to get through before it can function as a modern state—and this is something which the National Congressmen so far flatly refuse to believe.

The lowest price luxury car

with fully automatic transmission

HUMBER SUPER SNIPE

To the luxury and high performance of the Super Snipe is added the pleasure of a fully automatic transmission. Tested and proved all over the world, the Borg-Warner transmission gives 'two-pedal' driving with better performance and more flexibility, but no extra petrol consumption. It means tireless armchair driving, even in the densest traffic. With conventional or automatic gear change the Super Snipe is a car of distinction at a price unequalled for value amongst quality cars.

*Humber Super Snipe Saloon £950 plus p.t. £476.7.0
With Automatic Transmission £1,075 plus p.t. £538.17.0

*Available with Overdrive £45 extra, plus p.t.

the Wonder of Plastics

The Catamaran "Endeavour" built by Prout's of Canvey Island is the fastest sailing craft in Britain, having achieved 14.8 knots over a measured mile. The strong hulls are built from veneer strips, glued with Beetle Adhesives—a B.I.P. product.

B.I.P. SERVICES

The full resources of the B.I.P. Research, Technical Development and Design services are at the disposal of manufacturers interested in the possibilities of plastics. Advice will gladly be given on any problem concerning plastics applications, irrespective of the type of material involved.

In transport and tableware, in foundries and fabrics, plastics today play their part. Their role may be contributory, it may be fundamental, but the wonder of plastics is in their versatility, their infinite possibilities. Types and grades are innumerable, each with its own properties—and limitations—presenting a wide field of choice to the intending user. The leading plastics materials manufacturers maintain extensive consultative and development services and none is better qualified to advise and assist than B.I.P.

This Butlin's waitress is carrying over fifty plates made from MELMEX moulding powder—a B.I.P. product. Light, strong MELMEX Ware is specially designed to speed up service and reduce wastage in large-scale catering.

In the Humber Foundry at Coventry, the sand cores for the Hillman Minx cylinder block are being jointed with a Beetle Foundry Resin—a B.I.P. product.

THE BUSINESS WORLD

Spectre of Automation

AUTOMATION has become a devilish convenient word for sub-editors and industrial trouble-makers, and it is hard to judge which of them has done more mischief with it. It is perhaps a year since various British newspapers latched on to the notion that this new word, with its appealingly bizarre hint of science fiction, could be used in a headline on almost any story about industrial development: it saved finding out what the story was really about. The communists have not yet used "automation" quite so indiscriminately; but they have used it selectively, and thus with greater effect, in many of the arguments that are always arising about the use, the manning and the rating of new machinery. More new machinery is likely to be installed in British factories this year than ever before, offering higher output than ever before; but since home demand for that output is being brought under deliberate restraint, the agitators have an unrivalled chance to scare up those arguments into actual "automation strikes" such as the Standard dispute.

It may be politically beside the point to repeat that precious few of these arguments—or of the developments that are so labelled—have much to do with what is properly called automation. In the widest sense that still leaves it any distinct meaning, automation is a useful portmanteau word for forms of mechanisation that involve the linking, co-ordination and control of simpler industrial processes: typical examples were listed by Lord Halsbury this week as

transfer machining, automatic assembly, the whole field of control engineering and that part of communication engineering concerned with data processing, accountancy and calculation involving the use of electronic digital computers.

Even when properly used, the word has implications and overtones that are likely to become increasingly emotive. Used as it is being used today—to describe the installation of any new machine during a period when trade may not be good enough to absorb all the

men concerned elsewhere in the same factory—its meaning has become almost purely emotive. A Detroit business economist, travelling through London last week, said that a month in Europe had given him the feeling that unions, social workers and businessmen alike were absolutely haunted by the idea of automation. That may become true in Britain, too. But this year, at least, the spectre happens to be a bogey.

Retooling of the production lines for a new tractor at Standard Motors certainly includes an element of genuine automation—though probably no greater than what has already been installed at several other major plants in the motor industry, where no trouble arose. Certain lines of separate machine tools are to be replaced by transfer machines—banks of tools linked by devices which, when one operation is completed, automatically move the workpiece into position for the next. These lines would require far fewer men for a given volume of output. But in other sections of the factory retooling offers less dramatic economies. Moreover, the object of the exercise is not merely to maintain output, but to increase capacity by some 30-40 per cent. The increase in tractor output—as and when Standard manages to achieve it—was expected to increase, not diminish, the company's whole labour force, though indeed in a different pattern of jobs.

What has happened meanwhile is that Standard is now unable to switch as many tractor workers as it planned to car production, because of the squeezing of the home market and the softening of export markets for British cars. It may also be less sure how soon it can sell the extra 30,000 tractors a year that it is equipping itself to produce. The need to lay off men during the key months of retooling at Banner Lane has been aggravated. More men have to be laid off, and the company cannot promise when it will be able to take them all back.

The most significant thing about the Standard lay-off and about the Standard strike, therefore, is that two years or even one year ago re-equipment of this kind might have involved neither lay-off nor strike. What has changed is something beyond the powers of the management or the unions to control—Britain's economic climate. During this year and next a large proportion of the industrial investment decided upon during the boom years of 1953-55 will be maturing (like Standard's) and offering the chance of lower costs through higher productivity. Much of that investment is aimed at higher productivity and using roughly as many men to achieve much higher output—and not at the same volume of output with considerably fewer men. These two concepts may theoretically offer an equal return on investment, particularly when a company has to engage in "defensive" investment to maintain its share of a market. But in practice the industrialist generally puts most of his capital where he can see expansion—if not in the total market, then at least in the share he expects of it. The labour-saving in much of this investment, therefore, was to be achieved by enabling roughly as much labour to produce more. But it is coming in at a time when Government policy is making it hard for some industries to sell as much.

Both of these current facts strongly colour the workers' attitude today towards what they call automation—by which they mean any significant installations of more efficient equipment. The communist-inspired resolution on automation passed at the Amalgamated Engineering Union conference recently was bitterly—and in principle quite rightly—criticised for its insistence that the worker had a right to keep his job not only in the same industry but even in the same factory. What some of the critics ignored was just how often, in many of the case histories of automation from the United States, that is exactly what in fact happened. A company embarks upon the very high investment and overhead costs of automation because it is confident of expanding its output and sales much more than proportionately (whether the product is insurance policies or cylinder blocks); it often does so; and its labour force, albeit redistributed between jobs and skills, remains much the same or expands during the process, with re-shuffling, re-training and normal wastage taking care of the departments where particular operations or jobs are abolished. No doubt the cases cited are the rosier; businessmen seldom advertise their wrong decisions. But what automation offers has to be rosy before industrialists decide to buy it.

This does not mean that automation, or other technical change, is likely to freeze any existing pattern of industries within an economy or of companies within an industry. The AEU's dream of painless security of tenure for every worker wherever he chooses to work

is a nightmare of stagnation. But over any short period, heavy capital investment—in automation or less complex re-equipment—generally postulates expansion, and expansion for the particular company doing the investment. The companies that can afford this, indeed, are the growing elements in the economy—in their own field, and often in spreading beyond it.

Operatives in these growing industries, too, count on expansion to keep them busy in good jobs at high wages; and while these companies and industries succeed, it generally does. But when the success of these industries in the home market is checked as a result of Government action to bring total demand into balance with supply, that confidence is likely to be upset. Last winter, in certain of the fastest-growing industries, the fat margin of overtime and special bonuses that constituted the worker's main improvement in real purchasing power since the war began to be whittled away. Many were soon down to basic wages, some on short time; redundancy followed. This Government policy, and the reasons for imposing it, have never been simply and fully explained to the workers concerned. The reasons, indeed, are inherently not simple. But the overtones of automation, whispered in one's ear by a communist or blared in the headlines, do offer a simple wrong explanation.

The mischief is made now. What can sensibly be done to clear it up? First, but only first, explanation, both of automation itself and of the economic policy of which some intended results are today being mis-called automation. The explanation is not what is generally being advanced today—that the short-term effects of automation must inevitably be painful, but that in the long run automation will equally inevitably create more jobs. A revised, honest version might run like this:

Only a fool would claim that he can tell now what the long-term implications of automation will be on the pattern of employment. Research should give some pointers, and we are promoting such research. One thing is certain, for our comfort: automation cannot occur without the effective demand—probably widely distributed demand—to buy the extra goods.

Moreover, for the next 20 years or so, Britain's main weakness in economic growth will be shortage of people able to work, not redundancy: we can only expand by a steady advance in productivity. Automation, and investment in more productive equipment generally, is the key to that expansion.

In the short run, most of the companies that put in automation are growing anyway, and not many people are likely to lose jobs, though many will have to change the work they do. At times when the Government is putting the brake on expansion to steady the economy, growth through automation or re-equipment may have to be temporarily checked. This has nothing to do with automation, but a good deal to do with ensuring expansion in the future.

Secondly, closer consultation is required at the very inception of industrial change—certainly between industry and its workers, probably between both and

the Government. The unions concerned at the factory level should be taken much farther into management's confidence about its long-term intentions in re-equipment and expansion, and given the best forecasts management can make of the likely requirements and of the balance of different skills that technical trends in the company seem likely to demand. Where redundancy in departments or even whole factories is inevitable, careful manpower planning in advance ought to be able to make use of natural wastage and labour turnover to avoid sacking large numbers at once.

Where significant re-training may help—to make a production operative, for example, capable of planned maintenance—there may be some advantage in publicising and even rather window-dressing the re-training process, in association with Government training centres and with the unions. In circumstances where redundancy may be a direct result of Government pressure to transfer resources between industries and

The Geological "Scandal"

IN copper output the Belgian Congo is half the size of the Rhodesian copper belt—200,000 tons a year compared with nearly 400,000 tons. Yet the Belgians affectionately call their copper belt the geological "scandal"—scandal in the sense that a man is said to be "scandalously" rich. Rich it certainly is: Union Minière du Haut Katanga works copper ore of a grade of 6 to 7 per cent compared with 3 to 4 per cent in Rhodesia and much richer concentrations occur—13 per cent for instance—in some of the mines; great patches of green malachite are to be seen in the workings. Union Minière also produces about 8,500 tons a year of cobalt (two-thirds of the world's output); its cobalt production doubled between 1950 and 1954, and when it cuts the price, other producers will have to pick up the step. It works zinc in conjunction with copper and has stockpiled a large quantity of zinc concentrates. By-products include about 160 tons (£1½ million worth) of silver, and enough germanium is included in the residues to multiply several times the present tiny production. Arsenic salts and small quantities of radium, gold, platinum and palladium are recovered at the smelters of the Société Générale Métallurgique de Hoboken in Belgium, where part of the refining is also done.

Union Minière also owns the uranium mine Shinkolobwe. It used to work ore of a 60 per cent grade—fantastically high compared with South African grades. When war broke out there was a stock of it for the mine was then worked for radium, leaving the uranium as waste. But the far sighted management put those residues out of harm's way in America, so that when a harassed American administration asked for a most urgent 10,000 tons of uranium ore delivery was promised "tomorrow." The 60 per cent ore is now

even geographically, there may be a case for higher allowances during re-training and for assistance in moving and finding somewhere to live—not subsidising under-employment, but investing in mobility.

The Government, this week, showed itself sensibly alive to some such implications. At the national level, there will be value in consultation between the Government, the unions, and the employers' associations—provided that all three go slow on hollowly-resounding generalisations. Any significant development of re-training will certainly need new flexibility in union rules and perhaps in employers' recruitment policies. The question "What kind of skills are we likely to need?" affects education and apprenticeship, as well as shifting adults between jobs. So the final requirement, as the Department of Scientific and Industrial Research has already concluded, is more research—to find out how best, socially as well as economically, we may reap the promise of automation.

gone, and the grade has dropped. Uranium is not an important contributor to revenue.

The by-products proclaim the wealth, but copper sustains the economy. Copper accounts for about 70 per cent of gross annual profit, cobalt for 15 to 20 per cent; zinc comes third, and the rest are small. To a significant extent the copper of the Haut Katanga province supports the whole Congo, for including export taxes Union Minière finds about a third of the Congo's Budget. It is also the most heavily taxed copper company in the world but the copper belt's economy, the company's revenue and even the conservative dividend are all growing. Proved reserves are secret, but the much faulted mineralised belt stretching from the Rhodesian frontier near Elizabethville more than 200 miles westwards beyond Kolwezi has, after fifty years, merely been scratched in a few places. Only at Kipushi and at Zinkolobwe have the mines yet gone underground. The rest is opencast quarrying to a depth of about 160 feet. By contrast, across the Rhodesian border, Nchanga has just started opencast working of ore of less than 3 per cent grade, and hopes to use opencast methods down to 800 feet.

Electric power will also soon be available for export to Rhodesia from the Haut Katanga. The area is less than self sufficient in coal and coke, but is becoming generously supplied with hydro-electric power. Bia, Francqui and Del Commune power stations will be supplemented this summer by power from the much larger Le Marinel project with an installed capacity of 276,000 kW. It is timed to be opened on the corporation's 50th anniversary in July. Behind these three lies a further project twice the size of Le Marinel.

The power plants of the Haut Katanga, unlike those

of the Congo government, have been built with self-generated capital, though towards the 2,000 million francs (£14 million) that Le Marinel is expected to cost one-fifth will be found by the Rhodesian copper companies which are financing the power transmission line by paying in advance for the power they will take.

Haut Katanga is a "geological scandal" in a second sense. Nature has tucked her wealth away in one of the least accessible corners of the world. Rich in money and resources, the area is impoverished in communications. Roads outside the towns are bad (and American-type cars essential). The long haul by rail and river is sometimes costly and necessarily slow. The map shows the three main approaches to the area—the British-owned Lobito Railway from the West Coast to link up with the KDL line still in process of electrification, the Rhodesian Railway from Beira and Lorenzo Marques on the East Coast to the south-east corner of the Congo at Sakania. Much of the traffic also uses the incredible all-Belgian route by rail to Port Francqui, thence by river boat down the Kasai and the Congo to Leopoldville, where the goods take train again to Matadi, avoiding the Congo rapids. Transport routes should improve as the Government's 10-year plan progresses, but it will take time.

Both the standard and the cost of white living are high, but whites are spread thinner than in other parts of industrial Africa. The ratio of less than 100,000 whites in the whole Congo to around 13 million Africans would enforce African advancement even if the Belgians did not want it. They do want it and they have the money to make it possible. At the frontier a black train driver takes over. In the workshops a gang of 10 Africans can be seen moulding a copper ingot into a bar under a four-ton hammer with no obvious white supervision. A class of black machine tool apprentices may be seen learning the trade from black journeymen. African drivers man the giant grabs in the quarries and the giant cranes in the concentrators.

There is nothing here of "Give them the jobs and they will finish the tools." Generous investment in mechanisation has been used to spread white supervision thinly and push native advancement along. The danger is to assume that it is easy. The Congo is open-

ing its second university at Elizabethville this year; urban hospitalisation and schooling are good, but as yet skilled native labour and native professional men are still scarce. Some skills (notably teachers and hospital nurses) are visibly scarcer than in the Union of South Africa. Union Minière employs 20,000 native men and the child population is growing enormously but the first generation and their families are imported from tribal areas and it takes time and patience to change the men and their wives from raw natives drawing rations in kind into fully urbanised families.

The company spreads its money widely around its interests. The subsidiaries, however, are few. The Société Générale Métallurgique de Hoboken, the refining company in Belgium, which also handles the tin

concentrates coming from another part of the colony, and not mined by Union Minière, and Métalkat, which owns the electrolytic zinc refinery in the Congo, are the most important.

British enterprise contributed much to opening up the riches of the Haut Katanga—and allowed much of its advantage to slip through its fingers. Tanganyika Concessions explored and proved the minerals and still draws a royalty. It received in exchange for its work about 45 per cent of the capital of Union Minière. It will take many more years to live down the decision to reduce that interest to 14½ per cent and build the Benguela Railway

with the proceeds, even though the Benguela Railway pays its way and will do better. "Tanks" pays a 70 per cent dividend, and the 10s. shares stand at 7½, to yield £4 8s. 10d. per cent. They may still be cheap at that price, for on the basis of the Brussels quotation of 6,620 frs per one-tenth of a Union Minière share, the break up value of "Tanks" ordinary is much higher. But the main voice has passed to the Société Générale de Belgique, with which Union Minière has a strongly interlocked board. What might have been is amazing. If Tanganyika Concessions had retained its 45 per cent interest and not built a railway the break up of its shares would have been many times the present price, and its income based only on the present dividend of 1,600 frs by Union Minière would have been more than doubled. If only looking forward were as easy as jobbing backward!

THE CONGO COPPER BELT

Business Notes

Surfeit of Issues

IT has been a week of new issues on the Stock Exchange, and the reaction of the market has laid bare the smallness of investors' resources. On the gilt-edged side there has been one small new issue and one placing—the latter £1 million Hendon Corporation 5 per cent stock 1971-76 was placed at £98½ and favourably received. The issue of £3 million Essex County 5 per cent stock, 1968-71 at £99½ was a sharp disappointment. Terms had been shaded to take account of the poor response to the Ayr loan a week earlier and its sponsors can hardly have expected that 46 per cent of so small an issue would be left with the underwriters.

The logic of that partial failure and of the opening discount of 10s. on the Essex stock is that the market should now be given breathing space in which to accumulate buying power, especially as the Bank of England must have in mind another substantial government loan in the next month or two. So far as routine funding through sales of government stock by the government broker goes, the mere suspension of the flow of small local authority issues will make no difference; the process, designed to reduce the floating debt, goes on all the time. It is argued that the volume of funding might be greater if a reasonably steady market could be provided. Hence the current gossip about a possible early reduction of Bank rate, though that, whatever its other demerits, would amount to a vote of no confidence in credit control.

The industrial section of the market, now receiving the seasonal flood of company dividends and profit figures, behaved much better than gilt-edged. The *Financial Times* index reacted from 193.4 on Monday to 192.0 on Wednesday, but individual stocks continued to behave well. A big buyer has been in the market for Standard Motor which rose 6d. to 7s. 3d. in the first half of the week. There was naturally a sharp downward adjustment in British Petroleum after the confusion that arose last Friday, following an incorrect agency report of the dividend. Having touched 158s. on Thursday of last week, BP are now back to 141s. 4½d., the jobbers having rightly decided that the late bargains on Thursday of last week must stand—to their own considerable disadvantage.

Two fairly large rights issues have tested the industrial market successfully this week. British Aluminium is raising £4 million for its new Canadian venture by the issue, as rights on a two for five basis, of 2 million £1 ordinary shares at 40s. The new shares enjoyed an unexpectedly good market when dealings started on Wednesday, opening (nil paid) at 11s. 3d. premium and closing at 13s. 6d. Albert E. Reed, the paper company in which the *Daily Mirror* has a substantial holding, is to raise over £6½ million by the issue of 3,285,985 ordinary and the same number of "A"

ordinary shares on a one for two basis and a projected dividend of 16 per cent for 1957. The announcement of the issue came with the profit and dividend statement which showed a net profit, after tax, for the year ended March 31st, of £3,570,723, compared with £3,116,227 and a final dividend of 15 per cent making 25 per cent for the year, compared with 22½ per cent on a smaller working capital, and was well received. The shares, still full of their rights, stood at 102s. 9d. of Wednesday compared with 96s. 9d. just before the announcement. But though these issues have been welcomed, it has become even more evident that any substantial volume of company borrowing would force the market downwards.

Coal on Borrowed Money

IN the debate upon the coal industry's borrowing powers that was going on in the Commons as *The Economist* went to press this week, the Minister of Fuel and Power, Mr Aubrey Jones, gave no details of the increase in coal prices that is now imminent. Since Mr James Bowman, chairman of the National Coal Board, unexpectedly announced during a press conference last week that an increase could be expected "within days rather than weeks," the routine procedure of consulting consumers' councils and the trade has been going on; it was not completed in time for the debate. Mr Jones referred to the increase—to be made at a time when the Coal Board is not in the red on its current operations, but has an accumulated deficit of nearly £37 millions. If the Board were to be denied the power to recoup that deficit by raising its prices, he said, it would need to borrow some £400 million from the Government during the next five years of its £1,000 million investment programme—after which its investments will be financed almost entirely out of income. If it was allowed to raise prices to clear off the deficit, it would need to borrow about £350 million. The Government's decision to raise the coal industry's borrowing powers from £300 million—now largely exhausted—to £650 million and not £700 million was in line with their decision that higher prices for basic materials were less inflationary than subsidising the industry.

Mr Jones's speech was an objective, cold appraisal of the Coal Board's earlier investment plan, its largely disappointing results so far, and its revised plans: in no way did he identify himself with the industry, and he emphasised to members that his approval had been given to the general lines of the plan, not to the details of the Board's document "Investing in Coal." But he made an effective plea for better "objective understanding" between the coal indus-

try and others in Britain, in place of the suspicion poisoned by prejudice for and against nationalisation. It is certainly time for coal to rejoin British industry—in more ways than one.

Battle of Engines

ROLLS-ROYCE has brought off a notable coup in winning an order from Trans Canada Airlines for Douglas DC 8 airliners fitted with the Rolls-Royce Conway engine in place of the American Pratt and Whitney J75 for operation on the North Atlantic. Both Douglas and Boeing have been playing safe by tentatively offering their big jet airliners with a choice of American or British jets, but this is the first order actually to be signed for the Anglo-American combination. It is initially for four aircraft, with an option on two more and the possibility of further purchases—the order commits TCA to spending nearly £10 million. There is at least a possibility that two other Douglas customers, the Dutch airline KLM and the Scandinavian SAS, will follow suit. When the purchase price rises to sums of this order, the advantage of being able to pay for engines in sterling is considerable. The reasons that led TCA to specify the Conway were implicit in the performance figures for this version of the DC 8 put out by Douglas earlier this year: lighter weight, giving 300 to 400 miles extra range or a proportionate amount of extra payload; rather better economy than the Pratt and Whitney engine; and a lower price.

Rolls-Royce has found it less difficult to convince customers of the worth of the Conway than to get a sufficiently firm promise of government support in this country to be able to assure their customers that the engine will have put in enough flying hours in military aircraft before it goes into service with the airline. Rolls-Royce has never been afraid of commercial risks, and the company has sunk immense sums of its shareholders' money in research, experimental plant and actual production; but it flatly refuses to attempt the costly task of meeting the full bill for building up the hours of flying experience that an engine must have. The Ministry of Supply, uncomfortably pinched between the expanding demands of the services and the Treasury's pressure for defence economies, has at last given Rolls-Royce the assurance of help that the company wants, but just how the Conway will be flown and in what military aircraft, other than one of the big bombers, has still to be decided.

This undertaking has been having repercussions on the other major engine builder in this country, the Bristol Aeroplane Company. The Bristol Olympus engine is in the same power class as the Conway—at present in the 12,000 pound thrust class and working up to 20,000 pounds or more as development proceeds. Like Rolls-Royce, Bristol has agreements in the United States to make engines available if the American airframe manufacturers should need them, and negotiations with Boeing for the Olympus have reached a new stage. But if the Ministry is trimming its programme, and is committed to supporting the Conway, must it mean that the axe will fall on the Olympus? It would be ironic if it did, for the engine's designer, Dr Stanley Hooker, was largely responsible for the Conway engine when he worked for Rolls-Royce not so long ago.

Most of the strength of this country's aircraft industry is in its engine factories, as the Americans recognise, and it would seem a false economy to cut off one of the most notable engines in this country, which still holds the world's altitude record, when money is still being spent with apparent lavishness in other less rewarding directions.

Britannia Indisposed

THE engines of the Britannia airliner have developed what engineers like to describe as a slight cough. Like asthma, the condition came on at first only in certain climates, namely, in the area of wet cloud known as the inter-tropical front in Africa. But lately it happened not in Africa, but on a journey from Frankfurt to London; a flurry of alarm ran round London Airport, the condition was taken much more seriously and proving flights were temporarily stopped. The "cough" is in fact the extinguishing of the flame in the combustion cans by an unusual concentration of water and ice in a damp-laden atmosphere coming into the engine. The flame can be re-lighted immediately and an easy way of combating the condition is to keep the ignition permanently switched on. But it is nevertheless a disturbing phenomenon to have developed after so many hours of flying, and to develop in the comparatively normal air conditions found over Europe. Bristol is taking a Britannia with modified engines to Africa in a few days' time and believes that the answer has been found, but the BOAC schedules have been upset and there is now no chance of the airliner going into service on the day tentatively pencilled in, July 3rd; a date in August now seems more likely.

Record Dollar Exports

THE provisional returns of British overseas trade in April show that the recent improvement has almost been maintained. But the trade deficit is still too big for comfort. Exports last month fell by £14.9 million to £256.4 million fob. April had one working day less than March, however, and the daily rate of exports was unchanged. The average value in the first four months of the year was £257.9

YALE TRUCKS

30,000 lb. capacity Yale Electric Truck handling heavy steel coil.

... most practical solution to materials handling problems of any sort. Steel coils, dies, drums, bags, crates — no matter what materials

you must handle, there is a Yale Truck that will do the job for you... do it fast, efficiently and safely. And, wherever Yale Trucks go into operation, records show handling costs drop as much as 75%. Find out how Yale Trucks can meet your specific handling needs... increase production, speed shipments and save storage space in your plant or warehouse. Get in touch with the Yale representative nearest you. He'll be glad to show you the complete line of Yale Industrial Lift Trucks and help you solve your particular handling problems.

Heat where you want it

Use electricity and bring the heat to the job instead of having to bring the job to the heat. Heat can be applied wherever it is possible to bring a pair of wires—and so the heating process can be right in the line of production.

You get much finer control with electricity, too. Temperatures can be controlled automatically—and the constant heat value of electricity means that you know that the treatment is precisely what is required. Not only temperatures but the operation of a complete heating unit can be controlled automatically. Electric heating equipment can be arranged to start, run and shut down to any process requirement or time and temperature cycle.

Heat where you want it, perfect control, cleanliness, lower labour costs and better working conditions are some of the advantages of using electricity for heating.

Heating is just one of the many ways in which electricity plays a vital part in the drive for greater productivity.

Electricity increases Productivity

Ask your ELECTRICITY BOARD for advice and information or get in touch with E.D.A. They can lend you, without charge, films about the uses of electricity in industry. E.D.A. are also publishing a series of books on Electricity and Productivity. Titles now available are: Electric Motors and Controls, Higher Production, Lighting in Industry, Materials Handling, and Resistance Heating. Price 8/6, or 9/- post free.

million, 4½ per cent more than in the same period of 1955, when shipments were inflated by the over-spill from the October, 1954, dock strike. Imports in April fell slightly by £2.9 million to £327.3 million c.i.f. The total seems surprisingly low; it had been expected that some shipments held back in previous months by bad weather and strikes in other countries would arrive in April. The details published later this month may throw some light on this. The average value of imports from January to April was £328 million, just one per cent less than in the same period of last year. With re-exports £400,000 higher at £13.7 million, the trade deficit rose by £11.7 million last month to £57.2 million. That was only fractionally higher than the average in the first quarter, and the average of £56.4 million in the four months was nearly £18 million less than in the same period of 1955.

Exports to North America continued to increase; they reached a new record of £33.8 million last month, £5.3 million more than the first quarter's average. Shipments to Canada rose sharply by £2.5 million, compared with the previous month, to £15.9 million, and shipments to the United States were £800,000 higher at £17.9 million.

More Realistic Steel Prices

THE increase in steel prices announced last week took no account of recent rises in wage rates in the industry and in railway freight charges; nor could it take any account of the increase in coal prices that, as the National Coal Board has since announced, is about to be made. This increase—about 5 per cent for most of the basic prices in the maximum price schedules published by the Iron and Steel Board, with some revisions of extras for particular products—derives mainly from increases in the cost of imported materials, and partly from the increase in the price of home-bought scrap authorised by the Board of Trade a few days before.

Imported iron ore, scrap, pig iron and semi-finished steel, which are bought centrally for the steel industry, have all risen markedly in price during the last twelve months; there has, moreover, been a sharp rise on ocean freights. These costs are now being passed on to steel consumers; some had already been passed on to the steel producers who buy these imported products at British prices from the industry's central importing agencies. The loss on buying such products at high foreign prices and selling them more cheaply to producers here is met out of a central fund financed from levies on output throughout the industry. For some time this fund must have been in deficit on its current payments in and out, though cuts in the imports required in 1954 and in freight rates probably left it with a comfortable accumulated surplus. In December, the Iron and Steel Board increased by 10s. a ton the price at which foreign imported ore was sold to producers, and this week has increased it again by 11s. a ton; over the year, therefore, producers using imported ore have not only had to stand the actual increase in landed prices, but have suffered a reduction in the margin they enjoy compared with the world price of ore.

Last week's increase in the price of scrap purchased in Britain was another moderate but significant step towards

realism in the iron and steel industry's internal pricing system. About 18 months ago this price was raised from about £6 to about £8 a ton, under cover of talk about higher prices for better segregation of scrap; last week the price went up again to about £10 a ton. As comparable materials for steelmaking, scrap is worth, say, 80 per cent of pig iron; since the pig iron price is now about £18 a ton, this suggests that scrap might be worth perhaps £14 a ton. Even last week's increase, therefore, leaves some way to go. Many people in the industry are still prepared to argue that the price of scrap has no effect whatever on the amounts the industry can collect. Nevertheless, this latest increase in scrap prices is linked with a drive to collect more old iron and tin cans from the domestic user—by making it more worth while for local authorities to separate this out of the refuse they have to handle at dustworks.

Flags of Convenience

THE chairman of Peninsular and Oriental Steam Navigation Company, Sir William Currie, like the chairman of Cunard Steamship Company, Colonel Denis Bates, devoted much of his speech at Wednesday's annual meeting to a subject that deeply troubles British shipowners: whether something should be done to prevent legal tax avoidance by shipowners who transfer their fleets under such flags as those of Liberia and Panama and thus virtually escape national taxation. As Sir William put it: "When the next slump in shipping occurs shipping companies who bear in full their respective national responsibilities will find it hard to compete on price with those who can always undercut them by the whole cost of taxation, social services and the like."

The chairmen of these two big liner companies see alike on the seriousness of the problem. On its possible corollary: "If nothing is done about it, why should we not take advantage of the same opportunities?" there seems to be a difference of emphasis. Speaking to Cunard share-

Now in the bookshops:

THE BUSINESSMAN'S GUIDE TO BRITAIN

The guide is compiled by The Economist Intelligence Unit and has a foreword by Sir Graham Hayman, President of the Federation of British Industries. There are sections on:

holders a month ago, Colonel Bates said that if Cunard had been working under a flag of "advantage" over the six years 1949-54 its profits would have been increased by £14 million. Sir William Currie, after a somewhat fuller analysis, reaches the conclusion that: "The advantage for an established British Company is not at first sight very obvious." He makes two points: that the foreign (or perhaps Bermudan) subsidiary formed to operate the P & O fleet would have to pay British tax on that part of its profit that it remitted, and that it would not attract the valuable investment allowances still granted to shipping (though replaced by initial allowances for other industries).

Possibly the right path lies somewhere between those views. But at least it is clear that the Government as well as the shipowners have been made aware of the dangers, and that if P & O has decided that at present there is no argument strong enough to justify hauling down the red ensign, it is the retention of investment allowances for shipping that has done the trick.

Shipbuilders' Prices

IT is now revealed that though P & O decided last summer to build tankers and raised some of the money and reserved berths at British shipyards, no contract for building any of those ships has yet been signed. Shareholders who read the chairman's speech with care may feel that they have guessed the reason. Sir William Currie was vigorous in his denunciation of the shipbuilders' present methods of charging: "Few things are more commercially demoralising than to live for long on a cost plus basis." Sir William is not now demanding firm prices from the British shipbuilders. He agrees that the buyer of the ship must for the present take the risk of higher wages, longer holidays, shorter hours or increased material costs in the shipbuilding industry.

What he asks is that shipbuilders should fix a quantum of the materials and work to be used on any job and accept the risk that an excess quantity of either may be required. He does not agree—and the reservation seems modest enough—that the buyer should be asked to bear the risk of inefficient planning or labour handling or indeed of any form of inefficient management at the shipyard. If P & O with enormous orders in its pocket can make those conditions, and it seems possible that it may, many shipowners will have reason to be grateful.

Flying the Atlantic Cheap?

THE two American airlines that operate across the North Atlantic, Trans-World Airlines and Pan American, have let two boisterous cats loose among the pigeons by announcing schemes for cut-price flights on the North Atlantic just as delegates from all the major international airlines—including TWA and Pan American—were leaving for a general rate-fixing conference at Cannes. Their proposals are not identical, nor are the motives that prompt them. TWA wants to introduce a special 15-day excursion ticket this summer at a third below the standard tourist

fare. The 15-day ticket is a device TWA has already pioneered successfully inside the United States for attracting two-way traffic during the tourist season. If the ticket lasts only 15 days, the holders are bound either to go out or come home against the main stream of the traffic and use some of the seats in otherwise thinly filled airliners.

Pan American's proposal is more drastic. It is for an 18 per cent reduction in North Atlantic tourist rates generally, to come into force next summer. By that time, the airline will have taken delivery of a substantial fleet of new Seven Seas airliners and will have much more capacity available than its competitors. This puts it in a position to bid for extra traffic by offering lower fares, but whether Pan American would in fact be pleased to get a reduction as startling as 18 per cent is a matter that other airlines would question. Rate fixing between international airlines is a procedure that involves both hard words and hard bargaining. The fares are fixed by the International Air Transport Association, to which all the major airlines belong and governments whose airlines are members of IATA require foreign operators flying into their territories to observe the rates laid down. Thus neither Pan American nor TWA would be able to move unless their schemes were approved at the IATA conference that opens at Cannes later this month; without such approval, they might be refused permission to land in just those European countries to which they want to operate the cheap services. Knowing this, other operators are inclined to dismiss the Pan American proposals in particular as a manoeuvre not quite in accordance with club rules; it could also have been designed for home consumption, since American operators are in some trouble with their own licensing organisation.

Canadian Dollars in Demand

THE undertone of sterling has remained steady this week. New York is still a persistent commercial buyer and on Tuesday the sterling-dollar rate rose to a middle figure of \$2.81, the highest level since August, 1954. There has been a modest recession from this rate, but the evidence of the markets suggests that the Exchange Equalisation Account has continued to gain dollars during the last few days. The main reason for the inability of sterling to maintain the whole of its advance against the US dollar has been the persistent demand for Canadian dollars, the rate for which has improved to \$2.78½; this demand has helped to hold down the rate of sterling against the US dollar. Buying of Canadian dollars has been varied and well spread. It is largely commercial, to pay for aluminium and grain. Grain is now moving from Vancouver to Russia under the inter-governmental contract. Substantial shipments are also being made from Montreal to United Kingdom and continental ports. The frost damage to the European grain crops is causing European grain dealers to buy more Canadian wheat and barley. There has also been some financial demand for Canadian dollars. Part of this is due to the movement of short-term funds, encouraged by the recent increase in the Canadian bank rate. Part of it is of more permanent character. It includes transfers to Canada of such funds as the capital to be invested by the Five Arrows

(Continued on Page 603)

Can Shell Find £1,000 Million?

THE achievement of the Royal Dutch-Shell group stands for all to see in its accounts and statement of progress. In 1955 the group's total income increased by £200 million and exceeded £2,000 million for the first time, while its net income jumped from £134½ million to £160 million. It was a year of high prosperity, in which world demand for petroleum products again shot ahead and in which Shell (doing a quarter of the world's business outside the United States) fully shared. Fuel oil prices also rose and the gross profit per gallon of the group's sales was about 1½d. compared with 1½d. in 1954.

World production of crude oil and natural gasoline rose from 750 million tons to 840 million tons. Shell produced 101 million tons against 92 million tons in 1954. Development and the sale of specialised products went ahead. Of oil and chemical products the group's sales have advanced from 37 million tons to 92 million tons over the decade 1946-1955. Shareholders of "Shell" Transport—the British partner of the group—receive £12½ million in dividends compared with less than £2½ million ten years ago. There is occasion for satisfaction; there is no occasion for investors to be awe-struck just because the figures are astronomic. Shell—a well-managed group in an industry that is in the ascendant—showed a rise of nearly 13 per cent in its net income last year which some other well-managed and well-placed undertakings both large and small could match.

Shareholders this year can have a better look at their property than ever before. The company is excused from producing a consolidated balance sheet. But the reason for the exemption is not sinister. It is simply that there is nothing to consolidate. "Shell" Transport holds 40 per cent and Royal Dutch 60 per cent in the group's operating companies; the company is an agglomeration of minority interests. But the

board has this year carried those investments into the British parent's accounts on the basis of the 40 per cent proportion of the net assets of those operating companies instead of their cost. The effect is the same as a consolidation. It is in no sense a writing up but it discloses an investment of £443.4 million and capital reserves amounting to £371 million.

Shell's real problem is created by its own growth. The group invested in its own business £283 million last year. Year by year new investment essential to develop the markets and the oil reserves has been rising. Lord Godber, the chairman, foresees that it will be about £300 million this year. It is no wild guess to say that Shell will have to find £1,000 million of new capital somehow in the next three years. When such great figures are set against the limited capacity of the capital market, the comparison begins to look frightening. Whence is new investment on this scale to come?

The consolidated accounts give a first impression that the group is weighed down with cash awaiting investment: current assets exceed current liabilities by £526 million; those current assets include £344 million of cash and short-term marketable securities; puzzled pundits wondering where the Government's near maturities are held might give this balance sheet a glance. Yet the group's liquid assets do not greatly exceed its need of working capital. New fixed investment will have to come from new resources.

It is just possible to imagine that the London capital market on the most favourable day and on the most favourable terms might swallow an issue of £50 million. A more normal assessment of its capacity might be half that figure. The Shell group has every capital market in the world assessed and the markets will no doubt be offered what they can take. But the bulk of the new capital

will have to be self-generated as it has been in the past; shareholders' profits and (to the extent that they can be controlled) the prices that consumers pay will have to reflect the fact that oil is one of those industries that doubles itself in ten years and is expected to go on doing so. Last year the profit on oil increased, and the group was exceptionally fortunate. It retained £127 million of profit and provided £171 million of depreciation, so ploughing in a little more than actual capital expenditure of £283 million. The problem will recur and a conservative dividend policy alone will not solve it. A total of £33½ million was distributed to the shareholders of both the British and the Dutch companies last year. That sum is little more than a tenth of the anticipated capital expenditure for 1956.

In practice it is the margin between costs and selling prices that has provided the lion's share of the capital needed, and there seems no doubt that the oil price structure must continue to contain an allowance for the future if expansion is to continue—which is not the easiest point in public relations for an industry that is sensitive to criticism about its pricing arrangements. What Lord Godber calls "a happy prospect for the future requirements of oil products," must at least prevent oil prices falling. He recalls with satisfaction an earlier forecast that fuel oil prices must rise if increasing supplies are to be assured.

Your wisest choice...

for top performance,
luxurious comfort and value...

Compare the performance of the Pathfinder, its 110 brake horse-power, its top speed of well over 100 m.p.h. Compare the roominess; it seats six at their ease yet it will go into the average garage. Compare the advanced design of suspension—torsion bars at the front and coil springs at the rear; the power-assisted brakes; the floor-level right hand gear change that is such a delight to use. Compare all that the Pathfinder offers and then compare the price. You'll agree that Riley is your wisest choice.

Security Company, which comprises important British, Belgian, French and Dutch interests. In addition the preliminaries in the bidding for the Mersey Paper Mills in Ontario may have begun to influence the market for Canadian dollars.

Discount Company Results

THE smaller discount houses, it seems, have come through the dear-money storm in Lombard Street a good deal more smoothly than might perhaps have been expected. For the calendar year 1955, it will be recalled, two of the "Big Three" companies were obliged to reduce their dividends and to show substantial depreciation on their bond portfolios after applying the whole of their inner reserves in writing-down or in providing credits for profit and loss account. Of the six companies that have reported since then, two and possibly three have valued their bonds at or below market value, without having to draw for the purpose on published reserves, and all of them have maintained their dividends. Smith St. Aubyn has been able to state, indeed, that it still retains a "substantial" inner reserve; and Allen Harvey and Ross, which also wrote its portfolio down to market value, showed an increase in profit in spite of the fact that this was computed after a transfer to inner reserves, whereas the 1955 balance included a transfer from such reserves. King and Shaxson, for whom only preliminary figures are so far available, has announced an increase in profit from £65,412 to £95,008, has transferred £25,000 to general reserve, and has maintained its dividend on a capital as increased by the previous year's scrip bonus.

The three companies that have this year shown investments at a book figure above current market value are Cater Brightwen and Co., Gillett Brothers Discount, and Jessel Toynbee and Co. The disclosed depreciation, ranging from 2½ per cent to under 1½ per cent, was in each case comfortably covered by the amount of the published revenue reserves.

Unfair to Poor and Rich

THE provisions in the Finance Bill on the first £15 a year of interest in the Post Office and in the ordinary departments of the Trustee Savings Banks have escaped general attention. As foreshadowed in the budget speech interest remains at 2½ per cent. For the Post Office with its vast handling problem there is really no alternative between 2½ per cent (½d. per £1 per month) unless a level of 5 per cent (1d. per £1 per month) were considered. The first £15 of interest is as forecast to be free of income tax. For the man paying the standard rate of tax the return provided is thus equal to 4.35 per cent gross, provided he does not let his investment exceed £600. For the very small

investor liable to no tax the return remains at 2½ per cent and he could obviously do better elsewhere.

It has not been generally noticed that the first £15 of interest will still have to be grossed up notionally for investors liable to surtax. For those tax payers Post Office interest will have to be assessed in two portions. The first £15 will be excluded from the income tax return but included, with grossing up addition, for the surtax calculation, while the surplus over £15 will be brought into account at the actual figure for both income tax and surtax. It would not be an enormous concession and would greatly simplify assessment if the Chancellor would make the interest on the first £600 of deposits "such amount as after deduction of tax would leave 2½ per cent."

Future Film Finance

IN March, 1957, the lending powers of the National Film Finance Corporation—which since 1948 has provided a revolving fund of public money to finance film production in Britain—will come to an end under present legislation. During the period the corporation has advanced about £12.3 million to back films, of which about £5.5 million has so far been repaid. Of the remainder, the corporation has written off or provided against probable losses on films about £4.7 million, including about £55,000 during its last financial year which ended on March 31st. Nearly £3 million of this total loss represents advances to the former British Lion Film Corporation that had to be written off, though the corporation thinks that its ownership of the whole share capital of the successor company, British Lion Films Ltd., is worth more than the nominal £600,000 at which this stands in its balance sheet. On other film production, the corporation has thus lost about £1.7 million in 7½ years. Mr David Kingsley, its managing director, defined his purpose last week as first, not to lose more money than he can help, and secondly, to make sure that competent film producers stay in business. He added that "British independent production as a whole is still unprofitable, and with the present downward trend in box-office takings, this state of affairs is likely to continue." It would be right to infer that the standard of competence required in film production differs from that usually demanded in other industries.

Within the seldom stated but broadly unvarying film policies of Labour and Tory governments—that cinema exhibitors should not be allowed to get their heads too far above water, nor film producers to drown—the corporation may be said to have fulfilled its purposes competently, at least by film industry standards, particularly as the decision to pour good money after bad into British Lion was taken elsewhere. A significant proportion of British film production in the last two years has been financed without its assistance, by the Rank group and by American-controlled distributors, whose plans for this year account for about a third of the total feature films likely to be produced. The corporation is now gathering advice about its own future and that of the industry as a whole, in order to formulate its own views for the Board of Trade—which will have to devise, and possibly even define, some further film policy by the autumn.

Tobacco's Other Worries

THE cigarette trade has lately been having troubles of its own without any assistance from medical or statistical research on the causes of lung cancer. These other worries arise from the sharp competition that broke out early last year when tobacco supplies virtually matched demand for the first time since before the war; they may be a fore-taste of the tough conditions that the trade expects when the Restrictive Trade Practices Bill is passed into law this summer. The latest argument between the retailers and wholesalers on the one side and the manufacturers on the other over the size of distributors' margins appears to have been patched up for the time being by the increase in tobacco duty last month; this allowed the manufacturers to find room for slightly bigger trade margins in the process of rounding off new retail prices to the nearest penny. It has given place again to the battle for markets between manufacturers; and this in effect is being fought out by the branches of the giant and most successful Imperial Tobacco Company and all the rest, among whom Gallagher carries most of the guns.

Two new cigarettes have been launched this month, "Time" by Churchman in the Imperial group and a Dunhill "spun fibre tip" by Carreras, which had to pass its interim dividend last year. But the major controversy has arisen over the "Exclusive" cigarette launched last September by George Jackson, part of the Amalgamated Tobacco Corporation which has been trying to emerge from the "red" for the last two years. The company re-introduced the system of coupon trading that disappeared from the trade when the Tobacco Trade Association was formed with the backing of the larger companies in 1934. Price cutting and coupon trading were then dropped and collective resale price maintenance was introduced. Since these arrangements were frowned on by the Monopolies Commission in its report on collective discrimination last summer and seemed likely to be banned by the new bill, George Jackson decided to get in first. It enclosed coupons worth 3d. in cash or equivalent value in each 3s. 10d. packet of twenty "Exclusive" cigarettes and was able to open up 5,000 trade accounts within the first month or two. The efforts of the Tobacco Trade Association to stamp out this form of sales stimulant have achieved some success. But its authority will disappear with the new Act and several other smaller cigarette firms are only waiting for the Association's power to impose sanctions to be swept away before they issue coupons too.

Mouse from the Building Societies

AFTER long deliberation the council of the Building Societies' Association has disclosed its thoughts on interest rates. It advises its members to make no change in share or deposit interest rates (at present these are generally 3 per cent net and 2½ per cent net, respectively). Nor does it advise any change in the mortgage rate charged to existing borrowers. It does recommend, however, that the minimum charge to new mortgage borrowers should in future be 5½ per cent, which many societies in fact already charge.

The association obviously has made the very minimum concession to dearer money, and to the savings theme of the budget. No alteration in rates has been made, it is worth recalling, since before the Bank rate was raised from 4½ per cent to 5½ per cent. Nor is there any concession to the fact that from August 1st the return on savings certificates will rise from £5 5s. 11d. per cent to £7 5s. 11d. per cent (gross equivalent at standard rate of tax). The association draws attention to the fact that its members offer facilities for withdrawal at short notice, whereas "some other forms of savings"—an obvious tilt at savings certificates and defence bonds—yield the full rates only if they are retained for a period of years.

The association knows well enough that a substantial unsatisfied demand for mortgages still exists. Does it hope that the mere raising of the charge to new borrowers (by those societies that have not done so already) by not more than ½ per cent will bring the demand for new advances within the supplies of money? It seems unlikely; those societies that already charge 5½ per cent are getting all the mortgage business they want. Those societies, several important ones among them, that will now increase their charges to new borrowers will be earning some extra margin to meet the probability that the composite rate of tax they pay this year may be appreciably increased. But the movement as a whole is betting on the chance that the next move in money rates will be downwards and may not be too long delayed. They have thought long and they may be right; but there is an impressive weight of opinion that takes the opposite view.

Glass by Electricity

UNTIL this week electricity has always been thought too dear a fuel for making glass in Britain. Here electricity is relatively more expensive than gas or oil, though in Switzerland and other countries where the balance of competitive fuel costs is more in favour of electricity electric furnaces of conventional design have been used satisfactorily in glass making for some time. But work has been going on here for twenty years in developing a commercially practicable all-electric furnace and last Monday Mr Anthony Gell revealed in a paper read to the Society of Glass Technologists at Stourbridge that his company, the British Heat-Resisting Glass Company, makers of "Phoenix" glassware, had in fact succeeded after five years' research. Electricity has held out tantalising possibilities to glass technologists ever since it was discovered that at certain high temperatures the resistance of glass to electric currents declines sufficiently to allow currents to be passed through it. Thus heat can be developed within the glass as it melts, with much higher thermal efficiencies than when the heat is applied externally by flame.

Mr Gell and his associate, Mr D. G. Hann, have evolved a new furnace that is much more efficient than existing conventional structures. Instead of the normal longitudinal furnace, through which the melting glass moves horizontally from the introduction of the "frit" of raw materials at one end, through the melting zone, to the refining zone, and thence to the discharge throats at the other end, they designed a furnace in the shape of a cube through which the materials move downwards as they melt. This structure

DAISEE JUTE

builds a home

DAISEE likes a roof over her head. So do most people. And most people can thank jute for it. For jute is in the roofing-felt that backs the tiles and keeps out the wet. Jute is in the damp-courses that stop the damp from coming up. And jute makes the plasterers' scrim that binds the plaster that makes your walls and ceilings.

And that isn't all. Under the lino you'd find jute. Under the chair seats. And in the carpets, whether of the traditional woven kind, or the new seamless tufted carpeting.

What versatile stuff! And how modest. Unseen, unsung, anonymous, jute is hard at work, day and night, indoors and out.

OUR SHOWROOMS FOR IDEAS ON BUSINESS FURNISHING

offers several advantages. The molten glass in the furnace has a smaller surface area in relation to its volume; the last batch of unmelted materials on this exposed surface forms a floating crust that is almost as efficient an insulator as the surrounding refractory materials; a high density of current can be concentrated throughout the melting and refining zones; and there are certain economies in materials. A higher throughput can thus be obtained for the same space and heat losses are lower. So far thermal efficiencies of 50-60 per cent have been achieved, against 5-10 per cent in fuel-fired furnaces; it is claimed that capital and maintenance costs are cut by half; and it seems that fuel costs may also be lower, though it is not clear whether this would be true for all grades of glass.

Recovery in Wool Prices

THE recovery in wool prices has taken the pessimists aback. With barely two months of the 1955-56 season to go, prices of merino wool are now appreciably higher than when the season opened in September, though they are still below the closing levels of last season. The recovery in crossbred prices has not been fully held, but they are still as high as when the season began. The sharp rise in merinos recently may have been overdone. It evidently owes much to heavier buying in Australia by Japan. Other countries, mindful of the need to buy sufficient wool before the season ends, have been obliged to follow the market up. Demand has probably also been stimulated by labour troubles among Australian shearers and storemen, which have held back wool from the auctions. A point of more lasting importance is that demand seems at last to be moving in favour of merinos at the expense of crossbreds. The premium for merinos had become so small that their return to popularity seemed overdue. That shift in demand is supported by signs of a change in women's fashions from woollen to worsted cloth, and hence from crossbred to merino wool.

The rise in merino prices will be as welcome to Australia's suppliers as to Australia itself. As the largest producer of merino wool Australia had borne the brunt of the previous fall. In the nine months July to March its wool cheque fell by £30 million, compared with the same period of 1954-55, to £188 million, despite an increase of 35 million lb to 926 million lb in the quantity sold (and that decline in wool income followed a similar decline in the whole of the 1954-55 season). New Zealand, which produces crossbred wool, has fared much better; its earnings between July and March totalled £56 million, the same as in 1954-55, the quantity sold having risen by 18 million lb to 289 million lb.

Insurance Shareholders Do Well

NEARLY all insurance companies have now declared their final dividends and many have published their accounts for 1955. The table giving a further batch of these shows that both dividends and bonuses to policy holders have been moving upwards, but as with the increases shown in earlier declarations the movement has been uneven; in general those composite offices whose results rely in only small proportion on life business showed the least favourable figures. Investors have greeted the Chancellor's proposals for pensions for the self-employed with an enthusiasm that implies a longer view than some may realise. As Lord Knollys, the Chairman of the Employers' Liability, has recently pointed out, it will be many years before any benefit can accrue to shareholders from the increased annuity business likely to result.

* Life and annuity business transacted by subsidiary companies.
S = Simple. C = Compound.

Fire and accident premium income expanded further last year, but underwriting profits were on the whole lower than 1955, which was an average postwar year. Profits from the fire departments (in which "special perils" were underwritten) were moderately higher than 1954, which year bore exceptionally heavy hurricane losses, but the belated improvement towards the end of 1954 at home and abroad in motor insurance results (which dominates the accident accounts) seems to have petered out again. The modestly higher dividends of the composite insurance companies have been covered by higher interest income on non-life assets.

A New Index of Retail Trade

THE promised overhaul of the monthly retail trade figures has now been completed. The statistics for the independent shops were revised by the Board of Trade last year; now those for the large retailers have been treated in a similarly drastic way. A welcome outcome of all this is the

first comprehensive index of the movement in retail trade as a whole—a result which, as its critics should note, could never have been brought about but for the 1950 census of distribution. Here, at last, is a monthly measure of the sales that account for over half of all consumer spending.

The panel of contributors is much larger and more representative and the construction of the index numbers is on a much sounder basis. Yet, as the Board of Trade is the first to admit, there are still weaknesses in these statistics. Some of these it is hoped to remedy but others are probably inherent in the intricate patchwork of retailing. The sales figures are now grouped according to "kind-of-business" instead of on a commodity basis. The records show, for instance, the sales by grocers rather than the sales of groceries—a less useful classification but one which all shops, large or small, can readily provide. Unfortunately

sales of some goods cannot be traced at all. Tobacco sales, for instance, are lost among those of grocers—and with the co-operative societies this may be an important outlet—or with the confectionery and newsagent trade. Nevertheless the new figures do provide a reasonably sound and practical way of assessing the general trends in retailing, assuming that the experience of the panel of contributors since 1950 is representative of the experience of all shops. The new figures have not radically changed the broad picture of retail trade since 1950, but they have thrown up long-suspected inaccuracies in some of the measurements from month to month.

In the first two months of this year, retail sales were 3 per cent higher in value than twelve months before—an increase less than the rise in prices. By March the lead had increased to 9 per cent, but this partly reflects the usual heavy buying before Easter which was earlier this year than last. Factors such as this always complicate the interpretation of these figures. Now that a more accurate measure of retail trade is available, it is to be hoped that the Board of Trade can see its way to correcting these figures for holidays and seasonal variations.

Sterling Area Trade in 1955

THE broad picture of sterling area trade in 1955, already sketched by the Economic Survey and the white paper on the balance of payments, is now completed by the summary published this week by the Board of Trade. It shows that Britain was almost wholly to blame for the sharp

deterioration last year in the sterling area's visible trade balance with the non-sterling world. Britain's imports from non-sterling countries rose by 23 per cent to £2,312 million, while its exports to those countries rose by only 10 per cent to £1,572 million. Imports from non-sterling countries by the rest of the sterling area rose by 15 per cent to £1,976 million, but exports rose nearly as steeply—by 13 per cent to £1,660 million. Of the increase of £91 million in the sterling area's trade deficit, Britain accounted for £73 million.

The rise in the rest of the sterling area's exports to non-sterling countries was mainly responsible for the increase of eight per cent in its total exports (excluding Middle East oil), the first increase since the Korean boom in commodity prices burst in 1951. At £3,684 million,

STERLING AREA TRADE WITH NON-STERLING WORLD (£ million, quarterly averages)

	1954	1955	Increase
Total exports.....	723	808	85
Total imports.....	896	1,072	176
Deficit.....	173	264	91
UK exports.....	357	393	36
UK imports.....	469	578	109
Deficit.....	112	185	73
RSA* exports.....	366	415	49
RSA* imports.....	427	494	67
Deficit.....	61	79	18

* Rest of Sterling Area.

total exports were about 18 per cent higher than in 1950. Staple exports like wool, rubber and tin played only a small part in that increase; it mainly reflected growth in other commodities, such as cobalt and other new metals, diamonds, and petroleum from sources other than the Middle East. The share of such items in the total exports of the rest of the sterling area has grown from 48½ per cent in 1950 to 53 per cent in 1955.

Exports from the whole sterling area also rose by eight per cent last year, to £6,708 million. Although that increase matched the rise in world exports, the sterling area has not kept pace with the longer-term expansion of world trade. Its share of the world total was only about 25 per cent last year compared with 28 per cent in 1950. There are two reasons for that disquieting decline. One is that trade in manufactures has grown faster than trade in foodstuffs and raw materials, which are the principal exports of overseas sterling countries. The other is that in manufactures British exports have not grown as fast as world exports.

SHORTER NOTES

The Chancellor of the Exchequer has disclosed that the cost of raising the starting point for surtax from £2,000 would be:

	Loss at present rates of tax on income above new starting points	Loss if present rates above £2,000 were applied to corresponding slices above new starting points
New starting points		
£3,000	£27 mn.	£46 mn.
£3,500	£40 mn.	£61 mn.
£4,000	£50 mn.	£73 mn.

The current year's estimate for surtax is £144 million.

In recording the Finance Bill's proposals to shift the basis of taxation on the foreign business man to the country where his work is done, *The Economist* last week said that it seemed foolish "to run this timely risk." The compliment to the Chancellor was not intended: the risk is untimely.

Last Friday's debate on no par value shares and the Gedge Committee's report was counted out, so that the motion requesting the Government to implement its recommendations was not put. The Parliamentary Secretary to the Board of Trade had earlier outlined the need for consequential fiscal legislation if NPV shares were to be permitted; and though he found the case for them properly made out, he made it clear that there was no prospect of early legislation.

Petrochemicals, Ltd., the Shell subsidiary which acquired the British rights to the "Ziegler" process of making polythene under low pressure, first developed three years ago by Professor Karl Ziegler in Germany, expects its first plant to be ready in about a year with an initial annual capacity of 1,000 tons. Development has still some way to go, but it appears that the lower capital cost of this new method will be more than offset by the cost of certain

materials it uses. Its qualities should, however, be greater than polythene made under the high pressure process.

At a meeting of the interim committee of the International Tin Council this week the representative of Indonesia announced that its instrument of acceptance would be deposited in London shortly. This is the last step needed to ratify the International Tin Agreement.

In the nine months to March 31st, Roan Antelope earned a profit before tax of £11,031,000 from a sales revenue of £21,681,000, compared with £7,400,000 from a revenue of £15,730,000 in the nine months to March 31, 1954. In the same period Mufulira earned a profit of £12,558,000 from a revenue of £23,802,000, against £8,271,000 from a revenue of £16,601,000. In the latest quarter Roan Antelope earned a profit of £4,339,000 and Mufulira one of £4,654,000.

The 1956 awards by *The Accountant* on the report and accounts of public companies have been made to Associated Electrical Industries and Folland Aircraft.

Company Notes

GUEST, KEEN AND NETTLEFOLDS. The jobbers' reaction to the preliminary statement of Guest, Keen and Nettlefolds for the year 1955 was to mark down the £1 ordinary stock units from 53s. 6d. to 51s. There was at the time some profit-taking in steel shares that made the market nervous but the price has since recovered to 51s. 9d. Guest Keen has a progressive profit and dividend record; engineering concerns, though costs were rising, were doing well last year; the group is adding continually to its productive capacity; and in the

Ordinary dividends.....	1,315,962	1,596,508
Retained profits.....	3,687,805	6,608,618

£1 ordinary stock at 51s. 9d. yields £4 13s. per cent.

latest year a full twelve months' profits from Guest Keen's iron and steel subsidiaries were included in the results, compared with only about seven months' in 1954.

The 1955 results are, in fact, excellent. The ordinary dividend has been raised from the equivalent of 10 per cent to 12 per cent with the declaration of a final dividend of 8½ per cent. Trading profits, before depreciation and taxation, have risen from £15,956,697 to £22,754,701 and though part of that increase must be due to the full inclusion of earnings from the

iron and steel subsidiaries, that can only be part of the story. In effect, Guest Keen provides for replacement of its assets at current costs by making appropriations to replacement reserves over and above the normal depreciation provisions. This charge and the provision for tax went up last year. Nevertheless, net profits jumped from £5,402,222 to £8,342,950, of which the net ordinary dividends absorb £1,596,508. The big earnings cover implies a high rate of capital investment, financed out of retained profits, and this is an important factor in any assessment of the current yield of 4½ per cent offered by the £1 ordinary stock units.

VICKERS. The £1 ordinary stock units of Vickers grew in popularity last year and the number of the company's stockholders went up from 58,116 to 62,225. The stock was rightly popular because the group was expanding in almost every direction. Last year the capital employed by the group rose from £90.3 million to £94.3 million; the number of its employees from 79,660 to 83,060 and its wage bill from £40 million to nearly £46½ million. Turnover, which is not revealed in an otherwise admirable report, must have risen as well, for the gross value of stocks rose from £108 million to £118½ million while instalment payments on contracts rose from £66.6 million to £80.2 million.

The final result was that trading profits after depreciation rose from £7.7 million

to nearly £12 million. If depreciation and other miscellaneous charges are added back, last year's gross profit was about £16½ million, £5 million more than that earned in 1954. Only part of that increase is due to the inclusion of a full year's profits from English Steel. Another reason for bigger profits is the increase in the rate of return on capital employed; in 1955 this rate was 13.9 per cent, compared with 10.7 per cent in 1954. These figures justify the increase in the ordinary dividend from 8½ to 10 per cent.

	Years to Dec. 31, 1954	1955

£1 ordinary stock at 48s. 4½d. yields £4 12s. per cent.

Even more impressive figures may emerge this year, for in his review of the group's operations, the chairman, Sir Ronald Weeks, reveals that "in many works, full order books have committed production capacity for most of 1956 and, with some products, throughout 1957." The full impact on profits from the sale of the Viscount aircraft is still in the future; the group's shipbuilding yards secured more orders last year; the group's steel interests continue to do well; and if Metropolitan-Cammell Carriage and Wagon is faced with rising costs and

greater competition, it began the year with a full order book. Some of these future possibilities are discounted in the current yield of 4.6 per cent.

BOWATER PAPER. A mass of news for stockholders comes in the abridged report of the Bowater Paper Corporation. The company proposes to issue a fuller report, including the detailed accounts of its subsidiaries, later. Stockholders have already been informed that the gross trading profit in 1955 at £13,209,637 was higher than the profit of £13,095,463 earned in the previous 15 months and that the ordinary dividend has been effectively raised from 9 to 11½ per cent. They will now note that these dividend payments absorb £1,242,000 from a net profit of £3,588,314.

The directors now foresee that in the next few years the profits of the Tennessee Mills will be used to reduce the funded debt of Bowaters Southern Paper Corporation and accordingly there will be no immediate payment on that subsidiary's ordinary capital. The directors also say that "since the close of the year 1955 the high level of production and sales of the North American group has continued; in the United Kingdom there has been a slight slowing down in the packaging

—capital commitments at the end of the year were £20.4 million.

BRISTOL AEROPLANE.

The market price of the 10s. ordinary stock units of Bristol Aeroplane—currently 21s. 6d., giving a yield of 4½ per cent—is determined much more by the hopes of a rise in earnings coming from the sale of the Britannias than by the trading results of the immediate past. These and the dividend for the year 1955 were much as investors had expected. The group's trading profits rose from £2,825,304 to £3,322,903 and its net profits from £798,588 to £977,363, of which the ordinary dividend, repeated at 10 per cent, absorbs £398,475. The increase in net profits owes something to the tax relief on investment allowances (now replaced by the old system of initial allowances). In 1954 this relief reduced the charge for British tax by £105,000 to £624,000 and last year by £200,000 to £661,000; in addition the group had to provide £101,191 for foreign tax, compared with £90,830 in 1954.

BABCOCK AND WILCOX.

The £1 ordinary stock units of Babcock and Wilcox at 80s. xd yield only 3½ per cent on the dividend maintained at 15 per cent. The yield reflects the fact that this manufacturer of steam generating plant is now classed among the atomic power companies and hopes to count the atomic power stations among its best customers. The yield therefore looks forward beyond the current year.

Babcock and Wilcox ended 1955 in fine fettle. A new record in turnover had been

	Years to Dec. 31,	1954	1955
Consolidated earnings:—

established; its total income had risen from £32.7 million to £33.6 million; the order book was most encouraging; trading profits had risen from £5,606,303 to £6,659,472; the company had obtained further contracts from the Atomic Energy Authority; and the chairman, Mr Lionel Fraser, takes "a sanguine view" of prospects.

But there is one snag. The group has "to devote substantial sums to the provision of new plant and equipment," and at the end of last year its outstanding capital commitments were estimated at £4,650,000, compared with a total of £2,505,328 in liquid resources. It was owing to the need to conserve resources "and especially having regard to the

present difficulties of the national economy," Mr Fraser explains, that the directors thought it undesirable to recommend an increase in dividend payments. It must be the hope of its 17,500 stockholders that once the new equipment is earning its keep this policy will be reversed.

CAMMELL LAIRD. "Although 1955 production shows an increase over the previous year, the results could have been very much better had we not been handicapped by strikes, overtime bans, and demarcation disputes." In these words the chairman of Cammell Laird, Mr J. C. Mather, explains why the group's trading profit in 1955 rose by only £88,053 to £1,272,387. But the decision to leave the ordinary dividend unchanged at 14 per cent does not seem simply to reflect this disappointing result. Nor does it seem to come from pessimistic assumptions about the future; Mr Mather says: "the trading prospects for 1956 appear to be good. Each operating company brought forward a substantial volume of uncompleted orders and since the end of the year the demand for products has continued to be in excess of capacity to produce."

It is the last phrase which is the key to a conservative policy. At the end of December the group held in liquid form, including quoted investments at market values, £8,653,710. This may seem a big sum, though it was bigger before the company re-acquired its quarter of English Steel Corporation, but the group has heavy capital commitments to meet. The acquisition of a 75 per cent interest in Patent Shaft and Axletree has already absorbed £700,000; there is a liability in respect of uncalled capital of £400,000; and Cammell Laird has agreed to lend Patent Shaft and Axletree £1,200,000 to finance development. Moreover, Cammell Laird has recently agreed to buy the freehold of its Birkenhead shipyard for £860,000 and its plans to construct a new large dry dock are in an advanced stage. After providing for these commitments and for working capital, the directors say that the balance of liquid resources, together with profit retentions in the next few years, "will be required to finance a comprehensive programme for the modernisation of the shipyard." On the dividend maintained at 14 per cent the 5s. ordinary units yield 6.8 per cent at 10s. 3d. xd.

WHITBREAD. This brewery has a large number of tied houses and in recent years it has been working to establish itself on a national level. It has been reinforcing its informal links with other breweries by taking up their shares. It has helped to sell Whitbread's bottled beers outside its own public houses. It has also been one of the leaders in drive towards improving the amenities of public houses. Its ambitious and constructive policy has so far served shareholders well. Profits have been rising despite

poor showing of beer sales as a whole in this country, and the company's shares are counted in the top flight of brewery stocks.

In the year to December 31st Whitbread's profits again expanded slightly. The movement is not entirely clear from the company's preliminary statement, which shows that in 1955 the profit after all charges, including tax (which has risen from £1,220,090 to £1,279,163) was £1,050,073, compared with £1,444,190 in 1954. But the latest profit includes only £42,567 of special non-recurring credits, compared with £497,754 in 1954. Once the figures have been adjusted, Whitbread's gross profit before tax appears to have risen from £2,166,526 to £2,286,669 and its net profits from £946,436 to £1,007,506. The company's policy of buying new brewing investments and improving its properties costs money, and it is not surprising that the directors have left the ordinary dividend unchanged at 21 per cent, absorbing £556,633. On this dividend the £1 "A" ordinary units yield 5½ per cent at 71s. 6d.

UNITED GLASS BOTTLE.

The manufacturers of glass containers and bottles, of which United Glass Bottle is easily the biggest, work a highly mechanised and highly geared production machine. Thus when, as happened last year, a period of "unprecedented demand" is met by record production, profits shoot forward. The gross profits of UGB in the year to December 31st jumped from £865,640 to £1,414,312, reflecting the rise both in quantity and value of turnover. Another reason for the rise in profits is that the 1955 figures include nine months' profits of the new Scottish subsidiary, the Alloa Glass Work Company.

This acquisition has made its mark in the consolidated balance sheet. Issued ordinary capital has gone up from £1,117,022 to £3,200,000, reflecting the free scrip issue and the rights issue which brought in £1,200,000, the money being used to pay for Alloa Glass Work. The net book value of the group's fixed assets has risen from £2,977,345 to £4,235,446 and a goodwill

item of £551,364 has been eliminated by a transfer out of general reserves.

At the time of the rights issue the directors said that the final dividend would not be less than 6½ per cent. They have done better by recommending a final payment of 7½ per cent, making 11½ per cent for the year, against the equivalent of 10 per cent in 1954. After the jump in net profits from £380,658 to £689,981, they could hardly have done otherwise. Indeed, the chairman, Mr L. A. Elgood, says that in the current year, in the face of "further considerable cost advances" the group has got off to a good start and that its order books are "healthy." But there are clouds in the sky. Domestic glassware is now subject to purchase tax; British tariff duties on foreign glass may be reduced; and competition from manufacturers of containers of materials other than glass is keen.

LONDON BRICK. As the ordinary dividend for 1955 of London Brick was set as long ago as last February at 20 per cent, compared with 17½ per cent in 1954, there was little in the company's full report to excite investors. It is, however, a record of sound progress. "The demand for the company's products," the directors say, "continued at a high level throughout the year and new records were achieved in makes and deliveries." This is reflected in the improvement in trading profits from £2,198,555 to £2,323,305 and in net profits from £786,969 to £895,189, from which the ordinary dividends take £448,500.

Part of the improvement in sales and profits was due to the installation of new capacity; additions to fixed assets, less sales, during the year came to £455,864. More money was absorbed in working capital, with stocks rising from £918,487 to £1,112,014 and debtors from £1,780,597 to £2,023,982. But retentions from profits more than balanced these increases and the group's liquid resources (including investments written down to market values) increased from £1,850,749 to £1,933,792. Thus there was really no reason why the ordinary dividend should not be raised. The £1 stock units at 60s. yield 6½ per cent.

LONDON STOCK EXCHANGE

Next Account begins: May 23rd

Next Contango Day: May 23rd

Next Settlement Day: May 29th

The further lowering of the Treasury bill rate last week had little effect on short-dated Government stock; 2 per cent Exchequer 1960 lost ½ to 91½ while 2 per cent Conversion 1958-59 was fractionally higher at 93½. Undated stocks weakened. 46 per cent of the new 5 per cent Essex loan 1968-71 was left with the underwriters and dealings started on Thursday at ½ discount.

Discount shares were firm, Alexanders gaining 1s. to 35s. 6d. and finance houses improved, United Dominions rising 6s. 6d. to 80s. 3d. Among the stores GUS "A" advanced to 42s. 3d. and Debenhams to 37s. 9d. Motors were mixed; Jaguar rose 2s. 1½d. to 22s. 9d., Leyland were firm at 47s. 9d., Standards recovered to 7s. 3d., but Ford lost 4½d. to 33s. 4½d. Rolls-Royce rose 6s. 7½d. to 110s. 7½d. De Havilland gained 1s. 3d. to 23s. 6d. xd but Bristol Aeroplane was unchanged after the results at 21s. 6d. John Summers improved 1s. to 47s. 7½d., but steel stocks were generally a little easier, Stewarts and Lloyds declining to 67s. 6d. BAT and Imperial Tobacco both weakened on Tuesday after rising earlier before the smoking announcement. Shipping shares were strong.

Royal Dutch and Shell Transport continued to rise to 79 and 84½ respectively; British Petroleum weakened 3s. 1½d. to 141s. 3d. during the week which included the dividend announcement and the false rumour that preceded it. Burmah rose to 93s. 6d., following the final dividend of 12½ per cent, making 17½ per cent for the year. Randfontein was particularly weak among gold mines falling 3s. 3d. to 41s. 9d., although better conditions prevailed in the Kaffir market on Wednesday. Coppers weakened, but the nine months' figures of Roan and Mufulira helped Roan which rose to 28s. 7½d. British Tin and London Tin rose 9d. and 4½d. respectively to 22s. 6d. and 10s. 4½d. Rubbers declined, United Sua Bet losing 4s. 3d. to 46s. 9d.

THE MONEY MARKET

THE discount market made a further increase in its bid for Treasury bills at the tender on Friday last, by 3d. to £99 15s. 3d. per cent. This brought its discount rate to around $4\frac{1}{8}$ per cent, compared with $5\frac{1}{2}$ per cent at the tender two weeks before and over $5\frac{1}{2}$ per cent on the day after the increase in Bank rate in mid-February.

The offer of bills at last week's tender was under-allotted, by £10 million to £240 million, equal to the allotment in the previous week. Total applications rose by £2.5 million to £397.9 million; and the upshot was that despite its higher bid, the market suffered a fall in its allotment, from 61 per cent to an average of 51½ per cent. The market's application for the 92-day bills offered on account of the August Bank holiday was allotted in full; that for the 91-day maturities secured 45 per cent. At yesterday's tender, the offer was restored to £250 million.

* Government debt is £11,015,100, capital £14,553,000. Fiduciary issue increased to £1,875 million from £1,825 million on March 21, 1956.

DECENTRALISATION

Martins Bank has made a friendly personal approach a particular feature of its service to customers. The Bank's system of decentralisation of control into clearly defined districts; with local Boards of Directors and District General Managers in each District, ensures the full advantage of local knowledge and with the care and consideration of your branch manager, the "personal touch" is achieved.

What does
THE LONDON
CORRESPONDENT
say today?

IN TO-DAY'S TRAFFIC, a step off the pavement is too often a step into hospital. That's why every walker—and aren't we all?—should carry a London Assurance Personal Accident Policy in his knapsack. He won't have to worry about loss of earnings and medical expenses—and he doesn't throw a financial spanner in the family works.

OPEN FIRE!

You never know when a red-hot coal may shoot out on to your carpet; fires have such an unhappy knack of spitting behind one's back. But with our Householders Comprehensive Policy, the accident will not burn a hole in your pocket.

LOOK FORWARD TO IT.

Old age seems a long way off—until you get there. After a lifetime's labours, it's good to

know you can start your new life on your own two feet. A regular investment in one of our Retirement Policies helps you to look forward to your retirement with equanimity and aplomb.

Butter on both sides!

Bread-and-butter is such an accepted part of our lives that we might be excused for taking it for granted. Only when it has some extra quality does it penetrate our consciousness. When, for instance, we discover a piece which has *butter on both sides*.

It is often such seemingly trivial extras which give life its stimulus. Like taking out the usual bread-and-butter Life or Endowment policy with Legal & General and finding that, because it is "with profits", a generous annual addition comes along.

ROYAL EXCHANGE ASSURANCE

236TH ANNUAL REPORT

GROUP PREMIUM INCOME EXCEEDS £30 MILLION

LORD KINDERSLEY REVIEWS A SATISFACTORY YEAR

The two hundred and thirty-sixth Annual General Court of the Royal Exchange Assurance will be held on May 30th at the office of the Corporation at the Royal Exchange, London, E.C.

The following is the statement of the Governor, The Right Honourable Lord Kindersley, which has been circulated with the report and accounts:

Before I review the report and accounts for 1955, I wish to refer to changes that have occurred in the Court of Directors.

THE LATE LORD BICESTER

My first duty is the sad one of recalling to the Proprietors the death, on February 17th last, of our Honorary Life Governor, Lord Bicester. On behalf of his colleagues in the Court of Directors and all those members of the staff of the Corporation and its associated companies who share the privilege of having known him, I wish to pay a tribute to the qualities which made him so greatly respected during his long and colourful business life and which ensure that he will always be remembered with deep affection.

Vivian Smith's influence upon the fortunes of this Corporation was profound. Indeed he was the principal architect of our growth to the eminent position which the group now occupies in the insurance world. For more than 60 years he was a member of the Court; the last 40 he spent as our Governor. He was in almost daily contact with the other Governors and the Executive who were stimulated by his shrewd advice, imaginative judgment and above all by his great charm of manner. He was the embodiment of the City of London at its best and his loss is one which we all feel very deeply.

I am conscious of the difficult task I shall have in following Lord Bicester as your Governor, to which office the Court of Directors did me the honour of electing me in November last. I am especially fortunate in being able to count upon the invaluable support of the Sub-Governor, the Honourable David Bowes-Lyon and of the Deputy Governor, Mr Leslie Farrow.

THE DIRECTORATE

In the early part of this year we accepted with regret the resignation of Lord Charles Cavendish-Bentinck who had been a Director for fifty years and I wish to record our appreciation of all he has done to further the Corporation's interests.

On a happier note I welcome the Right Honourable Viscount Ingleby to the Court. Lord Ingleby, who until recently was a Minister of the Crown, is well known for his record of public service, and he is also an old friend of the Corporation. He was a Local Director at our Leeds Branch from 1931 to 1939 and has now agreed to serve once more as a Local Director there in addition to his Head Office appointment.

Another recent addition to the Court is Captain the Right Honourable Lord Teyham, DSO, DSC, RN, who also has a fine record of public service.

There are two Local Directors whom I would like to mention especially.

Sir Robert Menzies has just retired from India, where, for 25 years a member of our board, he has been a most loyal friend of the Corporation and a tower of strength to our managers in that territory. We wish him many happy years of retirement in this country.

Sir Keith Smith, the Chairman of our Australian Board, died at the end of last year. He too was a very old friend of ours whose loss is deeply felt.

Sir Nicholas E. Waterhouse, KBE, who has been our auditor since 1911 has expressed the wish to relinquish his appointment in favour of his firm Price Waterhouse & Company. This change from a personal appointment to that of a firm is in conformity with modern practice and at the Annual General Court stockholders will be asked to consider a proposal to this effect. I mention the matter here because I do not want to allow the occasion to pass without referring to the great obligation we are all under to Sir Nicholas Waterhouse for his valuable guidance over so many years. The warm thanks of the Proprietors are certainly due to him for his outstanding services on their behalf.

1955 IN RETROSPECT

No doubt you will expect me to comment briefly upon the economic and other conditions which affected last year's trading.

Since the last war we have fortunately not experienced the series of booms and slumps which were the economic pattern of the inter-war years. Instead, the western world has benefited generally by steady industrial and commercial expansion although progress has been checked from time to time. But difficulties have emerged and even up to the present day, in spite of the progressive imposition of monetary and other disinflationary measures, the country has not yet been successful in eliminating the excessive domestic demands upon the economy with the consequential distortion of our balance of payments and the resultant strain on gold and dollar reserves. These obstinate problems which are shared to a greater or lesser degree by so many other countries have had an important bearing on our operations.

In common with other British insurers we are now devoting an increasing amount of time, thought, effort and money to what might justly be called a "social service" in the form of loss prevention in all spheres. This work carried on through our technical staff tends, in spite of the increased hazards of modern life, to control the cost of insurance with a corresponding benefit to the community. It also tends to act as a brake on our premium income but even so, and despite

the disturbing effect of economic restrictions in many territories in which we operate we were able, by expanding our business, to raise the combined fire, accident and marine premium income by over £1 million to a total of £27,176,000.

The Life Department also was able to write a record volume of new business and, if its premium income is taken into account, the group can be credited with an aggregate annual premium collection of over £30 million for the first time. I am sure that you will also find the individual records of our underwriting departments for 1955 no less satisfactory.

We have continued our policy of keeping in close touch with our wide-spread organization, and during the year the General Manager and other members of the executive paid a number of visits to overseas branches. These opportunities for discussion "on the spot" combined with periodical visits by our overseas managers to this country are of great value in keeping the management properly informed about conditions abroad and it is an aspect of our work which we cannot afford to neglect.

Regular contact is also maintained with our branches in this country and our annual branch managers' conference which was inaugurated as long ago as 1919 still proves to be of the greatest benefit to all concerned.

INVESTMENTS

Your Directors recognised that the accelerating inflation of 1955, not only at home but also throughout the rest of the Commonwealth and even in North America, would have to be checked by government imposed monetary measures.

Accordingly we shortened sail well before the full impact of rising interest rates affected quotations for marketable securities. This policy has been maintained despite the very high yields now offered by fixed interest bearing securities, and it has led to our holding substantial cash balances and a large portfolio of treasury bills and other short term bonds. I am quite confident that the temporary but moderate sacrifice of interest income inherent in this and other appropriate investment policies designed to protect capital values will be of inestimable benefit in the next few years.

Although, naturally, security for our policyholders must remain the paramount consideration in deciding our investment policy we certainly do not overlook the national interest in such matters. For example, despite our determined liquidity policy, we still were able to invest an additional £1,700,000 of Life Fund monies in the securities of industrial and commercial companies of the United Kingdom and the Commonwealth.

At the head of the following comments upon our individual departmental accounts I have included three years' comparative

LIFE ACCOUNT

Year	Nett new Sums Assured	Gross Premiums	Interest Income	Fund at Year End
1955	9,559,132	2,730,200	1,321,753	25,550,794
1954	8,869,438	2,483,357	1,224,600	24,232,051
1953	7,414,284	2,343,102	1,143,310	23,346,680

Life Assurance today is looked upon as one of the most valuable and attractive forms of saving and the foregoing figures briefly summarise the steady but excellent development of this account.

Claims by death and maturity at £1,628,125 were some £8,000 greater than the year before, and the death claims are once again well within the expected mortality.

The rate of gross interest earned was £5 8s. 5d. per cent which compares with £5 4s. 9d. per cent the year before. A materially greater increase in interest income could have been achieved had we not followed the investment policy, to which I have already referred in some detail, designed to safeguard capital values to the detriment of immediate income.

The Annuity and Capital Redemption Funds have also made satisfactory progress. For the former of course, a greatly enlarged field of activity has been opened up by the recent budget proposals dealing with pension arrangements for the self-employed.

FIRE UNDERWRITING ACCOUNT

Year	Nett Premiums	Surplus	Ratio %
1955	9,597,570	998,408	10.4
1954	9,763,652	700,944	7.2
1953	9,541,464	1,142,952	12.0

The small reduction in premium income, as compared with 1954 is mainly attributable to two causes; reductions in premium rates and the devaluation of certain foreign currencies, but the overall underwriting surplus of £998,408 is again a most satisfactory outcome of operations at home as well as of our large overseas business.

In the United Kingdom the estimated fire wastage of £27,645,000 for 1955 exceeded by 5½ per cent the highest total previously recorded in a year, and this figure does not include consequential loss or the damage caused by the many special perils written to a steadily increasing extent in the fire department. The fact that under house-holders' comprehensive policies the claims for damage caused by storm, tempest, flood and the bursting of pipes again exceeded those caused by fire emphasises the necessity for this form of cover, and its value to the public.

The work of loss prevention to which I have already referred has become an integral part of the transaction of fire insurance. The services of our extensive survey departments, our participation in the field of fire research and in the formulation of regulations and recommendations for the safe operation of domestic and industrial equipment are all directed towards assisting the public to obtain immunity from havoc, interruption and loss caused by fire and related perils. It is a costly part of our establishment, but work in which we take a considerable pride.

Although, overseas, the year 1955 might be classified as uneventful in the sense that there was a comparative absence of spectacular disasters such as we have had in the past few years, it was not without its difficulties. Operating as we do in so many different countries, there are always interesting and sometimes complicated problems to be faced

arising out of some change in the political or economic scene in one territory or another; and although referred to here they are by no means confined to the fire department.

MARINE UNDERWRITING ACCOUNT

Year	Nett Premiums	Fund as at Dec. 31	Ratio to Nett Premiums %
1955	1,829,182	3,775,030	206.4
1954	1,766,950	3,771,715	213.5
1953	1,883,979	3,753,396	199.2

Upon the closing of the 1953 account it is gratifying to be able to report a transfer of £275,091 to the profit and loss account; this total compares with £289,548 released a year ago.

The 1954 account seems to be running off no less satisfactorily than that of the year that preceded it, while the 1955 account has also been developing reasonably well so far despite the highly competitive state of the market, both at home and abroad. At any rate the amount of this fund at the end of 1955, representing as it did over 200 per cent of premium income, should be adequate provision for the leaner times that marine underwriting may experience in the next few years.

Underwriters on the hull side of our business are still faced, as they have been for a number of years, with the ever increasing cost of ship repairs, and there is little doubt that, had it not been for the comparative absence of serious major casualties there would have been little if any balance remaining in hull underwriting accounts of recent years. Past experience tells us that this freedom from total losses is unlikely to continue indefinitely, and it may well be that we shall have to face a more normal casualty rate in the future. If this is so, then without doubt some corresponding increase in hull premiums will be needed by underwriters to meet the rising cost of ship repairs. Our problems are not made any easier by ship-owners postponing any but the most essential repair work; and we would welcome a greater sense of urgency in the handling of General Average adjustments.

Conditions in the cargo market have not changed to any great extent in the last twelve months, and although competition has been extremely keen, there seems at long last a realisation that, with many rates down well below prewar level, it is necessary for underwriters to call a halt to this trend unless they are prepared to face serious deficits in their accounts.

I am certainly glad to see that the market in London has in recent months given a lead towards the exclusion from the scope of marine covers of what are really normal trading risks.

GENERAL ACCIDENT UNDERWRITING ACCOUNT

Year	Nett Premiums	Surplus	Ratio %
1955	15,749,862	611,786	3.9
1954	14,485,940	867,910	6.0
1953	14,188,469	942,925	6.7

The substantial addition to aggregate premium income last year, at well over £1,250,000, is indicative of the virile progress in both the home and overseas fields; it reflects also an increasing appreciation by the public of the extent to which insurance serves their interests by providing protection against the financial consequences of accidental misfortune.

The necessity for such protection has been the impetus behind the great advance of

accident insurance in recent years. We are gratified to realise that our own progress is, in fact, a direct measure of the ever increasing service to the public which we have been privileged to provide—a service ranging from indemnifying a private individual against his legal liability for accidents affecting his fellow citizens, at a cost of a few shillings, to participating in the insurances, running into thousands and perhaps millions of pounds, relating to some great project which, by directing or harnessing natural resources, may change the economic life of an entire territory.

We are confident that in the future, as in the past, we shall be able to play our part in providing the protection which will be needed by continued social, scientific and industrial development.

A matter of major concern to us is the appalling toll of the roads arising from motor accidents. All over the world the constantly increasing wastage of both human and material assets from road accidents necessitates frequent revisions in and adjustment of the basis of premiums for motor insurance, and no real measure of stability in rates can be expected in the circumstances. It is high time that, from the welter of plans which have been drawn up and the vast sum of money which the Government of this country annually extracts from motorists by one means or another, we saw some practical benefit in the shape of improved roads.

The result of our operations during the year is that, after making full provision for all outstanding liabilities and creating the customary 40 per cent reserve in respect of the large increase in premium income, we are able to transfer the satisfactory sum of £611,786 to the profit and loss account.

TRUSTEE AND EXECUTOR DEPARTMENT

The business of this department is expanding. Earnings for the year have again exceeded the previous highest level, and, as has been stressed before, the influence of this department's work upon our affairs is not confined to the transfer it makes to the Profit and Loss Account. This was £17,400 last year compared with £7,751 and £2,252 for 1954 and 1953 respectively, but the profit for 1955 had the benefit of some non-recurring fees connected with certain long-standing trusteeships.

As Trustee for debenture and other stock issues the Corporation's services continue to be in demand, and we act in this capacity, or as Pension Fund Trustees for some of the leading industrial undertakings. There have been appointments also as Executor in many new wills, and as Trustee in Private Trusts of all descriptions.

CONSOLIDATED PROFIT AND LOSS ACCOUNTS

On the revenue side of these accounts we have first the income derived from the investment of our general funds. At £1,354,211 this figure is nearly £160,000 more than last year the increase being largely attributable to a full year's employment of the proceeds of our new capital issue made in the latter half of 1954, and this increase would have been greater but for two adverse factors. Firstly an investment policy designed to protect capital values, even to the detriment of income; and secondly an exceptionally large transfer made at the beginning of 1955 to satisfy the greater liability for future pensions arising from special salary increases granted to the staff during the last three years to meet the general rise in the cost of living.

The departmental transfers including the

initial instalment of the proprietors share in the 1952-54 valuation surplus totalled £2,003,895.

On the expenditure side you will see that the principal items are £1,606,484 absorbed by home and overseas taxation and £940,111 aggregate transfers in respect of our liability for Staff Pensions. Arrangements have now been made which I hope will enable any necessary transfers to the pension funds to be spread more evenly over the years in future.

After taking into account the balance from the previous year and one or two relatively minor adjustments there remains a disposable sum of £4,112,850.

DIVIDEND

Having regard to the buoyancy of our premium income and the satisfactory underwriting surplus derived therefrom, coupled with the very favourable margin that existed at the year end between the aggregate book value and market value of the invested funds, the Court of Directors decided to recommend a rise in the rate of final dividend to 20 per cent. Added to the 10 per cent interim distribution in November last the total dividend for the year will amount to 30 per cent as compared with 25 per cent for the previous year.

I do not wish the Proprietors to assume that they can look forward to annual additions to the dividend—of 5 per cent or any other figure. Whilst the total dividend for any one year will of necessity have to be judged in the light of then current conditions, I suggest that it might be wise to base expectations upon the probability that there may be a year or two of consolidation at the present rate.

STAFF

While general prosperity, coupled with a measure of good fortune, played its part in this successful 236th year of the Corporation's history, the major credit for the fine achievements summarised by the accounts belongs to the staff at all levels to whom the Proprietors owe so much and to whom I, on behalf of the Court, gladly express gratitude. Throughout the group, in this country and abroad, their work is highly appreciated. In particular I must thank our General Manager, Mr H. A. Walters, and the other members of the executive for the able manner in which they have discharged their responsibilities.

With the continued expansion of our business we have been paying special attention during the past few years to the recruitment of staff of the right calibre, and some while ago we inaugurated a series of special training courses. Although these were originally introduced primarily for the purpose of training our staff in this country, their scope has since been extended and they now embrace candidates for our overseas service.

The results to date have been most encouraging and they have been achieved mainly through the hard work and enthusiasm of several of our senior technical officials who, in their capacity as tutors, have devoted much time and ingenuity to this venture. I would like them to accept from me a special word of thanks for their efforts which represent a valuable contribution to our affairs.

May I also send greetings to our Local Directors and to our Agents and other friends throughout the world—in which category I would like to include the many friends we have among the brokers. We thank them for their support and we believe that we give them good service in return.

ATLAS ASSURANCE COMPANY LIMITED

PROGRESS IN ALL DEPARTMENTS

The Annual General Meeting of the Atlas Assurance Company Limited will be held on June 1st at the Company's Head Office, 92 Cheapside, London, E.C.

The following are extracts from the Statement to Shareholders by the Chairman, Mr Rudolph E. F. de Trafford, OBE, which has been circulated with the Report, Accounts and Balance Sheets for the year ended December 31, 1955:

While our results in some directions were below the standard of recent years—except in the case of Life business—they were, taken all round, by no means unsatisfactory. What is satisfactory is that we continue to hold our place in the world's markets—an accomplishment which is especially important in these highly competitive and testing times.

FIRE DEPARTMENT

Net Premium Income 1955	£6,237,496
Net Premium Income 1954	£5,931,206
Increase	£306,290

The increase in premium income was, as it happens, spread proportionately over the whole of our business as derived from the home field, the United States and the Commonwealth and general overseas fields. As to claims, our experience at home and in the USA was rather better than in 1954. Our claims experience in the Commonwealth and general overseas areas was rather less favourable than in the previous year but there was nothing in particular to account for this which calls for special comment.

The underwriting profit amounted to £384,686 (6.1 per cent), as compared with £434,950 (7.3 per cent) in 1954.

ACCIDENT DEPARTMENT

Net Premium Income 1955	£3,015,761
Net Premium Income 1954	£2,807,985
Increase	£207,776

As might be expected, it was Motor business which was largely responsible for the increase in volume and it was to this class of business also that a distinct worsening of our over-all claims experience was due. Much as I dislike saying so, I must confess that I entertain considerable doubts whether the rate increases which have been given effect to in various parts of the world in recent years—in the case of the United Kingdom, last year—are likely to prove to be sufficient.

The underwriting profit emerging from our activities, namely £70,343 (2.3 per cent) was much lower than that in 1954, viz. £250,179 (8.9 per cent).

MARINE DEPARTMENT

Net Premium Income 1955	£776,478
Net Premium Income 1954	£735,762
Increase	£40,716

The main source of the somewhat larger volume of premium income was our overseas business.

During the year major casualties continued to be light both in character and in number and, possibly for this reason, the deteriora-

tion in cargo rates still unfortunately persists. A welcome event is the recent introduction—reintroduction might be a better word—of a limitation on the period of cover after the discharge of cargo. It is hoped that this measure, which many will describe as overdue rather than precipitate, will be given the support that it clearly warrants by all who concern themselves with marine insurance business: possibly also it may indirectly have the effect of relieving the congestion of cargo which is experienced nowadays at so many ports. This should be beneficial in more directions than one.

The sum of £150,000 has been transferred to Profit and Loss Account and, after this transfer, the Marine Fund at the close of the year was £1,341,840.

LIFE DEPARTMENT

1955 was another record year for the Life Department. The total premium income exceeded three million pounds for the first time.

New business, both Assurance and Deferred Annuity, showed an increase over the corresponding totals for the previous year. Net new sums assured amounted to £7,363,273 and new Deferred Annuities secured £567,599 per annum.

The expense ratio rose by 13s. 6d. to £11 10s. 8d. per cent. This was due partly to increasing costs and partly to the large volume of new business transacted.

The Life Assurance and Annuity Fund amounted to £29,034,808 at the end of the year, an increase in the year of over two million pounds.

The gross rate of interest amounted to £5 6s. 8d. per cent as against £5 per cent in 1954; the net rate was £4 8s. 5d. per cent as against £4 3s. per cent.

The actuarial valuation at December 31st last revealed a surplus of £1,068,073, including £524,928 brought forward from the previous year. A reversionary bonus of 45s. per cent per annum calculated on sums assured and existing bonuses has been declared in respect of the three years 1953 to 1955. £200,000 was applied to strengthen reserves and the balance of £104,901 has been carried forward.

The increase of 10s. per cent per annum in our rate of Bonus makes "Atlas" with-profits policies extremely attractive—especially the larger policies for which the rates of premium have recently been reduced. Our non-profit premiums are highly competitive and here also we have reduced our rates for the larger policies. Our terms for staff pension schemes are also attractive. We welcome the Chancellor's recent proposals to extend, to the self-employed and to others not provided for under staff pension schemes, tax relief in respect of provision for retirement. This long-overdue concession will undoubtedly result in a considerable addition to savings and thus more than compensate for the comparatively modest loss of tax to the Revenue.

APPROPRIATION ACCOUNT

After providing for the dividend at the rate of 3s. 6d. per share, 1s. 6d. per share of which was paid in October last, the carry-forward amounts to £1,333,485.

CANADIAN PACIFIC RAILWAY

ENCOURAGING IMPROVEMENT IN TRAFFIC AND FINANCIAL RESULTS

GREATER OPERATING EFFICIENCY

PROGRAMME OF CAPITAL EXPENDITURE

MR N. R. CRUMP ON THE PROSPECTS

The annual general meeting of the Canadian Pacific Railway Company was held on May 2nd in Montreal, Mr W. A. Mather, the chairman, presiding.

The President, Mr N. R. Crump, addressing the meeting, said: The Report of your Directors for 1955 which was distributed to shareholders a month ago contains a comprehensive survey of the operations of your Company for the year's results of 1955. There was an encouraging improvement in both volume of traffic and financial results of railway operations. Especially noteworthy were improvements achieved in service and operating efficiency and effective steps which were taken to meet increased competition in transportation field.

You may, I believe, feel justly proud of the part played by Canadian Pacific in serving the expansion of the nation's business in 1955. Results of ocean steamship operations were considerably better and other income benefited also from an increase in dividend income. Receipts from petroleum rents royalties and reservation fees which have developed into stable source of income were moderately higher.

PUBLICATION OF SEMI-ANNUAL FINANCIAL RESULTS

It has been felt by your Directors that shareholders might wish to have published for their information the semi-annual financial results of your Company; accordingly arrangements are being made for release to the Press of a statement of income account as soon after mid-year as figures become available.

PROSPECTS FOR 1956

The pace of economic expansion has continued strong into 1956, and railway revenue for the first quarter has shown an increase of 12 per cent over that of the previous year. Your traffic officers feel that while gains of this order are unlikely to continue throughout the year neither does there appear at this time to be reason to look for any pronounced decreases. Increased freight rates on the movement of international and related traffic are anticipated to result in increased revenues during the year of some \$5 million.

WAGE NEGOTIATIONS

A Conciliation Board appointed by Minister of Labour to mediate dispute between your Company and its non-operating employees arising from demands for an 18 per cent wage increase and other benefits made its report under date of April 9th.

The Majority Report filed by the Chairman and the Nominee of Unions recommended a two-year contract effective January 1, 1956, providing for a series of wage increases aggregating 11 per cent, a contributory health and welfare plan and pay for two additional statutory holidays to hourly

rated employees. The majority of the Board identified the Crows Nest Pass rates on grain and flour as a major factor adversely affecting railway revenues. They took the position, however, that such circumstances should not be allowed to place the employees of the railways at any disadvantage by comparison with workers in durable goods industries, but they did not recommend immediate parity with wage level of such industries.

The Nominee of the Railways in a Minority Report rejected durable goods standard for railway wage determination because of basic differences between railways and durable goods industries. It was his recommendation that railway wages should meet a test of adequacy and any increase above such level of adequacy should be governed by railways' ability to pay. Adequacy of railway wages should be tested in his view by the average earnings of all paid workers in the community. He found that railway wages by such a test were adequate and railways having no financial ability to increase wages, he could not recommend any wage change for the non-operating employees in year 1956.

The Unions have accepted the Majority Report of the Board as a basis for settlement, including the recommendation for a two-year contract. This fact creates a situation in which your Company is prepared to do everything possible consistent with its responsibilities to the public to reach an equitable settlement of this dispute. Accordingly, Department of Labour has been informed that in conjunction with the other railways concerned your Company will be glad to meet the Unions as soon as possible for negotiations looking to the development of satisfactory basis of settlement.

75TH ANNIVERSARY

On February 16th of this year your Company marked the 75th anniversary of its incorporation. It is recorded that in 1881 there were sceptics who were doubtful whether either the ambitious new railway enterprise or the young nation it was to bind together could long survive. Today Canadian Pacific by land, sea and air has become a world-wide transportation system and has a proud record of three-quarters of a century of outstanding service to Canada. That record could only have been achieved by sound planning for the future and prudence in the handling of its affairs. Your Company may justly claim full partnership in the building and development of this great Country.

PLANNING FOR THE FUTURE

In his remarks at the Annual Meeting last year Mr Mather reviewed improvements and development which had been brought about over the postwar years and noted that not since the original construction had there been a period of more impressive progress. These

are times of rapid change and the need for careful appraisal of the future remains continuous and compelling.

I wish today to venture a look into years ahead. The past fifteen years have seen a doubling in the volume of the gross national product of Canada and widespread changes in pattern and character of transportation. There are few of us indeed who are not confident that further substantial growth is in store for the future. Your Company is vitally concerned in the course of developments as they affect transportation service which will be required. There will be changes in the distribution of production between the manufacturing and the extractive industries, changes in the geographical distribution of industry and greater competition will have to be faced.

Accordingly we have retained the services of a group of eminent economists to collaborate with Officers of your Company in a study of the nature and extent of probable Canadian economic growth over the next fifteen years. In particular the purpose of this study is to assess the effect of this growth upon volume and nature of traffic to be carried by Canadian Pacific Railway and to project on the basis of careful statistical and cost analysis, competitive factors relevant to the changing pattern of the transportation sector of the economy.

While this study is not yet complete the research group, which includes members of the faculties of Harvard and McGill Universities, have suggested a population figure for Canada by 1970 of some 21 million and a gross national product of the order of \$45 billion. These represent increases of one-third in population and of two-thirds in gross national product. They are substantial gains. It is clearly evident that if expansion of this order is to take place, great demands will be made on the transportation facilities of the Country. Careful plans are being laid to gear Canadian Pacific organisation and facilities to meet challenges and opportunities which it is anticipated will be encountered over that period.

RAILWAY PROPERTY INVESTMENT

Your Company has a vast property representing an investment of \$14 billion which must be maintained and kept fully modernised. The railway investment amounts to \$1,563 million, \$814 million for road and \$749 million for rolling stock, while the investment in steamships, hotels, communications and other properties totals \$199 million.

Included in your railway property are 23,300 miles of track, the equivalent of eight sets of tracks between Montreal and Vancouver. Of this, 8,600 miles are in first main and secondary main lines, 9,300 miles are in branch lines and 5,400 miles are in yards, sidings and industrial tracks. There is, of course, not only the track itself consisting of the grading of the line, the ballast, ties, rails, switches and other track material, but also fifteen miles of tunnels, hundreds of

bridges, thousands of stations, freight sheds, office buildings and complex signal systems. Railway rolling stock comprises almost 2,000 locomotive units, 80,000 freight train cars, 3,000 passenger train cars and over 6,000 units of work equipment, and there are shops and enginehouses located across the system to maintain them in efficient operating condition.

COST OF MAINTENANCE

All of this property is subject to attrition and provision must be made through depreciation charges for amortisation of its cost, but today's dollars are of far less value than those of the period in which most of the existing property was built and a wide gap exists between the amounts provided for replacement through depreciation and actual replacement costs. To illustrate, much of your road property was constructed more than 40 years ago, when labour and material prices were less than one-half of what they are today. It is therefore evident that the renewal of the existing plant alone will require substantially larger amounts than are provided through charges for depreciation based on original cost.

Maintaining the plant at present capacity, however, will be only part of the story. Provision will also be required for keeping pace with the increased demand for transportation service which will result from the expansion in the economy. For example, provision will have to be made for the improvement of road bed and track structure to take care of heavier loadings and to enable operations to be conducted at greater speeds. To this end the steady process of upgrading ballast and replacing lighter with heavier rail which has been under way for a number of years will continue. New roadway machines will be needed for the further mechanisation of track maintenance work. Branch lines will have to be built into new areas and new facilities will be required to take advantage of the opportunities offered by development of the St Lawrence Seaway. Additional sidings will have to be lengthened to accommodate the longer trains made possible by the general use of Diesel power.

The safety and efficiency of operations will necessitate the continued extension of automatic block signals and the installation of centralised traffic control systems. Construction of additional maintenance and heavy repair facilities will be required as Dieselisation proceeds. Provision must be made for expansion of classification yards and freight sheds and increasing the capacity of unloading tracks for handling increased traffic volume. It is almost certain too that present terminal facilities for coastal steamships will have to be supplemented. The estimated cost of all these improvements, as can now be foreseen, covering both renewal of existing railway plant and the provision for expansion will be of the order of \$600 million.

VIRTUALLY COMPLETE DIESELISATION

Over the next fifteen years equipment requirements will be similarly heavy. Virtually complete Dieselisation is planned by 1961. The carrying out of this programme and the subsequent additions required for replacement and expansion over the remainder of the fifteen-year period will require the purchase of about 680 Diesel units at a total cost of some \$125 million.

The total number of freight cars will not increase in proportion to traffic volume owing to improvements in types and increases in unit capacity of cars, but it is estimated that 50,000 units of freight equipment will have to be purchased and that 40,000 will be

retired. The estimated cost of the new units is about \$480 million.

PASSENGER CARS

The outlook concerning passenger cars is not quite so clear. Important technological changes leave the door open to widespread improvements in this field particularly with regard to development of light-weight trains. The rail Diesel car, however, is already established as an efficient and flexible instrument in passenger operations and full use will be made of its potentialities. It is probable that about 125 additional units of this type will be purchased.

Stated at a minimum figure the cost of new passenger train equipment will amount to \$45 million, and finally to round out the equipment programme the necessary replacements for work equipment now in service and the purchase of the additional work units that will be required will involve the expenditure of about \$15 million.

HOTELS

Your hotel properties comprising eight City Hotels with a total of about 3,500 rooms and seven Resort Hotels with about 1,500 rooms constitute a valuable adjunct to your rail and steamships services. Announcement has already been made of construction of an extension to the Royal York Hotel to commence later this year, to provide 400 additional guest rooms and several new banquet rooms. The decision to increase the size of the Royal York was made in view of opportunities for the development of potential convention business and the rapid growth of the Toronto area. The estimated cost of this addition is \$10 million.

Study is being given also to the possibility of extensions to certain other hotels where accommodation is already overtaxed or where the prospects for increased patronage are especially promising. These, together with provisions which are being made to add to the comfort of guests and for the improvement of service and operating efficiency, are expected to involve capital expenditures of a further \$18 million over the next fifteen years.

OCEAN STEAMSHIPS

Your Ocean Fleet consists of seven cargo vessels and three passenger cargo liners representing an investment of \$52 million. Capital requirements of the Fleet continue to be the subject of careful examination. With the entry into service of the *Empress of England* in 1957 and the possible disposal at that time of the *Empress of France* there will remain to be replaced only the *Empress of Scotland*, which is at present in North Atlantic and cruise service, and which will reach retirement age in about five years. Active consideration is being given to construction for this purpose of a third new ship which would probably be of greater tonnage than either the *Britain* or the *England*, with design and appointments particularly suited to cruise requirements as well as North Atlantic service. At present prices, such a vessel would cost about \$22 million.

As for your cargo vessels, all of those in service will reach the end of their normal lives during the next fifteen years. However, completion of the St. Lawrence Seaway may greatly affect their earning capacity, designed as they are for deep sea port-to-port operations, and consideration is being given to the desirability of replacing them within a few years with ships of modern design fully adaptable to both ocean and great lakes operations. It is estimated that

COMMUNICATIONS

Your communications properties with a \$42 million investment in pole line wire mileage, message transmitting and receiving equipment and microwave facilities provide a service of increasing importance in the highly complex and fast-paced modern business world.

In the communications field it is imperative to be alert to the opportunities for expanded, improved and more economical operations if a sound competitive position is to be maintained. The development of new equipment and techniques is rapid and continuous. The progressive installation of microwave relay systems capable of providing greatly increased numbers of circuits will be necessary to meet competition and demands for services such as telephoto and television in both its industrial and entertainment applications. The more efficient and economic handling of public message traffic will call for substantial expenditures for automatic equipment and for the provision of facilities for the passing of facsimile messages between Company and Customer to reduce the high cost of pick-up and delivery of telegrams.

The lively interest of business concerns in the possibilities of enhanced management efficiency and economies, through application of integrated data processing techniques will require communications associated with high speed computing machines. Your Company is the leader in Canada in embarking on a major plan of this kind for its own use. To provide for the full range of needed communications services in the next fifteen years capital expenditures of about \$60 million will have to be undertaken.

AIR LINES

Your Air Lines, the newest link in the "World's Greatest Travel System," with a domestic and international network comprising 37,000 route miles, hope to develop substantial new routes and extensions in the future.

There was in operation at the end of 1955 a fleet of 37 aircraft which, along with ground facilities, were carried in Canadian Pacific Air Lines Investment Account of \$19 million. The first two of eight DC-6B aircraft which were on order at the end of 1955 have been received and delivery of an order of five Bristol Britannia Turboprop Aircraft is to begin next year.

The pace of developments in the aviation field is so rapid as to introduce a large element of speculation into any long-range planning, but it is of the utmost importance that your Company should continue to benefit from the latest improvements in aeronautical power and design. The purchase of new aircraft and spare parts and the construction of additional hangar and administration office space will, it is thought, require the expenditure of some \$60 million over the fifteen-year period.

SUMMARY OF REQUIREMENTS

Now I have attempted to indicate for you in some detail the nature and amounts of capital expenditures which, after most careful and searching appraisal, it is felt will be necessary or advantageous to undertake over the next fifteen years.

Each item, rail and non-rail, will, of course, have to stand on its merits and will be subjected to the close scrutiny applied

to all capital appropriations. Each will be judged in the light of whether it is for a necessary replacement, or, if for an addition, whether that addition is essential to the ability of your Company to keep pace with economic growth or to meet competition and whether it gives promise of yielding a reasonable return.

CONCLUSION

As the prospects are viewed at the present time the total of such capital requirements will amount to \$1½ billion, equal to an average of \$100 million per year. Of these requirements it is unlikely that much more than \$60 million per year will be available from depreciation accruals and salvage proceeds. This will leave a balance of \$40 million which will have to be financed by other means. A part of this may come from retained earnings, but it will be necessary to obtain new money for the remainder. It would be unwise to raise the new capital required entirely through the issue of fixed-interest bearing securities and therefore at some stage equity financing will undoubtedly become necessary.

It is clearly evident that your Company can meet the financial requirements of a programme of this magnitude only if adequate income can be secured. An essential requirement will be that railway rates be kept consistent with costs and that there be an improvement in railway net earnings. Every effort will have to be put forth to obtain a maximum share of available traffic and to derive the fullest possible economies from Dieselisation and other technical improvements. These are the continuing responsibilities of your Management. I am confident we will succeed.

The report and accounts were adopted.

EAGLE STAR INSURANCE

Annual General Meeting will be held on May 30, 1956. Statement by Chairman, Sir Brian Mountain, Bt, for 1955 indicates:

Total resources now exceed £100 million.

Life new business record at £59,700,000. Premiums and Annuity Considerations over £12 million. Provisions of the Finance Bill giving tax reliefs which include premiums paid for pensions by self-employed persons are expected to result in an increase of business for which the Company is designing attractive policies. The Investment position continues to be satisfactory.

Fire Department premiums at £3,797,860 show an increase on the year. An increased profit of £368,147 results.

Accident Department premiums at £7,844,588 show increase with profits at £117,043. Motor claims continue to increase. Engineering Department shows satisfactory results.

The Pluvius Department premium income increased with satisfactory results. Improved facilities will this summer be available for holiday-makers on the Continent or in this country.

Marine premiums increased to £1,691,464; transfer to Profit and Loss £75,000; Fund at end of year is higher at 122.9 per cent of premiums.

In the Profit and Loss Account investment income increased to £743,998 and £25,000 transferred from Sinking Fund and Capital Redemption Account. Transfers from Trading departments were £560,190. Higher Ordinary dividend is 6s. per share for 1955, against 5s. 6d. for 1954.

Balance carried forward £1,437,441, an increase of £284,904.

THE UNITED GLASS BOTTLE MANUFACTURERS

UNPRECEDENTED DEMAND

The forty-third annual general meeting of The United Glass Bottle Manufacturers, Limited, will be held on May 31st, in London.

The following are extracts from the circulated statement by the chairman, Mr L. A. Elgood, OBE, MC, DL, JP, CA:

The Directors' Report details the further issues of our Ordinary Stock made during 1955; these were related to our purchase of the minority shareholdings in Kork-N-Seal Limited and of the entire issued share capital of The Alloa Glass Work Company Limited, purchases which have added considerably to the strength of the Group structure.

The Holding Company Profit for the year amounted to £469,853, against £286,462 in 1954. This increased profit permits of a larger appropriation to reserve and the Directors have allocated £251,364 for transfer to Revenue General Reserve compared with £163,766 in 1954.

As to the Ordinary dividend for the year, an interim of 3½ per cent, less Income Tax, was paid and after most careful consideration of all the relevant factors, your Directors now feel justified in recommending a final distribution on the £3,200,000 Ordinary Stock in issue at the rate of 7½ per cent.

ACQUISITION OF ALLOA COMPANY

In regard to the acquisition of the Alloa Company, I would recall my previous references to the growing demand for glass containers in Scotland, which we had been unable to meet fully by expanding production in our Scottish works at Shettleston, Portobello and Kinghorn. In the middle of 1955 we were approached by the Board of the Alloa Company, who inquired whether we were interested in acquiring that Company and of course we were.

Great benefit will be derived by the Group from our acquisition, as a going concern, of these additional modern glass container manufacturing facilities, well staffed, provided with an adequate labour force, and located in central Scotland at a point where our need for further manufacturing capacity was most pressing. The contribution which the Alloa Company can make to our Group activities by facilitating rationalisation of production and distribution has yet to be fully achieved but already savings in cost of delivery are being made as a result of some manufacture taking place closer to the point of delivery.

THE YEAR 1955

To look back on the year 1955 it can be said that, not only for our Company but for the whole Glass Container Industry, was it a year of unprecedented demand met by an all-time record production. Undoubtedly an outstanding summer made its contribution to the high level of demand, the signs being from the heavy calls on our production that the Soft Drinks Industry and the Brewing Industry in particular benefited. It is my belief that our trading in 1955 was marred by only one event, the need from October 10th to raise once again bottle prices. Nevertheless the selling price of our glass container products is now only double that ruling prior to September, 1939, and this I feel is a proud record when considered in relation to other prices and, above all, the diminishing value of our currency.

On this overall question of the price of our products, in previous years I have tried to give Stockholders an insight into the many complexities of our business. I think it is a matter for reflection that our principal finished product, the glass bottle, yields on average no more than £36 per ton delivered throughout the United Kingdom, made up in the following way:—wages, salaries and pensions—35 per cent; raw materials—15 per cent; all fuels—15 per cent; transport—10 per cent; leaving only 25 per cent to cover overheads, taxation, reserves and dividends, so that it can well be imagined the margin on which we operate. However, to make this point abundantly clear, particularly from the point of view of our Customers and in relation to the successful financial results I have been able to report for 1955, these profits were derived from the manufacture and delivery of no less than 1,750 million individual items.

IMPORTANCE OF EXPORTS

A feature of our Group operations has always been the emphasis and importance we place on our direct export trade. As with our home trade, export turnover by volume constituted an all-time record, sales including an encouraging proportion of dollar-earning trade.

In the glass field and to our container production must be added a flourishing off-spring in the form of "Sherdley" and "Ravenhead" domestic glassware. In October, 1955, a surprise Budget produced an even greater surprise, inasmuch as our domestic glassware business once again became subject to Purchase Tax, this time at a higher level than the wartime measure which was completely removed in 1946. Even now it is too early to forecast the effect on our business of this added burden to the Hotel Industry, the Licensed Victualler Trade and the housewife, all of whom support so substantially this activity.

ENTRY FOR FOREIGN GLASS

Almost parallel with the reimposition of Purchase Tax, the domestic glass industry received notification that at this year's GATT Conference there was the possibility of tariff concessions being made in response to an appeal from a member country or countries to ease the entry of foreign glass into the United Kingdom. This is a point on which we feel keenly, particularly as some member countries of GATT continue to export with the aid of quite substantial Government subsidies, a measure of export promotion which neither we, nor, I imagine, other affected industries can reasonably be expected to meet.

Of the current year I can only say that, even in the face of further considerable cost advances, the Group have got off to a good start and order books are healthy in spite of the uncertainties that abound. We have, in fact, a confidence in the future which, despite the uncertainties, prompted the gesture in March of this year of freezing prices of glass containers and closures for a period of at least six months. True, we were not pioneers, but in this step we did follow the lead of several industries, hoping that stability over a period might in due course check the ever increasing tempo of inflation that has beset our country since 1945.

JOHN LEWIS AND COMPANY LIMITED

EXPANDING TURNOVER

PREFERENCE DIVIDENDS AND PROFIT SHARING

INEQUITABLE TAXATION

RETIREMENT OF THE FOUNDER OF THE JOHN LEWIS PARTNERSHIP

The Twenty-eighth Annual General Meeting of John Lewis and Company Limited will be held at the Cowdray Hall, Henrietta Place, Cavendish Square, W., at 10.30 a.m., on May 29, 1956.

The report and accounts of the company for the year ended January 28, 1956, cover the Partnership's wholesale, export and manufacturing subsidiaries and the following department stores and shops:

LONDON SUBURBS AND HOME COUNTIES

DRAPERY AND FURNISHING

John Lewis, Oxford Street, London.
Peter Jones, Sloane Square, London.
John Barnes, Finchley Road, London.
John Pound, Regent Street, London.
Jones Brothers, Holloway, London.
Bon Marche, Brixton, London.
Pratts, Streatham, London.
Caleys, Windsor, Berks.
Heelas, Reading, Berks.
Trewin Brothers, Watford, Herts.

RETAIL FOOD TRADE

Waitrose, London and the Home Counties.
Schofield and Martin, Essex.

SOUTH ENGLAND

Tyrrell and Green, Southampton.
Knight & Lee, Southsea.

MIDLAND AND NORTH ENGLAND, AND SCOTLAND

Bainbridge, Newcastle.
George Henry Lee, Liverpool and Chester.
Cole Brothers, Sheffield.
The Silk Shop, Edinburgh and Newcastle.
Jessop & Son, Nottingham.
Robert Sayle, Cambridge and Peterborough.

Debentures have been issued by two Partnership companies, John Lewis Properties Limited, and Suburban and Provincial Stores Limited; Preference stocks of the same two companies of John Lewis Partnership Limited, and of Bainbridge and Company Limited are also publicly held. Otherwise all the capital of the Partnership companies is held internally and all its profits, after debenture interest and preference dividends, are used for the benefit of the 12,000 worker-members of the Partnership.

TURNOVER, PREFERENCE DIVIDEND COVER AND PROFIT SHARING

The report gives the following figures of total turnover:

1953-54	£22,756,000
1954-55	£24,384,000
1955-56	£26,413,000

and draws attention to the amount of profit available for preference dividends and profit sharing in these paragraphs.

The form of the Consolidated Profit and Loss Account is that required by Company Law, but because of the special character of the John Lewis Partnership it does not show clearly the true nature of the Partnership's results and of its dealings with the profit. The whole of the profits of John Lewis and Company Limited and its subsidiary companies, after payment of the dividends shown in the Consolidated Profit and Loss Account, is used for the benefit of all of the Partners, that is to say, all of the permanent staff of the Partnership. In the consolidated account the amounts used in that way are charged before arriving at the balance of profit, but they are in fact so used only if there is sufficient profit. Under our Pensions Rules, approved by the Inland Revenue, no contribution is payable to the Pensions Fund in any year in which the dividends shown in the accounts have not been earned. General Bonus likewise comes out of the profits after these dividends have been met.

The following summary of last year's results compared with those of preceding years shows the real facts of the amount of profit and of its disposal:

	1955/56	1954/55	Average of the 8 years 1946/47 to 1953/54
The total net profit after payment of debenture interest was	1,334,000	1,274,000	830,000
(It included profit outside the ordinary course of our business to the extent of)	(10,000)	(5,000)	(34,000)
Taxation	463,000	481,000	346,000
Dividends	226,000	213,000	205,000
Balance for profit sharing and reserves	646,000	580,000	279,000
This balance was divided between:—			
Pension fund contributions	180,000	161,000	166,000
General bonus to the members of the partnership	318,000	284,000	56,000
Additions to reserve	148,000	135,000	57,000

These figures show the ample cover that the available profits provide for the dividends upon outside shareholdings, a cover reinforced by the revenue reserves of £1,167,137 in the Consolidated Balance Sheet.

In the ten years since the war ended £617,558 has been added to taxed Reserves, £1,668,297 to the Pension Fund, and £1,049,437 has been distributed in General Bonus to the Partnership's worker-members.

INEQUITABLE INCIDENCE OF THE DISTRIBUTED PROFITS TAX

The net charge for taxation for the year was £462,864. The report comments upon this charge as follows: The November increase of 5 per cent in the distributed profits tax has been followed by a further increase of 2 per cent in the April Budget. As we have commented in previous reports, because of the Partnership's special character this tax bears upon it heavily and unfairly. At its present level of 27 per cent, it amounts to about £105,500 upon the total, over £391,000, of the Preference and Preferred Ordinary dividends paid by the companies forming the Partnership. Since however this £105,500 is not allowed as a deduction from the profits

upon which income tax and ordinary profits tax are paid, the amount of trading profits that has to be set aside to meet it is nearly £194,000. (In the year 1955-56 the amount was lower—about £152,000—because, until the end of October, the rate was 20 per cent).

This charge of £152,000, that arose merely as the result of paying the fixed dividends on capital almost all of which was issued many years ago, directly reduced that balance of our profits which goes to profit-sharing. But for this charge the General Bonus of 8 per cent to all worker-members of the Partnership could have been nearly 12 per cent. To every one of them therefore it represents a loss equivalent to about two weeks' pay.

We have drawn attention in the proper quarters to the inequity of this position. It could be removed by legislation providing for abatement of the tax in the proportion in which any company shares its remaining

profits with its employees or uses them in other ways that are of benefit to the general community, and we shall press strongly for that.

RETIREMENT OF THE FOUNDER OF THE JOHN LEWIS PARTNERSHIP

In February of 1951, the founder of the John Lewis Partnership, Mr John Spedan Lewis, announced in its weekly *Gazette* his intention to retire on his own 70th birthday, September 22, 1955, from the Chair of John Lewis Partnership Trust Limited, the position of chief individual responsibility and authority in that partnership's affairs, and to exercise in favour of Mr Oswald Bernard Miller (then twenty-four years' membership) the power, that the Partnership's constitution gives in certain circumstances to the holder of that position, to nominate his successor. The long notice has meant ease and smoothness in the Partnership's change of its Chief Executive.

The constitution rests upon two irrevocable Settlements in Trust, one of April, 1929, and a second made twenty-one years later. Such Settlements cannot be altered without the consent of a Court of Law. The scope

of these two has been restricted as narrowly as seemed just sufficient to secure the broad intention that in the John Lewis Partnership the relations of managers and managed, or as they are commonly called employers and employees, should be those between professional men and their patients, clients, or students.

In parliamentary democracy and in consumer cooperation the British talent for self government has enlightened the world. Cooperative production may be another opportunity. Perhaps sooner or later one or other of our political parties may decide to exempt experimentally from taxation the profits of enterprises that to the satisfaction of the Revenue Authorities are so organised that profit in the true sense will go not to the managers but to the managed. In such enterprises the taxation does not fall upon owners of capital. It is merely an income tax upon the workers concerned.

Sooner or later the Conservatives may decide that something of this kind has got to be done not merely to end the restrictive practices of discontented and mistrustful workers, but to prevent the spread of Communism, that latest and very highly poisonous "opiate of the people."

Socialists, on the other hand, may sooner or later decide that, though cooperative production on these lines may not produce such equality of income as to them seems possible, it will reduce at all events very greatly the preposterous inequality that exists as yet.

If by the Settlement of 1929 he had not renounced it, Mr Spedan Lewis's own income in recent years would have exceeded half a million pounds a year. The tax collector would have taken almost all of it to finance the Welfare State but the Welfare State with its multitude of unproductive office-workers and its dangers to general enterprise and energy is really only a clumsy and wasteful alternative method of securing a more reasonable sharing of the national income.

The exemption here suggested from taxation might or might not have substantial consequences but it is difficult to see how they could be in any important way bad. The psychological effects of such a gesture by the Government might strongly diminish pressure for inflationary increases of pay-rates. The idea of such "partnership for all" is at all events positive and constructive and the results of 40 years of its experimental operation in a particular case are available for study.

In spite of very great hindrances by the war, those results have included receipt by the John Lewis Partnership's thousands of members of about four and a half million pounds of profit over and above full ordinary commercial remuneration.

Already it has a capital of more than sixteen million pounds, all at fixed charges, of which the average rate for the whole is only four and a half per cent, and already it provides employment for upwards of twelve thousand members.

THE PARTNERSHIP SYSTEM

At the present stage of the development of its constitution the head of the organisation has, subject only to Company and to other Law and to powers that its constitution reserves to a Council (at present of about 120) representing its thousands of members and mainly elected by secret ballot of all of them, absolute control of a yearly pay sheet that is already four and a half million pounds and that seems likely to grow fast and far and has similar authority in all of the Partnership's operations.

In addition to the Council's powers, that have grown steadily and in course of time may grow much further, the constitution secures to the members of the Partnership complete freedom of speech by means of a weekly newspaper that, without requiring any disclosure of authorship, publishes any communication that in substance and form would be in order in the House of Commons.

The system leaves the worker on the one hand free to change his employment and on the other hand enable the Partnership to close a membership whenever that is thought desirable by someone to whom its constitution entrusts that power, the members having against the possibility of its abuse the safeguard of the Council's ability to award leaving gifts, an ability that must be exercised by secret ballot in any case in which that is requested by any member of the Council or anyone else concerned in that particular matter.

For such purposes the Council disposes absolutely of a yearly appropriation that already exceeds £40,000 and that must not be less than 1 per cent of the total pay sheet of the previous year.

By the autumn of 1910 the idea, that a business should be a genuine partnership of all of its workers but that their relations among themselves should be appropriate to the hard facts, that men are neither born equal in ability nor have equal luck in their upbringing and other opportunities, developed into the broad conception of the John Lewis Partnership.

The drafting of the second irrevocable settlement in trust gave rise to an application to the High Court of Chancery for leave to make a certain adjustment in the first. The consequent judgment of Mr Justice Vaisey included the words: "This is a well devised scheme to enable all the persons in this important business concern of John Lewis and Company and its Associated Companies to participate in the prosperity resulting from their activities. Indeed, I think in some respects it may be regarded as a model scheme which might well be adopted by other concerns. I am very anxious to do all I can to remove any administrative difficulties which might but for my assistance arise in carrying out the Scheme."

In the last analysis the supreme aim of our organisation is to give the highest possible standard of living to those of its members who are least fortunate in the possession of earning power and of scope for its exercise. Though in the interest of the members as a whole the pay and other attractions of positions above the lowest level of difficulty must be high enough to attract workers of first-rate ability and to retain them and to induce them to do their best, the system might in theory end in absolute equality of income. In practice, however, the earnings of a competitive private enterprise seem quite unlikely even to approach this level.

It has been thought desirable that on this occasion these matters should be mentioned in this Report not merely for more general reasons but also because a system that in theory should attract first-rate workers and secure their best efforts and that in practice seems to do so, must be good for the security of capital and for the regularity and punctuality of dividend payments.

Further information is available in the founder's two books "Partnership For All" (The Future of Private Enterprise?) published in 1949 by Kerr-Cros and now distributed by Staples Press Limited at 12s. 6d., and "Fairer-Shares" (A Possible Advance in Civilisation and Perhaps the Only Alternative to Communism) published in 1954 by Staples Press Limited, at 8s. 6d. The author's rights in both were given to the Partnership.

ENGINEERING COMPONENTS LIMITED

The twenty-first annual general meeting of Engineering Components Limited was held on May 10th in London, Mr C. C. Griffith, MC (the chairman), presiding.

The following is an extract from his circulated statement:

The Group turnover during 1955 was a record for your Companies. Such was our activity that we were able to absorb much of the increased cost of production without increasing our prices, with the final result that a Group Profit of £636,618 was made.

Out of the above profit, taxation—after deducting adjustments for prior years—takes £307,811, and the Subsidiary Companies retain £6,391, leaving your Company a net profit of £322,416. This figure added to the balance of £84,412 brought forward from 1954 gives an available balance of £406,828.

It is proposed to deal with this as follows: Dividend, 6 per cent Cumulative Preference Stock, £2,559; Final Dividend of 12½ per cent, less tax on the Ordinary Stock, with the Interim Dividend of 2½ per cent paid in October, 1955, will absorb £80,860; Transfer to General Reserve £200,000, and the Balance to carry forward, £123,409.

Our close tie with the Automobile Industry makes us largely dependent on their fortunes, but it must be realised that our customers are still doing a big spare business, and this is reflected in the Company's turnover. Up to the present our sales for the current year have been satisfactory.

The report was adopted.

GEORGE MALLINSON AND SONS, LTD. HIGH LEVEL OF SALES

The nineteenth annual general meeting of George Mallinson and Sons, Limited, was held on May 10th in London, Mr Dyson Mallinson, chairman, presiding. The following is an extract from his statement circulated with the report and accounts for the 52 weeks to February 18, 1956:

The accounts show a net profit of £125,303, a decrease of £2,970. The liquid assets exceed current liabilities by £891,361 (an increase of £46,011), and the directors recommend that the final dividend should be 30 per cent, making a total of 40 per cent for the year. We regret we are unable to recommend a bonus.

Increased competition, lower wool values and increased costs of production account for the decrease in trading profit of £21,916. The reduction in Income Tax, however, has helped to reduce this considerably, and your directors consider the Accounts to be satisfactory. Sales have been maintained at a high level. The values of wool during the latter part of the year have been steadier than for some time, and this should give confidence and stability to the industry.

It is too early to forecast the results of the current year's trading, but orders on hand will keep us fully employed for some months ahead. In the absence of any circumstances over which we have no control, I look to the future with confidence. Shortage of labour is our chief problem, and we are having great difficulty in satisfying the needs of our many customers by a given time. To alleviate this position, we are installing further machinery in the premises of our subsidiary company. The report was adopted.

THE ANGLO-PORTUGUESE TELEPHONE COMPANY

SUBSTANTIAL DEVELOPMENT IN YEAR OF GREAT ACTIVITY

UNFLAGGING DEMAND FOR SERVICES

SIR ALEXANDER ROGER ON GENERAL PROGRESS

The sixty-ninth annual general meeting of The Anglo-Portuguese Telephone Company Limited will be held on May 29th at Strower House, 8 Arundel Street, London, W.C.2.

The following is the statement by the Chairman and Managing Director, Sir Alexander Roger, KCIE, which had been circulated with the Report and Accounts:

ACCOUNTS

I am pleased to report that our Company has again accomplished substantial development in a year of great activity.

The Accounts for the year ended December 31, 1955, show that total Revenue at £2,288,656 is £258,842 higher than in 1954.

After providing for Royalties to the Portuguese Government, Renewals, Depreciation, Taxation, Debenture and Loan Interest, Sinking Fund Instalments and the expenses of Capital Issues the total Expenses amount to £1,790,501, an increase of £83,225.

The contribution which your Company makes to the State and certain Municipalities in Portugal in the form of Royalties and free or reduced rate telephone services amounted to £229,194 during the year.

Net Revenue at £498,155 is £175,617 higher than in 1954 and it is proposed to pay a final dividend of 5 per cent on the £3,985,500 issued Ordinary Capital which together with the Interim Dividend of 3 per cent paid in November last makes 8 per cent for the year on the £2,985,500 Ordinary stock issued prior to December last and 5 per cent on the £1 million Ordinary Shares issued during that month. It is also proposed to pay a dividend of 8 per cent on the "A" Ordinary Stock.

The above dividends together with the dividend on the 6 per cent Preference Stock require £205,183 and after transferring £200,000 to General Reserve the Carry Forward is increased by £89,265 to £228,503.

During 1955, two "rights" issues were made to Ordinary and "A" Ordinary Stockholders, the first of 280,500 Ordinary Shares of £1 each in May and the second of 1 million Ordinary Shares of £1 each in December. Both these issues were successful and applications for Excess Shares had to be substantially scaled down.

Of the second and larger issue, 5s. per share was payable on December 2, 1955, the balance of 15s. per share being due and received early in 1956.

The proceeds of these issues have been applied to the reduction of the sums borrowed from Telephone and General Trust Limited which had accumulated on a day-to-day loan basis for the purchase of equipment.

Our Consulting Engineers have made their annual investigation of the telephone plant and equipment and upon their recommenda-

tion the Provision for Renewals, after making adjustments in respect of plant withdrawn from service, has been increased by £183,260 to £2,182,718, which is about 22 per cent of the original installed cost of the plant and which the Consulting Engineers state is, in their opinion, adequate.

The Reserves of the Company, including the Provision for Renewals, continue to be invested in the business.

The value of telephone materials shipped to Portugal from the United Kingdom during 1955 was approximately £1,170,000, making the total value of shipments in the past six years £3,795,000. In addition to this valuable export trade for Great Britain, increasingly heavy orders are being placed with local manufacturers in Portugal. Last year purchases of these local materials were the equivalent of £440,000, making £1,556,000 over the past six years.

GENERAL PROGRESS OF THE COMPANY

The year under review was the second, and the heaviest, year of our Company's 4-Year Expansion Plan 1954-57. As the Balance Sheet shows, the book cost of Telephone Plant alone increased by over £1,770,000 and this sum provides a valuable guide to the activity of our Company when it is remembered that ten years ago the total Balance Sheet figure under this heading was less than £2,500,000. It is now almost £10 million.

During 1955 no less than 18,872 new stations (including 16,091 Exchange Lines) were added to the Company's systems in Lisbon and Oporto, the number of Stations at the end of the year having been increased to 170,755 and the number of Exchange Lines to 129,380.

The demand for service continues at a high level and applications are still being received at the rate of over 1,500 per month. There are clear indications that the public in Lisbon and Oporto is becoming increasingly telephone conscious and there is no sign of a fall in demand in the immediate future.

A number of large-scale undertakings were completed during the year. Chief among them was the bringing into service in November last of the Arceiro Exchange in Lisbon, which was followed within a few days by the opening of a new exchange at Boavista in Oporto.

The Arceiro Exchange is situated in a newly developed area of Lisbon and has an initial capacity of 8,600 lines.

The inaugural ceremony, which was presided over by His Excellency, the Minister of Communications, General Manuel Gomes Araujo, was attended by the representative of the British Ambassador, the Vice-Chairman of the Municipality, and many other leading figures in political, municipal, diplomatic, commercial and banking circles. The London board was represented by myself and two of my fellow directors.

In the speech which I prepared for this distinguished gathering I took the opportunity to review the remarkable progress we have made, particularly during the past five years, in providing telephone facilities for the communities of Lisbon and Oporto.

In his reply His Excellency the Minister of Communications warmly acknowledged the contribution which our Company is making to the development of the Portuguese economy.

The Portuguese newspapers gave generously of their space to report these speeches and to give coverage of the opening of this important new exchange. Our relations with the Portuguese Press are excellent and it is fitting that I should pay tribute to the co-operation we have received from them over the years.

No less than seven new exchanges were opened in Lisbon during the year. I have already referred to Arceiro with 8,600 lines; in addition there were Benfica, Algés, Pedrouços, Almada, Cascais and Sacavem, having together an initial capacity of a further 8,400 lines.

His Excellency the Minister of Communications honoured the Company with his presence at five of the inaugural ceremonies and, on your behalf, I would like to express thanks to him for giving us his valuable time so willingly. This evidence of the goodwill of the Portuguese Government is much valued and is a source of great satisfaction to us all.

The whole of the Lisbon Urban telephone service is now served by automatic equipment and any subscriber in the Urban area can dial directly to any other subscriber in that area.

Automatisation is now being extended to that part of the Company's system which lies south of the river Tagus.

A great part of our development consists of the extension of existing exchanges. When a new exchange is constructed we must first assess the possible future development in the district to be served by the exchange. We then plan the building to accommodate the necessary equipment to meet the demand of the early years, at the same time providing space for extension for later years. This planning calls for the utmost care and skill, particularly in rapidly growing communities, and our management gives particular attention to this aspect of development in order to achieve a maximum of economy commensurate with the provision of a satisfactory service.

During the year large-scale extensions were made to four exchanges in Lisbon and two in Oporto.

In Oporto towards the end of the year a new exchange was opened at Boavista with an initial capacity of 4,200 lines. We were happy to welcome the Civil Governor of Oporto, who kindly presided at the inaugural ceremony which was attended by many of the leading figures in Oporto. As in the case of similar operations in Lisbon, the

Company received much valuable publicity on the occasion of the Boavista cut-over.

FINANCE

I have already referred to the two successful "rights" issues of Ordinary Shares made during 1955, one in May and the other in December. These issues have enabled us greatly to reduce the temporary loans from Telephone and General Trust Limited which have formed the basis of our financial programmes since 1928.

In the present period of rapid development, entailing heavy expenditure, the Company is able to effect economies through being able to borrow large sums from Telephone and General Trust Limited on a day-to-day basis. The alternative would be to raise additional permanent capital in advance of requirements thereby causing new capital to be unremunerative temporarily. This is due to the fact that, particularly when new exchanges are being erected and equipped, substantial expenditure is incurred progressively over a period of some twelve months or more before the exchange can be made revenue earning.

It follows, therefore, that if we are to keep pace with the unflagging demand for service in Lisbon and Oporto we are faced with the need to raise new capital regularly as the pattern in recent years shows.

PORTUGAL

The outstanding event of the year in Anglo-Portuguese relations was the state visit to this country of His Excellency the President of Portugal, General Francisco Higinio Craveiro Lopes, and Madame Craveiro Lopes in October last.

The visit was an unqualified success and the spontaneous welcome given by the people of London and the friendly exchange of greetings between the two peoples to which the visit gave rise were indications of the continuance of the strong bond of alliance which has existed between Great Britain and Portugal over so many centuries.

The state visit was preceded by a most successful official visit to Lisbon by Sir Seymour Howard, the then Lord Mayor of London, who was accompanied by representatives of the Corporation of London.

In the economic field Portugal proceeded with the Six-Year Economic Plan, begun in 1953, to develop industry and agriculture and to undertake new public works both in metropolitan Portugal and the overseas territories. During the year the plan was revised to increase the investment programme by some £28 million during the remaining four years covered by the plan to bring the overall expenditure up to approximately £183 million.

The year saw further advances in the nation-wide hydro-electric scheme with the completion of the third and penultimate stage of the Cavado-Rabagão system and of the final stage of the Zezere system.

It is estimated that the annual output of electricity by 1958 will have trebled as compared with the output in 1950.

The availability of adequate power is a prerequisite of the industrial expansion of the economy, and the hydro-electric schemes, by harnessing the natural resources of the country, will prepare the way for the big industrial and agricultural development which Portugal is setting out to achieve.

Within the next ten years, however, it is probable that even the increased hydro-electric supplies will be insufficient and ex-

tensive research is being undertaken in the harnessing of atomic power for industrial purposes.

The United Kingdom and the United States of America have undertaken to provide information on atomic power and the first nuclear generator in Portugal is expected to be in production in less than ten years. Deposits of atomic fuel have been discovered both in Portugal and in the colony of Mozambique, which, it is expected, will render the country self sufficient.

The present prosperity of Portugal and the undoubted promise of her future prospects can be attributed largely to the fact that for almost the past three decades the country has followed a constructive policy, unhampered by internal political conflict.

The foresight and masterly planning of the Prime Minister, Dr. Antonio de Oliveira Salazar, and his Ministers provide an example to the world in constructive development and in the advantages of gradual progress within the framework of a stable economy. Portugal today is one of the few countries which are not beset by recurrent economic crises.

VISITS AND PERSONNEL

Your Directors continue to make frequent visits to Portugal as it is impossible otherwise satisfactorily to plan and direct policy with a thousand miles separating London and Lisbon. Furthermore, it has been our experience that visits between London, Lisbon and Oporto by members of our own staff and of our principal suppliers and associates has created a valuable and closely integrated unit of commercial and technical management, finance and manufacture, all of which are interrelated.

In 1955 I made three visits to Portugal, during the last of which I had the honour of being received by His Excellency the President of the Portuguese Republic. On two occasions I was received by the Prime Minister, His Excellency Dr. Salazar, and in an atmosphere of the greatest cordiality was able personally to give His Excellency the latest news of our Company and to discuss with him generally National and International affairs.

I also met and conferred with the Ministers of Foreign Affairs, the Presidency and Communications, the President of the Lisbon Municipality and many other leading figures in Portugal. In all these meetings I sensed the confidence and competence which are the hallmarks of the New State coupled with goodwill towards our Company.

In November last the Board in Portugal lost a valued colleague through the death of Snr. Eduardo Luiz Pinto Basto, who had been a Lisbon Director since 1942. The London Directors share the loss suffered by their colleagues in Portugal.

Snr. Engenheiro Antonio Bustorff Silva has accepted our invitation to fill the vacancy.

It is my pleasant duty to acknowledge with gratitude the valuable co-operation received by the London Board from Snr. Engenheiro A. Branco Cabral, CBE, and his colleagues on the Lisbon Board and from Dr Antonio Bustorff Silva, CBE, our Legal Adviser.

I also have pleasure in congratulating, on your behalf, our General Manager in Portugal, Mr R. S. Thorp, and his colleagues, staff and workpeople in Lisbon and Oporto upon the successful completion of a year of great achievement and in this I include the personnel in our London organisation who work in the closest harmony with the staff in Portugal.

BRITISH ALUMINIUM

INCREASED INCOME

The annual general meeting of The British Aluminium Company, Limited, was held on May 8th in London.

Marshal of the Royal Air Force the Right Honourable Viscount Portal of Hungerford, KG, in the course of his speech, said: "The consolidated income for the year after tax amounted to £1,426,717, which compares with £733,821 for the previous year."

During the year our primary operations have been influenced adversely by the low rainfall which seems to have been experienced in large areas of the Northern hemisphere. Over our Scottish catchment areas the rainfall in 1955 was only two-thirds of the long-term average. This compelled us for some months to close our Super Purity refinery at Foyers, and to reduce load both at Kinlochleven and Lochaber to less than half. Fortunately, our Super Purity refinery at Vikeland in Norway was not affected by power shortage and was able to operate at full capacity throughout the year. The demand for this product continues to be strong.

Our Research Department at Chalfont has continued its important contribution in all spheres of our activity, and has done most valuable work on new developments, particularly in welding, where the perfection of new processes is opening up most interesting prospects for increasing the use of our metal.

NEW CANADIAN SMELTER

I now come to what is perhaps the most important single development in the history of your company. After a number of disappointments in our search for a suitable location for additional aluminium ingot production, the creation of a new smelter, which we consider so vital to the company's long-term future, is under way. The needs of the company are steadily increasing and, in addition, there is a growing demand for aluminium ingot both from the company's subsidiary and associated companies and from other sources throughout the world.

One of the main considerations in selecting a suitable site for a factory of this kind is a large supply of electrical power at low cost, this being the factor which makes further expansion in the United Kingdom impossible. It came to our notice that such power might be available at Baie Comeau in the Province of Quebec.

You will have seen references to the formation of Canadian British Aluminium Company Limited, and to an increase in the authorised capital of your company and an extension of the Directors' borrowing powers. It is our intention immediately to issue 2 million of the new Ordinary Shares for which we seek authorisation. These shares will be offered to shareholders registered at the close of business on April 24th last at a price of 40s. per share, in the proportion of two new Ordinary Shares for every £5 Ordinary Stock already held.

Coming now to the Accounts, the total Manufacturing and Trading Profit for the year amounts to £3,248,463, which is £1,248,830 greater than in the previous year. We recommend a final dividend of eight per cent on the Ordinary Stock which, with the four per cent already paid, makes twelve per cent less tax for the year.

The report was adopted and at a subsequent extraordinary general meeting the capital of the company was increased to £12 million by the creation of 5 million ordinary shares of £1 each.

Peninsular and Oriental

Steam Navigation Company

STEADY PROGRESS IN A YEAR OF INFLATION

THE BOARD'S DIVIDEND POLICY RESTATED

THE THREAT TO BRITISH INTERESTS BY "FLAGS OF CONVENIENCE"

THE ONE HUNDRED AND SIXTEENTH ANNUAL GENERAL MEETING of the Peninsular & Oriental Steam Navigation Company held on Wednesday, May 9th, at the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.2. Sir William Crawford Currie, G.B.E., managing director, presided and in the course of proposing the motion for the adoption of the Report and Accounts said that he had mentioned in his speech last year that they had decided upon certain changes in the form of the Accounts. The nature of those changes was set out in the Directors' Report.

The result of the operations of the Group for 1955 had been a profit after taxation of £5.6 million, which was some £350,000 larger than for 1954. It had to be added, however, that investment allowances had relieved taxation to the extent of over £800,000 and had the investment allowance not operated, the profits would have been some £300,000 less than they were last year.

Every year since 1949 the dividend had been increased, and since at 8% it still represented only some 1.3% tax free on the capital employed in the business, they could hardly be reproached on national grounds if it were to be increased again this year. But, as he had recalled, they had not made a larger profit this year than last, except by reason of the investment allowance.

DIVIDEND CONSIDERATIONS

Turning to current conditions as a guide to dividend considerations, Sir Wm. Currie said that costs continued to rise at the rate of 6% to 7% per annum—a rise which was extremely difficult to match in revenue. Tramp earnings continued to be remarkably good. Those of the Liner Companies operating in the East had some reason to expect better conditions generally than they had met in the past few years. The Australian trade, however—like the trade of the U.K. itself—was what at sea they would call tender. It was lacking stability, and could fall off seriously under the impact of economic stress. Since the close of the Group's accounts, there had been two increases in the price of oil and an increase had recently been negotiated in the basic rate of wages of their seagoing staffs, which together in a full year for the P & O Company alone, quite apart from the rest of the Group, would increase the outgoings by £425,000. The loss to the Group resulting from the recent prolonged strike in Australia was estimated to be over £300,000. In these circumstances the Directors regretted that they could not justify proposing an increased dividend this year.

THE BOARD'S POLICY

It had been suggested that the Company should in some way distribute some of the profit it now retained for its maintenance.

This was not a policy which the Board could adopt as within 10 years the Company would have lost all its goodwill, half its business, and most of its good men. They believed

that businesses did not stand still. They either improved or they deteriorated. They either grew or they diminished. They believed that their duty to Stockholders was to try to improve the value of their Company as the years went on. The fact that a long period of inflation made this duty more difficult was neither here nor there. It did not alter their duty. They aimed at producing for Stockholders increasing returns, justified by increasing stability, and produced from increasing interests. So far, their predecessors and they themselves had succeeded.

FLAGS OF CONVENIENCE

The phrase "flags of convenience" was much heard in shipping circles today. The flags in question were those of Liberia and Panama, and certain other countries which had no maritime reality but which offered to shipowners virtual freedom from national taxation and national controls of any kind. When the next slump in shipping occurred, Shipping Companies who bore in full their respective national responsibilities would find it hard to compete on price with those who could always undercut them by the whole cost of taxation, social services and the like. This cloud was no longer the size of a man's hand. Flags of convenience now ranked third to U.K. and U.S.A. amongst tanker ownership in the world, and were becoming increasingly important in the drycargo trade as well. This had become such a very serious matter for all British Shipowners and Shipowners of other established maritime nations that it could no longer be regarded lightly. The British shipping industry and the Government were already giving close attention to the matter, and the Board would watch the position carefully.

NATIONALISED TRANSPORT INADEQUATE

He suggested that they should cast their minds to the state of nationalised transport, represented by the railways and the road system of this country. Primarily because those who ran them had been dependent on governmental control they were now quite inadequate because they had been starved of capital expenditure during a decade in which private industry had made quite extraordinary efforts to produce the money to re-equip and modernise itself. It was profoundly to be hoped, therefore, that the Chancellor would realise the need to spend vast sums of money on improving the ports, railways and roads of this country.

On behalf of the Stockholders as well as on behalf of the Board and himself, the Chairman expressed grateful thanks to all P & O people at sea, to all the Company's Agents, and to all P & O people ashore, for what they had done to keep the flag flying.

IF YOU ARE INTERESTED in obtaining copies of the Chairman's Speech or the Annual Report, please write to the Secretary, Peninsular and Oriental Steam Navigation Company, 122, Leadenhall Street, London, E.C.3.

THE COST OF SHIPBUILDING

is now 2½ times what it was in 1945 and is 4 times the pre-war cost

BABCOCK & WILCOX

OUTPUT AGAIN A RECORD

MR W. LIONEL FRASER ON HIGH LEVEL OF EFFICIENCY

The fifty-seventh annual general meeting of Babcock & Wilcox Limited will be held on May 29th in London.

The following is the Review by the Chairman, Mr W. Lionel Fraser, CMG, which has been circulated with the report and accounts for the year ended December 31, 1955:

THANKS TO STAFF AND OPERATIVES

Once again I desire, on your behalf, to express our gratitude to the Staff and Operatives of the Company and of the Group Companies, both at home and abroad, whose sustained efforts we so much appreciate. Our employees have contributed signally to the success of the year's trading and the anxieties of 1955 have not by any means been less than those in recent years. I know that throughout the whole Group we can rely in the period ahead on the maintenance of that team spirit which is the hall-mark of our organisation.

DIVIDEND AND FINANCIAL RECOMMENDATIONS

The profits of the Group, subject to United Kingdom taxation but after setting aside the sum of £1,780,282 for depreciation, were £4,629,498. After providing for United Kingdom taxation and making other necessary adjustments, the balance standing to the credit of the Consolidated Profit and Loss Account is £2,213,748. The Preference Dividends, less tax, required £54,713 and your Directors now recommend that a Final Dividend of 8 per cent, less tax, be paid on the Ordinary Stock, requiring £346,122, making a total of 15 per cent for the year.

It is owing to the need to conserve our resources, and especially having regard to the present difficulties of the national economy, that your Board felt it undesirable to recommend any change in the dividend on Ordinary Stock. Your Board recommend that the sum of £329,138 be transferred to General Reserve, which, together with amounts placed to reserve in the accounts of the Subsidiary Companies, raises General Reserve to a new total of £7,186,268. It is also recommended that the sum of £500,000 be transferred to Special Research and Development Reserve.

PLANT AND MACHINERY

I referred last year to the continuance of the Group's postwar policy to devote substantial sums to the provision of new plant and equipment. This is of cardinal importance, for we are heavily committed, as manufacturers of steam generating plant. Moreover, the preparations which we have made over the past eight years to play our part in the field of nuclear energy have, I am happy to say, resulted in our obtaining further contracts from the United Kingdom Atomic Energy Authority in connection with the Calder Hall "B" and Chapel Cross installations.

SALES AND TURNOVER

Throughout the year production has been well maintained, although the shortage of skilled labour and of draughtsmen has been the constant concern of our managements. The advancements in science and engineering technology call for ever higher degrees of skill in the design, engineering and manufacture of your Company's products, and in these circumstances it is gratifying that the

subsidiaries. Your Directors are convinced today, more than ever before, of the correctness of their policy to establish such manufacturing units, using whatever materials and labour are available locally with the more specialised and complicated components coming from this country. Healthy Overseas Subsidiaries can be the source in the future of most useful financial contributions to this country. Obviously close liaison is essential and with this in mind, Directors and senior executives of your Company have throughout the past year paid visits to all the leading Subsidiaries abroad.

GENERAL REVIEW AND PROSPECTS

It will be clear that we have had a year of progress and achievement. It has been a period of great complexity in international trade and unfortunately it cannot be said that the outlook is for any immediate betterment. We in Babcock & Wilcox are only too conscious of the dire need in the national interest to expand the exports of our engineering industry, but competition is increasing in all sections of our business, and it will be all we can do to meet it. Certainly we cannot afford for one moment to be complacent and we know that the only way in which further success can be achieved is through our being able to design, manufacture and construct the best possible economical product at the most economical price. That is our constant aim and ideal.

And it is also because I am convinced that never before in the history of your Company has there been a state of better preparedness and greater ability to tackle any problems which may confront us and to keep abreast of constantly changing circumstances, that I have no qualms once again, despite all seeming difficulties, in expressing a sanguine view of your Company's future prospects.

JOHN BARKER & COMPANY

NEW RATING ASSESSMENTS SHOCK

The sixty-third ordinary general meeting was held on May 4th in London.

Mr Trevor A. Bowen, DL, JP (the Chairman), in the course of his speech, said: The result of the year's trading operations of John Barker & Company, Limited, is a net profit, before taxation, of £768,715. Of this amount, taxation takes £409,947 (or 53.33 per cent), leaving a balance profit of £358,768.

I must again, unfortunately, refer to purchase tax—that thoroughly bad tax. There are now six rates of purchase tax varying from 5 per cent to 90 per cent of the wholesale value. If we are to be burdened with this unfair tax as a permanent measure, immediate steps should be taken to compensate traders for any tax losses by way of a rebate.

The Chairman then referred to the progress of the rebuilding of the main Barker Block, which if all went well would take about another two years before completion. He added that the new rating assessments now in operation had come as a great shock and presented a grim picture. The total assessment of their Kensington store properties had increased by 136 per cent over 1955, and the total additional cost to the Company would be not far short of £100,000.

The Board would do their utmost to keep the fast rising operating costs at the lowest economic level, but the effect of the increase which applied generally throughout the country was bound to reflect on prices during the coming months.

LONDON & MANCHESTER ASSURANCE

LORD GRANTCHESTER'S SPEECH

SAVINGS BOND POLICIES

A number of our policy holders effected during the war policies under which the Company contracted to provide Savings Bonds instead of cash. Some of these policies matured during 1955 and more will be due shortly. These Government Bonds stand at the present time at a discount, which is disappointing to those patriotic citizens who have been paying for them. Your directors have decided, I hope with your approval, to give such policy holders the option to receive in cash on maturity the full face value of their Bonds as an alternative to a Government Bond the sale of which at the present time would bring them less than they hoped to receive.

INVESTMENTS

A significant feature of this year's report is the higher rate of interest earned on investments. This is largely due to the re-arrangement of the balance in the investment portfolio as between Government securities and industrial equities. The resulting higher interest income is a material factor in the consideration of bonus declarations. The interest we can earn is dependent to a considerable degree upon dividends paid on our investments. Bonus possibilities are therefore directly linked with the profitability of industry.

New money available for investment derives this year as it happens almost entirely from interest income, which amounted to over £2 million. The increase in our equity holdings shows where the greatest proportion of new money has been invested.

Of the £33 million invested in mortgages £31 million is accounted for by mortgages on houses, shops or business premises under our house purchase schemes providing for repayment by means of endowment assurances.

It is again satisfactory to be able to record that the balance sheet values of the stock exchange securities as at December 31st last were in total less than their market value without recourse to the Investments Reserve Fund.

GOVERNMENT SPENDING AND PERSONAL SAVING

Your directors would deplore, as I am sure you would, attempts to interfere with or to influence their discretion in the investment of your Company's funds. Those who advocate such a policy are, we feel, deluding themselves and deceiving others when they imply that such intervention could be a material factor in righting the inflationary situation arising out of the great expansion of credit brought about largely, in my opinion, by Government over-spending. We who seek, above all, to safeguard our policy holders who entrust their savings to us, deplore the depreciation of the currency which has taken place and hope that the Government will practice the restraint it preaches.

We welcome the recently expressed determination of the Chancellor of the Exchequer to cut Government expenditure and hope the cut will not be limited to £100 million.

We also welcome the emphasis placed in his budget speech upon the value of saving. He stressed the benefit to the national

economy. It is for us to stress the value to the saver in an uncertain future of the security afforded by London and Manchester policies.

We are endeavouring to obtain a full share of the new business which may be expected from self-employed persons who will now be able on better terms to provide a pension for themselves by taking out a deferred annuity. Business of this type would fit in well with our existing structure which is substantially weighted with short and medium term endowment assurances.

STAFF

I hope, my Lords, Ladies and Gentlemen, you share the opinion I hear often expressed that your Company is today more widely known to the public it tries to serve and is respected accordingly. I think our advertising policy, though on a modest scale in these days of big splashes, has played a part but our best advertisement must always be in the persons of those who represent the Company, an asset which does not appear in the balance sheet.

If this is a deserved tribute to the staff for their work in the past it is also an invitation to them to continue their efforts the better to serve a growing public who count them and the London and Manchester as their friends.

For ourselves as for others we have to keep in mind that, if the value of the remuneration we receive for our work is not to melt away in our hands through inflation, increased reward must follow from increased effort. The London and Manchester provides a wide field of opportunity and of consequent reward to the staff whose efforts are directed to building the business of the Company in all its branches.

JEREMIAH ROTHERHAM & COMPANY, LIMITED

IMPROVED PROFIT

The fifty-eighth annual general meeting of this Company was held on May 9th in London, Mr F. Sydney Snowden, chairman and managing director, presiding.

The following are extracts from his circulated statement for the year to January 15, 1956:

The net profit of the parent company has improved, despite the heavy drain imposed by taxation and continually increasing overhead charges, particularly as to wages, motor transport and carriage.

Last year I referred to the vast amount being spent through the hire-purchase system on the purchase of such articles as refrigerators, wireless, television sets and motor cars. The present Chancellor of the Exchequer has evidently realised that the steps taken by his predecessor to reduce this form of expenditure had not had the desired effect, but it is obvious with the further restrictions now imposed, hire purchase has been drastically curtailed, and I think we can reasonably assume that more money may now be expended on commodities such as are supplied by ourselves and other wholesale warehouse.

The balance of profit amounts to £22,629, against £20,229 last year. After adding the balance of £54,809 brought forward from 1955 and deducting the interim dividend of 6 per cent, less Income Tax, paid on April 3, 1956, and the Profits Tax payable on this dividend, there is a balance of £49,238, which the directors recommend be carried forward. The orders for later deliveries are being maintained, and give encouraging prospects for the future.

The report and accounts were adopted.

PRINCIPAL POINTS OF INTEREST IN THE ANNUAL REPORT FOR 1955

The Net Income of Royal Dutch Petroleum Company for 1955 of fls. 244,083,045 makes possible the payment of a dividend of 4 per cent. on the cumulative preference share capital of fls. 1,500,000 and of 20 per cent. on the ordinary share capital of fls. 1,216,365,600 outstanding on 31st December, 1955; the latter includes 6 per cent. already made payable as interim dividend in January, 1956.

The Royal Dutch/Shell Group of companies maintained its leading position in the world markets and sales of "Shell" oil and chemical products world-wide again increased over the previous year.

Production of crude oil and natural gasoline, including quantities received under special supply contracts, amounted to over 1.9 million barrels daily, which was about 9 per cent. greater than in the previous year and almost three times as much as in 1946.

The amount of crude oil processed in Group refineries all over the world increased to nearly 2 million barrels daily.

The total owned and chartered tonnage of vessels of 2000 dwt. and over operated by Group companies amounted to about 7.7 million tons, of which about 2.8 million tons were owned and the balance chartered.

As on previous occasions, the Annual Report of Royal Dutch Petroleum Company will include financial statements of the Royal Dutch/Shell Group of companies.

The Net Income for 1955 of the Group amounted after taxation to £160 million (£134.5 million in 1954).

As a consequence of the increased activities, sales proceeds and other income amounted to £2,051 million (£1,852 million in 1954) and therefore exceeded £2,000 million for the first time.

Capital expenditures in 1955 amounted to £283 million (£226 million in 1954). This brings the total sums expended under this heading in the past 5 years to well over £1,000 million; an indication of the great investment necessary in the oil industry today to meet the rapidly growing demand for oil throughout the world.

Cash and securities amounted to £344 million at the end of 1955 and showed little change from the £346 million over the previous year.

Sales taxes, excise duties and similar levies collected and paid by Group companies totalled £444 million in 1955 (£406 million in 1954).

Income taxes throughout the world absorbed £116 million in 1955 (£106 million in 1954).

From the Net income of £160 million, dividends have been declared in respect of the year 1955 to the parent companies, viz., Royal Dutch Petroleum Company and The "Shell" Transport and Trading Company, Limited, of £33.4 million (for 1954 £26.8 million). The balance has been retained in the business.

Copies of the full report and accounts can be obtained free of charge from N. M. Rothschild & Sons, New Court, St. Swithin's Lane, London, E.C.4.

CROFTS ENGINEERS (HOLDINGS)

GRATIFYING TRADING RESULTS

The eighth annual general meeting of Crofts Engineers (Holdings) Limited was held on May 4th at Bradford, Sir Arthur Croft (Chairman) presiding.

The following are extracts from his circulated statement:

It is with great pleasure I present to you the Accounts for the year ended December 31, 1955. We are again showing increased profits; but on this occasion these include the results of a full year's working of the whole of our Group of Companies, including the two Companies acquired during the previous year—Carter Gears Limited and Parkinson & Son (Shipley) Limited, and the substantial increase in profits is due in the main to this fact. Extensions and alterations have prevented us from reaching the production anticipated; all the same the results are very gratifying.

The Trading Profit, before providing for taxation, is £861,173; against £706,716 for 1954. Tax takes £415,332, leaving a net profit of the Group of £445,841 (against £356,476 for 1954).

During 1955 the capital was twice increased by the capitalisation of Reserves; the first occasion being in the proportion of

one new share for every two Ordinary Shares held on June 7, 1955, which amounted to £400,000; and a second issue on December 22, 1955, of one new share for every three shares held resulted in the further capitalisation of £500,000. In addition, an issue of new capital was made to Ordinary Shareholders in the form of a "Rights" Offer. Almost 100 per cent of the new shares were taken up by them.

An Interim Dividend of 7½ per cent, less income tax, on the Ordinary Share Capital of £800,000 was paid in June, 1955, absorbing £34,500.

The Directors propose that a Final Dividend of 7½ per cent should be paid on the £2 million Ordinary Share Capital. The total distribution for the year on the Ordinary Shares is therefore £120,750, compared with £99,000 for 1954.

The Directors have given very serious consideration to the rate of Final Dividend proposed, and they feel that in future the Group should be able to finance its continued development out of its own resources. For this reason they have decided not to recommend an increase in the dividend rate, but to maintain the effective rate paid for the previous year—which in itself was an increase on the year 1953.

In my statement last year I informed you of the acquisition of J. Parkinson & Son (Shipley) Limited and Carter Gears Limited. Both Companies have installed additional

plant during the year, also Parkinsons have put up Works extensions which are almost completed—it is expected that by the end of 1956 this Company will be well on the way to full production on its increased capacity.

The Fixed Assets of the Group clearly indicate the rapid growth of your Company. The net increase in these assets during the year is £303,000, and this reflects the continued policy of installing modern machines and equipment in the operating subsidiary companies. There are commitments outstanding at December 31, 1955, for capital expenditure amounting to £218,000.

PROSPECTS

The future prosperity of the Group depends on trade and demand. All our Companies are in a position to deal with increased business, and, as stated last year, although competition is keener, we feel that due to the added strength and greater efficiency being obtained we are in an even better position to secure our share of any business available.

A general expansion in trade has taken place in all areas, both on Power Transmission equipment and Machine Tools, and our Canadian and South African Companies continue to show satisfactory progress.

The report was adopted.

THE KLABANG RUBBER COMPANY LIMITED

SIR JOHN BARLOW'S SPEECH

The thirty-sixth Annual General Meeting of the Klabang Rubber Company, Limited, was held on May 1st at Plantation House, London.

Sir John D. Barlow, Bart., MP, in the course of his speech, said:

The profit for 1955 was £29,843. Taxation requires £12,800. The transfer to replanting reserve is £10,000. An Interim Dividend of 1s. 6d. per stock unit (7½ per cent), less income tax, was paid on April 10, 1956, which required £8,625. There will be no further dividend in respect of 1955. The carry forward to next year's accounts is slightly reduced at £14,065.

As well as the 7½ per cent Interim Dividend, a Special Capital Distribution of 1s. per stock unit (5 per cent) was paid on April 10, 1956. This Capital Distribution is exempt from Income Tax and is made from the Capital Realisation Surplus account, which is reduced to £22,218.

CROP FIGURES

The crop of 766,000 lb was 67,000 lb less than last year, because of a changeover to a less intensive system of tapping. The cost of production was 20½d. per lb, which excludes provision for amortisation of estates, and the gross selling price nearly 4d. per lb, which enabled a profit of nearly 1d. per lb to be earned. This is the largest profit since the Korean War Commodity boom of 1950 and 1951.

From June 1, 1955, the Malayan Government raised the scale of export duty at prices above 22½d. per lb and introduced an anti-inflationary cess at prices above 28d. per lb. Discussions are continuing with the Government to try to agree to the method of repayment of the anti-inflationary cess, which should be returned to estates when the price of rubber falls below

28d. per lb. Export duty and anti-inflationary cess, after deducting replanting cess refunded, cost 4½d. per lb, or £14,733—over a fifth of the estates' revenue expenditure; this is the largest amount of export duty the Company has paid.

WORLD OUTLOOK

The outlook for world production and consumption of all types of rubber in 1956 is estimated at (in 1,000 tons):

	Natural	Synthetic	Total
Production	1,850	1,285	3,135
Consumption	1,820	1,180	3,000
Surplus.....	30	105	135

The figures show that production and consumption are almost balanced. With increasing industrial activity in many countries of the world, the demand for natural and synthetic rubber is high. Each product is essential for certain industries, but it has been estimated that nearly half the world's demand for rubber can be satisfied either by natural or synthetic rubber, depending on price.

ELECTIONS IN MALAYA

In July, 1955, the first elections were held in Malaya for 52 out of 98 seats in the Legislative Council. The Alliance party, which is composed of Malay, Chinese and Indian organisations, gained 51 out of 52 contested seats. Tunku Abdul Rahman was appointed Chief Minister. He visited this country in January, 1956, with a delegation from the rulers of Malaya and representatives of his Government. Discussions were held with HM Government in a cordial and friendly atmosphere. The communique issued at the end of the talks showed how large the measure of agreement was between the Malayan delegation and HM Government. It was agreed that every effort should be made to achieve self-government in Malaya by August, 1957, if possible.

The Report and Accounts were adopted.

RHEOSTATIC COMPANY, LIMITED

RECORD TURNOVER AND PROFIT

The nineteenth annual general meeting of The Rheostatic Company Limited was held on May 4th at Slough, Mr M. J. Gartside, B.Sc.(Eng.), M.I.E.E., A.C.G.I., F.C.C.S. (chairman and managing director), presiding.

The following is an extract from his circulated report for the year ended September 30, 1955:

I have pleasure in presenting Accounts which show a year of considerable progress. Both turnover and profit attained new high levels and Export sales accounted for a higher percentage of the total. The net profit before taxation increased by over 50 per cent to £237,771; after deduction of income tax and profits tax the net profit is £134,965 compared with £80,415.

The Board recommends a final dividend of 12½ per cent which brings the total distribution to 18½ per cent. This dividend provides a total distribution to shareholders greater than that of last year.

The reputation of Satchwell temperature controls continues to be enhanced both for the control of domestic electric appliances such as water heaters and cookers and for the automatic control of central heating. Taking the long view, the Board has confidence that the Company will continue to progress as it has done in the past.

Your Board has decided to call an Extraordinary General Meeting for the purpose of increasing the capital of the Company from £650,000 to £900,000, and to offer further shares at par to the Ordinary Stockholders on the basis of one new share for every share held. The directors expect to be able to recommend next year a total dividend of not less than 12 per cent on the ordinary capital as increased by this rights issue.

The report was adopted and the increase of capital approved.

UNITED BISCUITS LIMITED

RECORD SALES

The eighth annual general meeting of United Biscuits Limited will be held on May 31st in Edinburgh.

The following is an extract from the Statement by the Chairman, Mr Peter G. Macdonald, W.S., J.P., circulated with the report and accounts for the year 1955:

I am again in the happy position of being able to report group sales for the past year which break all our records at a figure of over £13,500,000, an increase of £2 million over the previous year. This increase in sales has, I feel, been due to the continuing popularity with the housewife of the products of McVitie & Price and Macfarlane Lang.

The policy of your Directors in the modernisation of plant and mechanisation of many processes—automation as it is now called—especially in the packeting of biscuits, has enabled us to handle this greatly increased volume of trade with a consequent reduction in overhead charges. Accordingly we were able in June, 1955, to pass on some of this saving to the housewife in the form of a reduction of a penny per pound in the price of biscuits. When so much discussion is taking place in Government circles with a view to a reduction in the cost of living I am particularly pleased that we have been able to help in that direction. It is noteworthy that the price of our biscuits today shows an increase of only 60 per cent on prewar prices despite increases in the cost of our main ingredients—flour, fat and sugar—ranging from double to treble the prewar figures. I know of no other foodstuff which gives the housewife comparable value today.

EXPORT

Our export trade has increased by about a third over the previous year, in spite of the fact that some of our perishable goods had to be returned from the docks owing to the Dock Strike, which again emphasises the important fact that we all depend on each other and that we must all pull together for the benefit of the whole. The increase in export trade is particularly encouraging as over 70 per cent was exported to hard currency countries.

The group profit for the year to December 31, 1955, before providing for taxation, amounted to £2,163,270, as compared with £1,911,533 in the previous year, an increase of £251,737. Income tax and profits tax require provisions of £1,062,741 and there remains after taxation a balance of £1,100,529 (1954, £997,219). The preference dividend for the year and an interim dividend of 4 per cent, less tax, on the ordinary shares paid in October last required £103,500, and the Directors recommend that the final dividend on the ordinary shares be 10 per cent, less tax, requiring £172,500. The total dividend of 14 per cent for this year is at the same rate as last year but payable on the increased ordinary share capital. This year's distribution is therefore equivalent to 21 per cent on the old capital.

The future prosperity of the biscuit industry is, like all others, primarily dependent on the general economic health of the whole country, and it is hoped that the steps which the Government have recently taken will strengthen our national economy. If this is achieved I feel that we can look forward to the future confident that we can expect to get at least our fair share of the trade of the biscuit industry and that a satisfactory level of profits may be obtained.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

STATEMENT BY SIR OLIVER FRANKS

The one hundred and twenty-third Annual General Meeting of Members was held on May 9, 1956. The following is an extract from the statement by the chairman, the Right Honourable Sir Oliver S. Franks, which has been circulated with the Report and Accounts for the year ended December 31, 1955:

The New Life Assurances of the Group amounted to the record total of just over £29 million, which compared with the record of the previous year of £22 million. The biggest increase is in the Ordinary Life Section of the Account, particularly in the With Profit Contracts: this is largely due to the excellent rate of bonus which we were able to declare at the end of our quinquennium in December, 1954.

In our Group Life and Pensions Department we have written a record volume of business.

The Home Fire Account once more maintained its rate of steady growth and an excellent profit has again been made.

In the Home Accident Department trading conditions were difficult but in each of the four main sections of the account the claim ratio was lower than in 1954, the greatest improvement being in the large Motor Section.

The Continuous Disability Account has shown very good progress and the substantial contribution to profits made by this account and by the Sinking Fund Account give reason for satisfaction.

THE ECONOMIST, MAY 12, 1956

In our Overseas Branches the small profit made in some areas was completely overshadowed by the loss incurred in our large Fire Account in the USA and Canada. In the Accident Account the results were also disappointing largely due to a loss in the United States and in Australia.

Our Marine Account is not a large one but by sound underwriting it continues to make a useful contribution to the profits of the Office.

I should like to mention our subsidiary, Southern Industrial Trust, which offers a most useful service in the form of hire-purchase finance. In 1955 the trading conditions were particularly difficult but nevertheless a most satisfactory contribution to Group profits was made by the subsidiary.

The Budget proposal to exempt from tax that portion of each payment under a Purchased Life Annuity which represents a return of part of the original purchase price removes what has been a long-standing grievance.

The further proposal in the Budget to give limited relief of taxation to the self-employed who have to provide for their retirement is most welcome. This Office, in accordance with its traditional leadership in Annuity and Pension business, is ready to provide opportunities for taking full advantage of these new conditions.

The gross rate of interest earned on the whole of the funds of the Friends' Provident was £6 2s. 5d. per cent, and the net rate, after deduction of Income Tax, £5 4s. 4d. per cent.

The Funds of the Group now exceed £60 million and as an indication of the rapid growth of the Office it is interesting to reflect that the Funds have been doubled in the seven-year period since 1948.

AUTOMATIC TELEPHONE & ELECTRIC CO., LTD.

Annual Report & Accounts of the Group for the Year ended 31st December, 1955

PRINCIPAL FEATURES	1955	1954
Profit (after depreciation, etc.)	£ 1,271,629	£ 1,440,400
Taxation	486,262	628,877
Net Profit	785,367	811,523
Dividends	211,692	209,042
Retained in the Business for Research, Development, Expansion, etc.	573,675	602,481
Issued Capital	3,294,400	3,294,400
Reserves and Amounts set aside	6,431,097	6,063,864
Fixed Assets	1,735,461	1,518,088
Investments	487,119	491,308
Net Current Assets	7,502,917	7,348,868

The following is an extract from the Statement to Stockholders made by Sir Alexander Roger, K.C.I.E., Chairman:—

In 1955 the value of our sales was again the highest in the Company's history. Moreover, the value of unexecuted orders in hand is greater than it has ever been, and the manufacturing programmes budgeted for 1956 and 1957 show progressive increases. I am afraid, however, we must recognise that lower profit margins are almost inevitable because recent wage awards have tended to become more and more an annual feature in our economy, and have long since ceased to bear any direct relation to increased production.

The element of labour costs for the finished telephone product is unusually high, whilst its dependence on imported materials is very low. From a national point of view it thus represents an ideal type of export; but because of this high labour element we are affected sooner than most industries by the continually rising labour costs.

THE ECONOMIST, MAY 12, 1956

ELLIOTT BROTHERS (LONDON)

INCREASED PROFIT

The Thirty-ninth annual general meeting of Elliott Brothers (London) Limited will be held on May 31st in London.

The following is an extract from the statement by the Chairman, Mr R. E. F. de Trafford, O.B.E., for 1955:

The consolidated profit before taxation has risen from £222,878 in 1954 to £260,685 in 1955, and is a reflection of the expansion of turnover and increased efficiency. Our order book is now larger than ever before.

In automation developments we have had

the benefit of associations with leading American organisations

The Elliott 405 Electronic Digital Computer is the first British electronic computer capable of dealing rapidly with the large volume of information required in office applications and data processing (for which purposes it has been specially designed). This computer has aroused great interest at home, in the USA and on the Continent. We have secured a number of orders from leading British industrial users and public authorities. We continue to be entrusted with important projects for Government Departments and this work has expanded, particularly in aviation.

Our investment in Fixed Assets expanded considerably during the year and has resulted in a substantially larger Depreciation charge,

against which we have had the benefit of Investment Allowances. I would like to express my regret that the Chancellor withdrew these allowances. It is clear that home demand for certain categories of goods must be curbed at this time, but it is equally clear that this country cannot hope to maintain, let alone to increase, its ability to compete in export markets unless its industrial capital equipment is constantly kept up to date.

Your Directors recommend the payment of a final ordinary dividend of 12½ per cent, making 17½ per cent for the year, as compared with an effective rate of 16½ per cent for the previous year.

Although it is too early to gauge the level of profits for the year as a whole, it is your Board's expectation that the current year will be another period of progress.

Bayerische Hypotheken-und Wechsel-Bank

HEAD OFFICE MUNICH

Foreign Trade Bank

At the Ordinary General Meeting on April 19, 1956, it was agreed upon that for the business year 1955 a dividend of 11 per cent. will be distributed on the nominal ordinary share capital of DM 40,000,000, and a dividend of 2½ per cent. on the nominal ordinary share capital of DM 20,000,000—which was issued in the course of the 1955 capital increase and participating in dividend payments as from October 1, 1955.

Balance Sheet Total:

As at December 31, 1955: DM 2,531,209,662.02

Principal Items of the Annual Balance Sheet per December 31, 1955:

Capital Stock	DM 60,010,000.00
Reserve Funds	DM 28,000,000.00
Pension Funds	DM 53,083,967.00
Deposits	DM 1,263,196,533.56
including Savings Bank Deposits	DM 384,315,145.53
Debtors	DM 669,353,065.62
Long-Term Loans extended by the Mortgage Department	DM 689,490,056.02
Debentures	DM 785,911,656.50

Besides the Munich Head Office, the following Branch Offices are licensed Foreign Trade Banks:

Augsburg, Nuremberg, Ludwigshafen/Rh., Aschaffenburg, Bamberg, Frankenthal, Freilassing, Fürth i.B., Grünstadt, Hof (Saale), Kaiserslautern, Kaufbeuren, Kempten (Allgäu), Kitzingen, Kusel, Lindau (Bodensee), Lindenberg (Allgäu), Mannheim, Markt Oberdorf, Neustadt a.d. Weinstrasse, Neu-Ulm (Donau), Regensburg, Schweinfurt, Selb, Weiden (Oberpfalz), Würzburg, and our Grossmarkthalle Branch Office in Munich.

THE BOARD OF MANAGEMENT

Munich, April 1956.

MARIEVALE CONSOLIDATED MINES, LIMITED

TONNAGE MILLED A RECORD HIGHER PROFIT AND DIVIDEND

Mr C. B. Anderson, the Chairman of the Company, in addressing members at the Annual General Meeting held at Johannesburg on April 27, 1956, stated that in 1955 the tonnage milled rose by 57,000 tons to a record of 857,000 tons and as the yield improved slightly to 5.19 dwt. the output was 18,292 ounces higher at 222,186 ounces fine. As a result of the greater output, coupled with a small increase in the average price received for gold, the working revenue was nearly £250,000 higher at £2,792,065. Working costs were twopence per ton milled lower and absorbed £1,720,546, and the working profit was £1,071,519, an increase of £141,295 over the previous year. This satisfactory position was due largely to Native labour being in better supply than for some years. It should be noted, however, that 62 per cent of this increase in working profit was absorbed in taxation.

After providing £524,108 for taxation the net profit was £547,625 or £60,477 more than in 1954. Two dividends totalling 2s. 3d. per share, or 3d. more than in 1954, were declared, absorbing £506,250. After providing £47,389 for capital expenditure and an additional liability for European leave pay the unappropriated balance was reduced slightly to £482,749.

GENERAL ACCIDENT A HIGHLY SATISFACTORY ACHIEVEMENT

The seventieth annual general meeting of the General Accident, Fire and Life Assurance Corporation, Limited, will be held on May 30th at Perth.

The following is an extract from the circulated address by the Chairman, Sir Stanley Norie-Miller, Bt, MC, DL, JP:

The net income from all sources amounted to £50,025,848, an increase of little short of £3 million, which can be regarded as a highly satisfactory achievement.

Allocations to Underwriting Reserves absorb £650,000 and £500,000 has again been transferred to General Reserve.

The aggregate New Business retained by the Group amounted to £10,993,389 as compared with £7,150,955.

In the Accident and General Department, the premium income increased by close on £2 million to £41,137,257.

Success has again been achieved in the Fire Department. Premium income has increased and a profit of £578,098, well up to our usual high standard, has been earned.

Marine Department: The volume of business written shows a slight decrease at £529,142, and the Fund at £990,336 is considered adequate for all eventualities.

Total assets have increased by £5,448,526 to £85,427,614.

USA: A gratifying increase in premium volume was achieved. The greatest credit is due to our Management and Personnel for results which were decidedly better than average for the market as a whole.

DEVELOPMENT AND ORE RESERVE

The development footage driven during the year totalled 38,787 feet. Of the 16,770 feet developed on the Main Reef Horizon 11,600 feet were on reef, and sampling disclosed 6,840 feet or 59 per cent to be payable averaging 18.4 dwt over 14 inches, equivalent to 258 inch-dwt. 22,017 feet were driven on the Kimberley Reef Horizon and of the 16,930 feet on reef and sampled 6,165 feet or 36 per cent proved payable averaging 9.0 dwt over 25 inches, equivalent to 225 inch-dwt. There was a very satisfactory increase in the payable footage on the Kimberley Reef and the percentage payability also improved, but the average inch-dwt figure was somewhat lower.

The recalculated ore reserve increased by 500,000 tons to 4,500,000 tons averaging 5.4 dwt over an estimated stoping width of 47 inches. The value was 0.1 dwt lower but the width unchanged. Of this tonnage the Kimberley Reef accounted for 600,000 tons averaging 4.8 dwt over 47 inches.

TAXATION

In March of this year the Minister of Finance announced that he proposed to restore the Formula Tax to the 1950 level, and also to increase certain allowances. The effect of the proposed change in the Formula Tax would be to reduce the rate of taxation by just under 5 per cent as from January 1, 1956. This reduction, though comparatively small, and the other concessions to the Industry were most welcome.

SILICOSIS LEGISLATION

The Chairman also welcomed the recent announcement by the Minister of Mines that when silicosis benefits are increased by legislation which it is proposed to introduce this year the State will itself assume responsibility for the retrospective liabilities so created up to the extent of £10,900,000. The Industry would continue to carry the burden of providing for present and future liabilities in respect of silicosis compensation. It was difficult to predict, at this stage, the precise effect on the Industry of the increased benefits now proposed, since this depended on the number of cases certified by the Silicosis Medical Bureau, but the increase in the liability might well be a substantial one.

RESULTS IN FIRST QUARTER OF 1956

During the first quarter of 1956 the ore milled was 208,000 tons and the working profit £249,818. Development footage driven on the Main Reef Horizon was 3,611 feet of which 2,610 feet were on reef and sampled disclosing 1,630 feet or 62 per cent payable averaging 17.8 dwt over 16 inches, equivalent to 284 inch-dwt. On the Kimberley Reef Horizon 4,918 feet were driven and of the 3,765 feet on reef and sampled 775 feet or 21 per cent proved payable averaging 12.6 dwt over 25 inches, equivalent to 314 inch-dwt.

The motion for the adoption of the Reports and Accounts which was proposed by the Chairman and seconded by Mr P. S. Hammond was carried unanimously. The retiring Directors, Major General F. H. Theron and Messrs M. W. Richards and J. S. Walker, were re-elected.

BLAW KNOX LIMITED SATISFACTORY VOLUME OF ORDERS

The annual general meeting of Blaw Knox Limited was held on May 9th in London, Mr J. M. Wallace (the Chairman) presiding.

The following is an extract from his circulated statement: The trading profits for the year amount to £398,089. After making full provision for taxation and depreciation, disposable profits for the year are £171,122.

Despite severe competition your Company's business in all directions has held up remarkably well, the volume of orders on hand being most satisfactory.

In my last review I referred to the introduction of new products and the continuance of a vigorous development policy. Orders for these new products have been rewarding. Furthermore, we now have in the course of production additional new products of major importance which have created wide interest.

The past year has been notable for the sustained and constructive effort by our sales departments in expanding our markets both at home and overseas. At no previous time in the history of the Company has there been such cause for satisfaction in the quality and efficiency of products the Company is able to offer.

Efforts have been made to improve standards of production efficiency and progress has been made. As to the future, our efforts and hopes for the further expansion of our business and even its maintenance at its present level depend very largely on Government policy and the measures it may take to restore the country's weakened gold and dollar reserves.

The report was adopted and the total ordinary dividend of 30 per cent was approved.

ALBERT E. MALLANDAIN STEADY PROGRESS

The nineteenth annual general meeting of Albert E. Mallandain, Limited, was held on May 9th in London, Mr William Balleny, CA, Vice-Chairman, presiding. The following are extracts from his circulated review for the year 1955:

During the past year, the company's business has been not only maintained but indeed expanded. All sections of the business show better results due to increased turnover and productivity and rigorous control of overheads. Raw materials values have on an average been more stable during the past year. This has enabled us, while maintaining reasonable profit margins, to quote keener prices to our customers than might otherwise have been possible. The ratio of export to total trade has also been well maintained.

The aggregate net profit is £86,842 compared with £72,020 for 1954, an increase of £14,822. An analysis of the factors which have contributed to the increased net profit shows that, while sales increased by 14 per cent over the previous year, costs in materials wages and overheads, although greater in terms of money did not increase to the same extent. Your Board recommend the payment of a dividend of 25 per cent. This, approved, will be paid on the existing capital of the company, viz. £200,000, and is equivalent to a rate of 50 per cent on the formal capital before last year's bonus share issue.

The demand for our goods is well maintained as evidenced by the state of our order book and, despite rising costs we can look forward to a continuance of satisfactory trading results.

The report was adopted.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

A SATISFACTORY YEAR

The annual general meeting of The National Mutual Life Assurance Society was held on May 2nd in London, Mr Kenneth A. E. Moore, FCA (the chairman), presiding.

In his speech to the members the Chairman said that 1955 had been a most satisfactory year from the point of view of the policyholders in that the rate of bonus earned had been well up to the exceptionally favourable level of the last valuation and augured well for the next bonus declaration due at the end of this year.

ANTI-INFLATIONARY MEASURES

Mr Kenneth Moore went on to comment on the steps taken by the Government in an effort to stop, or at least to curb, inflation. As a result of these steps the rate of interest has risen substantially and the market price of fixed interest securities had fallen by approximately 15 per cent. The amount required to be written off the Society's Stock Exchange investments to reduce them to market values was less than 6 per cent of their book value and was comfortably

covered by the Reserve Fund of £1,775,000 previously built up out of appreciation and realised profits. After providing for this the Reserve Fund, as shown in the Balance Sheet, stands at the substantial figure of £1,192,000.

The Government's Budget proposals for tax relief on the premiums for pensions for self-employed fall short of the recommendations of the Millard Tucker Committee, and it is to be hoped that a number of points which would make the proposals fairer and more attractive to the individual will be pressed when the Bill reaches the Committee stage. The Society in the meantime is preparing to play its full part in meeting the demand for the new pensions, but nothing can, of course, be finalised until the exact scope of the terms and conditions of the new deferred annuity policies are finally settled by Parliament.

EFFECTS OF HIGH TAXATION

Returning to broader matters, Mr Kenneth Moore stressed that taxation remains at a deplorably high level, blunting incentive, warping the conduct of industrial, commercial and private affairs and adding to the general inflationary pressure. He went on to say that, what is sadly needed, is such a reduction in taxation as would restore incen-

"SOFINA"

MR C. K. WILMERS' REVIEW OF THE YEAR

IMPROVED RESULTS

At the Annual General Meeting of Shareholders of Société Financière de Transports et d'Entreprises Industrielles ("Sofina"), held in Brussels on April 26th, the Balance Sheet and Profit and Loss Account for the year ended December 31, 1955, as well as the appropriation of profits were approved.

The Balance of the Profit and Loss Account amounts to B.Frs. 118,398,905, against B.Frs. 121,450,028 for 1954, but earnings available for distribution show an increase of B.Frs. 10,836,638.

The dividend on each of the 630,000 Ordinary Shares was increased to 125 francs net for the year 1955 as against 110 francs net for the preceding year. It will be payable as from May 2, 1956.

MANAGING DIRECTOR'S COMMENTS

An address to the Meeting by Mr Charles K. Wilmers, Managing-Director, included the following comments:

"The Balance Sheet and Profit and Loss Account of our Company which are presented to you today, again show an improvement over the figures for the preceding year. Our liquid assets have increased during the year by 114.8 million frs. and the market and estimated value of our portfolio by 634.2 million frs., representing a total increase in value of 749 million frs., or 14 per cent compared with the figures at December 31, 1954.

May I add that I hope that the presentation which we have given to our accounts and the comments and analyses which we have made in the annual report which is before you, have been helpful in giving you a clearer understanding of the position of our company. It is our belief that confidence in the company and in its management can only be soundly based on a clear understanding of the facts and it is therefore our policy to give you the maximum of information which

can be of use to you in forming your own judgment of our affairs.

Coming now to our Profit and Loss Account, this shows an increase in distributable income, and although there is a decline in income which cannot be considered as distributable this is due almost entirely to a decrease in 1955 as compared with 1954 in an unrealised profit on shares distributed as dividends to us by two of our American subsidiary companies.

Despite the improvement in the results to which I have just referred, which has enabled the Board to propose to you to increase the dividend by 15 fr. per share, much remains to be done to improve the net yield to our shareholders from our total assets. I am certain that I need not repeat my assurance that all steps which can be taken by us will be taken with this end in view, provided always that they can be reconciled with our obligation to defend all the interests entrusted to us by our affiliated companies and that they do not lead us to neglect long-term growth possibilities in favour of immediate yield.

I have referred first to our obligations towards our affiliated companies because, as you remember, we touched upon this question last year when I had occasion to remind you of the considerable services which our Company has continued to render, not only for the defence of the interests in Spain of an affiliated company, but also to aid our affiliated companies operating in Argentina. As I stated then these services have remained without remuneration for a long period of time, with the consequence that our remuneration for technical and management services is somewhat out of proportion with the expense which they involve. You will agree with me, however, that it would not only be a neglect of our duty but also a shortsighted policy, which only those who do not wish us well would recommend, to abandon these interests and not to make

tive and make possible permanent savings in the best Victorian sense. It would enable the individual to invest during his working life in anything which he thought fit, including the provision of risk capital in his own or any other business. It would be wonderful to see individual savings linked once again with individual investment.

It went without saying that all financial institutions were most anxious to support any effective steps taken by the Government in the fight against inflation. Their only wish was for more courageous action to be taken than had been forthcoming so far.

For a Life Assurance Company in particular the maintenance of a stable currency is vitally important. The members of the National Mutual and all who work for it—and indeed the whole world of Life Assurance—can take comfort in the fact that the very essence of Life Assurance is in the collection of savings in the form of premiums and their investment for long periods in some useful and productive form as a protection to the policyholder and his dependants.

The Chairman concluded by expressing his thanks to the management, officials and staff for their work during an unusually busy year.

The report and accounts were adopted.

ARGENTINA

As far as Argentina is concerned, it has been traditionally a country with which Belgium has traded on a large scale and in the economic development of which Belgians have played an important and constructive part. After a long period of disappointments and restrictions in the economic field, Argentina has found a government which appears anxious to free the country's economy and to seek to work in fruitful co-operation with other countries. The steps which have already been taken to liberate the exchange and the recent announcement of Argentina's entry into the International Monetary Fund and its application to become a member in the World Bank have been received with great satisfaction by its friends abroad. As you know, Argentina's capital requirements over the next few years will be very great. It has been estimated in Argentina that the funds needed from foreign sources alone over the next three or four years will be between 1,200 million and 2,000 million US dollars. One of the most essential and basic needs is a sufficient power supply. There can be no doubt that co-operation with the electricity companies now operating in Argentina is the surest, most rapid and most economical way of solving at least a most important part of this problem. Belgium will, I believe, be interested not only in renewing its trade with Argentina, its friend of long standing, but also in playing a part in assisting in the broad investment programme required, provided a sound and equitable basis can be found to achieve this objective, one which fully respects the effort and investment already made.

You may be interested to hear that I returned this week from a mission to Argentina, jointly with representatives of other large shareholders of our principal under-

taking there. The mission held high-level conversations in a frank and cordial atmosphere. As you have doubtless read in the Press a consultative commission, composed of members of the political parties in Argentina, has been studying the question of electricity. Its majority has apparently made a recommendation that the two principal companies, CADE and ITALO, should be expropriated. The Government, on the other hand, according to a recent statement, is making its own complete study of the situation and will publish its recommendations in due course. Discussions with the Argentine authorities are continuing on a technical level, and before leaving Buenos Aires I gave an assurance that I would be ready to return, probably with other members of the recent mission, whenever this might be considered opportune.

BARCELONA TRACTION

As far as the interests of Barcelona Traction in Spain are concerned, you and the shareholders of Sidro have been kept informed of developments by our annual reports and various communications made to the Press. A few weeks ago a shareholders' meeting of "Fuerzas Eléctricas de Cataluña" was held in Barcelona. Considerable publicity was given to this meeting in the Spanish Press and the headlines included such statements as "A brilliant Year and great Prospects for the Future" and "Solid financial Position of the Company." May I remind you first that this is the company which purports to have acquired, in circumstances with which you are only too familiar, the assets of Barcelona Traction's subsidiary companies. The figures made public on the occasion of this shareholders' meeting are indeed interesting. The net profit is stated to be 290 million pesetas without taking into account various subsidies to be received from the Government in application of new tariff regulations and which are stated to amount to 174 million pesetas. Furthermore, provisions for amortisation, depreciation and contingencies in an amount of 221 million pesetas have been made. These figures appear to show that the net receipts of the group exceeded 600 million pesetas. We had previously made calculations which estimated the net receipts at only 460 million pesetas, and these by comparison with the value attributed to other electricity companies in Spain by the Spanish Stock Exchanges, would already have given a value of 10,000 million pesetas to the undertaking. After deducting the debts and taking into account the fact that the Belgian interest in the equity, directly or indirectly amounts to approximately 80 per cent, we obtain a figure of 7,000 million pesetas for this interest.

Our decision to persevere in our efforts to defend and recover these assets has not changed over the years. I think I cannot do better, if you permit, than to quote a few of the things which I said to the shareholders of Sidro at their meeting of October 7, 1952:

"That any man of honour, any business man, should seek to deprive his neighbour of his property without compensation seems strange to us, stranger still perhaps that he should attempt to do so in order to increase a legitimate profit of 70 per cent to an unjustified and unjustifiable one of 480 or 930 per cent."

The only modification that would have to be made at this point is in the percentage of profit which the man to whom I referred proposes to make and which becomes much higher than I had foreseen in 1952. I went on to say at the time:

"The social obligations of capital are almost universally recognised and acknowledged today, in no field more clearly than

in the basic industry of production and distribution of electricity."

The attitude of the owners of FECSA seems to me to be in strange contrast with these obligations.

Finally, I concluded with the following remarks:

"Your Board has a public duty to thousands of shareholders, and it will continue to defend their large interest in Barcelona Traction before the courts of Spain and elsewhere. We do not dispute the claims of the bond-holders. If they in turn will cease to dispute our rights and our investment the way will indeed be open for the Barcelona affair to end.

"In continuing to strive for an equitable settlement we base our confidence in success on the merits of our case, on the belief that justice will be done and on what we are sure is your continued willingness to agree to any reasonable solution. In this conviction we shall not cease to carry our appeal to men of good will wherever they be."

I know your great interest in this matter. The words which I have taken the liberty of recalling remain apt. I do not believe that there is anything further that I should add today.

INVESTMENT YIELD

A few words now about the yield on our investments. We discussed last year the fact that the market price of many of them discounts an improvement in yield which will take place in the future. This, as you know, is particularly true of the natural gas stocks in the United States which, as you have seen from the analysis of our assets given in this year's report, represent in value 24.2 per cent of our total portfolio. If in the past we had concentrated only on the purchase of stocks producing a high immediate yield it is unlikely that we would have been able to increase the value of our assets as we have done in recent years. The fruits of this increase in value must, of course, ultimately be reflected in higher earnings and dividends. The present net yield on the portfolio shown in the analysis of our assets is approximately 2.5 per cent of the market value and 6.6 per cent of the book value. It is interesting to note that approximately 1,000 million francs in value of this portfolio produced no income whatsoever. This figure is made up to a large extent of our investment in Sidro and our investments in Argentina. If we deduct this sum from the total value of the portfolio the net yield on the remaining holdings rises to approximately 3 per cent. Consequently if this 1,000 million frs. were to produce only the same yield as the balance of the portfolio our income would be increased by approximately 30 million frs. There is another factor that affects the net yield on our portfolio, namely the general expenses of certain of our subsidiary companies which influence the dividends which they are able to pay to us. As you will have seen from comments in our report with reference to two of our American subsidiaries, reductions in expenses have already been made and steps have been taken to reduce even more substantially this year's expenses of these and other subsidiary companies. These steps are a result not only of economies in operation of the subsidiaries but also of a greater concentration of activities in Brussels. This may conceivably entail some increase in the expenses of our own company but these will be much more than offset by the increased dividends resulting from economies elsewhere. I can therefore say to you with confidence that our earnings for 1956 should show a substantial improvement over the figures for last year.

ALLIANCE ASSURANCE

A SATISFACTORY YEAR

The annual general meeting of the Alliance Assurance Company Limited will be held on June 6th in London.

The following is an extract from the Review of the report and accounts for the year 1955 by the Chairman, Mr T. D. Barclay:

The Company had a satisfactory year in 1955 resulting in a further increase both in premium income and net profit. The total premiums in the Fire, Accident and Marine Departments have increased from £14,301,704 to £15,629,620.

The total underwriting surplus from these three Departments rose from £1,533,389 to £1,642,058 in spite of the substantial additional provisions for unexpired liabilities arising from the increase in premium income.

DEPARTMENTAL RESULTS

Life Department.—The net new sums assured completed during the year amounted to £10,240,898 compared with £10,077,720 in the previous year.

Towards the end of the year many of the Company's rates of premium were reduced to give effect to the improving trend of mortality and the higher interest rates now obtainable.

These two factors have been further recognised by the decision taken earlier this year to increase the rate of interim bonus on With Profits Policies from 36s. per cent to 40s. per cent compound.

Fire Department.—The net premiums in this Department rose from £6,214,273 to £6,812,777 while the claims were £2,519,083 as compared with £2,466,077.

Marine Department.—The net premium income was £2,170,140 as compared with £2,159,164 in 1954 showing a slight increase for the first time for two years.

The Underwriting Account for 1953 has now been closed with a balance of £474,456. Of this amount £243,011 was required to settle claims arising from previous years' Accounts leaving £231,445 as against £125,595 available for transfer to the Profit and Loss Account.

Accident Department.—The net premiums in the Accident Department for the "Alliance" Group amounted to £6,646,703 compared with £5,928,267 in 1954. The claims also show a substantial increase at £3,170,543 as against £2,703,133 in 1954 and the surplus, after providing for unexpired risks, was £541,216; the corresponding figure in 1954 was £649,547.

Trustee Department.—The total fees received during 1955 amounted to £26,771 which represents a small increase over the previous year.

PROFIT AND LOSS ACCOUNT

The profit of the Group, after making provision for taxation and other outgoings, amounted to £1,458,625 as compared with £1,335,298 in 1954.

As you are aware, the Board has decided to declare a final dividend at the rate of 4s. 6d. per share, making 3s. 6d. per share for the year.

In conclusion, I must record, on behalf of the Directors, our thanks to the Chairman, Manager, his Deputy and Assistants and to the Departmental and Branch Managers and Staff throughout the Company's service.

THE NORTHERN ASSURANCE COMPANY LIMITED

FIRE AND ACCIDENT PREMIUMS INCREASED BY OVER £1,700,000

ALL-TIME RECORD NEW LIFE BUSINESS

The one hundred and twentieth Annual General Meeting of The Northern Assurance Company Limited will be held on May 30th in Aberdeen.

The following is an extract from the Statement by the Chairman, The Right Honourable Lord Glenconner, which has been circulated with the Report and Accounts:

Encouraged by the success of our regional offices in Scotland and in the North of England, which have rapidly established their value, we are taking further steps to extend our regional organisation at home. Plans are now in hand to set up a third regional office to serve the Midlands. It will concentrate on the development of engineering insurance and pension business, and the connections of the group in that highly industrialised area will find it ready with specialist service for the settlement of accident claims.

We have proceeded with the appointment of further inspectors to give service to our agents in overseas territories. It is important to provide the best assistance for these valuable connections, for the Northern's business in many overseas markets depends greatly on their knowledge and goodwill. Particularly encouraging progress is being made in engineering insurance abroad and also at home.

The name of the Northern has in recent months been reaching the new television public. We do not expect from this, or indeed from our now familiar newspaper advertising, any attributable or direct increase in our business, but we are satisfied that the Northern should be made more widely known among the insuring public and that its name should come readily to the minds of all who have questions about insurance and seek expert advice. They will find that the Northern and its associated companies stand ready to provide a service unexcelled throughout the British insurance industry.

LIFE DEPARTMENT

Indeed, the continued advance of the Northern Group rests on its high reputation for service in all departments of its business, and this is the explanation for last year's all-time record for life assurances placed with the Northern Group as a whole. Our new life sums assured reached £26,908,597, compared with £23,495,389 in 1954. This increase of 14 per cent is most gratifying, because it shows that the very great increase that we secured in 1954 (when the figures included a new assurance scheme for a large industrial concern) was no temporary phenomenon. We are now handling a volume of new life assurance business nearly four times what it was only five years ago. This rate of progress deserves all praise, and all branches handling life business have contributed towards it. But I should like to mention in particular that three of our provincial branches each obtained more than £1 million of new life assurances last year, for the first time in the company's history. The result is that the Northern Group is among the top twelve of British assurance offices reckoned by the annual amount of new life business written.

PENSIONS DEPARTMENT

Our pensions department continues to make a growing contribution to the progress of life business. It has demonstrated its

ability to handle a rapidly growing volume of business and to design pensions schemes that can meet the widely varying requirements of employers of all kinds. The Northern's reputation in pensions business stands high and we can confidently expect that our ingenious pensions department will add further laurels to its already excellent record.

Pensions business is not confined to the United Kingdom. In South Africa, where last year new life sums assured were more than double those of 1954, the pensions department is also making a most effective contribution to the figures. Our new Central African Branch, centred on Salisbury, is beginning to obtain a satisfactory volume of life assurance; it has been operating for only a short time and we have every hope that its promising start will in time enable it to compare favourably in achievement with our long-established branches.

FIRE AND ACCIDENT DEPARTMENTS

The overall business of the Northern and its associates in general insurance has passed one significant milestone and is in sight of another. Fire premiums increased from £9,503,981 to £10,038,597, while accident premiums at £9,999,071, compared with £8,772,484 in 1954, failed by only a few hundred pounds to reach £10 million. In terms of the volume of general insurance business that the Northern Group has been able to attract, there is no ground for complaint in such figures. It is, however, a different story in terms of underwriting profit. This is partly due to our own conservatism, for the Northern has always set aside 50 per cent of the year's premiums to cover unexpired risks, and the bigger the increase of premiums in any year the bigger are these reserves to be set against them. But we, in common with other underwriters, had another costly year in the United States, which yet again suffered a succession of windstorms, hurricanes and floods. The result was that operations in the United States were unprofitable. Elsewhere the experience of the fire department was good, and the account as a whole has yielded a profit of £290,589, compared with £150,019 in 1954. In the circumstances, this is a satisfactory result which reflects great credit on our fire underwriters.

Unfortunately, the out-turn of the accident account was less favourable and shows a loss of £151,596 compared with a profit in 1954 of £184,839. This result is due partly to the rising premium income with the consequent increase in the unexpired risks provision and partly to the weight of claims. Motor business bears the major responsibility and the proper relation between an economic level of premiums and the mounting cost of claims has yet to be found.

MARINE DEPARTMENT

Net premiums obtained by the marine department last year were again a little lower. Competition for business, both at home and in overseas markets, has exerted pressure on hull and cargo rates. At home, indeed, the capacity of the market has continued to expand more rapidly than the volume of marine insurance business to be transacted. The Joint Hull Agreement, however, has imposed a measure of stability in that branch

PROFIT AND LOSS ACCOUNT

The transfers to profit and loss account from the fire, accident and marine accounts set out above total £390,139, compared with £646,526 in 1954. On the other hand, the gross income from investments held in the shareholders' non-life funds has again sharply increased, from £1,015,643 to £1,204,051. This is in part a reflection of the growth of funds—due to the expansion of premium income and thus of unexpired risks reserves—and the Northern Group's gross profit (including other items) amounts to £1,524,625 against £1,693,957. Taxation at home and abroad is lighter, at £868,767 against £1,077,287, though it still absorbs well over half of our earnings. The Group's net profit thus shows a modest improvement from £616,670 in 1954 to £655,858 in the latest year, and we propose to allocate £210,000 of this profit to the investment and contingency reserve.

It is a general practice in British insurance to relate shareholders' dividends to the income earned on the investments in the shareholders' non-life funds. After providing for British income tax, the net investment income of these funds amounted last year to £705,003, showing a further considerable increase of £133,213, or 23 per cent, over the 1954 total of £571,790. A final dividend of 14s. on the ordinary shares makes a total of 24s. for the year, as compared with 22s. last year. If the final dividend is approved, a further dividend of 13s. 5.194d. per share will be payable on the participating preference shares which will be distributed with the half-yearly dividend due on July 1st next.

INVESTMENTS

Lastly I would like to refer to the effect of the impact of the Government's stiffer monetary policy on our investment holdings. As a measure of what investors have had to face, I may quote the Actuaries' Investment Index which calculates the fall in 2½ per cent Consols last year at 14.4 per cent, while industrial debentures fell by 17.3 per cent and preference shares by 16.3 per cent. Only in ordinary shares was there a net improvement, and this was limited to 1.6 per cent.

The book values of our Stock Exchange securities have shown a further considerable expansion from £44,313,268 to £48,244,539, and despite the heavy falls in the market there is a surplus in the market value of our holdings compared with their book values. In addition, I am glad to say that with the transfer that we propose out of the 1955 earnings the Northern Group's Investment and Contingency Reserves now stand at £3,040,003 compared with £2,504,284 at the end of 1954.

Taken as a whole, you will agree, I feel sure, that the Northern Group has made in 1955 further solid progress.

COMMERCIAL UNION ASSURANCE

PROFITABLE OPERATION AND CONTINUED PROGRESS

The annual general meeting of the Commercial Union Assurance Company, Limited, will be held on May 28th in London.

The following is an extract from the circulated statement by the chairman, Lieutenant Colonel John Leslie, DSO, MC, DL.

The Group has enjoyed another year of profitable operation, and I am pleased to report that continued progress has been made in practically every part of the world in which we operate. During 1955 the total net premium income through the Fire, Accident and Marine Departments exceeded £54 million, which is a record figure, and the total of new sums assured in our Life Department was the highest yet achieved.

Ten full years have now elapsed since the conclusion of the second world war, but many of the problems caused by the war remain with us. Several and far-reaching changes of an international and political nature are still taking place in many parts of the world, and a process of readjustment is therefore likely to continue for some considerable time. However, in spite of these vicissitudes, the general level of industrial and commercial activity was well maintained in 1955, both at home and overseas, and through the wide range of our organisation we were able to take full advantage of the various opportunities for promoting and enlarging our own business.

FIRE DEPARTMENT

At home our premium income is still growing, the rate of increase being greater than in recent years. This increase is due in large measure to an expansion in our business, but it also reflects the general rise in prices and an increase in stocks and materials held by industry. Fire damage continues to take a high toll of the national wealth, and although there has been a rise in the number of major fires during the year, our loss ratio has not proved unsatisfactory. We deal each year with a large number of claims arising from bad weather conditions, and there is an increasing demand for the inclusion of such extraneous perils with the Fire policy.

In the overseas field, whence we continue to derive the larger part of our Fire premiums, the incidence of fire damage in 1955 shows, unfortunately, an increase over the previous year, whilst the destruction of property caused by windstorm, earthquake and analogous perils has continued at a high level.

The year 1955 did not bring any marked change in economic conditions, although there was a fall in world prices of some basic commodities. Nevertheless, in spite of these factors, we are able to record further advances in our premium income in most of the territories in which we operate, notably in the United States, Australia and South Africa.

ACCIDENT DEPARTMENT

Home business again showed further expansion and the rate of progress quickened. To an extent, however, this satisfactory feature has an inflationary content, owing to the general rise in wages and the price level of goods.

The ever-increasing number of accidents on the roads and their costly consequences continue as a vital national problem. The most regrettable feature is that no real solu-

tion seems to be in prospect, in spite of efforts made in many directions; this is indeed a grave indictment of the age in which we live.

The Miscellaneous classes of Accident business again showed further advancement, with generally satisfactory results.

In the United States of America 1955 was a year of vigorous business activity. In this favourable economic climate there was a further advance in the revenue of Casualty insurers, although to some extent expansion was restrained by the intensified competition which I mentioned last year, as well as by rate reductions in some classes of business.

The profit from our American business as a whole was satisfactory, but it was lower than in the preceding year because of a deterioration in the Automobile underwriting experience. This is likely to continue, since there were some rate reductions in 1955, but no sign of any diminution in the number or severity of road accidents. Classes other than Motor produced satisfactory results.

MARINE DEPARTMENT

In the Marine market 1955 was an uneventful year and, although the number of reported casualties to vessels showed a slight increase on the previous year, no vessel over 10,500 gross registered tons was reported a total loss.

Keen competition for cargo business caused further reductions in rating, and, when the cushion of the war risk premium is removed, little or no profit is left; however, towards the end of the year there were signs that the market was taking the first steps to bring about some improvement by restricting cover under the Extended Cover Clause to sixty days after discharge from the overseas vessel.

LIFE DEPARTMENT

Continued progress was evidenced in the Life Department, and once again there was a record figure for the net sums assured retained at the Company's own risk after deducting sums reassured. The gross sums assured were actually £23,392,358, compared with £21,135,333 for the previous year. Most companies shared in our experience during 1955, but we are gratified to know that our 12 per cent rate of expansion was up to the average.

During the year the Life Fund increased by £3,360,936 to £53,490,132, and, in spite of a fall in the value of fixed interest bearing securities, the aggregate market values on December 31, 1955, exceeded the aggregate net book values by a reasonable margin. This happy position was due in the main to the Directors' decision some years ago to increase the proportion of the Fund invested in Ordinary Shares, which have considerably appreciated in value and increased the yield on the Fund. The average earned rate of interest was £3 15s. 3d. per cent net, an increase of 2s. 3d. per cent on the previous year's figure, and, having regard to the higher yields now obtainable on new investments, this trend will continue, with its consequent effect on the interest profits and eventual bonus on "with profit" policies.

The Directors recommend a final dividend of 2s. 2d. per 5s. Unit of Stock, making, with the interim dividend of 1s. 6d. paid in November last, a total for the year of 3s. 8d. per 5s. Unit, compared with 3s. 4d. for 1954.

THE MANGANESE BRONZE AND BRASS COMPANY

A YEAR OF EXCELLENT PROGRESS

The fifty-seventh ordinary annual general meeting of The Manganese Bronze and Brass Company, Limited was held on May 4th in London, Mr J. C. Colquhoun, MBE, Chairman and Managing Director, presiding.

The following is an extract from his circulated statement:

The year 1955 was again one of excellent progress with a volume of business and profit both up on the previous best year of 1952.

The profit for the year ended December 31, 1955, before providing for taxation and dividends, amounts to £485,254. That is after deducting a loss of £19,272 attributable to your Canadian subsidiary. The corresponding profit figure for 1954 was £381,463.

Provision for taxation requires £266,000 (£217,000), leaving available for distribution £219,254, against £164,463 for 1954.

In the course of his review of the changes in the balance sheet, the Chairman referred to the Subsidiary Company and said: "This refers to Paxol Limited, your recently formed subsidiary Company in Canada in which your Company holds a two-thirds interest. As I mentioned last year, output must reach a certain level before profits commence. That point was all but reached in December, and the rate of increase in monthly sales, particularly from June to December, coupled with a further survey of the potential market, indicate a promising outlook for what is a new industry in Canada."

Birkenhead Works: "The output of ships' propellers in 1955 was somewhat below the figures reached in recent years, but the inflow of orders increased during the year and the amount of work in hand today is very satisfactory. Of the total tonnage manufactured no less than 80 per cent was to our own Scimitar design, which shows the general appreciation of the design service which your Company offers. A feature of present-day orders is the high proportion specifying Nikalium."

On the equipment side, an item of special interest is an electric melting furnace. Its first year's working has just been completed successfully and has proved its superiority over other types, particularly as regards the quality of the resulting products.

Handford Works, Ipswich: "The output of extruded and rolled products during 1955 was some 20 per cent higher than for 1954 in tonnage and owing to the high metal prices prevailing the sales value was up 40 per cent. Despite recent indications of a recession the year ended strongly with a substantial order book."

Elton Park Works, Ipswich: "The sales of 'Oilite' products increased by 10 per cent in volume during the year and the value was up by no less than 30 per cent."

The production of machine parts in iron and iron-alloys continues to increase and, in fact, the output of such materials was double that of 1954.

In regard to the prospects for 1956, the marine side of your business is well booked up for the next 12 months. There are outward indications that a recession in certain trades may influence the volume of business at your Ipswich factories in the latter part of this year, but to what extent, if at all, that will happen it is impossible to predict with any degree of certainty.

The report was adopted, and the total dividend of 1s. 3d. per share was approved.

THE GROOTVLEI PROPRIETARY MINES, LIMITED

HIGHER TONNAGE MILLED

ENCOURAGING DEVELOPMENT RESULTS

Mr T. P. Stratten, the Chairman of the Company, in addressing members at the Annual General Meeting held at Johannesburg on April 26, 1956, stated that in 1955 the ore milled was 2,322,000 tons or 137,000 tons more than in the previous year. The yield improved slightly to 4.34 dwt per ton, the average price received for gold was 1s. 6d. per ounce fine higher than in 1954 and, due to the higher tonnage milled, working costs fell by 3d. per ton milled. As a result of these favourable factors the working profit in 1955 at £2,965,482 showed an increase of £332,761, of which, however, £202,127 was absorbed in taxation.

After providing £1,574,438 for taxation the net profit was £1,411,888. Two dividends totalling 2s. 5d. per unit of stock, being 4d. more than in 1954, were declared, absorbing £1,382,190. The carry forward was slightly increased to £660,236.

DEVELOPMENT AND ORE RESERVE

A total of 24,123 feet was developed on the Main Reef Horizon and, of the 17,630 feet

on reef and sampled, 8,510 feet or 48 per cent proved payable with an average value of 14.2 dwt over 15 inches, equivalent to 213 inch-dwt. In the two exploratory headings being advanced by Daggafontein Mines, Limited, on the Kimberley Reef Horizon in the Company's property, 2,880 feet of development was done during the year and the 2,200 feet on reef and sample disclosed 1,445 feet or 66 per cent payable, averaging 55.3 dwt over 7 inches, equivalent to 387 inch-dwt. These results could be regarded as encouraging, though much more development would have to be carried out before it could be judged whether the Kimberley Reef was likely to become a worthwhile additional source of ore.

While the ore reserve decreased by 500,000 tons it remained at the very substantial figure of 15,500,000 tons, averaging 4.6 dwt. over an estimated stopping width of 47 inches. The value was unchanged from the previous year, but the width was half an inch less.

TAXATION

The effect of the proposed change in the Formula Tax would be to reduce the rate of taxation by just under 5 per cent as from January 1, 1956. This reduction, though comparatively small, and the other concessions to the Industry, were most welcome.

SILICOSIS LEGISLATION

The Chairman also welcomed the recent announcement by the Minister of Mines that

when silicosis benefits are increased by legislation which it is proposed to introduce this year the State will itself assume responsibility for the retrospective liabilities so created up to the extent of £10,900,000. The Industry would continue to carry the burden of providing for present and future liabilities in respect of silicosis compensation. It was difficult to predict, at this stage, the precise effect on the Industry of the increased benefits, since this depended on the number of cases certified by the Silicosis Medical Bureau, but the increase in the liability might well be a substantial one.

RESULTS IN FIRST QUARTER OF 1956

During the first quarter of 1956 the ore milled was 565,000 tons and the working profit £668,289. 6,481 feet were driven on Main Reef, of which 4,565 feet were on reef and sampled, disclosing 2,225 feet or 49 per cent payable, averaging 14.2 dwt. over 17 inches, equivalent to 241 inch-dwt. On the Kimberley Reef Horizon 1,207 feet were driven, and of the 1,075 feet on reef and sampled 160 feet or 15 per cent was payable, averaging 29.3 dwt. over 4 inches, equivalent to 117 inch-dwt. From No. 3 Shaft an exploratory heading will be driven on the same Horizon to join the development from Daggafontein Mines Limited.

The motion for the adoption of the Reports and Accounts which was proposed by the Chairman and seconded by Mr H. C. Koth was carried unanimously. The retiring Directors, Messrs I. W. Gwynne-Evans and T. P. Stratten, were re-elected.

RAND MINES, LIMITED

IMPROVED RESULTS

MR W. M. FRAMES' STATEMENT

The Sixty-first Annual Meeting of Shareholders will be held in Johannesburg on May 11, 1956. The following is an extract from the circulated statement by the Chairman, Mr W. M. Frames, dated May 4, 1956:

FINANCIAL RESULTS AND INVESTMENTS

The profit for the year, after taxation, amounted to £650,300, which was £6,900 more than for the previous year.

During the latter half of the year the Company added materially to its investment portfolio by acquiring securities to the value of £1,349,000. About half of these new investments are dividend paying and the bulk of the remainder is expected to become revenue producing at an early date. A sum of £1,500,000 was transferred to Investment Reserve from accumulated profits, and after allowing for these transactions and for dividends declared during the year totalling £618,400, equal to 5s. 9d. per share, the Profit and Loss Account balance was reduced by £1,468,000 to £414,600.

At the end of the year the market value of the Company's quoted investments, which stood in the books at £7,472,000, was £10,738,500; in addition, the Company had nearly a million pounds in cash assets, after providing for all current liabilities. Approximately 67 per cent of the Company's investments is revenue producing. A substantial proportion of the remaining 32 per cent is represented by the Company's direct and indirect interest in Harmony Gold Mining Company Limited which it is hoped will

reach the dividend-paying stage in the comparatively near future.

GOLD MINING INTERESTS

Owing mainly to the expansion of gold mining operations and the commencement of uranium production at the Harmony Mine, the overall results of operations at the mines of the Central Mining-Rand Mines Group on the Witwatersrand and extensions and in the Orange Free State showed improvements by comparison with the figures for the previous year. Tonnes milled increased by 794,500 tons, the average yield was 0.167 dwt. higher, 303,800 more ounces of fine gold were produced, and the price received for gold, excluding certain additional revenue in respect of gold sales for the period March/July, 1955, was higher by 1s. 5d. an ounce. Although working costs increased by 1s. 6d. per ton milled, working profits from gold and uranium increased by £1,936,000 to £12,230,000. The increase in working profits was accounted for almost entirely by the expansion of operations at the Harmony Mine which, as I have already stated, has not yet reached the dividend-paying stage. Total dividends and repayments of capital for the year decreased by £261,500. Tax and lease consideration increased by £527,700, and uranium loan repayments, including interest, rose by £244,100.

Development footage increased by 25,500 feet to 410,400 feet, the footage sampled being greater by 8,600 feet. Estimated available ore reserves decreased by 2,431,100 tons to 34,407,600 tons.

COAL MINING INTERESTS

It was possible to increase despatches from both Witbank Colliery and Van Dyks Drift

Colliery because of a material increase in road transportation and of some improvement in the railway transport position. Railway facilities were, however, still inadequate to handle the country's increasing coal requirements. Towards the end of the year, Transvaal and Orange Free State producers received the benefit of increased prices. Since July, 1952, when the previous price adjustment was made for the benefit of producers, there has not only been a general upward trend in costs throughout the country which has adversely affected the industry's level of working expenditure, but in addition the remunerative export trade has, since January, 1955, been suspended due to the necessity of utilising the available truck supplies to meet the demand of internal consumers. The recent price adjustment will bring a welcome measure of relief to coal producers, whose profit margins had reached a level incommensurate with the large investment necessary to establish and maintain colliery operations.

INDUSTRIAL INTERESTS

The Pretoria Portland Cement Company had a satisfactory year. This Company is now considering plans for financing its programme of capital expenditure. The Eastern Province Cement Company increased its production and profits. The Cape Portland Cement Company also increased its production and had a satisfactory year. The Premier Portland Cement Company (Rhodesia) completed the erection of a fourth kiln, thereby materially increasing productive capacity; it also acquired interests in and assumed responsibility for the management of the Northern Rhodesia Lime Company Limited and Chilanga Cement Limited.

The Hume Pipe Company had a successful year, and operations at the steel and the concrete divisions were satisfactorily maintained; but, due to more competitive trading conditions and to the larger provision for depreciation of fixed assets, the net profit was less than in the previous year.

The Northern Lime Company decided to expand its new works at Silver Streams by the installation of two further rotary kilns with ancillary equipment. Construction and production operations at this work were generally satisfactory, but, due to a substantial and sustained increase in the demand for lime and limestone, the Taung works was required to operate during the year in excess of the economic output of its quarries.

The Timber and Forestry Companies of the Group maintained satisfactory trading operations. At the SA Forest Investment Company's plantations in the Sabie area there were exceptionally heavy rains during the year which made for good planting conditions, but hampered exploitation operations. Investigations are continuing in connection with the possibility of manufacturing newsprint from the small-size timber grown in the area and the desirability or otherwise of integrating a newsprint project with a centralised sawmill at Sabie.

In conclusion, I would like to record my appreciation to the technical and administrative staffs at Head Office, to the Managers, staffs and employees of all our Companies, and to our London Secretaries, A. Moir and Company, for the loyal and able services rendered by them in their various capacities throughout the year.

A report of the proceedings at the Annual Meeting will be available on request to the London Secretaries, A. Moir and Company, 4 London Wall Buildings, E.C.2.

ST. HELENA GOLD MINES, LIMITED

SUBSTANTIALLY IMPROVED RESULTS

DECLARATION OF MAIDEN DIVIDEND

MR J. S. WALKER ON YEAR OF GRATIFYING PROGRESS

Mr J. S. Walker, the Chairman of the Company, in addressing members at the Annual General Meeting held at Johannesburg on April 27, 1956, stated that in 1955 the tonnage milled increased by 197,000 tons to 1,238,000 tons, the yield improved by 0.82 dwt. to 5.34 dwt per ton and the average price received for gold was 1s. 6d. per ounce fine higher than in the previous year. As a result of these favourable factors the working revenue at £4,155,300 was £1,218,889 higher than in 1954. While the cost of labour and stores continued to rise the increasing scale of operations enabled the cost per ton milled to be reduced by 1s. 2d. to 40s. 8d. per ton milled. The working profit for the year at £1,640,318 was more than double that for 1954. He felt sure that members would agree that all personnel on the Mine were to be congratulated on the progress made last year.

He stated that after taking into account the items detailed in the Profit and Loss Account the profit for the year was £1,585,052 making with last year's unappropriated balance of £648,902 a total of £2,233,954 available for appropriation. Capital expenditure amounted to £1,489,377 and after allowing for other appropriations totalling £61,589 the balance carried forward was £682,988.

DEVELOPMENT AND ORE RESERVE

The total development footage driven during the year was 48,340 feet and of the 17,850 feet on Basal Reef and sampled 9,975 feet or 56 per cent proved payable having an average value of 12 dwt over 32 inches, equivalent to 384 inch-dwt. While the payable footage was somewhat less than in the previous year it was sufficient to increase the ore reserves by 250,000 tons to 3 million tons. The value was 0.1 dwt higher at 6 dwt and the estimated stoping width was unchanged at 55 inches.

IMPROVED YIELD

There had been a gratifying improvement month by month in the yield from 4.82 dwt in January, 1955, to 5.75 dwt last December. This improvement was to be expected as the mine settled down but it had been helped by increased sorting of waste underground and by the contribution of tonnage from the Northern section of the mine where, as he mentioned last year, good development results were being obtained.

EXPANSION PROGRAMME

As part of the programme of expanding operations to a scale appropriate to the Company's large lease area the capacity of the Reduction Plant was to be increased to over 150,000 tons per month and a new shaft, No. 2 Shaft, was being sunk to serve the North-Eastern portion of the property. The first stage of the extensions to the Reduction Plant increasing the capacity to over 125,000 tons per month had recently been completed. It was intended gradually to increase the tonnage treated but the extent to which this could be done depended mainly on the supply of native labour.

Satisfactory progress had also been made

in the sinking of No. 2 Shaft which at the beginning of the week had reached a depth of 1,898 feet below surface and had been concrete lined to a depth of 1,846 feet. The shaft was expected to intersect the Basal Reef Horizon at a depth of 4,100 feet but would be carried down to a final depth of 5,500 feet.

CAPITAL EXPENDITURE AND FINANCE

The Chairman stated that at the Annual Meeting in 1955 he had mentioned that the new shaft and the extensions to the Reduction Plant would involve an expenditure of about £4,500,000 to be financed out of profits and that it was anticipated that about one-third of this would be expended in 1955 the balance being spread more lightly over the succeeding years. In point of fact actual capital expenditure on this programme in 1955 was £1,228,500, or nearly £300,000 less than expected although the rate of sinking had been rather better than estimated. As a result of this somewhat quicker shaft-sinking programme which it was hoped to maintain in 1956 and with the consequent need to bring certain items forward in the timetable it appeared likely that capital expenditure in the current year would not be greatly less than in 1955. Total capital expenditure this year might be £1.3 million as against just under £1.5 million for the previous year.

The Balance Sheet at December 31, 1955, disclosed a healthy position with net current assets amounting to £734,602. In particular, except for housing loans, repayable in moderate annual instalments, the Company had no loan debt. However, in view of the scale of operations and the capital expenditure programme ahead, to be financed out of profits still to be earned, it was prudent to maintain a substantial cash position.

MAIDEN DIVIDEND

In March of this year the Directors declared a maiden dividend of 6d. per share, which was an important and gratifying event in the Company's progress. It was intended to consider the declaration of dividends in March and September of each year though the Company's financial year would continue as at present to end at December 31st.

RESULTS IN FIRST QUARTER OF 1956

During the first quarter of 1956 the ore milled totalled 288,000 tons and the yield was 5.87 dwt. The working profit was £453,055 and capital expenditure amounted to £279,887. The development footage driven totalled 9,808 feet, of which 3,330 feet were on Basal Reef and sampled, disclosing 2,015 feet or 61 per cent payable, averaging 13.5 dwt. over 31 inches, equivalent to 418 inch-dwt.

The motion for the adoption of the Reports and Accounts which was proposed by the Chairman and seconded by Mr J. M. M. Ewing was carried unanimously. The retiring Directors, Messrs C. B. Anderson, J. M. M. Ewing, H. F. Oppenheimer and M. W. Richards, were re-elected.

VAN DYK CONSOLIDATED MINES, LIMITED

A CREDITABLE PERFORMANCE

DEVELOPMENT TO IMPROVE ORE RESERVES

Mr C. B. Anderson, the Chairman of the Company, in addressing members at the Annual General Meeting held at Johannesburg on April 27, 1956, said that the tonnage milled in 1955 increased by 22,000 tons to 962,000 tons but the yield declined by 0.15 dwt to 3.28 dwt per ton. Thus in spite of a small increase in the average price received for gold the working revenue for the year at £1,980,334 was £32,475 less than in 1954, or a decrease of 1s. 8d. per ton milled. On the other hand, mainly owing to lower provision for the cost of development because of the smaller footage driven, but also as a result of strenuous efforts by employees on the mine, working costs were reduced by 2s. per ton milled, which in the face of continual rising costs in the industry is most creditable. Thus the working profit for the year at £36,300 was £16,121 higher than for the previous year.

The profit for the year was £40,102. After providing £15,000 for the additional liability for leave accrued to European employees and allowing £20,308 in respect of compensation for expropriation by the SAR Administration of certain surface belonging to the Company and other capital recoupments the unappropriated profit carried forward increased by £45,410 to £213,964.

DEVELOPMENT AND ORE RESERVE

The development footage driven at 26,494 feet was 5,332 feet less than in 1954. 18,810 feet were on reef and sampled of which 4,720 feet or 25 per cent proved payable averaging 9.2 dwt over 31 inches, equivalent to 286 inch-dwt. The percentage payable was slightly lower but the inch-dwt figure appreciably higher. The total footage included 9,165 feet driven in the No. 5 Shaft area and of the 4,505 feet on reef and sampled 1,495 feet or 33 per cent proved payable averaging 9.0 dwt over 29 inches, equivalent to 262 inch-dwt.

The recalculated ore reserve decreased 300,000 tons to 800,000 tons averaging 3.8 dwt over an estimated stoping width of 45 inches. The value was 0.1 dwt higher and the width showed an increase of 3 inches.

NO. 5 SHAFT AREA

The Chairman stated that up to the end of 1955 the total development footage accomplished in the No. 5 Shaft area was 94,558 feet. Of the 34,825 feet on reef and sampled 10,885 feet or 31 per cent have been payable averaging 9.4 dwt over 25 inches, equivalent to 236 inch-dwt. While this development disclosed some intermittent patches of higher grade ore, nowhere had there been any encouraging indication of large stretches of ore on which the Mine could depend for sustained tonnages and profits. Moreover, the No. 5 Shaft area was subject to large scale faulting and values were sporadic. These factors and the problems of providing adequate ventilation at such depths made the cost of development and stoping appreciably higher than in the old mine.

For these reasons and because some of the development ends were approaching extreme working limits from the shaft it had been decided to curtail primary development in the No. 5 Shaft area. The Chairman added

that work would now be limited to those places where payable ore had already been disclosed and to the more accessible areas which still appeared promising.

KIMBERLEY REEF EXPLORATION

The Company was drilling a number of shallow boreholes from surface in the vicinity of No. 4 Shaft to explore further the Kimberley Reef which lies at shallow depths in that area. Eight Boreholes had been completed but none had disclosed any values of consequence. On the other hand, small tonnages of payable ore were being mined from development and trial stoping was also being done from No. 4 Shaft on the Kimberley Reef Horizon.

SILICOSIS LEGISLATION

The Chairman welcomed the recent announcement by the Minister of Mines that when silicosis benefits are increased by legislation which it is proposed to introduce this year the State will itself assume responsibility for the retrospective liabilities so created up to the extent of £10,900,000. The industry would continue to carry the burden of providing for present and future liabilities in respect of silicosis compensation. It was difficult to predict, at this stage, the precise effect on the industry of the increased benefits since this depended on the number of cases certified by the Silicosis Medical Bureau, but the increase in the liability might well be a substantial one.

RESULTS IN FIRST QUARTER OF 1956

During the first quarter of 1956 the ore milled amounted to 240,000 tons and the working profit to £3,915. Total footage driven was 5,023 feet of which 4,010 feet were on reef and sampled. 570 feet or 14 per cent proved payable, averaging 9.4 dwt over 28 inches, equivalent to 264 inch-dwt. This footage included 1,486 feet driven in the No. 5 Shaft area of which 1,080 feet were on reef and sampled. 330 feet or 31 per cent proved payable averaging 9.6 dwt over 29 inches, equivalent to 277 inch-dwt.

A member enquired why members of the Company were not granted preferential rights to take up shares in Winkelhaak Mines, Limited, recently launched by Union Corporation, Limited, and whether any machinery had been sold by the Company to the Winkelhaak Company. The Chairman replied that he could see no reason why members of the Company should have been granted preferential rights to apply for Winkelhaak shares. The Company had sold to the Winkelhaak Company two compressors and a small hoist which were no longer required. The same member also enquired whether there was any chance of building up the Company's ore reserve beyond the present figure of 800,000 tons and the Chairman replied that the whole object of development was to improve the ore reserve.

The motion for the adoption of the Reports and Accounts which was proposed by the Chairman and seconded by Mr B. Elkin was carried unanimously. The retiring Directors, Messrs T. P. Stratten and J. S. Walker, were re-elected.

UNITED PREMIER OIL AND CAKE COMPANY

VIOLENT FLUCTUATIONS IN COMMODITY PRICES

The thirty-seventh annual general meeting of United Premier Oil and Cake Company Limited was held on May 9th in London, Sir Eric Miéville, GCIE, KCVO, CSI, CMG (the chairman), presiding. The following is an extract from his circulated statement:

The year to December 31, 1955, was an extremely difficult one for the seed-crushing industry in this country, and over the year the throughput of our Mills was substantially less than in the previous year. We are, however, pleased to say our other activities and the subsidiary companies concerned with them have rendered the same satisfactory results as they did in 1954.

The Group's gross profit on trading for the year ended December 31, 1955, amounted to £324,548 which, after deducting depreciation, taxation and Preference dividends, leaves £99,738 available for the payment of Ordinary dividends. To this amount can, however, be added £81,538 in respect of a tax refund and provisions no longer required, which, together with the amount brought forward from last year produces a total sum available of £438,247.

We have already paid an interim dividend on the Ordinary Stock of 3d. per unit (less tax) and we now recommend the payment of a final Ordinary dividend of 9d. per unit (less tax). This makes the same total distribution to Ordinary shareholders as last year, and requires a net amount of £46,000.

We have transferred £100,000 to General Reserve, which now stands in the consolidated balance sheet at £820,500 and the carry forward will be increased from £256,971 to £292,247.

During 1955 we expended some £340,000 on additional fixed assets. To complete the re-equipment programme initiated in 1947 another £250,000 is required and this we expect will largely be spent during the current year.

ADDITIONAL CAPITAL

By the end of 1956 we shall have spent since 1948 approximately £1,600,000 on the reconstruction and re-equipment of our factories. In addition, we have had since May, 1954, to finance some £500,000 of stocks which were previously carried by the Ministry of Food. We had hoped that the Group's own resources, together with retained profits, would have been sufficient to meet this large increase of capital employed in the business. It is, however, now clear to the Board that the Group requires additional capital and this has been raised by the issue of £500,000 Debenture Stock.

There are inevitably fluctuations in the price of those commodities with which the seed-crushing industry is concerned; these have been unusually violent since the market was entirely freed from Government control in May, 1954, and they have been largely responsible for the reduction in profit for the year December 31, 1955. Conditions, however, recently improved, but the Company's current financial year is not sufficiently advanced for the Directors to feel justified in making a precise forecast of the profits for the year. It should be borne in mind that modern seed-crushing plant has been installed during recent years and that certain of the group's subsidiaries continue to prosper independently of the seed-crushing industry.

The Report was adopted.

GEDULD PROPRIETARY MINES, LIMITED

HIGHER WORKING PROFIT

MR M. W. RICHARDS'S SPEECH

Mr M. W. Richards, the Chairman of the Company, in addressing members at the Annual General Meeting held at Johannesburg on April 26, 1956, said that during the year under review there was a further improvement in the native labour supply and the number of underground European personnel also increased. The Mine was able to raise the tonnage milled to 1,233,000 tons, which included about 100,000 tons from surface dumps. The yield decreased slightly to 3.23 dwt per ton, but the average price received for gold was 1s. 6d. per ounce fine higher than in 1954 and it proved possible to reduce working costs by 1s. 5d. per ton to 32s. 6d. per ton milled. The overall result was that the working profit for the year rose by £119,351 to £505,740.

He stated that after providing £213,961 for taxation and taking into account the items detailed in the Profit and Loss Account the net profit from mining operations was £328,626 which was £54,681 more than in 1954. Income from investments increased by £86,871 to £747,907 and the total profit for the year was £1,077,380. Two dividends totalling 14s. 9d. per share, being an increase of 2s. 6d. per share, were declared absorbing £1,077,382 and the balance carried forward was reduced slightly to £352,374.

DEVELOPMENT AND ORE RESERVE

Development footage driven on Black Reef was 9,498 feet and of the 7,130 feet on reef and sampled 3,060 feet or 43 per cent proved payable with an average value of 4.1 dwt over 69 inches, equivalent to 284 inch-dwt. 5,648 feet were driven on the Kimberley Reef and of the 3,920 feet on reef and sampled 810 feet or 21 per cent was payable averaging 193 inch-dwt. As there appeared to be little hope of disclosing large tonnages of payable ore on the Kimberley Reef development work on this horizon was being concentrated on the more promising areas which were easily accessible from existing Black Reef workings.

The ore reserve showed a decrease of 500,000 tons to 1,500,000 tons, the value being 0.1 dwt higher at 3.6 dwt, and the estimated stoping width 1 inch greater at 54 inches.

TAXATION

In March of this year the Minister of Finance announced that he proposed to restore the Formula Tax to the 1950 level, and also to increase certain allowances. The effect of the proposed change in the Formula Tax would be to reduce the rate of taxation by just under 5 per cent as from January 1, 1956. This reduction, though comparatively small, and the other concessions to the industry were most welcome.

SILICOSIS LEGISLATION

The Chairman also welcomed the recent announcement by the Minister of Mines that when silicosis benefits are increased by legislation, which it is proposed to introduce this year, the State will itself assume responsibility for the retrospective liabilities so created up to the extent of £10,900,000. The industry would continue to carry the burden of providing for present and future liabilities in respect of silicosis compensa-

tion. It was difficult to predict, at this stage, the precise effect on the industry of the increased benefits now proposed, since this depended on the number of cases certified by the Silicosis Medical Bureau, but the increase in the liability might well be a substantial one.

RESULTS IN FIRST QUARTER OF 1956

During the first quarter of 1956 the ore milled was 309,000 tons, and the working profit was £109,299. Development work on Black Reef totalled 2,950 feet, of which 2,690 feet were on reef and sampled disclosing 1,470 feet, or 55 per cent payable, averaging 5.8 dwt over 50 inches, equivalent to 292 inch-dwt. 440 feet were sampled on the Kimberley Reef, disclosing 60 feet payable, averaging 228 inch-dwt.

FUTURE OUTLOOK

The Chairman pointed out that with a steadily decreasing ore reserve inevitably earnings from the Mine itself would gradually decline. In recent years, however, less than one-third of the profits available for dividends had been derived from operations at the Mine, the balance of over two-thirds having come from long-standing investments in East Geduld Mines and in The Grootvlei Proprietary Mines. With a declining mine it was indeed fortunate that there was a considerable investment portfolio in addition to the freehold property which the Company owned. The motion for the adoption of the Reports and Accounts which was proposed by the Chairman and seconded by Mr T. Reekie was carried unanimously. The retiring Directors, Messrs T. P. Stratten and J. S. Walker, were re-elected.

THE EAST ASIATIC COMPANY, LIMITED

(Aktieselskabet Det Østasiatiske Kompagni)
COPENHAGEN, DENMARK

The following is a summary of the report for the financial year 1955 presented by the Board of THE EAST ASIATIC COMPANY, LIMITED, at the Company's annual general meeting in Copenhagen, on the 23rd March, 1956:

The Company's widely ramified activities under the Danish flag in international fields aim at adapting themselves to the changing conditions in conformity with the principle of correlation, which forms the basis of the Company's operations, i.e. to work on an equal footing with others for mutual benefit.

These operations embrace trade, industry, shipping and investment in subsidiary units with the object of stimulating correlation, not only between own and ancillary undertakings but also in co-operation with a network of agents throughout the world, partly financed by the Company's bank connections of long standing. Throughout the Company's existence prominence has been given now to one, now to another, of these centres of activity, based on conditions ruling at the time. Developments indicate that participation in industrial enterprises is likely to be of interest in the future.

A further aim lies in a gradual expansion and strengthening of the Company's shipping interests, where various tasks lie ahead, which will be taken in hand as the tonnage is augmented by the current building programme. In this direction steps were taken in the past year for an important expansion, contracts being placed for 4 tankers totalling 74,600 tons deadweight. The Company regards this measure to be a natural link in the development of its shipping activities. Simultaneously, a careful watch is being kept on research in the sphere of atomic energy and the possible use of nuclear power as a motive of ship propulsion, in which field a revolution can take place.

Shipping Department

Supplies of cargo for the Company's routes were adequate at remunerative rates throughout the year, although competition on the Far Eastern service is still noticeable. The financial result from the shipping operations improved, due to increased freight earnings. A decline took place in certain expenses owing to sale of ships and consequent reduction of tonnage in use.

Freight markets were firm with advancing rates generally, only interrupted by a temporary slight decline in the latter half of the year.

The Company's fleet at the close of the year comprised 32 motorships aggregating 327,342 tons deadweight with an average age of 10 years, standing in the books at kr. 204.55 per ton deadweight.

At the close of the year 11 vessels were under construction or on order at the Nakakov Shipbuilding Yard and Burmeister & Wain—3 10,000 cargo liners and 4 tankers of 18,500 tons from the Nakakov Yard and 4 cargo liners of 10,000 tons from Burmeister & Wain. Of this new building programme the M.S. "Sargolde" was delivered to the Company early in 1956, while the remaining vessels will be completed, 1 to 3 ships per annum, during the next few years.

Through "Profit and Loss Account" the fleet has been written down by 5 per cent, ordinary depreciation, and further by kr. 11,782,422.17 as extraordinary depreciation on ships and new buildings, in all kr. 19,965,421.33.

The Commercial Departments

The commercial activities of the Head Office are conducted through the medium of the import, export and wood departments. Parallel to the business transacted through Head Office a lively trade intercourse exists between the branches reciprocally.

Commodity prices in world markets were most favourable, with an advancing tendency generally rather than the contrary which occasioned an increased turnover with satisfactory results.

The Company's Overseas Branches and Associated Corporations

As mentioned in past reports the Company has a widely ramified organisation of overseas branches and associated undertakings which protect its trading and shipping interests and the management of local concerns, consisting mainly of forest, sawmill and plantation activities as well as oil industries, pharmaceutical factories, soap manufacture, etc.

Participation in other Companies

These investments stand in the Balance Sheet at kr. 87,737,904.52, against which there is a Security Fund showing a reserve of kr. 8,089,917.38. In the past year the Company acquired an interest in the wool firm of A/S Bloch & Behrens, Copenhagen—capital kr. 2,000,000—with overseas branches.

The results of the year under review were as follows:

From Shipping kr. 35,799,000.00
From Trade " 12,496,220.00
From Branches " 48,334,097.34
Dividends from Investments in other Companies " 3,622,140.01

Less: Interest and Financing Expenses kr. 100,262,000.30
" 3,269,521.30

Administration Expenses at Head Office and Branches kr. 46,823,717.98
Allocation for Taxes " 8,343,263.00

Depreciation kr. 42,816,462.84
" 22,962,707.00

Balance brought forward from last year kr. 19,833,000.00
" 7,830,190.20

For Disposal kr. 27,309,000.20

which it is proposed to apply in accordance with the accounts as follows: to pay a dividend of 18 per cent to the shareholders, to distribute a bonus of kr. 3,113,413.12 to the Board, Managing Directors and Employees, to allocate kr. 3,000,000.00 to the Extra Reserve Fund, kr. 2,800,000.00 to the Pension Fund, kr. 2,000,000.00 to the Insurance Fund and kr. 1,000,000.00 to the Extra Depreciation Fund for Buildings and Furniture, leaving kr. 7,894,473.30 to be carried forward to next year.

ROYAL INSURANCE COMPANY, LIMITED

A Statement by the Chairman, Sir John R. Hobhouse, MC, circulated with the 110th Annual Report and Accounts of the Royal Insurance Company Limited, announced record Fire, Accident, and Marine premiums exceeding £79 million, an increase of nearly £24 million over 1954.

Underwriting profit, at just over £3,800,000 (or 4.8 per cent), was down both in amount and ratio. Nevertheless, all departments had again contributed to the total, which had only twice been exceeded in the Company's history.

In the overseas field generally, business had continued to progress and results had been favourable. Despite the incidence of hurricanes and windstorms, a satisfactory year's trading in each department could be reported from the United States.

FIRE DEPARTMENT

Year	Net Premiums	Under-writing Profit	Percentage of Premiums
1955 ...	32,248,998	2,016,085	6.3
1954 ...	30,982,122	1,808,919	5.8

At home, Fire premiums had shown a modest increase of 4.5 per cent over 1954, and with a favourable loss ratio the account again produced a satisfactory profit.

ACCIDENT DEPARTMENT

Year	Net Premiums	Under-writing Profit	Percentage of Premiums
1955 ...	42,074,680	1,396,519	3.3
1954 ...	41,146,495	1,961,672	4.8

Accident premium income had shown a further increase, but profit had been smaller, largely owing to disappointing Motor results.

MARINE DEPARTMENT

Year	Net Premiums	Fund as at Dec. 31st	Percentage of Premiums
1955 ...	4,723,962	10,539,273	222.8
1954 ...	4,714,060	10,476,520	222.2

A profit of £409,492 (or 8.7 per cent) had emerged as a result of closing the 1954 underwriting account.

LIFE DEPARTMENT

Year	New Sums Assured	New Annuities (per annum)	Claims by Death	Matured Endowment Assurances
1955 ...	33,180,218	1,066,920	1,382,086	2,147,759
1954 ...	26,454,882	887,341	1,236,253	2,070,099

There had been a considerable further expansion in new Life business, and new Annuities had also shown an advance on the previous year.

As from January 1st last, the rate of interim bonus had been increased from 38s. per cent to 42s. per cent per annum except in certain overseas territories.

RESERVES

In view of the continued expansion in premium income, it had been decided to transfer £2 million from Profit and Loss Account to the Additional Reserve in the Fire Account. The Company's impressive progress over the years was based very largely

upon a reputation for unquestionable strength, and it was important to justify that confidence by building up reserves for the protection of policyholders to match the ever-growing volume of business.

INVESTMENTS

The rate of expansion and modernisation in British industry, and latterly the Government's policy of forcing borrowers away from the Banks into the market, had given rise to a record volume of new issues during the year. As a result, the Company had been able to invest a substantial part of its new funds in such issues at progressively increasing yields.

There had been many direct approaches for finance, particularly from small industrial concerns. In support of government policy an increasing restraint had been exercised in the Company's lending; nevertheless, there had been substantial additions during the year to the portfolio of mortgages in instances where lending was not in conflict with the national economic wellbeing.

The Chairman added that when interest rates were high, new money could be invested favourably, but there was, of course, a corresponding reduction in the value of existing holdings. However, in spite of the heavy fall in prices of fixed interest securities there was still a very substantial margin at the end of the year in the market value of investments over the value at which they were shown in the balance sheet.

During the year there had been received with regret the resignation from the New York Finance Committee of Mr John C. Traphagen, who had found it necessary to lighten the burden of his many business commitments. On the other hand, there had been the pleasure of welcoming as new members Mr Hulbert S. Aldrich, President of The New York Trust Company, and Mr William H. Moore, Executive Vice-President of the Bankers Trust Company. The Committee, under the chairmanship of Mr Benjamin Strong, had continued to invest the growing funds with great success, and its members had given freely of their great knowledge and experience of economic conditions in the USA. The Company was very much indebted to them.

The Chairman then thanked all the other Local Boards and Committees overseas, especially those in Montreal and Melbourne, without whom it would be impossible for the Group's substantial portfolio of overseas investments to be administered so satisfactorily.

FOREIGN EXCHANGE

Once again USA and Canadian dollar business had been brought into the accounts at the rate of approximately \$4.86 to the £, except for actual remittances from these countries, which had been taken at the sterling values realised.

For other overseas business, currency figures had been converted at the ruling rates of exchange throughout.

TAXATION

£1,100,000 had been set aside in the Profit & Loss Account in respect of United Kingdom taxation, this being additional to an amount of £1,606,173 charged to Interest, which was shown net of taxation. There had

also been overseas taxes of almost £4 millions in respect of underwriting and Interest, and taking into account the home and overseas income taxes on the Life and Capital Redemption Accounts, the aggregate taxation on the year's operations had approached £7½ millions.

DIVIDEND

An increased Final Dividend of 1s. 9d. is recommended by the Directors, making 3s. 4d. per 5s. unit of Stock for the year.

EAST GEDULD MINES, LIMITED

IMPROVED LABOUR SUPPLY

HIGHER OUTPUT AND PRICE

Mr T. P. Stratten, the Chairman of the Company, in addressing members at the Annual General Meeting held at Johannesburg on April 26, 1956, stated that as a result of an improvement in the native labour supply during the greater part of the year, the tonnage milled in 1955 increased by 102,000 tons to 1,765,000 tons and as the yield per ton milled was slightly higher at 6.18 dwt. the output of gold rose by just over 6½ per cent to 545,410 ounces fine. The average price received for gold was 1s. 6d. per ounce fine higher than in 1954. Accordingly the working revenue rose by £472,002 to £6,852,786. Working costs absorbed £2,760,925 and the working profit at £4,091,861 rose by £322,028 of which £204,699 was absorbed in taxation.

Provision for taxation amounted to £2,270,657 and after taking into account income from investments amounting to £66,615—mainly from the Company's holding in The Grootvlei Proprietary Mines, which remained unchanged—and the other items detailed in the Profit and Loss Account the profit for the year was £1,915,873.

£41,806 was appropriated to cover capital expenditure and an additional liability for European leave pay. Two dividends totalling 4s. 3d. per unit of stock, being 6d. more than in 1954, were declared, absorbing £1,912,500. The carry forward was reduced to £570,212.

DEVELOPMENT AND ORE RESERVE

The development footage accomplished on Main Reef was 13,039 feet or 3,413 feet more than in 1954. Of the 7,820 feet on reef and sampled 5,430 feet or 69 per cent proved payable, averaging 15.5 dwt over 26 inches, equivalent to 404 inch-dwt.

The ore reserve decreased 300,000 tons to 10,700,000 tons, averaging 5.8 dwt. over an estimated stoping width of 52 inches, the value being 0.1 dwt. higher and the width one inch more.

TAXATION

The effect of the proposed change in the Formula Tax would be to reduce the rate of taxation by just under 5 per cent as from January 1, 1956. This reduction, though comparatively small, and the other concessions to the industry, were most welcome.

SILICOSIS LEGISLATION

The Chairman also welcomed the recent announcement by the Minister of Mines that when silicosis benefits are increased by legislation which it is proposed to introduce this year the State will itself assume responsi-

for the retrospective liabilities so created up to the extent of £10,900,000. The Industry would continue to carry the burden of providing for present and future liabilities in respect of silicosis compensation. It was difficult to predict, at this stage, the precise effect on the Industry of the increased benefits, since this depended on the number of cases certified by the Silicosis Medical Bureau, but the increase in the liability might well be a substantial one.

RESULTS IN FIRST QUARTER OF 1956

During the first quarter of the current year the tonnage milled was 416,000 tons and the working profit £915,848. Development footage on Main Reef totalled 2,568 feet, of which 1,620 feet were on reef and sampled, averaging 740 feet or 46 per cent payable, averaging 10.5 dwt. over 22 inches, equivalent to 232 inch-dwt.

KIMBERLEY REEF EXPLORATION

The Chairman recalled that between 1951 and 1954 some development was carried out on the Kimberley Reef Horizon in the South-Eastern portion of the Mine, but that the values were disappointing. This work was carried out from a cross cut from No. 1 Shaft. With a view to exploring the Kimberley Reef in the vicinity of No. 2 Shaft development work from that Shaft on the Kimberley Reef Horizon will commence shortly.

The motion for the adoption of the Reports and Accounts which was proposed by the Chairman and seconded by Mr J. MacG. Love was carried unanimously. The appointment to the Board of Mr A. J. T. Goldby was confirmed and the retiring Directors, Messrs J. MacG. Love and J. S. Walker, were re-elected.

HUDSON'S BAY COMPANY

The two hundred and eighty-seventh Annual General Court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held on May 2nd, in London, Mr W. J. Keswick, the Governor, presiding.

The following is an extract from his circulated report:

1955 was a remarkable year in Canada. Even by the standards of other periods of prosperity, the increase in the national income was outstanding. Trading sales increased by 9 per cent to £62,017,000, a new record.

Consolidated profit for the year after providing depreciation of £854,123 and Canadian and United Kingdom taxes of £1,706,000 was £1,934,542, compared with £1,723,963 the year before. Income from royalties, primarily from oil and natural gas, reached the substantial figure of £435,110.

A total dividend from trading of 15 per cent, of which 4 per cent interim has been paid, is proposed.

A distribution of 2½ per cent, half of which has already been paid, is proposed from the Land Account.

The Retail Stores again reported increases in both sales and profit in spite of growing competition from many directions. Sales in the Interior Stores were substantially increased and the development of this Division is progressing. The increase in sales of the Fur Trade Department came entirely from merchandise sales in comparatively new stores in mining, paper and transport communities.

The report and accounts were adopted.

TRAWLERS GRIMSBY LTD
ENJOYS ANOTHER GOOD YEAR

*Large Expenditure on Development
brings increased turnover and profits
Fleet Expansion continues*

PROFITS AND DISTRIBUTION
OF PROFITS

The profits for the year of £215,526 (subject to tax) compare with £128,924 for the previous accounting period of 18 months. Depreciation at £200,000 is approximately 60% greater leaving the net profit after taxation at £115,134 compared with £58,662 for the previous period of 18 months, and making the final profit £137,161.

We think that the shareholders deserve some reward for their enterprise. Your Directors therefore recommend a final dividend of 10% on the issued ordinary share capital as increased by the recent bonus issue of £61,843 ordinary stock, making 16% for the year which compares with a rate of 12% per annum for the previous 18 months.

It is also recommended that a further £25,000 be written off goodwill which follows the £76,657 written off last year out of capital surpluses. The balance carried forward of £52,870 is increased to £72,089.

Out of the net profit of £137,161, distributions have amounted to £51,460 leaving £85,701 to be retained in the business to assist in further expansion.

CONSOLIDATED BALANCE SHEET

The issue of ordinary stock last May to shareholders in the proportion of one stock unit at 5/3 for each two stock units held brings the issued ordinary share capital on the Balance Sheet to £438,157 compared with £292,105 last year. Reserves and profits retained have increased during the year by £103,927 bringing the funds attributable to the holders of the ordinary share capital up to £1,164,748.

ANALYSIS OF PROFITS

Landings of 5,291,161 stones realised £1,801,367 at sale by auction at the quayside, and yielded a net profit after tax of 6½d. per £ sales and only .15d. per lb. of fish landed.

Our wholesale and retail fish and poultry business trading at all main fishing ports and large inland centres of population had a turnover of £5,144,830. The turnover in weight was 5,231,803 stones which resulted in a net profit after tax of 2½d. per £ sales or .16d. per lb. weight of fish sold.

FLEET EXPANSION

In pursuance of our policy of increasing the efficiency of our fleet whenever possible, several of our older vessels have

been sold and more modern vessels have been purchased.

It is well known to you that we have an extensive building programme in hand, under the assistance of the White Fish Authority Grants and Loans Scheme, and in the course of the twelve months under review one vessel was delivered, and operated very satisfactorily for the last seven months of the year and has since continued to do so.

Since the year ended three new vessels, the S.T. "Stella Aquila," S.T. "Kelly" and the M.T. "Ross Lion" have been delivered in March, 1956 and are at present fishing.

DISTRIBUTION ACTIVITIES

Our network of distribution of Sea Sparkle and Westwick products by our subsidiary Companies, Ross Group Ltd., Quayside Products Ltd., etc. throughout the British Isles has been broadened by the opening of several new delivery depots and the extension of road services to meet the needs of our customers.

A new Cold Store and processing plant which will have a capacity of around 750 tons is in course of erection and should result in economies in handling and storage charges.

CURRENT TRADING

It is difficult to forecast for the current year but with 6 months only passed it would seem reasonable to expect that profits will approximate to those for the year ended 30th September, 1955. We have a much improved fishing fleet, a keen and experienced staff in all departments and we look forward with confidence to the future of your company.

FROM SEA BED TO BREAKFAST
TABLE

In these days, the cost of food is on everyone's mind. The reason is very simple. Food is 40 per cent. of the cost of living in the average home. Fish is only a part of the national diet but a very important one. Whilst the cost of living is going up—and indeed it is a national economic problem—it should be borne in mind that whilst food costs generally have risen 30 per cent. since 1951, the cost of Fish to the housewife has only risen 6 per cent. This remarkable achievement in holding the price of fish down to a very low point has been made possible by the proper employment of capital in new ships, very efficient labour and high productivity and the speedy and efficient distribution of Fish from the sea bed to the housewife's table.

APPOINTMENTS
IMPERIAL CHEMICAL INDUSTRIES,
LIMITED

**BILLINGHAM DIVISION
VACANCY FOR ORGANISATION AND
METHODS OFFICER**
Applications are invited from University graduates or professionally qualified men up to about 30 years of age for a vacancy in the Division Office Organisation and Methods Officer. The duties will involve the study of organisation and methods with a view to improvement and the application of electronic data processing systems. Knowledge of general commercial practice, accounting, statistical methods, electronics and punched card techniques would be an advantage. Additional training can, however, be given to candidate with an appropriate educational or commercial background and there is also an attractive salary offered. Assistance can be given towards house purchase and removal expenses in case of married men. Write, giving brief details of age, qualifications and experience, to the Staff Manager, Imperial Chemical Industries, Limited, Billingham Division, Billingham, Co. Durham, quoting reference C.6.

MARKET RESEARCH MANAGER

THE HOTPOINT ELECTRIC APPLIANCE CO. LTD., Member of the A.E.I. Group of Companies, invites applications for the post of Market Research Manager. The successful applicant will be responsible for establishing and developing an important new Market Research Department in the electrical appliance field. Applicants must have first-class experience of market analysis and consumer research and should be capable of assessing and interpreting research data as a basis for formulating marketing policy. The position offers great scope to a man combining this experience with the highest personal qualities of integrity, personality and energy. Remuneration will be commensurate with the responsibilities of the position. There is a contributory pension scheme and other benefits. Applications will be treated with strict confidence. Please send full details of personal and business history including present and past remuneration, to Mr R. Craig Wood, Managing Director, The Hotpoint Electric Appliance Co. Ltd., Crown House, Aldwych, London, W.C.2.

FURNISHING FABRICS

COURTAULDS LIMITED wish to appoint a Senior Executive to take full charge of the development of medium and heavy furnishing fabrics in their Textile Division. A sound technical background and knowledge of the production of these fabrics which are principally woven jacquards is essential, but it should be combined with a considerable knowledge of colour, design, market trends and foreign goods. This is a senior appointment (based on London) for which a high standard of personal ability and achievement in this field of the textile industry is required, and will carry a salary commensurate with the responsibility. Candidates should write for a detailed form of application to the Director of Personnel and Recruitment, 16 St. Martins-le-Grand, London, E.C.1, quoting reference number E.73.

MARKETING EXECUTIVE—William R. Warner & Co. Ltd. require a Marketing Executive for their ethical pharmaceutical products. This is a newly created post offering considerable opportunity for advancement. Applicants should have had experience of all aspects of marketing both new and established products in this field. Commencing salary according to qualification and experience and will be adequate to attract an experienced and enthusiastic executive. The company has a generous non-contributory pension scheme. Applications, stating age, qualifications, positions held and salary earned, should be sent to Director, William R. Warner & Co. Ltd., Power Road, London, W.4.

CHARTERED ACCOUNTANT required for appointment as Company Secretary to a Public Company in the Multiple Stores field, with Head Office in Glasgow. Applicants should have managerial ability and first-class professional and commercial experience. Aged under 36. Successful applicant must be of executive calibre for a position offering substantial salary and exceptional prospects, and will serve for six months with present Secretary who is retiring. Applications which will be dealt with in the strictest confidence should state age, qualifications, previous employers and positions held, and be addressed to Mr Meyer Oppenheim, Chairman and Managing Director, James Grant & Co. (West) Ltd., Box No. 114, 10 Jamaica Street, Glasgow, C.1.

CZECHOSLOVAK and Hungarian analysts wanted by American radio organisation in Europe for translatable research work. Applicant must be able to translate into English and write English effectively. Background in social science research or journalism. £700 monthly, family housing, and transportation provided. Details in first letter, please—Box 408.

ATTWOOD GROUP OF COMPANIES are seeking really competent statisticians. In particular, they are looking for someone who has had three to four years' intensive experience in market research work. The man selected will be given considerable freedom to test out his own theories on consumer acceptance trials. Therefore, he must be capable of putting his ideas across to the colleagues and Clients. Mr Brown and Mr Chaplin will welcome a chat with anyone who feels interested in such a position and is available for appointment at the Grosvenor Hotel, Buckingham Palace Road, S.W.1, on May 18th between 3.30 a.m. and 4.30 p.m. Naturally, if you would like to telephone 80311 and make an appointment first it will be appreciated. These are good posts and first-class men will be offered really substantial salaries.

Europe (except Poland): £4.15s. **Iran:** £6
Australia: £6.5s. (sterling) **Gibraltar, Malta:** £3.15s. **Israel:** £6
Canada: £21.50 or £7.14s. **Hongkong:** £7 **Japan:** £9
East Africa: £5.5s. **India & Ceylon:** £6 **Malaya:** £6.15s.
West Africa: £5.5s.

MAKERERE COLLEGE

THE UNIVERSITY COLLEGE OF EAST AFRICA Applications are invited for (1) Lectureship or (2) Assistant Lectureship in Political Science. Salary Scales (1) £950 x £36—£1,032 x £42—£1,178 x £48—£1,350 x £54—£1,404 x £60. (2) £816 x £36—£924 x £42. Entry point according to qualifications and experience. Cost of living allowance 10 per cent salary. Allowance £30 p.a. per child (max. £150 p.a.). Passages for appointment and family (up to four adult passages) on appointment, termination and leave (three months every 21 months). P.S.S.U. Rent according to quarters provided. £45 to £84 p.a. (including basic furniture). Applications (six copies), detailing qualifications and experience and naming three referees, by June 12, 1956, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

THE WESTERN REGION PRODUCTION DEVELOPMENT BOARD, Ibadan, Nigeria, has vacancies in its accounting organisation for a Senior Accountant and an Accountant. Candidates for the post of Senior Accountant should possess a recognised Accountancy qualification and should have had at least five years' experience in a professional office since qualifying, including work on re-organisation, introduction of a new accounting system and budgetary control. Commencing salary, excluding indigence allowance, will be in the range of £1,360 x £60—£1,590. Indigence allowance is £300.

Candidates for the post of Accountant should have had at least five years' professional and commercial experience including the preparation of financial and cost accounts and designing of cost systems. Commencing salary, excluding indigence allowance, will be in the range £902 x £42—£1,070. Indigence allowance is £240. It is essential that candidates should have sound knowledge of costing and cost systems. 2. The terms of service include partly furnished accommodation at 84 per cent of the basic salary; free medical service; outfit allowance, free passage for wife and also free passages once each way per tour for children up to 3 in number not over the age of 13. Employees are required to contribute up to 10 per cent of salary to a Provident Fund. Home leave at full pay at the rate of 5 days per month on overseas service. Normal length of tour 18-24 months. 3. Applications, with duplicate, together with details of age, experience and qualifications and the names of three personal referees should be sent to: The London Representative, Western Region Production Development Board, 18 Grosvenor Gardens, London, S.W.1, to reach him not later than May 19, 1956.

AN outstanding Representative—eager to exert persuasive personality to the full in the sale of a long line of very high-class office equipment, and with ability to command an income of £2,000 per annum and above—is urgently required. Other qualifications: Youth (preferably not over 30); good education (University graduation or professional qualifications an advantage); accounting knowledge or study, preferably some business experience, undoubted integrity. To such a man we offer the employment of a progressive career field which he will be thoroughly to enjoy. A soundly established opportunity in a large, old-established, go-ahead organisation.—Send full details to Box 403 (ref. A/56).

GROUP LEADER

An Employer's Organisation in the North proposes to appoint a Discussion Group Leader as part of a comprehensive training scheme in human relations. In addition to the duties usually associated with group leading of managers and supervisors, the person appointed will, it is hoped, have some experience or interest in operative training, and in personnel matters generally. Ideally, the person would have a University degree and a solid foundation of industrial experience, and be between the ages of 30 and 35, although there is no intention to set an age limit. Knowledge of methods of visual presentation and techniques of communications would be of great value. The ideal candidate would preferably wish to stay in the job for about three years. Salary would be in the four-figure region, and would vary according to experience.—Write to Box 405.

ONE of the Attwood group of Companies would be interested to hear from gentlemen who combine personal initiative with a desire to discuss problems with Leaders of Industry on equal terms. The ideal person would probably be someone with a background of selling Market Research Development. The opportunities are considerable and the rewards sufficient to make this a really attractive proposition to an energetic and knowledgeable person. In the first place, please send us short details of your career to date, giving such facts as you think appropriate. Unless you are already in the £7,000 a year class, please do not trouble to apply. Please write to Bedford Attwood & Company Limited, Chantry House, Eccleston Street, London, S.W.1.

YARN THROWSTERS processing a variety of synthetic yarns wish to introduce into their sales department a young man to be trained as Assistant to the Sales Manager. After a thorough training he will be required to take charge of the sales office activities for both home and export markets and deputise for the Sales Manager during his absence. The position is an important one, progressive, and offers splendid opportunities for advancement. The candidate to be chosen should be of high educational standard, preferably a University Graduate in Economics or Commerce, have a grasp of business problems and show keen interest in sales management. He should be between 22-28 years of age and have had at least three years' experience in a junior management capacity in a reputable commercial or industrial undertaking. An attractive starting salary will be offered. Applications, giving full details of career, should be addressed to the Managing Director, British Depa-Creps Ltd., Gleebe Mills, Hollingwood, Oldham.

WINES of quality. Leading importers, P.O. 28s. 11d. will bring case of four bottles Bordeaux, Burgundy, Jugo. Free delivery—Paton & Company, Peterborough, distinguished wine merchants since 1838.

Pumps for Atomic Energy

The more exacting the engineering requirements of the Atomic Energy industry, the fewer are the specialist organisations which can provide the solution to each problem.

Of such organisations, Hayward Tyler is one, and the Hayward Tyler speciality is pumps.

Designing and building successful glandless pumps for high pressure and high temperature duties is no easy job but this Company has pioneered such pumps since 1945 and many of the difficulties have been overcome.

Add up the
unproductive time
spent taking
dictation ...

that could be
profitably spent
typing it ...

and you'll wonder
why you haven't
stopped this
waste before with
the help of the
world's most
practical
dictating machine
—the Dictorel

Dictorel savings are real savings. They can repay the initial installation cost in as little as a year. For the Dictorel is built to be most useful to you, most efficient for your typing staff. With Dictorel taking the dictation (on flexible, foldable, mailable, fileable, electronically-recorded, magnetic-coated sheets), all the work can be done by a minimum pool—freeing skilled staff for other work. Ask your secretary to get the details of this thoroughly practical machine—at its practical price of 99 guineas complete and ready to use. Also Multidict and Telerec—telephone systems linking executive desks with Dictorels in the typing pool.

ACEC-DICTOREL

A 'Unicorn' Briefcase with yet **ANOTHER** difference

'Unicorn' Briefcases are expected to be different. Thought behind design, quality of leather, standard of craftsmanship... these things already set the 'Unicorn' apart.

Now comes an overnight briefcase with yet another difference—a most ingenious code lock.★ Thought? Keys are easily lost, mislaid or duplicated. Design? A dignified arrangement of concentric dials offering no clue to the method of opening, or to which of several thousand possible combinations is correct. Craftsmanship? Magnificently engineered, wholly reliable quick action mechanism of watch-maker's precision, with neutralizing clutch accessible only to the owner.

Altogether a superbly convenient, more than useful, and—naturally—impeccable briefcase for the man who matters.

Two interior compartments, plus a 'personal' compartment; handy exterior zip pocket. Size 17" x 11½" (17" x 14" £1 extra). Natural coach hide, £15.10.0; light or dark pigskin, £18.2.6; tan or black cowhide, £15.3.6. Matching folio cases, £3.8.0, £4.10.0, £2.18.0 respectively. Post free and tax free in U.K.

★ Can be fitted as replacement on existing 'Unicorns' (and suitable 'Non-Unicorns') for approx. 5 Guineas.

(U.S.A. orders and enquiries: Sterling International, 225 Kearny Street, San Francisco 8, California.)

ONCE YOU'VE crossed the gangplank onto the famous "United States" or her running-mate the "America" you are in America. The glamour, the luxury and the hospitality of this friendly country surround you.

And if you're a businessman, you'll find that here is the perfect atmosphere to start a successful business trip. American businessmen like to be approached, like to talk business. In these informal, friendly surroundings, you make contacts that can be of great value to you.

But there's fun aboard, too, lots of it. You'll find unexcelled food and superb wine, magnificent cinemas equipped with CinemaScope, top-grade orchestras, well-stocked libraries, every "keep-fit" facility,

and, of course, just rest and relaxation if you prefer. Yes, the few days that separate you from New York pass all too quickly.

You travel fast and in the utmost comfort when you travel by United States Lines.

*** IMPORTANT!**

MEMO TO BUSINESSMEN

There are great advantages to be reaped by British businessmen if they travel by United States Lines. They have time, first of all, to adjust themselves to the American atmosphere and the American tempo before they arrive in New York.

And, most important, a fresh contact is more easily made under the sociable conditions aboard ship than over an office desk; the people you meet may turn out to be more than just good friends—they may be useful friends.

Three times in the picture

All electrical machines have to be built up from laminations of special steels, whether they are generators at the power station, transformers in the supply system, or the motor of your cake-mixer, vacuum cleaner, floor polisher, electric razor or other equipment.

Richard Thomas & Baldwins Ltd. make the required steels, roll them into sheets, and manufacture the laminations. Their output of laminations is one of the largest in Europe; they also supply large quantities of sheets and coils of the special electrical steels to those manufacturers who stamp their own laminations.

A £2,000,000 scheme is now going ahead for augmenting production of 'Alphasil' steel, which still further increases the efficiency of modern electrical plant. Here again, as in other Richard Thomas & Baldwins activities, whether in steel making, sheet rolling or tinplate production, the Company's policy is one of technical leadership, backed by the practical resources necessary to carry it into effect.

A Dictating Machine becomes 'Something in the City'

Thousands of offices both large and small have changed over to Stenorette 'S' dictation. Using the Stenorette 'S' is fundamentally the most simple, direct and economical method of reducing the time taken by everybody in dictation and transcription. It will boost an efficient secretary's output by as much as 40% and greatly ease the working day of any busy executive.

The average cost per installation
is about 50 guineas

Three Years to Go

IT is a year ago today since the general election. On May 26th, 1955, the Conservatives stood at their zenith and Labour at its nadir; there need be no recantation of the view that it would have been a national disaster if the party then slipping out of Mr Attlee's grasp had been returned as Her Majesty's Government. In the year since then, under Mr Gaitskell's pragmatic leadership, Labour has made as great progress towards responsibility as anybody could reasonably have asked for; it has not yet got a policy, but that is not altogether a disadvantage for a party of its kind. The Conservatives, on their side, have undoubtedly lost some of their dynamism and gloss. If an election were being held today, it would be reasonable for an organ of opinion of the centre to revert to editorial neutralism, harbouring a prejudice perhaps (it is very difficult for anybody who was close to that febrile Labour party of 1949-55 not to harbour a prejudice), but without feeling that the difference between national progress and political futility hung upon the vote. The two parties are back in the same league.

When people of the centre feel this way, the party that is most likely to win the next general election, unless the Government makes a forceful recovery, is the party at present in Opposition. The Conservatives would therefore be wise to treat this May 26th not as an anniversary but as a springboard. Theoretically the last possible date for the next election is four years from today; in fact, however, since Parliaments are never allowed to run till their last gasp, the next election will probably be held in the autumn, or possibly in the spring, of 1959. On a conservative assumption, the best slogan for this week is "three years to go."

What has to be done in this period? The first point to urge upon the Conservatives is that they should not overload their effort at recovery with too much legislation. Governments are not to be judged by the output of their sausage machine. The major proposals that will need to be in the Queen's speech next autumn are already known. They are a measure of local government reform, a revision (it would be better to make it a scrapping) of the Rent Restriction Acts, a Bill to implement the recommendations of the Royal Commission on gambling, and another to implement the Gowers recommendations for protection of shop and office workers. Together with the usual tag ends which encumber any parliamentary timetable, that is quite enough. Although the Bill to introduce cash betting shops—coming at about the same time as the first draw of those meretricious premium bonds—is quite likely to be the most discussed political phenomenon of 1957, it is at once obvious that there is only one really important measure on this list. If the Conservatives introduce a bold Bill to abolish the distortions, and to loosen the industrial immobility, caused by rent restriction, they will have done their main legislative duty for the last three quarters of this Parliament.

Legislation, however, plays a relatively small part in national

or political fortunes: nearly two hundred Acts were passed in the course of the last Parliament, and the ordinary man would be hard-pressed to name half-a-dozen of them. Instead, the dominant memory of 1951-55 is that Mr Butler made a success of his economic policy; the dominant misfortune of the present Parliament, to date, is that the sparkle of that achievement has worn off. So the second main resolution for the Conservatives, on this May 26th, should be to recapture the *élan* of the period of promised investment in expansion and success. That involves hard thinking about what went wrong in Conservative economics last year, and when it started to do so.

What went wrong was that Mr Butler's policy of all-out expansion, which had always carried with it the disadvantage of too many price and cost increases, carried in 1955 a greater increase in costs than the economy could afford—and brought a plain threat of devaluation of the pound. The day on which things started to go wrong, if one day is to be picked out, was January 5, 1955. On that day a three-man court of inquiry, in a report from which most other economic evils from then to now have flowed, recommended that the nation should "will the means" of delaying a railway strike by opening the floodgates to wage inflation across the whole economy. The only way in which the Conservative Government could have avoided last year's expensive deterioration, given Mr Butler's definition of full employment, would have been if the Minister of Labour had come down to the Commons that day, and thrown this disastrous piece of nonsense back in the court's teeth. Sir Walter Monckton did not do so; and the rest followed.

★

The Tories do not yet recognise this reading of last year's experience; their reaction when anybody blames Sir Walter for any of our present misfortunes is still one of surprise. But, to be fair to them, they have come to realise that determination to damp down cost inflation has now to be a central feature of their policy. The disinflation of demand now in process is the motive force behind that policy; the talks that the Prime Minister is so fond of holding with trade union leaders are the oil that is meant to smooth its operation; the willingness of state industries in deficit flatly to turn down wage demands next winter, even at the risk of strikes, may be the test of whether the machinery is to be used. The readiness to face this—including the readiness to face that nasty word "strikes"—is the hub around which the country's whole economic future (and, less important, the Tories' political future) will turn. If last winter's round of wage increases is repeated at the end of this year, especially at a time when it looks as if American demand may be about to turn down again, then it will probably be impossible to avoid another devaluation of the pound. If that happens, all further hopes of Tory economic progress go with the wind.

But if this is not going to happen, if the Government does manage to check wage inflation this winter—at the same time as it harvests the immediate balance-of-payments surplus which the present dampening of home demand ought to bring about—then it will be sensible to start thinking about another round of Butlerite advice. There are four particular sets of targets that can be laid down:

(1) *Tax Reform.* The most important aim here, as soon as there is any slack in the economy, should be to restore Mr Butler's investment allowances; they were withdrawn last February for the ironical reason that they were working too well. The other priorities should be the "middle class" income tax reforms left over from the report of the Royal Commission (which would cost a little money) and the replacement of the anomaly-ridden purchase tax by a flat rate sales tax (which would get some money back).

(2) *Conscription.* The decision to abolish general conscription by the end of 1958 should be taken now. General conscription is an absurdly wasteful way to run a technicians' army: a system under which nearly a third of the army's strength is absorbed in training or being trained or is in transit at any one time. This does not mean that the Tories should play for popularity; they should be prepared to face the reverse. If Britain has not got enough regulars by 1958, then general conscription should be replaced by *selective* conscription through ballot, if necessary for an even longer period of call-up than now. A bold decision that this is the alternative would give the Tories every incentive to make a success of their present scheme for expansion of the regular army.

(3) *Free Trade.* It is important to keep up the Butlerite impetus towards freer trade, although a steady advance to multilaterally freer trade may be difficult—especially if American economic activity should be about to slacken. The obvious course is for Britain to align itself with the ideas now stirring in Europe: with the so-called "common market" which is really a scheme for the progressive lowering of European tariffs.

(4) *Industrial Mobility.* The aim should be that when a worker is not wanted in one industry or factory he should promptly move on to another one. It is obvious that the abolition of rent restriction—the freeing of the housing market from the distortions based on squatters' rights—is the main step needed here. But the Government should aid mobility in other ways; Mr Butler, from his vague eminence as Lord Privy Seal, should be given the responsibility of working out a definite plan. Beside the provision of public money for re-training displaced workers, it would have to include the loosening of trade union restrictions on entry into some trades and the modification of certain exaggeratedly protective apprenticeship schemes.

★

There, then, is a positive programme with which the Conservatives might recapture their *élan* in domestic policy. In foreign affairs Sir Anthony Eden has been Foreign Secretary, *de jure* and then *de facto*, for so long that it might seem strange to say that the Government's record abroad in the last year has been more disappointing than its record at home. But, in retro-

spect, it plainly has been. The way to recovery is equally plain. Britain should co-operate more closely with its allies, even while it is making friends with its older foes and stamping out home-made bombs thrown by its newer ones. There are three obvious manifestations of this:

(1) Greater reliance upon the western alliance is clearly the first need for any solution of Britain's problems in the Middle East and in its strategic colonies that do not want to be colonies any more; if there is any answer to the mess in Cyprus, it must lie in turning the base there into a Nato one.

(2) It is even clearer that lack of co-ordination—the one-year itch to go part of the way alone—is the main danger now besetting British foreign policy in the long haul towards genuine peaceful co-existence with the Russians; while Sir Winston Churchill, trailing his historical clouds of glory, could occasionally afford to dart ahead of Britain's allies in the way that those allies were eventually going, Sir Anthony Eden cannot with impunity do so.

(3) Finally, one of the best ways for Britain to secure economies in defence also lies through co-ordination, through refraining to make various war machines that the Americans make better and that we do not need to duplicate; there are, of course, other worthwhile economies to be sought in defence manpower and in certain specialist branches of the services—one way to them lies through

puncturing in various service chiefs (especially admirals) the delusions of delightful independence that sometimes need to be punctured in Sir Anthony himself.

These may seem harsh things to say. But if there is any substance in the otherwise rather unfair cascade of criticism that has descended on the Prime Minister in the past six months, it is to be found in this: that he has sometimes seemed to try to replace the two main props of Britain's continued peace and prosperity—the strengthening western alliance abroad and the re-invigorated market economy at home—by the short-term manoeuvres of a skilled diplomatic technician. All the suggestions in this article have been based on the proposition that Britain will do best to revert wholly to the alliance and to the market again. These are the real sources of Britain's strength. They are also the real ingredients of the Conservatives' opportunity. The extent of that opportunity should not be underestimated. By 1959, with price inflation checked, production rising again, the housing "shortage" exorcised by the removal of rent restriction, conscription abolished, peace and security more secure, the new industrial revolution in full swing—the harvest to be presented to the electorate could be more golden than that of 1955. But it will require some hard and temporarily unpopular sowing in the meantime. There are three years to go.

Between Khrushchev and Thorez

AN uncanny resemblance to the "B and K" visit to Britain marked the French ministers' talks in Moscow last week. Saturday's joint communiqué was as wordy and woofly (one French journalist called it an "interminable document") as the one issued in London three weeks earlier, and followed in much the same tracks. M. Mollet tried as hard as Sir Anthony Eden, and as unconvincingly, to persuade his fellow countrymen that something concrete had emerged. "Cultural contacts" and trade targets were again cited as evidences of achievement. Once more the Moscow press exulted in "a defeat for the adversaries of international co-operation"; once more sighs of relief echoed from Washington. At first glance the whole affair looked like one more circumnavigation of the Muscovite mulberry-bush, fruitless but harmless. But what really happened?

Mr Khrushchev secured his minimum objectives. As in London, he obtained documentary evidence with which to impress upon his own subjects, if not upon others, how hard he was working for better relations. (The crowd scenes during the French visit were a notable revelation that his surest means of drawing popular applause in Moscow is to appear in foreign company.) He also—and even anti-Americans among the French newspapermen realised and remarked on

this—achieved, by the mere act of meeting the French ministers alone, another modest stage in his campaign to isolate the United States diplomatically. But, as in London, he got nothing more. Neither his polite sneers ("I know you cannot do this or that without offending your allies") nor his flattery ("France's voice should be heard more strongly") nor even his very non-committal "welcome" to the latest French plan for aiding backward areas affected his visitors.

The visitors, indeed, gave as good as they got. M. Pineau told his hosts that a Germany committed to the West and restrained by western control systems would be much less dangerous to Russia than an uncommitted Germany free to play off East against West. The French ministers pressed the question of political prisoners hard, and without coming under the same barrage of abuse as their fellow-socialist, Mr Gaitskell. "The Russians now know what a social democrat is," M. Mollet said later with a quiet smile. He also told the Soviet public that they all ought to have as close and free contact with the outside world as the men at the top. "People living in cloistered solitude cannot get rid of fear" was a memorable sentence to utter to the Moscow television audience. And as to Algeria, despite Marshal Bulganin's belated revision of the text of the communiqué, the French

were not highly impressed by the sight of the Marshal declaring at one end of a room that "Algeria is not our business, it is France's," while Mr Khrushchev at the other was reassuring Arab diplomats that "we shall support everybody who fights for national independence."

★

But uneasiness about France arises far less from any fear that the French will fall easy victims to smooth Soviet talk than from painful awareness of the country's internal pressures. M. Mollet heads a government pledged to bring peace to Algeria, but he has had to send close to 400,000 men to fight there. The resignation of M. Mendès-France on Wednesday frighteningly illuminated the weakness of the socialist prime minister's position. M. Mendès-France's action had long been awaited, for he had made it clear that in his view the government in which he was deputy premier until this week should have combined its military effort in Algeria with a parallel course of political action that would capture the imagination of the Moslems. He has been careful to resign as an individual; other Radical ministers are remaining at their posts; the government has not been brought down, but its future is more uncertain than ever. Moreover, M. Mollet's leadership of his own party is also in question. And all these weaknesses increase the need to look carefully at the role and intentions of the French Communists.

When M. Mollet landed in Moscow a delegation from the French Socialist party was just leaving; and they and their Soviet Communist hosts had agreed to ask their party executives to consult together on subjects of "common interest"—an agreement which the Russians had not extracted from any other democratic socialist party. The French Socialists have been quick to protest that they still mean to turn a deaf ear to the blandishments of the Communists in their own country. But in their present critical position they may have to choose between suffering the Communists' embraces or receiving from them blows that would send them reeling helplessly into the arms of the Right.

The French Communists for their part have also found Algeria a tricky matter. They have not found it possible to force a policy of "united action" upon the Socialists, either by giving them unqualified parliamentary support or by an all-out onslaught on their Algerian policy. Instead, they have grudgingly voted for the government's special powers in Algeria—"in order to keep it out of the arms of reaction"—at the same time attacking its handling of the Algerian crisis. This ambiguity enables the Communists to benefit from the growth of discontent, as increasing numbers of conscripts become bogged down in North Africa, without incurring working-class opprobrium for bringing down France's first socialist-led government since 1947. Normally the Communist leadership would have had no difficulty in transmitting these somewhat complicated marching orders to its troops, but the present situation is far from normal.

The French Communist party had quite a reputation

for Stalinist orthodoxy. It has long been puzzling to see intellectuals reared on Descartes indulging in mental acrobatics to keep to the party line, and workers with no MVD at their backs performing ritual Byzantine antics. After Stalin's death, M. Thorez and his colleagues actually proved more reluctant than Stalin's heirs to accept the new attitude towards Yugoslavia, to give publicity to rehabilitations in Eastern Europe and even to certain speeches at the Moscow congress. Their distaste for the attacks on "the cult of the individual" even gave the impression that they might stage a "Titoist revolt in reverse." This, however, was an illusion. The new current from Moscow is creating a turmoil in French Communist cells, one symptom being the violent outburst provoked inside the party by M. Thorez's condemnation of birth control. The rank and file are slowly recovering their critical faculties and asking awkward questions. It may not be possible now to command obedience for unexplained orders and empty slogans.

★

One plank of the new platform that puzzles the activists is the "possibility of reaching socialism by parliamentary means." Such wares, some of them argue, are better displayed in the neighbouring shop-window of the Socialists. It was the good fortune of the French Communist party that in the last ten years conditions in the country were bad enough to keep it the vote of over five million Frenchmen, but not bad enough to drive the workers to take violent action against the party's wishes. The dilemma of reconciling a revolutionary ideology with the fear of precipitating a world war is still far from solved. It was partly for making a virtue of this necessary caution that M. Hervé was expelled from the party earlier this year (though the Stalinist manner of expulsion suggested that his attack on "fetishes" was not only too loud, but too early). Reformism need not be the guiding principle for ever. The Communist leaders may well argue that in a few years American troops will leave Europe and nuclear stalemate will then open up new revolutionary perspectives, and that, however long the punches have to be pulled, the party must remain ever ready to spring to decisive action.

The rejection of Stalin may even strengthen the French party. Logically, M. Thorez and his accomplices, having lost their face, should lose their power. But although Communist intellectuals may now be suffering agonies of ridicule, ridicule does not kill, and it may be more than compensated for by new freedom of thought. Stripped of its tragi-comic cults, communism could exercise a still greater attraction on the Parisian left bank. Above all, the social conditions which have enabled the party to claim the allegiance of one Frenchman in four cannot be eliminated while the government remains preoccupied with Algeria.

The party should thus have ample time to recover from its crisis. It has advanced quite successfully over

the last few years. In 1952 the Communists were the untouchables of French politics. Since then the conflict over the EDC, Dien Bien Phu, the new Soviet tactics, and various battles on the domestic economic front have helped them to inch their way towards the centre of the stage. But it is a long road from untouchability to "united action" with the Socialists, and in normal circumstances much more subterranean growth, much

more erosion and many more rays of the new Soviet sun would be needed before this phenomenon could even see the light of day. Yet in the hot-house conditions of an acute Algerian crisis something very like a "popular front"—under that, or any other, name—may blossom rapidly, and the growing plant may throw its shadow over Western Europe. So much in France and Europe seems to hinge on Algeria.

The General Strike of 1962

(A chapter from "A School Social History of Britain for Middle Forms," published by HMSO [Standard Textbook Division], in 1986.)

EVEN in the late 1950s the Labour Party, confident of power as the first Eden ministry disintegrated, remained strangely blind to the possibilities of a middle-class general strike, though it had only to re-read the history of the years 1923-26—and to substitute the words "middle class" for "working class"—to foresee the upheaval. The welfare state and nationalisation had long been developing professional associations along lines analogous to the growth of trade unions after 1870—but far more rapidly. Increasingly frequent and crude demands by doctors and dentists for new "awards," for example, followed the establishment of the state health service in 1948. The real leaders in this movement, however, were the school teachers, already a militant middle-class force by the time Eden took office.

The early professional craft unions were certainly feebly led and fragmented among themselves. But two great events transformed this picture. During the centenary celebrations of the British Medical Association (BMA) in 1957 all the health professions, from doctors to opticians, joined in a single Amalgamated Medical Union (AMU). In 1958, out of a medley of institutes of engineers, scientists and technologists, was formed the Technological and General Boffins' Union (T & GBU). These new "massed brainpower unions" gave the middle-class struggle a new punch; but even when all the professional associations were affiliated to a central body, the Congress of Professional Associations, blatantly modelled on the TUC, Labour politicians paid little heed. Perhaps this was because it was formed too late to play much part in the general election of 1959.

The election, however, had a decisive effect on the CPA and the power-drunk leaders of the massed brainpower unions. Their power was based on the resentment of the middle class at being ground between the upper millstone of inflation and the lower of steeply progressive taxation. The failure of the Tory Government of 1955-59 to help them had, as the memoirs of Lord Luton (formerly Dr Charles Hill) point out, predisposed them to direct action. An inflammatory article on these lines appeared in *The Times* as early as February 27, 1956. The Labour Party manifesto

"Let's Face the Future—Again" confirmed their disillusionment with parliamentary methods. In November, 1959, many middle-class voters stayed away from the polls; and Mr Gaitskell found himself in office with a comfortable majority of 128 (subsequently raised to 131 by three Labour members from Malta).

He was pledged to a considerable extension of the welfare state. He had promised a complete state legal service, and an ambulance service to take patients to their general practitioners. Still more far-reaching, Labour had a mandate to reduce the size of classes in all schools (state and private) to 20, raise the school leaving age to 18, and to provide free university training for all who wanted it. For the middle classes this obviously meant yet another round of inflation and taxation. It meant, too, an extension of professional overwork, which had become as much the bane of middle-class existence as was unemployment of working-class life in the pre-Keynes era. The higher civil servants faced the ardours of another frenzy of scrambled legislation; the doctors would have to work all hours; the lawyers would soon have queues in the chambers without additional fees; and *The Economist* calculated that to meet the demands of the Standard State Instruction Bill, school and university teachers would have to work an 8-hour day, 11½ months of the year, the school terms being divided into alternate shifts. The professional engineers, who had of course absorbed the old Colliery Managers' Association, knew just what they were in for.

The first blow was struck soon after the election. Mr Gaitskell had hardly had his first row with his party, and was busy denying rumours that he would be out of the premiership within six months of getting into it, when the NUT tried to sabotage the projected Education Act with its "overbid" for higher pay and pensions, shorter hours and "conditions of service for all teachers at parity with the best in the public schools and older universities." After fruitless negotiations throughout 1960, Mr Michael Stewart, the Minister of Education, broke off the talks and the teachers came out at Christmas.

The Government, exasperated at what it naïvely called the teachers' "treachery," announced that while regretting the inconvenience to the child-rearing public,

it could not allow the pedagogues to usurp its function in deciding what was best for the country. The CPA replied that it would give the teachers — “heroically leading the van of the class-struggle”—full support, including an enormous number of private tutorships. “Let every middle-class family employ a tutor” was no idle slogan, and when the Law Society further tried to force the government to prosecute parents who failed to educate their children under the Schools’ Attendance Act, an indemnity bill had to be rushed through Parliament amid unprecedented scenes, in which the Speaker repeatedly left the chair.

There was no education in 1961, except for middle-class families, and parents suffered terrible hardships; the NSPCC broke down under pressure of cases. But the government was preparing counter-action and announced it in the autumn. It had, it said, completed a scheme to fit the empty classrooms with electronic teachers which would be operated jointly and remotely by the Ministry of Education and the BITA (the combined BBC and ITA television service). The electronic industry would be nationalised and required to manufacture the appliances (“They may bleat, but they won’t beat,” snarled the Headmaster of Rugby).

★

This was clearly a challenge to the mighty T & GBU, without whose members’ co-operation it was impossible to mount the greatest piece of automation of all time. All through the appalling Christmas holidays of 1961 (“When God and his angels slept,” as an historian of the time put it), the CPA was in session; in the new year it announced that unless the government dropped its monstrous strike-breaking threat, it would call its entire membership out.

The cabinet was split. Gaitskell was half inclined to listen to ministers like Mr Wilson, the Foreign Secretary, who, fearing the effect of the strike on the American alliance, counselled retreat. But Mr Bevan, the Chancellor of the Exchequer, who, in his latter years, had become an ardent Churchillian, was determined “to face the wicked threat of these misguided men and prove, at whatever cost in blood and treasure, that the nation is greater than the class.” He carried the day, partly because the government believed that, whoever else struck, the doctors would stick to their posts, obedient to their Hippocratic oaths—though three decades of working-class action had swept such mumbo-jumbo into the discard of professional ethics. On January 10th, in the midst of an influenza epidemic and the seasonal power cuts, it learned that its faith was mistaken. At 9 p.m. that evening the nation was told, in a distinctly non-U voice on the radio (all the regular announcers belonged to the T & GBU), that the second general strike had begun.

It was conducted on both sides with exemplary British good humour. At its height a (rugby) football match was played between the police and the strikers.

But it inflicted great suffering, and only the endurance of the British working man, and his readiness to try his hand at anything (after an emergency relaxation of trade union rules on job-demarcation) saved the nation from chaos. Bevan was its true voice and the hero of the hour. Himself caught by the strike in the midst of a course of dental treatment, he was everywhere where the fight was thickest, his jaw bound up in a silk scarf, rallying the people in more than usually Churchillian tones. Factory first aid was a crude substitute for state-doctoring; teeth were extracted by anglo-saxon methods; in Whitehall clerks speeded up state business by transferring files from in to out-trays without the intervening ritual of minuting. By general working-class consent the only professional service for which no emergency provision was made was that of the law courts. The officers of the armed forces, despite some unmannerly taunting, stayed loyal.

★

Even so, the strikers might have won, with incalculable consequences, had not the government received help from an unexpected quarter. The strike roused intense excitement abroad. The Americans backed the strikers; the government enjoyed uncomfortably the support of Russia. But there was no attempt to intervene directly until Pandit Nehru, the Prime Minister of India, decided that this was one dispute in which he could not stay neutralist. As it happened, he possessed an enormous stockpile of professional talent, which had been produced for years by the Indian universities in bulk; it had votes, but no jobs. Nehru saw his opportunity. In a famous telegram, sympathising with British sufferings, he offered Gaitskell 85,000 doctors, 270,000 certificated engineers, 700,000 senior civil servants and 550,000 teachers, delivery to begin within 24 hours by air, and the balance to be completed as fast as transport could be chartered or commandeered.

It was not necessary for Gaitskell to accept this offer. It frightened the strikers and the working-class about equally. Britons, so long estranged, stared into each other’s faces with a new understanding, and next day the CPA leaders went to Downing Street. The strike was over. It was not, however, in vain. Though the pledge of “no victimisation” was broken by the government with the passage of the Professional Associations (Conspiracy) Act in 1963, the nation had learnt a new respect for its brainpower. By tying middle-class salaries to the cost of living, the government shrewdly removed one of the biggest middle-class grievances while, at the same stroke, converting the trade unions decisively to wage restraint. This did not save Gaitskell from the swing of the pendulum in 1964; but it earns him an honoured place with Stanley Baldwin and Benjamin Disraeli among British prime ministers who have striven to make us “one nation.”

German Eyes on Developing Nations

THE Soviet economic offensive in Asia and Africa has nowhere aroused more concern than in Western Germany. For all their fantastic successes, not all German exporters feel secure. Many businessmen, remembering the violent ups and downs of the country’s economy in the past, still visualise a slump round the corner; and the German capital goods industries see their big future markets in precisely the new developing countries on which Russia and its satellites are focusing their efforts. The prominent part allotted to East Germany gives the Soviet campaign a special sting. In Chile, for example, where West German exports have been cramped for some time by payments difficulties, a delegation from East Berlin has used the good reputation of West German products to further its own exports: “We can produce the same things as Western Germany, but cheaper and quicker, and we will buy your goods to enable you to pay.”

Some of the more grandiose ideas put up by German industry for meeting communist competition have already faded into obscurity. The most practical proposals to date have been those advanced by Herr Berg, head of the Federation of German Industries, on his recent return from a tour of Southern Asia. One is a project, long pressed by German industry, for a new bank to finance cheap credits for exports on a long term basis. The balance sheets of most German firms still bear the mark of currency reform in the shape of very small liquid reserves, and with the discount rate at 5½ per cent and long term bank credits costing up to 10-11 per cent, their difficulty is clear. The Export Credit Corporation, financed by bank and public money, provides credits up to four years; but last year, with its funds almost exhausted, it was forced to cut back its grants of new credits by a third. And no state institution supplies long term funds at all. Germans have seen how the Export-Import Bank has helped United States exports to Latin America in years of dollar shortage, and Herr Berg has reported Russian credit offers for up to 20 years.

The snag here is obvious. The new bank which Herr Berg hopes to see set up to finance export credits would, he suggests, get DM 4-600 million from the state to start with, but after that would depend on Germany’s pathetically small capital market—and its requirements would diminish the small resources available for normal needs. The Federal government’s present policy is designed not to increase the liquidity of the capital market, but to check the pressure of monetary demand. Professor Erhard declared last week that this is not the moment for additional export incentives; for Germany’s really pressing problem, which will grow more intense when rearmament gets under way, is to curtail demand.

Herr Berg’s second important proposal is that more technicians from the developing countries should be

offered training in Germany—an old point given new force by the prominence of training arrangements in Soviet bloc contracts. The Russians have already, it seems, undertaken to train 500 Indian engineers, 300 skilled and 4,500 unskilled workers. The opportunities for indoctrination here are obvious. But there is also a straightforward economic issue. Britain and Germany can no longer hope to rival the United States as a capital exporter; instead they must rely largely on the export of skills—on training foreign engineers and technicians, making lasting contacts with them and accustoming them to their products. At present Britain perhaps does more than Germany in this way. Big firms in both countries have long trained graduate apprentices from overseas, but the numbers are pathetically small. Russia’s immense educational investment could make the training, and simultaneous indoctrination, of foreign technicians one of its chief weapons.

The third major recommendation voiced by Herr Berg is that German firms should not dissipate their strength by competing against each other in tough foreign markets, but should combine. The proposal has disquieting echoes of earlier German export cartels; but the background today is different, and so, in part at least, is the aim. Many modern development projects are too big for single firms, even for the giants of the Ruhr. Moreover, the proposal for combined action now is meant to meet the particular challenge, usually political in purpose, of a huge monopolistic international machine which can tender below cost and can offer to buy any product in exchange. Herr Berg’s first proposal was for teamwork by German industry alone—although he has spoken this week in favour of international co-operation. The Federal government, for its part, feels that the Soviet challenge can be met only by a joint western effort; and when Professor Erhard came to London recently he came in the hope of developing a common programme. At any rate, it is felt, when a major contract takes on an openly political complexion, a joint western effort should be made to tender cheaply; another vital form of co-operation is the development of international consortia capable of making comprehensive tenders for big projects like steel industries and dams; a third is a more efficient exchange of information between western countries, including information about Soviet trade tactics.

British reactions to these ideas have not been enthusiastic. There is a feeling that industry has already shown itself capable of getting together when faced with a huge project which, like the Aswan dam, is clearly beyond the scope of one industrial country. Apart from such cases, industry can fairly argue that competition, plus the normal exchange of technical information through licensing arrangements, will pro-

duce a more vigorous and lasting western answer to Soviet competition than any elaborate get-together. Some British businessmen believe that alarm over the Russian trade drive has been overdone. Yet if the communist bloc's tactics really begin to endanger western trade in key areas, and if at the same time the pressure of demand on British heavy industries eases, this attitude may have to be somewhat modified in certain respects. Permanent arrangements for dividing markets should be ruled out from the start, but British industry might well gain if it was more alert to the possibilities of *ad hoc* international collaboration on big development schemes.

Something could also be done on the political plane to turn to good account German aspirations to work together with other western countries in helping the "new nations" of Asia and Africa. The recent proposals to develop the economic side of Nato are unlikely to come to very much; but one other existing organisation might provide a useful outlet for German energies—the Colombo Plan. German participation in the Colombo Plan could make a valuable contribution to Asian development.

But some fundamentals must be kept in mind. The trading nations of the West are obviously interested in maintaining and expanding their trade wherever it

benefits all concerned; but it should not be their aim to prevent under-developed countries from getting any economic aid from the Soviet bloc. On the contrary, if and when communist regimes supply material or services, free or below cost, and without political strings, to "new nations" in Asia or elsewhere, the whole free world gains thereby.

Concerted arrangements, pooled finances, large-scale training programmes and the like are legitimate and probably essential devices if there is to be a fair commercial contest with the Moscow-run international "consortium"—the biggest the world has ever known. But these devices ought not to be used to the detriment of the "new nations." Nor should they be conceived as means of keeping those nations away from any safe and profitable trade with communist countries. Above all, there should be no question of the West rushing in with frantic give-away offers whenever a communist government comes forward with a proposition that means stinting its own subjects and benefiting a free Asian, African or Latin-American country. It is high time the Soviet bloc was held responsible for shouldering a fair share of the burden of aiding under-developed areas. In aid as in trade the basic principles of western policy *vis-à-vis* the communist powers ought to be fair play and reciprocity.

Notes of the Week

Singapore Aftermath

MR LENNOX-BOYD's rejection of Mr Marshall's post-conference proposals was understandable. Mr Marshall finally conceded almost all the safeguards the British Government sought for the security of Singapore, stipulating only that orders in council issued on the recommendation of the proposed joint security council must be approved subsequently by the House of Commons. But even before he made this offer Mr Lee Kuan Yew of the left-wing People's Action Party (PAP) had angrily repudiated it as total surrender; and not even the Liberal Socialist group, which stands to the right of Mr Marshall's Labour Front, attended the last tea-party. Mr Lennox-Boyd found himself treating with Mr Marshall, not with the whole Singapore delegation; and it was already obvious that the PAP had seized the opportunity to turn Mr Marshall into a figure of contempt and put themselves forward as the real representatives of the island. Mr Lee Kuan Yew's reception on his return to Singapore leaves little doubt that his enemies as well as his friends now see him as the future Chief Minister.

Whether he will achieve this position depends on a number of factors, some of which are examined in an article by our Singapore correspondent on page 801. But it is not yet certain that Mr Marshall will resign; after his visit to Delhi he may arrive in Singapore with a "mandate" from Mr Nehru to continue in power on some new and unforeseen basis. The Singapore legislature may now regroup in two parties, one prepared to work the present constitution, determined to avoid elections, and ready to reopen negotiations with a view to accepting the British offer, the other based on the PAP. Mr Lee Kuan Yew has made it plain that he wants to get into power quickly in order to "jam" the constitution by "legal and constitutional" methods. But however long it takes him, it is clear that he will now organise rapidly, and that when an election is held the Government may well face a situation not unlike that of British Guiana.

In the short time that still remains the Government should urgently reconsider two points. First, can it make a new approach to Tengku Abdul Rahman about bringing Singapore into the Federation of Malaya? Second, just how valuable is the Singapore base—and for how many years ahead?

From Messina to Venice

MUCH less has been heard of the proposal for a common market in Western Europe (described on page 803) than of "Euratom," the sister project for a six-nation atomic energy community. Euratom conjures up visions of a bright new future; but the words "common market" merely suggest long and tedious discussions about customs unions. Moreover, Euratom is now conceded to be at least a starter; but even the hardiest optimists doubt whether the "common market" plan can clear the highest hurdle ahead of it—French opposition. Again, while there has been American encouragement for Euratom and enough British tolerance to raise hopes of something more once Euratom is established, its sister plan has met with American silence and British strictures.

Next week in Venice both schemes will be formally presented by M. Spaak to the foreign ministers of the six countries that gave him his mandate at Messina almost a year ago. Even if, as is expected, his report proves generally acceptable as a basis for further action, two problems have still to be resolved. First, what is to be done about the military use of atomic energy? Second, how tightly should action on Euratom be tied to action on the common market? The French attitude to both questions is crucial. Under the 1954 Paris agreements, Germany has given up her right to produce atomic weapons. If France now joins in a similar renunciation there is some chance that, at least in Western Europe, atomic disarmament will have begun; and Euratom will be launched without any taint of discrimination. The problem of Euratom's link with the common market can of course be dodged for the time being by calling for drafting conventions on both treaties to begin their work, leaving open the question of what happens next. But the question of French readiness to undertake, and ability to live up to, the commitments in the common market plan will not be settled by drafting a treaty.

Until recently the British attitude to the common market has varied only between implacable opposition and ill-concealed relief at French hesitations. Recently, however, some small cracks have appeared in this wall of complacency. The road from the decision to call a drafting convention to the ratification of a treaty will be a long one, and it is still not too late for British second thoughts. The French will get the blame if the common market plan is stifled by discouragement, but the fault will not have been entirely theirs.

Freedom of the Air

SHORTLY after the Whitsun recess the country should presumably expect the report of the Select Committee of the House of Commons which is examining the "14 Day Rule" and other Parliamentary restrictions on broadcast and television discussions. It is still right to insist that the whole principle behind these restrictions—that Parliament should stop free discussion on the air of subjects that it is about to debate itself—is quite improper;

the elastic concept of the "dignity of Parliament" is being stretched to placate the undignified jealousy of untelegenic MPs, who are not invited to take part in these discussions, against those who are. But since the committee is clearly not going to find it possible to beat a full retreat, three points should now be made about any "compromises" on which it may be ruminating.

First, and least illiberally, if there is any shadow of a case for these restrictions, it can only be a case for restricting the part that MPs play on the air; Parliament has no real right to restrict what private citizens say, whether or not a microphone is listening in to their conversation. Secondly, restrictions—of this or any other sort—can only be workable if they apply to subjects that have been announced on the previous Thursday (in the weekly statement on the business of the House) as having been set down for Commons debate in that week; even then they should not apply to broadcasts where scripts have been prepared before the relevant Thursday—especially, for example, if they are part of a broadcast series. Thirdly, and most important, whatever restrictions the committee suggests, it should not lay down that the House itself will see that they are enforced—for example, by raising rumpuses at question time. The House is not a court of justice fitted to examine alleged transgressions of its own rules; the job of seeing that acceptable restrictions are obeyed is the job of the Governors and Director General of the BBC and their ITA counterparts. There is unfortunately the prospect of a sultry row on the 14 day rule this summer. The calm that has surrounded the subject since it was thrown into select committee is deceptive. Before the selected MPs publish their report, they should be reminded again that feelings on the matter, in what are usually considered to be the calmest circles, run surprisingly bitter and deep.

Yorkshire Shows the Way

MR SANDYS, who must shortly present his plans for the reorganisation of local government, has just been provided with a rare example of local initiative. The county council of the West Riding of Yorkshire is considering recommending that it should be split into two, thereby creating the terminological inexactitude of a fourth riding. No large local authority has ever before contemplated its own dissolution, but this particular operation would be fairly painless and would conform with a recommendation made nine years ago by the Local Government Boundaries Commission. The West Riding is the longest county from end to end and has 1,600,000 inhabitants, making it the most populous county (apart from Lancashire) outside the London area. It divides naturally into the two areas specialising in coal and textiles. Partition would mean less travelling for the councillors, and would probably make local government less "remote" without upsetting its administrative efficiency. The two new units would still be much larger and stronger than the average county.

There is therefore a great deal to be said for the proposal. Unfortunately, however, it does not provide a good guiding light for Mr Sandys's broader tasks—and for two reasons. One is a fault in the scheme itself. Any reorganisation plan—particularly in a populous area

such as the West Riding—is not likely to be very lasting or effective unless it deals also with the much more prickly issues concerning the relationship of the county to its larger towns. On this issue, the councillors of the West Riding have nothing new to suggest. The other defect is that the West Riding is not a typical case. Basically it is much more necessary and difficult to secure amalgamations of the smaller counties than to thin the few large ones that may perhaps be overgrown.

The continued difficulties of getting an agreed solution to these broader issues will (it is rumoured) cause Mr Sandys to confine his coming proposals to a rather narrow front. Such an approach would inevitably involve shelving the weary conflicts of the larger authorities—possibly by creating a few more county boroughs and then closing the lists for a longish period—and concentrating on the overhaul of the small ones. But the counties and county boroughs are today the real powers in local government, and their shortcomings and conflicts are the prime cause of the system's inefficiency. The stirrings in Yorkshire, like the earlier agitation for a Manchester County Council, show that some authorities themselves now appreciate the need for substantial changes. Is it too late to urge Mr Sandys that he should heed these stirrings and produce (even at the cost of a little more delay and a lot more fuss) the really effective lead which is bound to displease some of the local authority associations—but which everyone else knows to be necessary?

Russian Workers Shed Some Chains

SOVIET labour policy is undergoing encouraging changes. An important step in this direction is the new decree on pensions. The previous scheme for old-age pensions favoured only the privileged income groups, monthly payments at the lower end of the scale being so small that they barely provided a few days' maintenance. Now the whole system is being overhauled and the minimum is to be brought up to 300 roubles, while higher pensions are cut down. Lower charges at holiday resorts, hitherto often prohibitive for the mass of the workers, represent another blow at existing privileges. This, and the campaign against undue wage differentiation, seem to show that equality is no longer a fatal heresy.

Even more welcome to Soviet workers must have been the lifting of the regulations that tied them to their place of employment. Until now, to change one's job without official consent was punishable by jail or "corrective labour"; the planners in Moscow insisted that they needed this weapon to resist labour "fluidity," their greatest headache in the early days of Soviet industrialisation. Now, it seems, two weeks' notice will be enough to protect the restive worker from the arm of the law.

Yet these controls are being relaxed at a time when the need for direction of labour is certainly not decreasing. If 1,200,000 servicemen are really to be demobilised they will have to be steered to wherever their labour will be most productive. Siberia still calls out for new recruits—and some of its former inhabitants, surviving inmates of concentration camps, are apparently migrating in the opposite direction. An appeal has just been issued for

500,000 volunteers for pioneer work in the bleak east. They are being told about the hardships ahead of them with unprecedented frankness. Russia's new leaders seem to be reaching the conclusion that, in a modern industrial society, improving conditions and genuine pioneer enthusiasm are better prime movers than coercion. Siberia may provide a stiff test for these new ideas.

Jordan and British Money

UPSETS in Amman please no one, except the war party in Israel and the Egyptian and Saudi factions that hope to make Jordan a satellite. So western friends of its independence read with anxiety of another cabinet crisis, and of a court martial which suggests quarrels within the army (an article on its condition since the departure of General Glubb appears on page 802). The late cabinet resigned because it could not work with a king or an officer corps that took political decisions behind its back; its successor may be more tractable, but is still bound to come up against Jordan's basic problem—where to turn for the huge subsidy without which the country cannot survive.

Since Jordan became independent in 1948, this money has come almost entirely from Britain. The British have obtained military facilities, plus an ally with a tiny but reliable army; the Jordanians, funds amounting to just under half their exchequer receipts, plus a mutual defence arrangement that mitigates their vulnerability to attack by Israel. The Glubb affair was ample evidence that large sections of local opinion resent the British connection. Many of the critics simply do not realise that dependence on some foreign benefactor is inescapable for Jordan at present. Of the few who do, many think that an Arab

source would be less tainted. Only a tiny minority reflect that Arab investors expect a much bigger return for their money than do westerners, and that a Saudi lender, however cousinly his initial approach, would thereafter exact far more subservience than does Britain. The new premier has not yet committed himself, beyond refusing to include in his cabinet certain socialists who stipulated that, if they were to serve, the British subsidy must either cease or else be paid over unconditionally.

If advocates of revising the Anglo-Jordanian treaty influence the new government, British voices, too, will be entitled to speak up. In the past, the British taxpayer has paid his annual quota to the Arab Legion without demur because he saw it going to a willing and reliable ally. He was ready to pay a high price for the military facilities he asked in return because, though about half the sum went straight into Jordanian pay packets, the rest meant orders in Britain for arms and equipment. He would feel very differently if Jordan asked for an undiminished subscription to a lukewarm ally, and for the right to spend his money anywhere it wished. Why should he pay for armaments chosen by Egyptian advisers with a weakness for Czech guns and MIGs?

Japan Pays Dear for Salmon

JAPANESE fishing boats will be able to sail north to the Siberian coast once more this summer, but the salmon they bring home may be the dearest the Japanese have ever caught. Mr Kono, the minister of agriculture, who has been to Moscow to try to soften the restrictions the Russians recently imposed, set out with the brave assurance that he would talk about nothing except fisheries; but politics have kept creeping in. The agreement signed last week does not take effect until either a peace treaty has been concluded between the two countries or Japan agrees to restore diplomatic relations. The Russians at first insisted on the same conditions even for a temporary arrangement covering this summer's fishing season. Mr Kono, after threatening to go home, eventually won this point, but the provisional agreement will stir little enthusiasm in Japanese hearts. It limits Japanese catches in the area to

65,000 tons, at least 15,000 tons less than the fishing industry wanted, and this may involve the government in an expensive compensation programme. Apparently the unofficial Soviet mission in Tokyo, which Japan has long pretended does not exist, is also to scrutinise the issue of fishing licences—thus taking a long stride towards official recognition.

Nor is this all. In the communiqué signed at the end of the talks Mr Kono virtually committed his government to resume the peace treaty talks before the end of July. The

fishing industry has a powerful lobby in Tokyo, and, as it has no wish to face the 1957 season with a Russian sword of Damocles hanging over its head, it will press hard for a quick settlement. Already there are indications that Mr Hatoyama is swinging with the tide. It is rumoured in Tokyo that he may soon drop Mr Shigemitsu, his foreign minister, who was chiefly responsible for the firm Japanese attitude at the recent London talks. Mr Hatoyama and Mr Kono would then be free to push ahead with their own policy. They might choose to drop Japan's claim to the southern Kuriles, and settle for the return of the tiny Habomai and Shikotan islands; or they might adopt the "Adenauer formula"—that is, simply end the state of war, exchange ambassadors, and leave other questions open. In either case, the real price of entry into the salmon grounds off Kamchatka is likely to be the quiet dropping of Japan's claims to most of the extensive territory the Russians took from it in 1945.

Procedure of the House

TWO quite distinct issues are raised in the suggestion by Mr Ellis Smith and other Labour MPs that the Government should set up a select committee on certain procedural problems of the House. Attention has focused chiefly on the more trivial point: the special rights of Privy Councillors. There is a custom in the Commons that whenever a Privy Councillor gets to his feet, even if he has walked in only a minute before, he must be called at once, irrespective of how many backbenchers have been waiting and for how long. This custom—although it has the advantage that, as former Ministers, Privy Councillors should have specially knowledgeable contributions to make—suffers in practice from two obvious defects: it is bound to break down if too many of the elite take advantage of it, and it makes no distinction between, say, a Morrison and a Bellenger. The Speaker has ruled that because the custom is of great antiquity, it can only be changed by a vote of the House. The solution is obvious; ex-Ministers should be given priority only in debates affecting their old depart-

Now in the bookshops:

THE BUSINESSMAN'S GUIDE TO BRITAIN

The guide is compiled by The Economist Intelligence Unit and has a foreword by Sir Graham Hayman, President of the Federation of British Industries. There are sections on:

- What is Britain?—A picture of Britain in words and charts
- How to get to know things in Britain
- How to get about
- Britain's major economic areas—descriptions and directories of thirteen areas
- Special events in 1956

published by:

Chatto and Windus

ments. In practice the House would still be willing to hear a Morrison on most subjects, but then there are few subjects over which a Morrison has not; at some time or other, had some ministerial responsibility.

Far more important is Mr Smith's second point: that the proposed select committee should consider other suggestions for facilitating Commons business, particularly the voting of credit and the need for a detailed examination of departmental expenditure. This reflects growing concern at the way supply days, which should in theory be devoted to scrutinising estimates, are in fact often being taken formally, and the time devoted to set debates. Whatever one thinks of the record of the Select Committee on Estimates, there is little point in having a watchdog if the

THE ECONOMIST, MAY 26, 1956

householder does not bother to listen for his bark—and if administrative problems are not put under periodic broad review. MPs have dropped into the habit of taking little interest in the less spectacular areas of Whitehall. There is at last the prospect of an overdue debate on the Home Office, but what about some other departments? There have been many debates on coal, but few on the work of the Ministry of Fuel itself. There has been much discussion about aircraft and surplus paint, but little about the Ministry of Supply as such. Now that Parliament has more or less settled into its new peacetime pattern, the time may well be ripe for a new inquiry into the procedural machinery through which such debates can be initiated—and into its present disuse.

The Road Traffic Bill

NEXT Wednesday and Thursday the Commons will consider the report stage of the Road Traffic Bill, and certain new amendments will be introduced to it. This Bill has gone through so many vicissitudes that a summary of, and some comments on, its major provisions may be useful. It is a miscellaneous Bill designed to fill up gaps in the Minister's present powers, to remove anomalies, and to introduce some new devices to improve traffic conditions.

(1) *Vehicle Testing.* This is now in two clauses: (1) virtually the original clause, at one time abandoned by the Government, which gives the Minister power to designate private garages as well as local authorities to test vehicles over 10 years old (or of any prescribed age); (2) the "spot check" arrangement, originally devised as a substitute for garage testing, under which cars can be stopped by police and tested by Ministry inspectors on the roads. Both clauses are open to abuse, but much time has been devoted—in part, successfully—to trying to introduce safeguards into them.

(2) *Dangerous Driving.* Clause 7 introduces a new category of offence between manslaughter and dangerous driving, namely "causing death by reckless or dangerous driving of a motor vehicle," which is designed to overcome the reluctance of juries to convict for manslaughter. This is a very silly clause. A driver's punishment should vary in accord with the danger of his driving, not in accord with the lottery of whether he knocks down a victim with a thin skull instead of a thick one; since the penalty under this clause can be a long term of imprisonment, juries will not be more willing to convict merely because the horrid word "manslaughter" is removed from the indictment. Clause 8, a much better clause, is intended to overcome the anomaly of "being drunk in charge" when the person in charge of the car is not in the car or has surrendered his ignition key.

(3) *Dangerous Cycling.* Clause 9 applies the laws of dangerous driving to cyclists. About time, too.

(4) *Jay Walking.* Clause 10 gives limited police powers over pedestrians—a policeman actually regulating traffic can give instructions to pedestrians who commit an offence if they disregard them (and an offence also if they refuse their names and addresses.)

(5) *Driving Licences.* Clause 11 provides that a person who has had a provisional licence for 12 months and applies for another in the 13th month can be required by a licensing authority to prove that he has attempted the test or has had good reason for not doing so (this clause is aimed at motor cyclists who take out a succession of provisional licences without taking the test). The Minister will put forward an amendment to enable him to allow local authorities to issue driving licences valid for 3 years for 15s. The main trouble about these clauses is that they do not give the Minister the right freely to vary charges for driving tests and licences; Governments ought to be able to charge economic prices for such specific services as driving tests, as and when costs or the length of queues change, without having to go through all the paraphernalia of a new Bill.

(6) *Parking.* Clauses 12 to 17 introduce for the first time the principle that the use of the highway for parking may be charged for. It is designed to encourage local authorities to introduce parking schemes and thereby encourage off-street parking; the Minister is seeking a further amendment to permit him to step in and start a scheme of his own in any area and hand it over to the local authority on agreed terms. These clauses apply only to the metropolitan police area and the City; but an order to apply them to any other area can be made on the request of a local authority. The clauses also empower the Minister to survey the streets, designate no-parking streets, short and long period parking streets and to fix charges and install meters; and they provide (rather too rigidly) that all money collected must be used to provide off-street parking after costs have been met.

(7) *Taking Numbers.* Clauses 18 to 22 codify but do not add to penalties. Clause 23 provides that a policeman may in London, as in the provinces, take the number of a car which is breaking London traffic regulations; he need not wait for the driver to arrive.

(8) *Police Traffic Schemes.* Clauses 24-26 empower the police to make experimental schemes in London for traffic diversion, etc., for twelve months (after that the Minister's approval must be obtained); and to put up signs generally.

(9) *Coaches and Lorries.* Clauses 27-28 define what is a "private party" and a "special occasion," to clarify the law requiring coach operators to have a public service vehicle licence when contracting for the latter type of outing but not the former. There ought to have been a much more wholesale reform than this of the whole question of these differential licences, which have become something of a ramp to restrict competition. Clause 29 defines as a goods vehicle any vehicle adapted to carry goods whether it is carrying them or is travelling empty—so that the speed regulation shall apply to empty lorries. The Minister will resist an amendment by Mr Nabarro to raise the speed limit on goods vehicles from 20 mph to 30 mph at this stage and in this Bill. He should be pressed to say why. The 20 mph speed limit for goods vehicles is never enforced at the moment; the sole reason for retaining it is that the lorry drivers have made it clear that they would resist Mr Nabarro's amendment. This is because schedules drawn up on the basis of this nominal 20 mph limit allow them more time to spend in cafés.

(10) *Miscellaneous.* Many clauses in the Bill deal with machinery and legal tidying up. Among the general provisions, Clause 30 ends the situation in which provision of street lighting automatically classified a road as in a built-up area to which the 30 mph speed limit applied. Clause 31 permits the Minister to experiment with the regulation of pedestrians at road crossings.

thought for tomorrow

Sometime in the future the results of this man's research will be applied to the solution of a production problem. The outcome may be a better quality product, or a cheaper product, or a better method of analysis or control.

You yourself may benefit from his work, for the chances are that in your industry, too, electronics has an increasingly important part to play.

Mullard scientists work hand in hand with the designers of Britain's leading electronic equipment manufacturers; and this combination helps to produce the finest equipment in the world. You can invest in it, with confidence, for nowhere else will you find greater efficiency and reliability.

The words go out in polyglot profusion. Translated in language and form, they appear as print on a newspaper. Paper is an impartial recorder. It takes the news of a world conference, the football results, the names of the ladies who served tea in the village hall and makes history of them all. But paper does more, even, than that. In magazines and books it entertains and instructs. Converted into its many other forms, paper protects your groceries, brings supplies safely to farmers, takes precious goods abroad, wraps sweets for the children. Timber—the raw material of all these varied products—appears in the home in other guises; in kitchen fitments as hard-board, on the dressing-table as face tissues. On a world front, Bowaters are making an increasing contribution to people's knowledge, health and general contentment.

The harvest of the forest is given many forms by BOWATERS

Money to Burn

A REMARKABLE piece of information was hidden away among the written answers to Parliamentary questions in one of the last *Hansards* before the Whitsun recess. The Ministry of Fuel revealed that in 1955 the National Coal Board issued 5.1 million tons of free or concessionary coal to the 630,000 of its employees (usually householders) who were entitled to it. This works out at over 8 tons each. The ordinary domestic consumer, struggling—though no longer with desperation—on his ration (34 cwt per household in the south of England, and 2½ tons north of a line drawn from the Severn to the Wash), will be mystified how the miners manage to get through so much. Most miners' cottages have old-fashioned and inefficient kitchen ranges, which by tradition are kept alight night and day, winter and summer. But this one fire heats the kitchen-parlour and the water and is used for cooking. It can hardly by itself consume eight tons. The blunt fact is that a great deal of this free and concessionary coal—for which the average price to the miner is rather over 10s. a ton—is sold to fortunate local people at less than the market price.

It may be asked why the National Coal Board tolerates such extraordinary arrangements, which encourage the waste of coal, subsidise local consumers who buy the miners' surplus, and which disposed, in 1955, of nearly half as much coal as had to be imported. The explanation is that these are not national but mostly colliery agreements, survivals from the days when private companies had lots of coal and little money. Since nationalisation, however, the Board has acquiesced in the view that a privilege once given can never be taken away; it has even extended the system to Lancashire and Cumberland, where formerly the miners had no concessionary coal and where they now get 6 tons a year per household. It is true that in some places the miners now have an agreement to sell their coal back to the Board, and it is then distributed in the ordinary way—and not included in the 5.1 million tons. Sometimes the Board has installed modern grates in the miners' cottages and induced the tenants to accept a consequential cut in their concessionary coal. But these are purely local arrangements. The Board has some hope of bringing about rationalisation on a national scale through the current negotiations about the wages structure. But this might merely mean that the lowest allocations are brought up towards the level of the highest—and some miners are getting 12 tons of coal each. For a coal-importing country, this nonsense has become intolerable. The Board should withdraw the privilege at once, and increase miners' wages in exact compensation.

Korea's Odd Man In

SOUTH KOREA'S rather macabre presidential election, in which one candidate was a corpse, has paradoxically proved one of the most encouraging events there since the armistice. Something recognisably like a free election appears to have been held. Dr Syngman Rhee defeated

both his live and dead opponents, as was expected and probably also desirable; he still has no real rival as an efficient and upright administrator, especially since Mr Shinicky's sudden death in a campaign train, and his periodic outbursts of blood and thunder are gradually growing less horrific. But his overall majority was a narrow one, and although there have been several reports of intimidation and police interference at the polls, it is clear that, in the towns at least, people were not frightened to vote against him if they wanted to. The biggest surprise, however, was the defeat of Dr Rhee's nominee for the vice-presidency, who went down before the Democratic candidate, Mr Chang Myun. The interesting point is that Dr Rhee's Liberal party apparently resisted any temptation to "fix" the counting of votes in the town of Taegu, on which the vice-presidential issue hinged for three days, even after it became clear that they were likely to be beaten.

Mr Chang, who was left to carry his party's banner alone after Mr Shinicky died, is a Catholic with a reputation for honesty, and has had experience both as premier and as Korean ambassador in Washington. His relations with Dr Rhee have not always been idyllic; he has once before had to go into hiding when the president accused him of favouring peaceful negotiations with the communist regime in the north. Both men will have to move cautiously if the experiment of having a president from one party and a vice-president from another is to work. Dr Rhee has recently been showing signs of his years, and it would be tempting for him, in face of the growing opposition revealed by the election, to relax some of the policies that might increase his unpopularity—notably the attempt to collect taxes efficiently and to balance South Korea's swollen budget. If Mr Chang were foolishly partisan he might press for the same kind of measures. But the best hope for Korea—and for its statesmen—in the long run is to put the economy on a healthier basis. Nothing is likely to kill the first shoots of democracy more swiftly than the hot winds of inflation.

The End of the Affaire?

THE Paris trial arising from the *affaire des fuites* has ended after ten stormy weeks, but it has not shed much new light. (The fact that keeping secrets is even more difficult in Paris than elsewhere was no revelation.) The famous leakages from the defence cabinet in 1954 occurred at a time when they could no longer affect the course of the war in Indo-China. Nothing in the trial indicated that any information actually reached the enemy via the French Communist party; instead the impression was confirmed that the chief effect of the leakages was to furnish party-political ammunition for the friends of the policemen for whom M. Baranès, a journalist acquitted in this trial, acted as informer. The two officials who were given stiffer sentences than the prosecution demanded may well feel that they fell victims in a political battle.

In fact the trial, like the preceding scandal, took the shape of a vendetta against M. Mendès-France, in which his personal enemies were joined by men hostile to the entire regime. M. Tixier-Vignancour, one of the "young Turks" of Vichy and now a deputy of the extreme Right, nominally the counsel of M. Baranès. In practice he virtu

directed the operations of the military tribunal, and was given wide scope for name-calling and insinuations. The intention seemed to be not so much to settle old scores over Indo-China, but to frighten those who advocate a liberal solution for Algeria.

It is now clear that the secrets which "leaked" were subsequently dressed up to create the impression that they had passed through communist hands. As M. Mendès-France was in power at the time, this was an excellent opportunity for his opponents to suggest that he or his ministers were communist stooges. This "patriotic forgery" evokes memories of the Dreyfus case—but Zola might have had difficulty in making his protest before this tribunal. The president, who was surprisingly tolerant to anti-Mendès witnesses, resisted every attempt to probe the political motives behind the case. This trial, with its wild mud-slinging, has undoubtedly done much damage to the Fourth Republic. It will still be necessary to throw more light on the aims of those who flung the mud.

Wrong Lecture for Aden

LET us assume that a commodity called British counter-propaganda is manufactured in the Colonial Office. It is a big assumption. In Aden, two brands of counter-propaganda are required, one in the small and populous colony, the other in the barren protectorate. The latter merely involves countering plain bribery by Yemenis and Saudis—gifts of money and guns with which to shoot the Christians. The former, however, calls for ingenuity and imagination. Neither of these qualities was shown by Lord Lloyd, the Under-Secretary of State for the Colonies, when he addressed the Aden legislative council last weekend. His language was sadly "governessy"; he lectured his audience on being "reasonable" and "sensible," and on their "perfectly legitimate desires"; and he added that self-government must always be limited, as British economic and

strategic commitments would allow no "fundamental relaxation of responsibilities." He gave no sign of recognising that he was up against the first wave of a tide of nationalist emotion and that, unless he offered inspiring counter-attractions, even the pro-British citizens he was addressing would soon become South Arabian nationalists.

Current Egyptian propaganda is heady stuff for groups such as the local "United National Front" (which is left-wing and therefore preaches "affiliation" with the Saudi and Yemeni "people," though not with their present rulers) and for an "All-South Arabia League," the title of which

speaks for itself. But these do not represent the whole of the population. Colonel Nasser's message has so far made little headway with the Arab merchant community, or with the "Aden Association," which would like to preserve a British connection. Why throw such people into the arms of nationalism by the use of chilly, indeed repellent, language? Why not recognise in good time that what confronts enclaves such as Aden is a choice between *Anschluss* with Britain (which no one wants), *enosis* with their Arab cousins, and the full self-government (including partnership in the operation of local enterprises such as the big new refinery) that will attract educated Adenis, and afford them outlets?

White Bread Vindicated

THE terms of reference of the panel on the composition of flour were strictly limited. It was not asked to decide on the relative merits of brown and white bread or on whether "improvers" in flour can cause hysteria in humans as they have been shown to do in dogs. The panel was simply asked to decide whether there was any significant difference, from the point of view of public health, between (1) "National" flour; (2) flour of a lower extraction rate that has been enriched by an artificial addition of two vitamins of the B complex and of iron; and (3) low extraction flour which has not been thus enriched.

At present, the bread on sale to the public is made from one or other of the first two kinds of flour. But since the "National" loaf, made from flour of at least 80 per cent extraction of the wheat grain and which therefore should contain the two vitamins and iron in natural form, is subsidised, it accounts for about 99 per cent of total bread consumption. Having decided to remove this monetary incentive to buy the National loaf from the end of September, the Government then had to decide whether to enforce consumption of the high extraction flour by regulation, whether to compromise or whether to abandon all attempts at preserving the nutritive qualities of flour. In the light of the panel's findings, it has decided to compromise. For the panel is satisfied that flours of less than 80 per cent extraction, provided they are enriched, are just as nutritious as the unenriched 80 per cent extraction flour—though not, according to a table in an appendix to its report, as nutritious as "wholemeal," which is of 95 per cent or higher extraction. Indeed, the panel considers that the amount of essential vitamins in artificially enriched flour may be more stable than in National flour, in which they are supposed to occur in natural form.

Thus, when the subsidy is removed, 80 per cent extraction flour will go with it. Brown bread and flour will still be available to satisfy the small public demand for them; but millers will fall in with the bakers' preference for white flour for the bulk of their products. This, however, will have to be enriched as it is at present. The panel emphasises that the nutrition of a "significant fraction" of the population would fall below what is necessary for good health if white flour were not enriched, and that this fraction includes 10 per cent of the country's children. It is not surprising that before the war, when the practice of enriching white flour had not started and bread was an even more important element in the national diet than it

is today, malnutrition, especially among children, was so widespread. But now there is no official medical objection to the strange British habit of taking much of the goodness out of its bread—because, by another process, most of that goodness is solemnly put back again.

Master Drivers?

IT seems wrong to pour cold water on any proposal which might help to raise the standard of driving and reduce road casualties. That is why the Ministry of Transport may be half-inclined to encourage the private enterprise project of a voluntary "advanced driving test," going beyond the minimum prescribed for new drivers. The idea is that those who earned the diploma and carried the badge of "master-driver" might feel a new sense of pride, and set an example to others both in courtesy on the roads and in the standard of maintenance of their cars.

But there are certain obvious difficulties in the scheme. There is no prospect of the Ministry of Transport being able to operate it; the Ministry is already hard-pressed to find the examiners to deal with the backlog of learner-drivers waiting to take their test. The scheme is apparently envisaged as one to be operated by the driving schools. But this would mean that besides being the firms to benefit from the training and testing by way of fees, they would also provide the board of examiners. The institute sponsoring the project, although it includes a number of MPs, is said to be strongly supported by driving school interests. This would give rise to the suspicion of abuse. It would be quite wrong if the possession of a badge gave the word of a "master-driver" in the witness box greater weight than that of an ordinary driver. It is suggested that insurance rebates to those who had taken the test might encourage a growing number of drivers to take the additional training; at first sight that may seem an excellent idea, but increased rebates for avoidance of accidents probably provide the better incentive. This is a scheme that the Ministry might perhaps view with friendly detachment—but with the emphasis on detachment.

Dotheboys Halls

LAST week two fraudulent schoolmasters were sentenced to terms of imprisonment. Their habit was to buy up one private school after another, fail to pay for it, accept the children's school fees, order goods on credit, and then decamp to do the same again somewhere else. One of them claimed to be a B.Sc. and Ph.D. Actually he was an ex-hotel manager, and his accomplice was a farmer. They had graduated together from Leicester prison.

Stories like this arouse either indignation that there is nothing to stop such people from becoming headmasters, or amazement that parents should be so careless. There are in England and Wales some 5,000 independent schools containing 500,000 pupils. This total includes the great public schools which can offer educational and other advan-

tages not usually to be found in the state system. It also includes schools whose existence depends solely on British snobbery; their only appeal is that, unlike the free council schools, they are not "mixed" (which does not here mean co-educational). Many parents, especially of girls, are interested less in education than in nice manners and the right accent. Within broad limits, nobody should want to deprive them of their peculiar right to pay for this prejudice. But it is certainly desirable that they should be able to judge what they are getting.

The Ministry does its best to provide a yardstick. It has long operated a system of inspecting private schools at their own request. But less than a third of the independent schools are "recognised as efficient," and it is surprising how few parents are concerned to ask the question. Last year the Ministry went a stage further and asked the private schools for lists of their staffs, so that they could be warned if any of their teachers also figured in

The Italian Question

The state of Italy is briefly this. With the single exception of Sardinia, all the Governments in that Peninsula are anti-national or anti-popular; they are hostile to and hated by the great mass of the people over whom they rule; and they are supported only by force—by soldiers, by policemen, and by spies. This is one of their characteristics,—but it is not the only one nor the worst. In no instance except that of Lombardy do they subsist by their own strength: directly or indirectly, ostensibly or virtually, they are all supported by foreign bayonets, in the foreground or in the background. It is this last fact which constitutes the real grievance of the Italian people, and gives to surrounding States their right of intervention. It is this which makes the Italian Question a European Question. If the Italians were merely oppressed by their own Governments or enslaved or trampled on by their own nobles or their own priests, we should have no right to interpose; . . . for nations which cannot conquer justice or freedom for themselves can seldom maintain it when conquered for them and presented to them. But the case is altogether altered when a petty tyrant is upheld by a foreign and colossal Power: the people of Modena or Parma can no more be expected to contend against the Austrian Empire, or the people of Rome against the French Republic, than Cracow could be asked to make good its rights against the Czar of Muscovy. . . . In Sicily all classes, even the priests, are in opposition to the Government. In Naples, notwithstanding the support of the lazaroni, the King and his minions would be upset tomorrow but for the ingrained conviction that the insurgents would have to deal not only with Neapolitan but with Austrian legions. Of Rome occupied by France, and the Legations occupied by Austria, we need not speak. Parma and Modena are mere Satrapies of Vienna; and Tuscany, whose Sovereign was once beloved by his subjects, has sunk into the same condition. Austria has now military occupation of the whole Peninsula, except the city of Rome, where the French keep a detested Ruler on his throne, and Naples, which Austria governs not by actual occupation, but by a threat of occupying it if necessary. If Louis Napoleon were to retreat from a false position—which we most urgently advise—and so place himself *rectus in curia*, the occupation by Austria would then be complete, and the case would stand revealed to Europe in all its flagrancy.

The Economist

May 24, 1956

the Ministry's list of undesirable characters in the profession. The big step forward, however, will be taken on September 30th, 1957, when Part III of the Education Act of 1944 will be brought into force. After that date all independent schools will have to register, and if they are found upon inspection to be unsatisfactory they may be closed down. A preliminary inspection of all independent schools has already been carried out in order to give the Ministry some idea of the standards of private schools, and brief reports have been issued to the schools to give them an idea of what will be required. It would be interesting to know what report was given of the various schools run by the B.Sc., Ph.D. (Leicester gaol).

Nationalism on the Wide Screen

THE display of political sensitivity at this year's Cannes film festival was unusually intense. The Japanese obtained the withdrawal of the British film "A Town Like Alice," the Germans objected to French and Polish films which involved concentration camps, and the Russians in turn blackballed a German film about reunification, with the result that the West Germans withdrew from the festival. And a kindred spirit apparently influenced the decision taken a few days ago by the government of India, which, proclaiming the not unreasonable intention of

sparing the sensibilities of Africans, has firmly banned all films which reveal that much of Africa is jungle—including even "The African Queen," a saga of hardship in which Africans scarcely appear.

There is, of course, a silver lining to all this international pettiness. Films can usually count on getting some free publicity when somebody protests about them. And at the last Venice festival the American "Blackboard Jungle," a searing story about a tough East Side New York school, won fresh fame when the American ambassador obtained its withdrawal. "Rejected, Cannes Festival," may soon become as good a label in the film world as "Rejected by Royal Academy" has sometimes been for paintings.

Not all politics or social criticism has yet been banned from Cannes. This year most communist entries followed the party line as best they could in these troubled times. One of them was a remarkably vicious attack on the Polish wartime Resistance (which has meanwhile been granted "rehabilitation" by the Warsaw bosses). Hollywood, uninhibited either by ambassadors or by propagandist considerations, produced two more stark versions of the seamier side of American life, including a realistic study in dipsomania, its third successive effort on this theme at Cannes. And when it came to the prizegiving the judges did their best for co-existence. Shakespeare was there to help them out; and their choice of the Russian version of "Othello" for first prize won the respect of connoisseurs of diplomacy as well as of the many critics who enjoyed its colour even if they could not understand a word of its dialogue.

A further serious feature of these investment programmes is that they commit a whole industry to a certain programme. If the estimate is wrong the repercussions are far more serious than if one firm in an industry misjudges its future requirements.

These vast and vague sums seem to be arrived at by a series of discussions between the industries, their parent Ministries and the Treasury. This is unsatisfactory in several ways: it gives the Treasury a job for which it was never intended; there is no control either by the market or Parliament and yet the eventual decisions seem to be open as much to political as to economic influences. We know from the history of the coal industry alone that the forecasts made by these industries can be very wrong.

Once the amount allowed to an industry has been decided it will now be found by direct advances from the Treasury. I believe the new method of direct below-the-line advances for capital purposes will have some disadvantages though it will ensure uniformity (up to now various rates of interest have had to be paid by different industries—the Atomic Energy Authority paying nothing at all). The nationalised industries are not services like the Health Service, nor social commitments like pensions. There is no economic reason why, say, gas should be sold below its true price, though there may be a case for subsidising certain gas users. Yet to advance the Gas Board's money out of taxation at a low rate of interest is to subsidise

the industry. Nor is it clear that the new arrangements are necessary to stop inflation. The Chancellor's argument has been that the nationalised industries were always going to the market at the wrong time. Why? Why could not they time their issues like other firms?

Some consideration might be given to five suggestions. First, in spite of arguments to the contrary, there is still a good case for splitting some industries into smaller units—if only to avoid "mass mistakes." Secondly, industries such as the electricity industry which could be extremely profitable should be put into the market not sometime, but very soon. If it is then desired to subsidise certain consumers, that can be considered as a separate issue and financed by taxation through the Treasury. Thirdly, so long as subsidies are paid directly or indirectly to these industries or their consumers, they should be financed from specific taxes earmarked for the purpose. I know this would be difficult and would have little "real" or economic effect. It would, however, bring home to people the situation of the nationalised industries; the fact that if we want to expand and improve them we have to find the money and that if we want "cheap" coal, for instance, somebody has to pay. It would make it clear that they differ from the social services. Fourthly, the industries should be allowed to raise part of their capital in ordinary shares either from the market or the Government. Lastly, and most important, an investment board should be established. This would review the capital needs of all nationalised industries before their proposals are put before the Treasury. It would relate them to the savings available. It would examine them in relation to one another and in relation to what the private sector was doing (coal and atomic investment should clearly be related to investment in oil). It would be an expert and non-political body drawn from men engaged in varying types of business. Cuts or increases in each programme would be recommended to the Treasury, with whom the ultimate decision would lie, subject to confirmation by Parliament, to whom the board's advice would be most valuable.

If the first four suggestions are considered impossible, I do suggest that an investment board merits serious consideration. Without some such a board the methods of reaching decisions will still be unsatisfactory even with a Select Committee which, after all, will be composed of very busy amateurs, influenced by political considerations and reviewing decisions already made, which are very difficult to reverse.—Yours faithfully,
House of Commons J. GRIMOND

Union Boss

SIR—Your article under the above title (May 12th) struck many nails straight on the head, as I can testify, having lived through the period during which "Ben" has lived, and having been

closely associated with national officials of the trade union movement for the thirty-five years during which I have been a national officer of the Labour College movement.

Your contributor's hammer, however, did bend one nail. If Ben was in any way closely associated with syndicalist shop stewards or trade unionists who were keenly interested in industrial unionism, it is unlikely that he went to WEA classes. He would go to the classes of the Plebs League and of the National Council of Labour Colleges. The great bulk of left-wing trade unionists in those days regarded the WEA as not merely a right-wing body but as a thoroughly orthodox body. Moreover, industrial unionists and syndicalists played an outstanding part in creating the Labour Colleges.

About the end of the First World War, the Government set up Commissions on Industrial Unrest and, in the case of one large area at least, the Commission ascribed the unrest partly to the educational work of the Labour College movement and recommended WEA classes as a suitable soporific! It was about this time, too, that Glasgow University started to do extra-mural educational work in order, many thought, to counteract socialist educational work on the "Red Clyde-side."—Yours faithfully,
J. P. M. MILLAR
General Secretary

National Council of Labour Colleges
Tillicoultry, Scotland

A Great Commander

SIR—In your review last week of "The Mediterranean and the Middle East," Volume II, you say that the British could have employed the 3.7 in. AA gun in the anti-tank role in the Western Desert long before Alamein, "But the generals ignored it." This last remark, though quite conventional, is untrue. Certain generals pressed hard for this gun for the anti-tank role and, failing it, for the Egyptian Army's 3 in. AA gun, but they were told that these guns were all vital for the defence of the Canal, the ports and base installations and could not be spared. Obviously, other people beside the army and its "generals" would have had a say in the allotment of these AA weapons—in fact, it might be expected that their claims would be given priority, however mistaken some may have thought them. And all this argument was long before Alamein.—Yours faithfully,
F. S. TUKER
Falmouth, Cornwall (Lieut.-General Sir Francis TUKER)

The Geological "Scandal"

SIR—Your article of May 12th refers to the providential existence of a stock of uranium concentrates in the United States at the time that it was decided to undertake the manufacture of the atomic bomb.

It is right that the foresight and prompt action of M. Sengier which

brought this about should be generally known. In 1938, he was told by Sir Henry Tizard that at Shinkolobwe the Union Minière had in uranium something that might be of very great importance. The Shinkolobwe mine had been opened for the production of radium, but when M. Sengier learnt of the probable importance of the uranium by-product he gave directions that the uranium concentrates should be packed in drums and stocked at Leopoldville. Early in the war, he thought it possible that a German raider would penetrate up the Congo, and he then gave orders that the stockpile should be shipped to the United States. Meanwhile the Shinkolobwe mine had been closed down.

After the authorities in the United States decided to proceed with the atomic bomb, it was proposed that M. Sengier should be approached and asked to reopen the Shinkolobwe mine for the production of uranium. Colonel, later Major-General, Nichols, and recently general manager of the Atomic Energy Commission, called on him at his hotel, and behind locked doors cautiously broached the subject. Before he had got very far, M. Sengier said "If you are looking for uranium, I have some on Staten Island."

This stock of 1,200 tons of concentrates assaying about 65 per cent U. O. had been cleared through the New York Customs. The officials who knew of the existence of this stock knew nothing of its importance, or the plans for an atomic bomb. If it had not been for the shrewd foresight of M. Sengier, and he alone was responsible, the atomic bombs would have fallen on Hiroshima or Nagasaki much later than they did. This story is typical of the far-sighted intelligence of the management of the Union Minière. In Katanga the relations between natives and Europeans are perhaps happier than anywhere else in Africa.—Yours faithfully,
Basingstoke J. G. BOWER

Animals as Council Tenants

SIR—The public conscience is becoming roused against a process which bears all the marks of tyranny. When citizens are turned out of their homes by a local authority they have no alternative but to become its tenants, which often means that the family pet cannot go into the new home. Many of the cases are heart-breaking and it is socially unhealthy for a community to be devoid of animal members, especially dogs.

Many protests have been made, and the time appears opportune for these efforts to be co-ordinated. The suggested aim is that tenants of local authorities should have the right to apply for permission to keep an animal and that they should be made aware of that right. Who will help me?—Yours faithfully,
GREY DE RUTHYN

Institute of the Dog,
114 Wigmore Street, W.1

Letters to the Editor

Under Public Control?

SIR—The proposed Select Committee to examine the reports and accounts of the nationalised industries may be a step in the right direction, but it is unlikely to go far towards solving one of the main problems concerning the industries: the problem of deciding what capital they should get and on what terms. Since the market was abandoned there has been no certainty about how we should decide the amounts to be invested in, say, respectively coal, railways and electricity. Probably there is no completely satisfactory way of making such decisions. But it is most important for this country that it should invest somewhere near the right amounts in the industries which we happen to have nationalised. We only have a limited amount of saving and innumerable calls upon it. We cannot afford to make gross errors by investing too much or too little in any one industry. At present it would seem that we are about to invest too much in the railways and too little in the roads, and

too much in gas and electricity compared with industry in general.

Some idea of the magnitude of the investment involved can only be gauged from the figures in the capital programmes of these industries. The coal industry is to invest about £800 million in collieries and related undertakings in 10 years. The railways have to raise from outside sources £800 million out of their £1,200 million scheme. The British Electricity Authority are to spend at the rate of almost £200 million a year for the next few years. £300 million is to be spent on nuclear power. In addition, considerable sums must be found for gas, the North of Scotland Hydro Board and airports. In fact, over one-fifth of our gross fixed investment is undertaken by these industries. This may be too much or too little (the Shell Company proposes to spend up to £1,000 million over the next three years). But it is extremely important for our economy, the more so since these industries take 30 per cent of our output of machinery and plant and employ more men than all central and local government put together.

Books & Publications

Complex Greatness

LINCOLN THE PRESIDENT: Volume iv., Last Full Measure.
By J. G. Randall and Richard N. Current.
Eyre and Spottiswoode, 432 pages, 45s.

PROFESSOR RANDALL'S death early in 1953 robbed Lincoln scholarship of its most distinguished exponent at a time when his life's work, his Lincoln biography, was still incomplete. He left behind him eight finished chapters (about two-fifths of the present, final, volume) and extensive notes, from which (together with his own considerable knowledge of the man and the period) Professor Current has been able to bring the story down to its tragic conclusion on the evening of April 14, 1865. The skill and authority that Professor Current has brought to bear on his theme goes far to assuage one's regret that Randall's own pen could not follow his hero to the end. Despite the dual authorship, this volume has a unity of treatment, an evenness of judgment, which would make it difficult, if not impossible, to detect the moment of changeover, had the clue not been provided by the introduction. This is a high tribute both to the "definitiveness" of Randall's findings and to the sympathy of Professor Current's execution.

Narrative was never Randall's forte. His great work acquires its stature, not as a story of an eventful life, but as a series of shafts sunk, as it were, into Lincoln's personality, as a politician, as a president, as a man. It is the penetration, the thoroughness, the determination to sift every fact to its historical base, the recognition of what was important, what trivial, in the Lincoln saga—this was what made Randall the most respected Lincoln scholar of his day. These qualities, fortunately, are those which can best survive the completion of the actual literary narrative by another hand. To say this is not to depreciate Professor Current's achievement, but to reassure readers that all that they found admirable in the earlier "Lincoln" they will find in this, which tells the story of 1864 and early 1865.

Well, almost all. For there are one or two points in the events of that electoral year that the book, excellent as it is, leaves as unanswered questions in the mind. For a final assessment of Lincoln's stature, for his claim to be a great moral, as well as political, leader 1864 is a crucial year. Randall and Current are realistic. An election, even a re-election, is politics, and politics is compromise. But did Lincoln, the would-be nominee, have to dismiss the loyal Blair, the Dean Acheson of 1864? Did Lincoln, the candidate, really think

his defeat would be disastrous for his cause (his biographers clearly do not)? If not, why was he so keen on a Republican sweep? Would not a healthy Democratic minority have helped his Reconstruction programme in Congress? Finally, was Lincoln warranted, in terms of his own concept of the Constitution and the issues of the war, in demanding the passage of the Thirteenth Amendment?

In a sense, it is a tribute to the clarity and honesty of Randall's and Current's treatment that these questions rise so sharply to the surface. Nor is their silence to be harshly charged against them. It is a mark of the richness and complexity of Lincoln's personality that when so much is laid bare so much still remains to be discovered. And no one can read these four volumes without a conviction that Randall has, time and time again, come nearer to the core of Lincoln's being than any of the host of writers who have been attracted by that strange, great figure.

Controversial General

MACARTHUR: 1941-1951, Victory in the Pacific.

By Charles A. Willoughby and John Chamberlain.
Heinemann, 427 pages, 42s.

TO some, General MacArthur is one of history's most brilliant generals and proconsuls, who was right about the Japanese in 1941, the North Koreans in the spring of 1950, and the Chinese Communists that autumn. To others, MacArthur is a masterful yet controversial man, grown egotistical with long years of command, opinionated, slow to take advice, intolerant of criticism, at the end dangerously disinclined to follow guidance from anyone.

There is no common ground between two such divergent views. The appraisal of his mentor by General Willoughby (with the assistance of John Chamberlain) will reach most readers with their mind made up already for or against the hero of Bataan, Hollandia, and Inchon. As General MacArthur's intelligence chief and companion of long standing, General Willoughby makes no effort to chart an impartial course; his record is involved with that of MacArthur. He gives a devoutly favourable account that will help document the position of MacArthur for his partisans—while doubtless infuriating his critics. The book that can strike an impartial balance on this controversial man apparently is still to be written.

This is not a GI or Tommy Atkins

THE ECONOMIST, MAY 26, 1956

picture of war; it is a headquarters story, and as such it is concerned with the strategic and politico-military connundrums that do not beset lesser cogs. In General MacArthur's case, it was the political aspect that finally caused his downfall. Even so, in his best days, the man with the corn-cob pipe and gold-braided cap emerges as a magnificent fighter.

The Willoughby-Chamberlain account persistently attempts to whitewash everything the General did, to refute every hostile charge, and particularly to make his dismissal as America's Far Eastern Commander seem the unfortunate outcome of a personal vendetta against him by the President and the Joint Chiefs of Staff. In this effort, the story wears thin for anyone not prepared to accept the thesis that MacArthur charted only the successes while someone else always engineered the disasters. The papers of the General and his staff that comprise perhaps half the book are sometimes interesting, often boring, occasionally electrifying. But they are consistent in presenting one side—the MacArthur side—of a picture that has many sides.

The final estimate of MacArthur's latter day role hinges on the answers to certain key questions. More than one set of answers is already available, but these are General Willoughby's:

Did MacArthur cross the 38th Parallel into North Korea on his own initiative? No, says General Willoughby; the United Nations on October 6th voted approval of the crossing and the General received "definitive orders to move north."

Was MacArthur surprised at the Chinese entry? No, says General Willoughby; he knew the new enemy's capabilities and guessed his intentions. MacArthur "had to take steps to force the enemy to tip his hand" by continuing toward the Yalu. Either Washington or the United Nations could have stopped him at any point "if they had taken the mounting Chinese threat seriously," but each "preferred the opiate of wishful thinking" that Peking would not act. (Another version, not General Willoughby's, is that MacArthur took a calculated risk that he could bluff the Chinese out of fighting in North Korea and failed.)

Why was the Eighth Army overwhelmed in North Korea? MacArthur's strategy was not at fault, says General Willoughby. He quotes a headquarters report: "When the Chinese crossed the Yalu, MacArthur instantly ordered the bridges—six of them—destroyed by our air force. Within hours his orders were countermanded from Washington. Those bridges still stand..."

Finally, why was MacArthur fired? Mr Truman's reasons, according to General Willoughby, were MacArthur's public letter of August 27, 1950, emphasising the strategic value of Formosa; his letter of March 20, 1951, to Representative Martin about using Chinese forces from Formosa in the Korean war and saying "there is no substitute for victory"; and his offer to negotiate in

the field with the Chinese Communist General. But there was a deeper reason, says General Willoughby: General Bradley, chairman of the Joint Chiefs of Staff, felt that MacArthur "was not in sympathy with the decision to try to limit the conflict in Korea. The JCS had decided to avoid a third World War."

Lawrence in Sepia

THE DESERT AND THE STARS: A Portrait of T. E. Lawrence.

By Flora Armitage.

Faber, 334 pages, 25s.

THE "Seven Pillars of Wisdom" tells one major episode of T. E. Lawrence's life in the thundering language of the Prophets: "The Mint" records the other in tones that are sharper but no less vigorous. Lawrence liked, and demands, bold outlines and clear colours; his main characteristic is that he was compelling, both to himself and to others, so that even Mr Aldington, in the deflationary book he wrote last year, was willy-nilly compelled to use the violent purples and yellows of deadly nightshade. Miss Armitage, though she is perceptive, questioning and honest, and so catches an excellent likeness, is too restrained to get beyond a portrait in monochrome.

She never conveys one part of the essence of Lawrence—his quickness. Impulses and judgments "gushed out of him... and sometimes left the recipient gasping," once wrote Mr E. M. Forster. With her, nothing spurts or gushes; there is not a single slammed door or sudden lift of heart, and one wishes that she would sometimes stop tiptoeing about in carpet slippers.

Any biographer of Lawrence is up against odds. Apart from the books he himself wrote, there are already several lives, the wonderfully-edited "Letters" and the "Home Letters," as well as the posthumous snapshots by friends, who include three or four of the greatest contemporary masters of the English language. The competition is daunting, and there is no known till of unpublished papers by means of which to bypass it; every pickable brain has been picked. The one new element in Miss Armitage's book is its detachment. She sets herself the target of explaining Lawrence's well-known complexes, and she does this job, and deals out her praise and strictures, with a delicacy and impartiality that have greatly pleased all the Lawrence friends whom she consulted. This is no mean test of her capacity to convey his colossal impact on his contemporaries; she never knew him herself.

She has not written the major work that must some time be written because (contrary to a claim on the dustcover) she does not assess "the impact which he made on contemporary history." Nor does she attempt to set him in his place in English literature. She was sensible not to try, for the task will call for an intellectual range as huge as Lawrence's own, and to this she never aspires. Indeed, she lacks it to an extent that causes

her to make irritating little mistakes. Here and there her syntax quavers; approximately half her French quotations or titles are copied out wrongly, and there is one wrong attribution in her bibliography. Her publisher, usually impeccable in such matters, should have helped her over these small snags when they were handling so fastidious a hero.

Encyclopaedia or History?

THE SECOND INTERNATIONAL, 1889-1914.

By G. D. H. Cole.

Macmillan. Two vols. 1,067 pages, 70s.

AT some stage in the planning of his gigantic "History of Socialist Thought," of which this constitutes Volume III, Professor Cole must presumably have become aware of a crucial choice. Was his *magnum opus* to be a record—critical or straightforwardly expository—of the development and interaction of Socialist ideas, a book to be read? Or was it to be an Encyclopaedia of Socialism, a work of reference to be consulted?

Unfortunately the decision, whether consciously faced or not, was never resolved one way or the other. Trusting to an unrivalled expertise and a superlative ability to handle and tame unruly masses of material, Mr Cole tackled both jobs simultaneously. How far his title is a misnomer hardly appeared in Volumes I and II, dealing respectively with the more or less Utopian "fore-runners" and with the Marxist-Anarchist controversies; for during the periods in question it was indeed the development of ideas that constituted the main activity of Socialists. But in Volume III Mr Cole—and his readers—unmistakably pay the price of ambiguity. As a reference book "The Second International" is superb; it will be the standard authority for as far ahead as anyone can see. But the encyclopaedia has swamped the history. By geometrical progression, as Socialist and near-Socialist ideas spread and Socialist and near-Socialist groups become active in country after country, the material becomes increasingly unmanageable—or, at all events, impossible to infuse with any continuing sense of organic unity; a matter of industrial and political tactics in advance or retreat rather than of ideas, of particular and accidental circumstances rather than of principles.

"The Second International" is not, indeed, shapeless. It begins with two chapters on that singularly futile body the International itself; these are followed by national sections, lengthy for Great Britain, Germany, France and Russia, brief for a couple of dozen others, all covering roughly the same period from the 1880s to the First World War. A brilliant concluding chapter, providing the nearest approach to a unifying thesis, sums up the dominant issue of the period—that of Reformism versus Revolutionism—and explains both the confusion which obscured that issue and the effect upon it of national circumstances. In each section, social background and political framework are skilfully indi-

cated, while character sketches, always competent and sometimes delightful, give momentary life and colour to the story.

But too much of that story is a chronicle of blind-alley ventures, inconclusive industrial strife and party manoeuvres, and personal antagonisms, whose upshot has no perceptible bearing either on the Socialist thought, or on the institutions and problems, of our own time. Just possibly it may one day be important or interesting to someone to know what Socialist weeklies were published in the United States around the turn of the century, or who were Filippo Turati and Francesco Merlini; if so, here is the information, clearly and succinctly conveyed. But the possibility seems remote.

Mr Cole's next volume is due to cover the period from 1914 to 1939. Faced with the same relentless geometrical progression, he will surely be forced to revise his scale of operations; any well-wisher, either to the cause of effective scholarship or to Professor Cole personally, must hope that the revision will be drastic.

Queen Anne's Parties

ENGLISH POLITICS IN THE EARLY EIGHTEENTH CENTURY.

By Robert Walcott.

Oxford University Press, 299 pages, 18s.

MR WALCOTT writes that "Still another treatment of the party politics of Anne's reign would hardly be justified if it were not based either on new material or a significantly new approach." His new material is "every scrap of biographical data on some 1,200 Members of Parliament that could be collected over a period of some fifteen years"; his new approach is derived from Sir Lewis Namier, for whom he has the devotion of a disciple. In 75 pages of appendices he analyses members of parliament by occupations, representatives of government boroughs, party groups, the effects of the 1702 election and the composition of the Scottish contingent. His text of 160 pages is a sermon upon the appendices; in it he preaches the doctrine of a "multi-party framework," stresses the predominant importance of Court influence and anathematises those who have reduced the story to the dichotomy of the Whig and Tory parties.

Historians will be grateful for the painstaking research marshalled in the appendices. But the text is marred by the contempt Mr Walcott shows for the work of his predecessors, especially since he often attributes to them a crude dogmatism they never held, while ostentatiously calling attention to his own originality. Most historians, he alleges, agree that "a Whig and a Tory party were both organised on a national basis in the late 1670s... and that they have persisted with little fundamental change of identity down almost to the present day." A footnote emphasises that "this is the view of Feiling, Trevelyan and virtually every other historian." "We need," Mr Walcott

tells us, announcing his own discovery, "something besides the usual set of Whig-Tory co-ordinates. We need a Court-Country frame of reference."

This supplies Mr Walcott with his "general conceptual scheme" of four political segments. But Dr Feiling, writing thirty-two years ago, made just this point, though less crudely, explaining how in the 1690s the old line of division between Country and Court "crossed and zig-zagged with that of Whig and Tory." Mr Walcott is equally unjust in his accusation that Dr Trevelyan and Dr Feiling have overlooked the Court elements in their concentration on the parties. Again, in his statement that the dismissal of Harley "has never been satisfactorily explained or even described by historians," Mr Walcott has overlooked the three careful pages devoted by Dr Feiling to this episode.

Mr Walcott has slavishly applied the methods devised by Sir Lewis Namier for the study of the second half of the eighteenth century and has tried to force his master's conclusions upon the earlier and very different period. In Queen Anne's reign government interest was weaker, while the war produced social strains and posed general issues which made the period the forcing-house of parties. It is significant that in his concentration upon personnel Mr Walcott never considers the effects of the land tax. Ministers stormed the closet, but they also directed propaganda. Defoe, Davenant and Swift knew what they meant by Whig and Tory, terms which had more significance than Mr Walcott's "conceptual scheme" allows.

A Sting in its Tail

THE VIKING ROCKET STORY.

By Milton W. Rosen.
Faber. 244 pages. 21s.

ROCKETS bear the same relation to aeroplanes that wasps do to bees. Bees are busy, useful and essentially amiable creatures; if they occasionally sting their guardians there is no basic malice in their make-up. But there is a restless malevolence about a wasp that does not let it live at peace with anyone, and so it is with rockets. Whatever the purpose for which they are built, a rocket carries a terrible sting in its tail; a racing, scorching motor burning at temperatures of 5,000 degrees F., fed by inflammable, explosive, corrosive chemicals that are stacked, ton upon ton, above the motor.

Security has drawn a merciful veil over the heartbreak and tribulations of the men who work on guided missiles. Mr Rosen sadly explains that it all looks so easy when you do it on paper, where valves never freeze, gyros never drift and motors do not blow up in your face. The story of the first eleven Viking rockets is one of the few authentic accounts of the battle of wills between a rocket and its attendant crew; publication is possible because the Viking is a high-altitude research project, not a military missile, even though it is sponsored by the American Navy.

Mr Rosen was in charge of the Viking, and his book is made up from notes of progress and firing trials kept over the years from 1945, when his research group started its high-altitude work, to 1954 when the tenth and eleventh rockets were fired.

The Viking was like an elongated V2, 45 foot long and 32 inches in diameter. It carried a nose full of instruments and telemeters—for reading, recording and transmitting conditions up to 158 miles above the earth, the greatest height a Viking ever reached. Mr Rosen appears to regard the findings of those instruments with detachment, but he cared passionately, and to the exclusion of rest and sleep, how his proud rockets behaved when they carried them. Some would not leave the ground. Others were openly vicious. One broke a tail vane in flight and somersaulted at full power through the void above the proving ground, to the bewilderment of the radar crews tracking it. The most intransigent of the series tore free when it was on static test and roared away, cables trailing, on a disastrous unscheduled flight; another caught fire on the ground and turned the test site into an inferno. But some flew straight and true.

This is the kind of story that tomorrow's old men may tell their grandchildren as earlier generations told tales of sailing ships and battles with storm. It should be compulsory reading for those who carp at the slow development of military missiles, and talk of rockets to span the continents as if they should be delivered with next week's milk. Rockets are not easily tamed, and even when tamed are never trustworthy. As an example of American research methods, patient, painstaking, scrupulously thorough and fabulously expensive, the Viking is a superb example. But Mr Rosen never says what his Vikings cost, and the English reader regrets the omission.

Founder of Russian Power

PETER THE GREAT.

By C. de Grunwald. Translated from the French by Viola Garvin.
Douglas Saunders with MacGibbon and Kee. 224 pages. 21s.

M. de Grunwald, with his books on M. Alexander I and Nicholas I, has made himself an authority on Russian history of the first half of the nineteenth century. His *La Russie de Pierre le Grand*, published in 1953, goes back to the origins of the power which defeated Napoleon and was only for a time set back by the Crimean War. The present work shares the readability of its predecessors, which it owes in great part to the use of travellers' tales—Neuville, Manstein, Perry, Kritzhovich, Korb, and others—sometimes, perhaps, without sufficient evidence of their veracity. Russian historians are seldom quoted; and this, with the absence of any bibliography, must detract from the historical value of the work.

Nevertheless, if M. de Grunwald wears his scholarship lightly, it is un-

doubtedly there: in the description of "Holy Russia," with its Tsardom, Boyars, Voievods, and state church, so unlike their analogues in the France of Louis XIV; "Old Russia might pride herself on possessing the spiritual heritage of Jerusalem and Athens, but everything that the word 'Rome' suggests in organisation, discipline, and political order was lacking." For these benefits Alexis encouraged German infiltration, and Peter's "Great Embassy" (about which M. de Grunwald acknowledges "recent research done by Soviet historians") opened "a window 'on Europe'" by which a widespread but superficial culture came in from the West, and the New Russia acquired an army, a navy, a capital, and an empire, rivalling those of the West.

As for Peter himself, much still remains obscure:—What sort of man was he behind his eccentricities, his brutalities, his occasional heroisms? Was the impression he left on Paris, London, and Oxford (still very obscure) that of an educated savage, or of a poseur? What was the influence of his camp-wife Catherine, or the crime of his son Alexis? Was Menshikov the power behind the throne? We could do with more quotations from Peter's letters to Catherine "breathing tenderness, love, and devotion." Were all his aspects and aptitudes on the six foot eight scale?

M. de Grunwald rounds off the story with some account of Peter's successors, Anne and Elizabeth; with an Epilogue, in which he quotes the apocryphal Last Testament of Peter that Napoleon used as justifying his attack on Russia in 1812; and with quotations from the present rulers of Russia, who are doubtful whether to claim him as a patriot and reformer, or to execrate him as a Westerniser, an oppressor of the proletariat. But no one denies him the rare title of "The Great."

Books Received

A BOOK OF ENGLISH IDIOMS.
By V. H. Collins. Longmans. 271 pages. 10s. 6d.

A useful guide to 1,015 English idioms in most constant use. Their origin is given where known and an explanation. They are arranged alphabetically and there is an index.

EXCHANGES AND COMMODITY MARKETS.
Swiss Bank Corporation, London, E.C.2. Virtually all Britain's traditional exchanges and commodity markets have now been reopened; this small book briefly describes their functions.

YEAR BOOK OF LABOUR STATISTICS, 1955: Fifteenth issue.
International Labour Office, Geneva. London: Staples Press. 470 pages. Boards 36s. Paper 30s.

INTERNATIONAL REVIEW OF CRIMINAL POLICY: Nos. 7-8, January-July, 1955. United Nations, New York. London: Her Majesty's Stationery Office. 256 pages. 17s. 6d. \$2.50.

DOCUMENTS ON AMERICAN FOREIGN RELATIONS 1954.

Edited by Peter V. Curl. New York: Council on Foreign Relations. London: Royal Institute of International Affairs. 528 pages. 40s. \$5.00.

UNITED NATIONS

ECONOMIC SURVEY OF EUROPE IN 1955

An analysis of recent developments in the European economy and tendencies elsewhere affecting the economic framework within which European countries determine their policies.

Special attention is focussed on the longer term investment problems of both western and eastern European countries relevant to present-day policies. The closely related topic of labour market problems of western Europe is examined against the background of existing high levels of employment. 340 pages. 18/- (by post 19/5).

ECONOMIC SURVEY OF ASIA AND THE FAR EAST 1955

The regional economic situation as a whole is fully covered. Agricultural and industrial production, transport, trade and payments, monetary developments, and development planning and implementation are reviewed. In addition, detailed surveys of the economic problems and developments in seventeen countries of the area are given. 235 pages. 18/9 (by post 19/10).

For continued and current economic analysis . . .

ECONOMIC BULLETIN FOR EUROPE

ECONOMIC BULLETIN FOR ASIA AND THE FAR EAST

These Bulletins provide quarterly reviews of economic developments in the areas and contain articles of special interest. They are issued three times a year and supplement the annual Surveys.

A subscription to either Bulletin includes a copy of the relevant Survey. 22/6.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Rivalry Over Missiles

Washington, D.C.

MR CHARLES WILSON, the Secretary of Defence, who in the past three years has stimulated a great many controversies by impulsive remarks, has been engaged this week in calming a lively controversy stirred up by some impulsive subordinates. He has been singularly successful, perhaps to his own surprise, but the root of the trouble remains. This is that the missile, whether ballistic or guided, must be recognised as the major weapon of the future.

Controversy among the American armed services over the responsibility for these new and vital weapons is probably inevitable so long as it continues to be official policy to encourage each of the services to proceed with its own research and development and, in some cases, its own production for use—with the Defence Department itself exercising only moderate restraint in the way of co-ordination, rather than absolute direction. This policy came into existence when research into missiles was in its infancy. The reasoning was that active competition among the services would be a spur to speedy development and that, when satisfactory missiles come into being, from whatever source, then would be the time to determine which service should use them, and how. In Mr Wilson's words "we want the best missiles possible, and we want them used by the service which can use them best."

Unfortunately the separate services have not always felt that they could let action wait upon this persuasive reasoning. Weapons of war are not self-sufficient, but exist only as parts of whole systems. Thus, the sole purpose of the great aircraft carriers is to permit the most effective handling of the jet planes which they are designed to transport, service, launch and recover. The carrier with all its superb equipment was designed only when the Navy knew the general characteristics of the aircraft, then still on the drawing board, which would be completed at about the same time. The training programmes, the logistical set-up, the revisions of tactical doctrine—all these move along progressively in approximate unison with the various construction programmes. Conscious of this, the services have inevitably become as preoccupied with what is going to happen in the future as with what is happening now. At the higher levels, the several Chiefs of Staff usually express their views with tact, but at the lower levels there is less of this, and quite probably also less familiarity with the complicated problems which surround the simple facts of missiles.

Last weekend the press and the wireless were presenting

with great confidence the actual texts of "staff papers" which had been smuggled to them by some mysterious colonels with a view to getting them published. Some of these papers were extremely critical of the Air Force for reputedly reaching for larger and larger responsibilities; some were just as hostile to the Army for its own persistence in relying on the Nike (an anti-aircraft missile) when the Navy and the Air Force were at work on a superior missile capable of longer reach; others were savagely critical of the Navy for spending its money on "obsolescent" aircraft carriers (this being a familiar Air Force cry). A great many newspapers cheerfully printed these inter-service diatribes with little discrimination; and the more vocal Congressmen commented appropriately, one going so far as to threaten to cut defence appropriations unless the services spoke about each other more amiably.

Mr Wilson's first day of investigation wound up with an unusually stately press conference, attended by Admiral Radford, the chairman of the Joint Chiefs of Staff, and his four colleagues, and by the civilian chiefs of the services as well. Mr Wilson deplored any suggestion that the staff papers were more than individual expressions of opinion or that certain inevitable disagreements on policy had been set out in terms of service partisanship. He remarked sensibly that no weapon is permanently satisfactory, that no distribution of service functions and missions is more than temporary, and that the military establishment must adjust itself to constant change. The service chiefs, individually disavowed the published papers, and echoed Mr Wilson's statement of policy, with assurances that the country's military programme had their unanimous support; the uproar over these particular low-level staff papers was calmed.

★

It would be a mistake, however, to think that the whole question, particularly where the long-range missiles of the future are involved, can be disposed of so swiftly. Mr Wilson himself would say otherwise, for of all weapons the missiles seem to forecast the greatest changes in the shortest time. The Air Force continues to press toward the intercontinental ballistic missile by two separate routes and to continue experiments with its two existing long range air-breathing missiles, which must be recognised as promising a good deal in their own fields. The Army and the Navy are equally vigorous in their development work on an intermediate range ballistic missile which, the tech-

nologists say confidently, might prove capable of extension into the intercontinental range. There seems to be no intention of restricting either group of researchers, nor is there any visible restraint on experiments with shorter-range devices of the surface-to-surface category, and little on ventures in air-to-air, surface-to-air, and air-to-surface missiles, although it is perfectly apparent that rivalries will be developing in these fields, too.

Mr Wilson makes it clear that he is still learning, and it appears that he is waiting somewhat impatiently for a report from his new chief of missile affairs, Mr Eger Murphree, an efficient industrialist who has been in office only since the beginning of April and has hardly had time to reach conclusions on so complex a matter. There are those who think that ultimately a firm decision must be made on who will handle the great missiles, and that this time will come when one or another reaches so advanced a stage of precision that attention must be concentrated upon it. In brief, the major issue is very much larger than any of those raised in the somewhat immature staff papers which have just been hastily laid before a surprised public. And the questions which that issue presents will not be disposed of at a press conference, however deftly conducted.

It is unfortunate that this peripheral argument came along just as the B-52 intercontinental bomber was dropping an authentic hydrogen bomb. For here is a major advance in systems of weapons—a stupendously powerful bomb, now reduced to modest size for handling, delivered by a majestic new aircraft flying higher and farther and faster than ever a heavy bomber flew before. This looks like the last step in a series. There may be more shrinkings of H-bombs into smaller compass; there no doubt will be some adaptations of the great B-52 and combinations of the aircraft with an air-to-ground missile instead of a bomb, which would enable the B-52 to launch its charge from a greater distance than at present with less peril of detection or interception. But it seems very much as if the next big advance in bombing development may be a new missile rather than a new aircraft. And as the days of the manned bomber begin to look numbered, the pressure of the Air Force to assert its exclusive fitness to have the ultimate responsibility for missiles is likely to become more intense.

Senate Hopefuls

AS interesting as, and perhaps more important than, the victory of Mr Stevenson over Senator Kefauver in the Oregon election last week was that of Mr McKay over Mr Hitchcock in the fight for the Republican nomination for Senator. President Eisenhower's Secretary of the Interior, the man who has full responsibility for both the alleged "give-away" of the nation's natural resources to private exploiters and the favouring of private rather than public interests in the development of the country's hydro-electricity, will now be facing Senator Morse, one of the leading critics of these two Republican policies, in Oregon, the state where they have been most widely applied. Here therefore one great election issue is clearly drawn already. The Republicans are particularly anxious to oust Senator Morse, because he is the Republican who, by deserting to

the Democrats, gave them their majority of 49 to 47 in the Senate after the last election.

The neighbouring state of Washington offers the Republicans what they believe to be another good opportunity of gaining a seat in the Senate. There the Governor, Mr Langlie, a popular and proven vote-getter, has agreed, after long and prayerful hesitation, to run against the incumbent Democrat, Senator Magnusen. Another admirable Republican who has now been persuaded to stand for office is Mr Javitz, the Attorney General of New York, a state where the other elected administrative officials are Democratic. He is willing to try and defeat the respected Senator Lehman, and has a good chance of success, if there is any swing away from the Democrats this year. The Republicans are beginning to think that there may be; for a variety of reasons a Democratic Senate in 1956 no longer seems quite so inevitable as it did. Another state where the Republicans may pick up a seat is in Kentucky, particularly if they can induce Mr John Cooper, now Ambassador to India, to stand there again. An able statesman, he has won before in this habitually, but not rigidly, Democratic state. He was defeated last time only by the great personal popularity of the late Senator Barkley, and the Democratic party in Kentucky is now bitterly split by internal feuds.

On their side the Democrats also naturally hope to collect from Republicans some of the 35 Senate seats which are at stake. Seventeen of these are now held by Republicans, eighteen by Democrats; of the latter ten are safe in the solid south, while the Republicans can be absolutely sure of only five of their seats. But the Democratic plans to get outstanding candidates to run seem less far advanced than are those of the Republicans. And where the Democrats have an outstanding candidate, in Ohio, they are not all quite sure that they want him to win. For the Democrat who is trying to turn Senator Bender out of Mr Taft's old seat is the present Governor, Mr Lausche. He is a very successful independent who makes no secret of his regard for President Eisenhower and might even "do a Morse" in reverse should he be elected.

Farm Improvements

AN election issue which was flourishing only a month ago is already withering, although the Democrats will continue to tend it in the hope that it will still bear fruit next November. This issue is the farm depression, which is now not only less serious than it was but also apparently less influential politically. For the fall in farm prices has been checked since the end of last year, and in March and April there were noticeable upturns in the index. These are considered to be more than seasonal and to suggest that the improvement will be maintained. Even more encouraging, the gains are concentrated in livestock, and particularly in hog prices and farmers as a group draw about a third of their cash incomes from such sales. For what they are worth as political indicators, recent elections in rural areas, notably in Nebraska, have given no further sign of the trend away from the Republicans that was discernible in Minnesota in March.

All of this has made the Republicans in Congress less anxious to vie with the Democrats in cultivating the farmer,

regardless of the cost to the taxpayer, and more ready to co-operate with the President in finding an answer to the agricultural problem which will offer a long-term solution, rather than a temporary one timed to coincide with the election. As a result the complicated Farm Bill which is now on his desk is an improvement over the one which he vetoed five weeks ago. It appears to be acceptable even if far from satisfactory. The Bill gives Mr Eisenhower his soil bank, which will recompense farmers for withdrawing land from surplus crops next year, and it does not contain the high, rigid price supports on which Congress insisted last time. A comparatively innocuous compromise was reached on the question of higher price supports for feed grains, which gave rise to the greatest controversy in the debates on the present Bill.

Unfortunately, however, the improvements did not extend to the clauses affecting agricultural producers in other countries, in spite of the pleas of the State Department. The Secretary of Agriculture is directed to dispose of about 5 million bales of surplus cotton on the world market even if this means, as it presumably will, that the cotton must be sold at prices below the domestic support level. As a result the United States will be accused of dumping its cotton, and its rice as well, if the Secretary of Agriculture uses the authority he is also given in the Bill to set up a two-price system for that commodity.

Lower Air Fares?

THE Civil Aeronautics Board, the government agency which regulates the routes, flight schedules, and fares of American airlines, announced last week its general support for the new low-cost air service across the Atlantic proposed by Pan American World Airways. Because of the need for landing rights and navigational aids from foreign governments, the board has allowed the American international airlines to adhere to fares set by the International Air Transport Association, although these have been frequently criticised in the United States as the products of price-fixing agreements contrary to the anti-trust laws. When the CAB reluctantly accepted a general 10 per cent increase in first-class trans-Atlantic air fares last winter, it said that it would not allow these higher rates to continue after September 1st unless agreement had been reached by then on lower tourist fares. It may hope, by reiterating its approval of lower fares now, to support both Pan American and Trans World Airlines when they argue their cases at the meeting of IATA, which begins in Cannes on May 29th. The board may also hope to mollify its vociferous critics at home, who are as displeased with the way in which the agency has discharged its domestic responsibilities as they are with its toleration of IATA agreements.

Under pressure both from Congress and from other branches of the Administration, the CAB has just been persuaded to hold a full-scale inquiry into the "reasonableness" of the fares charged by the 13 major long-distance airlines operating within the continental United States. Those who maintain that the agency has been lax in fulfilling its duty to the public, and unduly under the influence of the aviation industry, have been particularly incensed

by the high and allegedly excessive profits earned by the airline companies in 1955, which they feel would justify the CAB in insisting on lower fares. The contention of the airlines is that, if the necessary expansion of the industry is not to be retarded by lack of funds, every penny of these profits is needed to pay for the hundreds of jet airliners and other expensive new aircraft now on order.

It is ironic that this blast at the CAB should have come after a year during which the board has deliberately encouraged fresh competition within the industry, invariably against heavy opposition. Subsidies paid to both domestic and international airlines have been progressively reduced, and of the 13 major domestic airlines only two still qualify for government assistance. Because the financial position of the airlines is so much stronger, the board has felt able to allow more competing airlines to operate on parallel routes, without the fear that this would lead merely to an increased need for subsidy. Moreover, while "passing around new routes like candy," the board has at the same time favoured the smaller airlines, including those which do not operate on a fixed schedule.

Decision in the West

FROM A CORRESPONDENT IN SAN FRANCISCO

CALIFORNIA is the arena for an exciting and possibly decisive battle in the contest between Mr Adlai Stevenson of Illinois and Senator Estes Kefauver of Tennessee for the Democratic presidential nomination. The Californian primary on June 5th ends a series of state elections in which delegates are chosen who are pledged to support one or another presidential candidate at the party's national nominating convention in August. It will be the last clear test before that convention of the grass-roots popularity of the two men who so far head the list of possibilities for the Democratic nomination. But Governor Harriman of New York is becoming a close third: he has not entered any primaries but he has been speechmaking through the western states, just at the time when the primaries in Oregon and California are drawing attention in that region to his two rivals.

For Democrats California is a kind of political Gettysburg because the state now ranks second only to New York in its number of voters and because its political allegiance, while tending to the Democratic side, is far from certain. Mr Stevenson's key backers say he cannot lose the nomination if he wins in California, while Mr Kefauver's campaign directors say he cannot win the nomination if he loses in California. Both believe the contest will be close and both expect the outcome to be influenced by the results of the primary elections in Oregon last week and Florida next.

The results in Oregon, a neighbouring state, could be the toppling domino that tips Florida and that in turn tips California. That at least is what some of Mr Stevenson's supporters believed: and Mr Stevenson won handsomely in Oregon. But Kefauver men would not concede that if the Senator lost in Oregon he would also lose in pivotal California. The Oregon ballot paper was as long and complicated as a Copenhagen sandwich menu and, in order to vote for either Mr Stevenson or Mr Kefauver, the voter had to write his candidate's name on the ballot. Kefauver sup-

porters argue that such confusing procedures make unreliable election barometers.

The campaign between Mr Stevenson and Mr Kefauver in California has been long and hard fought. Both have been up and down and back and forth across this thousand-mile-long state, off and on since the middle of February, shaking hands and talking themselves to the verge of physical exhaustion. Indeed, primary elections today demand more time and energy from the contenders than did presidential elections fifty years ago, and the successful candidate may well be worn out before the real campaign begins.

Mr Stevenson's formidable organisation in the state, made up of most of the best-known Democrats there, seemed to have California pretty much in hand when the party held its state convention at Fresno in mid-February. The huge hall was mobbed with men wearing Stevenson badges. Senator Kefauver seemed almost to be pitied for having to speak before such solid opposition. But his candid, off-the-cuff speech on such controversial and important issues as civil rights for Negroes made a much better impression on the delegates than Mr Stevenson's prepared speech. There was no doubt that Mr Kefauver "stole the show," but Stevenson supporters in California were not seriously worried until his decisive and unexpected upset by Mr Kefauver in the Minnesota primaries in March.

★

They then conceded that Mr Stevenson was no longer the front-runner in California and recognised for the first time that personalities, not principles, win popularity contests and that these are what primary elections really are. Mr Stevenson was persuaded that he was barking up the wrong tree in blasting Republicans and for the first time, at Los Angeles, he turned on his fellow Democrat, snapping sharply at Mr Kefauver for accusing him of being the candidate of the big city "bosses." After Minnesota, Mr Stevenson was also persuaded that he would have to imitate Senator Kefauver's "folksy" style of campaigning if he wished to stay in the race. It was here in California that the "new" Stevenson was unveiled. He developed the art of handshaking and perfected the automatic smile. He remembered to stop by the hotel scullery and thank the cooks. And every time someone draped a Mexican serape over his shoulder or jammed a sombrero on his patrician head, the new smile lighted as automatically as the photographers' flashbulbs.

Wherever Senator Kefauver had been, Mr Stevenson has also been in California, short of sleeping in the same bed. He has eaten his way through miles of spaghetti in California's Italian districts, dined on enchiladas with the Mexican field hands in the Imperial Valley, and stumped the "cow counties" in a Stetson hat astride a borrowed horse. As the California campaign moved into the home-stretch, Mr Stevenson was noticeably more relaxed. He was learning to handle himself better and his henchmen claim he has grown to enjoy the ordeal—which seems to "come natural" to his Tennessee rival in the coonskin cap. Perhaps this explains Senator Kefauver's continuing hold on the ordinary people, particularly in the rural areas. Even his closest admirers in California are at a loss to understand what has kept him up in the race, apart from his easy, natural, unaffected approachability. Certainly his campaign has lagged far behind that of his rival in organ-

isation and funds, although here and elsewhere he is said to have had help from Zionist groups.

The whole thing has been a repetitious and wearisome road show, almost devoid of high-level, policy-making speeches and showing little real difference between the candidates on basic issues. It is not surprising that, while there are still more Democrats than Republicans registered as voters in California, total figures for both parties are substantially below those for the last general election. The country at large seems to be taking more interest in this decisive election than do the people who will vote in it.

Steel Prepares for the Future

WITH their mills operating at capacity and the security provided by full order books for most products extending well into the second half of the year, the steel makers can afford to avert their eyes from the automobile industry, which is now producing only two-thirds as many cars as last year. But part of this prosperity is due to purchases made by customers in anticipation of trouble within the steel industry itself when the present contract expires on June 30th and of almost certain price increases after that. The steelworkers' union has already announced that it will demand at least four things this year: a substantial wage increase, supplementary unemployment benefits, extra pay for weekend work, and an extension of the employers' contributions to the social insurance programme. Since the union's great rival, the United Automobile Workers, did rather better than the steelworkers last year, and secured the first foothold on the ladder to a guaranteed annual wage, there is little doubt that the steelworkers will pitch their demands high this year and will maintain them very strongly. Indeed, both sides have already given a definite impression of intransigence: the union has proclaimed a readiness to strike if necessary to secure its demands; and the employers, by giving formal notice that their contract with the union terminates on June 30th, can now legally and collectively withstand, by declaring a lockout if necessary, a selective strike by the union against any one producer.

In the midst of this universally pessimistic approach to the steel wage negotiations, and the gloom seeping in from the motor industry, it is encouraging to see the confidence with which the steel producers are planning to expand capacity. The latest example comes from the Kaiser Steel Corporation, which announced this week that it would increase the annual capacity of its steel mill at Fontana in California by nearly 500,000 tons, or 40 per cent. At present west coast steel mills can supply only half of the region's growing demand.

Earlier the United States Steel Corporation announced what is said to be the first really long range expansion programme ever undertaken by a major American steel company. It calls for an increase in capacity of an average of one million tons a year for the next ten years, at a total cost of over \$1.5 billion during the period. This expansion in physical plant is being accompanied by an increased emphasis on the side where the steel industry has been weakest—research. The company plans to carry out an extensive programme of research at a special centre into new uses for steel, with emphasis on products made by coating

The metal that thrives on punishment

Steel serves you better when manganese is added

—because the harder it works, the tougher it gets

EVER WATCH a power shovel bite into earth and rock? And wonder how the teeth of the steel bucket can endure such punishment? The amazing answer is that the teeth not only endure such treatment—they actually get harder because of it!

MANGANESE HOLDS THE SECRET—The story behind this remarkable steel is the unusual metal called manganese. The hundreds of thousands of tons of manganese required each year by steel and other metal-making industries are obtained by refining huge quantities of ore that come from mines in widely scattered points across the face of the globe.

ADDED TO STEEL—All steel contains manganese. A small

amount "cleanses" molten steel and removes impurities. A larger amount of manganese makes the steel tougher and stronger.

FROM ORE TO ALLOY—Transforming raw ores into a variety of manganese alloys for the metal-producing industries is one of the many important jobs of the people of Union Carbide.

steel with plastics or aluminium and on the production of better vitreous enamel coatings for the steel sheets used in the building trade. More attention is to be given to fundamental research, as well as to the more practical problems of reducing blast furnace costs, and of producing alloy steels which can withstand the ever increasing temperatures encountered in the aircraft industry.

Better Living on Show

FROM A CORRESPONDENT IN NEW YORK

THE First International Home Exposition, which opened on May 12th at New York's new Coliseum, was not so gaudy an affair as the annual automobile show at the Waldorf Astoria hotel. But the resemblance was close enough to suggest that the building industry is using the same techniques as the motor car industry to attract customers—new styling for houses, wider advertising and a concentrated effort to make a family's present house seem out of date; and both are doing it for the same reason—to expand markets at a time when the demand for their products seems at last to be declining. Entitled "Showcase for Better Living," the "biggest ever" exhibition gave thousands of New York apartment dwellers a look at the latest types of suburban homes, four of which were erected inside the Coliseum, complete with garden fences as well as living rooms. Elsewhere in the vast hall, makers of every type of home furnishing, from book cases to air conditioners and complete kitchens, displayed their wares with enough spotlights, music and pretty girls to please a Hollywood director. Behind all this fanfare were months of solid research by the companies which make building materials, home furnishings and electric appliances, as well as by the builders themselves. A phenomenon of recent years is the rise of the large construction company building as many as 250 houses a year which can afford to do careful research into new designs and methods.

With the postwar need for shelter largely met, and sales of new houses dropping markedly in the past year, the industry is looking for ways to convince people that they need bigger and better houses, or to persuade them that they should modernise their old ones. Market surveys indicate that in homes, as in cars, the American public is strongly interested in change. Two-thirds of those questioned in one recent survey selected an ultra-modern house as the one they would like; hardly anyone wanted a conventional design. Surveys also show that dissatisfaction with existing housing is very great. About 40 per cent of the families with children would like to move, either because their present house is too small, or because they do not like its appearance.

By emphasising new designs and new colours, the building industry hopes to increase the number of families which are sufficiently discontented with their present houses to buy a new one. The home show featured kitchens in "confection colours," bedrooms with sliding glass walls on the garden side, extra bathrooms and dressing rooms for the women of the house, game rooms and studies for the men. Long queues of viewers indicated that these were highly saleable features. Of course, not all who would like these facilities can now afford to buy a new house and a large share of the exhibition space was taken by companies advertising products that will modernise an older one, such as

new kitchen appliances and telephones coloured to match any interior. Other exhibits showed how to repaint, re-wire or build additions to a house at low cost; in this connection, a line of prefabricated swimming pools was displayed by Miss Esther Williams, the film star. But the ultimate aim of the builder, and his customer, was kept clearly in view: a completely modern "wonder house," like the one in the centre of the General Electric Company's exhibit, with every new appliance built-in.

Some observers believe that the increasing emphasis on styling and marketing, and also the tendency to build the house around its electrical features, will eventually mean that the big appliance makers will participate directly in the building industry. The Frigidaire division of General Motors recently displayed a completely prefabricated kitchen, walls and all, ready to be lifted into place and some of General Electric's exhibits in New York suggested the same line of thinking. If, as many builders expect, the rate at which new houses are begun rises to 1½ or 2 million a year, from the present rate of just over 1 million, by the nineteen-sixties, then such prefabricated interior units can probably be mass produced to the advantage of both the builder and the appliance maker. And equally important, they can be advertised nationally under brand names. Then, it may even be possible to "trade-in" a room of a house for a new model, as people now do with cars.

This month's show at the Coliseum did not go that far; it was only the beginning of a trend. But it did show the extent to which the house builder has changed from a construction man to a merchant. To most Americans, a house is no longer an investment but a purchase. As marketing techniques are developed, housing seems sure to become—if it is not already—the next great industry in the field of consumer durable goods and one which may come to rival the automobile industry in basic importance.

Insurance for Reactors

DURING the hearings held by the Joint Congressional Committee on Atomic Energy last week it became clear that both a majority of the committee and the Atomic Energy Commission advocate some form of government insurance against accidents in nuclear power reactors. The development of atomic energy by private enterprise has raised a host of new problems for the insurance industry. Most of these can be solved by the private insurance companies themselves, but there is one risk against which they still feel unable to offer full protection. This is the possibility of a reactor getting completely out of control and showering deadly radio-active materials over a wide area, like the "fallout" from an atomic bomb. This has never happened, and the chances of its doing so are remote. But if it did happen, particularly in one of the new plants being built in populated districts, the damage claims could easily bankrupt both the operator of the plant and the firms which supplied the reactor and its components.

The insurance companies have formed pools from which they can provide third party coverage up to \$65 million on each reactor, but the electricity companies and equipment manufacturers reckon that claims against them might run to \$200 million or more. The Atomic Energy Commission

has therefore proposed that the government should make up the difference. It has set no upper limit to the government's liability, but there is a feeling in Congress that it should be restricted to \$500 million. The insurance industry, which had been hoping to solve these problems somehow without calling in the government, has accepted this suggestion with some reluctance. The alternative of a government reinsurance scheme is not popular, as the private companies have no wish to pay out huge sums and then wait for the government to reimburse them.

The urgency with which this matter of atomic insurance is now being discussed is largely due to mounting criticism of the slow development of private nuclear undertakings. One of the chief reasons for the delay is the insistence of the commission on the most stringent safety precautions, especially for reactors to be built in towns. But even the two schemes for which final permits have now been given are likely to be held up further unless the government does something very soon about insurance. If it continues to wait and see whether the insurance industry can work out a solution on its own, the whole programme may be retarded, and the opponents of private development for nuclear power would have strong support for their renewed efforts to get the government to reassume the leading role.

Cutting Down Big Jim

Montgomery, Alabama.

NEXT month Mr James Folsom, who had won the Governorship of Alabama for the second time in 1954 with more votes than his six opponents combined, was thoroughly trounced in the state election for membership of the Democratic National Committee, the party's central organisation. The giant killer—"Big Jim" Folsom is physically massive—was a State Senator, Mr McKay, a political unknown until he moved a resolution in the legislature "nullifying" the Supreme Court's decision against racial segregation in schools. The Governor paid for his temerity in dismissing this gesture as "hogwash" and "baying at the moon" and for refusing, with one last minute exception, to sign any Bill aimed at circumventing the Supreme Court. Mr Folsom is an incorrigible vulgarian and a rambling demagogue, with lax administrative habits and enormous stockinged feet dangling out of the windows of his official black Cadillac. But in Alabama, a one-party Democratic state where politics are highly personal, he is also the main force for moderation and sanity on racial questions.

Two factors laid Mr Folsom low, the times and his own personality. His political genius, like that of the early Populists sixty years ago, lies in his ability to identify himself with the aspirations of the poor of both races. His success in the 1954 election was the high water mark of the reaction against the traditional leadership of the state Democratic party by the "bourbons," the gentry of central and southern Alabama. This area is known as the Black Belt because of the exceptionally fertile soil and has a very large proportion of Negroes. It is being rapidly depopulated because of the mechanisation of cotton farming and the replacement of many of the cotton fields by enormous cattle ranches. Despite this the "bourbons" have by and large managed to cling on to political power because of their historic alliance with the "big mules," the industrialists of

Birmingham and other cities in the north of the state, and because of the failure of the legislature to redistribute its seats according to the changes in population.

Unfortunately Mr Folsom's eccentricities of character and casual, disjointed methods of government contributed to the rapid falling away of his support both during his first term from 1947 to 1951 and his present one; in Alabama a Governor cannot serve again without a four year interval. His actions in office disillusioned many of his backers, and the growing bitterness over racial questions since 1954 alienated the "red necks," the poor whites whose only superiority over the Negro is the colour of their skins. The riot over the admission of a Negro girl to the state university and the Negroes' boycott of the buses in Montgomery gave the "bourbons" a splendid chance for a comeback. Under cover of the racial issue they outmanoeuvred the Governor in his struggle for a constitutional convention, which should break their power by abolishing their rotten boroughs. They organised the Central Alabama Citizens Council, whose purpose was to drive from public life all possible leaders of a moderate movement.

★

It would be a mistake to paint the Alabamian political situation in uniformly sombre hues. Senator Lister Hill, who has a thoroughly progressive record except for formal votes on civil rights for Negroes, has been nominated for another term, without condescending to campaign against his only opponent, a splenetic admiral backed by the extreme segregationists. The Central Alabama Citizens Council run by the bourbons has been acutely embarrassed by the uninhibited racism and anti-semitism of its imitator in North Alabama, which is headed by Mr Ace Carter, the voice of the industrialised "red necks," and the two organisations are now tearing each other apart. Finally, whatever Democrats in the state may do, the machinery of government there will remain for the next two and a half years in the unsteady but also unbogged hands of Governor James Folsom.

SHORTER NOTES

The Secretary of the Treasury has officially informed Congress that a balanced budget now seems certain for the fiscal year which ends on June 30th. As a result of the "upsurge of prosperity in the nation," the estimate for receipts, mainly from taxes, has gone up by \$3.2 billion since last January to \$67.7 billion—some experts think this is still too low—while the estimate for expenditures has gone up only \$1.6 billion; the additional outlays are entirely for farm price supports and defence purposes. The probable surplus is now officially put at \$1.8 billion, but this is not yet considered enough to justify a reduction in taxation.

Singapore's Smeared Canvas

FROM OUR CORRESPONDENT IN SINGAPORE

SO far the reaction in Singapore to the breakdown of the London conference has not gone far beyond mild expressions of regret. It is true that the *Singapore Standard* attacked Mr Marshall from the 15th onwards; but this represents a continuation of editorial policy more than an expression of popular opinion. The general public is merely confused. As one editorial puts it, "The Singapore political picture is simply a smeared canvas."

It is, however, obvious that the potential sources of major disturbances have all been in London and that nothing much will happen until they all return. What, however, will happen then? The fact that Mr Marshall, on the 18th, announced his intention to resign is not taken as a final decision by Singaporeans who have heard similar announcements at fortnightly intervals ever since he took office. It can fairly be assumed that he will waver on this point, more especially if the Labour Front should re-unite. It will no doubt be the object of his friends to represent him as a martyr in the cause of freedom. Plans are already on foot, it is said, to make his return a "Day of Mourning," with 90,000 trade unionists staging a token strike. The Labour Front Secretary, Mr Keng Ban-Ee, has already hinted at the public protests which may assail "our colonial masters." Demonstrations such as these might well go to the head of Mr Marshall who, in any case, has more sense of drama than of balance. His taste for tragedy is one of the less predictable elements in an unstable situation.

If the People's Action Party were to join with the Labour Front in general protest against colonialism, the Communists would have their chance to create chaos. But co-operation has been made all but impossible by the open breach between Mr Marshall and Mr Lee Kuan Yew. The latter remarked during the conference that "Never in the history of colonial evolution has so much humbug been enacted in so short a time by so erratic a leadership." With comments such as this on record, he cannot readily join in an effort to equip Mr Marshall with the halo of martyrdom; and the Chief Minister, on his side, has already complained of being stabbed in the back. This need not prevent PAP's

supporters from creating disorder on their own; but that is not what Mr Lee Kuan Yew wants. His policy is to force on another general election, discrediting Mr Marshall beforehand. He is therefore in a dilemma, unable to make Mr Lennox-Boyd the villain without making Mr Marshall the hero. When he says, "There will be no violence," he expresses both a policy and a hope. No group (the Communists excepted) would gain from riots in Singapore; and even the less responsible elements of the PAP must at least recognise that they have heads to be broken and lives to lose.

The Liberal-Socialists consider that an immediate election would not be in the best interest of the colony (or of themselves). They calculate that Mr Marshall's resignation should enable them to form a government, attracting some of his former followers into their orbit. It seems just possible that they might secure office in this way. But the knowledge of this will incline Mr Marshall to withdraw his resignation. If there is to be a "caretaker government" pending new elections, he would rather head it himself, if only to thwart the ambitions of Mr C. C. Tan.

A significant feature of the last few days has been the steadiness of the market. Buyers have admittedly been few, but the price level has been little affected. If there is fear of Singapore becoming another Cyprus, it is not reflected in the price even of local industrials. This confidence may be connected, to some extent, with some of the political factors already described. It may be based on the knowledge that ample troops are available. It may rest on a belief that few of the Singapore Chinese are of the stuff from which martyrs are made. Many local Asians bitterly resent the white man's pretended or actual superiority. In the last resort, however, their resentment must take second place to their business sense. Mr Marshall complains of the Colonial Office, saying that it is "making possible the cry of 'Out with the British! Throw them into the sea!'" That such a cry may be heard is indeed possible. But whether it will in fact be heard the next few days will show.

Inside the Arab Legion

BY A CORRESPONDENT LATELY IN AMMAN

BEHIND closed doors on the outskirts of Amman, the Jordanian army—formerly the Arab Legion—is conducting a court martial of a hitherto unfamiliar kind. Two senior officers are being tried, and seven others are being held under house arrest, on a charge of attempting to assassinate a fellow officer from motives of personal rivalry. The dust raised when General Glubb was dismissed three months ago is still eddying uncomfortably around.

A major cause of this army unrest is uncertainty about the succession. General Glubb's immediate successor was his chief of staff, Major General Radi Innab, who is an ex-Palestinian of the requisite seniority but who has experience only on the police side. He is due to retire this summer and will probably do so, so that his colleagues are exercised less about his worth as a commander than by rivalries for his shoes.

The normal candidate would, no doubt, once again be his immediate successor in the office of chief of staff, who was an excellent and experienced officer, a graduate of the British Military Staff College at Camberley, enjoying the respect of senior colleagues. But—and here is where trouble started—within a month of this officer's appointment as chief of staff, he was "promoted" to a field job, command of the Arab Legion division; the reason for the inverted commas is that this post will no longer exist after the coming summer as the Legion is to be reorganised into brigade groups.

This manoeuvre made way for the appointment as chief of staff of a young man of thirty-four, also a graduate of Camberley. No matter how talented, intelligent and personally charming, an officer of this age, when suddenly promoted over the heads of senior men, is bound to make enemies. This able young man, Ali Abu Nuwar, is not rendered any more popular by his history, which is that, when military attaché in Paris, he won the ear of the King during a royal visit. General Glubb had wanted to retain him there until the summer of 1956, in order to keep an eye on French arms shipments to Israel, but the King, disregarding this consideration, brought him back to Amman as a personal ADC. Since Glubb's dismissal there have been few promotions, but such good jobs as have been going have fallen to Ali Abu Nuwar and his associates; it is with the attempted murder of one of them that the present court martial is dealing.

Latest Hatreds

There have long been other potential sources of rivalry within the legion—regional, as between officers from the highly parochial towns and tribes on the east bank; religious, as between Moslems and Christians; social and occupational, as between the desert Beduin whom Glubb liked and understood and the sophisticated townsmen of Palestine; political, as between those who favour alliance with the Egyptian bloc and those who hate the idea of subservience to Saudis. So long as the central command is weak, these latent hatreds are liable to erupt; they also supply demagogic politicians with splendid matter for speeches. The recent rioting which broke out in the largely Christian town of Madaba, in which three people were

killed, was at least in part due to the dismissal of Christian officers from the Legion.

Needless to say, these quarrels and changes of personnel have been accompanied by changes first in efficiency, and secondly, in strategic planning. It is no secret that King Hussein and General Glubb disagreed violently over the strategic possibilities of defending certain sectors of the promontory on the west bank of the Jordan in which Arab Jerusalem lies and which used to be part of Palestine. Glubb held, as any soldier outside the Arab world holds, that certain salients were untenable by so small an army. Now that the King has been able to appoint advisers of his choice, it seems reasonable to suppose that the Glubb plans have been abandoned—a supposition that must offer great temptation to Israel.

Observers who have talked with senior Arab officers believe that their weakness lies not in any deficiency in ability, but in a dangerous lack of realism arising out of inexperience. The extent of this inexperience is not generally realised. The strength of the Arab Legion is one division plus one armoured brigade, or roughly ten fighting regiments. Of these ten regiments, a bare two saw action in 1948, and they suffered nothing much worse than small arms fire—no artillery, no air attack. Since Glubb left, the Legion has started giving "special training" to refugees, and a "Woman's Branch" of the Jordanian army has been inaugurated. The effect of this latter may be social rather than military.

Relations With Cairo

The Jordanian Military Mission to Cairo does not seem to have produced any more than the pledges of "full co-ordination" that could have been anticipated. Having just got rid of their British commanders, the Jordanians were not likely to put themselves under the command of the Egyptians. King Hussein, who for the moment makes the most important military and political decisions himself, resents the efforts that Egypt has in the past made to subvert the Legion. But the series of pamphlets signed by "The Society of Free Officers" (printed in Beirut, and Egyptian inspired) seem to have ceased. A first glance suggests that Egypt had very little to do with the King's action, and has failed to cash in on the aftermath. It seems probable, however, that the young officers in the Legion who inspired the King to get rid of British control have not yet formulated any definite objectives. They seem themselves to be wondering what will happen next. But Ali Abu Nuwar, at least, worked closely with the Egyptians in Paris.

After Glubb had left, both the King and the prime minister asked that the British officers should be allowed to remain in the Legion. But it was soon apparent that it would be impossible to retain them "sandwiched" between Arab officers in positions of executive command. Of the 69 British officers on secondment or on contract to the Legion at the time of the dismissal, only 25 remain, in technical and advisory positions, and many of these are being replaced from England.

Under the recently concluded agreement between the British and Jordanian governments, the British subsidy to the Legion will continue, indeed it will be increased, and British officers will continue to wear the Legion uniform, serving under Legion command. There is some doubt whether this latter decision is a wise one, certainly it seems to be generally opposed by the officers themselves who

would prefer to have the status of an advisory mission. Since Glubb left, most British officers feel that they have been treated with ingratitude and indignity. Some of their service privileges have been curtailed, they have been by-passed at their work, and socially slighted by men whom they have known for years. In this as in other ways, the Jordanian alliance is not the pleasant relationship it used to be.

Plan for Europe's Common Market

THE foreign ministers of the Schuman Plan countries who meet in Venice next Tuesday and Wednesday will have before them a report mainly devoted to the problem of establishing a common market, and secondly to the Euratom proposal, with, tucked in at the end, a few suggestions for co-operation in other fields. The atomic energy proposals were summarised in *The Economist* of May 5th. The common market proposals have had little public attention, partly because they are so complicated. But they repay the struggle of reading them. The report succeeds to a surprising extent in reconciling the logical with the politically practicable. The result is a plan which follows the general pattern of the Coal and Steel Community, improved, or watered down (according to one's outlook), by experience.

The European common market, as it is envisaged by M. Spaak and his colleagues, is a customs union; that is, all tariffs, quantitative restrictions and other obstacles to free trade between members would be abolished, and all members would have the same tariffs on trade with non-members. But the common market is also meant to create a large area with common economic policies, which will constitute a powerful production group and encourage economic expansion, increased stability, a more rapid rise in the standard of living, and better relations among member countries.

To achieve these objectives a simple abolition of trade barriers would not be sufficient; it would not necessarily provide the competitive conditions required for increased productivity, and if unaccompanied by other measures might prove disruptive and cause unnecessary hardship. The kind of common market envisaged requires the elimination of discrimination based on nationality or a monopoly position; the elimination of those distortions—arising from different national social security systems, different systems of taxation and the like—which result in giving particular industries within the area an important competitive advantage, or putting them at a serious disadvantage; a common agricultural policy; the elimination of discrimination in transport rates and the establishment of a common transport policy; a procedure for mutual assistance to correct balance of payments difficulties within the area; an investment fund to help industries in difficulties to adapt themselves to the new conditions and to finance "European" projects; considerable harmonisation of social and fiscal legislation; and, eventually, free movement within the area for labour and capital. This is a very tall order, and it is not surprising that the report does not lay down all the details. It recommends that the treaty establishing the common market should be precise on the immediate steps to be taken, on

the procedure for removing barriers to trade, and on certain essential points; but, for the rest, it should set out the objectives, define clearly the responsibilities of the various institutions, and then let the system evolve.

The procedures and timetable for removing trade barriers lie at the centre of the plan and its other elements are geared to the three periods of four years each during which the customs union is to be created. During the first four-year period tariffs within the area would be reduced by 30 per cent (10 per cent at the end of the first year and another 10 per cent at the end of each of two eighteen-month intervals) and a start would be made on the abolition of quantitative restrictions not already eliminated under the OEEC liberalisation scheme. Here the principal proposal is that after the first 10 per cent reduction in tariffs has taken place, quotas should be automatically increased by 20 per cent annually. During the second four-year period tariffs would be reduced by a further 10 per cent at the end of two eighteen-month intervals and by a further 10 per cent at the end of the eighth year; this would bring the total reduction made by the end of the first two periods to 60 per cent. During the last three-year period the remaining tariffs and quantitative restrictions would be eliminated, unless recourse is had to a provision permitting a further three years of grace before all barriers fall.

Meanwhile, the external tariffs of member countries would be brought nearer together, and at the end of the transitional period the area would have a common external tariff, which in conformity with the Gatt rules, would be no higher than the average of existing tariffs. The rules of the common market will cover agricultural products as well as industrial goods, but it is recognised that certain modifications will be required. The basic principle is that if the European Commission, the Assembly and the Council of Ministers all agree that certain agricultural commodities cannot be left to the vagaries of a free market, particular markets will be organised on a "common" basis during the transitional period, and any special arrangements to protect agriculture (such as import monopolies) will thereafter also be on a common basis. Generous safeguards and exceptions for agricultural commodities are also foreseen in the provisions governing the reduction of trade barriers.

The new institutions are modelled on those of the

Coal and Steel Community. A European Commission, nominated by governments and, it is hoped, reasonably limited in numbers, would be the executive. In certain matters it would have powers of decision and in others it would have the responsibility of formulating proposals for approval by the Council of Ministers. The latter would be the instrument both for co-ordination among governments and for co-ordination of national policy with community policy. It would be a strong body, acting, in principle, unanimously. But the report seeks to identify those situations where unanimity would mean that one country could, in effect, nullify the treaty and for these situations it stipulates that common sense requires that the Council act by a majority decision. The Common Assembly and Court of Justice would be enlarged versions of those already functioning in the Coal and Steel Community, and the Assembly would be consulted in the formulation of general policies and in particular before any modification of the timetable laid down in the treaty. Finally there would be a semi-autonomous investment fund which would operate as a financial rather than policy-making institution, receiving directives from a Council of Governors on which both member states and the European Commission would be represented.

Both in institutional framework and in economic concept the report blends boldness in design with caution in application, relying inevitably, if a little optimistically, on the will of governments to make a common market work.

Hanging in New Zealand

FROM OUR WELLINGTON CORRESPONDENT

NEW ZEALAND'S recent decision to hold a referendum on whether to retain or abolish capital punishment was a direct outcome of the House of Commons vote on hanging. Immediately after that vote a New Zealand Labour MP, Mr W. T. Anderton, announced that he would introduce a private bill to repeal hanging as soon as possible after Parliament re-assembled. Before that there had been no particular public discussion of the matter. Now it looks as if the arguments for and against hanging will be very fully canvassed before the referendum is held in November, 1957, at the same time as the next general election.

The decision to hold a referendum was very largely a political manoeuvre. The proposal was introduced as an amendment to Mr Anderton's bill and was moved by the Prime Minister, Mr Holland. It is most unlikely that the government would have raised the question of capital punishment of its own volition. But as soon as the result of the Commons vote became known in New Zealand it was clear that the Labour Opposition, which is pledged to support the abolition of hanging, would seek to raise the matter. The government did not seem anxious to come to a decision and the introduction of the referendum issue was therefore regarded not only as good tactics, but as a way of drawing the sting from the debate on Mr Anderton's bill. Both sides were at pains to emphasise that capital punishment is not a political issue. But its political repercussions were obviously much in their minds during the debate and this was underlined by the expedition with which Mr Holland got rid of the problem by transferring it to the electorate.

The government's decision to hold a referendum at the same time as the next general election has been strongly criticised by a number of newspapers as an evasion of responsibility. It has also been attacked on the grounds that an issue of this type should not be mixed up with electioneering. A last minute attempt was made during the debate on Mr Anderton's bill to provide for the referendum being held six months earlier than the election, but it received no support from the government and failed.

The Labour administration which was in office from 1935 to 1949 never made use of either the death penalty or flogging and finally abolished both in 1941. Capital punishment was restored in 1950, partly because it was one of the planks in the platform on which the National party was returned to power in November, 1949, and partly because a series of murders during the preceding year had influenced a section of public opinion in favour of restoring the death penalty. In the subsequent five and a half years, murders have continued at much the same rate as when the death penalty was not applied, making the necessary allowances for the increase in population during this period. Although there has undoubtedly been some dissatisfaction with the executive's decisions in certain cases, there is no outward sign of any substantial shift in public opinion. But comparison of the cases of murderers recently hanged with those who have already been discharged from prison after serving sentences varying from seven to fourteen years has prompted serious misgivings about the justice of a system which established two different types of punishment for murder according to the political party in power. The result of the 1957 referendum, however, will probably be close and will largely depend upon whether the murder rate increases between now and November, 1957, and whether the abolitionists put their case well.

Malaya Eyes Siam

FROM A CORRESPONDENT IN BANGKOK

THE recent visit to Bangkok of Tengku Abdul Rahman provided something more than the diplomatic small change of the conventional "goodwill" mission. It was the Tengku's first action of international significance since the London conference at which Malaya was promised independence within the Commonwealth. As such, it provided welcome evidence of a desire for closer collaboration with Siam, Malaya's only "committed" neighbour. While this does not mean a weakening of the friendship between the Malaysians and Indonesians, it does seem to show that the neutralist path at present holds little charm for Malaya's Chief Minister.

One of the problems between Malaya and Siam arises out of the fact that the four southern provinces of Siam contain an appreciable Malay-speaking, Moslem majority (in some districts over 80 per cent) and the least assimilated and most Communist-influenced Chinese communities in the country. Before the second world war the fact that Malaya was under colonial administration dampened the ardour of the Malay irredentists in the south but the temporary occupation of southern Siam by Allied troops at the end of the war gave a renewed fillip to the movement. Neither Whitehall nor Kuala Lumpur, however, gave any

C.P.V. and the British exporter

WHEN we talk about the C.P.V. World Organisation, we mean just that; for the maps at our London headquarters are flagged in unexpected, as well as in obvious, parts of the globe.

In Fiji, for instance, it is perfume that C.P.V. advertisements are selling; in Istanbul—sewing threads and air services; in the great native markets of Africa and Malaya—a host of things, from tooth-paste to silver polish. There is hardly an overseas country where we are not working, with our own on-the-spot organisation or an associate, to market and advertise the varied products of our British clients.

To market them, we say. For though C.P.V. advertising weapons are tactically powerful, it is marketing strategy which dictates their use. We do not regard export marketing as a hit-or-miss affair—a casual matter of sending translated advertisements through the post, or leaving things to the man-on-the-spot. We believe it is a serious business. And we know a good deal about it; as our clients, and their sales, will testify.

To help the British exporter to market his products in almost any part of the world; indeed, to advise him whether, where and when he should market them at all; that is one of the chief purposes for which C.P.V. exist. *Can we help you?*

A 'Terylene' rope after hauling Thames barges for 137 days

an ordinary rope after hauling
the same barges for only 6 days

(Result of trial conducted by William Cory & Sons Ltd.)

Why has this 'Terylene' rope withstood 23 times the wear—and more? The answer is that 'Terylene' has a combination of properties found in no other fibre. In a rope these properties produce resistance to stretch, suppleness after continuous contact with salt water, low moisture absorption, and great strength even when wet.

Can 'Terylene' save money in your business?

These exceptional properties of 'Terylene' are already being applied successfully and economically in many industries, in many parts of the world.* Perhaps they can save money for you too. Have you a need for a textile fibre that is strong wet or dry, has low stretch, resists corrosion by acid, resists heat, does not rot,

has low moisture absorption, has high abrasion resistance, withstands weather and is ideal for electrical insulation purposes? Then find out more about 'Terylene' fibre for industry by writing to: Imperial Chemical Industries Limited, Hookstone Road, Harrogate, Yorks. Telephone: Harrogate 68021

*Some of the many uses to which 'Terylene' is being put are: electrical insulation fabrics; lifeboat covers; deck awnings; fire hoses; ropes; paper machine felts; filtration cloths; sewing threads; fishing nets; laundry machine clothing; dye bags; conveyor belts; industrial clothing.

'TERYLENE'

encouragement to the agitation and it was eventually repressed by a judicious blend of concessions and force.

The approach of full independence for Malaya has naturally aroused little enthusiasm in Bangkok. Although there has been considerable improvement to communications in the South, the Malay-speaking provinces still feel that they are a relatively neglected backwater—a sort of refuge for administrators whose incompetence or dishonesty had brought about their transfer. The "disappearance" of a Malay politico-religious leader and the murder of a former MP for Naradhiwas, a town in southern Siam, have more than cancelled out attempts by the Bangkok government to give better administrative jobs to those who speak Malay. Moreover, there have been renewed contacts with extreme nationalist groups in the Federation.

The Siamese were anxious for reassurances that Merdeka would not mean any recrudescence of perhaps legalised Communist political activity from Malaya. In spite of a Siamese-Malayan border agreement which both provides for a full exchange of information and allows police units to cross the frontiers in pursuit of terrorists, it is known that Communist camps have been established in Southern Siam. It is also freely alleged—although never proved—that Chin Peng, the Malayan Communist leader, has established his headquarters in Siam.

The Tengku, who is himself half-Siamese and partly Bangkok-educated, displayed considerable diplomatic skill in answering the inquiries of his hosts. He stated unequivocally that a full renunciation of Communism would be an essential prelude to the restoration of full citizenship to the Malayan guerrillas. He pleased the Siamese by saying that a fully independent Malaya would seriously consider joining Seato and would be influenced in all its foreign policy by the necessity of working closely with Malaya's more experienced neighbour. The Tengku was suitably discreet in discussing Chin Peng's whereabouts, but both Siamese and Malaysians declared themselves fully satisfied that border co-operation would be strengthened and extended.

Italian Straws in the Wind

FROM A CORRESPONDENT LATELY IN ROME

TOMORROW elections are to be held in some 7,000 communes all over Italy. The usual excitement of an election campaign has been woefully reduced by the drastic restriction of poster warfare, although some observers claim that a new apathy has prevented the contestants from making use of the new *tabelloni* where posters may be placed. Apathy or not, a national significance attaches to these municipal elections—the so-called *amministrative*. The government of Signor Segni is weak; and if the political views of the mayors of the major towns remain, or become, such as to bring them into frequent conflict with the prefects appointed by the central government, it might be forced to resign long before the general election due in 1958.

But there is more to it than this. The election of Signor Gronchi as President of the Republic just over a year ago was the expression of the revolt of a part of the Christian-

Democrat party, in opportunistic alliance with the extreme left, against the would-be dictatorship—as it is felt to be—of the Party Secretary, Signor Fanfani. This revolt has been carried on in the municipal elections campaign. A few Christian-Democrat politicians, notably Signor Gonella, who was formerly regarded as right-wing, are believed to be flirting with the Nenni Socialists. Signor Gonella and his associates seem to claim that the De Gasperi type of centre coalition has broken down; therefore the much discussed "opening to the left" must be ventured upon in order to bring a decisive proportion of the working-class into the political life of the country. Since Signor Saragat's Social-Democrat party has failed to do this, there is nothing for it but to accept Signor Nenni if the working-class is not to remain in eternal opposition. It may not have escaped Signor Gonella that the discomfiture of the Communist party after the renunciation of the Stalin myth has given Nenni new hopes of picking up votes from disillusioned communists. In spite of warnings from many quarters, including Signor Segni and Signor Fanfani, against any confidence in Signor Togliatti's old ally, there is in fact a perceptible relaxation of feeling against Nenni; in a speech in Turin on May 16th, Togliatti himself seemed afraid of Nenni's defection. On the other hand, Nenni has since discounted the possibility that he might change allegiances, and although it is fairly certain that his party will gain votes, it is improbable that any big changes will take place on Sunday in spite of a new electoral law which is slightly less favourable to the winning party in communes with over 10,000 inhabitants.

Headlong Charity in Florence

Last winter the very thought of Signor Nenni again in the government forged a fresh alliance between the big industrialists, landowners and traders, and this was followed last month by an agreement, the *Confindustria*, that this "Triplice padronale" would support certain candidates in the municipal elections in the name of free initiative and against every kind of socialism. This has put funds at the disposal of many right-wing Christian-Democrats as well as of the small Liberal party led by Signor Malagodi. Thus, in spite of clerical and anti-clerical reformers, property and the Church remain allied against the leaders of the Italian working-class.

Locally, the most interesting elections will be in Florence, Bologna and Rome. In Florence, the saintly Signor La Pira, elected as Christian-Democrat mayor five years ago, has dispensed a headlong charity—regardless of its cost—which has caused both enthusiasm and exasperation. In Bologna the communist mayor, Signor Dozza, who has been in office since the end of the war, has husbanded the city's resources with bourgeois caution; he is challenged by another of the Christian-Democrat saints, Signor Dossetti, who claims to be fighting, not for any party, but for the Christian ideal and the Catholic Church. In Rome, on the other hand, the administration of the Christian-Democrat mayor, Signor Rebecchini, was so discredited that he withdrew before the election campaign. In each case little change in party strength is expected, least of all in the capital; indeed, Professor Gedda, the head of Catholic Action, clearly implied in an election speech what everyone knows to be true, that the Vatican could never tolerate a red mayor of Rome.

Pakistan's "Self-Help" Plan

THE five-year plan which the Pakistan planning commission has laid before parliament is ambitious. It aims at raising national income by a fifth, and thus raising income per head by 12 per cent despite an estimated growth of population of about $7\frac{1}{2}$ per cent. To achieve this, public authorities are expected to spend 8,000 million rupees on development and private persons and institutions about 3,600 million, in all nearly double what was spent in 1950-55. But the plan also seems one of the most realistic drawn up by a developing country. Shortage of trained personnel, it admits, "will make it certain that there will be a shortfall of expenditure under this plan." And it proclaims that its main purpose is not to rush ahead with new projects, but to make the best use of the investments already made and fill in the gaps in the economy.

The main emphasis is therefore not on industry but on power, transport, and above all, on agriculture. Industry, starting from negligible beginnings, has made remarkable progress since 1952, but it is so hampered by power problems and the supply of spares is so held up by exchange difficulties that over-hasty development would be rash. The plan foresees a growth of output of some 75 per cent but, apart from the consolidation of existing industries, like jute manufacturing, the main growth will be in vital import-savers—like fertilisers and sugar—in industries essential to development—like cement—and in a little basic development, for example, of steel, caustic soda and sulphuric acid. Although industry will continue to benefit from a fair proportion of private investment, it will get little more than a tenth of the government's development funds.

"The enrichment of life in the villages" is the plan's "most important objective," and about a third of public spending is to be devoted to agriculture. Village aid schemes will cover a quarter of Pakistan's villages by 1960 and all of them by 1965. Three million acres of new land are to be colonised and it is hoped to raise output of rice by 11 per cent, wheat by 17 per cent, jute by 15 per cent and cotton by 38 per cent. Nine out of ten Pakistanis depend on agriculture, and the planners have realised that they must redress the one-sided emphasis of earlier years on industry. Altogether three-quarters of public spending is to go to agriculture, power and transport—the infrastructure of Pakistan's economy; power output is to be more than trebled, and transport will get a fifth of public investment.

With resources limited, social spending, on education, housing, and health, is to be relatively small—only a fifth of public spending; but within these limits its aims seem wise. Education and training are looked upon as the key to the whole plan and limited funds are to be spent on the most vital sectors, on training technicians and teachers, over a third of whom are at present untrained, and on widening the curricula in the secondary schools to give an education both vocational and broad. Some 250,000 houses are planned, 100,000 of them for refugees, but not all are to be built by the government. The latter will prepare sites and lay down drainage but many of the actual houses will be built by individuals, either with their own materials or with cheap materials bought from the government.

This enlightened idea of self-help in housing, almost unique in Asian plans, illustrates a fundamental belief that people can achieve more satisfying results by voluntary

effort than under a system of rigid and centralised dictation. The idea that the government's task is to guide and draw forth the people's individual energies, rather than impose a plan, recurs time and again. In agriculture, the plan suggests that "some of the new land in large blocks might be leased on a pilot project basis for a number of years to private companies." In industry government agencies will only undertake development when private capital cannot, and will hive off such factories to private ownership as soon as they can. The forbidding share of government spending in the plan—over two-thirds—results, in fact, only from lack of private capital and its inability to undertake vast low-yield investments.

But perhaps the most important theme of the plan is its emphasis on East Bengal—Pakistan's own underdeveloped world. East Bengal's chronic over-population problem was worsened by partition, and since independence it has received little of the economic jam. No Sui gas has transformed the fuel position, and hydro-electric power output is negligible and potential small; the roads remain vile. Because of lack of trained personnel, less than half the projected detailed schemes are planned for East Bengal, but reserve funds may be kept in case more can be done. Even the schemes now planned would triple eastern spending in 1960 on agriculture, industry, health and education and more than double the spending on power.

Need for More Savings

Like all such plans, this one depends on several doubtful factors. Savings will have to rise from five to eight per cent of national income by 1960; most of this increase will have to come, presumably, from larger company profits and taxation. Adequate foreign exchange—some 3,400 million rupees for the public sector and 1,900 for the private—will also be essential. At present earnings barely meet current needs; the plan seeks a surplus of 1,000 million rupees through a small cut in imports and a bigger growth of exports, but this will partly depend on the fickle world demand for cotton and on continued stability in the jute market. Private foreign investment is put at 500 million rupees, mostly in oil, but the bulk of the plan's requirements of foreign exchange will still depend on foreign aid. Even on last year's scale, however, this would bring in some 2,350 million rupees, and Pakistan has reasonable hopes of getting more. Foreign exchange thus seems less likely than inadequate home savings to act as a brake on development.

The planners recognise, however, that the human obstacles will be even more serious than the financial ones. Rural development will encounter formidable social difficulties. It will not be easy for a young instructor to teach *purdahnasheen* women how to keep their hens, or to avoid conflict with the village mullah's authority.

Finally, two thorny political problems overshadow the chances of the plan. Continued cultivation of much of the irrigated land of the Sutlej, Ravi and Chenab basins will depend on a solution of the dispute over Punjab canal waters on terms reasonably favourable to Pakistan. If this is not achieved, the value of the large new power and irrigation schemes will be largely cancelled out. And steady development, particularly in Bengal, will depend on a solution of Pakistan's domestic political problems, above all on a more harmonious relationship between East and West. The plan makes a fine gesture to East Pakistan, but neither the political nor the economic gulf can be quickly closed.

Wherever you may be . . . 
HERCULES
is there!

IN THE OFFICE...

The composition tiles which create handsome modern flooring effects are likely to contain Hercules hard or plasticising resins, contributing much to their quality and appearance.

OR IN THE HOME...

The lacquered surfaces of good modern furniture probably owe their rich gloss to resins designed by Hercules especially for the purpose.

BUT THESE ARE ONLY TWO of the countless common tasks in which Hercules chemicals serve the community every day—invisibly but well.

If you have a problem in industrial chemistry Hercules may have the answer. Address your enquiries to the Technical Service Department.

THE BUSINESS WORLD

Dynamics of ICI

IMPERIAL CHEMICAL INDUSTRIES in recent years can claim a fine record of progress. None of Britain's industrial giants has done more to combat rising costs by greater productivity; it has carried work study further than have most big groups; advanced research has gone into its production planning. Automation is so much a part of ICI's thinking that it finds a mention in the directors' report only incidentally—as a means of reducing accidents in the explosives division. The results, as they affect stockholders, workers, and indeed the export trade of the country have been satisfactory. In only two years of the past decade, 1949 and 1952, has the net profit, after tax, failed to show an increase. For 1955 there were new records in the value and the volume of turnover and in exports. The group has earned high marks for its earnings record, its technical advance, and its forward labour policy.

ICI has claimed that it had been more successful than most industries in holding prices down. That, no doubt, is still its aim, but in 1955 even ICI had to do some back-peddalling. This latest report omits the usual comparison between ICI's home selling prices, the prices of its raw materials, the earnings of its workers, and the Board of Trade's general index of wholesale prices. It admits, indeed, that "it was not possible in all cases to avoid price increases although for some products, for example 'Terylene,' titanium, and certain organic chemicals, the company was able to reduce prices." The report pursues this topic no further, leaving stockholders to infer that reduced prices must have applied to the smaller segment of the turnover and increased prices to the more important one. They can calculate for themselves that the ratio of profit to turnover was lower, but that is not conclusive, since prices were adjusted during the year. The comparison between the 1954 turnover of £352.1 million and the £411.0 million of sales achieved in 1955 also flatters slightly, since it contains a full year's returns from the

Canadian subsidiaries (£42 million), whereas only six months' figures were included in the 1954 accounts.

If ICI has been less successful than formerly in absorbing all the rising costs that assailed it, its own direct wage and salary costs have still been kept within the bounds of rising productivity. Wages and salaries per unit of output (excluding the metals division) were actually lower than in 1954 and lower even than in 1948. The table drawn from the report shows how increased productivity has kept pace with increased wages in the group while in industry at large it has failed to do so.

A cynic might say that no group that had invested so much in new equipment as ICI has done in the last decade could be satisfied with less. But that would not be a full and fair view of its achievement. ICI has given plenty of thought to carrying labour along in the stride of its advance. The profit-sharing scheme, giving the permanent employee an interest in ICI's ordinary capital, was designed for just that purpose; 81,000 workers shared last year, with an average benefit of £32 2s. 8d. a head declared in respect of 1954. The 1955 accounts show that in times of expan-

AUSTRALIA to-day

Are you up-to-date on Australia?

The economy of Australia is changing rapidly. It is still one of the world's chief producers of wool, wheat, meat, and butter. But the value of its manufactures now exceeds that of its primary products.

To promote the further expansion of manufacturing industries, the Bank of New South Wales — Australia's oldest joint-stock company — has recently published a booklet, "Establishing a business in Australia". If you are interested, you can obtain a free copy from

The machine worker in secondary industry is as typical of contemporary Australia as the traditional sheep-hand.

sion the scheme works like a snow-ball. On an unchanged dividend the share is again 5 per cent of eligible wages and salaries, but the cost is up from £2,691,390 to £2,833,467, reflecting a bigger number of participants and fatter pay packets. They prosper, modern Luddites might note, simply because the chemical industry is a heavy user of capital and a heavy investor. ICI spent £43 million on capital account last year, and group capital commitments outstanding on December 31st were £31.2 million, compared with £21.2 million at the end of 1954. The parent company alone has invested £223 million since the end of the war. That investment is the source of rising wages.

It might be relevant to inquire how productivity per unit of capital, not of labour, is faring. There are long lags between the raising of capital from the market, or from retained earnings, and the emerging production of the new equipment on which it is spent, and only bold accounting jumps are possible. Capital employed rose in the five years, 1951-5, from £251.5 million to £458 million. In the same period turnover (not, of course, at constant prices) rose from £262.8 million to £411 million. Sales per £ of capital employed thus fell from £1 os. 11d. in 1951 to 15s. 8d. in 1953, but rose again to 18s. in 1955.

This year's unchanged dividend of 10 per cent and the net taxed profit of £24 million, compared with £21.7 million, mark a year of peak activity in which more new manufacturing facilities began to pull their weight. They also reflect a continuous and successful attack on export markets. Exports rose by £3.6 million to £71.1 million, mainly a matter of volume for export prices remained "relatively stable." The United States, South Africa, Australia, the Near East, West Africa and the Caribbean were areas in which the export trade expanded.

Almost every one of the company's main sections reports greater activity. The alkali division, general chemicals, the salt division, the pharmaceuticals division, Billingham, the Nobel division, the leathercloth division, the paints division, and the plastics division, all report varying but substantial increases in sales.

The directors give no hint of what the future might hold. Certainly these accounts show that 1955 was a boom year for the group; and the report would seem distinctly odd if the Board did not expect continued expansion in coming years. Much new investment is planned, including a fertiliser plant to cost £3½ million to be built in Rhodesia by African Explosives and Chemical Industries (the jointly owned associate of ICI and De Beers). A fair amount of pruning is also

to be done, though it is the kind of pruning that looks like consolidation for a further advance. Permission is being sought to close down in Shanghai, ending a direct connection with China more than 50 years old, trading in future will be only through Hong Kong. The salt division is to discontinue some of its less important products and packet salt is to be made in Northern Ireland, and no longer in England.

Group stocks have risen from £96.4 million to £105.3 million, and cash assets have fallen from £31.5 million to £23.5 million. The price of copper had something to do with the stock increase, since ICI, by a shrewd stroke of business, was able to convert the debt from its Turkish subsidiary into copper. That

ICI GROUP PROGRESS
£ million

growth in stocks and some doubts about their replacement cost (particularly of copper) have prompted the company to increase its total appropriation to reserves from £13 million to £15 million, a figure that includes £2.8 million of investment allowances which the group will no doubt be sorry to see disappear. The retentions of profits are large, yet the group is not over-supplied with working capital.

Growth achieved and more growth planned are the highlights of the ICI accounts. Investors will not be surprised if the group presently needs more capital. If so, it should certainly be able to get it on good terms. Stockholders now number 63,720 (not counting the trustees of the profit-sharing scheme), and the yield on the stock—£4 8s. 2d. per cent at 45s. 4½d.—clearly presupposes further expansion. That is as near a certainty as any long-term investor is entitled to expect in this uncertain world.

Business Notes

Eyes on Wall Street

THE Wall Street market has come tumbling down again. On Wednesday the Dow Jones industrial average reached 480.16, compared with 492.69 a week earlier. The decline has held the London market in close restraint. The *Financial Times* industrial share index has dropped from 186.6 to 184.0 on the week, and there has been a notable absence of any expansion of business with the start of the new Stock Exchange Account. But London is not just a mirror of the Wall Street market: there were domestic reasons for the fall of industrial stocks in London, too, and the Whitsun holiday is not normally a period of expanding business. A fairly widespread fall in commodities comes as a reminder that the squeeze is still on, and that industry here and in other countries is no longer buying at the high rates of last year. The sharpest fall was in copper, which closed on Thursday at only £304 a ton for cash; rubber dropped to about 23d. a lb, the lowest price for over eighteen months.

Investors are now naturally watching America. They are wondering why a market recession on Wall Street that has so long looked overdue should have arrived at last, and whether it is the forerunner of an industrial recession. Perhaps they may conclude that though there is clear evidence of recession in the American motor industry, there is as yet little conclusive evidence of recession elsewhere. The sensible view is to accept the fact of a market recession in America, but not necessarily to presume a slump.

If Wall Street's setback is significant and prolonged, London will not avoid its broad effects, but at this present stage the potential reaction on London could easily be exaggerated. There is not, for example, yet much sign that the selected London stocks that were bought by American investors in recent months have been thrown back wholesale. It is a part, but only a part, of the picture that the whole American tax system is geared to discourage an operator from keeping his holding less than six months. If a capital loss rather than a gain is clearly inevitable, the considerations are different. There is some evidence that the selling at a loss of ICI around the end of December was made to offset capital gains on Wall Street. That problem is less pressing now, when the year-end is far away and capital gains on Wall Street are hard to find.

5½ Per Cent in Germany

THE *Bank deutscher Laender* sets a striking example of rigour, timeliness and independence in central bank action. Despite some opposition from the Bonn Government it increased the re-discount rate from 3½ to 4½ per

cent in early March; now the bank has raised the rate by a further one per cent. This increase was apparently approved by the Finance Minister, Herr Schaeffer, and the Minister of Economic Affairs, Dr Erhard, who attended the meeting with the central bank council last week. But although the government's power of delaying the application of the bank's decisions by one week was not used, Dr Adenauer himself has this week spoken out strongly against the rate of increase. In a speech at the annual meeting of the Association of German Industries, the Chancellor castigated the move as "a heavy blow to the German boom." Industrialists came out still more strongly against the deflationary measures—and against the proposed 30 per cent reduction in tariffs, on which Dr Erhard is also facing opposition from Dr Adenauer.

The latest increase in the re-discount rate has been made more effective by ending special privileges previously enjoyed by export finance. Exporters will no longer be able to discount their bills at the rates prevailing in the country to which the exports are sent; and the facilities of the commercial banks for re-discounting export bills at the *Bank deutscher Laender* will now be brought within quota limits, which have governed other re-discount facilities hitherto.

The German central bank's severe measures—which have resulted in spectacular falls in share prices—are designed to prevent inflation from emerging, though so far, in both the internal and external economy, inflation has barely raised its head. The bank authorities are worried about over-full employment, though the unemployment rate has never fallen significantly below 3 per cent. Prices are tending upward after many years of stability, but the extent of the movement so far has been small. Above all, as the bank itself states in its annual report published this week, "the external position of the currency continues to go from strength to strength." That is the difference between 5½ per cent in London and in Frankfurt.

Cars Far Below Capacity

IN April last year the British motor industry attained a peak output of more than 3,750 cars a day, and held roughly this level, seasonal fluctuations apart, until the end of the year. Its daily output this April, measured in numbers of cars, was about 17 per cent lower. If the industry has brought in any extra capacity to build cars during the last twelve months, it may now be working even farther below full volume than that figure suggests—though the number of cars produced, without any indication of size, is not quite a final measure of the volume of output.

Output in April, when allowance is made for the incidence

of Easter, was at about the same level as in March—about 3,100 cars a day instead of 3,125. Clearly, the recovery in sales indicated by the increase in new registrations in March—perhaps better described as the bunching of registrations into March that occurred this year—did not clear away enough cars from stocks to justify an increase in output during these two months. According to the industry, output in May is not likely to differ much from the two previous months; and during the next three months holidays may make it difficult to see how production is developing.

During March and April the rate of output of commercial vehicles also declined; in April this was about 10 per cent lower than in February, though still slightly higher than a year before. This fall seems largely to have derived from export difficulties; exports of commercial vehicles in April were about 11 per cent lower than in April, 1955, the decline affecting mainly the smallest vans and lorries. Exports of cars were rather better than in March though the number exported in April was still 25 per cent fewer than in the peak months of last year. It is too early to judge the industry's success in intensifying its selling efforts abroad and switching emphasis from home to export production. But it is clear that the extent to which total demand has now fallen below the capacity of the industry has brought about significant increases in cost—which when passed on regardless to the lukewarm British customer do not exactly boost sales, and which simply cannot be passed on abroad.

Success for Gatt

THE fourth round of tariff negotiations within the General Agreement on Tariffs and Trade appears to have been well worth the four months spent at the Palais des Nations in Geneva. Little had been expected of this series of negotiations, for the juice seemed to have been squeezed out of the orange by the previous rounds of negotiations at Geneva in 1947, Annecy in 1949 and Torquay in 1950-51. Although the details of the results will not be disclosed until June 7th when the 22 out of 25 participating governments which achieved new agreements will publish schedules of their new tariffs, it can already be claimed that the latest discussions were successful, as witness the figure of \$2,500 million which is the official estimate of the import trade of the participating countries affected by concessions negotiated. These concessions include not only actual cuts in tariff rates but undertakings to bind tariffs at existing levels. These bindings, particularly when they came from countries which had already reduced their tariffs to low levels, were justifiably regarded as fully equivalent to reductions conceded by countries with higher tariffs.

The main purpose of this fourth round of tariff negotiations was, however, to test and, if possible, take advantage of the new powers of tariff reduction that were granted to the President of the United States with the last renewal of the Reciprocal Trade Agreements Act. Under this Act the President can reduce any rate of duty in excess of 50 per cent *ad valorem* to that figure. Furthermore, he can reduce tariffs by 15 per cent of their January 1955 level by annual steps of 5 per cent in each of the next three years. The United States delegation at Geneva proved unexpectedly willing to exercise these powers—"unexpectedly" given the imminence of the Presidential election

and of the difficulties that are envisaged in steering the Organisation for Trade Co-operation bill through Congress. When the results of the latest tariff negotiations can be assessed it will probably be found that the United States has taken the lead in ensuring for this round of tariff talks more success than the sceptics were prepared to promise for it. Given America's share in world trade and competitive power such leadership is entirely appropriate.

Railways on Remand

TWO months after almost to the day, Mr Watkinson has explained the reasons which led him on March 19th to give the British Transport Commission half of the 10 per cent increase in railway freight charges that it had sought. They offer a fascinating view of the Minister's conception of transport economics and incentives towards efficiency. Mr Ernest Davies, for the Opposition, put the familiar questions effectively. Why had the Minister taken it upon himself, despite the counsel of the Transport Tribunal, to limit the railways to a 5 per cent increase, knowing that this would bring them further in breach of their statutory duty to pay their way? How did he suggest that a six months' stay on the remaining 5 per cent could meet the emerging deficit on the Commission's whole activities of £35 million a year? Did he seriously suppose that the new spirit that he professed to find abroad on the railways in mid-March could produce increased economies and greater efficiency capable of balancing their books by mid-September?

These were fair questions. The answers were less than convincing. After some experience at the Ministry of Labour about "willing the means," Mr Watkinson evidently decided in March to take a hand at willing some of the ends. Human relations, he found, were "not right"; put in more explicit terms, wages were too low, and he praised as "right, just and fair" the £20 million increase offered by the Commission, and promptly accepted by the men, last February. Then the Commission asked for £37 million in increased charges, but this, the Minister pointed out with the air of a man playing a minor trump, still left it with £18 million uncovered. He concluded that the "economic limit of raising charges had been reached." The mounting deficit could not be overcome by increasing charges "unless there are some countervailing economies." And the railways were "asking the Government and the country" to provide £1,200 million of resources for an industry which "at the moment does not appear to be able to make ends meet."

Hence the "six months' critical re-examination" of the whole railway system; hence, too, "the brake on increasing their charges until we can see and make a final analysis of their true position." But when he came to list the items in the "critical re-examination," Mr Watkinson put down all the self-evident things on which the Commission has long been working, none of which (except perhaps the belated decision on flexible charges for freight) belongs specifically or can be categorically solved, in this or any other period of six months. The Minister also succeeded in confusing the issue on the modernisation plan—seeming to suggest that if the railways were losing money it could not be justified (shades of the Southern Railway!) and at the same time that it must be speeded up.

The finest car of its class in the world

now offers you an entirely new
conception of motoring pleasure

To all the grace, space and pace that have made the Mark VII Jaguar admired and desired throughout the world—comes Automatic Transmission—bringing with it a wonderful new driving experience and a restful, effortless command of all the silken performance and supreme flexibility of the

famous XK engine. This Automatic Transmission model, now available for the first time in Britain, has for two years been acknowledged abroad as offering the smoothest, safest and the most silent 2-pedal driving of any car—in any country. Without clutch or gearshift it provides, at the touch of accelerator or brake, the complete answer to town traffic conditions... it banishes fatigue from even the longest of journeys, and is at all times the last word in silent efficiency and a revelation in relaxed driving comfort.

JAGUAR CARS LTD • COVENTRY

London Showrooms: 88 PICCADILLY, W.1

*Automatic
Transmission*
JAGUAR

*"I think I'd like a little Scotch whisky.
I happen to know they've some White Horse."*

MAXIMUM PRICES: Bottles 36/-, 1-Bottles 18/9, 1-Bottles 9/9, Miniature Bottles 3/9, as fixed by the Scotch Whisky Association

It was a gallant attempt to argue an impossible brief. Everyone knows that railway efficiency is unsatisfactory, though it has improved. Most fair-minded people would agree that ever since nationalisation, governments have inflated the railways' costs but have prevented them from recouping the increases, by delaying their consent to increased charges and by keeping them short of capital. Mr Watkinson has followed exactly the same line, and his attempt at rationalising his decision to give the railways half a loaf does nothing to dispel the sickening fear of British Railways in perpetual decline, propped up by a rickety concealed subsidy.

Small Change in Brazil

THE long-awaited reform of Brazil's multiple exchange rates has again been postponed: what the government has just done is of minor significance. The effective rates of exchange for the staple exports, coffee, cocoa, cotton and hides have not been changed. The rates for lesser commodities, which account for roughly one-fifth of total Brazilian exports, have been devalued by increasing the bonus paid to exporters over the official rate of exchange. The effective rate for exports of cotton linters, fruit, timber, carnauba wax, tea, manganese, iron ore, vegetable oil and some other items has been raised from 140.2 cruzeiros to the £ to 154 and the equivalent in dollars or other convertible currencies; this amounts to a devaluation of 10 per cent. The rate for exports of piassava, castorseed, soya beans and leaf tobacco is raised from 120.6 cruzeiros to the £ to 154, a devaluation of 28 per cent, and the rate for all other listed goods, mainly manufactures, is raised from 140.2 to 187.6, a devaluation of 33 per cent. These rates compare with the official rate—which nowadays has almost no significance—of 52 cruzeiros to the £ and with effective rates of 103.8 to the £ for coffee and 120.6 for cotton, cocoa and hides. There is something to be said for leaving the rates for the staple commodities unchanged and for encouraging exports of lesser commodities and manufactures. But while the government continues to shirk complete reform, few can be confident about its determination to check inflation and resist pressure from exporters of the staple items for more favourable rates for themselves.

Shifts in April Trade

THE value of British exports and imports showed little change in April, compared with the averages for the first quarter of the year, but there was a change in the composition and direction of trade, and the terms of trade deteriorated. Exports, at £256.4 million fob, contained a still higher proportion of engineering products and metals and a smaller proportion of textiles. Shipments of engineering products, at £105 million, were 1½ per cent higher than the record average of the first quarter; that mainly reflected increases in ships and boats (always a variable item) and of machinery, and shipments of cars and chassis

showed signs of recovery. At £10 million in April, cars and chassis were 7½ per cent above the first quarter average, though they were still far below the average of the first quarter of last year. Exports of metals were 2½ per cent higher than the first quarter average, at £37 million. Iron and steel shipments were 14½ per cent higher at £16 million but non-ferrous metals were down; shipments of copper products to Russia, at £862,000 in April, were less than half the average of the first quarter. Exports of cotton textiles declined further to £7.2 million; they were nearly 5 per cent below the first quarter's average and 25 per cent below the average for the same quarter of last year. Among imports, which totalled £327.4 million cif in April, there were seasonal changes in arrivals of foods and tobacco and basic materials. Imports of manufactures as a whole were almost the same as the first quarter average but imports of iron and steel rose further to £11.7 million, five per cent higher than the first quarter average and twice as high as the average for the same quarter of last year.

The balance of trade with the non-sterling area improved last month. Imports from non-sterling countries fell by two per cent to £191 million, compared with the first quarter average, while total exports to those countries rose by three per cent to £150 million, and the deficit fell by £9 million to £41 million. The reverse was true of trade with sterling countries. Imports rose by 2½ per cent to £137 million, while exports fell by five per cent to £120 million; the deficit with the sterling area rose sharply by £10 million to £16 million.

The deterioration in the terms of trade resulted from a fall of one point to 104 (1954=100) in prices of British exports; metals were the only exception to the fall. With the index of import prices unchanged at 106, the terms of trade moved to 102, the least favourable point reached in the last year.

Currency Expansion Slackening?

THE legal limit to the Bank of England's note issue—or, rather, to that 99.9 per cent of it known as the fiduciary issue—was last week raised by £25 million to £1,900 million, the highest it has ever been, except for a few weeks last Christmas. This does not necessarily mean that the nation's currency habits are still showing no trace at all of the Government's efforts to check inflation. The immediate cause of the revision of the limit was the withdrawal of notes from the Bank for spending over the Whitsun holiday; and at first glance these seasonal demands look reassuringly moderate. During the two weeks directly affected, the withdrawals totalled £12 million, whereas in the Whit weeks last year they amounted to nearly £30 million and in 1954 to nearly £24 million. Unfortunately the comparison with each of these years is hopelessly distorted by rail strikes, which caused the public and especially the commercial banks to carry larger amounts of currency. If the comparison is carried back to 1953 it is blurred by the special spendings associated with the Coronation.

There are some signs, however, that the pace of the long phase of currency expansion may be slackening. At its seasonal peak last Christmas, the note circulation of £1,889 million was £130 million larger than at Christmas 1954; at its seasonal nadir of £1,771 million last February its

increase over the corresponding 1955 total was £114 million; and now the increase over the post-Whitsun total of 1955 is £102 million—with the actual circulation at £1,868 million. It is still not possible to be sure, however, how far this improvement arises from the currency demands of the public, as distinct from those of the banks. Last year's strikes caused the banks to hold a larger proportion of their cash reserves in the form of notes in their tills, and the sharpness of the decline in the total note circulation early this year was partly due to a reversal of this movement. Between December and March, the latest date for which figures are available, the banks' till money was reduced more steeply than in the corresponding period of 1954-55.

HP Squeeze at Work

RESTRICTIONS on hire purchase by raising the minimum initial deposit or shortening the maximum length of contract impinge on trade in two ways. They cut out the marginal buyer. Secondly, they force all the other hire purchase buyers to use more of their own money and less of the funds of the retailers or the finance houses. The number of contracts falls and the amount of financing per contract falls. It is the second of these influences that explains the sharp drop in the Board of Trade's hire purchase indices in March. Those indices still need to be treated with discretion, if only because it will not be until they have been running for a year that their seasonal shape will be clear, but there can hardly be a doubt that control was biting deeper during March.

As briefly reported in *The Economist* last week, the retail section of the index of hire purchase sales (December,

1955 = 100) fell steadily through the first quarter of this year. From 100 in December it dropped to 69 in January, 67 in February and 65 in March. The Finance House section of the index shows no clear trend; the index rose from 100 in December to 101 in January and 102 in February but

dropped back to 100 in March. But this section is heavily weighted by motor cars, and it certainly shows nothing of the normal seasonal rise in hire purchase motor sales in the spring. Most striking of all the evidence is a fall of about 7 per cent in the nation's outstanding hire purchase debt. It fell though the starting point is still vaguely "at least £450 million" at the turn of the year and "at least £419 million" at the end of March. The total amount outstanding on hire purchase is paid off gradually and its amount fluctuates much less violently than does the monthly volume of new hire purchase transactions.

The Board of Trade has produced two useful new sets of figures this month. The hire purchase sales in the

retail section have been expressed as a percentage of total retail sales. The total for the household goods shops fell from 33 per cent last December to 28 per cent in March. The graph shows the changes for the furniture and furnishings shops and for the radio and electrical goods shops participating in the sample. The classification is by shop and therefore not precisely by type of merchandise. Nevertheless, the fall in the hire purchase percentage of the market shown in the Board of Trade's index for radio shops (which is by value at the gross retail price of the product, including deposit) appears somewhat sharper than that shown for the same (December-March) period by the British Radio and Equipment Manufacturers' Association, which reports numbers and not values of sales. The Association's figures show a fall in the hire purchase percentage of the market from 32 per cent to 31 per cent for radios, from 50 per cent to 46 per cent in television sets, but a rise from 52 per cent to 54 per cent in radiograms. The apparent discrepancy between the two sets of figures evidently means that credit has been spread more thinly over the contracts. Figures of credit per contract are also given for the finance house trade which represents largely vehicles. It shows a remarkably sharp drop in the credit per contract between February and March this year, doubtless largely reflecting the raising of the deposit on motor cars from 33½ per cent to 50 per cent. For new private cars the average credit dropped from £411 in February to £349 in March, for second hand cars from £225 to £184, and for commercial vehicles from £509 to £355.

China's Sterling and Trade

COMMUNIST China is rapidly emerging as one of the largest of Britain's short-term creditors. Its sterling balances have grown rapidly in recent months, and are now in the region of £100 million. China enjoys the normal transferable account facilities; and is using sterling freely in its transactions with other countries—both within the Communist bloc and outside it. It is believed to have used sterling to finance a number of purchases from Russia (which is short of sterling and periodically replenishes its balances by gold sales). China is also known to have settled its trade deficit with Egypt by substantial sterling transfers. The remarkable size of China's sterling balances is due in part to the surplus in its current trading account with Britain and other sterling countries (above all Hong Kong, with which China had a trade surplus of £45 millions in 1955). But part of the holding of sterling is China's reserve of foreign currency and the working balance needed for all Chinese dealings outside the Communist bloc. Thus with one country at least sterling has regained its cherished place as the principal medium of international exchange.

China is thus well placed to increase its purchases from Britain, and the possibility of its doing so was improved last week by the announcement that the Board of Trade will in future be more liberal in granting exemptions from the Chinese strategic embargo list. Since 1951, and the entry of China into the Korean war, this list has been considerably more stringent than the list applied to Russia and the European satellites. The logic of this distinction has never been

MAY 5 SILVERSTONE. Stirling Moss, driving a British Vanwall car, won the Daily Express International Trophy race here today. His car was fitted with a B.T.H. magneto, as were the Hurricanes and Spitfires which won a victory in the air for Britain.

clear; goods can always be re-exported to China by Russia, and in recent months suggestions from Britain and other European countries for ending discrimination against China have become stronger. The Paris committee of the Nato countries that watches over the common list ("Chincom") has agreed to a number of exemptions, including the export by Britain of tractors (of which, China has announced, it needs enormous numbers in the next few years). Following Sir Anthony Eden's visit to Washington in January, discussions have been in progress with the Americans on the possibility of scrapping the special China list altogether. The discussions are apparently continuing, but meanwhile the Board of Trade has in effect made a unilateral relaxation in the control by its new policy of making more concessions in its application. The exemptions apply only to goods that are not on the strategic list for Russia and the European satellites.

Anna Fades Out

THE Indian Government has now announced the new decimal system of currency on April 1, 1957. The rupee will remain the basic unit and its value will not be altered; but from that date one rupee will be equivalent to one hundred "naya paisa" (as the Ceylon rupee is divided into a hundred cents), the intention being that the sixteen annas that have hitherto made up the Indian rupee shall gradually disappear. A fifty naya paisa piece will supplant the present eight anna bit and a twenty-five naya paisa piece will replace the four anna coin. The first of the new coins to be issued, however, will be one, two, five and ten naya paisa pieces. Their purchasing power will be minute—five naya paisas might buy a somewhat shrunken box of matches. By first introducing the smallest of the new coins the Indian Government hopes to teach the public to think in tenths rather than in sixteenths. It does not intend to complete the change overnight and two, four and eight anna coins will continue to be legal tender after next April and will only gradually be withdrawn and demonetised.

In a recent discussion in the Indian parliament the official spokesman rejected a proposal that the new coinage should be inscribed "Satyameva Jayate" (truth alone triumphs) and announced that the change would be preceded by a nationwide publicity campaign explaining the denominations and nomenclature of the new units together with appropriate conversion tables. Assuming that it was necessary to put the rupee on a decimal basis (which has never been proved) the Indian Government seems to be going about the job in a workmanlike manner. The ready acceptance of the one rupee paper note, when wartime shortages made it impossible to continue minting silver in quantity, suggests that the Indian public is not hostile to innovation. The new currency will be fractional in the expenditure of the wealthy but for millions of others fifty naya paisas will represent a day's total expenditure. Those people will be the real judges of the new currency which will almost certainly prove easier to popularise than metric systems of weights and measures which are also reported to be contemplated by India.

Paradox in Coffee

COFFEE is in surplus but prices are not depressed. The paradox is easily explained. Supplies of mild coffee and high grade Brazilian coffee are barely adequate; it is the low grade Brazilian and robusta coffees that are plentiful. The Central American crops of mild coffee are almost sold out, leaving Colombia as the only substantial supplier until the new crops become available in October or thereabouts. Colombian coffee has recently risen by \$6 to about \$79 per 50 kilos fob. There is little high grade coffee left in Brazil, and prices have remained steady at about 480s a cwt fob for extra prime. Both types are near the top prices of this season. The announcement of the long-awaited currency "reform" in Brazil (which is discussed in a Business Note on another page) has removed for a time fears of a devaluation of the exchange rate for coffee, and buyers may now operate with more confidence.

While Brazil is able to dispose of its high grade coffee without difficulty it is faced with a substantial increase in its total carry-over this year. When the season ends on June 30th it is estimated that private stocks will amount to some seven million bags of 132 lb, compared with just over three million bags a year ago; in addition the government holds about three million bags, less than half of which is believed to be of exportable quality. The trade is naturally reluctant to finance a larger stock and is pressing the government to relieve it of part of the burden. The increase in the carry-over is more than enough to offset the sharp reduction in the 1956-57 crop, so that total supplies over the two seasons 1955-56 and 1956-57 should still be ample.

A Ticket to Moscow?

A FEW weeks ago the Soviet government gave SAS, the Scandinavian airline, permission to fly a direct service from the Scandinavian capitals through Riga to Leningrad and Moscow. The Russians have now made a direct approach to Pan-American World Airways about a service between the United States and Russia. Pan-American is the "certified" American carrier for this route and will accept the invitation if the American government approves, in spite of some doubts about the immediate volume of traffic. Although the Russians will presumably ask for reciprocal rights to fly into the United States, Aeroflot has no suitable aircraft at the moment to operate a Moscow-New York service. British European Airways has attempted to get similar rights to fly into Moscow but these are not likely to be granted until Aeroflot has a big enough fleet of Tu 104s to fly regularly between London and Moscow, although at least ten of these aircraft appear to be in service.

Flying a through route to Moscow would confront BEA with some difficult decisions about equipment. The corporation's fleet is based on turbo-props, but its routes are beginning to stretch over distances that would suit jet aircraft even better. Turbo-prop competition in Europe will intensify as the Viscount comes into general use and

as the Lockheed Electra (ordered by KLM) appears in Europe. A service to Moscow would have to meet competition from Russian jets from the outset, with the prospect of similar competition from American jets ending the last leg of their journey across the Atlantic at Moscow. It might, therefore, be necessary for BEA to run a small fleet of jets if it were to attract its share of the traffic on the Moscow route. It cannot decide on this until permission is granted, yet a decision could not be long postponed if the aircraft were to be delivered in a reasonable time.

The Seven Seas

THE Douglas Seven Seas airliner was given its certificate of airworthiness this week and Pan-American World Airways, which has taken the first deliveries, brought one of its airliners into London Airport on Thursday to complete the last fifty hours of test flying before starting scheduled operations across the North Atlantic on June 1st. In October, deliveries will begin to the British Overseas Airways Corporation, and BOAC should have the aircraft in service by January. The Seven Seas will be the last of the long line of Douglas piston-engined aircraft that began in the 1930s with the DC 3 and evolved progressively into their present enormous size. The Seven Seas has been stretched to the utmost limits to give it the power to cross the North Atlantic non-stop in both directions. Besides being the last of its type the Seven Seas is also the first of the true non-stop North Atlantic aircraft towards which designers have been working since the end of the war. Lockheed is working on an extended Constellation, the 1694, that will have an even greater range than the Seven Seas. No airline can hope to compete for first-class traffic on the difficult North Atlantic route if it cannot offer non-stop flights to match those of its competitors—hence the importance of early delivery of the Seven Seas to BOAC. But economically these gigantic airliners pose questions. They have grown larger and more powerful but they show little or no reduction in the cost of moving a passenger a mile. The airlines have looked to the new engines, jets and turbo-props, to break through this cost barrier; yet apart from the Viscount, with its relatively small and simple engine, these hopes, too, have yet to be realised.

Finding the Managers

IT is a common cry among industrialists that they are not getting enough young men of the calibre they need to take responsibility in the future; but reading the latest Acton Society Trust report on management* one loses sympathy for them in what is in large part a self-made predicament. Statistics assembled for 51 of the 65 firms employing over 10,000 people in this country reveal that management is to an increasing degree being recruited from the products of the universities and public schools,

* Management Succession: the recruiting, training and promotion of managers. The Acton Society Trust. 139 pages. 10s. 6d.

but that only one-third of the firms studied had any organised scheme for executive development (as opposed to some sort of personnel department). Some companies were understandably reticent when an attempt was made to check on the turnover of the graduates they recruited. If this is the state of affairs in the biggest firms it is easy to imagine how haphazard are recruitment and promotion in the smaller. It is a simple business principle that a scarce material must be used with economy and ordered up in advance of requirements. The personnel department of one firm makes a regular survey of future requirements for the directors and finds that "by the time X has been suggested as the right man for five different posts there is a greater appreciation of the shortages."

Notwithstanding these inefficiencies in recruitment and utilisation of managers, the Acton Society presents some dramatic charts showing how the proportion of men in management who started as clerks or manual workers is declining and how the proportion with degrees or professional qualifications is going up. Contrary to general belief, it is the good arts degree that seems to tell best, not a technical training. A list of the factors in a manager's past which have been advantageous or disadvantageous in promotion puts an arts degree at Oxford or Cambridge first in the list of advantages, a science degree seventh; while the worst disadvantage anyone can have in seeking promotion is to be a foreman. The Society found plenty of evidence of discouragement and bewilderment both among those climbing the somewhat rickety ladder of promotion, and of those on the factory floor who would like to be tried out on the first rung (a far higher proportion than is usually suspected). Big business is not the civil service; but neither should it give the impression to the ambitious young executive of being an elephant—"either it takes you for a ride or it sits down on you."

Credit Insurers Confer

THE international association of export credit insurers (the Berne Union) has come close to fulfilling the hopes of its founders. At the annual conference which ended in Cannes this week members came prepared to report on their trading accounts and experiences in a common manner, and more information was exchanged than ever before. The discussions relieved any anxieties that remained about the twin banes of all insurers: that growing competition would tempt some countries to do business at subsidised rates and to insure excessively long credits. Members were satisfied that each other's schemes were run on sound commercial lines and did not contain disguised subsidies or other artificial aids. A fairly solid front has been maintained against insuring exceptionally long credits; lapses from grace are still rare. Both the amount of credit insured and the maximum length of credit appear to have stabilised, with four to five years' credit as the normal maximum.

A comparison of credit terms insured confirmed that there were no significant differences between one country and another. That could hardly have come as a surprise, though it is in sharp contrast to what insurers are frequently told by their clients. It is a common ploy for an exporter

On the key vive

If you have a noticing eye, you will have noticed the name Wilmot Breedon on your car ignition key. Thereupon, if you have an asking mind, you arrive at a question.

Well, who are Wilmot Breedon?

Makers of keys?

No. Not precisely . . . Makers of all kinds of equipment for the Automobile Industry — bumpers, over-riders, handles, window-winders, locking mechanisms, radiator grilles, steering wheels — and this on such a large scale that only among the London-to-Brighton veterans will you be likely to find a British car to which they have not contributed something.

Wilmot Breedon. Dwelling in Birmingham and elsewhere in the world. Specialising in automobile components so necessary that you take them for granted, and so well integrated that you have to hunt

high and low for a hint of their identity. Two words on your key . . . many parts of your car . . .

WILMOT BREEDON ARE AT BIRMINGHAM : ALSO AT LONDON, MANCHESTER, GLASGOW, MELBOURNE, TORONTO

to claim that his competitors abroad are being offered better terms of credit insurance. Nowadays the members of the Berne Union do not wait for the annual conference to check those claims; they simply telephone their counterparts abroad. Frequently the terms prove to be the same.

"Blue Circle" Dividends

THE preliminary statement of the "Blue Circle" group of cement companies does not contain consolidated profit figures for the whole group. But to stockholders ruminating on the bigger dividends and the proposed free

scrip issues this will appear as only a minor defect. The ordinary dividends for 1955 of Associated Portland Cement and its subsidiary, British Portland Cement, have both been set at 22½ per cent, compared with 20 per cent in 1954. The ordinary dividend of another subsidiary of Associated Portland, Alpha Cement, has also been raised from 30 to 35 per cent. All three companies report an increase in net profits, but while the gross trading surplus of Associated Portland has gone up slightly from £4,722,375 to £4,725,589, the gross profits of the two subsidiaries show a slight drop, with British Portland's surplus declining from £4,166,893 to £4,073,898 and Alpha's from £1,242,992 to £1,175,054. During a boom year the profits of the "Blue Circle" group have done nothing more than hold their own. This is one of the facts that stockholders must weigh

Pictures of World Oil

A STATISTICAL review issued by the British Petroleum Company last week shows clearly some of the fundamental changes that have occurred in the petroleum industry since before the war. World production and consumption have been rising at an average of 8 per cent a year since 1945. In the Eastern Hemisphere the trend of oil consumption has been rising nearly twice as steeply as in the United States,

although America still consumes more than half of the world output. Proved reserves at the end of 1955 were sufficient for another 33 years' consumption at the 1955 rate.

The most striking increase in crude oil output has been in the Middle East, where 159 million tons were produced last year compared with only 16 million tons in 1938. Also in the Middle East are 17 billion of the 26 billion tons of

world proved reserves, and an even larger proportion of the "possible" reserves, which are many times as great. In the United States, which has more than doubled its own crude oil output since 1938, the proved reserves are sufficient for only 13 years' production at present rates, and the United States has become a net importer to the extent of 11 per cent of its supplies.

But the biggest changes have occurred in Europe. Before the war two-thirds of Western Europe's supplies came from wells and refineries in the United States and the Caribbean, and only 22 per cent from the Middle East. In 1955, when total oil imports into Western Europe were nearly triple the prewar volume, the Middle East provided more than three-quarters, and less than a quarter came from the Caribbean. Demand for fuel oils, which before the war accounted for only 32 per cent of the total, has risen over four times in volume, and now comprises 42 per cent of total demand. Conversely, the share of petrol, the demand for which has not quite doubled in volume during the same period, has declined from 35 per cent to 23 per cent.

after the scrip issues of 150 per cent from Associated Portland (raising its issued ordinary capital to £20 million) and of 200 per cent from British Portland (raising its ordinary capital to £16 million). The announcements of both issues, which are subject to the consent of CIC, contain the usual warning that the issues do not necessarily imply any effective increase in dividend payments. On the mathematical count of earnings an increase in dividend payments would not be impossible. But if the demand for building materials continues to increase the credit squeeze must in the end limit its rate of growth, and foreign markets may be less easy to penetrate than they were. Of more immediate moment, the industry's bill of costs is going up, and it will be interesting to see what profit margins emerge after the present undertaking not to increase prices before June 30th comes to an end. As the chairman of a rival group, Mr Halford Reddish of Rugby Cement, recently pointed out, substantial increases in costs have occurred since the undertaking to hold prices stable was given.

Raised Sights on the Copperbelt

THE Northern Rhodesia copper producers are confident that world demand will continue to grow, and they are also confident, as one of the world's low-cost regions, of their ability to share in that growth. Anglo American Corporation of South Africa, one of the two groups mining the copperbelt, will bring the Bancroft mine into operation next year with an initial output of 44,000 tons a year; output will rise to 86,000 tons by 1960. The other group, Rhodesian Selection Trust, has recently started producing at Chibuluma, a copper and cobalt mine with an annual output of about 16,000 tons of copper. Now this group has announced that further plans for expansion are being considered.

Speaking in Salisbury this week the chairman of RST, Mr Ronald Prain, said that exploration of the orebody to the west of the Mufulira mine had gone far enough to justify plans to expand output by up to 50 per cent; the existing capacity is not far short of 100,000 tons a year. The old Chambishi mine, development of which was abandoned in 1931 when the Mufulira orebody proved to be the more important, may be brought into production on a scale initially of something like that of Chibuluma. A 20-mile railway to carry ore from Chambishi for treatment at Mufulira was built in 1932.

Both programmes will be dependent on the supply of hydro-electric power from Kariba, scheduled to be available in 1960, and on an adequate railway capacity which still lags in Rhodesia. Mr Prain did not indicate the total cost nor how the financing—"a considerable operation"—was to be put through. On recent experience it seems improbable that Chambishi, though it has much of a shaft already in existence and is to start as a small mine, can cost less than £5 million. The Chambishi company's existing issued

capital is 550,000 £1 ordinary shares. Any new financing seems likely to be based on the proportions in which that capital is held—Rhodesian Selection Trust 64 per cent, Rhodesian Anglo American 32 per cent, and British South Africa Company 4 per cent.

Flowers, Frost and Horse Power

THE nurserymen watched ruefully whilst the dust was scuffed up by visitors along the paths at the Chelsea Flower Show this week. Much of the stock they were nursing through a hard winter has been lost—though fortunately the losses of their customers were heavy too. A cold spring has driven up the fuel bills of nurseries with extensive glass, making the prices of plants grown under glass considerably higher than they were last year. Now the prolonged dry weather threatens to be at least as serious as the late frosts. Some of the exhibits in the few outdoor gardens shown this year were suffering even on the first day. Of the seven gardens, five are given over to rock plants. One of the two formal gardens was J. Cheal's sophisticated, controversial design that well deserved the Royal Horticultural Society's medal, for it showed that landscape gardeners, for all the traditional nature of their calling, are capable of evolving new themes—in this instance advanced enough to startle some visitors.

The difficulty this year of bringing forward plants to stock the gardens may account for their smaller number, but the high cost of these spectacular exhibits, after a costly winter, must also have played its part. Applications for space under canvas, indeed, were heavier than ever. The range of plants shown was wider and more extensive than it has been for several years despite a notable absence of specimens tender to frost.

There were nearly 140 nursery exhibits, but they were outnumbered by the 170 stands devoted largely to means of mechanising the back-breaking job of gardening. Excluding such gadgets as spring-operated spades and weed-killer walking sticks, and not counting motor mowers (mechanical and electric), there are 13 different types of miniature tractors on display—a choice as wide, if not wider, than that which confronts the farmer. They range in size and price from 2 hp engines costing little more than £50 for the basic unit of tractor and hoe up to Ransomes' £335 baby rubber-tracked crawler. Many of these mechanical cultivators are bought for market gardens, but they are also going to the larger private gardens to offset ever-rising wages and the growing scarcity of skilled labour. They rank, as does the mounting variety of horticultural chemicals, as short cuts to good husbandry, part of a trend that has spread down from the large farms to the smallest suburban gardens.

Executives Under Strain

AFTER a heavy day at the office the businessman, almost proverbially, is in no condition to face anything strenuous in theatre, art or literature; but as the pace grows hotter, it is not just that the business man is tired but that

SOURCES OF POWER

Oil

Why is 'striking oil' a synonym for finding any sudden

source of wealth? Most often the task of reaching oil is painfully long and laborious.

Men must drill deep indeed before mineral

oil will gush or can be pumped to the

surface. And now that the world's demand

for clean, controlled power is well-nigh

insatiable, more and more oil is being

burned to generate electricity.

Between the crude oil that is burned to

drive a turbo-alternator and the switch that

starts a lathe or heats an oven, stretches

• a whole world of intricate, precise machinery and equipment—Crompton

Parkinson's world, where they

have long been pioneers. It would be

hard to find one major development

in the control of electricity with which

Crompton Parkinson have not been associated.

The generating, conducting, measuring,

moderating and utilising of electricity is their

familiar province; a province they stand

ready to widen when any new source

of power whatsoever is discovered.

Crompton Parkinson

Heat where you want it

Use electricity and bring the heat to the job instead of having to bring the job to the heat. Heat can be applied wherever it is possible to bring a pair of wires—and so the heating process can be right in the line of production.

You get much finer control with electricity, too. Temperatures can be controlled automatically—and the constant heat value of electricity means that you know that the treatment is precisely what is required. Not only temperatures but the operation of a complete heating unit can be controlled automatically. Electric heating equipment can be arranged to start, run and shut down to any process requirement or time and temperature cycle.

Heat where you want it, perfect control, cleanliness, lower labour costs and better working conditions are some of the advantages of using electricity for heating.

Heating is just one of the many ways in which electricity plays a vital part in the drive for greater productivity.

Electricity increases Productivity

Ask your ELECTRICITY BOARD for advice and information or get in touch with E.D.A. They can lend you, without charge, films about the uses of electricity in industry. E.D.A. are also publishing a series of books on Electricity and Productivity. Titles now available are: Electric Motors and Controls, Higher Production, Lighting in Industry, Materials Handling, and Resistance Heating. Prices 8/6, or 9/- post free.

2 Savoy Hill, London, W.C.2

he is becoming increasingly liable to serious occupational illness. "Ulcers" is the generic disease of mental and physical overstrain that goes with high executive responsibility; but though it is the one most owned to by American business men, "Managerkrankheit" in the German phrase can take many forms, amounting at worst to a type of business combat neurosis which at the least requires a month's holiday with compulsory golf, at worst psychoanalysis or some analogous and equally costly treatment.

British management, in particular, is faced with new dangers from exporting considerations, according to Mr J. J. O'Dwyer, principal medical officer of Unilever, Ltd., who has recently drawn the attention of the Royal Society of Health Conference to the effects of constant overseas travel. The executive going abroad into the front line of the fight for exports is warned not to think of this as in any way a holiday or even a mental change from the cares of the office; it is, on the contrary, an extra strain, involving a physical adjustment to a new climate as well as the usual 14-hour day of the top executive (counting—or possibly not counting—the business sociabilities inseparable from landing a worthwhile contract). This is no way to treat an ulcer. At the least, the doctors at the Congress urged, the executive should come back by boat. It is to be hoped that senior executives will take this professional advice seriously; and there may be something to be said for giving some inter-office publicity to Mr O'Dwyer's findings among executives who are spared the heavy burden of trips abroad. Some stay-at-home executives are even tempted to think they are missing something, particularly when a business trip happens to require the attendance of a wife. So they are, their peripatetic colleagues have now Mr O'Dwyer's authority to tell them, quietly but firmly—missing overwork, the risk of picking up typhoid or dysentery at some godforsaken restaurant, and the domestic nursing such misfortunes entail.

Rising Road Expenditure

A WARM bank holiday weekend at Whitsun brings out and concentrates along important routes a visibly high proportion of the 3½ or more million cars in Britain, and holidaying motorists stuck in long traffic jams—as most are sooner or later—are ready consumers of propaganda about road expenditure as the Roads Campaign Council found last weekend. But congestion is not the symptom only of peak holiday travel and one disquieting feature in recent road casualty returns (to the end of April ten per

cent up on last year) and in the latest police accident reports is the marked increase in the number of accidents apparently caused by vehicles following too closely behind each other.

Road expenditure is slowly gathering momentum under the government's £147 million four-year programme but progress is still measured more in schemes in preparation than in work actually being done. Between authorisation and commencement of work the details of planning and contracts may take a year or eighteen months. In the year to last March about £8 million was spent out of Exchequer funds on new construction and major improvements and £27 million of future work was sanctioned. Authorisations totalling £43½ million were carried forward to the present year, when spending is expected to reach about £20 million, including £5 million by local authorities. These authorisations include some of the new motorways. The contract for the Preston by-pass was placed this week. This will form part of the Preston-Birmingham motorway, and contract details for the London-Birmingham section of the London-Yorkshire motorway are now being settled. The programme has at least escaped the latest batch of cuts and the general aim for the rate of spending on new works by all authorities is still £50 million a year in about two year's time.

SHORTER NOTES

After a period of test, the first of the Calder Hall reactors is now working, and the transmission of electricity to the Whitehaven district should start in a few weeks. The full installation, consisting of two reactors and four turbines, will deliver 100,000 kW.

Full accounts of Marks and Spencer show that the company has continued its policy of rapid development. Freehold and leasehold properties have risen from £35,297,191 to £38,802,199, but the future commitments on properties in the course of development are down from £2 million to £1 million.

The interim ordinary dividend of Turner and Newall, the asbestos group, has been left unchanged at 5 per cent. But the cautious directors say that while trading conditions in the half-year to March 31st were "satisfactory," towards the end of the period the volume of sales was "tending slightly downwards," and in the home market some customers, affected by the credit squeeze, are reducing their orders. Abroad the volume of trade is "static and may be somewhat lower before long."

The directors of Carreras have again passed the interim ordinary dividend, although the provisional results for the half-year to April 30th are slightly more favourable than those for the corresponding period last year. For the full year to October 31, 1955, there was one dividend payment of 8½ per cent.

Company Notes

UNITED MOLASSES. The public thinks of the United Molasses Company partly as a commodity trader supplying molasses, which is a sugar product, partly also as a shipping company reflecting the fluctuations of the freight market, and particularly of the tanker section. That view is not wrong; the reason why in 1955 the company showed a profit before depreciation and tax of £5.2 million compared with £4.3 million in 1954 had much to do with the strong demand for molasses and much, also, with the favourable turn that shipping freights took in the last three months of the year. In the result the dividend is up to the equivalent of 29 per cent gross, compared with 22.1 per cent gross last year, when it was supplemented with a 4 per cent tax-free distribution from capital reserve.

The current development is that United Molasses is broadening its base. It is now a great deal more than a tanker plus commodity company. Through the Anchor Line the group owns an important fleet of passenger liners and cargo liners. It has important holdings with Tate and Lyle in Sugar Line and in West Indies Sugar Company. In Weymann's it owns a bus body building company and last year it was actively engaged in buying more manufacturing companies. For about £210,000 it bought all the capital of E. N. Bray, electrical control gear manufacturers, and at the turn of the year it broadened its investment in Olympic Portland Cement, a British registered company making cement in America, into a controlling interest. The cost of the 62 per cent holding in this company was about £749,000.

The main lines of the group's business have done well. In the molasses business itself the chairman, Mr G. W. Scott, reports stable prices and a further increase in consumption. Consumption in cattle feed both in Britain and the United States has expanded and in Britain the demand for molasses for distillation also rose, though the chairman still expects that part of the demand to shrink when the new synthetic plants now springing up are completed. Towards the end of the year molasses prices hardened and the company had to raise selling prices—but not, the chairman thinks, to a level that will prevent demand expanding. The sharp rise of about 32½ per cent to £3.2 million in molasses stocks must therefore owe something to price as well as to volume. On the shipping side the company should receive one more vessel next year to complete its second tanker building programme. But it has not stopped building. Since the close of the accounts it has ordered three bulk cargo carriers of 11,000 tons for delivery in 1958-59 and has reserved a berth for a tanker for delivery in 1961.

On one side only does the balance sheet show signs of discomfort. The substantial gilt-edged holdings have suffered in the credit squeeze and the company has wisely decided to write its gilt-edged

holding down to market value out of capital reserve, even though it may get back more than all the book loss if it holds its investments to maturity. After using £763,798 for that writing down, group reserves and undistributed profits still amounted to £13.2 million, compared with £12.9 million at the end of 1954. The chairman thinks that shipping freights are likely to remain higher than in 1955 and that, barring catastrophe, profits should not be less than those of last year.

MONSANTO CHEMICALS.

Two connected themes run through the valedictory statement of Mr Edward A. O'Neal as chairman of Monsanto Chemicals. One is the trimming of profit margins as competition intensifies and as costs continue to rise; the other concerns the development and research programme designed to bring new products into the Monsanto fold and to consolidate the business in existing products.

Last year Monsanto established another new record in the volume and value of its sales. That is to be expected; for the group has continued to add to its productive capacity, spending £1,257,801 on capital account last year. But the group's margins were so trimmed that its gross profits fell slightly, from £1,791,083 to £1,789,573 and the ordinary dividend was left unchanged at 22½ per cent. And Mr O'Neal evidently fears that margins will be further narrowed.

	Year to Dec. 31, 1954	1955
<i>Sales and earnings:—</i>		
Sales.....	12,634,616	13,499,986
Total income.....	12,662,053	13,638,566

Dividends.....	404,250	422,625
Retained profits.....	402,249	575,525
<i>6s. ordinary share at 26s. 6d. yields 4 5s. per cent.</i>		

Perhaps the most significant of Monsanto's new ventures are the full-scale plant at Newport for the production of synthetic rubbers and Monsanto's direct venture into petrochemicals. On this Mr O'Neal says: "following discussions with Esso Petroleum Company Limited our two companies have reached agreement in principle in respect of an arrangement under which Esso have offered us a site for a new plant to be erected by us adjoining their refinery at Fawley in Hampshire."

CADBURY BROTHERS and ROWNTREE. The past year was a black time for the chocolate manufacturers. For fifteen years the industry had been subject to controls; last year it had to face the full force of competition. During the year, too, the price of cocoa fell from £400 to £250 a ton and the

manufacturers were forced to write down their stocks. To add to these troubles there were disputes with the retailers and wholesalers about profit margins. And, as in most industries, costs were rising. No wonder, then, that the full report of Cadbury Brothers and the preliminary report of Rowntree are bitter rather than full cream.

Both companies show an increase in sales. Sales by Rowntree were higher than the 1954 record figure of about £43 million, while Cadbury's sales on the home market rose by 6.3 per cent to just under £45 million, stemming from an increase of 3 per cent in tonnage. The value of Cadbury's export sales was lower than in the previous year, but it brought the company's total sales up to £47½ million. Including the sales of subsidiaries, the group turnover rose from £72.5 million to £76.3 million.

The costs of Cadbury's "ingredients, wages, materials and expenses," however, rose from £61.3 million to £69.4 million. This indicates a rise in operating costs, but also includes an unspecified amount written off stocks of cocoa. It cannot have been a trifling amount, for the Cadbury group carries heavier stocks than Rowntree, which had to write off £2,043,850 from its stocks last year. The final result is that both companies have left their dividends unchanged, but both have reported a sharp fall in net profits. Rowntree's net earnings have dropped from £1,887,341 to £366,740, while the net profits of Cadbury have fallen from £3,500,720 to £952,112. In the light of these results, the chairman, Mr L. J. Cadbury, says that the company has revised its capital development programme, postponing some projects, though much more on the side of amenities than on the side of production. All the chocolate manufacturers will continue to try to make production more efficient, for, as the recent price reductions showed, they are still locked in a competitive struggle, in which the smaller manufacturers rather than the giants may have to take the worst buffets.

BURMAH OIL. The first illustration in the full report of Burmah Oil is not, as some stockholders might expect, one of a dividend warrant from British Petroleum, but of the Chauk Oilfield on the Irrawaddy. Derricks and pagodas make a romantic combination, but it is the mundane (though prodigious) investments that gave Burmah Oil's dividends a fillip. The ordinary dividend was raised from 11½ to 17½ per cent and the accounts were closed before the bigger final dividends from BP and Shell were paid over. Out of the £13,632,789 of total income after depreciation, dividends on "other investments" contributed £6,776,119, compared with £2,884,504 in 1954. The profit on trading, after depreciation, contributed £4,381,880, compared with £3,855,048.

The comparison can be taken a stage further. In the consolidated balance sheet fixed assets, after depreciation of £6,987,547, are valued at £9,578,108. The

book value of Burmah Oil's "other quoted investments" (which exclude the £2,842,294 of British Government securities) is £32,088,863, compared with £10,714,505. That increase reflects the directors' revaluation of the company's holding in British Petroleum from 4s. to 20s. a share. That revaluation tells only a fraction of the story, for the market value of these investments at the end of last December was £164,738,704, compared with £127,052,750 at the end of 1954.

But in his review the chairman, Sir Kenneth Harper, devotes most of his attention to the company's trading in Burma, India and Pakistan. This trade brought in a bigger profit last year, but these profits came chiefly from the distribution of oil products, of which only 28 per cent came from Burmah Oil's indigenous production. But though Sir Kenneth has an interesting story to tell, the eyes of stockholders will surely keep returning to the £164 million of investments while the price of Burmah Oil's £1 stock units—currently 88s. 6d. giving a yield of about 4½—moves with that of British Petroleum.

J. & P. COATS. The directors of J. & P. Coats have left the ordinary dividend for 1955 unchanged at 8½ per cent. Since the announcement the £1 ordinary stock units have risen in an uncertain market from 22s. 6d. to 23s. 10½d.—a move that expresses less satisfaction with the dividend, which can never have been in danger, than with the profits which were good.

The group's loss on exchange has been whittled down from £4,200,000 in 1953 and £1,300,000 in 1954, when the losses occurred in Mexican and Brazilian currencies, to £245,000 in 1955. After charging these losses, the consolidated gross profit has risen from £8,638,512 to £10,878,524. If these losses are added back the trading surplus still shows an increase, from £9,938,512 to £11,123,524. The charge for British taxation on profits has fallen, from £2,449,984 to £2,280,661, but that for foreign taxation has gone up

from £2,541,507 to £3,221,740. These figures support the impression that it was the company's business overseas which contributed most to the improvement in trading results. So, also, does a comparison between the profits of the group and those of the parent company alone. The group's net profit after tax has risen from £3,647,021 to £5,376,123, while the parent company's net profit has risen, less sharply, from £2,459,450 to £2,718,804. At an ex-dividend price of 22s. 9d. the £1 stock units yield 7½ per cent, one of the smallest yields in the cotton textile list.

GESTETNER. The end of Gestetner's accounting year has been changed from August 31st to March 31st. Thus no firm comparison can be made between the profits earned in the seven months to March 31, 1956, and those earned in the year to August 31, 1955; indeed, the directors emphasise that "the results of the period covered by these accounts should not be taken as proportionately representative of a full twelve months' trading." Stockholders can if they wish take cheer from the fact that the ordinary dividend of 12½ per cent for the seven months is equivalent to an annual rate of 21.4 per cent, compared with 20 per cent in 1954-55, and need not read anything ominous into the apparent drop in the monthly rate of profits.

They should also note that the level of trading has been higher, bringing up the value of stocks in seven months from £1,641,810 to £1,750,385 and of debtors from £1,633,554 to £1,886,666. And the company is still expanding. Costs of production and distribution continue to rise and the full cost of recent wage increases is not reflected in the latest accounts. But the directors hope that the higher turnover for which the new buildings provide will go far to absorb increases in costs and so enable prices to be maintained. At the current price of 21s. 6d. the 5s. "A" ordinary shares yield about 5 per cent on the assumption of an annual dividend of 21½ per cent.

LONDON STOCK EXCHANGE

Next Account begins: June 6th

Next Contango Day: June 6th

Next Settlement Day: May 29th

SHORT-DATED Government stocks were again firm throughout the week, 5 per cent Exchequer 1957 moving up a fraction to 100½. Longer-dated stocks declined; 3½ per cent Gas 1969-71 was lowered ½ to 84½ and the 3 per cent stock 1990-95 ½ to 69½. Undated issues were scarcely changed; 4 per cent Consols were ½ lower and 3½ War Loan a similar amount higher. Industrial stocks showed scattered gains towards the close of last week, but declined this week. The opening of the new account on Wednesday brought little support, due partly to a decline on Wall Street and losses predominated.

Associated Portland Cement receded 1s. 3d. to 108s. 9d. before the announcement of the increased dividend and scrip issue, but then recovered 1s. Tarmac advanced to 80s. ICI lost 1s. 1½d. to 45s. 10½d. following the report. GUS "A" rose 1s. 9d. to 42s. 6d., but stores were generally easier, Woolworth losing 1s. 3d. Electrical stocks improved at first, but dropped back in the new account; C. A. Parsons gained 2s. 6d. to 88s. 6d., then receded to 85s. 6d., Plessey were 6d. higher on balance at 69s. and Reyrolle fell to 105s. 6d. after reaching 108s. 6d. Steel shares weakened on Wednesday and engineering stocks are generally unchanged since last week. Raleigh lost 2s. 10½d. to 36s. 10½d., BSA 1s. 6d. to 29s. 9d. and motors were again lower. Ford and BMC reached their lowest points this year at 31s. 4½d. and 6s. 11½d. respectively following the fall in production. Hawker Siddeley fell 2s. 6d. to 35s. Reckitt & Colman rose 2s. after the disclosure of higher profits.

Randfontein lost a further 9d. to 39s., but some Kaffirs were firm, Dominion Reefs gaining 3d. to 17s. 3d. De Beers failed to maintain a slight improvement and the deferred shares receded to 4½. London Tin lost an earlier rise of 7½d. and were quoted at 9s. 6d. 10d on Wednesday. Coppers eased at the same time and rubbers were depressed by the further lowering of the commodity price.

Financial Statistics

EXCHEQUER RETURNS

For the week ended May 19th, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £15,626,000 compared with a surplus of £12,102,000 in the previous week and a deficit of £16,691,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £309,000, bringing the total cumulative deficit to £38,414,000 (£94,413,000 in 1955-56).

THE MONEY MARKET

CREDIT in Lombard Street has remained short this week. Before the weekend the Bank made small special purchases, and on Tuesday after the holiday three or four houses were obliged to take a very small amount at Bank rate, despite some small further special purchases. Up to 4½ per cent was paid for overnight loans. On Wednesday market supplies of credit were just adequate for demands. Throughout the week, dealing rates in July and August bills have remained at 4½-4¾ per cent.

At the Treasury bill tender on Friday of last week the discount houses maintained their bid at £98 15s. 3d. per cent, and as applications for the unchanged offer of £250 million fell by £11.5 million, to £393 million, the market's allotment rose from 42 to 47 per cent, and the average rate of allotment by id. to £4 19s. 0.6d. per cent. At yesterday's tender, the offer was cut by £10 million to £240 million.

Sterling has weakened slightly during the past week. The spot dollar rate fell from \$2.80½ on Thursday before the week-end to \$2.80½ at Wednesday's close. The deutschmark rose markedly against sterling as a result of strong demands following the increase in the West German re-discount rate. In the gold market, the price at the fixing has risen slightly, in sympathy with the decline in Thursday last to 248s. 2½d. on Wednesday.

A sad case of over-heating

This once-fiery furnace tube was found in a
state of collapse after a bout of over-heating.
And the reason was entirely due to that old
boiler gremlin causing loss of water and
jamming the low water alarm valve.

What Vulcan say about it

Neglect, mechanical defects, or electrical
faults: those are the three main reasons
for failures of boiler controls. The pre-
vention of breakdown and possible ex-
plosion demands regular and scrupulous
inspection. For this exacting job, the
eagle-eyed experts are Vulcan's Engineer-
Surveyors.

They are the specialists who know
where to look for likely danger and dis-
aster in every heating plant going—or not
going. In lifts, hoists and cranes, too:
anywhere there's an accident coming
up, they're down on it before it has even
thought of starting. In other words,
safety first is Vulcan first.

COMPANY MEETINGS

UNILEVER LIMITED

THE IMPORTANCE OF GOOD MANAGERS IN INDUSTRY
ESSENTIAL REQUIREMENT FOR INCREASED PRODUCTION

KEEN COMPETITION FOR POTENTIAL CANDIDATES

INTERNATIONAL CHARACTER OF BUSINESS A SAFEGUARD AGAINST
UNIFORM MEDIOCRITY

LORD HEYWORTH ON COMPANY'S APPROACH TO A COMPLEX PROBLEM

The Annual General Meeting of the Members of Unilever Limited was held on May 24th at The Hall of the Chartered Insurance Institute, 20, Aldermanbury, London, E.C.2. Lord Heyworth presided. Addressing the Meeting the Chairman said:

THE MANAGERS

Each year the Annual Report and Accounts give you considerable information about the material assets of your business—its plant, equipment, buildings, capital expenditure, sales and profits—all things to which a money value can be attached. But they do not, and cannot, tell you much about the human side of the business, the people in it who "make the wheels go round."

Today I propose to say something about one important section of those people, the managers. Important to the shareholders, because without good managers neither this nor any business could thrive. Important to the employees, for without good skippers you cannot have a happy ship. And important to the communities we serve, because without good managers we shall not achieve the increased productivity upon which the improvement of standards of living depends.

The topic is of particular moment now when, with full, or overfull, employment in most parts of the world, the competition to secure the services of those who show an aptitude for management is keener than ever before. In this country, for example, when a young man of reasonable attainments comes today for interview, as often as not he comes prepared to weigh any job which you may offer him against the several other offers which he already has in his pocket. And even when you have caught your potential manager young, there is always the chance that on his way up the ladder you will lose him to someone else. The question is therefore one which today we must take very seriously.

To cover this subject fully would take a book, and today I can deal only with some of the high lights of our own experiences. Some of our problems are, no doubt, peculiar to our own business, an Anglo-Dutch partnership operating several hundred companies in more than forty different countries. I shall not presume to say to what extent others can apply the lessons we have learnt, and indeed are still learning. Let no one think that we are under the illusion that we know all the answers. On the contrary, we are aware that this is a field in which complacency would be followed by retribution even more quickly than usual.

Let us at the outset define our terms. It

seems to me that essentially a manager in our business is one to whom is entrusted, at whatever level, the supervision or direction of others. On this footing we have some 22,600 managers in Unilever, out of a total labour force of about 270,000. Managers, that is to say, form 8 per cent of the total. But inside the general pattern the proportion of managers to the whole varies from one part of the business to another, and from one country to another, not arbitrarily or because someone has been "empire-building" but because, as any part of the business and the country in which it operates becomes more highly developed, the art of management becomes more complicated and a higher proportion of managers becomes necessary. At one end of the scale is a business like our Plantations in Nigeria and the Cameroons, where both the country and the operations are still comparatively simple. Here the managers form only about 3 per cent of the whole. At another stage we have Indonesia, for example, where we have a business producing both detergents and edible fats, and here the proportion of managers has risen to 6 per cent. In the United Kingdom, confining ourselves to our operations in detergents, edible fats and other foods, oil-milling and toilet preparations, the proportion of managers to the total labour force has reached 11 per cent, and in Holland, with the same range of operations, it is about the same. In the highly sophisticated conditions of the United States, where our interests embrace detergents, toilet preparations, foods and oils and fats, our managers form no less than 15 per cent of the total of our employees. The pattern that emerges is that the higher the degree of mechanisation and the more sophisticated the environment, the higher will be the ratio of managers required.

VALUE OF SPECIALISTS

My broad definition of managers as people who control or direct others needs one qualification in respect of some of the specialists—scientists, research workers, craftsmen, expert advisers on economics, international affairs and so on. Some of these do in fact lead small teams or have a handful of assistants and therefore control others, but others work on their own, with perhaps only a personal secretary to help them. But the value of all these specialists to the business is very great, in some cases greater perhaps than some categories of managers, and in Unilever we do in fact regard them all as equivalent to management.

Our managers fall into three main categories. At the base of the pyramid there are the junior managers, numbering about 16,400.

Of these there are some 5,000 in this country and 800 in Holland. This category includes the foremen and supervisors, the men and women on the factory floor or in the office who are the first to carry responsibility for the running of a small group and who are all people who have to understand the art of handling, or "managing," other people.

Next comes the large class of middle and senior managers totalling about 6,000. And, at the apex, we have the top management, the two or three hundred people who take on themselves the decisions which make or mar the success of the business as a whole. It is not possible to draw a hard and fast line between the place where the main body of management ends and the top management begins.

MERIT—THE ONLY TEST OF
SUITABILITY

At the outset let me say that the only test which we apply to determine a man's suitability to enter our managerial ranks is that of merit. There is no question of demanding a particular social or educational background. An increasing proportion of prospective managers have had a university education but my forecast is that in future, as today, many Unilever managers will be men who came in at one of the lowest levels, who "came up the hard way" and whose qualities of leadership were developed after they had joined the business. We try to see that in our business there is always a ladder by which a man with the right qualities can climb to the next stage. If we succeed in this, there will always be found at every level of our management men whose only university has been what William Lever used to call the University of Hard Knocks.

In analysing this large subject of management the methods by which our managers are selected form a logical starting-point. Selection, like the other operations of our business, is a matter in which we find that decentralisation is essential. In general, therefore, it is left to the individual companies and local managements throughout the world to do their own selection, whether from within their existing ranks or by recruitment from outside. They can and do, however, draw upon the common fund of knowledge and experience which has been accumulated by our Personnel divisions at Headquarters and as a result we find that the technique of selection everywhere conforms more or less to a common pattern, but this is flexible and capable of adaptation to suit particular circumstances. I do not propose to describe the technique in detail. There is nothing mysterious about it and we are neither the inventors nor the sole users. One

basic principle which is commonly followed, particularly when assessing candidates for the higher grades, is that the qualities of the potential recruit are assessed not merely by individual interview but also by seeing him perform as one of a group, which lets him show whether he possesses such obviously desirable qualities as intelligence, common sense, organising ability, and the ability to get on with others. We know very well that selection procedure of this kind is not perfect. There is, for example, still a danger of choosing the pleasant talker and easy mixer to the exclusion of the rough diamond and the gifted eccentric. But at least, in realising the danger, we have gone some way to meeting it: and we think that a procedure of this kind, though we are always trying to improve it, enables us to make fewer mistakes than any other form of selection which we have been able to devise. It is worth noting that although the advice of the personnel specialists is available throughout, the actual selectors with whom the final decision rests are active executives from all parts of the business. These are the men who know by the hard test of practical experience the sort of men they want as managers, and therefore it is important that they should spare the time from their ordinary duties to take part in this business of selection.

TECHNOLOGICAL SKILL AND
MANAGEMENT

I have mentioned some of the qualities for which our selectors look. But there are managerial posts in the business for which these qualities alone will not suffice and which, particularly on the technical and production sides, can only be filled by the man who has in addition the right technological skill. Similarly, there are posts for which a knowledge of accountancy is essential. Some men, therefore, are picked primarily for their specialist knowledge and we pay special attention to developing their general management ability in the business. But the man must have the germ of leadership within him, and it does seem in general to be harder at the stage of initial selection to detect this germ in the technical man than in the non-scientist.

My own feeling about this is that we may have to recognise that for the man reading science at the University today the curriculum is so specialised, and so much time has to be spent in the laboratory and lecture room, that it is up to us, once he has joined us, to pay special attention to helping him to broaden his outlook. Certainly we know from our own experience that technological skill and management ability are far from incompatible.

BACKGROUND OF THE CANDIDATES

What is the background of the candidates for management posts in Unilever? One result of trying at every stage to leave the road open for the man of ability to climb to the next level is that many of those who come to our management selection boards are internal candidates, men coming up from the ranks. In one sense, of course, everyone at the moment of first joining the business is an external candidate. In talking of internal candidates for management posts I mean people whose first recruitment was on a lower level, not specifically for management, but whose potentialities for that grade have become apparent after they joined us. It is an important part of the job of every company chairman and his advisers to be on the watch for talent of this kind, to nurse and train it and, when the man is ready, to bring him forward for consideration. It may seem a departure from the principle of decentralisation for the company to send a man

to a central selection board. But apart from the fact that this corrects the inevitable differences in the standards of judgment of individual chairmen, we have found that companies often welcome this chance of an independent assessment and a second opinion of a man's worth, not from Personnel experts but from colleagues in the business who are in the same general stream as themselves. The proportion of internal to external candidates varies from country to country. For the scheme which we run in this country they now provide about half of the successful candidates, while in Holland the proportion is at present considerably less.

Of the recruits from outside—I am now talking of men whom we take on specifically as potential managers—many have had a university education, but this is by no means a necessary qualification. It is largely a question of age. Men who want to join us specifically in a managerial role are usually in their early or middle twenties and with increasing facilities for higher education more and more of the men of ability in this age-group have in fact been to a university. We are, however, content to take on a promising boy a few years younger than the University candidates, train him for a few years and then let him show his paces to the selectors with others of his own age, against whose university education he can now set the advantage of some years' training in the business. But at present, the bulk of external candidates in their early twenties who come to our selection boards, certainly so far as this country and Holland are concerned, has had a University education.

INDUSTRY AND THE UNIVERSITIES

In Holland, men who intend to make business their career usually read law or economics, but our experience in the United Kingdom is that a degree in any field can form an adequate background and provide suitable mental training for the general side of business, though there are as I have said many posts for which a technological education is essential. In the United States, education specifically for a career in industry has long been more highly developed than in Europe and a much higher proportion of those who graduate do so in economics or commerce. In addition there are in the States many schools of business administration which have no counterpart over here. For this difference there are a number of reasons. For one, the status and prestige of industry in the States is second to none, whereas in many other countries it has taken longer to become recognised as a first-class career. For another, until the days of the great depression comparatively few young men in the States were attracted to Government employment, nor were there opportunities for Imperial Government service abroad. A higher proportion therefore tended to go into industry and commerce, and the Universities allowed for this in the education which they provided. And it is not only the attitude of the universities to industry which affects the issue but of industry to the universities. In this respect the climate is changing fast and over the last generation or so industry in the United Kingdom and Holland has been rapidly losing its traditional resistance to the employment of graduates, while the universities, for their part, are increasingly ready to co-operate with industry.

TRAINING THE POTENTIAL MANAGER

Let us now return to the man starting out on his career as a manager in Unilever and say something about his training.

First and foremost, the most important training is that which is done individually and on the job, and it must be flexible and selective. There is no general scheme of training into which everyone will fit, no universal and all-embracing sausage-machine into one end of which you can put a trainee and expect a trained manager to emerge at the other. To change the metaphor, training should be tailored to measure, not ready-made off the peg. Therefore we do not start by sending the potential manager to a training school. Immediately, or after a short settling-in period, we give him a job, and in that job he starts to learn the art of being a manager. We do not expect him to work out the answers for himself by the light of nature, and we do expect the man above him to spend a good deal of time and trouble in the training of his subordinate. This training of the men under them is a vital part of the work of all managers, and the man who neglects it or regards it as a waste of time is unlikely himself to reach the heights.

Training, then, starts on the job. We try to avoid any emphasis on privileged categories of learners wearing the equivalent of the officer cadet's white cap-band. Experience has shown that the creation of a special class of this kind causes the trainee to be regarded by those with whom he works as a kind of hot-house plant going through Unilever life with a special label—an unhealthy state of affairs for everyone.

To this basic training on the job, courses provide a most valuable reinforcement, and in these post-war years we have greatly extended this form of training. Those which we run ourselves are of two main kinds. There is the general course, primarily designed to give a man the broad picture of industry and its economic background, and to tell him something of Unilever as a whole. In this category we have courses for supervisors, which have been greatly developed in recent years. Indeed, one can hardly do too much in the training of this vital link in the chain of command, without which the best of senior managers cannot get their ideas transmitted to the factory floor. We have also developed courses for managers, mostly men in their late twenties and early thirties, where a man can meet and exchange ideas with his contemporaries from other sides of the business. Courses of this kind run from three to four weeks in length.

The second category is that of more specialised courses, of which the main instructional content is devoted to a particular technique, such as production study, accountancy, advertising, or some technical process, though here, too, we seek to give something of the general background.

It is necessary to add that courses do not suit everyone, nor does everyone need them. Those concerned with a man's training have to decide if and when he will benefit from this form of instruction. Unless the right men are sent on the right courses these are at best a waste of time and at worst can do positive harm.

OPPORTUNITIES TO VISIT OUTSIDE
INSTITUTIONS

For more senior managers the opportunity may arise of going to an outside institution such as the Administrative Staff College at Henley in this country, Nijmegen in Holland, and the advanced courses available at such places as the Harvard School of Business Administration in the United States. We send people to all these places, sometimes to the one in their own country, sometimes abroad. The opportunity should be grasped with both hands, for the effect of meeting

people from completely different fields of business, from the Civil Service, nationalised industries and so on can indeed be stimulating. At present most of those who come to these courses from business over here are drawn from the larger firms. I know that it is more difficult for smaller firms to spare men to attend these courses, but I am sure that it would be to the general benefit if they could do so. The duration of courses of this kind is usually about three months, though in America courses of twelve months are beginning to be developed and there is one of this length in Europe. The longer the course the more difficult the problem of secondment, but for the few exceptional men who would benefit from courses of this length the time could be well spent. Then there are the courses run by Universities, Summer Schools of business and the like, lasting three or four weeks. Where the courses are for more senior people the students, if of the right quality, can to a great extent teach themselves and each other, with a guiding hand from a few experts, but for younger men more positive instruction is necessary. In the United States there are plenty of men in academic life who have had sufficient contact with the industrial world to be able to act as the instructors, but in Europe there is a shortage of people with these qualifications. Industry therefore should make a contribution, not only by ensuring that the quality of those whom it sends as students is high but also by seconding first-class men to assist on the instructional side. I for one would like to see this kind of secondment becoming a two-way traffic. If, as one hopes, the Universities are going to develop the teaching of business administration, I would favour the experiment of seconding the University teacher to industry for a year or two, and so giving him an inside view of how industry works before he returns to the University to teach.

OTHER AIDS TO MENTAL ALERTNESS

In addition to courses there are other aids by which a manager's mind can be kept supple and alert. Conferences play a part here, and by conferences I do not mean get-togethers for merry-making and junketing, but working conferences in which anything from twenty to a hundred senior managers are brought together for an intensive study of questions which are of general interest to them all but are outside their daily run of business. Similarly, when we are faced with a problem—it may be whether we should launch into a new field, it may be office accommodation or the organisation or budget of one of our companies or departments—we often set up a small panel or study group of senior managers to investigate and report. There is nothing new about this technique but the point to note is that in addition to its primary purpose of providing us with a considered view of the particular problem, it gives the members of the panel a useful opportunity to stretch their minds and apply them to something outside their own daily jobs.

THE GREATER THE SCOPE THE BETTER

But when all is said and done, when we have made the fullest use of courses, secondments, conferences, study panels and other extraneous aids of this kind, we come back to my starting-point, that fundamentally the training of the senior manager, as of the junior, is done on the job. And a man cannot develop his full qualities in his job unless those above him give him scope to do so. This means that we must truly practise delegation, not just pay lip-service to the principle. Delegation does not mean just sitting

back with your feet up and leaving a subordinate to do the work; it should be a positive act of trust. It does not, I think, come naturally to most people. We are all inclined to give a man a job to do and then to look over his shoulder to make sure that he is not making a mistake. This is a tendency which must be resisted, as must the inclination to delegate only to those whom we regard as men who will play safe. This is no way to create a forward-looking and progressive body of managers. Management cannot be lively and efficient unless there is true delegation. Conversely, people will be unwilling to delegate unless management is lively and efficient. If these two propositions look like creating a vicious circle anywhere in the business, we must break through it. I do not mean that in a passion of devotion to the principle of delegation we should immediately scrap those controls which we have devised to ensure that the best advantage is taken of the resources of an organisation the size of ours—the controlling machinery of Capital Expenditure budgets and Annual Operating Plans, the technique of which I described in some detail a few years ago. Nor should I like to see our managers interpreting my words as meaning that, from now on, they are to prove their spirit of independence by ignoring the accumulated experience and specialist skills with which our central advisory departments can provide them. By all means let there be continuous and constructive co-operation between the companies and the experts at the centre. But in general the greater the scope which every manager can give to those below him, the better.

This brief discussion on the training of the more mature manager prompts one to ask at what stage a man is to be considered fully trained. In the sense that all of us can and should go on learning right up to the moment we retire, I suppose that the answer to this question is—never. But we must be careful not to carry this spirit of perfectionism so far that, when we begin to approach retiring age, we find ourselves looking upon men in their thirties and early forties as far too young and untrained to hold positions of real responsibility. Such a tendency is, I think, natural in any large organisation where most men go on to a retirement age in the sixties, but it must be resisted. We have to remember that we ourselves may have thought very differently fifteen or twenty years ago.

THE DANGERS OF IN-BREEDING

There are certain obvious advantages in possessing a corps of managers trained up in the business, professionals who at the start of their working life have made industry in general and Unilever in particular their chosen career. Unless our methods of training and development are sadly awry we can put on the credit side loyalty, team-spirit, knowledge of the business and of the people in it. But we must beware of the dangers of in-breeding: the tendency to rest content with things as they are and to play safe, to follow precedent, to play down initiative and originality and to keep one's nose so closely to the Unilever grindstone as to let change and development in the outside world pass by unnoticed. Among the correctives to this kind of attitude are the extraneous aids which I mentioned a moment ago—courses, whether as student or instructor, conferences and study groups. Moreover, the lump is continually being leavened by the yeast of new-comers, though the introduction of new blood at the more senior levels has so far been practically confined to specialists whose particular skill cannot be matched from our existing resources. It may

be that more interchange from one business to another at senior levels would be no bad thing. There are admittedly practical difficulties. Those who feel that they have borne the heat and burden of the day in the lower ranks will feel disheartened if new-comers are brought in over their heads. One must strike the mean and give due weight to this very natural feeling without allowing it to operate as a rigid ban against the introduction of new-comers who may have had valuable experience outside the business. Pension rights, too, are sometimes a difficulty and I for one should be sorry to see pension schemes being used to fetter a man to his present job with chains of gold. It cannot be a good thing for a man to feel that he cannot get out and go to new employment except with a crippling loss of pension rights. It is worth noting that in the United States it has become the accepted pattern for a man to move upwards by switching from one business to another without suffering any stigma of disloyalty or careerism. Indeed, in that country cross-fertilisation between businesses has reached such a pitch as to give rise to a new profession, that of the placement consultant, who acts as a kind of confidential marriage-broker between the man who wants a change and the business in search of a new executive.

DIVERSITY OF BUSINESS AN ADVANTAGE

In Unilever we have one particular advantage, one special safeguard against our management sinking to a level of uniform mediocrity, and that lies in the international character of our business. Our managers are of many different nationalities. Those in charge of our business in the many countries in which we operate have frequent contact with headquarters in London and Rotterdam where, at the higher levels, the British and Dutch are in the majority, as is natural in a business which originated and has its headquarters in the United Kingdom and Holland; but there is room, too, at the Head Offices and elsewhere, for senior managers from practically all the countries of Europe and from the other four Continents as well. This coming together of different nationalities, different backgrounds, characteristics, upbringing and methods of approach helps to keep every one of us out of the rut.

POSTINGS AND PROMOTIONS

The diversity of our business also enables the experience of many managers to be widened by postings to countries other than their own. One need hardly stress how stimulating this can be, particularly for the man who finds himself in the more bizarre parts of the world where logic alone is often not enough to solve the unusual problems which arise. It is unfortunate that traffic of this kind is at the moment far too much one way, from the United Kingdom and Holland outwards. Except for the United Africa Group, who expressly recruit men for an overseas career, we do not of set purpose earmark managers specifically for either the Home or Overseas sides of our business. Managers should be interchangeable between the two. But the present wide discrepancies in taxation and cost of living in the various countries in which we operate constitute a serious clog on the mobility of our managers. The progression of personal taxation is at its most severe in our two home countries for the range of salaries appropriate to senior managers. It makes it practically out of the question, for example, to bring Americans into the business in England or Holland, valuable as such a step would be, and makes it difficult to move men from country to country in Europe as freely as efficiency requires.

Or again, take the case of the man posted from one of the home countries for an assignment overseas. He must be given something more than the strict "rate for the job" to allow for the extra domestic expenses of living in a foreign country and also to give him a standard of living which reflects the prestige of his more isolated position there in the eyes of those who judge by external signs. Against this he may have the benefit of lower personal taxation.

When in due course we want to bring him home on promotion, the difficulty presents itself that to continue his overseas rate of pay would give him a salary which would be much above the salaries of men doing comparable jobs at home. On the other hand, to reduce his standard of living from that to which he has become accustomed overseas is an odd kind of promotion.

In mentioning this extraneous obstacle in the way of bringing men from overseas to posts in the two home countries, I have in mind assignments of a semi-permanent nature which require men to become technically resident in England or Holland. No such handicap prevents our bringing them back for short visits for discussions or to attend training courses, and we are making increasing use of these facilities. In the last four years, for example, about 800 managers have been brought to England and Holland from the rest of Europe and from overseas for individual training and refresher courses. This is a necessary part of our policy of filling all management posts in each country in which we operate more and more with nationals of that country. Our plans assume that this process will continue, though we also think and hope that the overseas countries will still have room for some admixture of talent from home. It should be to the benefit of both sides for such interchange to continue.

PLACEMENT COMMITTEES

I have talked of postings and promotions and I would not have it thought that these are done arbitrarily, at the whim of an individual. We have placement committees composed of experienced executives who, in conjunction with the Personnel specialists, are responsible for watching the progress of promising men and for selecting and recommending the right man for the right vacancy. Government by committee has been a much-criticised institution and it has its weaknesses. But, on balance, we find it the most satisfactory method of ensuring that good men are not lost sight of and are neither over-valued nor under-valued and for making sure that promotion depends on the only genuine test, that of merit. The individual boss can back his fancy and push his man a certain distance; but thereafter he must leave him to prove his worth in the eyes of impartial and experienced men.

A CONTINUOUS PROCESS

I have only been able today to deal with some of the highlights of this formidable and many-sided subject. Perhaps one may conclude by asking by what test can you, the stockholders, decide whether we are succeeding in the task of creating a lively and efficient body of managers. I suppose that in the last resort the quality of the management is reflected by the results of the business which are laid before you in Annual General Meeting. But it is quite certain that even if, as I hope, you may think that the results at this moment indicate a reasonably satisfactory state of affairs, we cannot rest on our oars. As the business expands we shall need more managers and, as I suggested earlier, the

pattern which is unfolding is one in which the proportion of managers in relation to the whole will continue to rise, and this at a time when the competition to secure the services of managers is everywhere increasing. Therefore we can never let up. We must not expect the Universities, schools and technical colleges to prove the answer unaided. We must continually examine our methods of recruitment and selection. We must take every opportunity to bring on and upgrade our own people from the lower levels. We must all of us understand the importance of training. For if we fail to do these things, and to do them in every country where Unilever is to be found, our failure will not be slow to show itself in the results which are laid before you.

After paying tribute to the services of Sir Herbert Davis, who was that day retiring, and Dr Paul Rykens, who had retired since the last Annual General Meeting, the Chairman concluded by moving the adoption of the Report and Accounts for the year 1955. Sir Herbert Davis, Vice-Chairman, seconded the motion and it was carried unanimously.

The proposed final dividend of 9½ per cent on the Ordinary Stock and a dividend of 6 per cent on the Deferred Stock payable on June 7, 1956, were approved.

The retiring Directors were re-appointed with the exception of Sir Herbert Davis, who, having reached retirement age, and Mr J. H. Hansard, who, at his own request, did not seek re-appointment.

The remuneration of the Auditors, Messrs Cooper Brothers & Company and Messrs Price Waterhouse & Company, who had been

re-appointed under the provisions of the Companies Act, 1948, was fixed.

At a subsequent Extraordinary General Meeting a Special Resolution was passed amending the Articles of Association to exempt a Director of the Company who is in the whole-time service of the Company or of Unilever NV from the need to hold a share qualification.

The proceedings terminated with a vote of thanks to the Chairman, Directors, and all employees.

UNILEVER NV

The Annual General Meeting of the Members of Unilever NV was held on May 24th at Museumplein, Rotterdam. In the absence of Mr F. J. Tempel the Chairman of the Company, Mr Sidney J. van den Bergh, Vice-Chairman, presided and made a speech in similar terms to that delivered by Lord Heyworth at the Annual Meeting of Unilever Limited, reported above.

The Report and Accounts for the year 1955 were adopted. The proposed final dividend of 8½ per cent (being the equivalent of the final dividend for the same year to be paid by Unilever Limited to its Ordinary Stockholders calculated in accordance with the provisions of the Equalisation Agreement) was approved, the retiring Directors, except Sir Herbert Davis and Mr J. H. Hansard, were re-appointed, Mr A. C. C. Baxter, Mr A. F. H. Blaauw, Mr F. J. Pedler and Dr E. G. Woodroffe were appointed Directors, and the Auditors, Messrs Price Waterhouse & Company and Messrs Cooper Brothers & Company, were re-appointed.

Gestetner

LIMITED

TOTTENHAM, LONDON, N.17.

The Company manufactures the world-famous "Gestetner" Duplicating Machine and accessories. It has branches throughout the United Kingdom and subsidiary companies or representatives in all parts of the British Commonwealth, in the Americas, the Far East, and many countries in Europe. Extensive servicing facilities are available throughout the organisation.

SUMMARISED CONSOLIDATED ACCOUNTS AT 30th MARCH, 1956.

	£	£	£
Issued Capital	2,043,504	Fixed Assets at cost ...	3,089,964
Capital Reserves	487,825	Less: Accumulated depreciation	1,502,305
Revenue Reserves and Unappropriated Profits	1,637,057		1,587,659
Amounts set aside	680,101	Patents and Goodwill ...	1
Debenture	500,000	Subsidiaries not consolidated	224,444
Outside Shareholders' Interests ...	536	Excess of Current Assets over Current Liabilities	3,536,919
	<u>£5,349,023</u>		<u>£5,349,023</u>
Net Group Profit for the period 1st September, 1955 to 30th March, 1956, after Taxation, Staff Insurance Schemes, &c.			£411,809
Dividends Net by Gestetner Limited:			
Preference			£11,320
Ordinary			92,971
			<u>104,291</u>
Retained in the Group			<u>£307,518</u>

The Directors' Report states that the results of the period covered by these accounts should not be taken as proportionately representative of a full twelve months' trading, but the period saw the continued progress of the business.

Copies of the Accounts and Chairman's Statement may be obtained from the Secretary, Gestetner Works, Tottenham, London, N.17.

THE PRUDENTIAL ASSURANCE COMPANY LIMITED

(Incorporated in England)

In the course of his remarks at the Annual General Meeting, Sir Frank Morgan, MC, Chairman of the Company, said:

INVESTMENTS

Since 1939 this country has been faced with the twin problems of inflation and the balance of payments and much has been said and written on the recent manifestations of these problems. I propose only to call attention to one aspect of our national economic situation which has affected this Company in the past year.

In 1955 there was a great upsurge in capital investment by both public and private industry unaccompanied by sufficient personal saving and retrenchment in Government expenditure. The expansion in investment stemmed from Government policy introduced in 1954 with the very desirable and important objective of stimulating the modernisation of British industry. This modernisation, which is essential for the future economic life of our country, has unfortunately, now had to be restricted. Ambition in the field of capital investment has outrun performance in the field of saving.

The dominating influence in the capital market last year has been the substantial increase in the demand for funds to finance this high level of capital expenditure. Whereas in previous years industry was able to finance a considerable part of its re-equipment out of its own liquid resources and by bank credit, during 1955 the pressure to reduce bank advances has obliged business concerns to turn in increasing measure to the open market; the new arrangements for the finance of local authority expenditure have also worked in the same direction. In these circumstances a rise in interest rates was to be expected and this trend has been accentuated by increases in Bank Rate.

The increased activity in the new issue market has enabled us to exercise a wider choice in the selection of new investments than in recent years. For the first time since the war opportunities to invest in first-class industrial securities, mortgages and properties exceeded the amount of our accruing funds and because of this we have made some reduction in our holdings of gilt-edged investments. During 1955 almost two-thirds of our investments made in the industrial field have been in new issues, against approximately one-third in 1954. I would like to make it clear that the substantial support we have accorded to the new issue market is not inconsistent with the Government's monetary policy, which is expressly designed to reduce credit and restrict capital expenditure to the volume of current saving that the country is willing to make. Our net investment represents the current savings of our policyholders and, unlike expenditure financed by bank credit, it cannot be described as inflationary. In the great majority of the investments by which we provide new money the borrowers are required to obtain the approval of the Capital Issues Committee and where official sanction is not required we shall as always pay regard to the national interest.

During 1955, we invested a total sum of £70 million. This amount was derived in part from the accrual of new funds and in part from the proceeds of sales and redemptions. The principal channels into which the

£70 million was directed were £26 million of debenture stocks, £6 million of preference stocks, £18 million of ordinary shares, £7 million of mortgages and £7 million of property investments. At the same time it will be observed that the Balance Sheet figure for securities of, or guaranteed by, the British Government has fallen by £18 million. Part of this reduction is due to sales and redemptions and part to some further writing down of the book values of this group out of the investment reserve accounts.

The higher rates of interest at which we have invested our new money and in particular the increases in dividends on Ordinary shares have resulted in higher yields on our Life funds. The gross rates of interest earned on these funds during 1955 were £5 7s. 3d. per cent in the Ordinary Branch and £5 8s. 6d. per cent in the Industrial Branch, showing increases of 5s. 7d. per cent and 7s. 1d. per cent respectively compared with 1954.

During 1955 there was an appreciable fall in the market values of fixed interest securities and, in ordinary shares, a small rise compounded of a large increase in the first half of the year and a fall thereafter. The net effect of these movements has been a fall in the amount by which the market value of the Company's assets exceeded the value shown in the Balance Sheet, but I am happy to say that there still remained a substantial margin. In any case, as I said last year, the primary concern of a life assurance company is the income from its investments and not the fluctuations in market values.

The total of ordinary dividends declared by companies in which we have an interest increased again by an amount comparable in size with the increase in 1954. We do not expect that there will be a movement of similar magnitude in 1956 and the future will no doubt bring many fluctuations. Nevertheless we believe that a substantial part of the increase of the past two years will prove to be permanent. The benefits of this rise in income from ordinary shares now appear in larger allocations to policyholders and shareholders.

BONUS DECLARATIONS

Shareholders will have seen from the Press and from the Directors' Report that this year, besides declaring higher rates of normal reversionary bonus, we have also declared special bonuses. The rates of reversionary bonus declared for policies issued in the United Kingdom have been increased from 40s. per cent in the Ordinary Branch and 30s. per cent in the Industrial Branch to 42s. and 32s. per cent respectively. As regards the declaration of special bonuses an explanation of the background to this step is necessary.

Normally the Company declares a uniform simple reversionary bonus within each branch and territory. This is a broadly equitable system which is free from complications, which has stood the test of time and which, moreover, we believe will stand the test of time in the future. Its very simplicity, however, may well render it inappropriate to deal with circumstances of such a character as the recent exceptional increase, to which I have just referred, in the dividends on our holdings of ordinary shares in this country. This increase has added substantially to the

current surpluses and has posed the question as to the most equitable method of distribution.

The increases in dividends largely arise from investments made in the past and thus are attributable in greater measure to older than to newer policies. Consequently we felt that it would be inequitable to distribute the whole of the policyholders' share of these increased dividends as additional bonuses in respect of 1955 and future years, since much would go not only to the newer policyholders, but even to future policyholders who are not yet insured with us. In short we felt that the older policyholders had a prior claim on these increased dividends. We therefore decided that a part of last year's surplus should be distributed as a special bonus on claims arising during the remainder of 1956 on policies issued in the United Kingdom, and that this bonus should, with certain limitations, be based on the number of years during which the policy had been in force prior to January 1, 1954. The rates of special bonus for each such year are 6s. per cent in the Ordinary Branch (with a maximum of £9 per cent) and 4s. per cent in the Industrial Branch (with a maximum of £6 per cent).

Whilst giving no guarantee it is our hope that, out of future surpluses, we shall in the years to follow be able to declare similar special bonuses on claims arising from the same range of policies. By this I mean that we contemplate not only that the rates of special bonus will remain unchanged but also that they will continue to apply only to policies effected prior to January 1, 1954.

The special bonuses, in conjunction with the increased reversionary bonuses we have declared, have the virtue, we think, of demonstrating that our policyholders have a real and intimate share in the prosperity of the country's industry. Through life assurance they have an interest in the level of ordinary dividends and, as can be seen from the measures adopted this year, that interest is a valuable one.

May I put what I have just said in a more graphic form? Due to the magnitude of our investments and the policy of the Company strictly to limit its holding to a modest percentage of the equity of any industrial concern, we are interested as investors in the great majority of companies of standing in this country whose shares are quoted on the London Stock Exchange. If, as we believe, approximately every third person in this country is a Prudential policyholder, then through the Prudential alone a third of the population has a financial interest in the prosperity of the nation's industry.

DIVIDENDS

The increased distributable surpluses in the Life Branches have again enabled the Directors both to improve the proportion of these surpluses allocated to the policyholders and to increase the amount allocated to the shareholders. In each of the Life Branches the policyholders' allocation, which for 1954 was approximately 91.9 per cent of the distributable surplus, is now 92.3 per cent.

The net dividend declared on the A shares is 25s. per share, an increase of 1s. 6d., and £156,250 has been transferred to the Dividend Reserve Fund. The net dividend

declared on the B shares is increased from 3s. to 3s. 6d. per share.

The sum set aside for the dividend on the B shares, together with the corresponding provision from the General Branch for dividend to A shareholders, is again more than covered by the interest earnings of our General Branch funds after deduction of the relevant taxes.

ORDINARY BRANCH

In the Ordinary Branch, the total new sums assured under individual and group life assurance policies issued at home and overseas during 1955 amounted to £154 million.

The premium income for the year, including £9,500,000 in respect of deferred annuities, amounted to £47,800,000 and showed an increase of £3,300,000 over the preceding year. The total sums assured and bonuses in force at the end of the year were £1,100 million.

Out of the surplus for the year a sum of over £9,400,000 has been allocated to policyholders. For with-profit policies issued in the United Kingdom (other than group pension policies) the Directors have declared the reversionary and special bonuses to which I have already referred. The rates of bonus in respect of with-profit group pension policies have hitherto been at the same rates in the United Kingdom and overseas. The time has now come for these to be differentiated, the principal reason being that the differing bases of taxation give rise to a different incidence of emergence of surplus. In our Southern and East African territories the compound reversionary bonus on with-profit deferred pensions is increased and in the United Kingdom there is an increase in the special final bonus pension added when these pensions are entered upon.

The Chancellor's proposal to implement some of the recommendations of the Millard Tucker Committee is of great interest to all engaged in annuity and pension business. The method of taxing purchased life annuities has for long been regarded as an injustice and its revision will be welcome to many who are living on fixed incomes. We shall play our part to the full in encouraging additional saving by the self-employed and other classes who are to be given an incentive to provide pensions for themselves.

OVERSEAS LIFE BUSINESS

A record volume of new business has again been written by our overseas branches, the new sums assured, including £5 million under group assurances, amounting last year to over £59 million. This constituted nearly 40 per cent of the total new sums assured in the Ordinary Branch.

Our overseas business as a whole continues to make excellent progress and its financial position is most satisfactory.

In both the Australasian and Canadian branches a record amount of new business was again written in 1955. In Australia the new sums assured amounted to over £15,500,000 and in New Zealand to nearly £3 million, whilst our Canadian branch again wrote the largest amount of any of our overseas branches, their figures exceeding £21 million.

Our branch for the Southern and East African territories continued to do well and wrote nearly £12,500,000 new sums assured.

Shareholders will, no doubt, have seen references in the Press to the action taken by the Government of India towards the nationalisation of life assurance business. There have undoubtedly been malpractices in Indian life assurance, including several

cases where funds have been misapplied. So far as British and Canadian Offices working in India are concerned, no complaint has been or could be levelled against them and they have continued to set an example of probity and efficiency. We believe that it is with regret that the Government of India feels compelled to include them in the nationalisation measures.

I do not propose further to discuss the decision, but it is naturally a disappointment to us that our life assurance activities in India must terminate after our Indian Management have built up such an efficient organisation. We are very sorry to lose our Indian staff and we thank them for all they have done for the Prudential. Our Actuary, Mr Redington, in his capacity as Deputy Chairman, now Chairman, of the Life Offices' Association, has led a delegation representing British and Canadian offices which has visited India to discuss problems arising in connection with nationalisation.

We have been transacting life business in India for over 30 years and have accumulated a fund which, although substantial, is nevertheless less than two per cent of our Ordinary Branch fund. The Indian sums assured and bonuses in force at the end of last year exceeded £18 million, including £2,500,000 assured under sterling policies which have been issued mainly on non-Indian lives. Following representations we have reason for believing that sterling and other non-rupee policies, except those held by citizens of India, will be excluded from nationalisation.

INDUSTRIAL BRANCH

In the Industrial Branch the new sums assured last year were over £86 million, compared with £80 million in 1954. The average sum assured per policy issued continues to increase and is now £64.

The total sums assured and bonuses in force at the end of the year were £1,062 million and the premium income for the year was £47,500,000.

Our field staff have again succeeded in reducing the rates of premature discontinuance of policies. Less than 11 per cent of new Industrial Branch policies now lapse within one year of issue. Of the policies on which premiums have been paid for a year or longer less than 24 per cent were discontinued last year, and for all of these either a free policy or a cash surrender value was allowed.

From the surplus of the year a sum of over £10,400,000 has been allocated to policyholders. Bonus additions paid last year on claims by death and maturity averaged over 19 per cent of the original sum assured.

GENERAL BRANCH

The General Branch premium income for 1955 exceeded £12,300,000, showing an increase of about £250,000. In addition premiums of over £1,850,000 were written by our American subsidiary. Of the total premium income approximately half was derived from overseas sources.

The gross underwriting profit for 1955 was less favourable than that of the previous year, which was a record for the Company, although our motor vehicle account is the only one which shows a loss. For some years we have been concerned with the increasing cost of road accidents in this country and in many of the overseas territories where we operate. Last December, in common with other companies, we revised our home motor rates and improved the no claim discounts for private cars. In certain overseas territories an improvement in our results has followed rate revisions in recent years. The

sickness and accident account was favourable, showing a further improvement over the good results of the previous year. The fire and miscellaneous accounts again show a reasonable margin of profit, whilst our experience in marine, aviation and transit business continues to be satisfactory.

The gross interest earnings show a further substantial increase, and the net surplus, after provision for taxes and excluding the amount brought forward, amounted to £517,000. Of this surplus the Directors have transferred £300,000 to the General Branch Contingency fund.

The figures of our American subsidiary, The Prudential Insurance Company of Great Britain, are annexed to the accounts before you. You will perhaps recall that last year I mentioned that we had arranged to expand the operations of that Company by transacting casualty as well as fire reinsurance business, and that in consequence we had increased its capital resources. The volume of casualty business has so far not been large, but a start has been made. The year's results have again been satisfactory and a dividend of 7½ per cent has been declared on the increased capital of \$1,500,000.

STAFF

The results of which I have spoken, and the impressive figures contained in our Balance Sheet, summarise the achievements of our organisation, over many years, in its service to millions of policyholders. At home and overseas we cover a wide field of need in family life and in commercial and industrial enterprises. No factor is of greater importance to our success than the friendly advice and efficient service which our staffs afford to the communities they serve.

You will agree, in the light of my review of the achievements of 1955, that the Prudential continues to make substantial progress. Its good name and the quality of its service are in the capable hands of men and women engaged in many different tasks and in many different lands, and I am glad to take this opportunity of paying a sincere tribute to their industry and to their loyalty.

LIFE ASSURANCE AND SAVING

I have already commented on the fact that the country's capital investment, on which our economic progress so largely depends, has had to be restricted through lack of sufficient savings. This state of affairs, followed by Government proposals for new incentives to thrift, emphasises the fact that an increase in savings is fundamental to the curbing of inflation and the promotion of national prosperity. Our staff can be proud to feel that they are contributing to these ends by encouraging and facilitating an increasing amount of regular saving through life assurance. Year by year vast numbers of individual premium payments, which in many cases might otherwise be diverted to current expenditure, are aggregated to provide impressively large amounts for investment. The total net saving effected by means of Prudential life policies can be broadly measured by the increase in the funds of the Life Branches. Last year, for our United Kingdom business alone, this exceeded £37 million.

In this way the Prudential, and indeed life assurance as a whole, are making substantial contributions to individual and national well-being and those contributions are increasing as life assurance itself increases. To remind ourselves of this is to find considerable satisfaction in what has already been achieved and fresh encouragement for the years to come.

THE BURMAH OIL COMPANY LIMITED

YEAR OF CONTINUING EXPANSION

INCREASING DEMAND FOR PETROLEUM PRODUCTS

SIR KENNETH B. HARPER REVIEWS EXPLORATION ACTIVITIES

The fifty-fourth Annual General Meeting of The Burmah Oil Company, Limited, will be held on Thursday, June 14, 1956, in the Merchants' Hall, 30, George Square, Glasgow.

The following statement by the Chairman, Sir Kenneth B. Harper, has been circulated with the Directors' report and accounts for the year ended December 31, 1955:

THE BOARD OF DIRECTORS

Mr W. E. V. Abraham retired from the Board on November 30, 1955. His services will continue to be available to the Board in a consulting capacity.

Mr R. P. Smith has been appointed Assistant Managing Director as from April 1, 1956.

ACCOUNTS

The year 1955 was one of continuing expansion in world trade in petroleum products. Trade in Burma, India and Pakistan reflected this world trend and our operations resulted in a Group profit of £6,018,174, being an increase of £886,963 over the corresponding profit for 1954. As is our usual custom the figure of profit has been struck after charging the cost of exploration programmes and in addition there has been charged this year losses resulting from the revaluation of the Pakistan rupee in July, 1955.

£1,636,294 has been set aside for depreciation compared with £1,276,163 in 1954. The increased provision in 1955 is mainly in respect of the new seaboard installation which was completed recently in East Pakistan.

Dividends and interest received in 1955 amount to £9,250,909. The substantial increase of £5,022,904 over receipts in 1954 under this heading is due mainly to larger dividends received from The British Petroleum Company, Limited, and from our Trade Investments.

Full provision has been made for United Kingdom and Overseas taxation based on the profits for the year.

With the balance of £610,888 brought forward from 1954, the total amount available for distribution becomes £6,463,446. From this amount the Directors have allocated £1,500,000 to General Reserve and £2,961,936 for a final dividend of 12½ per cent which they recommend should be paid on the Ordinary Stock. After making the foregoing appropriation to General Reserve and deducting the net dividends paid and payable on the Preference and Ordinary Stocks, the balance of unappropriated profit carried forward is £640,486.

In the Parent Company's Balance Sheet the increase in Advances to Subsidiary Companies reflects the expansion of the activities and financial requirements of those Companies.

Trade Investments also increased during 1955 as a result of our half share of the

additional capital provided for Burmah-Shell Refineries, Limited.

The increases in Shares in Subsidiary Companies and in Quoted Investments are mainly the result of the revaluations in 1955 of our investments in Ordinary Shares of The BOC British Petroleum Share Trust Limited and in Ordinary Stock of The British Petroleum Company, Limited. The aggregate increment arising from these revaluations was transferred to Capital Reserve as is shown in Note No. 2 on the Accounts.

In accordance with the Resolution passed at an Extraordinary General Meeting held in July, 1955, the Company's Authorised Capital was increased from £25 million to £50 million and the Issued Ordinary Share Capital was at the same time increased by the issue of 20,604,770 Ordinary Shares to holders of Ordinary Stock.

PROSPECTING AND OILFIELD DEVELOPMENT OPERATIONS

Burma.—The geophysical survey of the Irrawaddy Delta to which I referred last year has been started. The Government are providing protection against any insurgent activities in this area.

In Upper Burma it is proposed to drill a test well at Ondwe, an area thirty miles south of Yenangyaung, where a suitable structure is known to exist.

Both these operations will be undertaken by The Burmah Oil Company (1954) Limited in which we hold a 55 per cent interest.

During the year production at Chauk was increased to meet the needs of the refinery there and additional wells were completed in readiness to produce the supplies of crude oil which will be required for the new refinery at Syriam, near Rangoon, towards the end of this year.

India.—Drilling results at Nahorkatiya have confirmed previous expectations that the structure is geologically complicated but I am pleased to say that on the whole they have been successful. Potential production in the area so far proved is judged to be sufficient to maintain a refinery throughput of one million tons a year for at least twenty years. Discussions are being held with the Government of India, regarding the formation of a rupee company with Indian participation to take over and develop the oilfield at Nahorkatiya and certain other concessions in Assam. Additional refining capacity will be required. The location of this and the transportation of the crude oil are subjects which are also under discussion with the Government of India.

Pakistan.—Pakistan Petroleum Limited, in which your company has a 70 per cent interest, is continuing its vigorous exploration in both West and East Pakistan. The test well in the Uch area in West Pakistan, to which I referred last year, was completed without finding oil, but it has established a useful additional reserve of gas. The proved reserves of Sui and Uch together amount to

the equivalent in calorific value of more than 120 million tons of fuel oil.

The laying of the Sui Gas Transmission Company's main line to Karachi was completed during the year, and deliveries to consumers began in September, 1955. Consumption at the end of the year was at the level of 15 million cubic feet a day, and this is expected to increase to 40 million cubic feet by the end of the current year.

Meanwhile, the Pakistan Government, through the medium of the Pakistan Industrial Development Corporation, have entrusted the Sui Gas Transmission Company with the construction of a further 16-inch pipeline from Sui northwards to Multan, a distance of approximately 200 miles. Preparations for this project are well under way. It is intended thereafter to extend the line to Lahore, a further 200 miles. We have no financial interest in the ownership of the line, but we welcome this prospect of additional offtake of Pakistan Petroleum Limited's gas.

At the Annual General Meeting, in June last, I informed you that Pakistan Petroleum Limited's No. 1 test well at Sylhet had encountered gas at 7,800 feet and had been destroyed by fire. Preparations for drilling a second well are nearly completed, and drilling is expected to start in a few weeks' time.

REFINERIES

I have already referred to the new refinery at Syriam, near Rangoon. Construction has been unfortunately retarded in consequence of the import licensing procedure introduced by the Burma Government to conserve foreign exchange. The refinery is expected to start up before the end of this year.

Digboi refinery has continued to operate satisfactorily, but the limitations of rail transport for the products resulted in the refinery's output for the year being 16 per cent below its full capacity.

The Burmah-Shell refinery, near Bombay, in which we have a 50 per cent financial interest and which has a capacity of two million tons per annum, came into full-scale operation in the third quarter of the year. The refinery is now producing 45 per cent of India's total requirements of petroleum, and has been designed with a view to considerable expansion as and when required.

The recent Indian Budget imposes Excess Duties on diesel and furnace oils produced in the Bombay and Digboi refineries at the same rates as the respective existing Import Duties.

TRADING

Our trade in all areas through our Subsidiary Companies and through Burmah-Shell amounted to over 1½ million tons of petroleum products; an increase of 12 per cent over the previous year.

Of the total supplies to meet our trade, 28 per cent came from our indigenous production, the balance being imported. (Here and elsewhere in this statement where I refer to "our" production or "our" trade I mean the operations of the Subsidiary Companies, in which your Company holds over 50 per cent of the equity, including the trade they do through Burmah-Shell.)

The ratio of indigenous to imported oil in the different areas varied, according to the location of the producing areas relative to the market, from 97 per cent indigenous in Assam to 10 per cent in the rest of India and nil in East Pakistan. The proportion should increase considerably in India when the products from Nahorkatiya crude oil reach the market. In Burma the indigenous figure last year was 48 per cent. The immediate target of The Burma Oil Company (1954) Limited is to make Burma self-supporting once again in major petroleum products, and it is with this objective that the refinery is being built at Syriam.

Security conditions in Burma continued to improve, and our trade with it. Burma's internal troubles began in 1948, and it was not until 1953 that the demand for petroleum products again reached and passed the 1948 figure. 1954 was a better year than 1953, and 1955 better than 1954, the latter percentage increase being 12 per cent. We expect the current year to show continued expansion.

In India there was a general expansion in the demand for petroleum products in 1955. Kerosine still shows the highest sales gallonage though motor spirit and automotive diesel oil together are a close second. In the years 1952-54 our sales of motor spirit in India stood still, instead of advancing steadily as in most of the rest of the world, but in 1955 there was an improvement of 5 per cent. Automotive diesel oil sales also increased substantially.

While it is satisfactory that motor spirit sales have begun to advance again, heavy taxation both of the vehicle and its fuel and restrictions on the use of vehicles are having a restraining effect on the development of road transport. The President of the Indian Roads and Transport Development Association has recently pointed out that one effect has been that the annual increase in the number of motor vehicles in India dropped from 12½ per cent in the period from 1936-51 to 3½ per cent in the period 1952-54. There was a slight improvement in 1955 which I hope will continue. It will certainly be needed if transport is to keep in step with India's second five-year plan.

While there was an overall increase in our trade in Pakistan, the offtake of individual products varied considerably. It was good in furnace oil, there was a reduction in motor spirit, an increase in automotive diesel oil and an increase in kerosine in West Pakistan offset by a reduction in East Pakistan. The decreases were a consequence of the difficulty of obtaining foreign exchange, affecting the operational side of our business in such ways as a shortage of tinplate. We cannot look for more than a modest expansion of trade in the current year unless the foreign exchange position improves and import licences for both products and tinplate are more readily granted.

PRIVATE ENTERPRISE IN INDIA

I referred last year to the difficulty we were experiencing in determining the precise place that is to be left for private enterprise in India's "socialist pattern of society," and in particular what room there will be for foreign capital and expertise in the Petroleum Industry.

A few days ago the Indian Prime Minister made a statement on his Government's revised Industrial Policy. The place for private enterprise in future will be "as an agency for planned national development in the context of the country's expanding economy." "Mineral Oils" are included in the category of industries of which all "new units" "will be set up only by the State," "save where their establishment in the private sector has already been approved."

At first sight, so far as "Mineral Oils" are concerned, this statement of revised policy does not differ appreciably from the policy announced in 1948. Both draw a distinction between "new units" and "existing undertakings" and we are at present engaged in conversations to clarify the future scope for our operations in India.

In the meantime Stockholders may have read in the press that on the advice of a team of Russian experts, after a three months' general mineral survey of India, the Government have decided to enter the field of oil exploration with a programme to spend about £20 million over the next few years.

TANKERS

The fleet continued to give excellent service and was fortunately again free from accident. The year was noteworthy for the resumption of shipments by us from Abadan where the first of our vessels called in February, and the commencement in the same month of Indian coastal shipments from the Burmah-Shell refinery at Bombay. We have since been loading regularly at both ports and, by reason of their size and draft, our white oil vessels continue to prove particularly suitable for the Indian coastal trade.

With increasingly quick turn-round at loading and discharging points time ashore has been correspondingly restricted. Our Mail Advice Service, whereby next of kin are kept advised of the movement of our ships, is proving its value in enabling officers to obtain letters from home more quickly and is greatly appreciated by all concerned.

The Government of India have announced that it is their policy gradually to reserve the coastal tanker trade for the Indian Flag and that their immediate target is three ships. They have made a beginning recently by assisting an Indian Company to acquire one of them.

LABOUR

I am glad to report that the year brought no major strikes or interruptions in the field of labour although both Burma and India continued to experience prolonged litigation in the Industrial Courts. I am afraid that the too frequent use of these Courts is for the time being an obstacle in the way of serious negotiation between employer and employee, thus hindering the growth of responsible trades unionism. It must be recognised, however, that the system of reference to adjudication can, and does, prevent strikes because in India, Pakistan and Burma a strike is illegal as soon as a dispute has been referred to official conciliation or adjudication.

STAFF

We are fortunate in the Management and Staffs we have, both at home and overseas, to conduct our business and deal with the new problems which are constantly arising and it is very pleasing to be able to record once again the Board's appreciation of their services.

THE LONDON ASSURANCE

SUBSTANTIALLY INCREASED PREMIUM INCOME

The Annual General Court of The London Assurance will be held on June 13th in London. The following is an extract from the circulated statement of the Governor, Mr R. Olaf Hambro:

The Corporation acquired last summer the entire capital stock of the Guarantee Insurance Company of Los Angeles. We had realised for some time that it was necessary for us to transact casualty insurance in the United States if we were to retain the goodwill of our agents and policyholders in that country. The purchase gives us a valuable entry into this very competitive field.

There was a substantial increase during 1955 in our premium income, the total for the Fire, Accident and Marine Departments amounting to £17,540,757, as compared with £16,527,122 in 1954.

Despite the increase in premium income the year has been slightly less profitable than 1954, which in turn was less profitable than 1953. The Fire Department has suffered again from heavy windstorm losses in North America, and the Accident Department from the higher number and cost of motor claims in many territories.

Life Account: A Quinquennial Valuation of the Life Fund was made as at December 31, 1955. I am pleased to report that a surplus of £1,382,417 was realised and that this has enabled the Directors to declare a very satisfactory bonus to policyholders. The new compound reversionary bonus at the rate of £2 5s. per cent per annum represents an increase of 50 per cent on the rate declared for the previous five years.

PROFIT AND LOSS ACCOUNT

The transfers from the four Underwriting Accounts amount to £834,459, as compared with £1,005,507 in 1954. The other main source of revenue is the income from the investments of the General Fund, which after deduction of Income Tax amounts to £573,150 and represents a satisfactory increase on the figure of £510,724 for the previous year.

The net profit for the Group comes to £628,258, as compared with £721,748 in 1954. The Directors have already declared an interim dividend on the Ordinary Capital of 1s. per share. The dividend of 1s. 3d. per share which they now recommend will make a total of 2s. 3d. per share, the amount forecast at the time of the "rights" issue in June last year. After providing for the dividends and transferring £96,213 to General Reserve, the balance carried to the Consolidated Balance Sheet amounts to £2,964,008, an increase of £82,050 on the balance brought forward from 1954.

Balance Sheet: The Balance Sheets of the General Fund of the Corporation and of the Life Department both record substantial increases over the year, and the combined assets of the Group amount to the very substantial total of £55,945,795, a gain of no less than £4,413,699 during the year.

In both the General and the Life Funds the investments as a whole show a substantial margin between the market values and the book values, in spite of the considerable fall in the prices of fixed interest securities during 1955. As a result of the general rise in interest rates we have been able to invest our available money on attractive terms.

CADBURY BROTHERS LIMITED

GROUP SALES INCREASE TO £76.3 MILLION

HEAVY WRITING-DOWN BILL ON COCOA STOCKS

MR L. J. CADBURY ON COMPETITIVE CONDITIONS

The fifty-seventh annual general meeting of Cadbury Brothers Limited will be held on June 11, 1956, at Bournville, Birmingham.

The following is an extract from the statement by the Chairman, Mr L. J. Cadbury, which has been circulated with the Report and Accounts: It is well known that the price of Cocoa has declined rapidly over the last two years and this was particularly the case in 1955. We therefore had to face a heavy writing-down bill when we took stock at December 31st last. This was not only the case with our Company in this country, but with our overseas subsidiaries as well.

During 1955 Cocoa prices fell from £400 to £250 a ton. Since the beginning of 1956 they have dropped still further; this has been due mainly to a falling-off in demand due to excessive prices in previous years, and also to a better crop year. The previous summer the all-time record of £560 a ton had been reached.

The falling-off of demand was specially noticeable in America. This occurred although candy consumption there remained steady. Contributory causes were the use of substitute fats in place of Cocoa Butter in Covering Chocolate and less Chocolate being used in Chocolate confectionery. There has consequently been a reduction in the demand for Beans as well as a tendency to depress the price of Cocoa Butter rather than that of Cocoa Powder, the other joint product of the bean. It is also one of the reasons why we have been able to reduce the price of our Chocolate lines earlier this year but not that of Powder.

The reduction in demand has meant that the world consumption of Cocoa Beans has fallen from 800,000 tons in 1953 to 725,000 tons in 1954, and probably not much over 700,000 tons in 1955. There has been a corresponding improvement in the stock position.

TRADING RESULTS

In the consolidated Profit and Loss accounts for the year, the heavy cost of writing down our Cocoa stock already referred to is one of the items that has increased the figure for "Ingredients, Wages, Materials and Expenses." The final result is a net profit of £1,031,000 or, taking the losses sustained by the Subsidiaries through writing down stocks into account, £925,000 compared with £3,500,000 last year. This still allows us to maintain the same dividend as in previous years, and to add to our reserves.

SALES

Cadbury sales on the Home Market amounted to just under £45 million, a 6.3 per cent increase in value on last year, and one in tonnage of 3 per cent. These sales earned a satisfactory rate of profit.

Our Export sales were less in value than the previous year, but brought the Cadbury total up to £47½ million. Taking the sales of our group of Companies, including the fellow-subsidiaries of our parent the British Cocoa & Chocolate Company, sales were

£76.3 million compared with £72½ million last year.

FULL FORCE OF COMPETITION

For fifteen years our industry has been subject to overall controls or to allocation in one section or another. Now, however, the full force of competition is once more playing its part.

The turning point came last year. In January and February Cadbury's Dairy Milk Blocks, Filled Blocks and Slides were freed to retail customers, and afterwards to wholesalers. Quotas were removed a month or two later from the Milk Recipe lines with the exception of Brazil Block. By the end of the year, of our few lines not on free sale, Milk Tray and Roses Assortment were the only ones of any importance.

OVERSEAS ACTIVITIES

As already mentioned, exports from Bournville were down by nearly 20 per cent. This figure does not take into consideration the Chocolate made under licence for us in Germany. It takes the place of what formerly were exports from this country.

In all our export markets competition has been intensive during the past year. The "B" houses in this country have been very active in marketing their products abroad and we have had strong competition from Holland.

Sales to the USA showed a fall last year although our goods are well displayed in selected areas, particularly in the Eastern states and on the Pacific coast.

Notwithstanding representations on the spot, we were cut out of the Jamaican market for Proprietary Cocoa in September to assist a local firm.

Egypt has opened up in a small way after several years of no imports.

CONSIDERABLE FACTORY ECONOMIES ACHIEVED

Main building developments in this country have been at the new factory in the Wirral Peninsula, Moreton. The whole of our Chocolate Biscuit production has been moved there as well as some of our Chocolate manufacture. With ample space to lay out buildings and plant in the most efficient manner for their special purpose we are achieving considerable factory economies.

During the year we have made progress in bulk handling of some of our raw materials and semi-manufactured products. Also in the delivering of Chocolate coatings to the trade.

We have kept in close touch with the development of electronics for office use and have installed two Wage Calculators. The results so far are very satisfactory and multiplying speed is ten times that of the machines replaced. The full description of these machines is "Cadbury's Hollerith Office Calculators" or, in accordance with the practice of coining names from initials, "CHOC 1" and "CHOC 2."

The return of competition to the industry has already been mentioned and with it the

end of the sellers' market of recent years. Despite this period of comparatively easy sales we have since the war made every effort to see that our Research and Experimental activities have not been allowed to suffer.

Overseas our biggest building extension has been in our Canadian factory.

DEVELOPMENT PROGRAMME REVISED

We naturally have to plan our future developments and extension well ahead and last year had a substantial programme that was spread over the next four years. Normal procedure is to pay for the new buildings and plant out of retained profits and depreciation. In the light of last year's results we have now revised our programme and postponed some of our projects. This also agrees with Government policy.

As far as possible the items we have postponed should not affect our progress towards more efficient production, but will deprive us of amenities to which we had been looking forward. Our Subsidiary companies look to the parent Company to provide them with the bulk of their finance; we have therefore revised their commitments in line with the policy we have adopted at home.

RAW MATERIALS

Turning to raw materials, Sugar rose from 61s. a cwt at the beginning of 1955 to 62s. 6d at the end of the year.

In handling our Milk, 1955 was the first complete year since before the war that our dealings have been entirely with the Milk Marketing Board. Our intake of Milk in the UK, at 24½ million gallons, was about ½ million gallons short of 1954, mainly due to the effects of a warm dry season. The deficiency was made good by increasing production at our milk chocolate factory at Rathmore in Eire. At the end of the Milk Contracting year, September, the Milk Marketing Board made a request for an increase in price. This was opposed by the manufacturers and went to arbitration. As a result the price rose by 2d. to 1s. 10d. a gallon.

The crops of Hazel nuts and Almonds were very poor last season and under the Government-controlled selling arrangements in Turkey and Spain prices rose very sharply; in the case of Almonds they have more than doubled to over £900 a ton. While we have cut our use of nuts a little in some of our Confectionery recipes, we have preferred to put up the prices rather than alter the proportion in our Milk recipe lines.

SEARCH FOR FURTHER COCOA SUPPLIES

To return again to cocoa. British West Africa remains of course by far our most important source of supply. We have, however, continued in our efforts to promote production in other parts of the world.

Planting in Malaya's first cocoa estate has been carried on well by Malayan Cocoa Ltd. a company we run jointly with Harrisons & Crosfield Limited and Colonial Development Corporation. Experience from this estate

to be used by the Government in developing pilot schemes for smallholders.

In conjunction with the same partners and with Van Houten and Zoon NV another company, United Cocoa Developments Co. Ltd., has been started, also in Malaya, in the Trengganu State. An effort has been made to interest the industry generally in this venture and a number of Cocoa and Chocolate companies in this country and on the Continent have taken up shares.

In our search for further Cocoa supplies we have paid a number of visits to the British Cameroons. About 4,000 tons per annum is being grown there but the soil and climate could support a much bigger production.

With the intention of showing what can be done to grow more Cocoa we have started a plantation at Ikiliwindi about 15 miles north of Kumba. Work has begun to clear the site, to build roads and accommodation for labourers, and to plant nurseries. We hope this venture will become a model Cocoa plantation leading to an expansion of Cocoa production. We are supplying all the capital.

In the Gold Coast and Nigeria our agencies continued to buy from the farmers on behalf of the Government marketing companies. Both operated at a small loss last year, but we still believe they fill a useful place in the economies of these two countries where so much is in a state of flux. We estimate that the West African crop for the season 1955-56 will be about 320,000 tons, which is 30,000 tons up on last year. The cutting out campaign against Swollen Shoot goes steadily on and has the situation under control though this disease, Black Pod and Capsid continue to take a heavy toll of the crop. In Nigeria spraying against Black Pod has been very successful.

YORKSHIRE INSURANCE CO., LIMITED

FURTHER EXPANSION

The annual general meeting of this company was held on May 23rd at York.

The Right Honourable Lord Middleton, chairman, in the course of his speech, said: Our Life Department has had another record year, 9,095 new policies having been issued for sums assured totalling over £22½ million. The Life Fund now stands at over £36 million.

The premium income in the Fire Department for the year amounted to £4,524,080. The loss ratio was 44.01 per cent, compared with 46.42 per cent in 1954. We are able to transfer £426,450 to the Profit and Loss Account, compared with £383,488 last year.

The premium income in the Accident and General Account rose by £600,000 to £8,500,000. The ratio of claims paid and outstanding was 60.34 per cent and after adding £248,000 to the provision for unexpired risks, the deficit of £48,711 has been met by a transfer from Profit and Loss account. This disappointing result is caused by heavy losses on Motor business at home and overseas. The Marine premium income for 1955 was £2,038,573, compared with £1,848,787 in 1954. Claims paid on account of the current and previous years totalled £1,570,034, against £1,435,957 in 1954.

There is £781,000 for appropriation. We have allotted £100,000 to the Staff Pension Fund and £100,000 to the Investment Reserve. The recommended dividend is at the gross rate of 19s. 6d. per £1 of paid-up capital to which it was raised last year.

The report and accounts were adopted.

BANK OF BRITISH WEST AFRICA

SATISFACTORY INCREASE IN PROFIT

The sixty-second annual general meeting of the Bank of British West Africa Limited will be held on June 14th in London.

The following are extracts from the circulated statement of the chairman, The Right Honourable Lord Harlech, KG, GCMG, for the year ended March 31, 1956:

During the year new branches have been opened at Bolgatanga, Kejetia (Kumasi), Tepa, and Wa in the Gold Coast, at Yendi in Togoland, at Kontagora, Owo, Port Harcourt Town, Umuahia, and Jos Market in Nigeria, and at Bonthe and Segbwema in Sierra Leone. A constant watch is maintained for developing areas into which our services can be extended, and the strengthening of our branch network has been very fully justified.

Again it gives me great pleasure to express thanks to our staff both at home and overseas for the service they have rendered in the interests of the Bank. I have met many of them and know for myself of their loyalty and keenness. From the numbers anxious to join us it is clear that our emoluments and conditions are very attractive, but rightly so, for we must secure men of character and integrity who by work and study will in due time be fit to fill the highest appointments. We are concerned to encourage both our Europeans and Africans to be ready to seize the opportunities which our service offers. We have study courses for the former, while for the latter we have now introduced a scheme for scholarships tenable in the United Kingdom. The quality of the bank's work lies with the staff and I believe we can be justly proud of the men and women in our employ.

THE YEAR'S RESULTS

The Balance Sheet and Profit and Loss Account are before you. While the Balance Sheet shows some contraction in total, the Profit figures record a satisfactory increase due in part to a higher average level of lending and in part to the higher return upon our liquid funds maintained in London.

The Capital and the Reserve Fund now record the increases arising out of the plan unanimously approved by the Extraordinary General Meeting held in the early part of last year. In view of the increase of £500,000 then made in the Reserve Fund the surplus in the past year's earnings has been carried into the Inner Reserves.

Current, Deposit and other Accounts are £10,796,922 lower at £68,026,583. The reason for this change is that although deposits abroad have risen those in London have fallen substantially, an experience arising out of the changed monetary conditions here and in which we are not alone. The contraction does not represent a decline in the basis of our business, for the number of our customers shows a very satisfactory increase.

This year the provision for the dividend requires a larger sum owing to the higher amount of Capital.

Liabilities on Acceptances, Confirmed Credits and other Engagements on behalf of customers at £13,164,490 show an increase of £2,869,767.

CASH AND INVESTMENTS

On the opposite side of the Balance Sheet, Cash at £7,221,868 is lower by some £3,082,990. Money at Call and Short Notice

at £12,350,000 shows a decrease of £10,150,000 and Bills of Exchange, principally Treasury Bills, at £19,253,987 show a moderate decline of £3,014,386. As I have explained in previous statements, our liquid position is necessarily high owing to the fluctuations in the demands which are made upon us.

Investments have increased by £2,142,029 to the total of £16,979,199. These are included in our figures at or under market value. All are of relatively early maturity and we are in the happy position of being able to provide out of Inner Reserves for the diminution in market values which has taken place in the past few months.

Loans, Advances and other Accounts at £16,486,401 are higher by £5,057,659. While there are several trends in this movement, it does contain an appreciable increase in borrowing by African customers who are more and more appreciating the value of conducting an account with us, so enabling them to expand the volume of their trade.

Premises stand in the Balance Sheet at £371,074, an increase of £110,722 compared with a year ago. We have many fine offices the value of which we steadily write down, but our programme for rebuilding and the erection of new branches involves a heavy outlay which we must accept as a continuing subject of expenditure.

DIVIDEND AGAIN 10%

Once again the Directors have pleasure in recommending a Final Dividend at the rate of seven per cent, which, together with the Interim Dividend of three per cent paid in November last, makes a total of ten per cent for the year. On the increased Capital this dividend costs more than double that of a year ago, but we are fully satisfied that the greater distribution is justified in view of the higher profit earned and the broadening of the Capital structure which has been effected.

In each of the West African territories in which we are principally concerned urgent endeavours are being made to attract overseas capital for industrial purposes. We have been consulted in this connection at Government level as well as by those potentially interested in particular projects, and the benefit of our experience and specialised knowledge has been made freely available. Venture capital is a scarce commodity, and the Governments are wise to recognise there is extensive international competition to secure it in which only those offering fair treatment will succeed.

AFRICANS AND THE BANKING HABIT

It is unfortunate that there is so little local capital available, but we are making great efforts to promote the banking habit amongst Africans. As funds may begin to accumulate in private hands, it is likely that some part of them may be devoted to the capitalisation of local enterprises. Such a movement will promote a healthier economy and will relieve official resources from the burden they at present carry of providing funds, where outside resources cannot be attracted, for almost all new ventures needing more than a quite small amount of fixed capital.

There have been further generous grants from the Colonial Development and Welfare Funds. Vast sums will yet be required to provide public services adequate by modern standards.

OTTOMAN BANK

SATISFACTORY LIQUID POSITION

TURKEY'S AMBITIOUS MODERNISATION PROGRAMME

LORD LATYMER'S REVIEW

The Eighty-ninth Annual General Meeting of Ottoman Bank was held on May 23rd at Winchester House, Old Broad Street, London, E.C.

The Right Honourable Lord Latymer, the chairman, presided, and in the course of his speech, said:

TURKEY

In 1955 a number of factors affected Turkey's balance of payments. The country has embarked upon an ambitious programme for the modernisation of many sectors of its economy. The Turkish Authorities are endeavouring to increase production, particularly by exploiting more fully the country's natural resources.

Such a policy, however, cannot be expected to produce immediate results. In the meantime, the heavy expenses of development schemes and of imports of materials have to be faced.

The effect upon the country's balance of payments was further aggravated by a serious reduction of exports, due to the partial failure of the 1954 cereal crop. The disparity between internal costs and world prices also caused exports to decrease.

Faced with this situation, the Turkish Government is not for the moment proceeding with certain important new schemes, which might weigh too heavily in the balance of payments. It has taken strong measures to curtail imports of consumer goods into Turkey and to see that foreign exchange resources are applied to the country's real and urgent needs. On the home front, the Government is making every effort to combat the inflationary tendency and its results.

As regards Turkey's foreign trade, imports have risen to Ltq.1,393,400,000 (an increase of Ltq.54 million compared with 1954); exports on the other hand declined to Ltq.877,400,000 (a fall of Ltq.60,400,000 compared with the previous figure of Ltq.937,800,000). The decline in exports is due to the suspension, in the first half of 1955, of cereal sales abroad. The deficit in the country's trade balance was Ltq.516 million in 1955 against Ltq.401,600,000 in 1954.

The Budget adopted in March last shows a total of Ltq.2,369,710,000 for current expenditure: to this must be added Ltq.955,264,000 for public works.

EGYPT

The year 1955 was in many ways one of remarkable stability and at December 31, 1955, the Cost of Living Index, the Note Circulation total, the Bank Loans and advances figure, and the Stock Markets Security Index showed very little divergence from the equivalent levels at the close of 1954.

For agriculture and for trade it was, on the whole, a favourable year. The area under cotton increased by over 200,000 feddans to 1,800,000 feddans. Trade figures show an increase over the 1954 totals. Imports rose to LEg.182,300,000 and Exports to LEg.138,400,000.

The cotton 1955-56 campaign opened in September, 1955, with a carry-over of some 2 million cantars. The current cotton crop

is estimated at about 7,500,000 cantars, thus making a total supply for 1955-56 of about 9,500,000 cantars, a figure slightly higher than that of the previous campaign.

SUDAN

On December 19, 1955, the Sudanese Parliament passed a Resolution declaring the Sudan an Independent Sovereign State. Your Bank is ready to play its part in promoting economic stability in the country and to help in every way the new State and its government.

1955 was, upon the whole, a good year for trade, with exports totalling: LEg.51,400,000 and imports LEg.48,800,000.

JORDAN

The harvest in 1955 was exceedingly bad owing to the poor rainfall in the Spring of that year. As a result, the cereals crop suffered very considerably and substantial quantities of wheat had to be imported. Owing to the drought, pasturage suffered, with consequent adverse effects on flocks. These conditions, coupled with a considerable degree of political uncertainty—particularly towards the end of the year—resulted in dull markets.

The 1955 trade figures were: Imports JD25,866,000; Exports and Re-exports JD2,545,000.

Fortunately, harvest prospects for 1956 are much brighter as early rains have been heavy.

IRAQ

In Iraq, little rain fell early in the year and the country was spared the dangers of the massive Spring floods which have so often threatened Baghdad and the southern provinces. On the other hand, this drought was disastrous for the harvests.

Trade figures for the year were: ID59,554,000 for Imports, and ID12,264,000 for Exports, excluding exports of oil.

CYPRUS

It is remarkable that, in spite of tension in Cyprus, trade in the Island steadily progressed. Indeed, the trade figures—Imports LCy30,420,000 and Exports LCy18,539,000—exceed the 1954 totals. Money in circulation rose by about LCy500,000 to LCy8 million—a new coinage, incidentally, was introduced in August, based on a decimal currency—and Bank Deposits increased from LCy17 million to LCy24 million.

MOROCCO

In Morocco 1955 was not a particularly favourable year for agriculture; exports of agricultural produce, however, reached FF57,000 million including FF16,400 million for grain and FF5,600 million for citrus fruit.

In the Foreign Trade figures Imports have fallen slightly: FF164,000 million against FF168,000 million in 1954. The adverse trade balance has been reduced from FF68,000 million to FF55,000 million as a result of increased exports: FF109,000

million against FF100,000 million in 1954. Thus, imports were covered by exports to the extent of 66.5 per cent against 60 per cent in the previous year.

LEBANON

In the Lebanon there was a decline in agricultural output in 1955, but a general improvement in organisation resulted in a net increase in exports of fruit, particularly of apples: 12,000 tons against 4,600 in 1952.

Imports totalled LLeb529 million in 1955 against LLeb527 million in 1954.

SYRIA

During the year under review the current business of the Banque de Syrie et du Liban proved satisfactory and an important change affecting the future status of the Bank in Syria was agreed. In accordance with the Currency Law of March 28, 1953, for the formation of a Central State Bank, negotiations took place between the Syrian Government and the Banque de Syrie et du Liban concerning conditions whereunder the note issue privilege, granted to the Bank until April 1, 1964, might be determined at an earlier date. The outcome of these negotiations was an Agreement signed on September 1, 1955; thereunder the note-issuing functions of the Banque de Syrie et du Liban will cease on July 31, 1956.

The Banque de Syrie et du Liban, which still remains the Bank of Issue in the Lebanon, will, of course, maintain in Syria as in the Lebanon its general commercial business.

LONDON AND PARIS, ETC.

Our Paris and London Offices and the Branch at Marseilles continued to work satisfactorily.

BALANCE SHEET ITEMS

The Balance Sheet total shows an increase of more than £10 million, with "Current, Deposit and Other Accounts," higher than last year. This increase in the deposits is reflected on the other side of the Balance Sheet almost entirely by the increases in Cash and Money at Call.

Bills Receivable and Investments appear at much the same figures as last year, with ratios to deposits slightly reduced to 16 per cent and 14½ per cent respectively. Advances also remain at approximately the same figure as last year but they too show a reduction in ratio by reason of the increase in deposits.

I think you will agree that the liquid position disclosed by the Balance Sheet can be considered satisfactory.

The total amount of profit available, including the balance of £33,470 brought forward, is £432,636 compared with £433,469 last year. After appropriating £200,000 to "Reserve for Contingencies," the balance remaining is £232,636.

The Committee proposes that a dividend of eight shillings per share be paid again this year, absorbing £200,000 and leaving £32,636 to be carried forward to 1956.

The report was adopted.

KEMSLEY NEWSPAPERS LIMITED

VISCOUNT KEMSLEY'S ANNUAL REVIEW

The Thirty-second Annual General Meeting of Kemsley Newspapers Limited was held on May 24, 1956, at Kemsley House, London. The following is an extract from the statement of the Chairman, the Viscount Kemsley, circulated with the Report and Accounts for the year ended December 31, 1955, submitted to the Meeting:

The combined trading profits, investment and special income together come to £1,584,000 and after deducting £99,000 for debenture interest the net earnings of the Group for 1955 before deducting taxation amounted to £1,485,000, as compared with £1,598,000 in 1954, a modest reduction in the circumstances in which we had to operate.

THE PROFITS TAX

The amount of £850,000 required for taxation is £56,000 less than in the previous year, as might be expected from the reduction in profits. While we recognise that taxation must be shared by all, I maintain that your Company is unfairly dealt with in the matter of profits tax levied on dividends. The fiscal purpose of such a tax is to place a curb on existing dividends and recent increases in the rate are designed to curtail spending money in the home market. In the past we have borne, under protest, this substantial charge on the fixed dividends payable on our preference capital and it is all the more regrettable that we should have to shoulder successive increases in this heavy burden, although we are merely fulfilling an obligation to our preference stockholders which was settled at a fixed amount many years ago. The tax operates particularly harshly in the case of our company and it is, therefore, most discouraging to be faced with two increases in the rate within a matter of months. For your information the distribution charge in a full year on the preference dividends at the rates as proposed in the budget speech is no less than £138,000, the whole of which has to be found out of earnings which are also subject to income tax at the standard rate.

THE DIVIDEND

Although your Company has encountered one of the most difficult years of trading in the thirty-two years of its history, your Directors consider that they are justified in maintaining the same distribution as for 1954 and therefore recommend a final dividend of 5 per cent, making 10 per cent for the year. They have transferred the sum of £200,000 to general reserve and after making these appropriations there is a slight reduction in the balance carried forward in the consolidated Profit and Loss Account, which is now £617,000 as compared with £621,000 a year ago.

The main changes in the consolidated Balance Sheet as compared with that of the previous year stem from the disposal of the interests to which I have already referred, including the reduction in the copyrights and goodwill and an increase of £500,000 in the item of trade investments because of the change in status of the nature of the investment held by Kemsley Newspapers Limited in the Glasgow company. It will be noted that there has been a decrease during the year of £310,000 in the amount of debenture indebtedness mainly arising as a result of purchases in the open market. In this con-

nection I should like to mention that since December 31, 1952, the outstanding amount of debenture stock of Kemsley Newspapers Limited has been reduced by the substantial sum of £869,612.

INCREASED SALES

I am happy to record that all our newspapers enjoyed, from the point of view of circulation, a very successful year. Not only the four Sunday newspapers of the Group, but also the eleven dailies—four mornings and seven evenings serving some of the most important industrial areas of the British Isles—reached sales figures in excess of the previous year.

"THE SUNDAY TIMES"

It is my custom to say a special word about *The Sunday Times*. Again I can record an increase in circulation in the year under review and I am glad to say further that the circulation in the first quarter of 1956 was the highest in the history of the paper. It has been a great satisfaction to be able to publish larger issues than at any time since 1939 and I and all connected with the paper are determined to maintain its progress, its influence and its authority.

The amalgamation of the *Empire News* and *Sunday Chronicle* has produced results beyond our expectations. We have retained a very substantial proportion of the joint readership, and whereas the circulation of the *Empire News* was just over two million before the merger, the sale of the combined publication has now risen to over 2,500,000 copies per issue, the highest sale ever attained by any newspaper of the Company.

Our family picture newspaper, the *Sunday Graphic*, continues to maintain its sale in a large and clearly defined market. The emphasis is on people and personalities.

OUR OBLIGATIONS

It was not easy last year to forecast the future. It is no less difficult today. During the last decade the Press has been in a process of development, change and flux. Is it untrue or harsh to say that the conduct of newspapers has become more of a business and less of a profession and has become more concerned with providing entertainment than providing news? It has always seemed to me that beyond a commercial purpose, social and indeed moral obligations rest upon those responsible for the Press of this country. Yet so often it seems these obligations conflict with the commercial purpose. You have always supported me in my constant endeavours to produce newspapers of which we can all be proud, but I am bound to remind you that the advertiser who provides us with so much of our life blood is primarily influenced by figures of circulation. Unless we too do our best within the limits we set to provide the public with what it wants to read we are not fulfilling our obligations to your Company. At the present time our publications are in a very healthy condition and I have no reason to be dissatisfied with them. They are in the hands of a young and enthusiastic staff full of eager determination, and on this occasion I would like in particular to express my appreciation of the untiring support given to me by each and every one of my colleagues on the Board in a year of exceptional difficulties.

G. & J. WEIR, LIMITED

ANOTHER RECORD

The sixty-second annual general meeting of G. & J. Weir, Limited, will be held on June 25th at Glasgow.

The following are extracts from the circulated statement by the chairman, The Honourable J. Kenneth Weir, CBE, for 1955:

The company has now been operating for one year with the direction of the Executive Board. I am glad, therefore, to report that the output of new work and repairs created another record—a gratifying result achieved with the same manufacturing capacity as in 1954. While this increase in output reflects improved production efficiency, we continued to have the advantage of a fair proportion of repetitive work, although rather less than that which we have enjoyed during the past three years. A high proportion of the output was for export markets, deliveries to foreign shipbuilders, in particular, showing an improvement over 1954. Indeed our export performance compares very favourably with the exceptional year 1954, which benefited substantially through the shipment of the greater part of our large contract for Kuwait.

During the course of the year your Executive Board approved the final arrangement and layout of a new Test and Development Shop which will occupy a considerable part of the old Foundries. Designed to enable the very largest boiler feed pumps to be tested at full load, pressure and temperature, this shop will probably be the finest of its kind in the world. Provision will, of course, also be made for the testing and development of our other products such as evaporating and distilling plants, de-aerators and other heat exchangers, pumps and compressors. Alongside the new Department will be our Research building—a three-storied structure fully equipped with all the necessary facilities for fundamental and shorter term research. Substantial progress has already been made in its construction.

THE OUTLOOK

Turning now to the input of new work, we have made a very good start indeed at Cathcart, and our normal orders continue to follow the upward trend which began in the late Autumn of 1955. Moreover, during the first quarter of this year the Parent Company received the largest individual contract in its history. This is for the supply of four large Evaporating and Distilling Plants for the Island of Aruba, Netherlands Antilles, and its value is approximately £1½ million sterling. This valuable and important addition to our orders was secured against strong International competition. At Yoker the trend of new orders is also encouraging, and the Housing Corporation equally report a good start to the year, as do the smaller units in the Group. Finally, current inquiries are at a healthy level and we feel that our order position should show a still further improvement in the next few months.

We are, therefore, in a stronger position than we were last year, and, although the prospects of the Housing Division are more obscure the outlook for the Engineering Companies in the Group seems definitely brighter. Of course, while a larger order book is undoubtedly encouraging, in the last resort it is mainly the cost of manufacture which determines whether our results will improve or worsen.

Unless unexpected contingencies supervene, there seems no reason why we should not continue to give a good account of ourselves.

ANGLO-NEWFOUNDLAND DEVELOPMENT COMPANY

(Inc. in Newfoundland)

MARKED IMPROVEMENT IN EARNINGS

MR ELLIOTT M. LITTLE'S REVIEW OF GROUP'S ACTIVITIES

The ordinary general meeting of Anglo-Newfoundland Development Company Limited, was held on May 21st at the offices of the company, Grand Falls, Province of Newfoundland, Mr Elliott M. Little (the President) presiding.

The following is the statement by the President which had been circulated with the report and accounts for the year ended December 31, 1955: The marked improvement in consolidated earnings of the Company for 1955 arose out of higher production of newsprint and a substantial increase in the revenue from its mining interests. Both sources of income were aided by a strengthening of the United States dollar.

ANGLO-NEWFOUNDLAND DEVELOPMENT COMPANY, LIMITED

The demand for the Company's products was good throughout the year. Production of 231,736 tons of newsprint set a record for the Company. The benefits which might have been expected from improved manufacturing facilities and more favourable exchange rates were largely offset by a general wage increase and higher delivery expenses.

The major projects under the long-term rehabilitation programme have now been completed, but preliminary work on the speeding-up of three newsprint machines has been commenced as part of the plan to further increase production, to which I referred in my report of last year.

The outlook for the year ahead is undoubtedly favourably influenced by a newsprint price increase of \$4.00 per ton which became effective on January 1, 1956. The extent of increased earnings may not, however, be safely forecast at this time due to continued rising costs.

Reference was made in my 1953 report to the Company's interest in the British Newfoundland Corporation Limited. Additional shares in the latter Company were purchased in the past two years and 259,651 shares at one Canadian dollar per share are now held.

GASPESIA SULPHITE COMPANY, LIMITED

The Mill operated at capacity throughout the year and produced a total of 79,774 tons or 5,688 tons more than in 1954. Of this total, 22,764 tons was unbleached sulphite pulp and 57,010 tons bleached pulp.

The price of each product was increased by \$10.00 per ton during the year, the differential between the two prices remaining at \$20.00 per ton. The higher proceeds obtained from sales were partly offset by increased costs of raw material, chiefly pulp-wood.

Prices and demand, at least for the immediate future, appear to be firm.

TERRA NOVA PROPERTIES, LIMITED

The improvement in base metal prices was responsible for the increased earnings

from the Company's Newfoundland property and its other mining interests.

The quantity of ore mined and milled at the Buchans Mine was 291,000 short tons compared with 340,000 tons for 1954, the decrease of 49,000 tons being due to a work stoppage of 37 days caused by a labour dispute.

Exploration and geological reconnaissance work was carried out throughout the summer season on areas within the Crown Lands Concession, but no mineralisation of economic importance was discovered.

Buchans ore reserves as of December 31, 1955, were estimated to contain approximately 6 million short tons of assured and probable ore, as compared with 5,694,000 tons at the end of 1954, the increase of approximately 306,000 tons coming from R-1 and R-4 orebodies.

Mine development for the year consisted of approximately 16,000 feet of diamond drilling, of which 6,000 feet were carried out underground outlining R-4 orebody and 10,000 feet in conjunction with development work in R-1 and O-2 orebodies.

Production for 1956 is estimated at approximately 340,000 short tons of the same grade as that obtained during 1955.

TERRA NOVA EXPLORATIONS, LIMITED (NO PERSONAL LIABILITY)

The above Company was incorporated under the Quebec Mining Companies Act on February 7, 1955, with an authorised share capital of 20,000 shares of the par value of \$1 each, of which 2,000 shares were issued and subscribed for by Terra Nova Properties Limited. The primary purpose of this Company is to prospect for minerals in the Province of Quebec.

MONTMORENCY SHIPPING LIMITED

The financial results of this Company for the year ended December 31, 1955, resulted in a small profit, which may be considered satisfactory in the light of general conditions prevailing throughout the year. The Company continues to operate a number of vessels on time charter for the purpose of delivering newsprint to the parent Company's customers. Deliveries were carried out at costs which were not affected to the full extent of the increase in the ocean going freight and charter rates.

CONSOLIDATED POSITION

Consolidated Profit, after depreciation and taxes, of \$4,632,139 is equivalent to 84c per stock unit, compared with \$3,631,516 or 66c per stock unit for the previous year. Consolidated Working Capital amounted to \$22,028,640 compared with \$20,032,211 as at December 31, 1954.

I wish to express my appreciation of the loyal and efficient services rendered by the officers and employees of the Company throughout the year.

The report and accounts were adopted.

BRITISH PAINTS (HOLDINGS)

INCREASED SALES AND PROFITS

The twenty-sixth annual ordinary general meeting of British Paints (Holdings) Limited, was held on May 23rd at Newcastle upon Tyne, Mr J. W. Adamson (Chairman) presiding.

The following is an extract from his circulated statement:

Sales over the trading period last year constituted a record for your Company, both at home and abroad. The net profit, before tax, at £962,450, can be considered most satisfactory and is, indeed, higher than that of 1954. Profits would also have been a record had it not been for the exceptionally keen competition which continued in the industry over the whole of 1955. This was particularly so in Government business, where some Companies, large and small, continue to sell at Gate Cost with little or no contribution towards overheads or profit.

While the Paint Manufacturer is solely to blame for this state of things, let us hope that the Monopolies Commission will encourage efforts by Industrial Associations to safeguard themselves by being allowed to fix a fair selling price to the Government.

The debasing of prices should be an offence in the recent Government Monopolies Legislation. Sound business can only be built up if the selling price contains at least a margin of profit. The Government Departments should allow the inclusion of a contribution in their prices which will give this.

Nineteen fifty-six has started off well in the Paint Industry, but will it continue if the Government do not immediately cut their costs and spending and reduce the monopoly prices of coal, electricity and gas, which are now a heavy charge on all industry. If this is done we need not be living in an artificial world.

Profits in the Paint Industry are looked upon as being high, but it should be borne in mind that a proportion of these, in many cases, are earned overseas and from goods other than paint.

You have reason to be proud of the progress of the Overseas Companies. In all cases sales have increased, and satisfactory profits have been made with the exception of one Company and I am sure all your Companies can face the future with confidence since your factories are amongst the most up to date in the world.

Your Parent Company still provides the lion's share of our net profit. It should be remembered that it has always been the policy of your Company to plough back, and this policy is being adopted in the case of the Overseas Companies.

Arrangements have been made in this country for the manufacture of specialised products in the Plastics, Electrical, and Guided Missile industries. The Paint Industry has now become a highly scientific one and your Company are well to the fore. Given the continuance of good trading conditions we can look forward to the future everywhere with confidence.

Of the profit of the Group, £962,450, £509,875, Dividend on Preference and Ordinary Stock will be £127,464 and the Carry Forward is £922.

Your Directors have decided to pay a dividend of 20 per cent, less tax, making per cent, less tax, for 1955 on the Ord. Stock. Current assets exceed current liabilities by £2,824,698. The report was adopted.

THE SCOTTISH UNION AND NATIONAL INSURANCE COMPANY

RECORD LIFE FIGURES

INCREASED FIRE AND ACCIDENT PREMIUM INCOME

SATISFACTORY INVESTMENT POSITION

MR CHARLES F. J. YOUNGER'S REVIEW

The one hundred and thirty-first Annual General Meeting of the Company was held at Edinburgh on May 23rd.

The following is an extract from the statement made by the Chairman, Mr Charles F. J. Younger, DSO, TD, circulated with the Report and Accounts for the year 1955:

A year ago it was stated the Directors might find it desirable to seek a new Act of Parliament and to revise the Company's capital structure. A Private Bill is in course of passage through Parliament, and a circular giving full particulars of the capital reconstruction scheme embodied in the Bill was issued to the shareholders in November last. The shareholders will be given as early intimation as possible of the date fixed by the Directors on which the capital reconstruction scheme will take effect.

The new life business completed, after deduction of reinsurance, was more than £6,360,000, a new record for the Company, while the Life and Annuity Fund increased by nearly £2 million and is now almost £22 million. The quinquennial valuation of the Life and Annuity Assets and Liabilities was carried out as at December 31, 1955 and, after setting up actuarial reserves on the usual stringent basis, and making full provision for contingencies, there was a surplus amounting to £1,332,187. The Directors have declared a reversionary bonus for the past five years at the rate of 42s. per cent per annum calculated on the sum assured in respect of home with-profit policies in force on January 1, 1956. The strong financial position disclosed by the valuation and the satisfactory bonus declared indicates that with-profit policies should appeal to those who wish both an assurance and an investment.

The Premium Income in the Fire Department for the year 1955 amounted to £5,354,567, an increase of £292,093. The claims experience during the past year was lighter, the loss ratio being 53.7 per cent compared with 57.1 per cent in the preceding year. The continued high loss ratio, together with the mounting expense of conducting our business in the USA where our portfolio represents a large proportion of the Fire Account, overshadowed the good results obtained from the business in other parts of the world, and had the effect of leaving the account with a deficit of £133,680 after provision for unexpired risks.

The net premiums in the Accident and General Account increased to £1,966,230 compared with £1,811,431 in 1954. The increase in the number of claims coupled with the high cost of settlement of injury claims and the heavy cost of repairs had an adverse effect on the Motor Account, which was offset by the very satisfactory results in the other sections of the Account. Although the year's operations showed a trading profit of £51,498 on the whole Account, the sum of £25,105 was transferred from the Profit

and Loss Account in order to maintain the unexpired risk provision of 50 per cent of the premium income.

In the Marine Department a reduction took place in the premium income and the sum of £140,000 was transferred to the Profit and Loss Account.

The past year has been marked by an increase in interest rates which should reduce the demand from borrowers and prove an inducement towards saving. The net rate of interest earned, after deduction of income tax, on the Life and Annuity Fund increased from £4 0s. 1d. per cent to £4 4s. per cent. During 1955 a larger amount than in recent years has been advanced on the security of house and other real property

(combined with endowment assurances effected with the Company), which has had a stimulating effect on our new life business.

The Directors felt that at the present time it would not be appropriate to suggest any further increase in the dividend, and recommended that a dividend of 8s. on the "A" shares and 30s. on the "B" shares be confirmed.

The Chairman paid tribute to all the officials and members of the staff at home and overseas who have given wholehearted service to the Company during the past year and to all members of local boards and agents at home and abroad who have continued to give the Company their valuable support.

The Report and Accounts were adopted.

REICHOLD CHEMICALS

MAINTENANCE OF HIGH PROFIT LEVEL

MR W. H. BREUER'S STATEMENT

The fourth annual general meeting of Reichhold Chemicals Limited will be held on June 12th at Winchester House, Old Broad Street, London, E.C.

The following is the Statement by the Chairman, Mr Walter Hugo Breuer, circulated with the report and accounts:

The Annual Accounts are presented in a similar form to last year, and adequately reflect the year's operations of our Group of Companies and their position at the close of the year.

Your Directors view with satisfaction the maintenance of a high profit level and recommend the payment to the Holders of Ordinary Shares a Final Dividend of 10 per cent, and a Cash Bonus of 5 per cent. With the Interim Dividend of 7½ per cent already declared and paid, this makes a total Dividend for the year of 17½ per cent and a total distribution of 22½ per cent.

The Cash Bonus of 5 per cent implements the promise made in my last year's statement.

Your Directors have placed a further £100,000 to "General Reserve."

REDUCED PROFITS MARGINS

Due to the Credit Squeeze which was brought about by the Autumnal Budget, in conjunction with unexpected increases in the price of Raw Materials the profit margins in the last quarter of the year were somewhat reduced, although the volume of sales continued at a satisfactory level. The operating Companies endeavoured to support the Chancellor's exhortation to avoid increasing prices and in fact maintained or reduced their selling price schedules from March, 1955, throughout the year.

In spite of ever-growing competition and increased volume of imported Synthetic Resins, your operating Companies continued to hold and even increase their sales turnover based on overall increased production.

Our close and beneficial association with Reichhold Chemicals, Inc., and its associated Companies continues and all enjoy the frequent exchange of technical information in the field of new developments.

NEW PRODUCTS DEVELOPED

During the year a number of new products have been developed by the Research and Technical Service Laboratories and we are now firmly established in the fields of Fibreglass Reinforced Plastics and Vinyl Polymers.

Unfortunately the hope of bringing into effect our production of Phthalic Anhydride by March, 1956, has not materialised, due to delays in delivery of important component parts of the Plant and it is now anticipated that the benefit from the production of this essential Raw Material cannot be expected until at least the closing months of the present year.

You will doubtless wish to associate yourselves with the tribute I am happy to pay on behalf of the Board of Directors, to all our Factory employees, Technical and Administrative Staffs and Directors of the Operating Companies, for their enthusiasm and loyal support.

THE CAPE ASBESTOS COMPANY LIMITED

A YEAR OF GRATIFYING PROGRESS

MR ROBERT WALKER ON RECORD OUTPUT

The sixty-third annual general meeting of The Cape Asbestos Company, Limited, will be held on June 11th in London.

The following is an extract from the statement by the chairman, Mr Robert Walker, MBE, which has been circulated with the report and accounts for the year ended December 31, 1955: It is gratifying to be able to disclose a substantial increase in profits. The most significant contribution to this improvement stems from the activities of the home factories and from the efforts of the sales force both at home and abroad. In South Africa the recovery made in 1953 has made further headway, though with a change of emphasis to which I will refer later.

ACCOUNTS AND BALANCE SHEET

The Group trading profit for the year amounted to £1,538,194, compared with £1,256,015 in 1954. After setting aside £503,767 for depreciation, against £453,717 in 1954, and making various other adjustments, the amount of the remaining net profit attributable to the Company is £1,044,332, compared with £790,946 in 1954.

The trading profit of the Parent Company alone has risen from £588,813 in 1954 to £745,468, which is a record. Adding the amount brought forward from 1954 of £139,687, and an amount of £11,514 for Taxation over-provided in earlier years, the sum of £896,669 remains for disposal. From this, taxation requires £316,000 and the final dividend proposed of 10 per cent, making with the 2½ per cent interim, a total of 12½ per cent for the year, absorbs, together with the Preference dividend, £215,625. It is proposed that £225,000 shall be placed to reserve, and that £140,044 be carried forward to next year.

The net increase of £218,407, after charging £503,767 for depreciation, in the value of the fixed assets recorded in the Consolidated Balance Sheet, is a reflection of the expansion programme envisaged when we raised additional capital late in 1954. This programme is steadily proceeding and in due time the capital thus invested will make its contribution to our profits. Our cash position is strong and, at this time of financial stringency, it is reassuring to know that we have adequate finance for our known needs.

During the year the capital of Andersons Insulation Company Limited, was acquired in exchange for the issue to the shareholders in that Company of 600,000 shares of 5s. each in The Cape Asbestos Company Limited. The issued capital of your Company has consequently been increased by this amount, and the assets of Anderson Insulation Company Limited, have been consolidated in the Group Balance Sheet.

SALES

During 1953 a considerable expansion of the sales force of your Company took place with the object of widening the field of consumption of our products. The impetus of the efforts made at home on the Continent and, notably, in North America and Canada has gradually mounted, and the satisfactory

results which I am able to lay before you today are due very largely to the energy and devotion to their task which has been shown by every member of the sales organisation.

The total sales revenue of the Group in 1955 increased by rather more than 20 per cent, the proportion of growth being about identical as between crude asbestos and factory produced goods. Of the total shipments from South Africa of crude asbestos a high proportion was to the dollar area.

FACTORIES

Manufacture and sales are naturally wholly interdependent, and the factories have not only risen to the task of providing a record output, but have grasped the opportunity provided by a full production line to improve efficiency and thereby moderate the adverse effects of rising costs. This is clearly a most vital task in times of recurring wage claims and of consequential increases in the cost of materials and services. A considerable programme of expansion is in train, notably for the production of our Asbestolux boards, for which demand both at home and abroad far exceeds our capacity to supply. I must in addition report that at Stirling, where we manufacture the natural mineral wool products marketed under the name of Rocksil, the capacity of the factory is being doubled.

SUBSIDIARIES

In my statement last year, and in 1953, I referred to the anxieties which beset us in connection with the mining and treatment of the Blue and Amosite asbestos in South Africa.

I am glad to say that on the Blue mines the quality of the fibre turned out by our enlarged and re-fashioned mills showed further improvement and stability, and there was also a material increase in production. The demand for Blue fibre remains extremely strong and shows signs of becoming world-wide.

The demand for Amosite, too, remains very strong, but the mining problems have been considerably greater than in the Blue fields. While confident of the exceptional nature and extent of the deposits of Amosite which are operated by your South African Companies, there is no doubt that as mining increases in depth, the hardness of the country rock and other attendant problems will increase the costliness of winning the fibre. Increased expenditure of time, labour and money will have to be devoted to development and to lateral exploration. It is therefore probable that both the cost of production and the cost of capital equipment may be considerably greater than was anticipated in 1954. Measures are being taken to put both mines and mills in a position to meet the growing demands of our own factories and of our consumers. I am glad to be able to add that the improved quality of the fibre coming from the treatment plants has been maintained throughout the year.

The statement concluded with a review of the other subsidiary companies at home and overseas.

JOHNSON & PHILLIPS, LIMITED

(Cable Makers, Electrical and General Engineers and Contractors)

The fifty-first annual general meeting of Johnson & Phillips, Limited, was held on May 17th in London.

Mr G. Leslie Wates, JP, Comp.IEE (the Chairman), presided and, in the course of his speech, said: I am glad to be able to draw Shareholders' attention to an increase of over £100,000 in the balance brought in from the Trading Accounts amounting to £647,000. It shows a welcome recovery from that of the previous year. The Directors recommend the same dividend of 15 per cent. Expressed as a percentage of the Ordinary Shareholders' capital invested in the business at book values, this dividend is equivalent to 4.79 per cent, which critics will perhaps remember when criticising so-called Restrictive Practices. The Directors have transferred £100,000 to Revenue Reserve, leaving £147,821 to be carried forward, which compares with £152,136 brought in. During the past eight years we have put to Reserve just under £1 million.

On May 10th the Company sent you papers inviting you to subscribe to an issue of £1,800,000 of 5½ per cent Loan Stock, issued at 97 per cent, repayable in 1976, but with an option to the Company to repay in 1971 or thereafter. The issue has been underwritten for a commission of 1 per cent. I commend it to our Shareholders and have every hope that it will be well supported by them.

The report was adopted.

LIMMER & TRINIDAD LAKE ASPHALT

RECORD YEAR'S TRADING

The Eighty-fourth Annual General Meeting of The Limmer & Trinidad Lake Asphalt Company, Limited, will be held on June 14th at Trinidad Lake House, 232-242, Vauxhall Bridge Road, London, S.W.

The following is an extract from a circulated Statement by the Chairman, Sir John Hathorn Hall:

For the fourth successive year the Group Trading Profit has created a new record. Including income from trade investments and Government securities, the Trading Profit amounted to £711,255 or some £62,000 better than in the previous year. This notable increase of trading profit is not to be ascribed to any widening of our profit margin. On the contrary, it has been achieved in spite of a general narrowing of our margin of profit and is the result of an increase of turnover amounting to about 15 per cent. This increased volume of work comprehends practically all our Branches and Associated Companies and extends over the whole range of our activities.

Your Directors recommend a Final Dividend of 10½ per cent, making a total for the year of 15 per cent on the capital increased in June, 1955, to £1,100,000.

The higher level of activity which was so encouraging a feature of 1955 has been more than maintained during the current year.

I hazard the prophecy that whatever the Government of the day may do or fail to do, there should be a sound and profitable future for Limmer & Trinidad.

THE PYRENE COMPANY

FURTHER EXPANSION

The forty-second annual general meeting of The Pyrene Company, Limited, will be held on June 14th in London.

The following are extracts from the circulated Statement by the Chairman, Mr Francis A. J. Harrison, for 1955:

During 1955 opportunities were taken to further expand your company's interests. Towards the end of June the offer to purchase the share capital of Minimax Limited became unconditional, and the entire share capital of the company is now owned by your company. Early in July your company acquired a controlling interest in High Pressure Components Limited and its wholly owned subsidiary, The Sun Engineering (Richmond) Limited.

INCREASED PROFIT

The 1955 Group trading profit amounted to £659,277, against £616,428 for 1954. The 1955 consolidated profit, before tax, was £549,885, as compared with £532,298 for the previous year. Your directors recommend a final dividend of 15 per cent, making 25 per cent for the full year.

Sales of the Parent Company established another record at 14 per cent higher than those in 1954. Direct export sales were increased by 8 per cent and shipments were made to 93 overseas territories. Unexecuted orders on the Parent Company's books at December 31, 1955, were 12.3 per cent higher than at January 1st that year.

Briefly it was necessary for the Parent Company to sell and make more goods to earn approximately the same amount of profit before tax. This was achieved by intensifying sales efforts at home and abroad, installing additional plant, improving manufacturing methods and keeping prices steady. By these measures the increases in costs of wages, materials and services were practically balanced.

The Canadian Company's sales in 1955 were 8 per cent higher, and the profits showed an encouraging improvement. In June last a Foam Engineering Department was added to this company's operations.

MINIMAX LIMITED

The 1955 profits of Minimax Limited were comparatively low, mainly due to the development and installation of new plant and methods which will not come into full operation until the middle of 1956, and to an increase in general costs without any increase in the selling prices.

The products of High Pressure Components Limited are mainly high pressure valves and couplings of special design used extensively both on normal and on the newer types of aircraft and in industry generally. This business, which is being built up, should broaden the scope of your company's interests. There is also a good outstanding order book for the special type of Crash Trucks made by this company's subsidiary, The Sun Engineering (Richmond) Limited.

During the first four months of 1956 the Parent Company's sales in terms of shipments were running at 6 per cent higher than the average of 1955. Production of motor-car bumpers should not be less than that of 1955 unless the output of the company's motor-car manufacturer customers drops by more than 20 per cent, which does not appear to be probable from the present production schedules.

UNITED MOLASSES COMPANY, LIMITED

LARGER PROFITS

The thirtieth annual general meeting of this Company will be held on June 12th, in London.

The following is an extract from the circulated statement by Mr G. W. Scott, CBE, chairman and managing director, for 1955:

Last year I forecast that the group profits for 1955 would be satisfactory, but possibly at a slightly lower level than those for 1954; and it is, therefore, with pleasure that I have to advise you that the gross profits of the group for 1955 at £5,170,654 have considerably exceeded such forecast.

The recommended increase in the Ordinary dividend is considered fully justified, in the light of the increased profits.

The Consolidated Balance Sheet reveals the great strength of the company and indicates that the company has ample funds to meet its substantial capital commitments and at the same time provide capital for future reasonable developments without having to resort to the issuance of fresh capital or obtaining loans on the money market.

Molasses prices during 1955 remained stable and at a reasonable level, and these conditions encouraged a further increase in consumption. While it is difficult and dangerous to attempt to forecast the trend of affairs in the future, nevertheless, your company has started off well during the current year, and present indications are that the profits for 1956, barring any unforeseen recession or catastrophe, should not be less than for 1955.

MONSANTO CHEMICALS LIMITED

The following are the salient features of the circulated statement of the Chairman, Mr. Edward A. O'Neal, Jr., which will be presented at the Annual General Meeting on 19th June, 1956.

Sales established a new record at £13,499,986, an increase of 7 per cent over 1954. Direct exports increased to £5,056,553, an increase of 5 per cent over 1954, and represented 37 per cent of all sales. Dividend for the year on the ordinary stock totalled 22½ per cent on the nominal value of the stock. Profit for the year before taxation was £1,789,573.

EXPANSION / Capital expenditure during 1955 totalled £1,257,801. Construction began on a number of new manufacturing units together with ancillary additions to services and power installations, whilst additional research facilities were completed. Expansions carried out will give increased production of polystyrene, chemical additives for lubricating oils, chemicals for the rubber industry, intermediates for detergents and raw materials for the plastics and paint industries.

The 1956 construction programme includes facilities for producing "synthetic rubbers" for shoe soling and surface coatings, also new plants for maleic and phthalic anhydride, which are used in the production of resins for the plastics and paint industries.

Manufacture of oil additives will be further expanded and phenol output is being increased by a series of plant expansions.

FUTURE DEVELOPMENT / At Ruabon and Newport, development of manufactures in line with the general character of operations at these factories will be continued. Plans for long-term development in the field of petrochemicals have been announced.

Following discussions with Esso Petroleum Company Limited, our two companies have reached agreement in principle in respect of an arrangement under which Esso have offered us a site for a new plant to be erected by us adjoining their refinery at Fawley in Hampshire.

As our first operation at this location we propose to add substantially to our present plastics business by manufacturing polyethylene from supplies of ethylene which will become available from the Esso refinery. It is our intention to develop other plastics and chemicals on the same site from products from this refinery.

Assured access in this country to the new but rapidly expanding source of raw materials derived from petroleum will provide a sound and solid basis from which these further developments will be aggressively pursued.

Copies of the Annual Report are available on application to the Department of Industrial and Public Relations.

MONSANTO CHEMICALS LIMITED

Registered Office: 8, Waterloo Place, London, S.W.1.

Sales Offices: Victoria Street, London, S.W.1, and at Royal Exchange Buildings, Manchester.

POWER SECURITIES CORPORATION

EXPANDING TURNOVER

The thirty-third annual general meeting of Power Securities Corporation Limited will be held on June 13th in London.

The following are extracts from the circulated Statement of the Chairman and Managing Director, Sir Andrew M. MacTaggart, for 1955:

Profits from contracts and other income, together with income from investments, has for the first time passed the million mark, and amount to £1,093,893, compared with the previous year's figure of £930,497. The consolidated net profit for the year is £310,996, an increase of over £40,000.

PROPOSED ISSUE OF SHARES

The past year has been one of activity in all branches of the organisation, and I hope you will regard the results as satisfactory. The increased volume of work, together with increased costs, has meant that we have had to rely on our bankers for a substantial amount of finance, and your directors have come to the conclusion that further capital is required in order that we may cope with the expanding turnover, particularly in connection with overseas contracts where large financial outlays are necessary. They have therefore under consideration the issue of the 300,000 undenominated shares as Ordinary Shares. Application has been made to the Capital Issues Committee for Treasury consent to this issue. Subject to this consent being granted, it is proposed that these shares will be offered for subscription by the Ordinary shareholders in the proportion of one new Ordinary share for every four Ordinary shares held. The price, of course, will depend on market conditions at the date of issue.

In order to provide for possible future requirements, a Resolution will be proposed at the annual general meeting, under which the Authorised Share Capital will be increased to £2,500,000 by the creation of 500,000 unclassified Shares of £1 each.

Your Directors recommend that the dividend on the Ordinary shares be increased by 1 per cent, making 10 per cent for the year.

THE FUTURE

With regard to the future, I am not going to attempt to make any prophecy, but I would like to mention a few things which affect our financial interest in contracting overseas, in which field we have been very actively engaged during the past 25 years, and at the moment have many interests.

The holding back of capital investment is a matter of Government policy, and as I see it this can only be of short duration, as any prolonged restriction of this nature could only result in our losing opportunities of creating markets for our exports, the need for which is so vital to this country.

There is, however, in the Middle East, a much greater problem, which, if successfully resolved could well lead to a period of peace and prosperity throughout the world. With a long and intimate knowledge of the Middle East, I consider the solution of this problem is our country's number one priority. With such peace assured, the development of Nuclear Power, and the opening up of sources of raw materials within our Colonies and the Commonwealth, we would look forward with confidence to the future.

SAPONG RUBBER

In his address issued with the annual accounts and directors' report of The Sapong Rubber Estates Limited for 1955 the Chairman, Mr H. W. Horner, says:

In July it became necessary to increase wage rates substantially, as the result of the rise in the price of rubber which had then begun. In spite of this the management was able to keep the cost per pound of manufacture and the cost of distribution at practically the same figures as in the previous year, but the cost of tapping and the cost of upkeep were appreciably higher.

The cost of production in 1955 includes a new item, export duty, as the fifty year period of exemption expired on March 31, 1955. Export duty for nine months and cess for research for the twelve months total £14,188. After deducting this sum from the profit for

the year we are left with £24,945, of which fully half is absorbed by North Borneo and United Kingdom income tax and United Kingdom profits tax, leaving £12,201. From this remainder, the directors have transferred £5,000 to Capital General Reserve, with the purpose of maintaining and to some extent improving the Company's financial position, and they recommend payment of a dividend for the year of 10 per cent less income tax.

A substantial programme of extension was begun in 1952. The new planting done so far amounts to 405 acres, and as these rubber trees of modern high-yielding types come into bearing we may expect to have increasing crops to record.

The Board has it in mind to dispose of some 5,000 to 6,000 acres of the reserve, so situated that occupation by others should not seriously affect the Company's own operations or constitute enclaves within its boundaries.

HUMPHREYS LIMITED

(Building and Civil Engineering Contractors)

PROPOSED NEW SHARE ISSUE

The sixty-fourth annual general meeting of Humphreys Limited will be held on June 19th, at Winchester House, Old Broad Street, London, E.C.2.

The following is an extract from the statement by the chairman, Mr A. V. Bridgland, CBE, which has been circulated with the report and accounts:

In the parent Company we are busily engaged on some very large contracts. Each of these contracts is of seven figures in value, and two of them are likely to be completed before the end of 1957, while a third one will take us about another two years to complete, i.e., before the end of 1959. Apart from these, a great number of contracts of smaller amounts are in our hands, and to these fresh business is constantly being added. I may sum up our Home business by saying it is large and active and should be remunerative.

Abroad, we are still working in Gibraltar for the Government Services, and have an appreciable amount of work in hand.

In South Africa, our subsidiary, R. H. Morris (Proprietary) Limited, has now got through the teething troubles that inevitably occur through a change of management. Its business on hand has increased sharply, and it is hoped that all its departments will now contribute to its profits. Our interest in National Quarries (Proprietary) Limited is a profitable one, and at present we are working to capacity.

The year under review has shown a satisfactory profit, and there are indications that these results will be improved upon in the

current year, unless some unforeseen occurrence upsets our calculations.

CAPITAL STRUCTURE

Looking at the parent Company's affairs, it will be seen that shareholders' funds, reserves, and carry forward total £527,561. Of this amount, share capital is represented by £300,000 and reserves and carry forward by £227,561. This is after adequate provision has been made against all contingencies. The Board feel that if and when reserves permit the Ordinary capital of the Company, which was written down in 1935 by 15s. per £1 share, should be restored by means of the capitalisation of reserves. As the shareholders know, Ordinary shares to the extent of £100,000 have already been issued in this way, and I am happy to say that Capital Issues Committee consent has been received for the issue of a further £50,000 worth of Ordinary shares. This will have the effect of raising our Ordinary capital to £250,000 and reducing our General Reserve to £100,000, leaving intact our present balance in Profit and Loss Account to be carried forward. The Board very definitely feels that the size of the Company's business today makes it imperative that the Issued Capital of the Company should be enlarged so as to be more in relation to its commitments.

A dividend for the year has been recommended on the Ordinary shares of 15 per cent. It is hoped to maintain this dividend on the increased capital that will result from the proposed new issue of shares.

THE ECONOMIST, MAY 26, 1956

THE RHODESIA BROKEN HILL DEVELOPMENT COMPANY LIMITED

(Incorporated in Northern Rhodesia)

HEAVY CAPITAL EXPENDITURE PROGRAMME

SUBSTANTIAL INCREASE IN ORE RESERVES

The forty-sixth annual general meeting of members of The Rhodesia Broken Hill Development Company Limited will be held at Nkana, Northern Rhodesia, on June 13th. The following is the statement by the chairman, Sir Ernest Oppenheimer, which has been circulated to shareholders with the annual report and accounts:

During the year, the market for zinc and lead was firm. Although the revenue from the sale of metals in 1955 at £4,028,000 was £487,100 higher than the previous year, production costs, realisation charges, taxation and royalties were also higher and the net profit at £1,154,000 was only £129,000 larger than the previous year. The dividend of 1s. 3d. net declared for the year, which is the same as the previous year, absorbed £812,500.

Capital expenditure at the mine is likely to be heavy for some years and £350,000 was appropriated this year for this purpose. Of this amount, however, about £150,000 was spent during the year and only about £200,000 is available towards financing the future capital expenditure programme envisaged.

It is probable that some time will elapse after the commissioning of the Kariba hydro-electric scheme before power from this source can be made available at Broken Hill. Our own power supply from the Mulungushi and Lunsemfwa hydro-electric stations is fully committed at the present scale of operations, and during the intervening period there will be inevitable increases in the demand for power due to mining at greater depth and minor plant additions. Moreover, there are process improvements under consideration for which power may have to be secured.

The Consulting Engineers are therefore investigating the capital cost of increasing the generation capacity of the Lunsemfwa station by constructing a dam on this river and the installation of a third 6,000 kw generator.

Should it be decided to proceed with this scheme it is probable that an amount of about £1,200,000 will have to be found and the Company has therefore had discussions with the Broken Hill Municipality which has agreed to provide some of the capital sums and to draw power from the Company in the event of this scheme being undertaken.

PRIMARY OBJECT OF EXPANSIONS

While the primary object of these expansions is to safeguard the position until Kariba power becomes available, the proposed installations must not be considered as having an economic life which would end with the advent of Kariba power. The cost of energy from the extended plants is estimated to be very low and consequently the Company would continue to utilise its own generating resources to the full, supplementing them later from other sources as required.

The Directors have under consideration the

possibility of disposing of the Company's Iron Duke pyrites mine, which is situated in Southern Rhodesia some hundreds of miles from the Company's principal property. The production from the Iron Duke mine has hitherto been largely sold to the Northern Rhodesia copper mines, but recently this demand has fallen away and although other consumers of pyrites are expected to develop in the Federation your Directors are of the opinion that the capital tied up in this asset could be used to better advantage in helping to finance capital expenditure of direct benefit to the Broken Hill mine.

SALE OF BY-PRODUCTS

In addition it is anticipated that some profits will arise from the sale of by-products which have not previously featured in the Company's production programme. These comprise small quantities of cadmium and cement copper, it being profitable to treat the latter with copper at its present high price.

I must emphasise, however, that it will be necessary for some years to continue to appropriate fairly substantial sums from profits.

The Consulting Engineers, however, are not yet in a position to place their recommendations before the Board of Directors, as further investigations must be carried out at Lunsemfwa and metallurgical tests finalised before this can be done.

During the year, underground development and diamond drilling has brought in a large block of ore which can now be included in the ore reserves. The ore reserves, at 1,723,000 tons proved and 1,304,000 tons indicated, are 654,000 tons greater than at the end of the previous year.

Further ore reserves will probably be added from what is known as the "X" orebody on the 950 foot level, but so far insufficient data is available to enable an assessment to be made of the tonnage or grade in this area. The ore reserves do not include the surface stockpiles of silicate and other ores which will be treated over a period.

Copies of the annual report and accounts may be obtained from the head office, Kisumu, or from the transfer offices at 44 Main Street, Johannesburg, and 40 Holborn Viaduct, London, E.C.1.

FIAT

FIAT S.p.A.

(Turin, Italy)

BIG INCREASE IN OUTPUT AND SALES

The Annual General Meeting of the Fiat Company was held in Turin on April 27th, with Professor Dr Vittorio Valletta, Chairman and Managing Director, in the Chair. The following are details of the report presented by the Board of Directors:

The big increase in the Company's output in 1955 resulted in total sales to the value of Lit. 310,000 million, an increase of Lit. 35,000 million over 1954. This general increase reflects the drive of the Fiat labour force, and of the Company's organisation.

The production of motor vehicles (250,299 units in 1955) stands at present at a daily average of 1,000 units, a high level in European conditions, largely as a result of the great success of the small Model 600 car.

Fiat continues to produce its range of basic models: the 600, the 1100, the 1400, and the 1900—the last two with improvements and additional power. The new baby car, smaller even than the 600, which has been announced, is under construction, and is expected to go into production in 1957. Further 1955 production figures are 16,130 tractors, 517,549 tons of iron, steel and non-ferrous metal products, and diesel marine engines totalling 132,000 h.p. The types of aircraft produced by the Company are of international importance: the "F.86-K" jet plane, built in co-operation with the North American Aviation Inc., and the "G.82" and the "G.91," both jet aircraft of Fiat design.

The various Fiat plants are being greatly enlarged and modernised according to a consistent investment policy, aimed at promoting progress in production both technically and economically. A new "Mirafiori Sud" plant is in course of construction alongside the "Mirafiori" car factory.

The Company's present labour force amounts to 75,000, including about 60,000 manual workers. This is Italy's largest single body of industrial workers. In 1955 Fiat spent about Lit. 9,000 million on social welfare work. The recent Trade Union elections in the Company's plants have consolidated the victory of the free democratic Unions; productivity has increased; there were no strikes at Fiat plants during 1955.

The report, which points out the importance of Fiat's activities within the framework of the Italian economy, and underlines the constant progress being made, stresses the need for a progressively closer international co-operation, and outlines the new tasks which the atomic age is setting for industry generally, to increase output and work towards peace.

The surplus on the year's working was Lit. 12,656 million, and a dividend of Lit. 70 per share was declared. The increase of the Company's capital from Lit. 57,000 million to Lit. 76,000 million through the issue of new shares and bonds was also approved, and the report and balance sheet for 1955 were adopted unanimously.

GREAT BOULDER PROPRIETARY GOLD MINES

PROPOSED INCREASE OF CAPITAL MR A. M. COULSON'S SPEECH

The Sixtieth Annual General Meeting of Great Boulder Proprietary Gold Mines, Ltd., was held on May 9th in Melbourne.

Mr A. M. Coulson, Chairman and Managing Director, who presided, said: The Directors' Report and Statement of Accounts for the year ended December 31, 1955, reveal a position which is distinctly encouraging. The Net Profit for the year, after providing £62,419 for Depreciation and £174,504 for Development, amounted to £216,369, as compared with £206,955.

The Profit and Loss Appropriation Account shows that dividends totalling 1s. 3d. (Aust.) per stock unit have been paid; £40,000 transferred to General Reserve and £23,700 written off Mining Leases, the latter figure being the sum spent during the year on Hamilton Shaft.

TREATMENT AND DEVELOPMENT

473,288 tons of ore were treated for a recovery of 115,581 ounces of gold, both figures showing small increases compared with the previous year's results.

Development was not pushed so actively as during the previous year but results were up to expectations, and there are several promising areas still to be explored which it is hoped will open a large tonnage of new ore. Ore Reserves at 2,068,400 tons averaging 5.42 dwts are higher than last year both in tonnage and grade.

Increased wage margins to tradesmen granted by the State Arbitration Court, and a resumption of the quarterly cost-of-living adjustments in the basic wage, plus higher prices paid for mine stores, were responsible for an increase of 2s. 10d. per ton in Working Costs.

CAPITAL EXPENDITURE

Expenditure on capital account during the year totalled £105,773, and included the sinking of Hamilton Shaft a further 263 feet, the conversion of Main Shaft Winder to electric drive and the installation of a fourth roaster. Since 1948 the Company has spent approximately £800,000 on modernising and increasing the efficiency of the plant and installing an electric power station, and with the exception of £100,000 borrowed from Loloma (Fiji) Gold Mines N.L., the whole of this expenditure was met from the Company's own resources.

Funds are now required for a development programme which includes:

1. Sinking an internal shaft from 3,100 ft to 4,000 ft in the Edwards Shaft section to enable development of this area where depressed diamond drill bores down to 3,750 ft have intersected a number of ore seams of higher than average grade.
2. Deepening Hamilton Shaft to 3,250 ft and developing the lower levels of the Western leases where development adjacent to the Lake View boundary has given encouraging results.
3. Development of the southern end of the Eastern Lode system where there is a large area of virgin ground.
4. Establishment of a main haulage

system between Edwards and Hamilton shafts.

NEW CAPITAL ISSUE

To carry out this programme the Directors recommend that the authorised capital of the Company be increased to £350,000 sterling by the creation of 1 million shares of 2s. each, and a resolution to that effect will be submitted to an Extraordinary General Meeting. If carried, the 1 million new shares so created will be offered to existing stockholders at 8s. (English currency), i.e., a premium of 6s. per share, in the ratio of two shares for each five stock units held. This means that Australian stockholders will be required to pay 10s. (Australian currency) for each share taken up. It is expected that the necessary formalities will be completed in time for this to be done by next July.

I may mention that as far as can be seen the issue of this additional capital is not likely to cause the rate of dividend to fall below 1s. 3d. It may interest stockholders to know that since 1895 when the Company commenced operations, the mine has produced over 5 million ozs. of fine gold valued at £38 million, and dividends paid aggregate over £8 million.

In closing I would like to express the thanks of the Board to the General Manager, the executive staff and employees of the Company for their efforts during the year under review.

The report and accounts were adopted.

ASHANTI GOLDFIELDS CORPORATION

SATISFACTORY RESULTS MARRED BY GENERAL STRIKE

Presiding at the annual meeting of the Corporation held on May 16th in London, Major General Sir Edward L. Spears, Bart, KBE, CB, MC, FInstD (the Chairman) said that but for the fourteen weeks' general strike from November 20, 1955, to February 27, 1956, he would have a generally satisfactory report to make.

For the third year in succession, the tonnage treated was a record for the mine; and gold production in the year was the highest since the war. The technical position of the mine was very strong.

Ore reserves were sufficient for some years ahead, and there was promise of considerable new tonnage being developed.

Commenting on the strike, the Chairman said that on all the mines it had brought nothing but hardship to the workers and loss to the industry. Correspondence which had passed between the Union Headquarters and the Chamber of Mines since the strike ended entitled them to entertain some hope that good relations would be restored and that there would be no recurrence of that kind of trouble.

Referring to the political situation on the Gold Coast, the Chairman said he thought all parties recognised the vital part the mines played in the economy of the country, and he did not believe that any party had any desire to alter or interfere with the way the industry was owned and run.

The Chairman concluded: The British Government has still an important part to play and I think that, wisely handled, a satisfactory settlement can be reached provided firmness is displayed and our clear intention not to allow anything approaching civil war to take place is asserted.

The report was adopted.

LUNUVA (CEYLON) TEA & RUBBER ESTATES

The annual general meeting of The Lunuva (Ceylon) Tea & Rubber Estates Limited will be held on June 14th in London. The following are extracts from the circulated address of the Chairman, Mr H. W. Horner:

The results for the past year are substantially better than promised by the depressed market for tea about this time last year, when the average auction price of Ceylon tea in London had fallen to 4s. 1d. a lb at the end of June from 7s. 4d. in January. Rapid recovery ensued and for the greater part of the second half of the year the market was again on a more normal basis.

The lower prices which our teas have realised, as compared with the previous year, have been compensated to some extent by a total crop in excess of that estimated. Improved prices realised for rubber have made a valuable addition to profits.

The year's profit before taxation is £330,667, as compared with £729,565 for 1954. The net amount of tax is £180,182 and, after adjustment has been made in respect of tax for previous years, the amount carried to appropriation account is £156,033. The directors recommend a final dividend of 14 per cent, making 20 per cent for the year.

For the current year we estimate to produce about 9 million pounds of tea and 1½ million pounds of rubber at costs not significantly exceeding those of 1955; Market prospects continue good, and growers of Ceylon tea of the types produced by this company's estates can look forward to a satisfactory season.

AMALGAMATED BANKET AREAS

The twentieth annual general meeting of Amalgamated Banket Areas, Limited, was held on May 23rd in London. Mr W. J. C. Richards (a Director) presided.

The following is an extract from the Statement of the Chairman, Major General W. W. Richards, CB, CBE, MC, circulated with the Report and Accounts for the year ended September 30th, 1955.

The profit of £119,405 was £78,954 higher than that of the previous year. Dividends aggregating 10 per cent, less income tax, absorbed £162,275; leaving a balance of £85,683, which it is proposed to carry forward.

It is satisfactory to note—

- (a) The record tonnage milled, at 961,662 tons, exceeded that of the previous year by 131,042 tons. There was a small drop in the grade of the ore treated from 3.390 dwts to 3.292 dwts per ton. The gold recovered, at 149,884 ounces, was up by 15,442 ounces.
- (b) The overall cost per ton milled, at 30s. 2d. per ton, was 2s. 9d. per ton lower than for the previous year.

ORE RESERVES

The total ore reserves as at September 30, 1955, were computed at 2,895,428 tons, as follows:

	Tons	Grade dwts	Width inches
Underground	Ore 1,657,188	5.621	40.57
Surface	Ore 1,238,240	1.801	121.1

The report and accounts were adopted.

APPOINTMENTS THE NEW SOUTH WALES UNIVERSITY OF TECHNOLOGY, SYDNEY

VACANCIES FOR LECTURERS IN ECONOMICS.—The University of Technology invites applications for appointment to the position of Lecturer in Economics in the newly established Faculty of Commerce. Salary £A1,231 range £A1,881 per annum, commencing salary according to qualifications and experience. Applicants should possess an honours degree or equivalent qualifications and university lecturing experience would be an advantage.

Opportunities exist for specialisation in the fields of statistics, the Theory of the Firm, Labour Economics, Shipping, and the Theory of the Firm. Successful applicants will be eligible, subject to medical examination, to contribute to the New South Wales State Superannuation Fund. Shipping fares to Sydney of appointees and their families will be paid. Five copies of applications (including the names of two referees) should be lodged with the Agent General for New South Wales, 56, Strand, London, W.C.2, and a copy forwarded by airmail to the Registrar, New South Wales University of Technology, Box 1, Post Office Kensington, New South Wales, Australia, in an envelope marked "University Appointment," not later than June 9, 1956.

MAKERERE COLLEGE, THE UNIVERSITY COLLEGE OF EAST AFRICA

Applications are invited for the following appointments in the East African Institute of Social Research:—
(a) Senior Research Officer in Economics.
(b) Senior Research Fellow in Economics.
Appointments will be on contract for 2½ years. Salary (a), £1,550 per annum, plus 10 per cent c.o.a. (b), between £960 and £1,330 per annum, plus 10 per cent c.o.a. Entry will be determined by qualifications and experience. Child allowance, £50 per annum per child (maximum £150 per annum). F.S.S.U. Passages (including family) paid on appointment and termination. Accommodation at reasonable rent while at College. Field equipment provided.
Detailed applications (six copies), naming three referees and outlining research interests, by June 21, 1956, to the Secretary, Makerere College, Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

GENERAL MANAGER

SCHEME FOR NATIONALISATION OF OMNIBUS TRANSPORT IN CEYLON.—The Government of Ceylon is urgently in need of the services of a General Manager to organise a scheme of nationalisation of the omnibus services in Ceylon and launch the undertaking. The applicant should have had considerable experience in a managerial capacity of the operation, control and management of an omnibus transport undertaking with a fleet of about 3,500 buses.
2. The selected candidate should be a person of outstanding ability, capable of preparing and putting into execution a plan to take over the services now provided by eighty private operators, and of effecting the transfer in a smooth, efficient and orderly manner.
Background information on the problems involved will be supplied by the Ceylon High Commission, London, on request.
3. Remuneration, leave, passages and other terms and conditions of employment will be determined by negotiation with the Ceylon Government through the High Commissioner in the United Kingdom.
4. Applications should be addressed to the High Commissioner for Ceylon in the United Kingdom, 13 Hyde Park Gardens, London, W.2, and should contain the fullest possible information regarding the qualifications and experience of the applicant.
5. Applications close on Friday, June 8, 1956, at 12 noon.

AN OUTSTANDING OPPORTUNITY

A well-known public company manufacturing world-wide lines of household goods is seeking its head office in London, is looking for an outstanding man on the sales side.
He will initially occupy an executive position in charge of a new sales division and will be directly responsible to the Board. He should be between 35 and 45 and should have already occupied positions as General Sales Manager or preferably Sales Director of a nationally known company; alternatively he might have occupied a senior position in a leading advertising agency. He should be a proved leader of men, have imagination, drive and administrative ability and be able to assume wide responsibility. A thorough knowledge of advertising and modern promotion methods is essential.
No one without these qualifications should apply. A substantial salary will be paid to the right man. Applications (preferably typewritten) which will be regarded as strictly confidential should contain full details of education, experience, qualifications and present salary and should be sent to the Managing Director.—Box 428.

A VERY well-known Company manufacturing canned foods invites applications for an important executive appointment at top management level, to take charge of materials buying on a world-wide basis.
The successful candidate will be one who has had very extensive experience in the buying of meat and cereals on an international scale and who has proven ability in taking out and opening up new sources of supply.
A knowledge of statistics and their application to forecasting is desirable, as well as acquaintance with methods of handling, refrigeration and storage of meats.
This is a most important appointment that will involve travel of large scale contracts at top level all over the world, and will involve considerable travel overseas. The initial salary is of secondary importance to securing the right man but figure less than £5,000 per annum will be paid, together with exceptional additional benefits including non-contributory Pension, Life Assurance, etc. The Company's employees are aware of this advertisement. Applications, giving a chronological summary of education, career and qualifications should be addressed to Box 127, marked "Confidential to Managing Director."

SENIOR STATISTICAL CLERK (male or female) required for Statistics Department of Coventry Engineering firm. Some experience of Market Analysis desirable, a degree in Economics an advantage. Interesting permanent position. Pension scheme.—Applications, with full particulars, to Box 425.

UNIVERSITY OF GLASGOW

TEMPORARY SENIOR RESEARCH WORKER.—Applications are invited for the post of Temporary Senior Research Worker in a study of community and associational developments in new housing areas in Glasgow. The appointment will be for two years at a salary in the range £1,100 to £1,200 per annum. Applications (six copies) should be lodged, not later than June 30, 1956, with the undersigned, from whom further particulars may be obtained.

HUTCHESON, UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

Applications are invited for the post of Assistant Lecturer or Lecturer in Social Statistics. Salary scale £600 x £25—£650 (Assistant Lecturer) or £650 x £50—£1,350 (Lecturer). F.S.S.U. and children's allowances. Applications should reach the Registrar, The College, Keele, Staffs, from whom further particulars and application forms may be obtained, as soon as possible.

THE MARLEY TILE CO. LTD.

REQUIRE

A GENERAL MANAGER

for one of the Dominions. Must have had a very wide experience in running a large manufacturing business on his own. Must be prepared to live in the Dominion and take sole charge of business there. Experience in Plastics an advantage. A first-class salary and a real opportunity for the right person. Please write, giving age, full details of education, qualifications and experience, to The Managing Director, THE MARLEY TILE COMPANY LIMITED, 15, Abchurch Lane, London, E.C.4.

Only applicants selected for interview will be notified. INTERNATIONAL PHARMACEUTICAL AND Cosmetic Organisation needs potential manager for Japanese operation. Must have had sales experience in the Far East, with good administrative and organisational ability. This top spot needs man familiar with Oriental temperament but possessing English-type personality, imagination and drive. Able delegate responsibility to local staff, but command respect and get job done. Salary and incentive basis. Age 35-45, preferably married, who wants to live in Japan. Fluent Japanese essential. Replies will be treated in strict confidence.—Reply Box 421.

SALES MANAGER required by the English and Scottish Joint Co-operative Wholesale Society, Ltd., to develop their present U.K. selling organisation for tea, coffee and chocolate. The appointment is a major one, involving direct responsibility to the Board, and offers an excellent opportunity to a fully qualified man, experienced in nation-wide distribution. Knowledge of the trades involved is of less importance than proved ability in the sales field.—Apply to the Secretary and Executive Officer of the Society at 100, Leman Street, London, E.1.
SALES ADMINISTRATION OFFICER at Bristol Branch of progressive Company. Applications, giving fullest details, are invited from young men with drive, initiative, analytical minds and co-operative personalities. Duties include sales planning, correspondence, etc.—Apply to: Personnel Manager, Black & Decker Ltd., Harmondsworth, Middlesex.

FURNISHING FABRICS

COURTAULDS LIMITED wish to appoint a Senior Executive to take full charge of the development of medium and heavy furnishing fabrics in their Textile Division.
A sound technical background and knowledge of the production of these fabrics, which are principally woven on Jacquards, is essential, but it should be combined with considerable experience of colour, design, market trends and foreign goods.
This is a senior appointment (based on London) for which a high standard of personal ability and achievement in this field of the textile industry is required, and will carry a salary commensurate with the responsibility.
Candidates should write for a detailed form of application to the Director of Personnel, Courtaulds Limited, 16 St. Martin's Lane, London, E.C.1, quoting reference number E.73.

AN APPOINTMENT with unusual prospects is to be made in the late summer in a prominent industrial organisation, with headquarters in London and activities throughout the United Kingdom. The position will call for a man with a University Degree, a good experience of industrial administration, shop-floor conditions, and the ability, after special training, to direct production work in industry. Age 28 to 35, approximately. There is a chance of short periods of service overseas later, but this need be optional. Earnings will rise to about £1,500 after a four-month training period, and £3,500 will be reached within 6-10 years. Pension, Life Assurance and full range of employee benefits. All details will be given at interview in London, Manchester or Glasgow, as convenient to applicants.—Please write, with tabulated details of age, education and experience, to Box 422.

NATIONAL COAL BOARD—N.W. DIVISION

Applications are invited for a superannuable appointment in the Organisation and Methods Branch at Divisional Headquarters in Manchester. The work involves the conduct of O. and M. studies concerned with the organisation of work, methods, and staffing at Colliery, Area and Divisional Offices. Some travelling within Lancashire and North Wales will be involved. Applicants should have a minimum of 10 years' specialised experience relating to the work of this post, and preferably a recognised professional qualification or University degree, and experience in a position of responsibility in a large organisation. Salary will be within the scale £1,085 to £3,475 per annum.—Applications, stating age, education, qualifications and experience, to Staff Director, 40 Portland Street, Manchester, 1, within seven days.

THE ECONOMIST INTELLIGENCE UNIT LIMITED is expanding its research departments, and invites applications from men aged 26 to 35. Applicants must have good academic qualifications, and should have had experience in industry, agriculture, commerce or finance; knowledge of foreign languages an advantage. Starting salary according to qualifications, but not less than £500 per annum. Please write fully to "Research," 22 Ryder Street, St. James's, London, S.W.1.

A GROUP of Investment Trust Companies in the City of London has a vacancy for a YOUNG MAN, aged between 25 and 30, who is interested in investment. An Accountancy or Secretarial qualification would be desirable but not essential, providing applicant has sufficient other experience of work of similar character, i.e., in a Banking House or Stockbroker's Office. Starting salary £1,000 to £1,250. Pension Fund, etc.—Write Box 429.

THE ALEXANDRIA WATER COMPANY LIMITED

EXTRAORDINARY GENERAL MEETING.—Notice is hereby given that an Extraordinary General Meeting of the shareholders of the above-named Company will be held at the Company's Offices, 61, Avenue du 1er, Alexandria, on Wednesday, June 20, 1956, at half past four in the afternoon for the purpose of considering and, if thought fit, passing the subjoined Resolution as a Special Resolution and, if the requisite quorum is not present, the Meeting will stand adjourned to the same day in the next week at the same time and place, that is to say, on Wednesday, June 27, 1956, at half past four in the afternoon.

RESOLUTION.—That Article 72 of the Articles of Association of the Company be altered by deleting the final phrase of the existing Article 72 reading as follows: "taken into account." "Votes for intermediate numbers of shares in any one group will be calculated on the scale applied in that group so that fractions of a vote being less than or equal to one half shall be disregarded, and fractions of a vote being greater than one half shall constitute one vote." and by substituting therefor the following: "Intermediate numbers of shares in any one of the above-mentioned groups will not be taken into account and will give no right to any additional vote or votes." Holders of share warrants to bearer desiring to attend or to be represented at the Meeting must deposit their share warrants in London before 10 a.m. on Wednesday, June 14, 1956, until after the Meeting, at the Midland Bank Limited, Overseas Branch, 122 Old Broad Street, London, E.C.2, or at the National Bank of Egypt, Alexandria, or at some other approved bank in London or Alexandria.

A Member of the Company is entitled to appoint a proxy to attend and vote at the Meeting in his stead and, any proxy so appointed need not be a Member of the Company.

Dated, Alexandria, Egypt, May 23, 1956.
By Order of the Board,
ALEX. I. BENACHI,
Chairman and Administrator-Délégué.

DIRECT from the dairy Somerset CLOTTED CREAM by post 5s. per 4 lb. 9s. 6d. per lb. cash with order. The Western Counties Creameries Ltd., 10 Sherborne Road, Yeovil, Somerset.

CEUDRAETH, near Portmadoc. With 11 acres. Three bedrooms, magnificent lounge, etc., all modern convenience. £2,750 freehold, including fitted carpets and curtains. Substantial mortgage available.—Mill House, Harlow, Essex.

SUCCESSFUL TUITION FOR THE B.Sc.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the better qualified students for Lond. Univ. B.Sc.(Econ.) (three if Entrance is included). Moderate fees: instalments. Over 1,000 Wolsey Hall students have secured this valuable degree since 1925.—Prospectus from C. Parker, Director, L.L. Director of Studies, Dept. P. 16, WOLSEY HALL, OXFORD.

WINES of quality. Leading importers, P.O. 28s. 11d. will bring cash of four bottles, Bordeaux, Burgundy, Jugo. Free delivery. Paten & Co., Peterborough. Distinguished wine merchants since 1838.

FOR SALE: Bound copies of "The Economist," Jan., Feb., March, April, May, 1955, inclusive with "Records & Statistics Supplements."—Box 424.

BEFORE YOU PRINT IT, LET PENMAN PLAN IT. Expert planning means greater results from sales literature and greater economy in production. Planning, writing, illustrating, printing, or any part of the job.—H. G. Penman, 76 Grange Road, London, W.5.

FRUSTRATED FLAMENCO SINGERS: Nothing opens the throat more than the sight of a bottle of Duff Gordon's CHD Sherry. Try, plan, with or without guitar accompaniment. Ole! Ole!

HUMAN RELATIONS IN INDUSTRY.—Five-day residential course, July 23rd-27th, suitable for managers, University and technical College staff wishing to meet industrial managers. Small course, run on discussion basis, in delightful surroundings. Fee—10 guineas, inclusive of board and accommodation.—Apply to Director of Studies, Roffey Park Institute, Hornham, Sussex.

THOSE interested in investing in manufacturing concerns are invited to consider personal advisory service.—Box 426.

THE Economist's Bookshop has the world's widest range of books on Economics, Politics, History, Anthropology and the Social Sciences. World-wide mailing service. Second-hand books bought.—11-12 Clements Inn Passage, Aldwych, London, W.C.2.

HUDEPOHL LTD.—Distinguished Swiss Watch Repairers have established a postal service for the estimates submitted. Work guaranteed for twelve months.—Hudepohl Ltd., Dept. D2, 111 New Cavendish Street, London, W.1.

EXPERT POSTAL TUITION for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

METROPOLITAN COLLEGE, ST. ALBANS or call at 30 Queen Victoria Street, London, E.C.4.

HANDLING ECONOMY:

FOR MORE THAN THIRTY YEARS Mitchells have supplied mechanical handling plant to the world's industries; the Company has been the pioneer and inventor of plants which have provided greater efficiency and savings in handling and site costs.

AMONG THESE DEVELOPMENTS are the quick action of grabs closing in half the time taken by other mechanisms, with equal power; the non-skid control of transporters which eliminates all possibility of the transporter skidding on its tracks; and unique methods for guiding conveyor belts and ensuring that they are kept straight on their idlers under all conditions of service and loading. Tipplers, wagon tippler hoists, ropeways, cableways, cranes and complete automatic wagon marshalling systems are the other aspects of Mitchell enterprise.

Mechanical Handling Plant at TILBURY POWER STATION

MITCHELL ENGINEERING LTD supplied the comprehensive coal unloading, storing, reclaiming and conveying plant. The travelling transporter for storing out and reclaiming has a span of over 270 feet and is the largest travelling bridge in Great Britain.

Plessey

The Plessey Company Limited
Ilford • Essex

raw materials • actuation and control • instrumentation
electronics • hydraulics • mechanics

The Plessey contribution to this vast work is largely concerned with control equipment and precision instrumentation. A current example of the vital role these products are designed to play is to be found at Calder Hall—location of the world's first nuclear power plant. The efficiency of this establishment is dependent upon certain specialised detection equipment supplied by Plessey, designed and produced in collaboration with the U.K.A.E.A. Industrial Group at Risley. To cater on a broader basis for the future planning and production of kindred instrumentation, a new company—Plessey Nucleonics Limited—has been formed.

THE ONLY ANSWER...

At Kellogg House the problem has been trying to "put a quart into a pint pot". This situation developed even though the Kellogg International Corporation anticipated an expansion of the petroleum and petrochemical industries. To provide additional engineering services for this expansion, four years ago the Kellogg International Corporation moved from the City to offices nearly three times as large at Kellogg House in the West End. Since then, the Kellogg International Corporation engineers have participated in the expansion of the petroleum and petrochemical organisations in the United Kingdom, France, Belgium, Italy, Germany, Yugoslavia, the Near East, South Africa, Australia and even Canada. To supply material and equipment for these projects, the Purchasing and Procurement Groups at Kellogg House have been dealing with over four hundred British manufacturers. Now the offices at Kellogg House can no longer house our steadily growing staff. Doubling the size of Kellogg House is the only answer to maintaining our high standards of engineering services.

Men who guide the destinies of the world wear Rolex watches

YOU MAY NEVER come into personal contact with these men, but you cannot remain ignorant of them. The whole gigantic network of news ensures that even their slightest words and actions are immediately reported. Because they are so important they are, inescapably, the best known men in the world.

We cannot mention their names. It would not be fitting to do so, for they include royalty, the heads of States, great statesmen,

service chiefs—the people who feel the pulse of our times. But next time you see their pictures, take a look at something you might not normally notice—the watch on their wrists. That watch will most likely have been made by Rolex of Geneva.

To these men, reliable service is a matter of course. We are proud that for a watch that will play its part fittingly in their daily lives, they look, with complete confidence, to Rolex.

The Rolex Oyster Perpetual Datejust, the most remarkable achievement in watchmaking. Every Datejust is awarded an Official Timing Certificate by a Swiss Institute for Official Timekeeping with the mention "Especially good results." This accuracy is protected by the famous Oyster case. Thirty years ago the Oyster case won fame as the first waterproof watch on the wrist of a Channel swimmer. In 1953 it withstood the rigours of the successful British Everest Expedition. It protects the movement from all hazards. The watch is self-wound by the Perpetual "rotor" mechanism, another Rolex invention, that makes for even greater accuracy. The date is shown on the dial, changing automatically every midnight, and magnified by a "Cyclops" lens for easy reading.

A ROLEX
RED SEAL
CHRONOMETER

The Rolex Oyster Perpetual—culmination of three Rolex triumphs. In 1910 Rolex gained their first Official Timing Certificate for a wrist-chronometer. Now Rolex have produced over 250,000 Officially Certified wrist-chronometers—three times as many as the rest of the Swiss watch industry combined. In 1926 Rolex invented the Oyster watch-case, the first truly waterproof case in the world and still the finest. This rugged and sturdy Oyster protects the movement permanently, from water, dust and dirt. In 1931 Rolex invented the first "rotor" self-winding mechanism. A new refinement of this Perpetual "rotor" powers the Oyster Perpetual, silently and automatically, actuated by every slightest movement of the wrist.

We don't **MAKE** these

... we're the specialists behind the scenes

We make steel and roll it into steel sheets and tinplate, which are then sold to manufacturers in Britain and abroad.

So you won't see our name stamped on anything you buy, though you may be surrounded by articles made from our materials.

We say this because we make a quarter of the nation's steel sheets and a quarter of its tinplate, right from the raw material.

Products made from our steel are everywhere: the steel sheets for motor-car bodies, filing cabinets, and hundreds of other articles; the laminations in your vacuum cleaner and in the electric motor of the office lift; and the steel parts of the lift itself.

The tins containing your food may be made from our tinplate. R.T.B. steel may also have been used for the springs of your grocer's van and for your stainless steel ware; and your domestic water supply may come to you from one of our tanks.

Richard Thomas & Baldwins Ltd

FIRST IN EUROPE TO MODERNIZE PRODUCTION OF STEEL SHEETS & TINPLATE

You can start your business trip at Southampton...

... you're in America the moment you step on board

IN THE PERFECT ATMOSPHERE
FOR BUSINESS CONTACTS*

ALL THE THINGS that say "America" — the easy courtesy of the Deep South, the streamlined efficiency, the glamour, the glitter, the heart-warming friendliness—all these are yours only two hours away from London!

Over the fifty feet of gangplank on to the famed "United States" or her running-mate the "America" and you're in America; the luxury, the hospitality and the gaiety of this friendly country surround you.

And if you're a businessman, remember that here is the perfect atmosphere to lay the foundations of a really successful business trip. In informal, friendly surroundings you meet the men who might make all the difference. The extra reserve of speed of the "United States" (the Blue Riband holder) helps you, too, for it means that she has an outstanding record for punctuality. And if you have a business appointment soon after you land, that's important!

But there's fun aboard, too, lots of it. You'll find unexcelled food and superb wine, magnificent cinemas equipped with CinemaScope, top-grade orchestras, every "keep-fit" facility, well-stocked libraries, and, of course, just rest and relaxation if you prefer. Yes, the few days that separate you from New York pass all too quickly. You travel fast in the utmost comfort when you travel by United States Lines.

* IMPORTANT

MEMO TO A BUSINESSMAN

As a British businessman, you have great advantages to reap if you travel by United States Lines. You have time, first of all, to adjust yourself to the American atmosphere and the American tempo before you arrive in New York.

And, most important, a fresh contact is more easily made under the sociable conditions aboard ship than over an office desk; the people you meet may turn out to be more than just good friends—they may be useful friends.

**FASHIONED FOR NOW...
AND THE FUTURE**

Some day, of course, all watches will be self-winding. For Mido, that day is now — every Mido watch is self-winding. And what beautiful examples of watchmaking they are! Designed out of sheer fashion excitement, engineered for worry-free performance — 100% waterproof, shock-protected, anti-magnetic, unbreakable mainspring! Wear a Mido when you will, where you will — nothing can dismay it. And Mido gives you the privilege of choosing from the world's largest selection of self-winding watches — strikingly handsome models for men... the tiniest self-winding watches for women. See them at better jewellers everywhere.

110 in the Boiler Shop

IN MATTERS OF sound measurement the word 'phon' will crop up very often, because this is the unit of measurement which acoustic engineers use to assess the loudness of sounds.

Let's look at a few examples of noises expressed in terms of phons. A pneumatic tool nearby would have a phon value of about 105, whilst a quiet street gives only 45; in an express train the reading would be about 80, compared with 20 for a rustle of leaves. In a boiler-making shop, the high rating of 110 makes the noise almost unbearable.

The human ear compares noises on a logarithmic scale so that a noise of 70 phons sounds 50% below one of 80 phons.

Those examples are perhaps sufficient to show the extent to which noise is with us most of the time. But sound, like heat, must be kept in its place, and much can be done in factories and offices to ensure that excessive and unwarranted noise is reduced to a rea-

sonable level. The best way to do this is by sound absorbing treatment of the walls and ceilings because these surfaces intensify noise by reflection. By way of example, the normal painted plaster wall to be found in many offices absorbs only 2% of the sound impinging on it. Compare this with a modern acoustic tile which has an infinitely higher sound absorption.

Newalls (Reg'd Brand) Paxtile is such a product and has a 75% sound absorption and combines an extremely pleasing appearance with the added virtue of being incombustible and vermin-proof; it also affords effective heat insulation. Our skill and experience and our well equipped Sound Laboratory are entirely at your service to investigate any noise or acoustic problem on which you may need help. We invite correspondence on this subject and will be pleased to submit suggestions, designs and estimates based on a careful appraisal of your particular problem.

A Daniel for Defence?

"SO far as I can judge the future," said the Prime Minister at Norwich last week, "the more immediate threat to our country's existence is competition in export markets rather than a world war." Once again, it must be suggested, Sir Anthony seems to have been whispering words of some moment. He was almost certainly foreshadowing the Government's hope of a substantial long-term cut in Britain's defence programme.

This hope of a long-term cut must be sharply distinguished from the settled programme of immediate economies. Those immediate economies—the £100 million of civil and military cuts promised for this financial year—are now being painfully worked out behind the scenes; the closing of Scapa Flow seems to be one example of these pinchpenny cuts, and Mr Macmillan is expected to announce a tidy package of others next month. The longer-term, larger but very much vaguer project arises from a quite separate question. Can Britain afford, the Government is asking itself, to spend £1,600 million a year on defence and £2,500 million a year on the social services, not only now but for ever? The answer it wants to give is that although it is "politically impossible" to degut the social services, it may at last be "politically realistic" to consider reorganisation of defence on a significantly cheaper basis. To that end it apparently hopes that, after detailed and forward-looking study, it might be able to announce a fairly drastic reorganisation of the defence programme next autumn or winter, even although it would be a reorganisation the effects of which would not work through into the economy for another one to three years.

It is not the purpose of this article to discuss the wisdom of this hope, but there are certain preliminary things that obviously need to be said about it. One's immediate reaction is that, because of the circumstances under which the hope has been conceived, it could be very unwise indeed. There are some important traps to be avoided. It is not true to say that Britain is faced with either military or economic competition; it is faced with both. There is nothing in the new balance of forces in the world to justify any dismantling of western defences, however much they may have to be remodelled to meet modern needs. The primary test of any changes in the defence programme must be whether they make Britain stronger or weaker, in concert with its allies. Any reappraisal of the defence programme ought to be based upon a calculated assessment, not of the "immediacy" of the military as against the economic threat, but of the military threat itself. The Government has to judge what military contingencies we and our allies have to be ready to meet, and to decide what forces, and what kind of armament, are together required. There must be a defence policy, based on military not economic needs. When this has been plainly stated, and only when it has, discussion can turn to a separate but equally pressing problem: the mechanism through which the Government may seek to arrive at a

decision, both in broad outline and in detail as between the different arms and services. If the Government is going to carry out the right sort of reappraisal—based upon something more than the undoubted conveniences of parsimony at this time—it is very important that it should also get the mechanism for re-appraising right.

There are three possible mechanisms. One is after open and extensive public debate of present and future service roles and (possible) anachronisms. That, perhaps to the embarrassment of the Administration, seems to be the American way—with press leakages to help it. The system of a newspaper war between the army and air force, with generals deliberately handing out “internal memoranda” that accuse airmen of arrogantly wasting the taxpayer’s money, may seem shocking to British serving officers; yet the fact remains that the press—and through it Congress—is now much better equipped to debate the long-term problem of defence appropriations in America than are the press and Parliament in this country. In Britain, however, an extension of this system is inconceivable. The struggle between the services, though at its roots no less bitter than in America, will go on behind the scenes and therefore (more or less) in private.

★

The second, and more British, way in which the possibilities of a new look in defence may be hammered out is by intra-Cabinet struggle—a friendly see-saw between two schools, who might conveniently and respectively be called the “economisers” and the defenders of defence. The economisers, in this instance, will presumably be led by Mr Macmillan, who has publicly styled himself a “poacher turned game-keeper”; the political defenders of defence will include not only the individual service Ministers but also the Minister of Defence himself. The likely agenda for the struggles will probably be for the Minister of Defence, briefed by the individual services, to go before some Cabinet committee to say that an annual expenditure of £1,600 million is the irreplaceable minimum for security; for the members of the Cabinet committee, who see the relevant papers only in their spare time between running their own departments, to say that a cut of £x million is economically essential and to suggest ways in which it might be effected; and for the Minister then to shuffle back and forth between the Cabinet and the service chiefs until some compromise is reached.

The more one ruminates on this system, the working of which must depend very largely on the strength of certain personalities at certain particular meetings instead of through the length of their working day, the more one doubts its efficacy. The third and surely better way would be to centralise attempts at reorganisation in the hands of the Minister of Defence himself—who should, however, be initially associated neither with the school of “economisers” nor with that of the

“defenders of defence.” It may be that, working full time on the job, he would find that the long-term cuts of which the Government dreams are quite inconsistent with security; it may be, on the contrary, that he would achieve bigger economies than the pressure of Mr Macmillan and Sir Anthony at particular and scattered meetings is likely to do. But, whichever way his decision lay, it would surely have more chance of being the right one than any compromise arrived at under the system of group bargaining. The argument that is often entered against this proposal—that an impossible situation arises if a Minister of Defence is expected to be constantly at loggerheads with his Admirals, Generals and Air Marshals—is not valid. Aggrieved Admirals, Generals and Air Marshals can be made to toe the line; they do not go on strike; and individually they are replaceable in their office.

★

The difficulty in the way of this third mechanism is, quite frankly, the tradition of the Ministry of Defence, as established over the last five years. Lord Alexander set the tone for a Conservative Minister of Defence to be a defender of defence; in his day, that tone was probably needed. Mr Macmillan—the self-confessed “poacher”—carried on the tradition; but he was only holding the portfolio while under training as Secretary of State for Foreign Affairs. Mr Selwyn Lloyd, although his tenure was also cut short, broke some way from the tradition; he will go down to history as the man who, single-handed, abolished the British battleship. The present Minister of Defence is Sir Walter Monckton.

It is inevitable that the argument should come down to personalities here. But that argument can perhaps best be framed in the form of a question. Into which of two roles might Sir Walter be supposed to fit more easily? As an arbitrator seeking to effect a friendly compromise (both between the individual services and within the Cabinet), with the minimum of ill will but also the minimum of new thought among all concerned? Or as a tough Daniel come to the defence dilemma, scorning all compromise in the search for truth, eager (as one Tory has put it) to do battle against prejudice in the Navy, stupidity in the Army, and arrogance in the RAF—if, of course, he should find, on close examination, that those often-alleged defects do in fact exist? The implication is obvious. Sir Walter has great talents and virtues, which have been of signal service to the country in the past and can continue to be so in the future. But, if the Prime Minister’s speech at Norwich last week presaged what one thinks it presaged, and despite the disadvantage of yet another change in this key office, the £1,600 million question must be asked. Might it not be better if Sir Walter were to play out in some other department the last acts of that long and mysterious morality play which is now universally known in Whitehall as *Waiting for Goddard*?

India and Pakistan

NO two countries need to co-exist in peace more than India and Pakistan. Free Asia’s two greatest states can enjoy neither freedom nor peace except in common. For each there is no more vital interest than that the other should go forward in stability, no delusion more fatal than the idea of profiting if the other should founder. In both Delhi and Karachi there are perceptive men who know this; but today their voices are almost drowned by a shrill clamour. Relations between the two countries have worsened in the past twelve months to a degree that is not fully understood either in the West or, it may be added, in the two republics themselves.

The political leaders and press of India have taken keen offence at Pakistan’s adherence to the Baghdad defence pact. Those of Pakistan have asserted their claim to Kashmir with mounting anger ever since the Soviet rulers visited Srinagar and proclaimed it to be unconditionally Indian property. This month’s Commonwealth conference will be clouded by the prospect of Pakistan calling on the Security Council to debate Kashmir once more, and by the new harshness of the Indian attitude on Kashmir. Recent border clashes in both east and west have helped to heighten the tension. And in the last few months Hindus have been pouring out of East Pakistan in distressing numbers, which reached a peak of 55,000 in March.

All but the most responsible politicians and newspapers in each country have accompanied these events with a high-pitched antiphonal chorus of abuse. An outsider might be forgiven for thinking the two nations on the brink of war. Mercifully, he would be wrong. Their antagonism is by no means as taut as that between Israel and its neighbours. During May they were able to confer quietly in Delhi about financial issues and in Dacca about the Hindu flight from East Bengal—two meetings which revealed that there is still on both sides a submerged current of conciliation. But the operative word is “still.” The present danger is not of war, but of a drift into final irreconcilability.

In commenting on this sad situation, Britons should be cautious, for attempts to be helpful are liable to be branded as condescension. Yet there is a plain duty for those who wish both India and Pakistan well to analyse their problems in terms of common sense, and to put forward possible solutions. Only the

communist powers stand to gain from playing them off against each other.

There is a deal of rubble for the bulldozer of common sense to clear away. In Britain and in the West generally, there has been a tendency to present a false choice—between automatically backing Pakistan, as an ally, against India and automatically backing India against Pakistan because so much depends on India’s courageous effort to overcome poverty by democratic methods. It is vital to avoid such partisanship, for the first interest of each country is to live in friendship with the other. Again, no sensible Indian should argue that Pakistan’s decision to align itself defensively with other nations against pressure from the north sets

up a barrier to co-existence; neutral Sweden enjoys intimate friendship with Norway and Denmark, both members of the North Atlantic alliance. Nor should any sensible Pakistani regard as “betrayal” the refusal of his country’s allies to endorse its claims against India. If the South East Asian treaty were mis-

construed in this way, Pakistan in turn would, for example, have to side wholeheartedly with France over North Africa.

Above all, good sense dictates that if the two republics are to get along together they will have to stop excoriating old wrongs. It is obviously too much to expect that the injustices and bestialities of 1947 should already be forgotten; but the public men and journalists who dwell on them for political purposes are acting against their countries’ interests. Neither India nor Pakistan—nor, indeed, Britain—can disclaim a responsibility for those tragic events, and each public evocation of them merely diminishes the prospects of reconciliation. What is required is more attention to the future and less to the past. This is nowhere more true than in Kashmir.

Present realities and future needs make both governments’ attitudes to Kashmir untenable. India’s claim that the four million Kashmiris have freely chosen to be ruled from Delhi does not stand up to examination. A legalistic attitude ironically akin to the Portuguese position on Goa has cost India good will throughout free Asia as well as in other continents. Pakistan’s insistence that Kashmir’s diverse inhabitants must choose *en bloc* between Delhi and Karachi has also been lacking in reality. Jammu and Ladakh have as little wish to join

Pakistan as the north-western areas have to join India. There is surely everything to be said for keeping the number of people involved in any final settlement down to the minimum. Common sense suggests that only the inhabitants of the Jhelum valley should be asked to vote freely on their own future. It also suggests that, after the bitter conflicts of the past decade, they should not be confined to opting for India or Pakistan. Why should they not be allowed—at least in the first instance—to choose local autonomy, and try to achieve self-sufficiency by recovering their natural trade link with Pakistan while retaining Indian tourist traffic?

Any such solution would require both India and Pakistan to modify their claims. For India, however, it would also mean relinquishing its military hold on the valley. But two points arise here to which India seems to have given little thought as yet. First, if—as it maintains—the valley Kashmiris have freely accepted its rule already, India can lose nothing of substance and will gain much in moral terms if it lets them freely demonstrate that acceptance to the world. Secondly—supposing that the vote goes the other way—is the retention of this charming but remote valley worth the frightful price that India is paying for it?

That price seems never to have been fully totted up in Delhi. It is not just a matter of subsidising a rickety regime in a state arbitrarily split across its economic grain, and of maintaining expensive armed forces out on a strategically irrelevant limb. There is a less easily measured but vastly bigger debit item: the loss to India not only of Pakistan's friendship but also of Pakistan's internal stability—which India ought to cherish beyond rubies.

For what is it that drives India to spend on arms sums that might decide the success or failure of its great economic plans? It is not fear of a cold-blooded, full scale invasion from Pakistan. The Pakistanis, out-

numbered five to one, lacking in basic economic resources and communications, sundered by a thousand miles of Indian territory, are simply not a contender in such a fight, with or without American defence aid. India knows this, and knows that the Pakistanis know it, too. What India fears is that wild men might gain power in Pakistan and might, if only to divert attention from their incompetence, make a sudden thrust at Srinagar or some such target, hoping for a cheap victory but in fact embroiling the two republics fatally.

Yet India's present Kashmir policy is exactly calculated to increase the risk, today still negligible, of this occurring. As long as the Srinagar valley is blatantly denied the political freedom that India itself enjoys, the cry of "liberation" can always be raised in Pakistan, and the voice of sanity drowned. Kashmir does not account for all the vendettas and scrambling for places that disfigure Pakistan's parliamentary life, but it does make these political ills almost impossible to cure. And who will doubt that the recent Hindu exodus from East Bengal reflects the fact that, against the background of tension provided by Kashmir, local Muslim bullies have felt free to strike or threaten without much fear of retribution from their authorities?

Indians may feel that they are being asked to lean over backwards in dealing with Pakistan. So they are. That is always the way when a strong state and a smaller one live cheek by jowl. One is tempted to beg Indians to consider the sad past and the cordial present relations between the United Kingdom and the Irish Republic. No Dubliner today can be heard complaining bitterly that his state is not really accepted as a sovereign entity by its big neighbour. Yet countless Pakistanis feel exactly that way; and many Indians still give them good ground for doing so. Every hint that "big brother" is losing patience and that a spanking may be imminent exacerbates this feeling, and increases the very same risk that India wishes to avoid.

Labour at the First Ditch

WITHIN the next two weeks the Labour Party will put out the first of its promised "ten statements on policy," on the subject of housing. A second statement, on the freedom of the individual, will appear at the same time, but it is the housing manifesto that deserves attention, for it bids fair to exemplify most of the dangers of a party getting study groups to think up a policy for it. The contribution of the housing study group to Labour's "new and up-to-date thinking" has apparently been to recommend that the party should be tied more closely to the doctrine of "municipalising" rented property. This is about as up-to-date as a periwig, and as representative of new thinking as a parrot.

The public will inevitably interpret a call for municipalisation as a sign that Labour has reverted to its

most reactionary instincts of the last twenty years. Faced by a social problem, Labour has stretched for the old and unpopular concept of public ownership—in much the same way as Field Marshal Goering, whenever anybody mentioned culture, was wont to reach for his gun. Why? The Tories will have a ready and gleeful answer to that question. They will say that the proposal is a surrender to the old-fashioned left. Although public ownership (whether under municipalisation or any other name) is a scarecrow to the voters whom Mr Gaitskell most needs to woo, it is an unguent to the party malcontents whom he most needs to placate. There is something in this Tory argument. But it is not by any means the whole truth. The proposal for municipalisation does not really spring from a heroic defence of (or cowardly surrender to) old-fashioned socialist

principles. It springs from something much more complicated and muddled. To probe it, it is necessary, although somewhat distasteful, to probe the Labour Party's subconscious.

At the back of its mind, Labour knows that those private rents that are at present restricted have got to be allowed to rise. That is a credit to its common sense. But it does not like this horrid knowledge. So it has seized upon this concept of municipalisation—this word that proclaims that rents will go to local councils instead of to greedy landlords and landladies—as a counterpane to cover it up. But cover from whom? From the Labour leaders themselves, so that, once in office, they would not let rents rise by as much as they ought? In that case, the project is bad statesmanship. Or cover from the public, in the belief that tenants will be more willing to pay higher rents to local councils than to private landlords and landladies? In that case, the project is bad psychology and worse politics. Labour will then be philanthropically setting up an Aunt Sally to gather in the extra halfpence, in a way which will ensure that its already unpopular concept of public ownership will also get the extra kicks.

These may seem harsh words. But it is necessary to be harsh in order to be constructive. What should Labour say about housing policy at this time? The answer is simple, once the party has grasped a single salient fact. By the time Labour gets into power, the housing "problem" which occupies politicians' attention today is most unlikely to exist. Since Britain

The UN and the Deep Blue Sea

THE world's oceans have been disturbed in the last few years by the splash of old and cherished concepts of the freedom of the seas going overboard one by one. Vast expanses of seas that were once open to all comers have been marked off by various countries, under one pretext or another, as their private property, or have been put under restrictions of different sorts. The International Law Commission, which consists of fifteen legal experts from different countries, is now meeting at Geneva in an attempt to bring order to this scene of confusion. It has been asked to prepare a draft code of the sea for the United Nations Assembly to consider in November. This is the Commission's eighth annual session, and it has already consumed in some hot debates seven of the ten weeks it gave itself to finish the task. It has become very clear that, even if it manages to avoid all the snags in its way, its proposals will meet fierce opposition from some nationalist-minded countries in the Assembly.

Not many countries have taken things to such an extreme as El Salvador, which has written into its constitution a claim that its territorial waters extend 200 miles from its coast. But several others have gone nearly as far. Ecuador, Peru and Chile between them

already has more housing room per head than before the war, the only problem today is one of maldistribution—of gross under-utilisation of some sorts of accommodation and long queues for others. This, in turn, is a function of rent control; and the Tories, with greater or less willingness (probably less), are bound to amend rent control before they fall from power.

A wise leader of Labour at this time would therefore give this advice to his party: sit tight; formulate a policy about such permanent housing issues as differential rent schemes, suburban development, new and overspill towns; harvest the fruits (but not too greedily) of the initial unpopularity that the Tories are bound to incur through reforming rent restriction; be very careful not to commit the party to restoring that restriction; leave no more than a vague feeling in the voters' minds that when Labour returns it may perhaps set up a departmental committee to examine how local councils can add to their stock of rentable houses by more extensive purchases of existing houses on the market. During the last two weeks the Labour Executive has been busily knocking the rough edges off its housing committee's original flight of fancy; it may, of course, have knocked off enough edges to destroy its silly and too specific core, and to produce a pragmatic statement of this sort out of the mess. Let us hope so. For this not very difficult, and only temporarily emotional, problem of housing seems fated by an unfortunate timetable to provide the first printed test case of Mr Gaitskell's leadership, patience and policy.

waters above; but they are a step back from the purest classical doctrine of the free seas.

In the face of incipient anarchy, however, it has fallen to Britain and other old-established maritime powers to try to call a halt. Among the mass of smaller issues with which the Commission has been grappling, two major problems stand out. First, what is the proper width of territorial waters, within which coastal states are entitled to claim full sovereignty? Second, what lesser powers, short of full sovereignty, should states be allowed to exercise outside territorial waters to meet the conditions of technological change—or simply, perhaps, to save them from the temptation of marking off huge stretches of sea as their own?

★

The British case is that international law is quite unambiguous about the width of territorial waters. Apart from a few exceptions with a long history behind them (such as the Norwegian claim to a four-mile limit, to which the International Court gave its blessing in 1951) Britain says that practice and precedent justify only the familiar three-mile limit. Outside this narrow strip of territorial water, according to the British argument, a coastal state's legitimate interests can be safeguarded in three ways. One is to allow it to exercise certain limited powers, chiefly concerned with customs and health regulations, in a "contiguous zone" up to 12 miles from the coast. The second is to grant it full control over the resources of the sea bed off its shores, down to a depth of 200 metres. The third is to allow it to make regulations to protect fishing grounds off its coast in which it has a special interest, provided that other states affected by these regulations can appeal to an independent tribunal.

Unfortunately, this scheme of things has not emerged quite intact from the Commission's debates. For one thing, the proposed "contiguous zone" looks like being swallowed up by renewed claims for territorial waters over and above the three-mile limit. At last year's session the Commission, torn between the traditionalists and the nationalists, in effect drew two parallel lines to mark the boundary of territorial waters. It said that international law did not justify their extension beyond twelve miles, but added that states need not recognise a width of more than three miles. The nine miles in between were thus left in a lawyers' limbo.

The British delegate is urging the Commission to think again at this year's session, but he is unlikely to make much headway. The only real justification for the old three-mile rule lay in its general acceptance; and it has now been broken in so many places that an international agreement to stick the fragments together again can hardly be hoped for. If the Commission refuses to condemn extensions up to 12 miles, no prophetic gift is needed to forecast that a growing number of countries will follow the current fashion and push their territorial waters further out. And it is hardly

helpful for states to be told that they are not "required to recognise" more than three miles if in fact gunboats go out and enforce a twelve-mile limit. The idea of the "contiguous zone," in which nations could exercise a kind of half-sovereignty, is in danger of being swept aside in the rush to claim full sovereignty.

This is not all. The right of coastal states to exploit the resources of the sea bed off their shores is generally admitted; but at Geneva this week the Mexican and Cuban delegates led a move to extend the definition of "resources" in such a way that they might have included pearling grounds and perhaps even deep-water fisheries. This brought such loud protests that the Commission hastily dropped the matter without agreeing on a definition. Almost as much trouble has been caused by the regulation of fisheries outside territorial waters. The same Mexican delegate, with the support of the communist representatives on the Commission, recently tried to delete the clause providing for compulsory arbitration where the countries involved cannot agree what regulations are needed. The code offers coastal states the right to lay down regulations for fishing grounds off their shores; if they are to have this privilege, it is important that other countries should be able to appeal to a neutral umpire if they think they are being unfairly treated. The Commission has decided to keep the compulsory arbitration clause; but the attack on it may be renewed in the Assembly.

It must be admitted that even if, by a miracle, the British proposals had gone through the Commission intact, they would still have marked a retreat from the old idea of the sea as a completely free and untrammelled place. Territorial waters would have stayed narrow; but various kinds of restrictions could have been enforced outside them, on both the surface and the sea bed. Now, however, the line marking the border of territorial waters has been blurred, and it appears that many coastal states, not content with the other privileges that have been granted them, want still wider powers. The slide to chaos has not yet been halted.

The real battle will be joined in the General Assembly, where the national interests which in the International Law Commission peeped out from behind the lawyer's robes will make their appearance naked and unashamed. Probably the best that can now be hoped for from the Commission is a draft code which, while falling short of what the liberals (like Britain, France, and the United States) want, would at least prevent the most flagrant kind of sea-grabbing. But this code will have a rough passage through the Assembly, even if it eventually gets the sanction of a two-thirds majority. The worst of the recent offenders, like Peru, Chile and Ecuador, have not been represented on the Commission, and they will presumably have a good deal to say when the Assembly meets. And even if the Assembly accords the code a two-thirds majority, it is difficult to see how it could be enforced upon an intransigent violator. The prospect of keeping the seas free from encroachers remains a gloomy one.

Notes of the Week

The Economic Skein

IT would be a mistake to suppose that Mr Macmillan's impromptu statement of good cheer in the Commons on Tuesday (that he believes that his "various weapons, of which monetary policy is one, will be successful in overcoming our difficulties this year") presages any switching off of the alarm clock. The circumstances of the statement were peculiar. The Chancellor was being asked by a Tory backbencher to reduce Bank rate, because he (the backbencher) thought that Bank rate was not working; Mr Macmillan indicated that Bank rate certainly would not be reduced, because the weapon was working very well; and some people have strangely interpreted this as meaning that, since the Chancellor thinks that Bank rate is working well, he may soon be in a position to reduce it. The muddle could hardly be more complete.

But this is partly because Britain's economic problem is now in a very muddled and intricate stage. To attempt a summary. The Government's economic policy is probably working well enough to restore Britain's balance of payments to surplus this year, provided overseas demand remains reasonably buoyant. Its main failing is that the unions are still in full cry for wage increases. On this situation there have now been superimposed two shocks from abroad. The first is that the continuing tide of wage demands has prompted some renewed speculation against the pound; the second is that it now seems possible that overseas, and particularly American, demand may not be as buoyant this year as had been hoped.

Provided there is no American recession (the prospects of that are discussed in an article on page 991), the outlook seems spotty rather than dark. Although the present degree of disinflation is not checking the formulation of extravagant wage demands, it may still check the granting of them—and without too many strikes (the unions' cautious attitude towards the projected stoppage at Standards this week was significant); if this happens, then speculation against sterling will certainly turn round in its tracks. But this is a time for caution, and it is important to distinguish the different strands in the economic skein. The exchanges at question time last Tuesday merely served to tangle them.

Tito in Moscow

THERE has been no lack of theatre in the opening of Marshal Tito's visit to Russia. There was the tumultuous hero's welcome on his arrival in Moscow; the handshake with his old enemy, Mr Molotov, the timing of whose resignation as foreign minister is a sacrifice on the

altar of Soviet-Yugoslav friendship; the curious crowds on Gorki Street forcing the Marshal and Mr Khrushchev on their sight-seeing stroll to take refuge in an ice-cream parlour; most dramatic of all, the studied snub to Stalin administered when Tito deposited at the Lenin-Stalin mausoleum a wreath addressed to Lenin alone.

The warmth of Marshal Tito's present meeting with the Soviet leaders is in striking contrast to the coldness, on his side, of his last meeting with them in Belgrade. In the intervening year the Soviet leaders have made the grade in Marshal Tito's eyes, and it seems to have been the Soviet party congress last February that tipped the scales in their favour. (The satellite leaders have not all done quite so well, and the future of their régimes may turn out to be one of the few clouds in the Soviet-Yugoslav sky.) Marshal Tito now holds that the recent changes in Russia are genuine and important, that between Yugoslavia and Russia "there are no longer any important problems difficult to solve" and that any divergence between the two countries on international policy are not of "vital significance."

Marshal Tito insists that none of this need affect his relations with the West. Nor need it, in theory; but in practice it is much trickier for him to lean over the eastern side of the fence without falling off than over the western side. When he visits a western country, like France, he is sufficiently a bird of exotic plumage to stand out distinctively from his background. But when as a communist he pays a demonstratively friendly visit to another communist country he can retain his separate identity only by a deliberate effort. He may still succeed in holding to his independent line, yet the healing of the breach with Moscow presents Yugoslav diplomacy with a problem: how, in these transformed circumstances, is Marshal Tito to keep the prestige and confidence which his courage in standing up to Stalin won for him, rightly, in the western world? Pressure in the United States Congress to cut down, or cut out, foreign aid is at its most emphatic in the case of Yugoslavia because of the reconciliation with Moscow.

Uneasy Survival in Paris

THERE was no political earthquake in Paris this week, but a fairly quiet debate in the Assembly leaves M. Moller still sitting very uncomfortably, with an Algerian burden which he shows little sign of being able to move. The Communists finally decided against an all-out attack on the government. They preceded this choice by the unusual step of summoning their Central Committee and parliamentary group to debate the line to take. There were apparently many who advocated a negative vote in keeping

with the mood of the working class and with the party slogans on Algeria. After lengthy discussions the official view prevailed that abstention was better than a rift with the Socialist rank and file. The conservatives, for the most part, did not seize the opportunity of this Communist defection to climb on M. Mollet's bandwagon and claim the driver as their own. They are torn between their liking for M. Lacoste's policy in Algeria and their instinctive dislike of a Socialist-led government.

M. Mollet thus finds himself once again in the centre, protected by tactical calculations on his wings and by the lack of volunteers for the succession. The key to French politics now lies in Algeria (the outlook for French policy there is discussed on page 1001), and this is certainly not the last debate to be dominated by North African events. If M. Mollet has a realistic programme capable of shortening this costly war in the interval, which is unlikely to last long, he has not disclosed it.

The impact of the Algerian conflict on French life is growing; its cost can no longer be concealed. At least £100 million will have to be found for military outlays on top of the recent estimates, and the bill is mounting up fast. The taxes announced by M. Ramadier—a "civic tax" and one on supplies for the troops—will raise only a fraction of what will be needed. There are fears, too, that the recall of reservists will affect industrial production at a time when France is experiencing a deterioration in its balance of trade. There are no dollars this time to come to the rescue, and M. Mollet may find his improvements in the social services frustrated by the Algerian running sore. He did not give the impression this week that he is aware how closely he is fighting against time.

Saar Settlement

MOLLET'S latest meeting with Dr Adenauer may, if all goes well, have removed the Saar permanently from the arena of European national disputes. Presumably no one will again be prepared to base any policy on the assumption that the Saar can be made anything but German. This is France's main concession: to accept the political and economic return of the Saar to Germany. Political union with the Federal Republic is fixed, in principle, for next New Year's Day. Inevitable since the plebiscite and the electoral victory of the pro-German parties, it has in the end been accepted with good grace by French opinion. Economic union, to be achieved by January, 1960, will come later than the Saarlanders wished but several years earlier than the French, quite lately, had intended. To Germans, the recovery of the Saar will be a major political event: the first stride by the Federal Republic towards the territorial restoration of Germany.

France retains for a time a stake in Saar coal, though here both sides have had to give ground. Much of the coking coal for the Lorraine steel industry comes at present from the Warndt coalfield in the Saar, which the *Charbonnages de Lorraine* have been developing since the war, and from which they originally hoped to extract a further 130 million tons by 1980. But the Warndt field is the Saar's main coal reserve; and as the pits in the developed part of the Saar basin approach exhaustion, the Saar mining undertakings will be forced to turn more and more to the

Warndt. Its reserves are very large, but if the Saar's own future needs are borne in mind, the German agreement to allow France 90 million tons between now and 1980 (about the present rate of extraction) is not one of which France can complain.

★

Germany's principal concession has been to accept the project to turn the Moselle into an industrial waterway from Thionville to Coblenz, where it joins the Rhine. The cost to Germany of the canal, in German territory for most of its length, will not be as large as some German critics supposed, since France is to pay 250 million of the estimated cost of 550 million marks. Still, Dr Adenauer's concession is considerable. Because the canal will improve the competitive position of the Lorraine steel industry against the Ruhr it has been vigorously opposed by German industry. The Saarlanders, too, dislike it; the project will not benefit them, and they would prefer any available funds to be used to make up their own pressing arrears of investment. In return for the Moselle canal, the French have agreed to go no further with their canalisation of the upper Rhine, and to pay compensation for such losses as the existing Alsace canal may have caused to German agriculture and water supplies. Although this concession may irritate local French feeling, it is a small price to pay for the Moselle canal, so dear to Lorraine.

Once completed and ratified, these agreements should remove the chief irritant between the two countries. "Europeans" were disappointed that a supranational solution was not found for the Saar, but events have shown that they were unwise to suppose that "Europe" could be advanced by a compromise settlement of a national territorial dispute. But the new agreement is a step in the functional integration of Western Europe; the Moselle canal is not only an earnest of German willingness to make the coal and steel community work, but should be in practice a major "European" development project.

A Star is Not Born

ANYTHING which increases competition among newspapers is profoundly in the public interest. The announcement by Hulton Press that it has abandoned its plans to produce a new Sunday paper, in the face of the refusal of the National Federation of Retail Newsagents to handle it on the normal terms laid down by the Newspaper Proprietors Association, should therefore cause some searching questions to be asked. Plainly there is some intolerable restrictionism here. But restrictions by whom? Partisan statements have flown about. The Hulton announcement itself hardly covers all the facts, but seems nearest the truth when it says that "the *Sunday Star* has become the victim of the Federation's dissatisfaction with the NPA's terms."

The Federation is certainly dissatisfied with the margins on which its members, the newsagents, sell and distribute newspapers; in the case of 3d. Sunday papers this margin is 25 per cent, but only if every paper ordered is sold. On the plea of saving paper, the NPA still will not allow return of unsold copies. The NPA has repeatedly and flatly turned down the Federation's demands for an

increase; the newsagents grumble but accept this—for the margins are, after all, sufficient to keep a huge network of them alive. The Federation, however, is now trying to breach the NPA's defences by demanding better-than-NPA terms from any new newspaper. For the *Sunday Star* it demanded the terms agreed for periodicals with the Periodical Publishers' Association (an extra 6d. a quire compared with newspapers); it had already demanded, and secured, these from the Mirror Group for its *Woman's Sunday Mirror*. Hultons aver that they cannot comply, not only because of the extra expense, but because compliance would disqualify them from getting from the NPA (of

which they are not yet members) the distribution facilities needed by a true Sunday paper produced wholly on Saturday.

The appearance is, therefore, of collective agreements being enforced by the Federation openly, and at one remove by the NPA. One powerful trade association is fighting another; when this happens there is no objective criterion by which one can judge whether the margins that emerge for retailers are "fair." But it is very serious if the result of the battle is going to be collective discrimination against new entrants. When the Restrictive Trade Practices Bill comes up for its report stage, Parliament should make sure

The Copyright Bill

THIS Bill, which got its second reading in the Commons on Monday, attempts to bring the law of copyright, as propounded in the Act of 1911, into line with technical change, international and imperial developments, and new conceptions of individual rights in artistic works.

1. Part I deals with copyright of individuals in original works.

Artists' Rights. The basic formula stated in Clause 2 and 3 is now "Life + 50"—full copyright for author's life and 50 years for his heirs. In order to comply with the Berne convention—and to enable Britain to ratify the "universal convention" and protect rights of nationals of convention countries—the escape clauses of the 1911 Act have been dropped. Under these, 25 years after the death of an author, any publisher could republish on payment of a statutory royalty. As the law will be, unless his original publishers agree, cheap editions of (e.g.) Rudyard Kipling cannot appear until 1986. This is a great pity.

Staff Artists' Rights. Under the 1911 Act a staff journalist or artist lost all rights in his work to his employer, except that the latter might not use his work otherwise than in a periodical, etc. Clause 4 §2(b) now gives him the right to use his work in any other way, e.g., as a film; clause 4 §2(b) equates the author of a commissioned work, when no contract stipulating otherwise exists, to that of a staff artist.

Infringement. Under the 1911 Act only the performer of a work infringed copyright if he performed it without permission; under clause 5 §2 the owner of premises in which infringement occurs is liable separately, unless he has reasonable grounds for ignorance.

Fair Dealing. Clauses 6 and 9 deal with, broadly, the right to quote without infringing copyright (subject to acknowledgment); and broadcasting organisations are given the right to make an "ephemeral" canned record of a work without incurring a separate recording fee, subject to destroying the record 28

days after the last contractual performance. This is necessitated by the fact that performing rights and recording rights may be vested in separate hands. **Photocopying.** Clause 7 (a new clause) codifies libraries' rights to make photostat copies of copyright works.

Licence of right to record. Under clause 8, once permission has been made to record a work, it is made to all recording organisations, subject to royalty; there is, e.g., no copyright in recording any one modern symphony. Different rights may be prescribed for different classes of record.

Art and Design. Clauses 10 and 42 between them attempt to define when a work is an original work and when it is an industrial design, necessary because design protection as distinct from copyright lasts only 15 years; the formula is broadly reproduction by a production process, e.g. in metal.

2. Part II deals with "quasi-industrial" works—sound recordings, films, typography, etc.

Copyright in Reproduction. There is a separate copyright in reproducing which may be in different hands from the copyright in the original. Clause 12 now reduces copyright in reproductions from 50 to 25 years. It also makes one welcome, though limited, assault upon the Luddite practices of the Musicians' Union in preventing records being played under any conditions in which live musicians might be employed: it is laid down in clause 12, and reinforced in clause 14 and in Part IV that the scope of copyright should not apply when the record is played as an amenity not charged for in residential premises, "pubs or clubs," or for philanthropic purposes.

Component Rights. A film is to enjoy a copyright of itself which lasts 50 years from registration. This is too long, for though it means Hamlet can be remade any time, films of authors in copyright cannot. It is proposed, however, under clause 13, that component rights of performances or scripts done for a film should expire with the film's copyright.

When the film of "The Third Man" is out of copyright, so is the playing of the Harry Lime theme, even if the composer's heirs' 50 years have not expired. **Pubs and Clubs.** Clause 14 §8 allows pubs and clubs to turn on the radio or TV without infringing copyright if no separate payment is made for admission. This remedies a bad defect in the original draft of the Bill.

Offset Piracy. Clause 16 establishes a 25-year copyright in a particular typesetting of a work, and is designed mainly to prevent copying by offset processes of music-scores.

3. Part III (Clauses 18-22) increases the powers of courts to award exemplary damages but protects an innocent infringer.

4. Part IV sets up the Performing Rights Tribunal, which is an independent authority to which would-be copyright users can bring cases (a) of overcharging and (b) of withholding licences for improper or arbitrary reasons. Appeals lie to the High Court on points of law only.

This Tribunal, whose working is set out in clauses 23-26, is designed as another attack on the Luddism of the Musicians' Union; organisers of dances and so forth who are refused permission to play records should in future be able to refer the union direct to the Tribunal.

5. Part V and VI deal with miscellaneous matters.

Empire Copyright. Clauses 30-34 deal with the situation, not envisaged in 1911, when British law is made for the United Kingdom only; they provide for British copyright law to be enacted in the colonies, by Order in Council.

Copyright in the Copy Book. Clause 16 exempts places with a "pupil-teacher relationship" from infringing copyright in exam. papers, school concerts, etc.

Bible Monopoly. Clause 44 maintains the Bible monopoly (discussed in *The Economist* last week) and the General Medical Council's monopoly in the "British Pharmacopœia."

that it is equipped to deal adequately with restrictionism of this kind—and that the proposed tribunal can investigate the practices of both these bodies.

Stalin's Epitaph

THE text of Mr Khrushchev's attack on Stalin has finally found its way into the western press. Delivered at a secret session of the Soviet party congress towards the close of February, it leaked and created an immediate stir in the Soviet Union. Versions were later circulated to communist parties in eastern Europe and elsewhere, to explain the anti-Stalinist campaign and to ensure if possible that the drive for collective leadership should be extended outside the Soviet Union itself. By now several texts have reached western governments, and the State Department has decided to release a version, not guaranteeing its authenticity but stressing the reliability of the source. The text rings true, makes fascinating reading, and calls for comment at length. A few things, however, can be said at once.

In the first place, there is a striking contrast between Khrushchev in the open and Khrushchev behind closed doors. A few days previously he had been cautious in his condemnation of Stalin. At the secret session he delivered a violent indictment. In his first speech he still referred to oppositionists as "enemies of the people"; in the second he described the very application of such terms to deviationists as Stalin's diabolical invention. There must have been many awkward questions from the floor, probably precipitated by the more outspoken Mikoyan, to spur a guarded Khrushchev to such passionate fury. And what has been said to the privileged few has not yet been openly broadcast to the Soviet people. Secondly, in a most un-Marxist fashion all the blame is put on Stalin alone and not on the system. This seems a curious cult of the individual in reverse, with Stalin appearing as a *diabolus ex machina* and developing his worst feature at a specific time, somewhere in the late 'thirties. Finally, there are still several Stalinist distortions and instances of deliberate confusion in the speech (e.g., the assertion that Trotskyites were opposed to industrialisation). The shooting of more "Beria men," Bagirov and his associates in the Caucasus, has also provided a fresh reminder that the methods of Stalin have not wholly been embalmed with their author. But the questions and the pressures which caused Khrushchev to change so much in so few days are still at work, forcing the Soviet rulers to bury more and more bits and pieces of Stalinism.

Crystal Gazing at Suez

AN Egyptian director of the Suez Canal Company has this week come out with a statement that was to be expected: when the canal company's concession ends in 1968, the Egyptian government intends to take over full management of the enterprise. Though the date is still twelve years away, and no one can predict what political considerations will by then be weighing Egypt's actions,

there are, on the practical side, several contingencies that can be foreseen.

One safe forecast is that Egyptians will be determined to run the Canal well, not only for prestige reasons, but because Canal dues are a prime source of the foreign exchange which they must earn if they are to service the huge loans which they plan to contract for internal "development."

Another guess is that twelve years is too short a time to inculcate a taste for the steady slog at routine administrative work on which the French Company's superb local efficiency has hung. So far, no competent Egyptians have held, or even wanted, senior administrative jobs tucked away on the Canal bank. Nor has the Egyptian civil service, so far, provided the right kind of training ground for the work; in Egypt, aptitude for routine work is rarely evident except in the armed forces—so little so that army officers are now being pushed into ministries to implant it. Once in nationalist hands, Canal traffic management is likely to work less smoothly, and certain to work less silently, than it does now. Already this year, pressure has been exercised on the Company to employ more Egyptians as pilots, and because too few Egyptians have the necessary seagoing qualifications, the standard has been lowered to let more in. Such reduction of standards, if extended to other realms of management, will not cause traffic to collapse, but it must impair the chances of quick handling.

Unfortunately, there is no room for sagging efficiency. Already the traffic is approaching bursting point. It more than doubled between 1948 and 1955, largely, but by no means wholly, because of the increase in oil traffic. To judge by the OEEC report on Europe's future energy demands that is summarised on page 1020, the volume of oil carried will go on rising for the foreseeable future. Who is to organise the changes needed to meet such pressure, including the capital works entailed? The outgoing concessionaire? The incoming manager? Or the users? One point of which users already seem aware is that representation of their interests to an Egyptian management, if composed of supercharged nationalists, will be more effective if conducted by some international shipping body than by governments to whom political motives can be ascribed.

Disquiet Over Kenya

ONCE again the Colonial Secretary has had a mauling in Parliament over Kenya. He got out of his last brush with Mrs Castle in no very good shape, and on Wednesday he did little better with his rebuttal of Miss Fletcher's charges—brought forward by Mr Creech Jones and Mr Bevan—that the government of Kenya was sentencing to long periods of imprisonment, and sometimes hard labour, Kikuyu girls as young as 11 or 12. He triumphantly announced that medical inquiries had proved that the girls were 15 at least; and the story of this "regrettable" mistake, which had misled everyone, including Miss Fletcher, was saved up as the final annihilating retort for Mr Lennox-Boyd's reply at the end. This sort of thing makes one despair of the Government's sense of proportion in dealing with the highly-charged Kenya situation. Of course African women are mature at 15; but it was a poor answer to the whole tone of the indictment, and the Government's replies to most of Labour's other charges—many

of them exaggerated—were little more effective. The government of Kenya should resent such bad psychology, if no one else.

It is no longer enough to assert that fine work has been done in putting down a bestial conspiracy in which thousands of innocents were butchered. Confidence in the rule of law in Kenya has been shaken; the bland announcement that an investigation is going on into the Kenya criminal code as fast as resources permit, and the flat contradiction of the strictures passed on Kenya's justice by one of the colony's judges, will not remove doubts. Colonel Young's resignation from the police force has never been explained; and so long as it is not—and Mr Lennox-Boyd has slammed the door on further discussion—the presumption will remain that the control of the police by the executive is thoroughly bad. Kenya is not Britain—but the fact remains that Africans are not tried by jury, suspects are held on suspicion, released arbitrarily when "rehabilitated" or reclassified, and that serious allegations have been made about conditions in the camps. The Kenya judges differed on the fairness of present administration of justice, just as Mr Lennox-Boyd and Labour members differ on Miss Fletcher's reliability as a witness. But it is time the smoke screen over Kenya affairs was dissipated.

It is only fair to add that some of the nonsense talked by Labour members in the debate was beyond belief—as witness Mr Bevan's demand that there must be "democracy" in colonies before there is "self government." If, however, the Labour party can bring forward practicable proposals, as Mr Bevan promised, to keep colonial affairs under closer—but above all better informed—review, they should be examined with every sympathy.

Ritual Sacrifice

THE allies have handled the winding up of the Korean the Ministry of Agriculture has received considerable publicity and has been widely represented as a bad example of high-handed bureaucracy. But it was nothing of the sort. The Ministry was only following the recommendation made to it by a local committee of representative farmers. This farmers' committee in its turn was only applying—seemingly most reluctantly—its statutory duty under the Agriculture Act to take steps against inefficient farmers. The committee had had Lady Garbett "under supervision" for as long as five years and, in their view, she was still farming badly. She could have appealed against the committee's verdict to the Agricultural Land Tribunal—a body which is wholly independent of the Ministry and incapable of being overridden—but she did not choose to do so.

Clearly, the indignation at the Ministry's expense which this case has uncorked is badly misplaced. The actual handling of the case appears to have been fair and even lenient, and its only striking feature was the fact that a titled lady and not just a simple farmer has been evicted from house and land. The fault lies, not in the Ministry's conduct, but in the continued acceptance by the Government and the farmers' unions of the principle that bad farmers should be coerced by the state in peace as in war: that the ritual sacrifice of 50 inefficient Joneses a year is a reasonable offering for

farmers to lay at the Treasury's feet in exchange for a £200 million subsidy. This principle—with its concomitant hindrances to progress towards a more economic system of farming tenure, and to the conversion of county agricultural committees into straightforward technical advisory bodies—was attacked in *The Economist* in an article on May 5th last. Now that no ordinary Jones, but a newsworthy lady and her daughter, have fallen foul of the system, there may be more hope that the sort of recommendations contained in that article will be put into effect.

Speeding Korea's Guests

THE allies have handled the winding up of the Korean armistice commission very clumsily. The announcement by the United Nations command last week, although technically it did no more than "suspend the operations" of the three teams of neutrals supervising the truce in South Korea, in fact amounted to an eviction order, and the teams have been shown the door to the demilitarised zone that lies between the two armies. This way of doing things leaves the allies with the odium of breaking up the arrangements made at Geneva in 1954, and is liable to excite disapproval in India and various other uncommitted countries.

It is true that the neutral armistice commission had long outlived its main purpose. The communists have violated the ban on reinforcements with the barest of faces, as the evasions catalogued by the UN command show. The Swiss and Swedish members of the commission have several times complained that they have been unable to keep a proper watch because the North Korean authorities, with the connivance of the Poles and Czechs on the commission, have stopped them moving about freely. Things have been little better in South Korea, where the Poles and Czechs had to be protected against Dr Rhee's mobs by American bayonets. But it would have been much more sensible of the allies to have waited until the commission disintegrated of its own accord.

The frustrated Swiss and Swedes would have needed little encouragement to announce that communist impediments had made it pointless for them to carry on. They had already suggested in March that the teams should retire to the demilitarised zone (a proposal which the Communists, who rejected it at the time, have now suddenly accepted with a show of virtue). If the Swedes and Swiss could have been persuaded to force their demand home, they might then have withdrawn simultaneously from north and south; the Poles and Czechs in the south could have been ushered out without embarrassment; and the responsibility for the commission's failure would have been plainly stated by those whose word would carry most weight in the neutral world.

In theory, of course, the commission can still perform one useful function from the demilitarised zone—to guard against a sudden foray across no man's land, although strictly this is not within its terms of reference. But it is unlikely to be content with this relegation to limbo; and its members will probably soon pack their bags and leave for home.

Cyprus Over Athens

IN this country Cyprus is not yet the dominating political issue; in Greece it is. The emotions aroused by the problem in Greece push other tasks into the background, cloud thought, put a premium on intransigence and play into the hands of extremists. Neither the present nor any other Greek government is likely to prove able to control and direct the flood of public opinion; it must swim with the tide. This partly explains the emotional and largely misdirected attack on British policy made by the Greek prime minister last weekend. It explains, although it does not justify, the failure of the Greek government to curb the disgusting excesses of Athens Radio. And it explains the recent resignation of Mr Theotokis as foreign minister; a conciliatory man, he went because his mildness failed to reap dividends.

Yet, as things are, a tougher policy is unlikely to do much better. Greece's room for manoeuvre over Cyprus is strictly limited. Most responsible Greek politicians (as last month's parliamentary debate showed) are averse from cutting the painter with Nato. But apart from this drastic step there is at present little to be done beyond appealing to Uno, enlisting international opinion and resisting (as Mr Karamanlis now seems to be doing) the attempts of the Ethnarchy to dictate Greek foreign policy. But as the crisis drags on it will become easier for extremist groups to harness popular feeling to their own ends, and more difficult for the government to pursue a moderate policy and accept a moderate settlement. In Athens, as in Cyprus itself, time is no healer.

Letters from Prison

ON the face of it, Mrs. Braddock's questions to the Home Secretary last week drew attention to an unjustified bureaucratic restriction: the refusal of the prison authorities to allow a prisoner to send a letter to a member of Parliament. If a prisoner has a grievance, ought he not to be allowed to voice it—instead of being made to feel that all the actions of officials, from the Secretary of State downwards, are aimed at repressing him?

But in attacking this particular restriction Mrs Braddock was only trying to remove one symptom of a deep-seated disease; and she, and others who share her indignation, may run the risk of exacerbating the disease in so doing. For the immediate reaction of prison staffs to this sort of complaint is to regard it as a further attack on themselves. Their resentment at what seems to them the ready hearing given to prisoners' grievances, while their own are ignored, is increased; and it tends to work itself out in their relations with the prisoners in their charge, who themselves are on the look out for any piece of petty malice which they can magnify into gross ill-treatment and forward a complaint about—and so it goes on. Prison staffs are not the reactionary domineering bullies they are sometimes made out to be. But they are harassed, grossly overworked men, doing a monotonous unconstructive job in a highly unnatural, and sometimes potentially dangerous, environment—and without, they must often feel, the support of the public that has placed the prisoners in their care.

It is this constant state of mutual tension in which prisoners and prison staffs live that, as often as not, gives rise to the sort of complaint that occasionally surfaces in the House of Commons at question time. The right remedy for it is not merely to make it easier for prisoners to make allegations about prison conditions; the restrictions on writing to MPs were put on because the stream of letters from prisoners became overwhelming when the conditions were less stringent. It is to cut through the depressing and oppressive atmosphere of prison life by giving the staffs an entirely new outlook towards their work, which means making it constructive instead of purely custodial. This remedy has been adopted with success in other countries; it can be applied here—given the will.

General Post in Burma

U NU had often talked of resigning the premiership of Burma, which he had held ever since the country became independent in January, 1948. On many occasions he made known his wish to retire to a life of religious contemplation and study, a wish characteristic of this least ambitious of politicians, upon whom greatness was thrust only by the simultaneous assassination of Aung San and a number of his closest colleagues in 1947. But it is not to a monastery that U Nu now goes; he has accepted the task, more profane but not less rigorous, of sorting out the affairs of his own governing party, the Anti-Fascist People's Freedom League. The League still enjoys a comfortable dominance in parliamentary and public life, but its losses to the National United Front party in the April elections provided a salutary shock; and U Nu may well feel that if its inner unity and rickety organisation are not quickly overhauled it will disintegrate and make way for the kind of splinter politics that have plagued Indonesia, Pakistan and other neighbouring "new nations."

U Ba Swe, who now becomes prime minister while retaining the important defence portfolio, seems also to have a pepping-up mission. So many of the members of the new cabinet have swapped ministries that the changes might fairly be termed a general post. Some of them, such as the transfer of the able U Raschid from trade to mines, may be the result of particular pressures; but the others, taken together, look like an attempt to dig ministers out of posts into which they have settled rather too comfortably and to test their talents by setting them unfamiliar tasks. If this is indeed the intention, Burma stands to benefit; in its present difficulties, largely created by the blithe way in which its representatives have plunged into ill-judged barter deals with communist countries, it is badly in need of more ministerial vigour and attention to priorities.

British Reactors for Germany

THE success of British efforts to win a foothold in Germany's nuclear development plans was confirmed last week when details of eight reactors planned in West Germany were released. Three will probably be made in

THE CAPE ASBESTOS COMPANY LTD

114 & 116 PARK STREET • LONDON • W.1
WORLD'S LARGEST PRODUCER OF AMOSITE AND "CAPE BLUE" ASBESTOS

THIS IS ONE of those legendary associations that bear no real relation to the truth. Salamanders are amphibians, the black and yellow species 'Fire Salamander' being common still throughout North Africa and Central Europe. Far indeed from being fireproof, he is found only in the dampest places.

There is nothing mythical however about the fire-resistant properties of ASBESTOLUX, one of the most up-to-date manufactured products of The Cape Asbestos Company. Non-combustible and therefore widely used in modern building practice, this asbestos insulation board is mainly composed of Amosite asbestos fibre, from the Company's own South African mines. It is this Amosite, with its high specific volume, i.e. millions of long, thin hair-like fibres per pound, that gives to ASBESTOLUX many of its outstanding qualities—high insulating efficiency, good strength/weight ratio, and extreme durability due to its indifference to temperature, moisture, chemicals, insects and fungi.

Current action

is pure design

There were many problems to solve in making an electric current operate the action of the latest Remington electric typewriter.

This highly efficient machine with its crisp printwork is once again a happy combination of international designing and British engineering skill.

For this machine, like other Remington products, is the result of blending business knowhow and technical skills.

It will pay you to keep an eye on Remington Rand, for it is by design, not accident, that Remington can bring the latest ideas in photocopying, typing, filing, charting, and machine accounting to the business man. These ideas are helping industry to function more smoothly, with less fuss.

There are Remington Rand factories in Great Britain at HILLINGTON, GLASGOW · WEYBRIDGE, SURREY · PARK ROYAL, LONDON — and 50 plants overseas in 41 strategic world locations.

Germany—the research reactor at Karlsruhe, a reactor for testing materials to be built in the Ruhr by a consortium of German firms, and the first German pilot power plant to be constructed for the RWE power undertaking. Three research reactors, including two of the “swimming-pool” type, are to be bought from the United States. Two other small research reactors are to be bought in Britain and there has been talk of a third; one has been ordered already. Both the United States and Britain will supply fuel.

The federal German Minister for Atomic Questions, back from America, also went out of his way to reaffirm his government's desire for atomic collaboration with Britain; Herr Strauss plans to visit Britain later this year for talks on a bilateral atomic agreement. He went on to oppose the grant of any “*dirigiste*” powers to “Euratom” and to declare that “Euratom” must be designed to fit in with OEEC plans (of course including Britain).

The announcement of detailed plans should also have given a little comfort to the many German critics who have been chafing at the slow progress of German plans for nuclear development. The plans so far announced are fairly modest and are confined to research. Herr Strauss and his advisers feel that “since Germany's coal and energy position is somewhat more favourable than Britain's” she would be unwise to plunge into power development at a time when there is so much controversy about the most economic type of plant. Ten years behind in experience, Germany does not want to make the mistake of constructing obsolete plant, and the development of medium-sized power stations is not expected for five to seven years. But the draft atomic law on which Herr Strauss's ministry has been working is now apparently complete and should soon be laid before cabinet and parliament. The law, though more moderate than the extreme *laissez-faire* proposals put forward by certain industrialists, is evidently designed to give scope to private enterprise. Once it is through, German firms will be free to develop more ambitious projects.

Hobson's Choice for the Church

WHEN the Church of England Assembly meets on June 21 it will have to decide what to do about its schools. Since the Education Act of 1944 came into force these have been of two main kinds:

(1) “Aided” schools, in which only one-third of the school managers are appointed by the local authority, and two-thirds by the Church; the Church therefore has a permanent majority in the selection of staff and so on. But the Church has to find half the cost of bringing these schools up to standard and of maintaining their fabric, the state paying the other half and the local authority the running costs.

(2) “Controlled” schools, in which the local authority has two-thirds of the managers and pays all the costs; and in which church teaching is only for those children whose parents request it in writing.

The Roman Catholics have succeeded in keeping all their schools as aided schools, and the Church of England naturally prefers to do so; but where the local church is unable to raise the money necessary to pay its share, it has to accept controlled status. In consequence, since 1947, Church of England aided schools have been becoming

controlled at an average rate of 93 a year. Last year the Minister of Education, in announcing his plans for rural schools, called upon the churches to bring their rural primary schools up to standard. An acute crisis is therefore upon the Church of England; and the whole future of its schools has just been examined by the Central Board of Finance, the Church Commissioners and the Schools Council.

The report reveals a dilemma. Not counting 2,350 schools that are due for closure anyway, the Church of England has 5,650 schools (rather over one in five schools in the state system) and of these 2,500 are aided. If this line is to be held £3 million must be found over the next 25 years, or £590,000 a year. That suggests a deficit of £180,000 a year on present assets, but the Schools Council, for its part, thinks that all but about £40,000 a year can be raised or found by economies. This £40,000, it suggests, should be borne by central funds. To this the Church Commissioners reply that at present they have no power to use their money for schools, and they emphasise that if they are given such power by legislation they will have less to supplement stipends, to modernise parsonages and to provide church buildings in new housing areas.

Aided schools, closely linked to church and congregation and helped by the vicar, often have an atmosphere which it is a pity to dispel. But the minimum salaries of parsons

Too Much Legislation

It may be useful, now that the public attention is likely to be again much directed to domestic affairs, to advert briefly to the principles on which laws ought to be made, or what is called the philosophy of legislation. From the want of a knowledge of these principles, which can alone supply a standard for making or amending laws, we make laws one session, and repeal them the next, or a session or two afterwards; we allow individuals to suggest or make laws according to their fancy or caprice; and we have in consequence now got a great heap of undigested laws, filling we know not how many volumes, which are a standing disgrace to both Houses of Parliament and to the whole nation. . . . We must now find out what laws will answer the purposes we propose and what will not. At this moment society is very generally philanthropic, extremely desirous of improving the condition of the multitude; it is deeply affected by sufferings from disease and want, from close, small, and crowded dwellings, and seems resolved by legislation to get rid of dirt and discomfort. The object is excellent; the legislation, however, in the main is really directed against poverty; it is carried out, and can only be carried out, by some kind of restrictions and some kind of office-bearers to see them executed—an infallible means of dividing the existing amount of wealth in smaller portions, with no tendency to increase the whole, and certain, therefore, to sharpen and augment the poverty it really aspires to lessen. The principle on which legislation must proceed to lessen poverty is, as we now know from much experience, to remove restraints and restrictions, to permit the field of enterprise to become common and uninclosed as Nature made it, to leave the development of all the diverse faculties and powers of individuals perfectly free, assured that they are no more made in vain than the many flowers of the field. Their full development is necessary for the well-being and harmony of the whole, and the legislation which proposes to lessen poverty and its multiplied evils by any kind of restrictions is an error.

The Economist

June 7, 1856

have only recently reached £550, and the cost of living has risen many points since that target was fixed; while their pensions, now only £250, are a pittance. Their prospect would be bleak if money were diverted to the schools.

Peking Orders Nonconformity

CHINA, hitherto resistant to the post-Stalin ferment in most of the communist world, is at last feeling a touch of the new mood. The Chinese rulers, apparently alarmed that the discipline they have imposed on their intellectuals is making them sterile, have launched a campaign calling for more controversy and freer discussion among scientists and historians. The first salvos were fired on Youth Day early last month. *Jenmin Jih Pao* told students that they must rely on "independent thinking," and that they will never get anywhere if they "just say what others have said, and do what others have done." Other newspapers and learned bodies have stated the same incontrovertible fact, pointing out that "we do not have to be afraid of any consequences arising from debates and arguments, because debates and arguments only tend to reveal the truth." Chou En-lai has told a gathering of prominent Chinese scientists that they should carefully study the techniques of capitalist countries. The moral that China's intellectuals are supposed to draw is twofold: they must not be frightened of putting forward nonconformist ideas, and the communist world is not the sole repository of scientific truth.

If these propositions look like platitudes to western eyes, they mark a bold innovation in China. The punishments inflicted on Hu Feng and his literary friends last year for falling prey to the "idealist" philosophy have left their mark on Chinese thinkers. Vigorous attempts have been made in the last few months to persuade intellectuals to join the Communist party, and each new batch of enrolments is greeted with well-publicised enthusiasm. China's leaders have probably been encouraged to take a risk by the comparative ease with which they seem to be pushing through the collectivisation of the countryside and the take-over of private industry in the cities. But it is doubtful whether Mao can afford to loosen the reins very much. The new campaign has so far been directed chiefly towards scientists, and even they are told that they must restrain their originality within the bounds of Marxism-Leninism. China still has to go through a long period of economic construction, entailing great self-sacrifice and discipline for its population; and in these circumstances its leaders may well feel that it would be dangerous to let free-thinking spread.

Russia's Missing Millions

POPULATION statistics have been guarded by the Russians since the war as closely as a military secret. Western estimates suggested that by 1950 the Soviet population had reached some 200 million and, since recent annual increments were officially put at 3 million, it was generally assumed that the Soviet Union now had over 215 million

citizens. Mr Khrushchev not long ago cut this figure when he referred vaguely to "about 200 million," and the reduced figure has now been made official, in answer to a query from a French socialist visitor, as the state of the Soviet population on December 31, 1955. This piece of statistical evidence throws new light on Russia's enormous losses of human life in the struggle against Nazi Germany.

In 1940, after the annexation of the Baltic states and the eastern provinces of Poland and Rumania, there were some 196 million inhabitants of Soviet territory. Mr Lorimer, in an interesting study published by the League of Nations, estimated that, without war losses, the Soviet population would have reached about 240 million in 1955—or about 215 million if an allowance of 20 million were made for losses (5 million military casualties, 9 million civilian dead, and a loss of some 6 million through excess infant mortality and the "unborn" babies). This nightmare computation now turns out to have been conservative. On any reckoning, and with due allowance for Polish migration or Soviet "non-returners," it appears that a total of some 25 million Soviet citizens, military and civilian, must have been killed by the war.

Why did the Russians keep this sacrifice secret, instead of parading their terrible wounds? Secrecy can hardly have been thought to have any domestic political value. It would rather seem that in the mood of the cold war they expected no gratitude from yesterday's allies for this human holocaust, merely a more sceptical assessment of their bargaining power. And indeed the effect on the Soviet manpower problem must have been immense, since to the list of dead must be added a corresponding number of wounded. Migration from country to town continued after the war, and the countryside has been depleted of its able-bodied men. This may partly explain the agricultural crisis and the relatively small return from investment in machinery and fertilisers. Now the Russians are pinning great hopes on automation and within a decade the postwar population "bulge" should reach working age. More confident in the future, Stalin's heirs, cursing their master for the lost legions, have lifted the curtain to permit a further glimpse of their wartime inferno.

Letters to the Editor

Economics of the Drought

SIR—I agree with your comment of June 2nd that it would be absurd to increase the investment in water supply because of the threat of a shortage from droughts of a duration and severity which statistically are only likely to recur at intervals of upwards of 100 years, and I write this at what I hope is now the end of a drought of unprecedented duration and severity for S.E. Scotland, and it may well prove for the country as a whole.

I join issue, however, with you when you suggest that to cope with the increasing demands of industry—these in Edinburgh have amounted to 50 per cent or some 5 million gallons per day during the past 10 years—the price mechanism should be invoked and resort had to the metering of household supplies. This is a suggestion which is made from time to time, but one wonders if the people who make it have ever got down to analysing the economics of domestic metering. Leaving aside the many older tenement properties in the city, where because of the plumbing layout the cost of installing a meter on the supply to each individual house would be quite prohibitive, to meter the remainder—say 90 per cent—of the domestic supplies would involve, in the case of Edinburgh, an expenditure at current prices of the order of £2,250,000, representing an annual debt charge at the current rate of interest of £118,000. To this there falls to be added the cost of the meter reading, of the additional accountancy and clerical work, and of the repair and maintenance of the meters. This would involve a further £75,000, making a total in all of £193,000 per annum. For this annual expenditure, which is only very slightly less than our total income from the domestic rate, I doubt if we should obtain a saving of 5 gallons per head at the outside, or rather less than 3 million gallons per day in all. Contrast this with what we should be able to obtain for the same annual expenditure in providing an additional supply or supplies, i.e., at least 20 million gallons per day, or sufficient to meet the needs of the city at the present rate of increase in the demand for at least the next 50 years. Much the same applies to the bulk of the water undertakings in this country.

I am fully aware that the metering of domestic water supplies is employed extensively abroad, but it is one thing to introduce a system of this kind in a new or comparatively new city, and quite another in the older cities of Great Britain. It has also to be borne in mind that in hot countries or countries with hot summers,

e.g., Australia, South Africa and the USA, very large quantities of water are used for domestic purposes, and more especially for garden watering. It is, however, only very occasionally that there is any very excessive use made of water for domestic purposes, including garden watering in this country, and any increase or saving in cost to the consumer by the introduction of domestic metering would in the vast majority of cases be reckonable in pence.

With regard to the large and increasing quantities of water which are now required by industry—these in the cases of some industries would supply a fair-sized town—water is so cheap, e.g., in Edinburgh and Glasgow about 2d. per ton (it will not always remain so) that, in general, industry is prodigal in its use. Large quantities are wasted for cooling purposes which could be re-circulated, as is already the common practice with some industrial undertakings, and the same applies to some of the water which is used for certain process purposes. What is required, therefore, is general legislation which would empower water supply undertakings to exercise some degree of control over the way in which industry uses water, including the enforcement of recovery and re-circulation where in the circumstances of the particular case it is feasible and reasonable to require this. The alternative to this would be to use the price mechanism with an ascending scale for the larger quantities of water. This would be quite justifiable on economic grounds.

As you very truly remark, it is important that the politicians should get the economics of water supply right.—Yours faithfully,
GEORGE BAXTER,
Edinburgh City Water Engineer

Fighting Talk at Harwell

SIR—In your issue of June 2nd it was stated that Harwell had "thrown the bulk of its effort" into "the simplest type of reactor burning natural uranium" and "the very advanced type of breeder reactor" ("Stage I" and "Stage III" types).

This does not in fact present the complete picture. The Authority is additionally devoting a great deal of research effort to reaching a decision on the best design for the "Stage II Reactor" which was foreshadowed in the "Programme of Nuclear Power."

Sir John Cockcroft summarised the present situation as follows in a talk to press and other visitors during the recent "open week" at Harwell:

We are already working here and in the Industrial Group of the AEA on nuclear power stations for the second stage of our programme, when we expect

to have plutonium available from Stage I to enrich the uranium fuel of our reactors. We are investigating two competitors for this stage. The first is a reactor using water to surround the uranium rods and transfer the heat. The other uses graphite as a moderator but uses liquid sodium to transfer the heat, instead of gas.

These reactors have many technical problems requiring development work—particularly due to the corrosion of the reactor materials. Their main advantage over the gas-cooled reactor is that they would have a lower initial uranium investment—and may have slightly lower capital costs. The Authority expects to build a prototype of the selected reactor by 1960, and if they prove to be attractive economically, they might replace the gas-cooled reactor stations in the late 1960s.

The potential large-scale application of breeder reactors, he said, lay further off—in the 1970s.

Sir John also pointed out that the Authority is studying a number of other advanced reactor systems, amongst them the aqueous homogeneous reactor, which uses a liquid instead of solid fuel.—Yours faithfully,

ERIC. H. UNDERWOOD,
United Kingdom Atomic Energy Authority

The Record of the Books

SIR—Book publishers will welcome your note under this heading—and doubtless a larger proportion of them than before the war are today (of necessity) amongst your readers. Our costs are even now still lower than in the United States, but what swells the export totals and often persuades an American publisher to print scholarly work here is the enterprise of the British publisher in offering to share the edition with him, or in drawing his attention to a work which might be a modestly profitable and desirable venture if shared in this way. One wonders whether the printing industry and its ancillary trades appreciate how much of the overfull employment they are now happily exploiting is due to export orders.

The settlement of the recent dispute between the Master Printers and the craft unions will involve an increase of no less than 20 per cent on all printing charges as from June 1st (following on cumulative previous increases of 18½ per cent, 10 per cent, 5 per cent, 17½ per cent, 5 per cent and 7½ per cent since 1945). Twenty per cent is a very substantial figure and is accompanied by a new increase in the price of block-making. Here there is a tight ring, so that increases in wages agreed in a happy atmosphere of mutual congratulation between employers and unions are readily passed on to the consumer. But at the end of this chain the publisher wonders how much longer it will be possible to keep up the exports with this burden on his back and whether next year's Record of the Books will read as well as last year's.—Yours faithfully,

C. A. FURTH,

Industrial Engagement

THE LABOUR GOVERNMENT AND BRITISH INDUSTRY 1945-51.
By A. A. Rogow with the assistance of P. Shore.
Basil Blackwell. 209 pages. 18s.

THIS is an objective, but not an impartial, analysis of a lengthy economic and political engagement: Mr Rogow, writing from California, makes no bones about the fact that his sympathies lie with the Labour governments rather than with British industry. Perhaps because of this, he shows more insight as a friendly but penetrating critic of Labour policies towards industry than as an observer, strictly from the outside, of industry's reactions and occasionally active policies towards the postwar Labour governments.

Naturally Mr Rogow, like any other foreign observer, sees this involved political process in sharper and more logical outlines than those who were closely concerned with it. His sketch is clear enough. A Labour party, committed to planning the economy in peace but utterly without experience of what that implied, is shown as taking power with two advantages—the existence of machinery for planning of the wartime kind, and a fair degree of public approval, even outside Labour supporters, of the idea of planning—but fairly soon forfeiting both. The machinery, bereft of the simple, overriding objectives of wartime, and insufficiently supplemented with statistical information or economic intelligence, was soon seen to be inadequate to control the economy in peace; in particular, being heavily staffed with businessmen, it was largely ineffective in inducing industry to do anything it did not like. The public sanction for planning steadily evaporated, and with it the Labour government's own enthusiasm.

As long as Labour was content to continue existing "rationing" controls, to nationalise coal and the public utilities, and to set up working parties and a Monopolies Commission to inquire into industrial organisation, British industry gave unfriendly but genuine co-operation. Once Labour moved further into the field of industrial initiative—as in the proposal for Development Councils, for the nationalisation of steel, and later for a second round of nationalisation—Mr Rogow sees British business as opposing it directly, with a sustained and effective campaign for the industrial *status quo* in general and against the nationalisation of particular industries.

"So far as the future is concerned," Mr Rogow concludes, "this analysis suggests that the issue of co-operation or conflict will be joined at every point at which power interests, rather than property interests, are sharply opposed... faced with disagreeable social change, power interests in a well-established democracy will increasingly enter the arena of politics." He sees power, not property, as the key area of conflict: "a remarkable feature of the entire period was that the most notable concessions made by industry to Government were invariably those which disadvantaged shareholders."

This is not an implausible analysis; many of the businessmen most concerned might broadly accept it. The emphasis on power rather than on property rights may seem rather an artificial distinction in the key issue of nationalisation, where most of the direct conflict took place; the British Iron and Steel Federation, for instance, has conceded to the post-nationalisation Iron and Steel Board, if not willingly at least with a good face, much of the power it strove so tenaciously to deny Mr Hardie's corporation. Moreover, business could choose to oppose only among what the Labour governments chose to propose; it might well have resisted a major capital levy, a capital gains tax, or other measures to redistribute property as bitterly as at length it began to oppose further nationalisation.

Can business attitudes towards those or any other Labour governments, moreover, be separated from the development of public opinion in general, or at least of middle-class opinion, towards such governments during their terms of office? Had not uncommitted public opinion in Britain already begun to swing against Labour policies before industry's propaganda counter-offensive began in 1949? This, perhaps as much as industry's own opposition, the inadequacies of the planning machinery or Opposition tactics in the House of Lords, tended to limit the Labour government's sphere of further operations, and even its intentions. The government, also, had meanwhile become chastened by realising the sheer dimensions of Britain's postwar economic problem; and its own vested interests in the *status quo*, the trade unions and the prospering upper working class were leaning towards moderation.

This is not to challenge Mr Rogow's view that any future Labour government might be confronted by a determined effort on the part of industry to influence public opinion, on significant issues of industrial power or perhaps

generally, through sheer distrust of the harm any Labour government might be counted upon to do industry. But not even a student of socialist strategy should exaggerate the importance of this. The primary determinant of what any radical government can do is surely the extent of "general sanction" for social and economic change—measured both in the numbers of people ready for change and in the range of radical measures that they might countenance. If that readiness for change is considerable, it is likely while it lasts to determine the tactics of existing power groups, such as industry, towards government action that they dislike; and if it is not fairly wide, no radical government would be elected anyway. If the Labour party has meanwhile settled down to becoming the alternative government of the welfare state, such a question need never arise; it may cease to annoy British industry.

Wandering Scholar

THE LETTERS OF GEORGE SANTAYANA.
Edited by Daniel Cory.
Constable. 482 pages. 50s.

SANTAYANA never secured a wide acceptance in this country. He came nearest to it with the publication in 1921 by his friend Logan Pearsall Smith, also an expatriate American, of the volume of selections called "Little Essays from the Writings of George Santayana." Santayana had welcomed the project and recognised that his work gained rather than otherwise by being anthologised. "The fact is, I write too much," he says in one of his letters.

Much of the best of the "Little Essays" comes from the five volumes of "The Life of Reason" (1901-5), afterwards condensed into a single volume. Is it still read? The volumes on "Reason in Society" and "Reason in Religion" are masterpieces of good sense and of English prose. In his later life, it must be admitted, the sage succumbed to the occupational disease of his craft and became, perhaps more profound, but certainly more obscure. Like Humpty Dumpty, he used words with private meanings and his last big book, "Dominations and Powers" is like the Athanasian God, impressive but incomprehensible.

These letters carry us from his student days in Göttingen with a Harvard travelling scholarship (1886) to his extreme old age as the guest or patient of a Catholic Sisterhood in Rome (1952). For those who like reading letters and feel drawn towards Santayana the volume is continuously agreeable. The too-muchness of his books here presents itself more agreeably as a Victorian amplitude of correspondence, and one realises that he always remained a Spaniard. Was Tennyson correct in attributing to Spaniards a "courtly foreign grace"? The exquisite urbanity with which the aged Santayana gives thanks for obviously tedious works sent to him by aspiring authors in half a dozen languages is evidence in Tenny-

'Northern Ireland offers the answer to your factory and labour problems'

says LORD CHANDOS

Chairman of the
Northern Ireland Development Council

"The best opening for industrial growth in the United Kingdom today is in Northern Ireland. This is because the factory and labour problems of expansion are so easily solved there. Just look at the benefits an industrialist gets in Northern Ireland."

MONEY

Capital grants for plant, machinery and new buildings. Grants toward transfer of machinery to Northern Ireland. Grants for training and services. Concession rents. Coal rebate.

LABOUR

Plenty of labour. Possibility of multiple shifts. Little absenteeism: low labour turnover. High output per man.

FACTORIES

Government-built factories ready on rental or repayment. Housing priorities.

Send for this Memorandum The Northern Ireland Development Council has prepared a practical memorandum of the facts a businessman wants to know. Ask for it in strict confidence from the Council—or, if you prefer, from the Ministry of Commerce, Dept. E, Belfast.

NORTHERN IRELAND DEVELOPMENT COUNCIL 13E Lower Regent Street, London, SW1

Over 100 firms have set up factories
in Northern Ireland since the war.
Here are a few of them—

BRITISH THOMSON-HOUSTON CO. LTD. · COURTAULDS, LIMITED
BRITISH TABULATING MACHINE CO. LTD. · METAL BOX CO. LTD.
HUGHES TOOL CO. LTD. (U.S.A.) · BEHR MANNING, LTD. (U.S.A.)
BERKSHIRE KNITTING (ULSTER) LTD. (U.S.A.) · PYE, LTD.

the things they say!

I.C.I. spent more than 30 million quid last year on new plants. That's what I like to see — big ideas being put over in a big way!

Yes, but isn't there a danger of a company getting too large?

Why so?

Because the sort of centralised control you get in big organisations kills initiative and smothers everything in red tape—costs rise and efficiency falls.

But I.C.I. doesn't work that way.

It has 13 operating Divisions, and each is largely master of its own affairs. Certainly, the end-product of one is often the raw material of another, but there's plenty of rivalry between them.

Well, if the Divisions are run as separate concerns, what was the sense in merging them?

So as to make a common pool of all their research and technical knowledge — and of their buying and selling, too, whenever that could be done with advantage and economy.

Is that all?

By no means. The merger also meant that the best brains in the business would be available to plan for all. And by putting all their money into one "kitty", they made sure that their ambitious new plans wouldn't fail for lack of capital.

You sound as if you really believed in I.C.I.'s sort of bigness!

I do. I.C.I. has to be as big as it is, to do the very big job it is doing.

son's favour and also furnishes models that might be useful to other great men who have to write such letters.

The middle ages down to Erasmus furnish many examples of wandering scholars who achieved supernatural outlook. With the onset of nationalism the supply of such minds was reduced to a trickle, greatly to the detriment of European society. Santayana was in our own day a remarkable example of such a mind. Spanish by birth, American by accident, and then, after his flight from Boston in 1912, successively resident in Oxford, Paris and Rome—it all passes before one in the panorama of his letters.

A Feeling for Colour

THE COLOUR CURTAIN.

By Richard Wright.

Dennis Dobson. 188 pages. 12s. 6d.

ONE of the most necessary attainments of the western diplomat or politician—or even big industrialist—today is an understanding of the attitude of the non-white races to the white. It is an attitude that varies significantly from Africa to Indonesia, or from Japan to Samoa. But in large measure it is a reaction proportionate to the period which the coloured race has spent under white domination, or, in some cases, imagines it has. Indeed whatever any coloured race's experience of political domination may have been—and clearly China or Siam have felt it less than India or West Africa—the supremacy of western thought and technology has had a deep effect on non-white psychology, increasing the sense of political domination. It was a sufficient bond to bring together the African and Asian states that attended the Bandoeng conference, despite great divergences of interest on most other matters.

These divergences have received most of the publicity; it is the merit of Mr Wright's personal account of the conference that it examines the basic attitude which gave these countries and delegations a fellow-feeling; one that was shown in repeated denunciations of colonialism. The author had the advantage of being at once American, coloured and a distinguished intellectual in his own right, and this helped him to probe below the surface of Asian and African feelings. The result makes, at times, a rather scrappy piece of rapportage, but is nevertheless interesting as first-hand witness to the feelings of inferiority, aggression, bitterness and yet admiration which in varying degree form the compound of anti-white racism. How great a part personal experience plays in it is evident from Mr Wright's interviews; this is something that finds no parallel in white psychology—the trauma of being treated, at one time or another, as inferior, despicable, less-than-normal, or even subhuman.

Mr Wright is under no illusions about the difficulties of achieving any mutual understanding between races, especially between the white and non-white world, but his good will, and anxiety lest "coloured races of the world, unite"

should become a sterile but destructive political slogan, are evident. Perhaps what he saw at Bandoeng caused him to overrate the danger, but his views should nevertheless be treated with respect. His warnings of the danger of Asians accepting communism on entirely non-ideological grounds need no emphasis. Yet, after showing how western materialism is a point of misunderstanding between the white and non-white world, he lands himself in the paradox that though the West's difficulty is to sell its culture not its technology, the only way to sell the intangible is to step up sales—or gifts—of the tangibles. He pleads, ultimately, for a Marshall Plan magnified many times to meet Asian poverty. The implication that it is health and wealth that make a man a westerner in political thought and sympathy seems rather naively American—but coming from an American of colour this is not the least suggestive thing about this thought-provoking little book.

The Enemy Within

THE GERMAN FIFTH COLUMN IN THE SECOND WORLD WAR.

By L. de Jong.

Routledge and Kegan Paul. 319 pages. 28s.

THE essential thesis of Dr de Jong's book is that the opponents of Germany in the last war sought to excuse their early inefficiency by attributing all kinds of activities to the Nazi Fifth Column which in fact it never perpetrated. That is no doubt true. Its demonstration, however, causes Dr de Jong to seem to cry down Hitler's guilt because he has established that many of the less effective ruses that those who feared Hitler declared him responsible for were nothing but figments of their own imagination. Dr de Jong seems insufficiently aware that anti-German hysteria was more marked, certainly in Britain, during the first German war, at a time when it was certainly less justified; Imperial Germany was harsh, even brutal, but it was not ruled by a gang of peculiarly sadistic criminals who gloried in dastardly deception. One cannot help feeling that Dr de Jong has taken enormous pains to prove that a number of rumours to which no one today attaches much importance were groundless; after all, no serious military critic has suggested that the German Fifth Column greatly affected the course of the war.

A fifth column, however, was a political rather than a military device, and towards the end of his book Dr de Jong makes very plain that he does not underrate its importance as such. Indeed he goes at some length into the role of the German minorities in other countries: he knows and he shows, for instance, that Schuschnigg's Austria was undermined by Nazi conspiracy, and that the same thing was true in different circumstances of the Czechoslovak Republic presided over by Beneš. These were repercussions of the not unreasonable veto placed on Great-German unity by the victorious Allies in 1919. The far from negligible activities of the Volks-

deutsche in Poland in 1939 were due to the resurrection of the Polish state, which leading Germans had long regarded as incompatible with their own conception of the legitimate power of Germany. As for Yugoslavia, German military success there was decisively facilitated by the fratricidal enmity of Croats and Serbs; in this sense the Croats, as well as the Germans in Yugoslavia, formed an effective fifth column.

These facts, which Dr de Jong lays bare, seem of greater importance than the rumours he disproves. Looking back, a British reader may wonder whether his compatriots were not too slow to believe in the iniquities of the Nazi leaders rather than too quick to believe that German parachutists were disguised. Indeed is not Dr de Jong occasionally over-eager to write off anti-German demonstrations as purely irrational? When the Serbs smashed the windows of the German Travel Agency in Belgrade in March, 1941, it was because they knew that Neuhausen, the head of the Agency and German Consul-General in Belgrade, was also the organiser-in-chief of the German Fifth Column in Yugoslavia.

History in Film Script

MUSSOLINI: Twilight and Fall.

By Roman Dombrowski.

Heinemann. 248 pages. 21s.

TO a Polish exile, Roman Dombrowski, who was a journalist in Italy before the war, is due this not inhumane account of Mussolini's movements from the moment when Victor Emanuel III had the dictator shuffled into a waiting Italian ambulance at the Quirinal Palace (after the Grand Fascist Council's adverse vote in July, 1943) down to the shooting by the future Communist deputy, Walter Audisio, of Mussolini and Clara Petacci, his mistress, on April 28, 1945.

The book is an account of movement, as a film script might be, interspersed with sharp little bits of likely conversation, and innumerable phrases like "Early that morning," or "Edda read these instructions with a feeling of relief," or "Vittorio was silent, for he had no idea what to suggest . . .", Edda and Vittorio being Mussolini's two elder children. The book is based mainly on Mussolini's own *Storia di un anno* (an important, but tainted source). No references adorn Mr Dombrowski's book. It is therefore unhelpful to the historian and, one must add, to the normally intelligent reader, who is left with the final horror of the mob shying missiles at the corpses of Mussolini, his mistress and his immediate collaborators, hanging upside down in a Milan square, but with very little else. For a film or for television that would be enough. Not for a book. Nevertheless the author's summary of why the National Committee of Liberation desired Mussolini's death "to avoid an Italian Nuremberg trial" is true, and his pursuit of the final hours is interesting.

The story of how puppet states exist at all is bound to be a grim human chapter. Pétain's Vichy state, Quisling's

The Economist Intelligence Unit

SERVICES FOR BUSINESS

For the Exporter

Three-monthly reports on business conditions and prospects; this service now includes all countries.

"Trend"

A bulletin service for senior executives.

"Motor Business"

A quarterly bulletin on business problems and trends in the motor and allied industries.

"The Paper Bulletin"

Quarterly bulletins and monthly information sheets on supply, demand and price trends of packaging materials, stationery and other paper products.

Capital Replacement Costs

Index numbers of prices of twenty major groups of capital equipment and buildings are reported quarterly.

British Wholesale Prices

The weekly wholesale prices of over three hundred commodities are reported monthly.

"Hard Fibres"

A quarterly bulletin for the sisal, manilla and allied industries.

"The Businessman's Guide to Britain"

An annual publication for those travelling in Britain on business.

"The Oxford Economic Atlas of the World"

Comprises text, detailed maps and statistics relating to world production and trade.

"The Oxford Regional Economic Atlas of the U.S.S.R. and Eastern Europe"

Further particulars of these and other services may be obtained from:

The Economist Intelligence Unit

22 RYDER STREET,
ST. JAMES'S,
LONDON, S.W.1.

Tel.: WHITEHALL 1511—ext. 144

Norway, Mussolini's Italian Social Republic with headquarters at Salò on Lake Garda cannot be dissociated. They belong to the civil war latent in the last war. Likewise the very dictatorships of Hitler and Mussolini belong to a much wider historical situation (barren as these dictatorships were). These men, like Lenin and Stalin, devised very odd methods and myths for coping with masses of mutinous disbanding armies, of unemployed, of ever-increasing populations in every industrial metropolis. Mussolini in his last months reverted to his early dreams as a socialist blacksmith's son and signed a pile of legislation making it illegal to dismiss any worker from any factory, wildly increasing workers' insurances and introducing every liberty of meeting into the workshops of Northern Italy. Once Mussolini was dead, the Communists joyously took up this legacy, and they have been fighting indignantly to uphold these anarchies in Italy's factories ever since.

None of all this appears in Mr Dombrowski's book. He endows Mussolini with a knowledge of Latin he never possessed. The Dante quotation is inaccurate, and, for the rest, we have little means of checking anything. Why has no serious historian yet tackled this not unimportant postscript to an age?

A Prominent Victorian?

STRAWBERRY FAIR: *A Biography of Frances, Countess Waldegrave, 1821-79.* By Osbert Wyndham Hewett. Murray. 292 pages. 18s.

FRANCES, COUNTESS WALDEGRAVE, daughter of John Braham, a world-renowned tenor of the eighteenth-century, was four times married: to John Waldegrave; his brother George, the seventh earl; Granville Harcourt; and Chichester Fortescue, later Lord Carlingford. The two Waldegraves died young, of a combination of inherited ill-health and alcoholic excess, having brought her great possessions, including Strawberry Hill. Her marriage to Granville Harcourt, old enough to be her father and an ineffably pompous bore, consolidated her social position. On his death she married Fortescue, whom she loved devotedly. She entertained lavishly at Carlton Gardens, Harptree, and Strawberry Hill, and she made Queen Victoria "laugh till she cried" when dining at Windsor. Dukes apparently sought her advice; Newcastle's infatuation was almost embarrassing; Bedford invited her suggestions for Cabinet-making; while the Duke of Orleans wanted her to plan his propaganda in France. No wonder the Encyclopaedia Britannica described her as "socially prominent."

But she is not prominent enough in this biography. Her beauty is revealed by two portraits; she undoubtedly inherited a vivid and compelling personality from her father; yet she seldom comes alive. Lost in a crowd of guests, she emerges occasionally to contribute a shrewdly amusing remark, and is swallowed up again by a fresh influx of visitors, who are brought on and off

the stage with an irrelevance reminiscent of the Guelfs and Ghibellines in Max Beerbohm's parody "Savonarola Brown." And one is left wondering whether her professed interest in politics was anything more than a devotion to her friends' careers.

The publishers state that while Mr Wyndham Hewett, an enthusiastic collector of Victoriana, was preparing to write a social history of mid-Victorian Britain, he was so intrigued by constant references to Lady Waldegrave that he "set to work with ten thousand letters to, from, and concerning her, lent to him by Lord Strachie, to give some idea of the superb creature." Sometimes he succeeds; but he might have presented a more convincing picture if he had remembered that "the essence of Art is selection."

Shorter Notices

CZECH TRAGEDY.

By Glorney Bolton.
Watts. 252 pages. 21s.

The history of the Czechs and Slovaks has rarely been lacking in dramatic or tragic episodes; and this book, which covers in varying detail about the last fifty years of their story, has its full share of both drama and tragedy. It is a study of the lives of three great Czechoslovak leaders—Thomas Masaryk, the philosopher-statesman who became the first President of the Republic; his son, Jan Masaryk, who returned to his country as Foreign Minister after its liberation from the Germans and suffered a mysterious "defenestration" shortly after the Communist coup in February, 1948; and Eduard Benes, the elder Masaryk's successor as President, who was forced to play the leading role first in his country's submission to Hitler and then, nearly ten years later, in the even greater tragedy—because fellow Czechs and not alien Germans were responsible for it—of its submission to Communism.

The author worked with President Benes and Jan Masaryk during the war years in London. He has a vivid appreciation of the strains to which the Czech character is subjected by its attraction towards both western liberalism and the great Slav country, Russia, as well as by its admiration for the two national heroes—Zizka, the fifteenth-century Hussite warrior leader, and Chelcicky, the passive resister, who in the same century urged that to oppose violence actively is useless. Mr Bolton does not claim to add to our knowledge of the events he describes, but he writes with insight and sympathy (which is not wholly uncritical) of the leading actors. His somewhat staccato and impressionistic style is more successful when dealing at close hand with Czechoslovak affairs and personalities than when sketching in the wider background.

★

THE FEDERAL REPUBLIC OF GERMANY.

Her Majesty's Stationery Office. 12s. 6d.

This is the first economic survey of Germany to be published by the Board of Trade since 1935. It is a comprehensive handbook which gives data on all the most important aspects of the Federal Germany economy. Special attention is paid to all matters of interest to British traders, and it is shown that there are good openings for selling British manufactures in this expanding market.

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Recession Talk

Washington, D.C.

RECESSION is being talked about a great deal in the United States, and most, although not all, economists, whether in or out of the government, now expect some decline in activity in the third quarter of this year. But two words of caution are necessary: first, it is hard to remember a time of more uncertainty and confusion about the outlook; second, there is a widespread, and perhaps preponderant, belief that growth may be resumed in the fourth quarter. If that happened, a contraction in the third quarter would scarcely qualify as a recession.

The present nervousness is paradoxical in many ways. The economy is still operating at an extremely high level, and in general prices are still strong—some are weakening but some others are strengthening. There is, to all intents and purposes, full employment; such developments as the slump in automobiles have not prevented an actual reduction in total unemployment so far this year. Demand in several major sectors is not only strong but shows signs of mounting as the year progresses. And the Federal Reserve System is still operating as though inflation, not recession, were the threat; true, the "Fed" appears to be on the verge of a gentle shift toward slightly easier money this month, but even that would leave the banks under substantial pressure.

To many foreigners, who presumably will not forget 1929 for at least a century, the stock market is still apparently the measure of the American economy, and the stock market has indeed taken a severe tumble in the past three weeks. Presumably this tumble is to an important extent attributable to the sudden surge of feeling that economic activity, and hence business profits, are due for some decline. Yet stock prices had been rather dizzily inflated before the recent setback, and some sort of reaction was almost bound to occur. What is more, the market so far has shown no sign whatever of panic—indeed, it was stabilised last week after some three weeks of decline.

By far the most impressive reason for expecting a dip in activity in the months immediately ahead is a familiar one: inventories. A glut of stocks started both American postwar recessions, and something of a glut has developed over the past year. Altogether, the value of stocks is now about \$6 billion higher than it was a year ago and at a record level. Sales are not far short of a record, which means that the stock-sales ratio is still not as high as it was before the 1953 recession. However, the composition of inventories has been shifting, and they now consist more of finished goods than of raw materials or work in process; this is a

clear signal of reduced buying to come. The most perfect example is found in steel: there is a virtually unanimous belief that customers have built up stocks to guard against a certain rise in price this summer and a possible strike. Nobody expects steel operations in the third quarter to remain at the near capacity level of the first half of 1956, although, paradoxically, some products are sure to be tight throughout the year.

Elsewhere, the weaknesses have been apparent for some months. Automobiles are having a bad time (though only by comparison with last year), with 185,000 workers laid off and stocks in the hands of dealers at a record 900,000 cars. Model change-overs will probably come toward the end of the third quarter, and so no recovery is expected in this important, but far from critical, sector until the autumn. The motor slump has had minor ramifications in steel, rubber, textiles and copper products, though all of these industries are so diversified that they have weathered Detroit's squall remarkably well. The number of new houses started has also been running behind last year; mortgage money remains extremely tight, and buyers for homes are a little more difficult to find than they have been at any time since the war. Perhaps the key point here, however, is that housing starts over the rest of the year are as likely to rise gently as to decline. There have been scattered layoffs in the textile and clothing industries and in plants making household appliances. As a generalisation, it can be said that retail sales, while still running a shade ahead of last year, have been disappointing; this, indeed, is the cause of whatever suffering there has been thus far at the manufacturing level. With all this, some sensitive prices have weakened, led by copper, steel scrap, rubber, and lumber. And although unemployment remains relatively low, at only 3.9 per cent of the labour force (compared with an average of 4.0 per cent in 1955), the work week has shortened to an average of 40.2 hours, compared to a peak of 40.9 at the height of the boom last autumn.

★

But the macro-economists, with their sights trained on the broad sectors of demand, can find good reasons for concluding that there need be no real recession at all. The evidence is impressive. To begin with, total personal income is at a record rate of \$31.5 billion a year, in spite of the slight falling-off in factory workers' take-home pay. Indeed, only one out of every four labourers in the United States works in manufacturing, a point which is widely

overlooked abroad. This kind of income is almost a guarantee of strong consumer demand, even though more of it than ever before is required to pay off debts incurred in the past. What is more, there is every likelihood that as the year goes on, substantial wage increases will add to the income flow. Spending by state and local governments has been going up steadily for years, and will continue to do so this year. Purchases of goods and services by the federal government have stopped declining and are about to rise gently. And then there is the *pièce de résistance* of the optimists: the fabulous plans of businessmen to spend this year on new plant and equipment some 30 per cent more than the record \$28.7 billion of last year.

Other signs of health include a slight upturn in new orders received by manufacturers in April, after four months of decline, the certainty of record levels of non-residential building and, perhaps as important as any, the rather abrupt end of the decline in farm prices. These have risen for five consecutive months and are now at the same level as they were a year earlier, for the first time since 1951. If farm income is stabilised, this will remove a depressant factor that had been becoming cumulatively worse.

Perhaps the greatest hazard in forecasting the American economy is a disposition to pay too much attention to sectors such as automobiles or housing or farm incomes—none of which accounts for more than a fraction of the gross national product. For example, consumers spend almost three times as much on services as they do on all the consumer durable goods put together. Still, when about a hundred and fifty of the country's leading businessmen, accompanied by their platoons of economists, met two weeks ago in Virginia as the Commerce Department's Business

Advisory Council, word seeped out that they were nearly unanimous in expecting business in general to be worse in the third quarter. Few of the government's experts are disposed to disagree with them. And yet it was only three months ago that new reports on plans for spending on plant and equipment, which have since been revised upwards again, were leading some of these people to predict a gross national product of \$410 billion for 1956, with activity constantly rising during the year. In short, an accurate forecast is more elusive than ever this year; it would not be too surprising if the famed third quarter contraction never materialised at all.

After California

MR ADLAI STEVENSON must feel like a man who has emerged victorious, if somewhat worse for wear, from a lion's den only to find himself in a bear pit. For although his spectacular triumph in the primary election in California has all but eliminated Senator Kefauver, Mr Stevenson is still a long way from having clinched the Democratic presidential nomination. In fact, the eclipse of Mr Kefauver makes Mr Stevenson the principal target for other ambitious Democrats and the long, bruising battle against the Senator from Tennessee has left its mark. Not only did Mr Stevenson have to descend to the lower levels of American politics where candidates prove their fitness by kissing countless infants, eating soggy lunches on fair-

grounds and insulting one another, but Mr Kefauver forced Mr Stevenson to equivocate on difficult issues and to adopt a middle-of-the-road stand. No doubt Mr Stevenson's moderation helped him to defeat Senator Kefauver in such states as Florida and California. But powerful Democratic leaders—including Mr Truman—believe that President Eisenhower already occupies the middle of all possible roads and that the only Democrat who has a chance in the November elections is one who is prepared to keep firmly to the left.

The question is whether any of Mr Stevenson's rivals will be able to catch up with him now that California and his victories in other primaries have put him well in the lead. Mr Stevenson needs 686½ votes out of the total of 1,372 to be nominated by the Democratic convention. Far ahead of his nearest rival, Senator Kefauver, as he now is, he remains several hundred votes short of that total. Mr Stevenson must still win over as many as possible of the 370 delegates who have already been chosen but are not committed to any candidate and he must still seek for support among the 238 delegates who have yet to be selected by Democratic state conventions or party committees. It looks, therefore, as if the national convention in Chicago will be "wide open" and as if Mr Stevenson will have a difficult time of it should he not be carried over the top during the early ballots.

That situation favours such potential candidates as Governor Harriman and Senator Symington of Missouri. Mr Harriman now seems the most dangerous of Mr Stevenson's rivals. An outspoken radical, he enjoys Mr Truman's backing and he has at his command one of the smoothest political machines in the country. The main obstacle to his nomination is the hostility of southern Democrats who would rather leave the party than vote for a man who has spoken of using federal troops to enforce racial integration. These Democrats and many other moderates will probably support Mr Stevenson. If the latter's bandwagon does not get rolling, however, they may settle on a compromise candidate such as Mr Symington. But how many Democrats believe that anyone really can defeat that man in the White House?

Too Hot to Strike

THIS year's wage negotiations between the United Steelworkers and the steel producers have unusual aspects. For the first time, the United States Steel Corporation, the Bethlehem Steel Corporation and the Republic Steel Corporation—which between them account for nearly 55 per cent of total annual production in the United States—have agreed to bargain jointly with the union. Although representatives of the industry insist that settlements will be concluded separately, this joint session is acclaimed by Mr David McDonald, the president of the steelworkers' union, as a first step towards industry-wide bargaining. Secondly, it was decided that much of the negotiations would take place in New York—a neutral territory removed from the strong pressures generated in Pittsburgh, the steel capital.

There are indications that both sides are genuinely anxious to arrive at a settlement well before the deadline that falls at midnight on June 30th. Whether this laudable aim

can be achieved is less certain, for Mr McDonald and the 650,000 workers whom he represents are asking for a great deal. Foremost among their demands are the supplementary unemployment benefits which Mr McDonald's main rival, Mr Walter Reuther, obtained last year from the automobile industry and which the steelworkers themselves have already won from the food canners. The union is also asking for a "substantial" increase in wages, extra pay for Saturday and Sunday work—an issue on which it may prove difficult to reach agreement—further health and welfare benefits and a clause specifying that all men employed in the basic steel industry must join the union.

The steel producers have pointed out that these demands will force them to increase the price of steel still more and will have an inflationary effect. For not only will costs rise correspondingly in the many industries using steel, but union demands elsewhere will follow the pattern set by Mr McDonald. It is expected, moreover, that the combination of high stocks—accumulated in the fear of a rise in prices or of a strike—and the slump in the automobile and related industries will bring a substantial decline in orders for steel in the third quarter. Already customers are beginning to cancel orders and many more cancellations are expected if there is no strike. At the same time, however, labour leaders know that a rally in steel demand is expected in the fourth quarter and that total output for 1956 will probably equal that of 1955, a record year. Furthermore, steel profits in the first quarter of this year ran to \$312 million—a marked increase over the first quarter of 1955. Mr McDonald is expected to drive a hard bargain.

A Mess of Benefits?

AS the steel workers began to press for a similar arrangement, the automobile workers were lining up to draw the first payments from their employers under the plan for supplementary unemployment benefits which was negotiated as part of their wage settlement a year ago. The scheme is being put to an unexpectedly severe test at a very early stage, even though it is being brought in by degrees and even though by no means all the 185,000 automobile workers who are now unemployed qualify for the benefits. Only people who have been laid off since May 1st by the General Motors, Ford and Chrysler companies are eligible and only if they live in states where it has been decided that the scheme does not conflict with the local unemployment compensation law. Seventeen states have now decided that it does not and, from the automobile workers' point of view, the only important exceptions are Ohio and Indiana. In these two states it has been held that the supplementary benefits constitute wages within the meaning of the state law and that therefore workers receiving them are not qualified to receive compensation from the state.

What the employer supplements is the unemployment compensation paid by the state, which is to be brought up to 65 per cent, for the first four weeks of unemployment and 60 per cent for the next twenty-two weeks, of the workers' normal take-home pay, that is, of his earnings after taxes. Since state compensation varies from \$25 to \$45 a week, the employer's contribution will also vary and

The American Economy

may in some cases come to the maximum of \$25. Furthermore, the employers will have to pay more to a single man than to a married one with dependants, since the latter draws more compensation from the state. Finally, the amount which the worker is entitled to draw from his employer depends on his length of service and on the financial status of the supplementary unemployment fund. These funds are being built up by the companies at a rate of 5 cents for every man hour worked, but they have not yet reached the totals necessary to enable benefits to be paid to laid-off workers over the full twenty-six weeks. Many of the people who started to draw benefits this month will have exhausted their credits under the plan in a few weeks. The automobile companies are doing their best to make this complicated arrangement work, opening special offices and training special staffs to deal with it. But it will not be surprising if, after his first taste of the much-advertised scheme, the average automobile worker feels that he has traded a solid wage increase for a mess of supplementary unemployment benefits—and if other trade unionists decide that he made a bad bargain.

Republicans Despite Ike

FROM A CORRESPONDENT IN WISCONSIN

IT is often said of Wisconsin Republicans that "they like Ike, but don't like what Ike likes." In the wake of the Republican state convention which took place in Milwaukee on May 25th and 26th, even the first of those two sentiments looks dubious. For in many ways the Wisconsin convention brought into sharp focus the great gap that still divides the Republican "Old Guard," particularly in the midwest, from the Eisenhower wing of the party. In its most spectacular action, the convention turned with a vengeance on Senator Alexander Wiley and denied him endorsement for re-election, precisely because he had vigorously supported Mr Eisenhower's foreign policy, as the senior Republican on the powerful Foreign Relations Committee.

After praising the Administration for restoring "honour and dignity to our nation's capital," and for providing "leadership characterised by integrity, morality and devotion to duty," Wisconsin Republicans denounced some of the most important goals of that same leadership. One resolution warmly endorsed the notorious amendment to the Constitution which would curtail the treaty-making powers of the President, which both Mr Eisenhower and Senator Wiley have gone all out to defeat. Another praised the McCarran-Walter Immigration Act and opposed the Administration's attempts to liberalise the law. A third resolution criticised the Organisation for Trade Co-operation, of which Mr Eisenhower has asked Congress to allow the United States to become a member.

Here, then, was a party officially committed to work for the re-election of Mr Eisenhower in November and quite aware that without him the Republican cause might be doomed—but it still was a party whose soul remained isolationist. In fact, the contents of the resolutions and the platform adopted in Milwaukee were no surprise. It was the dramatic, eleventh-hour overthrow of Senator Wiley that came as a shock, for it had been widely believed that Mr Wiley would win a lukewarm endorsement for his fourth

term. The Senator had been viciously attacked when he appeared at local party meetings in the weeks preceding the convention. On May 6th, Wisconsin's Young Republicans repudiated Mr Wiley and asked the party to endorse "a candidate whose position more closely resembles the state Republican philosophy." Supporters of Senator McCarthy kept sniping at Mr Wiley because he had not voted when the Senate censured his junior colleague in 1954. Nevertheless, the belief that Senator Wiley would survive was strengthened, nine days before the convention, when his chief rival, Mr Mark Catlin, speaker of the Assembly in the State Legislature, was dealt a staggering blow. Mr Catlin was charged with accepting more than \$5,000 from state prison inmates to use his political influence in obtaining their release.

It was obvious as the convention opened that Senator Wiley himself was confident of his eventual success. He ignored the attacks made upon him, calmly recited his record of support for President Eisenhower, and called for Republican harmony in the interests of victory next November. At a late hour, however, a group of his foes—party leaders and industrialists—decided to launch a boom for Mr Glenn Davis of Waukesha, who has been a Congressman from Wisconsin since 1947. Mr Davis, a handsome 41-year-old lawyer, is an effective campaigner and close friend of Vice President Nixon. His record is unimpeachably isolationist. Earlier this year, Mr Davis considered running against Senator Wiley, but abandoned the idea after a public opinion poll showed that Mr Wiley was ahead of him by a three to one margin. At the convention, however, and after his supporters promised to raise \$150,000 for his campaign, Mr Davis agreed to stand and on the third ballot he was endorsed overwhelmingly, with 1,795 votes to 481 for Mr Wiley.

★

Endorsement by the convention is not tantamount to nomination in Wisconsin. Senator Wiley can run against Mr Davis in the Republican primary election on September 11th, and many observers believe that he can win the nomination, even though, as a result of the convention, he will not have the backing of the party machine in the state. After his defeat, Senator Wiley recalled two previous occasions on which unendorsed candidates had won at the polls. Moreover, he will probably receive a large vote of sympathy from Republicans appalled at the shabby conduct of the convention. Mr Wiley will also get substantial help from Wisconsin Democrats, who have no contest for their own senatorial nomination and who will welcome the opportunity to deal a blow at the state's Republican organisation. Under Wisconsin law, there is nothing to prevent Democrats from voting on the Republican ballot in September.

So Senator Wiley could prove a strong candidate, if he campaigns on the record of his support for President Eisenhower and the opposition to him of "the bosses" and "the party machine." This kind of appeal has long been effective in Wisconsin. On the other hand, Mr Wiley faces a formidable fight. Against him will be most high party officials, all pro-McCarthy elements, unreconstructed isolationists, a vigorous candidate and a sizeable campaign fund. Some observers actually believe the Republican National Committee and the Administration might attempt quietly to persuade Mr Wiley to withdraw in the interest of party harmony. This seems incredible in light of Mr Wiley's

...why they spell a better life for you

A CENTURY AGO, pioneering scientists learned to take apart water, air, and earth and put them together again...in completely different arrangements.

THE RESULT, very often, was a *synthetic*—a brand new material that didn't exist in nature, or a more abundant, more useful version of a nature-made product. Thus, synthetic has come to mean 'man-made and well-made.'

Science has developed nearly half a million synthetic materials since that time, and millions more are possible.

WHERE DO SYNTHETICS fit into your life? Nearly everywhere! The aspirin you take for a headache, the life-saving sulfa drugs and scores of other modern medicines are synthetics. So are today's remarkable plastics, new textiles,

and many paints, dyes, adhesives, and valuable chemicals.

AN IMPORTANT PART of the work of the people of Union Carbide is discovering and producing synthetic materials that serve you and industry. From natural gas and oil, alone, they produce nearly 400 chemicals. Among them are chemicals that are vital to everything from synthetic rubber to cosmetics...and to the variety of plastics and resins made by Union Carbide, which are used in nearly every home and industry today.

FREE: Learn more about the interesting things you use every day. Write for the illustrated booklet "Products and Processes" which tells how science and industry use the **ALLOYS, CARBONS, CHEMICALS, WELDING EQUIPMENT, and PLASTICS** made by Union Carbide. Ask for booklet IE-6.

SYNTHETIC ORGANIC CHEMICALS • EVEREADY Flashlights and Batteries • NATIONAL Carbons • ACHESON Electrodes
Dynel Textile Fibers • ELECTROMET Alloys and Metals • HAYNES STELLITE Alloys
UNION CARBIDE and VINYLITE Plastics • LINDE Welding Equipment • PRESTONE and TREK Anti-Freeze

MAKING
BRITAIN
GREATER

Britain turns to Oil

URGENTLY the country needs more electricity, for industry, for the home. Within a short span one-seventh of the nation's electric current will be coming from power stations fired by — oil.

Urgently this country needs more gas, in the home, in industry. A new gas plant, the largest of its kind in the world, now being built will use nothing else except — oil.

Urgently this country needs faster, cheaper, more efficient railways. In the huge modernisation scheme newly-begun by British Railways priority has been given to dieselisation, and that means — oil.

Big decisions these, high-level decisions, long-term decisions. They confirm oil in its new status. Once used primarily for traction and no more than an auxiliary of coal in wider industrial uses, oil now becomes complementary in the fullest sense to Britain's traditional power source, coal.

It is an inevitable development. Other power sources, notably coal, though stretched to the utmost, have been unable to meet the nation's swiftly-growing demands. At this critical halfway juncture of the 20th century, oil is the only power source readily available in rapidly expanding quantities.

Oil is the key because it can meet the new obligations thrust upon it and more, much more, without risk of over-reaching its resources.

National policy, accepted by all parties, is to use more oil. In line with that policy great new refineries have been built in this country during the last ten years. Oil has taken its place alongside coal as a full partner; its permanence is assured.

Oil has to do more, considerably more, if Britain is to withstand the challenge of harsh competition from rival nations where machine-power per man is higher, where manpower is cheaper. It has to help combat waste, wasteful methods, wasted manpower.

Shell-Mex House, on the Embankment in London, where decisions are now being taken vitally important to our future.

enterprise, an adventure typical of the men behind it, the men who went on to build the giant Shell-Mex and B.P. organisation.

A few hundred tons of oil in that first cargo, that was all. A changed picture today when the oil brought to Britain is accounted in millions of tons. A changed world, too: a world of shortages in which there is no shortage of oil.

Incredible in thinking of oil to recall that within a lifetime responsible men were disputing the Royal Navy's plans to convert from coal-burning ships to oil burning. Yet bitter was the controversy when the First Lord, then plain Winston Churchill, announced the change. That was some 50 years ago, soon after the first vessel to carry a cargo of oil to Britain had sailed into the Thames.

How many people appreciated the significance of that first cargo? It was a pioneer

faithful service to Mr Eisenhower, but the latter has not chosen to help his loyal supporter, and is adopting a position of pious impartiality.

Events in Wisconsin show how completely Mr Eisenhower and his team have failed to turn Republicans in the midwest into moderates or internationalists. But it should be remembered that the convention delegates are party leaders, and their views do not always represent those of a majority of ordinary voters. It would be rash, therefore, to conclude that Senator Wiley's setback represents a return to pre-war isolationism on the part of midwestern voters generally, or even of most Republicans in a state which, only two months ago, gave President Eisenhower a margin of 100,000 votes over his lone Democratic rival, Senator Estes Kefauver, in the presidential preference primary.

Raising Cain

Washington, D.C.

UNDER pressure from the press the President has agreed to see Mr Harry Cain, the member of the Subversive Activities Control Board who has been waging a one-man campaign to expose the follies and inhumanities of the Administration's internal security system. It is just possible that Mr Eisenhower listened attentively to what Mr Cain had to say. But the auguries were not good, partly because Mr Cain felt obliged to make a public issue of his inability to fight his way past the watchdogs at the White House door, but mainly because the President has long seemed insensitive to the moral issues which are involved.

To the pain of his admirers the atmosphere of the President's press conference changes as soon as a question of fair treatment for an individual in the government service is raised. The usual easy relationship switches to one of brusqueness on Mr Eisenhower's part and a mixture of frustration and embarrassment among the normally respectful newspapermen. Three weeks ago there was a reference to the latest of several cases publicised by Mr Cain, in which a man's career has been wantonly wrecked on the flimsiest of evidence. The President replied coldly that "periodically they bring before me what has been going on, usually not in terms of names but in terms of numbers."

It was after this that Mr Cain declared that the President was being "fed varnish." Moreover, as Mr Cain presumed that he would not be reappointed to his official job, he wanted to see the President once before he left. As a presidential appointee Mr Cain is theoretically entitled to have access to the White House. But to the staff there he must seem an exasperating fellow. Mr Sherman Adams, the chief presidential watchdog, has given him "unshirted hell" for showing lack of "loyalty to the team." Nevertheless, Mr Cain remains in the government because members of the Subversive Activities Control Board are appointed to a fixed term and cannot easily be removed until its end, which in Mr Cain's case is in two months' time.

But Mr Cain's mutiny is ironic. When he was appointed to the board, he was known as a wild McCarthyite Senator who, to the great joy of all liberals, had been badly beaten for re-election. Further, as Mr Adams has sharply reminded him, the board itself has nothing to do with individual

security cases but is set up to try, with full legal safeguards, organisations that are charged with being Communist-run. But Mr Cain was converted and "caught religion" in January of last year and his vigorous attempt to have the whole security system revised has benefited from an official title that gave him authority to talk on this subject and a political record that made it impossible to dismiss him as "soft on Communism." Above all, his feverish eloquence has been combined with great shrewdness in the choice of the security cases to publicise.

Grotesque abuses are thoroughly documented in the portfolio which Mr Cain kept ready for his summons to the White House this week and it is difficult to see how any fair-minded President could reject his proposals. He wants charges against civil servants to be specific, defence counsel to be provided, and hostile witnesses to be produced for cross-examination unless they are genuinely important informers, in which case they must still be interviewed in private by the hearing board. The final determination in each case should be speedy and should be accompanied by a full list of reasons, to form the basis for an appeal. Furthermore, many agencies should be exempted from security regulations altogether and the Attorney General should either revise and qualify or simply withdraw his indiscriminating list of 283 allegedly subversive organisations. Only a tiny proportion of these have ever been put on trial before Mr Cain's board and many a worthy official has been ruined by a fleeting and innocent connection with one of them.

Ploughs Come Full Circle

AMERICAN farmers will soon be ploughing growing crops back into the ground under government auspices, something they have not done since 1933, when a much-criticised Democratic Secretary of Agriculture, Mr Henry Wallace, desperately attempted to relieve the agricultural depression by paying farmers to destroy their cotton. Now it is a Republican Secretary, Mr Ezra Benson, who has been forced to do the same thing by the long delays in the passage of the new Farm Bill. By the time it was signed, farmers had already planted most of their crops for this season and ploughing under was unavoidable if the soil bank scheme, which is the crux of the new legislation, was to be of any help to them this year. Mr Benson has therefore announced, with some reluctance, that farmers whose crops are not yet far advanced will be able to join the soil bank at once and will be compensated by the government for land taken out of the main surplus crops—cotton, maize, wheat, rice, tobacco and peanuts.

The payments will probably range from about \$24 an acre for land on which wheat would have been grown to \$60 or more an acre where cotton has been ploughed under. Whether this will appeal to farmers who make a profit of as much as \$100 an acre when they send their crops to market remains to be seen. On the other hand, there is some fear, for this year at least, that farmers in Iowa and elsewhere, whose crops have suffered from drought, may regard the soil bank merely as a new form of relief. The intention is that the payments should make up the income lost by taking out of cultivation land which would otherwise have

been growing surplus commodities. The soil bank should not, therefore, mean any immediate increase in farm incomes. This will not come until later, when agricultural prices have been stimulated by the removal of the surpluses which now overhang the market.

The removal of these surpluses is the real purpose of the soil bank scheme; this explains why it is considered to be such a constructive approach to the farm problem. The acreage reserve section, with which Mr Benson has now made a small beginning, is an annual affair. To qualify for payments from the government, farmers must leave the land taken out of surplus crops entirely idle, not even grazing cattle on it. The conservation reserve section is a long-range proposition, under which farmers will agree to grow grass or trees, over a period of from three to fifteen years, on land which would normally be planted to surplus crops. If the soil bank does what it is supposed to do, farmers will be depositing fertility in their land instead of unwanted commodities in the government's storage bins.

Research Business

FROM A SPECIAL CORRESPONDENT

THE United States Steel Company's research centre at Monroeville, Pennsylvania, and the General Motors Corporation's technical centre in Warren, Michigan, were formally opened in May, the latest chapters in the American success story of the business of research and research for business. The impressive increase in scientific and technological research activity during the war has been vastly expanded in the last ten years. The total amount spent rose from \$900 million in 1941 to \$1,520 million in 1945. Thereafter, with only a slight levelling off in 1949, the annual rate of increase was roughly \$300 million and expenditure in 1955 came to \$4,200 million. It promises to be higher still this year. The federal government provides the lion's share of the funds and industry does most of the spending. In 1951 a census, which covered approximately 85 per cent of all industrial research and development, showed that while the aircraft industry conducted the greatest portion of its research at government expense, manufacturers and designers of electric machinery were the highest spenders. This industry, which includes telecommunications and electronics also topped the list of company-financed research projects in 1951, contributing \$185 million to their total cost of \$431 million.

Although there may be no attempt to correlate an increase in sales with research expenditure, full order books, as automation grows, help to persuade stockholders that research is a sound investment. The drive for new products and improved methods, coupled with very generous tax concessions, has given industries a vested interest in solving problems, or having problems solved for them. In spite of the increase in the research facilities of both government and manufacturers—more than 4,000 companies now have research laboratories—a good deal of the work is farmed out under contract to various specialised agencies. Consequently the profession of research consultant has flourished and several hundred companies now do research for profit.

The universities and the non-profit research foundations, such as the Mellon, Armour, Battelle, Southwest and Midwest Research Institutes, also play an important part in

the great alliance between brains and industrial progress. Most of the foundations have been privately established and endowed through the efforts of a small group, a family or a business, often for the benefit of the locality with which the donors are connected. In that contributions to their endowment and supporting funds are tax-deductible, they count as charitable organisations, but they are run on businesslike lines. Their work ranges from specific problems affecting the region they serve, to long-term projects in the social as well as the natural sciences. Their volume of business varies from just over \$1 million to more than \$10 million a year, mostly from government and industrial contracts; profits, if any, are used for further development. These regional bodies differ from such mammoth patrons as the Ford and the Rockefeller Foundations in both size and intent, but they share a common belief in the important contribution to be made by research to continued prosperity.

The nature and extent of the scientific and technological studies currently under way in the United States defies description. Even an account of such diverse achievements as the Salk vaccine, the solar battery, the discovery and synthesis of the "miracle" drugs, the atom-powered submarine and the breeding of Santa Gertrudis cattle, would give only a small hint of work in progress. It is reasonable, however, to assume that the bulk of the effort and resources are going towards applied rather than fundamental research. This is inevitable, since every answer to a basic problem sets off a chain reaction of further questions, frequently starting with "what can we do with it?" The concern now being-voiced is whether enough effort is being put into finding answers to basic problems of today which are sufficiently provocative to inspire future activity. It is difficult even to define the difference between fundamental and applied science but, given a fairly loose interpretation, it is estimated that more than 3 per cent of the total funds expended on research are used for fundamental work and that most of the latter is being done in the universities and institutes of advanced studies.

Critics of the present state of affairs are concerned with two main problems: to secure a larger share—perhaps 10 per cent—of the total funds for fundamental research, and to improve the climate in which it is conducted. The usual method of obtaining funds is to approach the government or some other philanthropic body with a plan for a particular research project. In making out a case, reference must often be made to the value of the results in terms of practical utility and the likelihood of a fairly rapid demonstration of progress. This has tended to concentrate work on large-scale projects with obvious "appeal," and to favour research teams rather than individuals. The difficulty of making grants to private persons, rather than organised groups, is recognised, but at least two of the foundations, Ford and Guggenheim, are supporting individual projects in the social sciences. Reports of government expenditure, moreover, include an increasing number of grants for graduate and post-doctoral studies in the natural sciences.

The financing of fundamental inquiry, however, is not as great a problem as finding the people to undertake it. There are many reasons for the shortage of scientists: one is the conflict between scientific principles and the expedients of national security, but another may be the national inclination to put a premium on palpable achievement, and to believe that the man who "sits and thinks" more often just "sits."

NATURE OF FIRE RISK..... (please attach letterhead)

In every Ship of the Royal Navy

Every week we have a number of small fires in our works; they're an unavoidable risk we have to allow for. But of course that doesn't mean that we take them casually. Quite apart from a lot of valuable machinery, we've got *lives* to consider. So our real job is to find the means to stop these fires *quickly* before they do much damage. That's why we've standardised on Nu-Swift extinguishers. They act immediately; they're easy to operate, easy to maintain—always completely reliable. Their system of high-speed recharging is a tremendous advantage; with a supply of spare pressure-charges, one extinguisher does the work of four or more. Yes, our safety standards have really gone up since we got Nu-Swift. As my Works Manager put it: 'at last we've got fire-fighting equipment that's as well designed as the rest of our plant.'

...and so will you
because Nu-Swift
extinguishers combine these four
essential advantages:

* **INSTANT ACTION** immediately the knob is struck—thanks to the principle of pressure-charge operation in all models.

* **GREATER RELIABILITY** through extra care in design and manufacture. The sealed pressure-charges will not leak, evaporate or cause corrosion.

* **HIGH-SPEED RECHARGING**—thanks to drop-in pressure charge, pioneered by Nu-Swift. All 2-gallon models can be recharged in 30 seconds.

* **STANDARD SYSTEM** throughout the range. All models are used in the commonsense upright position. Different colours show at a glance the risk for which each extinguisher is designed.

THE CHANGING WORLD

Changing methods and markets bring opportunity as well as risk for British industry. Engineer, businessman, scientist—each is confronted with changes in his sphere. The problem is to see the picture whole and this "The Financial Times Review of British Industry" helps every executive to do.

The Review searches out the facts and examines the many important social and economic changes of recent years and attempts an assessment of further changes which are likely in the future. It considers consumer habits and the growth of newer industries. It reviews the sources of our basic power, our transport problems and the ever present problem of overseas markets. Here is a publication which the executive in industry should read. It provides constructive criticism of present practices and gives pointers to future markets.

Algerian Crisis in Midstream

FROM OUR PARIS CORRESPONDENT

THE two defections which the Mollet government had most to fear have come about. M. Mendès-France has gone into the desert, wrapped in thunderous silence, and the Communists have withdrawn their support on Algeria; they hope to force their policy and the Popular Front upon the government by tunnelling away among the Socialist workers. For the moment the change is not dramatic. The government has a much narrower majority in the Assembly than it had, but remains firm enough because no one wants its shoes. The prospects for the future now depend, in part, on how far the Socialists can exploit their indispensability as part of any government, and, in part, on whether M. Lacoste can be successful in Algeria quickly enough to prevent Communist and mendèsiste pressures on the Socialist party from transforming the government from within. The significance of the great debate on the government's general policy—in fact a rather tame affair which produced few ideas from the floor and, perhaps inevitably, fewer and slighter hints of the government's intentions than some would have wished—was chiefly that it gave a preview of the balance of forces to come.

Of these, the force least easily controllable from Paris is that generated by events in Tunisia and Morocco. The danger that Algeria will be more interdependent with them than any one of them is with France is bound to put a continuous strain on the government's relations with the Right. Already, there is interaction—or, not to mince words, interdependence—between the rebels in Algeria and a Moroccan freelance "army of liberation" that virtually controls the area just inside the Moroccan border. Yet here is M. Mollet stamping on the Algerians (a technique that the Right applauds) while signing conventions with the Sultan, although the latter has not full control over his borderlands (a technique that it deplors). No wonder that the Right pulled its punches during the debate. Its mind is twisted with paradoxes and vicious circles and will remain so while the Algerian revolt continues to sow insecurity beyond Algeria's borders. Its dilemma will be absolute if the government's Algerian campaign is still being actively pursued when Parliament is called on to ratify Tunisian and Moroccan independence later this year.

Meanwhile, the support which the government enjoys, or suffers, from the Right makes it invulnerable to adverse votes on the Left. Yet the growing gulf between Left and Right is itself a danger. The Right has been prone to detect

treachery in every form of opposition (a pastime in poor taste for some ex-collaborators). Liberals like Jean de Maisonseul, the chief architect of Algiers, who was arrested for getting in touch with the rebels in hopes of facilitating a cease-fire, have been the victims. Shades of an unhappy, but recent, past in Tunisia and Morocco are resurrected when members of the French government admit that they were not informed of impending arrests. On the Left, the champions of immediate negotiation, the Communists in particular, have shown their strength in a series of organised demonstrations against the call-up of conscripts, and in favour of a cease-fire. The campaign has had an effect on the Socialist rank and file, including many deputies. The pressure will grow, especially if the costs of war put real wages and the government's social programme in danger. The man in the street, as he speculates on the jumble of opinion on either wing, is not as yet shaking the government, but he is doing his bit towards undermining it. There will be no end to this slow sapping of its strength until it displays enough moral courage to propose a clear-cut policy for Algeria.

But all told, there is a better chance than there was of a "middle way" solution because many deputies now realise more clearly than three months ago that if they want a genuine Franco-Moslem community, they must swallow equal rights for Moslems. The government has begun to grope towards a policy along these lines. M. Lacoste has announced that he will soon hold municipal elections in the areas that are cleared of rebel bands, as well as in those not yet affected by the rebellion. He has even said that foreign observers might supervise the elections. M. Mollet has repeated his original promise that general elections will be held after pacification to choose "valid spokesmen" for Algeria, and has specified that these will be for a single chamber (in other words that the elections will not be weighted in the settlers' favour, as some conservatives hoped). He has added that wide powers would, in the proposed statute, devolve on regional authorities.

These fumbleings after a policy raise many questions. The first is whether the parties backing M. Lacoste's pacification will still agree when it comes to M. Mollet's statutes? Every sign is that many will not. Next, could the government carry out its reforms, once the immediate crisis were over, in the teeth of opposition from the settlers and the conservatives in Paris? The Communists in the last resort hold the answer to this problem, for they could

give the government an alternative majority. More fundamental still, and despite M. Mollet's confidence to the contrary, may not freely elected Algerian representatives opt for independence? Could the French refuse? How long can Algeria be satisfied with a mere "personality" when Tunisia and Morocco have a nation? It has been too easily assumed that should the rebellion be crushed, the problems of Algerian nationalism will vanish. The very fact that these pertinent questions are beginning to be asked may spur the government to clearer-cut proposals.

Though M. Mollet has lost support in parliament, he has gained a little compensating strength from other quarters. One or two international factors have operated in his favour: Moslems who were sure that they had both Russia and the Afro-Asian bloc solidly at their back have been caused to think twice, first by Russia's intimation that it would rather see France remain in North Africa than the United States move in to fill a vacuum, and secondly by Mr Nehru's advocacy of a five-point plan for an Algeria composed of a mixed Eur-African community; it seems that Moslem confidence in the value of intransigence may have been undermined.

In a confusing situation only a few facts remain clear. One is that M. Mollet's race against time must be run not only in Paris and the Algerian areas of rebellion but also in Morocco and Tunisia. Another is that little piecemeal offers of "reforms" in this or that pacified area will not make for peace, since they may incense the unpacified areas to which they do not apply. Some offer to Algeria as a whole has to be made if anything lasting is to be achieved. A third is that a federal pattern may work as a transitional solution, but looks less and less like a lasting one. Yet if M. Mollet can get the present Chamber as far as that island in midstream, he will have done well.

The Succession to Molotov

NEWSPAPER readers in Moscow learnt last Saturday, from a short report on the last page, of the replacement of Vyacheslav Molotov, minister of foreign affairs, by Dimitri Shepilov. Thus unobtrusively ended the long rule in that office of a man who for years had been Stalin's second-in-command. The end may have been precipitated by Marshal Tito's visit—Mr Molotov acting as fatted calf for a prodigal who has done well in the world—but it was no surprise; only the timing can have been in question. For some time past the Soviet minister for foreign affairs had been left behind, out of the limelight, by Stalin's peregrinating heirs. His departure was awaited as yet another symbolic break with the Stalinist past.

Faithful service to Stalin cannot be a bar to high office in present-day Russia. Bulganin and Khrushchev, Mikoyan and Malenkov have all been Stalin's servants. Molotov's eclipse is not merely a question of age either; at 66 he is scarcely older than some of his colleagues. It is because he joined the Bolsheviks as a youth of sixteen that Molotov now appears to be such a veteran. He is one of the very few fairly prominent revolutionaries who have managed to survive. A dogged bureaucrat, he tied his fortune to Stalin's early in the day and helped him in the struggle for Lenin's succession. He climbed the ladder as Stalin was

kicking more famous Bolsheviks off it. By 1930, when Stalin had crushed, though not yet liquidated his opponents, Molotov became chairman of people's commissars, then the Soviet equivalent of prime minister, a post he kept until the outbreak of the war. Though he was obviously a tool of the omnipotent secretary-general, he, more than any other living Soviet leader, bears a degree of formal responsibility for the crimes perpetrated in the 'thirties, which are now being progressively repudiated.

In foreign affairs, too, Molotov cuts an anachronistic figure. He took over in 1939 when Litvinov's "soft" line was dropped abruptly and he kept the job in the postwar period when Russia, licking its terrible wounds, gave full rein to its suspicion of the West, held convulsively to what it had seized, and tried to expand its *cordon sanitaire*. The patient official, giving masterly examples of that stubbornness which Ivan the Terrible had already recommended to Russian diplomats, fitted perfectly into this rigid pattern. His stolid negative performances during the cold war gained Mr Molotov the international nickname of Mr Niet. Within the Soviet bloc this was also the period when Stalin peremptorily ordered his satellites about, apparently hurting Mao Tse-tung's feelings and bringing about the break with Marshal Tito.

This behaviour had already outgrown its usefulness in Stalin's day. In his last speech, in 1952, Stalin, the theoretician of "socialism in one country," could proclaim the end of Russia's isolation. The production of a Soviet hydrogen bomb boosted the self-confidence of Russia's new leaders. They could afford to vary the set routine and to attempt a more elastic, more flexible policy designed to take the initiative out of western hands.

Shepilov's Prospects

Molotov has always been a mouthpiece, a time-server. Could he not carry out the new line prescribed by his colleagues? Like many who climbed on Stalin's bandwagon, he had little room for manoeuvre and was in permanent danger of a fatal fall (Mrs Zhemchuzhyna, his wife, was arrested at least twice). And yet Molotov's reflexes, like Stalin's, were probably too conditioned by past experience to get adapted to the new mood. This, at least, must have been the conclusion of Stalin's heirs, since they gave him only a minor part to play in the new Soviet diplomacy. Functions of his ministry were usurped by others. He did not travel to Peking or to Belgrade, to Delhi or to London; at Geneva he appeared as a subordinate. Once before, in 1949, Molotov relinquished the ministry of foreign affairs, though he continued to supervise this field from a vantage position as vice-premier. Now he also remains deputy premier but he seems too closely identified with Stalinism to make a come-back. His resignation is probably the first bow in his quiet exit from the Soviet political stage.

His departure involves a change of guard, since by Russian standards Mr Shepilov (at 50) is a mere youngster. Messrs Bulganin, Kaganovich, Khrushchev, and Mikoyan are all in their sixties. There was a time when Trotsky became head of the Petrograd Soviet at 26. Now the Soviet "young men" are all in their early fifties; Mr Malenkov is the most prominent of them. Shepilov is one of the most gifted members of this group, which had an opportunity to do some thinking before entering into Stalin's political purgatory which lasted nearly a quarter of a century. Behind them there are, as yet, no bright young

men to be seen in politics; such are the intellectual ravages of Stalinism.

Dimitri Shepilov is obviously an intellectual and has apparently a better grasp of historical perspectives and Marxist doctrine than most of his elder colleagues. He made his way as a propagandist and was at one time head of the propaganda section of the party. But he showed too much independence and in 1951 was attacked as a defender of the disgraced Voznessensky and downgraded to the editorship of *Pravda*. After Stalin's death he began to climb again. He was entrusted with the attack on Malenkov in the "heavy versus light industry" controversy. He has acted as Molotov's understudy for some time past, taking the Canossa road to Belgrade or travelling to Cairo to inaugurate the new Soviet line for the Middle East. At the last party congress came the reward. Shepilov was elected a candidate member of the party presidium and a full member of the secretariat. Now he gets Molotov's job. There is no question of Shepilov being less intransigent or a less convinced Communist than his predecessor. But he is a less rigid man, more apt for the new language and the new strategy. With few young competitors in sight, Shepilov is taking another step in a career which may yet lead him to the very top.

Elections in Holland

FROM OUR CORRESPONDENT IN HOLLAND

DUTCH voters go to the polls next Wednesday; but their prosperity has increased so steadily over the last four years that they are unlikely to bring about any important changes in the political scene. Industrial capacity has increased by about 45 per cent. Exports are about 250 per cent above the 1949 level. There is full employment and even over-employment. Ninety-two per cent of Holland's trade with OEEC countries has been liberalised and almost 100 per cent of its dollar trade. Imports are steadily increasing, even to a rather dangerous extent. All this throws an aura of success over Dr Drees' government. His cabinet is formed by the Roman Catholic Peoples party and the Labour party (each with 30 seats out of 100 in parliament) and by the two smaller protestant parties with 12 and 9 seats respectively. The exiguous opposition consists of the Liberal party, with nine seats, and the Communist party, with six. This opposition is not only small but largely ineffective since the Liberals never offer a clear alternative policy and the Communists are quite without influence.

The outstanding domestic problem in Holland today is the enormous shortage of houses. An average of about 70,000 new houses each year is not enough to keep pace with the increasing population, which rose from 8.5 million in 1938 to more than 11 million today. But because labour is scarce and building processes insufficiently rationalised it has so far proved impossible to cope with the problem. All the political parties, however, are agreed on its gravity. A second serious problem is the danger of inflation. But here too no party lays exclusive claim to a panacea although each has its preferences for the measures that should be taken. In fact, in a small country like Holland, with a free economy

and dependent for its prosperity on the outside world, there is not much room left for party manoeuvres.

On foreign policy there is even closer accord. Its main points are the continuation and consolidation of Nato European integration, anti-communism and anti-neutralism. The new plans for a European common market and Euratom are wholeheartedly backed by all democratic parties. The vague opposition in some industrial circles, which arises partly out of Britain's aloofness and partly out of fear of any adventure, is hardly strong enough to affect any of the party programmes. This does not mean that there is much optimism in Holland about the chances of the Messina plans; it is widely realised that the common market plan in particular will have to face very strong opposition in France. More and more Dutch people are coming to feel that supranational dogmatism must not be allowed a second time to prevent practical co-operation on a much closer basis than has appeared possible in OEEC.

In the absence of clear-cut political issues the election campaign has been largely fought on matters of party allegiance. Before the war most Dutchmen who did not belong to the socialist or liberal parties used to vote for whichever political party was more or less an extension of their church or confession. After the war the Socialist party started a campaign against this close connection between religion and political party. Together with some small political groups they organised a new "Labour party," on the basis of democratic socialism, which was open to members of all Christian churches as well as to those who belonged to none. They proclaimed the so-called "bursting" of the dykes of the politico-religious party system and won thousands of Roman Catholic and Protestant voters.

This new Labour party did so well in the general elections of 1952, particularly in the Roman Catholic parts of the country, that the Roman Catholic ecclesiastical authorities became greatly concerned. A year ago, with new elections on the horizon, the Dutch bishops issued an episcopal letter which made a strong appeal for unity, *in politics*. This letter is being used during the present campaign by the Catholic Peoples party as a propaganda pamphlet against their biggest rival, Dr Drees' Labour party. It remains to be seen how many of the Catholics who voted for the Labour party in 1952 will this time vote for the Catholic Peoples party, not out of political conviction but as a matter of religious obedience. On their decision will depend which of the two parties is to have the strongest influence in the next parliament and government. But it remains unlikely that either the Labour party or the Catholic Peoples party will find themselves in a position to form a government without the help of the other.

New Faces in Ceylon

FROM OUR CORRESPONDENT LATELY IN CEYLON

IT is arguable that the change of government in Ceylon may prove, even for Britain, a change for the better in the long run. The government of Sir John Kotelawala was reasonable enough about Trincomalee but it was increasingly out of touch with its own people; and it sometimes behaved so like a weathercock that it, too, might not

have hesitated to get rid of the British bases if and when that step was necessary for it to remain in power.

Sir John had had 25 years in office, but only for the last four of them was he a really national figure. As Prime Minister he blossomed, his personality became daily gossip right across the island; but he went too far in search of popularity, and hints of his romances were read even into his parliamentary speeches. In Colombo, society is small and rumours resound much as they do in Clochemerle, until it becomes hard to distinguish between fact and fiction. There was no doubt that Sir John dominated people's minds, but he failed to dominate their loyalties, for he represented a vanishing crust with money but little education. On the international plane he had got it into his head that he must outshine India's Prime Minister. His first attempt was at Bandoeng, where he stood up to Mr Nehru on the relative dangers of colonialism and communism and, in doing so, catapulted himself into American hearts, a dangerous action for any Asian leader with an election in the offing. Still doggedly following Mr Nehru's trail, he went off globe-trotting and he also wrote his memoirs.

Intellectual Nationalists

The new government is completely different. It is a government of intellectual nationalists. Mr Bandaranaike is an aristocrat; the son of one of Ceylon's oldest and richest planters, he was named West and Ridgway after the Governor who was a friend of his father. He is everything Sir John is not: well educated, a brilliant conversationalist, a secretary of the Oxford Union. Money has been around him for long enough not to glitter, and he leads a quiet family life in a large but simple house. His opponents criticise him because his wife salutes him in Kandyan fashion, and say that his conversion back to Buddhism is the result of ambition not faith—but gossip gives him no mistresses. His ambition is real. He broke with Mr Senanayake at the time when, unkind people say, he received a lot of telegrams telling him to resign and discovered, too late, that they had come from Communists.

Whatever the reasons for his leaving the United National Party nearly six years ago, Mr Bandaranaike made good use of his time in opposition. He discovered that power lies not in Colombo but in the villages, with the ayurvedic doctors and the school teachers who know only Sinhalese; in fact with the rural middle-class—that vast mass of voters who are not impressed by what the West thinks. Once he had discovered this, it became relatively easy to win votes. Mr Bandaranaike is now a staunch Buddhist; he addresses meetings in Sinhalese, wears the sarong in public (trousers at home), insists that Sinhalese should be the only state language and that Ceylon should get rid of British bases because "a people who have been colonised can never feel free in their hearts so long as they can see the uniforms of the colonisers on their soil" and, finally, making the key Kandyan voters his, he insists that Indian tea-garden labourers should remain disfranchised and go home.

The men around him, with the exception of Mr P. Gunewardene, are not well-known. Mr De Silva, the present Speaker, alone has administrative experience; he was a senior civil servant and established his popularity as settlement officer in newly reclaimed agricultural colonies. Mr Dahanayake, the Minister for Education, was also an MP before this election; he is a "Sinhalese only" fanatic

and formed his own tiny party on that issue before joining in the broad coalition which swept the polls. Since he assumed office he has done two things. He cancelled an examination because there had been the usual leakage of the questions; this austere honesty has thunderstruck Ceylon. He has also announced that only teachers trained in Sinhalese will be appointed to government jobs this year. Mr Philip Gunewardene, the Food Minister, is a Trotskyite. He was disqualified from elections last time because he went to jail after a riot, and his wife got elected to keep his seat warm. His first action has been to lower the price of rice by 10 cts per measure. After 30 years he has had the twin satisfaction of getting into power and seeing Stalin discredited all in the same week.

Angry Tamils

In most respects, the domestic programme of the Bandaranaike government is going to be less dramatic than it sounds. Schools will become secular, the western churches will lose their privileges, and Buddhism may gain a few. Sinhalese is to become the *de facto* state language, but local self-government will be encouraged so that in the north of the island the daily routine will be conducted in Tamil. The communal tension that has shown itself in this week's violence is likely to be kept high, however, if the government insists on Tamils sending their children to Tamil schools with the result that they would be at a perpetual disadvantage with the Sinhalese when competing for jobs in Colombo. Nationalisation will probably be confined to bus transport and insurance (both have in the past been sources of financial support for the UNP). Plantations are most unlikely to be nationalised; they provide Ceylon with one-third of its revenue and two-thirds of its foreign exchange; one does not kill the goose that lays the golden egg. The planters, however, will probably have to provide money for the gratuities with which the government hopes to induce Indians not to claim Ceylonese nationality but to settle in India.

Trouble on Bulgaria's Farms

BY A CORRESPONDENT LATELY IN BULGARIA

FIGURES given by Mr Yugov, the new Bulgarian premier, about the recent increase in collectivisation vividly illustrate the régime's determination to complete the process within the next three years. More than 77 per cent of peasant households and 75 per cent of arable land are now in the collectives. During the first four months of this year 282,000 families were induced to join collectives and the drive, though slowed down since, has certainly not been abandoned. It is only natural that during a season of intensive agricultural field work, the government should not press on with collectivisation too harshly. But the methods employed earlier in "persuading" the peasants to enter the collectives were not always strictly legal and it was publicly admitted—during the wave of criticism and self-criticism which followed Mr Chervenkov's dismissal—that the "voluntary principle" had not always been observed.

It is not easy to make out what, in the government's view, is "voluntary" and what is not. Many peasants who have recently succumbed to the collectivisation drive gave the same explanations of their action: their children had been told they would not be able to continue at school if their parents did not join; or, if one member of a family worked in a factory or elsewhere, it was hinted that the job would be forfeit if the family holding was not taken into the collective. Threats of loss of employment or of educational opportunities appear to be relatively legal methods of showing peasants the "advantages" of collective farming. When the Bulgarian communists talk of non-observance of the voluntary principle they are, it seems, referring to crude pressures, often aided locally by police or even military interference.

Much adverse comment has been levelled at the work of the collectives and at the government's agrarian policy generally. So widespread did this criticism become that the official press is now complaining of "enemies" who are trying to exploit this critical mood within the party and to "shatter confidence" in the co-operatives by telling the farmers that life would be worse inside them than it is outside. There must have been many who blamed Chervenkov for collectivisation and these "enemies" are now being forcefully reminded that the policy was not just the "temporary one of an individual" but a permanent party programme. If there are any who still think that a change in the government leadership might mean a new policy towards the remaining "free" peasants, they are being left in no doubt that the new administration intends to see collectivisation through to the bitter end.

Evading Criticism

Doubts and disagreements seem to have arisen within the party itself and within its appendage, the puppet Agrarian Union, because some members are being charged with having shared the attitude of the petty bourgeoisie and with raising claims which have "no real value" and are not in "conformity with reality." This is an obvious admission that the demands for drastic improvements inside the collectives, particularly in the payment and standard of living of their members, have become louder and that the government, while admitting that something must be done, is still neither able nor willing to make any basic revision of the prevailing system. How else can one interpret angry warnings to "self-appointed" agricultural specialists that the needs of the farms must comply with those of the national economy as a whole?

The government admits that there are shortcomings, but meanwhile, it seems to be seeking to evade criticism by promising "serious attention" to further mechanisation, the construction of new dams and irrigation systems, new fertilizer plants and so on. It also warns the peasants that the main improvement must be brought about by increased yields: that is, by harder work in the co-operatives for little more than the existing meagre rewards. But the régime will find that it has a difficult row to hoe. Its promises have been openly described by impatient opponents as mere "idle talk." Drastic revisions of the whole agricultural policy, including price policy, are being demanded as well as a rapid increase in the standard of life in the villages. It is being rumoured in Bulgaria that there is soon to be another session of the Central Committee devoted entirely to the problems of agriculture. This in itself is a sufficient indication of the régime's difficulties.

NOTES FROM CANADA

(With the exception of the first, these Notes are contributed by our Correspondent in Ottawa)

Unparliamentary

LAST Friday the parliamentary kettle in Ottawa, which had been whistling for some time, boiled over. As an article in *The Economist* of last week had explained, the Liberal government was already in trouble, despite its huge majority, owing to its need to hurry through its bill on the trans-Canada natural gas pipeline. In the eyes of the Opposition, already infuriated by the closure tactics used by Mr C. D. Howe, the Minister of Trade and Commerce, the last straw was Friday's announcement by the Speaker, Mr Beaudoin (a Liberal), that he had changed his mind about accepting a motion which would have upset the government's urgent timetable. When closure of the committee stage on the pipeline bill was moved a few hours later, there was a clamorous outcry against the Speaker. Conservative and CCF (socialist) MPs left their seats and brandished their fists at Mr Beaudoin; the mace itself seemed in jeopardy for a moment; and Mr Coldwell, the CCF leader, was heard above the general din to shout that "Parliament has ceased to function." Not for many years has such an "unparliamentary" scene been witnessed.

Comment in the Canadian press and among the public has not, however, laid the blame for this on the Opposition. It is widely felt that the Speaker had, at the least, failed to ensure that parliamentary justice was seen to be done; that Mr Howe has behaved too forcefully, while the Prime Minister, Mr St. Laurent, has not been forceful enough; and that the Liberal MPs had themselves set a bad example, for instance, by trying to drown Opposition protests with rousing choruses ranging from "Alouette" to "Home on the Range." If the good name of Parliament is now tarnished, it is argued that it was from the government benches that the first disrespectful gestures came.

★ ★ ★

Disquiet over American Capital

THE bitterness over the pipeline issue arises in part (as was pointed out last week) from the underlying controversy about how much United States capital Canada can safely absorb. Lord Home, the Secretary of State for Commonwealth Relations, recently became embroiled in this delicate political issue during his tour of Canada when, answering a journalist's question, he innocently remarked that Canada needs all the development capital it can get. In straight economic terms he was, of course, quite right. Moreover, the Liberal government has done very well out of prosperity, and its economic thinking is still dominated by Mr Howe, who is American born and on record as not caring about "the nationality of a dollar bill." It is on unassailable economic ground when it points out that the present rate of Canadian expansion would be impossible without the large inflow of American capital.

The Conservative opposition has no such easy case to make out. But it is much more sensitive to a certain undertone of uneasiness about the swift growth of American

financial control over many of Canada's most dynamic industries—oil, gas, mines, and, to a lesser degree, timber. American businessmen like to ensure control of most companies in which they invest, and many of them do not even make the shares of these companies available on the Canadian markets. The most sophisticated expression of disquiet about American economic domination is the observation, heard increasingly often, that a slower rate of development involving a smaller capital inflow might be in Canada's better interests. The least sophisticated, which everyone fears, would be a growth of ordinary anti-Americanism. This is not yet apparent to any serious degree, but there are potentialities which American as well as Canadian politicians would do well to note—though it probably lies more with American business leaders than with anybody else to reassure Canadian opinion.

★ ★ ★

Canada and the Commonwealth

THE traditional Canadian view of the Commonwealth is bound to be in evidence in any informal exchanges of view at this month's Prime Ministers' meeting in London. In Canadian eyes the admission of the Gold Coast or of any other African or Asian country which has advanced to self-government presents no difficulties. Indeed, it is no great exaggeration to say that in the Canadian view this is precisely what the Commonwealth is for. The value of the association will only be enhanced by the addition of new members which have graduated by the same route that Canada pioneered. But Ottawa will not take the responsibility of trying to hasten new admissions; the United Kingdom, it concedes, knows far more about the stability of newly-created democratic institutions in former colonial territories. In principle Canada holds that the sooner they can come to full membership the better; in practice it will tend to accept Britain's verdict on when that stage is reached.

The probable business at the Prime Ministers' meeting reinforces the Canadian conviction of the incalculable value of the Asian countries' membership of the Commonwealth. Most of the time is expected to be taken up by discussions on the position of Communist China, on Seato, on the Baghdad Pact and the new course of Russian tactics. From Canada's point of view, as a very close neighbour of the United States, it will be of vital importance to be able to discuss all these questions in full frankness, to hear the probably divergent views of India and Pakistan and to make acquaintance with the new leaders of Ceylon.

★ ★ ★

Mr Massey's Success

CANADA has always been proud of its part in leading the evolution of the British Empire into the present Commonwealth, but paradoxically it was the last of the "Old Dominions" to appoint a Governor-General from among its own citizens. That was 4½ years ago when Mr St. Laurent's Liberal government recommended the appointment of Mr Vincent Massey. Now the Queen has approved an extension of his term from February, 1957, to the spring of 1958. This extension is universally

popular; the original appointment was not. There were still a number of Canadians, perhaps more influential than numerous, who regretted the appointment of a native Canadian as the Queen's representative and feared that the dignity and impartiality of the office might be thereby impaired. Although their fears are not now removed in principle, they are completely removed as far as Mr Massey is concerned.

He has achieved a reconciliation of qualities which have too often been considered irreconcilable. The dignity and even the ceremony associated with the Crown have been increased rather than diminished. It was Mr Massey who on a cold winter day towards the end of 1952 revived the ceremonial practice of driving to the opening of Parliament in an open horse-drawn carriage with a mounted escort. At Government House in Ottawa, and everywhere else that he has visited in Canada, the ceremonial proprieties have been richly observed—even to the imaginative idea of flying the Governor-General's standard from a dog-sled on his Arctic tour this year. But along with this strict observance of all ceremonial niceties Mr Massey has shown a brilliant originality in bringing the Crown's representative into direct touch with the people of Canada. He has probably travelled more widely and entertained more varied sections of the community than any previous Governor-General. It may be that only a Canadian Governor-General could have achieved Mr Massey's brilliant combination of ceremony and simplicity. But the question remains whether any other Canadian can do it as well.

M. Duplessis Fights On

WHILE the federal election is not expected until next year, several provinces are holding elections for provincial Legislative Assemblies this summer. The chief interest lies in Quebec, where M. Maurice Duplessis is seeking to renew the mandate of the "Union Nationale" party which is his own creation. He was in power from 1936 until 1939 when the Liberals succeeded in their concerted effort to rally patriotic support for the national Canadian cause rather than the Quebec provincial cause. But M. Duplessis came back late in 1944 and has held office ever since.

In so far as any intellectual appeal affects Quebec elections, M. Duplessis's stock in trade is the defence of French Canadian interests, identity, race, language and religion against those whom he calls the "centralizers" at Ottawa. If Mr St. Laurent thought that he could take the sting out of this appeal by his new arrangements for federal-provincial taxation (which concedes a great deal to M. Duplessis), he has been quickly disillusioned. Although M. Duplessis will get an unconditional "equalization payment" of at least \$40 million a year besides levying all the taxes he fancies, he evidently still feels himself on strong enough ground to attack the federal government for encroaching on provincial rights. In all the less public electoral devices, involving strong party organization and a nicely measured distribution of favours, there is no sign that M. Duplessis has lost the master's touch. It will be a great surprise if the provincial Liberals can defeat him—with or without the support of some prominent federal Liberals.

HERE'S A STOP-WATCH THAT KEEPS ON GOING!

IT'S A SWISS CHRONOGRAPH—a wrist-watch and stop-watch in one. You can tell it by the two extra buttons, one on each side of the winder.

First you have a simple wrist-watch—a very good one though. Press one of the buttons, and it becomes a stop-watch; the sweep second hand starts from 12, moving one-fifth of a second at a time. Press again,

the hand stops. Press the other button and the hand returns to 12. And all the time, the minute and hour hands tick serenely on.

Get a good jeweller to demonstrate one for you. See the other wonderful watches from Switzerland—watches that wind themselves, that keep out damp and dust, calendar watches, jewellery watches... and many, many more for you to choose from.

Your jeweller's knowledge is your safeguard

Time is the art of the Swiss

Go to a jeweller, who provides full servicing. Get an expert to help you choose your watch, and he'll look after it for you all through its long life.

SWISS FEDERATION OF

WATCH MANUFACTURERS

THE ALOADAE, Ephiates and Otus were sons of Poseidon, the sea god. They grew one cubit in breadth and one fathom in height every year and eventually killed each other by accident, thus fulfilling the prophecy that they could not be killed by other men or gods. But before this, such was their vast strength, they chained Ares, god of war, and kept him, much against his will, in a brazen cask for thirteen months.

Brazen casks may be all very well for containing classical deities, but for more modern problems of packaging, aluminium and its alloys provide the necessary endurance, resistance and lightness, together with enough strength to contain most things.

THE BRITISH ALUMINIUM CO LTD

NORFOLK HOUSE ST JAMES'S SQUARE LONDON SW1

THE BUSINESS WORLD

Houses of Gold

WELKOM is not a health resort. It is a busy, bustling nine-year-old town, hotter and more dusty than the higher towns of the Witwatersrand, with a vigorous young life of its own. The most numerous visitors are not white. They come without their families but with their multi-coloured blankets and bundles of exotic *bric-à-brac* from the native territories, from the High Commission territories, and from Portuguese Africa for a sojourn of four to eighteen months and they move off from the reception centre to their compounds, their aptitude tests and their initial mine training. The whole place, from the magnificent Ernest Oppenheimer native hospital—as fine as anything of its kind in the world—to the European mineworkers' bungalows, looks new. The landscape is still largely unscarred by the sterile yellow dumps that defile the Rand. But two features of the panorama stand out.

All available depressions in the plain have been bought and turned into lakes of brackish water. They provide evidence of the chief technical problem of gold mining in the Orange Free State—the fact that though fresh water for the garden is not plentiful, brackish water from under the ground is embarrassingly abundant. The mines in the OFS last year pumped up water weighing nearly three times the tonnage of the ore they crushed, and left it to evaporate. The second peculiarity is the town hall: there is none. These are still early days at Welkom, but there is hardly another town in South Africa of over 20,000 European inhabitants that has no municipal building. And while that void remains the hardworking citizens of Welkom will remember the chief political problem of goldmining—the fact that on important issues, including native policy, the nationalists in power and the indus-

trialists who control the mines do not see eye to eye.

Investors, too, should keep those two warning signals in mind when trying to assess the achievements of the new gold mining areas, Orange Free State, Klerksdorp and Far West Rand and Bethal against the declining but still dominating production of the Central and Eastern Rand. They will buy gold shares, as they always have, when they distrust their own currencies. But the long term prosperity of the industry, without which those hedging facilities against the franc and against sterling would not exist, depends on the success of the vast investment that has gone and is still going into the new gold areas. In the Orange Free State that investment so far has been £167 million, £95 million of it found by the Anglo American group alone.

So far the news is good; South African gold production in 1955 was a record at over 14 million ounces. The whole and more than the whole of the extra production came from the new areas. Four Orange Free State gold mines, President Brand, President Steyn, Western Holdings (from the Anglo American stable) and St. Helena (under Union Corporation's management) began dividend payments. The ten thousand inch-pennyweight boreholes that startled the Stock Exchanges in the years just after the war have not yet produced the grades that the optimists anticipated. They have produced an uneven batch of mines and considerable geological difficulties. But with eleven of the twelve Orange Free State mines at work last year, the grade of ore crushed was about 7 dwt per ton, compared with about 4 dwt on the Rand. As more mines come into production and young mines get into an adult stride the grade on the OFS and at Klerksdorp should rise.

To risk judgment on the future

of any individual mine is hazardous (for promising propositions sometimes bring big disappointments), but the profits of the mining finance houses should continue to rise. Three that have reported for 1955, Anglo American, Union Corporation, and Central Mining show big rises for 1955, the result of bigger dividends from their mining investments. The mines they manage are still confronted with rising costs. The president of the Transvaal and OFS Chamber of Mines has estimated that sixteen mines on the Witwatersrand with low profit margins are vulnerable, but the advance in costs last year was somewhat below the recent annual average of 2s. 3d. per ton. The mines could also use still more African labour, though most mine managers would be embarrassed if they were suddenly offered 100 per cent of their labour quotas. For those mines that are selected uranium producers, uranium is now a steady source of income with the prospect that at the end of the ten year contracts, the price of uranium may not be so favourable, but that the costly plants will stand in as free assets to the companies. The gross gold revenue

of the Orange Free State has risen without a break from £230,000 in 1951 to £27½ million in 1955. In addition, at the end of last year the OFS mines are estimated to have drawn working profits at the rate of £3 million a year from uranium and sulphuric acid plants. The pay off from the great investment, at least as the Anglo American directors see it, has still far to go. It can be expected, they say, that over the next few years the monthly milling rate of the existing Orange Free State Mines will rise to more than twice the end-1955 rate.

Some of the mines of the Orange Free State must doubtless now be regarded as established propositions. About others the directors of Anglo American offer a clear warning. Loraine and Freddie are both working at a loss, Jeannette has been placed on a caretaker basis, and in the Klerksdorp area Ellaton will have a shorter life than had been expected. With that warning in mind, many investors will feel happier with the spread of a mining finance house behind them than with the shares of an individual mine.

The South African finance houses compete

vigorously with each other in prospecting and in sinking shafts quickly. They collaborate together on almost all other matters, holding investments in each other's properties, supplying directors to each other's companies. The chain that holds the mine to its finance house is usually not a majority investment. It is substantial investment plus an agreement for secretarial or technical services, often carrying the right of the finance houses to appoint the chairman and some members of the board. On the quality of its technical advisers—the consulting geologist, the consulting engineer, and the native affairs adviser—the success of the group largely depends. But selling a product for which there is always a market and never a variation in price leaves no room for competition on sales or labour policy.

The finance houses are also vendors of another commodity for which they do not enjoy either an insatiable market or a guaranteed price—gold shares. Profits from investment transactions last year were lower in all the mining finance accounts so far published. That is not an order of events that suits the finance houses. Their profits on share dealings are really profits on realisations. A finance company's interest in a mine it has proved and floated declines gradually until it reaches the minimum regarded as necessary to maintain management (perhaps 20 to 25 per cent of the capital). A mining company thus usually starts as a subsidiary of its finance house and moves out of that class though it remains administratively within the group.

Realisation by the finance companies must continue; it is their method of turning over their capital and using it afresh for new developments. And the kind of gold share market that obtained last year is the worst for them. London always has provided much of the finance for South Africa's gold mining. The difficulty is acknowledged by the directors of Anglo American, who have applied £549,496 to writing down investments below market values and set aside a further £500,000 against loans to associated and other companies. To write down investments when they have a book value of £38 million and a market value of £69.5 million looks like extreme caution, but Anglo American can afford to be cautious. Its cash and Treasury bills (not all of it, naturally, the product of the gold side of the group) last year stood at £40.4 million compared with £29.7 million at the end of 1954.

Six of the eleven mines of the Orange Free State are of the Anglo American stable, but for all the mining finance houses the Orange Free State is still a small factor in total income. Particularly is this so with Anglo American which, linked with De Beers and with Rhodesian Anglo American, spreads its investments through gold, diamonds, copper, coal and a host of industries. The importance of the progress in the new gold fields still lies mainly in the future. Thus far there has been more than enough gold from them to offset the decline in the output from the old mines. The gold field of the central and eastern Rand is, however, nearly

three generations old: its production must tail away faster—particularly if, when present uranium contracts expire, there is no longer an incentive for certain mines to work ore that on its gold return alone is barely payable. The ultimate capacity of the Far West Rand, the Klerksdorp area, the Orange Free State and of the Bethal area in which Union Corporation has specialised is still unknown. It depends partly on geological factors of which the amount of accumulated water still under

the ground and the amount of faulting are the most obvious. If mining is more difficult and more costly in the OFS than was at first envisaged, there are also sure to be some winners among the mines that have been proved. Meanwhile investment income of the finance houses has been good enough to outweigh the decline in share dealing profits in a year that was particularly bad for share dealing, and the new mines have not reached maximum production.

Measuring the National Income

FOR the past fifteen years the statistical high priesthood have handed down to the laity an annual set of figures on Britain's national income and expenditure. This exercise started as a slim White Paper; nowadays it has become a portentous Blue Book, preceded by a trailer which is itself of sufficient complexity to scare those who are fearful of figures. It needs a certain courage to pick a way through the baffling concepts and complicated figures in which these econometricians of the Central Statistical Office have to deal.

Yet they are essentially modest men and this week they have made it possible for the ordinary man to enter their arcanum. They have come clean with a full description of what the national income accounts mean and how they are put together. Their book* is not easy going, but its frankness and lucidity deserve high praise. Since the measurement of national incomes is a young technique, with perhaps more of art in it than science, it is bound to suffer from limitations and weaknesses—some common to all such figures and some peculiarly British. Despite the rapid advances in national income accounting and the progress towards common international standards of measurement, there are two abiding difficulties: first, to define what should and can be measured; secondly, to get accurate measurement.

National income is defined most simply as a measure of the value of the goods and services becoming available to the nation from its economic activity. To this the statisticians add a rider; the contribution from some kinds of activity defies measurement—the housewife's services, for instance, or those of the handyman about the home—and in general the line has to be drawn where goods and services are normally exchanged for money, with allowance for certain income in kind, such as food consumed on farms. If the object of the exercise were merely to get a total figure for the national income, many problems of definition could be avoided. But the real problem is to record all the nation's transactions in such a way so that the relations between the different parts of the economy can be studied. In

fact, the national income estimates can be regarded, and are built up, in three ways. The total is a sum of incomes; it is also a sum of expenditures; and finally it is a sum of the nation's output. Each of these methods provides useful cross-checks on the others, and each supplies a different set of economic indicators.

Many of the concepts used in building up the national income accounts are straightforward; others need stricter, and sometimes rather artificial, definition. The treatment of current and capital expenditure is an outstanding example. How should expenditure on a motor car or a refrigerator be entered? Ideally the services rendered by such durable goods should be spread, like a rent, over the lifetime of the article; but the only practicable case of this treatment is housing, where an assumed rent is recorded for owner-occupiers. Purchases of durable goods generally are counted as consumption only in the year when they are made.

The right treatment of fixed capital is still the weakest section of the framework of the national income statistics. The official figures deduct no provision for depreciation, so that it is impossible to measure the yearly net change in the nation's wealth, or to say what the true national income is. Some would argue that no really satisfactory method of allowing for depreciation can be devised and most people would agree that the normal accounting practice of providing for depreciation on the basis of the original cost of the asset would not serve. The statistical and accounting hazards are great, but is it impossible to attempt to measure changes in the written down value of assets, allowing for price movements? The figures for stocks are already divided between their two constituents of change in volume and change in price, and the result is meaningful even though the exercise is precarious.

The national income statisticians have to draw on a very wide variety of sources for their data, little of which is designed specifically for their use. Chief among them are tax assessments, the census of production and the government accounts. All of these are related to financial and not calendar years. For PAYE and most of the government accounting, the change-over is fairly straightforward but companies use their own accounting years both for tax and census returns.

* National Income Statistics—Sources and Methods. Central Statistical Office. HMSO. 387 pages. 25s.

Company statistics present another timing difficulty. The national income statistics for 1955 are now being completed, yet 1953 is the latest year for which complete profit assessments are available. Later figures have to be projected largely on forecasts provided each January to the Inland Revenue by companies whose profits are thought likely to exceed £10,000 in the coming year. The fact that the Revenue is skilled in this kind of estimate does not make up for a serious gap in up-to-date knowledge about this important component in the national income—which incidentally provides the bulk of the nation's savings and has been allowed to become a political cockshy.

The three main sources of information on the national income throw little light on one important element—how personal incomes are spent. The measurement of personal expenditure draws on a great variety of sources—retail statistics, the national food survey and customs statistics among them—and there is an obvious danger of unevenness in the results. The total consumption of a particular class of goods may be known with reasonable accuracy, but there is often little guidance about how much is bought on business account and how much on personal account. Some rather arbitrary assumptions have to be made; just under half of all new cars, it is assumed, are bought by business firms; about 5 per cent of spirits and wine; and about one-fifth of the passenger services of British Railways are regarded as being provided for businessmen and civil servants. There are no ways of proving these assumptions, and it may be that the share of business in consumption has been underestimated. If so, it would mean that personal consumption had been over-estimated and that, in consequence, personal savings (which are a residual figure) had been cast too low.

One important contribution in this new book is a rough assessment of the degree of reliability of the main figures. They are graded in three groups, according to whether the error is reckoned to be under 3 per cent either way, between 3 and 10 per cent, or over 10 per cent. The accompanying table reproduces the grading of some of the main series and then calculates the sort of range within which the figures might in fact lie, assuming a midway error in the group.

The first reflection on looking at the last column in the table is that the Blue Books have been misleading in putting out figures which, by not being "rounded-off" at least to the nearest £5 million or £10 million, appear to give a precision which they do not possess. The defence of such doubtful precision is that the error in the actual level of the figures is likely to be greater than that in the differences from year to year and

that "rounding-off" of small figures could distort these comparisons. It is, nevertheless, apparent that users of these statistics should have this reliability guide very much in mind. There is little to be said for arguments revolving round changes in stocks from one year to the next of, say, £50 million, when the potential swing of error in the actual figures is of the same order. And the components of these aggregated figures shown in the table tend to be less reliable not only because the errors when amalgamated offset each other to some extent, but also because separate checks can be made on the totals. The argument that the accuracy of the whole is greater than that of the parts would, indeed, suggest that a 1½ per cent error in the gross national product is excessive; if it is not, some of the fancy calculations that are based on changes in output from year to year would be very shaky.

It is not only the most recent year's estimates which are liable to such margins of error. Gradings are also given for the latest year but one, and, surprisingly, they show scarcely any improvement. Why, then, do such drastic revisions so often occur between one Blue Book and the next? The explanation often rests in improved definitions and new sources of information. If so, improvement will reach a stage when major revisions become much less likely. But when they occur between one year and the next, might they not have a word of explanation? After all, the wizards of Great George Street have gone in for the dangerous business of taking the public into their confidence; medicine men should beware when the fuzzy-wuzzies have any ground for doubting their incantations.

NATIONAL INCOME—RELIABILITY OF ESTIMATES

- A ± less than 3 per cent (assumed in final column to be 1½ per cent).
B ± 3 per cent to 10 per cent (assumed 6½ per cent).
C ± more than 10 per cent (assumed 15 per cent).

	Grading	1955 Preliminary Estimate (£ million)	Likely Range of Estimate (£ million)
Incomes

Business Notes

No Plateau in Throgmorton Street

ON Tuesday the London stock market tottered to the end of one of its most dismal accounts on record. In that account the *Financial Times* ordinary index had fallen by 8.4 points to 175.6, the Government securities index by 1.88 points to 84.76 and the fixed interest index by 1.74 points to 94.72. On one day alone the ordinary index fell a clear 5 points, and on Monday War Loan touched its lowest point ever at 69½, putting it on a 5 per cent yield. Sellers were in the market, though not in really heavy array, and there were no buyers. And why should there be? Sterling was weak, commodity prices had been falling, the gold and dollar figures were unimpressive and in the background loomed the spectre of wage claims and labour disputes.

The market was sensitive, and to the sound of Mr Macmillan's set speeches a slight rally took place on Wednesday, bringing the ordinary index up to 176.9 and the Government securities index to 85.31. Sterling was a little better, and metal prices had hardened, taking commodity shares up with them. But there were no signs of "grooming" in the gilt-edged market in advance of the Government's re-funding operation on the 1954-56 War Bonds. For many months now the authorities have continued to be net sellers, taking in the 1954-56 issue in exchange for such short-dated stocks as 5 per cent Exchequer and 4 per cent Conversion, and it may be that they are hoping for more sellers of the 1954-56 bonds before the stock goes ex-dividend on July 9th. At the moment the market turns on the slight nuances in the metaphors which Mr Macmillan uses. Its future course will depend on whether economic policy is to be determined by realism and resolution or whether equivocation and expediency will take charge. The ironic outcome, in the short run, is that the first course would be painful for the markets as for many other people,

whereas the second would let loose the false warmth of complacency—for a time.

Pray Silence for Sterling

STERLING does not thrive on the feast of ministerial oratory with which it has recently been surfeited. Words like "disaster" and "the road to ruin" from the lips of the Chancellor of the Exchequer are not always read carefully in their context. They have recently led to some selling of sterling by foreign operators. Sterling has been sold against dollars in the official market, partly on commercial account but also by American interests with sterling commitments which are only covered by forward sales when sterling itself comes under serious pressure. The official rate dipped at one time to \$2.80½ and might well have gone below parity but for some intervention on the part of the Exchange Equalisation Account, particularly on Tuesday when the weakness of sterling was greatest. There has since been a modest recovery following the more reassuring utterances by the Chancellor both in Parliament and at the luncheon table. On Thursday, the pound was supported, oddly enough, by the prospect that the Texas Company will have to buy a lot of sterling if its offer for Trinidad Oil goes through.

The heaviest selling of sterling has come from the Continent and particularly from Germany. Against the D-mark sterling has fallen below the 11.70 line and has been quoted as low as 11.69½; this is still some way from the lower "gold point" of 11.67½, but it is the lowest figure for sterling since last September. A small part of the demand for D-marks is said to be due to the movement of short-term funds from London to Frankfurt on Swiss account. Prevailing short-term interest and forward exchange rates would make such a switch just profitable. This, however, is probably a small factor in the situation. The main demand for D-marks is commercial in character, reflecting the current strength of the German balance of payments. Much of it comes from the Scandinavian countries and France, and the buying of marks has been financed in large part by sales of sterling.

Apart from interest arbitrage and commercial demand, there has also been some recrudescence of speculative operations against sterling, evidence of which is provided by the fact that a number of foreign exchange operators have been looking around for facilities to borrow sterling for a few days in the London market. The substantial short position in sterling of two months ago had been considerably reduced earlier in May—a fact that must make the May gold and dollar reserve even less impressive—but this week short positions were again being expanded.

A Disappointing Gold Gain

THE exchange market was unimpressed by the Treasury's announcement on Monday of the movement in the reserves in May. The rise of \$41 million was taken as a poor augury for the months of seasonal pressure ahead. Another disappointing feature was the fall in the month's surplus with the European Payments Union, from £14 million to £8 million—to be settled next week by a gold payment of \$17 million. The reserves in May benefited from the receipt of \$29 million in respect of the April surplus, and the deterioration in May is still more apparent if the EPU settlement is reckoned in the month to which it relates. On this basis, the surplus before allowing for receipts of defence aid has fallen back from \$78 million in March and \$76 million in April to \$26 million—easily the lowest this year.

RESERVES IN PERSPECTIVE

(\$ million)	Gold payments (—) or receipts (+)*		US Aid	Change in Reserves	Reserves at end of Period
	EPU Settlement	Other Dollar Accounts			
1956 —					
January	— 23	+ 46	6	+ 29	2,149
February	— 8	+ 63	6	+ 61	2,210
March	— 16	+ 78	5	+ 67	2,277
April	—	+ 47	4	+ 51	2,328
May	+ 29	+ 9	3	+ 41	2,369
Total Jan.-May	— 18	+ 243	24	+ 249	2,369
Jan.-May:					
1955	+ 43	— 203	84	— 76	2,686
1954	+ 51	+ 311	75	+ 467	2,985
1953	+ 127	+ 209	139	+ 475	2,321

* Settlements with EPU governed by balance in previous month.

The performance has, however, been rather disappointing right through this season of favourable influences. This is strikingly illustrated in the accompanying table, which compares the gold and dollar balance in the first five months of this year with that in the corresponding periods in the past three years. The rise in the reserves by \$249 million this year looks well against the fall of \$76 million in 1955—but is placed in truer perspective by the gains of \$467 million in 1954 and \$475 million in 1953. A fair part of the shortfall, admittedly, is attributable to lower receipts of defence aid, which is now tailing off to its end; but, on the other hand, considerably more has been received in dollars from off-shore sales and from spendings by United States forces in Britain. The underlying deterioration is in the commercial balance. This year, as the Chancellor pointed out on Wednesday, the main influence does not seem to be attributable to the United Kingdom—visible exports to the United States and Canada have been running at record levels. But the dollar earnings of the overseas sterling countries have been considerably reduced by the fall in the prices of most of the main sterling export commodities.

Bill Rate Up

THE Treasury bill rate again rose above 5 per cent at the tender on Friday last, from the level of just over 4½ per cent at which it had been held since end-April. The discount market had ample reason to reverse the earlier trend—which had brought the rate down from over 5½ per cent on the day after the increase in Bank rate in mid-February, and just under 5½ per cent early in April. The market's increase in the rate by ½ per cent last Friday was stimulated partly by the immediate need to restore its dealing margins, which had been squeezed by the credit stringency in some cases almost to vanishing point.

This consideration, moreover, was reinforced by the weakness of the gilt-edged market and of sterling, not to mention the Chancellor's strictures. The gilt-edged market as a whole has risen in the middle of this week, but the recovery has not extended to the shorts. And sterling has weakened further, in particular against Continental currencies. On the other hand, credit conditions in Lombard Street have been slightly less difficult than in the past week or two, and the market has needed no help from the Bank, either through special purchases of bills or through loans at Bank rate, except on Thursday when a trifling amount was taken at Bank rate. While the weakness in sterling and gilt-edged may for the moment be sufficient by themselves to maintain the bill rate at its current level, or quite possibly even to raise it further, it would be more reassuring if the authorities themselves maintained the requisite degree of pressure through firm tactics in the short loan market.

Texas Offer for Trinidad Oil

THE Texas Company's offer of 80s. 3d. for each 5s. stock unit of the £3,934,685 ordinary capital of the Trinidad Oil Company (formerly Trinidad Leaseholds), a total bid of £62.3 million, is the biggest take over bid of modern times. It is a move that has taken the alert oil press in the United States, as well as the London stock market, completely by surprise. Although the offer is still subject to "certain conditions"—which presumably include the Treasury permission required before the control of a British company can pass outside British domicile—the market apparently believes that these conditions can be met, since the stock, which was priced at 41s. 6d. on Wednesday night before the news came, closed at 72s. 6d. on Thursday after the directors had "strongly advised" stockholders not to part with their shares.

Although Trinidad Oil paid a tax free dividend of 21½ per cent on £3,278,904 capital in 1954-55, there is not enough in its earnings figures to justify a doubling of the market price of its shares. Nor is this justified by the prospects for its crude oil and refining operations in Trinidad. The reasons for the doubled valuation put on its operations by the American company must lie elsewhere. The Texas Company sold its European marketing facilities at the end of 1946 to Caltex, a company in which it has a 50/50 share with Standard Oil of California. As a result of this and of a previous agreement, it secured access to

Middle East crude oil supplies, through a half interest in the Bahrain Petroleum Company and a 30 per cent interest in Aramco; now it also has an 8 per cent interest in the Iranian Oil Consortium. Since Caltex already has a half interest, with Trinidad Oil, in the Regent Oil Company in Britain, the Texas Company already has an indirect link with Trinidad Oil. By obtaining control it should be able to provide much needed additional outlets in Europe for its Arabian and Iranian crude oil.

It is also significant that demand for oil in the Eastern Hemisphere and in the United Kingdom itself increased last year at the rapid rate of 11 per cent, while the rise in the Texas company's domestic American market was only 6 per cent; this difference in pace is expected to continue. A third attraction for the Texas company, which already has widespread interests north of the border, is the investment of the Trinidad Oil Company in Canada, where it has a 90 per cent interest in Regent Refining (Canada). This subsidiary has been expanding its crude oil development programmes, and a large share of the parent company's capital expenditure has recently also been in Canada.

A Little More Unemployment

UNEMPLOYMENT in Britain on May 14th—measured as an absolute number or as a percentage of the estimated number of employees—was slightly higher than in May 1955. The margin was small—237,000 were registered as unemployed three weeks ago, against 223,000 in mid-May 1955—but it was the first time for a long while that unemployment had exceeded the level a year before. The figures of employment, too, suggest that a greater fall has taken place this winter than for several years, and that there has been a smaller recovery than usual in employment this spring.

Figures of employment and unemployment do not change neatly in unison: there are always new people entering the labour force, and others leaving it. During recent months, with the first significant effects of the credit squeeze appearing in industrial production, it seems likely that more of these marginal workers—married women and old men leaving jobs, who may never register as unemployed—have been leaving industry than the simple unemployment figures show. But now discernible increases in the rate of unemployment are appearing in one or two areas. The percentage in the Midlands, for example, is no more than 1 per cent now: but it was only half of one per cent a year ago.

Switch Within Building

BUILDING output in the first three months of this year, far from showing any signs of slackening as a result of credit restraint, actually rose by about 12 per cent in value over the corresponding months of 1955, according to the Ministry of Works. But the Ministry's new index of the cost of new building work shows a six per cent increase over the same period; and the growth in real terms of 5-6 per cent may largely be explained by the much more severe and prolonged cold spell that disrupted outdoor activity in

early 1955. The large number of industrial building contracts placed last year and the time it takes for credit restraint and cuts in subsidies to affect the public house-building programme made some hump in building activity likely during the first half of this year.

Within this increase, the switch from house building to other forms of social investment and to industrial and commercial building has continued. About 18 per cent fewer houses were completed between January and March—although the number still under construction rose slightly—and the private builder is fast catching up with the declining pace of local authority building. The total labour force has grown but there are still more vacancies than unemployed building craftsmen to fill them. Presumably most of them are finding it possible to switch to other kinds of contracts. New work other than housing rose a quarter in value in the first three months. This included a 30 per cent increase in expenditure on industrial building which, so far at least, tallies fairly closely with the information the Board of Trade gathered last year about industry's intended investment in 1956 in new factories.

Sir Bernard Docker and BSA

AMID the TV interviews, the pink champagne and the popular press circus atmosphere that has surrounded the episode of Sir Bernard Docker and BSA, facts tend to become somewhat blurred. Given the imminent cannonade of circulars and the possibility of action in the courts both sides have shown natural reticence, since the matter became public a week ago, in airing the substance of their differences.

Briefly the hard facts can be stated. On Thursday of last week the Birmingham Small Arms Company announced that Sir Bernard Docker had ceased to be a director of the company and no longer held the offices of chairman and managing director. Sir Bernard immediately countered with a statement that "a certain resolution" by the board in no way affected the stability of the company, but that he was considering "whether in all the circumstances and in the best interests of the company, the shareholders and myself, I should discuss the matter with them, or take certain proceedings at law." He ended by stating "I have no more to say now, as I do not desire in any way to injure the company." The following day the new chairman of BSA disclosed that the resolution to remove Sir Bernard from the board had been passed by six votes to three. That sums up the official statements so far issued.

But Sir Bernard has, in fact, said more. He has disclosed in private, but for quotation, that one of the matters in dispute was the amount of expenses charged to the company and incurred in publicising Daimler cars—in particular an item of £7,000 to £8,000 for dresses and a mink coat worn by Lady Docker at the Paris Motor Show. This was queried by the tax authorities and then paid by Sir Bernard. A second issue was opposition to Sir Bernard's proposal that a relation of Lady Docker should be elected to the main BSA board. A third, which may explain the sensitivity of the directors and of some of the big shareholders, was the decline in the profits of the Daimler Company since the beginning of this year. To all these disclosures Sir Bernard has added the information that he proposes to call a special

meeting of shareholders of BSA, for which he needs the support of shareholders holding 10 per cent of the equity. He himself controls 100,000 shares and he would need support from holders of 570,000 shares in all for his purpose.

Among the large shareholders are institutions in the insurance world which only intervene directly in the affairs of companies in which they are interested when they become concerned about them. It seems reasonable to assume that some such concern may have been felt on this occasion and that some initiative was taken, for the "rebels" on the board do not between them control more than a fraction of the shares held by Sir Bernard. The deployment of the forces involved will be as interesting a revelation of the coming proceedings as the airing of the real issues at stake.

More Rubber for China?

MALAYA is naturally pleased that Britain has lifted the five-year-old ban on the export of rubber to China, even though it may be of little immediate help. The ban irritated Malaya because it was ineffective and discriminatory. China could obtain rubber from other producing countries that did not enforce the United Nations' ban; and it could obtain Malayan rubber, if need be, from Russia, since restrictions on exports to Russia were removed two years ago. There is little reason to suppose that China has not been able to get all the rubber it needs. China's total imports may not increase merely because the ban has been lifted, but it may well buy directly in Singapore, and give the market there some much-needed support. The withdrawal of the ban follows the British Government's recent announcement that it will be more liberal in granting exemptions to the strategic embargo on exports to China of goods which are not on the embargo list for Russia and the European satellites; with the principal exception of rubber these goods are of more interest to producers in Britain than the Colonies. Increased use of the exemptions procedure is an interim step until the American government can bring itself to agree that the Chinese list should be no more restrictive than the Russian. For political reasons some semblance of control on exports of rubber to China has been maintained; individual shipments will normally be limited to 2,000 tons at a time.

Rubber prices rallied after the news of the relaxation, closing on Thursday at 23d. a lb, a gain of 1d. on the week. But there was little buying by consumers. A possibility of more business with China must be set against the hard fact of increasing unemployment in the American motor car and tyre manufacturing industries. Last year the American motor car industry used roughly 500,000 tons of rubber (natural and synthetic) for tyres and other equipment, equal to one-third of total American rubber consumption. If the latest forecast of car production this year proves correct, the industry's consumption of rubber could fall by about one-fifth. Now that the big tyre manufacturers are producers of synthetic rubber, natural rubber would presumably have to fall well below the price of synthetic before they would be tempted to use more natural rubber at the expense of synthetic. It is those considerations, and the gloomy news from the British motor industry that weigh on the rubber market now.

Building Societies' Rates

A FAIR number of the smaller and medium societies in the Building Societies Association are now paying 3½ per cent, tax free, on their share accounts. Recently they were joined by the Provincial, ranking sixth in the movement, and by Bingley, another Yorkshire society, ranking eighteenth. Two London societies, Lambeth and Fourth City, have put their rates on shares up to 3½ per cent, tax free. The reason why the building societies are not holding a firm line is clear. Shareholders in the movement, caught in the credit squeeze, are withdrawing their savings—largely to meet their spending commitments. Withdrawals have been particularly heavy in the smaller societies, notably in the Metropolitan area; some members of the movement argue that in addition to the pressure of the credit squeeze the troubles of Exeter Benefit last year have thrown shadow on the standing of the smallest societies.

Withdrawals are not pressing so heavily on the giants of the movement. Over the last few months withdrawals from their share accounts have certainly been heavy, but they have not jumped so suddenly ahead as they did a year ago. With the flow of new money remaining reasonably steady, the big societies have been able to hold their own—and to leave their rates on shares at 3 per cent. But deposit accounts, from which companies have been withdrawing short-term money, are still moving erratically and the societies are faced with a large unsatisfied demand for new mortgages.

Sufficient holes have been knocked in the dyke of the Building Societies Association to stir up a keen debate about Mr Algernon Denham's advocacy from his place as the president of Halifax of a two-tier structure of interest rates, with the largest societies paying shareholders ½ per cent less than the smaller ones. Some would claim that *de facto* and somewhat informally this two-tier structure is already being established. Should it be given the blessing of formal recognition? The answer is "probably not," for it might be impossible to draw a formal line of demarcation between "large" and "small" societies. The best hope of those who support Mr Denham's arguments is that a loose, informal loyalty will hold the larger societies together. They would then have to rely on their long-established reputations, actively kept in being by large numbers of branch offices, to withstand the competition of higher interest rates from the smaller, local societies. But some may reply what is good for Halifax is not necessarily good for them and that they must be free to judge the issue in their own circumstances. In the next few months, however, something will have to be decided, for the autumn will bring new and attractive baits for the small saver—once more posing the question whether building societies' rates as a whole are too low.

Trade Dividends from Gatt

THE results of the fourth round of Gatt tariff negotiations were announced in Geneva on Thursday in the form of massive schedules of the new tariff rates. The

China cups

& Japanese lanterns

Pottery and paper novelties are merely two among hundreds of things which more than 80 industries are making better, faster, and more cheaply with the aid of starches, glucose, and dextrines.

concessions achieved as a result of the last series of negotiations can only be measured by comparing the latest documents with those issued after the 1950-51 third round negotiations at Torquay. The results as they affect the United Kingdom have also been published in a White Paper. The total concessions secured from the conclusion of 57 bilateral agreements between 22 countries which negotiated in Geneva affect trade amounting altogether to \$2,500 million. The results obtained reveal the dominant position of the United States, not merely in the timing of the latest round of negotiations, but in the measure of the concessions exchanged. The timing of the negotiations was conditioned by the fact that the first of the three tranches of 5 per cent tariff cuts allowed by last year's Reciprocal Trade Agreements Act had to be applied before July 1, 1956, or be lost for ever. The maximum concessions that could be made by the United States amounted to 15 per cent of the existing tariffs or a reduction to 50 per cent of any *ad valorem* duty above that figure. Most of the cuts conceded by the United States in the Geneva discussions were of the order of 15 per cent spread over three years and this necessarily determined the magnitude of the reciprocal concessions made by other countries.

The most important negotiations held by the United Kingdom delegation were those with the United States, Western Germany and the Scandinavian countries. All told, Britain granted concessions on items which in 1954 involved trade of £94 million and secured concessions on trade amounting to £104 million. From the United States the United Kingdom has obtained reductions in duties on motor cars, planes, electric motors, linen, footwear, wool clothing, china clay and whisky. Some of these were intended as an offset to last year's increase in the import duty on bicycles. For the rest they were answered in the main by cuts in British import duties on machinery and tools (from 20 to 17½ per cent), cars (from 33½ to 30 per cent) and aircraft (from 20 to 17½ per cent). Britain made small reductions in certain steel duties, as did the United States, and also the Coal-Steel Community, which negotiated with the Americans on behalf of Germany, France and Italy. The most substantial concession made by the United Kingdom in the course of negotiations was probably the cut from 16½ to 14 per cent in the duty on imports of certain types of paper. This was conceded to the Scandinavians in exchange for lower duties on motor-car tyres, machinery, plastics and other items. This is one of the few concessions which involves a preferential margin since there is a Canadian interest in the paper preference. This, however, is not a contractual preference under the Ottawa Agreement, since Canada in 1947 waived all its contractual preferences with the United Kingdom.

The results of the Geneva fourth round of tariff negotiations may appear modest when weighed in terms of the concessions actually exchanged, but they apply to a wide variety of items in which there is a substantial volume of trade. Further, they maintain the momentum of the movement towards freer trade and for that reason alone are to be welcomed. It would have been unreasonable to expect from the latest negotiations results comparable to those of the earlier rounds; in this field a law of diminishing returns inexorably applies—particularly when, as is now the case, a large number of participating countries have such low tariffs that they are virtually deprived of bargaining power.

Cold Sense on Printing

INSTEAD of the racy remarks about competition in the newspaper business with which he often regales the annual meeting of Daily Mirror Newspapers Ltd., Mr Cecil King this week gave his shareholders a cold and dispassionate review of the labour situation in the London printing industry—less colourful, but equally penetrating. He outlined the unbalanced structure of trade union organisation within the industry, in which the large majority of workers in newspaper printing, for example, are members of the two “non-craft” unions in the industry, while the seven craft unions, inhabiting “one of the strongest citadels of craft unionism in the country,” have in fact fewer members. In this trade, as elsewhere, flat rate increases in wages across the industry—to which the craft unions agreed—have had the effect of whittling down the differentials to which they cling as a monetary reward for skill. Today the non-craft unions are the most uncompromising in enforcing their claims for more men on jobs and more money for them—while the craft unions, not to be outdone, are restricting apprenticeship to keep their numbers to a minimum, enabling them to argue their own claims on the basis of labour shortage. The genuine amount of skill actually required is often questionable, and some skilled men are doing work unskilled men could do just as well; but union restrictions and demarcation lines make it impossible for most unskilled men to obtain any promotion, which throws them back to concentrate on pushing up their take-home pay.

Mr King, again characteristically, had no kinder words for his colleagues in newspaper management, or their own association:

The Newspaper Proprietors Association has in general failed to give them the necessary support and has shown itself to be a feeble body on most labour matters. . . . No one denies that the industry is peculiarly vulnerable to strikes, but it is highly questionable whether the threat of strike action has in fact been diminished by a vapid theory that the unions should be appeased at all costs.

Perhaps less characteristically, he had no solution to offer—nor any confidence to hold out to his shareholders that the characteristic process by which this industry periodically takes time out for a good gnaw at its own vitals will not continue.

Development Areas Come Into Line

FOR the time being no more public money will be put into building or extending factories in the development areas—except in “cases of special importance or emergency.” This decision, announced in the Commons this week, is in line with the Government's restraint upon excessive investment, but it is in fact little more than a timely recognition of changed conditions. For it has long been clear that these particular powers bestowed by the Distribution of Industry Act have largely become unnecessary, with the general tone of new prosperity now displayed in most of these areas. They employ 18 per cent of the

(Continued on page 1021)

Europe's Fuel Gap

DURING the past eight years fuel consumption in the rest of Western Europe has been rising about three times as fast as it has in Britain, and though the Continental coal industries have managed to expand output faster than the National Coal Board, they have been even less able to cope with the surge of total demand. Britain's fuel problem is certainly the most publicised of any in Europe—perhaps because Britain realised first what the trends implied—but it is not in all ways the most difficult. In 1948 the other countries in the Organisation for European Economic Co-operation used fuel equivalent to about 310 million metric tons of coal, and output from their own mines covered about 60 per cent of it. Their consumption last year had risen to about 475 million tons of "coal equivalent," towards which their mines supplied some 250 million tons, not much over half of the total. Even last year coal output here covered nearly 90 per cent of total British fuel consumption.

Other countries in Western Europe have much more hydro-electricity than Britain; some have oil and natural gas as well. There is no common pattern of energy among the 17 OEEC countries. But a group of experts who have been studying the likely development of fuel demand and supplies in the OEEC area, led by Sir Harold Hartley, have concluded in a report published this week that most of these countries may soon face a common predicament. If they are to achieve the economic expansion that on recent performance looks to be within their powers, their total

demand for energy is likely far to outrun the supplies at present expected to come from domestic resources.

This very broad estimate of the size of Western Europe's fuel problem has been arrived at by methods of projecting fuel demand that have become fairly familiar in the last couple of years. But it is one to which the rather official stamp of any survey issued by OEEC—as compared, for example, with the more idiosyncratic calculations of the Economic Commission for Europe—lends some special weight. The group consisted of fuel experts in their own right; it had the benefit of the best national estimates, official and unofficial, of energy demand and supplies in each member country; its secretariat prepared independent estimates for each member nation and for the 17 nations as a whole by various methods; and it

FUEL CONSUMPTION AND SUPPLY FORECAST IN THE OEEC AREA, 1960 AND 1975

(Million tons of Coal equivalent)

	1955	1960	1975
Inland Consumption:			
Mean of estimates	730	840	1,200
Indigenous production:			
Coal	478	500	520
Brown coal	31	35	35
Hydro power	57	75	130
Crude oil	13	25	50
Natural gas	5	10	20
Total	584	645	755
Potential "Fuel Gap"	146	195	445
Covered by imports of:			
Nuclear fuels	—	—	80
Coal	29	40	50
Oil	117	155	345

had the benefit of similar estimates from several of the major oil companies—who have the greatest possible interest in getting these particular sums right for themselves.

This answer thus reached suggests that energy consumption in the OEEC area, which totalled about 730 million metric tons of "coal equivalent" in 1955, might reach 820-860 million metric tons by 1960 and 1,100-1,300 million metric tons by 1975.

What about supplies of fuel? From plans now in train, the experts can see an increase in indigenous production of the "conventional fuels" from the 584 million metric tons (measured as coal) of last year to perhaps 645 million tons by 1960 and 755 million

tons by 1975. The arithmetic of the fuel gap is depressingly easy: the equivalent of nearly 200 million tons of coal may need to be imported by 1960 and of nearly 450 million tons by 1975.

These experts, perhaps more firmly than any other forecasters of recent years, are concerned to get the prospects of the unconventional fuel, nuclear energy, into the right perspective. Without disputing that it will pay Britain, and probably some other countries in Western Europe, to build all the nuclear power stations they can in the period, the experts are clear that for many years to come "coal must remain the mainstay of the Western European energy economy. We are all agreed that today its future is being seriously prejudiced by misconceptions in the public mind as to the part they expect nuclear energy to play in the near future." On all—including atomic—advice, they themselves put the likely contribution of nuclear energy in Western Europe by 1975 at perhaps the equivalent of 80 million tons of coal, which would meet only about 8 per cent of the OEEC area's total fuel demand.

This leads the experts to two conclusions: first, the inevitable estimate that Western Europe will need vastly increased imports of oil; second, the rather less usual suggestion that it can and ought also, by putting sufficient effort and investment in, get significantly more coal than the present snail's pace of growth appears to offer. They urge considerable increases in coal investment not merely because coal output, in terms of the capital cost of getting an extra ton, is still perhaps the cheapest fuel production to increase of any. They are concerned—as they may well be—with the possible effect upon the balance of payments countries in Western Europe of importing vast amounts of extra fuel.

(Continued from page 1019)

total insured population and "serious" unemployment is on the whole now found only in small, localised patches. Private industry has lately been putting up three times as many factories there as the Government, and those managed or leased by the Board of Trade now employ fewer than five per cent of the areas' total labour force.

Since the war the Government has used its powers to invest £62 million in establishing factories in development

Development Area	Board of Trade Factories		Insured Employees	
	Floor Area	Tenants	B-o-T	Total
	('000 sq. ft.)	(No.)	('000)	('000)
South Wales	12,869	361	64	716
Scottish	14,358	358	62	1,194
North Eastern	11,617	310	49	1,020
W. Cumberland	1,413	32	6	52
North Western	1,271	24	5	857
	41,528	1,085	186	3,839

areas and another £6 million in loans. It has about a thousand firms as tenants, including 60 from overseas, most of them American. Since 1951 new factories have been leased for periods of 21 years at rents that represent current market value in each locality, with rebates of up to 50 per cent during the first five years. There would be little logic in continuing to offer such a selective subsidy to investment at a time when industry as a whole is under pressure to prune its growth.

Smaller Profits from Courtaulds

SHAREHOLDERS in Courtaulds have had ample warning that the group's profits were declining in the year to March 31st last and that the directors expected to do nothing more than maintain the ordinary dividend of 10 per cent. In the preliminary statement, announcing a 10 per cent dividend and reporting a fall in gross profits before tax from £20,048,321 to £18,168,854, the directors say that in spite of intensified competition in the textile industry, sales both at home and overseas have been well maintained. Profits earned abroad have in the aggregate increased but at home there has been a further increase in manufacturing costs and the margin between these costs and selling prices has been narrowed. Courtaulds, as the producer of the cheapest textile staple, viscose rayon, has pursued a policy of price stability and this policy will be discussed in the statement by the chairman in July.

The group must have continued to invest in new capital equipment for the benefits received from investment allowances have risen from £380,000 to £560,000. After crediting these reliefs, tax has fallen from £8,542,680 to £7,111,482, cushioning the fall in net profits. These have fallen from £11,016,032 to £10,025,555, from which the ordinary dividend takes £2,764,568. At the current price of 37s. the £1 ordinary stock units offer a yield of about 5.4 per cent on this dividend.

Deuce on the Payroll

AS a report from the Trades Union Congress recognised this week, many experts consider that automation is likely to have much more significant effects upon employment in the office than in the factory—largely because effort on the factory floor is far more mechanised to start with than office work. In particular, large amounts of routine book-keeping, such as payroll work, offer obvious possibilities for the employment of digital computers. In Britain, so far, few companies have any experience of using computers in this way, but an excellent case study* of exactly how one could be used in payroll accounting has just been published by a group representing the National Physical Laboratory (as computer experts), the Ministry of Pensions (as the user) and the Treasury (contributing its experience in "organisation and methods"). The NPL computer Deuce, assumed to be fitted with magnetic tape equipment which is not yet available in Britain, was used to prepare a notional payroll for the 3,400 staff in the Ministry of Pensions' central office in Newcastle. The group found that this work could be done by the computer in one hour a week, but would require 43 man hours to code the pay data on to "input" tape, and 8 hours to print its results. The wages staff would be reduced from 22 full-time workers to 11, mostly part-time. If used only for this work (i.e. if the computer were left idle for all but one hour a week) the total annual cost, including capital charges, would be £16,200 against £12,700 a year by customary methods. But if full use could be made of the computer, by providing it with another 39 hours of other work a week, its cost could be reduced to £2,700. In each case the machine, which costs £42,000, would be written off over a ten year period, and was assumed to carry an interest charge of 5 per cent. Even if the machine could not be fully utilised, the study concludes, it could be used economically on payroll work alone by firms with over 5,000 employees—a conclusion which is broadly in line with American experience.

Two points, even in this admirably detailed study, could have been examined more closely. The group might well have made more than passing reference to the advantages of redesigning the entire system of office work in order to make better use of the computers. Some American firms have employed teams of systems experts for as long as two years before installing their computers. But if such extensive preparations were made the full cost of programming the work for the computer, although eventually justified by fuller machine utilisation and lower operating costs, would be more than the "small part of total capital cost" which this study group felt able to ignore. These points should be examined more closely when this excellent "operations" approach to the use of computers in payroll accounting is extended, as it should be, to other office work.

Mr Clore in Scotland

WITH Scottish Motor Traction Mr Charles Clore has used his customary tactic. When the directors turned down his overtures to them, he appealed directly to the shareholders, offering one 5s. "A" non-voting ordinary

* Wage Accounting by Electronic Computer. HM Stationery Office. 2s. 6d.

share in Sears Holdings for every 5s. ordinary share in SMT. The directors of SMT made a familiar response, promising shareholders a bigger slice of the cake in the future, and thus implicitly admitting that the shares were undervalued. Mr Clore has now made his counter reply. In the meantime, a skirmish on the sidelines has developed between Sir Andrew Murray and the other SMT directors who turned him out of the chairmanship when he took a more favourable view of the bid than they did. Such dissension in the board-room can only be to Mr Clore's advantage.

The pros and cons are now there for shareholders to consider. The SMT directors have said that they would raise the ordinary dividend from 10 to 20 per cent; Mr Clore has replied that the Sears dividend will be at least 20 per cent and seems to have a bigger earnings cover than the projected SMT dividend. In answer to the recent acquisition of Alexander Findlay by SMT for £650,000 Mr Clore says that a transfer of control to Sears will not "in any way hinder the growth" of Alexander Findlay, which is associated with atomic developments. The directors of SMT say that they aim to employ funds amounting to £1,200,000 which are now in marketable securities and short-term loans to secure a return of at least 20 per cent, compared with the current return of 6 per cent (thus conceding that they have been underemployed). They then explain that the underlying assets of SMT (including Alexander Findlay's) are worth at book values 10s. 10d. per 5s. share and at current values about 13s. 6d. a share; they estimate the assets value of Sears to be about 6s. 9d. a share, and they add that SMT has proportionately more of its assets in liquid form than the Sears group. The reply of Investment Registry to all this is succinct:

The offer by Sears has been based neither upon theoretical calculations of asset values, nor upon hypothetical assumptions as to the earnings which should be obtained if those assets were fully and remuneratively employed. Primarily, the Sears Board have had regard to the present values of the respective shares and stock units of the two companies, viewed as continuing businesses and with due regard to past achievements.

The question that shareholders must decide between now and June 18th is whether the shares of SMT would be worth their current price of 12s. 7½d. without Mr Clore's offer. They will recall that before the bid was rumoured these shares stood in the market at a price well below their asset value. Usually, market prices are well above assets values, reflecting the company's ability to earn profits and its willingness to pay dividends. The reversal of the normal order virtually concedes Mr Clore's case that the assets were not being fully employed. This fact should not be obscured by a Scotch mist of national pride.

Wool Industry Buoyant

Two great textile industries lie on either side of the Pennines, but for all their proximity they live in vastly different worlds. The Lancashire cotton industry is contracting. Exports are dwindling, the home market is challenged by imported cloth, and America's attempts to dispose of its surplus cotton have long destroyed confidence in prices. The Yorkshire wool industry must seem an enviable haven of stability in comparison. Output remains

high, exports are buoyant and the raw wool market is almost free from government interference. The industry is not without its troubles: competition in many markets is fierce and not always fair, and supplies of Australian wool are again held up, this time by the shearers' dispute. But these are not big worries at present. The recent rise in prices of merino and fine crossbred wool has stimulated business and orders books have lengthened. That rise owes much to Japanese buying in Australia, but it also reflects a change in demand. Demand is shifting from woollen to worsted cloth—and therefore from crossbred to merino wool—partly because women's fashions are changing and partly because crossbred wool has become relatively dear.

UK EXPORTS OF WOOL GOODS

	January to April	
	1955	1956
Tops, million lb	25.8	28.1
Yarns, million lb	7.2	7.9
Fabrics, million sq yds	34.4	43.5
Value, £ million	39.9	39.5

The shift is illustrated by the trend of consumption. While total consumption of wool in the first four months of this year was just one per cent lower than in the same period of 1955, consumption in topmaking (the worsted process) was 2½ per cent higher while consumption in woollen spinning was nearly 8 per cent lower. Both sides of the industry used more merino and less crossbred wool than in the same period of 1955. Topmakers will be thankful that worsteds are returning to favour, but they still complain about the prices that have to be accepted.

In overseas markets the industry is holding its own. Exports of tops, yarns and fabrics in the first four months of this year were all higher in volume than in the same period of 1955, though the value was slightly lower owing to the fall in wool prices last year. Exports of tops to China, now Britain's largest market for tops, rose by £750,000 to £2.1 million. Exports of fabrics to the United States and Canada, the two leading customers, rose sharply: shipments to the United States rose by £930,000 to £4.17 million and shipments to Canada rose by £600,000 to £3.73 million.

Electricity for Railways

SINCE the electrical manufacturing and electricity supply industries both stand to gain much from railway electrification it is not surprising that "Electricity and Transport" was chosen as the theme of last week's Electrical Power Convention at Torquay. Most of the papers were in fact devoted to railway electrification; and the occasion was used by electrical engineers from all three industries for some hard talking about the wide and controversial implications of the decision the Transport Commission announced two months ago that it would standardise its future plans largely upon 25 kV alternating current supply fed from overhead contact wires through rectifiers to direct current traction motors.

For the railways there is no doubt that this combination of the technical and economic merits of high voltage ac supply at standard frequency with the ruggedness and

SO MUCH FROM SO LITTLE

You are looking at a kilowatt-hour, or one unit, of electricity in its raw state—coal. This lump of coal weighs only one pound. Not long ago—in 1920—the amount of coal required to produce a unit of electricity was much larger, and weighed 3½ pounds. The difference represents, on the basis of last year's electricity demand in Great Britain, a saving of some 60,000,000 tons of coal per annum.

Furthermore, this far greater efficiency in the use of fuel is being achieved with much poorer grades of coal, so that the better grades are released for urgent home and export needs and more effective use is made of the nation's coal supplies.

With Britain's demands for electrical power doubling every ten years, the development of atomic power generation is vital to her future progress and to conserve her coal resources.

In this field, also, Babcock & Wilcox are playing a leading part, being already engaged in building the specialized steam-raising plant for Britain's first atomic power station.

What the Rocket was to the postchaise Titanium

is to the metals of today

Very occasionally, the slow pace of progress quickens dramatically. Today, titanium—at last harnessed to the needs of engineers—promises to speed the rate of achievement.

No designer in metal can afford to ignore titanium's special properties, particularly its high strength-to-weight ratio and its outstanding resistance to corrosion. Already, aircraft designers are finding in it the answer

to some of their most exacting problems. It may provide an answer to yours.

I.C.I. are now producing titanium as a raw metal, and are also making sheet, strip, rod, tube, wire, plate and forging stock from titanium and its alloys. For full technical information about this remarkable new metal, write for the booklet "Wrought Titanium".

IMPERIAL CHEMICAL INDUSTRIES LIMITED LONDON S.W.1

better all-round performance of ac-dc rectifier locomotives and multiple train units is by far the best choice, as experience in France and more recent studies in this country have shown. It also has the merit of ending, in this marriage by mutual consent, the long controversy about the relative advantages of the two systems. But this type of traction is relatively new in railway electrification and the manufacturing and railway industries, particularly, have an impressive amount of research, development, and simplification ahead of them. Electrical manufacturers are by now fast becoming the largest single exporting group, but electric traction exports have lagged behind the rest of the industry; the adoption of this ac system for main line traction here should open up a valuable home market which could act as a proving ground and shop-window for business with the other countries that are beginning to standardise their future programmes on the same system.

The Transport Commission has estimated that its annual electricity consumption for traction purposes under the electrification programme will rise by about 1,500 million kWh by 1970 from rather under 900 million kWh now. This new demand will not present any major technical problems; it will moreover be a minute additional load set against the Central Electricity Authority's prospective expansion, and there will be an added attraction in that much of this new load will occur outside normal peak hours from the night movement of freight. Both industries have a number of problems still to be thrashed out, including the methods to be adopted of charging for this extra demand for current and also perhaps whether the electricity used

by the railways in their ancillary services should in future be taken from the overhead wires and charged for accordingly.

Burning Coal Underground

To the outsider, underground gasification of coal—burning it in the seam, not in the grate—is one of the most intriguing of all those projects that fuel experts generally class rather patronisingly as "minor sources of energy." It has not perhaps the glamour of solar energy or harnessing the tides, but somehow it sounds a lot simpler. This it may be, but it is not very simple at that, as experiments on and off during the last 40 years have shown. Since the war such experiments have been carried out in the United States, in Britain, and in several parts of Europe. The British trials have had their disappointments; but the results have been promising enough for the Minister of Fuel and Power to announce this week that a pilot plant will be set up with the co-operation of the National Coal Board and the Central Electricity Authority to study the economics of burning coal underground and using the gas thus produced to run a gas engine and generate electricity on the surface.

Two of the techniques upon which most hopes were placed in Britain involved no underground work at all. Boreholes were drilled from the surface to the coal seam,

Snapshot of the Stock Market

THE statistics published by the London Stock Exchange at the end of its financial year are snapshots of the market on one particular day. The year to March 29th was an exciting one; but little of that excitement is revealed in this statistical picture—except, perhaps, in the figures of bargains marked, which were 2,594,744, compared with 3,218,749 in 1954-56. There is no compulsion to mark all bargains and the figures may vary because of pressure of work or even the whim of brokers but the figures suggest the general inference that more stock may change hands when the market goes up than when it comes down.

These yearly snapshots miss the peaks and troughs. On March 31, 1955, the *Financial Times* ordinary index stood at 183.0; a year later it stood at 180.1. But in the meantime it had climbed to a peak of 223.9 in July and fallen to a low of 175.7 in March. The Stock Exchange computations show that over the year the market value of all ordinary stocks crept up from £12,792 million to £13,426 million, while their nominal value (thanks in unspecified parts to new cash issues and free scrip issues) increased from £4,170 million to £4,578 million. In the "Commercial and Industrial" list alone the market value of ordinary shares went up from £5,699

million to £5,737 million and more significantly in the oil list from £1,640 million to £2,082 million. The gilt-edged market, however, continued to de-

cline, with the market value of British Funds alone falling from £12,900 million to £12,151 million although there was a rise in the nominal amount of stock quoted from £14,588 million to £15,010 million.

and attempts were made to pass air down one borehole, to a coal seam, ignite the coal and produce a stream of gas through the seam and up another borehole without any preparation underground. One way was by forcing air down at high pressure into a faulty seam, through which it worked its way through fissures to other boreholes. The second was "electro-linkage," by which electrodes were inserted down two boreholes and a current passed between them through the coal seam. The heat generated by the resistance of the coal gradually carbonised a path between

the two electrodes, because the coke formed has a lower electrical resistance than coal. Both techniques worked, but appeared likely to require great expenditure on development. More successful results were obtained by sinking shafts and passing the air for carbonisation along boreholes in the coal at seam level. Nearly 5,000 tons of coal have been gasified in about 50 trials, and rates of over 20 tons a day have been maintained on single systems, enough to generate about up to 800 kW. Costs at first appeared uneconomic; latterly, as the price of gasworks and power station coal rose, they begin to look more competitive.

Handyman in a Reactor

ELECTRICITY authorities must have wondered occasionally what happens when something breaks inside the reactor of an atomic power station. Does the reactor, contaminated through and through with radio-activity, have to be sealed off for all time and a new one built to take its place? When atomic plants were first designed, this seemed inevitable. But in a recent paper to the Institution of Chemical Engineers, the works manager of the Atomic Energy Authority's plutonium plant at Windscale, Mr. H. G. Davey, gave a somewhat hair-raising description of how running repairs have in fact been already carried out to pieces of the Windscale reactors which disconcertingly came apart. The fuel elements, little aluminium-encased rods of uranium that are packed one on the other down narrow channels in the graphite structure of the reactor, sometimes came adrift and turned up in air channels where they had no business to be. Two metal plates, so torn and distorted that they were hard to identify, fell in succession off the back face of the reactor; and a third plate bent away from the graphite face and fouled the equipment used to detect leaks in the fuel elements—a vital element in plant operation.

The engineers dealt with these potentially dangerous failures with a variety of tools: anvils and chisels, television cameras and oxy-acetylene cutters, and some odd-shaped hooks and tweezers, all remotely operated from distances of

as much as 60 feet, and inserted through inspection holes and fuel channels that were never wider than 4 inches. In what Mr Davey ambiguously describes as "the strange working conditions," engineers have grown so confident of their developing repair techniques that they have spot welded 121 bolts and made 180 strengthening welds to the pile face, and are planning to re-weld missing plates in some even more remote and radio-active positions.

The biggest undertaking so far was a repair carried out almost inside the reactor itself. One of the brackets holding the detecting equipment in place broke off. As the equipment is essential to the safety operation of the reactor, some kind of repair had to be attempted. The way it was done was a masterpiece of ingenuity. The engineers obtained access to the broken bracket through the duct that carries the spent fuel elements away from the reactor. They worked on fixing a new bracket from the protection of an improvised box made of 2-inch steel plates, which cut off the most serious radiation. The maximum time allowed per man was 25 minutes, and it took 251 men to do what was in all other respects an essentially simple job. Most people will feel that Mr Davey's tribute to the "courage, the ingenuity and the tenacity of purpose" of the men who devised and carried out the repairs was well earned. It demonstrates, moreover, that regular maintenance and repairs—of a rather unconventional kind—is possible on atomic plants.

SHORTER NOTES

The possibility of an issue from Free State Geduld has been overshadowing the Kaffir market for some time. Now Anglo-American has agreed to replace the temporary loan facilities of £4½ million with a loan of £5 million, at 6½ per cent, open to December 31, 1960. For granting these facilities, Anglo-American has been granted the right to subscribe for 497,346 shares at 80s. each on December 31, 1957. On the same date shareholders will receive the right to subscribe for 703,900 shares at the same price. The money received from this issue will be used to reduce the loan. On the eve of the announcement FS Geduld were quoted at 86s. 10½d. and shareholders have eighteen months to see how this developing OFS mine is faring.

Sir Ernest Oppenheimer, chairman of De Beers Consolidated Mines, has announced that sales of gem diamonds by the central organisation amounted to £20,465,000 in the first five months of this year, a fall of £3,008,000 compared with the same period of 1955; sales of industrial diamonds fell by £297,000 to £8,758,000. The fall in sales, said Sir Ernest, reflected a drop in supplies, not in demand.

The multilateral payments scheme under which Brazil pools its earnings of sterling, deutschmarks, Belgian francs and Dutch florins for spending in any part of the combined currency area has been extended to embrace the Italian lira. Further extension to cover the currencies of Austria and France has been under discussion in Rio.

The Board of Trade is to dispose of about 1.8 million cu. ft. of imported hardwood from the strategic stock, in addition to 150,000 standards of softwood.

International Investment Quarterly

A new international journal published in North America to serve the investment community, industrialists seeking foreign expansion and overseas companies interested in foreign capital. Analytical articles by authoritative writers in all parts of the world.

Summer, 1956 Vol. No. 1

The Renaissance of the Investment Company in Foreign Investment. Background, plans of new American trusts for investment in European securities, underdeveloped countries. American experience in this field. By a New York lawyer. 27 pp.
Stanford Research Institute's New Plan to Stimulate Private Foreign Investment. How it will assemble information around the world. Two extensive on-the-spot surveys by an Institute economist on:
Investment Conditions in the Philippines. Little-known opportunities that lie ahead; the place for non-American capital; three-way investment in South-East Asia with Japanese, local capital. 10 pp.
Investment Conditions in Japan. A realistic estimate of the opportunities for, obstacles to foreign direct investment, private technical assistance. 12 pp.
Europe's New Place in World Trade and International Finance. Foreign Investment in Canadian Real Estate.

Fast...and foremost!

NEW FASTER SERVICES
BOULOGNE-PARIS
BOULOGNE-BÂLE
PARIS-BÂLE

French Railways will be introducing their fast new Diesel services between the above centres in June. This will mean a big cut in travelling time! Ideal for business men, these high speed Diesel Railcars offer noiseless running, spacious comfort, meals served directly to compartments and all the latest methods of lighting, heating and ventilation.

DIESEL RAILCARS ARE BEST FOR BUSINESS!

FRENCH RAILWAYS SELF-DRIVE CAR HIRE In Paris and over 115 other French towns you can be met at the Station by a French Railways self-drive hire-car. Make arrangements for your Renault 750 or Simca Aronde hire-car when booking railway tickets in this country.	FIRST CLASS FARES REDUCED Since 3rd June first class fares on the French Railways have been reduced by 18%, but the high standard of comfort still remains the same, with six seats per compartment by day and four couchette berths per compartment by night.

Keep it off the floor!

In the production line of a factory every component has a value which increases as it passes through each process. But while it's lying about idle, waiting to be moved by hand from one place to another, its cost starts to catch up with its value until it ceases to be an asset.

Components must be kept on the move and off the floor, not by costly and inconvenient manual methods, but by one of the many types of mechanical handling equipment that occupy little or no floor space and can move parts horizontally or vertically to any part of the shop.

It's a fact that mechanical handling can do more for production than any other factory technique. This is only one of the many ways in which Electricity is playing a vital part in the drive for greater productivity.

Electricity for Productivity

Ask your ELECTRICITY BOARD for advice and information, or get in touch with E.D.A. They can lend you, without charge, films about the uses of electricity in industry. E.D.A. are also publishing a series of books on Electricity and Productivity. Titles now available are: Electric Motors and Controls, Higher Production, Lighting in Industry, Materials Handling, and Resistance Heating. Price 8/6, or 9/- post free.

Issued by the
British Electrical Development Association

Company Notes

GUEST, KEEN AND NETTLEFOLDS. The £1 ordinary stock units of Guest, Keen and Nettlefolds, currently yielding about 5½ per cent, have long been numbered among the growth stocks. Why they are made plain in the full accounts for 1955. Over the year the group earned a trading profit before depreciation of £22,754,701, compared with £15,956,697 in 1954. Part of the increase was simply due to the inclusion of a full year's earnings of the South Wales steel subsidiaries (against about 7½ months' earnings in 1954) and one month's earnings of Brymbo Steel and John Lysaght's, acquired by Guest Keen in December.

But there was a "notable increase" in turnover throughout the group, reflected in the rise in stocks and work in progress from £26,033,519 to £34,598,672. The higher level of production and the more efficient use of capacity enabled the group to absorb many increases in costs, though it had to pass on the higher prices of raw materials to its customers. But, as Mr K. S.

* £1 ordinary stock at 45s. yields 10½ p.c. on present capital.		

Peacock, the chairman, points out, the ratio of profits to sales is small and with most of the plant working close to full capacity there is only "limited room" for an improvement in the profit ratio "whilst on the other hand it could be greatly reduced by a fall in the volume of orders." And, though the current year opened satisfactorily for the group both in regard to profits and to orders, those subsidiaries supplying the motor trade and the manufacturers of domestic appliances, furniture, radio and television have begun to feel the cooling winds of recession.

The increase in production was built up on the heavy capital outlays of earlier years. Last year, the group spent £8,997,271 on capital account, bringing the total over the last six years up to £41,114,831. This is already an impressive sum, but the group's confidence in the future is demonstrated by capital commitments, stretching over the next two or three years, of the order of £16 million. Some of that will be spent on further developments at Brymbo and John Lysaght's.

The acquisition of these two subsidiaries accounts for £15,145,678 of the

growth of the gross book value of fixed assets from £52,263,256 to £75,589,884. That is balanced in part by the new unsecured loan of £9 million from the Iron and Steel Realisation Agency. The loan is repayable on or before June 30, 1958, but the directors of Guest Keen believe that "at an appropriate time before that date John Lysaght's Scunthorpe Works might obtain finance on a long-term basis to provide a substantial part of the funds required to repay this temporary loan." It seems clearer than ever before from this report that growth at Guest, Keen and Nettlefolds will come from a steel base.

GODFREY PHILLIPS. About eighteen months ago Godfrey Phillips, one of the smaller tobacco companies, took the risk of launching a new brand of cigarettes in a market free from quotas and already intensely competitive. The venture did not succeed, for sales of the new "Red and White" cigarettes fell "considerably short" of the directors' hopes. Later in the report, indeed, the directors talk of trading losses in the United Kingdom. These revenue losses would have been much bigger had not the exceptional advertising of the new brand, which absorbed £325,287 in 1955, been charged entirely to a development and contingencies reserve, which had been built up specifically to absorb such expenses.

In strict accounting terms, the net loss of £148,219 in 1955, compared with a net profit of £30,087 in 1954, cannot be attributed directly to the failure to secure the anticipated market for "Red and White" cigarettes. In fact, the group's gross trading profits were practically unchanged at just over £640,000. But it had to pay in bank and other interest £179,496—just over twice the amount it paid in 1954—and at the end of December, despite a slight reduction in stocks from £10,925,780 to £10,717,164, its bank loans came to £3,947,313 (against £2,847,736). The loans went up to meet the finance required to launch the new cigarettes and the burden of interest on them was heavy because of the rise in money rates. Moreover, taxation absorbed £278,539, against £186,069, a charge disproportionate to the year's profits, because full relief on trading losses in Britain could not be set against earnings overseas. Nor were earnings abroad in such good shape as they had been in 1954. In Australia, where Godfrey Phillips runs its own distributing organisation, the group suffered a "serious setback"; the return to competitive conditions in Australia seems at least as exacting as it has been in this country, and it came more quickly than had been expected. Had it not been for this setback the group would have been able to report "much better results."

But Godfrey Phillips is not throwing good money after bad. A small but steady market in the "Red and White" cigarettes has been established. Production of the brand has been cut back and

the company is clearly making every effort to reduce stocks and, hence, its bank loans. This year there will not be the exceptional advertising costs to meet and, along with the other manufacturers, Godfrey Phillips should secure a margin of advantage from the increase in cigarette prices to outweigh higher wages and increased costs of packing. This year, too, it should benefit from its purchase of the goodwill and brand names of George Dobie, which together with shares of two subsidiaries of Dobie it secured for £430,000. Sales of its more profitable brands have recently increased and the directors now describe the business, outside Australia, as "more surely founded" and look forward to a "distinct improvement" in trading results.

There are some investment morals in this report. First, the smaller companies must look more and more to the markets in special brands of cigarettes outside the normal 3s. 6d. and 2s. 9d. ranges of prices. Second, in many export markets, where BAT is as strong as Imperial Tobacco at home, it is not plain sailing for the smaller concerns. Third, competition is as acute as ever and it might not necessarily be to the advantage of the smaller companies to resurrect coupon trading—though some of them may try when the Restrictive Trade Practices Bill becomes law. All these factors must be weighed in considering whether Godfrey Phillips, having passed its final dividend after paying an interim of 2½ per cent, can ultimately restore the ordinary dividend to the 1954 level of 10 per cent.

METAL BOX. No one can be disappointed with the Metal Box final ordinary dividend of 6 per cent; when the interim dividend was increased the directors said firmly that they could not foresee circumstances in which the total payment would be more than 10 per cent. The 10 per cent dividend is paid on a capital of £13,148,948, as increased by the 100 per cent free scrip issue and the two for five rights issue; it is equivalent to the 20 per cent for 1954-55 paid before the scrip issue was made. On this dividend the £1 shares offer a yield of just over 4 per cent at the current price of 49s. 6d.

This is a low yield, but the expansive qualities of Metal Box are certainly confirmed by the trading results for the year to March 31st. The group's income from sales and investments has jumped from £52,603,000 to £61,225,000, carrying the gross profits of the home group up from £3,587,000 to £4,055,000 and of the overseas group from £1,306,000 to £1,708,000. After tax, combined net profits have risen from £2,227,000 to £2,690,000, from which the ordinary dividend takes £753,000. About £2,690,000 has been ploughed back into the business. These figures suggest that Metal Box is among the companies that have been able to maintain their margins.

J. & P. COATS and ENGLISH SEWING COTTON. At home and abroad J. & P. Coats is a bigger influence in the market for sewing threads

than English Sewing Cotton. Last year it seems to have done rather better in these markets than its much smaller rival. English Sewing Cotton has reported a drop in its consolidated surplus from £1,513,813 to £1,189,825 and as its receipt of £464,459 from the American Thread Company was only a few pounds less than in 1954, much of the decline in earnings must have occurred in the home market. Net profits of American Thread rose last year from \$953,571 to \$1,328,731. J. & P. Coats, on the other hand, has reported that its consolidated profit rose by about £2,130,000 to £10,600,000. Some £700,000 of this increase comes from the consolidation for the first time of the German and Swiss subsidiaries, while foreign exchange losses (charged before striking trading profits) were lower by £1,050,000. The trading profit of the British parent company was slightly higher at £5,529,606, against £5,398,874 in 1954; the chairman, Mr Robert Laidlaw, says that home sales remained "buoyant" and sales all across the world reached a record high level "chiefly supplied from increased production in foreign mills."

The ordinary dividend of J. & P. Coats was never really in danger, but there had been some speculation on the possibility that English Sewing Cotton might cut its payment. In the event, both companies left them effectively unchanged: J. & P. Coats at 8½ per cent and English Sewing Cotton at 12½ per cent. The different investment ranking of the two companies is reflected in the yields on their stocks: at 22s. 4½d. the £1 units of J. & P. Coats yield 7½ per cent, while at 24s. 10½d. the £1 units of English Sewing Cotton yield 10 per cent.

These companies are affected not merely by changes in demand, but also by changes in raw cotton prices, for they have to carry heavy stocks. With stocks at over £36 million, it is not surprising that Mr Laidlaw re-emphasises this point to the stockholders of J. & P. Coats. He admits that "the present times are difficult for buying" and that the company is finding it increasingly hard to purchase the superior grades of cotton which it requires; hence the Coats group is seeking new sources of supply, but at the

moment only one of these looks promising.

J. LYONS. The size of the ordinary dividend of J. Lyons is never the subject of much speculation. It took a war to alter it, when it was reduced by 2½ per cent. In 1946 it was restored to 22½ per cent and since then has remained unaltered. On the repeated dividend the £1 "A" ordinary stock units yield about 5.3 per cent. Failing a loosening of the purse strings, stockholders look for a rise in profits. But here they met with a further disappointment; in the year to March 31st last the consolidated trading surplus fell from £4,561,949 to £4,399,567. Rising costs pressing against margins in a competitive market are, presumably, one reason for this decline. But the pic-

ture is brightened in two respects. First, the provision for taxation was reduced by £418,084 to £1,121,135, so that net profits actually rose from £921,891 to £981,000. Secondly, no provision had to be made in 1955-56 for adjustments in tea prices; in 1954-55 £500,000 was provided to meet this contingency.

Another reassuring sign is the reduction in stocks from £16,405,307—a figure which reflected the rise in tea prices—to £10,826,928. This has been accompanied by a reduction in bank overdrafts from £1,843,239 to £663,175 and in the elimination of the £1,750,000 of acceptance credits outstanding on March 31, 1955. The group's cash balances have been built up from £1,480,559 to £2,140,999.

LONDON STOCK EXCHANGE

Next Account begins: June 20th

Next Contango Day: June 20th

Next Settlement Day: June 12th

The pace of the decline in gilt-edged securities quickened at the beginning of this week. 3½ per cent War Loan which stood at 71½ last Wednesday closed on Friday at 70½ and lost ½ further on Monday to 70¼ when the *Financial Times* index of Government securities fell to 84.49, the lowest point recorded. At the same time the index of industrial ordinary shares dropped to 174.5—a fall of 9.2 since last Wednesday. The largest losses occurred on Friday, when the index lost 5 points, but on Monday the decline slowed down. There was a rally on Wednesday when all sections of the market recovered; War Loan touched 71½ and the industrial index rose to 176.9.

The losses in bank shares were not extensive, Westminster "B" losing 1s. 6d. to 71s. Pearl Assurance lost ½ to 21. United Dominions Trust fell 2s. to 74s. 3d. But Bowmaker gained 1s. 3d. to 20s. 3d. after the increase in the interim dividend. Associated Portland Cement had receded from 110s. 6d. to 98s. 9d. by Monday but improved later to 101s. London Brick lost 2s. 9d. to 53s. 6d., GUS "A" recovered to 41s. 6d. after touching 39s. 3d., Marks & Spencer "A" shed 2s. 3d. and Woolworth 1s. 10½d. to 56s. 6d. English Electric lost 2s. to 51s. 9d. and C. A. Parsons 5s. to 83s. 6d. ICI declined from 44s. 10½d. to 43s. 9d. Vickers dropped 2s. 10½d. to 40s. 3d. and BSA 1s. 3d. to 27s. 9d., but Hawker Siddeley recovered to 33s. 3d. after 30s. 6d. Metal Box rose 2s. on the results to 49s. 6d.

British Petroleum led a rally in oils on Tuesday, gaining 5s. to 143s. 9d., but still showed a net loss of 1s. 3d. over the week. Shell was ½ lower at 8½. Base metals rallied with the firmness in commodity prices. After a false start on Monday interest expanded in gold shares and sizeable gains were made; President Brand gained 1s. 3d. to 55s. and Vaal Reefs 2s. 10½d. to 29s. 4½d. Rubbers rebounded on hopes of trade with China, "Suas" gaining 3s. 3d. to 43s.

(1) Electricity production for New Zealand represents about 87 per cent of total generation. (2) Copper and tin refer to metal production. (3) General trade (including re-exports) except for Canada, which is special trade only. Imports are cif except for Australia, Canada and S. Africa which are fob; exports are fob. Trade for India and Pakistan includes that going by land, except for Pakistan in 1948 when figures are for trade by sea and air only; annual figures for India are for 12 months beginning April 1st of year stated and for Australia and Pakistan 12 months ended June 30th. (4) Gold and foreign exchange holdings are those of the government and central bank; only figures for Australia include holdings of commercial banks. Cost of living for S. Africa and S. Rhodesia relates to Europeans only and for S. Africa includes direct taxes. (5) Including some long-term securities. (6) Including semi-processed gold. Beginning January, 1955, including South-West Africa. (7) In July, 1948, part of holdings was transferred to the State Bank of Pakistan. (8) April, 1948—March, 1949. (9) Average for fourth quarter.

EXCHEQUER RETURNS

For the week ended June 2nd, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £851,000 compared with a deficit of £3,869,000 in the previous week and a deficit of £24,392,000 in the corresponding period of last year. There was a net "below-line" receipt of £835,000, bringing the total deficit to £44,295,000 (£147,032,000 in 1955-56).

Financial Statistics

THE MONEY MARKET

THE discount market reduced its bid by 4d., to £98 14s. 11d. per cent, at the Treasury bill tender on Friday last. This represented an increase in the rate of discount by 1/8 per cent, from the level of just over 4 1/8 per cent that had been held through the four tenders in May. The market was influenced mainly by the previous stringency of credit and by the fall in the short bond market and in sterling. Outside applicants apparently raised their rates by a similar amount; the average rate on all bills rose by 1s. 2d. per cent to £5 os. 3.45d. per cent. Total applications rose by £8.2 million, to £381.4 million, but as the amount on offer was up by £20 million, to £260 million, the market's allotment rose by one point to 53 per cent. At yesterday's tender, the offer was maintained at £260 million.

Credit conditions in Lombard Street have been rather less difficult this week than of late. Dealings in August maturities have taken place at 4 1/8 per cent, 1/8 per cent below the tender rate, whereas in the last few weeks, when the tender rate was 4 1/8 per cent, they frequently ranged up to 4 1/2 per cent, leaving the discount market a margin of a bare 1/8 per cent.

The bill rate in New York fell by a further fraction this week, to 2.56 per cent, following its decline last week from 2.70 to 2.57 per cent.

On the dearth of Immortals

"O, King, live for ever!" the people cry. But under present imperfect arrangements even kings never quite manage to bring this off. The people's chances aren't too bright, either. Crown and sceptre, umbrella and briefcase, all have to be laid aside in time. The analogy is not exact. National revenues, after all, go on. Private revenues are apt to dwindle and stop . . . Unless the breadwinner pauses in his breadwinning to think: to think ahead to the day when, incredibly but inevitably, someone else will be going through the papers in his writing desk, his deed box, his office drawer marked "Private". To find what? With luck, a safeguard for the years to come. An assurance not only of income today, but capital tomorrow.

The SAFEGUARD POLICY means continuing security for your dependants when you are no longer on hand to see to it. It means material comfort for them in the future; spiritual comfort for you in the present. And all for a small additional premium to either Endowment or Whole Life Assurance.

Full particulars, with illustrations of how the SAFEGUARD POLICY works, may be had in exchange for the date of your birth from

ADMINISTERS NATIONAL SAVINGS

SIR ERIC BOWATER AT THE ANNUAL GENERAL MEETING OF THE BOWATER PAPER CORPORATION LIMITED

*"When ideas take shape,
that is progress—and it
is progress I have to report"*

two ships in commission, a third due for completion in the coming year and five more to follow at short intervals, has got away to a good start.

Tissues: A Notable Partnership

Of special interest is the recently arranged partnership with the Scott Paper Company of America (largest producers of household tissue papers in the world), by which the Bowater-Scott Corporation Limited has come into being. Besides operating the Organisation's existing St. Andrew Mills at Walthamstow, the new Company is constructing a new manufacturing and conversion plant at Northfleet in Kent. This new venture, enjoying the full benefit of Scott's 'know-how' and patents, is deemed of major importance. The United Kingdom market for this type of product, commented Sir Eric, has hardly yet been touched. Before leaving the accounts the Chairman drew shareholders' attention to the Chancellor of the Exchequer's proposal to increase still further the tax on distributed profits (described by Sir Eric on another occasion as a dividend tax), and the heavy drain this tax exerts on profits which would otherwise be available for dividend, or for the further development of the business: "on dividend distributed in respect of the last year the 'dividend tax' amounted to practically £½ million. Doubtless the Chancellor has to find a large sum of money from somewhere to meet the heavy losses entailed in some of the nationalised industries, and it is to the profits of free enterprise industry that he turns."

Welcoming some 1,700 shareholders to the Annual General Meeting of The Bowater Paper Corporation Limited, held at Croydon on 29th May, 1956, Sir Eric Vansittart Bowater, Chairman of the Corporation, said: "When ideas take shape, that is progress—and it is progress I have to report." Earnings for the year 1955 exceeded those of the previous fifteen months, which in themselves had been a record. These earnings—totalling more than £13,200,000—had encouraged the Board to recommend a final dividend of 7½ per cent on an Ordinary or Common share capital increased by last year's financial reorganisation to 19,200,000 shares of £1 each.

A large part of these earnings derived from sources in North America, where more than 50 per cent of the Organisation's assets are now located. In addition to its British and North American interests, the Organisation also has important interests in Australia, Sweden and Norway. The higher earnings, said Sir Eric, reflect the full operation and greater production of our plants throughout the world, as well as the vast capital sums we have spent on further development of existing properties and construction of new plants.

Progress in Packaging

Sir Eric stressed the progress and prospects of Associated Bowater Industries Limited, through which the Organisation's numerous packaging activities are conducted. The Master Plan for developments provides for another corrugated case factory on Merseyside, while a new site is being acquired at Stevenage for new corrugated case and fibre drum factories. Negotiations are well advanced for the merger of Bowaters Fibre Containers Limited (subsidiary of Associated Bowater Industries) with Eburite Corrugated Containers Limited, a virile and well-managed concern with a long record of success.

The Irish Wallboard Co. Ltd. in Eire has made favourable progress, and its productive capacity will shortly be materially increased. Other production companies of the Organisation have also flourished. The pulp mills in Norway and Sweden continue to work to capacity and are scheduled for expansion also.

Sales companies in Britain, Australia and South Africa all enjoyed a successful year, during which the Australian company acquired the entire share capital of the British-Australian Paper Company, a conversion undertaking capable of profitable development. The Bowater Steamship Company Limited, with

Newsprint Demand—and Supply

Demand for newsprint—by far the largest in volume of the Organisation's products, though in the United Kingdom the least profitable—is insatiable. Much new productive capacity is planned in Britain, as also in Canada and the USA, and the Chairman hoped that by 1958 or 1959 the present unbalance between supply and demand would be eased, but he pointed out that authoritative reports indicated an ever-increasing demand for newsprint during the period 1960-1975.

"For our part," said Sir Eric, "we are exerting every effort to increase availability in this country by our bold plans for development, though the installation of new machines is a lengthy and costly process." Mentioning that the Kemsley mill's Number Six machine is now at long last about to come into operation, the Chairman said that the effect of increased productive capacity would be to assure customers that, with the ending of Government control in Great Britain, the Organisation would be able to fulfil all its long-term contracts to the letter.

Advances in North America

Earnings of the Bowater Corporation of North America Limited (embracing production

and other interests both in Canada and the USA) amounted to \$22,579,000, an increase of about \$5½ million over the previous period, due mainly to the Tennessee mills completing a full year's operation.

The Corner Brook mills operated at their highest rate of production ever, and the newly formed Power Company, supplying a growing demand for electrical energy in Western Newfoundland, is to instal a further 13,500 kW. hydro-electric plant.

To ensure an adequate supply of raw materials, particularly for the Organisation's paper mills in Kent, it has been decided, in principle, to construct a groundwood pulp mill in Canada with an annual capacity of about 100,000 tons of pulp.

Prospects from Tennessee

The new Number Three machine at the Tennessee Mills, which will be in operation before the end of this year, will raise the annual newsprint capacity of those mills—now running at an annual rate of 212,000 tons—to over 300,000 tons. Installation of a fourth newsprint machine is now under serious consideration, and its production has already been sold on an "if and when" basis.

Bowaters Fibreboard Company, Inc., was formed last November to set up a new \$4½ million fibreboard mill in Tennessee with an annual capacity of 120 million square feet of building board.

New Mill for South Carolina

Prospective increases in demand from both Tennessee and United Kingdom mills on existing sulphate pulp resources have resulted in a decision to embark immediately, subject to local authorities' consent, on building an entirely new sulphate pulp mill on the Catawba river near Rockhill in South Carolina. At some later date, a mill for manufacturing packaging papers may be undertaken on the same site.

In conclusion, the Chairman declared his complete confidence in the future of the industry. "The credit squeezes in both the United Kingdom and the United States—provided they are intelligently handled, as I have no doubt they will be—should, in my opinion, do no more than check undesirable inflation. There will undoubtedly be periods when we, in common with others, will have to work hard to sell all we make in a competitive world. Should such a situation come, it would have the good effect of keeping us all right up on our toes, and my view of the future would still be one of restrained optimism."

Stockholders will automatically receive copies of the complete speech by Sir Eric Bowater. Others who are interested may obtain copies from: The Secretary, Bowater House, Stratton Street, London, W.1.

COMPANY MEETINGS

CAMMELL LAIRD & COMPANY LIMITED

COMPREHENSIVE PROGRAMME OF SHIPYARD MODERNISATION

PRODUCTION HANDICAPPED BY STRIKES, OVERTIME BANS
AND DEMARCATION DISPUTES

CONFEDERATION'S UNREALISTIC REACTION TO EMPLOYERS' SUGGESTION

MR J. C. MATHER ON GRAVE INJURY TO NATIONAL INTEREST

The ninety-second annual general meeting of Cammell Laird & Company, Limited, was held on June 1st at Birkenhead, Mr J. C. Mather, JP (the Chairman), presiding.

The following is the Chairman's statement which had been circulated with the report and accounts for the year ended December 31, 1955: As stated in the Directors' Report, Mr C. L. Mason has decided to retire from the Board and does not therefore seek re-election. Mr Mason was appointed a Director in 1928 and during his 28 years' service the Company has had the invaluable benefit of his long experience and wise counsel. I wish to express to him our grateful appreciation of his long service to the Company and our best wishes on his retirement.

Mr A. Reith Gray was appointed a Director on February 7, 1956, and in accordance with the Articles, offers himself for re-election. Your Board consider themselves fortunate to have obtained the services of a man of Mr Gray's standing and experience in the Steel Industry.

NEW ACQUISITION

On February 21, 1956, the Company acquired 75 per cent of the capital of The Patent Shaft & Axletree Company Limited, Wednesbury, makers of open-hearth steel which is rolled into plates, sections and small bars; the remaining 25 per cent being acquired by the Metropolitan-Cammell Carriage & Wagon Company, Limited. Prior to Nationalisation, The Patent Shaft Company was a wholly owned subsidiary of Metro-Cammell. The demand for the Company's products in the Midlands is at a level which cannot be satisfied and appears likely to continue. A substantial scheme of reconstruction, including the installation of additional furnaces and new slabbing and rolling mills, is, therefore, to be undertaken, which your Board believes will make this undertaking a valuable addition to the Company's investments in heavy industry. In spite of many difficulties, to which I shall refer later, I am glad to be able to report satisfactory results for the year under review. I wish to express to the Management, Staff and Workpeople of our Subsidiary and Associated Companies our grateful appreciation of all that they have done to produce these results.

ACCOUNTS

Parent Company's Balance Sheet.—Investments in Subsidiary and Associated Companies are unchanged. Quoted Securities show an increase of £87,325 after reducing their book value by a net transfer from Capital Reserve of £410,897 in order to bring them to the market value at December 31, 1955. On the Liabilities side, Capital Reserves have been reduced accordingly, but the Profit and Loss Balance unappropriated

has been increased by £252,588. Taxation Reserve in this Account disappears and Provision for Current Taxation is reduced to £47,346, mainly due to the settlement of the liability remaining when the Company ceased direct trading activities. Advances from the Subsidiary made for the purpose of temporary investment by the Parent Company, after providing for a dividend since declared, have increased by £1,869,901.

Consolidated Balance Sheet.—The only point which calls for comment, other than those mentioned elsewhere, is the substantial reduction in the figures for Stock-in-Trade and Work-in-Progress, and Instalments received on that account. This is due to the final completion of certain contracts which have been included in these figures for some time.

CONSOLIDATED PROFIT AND LOSS
ACCOUNT

Trading Profit shows an increase of £88,053 and Investment Income is up by £86,242, the latter being due mainly to a full year's dividend from the English Steel Corporation, against a dividend for approximately six months in last year's accounts. Normal depreciation is approximately the same as last year but a larger provision has been made for depreciation in the value of Trading Stocks. Taxation takes £881,000, representing 55 per cent of our profit and in the current year, the Chancellor proposes to increase the rate of profits tax on both distributed and undistributed profits.

£354,152 is retained by the Subsidiary, principally to provide for the taxation reserve hitherto carried by the Parent Company. The credit of £311,000 added to the net profit available to the Shareholders represents the other side of this transaction. After adding the balance brought forward from 1954, the sum available for appropriation is £899,441. The Interim Dividend paid on October 11, 1955, absorbed £102,063 and from the balance your Board recommends that a final dividend of 10½ per cent should be paid again this year, leaving £252,588 to be added to the carry-forward.

CAPITAL COMMITMENTS

The total liquid assets included in the Consolidated Balance Sheet, taking Quoted Securities at their market value on December 31, 1955, amount to £8,653,710. After providing for working capital and the items mentioned below, it is considered that the balance, together with retentions from profits during the next few years, will be required to finance a comprehensive programme for the modernisation of the Shipyard. The acquisition of a 75 per cent interest in The Patent Shaft & Axletree Company Limited has already absorbed approximately £700,000. There is a liability in respect of uncalled capital of about £400,000 and in addition, this Company has undertaken to provide, as

its share of the Development Scheme which I have already mentioned, a loan of £1,200,000. As already reported in the Press, we have recently concluded negotiations with the Corporation of Liverpool and the Mersey Docks & Harbour Board for the purchase of the freehold land on which the Birkenhead Shipyard operates, at a total cost of £860,000. As has also been announced, negotiations are proceeding for the purchase and extension of Rock Ferry Pier for the gas-freeing of Oil Tankers.

Plans for the construction by the Subsidiary of a large dry dock, to which I referred last year, in spite of protracted delays in the negotiations with various official bodies, have now reached an advanced stage. The modernisation and re-siting of existing shops, the alteration of slipways to provide for the building of larger vessels, and other plans essential to maintain the Subsidiary's position in the shipbuilding industry, are being pressed forward as quickly as possible.

CAMMELL LAIRD & COMPANY
(SHIPBUILDERS AND ENGINEERS) LIMITED

Ship Construction.—During the year eight ships were launched totalling 88,586 gross tons, compared with the previous year's tonnage of 72,080. The eight ships launched were as follows:—ss *Vexilla*, tanker for Shell Bermuda (Overseas) Limited; ss *Manxman*, passenger ship for The Isle of Man Steam Packet Company, Limited; mv *Crystal Bell*, bulk sugar carrier for Sugar Line, Limited; ss *Hemiplecta*, tanker for Shell Bermuda (Overseas) Limited; ss *Leader*, bauxite ore carrier for the Pan-Ore Steamship Company Incorporated; ss *Calameres*, fruit carrier for Empresa Hondurena de Vapores; HMS *Tenby*, Anti-submarine Frigate for the Royal Navy; ss *San Fortunato*, tanker for the Eagle Tanker Company, Limited. Eight ships (plus two integrated barges constructed for Messrs John Holt & Company (Liverpool), Limited), including four of those launched, have been completed and delivered to their Owners. Among the vessels completed was HMS *Ark Royal* which, after running acceptance trials, was handed over to the Royal Navy last February.

Engineering.—During the year seven sets of marine steam turbine double-reduction geared machinery were built and tested in our main Engine Shop. Work is progressing on the construction of diesel engine sets for submarines and frigates for the Royal Navy, and also on the construction of gas turbine machinery for installation in mv *Auris*, owned by Shell Tankers, Limited. The output of our Boiler Shop for the year comprised 15 boilers of different types giving a total evaporation of 664,000 lbs of steam per hour.

Work was also carried out in the Boiler Shop on the manufacture for Shell Haven Refinery of a large reactor vessel, constructed

of stainless steel and the first of this type to be manufactured at our works.

During the year the Company established an Engineering Development Section which is charged with the task of keeping pace with modern technical developments and applying these developments to Marine Engineering. Work is proceeding on the development of Merchant and Naval machinery with advanced steam conditions, with investigations into the use of gas turbines and, for the future, nuclear power for ship propulsion. This Section will ensure the best possible service to our customers by making a close study of their requirements and by proposing the best mechanical arrangements to meet them.

Ship Repairing.—Our Ship Repairing Department has experienced keen competition but was successful in gaining a satisfactory share of business and, during the period under review, carried out repairs on board 177 ships. The work undertaken included refit contracts for the Royal Navy.

GENERAL

Although 1955 production shows an increase over the previous year the results could have been very much better had we not been handicapped by strikes, overtime bans, and demarcation disputes. The opening months of the year were marred by a strike of stagers which delayed the launch of the *Hemiplecta*. This was followed by a tug-boatmen's strike which delayed the sea trials of the *Hemiglypta* and interfered with docking arrangements for other vessels. The closing months of the year were overshadowed by a demarcation dispute which resulted in a strike of joiners in the month of September and, except for a resumption of work for a short period, this strike was continued until resolved at the end of March this year. The strike directly affected the fitting-out and completion of six ships and, in consequence, the launching of two ships had to be postponed thus delaying the laying down of two further ships.

This strike received wide publicity and, as the Findings and Recommendations of the Committee of Inquiry were published in considerable detail in the national Press, there is little for me to add. Many have wondered why this strike was allowed to go on for so long. All that can be said is that the machinery was always in existence to settle this dispute, but in spite of pressure from us, the parties were unwilling to use it. The Management, the Employers' national organisation, the Ministry of Labour and the Trades Union Congress made many efforts to settle the dispute but without avail. The Report of the Committee of Inquiry and the publicity given to the Findings no doubt contributed in a major degree to bringing the strike to an end, but many will feel that the outburst of natural irritation of Mr William C. White, President of the Pan-Ore Steamship Company, Incorporated, and the resulting publicity in respect of the delay in the completion of his Company's ship *Leader* probably served a greater purpose in bringing home to all the gravity of a most ridiculous and extraordinary situation.

It is unnecessary for me to stress the harm done to the industry generally by such disputes as this, and I believe that all responsible men, whether employers or employees, deplore them. In the opinion of the Shipbuilding Employers, it would help considerably if the Confederation of Shipbuilding and Engineering Unions would take a more active part in dealing with the many disputes affecting all their constituent unions, with special reference to demarcation of work questions. The Employers' organisation has approached the Confederation with a request that a Joint

Committee be formed to investigate this matter, but the Confederation has not yet seen its way to comply with this request, on the grounds that questions such as demarcation can only be dealt with by individual unions. This reaction is most unrealistic, and is doing grave injury to the national interest, and I sincerely hope that the experience of our Company in relation to the joiners' strike, coupled with the resultant publicity which reflects unfavourably on the trade union movement, will lead the Confederation to reconsider its attitude and assume the responsibilities which devolve upon it.

Among other handicaps to production is the national shortage of skilled manpower, including draughtsmen and technicians, and our Company is taking all possible steps to obtain full advantage of the opportunities offered by the technical colleges by encouraging our apprentices and adult staff to study for qualifications in appropriate subjects. This may not increase the numbers available for employment but will assuredly produce a better qualified type of person who will be an asset to us.

METROPOLITAN-CAMMELL CARRIAGE &
WAGON COMPANY, LIMITED

Metropolitan-Cammell Carriage & Wagon Company Limited obtained a number of important export orders during 1955 against severe world-wide competition, including 349 coaches for the Reef electrified services of the South African Railways, and nearly 2,000 wagons for India as an extension of the existing USA Dollar-aid contract. In association with an Indian Company an order was also received for electric motor coaches for the Calcutta suburban service. Further wagon orders were secured from Rhodesia, India, Burma, and West Africa.

Due to serious shortages in steel supplies, production did not reach the record level of the previous year, but shipments of substantial quantities of passenger coaches and goods wagons were made to several Commonwealth countries and a number of mechanical structures for diesel electric locomotives for Eire were completed. For British Railways output of standard steel coaches and wagons continued and deliveries of diesel railcars commenced for the Modernisation Programme.

The Company started 1956 with a full order book, but in the face of rising costs and growing overseas competition, greater productive effort and efficiency will be required to retain overseas markets.

Bus Bodies.—Following a temporary recession, there was a greater demand by United Kingdom operators during the year for new public transport vehicles, and orders for more than 600 metal bus bodies were placed with the Company. Many of these were repeat orders, reflecting the success of the Metropolitan-Cammell lightweight design. There were fewer enquiries from overseas for bus bodies, but against strong competition the Company secured orders from New Zealand, Jamaica, and Uruguay. The improved order book should provide more economic production during 1956. A number of new prototypes based on improved designs developed by the Company are under construction.

ENGLISH STEEL CORPORATION LIMITED

At the commencement of 1955, English Steel Corporation, Limited, was converted into a Holding Company, and its manufacturing operations were transferred to five wholly-owned subsidiary companies. Each of these companies is a leading member of the section of the industry in which it is engaged.

All of these companies, together with Taylor Bros. and Company, Limited, and

The Darlington Forge, Limited, had a successful year with full order books and maximum production possible with available labour. The steel output of the Group of 565,000 tons was slightly less than in the previous year, but record peace time outputs of rolled steel products, drop forgings, springs and railway wheels and axles were achieved.

Firth-Vickers Stainless Steels, Limited, in which English Steel Corporation, Limited, has a 50 per cent interest, also had a very successful year with demands for its products in excess of capacity to supply.

A site of 500 acres has been acquired at Tinsley, Sheffield, for further developments. Initially, a small part of the area will be used to rehouse the spring production plant for which new buildings are required.

The first step in the major development of the new site is to instal heavy forging and foundry plant with appropriate melting furnaces to meet the growing demand for forgings and castings in sizes and weights beyond the capacity of any existing plant in Great Britain.

The trading prospects for 1956 appear to be good. Each operating company brought forward a substantial volume of uncompleted orders, and since the end of the year the demand for products has continued to be in excess of capacity to produce.

The report and accounts were adopted and the dividends, as recommended, were approved. The retiring directors, Sir Archibald J. Boyd, Mr J. C. Mather and Mr A. Reith Gray, were re-elected; the remuneration of the Auditors, Messrs Cooper Brothers and Company, having been fixed, the proceedings terminated with a cordial vote of thanks to the Chairman, Directors, Staff and Workpeople.

BARRY AND STAINES
LINOLEUM, LIMITED

The annual general meeting of Barry and Staines Linoleum, Limited, will be held on June 28th at 6, Old Bailey, London, E.C.

The following is the statement by the Chairman, Mr T. J. Cavanagh, circulated with the report and accounts, for the year ended January 31, 1956:

A year ago I stated that prospects were somewhat less favourable because of rising costs. In the case of raw materials, in particular, this trend continued with increasing severity as the year advanced. Our profit margins in consequence were substantially reduced despite economies achieved by increased production and increased sales in both home and export markets.

A second contributory factor to the setback in profits was the smaller return from export trade.

Group trading balances are down, therefore, by £253,827 from £895,491 to £641,664, but there are reduced charges for depreciation and taxation, the net result is a reduction of £113,909 from £345,464 to £231,555.

Never, since the end of the war, has it been more difficult to hazard a guess about the future. Although our selling prices were raised in February of this year and the value of turnover has since been maintained, the increasing tempo of production has had to be modified, but improvement and development of our plant and processes continue and further economies and operating costs have been achieved.

To sum up, I would say the prospects for the current year are uncertain, but nevertheless hopeful.

DAILY MIRROR'S YEAR OF EXPANSION

Cecil H. King discusses wage and labour problems

The Thirty-Sixth Annual General Meeting of The Daily Mirror Newspapers Ltd. was held on 4 June at Brettenham House, Lancaster Place, London, W.C.2. Mr. Cecil H. King, Chairman and Managing Director, said:

For the year which ended on 29 February, during which the trading of all national newspapers was affected by the 26-day newspaper strike and the rail strike, the trading profit of your company was radically reduced. The amount available for appropriation, however, with lower taxation provisions and a substantial income from investments, was more than adequate for us to maintain the dividend while still adding to reserves.

Newspapers acquired in Scotland

In November your company and Sunday Pictorial Newspapers (1920) Ltd. expanded their publishing interests by each acquiring 50% of the First Preference and Ordinary Share Capital of the Scottish Daily Record and Evening News Ltd., publishers in Glasgow of the Daily Record, Noon Record, Evening News and Sunday Mail. To finance this transaction and to make more liquid resources available, the holding of 'A' Ordinary shares in Albert E. Reed and Co. Ltd. was sold.

Northern printing begins

Another important step was also taken towards the end of 1955 when we entered into a contract with Kemsley Newspapers Ltd. to print the northern editions of the Daily Mirror on that company's plant at Withy Grove, Manchester. It is vital in this competitive industry that we should be able to provide the latest news in the north as well as in the south, and the higher operating costs that have naturally resulted from the new arrangement can therefore be considered as a necessary insurance for the future.

Buoyant sales of the Daily Mirror

The advertisement rate of your paper was raised 12½% in May. The retail price was also raised during the year; but, with later news and recently with larger issues, there is no doubt that our readers are being given full value for their money. That the Daily Mirror has kept the favour of the public in spite of the increase in price is shown by the fact that over the latter half of 1955, during almost two-and-a-half months of which it was selling at 2d., the average daily net sale was only some 60,000 lower than over the last six months of 1954. Over the whole

twelve months to 31 December, 1955, the daily net sale showed an average of 4,708,345, at the same level as the previous year.

The timing of the price increase was important and provided an interesting circulation battle among the daily papers. We decided to go up in September. The News Chronicle and Daily Herald did the same, but the Daily Express and Daily Mail seem to have thought that by staying at 1½d. they would enlarge their circulations at our expense. It is said that they expected the Daily Mirror to drop a quarter of a million. In fact our losses were nothing like this figure, while the Express and Mail after rising slightly were forced to join us at 2d. in the new year. By raising the price early we gained necessary revenue and also retained the goodwill of the retail trade. It is worth remembering that, when the Daily Mirror went up from 1d. to 1½d. in 1951, the decline in the six-monthly average sale figures reached 238,000 which was not recovered for two-and-a-half years.

Unrest in the printing industry

The last eighteen months have seen two examples of unrest in the printing industry, the newspaper strike and the dispute in the London general trade. Rising costs, and most important perhaps the rise in wages, have led to the amalgamation of two national Sunday papers and to the extinction of the largest provincial daily. We ourselves for similar reasons have had to close down Junior Mirror. Wage and labour problems have come forcibly into the public eye. Since, as shareholders, you will be interested in any matter so vitally concerning the industry, I feel that you might wish me to say a few words on the subject.

The craft unions

National newspapers, represented since 1906 by the Newspaper Proprietors Association, negotiate with the unions independently of the provincial press and general trade. There are altogether thirteen unions involved in these negotiations. Two of them, the National Union of Journalists and the Institute of Journalists, represent employees on the editorial side. Two, the Amalgamated Engineering Union and the Electrical Trades Union, are national unions outside the printing industry, providing only a small nucleus of maintenance men. Of the remaining nine, all but two are craft unions, some of them with traditions of skill among the oldest in the country. The London Society of Compositors for example (which last year after amalgamation with

another craft union, the Printing Machine Managers' Trade Society, became the London Typographical Society) was formed as long ago as 1848 and the British compositor can trace his trade back even further to the time of Caxton in the fifteenth century. The importance of apprenticeship within a number of these unions survives to this day, and the printing industry provides one of the strongest citadels of craft unionism in the country.

The two non-craft unions

But by far the greater number of men employed on the production side of a mass-circulation newspaper—such as the Daily Mirror, with the largest daily circulation of all—work in two departments and belong to one or other of the two unions regarded in the newspaper industry as non-craft. These are the National Society of Operative Printers and Assistants, known as Natsopa, and the National Union of Printing, Bookbinding and Paper Workers, which between them organise most of the men on rotary presses and all those engaged in packing and tying parcels for distribution.

Individual negotiation

Nine of the thirteen unions I have mentioned are affiliated to the Printing and Kindred Trades Federation. There is close consultation within this federation, but for wage and labour arrangements each union has seen fit to negotiate separate agreements with the NPA. The insistence on individual negotiation can be attributed largely to fear on the part of the craft unions that in any tight federation they would be outvoted by the larger non-craft unions.

Wage differentials

This clinging to autonomy is closely connected with an anxiety, shared more or less by craftsmen throughout the country, over the whittling away of the wage differentials between skilled and unskilled men. In grievances over the differential, comparison is usually made with wage rates in 1939. Since that time there has been an overall rise in the cost of living and it is true that, while all wages have gone up, the increases have not followed a strict proportion. In 1941, and again in 1943, war bonuses were paid. In 1951 revised wage agreements instituted a cost-of-living bonus geared to the retail price index. These bonuses, all of them flat-rate increases, the same for all unions whether craft or non-craft, have had the effect of reducing differentials in real terms. It is little consolation to the craft unions to

remember now that they were signatories to the agreements and consciously accepted flat rather than relative increases—that in fact they have themselves played a major part in whittling away their own differentials.

Increase in gross earnings

The problem of differentials has been complicated by other factors. Larger circulations since the war and the greater number of publications produced by some offices, notably the Daily Mirror, have increased the opportunities for extra earnings—from overtime, extra shifts and special payments. Because of the wide variation in the labour demands of different offices, many detailed matters cannot be comprehended within the NPA agreements. House agreements have therefore been negotiated by individual management directly with the departmental 'chaplains' of their employees, and in these agreements each chapel has pushed its individual claims to the limit. On the whole the non-craft workers, who have always been anxious that the maximum number of men be employed so that the work load should be as light as possible, have been the most uncompromising in enforcing their claims for more men and more money—sometimes by restrictive practices. The craft workers, on the other hand, have not been outdone. They have restricted apprenticeship to keep their numbers to a minimum, and the main lever in their claims has been the consequent shortage of staff. The general result is that throughout the labour force attention has come to be focussed on a man's gross earnings rather than on his basic wage, and rivalry over differentials has been intensified.

Diminished skills

There are, of course, profounder reasons for the tension between craft and non-craft workers. One is the whole question of the degree of skill really required in many traditionally skilled jobs. With the advance of mechanisation many skills have diminished. Relativities even within single departments have ceased to be based on fact and in some cases skilled men are to be found doing jobs well within the capacity of the unskilled. Another is that, because of union restrictions, most unskilled men have no chance of promotion. They are therefore inclined to watch the clock and concentrate on their take-home money—and this is where the spiral starts.

Challenge to the Trade Unions

These are fundamental questions facing the trade union movement to which it must largely find its own answer. A related problem it must also help to solve is that of raising productivity—upon which the future security of earnings in every industry must ultimately depend. Although these difficulties have been apparent in the country for many years, little constructive thinking has so far taken place in the newspaper industry and less has been translated into action.

Power of the father of the chapel

Many of the printing unions are under the leadership of able men who are well aware of all this. It is further down the scale that conviction becomes harder and it is clear that many general secretaries have difficulty in persuading union members and minor officials that they are living in 1956. An example of increased influence among the lower ranks of officials is the power that has come to be vested in the 'father' of the chapel (shop steward). This is particularly noticeable in the non-craft sections of labour where, with control over such matters as the selection of men, their deployment, rotas and holiday times, he has virtually taken over the non-technical functions of management. Although he is paid by the company his energies are often devoted full-time to union and chapel business. His first loyalties are towards his chapel members (by whom he is elected) and in some cases he may even have greater authority over them than the overseer. That functions of management have been usurped is unhealthy enough in itself; it should also be alarming at top union level that so much power has devolved upon men who have no long-term responsibility for the welfare of the industry as a whole.

Weakness of the NPA

Nevertheless, it would be a mistake to attach all blame for the present evils to labour; a great deal must also be laid at the door of the employers. Soon after the first world war newspaper workers obtained substantial wage increases which helped them through the years of recession ahead. In these inter-war years, when real wages in the industry were comparatively high and rates more or less static, the proprietors took little interest in labour questions. Circumstances since the war have forced their attention but individual management have remained weak. The NPA has in general failed to give them the necessary support and has shown itself to be a feeble body on most labour matters. It is true that its members were shaken together during the newspaper strike—even though that would have ended two weeks earlier if concerted action had not been delayed—but this was a conspicuous exception. On the whole, even on those occasions when they have apparently been ready to take a stand, some individual member has weakened at the last minute. No one denies that the industry is peculiarly vulnerable to strikes, but it is highly questionable whether the threat of strike action has in fact been diminished by a vapid theory that the unions should be appeased at all costs. What is certain is that, by their lack of solidarity, the newspaper proprietors have contributed their portion to the muddled history of labour negotiations since the war.

Publishing interests at home

You will now wish me to tell you how your company's other interests

have fared. The prices of the Sunday Pictorial and of both Reveille publications were raised in the second half of the year. The average net sale of the Sunday Pictorial, however, over July-December 1955 was some 56,000 above the figure for July-December 1954. Sales of Weekend and Midweek Reveille declined over the year but increases have been noticeable since the beginning of 1956.

Your other associated publication, Woman's Sunday Mirror, has more than justified itself with a sale of well over 1,100,000 after only a year.

West Africa and Australia

Let me now turn to the affairs which concern you abroad. In West Africa, where a new evening paper was recently launched, you now have an interest in six newspapers each with far larger sales than any of its competitors. All that now has to be faced is the political risk inevitably attending such an enterprise in countries nearing independence. In Australia, progress has continued but the economic problems of newspaper production in that country have not diminished.

Pulp and paper-making

Your company's considerable investments in the pulp and paper-making industry—in Albert E. Reed and Co. Ltd. and in Anglo-Canadian Pulp and Paper Mills Ltd.—have been well rewarded. In a world where the demand not only for newsprint but for all paper products is continually expanding, the prospects of the industry and of your investment in it are exceptionally good.

The new building

Excavation for our new head office and printing works in Holborn began about two months ago. The new building, estimated to cost over £2½ million, will replace the inadequate Fetter Lane properties which we first occupied in 1927 when the Daily Mirror's circulation was under a million. We shall instal in it modern printing presses which will enable us to meet foreseeable rises in circulation and paging. With a basement depth of some 45 feet and a height of some 170 feet, the building will provide your company and its associated companies with a home designed for their present and future needs, a home which incidentally will be one of the major landmarks in the reconstructed City.

Strong financial position

In this summary, I have touched on some of the problems besetting the newspaper industry and also given a survey of your company's activities over the year. You will see that, in spite of a reduced trading profit, your company has maintained its strong financial position; and I should like to close by expressing a note of thanks, on your behalf, to all those both at home and abroad who have contributed towards the year's overall success.

The report and accounts were adopted.

UNION CORPORATION, LIMITED

LORD BRACKEN REVIEWS PROGRESS OF THE GOLD-MINING INDUSTRY

COMMENT ON EXPLORATION IN THE KINROSS AREA

The annual general meeting of Union Corporation, Limited, was held in Johannesburg on May 29, 1956, Viscount Bracken presiding. The chairman in moving the adoption of the report and accounts for the past financial year, said:

Gentlemen, the accounts of the corporation for the year 1955, together with the directors' report, are submitted for your approval.

The gross profit for the year was £1,776,000 and the net profit, after providing £483,000 for taxation, was £1,293,000 as against £1,081,000 in 1954.

As I reminded you last year, the development of the Kinross area will require substantial expenditure by the corporation over a period of years. Your directors have therefore appropriated £325,000 to the general reserve account which, after the transfer from taxation reserve of the sum of £317,801 no longer required, now stands at £1,300,000. By the addition of £50,000 exploration reserve account now amounts to £974,554.

Dividends to a total value of 2s. 9d. gross per share have been declared, compared with the equivalent of 2s. 8.909d. for the previous year. These payments have absorbed £735,000, leaving £392,000 to be carried forward to the new account.

As our main interest is gold mining in South Africa, I should like briefly to review the position of the South African gold-mining industry as a whole. Much of what follows also has bearing on the gold-mining companies under our administration.

GOLD-MINING INDUSTRY

Owing to the improved Native labour supply, which I am glad to say has been maintained in the current year, the tonnage mined by the industry in 1955 increased by about 6 per cent to 65,950,700 tons. Because of the increasing contribution of the new, higher-grade mines of the Orange Free State and Far West Rand, the average yield improved by 0.206 dwt per ton to 4.274 dwt per ton, so that the total gold output rose by over 11 per cent to 14,093,668 ounces fine.

As a result of the larger output, coupled with a small increase in the average price received for gold, the working revenue from gold—but excluding that from uranium—was £177,414,094, or £18,770,308 more than for the previous year. Working costs absorbed £133,161,104, so that the working profit was £44,252,990, being an increase of £6,044,205. To this working profit must be added the estimated profit from uranium production, which in 1955 at £17,558,208 was more than double that for the previous year. The total working profit for the industry, therefore, including uranium, amounted in round figures to £61,800,000, or £15,500,000 more than in 1954.

From this profit over £22,500,000 was appropriated for capital expenditure, for loan redemption, including loans granted for uranium production and for other items. Provision for taxation and Government's share of profits is estimated at £16,894,000, being an increase of just over £2,600,000. Net dividends distributed to shareholders rose by £3,235,000 to £22,361,887.

WORKING COSTS

Working costs for the whole industry averaged 40s. 5d. per ton milled in 1955, being an increase of 1s. 9d. per ton milled over 1954. Of this increase part is due to the effect on the figures for the whole industry of the operations of the newer mines, whose costs per ton milled at present are appreciably above the average; but rather more than 1s. 0d. of the increase results from further increases in the cost of stores and materials and from increases in remuneration of European employees introduced towards the end of the year under review. While the full effect of these increases in European remuneration will only be reflected in the current year there is some indication that the rate of increase in other costs has slowed down.

The development footage accomplished by the industry in 1955 totalled 2,769,394 ft, or about 525 miles, being approximately 7 per cent more than in 1954. This was not sufficient, however, to maintain ore reserves, which declined by just over 4,600,000 tons to 163,680,243 tons, but the grade was 0.23 dwt higher at 5.63 dwt.

The scale of operations of the new mines of the Orange Free State and Far West Rand, which have reached production since 1951, continued to increase in 1955. These mines accounted for over 26 per cent of the total gold output of the industry, a little over 42 per cent of the working profit from gold and nearly 18 per cent of the total net dividends distributed by the industry. These dividends included the first declarations from the Orange Free State. They are a first and modest reward of a decade of bold enterprise, gruelling work and high resourcefulness in solving novel problems.

TAXATION

At present, because of the provisions whereby a new gold mine is allowed to amortize its capital expenditure before incurring liability for payment of taxation or State's share of profits, few of the newer mines are paying any taxation or State's share of profits, but in years to come it is clear that these new producers will make a most substantial contribution to the revenue of the State.

In March of this year, in his Budget Speech, the Minister of Finance of the Union of South Africa announced that he proposed, *inter alia*, to restore the formula tax to the 1950 level and also to increase the amount allowed as a working cost in respect of replacements of single items of equipment. The effect of the change in the formula tax will be to reduce the rate of taxation by just under 5 per cent as from January 1, 1956. This reduction, though comparatively small, and the other concessions are indeed welcome to the industry. The world is so accustomed to monotonous increases in taxation that it is a pleasure to witness a tax-gatherer resting from his labours.

Welcome, too, is the recent announcement by the Minister of Mines that when silicosis benefits are increased by legislation this year the State will itself assume responsibility for the retrospective liabilities so created, estimated at £10,900,000. It is pleasing that as a result of renewed representations by

the industry the State has for the first time recognised that the additional retrospective liability is properly one for the community as a whole, which has benefited so greatly from the operations of the gold mines. The industry will continue to carry the burden of providing for present and future liabilities in respect of silicosis compensation. It is difficult to predict, at this stage, the precise effect on the Industry of the increased benefits since this depends to a large extent on the number of cases certified by the Silicosis Medical Bureau, but the increase in the liability may well be substantial.

I should now like to review briefly the progress of the Gold Mining and other companies under our administration and some of the other companies in which we are interested.

Having reviewed the progress of the companies under the Corporation's administration, the Chairman continued:

EXPLORATION

The formation of Winkelhaak Mines, Limited, and the commencement of shaft sinking by it in the Kinross area marks an important stage in the progress of the corporation's exploration work in that area.

Much prospecting work is being done in the Kinross area outside the Winkelhaak lease area. If present indications continue to be confirmed by further drilling—as we hope they will be—we may, in due course, see two, or perhaps three, additional mines proved on ground controlled by our subsidiary companies.

I need hardly tell you that the corporation continues its search for new mineral deposits in other parts of the world.

Before concluding I should like to take the opportunity of expressing our thanks to the staff of the corporation both in South Africa and in London and to the managers, staffs and employees of the companies under our administration for their loyal and efficient services during the past year.

REPLY TO QUESTIONS

In reply to questions regarding activities in the Kinross area and the increase in the fixed assets figure shown in the consolidated balance sheet, the chairman reiterated that on the data available it looked as though there might be two or perhaps three further mines established on ground held by the corporation's subsidiaries. That might perhaps be a conservative view but it was necessary to be cautious in these matters. Any purchases of surface or mineral rights were only undertaken after full consideration. It would not be in the best interests of shareholders to attempt to be more specific at present but when the full picture emerged they would be informed.

Dealing with a member's question regarding the valuation of the corporation holdings in Tsumeb Corporation, Limited, and Chrome Mines of South Africa, Limited (included in the balance sheet under unquoted share and debenture holdings valued at or under cost), the chairman stated that he did not feel it was in the interests of members to give too much detail about the corpora-

tion's holdings. Chrome Mines of South Africa, Limited, was doing well despite a shortage of railway trucks.

In reply to another query in regard to the deduction of British income-tax from dividends paid by the corporation to members on the South African register, the chairman stated that it was the constant preoccupation of the directors to get some solution to this heavy burden.

The report and accounts were adopted and the retiring directors re-elected.

PROVINCIAL INSURANCE COMPANY

MR F. C. SCOTT'S STATEMENT

The fifty-second annual general meeting of the Provincial Insurance Company Limited was held yesterday at Stramongate, Kendal, Mr F. C. Scott (the chairman) presiding.

The following is an extract from his circulated statement for the year 1955:

To turn to the actual figures, it is interesting to note that we have passed the first million in fire income and in fact, with the acquisition of the United Kingdom Fire and Accident Insurance Company Limited, to which I shall make further reference, we are well on our way to the next £250,000. The resulting profit of £101,000 is substantially less than the very fine figures we have grown accustomed to in recent years. The effects of inflation we have enjoyed since the war have departed. Many rates of premium are being quoted which leave little or no margin for profit, and from now on we are going to have to fight hard to maintain our progress in the face of severe competition.

ACCIDENT AND MARINE ACCOUNTS

The accident account, which includes a preponderating income from motor insurance, is overshadowed by the quite phenomenal rise in the number and cost of motor claims already alluded to. A modest profit seemed probable in the early part of the year but was succeeded by a very bad experience during the latter half and, in spite of profitable results in many sections of the accident account, owing to our motor figures we show a net loss on this account of £72,184.

It has always been our practice to take a conservative view of our marine underwriting profits year by year, but because of the improvement now apparent in the years prior to 1952, and in spite of our anxiety for the outlook, we have felt justified in increasing the contribution to profit and loss account from £50,000 to £100,000, but do not expect to repeat this allocation next year. The marine fund will still show a ratio of 186 per cent to premium income.

INCREASED INTEREST AND DIVIDENDS

In the consolidated profit and loss account, perhaps the most significant feature is the rise, for the second year running, in gross interest and dividends by over £100,000. This was due in part to investing more fully our liquid funds but largely to the increased dividends received from our substantial holding of ordinary shares. In spite of the very modest underwriting results, we have felt this considerable increase justified us in raising the rate of dividend from 1s. 3d. to 1s. 6d. per share, which is well within the total interest and dividend receipts after allowing for the effect of profits tax.

I particularly refer to these features because the year-end saw the close of the personal management exercised by Mr Ian

Macpherson over our investments. For fifteen years or more he has been very intimately associated with us in conjunction with the late Lord Keynes, and since the death of the latter in 1946, in full control of our investment management. To him in major degree we owe our wise and successful investment policy over this period. It was with the greatest regret and only because we felt the long view made the creation of our own investment department an essential step that we have said good-bye to Mr Macpherson and some eighteen months ago appointed Mr G. F. M. Lyster gradually to take over control. He has now done so and we wish him all success in his new responsibilities but are happy to feel that we shall still have very close relations with Mr Macpherson and his colleagues at Buckmaster & Moore.

Here I should like to mention the acquisition by purchase of the United Kingdom Fire & Accident Insurance Company. We have added a useful fire and accident subsidiary to the Provincial and have welcomed Sir John Benn himself on to our board, and the United Kingdom Provident, I believe, appreciate the association with the Provincial and have appointed my son Peter to their board.

The report was adopted.

VAB PRODUCTS LIMITED

INCREASED TURNOVER

The nineteenth annual general meeting of Vab Products Limited was held on May 31st in London, Mr Ivor Lloyd, AMIAE, FCS, MInstBE (the chairman), presiding.

The following is an extract from his circulated statement:

The Profit of the Group amounted to £45,583 for the twelve months ended December 31, 1955, compared with £49,212 for the previous year. From the profit earned, £27,800, or 61 per cent, falls to be paid to the Government as taxation. I referred last year to the excessive amount of earnings which are absorbed in this way and I again stress the severe handicap under which we and many businesses are labouring. For every £1 earned, 12s. 2½d. is earmarked for taxation, and this proportion may be even higher in the current year. Additionally, during the year under review, no less a sum than £65,000 was paid over to the Government in the form of Purchase Tax on our products.

During 1955, conditions proved as difficult as in the previous year, with profit margins reduced by the ever-increasing costs in wages, metals and other raw materials. As in 1954, every effort was made to absorb these extra costs in order to hold selling prices and retain our markets with, I think, satisfactory results. However, notwithstanding an increased turnover, more efficient production, and a greater effort by all concerned, the profit was slightly lower.

Trading thus far this year compared favourably with the same period last year and, without undue optimism, our turnover for 1956 should be at least equal to 1955. We are fortunate in the diversity of the goods we make in our various Subsidiary Companies as, on average, a fall in the profit of one Subsidiary is usually compensated in others.

Your Directors are pleased to recommend a Final Dividend of 7½ per cent, less Income Tax, which with the Interim of 5 per cent already paid, makes 12½ per cent for the year 1955.

The report was unanimously adopted.

THE CHLORIDE ELECTRICAL STORAGE COMPANY

LEVEL OF SALES WELL MAINTAINED

The sixty-fifth ordinary general meeting of The Chloride Electrical Storage Company Limited was held on June 6th at Exide Works, Clifton Junction, near Manchester, Mr A. W. Browne, OBE, MIEE (chairman and managing director), presiding.

The following is an extract from his circulated statement: The level of sales has been well maintained in practically all markets throughout the year, and shows an increase over the previous year. Costs have continued to rise and our policy has been to absorb these increases wherever possible and thereby keep our selling prices steady, the result of which is reflected in the slight decrease in our income from trading.

Since the end of the year further increases have had to be met, and it is becoming increasingly difficult to hold prices at the present level. If we are to compete successfully, especially in the export markets, we must take advantage of all possible means for keeping selling prices steady, consistent with a high quality product.

The net income for the year is £1,102,083, which is 6 per cent in excess of that for the previous year. This increase is due principally to a decrease in the charge for taxation. The relation of current assets to current liabilities is much the same as last year, that is, 2½:1, and in this connection I think it may be claimed that the financial position of the Group is satisfactory.

Your Directors feel justified in placing a further £250,000 to General Reserve, and paying to the Ordinary Stockholders a dividend of 12½ per cent, making 17½ per cent for the year.

I am glad to be able to report that our principal brands of batteries—Silver-Exide, Chloride and Dagenite—continue to find high favour with the motoring public both at home and overseas. Our second outlet for batteries in order of importance is for trucks and other handling devices of all kinds. The demand for traction type batteries is rapidly increasing, and our Exide-Ironclad, Katha-node and Tudor batteries are eminently suitable for this class of service.

The third main category is what is known in the industry as the "Stationary" type. The new atomic power stations require large batteries, the first of which has already been installed. Our long experience in engineering the installation of large stationary batteries is of considerable assistance in securing such orders. The fourth category is made up of literally hundreds of different types, each especially designed for its particular purpose.

I am glad to report that the improvement in our export business which I noted last year has continued during the year under review.

For many years it has been the policy of your Directors to extend the Company's interests beyond the battery trade and I have previously mentioned our ever-growing interest in plastics, light engineering, sanitary engineering and other industries. During the year a new plastic film has been produced from one of our products which, as a result of technical collaboration with a leading company in the medical supply industry, is being used for bandage purposes.

In conclusion the state of the Company's affairs continues to be satisfactory, and we can view the future with measured optimism.

The report was adopted.

STRONG FINANCIAL POSITION OF THE SUNDAY PICTORIAL COMPANY

Cecil H. King reviews world-wide interests

The Thirty-Sixth Annual General Meeting of

Sunday Pictorial Newspapers (1920) Ltd. was held on 4 June at

Brettenham House, Lancaster Place, London, W.C.2. Mr. CECIL

H. KING, Chairman and Managing Director, said:

The year which ended on 29 February was overshadowed by two strikes and the trading profit of your company was heavily reduced. During the newspaper strike, when we were prevented from publishing four issues of the Sunday Pictorial, we operated at a loss. The rail strike was less serious, but the Sunday Pictorial, printed at that time only in London, had to bear extremely high costs of air and road transport.

Costs continued to rise during the year. The revised wage agreements of November 1954 maintained the industry as one of the most highly paid in the country and further wage increases were introduced in the following June. Railway freight charges were increased, and newsprint prices went up once again in the New Year. On the other hand, the retail price of the Sunday Pictorial rose to 3d. in October and in January the advertisement rate was raised 12½%.

It should be mentioned that the rise in costs has not been compensated by a rise in productivity. The number of Sunday newspapers was reduced in November when the Sunday Chronicle was swallowed by the Empire News, and this merger—like that of the Daily Dispatch a week later—must be taken as a warning of the economic tension that has resulted within the industry.

You will have seen from the accounts that, while the trading profit of your company decreased by £130,395, the total of dividends, interest and other income was higher. Taxation provisions were less and the net profit was only slightly lower than in 1954/55. We have recommended that the dividend be maintained.

FOUR NEWSPAPERS IN SCOTLAND

During the year the liquid resources of your company were enlarged by the disposal of its holding of 'A' Ordinary shares in Albert E. Reed and Co. Ltd. Part of the proceeds of this transaction was used to purchase 50% of the First Preference and Ordinary Share Capital of the Scottish Daily Record and Evening News Ltd., publishers in Glasgow of the Daily Record, Noon Record, Evening News and Sunday Mail. The other 50% was acquired by your sister company, The Daily Mirror Newspapers Ltd. Because of distribution solely from London, sales of the Sunday Pictorial, as of the Daily Mirror, have always been restricted in Scotland. By acquiring papers with established circulations and their own sources of advertising revenue, we have entered a field where we have never before been able to offer the strongest competition. Profits from our interest in the Scottish company should, in the long run, be greater than those to be derived from extended Scottish sales of the Sunday Pictorial.

THE START OF NORTHERN PRINTING

Towards the end of 1955, arrangements were made for printing the northern editions of the Sunday Pictorial on plant owned by Kemsley Newspapers Ltd. at Withy Grove, Manchester. This was a most important development and will be of great benefit to the Sunday Pictorial, long handicapped by its lack of late sports coverage in the north of England. Now, by going to print later, the northern editions should expand in circulation to give a more balanced distribution of your paper over the whole country.

GROWING SALES OF SUNDAY PICTORIAL

Sales of your paper have been entirely satisfactory. The consistently rising trend of the last three years levelled off during the first half of 1955. But over this period, which was disrupted by the strikes, we suffered far less than either the News of the World or The People, the papers immediately above and below us in circulation. In the second half of the year, when in company with other Sunday papers we raised our price to 3d., the Sunday Pictorial reached an average sale of 5,600,642, showing a greater numerical and percentage increase on the first half of the year than any of its competitors.

Sales of the Daily Mirror have also been good. In spite of strikes and a price increase, the daily average net sale figure for 1955 was at a level only just below 4½ million.

WOMAN'S SUNDAY MIRROR GAINS STRENGTH

The chief experiment of last year in which you were interested has been a notable triumph. Although born into a world of strikes, Woman's Sunday Mirror passed its first birthday with a rising circulation of over 1,100,000. Sales of the leading women's periodicals continued the prodigious rise shown since the war, and Woman's Sunday Mirror, its own personality established, has taken full advantage of this growing number of women readers. Reveille Newspapers Ltd., your associated company, returned a much smaller profit than last year. Both Weekend and Midweek Reveille, suspended by the newspaper strike, lost revenue from sales, advertise-

ments and competitions. Price increases were introduced during the latter half of the year and circulations fell. Some competitors, such as Weekend Mail and Titbits, showed a smaller decline, but no publication in this field altogether escaped the general recession of demand to be expected after the boom period of the last few years. The combined sale of Weekend and Midweek Reveille, at an average of just under 4½ million over the last six months of 1955, was still more than two-and-a-half times as great as that of any of their competitors. In the first months of this year there has been an advance in the sales of both publications.

High costs proved too great for Junior Mirror. Publication ceased at the close of the financial year, and its less successful rival, Junior Express, was left to battle on alone with the further extravagances of colour production.

HIGH COSTS IN AUSTRALIA

You will now wish to hear of your concerns abroad. News from Australia is not yet entirely satisfactory. Although radio interests (recently expanded with the granting of television licences) continue to do well, the daily newspaper, The Argus in Melbourne, is still not free from problems.

When you acquired your interest in 1949, The Argus was the most depressed metropolitan newspaper in Australia. Since then there has been enormous development. Staff has been reorganised to such an extent that no other paper in Australia can claim to have better; sales have increased in greater proportion than those of any competitor and a full share of advertisements has been gained. But in spite of these advances The Argus is still not out of the wood. Labour costs have gone up. The cost of newsprint at an average price of over £70 per ton—over 20% higher than in this country—already more than offsets the revenue from sales. Advertisement revenue, derived largely from the classified market, is as high as can be expected; not only is it difficult to enlarge but it might even diminish if the present economic boom ever gave way to recession. Moreover, circulation has already risen beyond the point at which existing plant can safely be considered adequate, and the company may soon be compelled to increase its capacity for colour

printing in order to be more competitive in the advertising field.

The weekly paper, Australasian Post, tells a similar story. Circulation has risen sharply. In April 1954 it averaged 98,000; eighteen months later it had reached 227,000. Nevertheless, the figure must rise again considerably before the high costs of production are fully counter-balanced.

BIRTH OF A NEW PAPER IN WEST AFRICA

In West Africa, on the other hand, your company's interests flourish. At a time when the sudden death of established newspapers was being lamented in this country, a new evening paper was being born in Lagos. You now have an interest in a total of six newspapers in the three territories. Circulations have continued to rise. In Sierra Leone the 10,000 mark has been comfortably passed. In the Gold Coast and Nigeria circulations of the daily papers reached averages of 54,737 and 65,756 over the latter half of 1955, increases of 24% and 29% on the same period in 1954.

In all three countries a big proportion of readership is in the larger towns where literacy is higher and there are fewer difficulties of distribution. But African governments are spending more both on education and on communications, and these developments should gradually bring wider sales. New territory is being penetrated—a special edition of the Nigerian daily paper is now flown out four times a week to the Cameroons some 450 miles away—and though costs of carriage may now be high the eventual reward will, it is hoped, be considerable.

As sales grow even further, plant will have to be expanded; but any problems encountered will be political rather than commercial. As you know, both Nigeria and the Gold Coast are nearing self-government. By providing impartial newspapers, staffed almost entirely by Africans and produced for Africans, we have done much to develop and encourage the political consciousness of both these countries. But you will understand that, as autonomy approaches, the political problems involved in such a project naturally grow more intricate.

EXPANSION IN PULP AND PAPER

Let us now consider your interests in the pulp and paper industry. The Albert E. Reed company has shown a substantial increase both in its

overall turnover and in productivity. A large amount of money is to be invested over the next two or three years in plant and buildings at Aylesford and elsewhere, and a new glazed kraft machine has already been installed. The newly associated companies have also continued their programmes of expansion. Kimberly-Clark Ltd., previously known as Cellucotton Products Ltd., has proceeded with its new converting factory. In New Zealand, the Tasman Pulp and Paper company has completed the installation of its new paper-making plant; production, planned initially at a yearly rate of 75,000 tons of newsprint, began in November. The integrated sawmill, pulp and newsprint operation is now New Zealand's biggest single industrial enterprise.

In November, market hopes of a larger interim dividend from Albert E. Reed were more than fulfilled by the maintenance of 10% on its increased equity capital (in which your interest is now confined to a large holding of Ordinary shares).

Your company's concerns in Canada also had an excellent year. Anglo-Canadian Pulp and Paper Mills Ltd. again showed a rise in total production and the consolidated net profit went up by \$½ million. The demand for newsprint, the company's main product, was particularly keen. The world shortage of this commodity (which seems to have been apparent to everyone except the President of the Board of Trade) became more acute towards the end of 1955 with the remarkable increase in consumption by American publishers. At the Dryden Paper company, Anglo-Canadian's subsidiary in Ontario, the new development scheme was begun during the year. Although the first stage was delayed by strikes, it is anticipated that the whole programme, designed to double production by July 1957, will be finished according to schedule.

THE FUTURE

From this account of your company's many interests, you will see that, in spite of obstacles at home, the health of your overall investments has been good. It remains for me to thank all staffs, both at home and abroad, whose co-operation has contributed to the year's result and to say that we can look forward to the future with confidence.

The report and accounts were adopted.

GALLAHER LIMITED

RECORD RESULTS IN CENTENARY YEAR

CONSOLIDATED PROFITS EXCEED £4 MILLION

SIR EDWARD DE STEIN ON THE OUTLOOK

The sixtieth Annual General Meeting of Gallaher, Limited, was held on June 6th at Winchester House, Old Broad Street, London, E.C.2, Sir Edward de Stein, Chairman of the company, presiding.

The Secretary (Mr George Iliff, ACA) read the notice convening the meeting and the report of the auditors.

The following is the Chairman's statement circulated with the report and accounts for the year to December 31, 1955: I very much regret to have to report the recent death of Mr Arthur Robinson who had been a director of J. A. Patreux, Limited, for a number of years before we acquired that company in 1937 and was a Director of your Company since 1943. Patreux, as you probably know, are the owners of the Senior Service brand of cigarettes, and Mr Robinson decided that the business could best be expanded in association with your Company. You are aware of the successful results of this combination, and we all owe a great debt of gratitude to Mr Robinson for his loyal and most helpful co-operation. He will be greatly missed by us all.

This is the hundredth year since the business was founded by the late Mr Thomas Gallaher. I am, therefore, particularly glad to be able to place before you results for the year which constitute a record in the Company's history. An illustrated brochure, showing some of the Company's activities, is being circulated to Stockholders, Employees and Direct Customers. I hope it will be of interest to all who receive it.

BALANCE SHEET FIGURES

In the Consolidated Balance Sheet at December 31, 1955, you will see that almost every individual figure is higher than the corresponding figure in the 1954 Balance Sheet. Not all of these increases call for comment.

Stock in Trade of the Group at December 31, 1955, was higher than in 1954 by £7,700,000. The principal reason for this increase is that quantity stocks of leaf in bond were greater at December 31, 1955, than at the end of 1954. Other factors contributing to the increase are that the average price of leaf in bond was higher this year than last and that duty paid stocks were also higher on a scale which reflects the increase in the rate of turnover in 1955.

Apart from the increase in the Company's business, the expansion of debtors from £11,700,000 in 1954 to £17 million in 1955 was due to lengthening the period of settlement from four weeks to five weeks in the case of some customers, and the higher selling prices of the Company's products which became effective during 1955.

FINANCE

Since the last Annual General meeting a number of changes have taken place in the financial structure of the Group. Before the end of 1955 we issued for cash 1,500,000 5½ per cent Cumulative Preference Shares of £1 each and 500,000 Ordinary Shares of £1 each—all since converted into Stock. These issues resulted in Share Premium Account benefiting to the extent of £680,000, being the premium on the Ordinary Shares issued less the expenses of the issues.

This additional finance did not prove sufficient for our requirements. In the first place it was difficult at that time to gauge the extent to which our turnover would rise, since the demand for one of our main brands, Senior Service, exceeded supply. In the second place, instead of being able to increase our borrowing in relation to our increased business and assets, we were faced with the continued pressure of the credit squeeze, and were informed that our banks would have to reduce their facilities. In these circumstances it became necessary in the early part of the present year to find a substantial amount of new capital and, as you all know, we issued in March, 1956, 5,437,500 Ordinary Shares of £1 each at par and £8 million 6 per cent Unsecured Loan Stock. The new money will, of course, substantially reduce our total short-term borrowings. At the same time the Authorised Capital of the Company was increased by £10 million to £22,500,000. The Directors have also set aside 125,000 Ordinary Shares of £1 each which will be offered to employees at par, subject to certain restrictions.

SUBSIDIARY COMPANIES

About the middle of 1955 we acquired a controlling interest in Benson and Hedges, Limited, a company whose name is well known at home and to all who travel abroad. We now own all the issued capital of this company and intend to develop its business.

The sum of £100,000 added to Goodwill and the charge of £35,356 against Reserve for Contingencies referred to in the notes on page 9 of the Accounts both relate to the Benson and Hedges, Limited business.

Our engineering subsidiary has made record profits again in 1955, the major part of which has been ploughed back into the business.

TRADING RESULTS

I now come to the Trading Results for the year. The consolidated profits, as you will have seen, amounted to £4,033,000, compared with £2,510,000 in 1954. I should like to add it is satisfactory that the increased profits have not only been brought about by an increase in the sales of "Senior Service" cigarettes but also in other sections of our business. "Park Drive" cigarettes, "Old Holborn" tobacco and "Manikin" cigars in particular have shown satisfactory increases. We are also the largest producers of roll and hard tobacco and we are satisfied with the results which have been achieved on this side of our business.

In the Accounts submitted to you, we have provided for a final dividend of 20 per cent on the Ordinary Capital as increased by the issue of 500,000 Shares in the Autumn of last year. In addition, we have set aside against our future liability for pensions in the Group the sum of £200,000. If you agree to these proposals this will leave us with an addition to our Carry Forward in the Consolidated Balance Sheet of £829,000.

FACTORIES WORKING AT HIGH PRESSURE

I informed you last year that, in order to meet the expansion in cigarette sales which took place in 1954, output had to be increased

rapidly and substantially in conditions which could not be maintained over a long period. Our cigarette factories are still working under high pressure to meet the demands being made on them. In two factories a considerable amount of overtime was worked throughout the year and one factory has been on double shift working for nearly two years. In addition our cigarette factories have more manufacturing machinery installed at the present time than they were planned to accommodate. These conditions have brought about reductions in working costs since they have enabled us for the time being to obtain the maximum output on a minimum investment in buildings, plant and machinery. This abnormal position could not be expected to continue.

In order to cope with our increased trade and to be in a position to meet further expansion, we acquired during 1955 a building in the Manchester area which is now in course of being adapted for use as a cigarette factory. Production is planned to commence there early in September this year. In addition, site preparations are now proceeding in Northern Ireland for the erection of a cigarette factory under facilities provided by the Government of Northern Ireland. That factory will not come into production for about two years. This will provide some additional manufacturing space but in part it will replace old buildings we took over during the war which are becoming uneconomic to maintain for manufacturing purposes. When these building operations are complete and the factories fully equipped with plant and machinery we will have added considerably to our manufacturing capacity.

DEPOTS MECHANISED

Our Sales and Branch Organisation has naturally had its problems to face, not only in meeting increased competition but in distributing to the Trade a greatly increased volume of goods. In order to meet the difficulties of physically handling larger quantities our distribution depots have been mechanised. Where possible depots have been extended and others have been altered to the best advantage. In Sheffield the erection of new premises, designed by our own staff, is nearing completion. The greatest credit is due to all concerned for maintaining uninterrupted supplies while all these alterations were in progress.

LEAF SUPPLIES

I have already mentioned that the principal reason for the increase in Stock in Trade is the higher volume of leaf tobacco which we had in bond at December 31, 1955, compared with a year earlier. There were large crops last year in both the United States and Southern Rhodesia. By reason of the increase in our cigarette sales in the year to June 30, 1955, our Dollar allocation for the 1955 United States crop was also higher: in addition the negotiations between the Treasury and the United States Government regarding the purchase of Dollar tobacco for Sterling to which I referred in my Statement last year resulted in our being able to improve our stocks of Dollar tobacco. However, the expansion of our cigarette business and the continuing control of Dollar expenditure are

still preventing your Directors from building the Group's stocks of Dollar tobacco to a desirable level.

It is to be hoped that the Dollar allocation to the industry this year will enable us to improve our stock position and that we may have the opportunity again this year of buying American tobacco for Sterling.

Southern Rhodesia tobacco auctions are now in progress, and it is expected to be a record crop from which your Company hopes to make a satisfactory purchase.

I recently paid a visit to our tobacco leaf Packing Factories in Southern Rhodesia and Nyasaland, which have most important functions to perform, and I was very glad to have the opportunity to discover for myself the efficiency and enthusiasm with which their work is being carried out.

SMOKING AND HEALTH

You will all probably have seen reference in the Press to the statement issued by a group of leading tobacco manufacturers of which this Company is one. I have nothing further to add to this.

THE OUTLOOK

When advising Stockholders in the middle of February of our plans for increasing the Capital of the Company we stated that, sub-

ject to unforeseen circumstances and to factors outside their control, the Directors anticipated that the profits for the year 1956 would be sufficient to justify a total distribution of 17½ per cent on the doubled Ordinary Capital. Since then there have been adverse factors—the increase in the Bank Rate two days after our circular was issued to Stockholders, the higher rate of tobacco duty and its possible effect on consumption, and the increase in the rate of Profits Tax imposed by the Budget. In view, however, of the satisfactory expansion of our trade which extends to many of our brands, we do not at present see any reason to alter the view already expressed even though our costs may tend to rise.

TRIBUTE TO EMPLOYEES

I need hardly say that the rapid expansion of our business has created a great many problems and put a great deal of responsibility and work upon the shoulders of our staff. Your Directors are very sensible of the splendid co-operation which they have received from everyone in the business.

The report and accounts were unanimously adopted; the proposed dividend was approved; the retiring directors, Sir Edward de Stein and Mr W. A. Edmondson, CBE, DL, were re-elected, and the auditors, Messrs Hill, Vellacott and Bailey, were reappointed.

SOUTH AMERICAN GOLD & PLATINUM COMPANY

Proceeds from Gold and Platinum Production
Provide Record Earnings in 1955

Developed Reserves Show Increase

South American Gold & Platinum Company had the highest earnings in its 39-year history in 1955, with net income rising to \$1,960,626 from \$1,388,314 in 1954, a gain of 41 per cent, Lewis B. Harder, president, states in the Company's Annual Report. Earnings were equal to \$1.05 on each of the 1,875,000 shares outstanding, compared with 85 cents on each of the 1,623,826 outstanding a year earlier.

Proceeds from sale of gold and platinum produced from its Colombia properties were at an all-time high of \$5,166,139. Gold production increased to 74,237 ounces from 59,614; and platinum recovery was 28,950 ounces, against 25,266. Despite the fact that the Company dredged a record high of 23,953,000 cubic yards, developed gravel reserves increased during the year to 116 million cubic yards from 105 million at the end of 1954.

South American plans to participate actively in the direction of the activities of Anglo-Ecuadorian Oilfields Limited, in which it and an affiliate bought a 34.4 per cent interest last year. The oil company has approximately 30 million barrels of reserves, daily production of 8,500 barrels and a 5,000 barrel refinery. It is felt that the removal of Anglo-Ecuadorian's domicile from England together with an improvement in rates for oil products in Ecuador will enhance the company's profits in future years.

Dividends received from the Company's 34.3 per cent interest in Pato Consolidated Gold Dredging, Limited, amounted to \$1,143,685. Of this amount, \$687,685 was applied to South American's income account; the balance of \$456,000 was considered paid from surplus and accordingly applied to reduce the cost of the investment.

The Company's future policy may include participation in other enterprises, but emphasis in the field of natural resources development is expected to continue. The management feels that gold and platinum mining activities afford unusual corporate protection in depression times, and that further broadening of these operations into development and extraction of related natural resources and auxiliary enterprises in South America will provide growing participation in the expanding economy of Latin America.

The Company's investments in local Colombian industries are all progressing satisfactorily. Oleoducto del Pacifico, the petroleum pipeline (in which South American is a co-investor), went into operation in March of this year. Vidrio, a new glass plant in Bogota, began manufacturing bottles in December and will become the first flat glass producer in the country. Promotora Colombiana, the consumer finance company, enjoyed unusual profits during its first year of operation.

Copies of the 1955 Annual Report, from which the foregoing material was extracted, may be obtained from Singer & Friedlander, Limited, 55, Bishopsgate, London, E.C.2, England, or from South American Gold & Platinum Company's New York office at 535, Fifth Avenue, New York 17, New York, USA.

THE CENTRAL MINING & INVESTMENT CORPORATION

MAINTENANCE OF STRONG
FINANCIAL POSITION

The Fifty-first Annual General Meeting of The Central Mining and Investment Corporation Limited was held on May 31st in London.

The Right Honourable Lord Baillieu, KBE, CMG (the chairman), presided and in the course of his speech said:

The very active conditions of the stock markets in 1954, especially in South African mining shares, gave way to quieter conditions in 1955, with declining prices which have persisted up to the present time. These have two main effects on our results: first, the profits arising from trading in shares necessarily suffer and, second, the provisions for diminution in the value of some of our investments are inevitably larger.

We continue to value our portfolio at cost or Stock Exchange price or, where there is no quotation, Directors' valuation, whichever is lowest. Diminution in value of investment acquired in 1955 is, as usual, charged against the profits of the year. Of £220,000 so charged in 1955 no less than £103,000 is in respect of British Government Securities, but, as the stocks concerned are all dated, recovery in value is only a matter of time or downward adjustment of interest rates as the case may be.

The significant change in the balance sheets calling for comment is the addition of £1 million to the value of our portfolio of investments. I would specifically mention a substantial addition to our holding in the Harmony Gold Mining Company Limited and the acquisition of a considerable holding in Rhodesian Anglo American Limited.

Our financial position remains strong, the net surplus of current assets being almost £2 million.

The actual results for 1955 record a notable increase in the scale of operations of both the gold mining and uranium industries. Foremost among the contributory factors were the expansion of production at a number of newer mines, notably those of the Orange Free State, an increase in the labour force, an improvement in the supply of electric power and the addition of a number of new producers of uranium. The uranium industry has already shown good returns, both to the producing companies of which it is composed and to the Governments by whom it has been financed.

Recently the market in South African shares has not attracted the support and interest of the general investing public. I think the reason for this is, broadly, twofold, and may be simply stated.

Firstly, in recent years investment opportunities in other markets have been more attractive and funds have flowed there. Secondly, the sharp conflict within South Africa on certain racial and constitutional issues has created disquiet in the mind of the overseas investor.

The broad result has been that the "Kaffir" market, which is a barometer of public feeling of the Union's greatest exporting industry, if not friendless, has lacked the sustained and active interest of informed investment opinion.

So far as the Corporation's action is concerned in the year under review, we substantially increased our investment in South African securities.

The report and accounts were adopted.

MIDDLE WITWATERSRAND (WESTERN AREAS) LIMITED

(Incorporated in the Union of South Africa)

CONTINUED SATISFACTORY PROGRESS

MR S. G. MENELL'S REVIEW

The Twenty-third Annual General Meeting of Middle Witwatersrand (Western Areas) Limited will be held in Anglovaal House, Johannesburg, on Thursday, June 28, 1956, at 11 a.m. The following is the Review by the Chairman, Mr S. G. Menell, which has been circulated with the Report and Accounts for the year ended December 31, 1955:

Your Company and its subsidiaries continue to make satisfactory progress. During the year the consolidated profit amounted to £583,852, of which £125,120 was attributable to the minority interests. The parent Company's profit of £199,198 arises mainly from the realisation of certain investments, the proceeds of which have been utilised principally in exercising your company's options to subscribe for additional shares in the Hartebeestfontein Gold Mining Company Limited and in the Buffelsfontein Gold Mining Company Limited, and in acquiring a large holding in the Free State Saaiplaas Gold Mining Company Limited.

Your Company continued its policy of undertaking new ventures by acquiring mineral option contracts over large areas in the vicinity of Delmas and Leslie and in the Standerton district of the Transvaal as well as in the Hoopstad and Boshof districts of the Orange Free State. Since the end of the financial year the Company has embarked on a drilling programme in the Delmas and Leslie area.

During the year further loan advances were made to our subsidiary Sabi Mining and Exploration Company Limited, which continued its investigation of coal measures in two Reservations granted under Exclusive Prospecting Orders in Southern Rhodesia.

As set out in the Report of the Directors, satisfactory progress and profits are being made by Virginia Land & Estate Company Limited.

A summary of the arrangements in connection with the Riebeeck Gold Mining Company Limited, in which your Company will have a substantial interest, is contained in the Directors' Report (the relevant extract appears below). These arrangements are subject to the approval of the Stockholders of General Exploration Orange Free State Limited at a Meeting to be held shortly.

Details of the results so far obtained in boreholes drilled by the Zandpan Gold Mining Company Limited, in which your Company also has a substantial interest, have recently been published in the press.

PROGRESS OF MINING INTERESTS

Details of the progress achieved by other mining companies in which your Company has considerable shareholdings are as follows:

At the Virginia Mine, satisfactory progress is being made with increasing the rate of production, from a monthly average of 48,333 tons milled at a recovery grade of 4.065 dwt per ton during the quarter ended March 31, 1955, to an average of 73,667 tons milled at a recovery grade of 4.309 dwt per ton during the quarter ended December 31, 1955. Sulphuric acid production was commenced in

January, 1955, and uranium production in September, 1955. The working profit from all operations for the financial year ended December 31, 1955, amounted to £644,563, of which £223,554 was derived from acid production and £199,544 from uranium production. Work is proceeding on extensions to the reduction plant and it is anticipated that a milling rate of approximately 100,000 tons per month will be attained towards the middle of the current financial year. The ore reserve at December 31, 1955, was estimated at 1,067,000 tons having an average value of 4.72 dwt over a stopping width of 48.0 inches, an increase of 317,000 tons as compared with the ore reserve as at December 31, 1954. During the quarter ended March 31, 1956, 231,000 tons were milled at a recovery grade of 4.371 dwt per ton, resulting in a working profit, including sundry revenue, of £65,190. In addition, an estimated profit of £307,464 accrued from uranium and acid production.

At the Merriespruit Mine, official production was commenced with the month of March, 1956. 75,000 tons were milled at a recovery grade of 4.519 dwt per ton resulting in a working profit, including sundry revenue, of £45,433. In addition, treatment of the uranium- and pyrite-bearing concentrates at the Virginia Mine resulted in an estimated profit of £4,615. The shaft sinking necessary for the present requirements of the Mine was completed during the year and a connection between No. 1 and No. 2 Shafts was made on the 35th level. No. 2 shaft is to be used as an upcast ventilation shaft.

At the Hartebeestfontein Mine, the production of gold was commenced with the month of July, 1955, when a profit, including sundry revenue, of £57,683 was declared. During the quarter ended March 31, 1956, 165,000 tons were milled at a recovery grade of 9.413 dwt per ton resulting in a working profit, including sundry revenue, of £430,380. Work is in progress on extensions to the reduction plant and it is anticipated that, dependent upon the sorting rate achieved, a milling rate between 65,000 and 75,000 tons per month will be reached towards the end of the current financial year ending June 30, 1956. Further plant expansion is anticipated during the following year ending June 30, 1957. By arrangement with the Atomic Energy Board of South Africa, the Company is erecting a plant with a treatment capacity of 100,000 tons per month for the extraction of uranium from the residue slimes from the reduction plant. The contract with the Board will be for the sale of uranium over a period of 10 years from January 1, 1957. Construction work on the plant is proceeding satisfactorily.

During the quarter ended March 31, 1956, operations at New Klerksdorp Gold Estates Limited, after taking into account the profit from uranium production estimated at £34,500, resulted in a net profit of £23,622.

At the Stillfontein Mine, erection of the sulphuric acid plant was completed towards the end of the year and its capacity has since been increased to 225 tons daily. Satisfactory profits are being made from gold,

uranium and acid production, and the ore reserve established at December 31, 1955, was estimated at 3,506,000 tons having an average value of 8.67 dwt over a stopping width of 36 inches. Work has been commenced on the deepening of the Margaret Shaft.

At the Buffelsfontein Mine, the sinking of the Pioneer Ventilation Shaft was completed in October, 1955, and of the Pioneer Main Shaft in February, 1956. A limited amount of reef development has been accomplished with satisfactory results. Erection of the reduction plant is proceeding and it is anticipated that trial milling operations will be commenced during the second half of this year.

Preliminary work in connection with the sinking of two vertical shafts is proceeding at the Free State Saaiplaas Mine.

In conclusion I desire to place on record your Board's appreciation of the services rendered by Anglo-Transvaal Consolidated Investment Company Limited, our Secretaries and Technical Advisers, both at the Head and London Offices and by the Managers and Staffs of our subsidiary companies.

EXTRACT FROM THE DIRECTORS' REPORT

As was announced in the press on January 31 last, Riebeeck Gold Mining Company Limited has been incorporated to take cession of certain mineral rights in the Van den Heeverstrut Area ("the joint area") from General Exploration Orange Free State Limited ("Geoffries") and your Company.

A provisional agreement in regard to the future exploitation of that area has been entered into between your Company and inter alios Geoffries, and which is subject to ratification by the Stockholders of the latter Company, the principal provisions of which are as follows:

(i) Application will be made by the Riebeeck Company for a mining lease in respect of approximately 2,415 claims on the joint area.

(ii) While no vendor consideration will be payable, the Riebeeck Company will refund to Geoffries and your Company £507,085 expenditure incurred on the joint area, of which your Company's share is £248,845.

(iii) Geoffries and your Company have undertaken to lend to the Riebeeck Company up to £400,000 to meet its initial capital expenditure, of which your Company will contribute £100,000.

(iv) In the event of a mining lease being granted, initial development by the Riebeeck Company will be devoted to the Upper Reefs—that is to say, the reefs lying above the geological horizon known as the Upper Shale Marker. If that development shows that the Upper Reefs do not constitute a satisfactory mine, the Riebeeck Company will be thereafter entitled to mine the Lower Reefs lying below the Upper Shale Marker free of any consideration. If that develop-

ment shows that the Upper Reefs do constitute a satisfactory mine, then, subject to the consent of the Government Mining Engineer, Geoffries can incorporate the Lower Reefs either in a mine to be controlled by General Mining & Finance Corporation Limited or in any other mine, and in either case your Company will be entitled to 33½ per cent of any vendor or other consideration. In the latter case, the Riebeeck Company will be entitled to mine the Lower Reefs, in priority to any other mine, on payment of £300,000, of which £100,000 will accrue to your Company.

(v) If the application for a mining lease is granted, the capital of the Riebeeck Company will be increased to £3,500,000 divided into 7 million shares of 10s. each of which your Company and its sub-participants will be entitled to subscribe for 1,750,000 shares at par. When that £3,500,000 has been spent a further £2 million will be raised either by way of loan (of which your Company will be entitled to subscribe for £500,000), or by way of an offer of shares to the Riebeeck Company's then Shareholders. These issues will be jointly guaranteed or underwritten by

UNIVERSAL PRINTERS LIMITED

(Controlling Bemrose & Sons Ltd., Derby, Alf Cooke Ltd., Leeds, and Norbury Printers Ltd., Manchester)

DIVERSITY OF PRODUCTS

Mr MAX BEMROSE ON CAPITAL IMPROVEMENTS

The thirty-fifth annual general meeting of Universal Printers Limited was held on May 31st at Derby, Mr Max Bemrose, MA (The Chairman), presiding.

The following is an extract from his circulated statement:

The Trading Profit of the Group at £411,150, as against £447,991 in 1954, shows a reduction. Net Profit, after making provision for taxation, however, remains very close to that for 1954, the figures being £156,247 compared with £157,136 for the previous year.

An interim dividend of 5 per cent on the Ordinary Shares as increased by the issue of shares made in June, 1955, was paid on November 25, 1955.

Your Directors recommend payment of a final dividend of 10 per cent, making a total of 15 per cent for the year. Last year the distribution was 18½ per cent on the old capital which is equivalent to 14½ per cent on the present capital.

The net amount of the Preference and Ordinary dividends provided in the Accounts represents 4.71 per cent of the Shareholders' Funds employed in the business at December 31, 1955, i.e., the total of Capital and Reserves £1,367,806.

GROUP SALES

Whilst the Group Sales show a small increase in terms of money, the margin of profit is reduced. At the end of the year, the three Subsidiary Companies, Bemrose & Sons Limited, Derby; Alf Cooke Limited, Leeds; Norbury Printers Limited, Manchester; each had a full order book.

As a result of trade conditions our turnover in certain lines fell off during the latter part of the year, but we were fortunate in being able to replace much of the work lost. One of the main strengths of our Group is

General Mining & Finance Corporation Limited and by your Company in the proportions of 75 per cent and 25 per cent.

(vi) The Riebeeck Company will be under the technical and administrative control of Anglo-Transvaal Consolidated Investment Company Limited.

The Riebeeck Company has entered into an agreement with Loraine Gold Mines Limited whereby it will contribute to the cost of the driving by the latter of twin cross-cuts from its No. 2 shaft towards borehole No. 1 (on the common boundary of the farms Kromdraai 386 and Graspan 40) and thence into the proposed lease area of the Riebeeck Company. This will have the effect of reducing initial capital expenditure and assisting development in the northern section of the Riebeeck Company's proposed mine.

The Directors of the Riebeeck Company are:

B. L. Bernstein (Chairman), Sir George Albu, B. E. Herscov, R. F. Lapping, E. L. Lloyd, C. S. McLean, S. G. Menell and J. Scott.

the diversity of its products, and its ability to serve many industries.

We have continued to make further improvements to our factory buildings during 1955. The total expenditure of £73,869 on additions to Land and Buildings for the year includes the balance of the cost of the new factory near Derby, which is now in full production.

NEW MACHINERY

The sum of £191,179 was spent last year on new machinery, and further commitments amounting to £106,772 were outstanding at December 31, 1955.

Although the cost of additions to Plant and Machinery during the past nine years has amounted to £947,290, the book value of the whole of our Plant and Machinery at December 31, 1955, only amounted to £691,913.

The modernising of our Plant is a great achievement, firstly because it has been financed wholly out of retained profits, and secondly because it helps us to compete by enabling us to use to the best advantage the limited labour available.

The private sector of industry must not be prevented from making capital improvements if the real standards of living are to increase. Neither can there be economic growth if differential awards are not available (after allowing for taxation) for hard and conscientious work, skill, initiative and responsibility.

THE FUTURE

Although the trading results of the first three months of the year are similar to those for 1955, the credit squeeze and possible reduction in consumption may adversely affect the sales of the Group.

As a result of lengthy negotiations with the Trades Unions we are faced with sharp increases in wages. Every endeavour will be made to meet the additional cost by greater output and increased efficiency. Nevertheless, it seems inevitable that the prices of some of our products will have to be increased.

In view of these factors I hesitate to forecast the future.

In conclusion I would like to thank the Staff and Employees for their continued loyalty and ability. We are fortunate that so many regard their work as a vocation.

The report and accounts were adopted.

THE ANGLO-EGYPTIAN OILFIELDS, LIMITED

The Annual General Meeting of The Anglo-Egyptian Oilfields, Limited, was held in Cairo on May 31st.

Mr H. M. Jones, the Chairman, in the course of his statement, said: At the Annual General Meeting last year I announced that an understanding had been reached with the Government regarding the 50/50 Agreement, and that we expected the 61 licences to be issued within a matter of days to Anglo-Egyptian Oilfields and Mobil Oil Egypt (formerly the Socony-Vacuum Oil Company of Egypt) as authorised by Law 205/1954. I also mentioned at last year's Annual General Meeting that an understanding had been reached with the Government on the main outstanding problem arising from differences of interpretation of the 1954 Price Agreement.

The position regarding the 50/50 Agreement is that subsequent to the last Annual General Meeting some new factors were injected into the field of negotiations and eventually the negotiations were concluded in February when the last outstanding point was agreed and the agreement was initiated by the negotiators. In so far as your company is concerned, we are now awaiting only the final formalities of signing the agreement and the issue of the licences. We have the men, the material, and the money—and all of us are anxious to get on with the task of, firstly, establishing whether or not oil exists in commercial quantities in those areas which have already been the subject of considerable expenditure by our Company and thereafter of long protracted negotiations and, secondly, if we are successful in exploration, of increasing our contribution to the national economy.

The Preliminary Announcement issued on April 7th explained that the Government had not yet confirmed the understanding, announced at last year's Annual General Meeting, on the main point of difference in the interpretation of the 1954 Price Agreement. However, a Committee has recently been set up by HE The Minister of Commerce and Industry to study the points outstanding between the Government and the Oil Companies, and we must hope that this matter will appear high on the agenda. In the meantime, as stated in the Directors' Report and the Preliminary Announcement, the Board have made no special allowance in the 1955 Accounts for adverse financial consequences.

There is no news regarding the 160 Exploration Licences—138 in the Delta Area and 22 in the Gulf of Suez—for which we had originally applied in February 1955 in accordance with the provisions of the Mining Law. As a result of recent amendments in the legislation we have re-submitted our applications: a decision by HE The Minister of Commerce and Industry is now awaited.

The net revenue for the year 1955, after providing £541,000 for Egyptian taxation, was £2,519,000 as against £1,800,000 for 1954. This increase, explained in the Accounts paragraph of the Directors' Report, is largely due to an increase in the sales tonnage.

The pattern of the decline in production from the fields has followed the lines forecast last year. Once again complete inactivity in exploration operations caused by the continuing lack of new licences must be reported. The programme of modifications and modernisation of the Refinery plants is being carried out according to plan.

Resolutions for the increase of the capital to £5,665,500 and for the bonus issue of one new "B" share for two "A" shares held were approved and the Report and Accounts were adopted.

NATIONAL BANK OF NEW ZEALAND

CONTINUED EXPANSION OF BUSINESS

MR ARTHUR H. ENSOR'S STATEMENT

The annual general meeting of The National Bank of New Zealand Limited will be held on June 28th in London.

The following are extracts from the circulated statement of the Chairman, Mr Arthur H. Ensor:

You will observe in the Balance Sheet that, pursuant to the Resolutions which were approved at the last Annual General Meeting, our capital now stands at £2,400,000, divided into shares of £2 10s. upon which £1 has been paid up.

The Reserve Fund amounts to £2 million. In conformity with the more general practice, the item Bills Payable and Other Liabilities, previously shown separately, is now amalgamated with Deposit and Current Accounts. The total for this item, now designated Current, Deposit and Other Accounts, is £60,305,000, a reduction of £4,366,000 compared with the figure for last year.

On the assets side of the Balance Sheet the principal alterations are a reduction of £3,663,000 in Cash and Balances with Bankers, and a reduction of £1,770,000 in Advances.

The net profit after provision for taxation is £277,447, against £265,430 last year.

From the profit brought in, £100,000 has been allocated to Contingency Account and an interim dividend of 4 per cent actual, less United Kingdom Income Tax at 8s. 6d. in the £, was paid in January last. The Directors now recommend for your approval a final dividend of 6 per cent actual, less United Kingdom Income Tax at 8s. 6d. in the £, making a total of 10 per cent for the year on the increased capital. The amount left to be carried forward is £227,497.

BUSINESS DEVELOPMENT

It is pleasing to report that our business continues to expand and that over the past ten years the number of customers on our books has more than doubled. The total number of our branches and agencies is now 140

PRIMARY INDUSTRIES

With continued mechanisation, high yielding grasses and good pasture management, farm production continues to increase, the volume index being a third higher than in 1938/39.

Wool prices this season have been on the average slightly lower than in the previous year. The fall has been less in the case of crossbred wools than for other types, and therefore in New Zealand, where crossbreds predominate, the drop in wool prices has not been so marked as elsewhere. The volume of production this year has been a little higher than in the previous season.

Production of meat for export in the first six months of the current season was 280,000 tons, a new record, although this is partly due to early killings as a result of the dry season in the South Island. In the 1954-55 season total exports were not far short of 400,000 tons, most of this coming to the United Kingdom.

The first New Zealand newsprint is now

being produced by the Tasman Pulp and Paper Co., Ltd., at their Kawerau plant. Some has been used in New Zealand and Australia, and shipments of wood pulp have been made to the United Kingdom and Australia. New Zealand Forest Products, Ltd., producers of kraft paper, timber and allied products, have announced their intention of substantially expanding their plant capacity in order to utilise more fully the annual growth of the Company's forests. Whakatane Board Mills, Ltd., brought a further cardboard machine into operation during the year, and their plant capacity is now 30,000 tons a year.

FINANCE

New Zealand's overseas balances at the end of December, 1955, stood at £65 million, a decrease of £23 million compared with the previous year. This followed a fall of £17 million in 1954. Imports during 1955 averaged more than £22 million a month, as against £20 million in 1954. Such a level could not be sustained, and it is satisfactory to record an improvement in the exchange position in the early months of this year, overseas balances recovering to £85 million at the end of March. Indications are that imports for the full year will show a considerable reduction.

Rates of interest throughout the economy

have shown an upward trend. Typical movements have been an increase from 4½ per cent to 4¾ per cent in the rate charged by the State Advances Corporation on loans for new houses, an increase in the fixed deposit rates of the Trading Banks and the raising of the maximum rate for Local Body Loans from 4½ per cent to 4¾ per cent.

GENERAL TRADING AND INDUSTRIAL CONDITIONS

During the year to March, 1956, the Consumers' Price Index rose by 2.5 per cent, compared with 3 per cent in 1954/55 and 5.4 per cent in 1953/54. There was no application to the Arbitration Court for a general increase in wages, and the amount of time lost in industrial stoppages, although showing some increase over the very low figures of the two previous years, was small.

The value of retail sales showed a slight increase, but when allowance is made for variations in prices it appears that the volume of sales was about the same as in the previous year. With changing conditions, competition among manufacturers and traders has become very keen in many lines, and this is likely to be more pronounced in the current year.

It would be true to say that the general position in New Zealand is one of prosperity yet still inflationary with overfull employment, a strong demand for goods and services, and a lack of personal savings.

There are signs that the financial measures taken over the past twelve months are beginning to have some effect in damping down inflationary trends, and conditions are tending slowly to assume a more healthy form.

It is clear, however, that present financial policies will have to be continued for some time if relative stability is not only to be achieved but is also to be maintained.

PHILLIPS RUBBER SOLES LTD.

The 29th Annual General Meeting was held on 7th June, 1956, the Chairman, Mr. Peter Pettit, presiding.

THE ACCOUNTS for the year ended 28th February, 1956, show:
Profit for the year £204,409
(compared with £218,606 for the previous year).

APPROPRIATIONS:
Income Tax and Profits Tax £120,000
Transfers to Reserve 1,059
Dividends (Net) 51,750
Added to amount carried forward 31,600
£204,409

The following points are included in the Chairman's Review, which was circulated with the Annual Accounts:

- Sales of PHILLIPS Soles and Heels in both the home and export markets reached new high levels, but total Group earnings were a little lower.
- Prices of PHILLIPS lines have been kept down over a long period—increased costs being met by expanding output, but a small general increase of prices was made in January, 1956, chiefly necessitated by two national wage awards.
- Finance. Permission had been obtained to raise privately £250,000 unsecured loan stock, towards the rebuilding and re-equipment of the Manchester factory. Negotiations are in hand to do this.
- Additional Premises and equipment have been acquired in the meantime to ease the strain in the main factory.
- For the current year costs still tend to rise, but it is hoped that the credit squeeze will not adversely affect the sale of PHILLIPS Soles and Heels, which are a particularly good "buy" in hard times.

A Final Dividend of 15% (making 20% for the year) was approved, and the Report and Accounts were adopted.

UNITED DRAPERY STORES

Year of Continued Expansion

TEN YEARS' PROGRESS

The following are extracts from the statement by Sir Brian E. S. Mountain, Bart. (the chairman), circulated with the Report and Accounts for the year ended January 28, 1956:

The year under review has been one of continued expansion.

ALEXANDRE LIMITED.

The acquisition of this business was completed on February 1, 1955. This is our last acquisition to date and it has proved a most satisfactory one. This business, built up under the able direction of its present Chairman, Mr S. H. Lyons, has recently celebrated its 50th Anniversary, and I think we may confidently anticipate that it will make still further progress in the future.

PROPERTY VALUATION

Our freehold and leasehold properties have been valued by Messrs Healey & Baker at £16,423,535. This figure showed a surplus of £6,114,134 over book value but your Board decided to exclude from the Balance Sheet the value placed on all Leaseholds expiring before the year 2000 amounting to £2,038,000. This reduced the net surplus to £4,076,134, the figure dealt with in the Accounts. £3,360,042 has been applied to writing off the Goodwill.

CONSOLIDATED ACCOUNTS

The Group Trading Profit amounts to £6,091,144, an increase of £1,540,366 over the previous year, and each of our subsidiaries has had a satisfactory year's trading. A number of branches have been transferred from the Prices tailoring group and are now operating as Alexandre or Richard Shops. We have also modernised and converted nearly 150 of the Fifty Shilling Tailor shops, which now trade as John Collier. Once the conversions have been completed, there has been a noteworthy increase in sales in the branches concerned. Our programme of modernisation is still far from complete, but I believe the current year's profit should materially benefit from all this expenditure and effort.

UNITED DRAPERY STORES LIMITED

Executive Offices: 364-366 Kensington High Street, London, W.14

TAXATION

The charge for taxation has risen by nearly £900,000 and amounts to nearly 11s. in the £ of our total net earnings. After deducting taxation and the profits attributable to outside interests, Group profit amounts to £2,453,756, an increase of £610,599. Of this profit after payment of dividends, we are retaining £1,153,576 in the business.

Our total sales under hire purchase terms amount to only 7 per cent of the total Group turnover, and although the additional restrictions imposed by the Chancellor last year may bring about a further contraction in hire purchase sales, this can only have a slight effect on the turnover of the Group as a whole.

GOODWILL

We have taken the opportunity of reducing the book value of Goodwill to a nominal amount of £1 by writing the balance off against part of the Surplus on Valuation of Property

Capital and Reserves now amount to £15,406,976, an increase of over £64 million in the year.

FUTURE PROSPECTS

The Group turnover for the first quarter of the year shows a satisfactory increase, and we have no reason to suppose that this trend will not continue. Our main concern is that almost every item of expense continues to increase, and this year, in particular, we are faced with very heavy additional demands for Rates resulting from the new assessments.

For the remarkable growth of the Company's business during the last eleven years we are indebted to our Vice-Chairman and Managing Director, Mr Joseph Collier, whose vision and brilliant direction have achieved these results, backed by a team of able Executive Directors and Staff. Providing present trading conditions continue, I am confident that next year I shall be able again to present accounts showing still further progress.

BRITISH TIMKEN LIMITED

MR JOHN PASCOE ON "UNNECESSARY UPROAR" OVER AUTOMATION

Mr John Pascoe, Chairman and Managing Director of British Timken Limited, at the Annual General Meeting in Birmingham on May 30th said that, excluding the £1 million Preference share issue in 1948, all postwar expansion had been financed by retained profits. Mr Pascoe added:

Our Reserve Fund is represented by assets permanently employed. We are therefore proposing to issue to Ordinary shareholders one new Ordinary share for every two held.

During 1955 we purchased the freehold of part of our Birmingham factory and thus deleted £25,512 from Leasehold Property. Further additions to Freehold Property are mainly due to the new factory at Daventry. In the past four years capital expenditure on expansion and re-equipment has been approximately £2,500,000, and capital commitments at the end of 1955 were £633,000.

This large capital expenditure and very considerable future amounts we foresee, necessitate a conservative dividend policy. However, we recommend a small increase.

Our profits were obtained from a much larger turnover, and I cannot emphasise too strongly that adequate profits are necessary to maintain and support the growth of our productive capacity. We cannot but regard the increase in Profits Tax of the last Budget as most regrettable and difficult to reconcile with a real belief in free enterprise.

The satisfactory increase in orders came from almost every section of industry. In spite of greatly increased home demand, we were able to increase our direct exports. These went to over 92 countries. To maintain and build up these direct exports, your Directors and senior officials made many visits overseas and in addition we maintain technical representatives in a large number of overseas territories.

I was unfortunately correct last year in suggesting we were entering a more difficult period in obtaining raw material. At present the obtaining of adequate high-grade alloy steel is a very difficult problem. Although our operations have not yet had to be curtailed, unless we can overcome this difficulty our rapid expansion may be forced into a slower pace.

We are expanding the Daventry factory and about the year end a further section should be in operation. This factory has enabled us to obtain a greater turnover in the larger types of tapered roller bearings, and we are confidently expecting further opportunities of expanding these activities. In this factory, with its new and very expensive machinery and equipment, it is particularly essential to maintain at least two-shift working so that we may compete with active foreign competition. Manufacture cannot be economical if a very expensive machine tool only works for a fraction of the available hours.

AUTOMATION

Last year I referred to the almost incredibly rapid development of the machine tool and of the automatic control of industrial processes and movement. Great attention has been focused on this evolutionary development by the importation of the word "automation" from the United States. The convenience of being able to describe this technical development in manufacturing methods by one, although ugly, word, automation, has led to a spate of writing, very little of which has relation to fact. The prevalent idea that we are on the eve of displacement of large numbers of workers by automatic brains and robot manned factories is unrealistic to the point of being fantastic.

As always in industry, the development of new manufacturing techniques will mean transfer of some workers from one industry to another. To me, the problem seems to be whether the older industries can lessen their demands for workers rapidly enough to permit new industries, which grow up year by year, to satisfy their demands for manpower.

A prominent USA industrialist has said that half today's industrial force in that country is producing and distributing products not even heard of fifty years ago, and that with the acceleration of modern development the next twenty-five years is likely to show a similar shift in the working population.

This undoubted pattern of the past and forecast of the future must, on a little consideration, mean that all that is covered by this word "automation" must not be regarded as anything of a tragedy to our working population, but rather as a definite promise of increasing standards of living in the future.

When all the unnecessary uproar over this word has died, I still hope to be able to tell you that, with increased efforts in research and development, we are keeping abreast of all advances in modern techniques and so playing our part in the development of a still more efficient industry in this country.

FUTURE PROSPECTS

During this year demand from the motor-car trade has fallen, and we have warnings from two eminent members of that industry that the immediate future is likely to present some difficulty.

In other directions, railways, commercial vehicles, aircraft, machine tools, and large rolling mill bearings, there has been no fall in demand. There is every indication that manufacture of bearings for these industries, comprising the greater part of our turnover, will keep our factories well employed this year. Further, we are confident that requirements for large bearings will enable us, with our expanding facilities, to increase our turnover in these during the coming year, always provided that the considerable raw material difficulties are overcome.

I must, however, remind you that we are in a period of further increases in costs, and it is only to be hoped that inflation will be stemmed sufficiently rapidly to permit our continued successful competition in foreign markets.

Our contribution towards modernisation of British Railways is already considerable. Many of the new locomotives, both diesel and electric, will run on our axle boxes, and we have great hopes that the demand from railways in this and other countries will afford us opportunities for very considerable expansion during the coming years.

Our output to the aircraft industry has been well maintained, and we are continuing to share in the world success of the famous Vickers Viscount.

FISCHER BEARINGS COMPANY, LIMITED

The products of our subsidiary, Fischer Bearings Company, Limited, continue to meet a wide range of acceptance, particularly in the aircraft industry.

Orders on the Fischer books are appreciably greater than a year ago and include a substantial increase in the special bearings made for the latest types of aircraft engines. The Fairey Delta II, which recently established a new air speed record of 1,132 miles per hour, has FBC bearings in its Rolls-Royce engine.

Mr Pascoe thanked employees of British Timken Limited, Fischer Bearings Company, Limited, and British Timken SA (Pty) Limited, for their services and paid special tribute to the Managing Director, Mr J. N. F. Brown, of the South African subsidiary for his part in building direct exports.

BANQUE DE PARIS ET DES PAYS-BAS

(Paris)

The annual general meeting of the Banque de Paris et des Pays-Bas was held in Paris on April 26, with Monsieur Emanuel Monick in the Chair, and the following is a summary of the report presented by the Board of Directors:

ECONOMIC EXPANSION

The world economy in 1955 was marked by rapid industrial expansion, persistent agricultural overproduction, and altogether unprecedented prosperity. The industrial advance was largely due to the recovery of the American economy, which had set in during the closing months of 1954.

In Europe, too, there was distinct economic progress. In Germany and the Netherlands unemployment has practically disappeared, and the menace of inflation, closely linked with an exceptional rate of expansion, has grown in almost every country.

The Bank expanded its activities during the year in the many countries where it has interests. It participated in the issue of five-year State Savings Bonds and took an active part in a number of other financial operations, such as share issues, loans, and capital increases conducted by large industrial organisations. Particular importance attached to the Bank's operations in Colombia, Peru and Brazil, where it is actively engaged in promoting the construction of steel plants.

PROFIT AND DIVIDENDS

The balance sheet at December 31, 1955, totalled Frs.124,428,123,106, as against Frs.118,250,751,973 in the preceding year.

Net profits available for distribution amounted to Frs.785,529,400, as against Frs.663,125,222 for the previous year. It was accordingly proposed to distribute a dividend of Frs.600 net per share of Frs.5,000 nominal, equivalent to Frs.659,340,759, to appropriate Frs.87,019,887 for various purposes, and to carry forward the balance of Frs.39,168,754.

The report and the proposals put forward by the Board were adopted.

THE ORION INSURANCE COMPANY, LIMITED

CONTINUED DEVELOPMENT

SIR STRATI RALLI'S REVIEW

The twenty-sixth Annual General Meeting of The Orion Insurance Company, Limited, will be held on June 14th in London.

The following is an extract from the circulated statement of the chairman, Sir Strati Ralli, Bt, MC: In my statement last year I advised you that your Board was endeavouring to develop the Company's Fire and Accident business on a wider basis, both at home and overseas, and in the year under review some progress has been made in pursuance of that policy.

In the United Kingdom the Company has appointed productive Broker Agencies in various cities and towns and although the results in terms of premium income are, as yet, comparatively modest, advances are being made in the right direction and a considerable measure of goodwill has been established. As a further step in the development programme the Company has acquired the lease of premises in Manchester and the first home Branch of the Company will be established there in the very near future. Mr F. K. Marriner, FCII, has been appointed the Branch Manager and we welcome him to our service.

Overseas, new Underwriting Agencies have been appointed for Egypt, at Alexandria, and in Malta. Following the visit of Mr T. R. Easton, Joint General Manager, to Australia last year your Board decided to convert our Underwriting Agency at Sydney to a Branch basis. Mr L. F. Thorpe has been appointed Manager for New South Wales and the Staff of the Agency have become members of the Staff of the Company. We extend a welcome to our new Manager at Sydney and to all the members of his Staff there.

The measures which I have thus briefly outlined in furtherance of the Board's declared intention to seek expansion of our Fire and Accident business at home and abroad bring inevitably in their train an increase in expenditure but, although the fruits of our endeavours will not be immediately apparent, your Board is confident that the Company is moving prudently in the right direction. The early period of the development process of a young Insurance Company—and we are still so, measured in terms of the majority of our competitors—cannot be other than slow if allied, as it must be, with care.

MARINE DEPARTMENT

In the Marine Department the Net Premium Income for 1955 amounted to £1,211,036 compared with £1,047,744 for 1954.

The ratio of total Claims paid in respect of all Underwriting Accounts was 72 per cent compared with 78 per cent in 1954. Expenses of Management amounted to 5.8 per cent compared with 6.3 per cent last year.

The 1953 Underwriting Account has closed with a very satisfactory profit out of which the sum of £110,000 has been transferred to Profit and Loss Account.

The Marine Fund now stands at £1,563,889 (129 per cent) compared with £1,408,679 (134 per cent), the slight reduc-

tion in percentage being due to the increase in premium in 1955.

With regard to the Open Underwriting Years, the 1954 Account, although not quite so good as 1953, gives every indication of producing a satisfactory profit. The first year settlement for 1955 is almost the same as that on the 1954 Account.

The Aviation business is included as is customary in the Marine figures and I am glad to be able to report another satisfactory profit in this Section.

FIRE, ACCIDENT AND MISCELLANEOUS DEPARTMENT

The Net Premium Income in this Account amounted to £774,905 compared with £809,872 for 1954.

The fall in Premium Income is attributable to a re-examination of the composition of the whole of this Account resulting in a considerable reduction in certain sections. Progress has been made, however, in other sections and the direct Fire and Accident Income from all sources has increased by more than 10 per cent.

The total figures of all Classes combined show Claims incurred 71 per cent on Earned Premiums, and Commission and Expenses 25 per cent, thus enabling us to transfer the sum of £29,239, equivalent to 4 per cent, to Profit and Loss Account.

PROFIT AND LOSS ACCOUNT AND BALANCE SHEET

The total of the transfers from the Revenue Accounts amounts to £139,239 as against £148,335 last year and after bringing in Gross Interest and Dividends of £163,761 (£145,618) and deducting Directors' Fees £3,000 (£3,000), Other Expenses and Audit Fee £33,773 (£27,529), Overseas Taxation £3,051 (£7,000) and provision for United Kingdom Taxation of £145,000 (£190,000), the Net Balance for the year amounts to £118,176. To this amount has been added the sum of £25,268 being net Dividends received relating to previous years and the sum of £162,838 brought forward from 1954 making a total of £306,282 available for appropriation.

Your Directors have decided to transfer the sum of £15,000 to the Provision for Staff Contingencies and to augment the General Reserve and the Investment Reserve by the transfer to these funds of £25,000 and £60,000 respectively.

Your Directors recommend the payment of a Dividend of 15 per cent (less income Tax) for the Year 1955, being an increase of 2½ per cent over the Dividend paid for the Year 1954. This requires a net sum £43,125 leaving a balance of £163,157 to be carried forward to the next Account.

Total Assets continue to grow and now amount to £5,729,391. The Market Value, or, where there is no quotation, the estimated value, of our Investments at December 31, 1955, was, in the aggregate, in excess of the Balance Sheet figure.

WORTHINGTON-SIMPSON, LIMITED

RECORD TRADING PROFIT

The sixty-fifth annual general meeting of Worthington-Simpson, Limited was held on June 5th in London, Sir Samuel R. Beale, KBE, MIMechE, chairman, presiding.

The following is an extract from the chairman's circulated statement for the year 1955: The Report and Statement of Accounts shows a record trading profit of £887,658 compared with £652,202 for 1954. After making provision for all charges, including taxation, the net profit for the year under review is £405,977 as against £296,112 for 1954. I feel that some explanation is necessary to indicate the cause of the considerable increase in profits over last year. The major portion results from increased sales and output of our established lines, coupled with increased sales from developments to which I referred last year; additionally we have been able to take profits on certain large contracts which have come to fruition during the year.

Our order book stands at about the same high level as last year and the incoming business for the first quarter this year is most encouraging.

Our capital commitments at £136,353 are considerably in excess of those at the end of 1954. The expenditure covers new machine tools, plant extensions and additional office accommodation.

The report and accounts were unanimously adopted; the proposed final dividend of 10 per cent on the Ordinary shares, making 20 per cent for the year, less income tax, was approved.

ODHAMS PRESS LIMITED

INCREASED REVENUE

The thirty-sixth annual general meeting of Odhams Press, Limited, was held on May 31st in London.

Mr A. C. Duncan, FCA (the chairman), in the course of his speech, said: Whilst our gross revenue as compared with that of the previous year has increased by £3,707,000, production costs and other expenditure have increased by £3,637,000. The increase in Trading Profit is £70,000. These results were achieved despite the losses incurred from a serious stoppage of our newspaper activities in the early part of the year, followed by a strike on the railways which involved us in further heavy costs.

The last page of the Report gives an up-to-date picture of the expanding scope of your company's activities and a list of the 56 publications owned or controlled by it, an increase of eleven during the past year.

The *Daily Herald* and *The People* maintain their influence, popularity and place among the great national newspapers and *The Sporting Life* also retains its pre-eminent status.

The sales of *Woman* exceed 3,300,000 copies per week, a world record for a publication of this kind, and *John Bull* and *Illustrated* maintain their leading position in their own fields. *Ideal Home* has maintained its popularity.

Overall, the sales of our newspapers and periodicals are, approximately, 23 million copies a week.

The report was adopted and a final dividend of 1½ per cent, making 17½ per cent for the year, was approved.

APPOINTMENTS

UNIVERSITY OF BIRMINGHAM

Applications are invited for a Research Fellowship or Associateship in the Faculty of Commerce and Social Science.

A Fellowship or Associateship is subject to annual renewal and is normally tenable for three years. A Fellow should possess a doctor's degree or have had equivalent research experience; an Associate should be a graduate of at least two years' standing. The salary will be not less than £550 p.a. for a Fellow, and £500 p.a. for an Associate, with membership of the F.S.S.U. and family allowance.

Applications (two copies), with the names of two referees, should reach the Registrar, The University, Birmingham 15, not later than June 23, 1956. Candidates are invited to submit with their applications a brief outline of their proposed research.

G. L. BARNES, Secretary.

The University, Birmingham 15.

UNIVERSITY OF ST. ANDREWS

The University Court of the University of St. Andrews invites applications for a Lectureship in Political Economy in St. Andrews College. Applicants should have a special interest in Social Economics. The appointment will date from October 1, 1956, or as soon thereafter as possible. The salary will be on the scale £650 by £50 to £1,350 per annum (subject to an efficiency bar at £1,000), commencing salary depending on qualifications and experience. The post carries F.S.S.U. benefits and family allowances, and a grant towards expenses of removal will be made. Further particulars may be obtained from the undersigned, to whom five copies of the application, together with the names of three referees, should be lodged not later than June 30, 1956.

D. M. DEVINE, Joint Clerk to the University Court, College Gate, St. Andrews.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited for a temporary Tutorship in Economics. Salary between £400 and £500 per annum according to qualifications and experience. The appointment will be for one year in the first instance and may be renewed for a second year. Applications should be sent by June 30, 1956, to the Registrar, University College, Singleton Park, Swansea, from whom further particulars may be obtained.

CITY AND COUNTY OF KINGSTON UPON HULL

TOWN PLANNING DEPARTMENT

Applications are invited from suitably qualified persons for the post of Planning Assistant, Grade APT.III (£640 x £25—£765 per annum).

Preference will be given to candidates possessing an Honours Degree in one of the Social Sciences and/or practical research experience with a Local Planning Authority.

Housing accommodation will be provided in appropriate cases.

Application forms may be obtained from the undersigned and should be returned not later than Saturday, June 23, 1956.

H. F. ALSTON, M.T.P.I., A.R.I.C.S., A.M.I.Mun.E., Town Planning Officer.

Guildhall, Kingston upon Hull.

May 31, 1956.

ADMINISTRATIVE OFFICER

required in the London Office of the UNITED KINGDOM ATOMIC ENERGY AUTHORITY for work relating especially to the policy and conditions of employment of non-industrial staff.

Salary in the range of £1,900-£2,200 (likely to be reviewed shortly); contributory pension scheme.

Applicants who can show evidence of high administrative ability coupled with appropriate experience should send postcard for application form to U.K.A.E.A., Room 11, 14 Ormond Yard, St. James's, London, S.W.1. Closing date for receipt of requests for forms will be June 30th.

TRAINING OFFICER required by N.C.B.'s Staff Department in London to be responsible to the Head of Staff Training Branch for work which includes the education and training of non-technical staff at London Headquarters, the co-ordination of divisional activities in this field, and the organisation and administration of national courses and conferences (including the Summer School) for both technical and non-technical staff. Candidates should have had a wide experience of education or of industrial training. They should possess a good degree, administrative experience, teaching ability, and be well versed in the methods and knowledge of the coal industry would be an advantage. Appointment (superannuable), according to qualifications and experience, with inclusive range £1,454 to £1,820. Write, with full particulars, to Mr. J. H. G. Jones, Director of Training, N.C.B., National Coal Board, Hobart House, London, S.W.1, marking envelope SS/303, before June 26, 1956.

C.W.S. Market Research Department has vacancies for **TRAINEE ASSISTANTS** with qualifications in economics, commerce, statistics, etc. (Consideration will be given to applicants who expect to complete their degree courses this term.) The work of the department is concerned mainly with the study of consumer habits and retailing practices, and persons appointed may work in the office or in the field. Commencing salary £500 per annum. Apply, giving full details of age, education, etc., to C.W.S. Limited, Central Labour Department, 1 Ballgown Street, Manchester, 4.

ORGANISATION and Methods Officer required by a large engine manufacturing factory in the Manchester area. Must be experienced and hold an Accountancy and/or Engineering qualification. As this will be the initial appointment prospects are excellent. A suitable salary will be paid, together with a contributory Pension Scheme. Apply, setting out details of practical experience of Organisation and Methods work, to The Personnel Officer, The National Gas and Oil Engine Co. Ltd., Wellington Works, Ashton-under-Lyne, Lancashire.

ARTICLES offered by medium-sized firm of Chartered Accountants in the West End to suitable persons leaving school in July. No premium; small salary. Please give full particulars.—Box 439.

UNIVERSITY COLLEGE OF THE GOLD COAST

Applications are invited for the following appointments in the Registrar's Office:

(a) Assistant Chief Accountant.

(b) Two Assistant Registrars.

For (a) candidates must be professionally qualified accountants, for (b) they must be graduates. Salary (a) £1,700 p.a. (b) £950 p.a.—£1,600 p.a. according to qualifications and experience. Allowance £100 p.a. per child (max. £500 p.a.). Outfit allowance £60. F.S.S.U. Passages for appointee, wife and maximum of 5 children on appointment, normal termination and leave. Part furnished accommodation at rent not exceeding 7.5 per cent of salary. Detailed applications (6 copies) naming 3 referees by June 30, 1956, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 from whom further particulars may be obtained.

THE METAL INDUSTRIES GROUP OF COMPANIES

invite applications for the following appointments:—

CHIEF ACCOUNTANT: The successful applicant will be responsible to the Board for the supervision and control of Subsidiary Companies accounting procedure, the preparation and interpretation of Group financial budget statements and consolidated Accounts, controlling Group expenditure and carrying out the financial policy laid down by the Board, preparing special financial reports and statistics, preparing Group Profit Taxation Computations and advising Subsidiary Companies on taxation matters. Knowledge of budgetary control and standard costing procedure would be desirable. Initially the Chief Accountant will operate from Glasgow, but will be located ultimately in London. He will be expected to pay periodic visits to Subsidiary Companies in Scotland and England. The post will carry a salary of the order of £3,000 per annum. Applicants should be members of the Institute of Chartered Accountants or one of the other principal recognised accountancy bodies.

SECRETARY: Duties will include carrying out legal responsibilities under the Companies Act 1948, preparation of all Board Meeting documents and attendance at Board Meetings, supervision of Registration Department, Pension Funds and insurance of all Group Companies and plants in collaboration with Insurance Brokers. The Secretary will be located in London and the post will carry a salary of the order of £2,500 per annum.

Applicants for the foregoing posts should be between 35 and 45 years of age.

The Company has a contributory pension scheme in operation.

Applications in writing, giving details of education, age and past experience, should be addressed to Sir Charles Westlake, Chairman, Metal Industries Limited, Universal House 60 Buckingham Palace Road, London, S.W.1, under Private and Confidential cover.

PRODUCTION ENGINEER required for Senior Appointment with leading Motor Car Manufacturers, to be responsible for Controlling Production Planning, Machine Tool Specification, Jig, Tool and Gauge Design, and Plant Layout.

Applicants must prove a successful record in a similar capacity, and should not be over 45 years of age. Only those with experience of Modern Machine Techniques, Assembly and Layout, and of managing a large staff need apply.

The position is superannuated, carries substantial remuneration, and presents first-class opportunities for advancement.

Applications will be treated in strict confidence, should contain full particulars, and be addressed to Box E.296, c/o 191 Gresham House, E.C.2.

BOURNVILLE VILLAGE TRUST require a successor to present head of Accounts Department who will retire within the next three years or so. Applicants should have experience of accounting and company finance and property management most desirable. Must be prepared to take an interest in the estate. Fuller particulars will be sent if required. Apply, stating age, experience and salary required, to Secretary and Manager, Estate Office, Weoley Park Road, Birmingham, 29.

WOMEN GRADUATES, aged 25-28, wishing to make a career in industry, are invited to apply for a vacancy at the headquarters of an expanding company in pleasant Thames Valley area within easy reach of London. Initially, the duties of the successful candidate will be in the Personnel Department, and the commencing salary will be up to £650. Apply, giving full details of age, education and experience.—Box 446.

JUNIOR RESEARCH EXECUTIVES, female, aged 21-26 years, required by expanding Research Department of an International Advertising Agency. Research experience and/or social science qualifications an advantage, but not essential. Salary not less than £425. Apply in fullest detail to Director of Research, McCann-Erickson Advertising Ltd., Brettenham House, Lancaster Place, London, W.C.2.

MARKET RESEARCH. A number of appointments are to be made in the expanding Consumer and Retail Research Unit of a large industrial company in the provinces. The work is of a new and interesting nature and there will be opportunities to contribute to all aspects of it. Essential requirements are a good academic background in Economics or Sociology and wide experience of consumer research. Candidates should be in industry. Starting salaries will be assessed in each case on qualifications and experience offered. In certain circumstances houses to rent will be available locally. Applications should be sent as possible, to the undersigned in strict confidence.—Box 442.

COMMERCIAL AND OFFICE MANAGER required by Engineering Company near London in Hertfordshire. The position requires the control of the office of a rapidly expanding company and includes buying. There is very considerable scope. Previous experience in a similar capacity an advantage. Please write Box 441.

A VERY well-known Company manufacturing canned food invites applications for an important executive appointment at top management level, to take charge of raw materials buying on a world-wide basis. The successful candidate will be one who has very extensive experience in the buying of meat and/or cereals on an international scale and who has proven ability in seeking out and opening up new sources of supply. A knowledge of statistics and their application to forecasting is desirable, as well as acquaintance with methods of handling, refrigeration and storage of meats. This is a most important appointment that will involve negotiation of large scale contracts at top level all over the world, and will involve considerable travel overseas. The initial salary is of secondary importance to securing the right man but a figure not less than £5,000 per annum will be paid, together with exceptional additional benefits including contributory Pension, Life Assurance, etc. The Company's employees are aware of this advertisement. Applications, giving a chronological summary of education, career and qualifications should be addressed to Box 427, marked "Confidential to Managing Director."

Pumps for Atomic Energy?

Well, not only for Atomic Energy! Through their association with American Companies, Hayward Tyler have already equipped some of the world's largest oil refineries with special high duty "process" pumps and steam turbines.

The oil industry states that orders placed for equipment in 1955 were 54% higher than in 1954 and experts estimate that the demand for oil will double over the next ten years.

Hayward Tyler are now tooling up to meet greatly increased demands for pumps handling oil and petrochemicals.

phenol

Telephones of phenolic resin are more functional and durable, plywood adhesives for boats more dependable, quality of motor oils improved at low cost—all through one common ingredient, Dow phenol.

... Another example of Dow at work with industry to make better products for you.

Though you won't always find Dow chemicals identified in the products you use each day, they are often the important basic ingredient that makes possible higher quality and lower price. Agricultural chemicals help the farmer make his land more productive—help him in his fight against weeds and insects. Magnesium by Dow is the lightweight metal that subtracts many pounds from power tools, luggage and ladders. These are but a few examples of Dow's contribution to progress through chemistry.

For more information about Dow products, contact your representative in England, or write to Dow, Dept. 309-N.

Current Beecham Achievements

"My Board are most impressed by the way you completed the existing factory within the stated time and I would add that we are highly delighted with the finished building. It is very refreshing these days to get what you want, when you want it, without having to pay for a considerable amount of extras when you have got it. Your ability to execute this work so efficiently has helped us very considerably in meeting our own production commitments.

To meet additional requirements, I would appreciate it if you would quote me by return for extending the building by a further 20,000 sq. ft."

The extracts quoted are from a letter written by E. Loades, Esq., Managing Director of The Abbey Panel & Sheet Metal Co. Ltd., Coventry and Bedworth.

... completed to schedule this factory, illustrates another successful Beecham contract, undertaken during a period of maximum production and against adverse weather conditions.

Concurrently Beecham Buildings have erected the largest prefabricated industrial building in this country; a 200,000 sq. ft. factory in the Midlands. Their new ways of building allow Beecham to keep the pace on all their numerous contracts. For technical efficiency and well studied economy in Industrial Building you are advised to consult Beecham Buildings Limited.

What makes a Stenorette 'S'

cheaper than notebook and pencil?

TIME... is the answer.

There are very few dictation periods that aren't continually interrupted by 'phone calls. A secretary often sits waiting for a full thirty minutes to take down ten minutes shorthand.

It is this that makes the shorthand notebook so expensive.

A Stenorette 'S' on the other hand, wastes no one's time. It performs its duties with complete economy and a minimum of effort.

It will take dictation for 25 minutes, record business conferences verbatim, record both sides of telephone conversations. It is compact, genuinely portable, absolutely efficient.

The average cost per installation is about 50 guineas.

Write for the FREE 14-page book of the Stenorette 'S'

A
TELEX
message
for
the
Chairman

URGENT. Have you heard of Telex, the new communication system that combines the speed of the telephone with the authority of the printed word? This 24-hour Post Office teleprinter service enables you to exchange messages with any other Telex user at home or overseas and is rapidly becoming indispensable in the business world. A Telex call to a subscriber beyond a 25-mile radius costs about half as much as a phone call of the same duration. Overseas calls, too, are usually far cheaper than their telephone equivalents. Telex requires no special staff: a competent typist is an efficient operator after the briefest instruction.

Every day more and more commercial and industrial organisations become Telex subscribers. Isn't it time you were on Telex? Can you afford not to be? Should you not, at any rate, know something about it? Ask for the Telex booklet from the address below, or from your Telephone Manager: or ask your Telephone Manager to arrange for you to see Telex in action at your nearest Demonstration Centre.

You can't run transport for nothing....

BUT SOME FOLK GET MIGHTY CLOSE

For instance, consider the case of Mr. Edward E. Burton of Wisbech. In November 1951, he bought a Leyland 7-8 ton 'Comet'. So far, it has covered 300,000 miles without lifting the cylinder head or touching the valves. The only repairs have been a re-conditioned set of injectors, brakes re-lined and new wheel bearings... and that's pretty near next-to-nothing maintenance, with a vengeance! To round off the story, oil consumption is still under a pint per 300 miles and fuel consumption between 17/19 m.p.g. on full load. Of course, the truck has been looked after properly. It deserves to be! But the point is that it is just an ordinary run-of-the-line model, exactly the same as those tens-of-thousands more which are giving this fine Leyland service to operators all over the world.

PERIQUE—AND THE PIPE OF PEACE

*'Tis rare Perique,
that so perfects
Three Nuns*

As the comforting clouds of Three Nuns Tobacco float lazily into the realms of remembered pleasures, reflect awhile on the nature of this fine tobacco. In the discs you'll remember the dark centres—the black heart of Perique, added by an expert hand to enrich and prolong your enjoyment of each ounce of Three Nuns.

Long, long before Columbus adventured on American shores, Perique was being cultivated by Indian Braves in what is now the parish of St. James. For only in this 10 square mile area, some fifty miles above New Orleans on the rolling Mississippi, can this unique tobacco be successfully grown.

Many a pipe of peace did Perique fill, many a Brave did it solace. Today, rich and rare, it imparts that distinctive aroma which the smokers of Three Nuns always enjoy.

MUMM'S THE WORD!

The très sec Champagne

The soap that washed the floor washed the family

Drawn by
Topolshi

It is doubtful if the painting by Millais of "Bubbles," used early in the century to advertise a famous soap, won many customers among wage earners. Their household budget allowed for only one kind of soap to serve several purposes. Today the 6,750,000 wage-earning readers of the DAILY HERALD, whose standards of living have considerably increased in post war years, take full advantage of the vast array of soaps, powders, liquids and lotions available for toilet and every household cleaning job. These 6,750,000, including 2,800,000 women, have an income of something like £1,000,000,000 a year between them, plus two or more pay packets coming into over half of their homes every week. That puts them in the market for most of the good things of life and some of the luxuries too! More and better food; smarter clothes; new homes and furniture; radio and TV; insurance, holidays, cycles, motor cycles and, in many cases, the family car. If your product is for the masses, mark well these, 6,750,000 big spending, permanent customers. Note, too, that the DAILY HERALD is the only sure way of selling to them. For, apart from the fact that 40 per cent. of the 6,750,000 never read any other daily paper, they are all much more influenced by the HERALD—the paper they believe in—than they are by anything else in print. Isn't that half your advertising battle won!

Pumps for Atomic Energy

High pressure circulating pumps that never leak, yet run for years without maintenance, are now a reality. They have been designed and developed by Hayward Tyler & Company Limited during the past fifteen years and since 1945 their performance has been proved on La Mont boiler installations.

Such pumps are of special interest to engineers in the Atomic Energy industries where the twin merits, zero-leakage and reliability, are vital.

Cast Out Conservatism

THERE is a great deal of public confusion about Britain's present economic predicament, and Ministers' speeches have done something to make it even worse confounded. They have themselves partly to blame that criticism of their basic policies seems to be reaching a new pitch of muddle; and behind this criticism there are signs of a dangerous reversion in some people's thinking away from expansionism towards an old-fashioned and protective conservatism, clamouring timidly for a policy of re-imposing certain physical controls. It will be useful if every partisan in this debate pauses for a moment to try to get the basic facts of the present situation straight.

There are four salient points about the present state of the balance of payments and the present standing of sterling. *First*, Britain itself has almost certainly succeeded in turning its former external deficit (£103 million last year) into a moderate current surplus; the visible trade figures in the first five months of this year were at an annual rate some £240 million better than their monthly average last year, and receipts from "invisible" transactions, especially the net income of British oil companies overseas, have almost certainly also improved. Although one reason for this turn-round in visible trade is that disinflation is successfully diverting some production to export, another seems to be that British industry is being more economical in its stock-holdings of many imported raw materials. Last year, largely because industrialists felt that raw material prices were likely to rise as America pulled out of its recession, Britain ran up its stocks by some £350 million; this year, partly because some industrialists feel that raw material prices may be going to fall if America slides into some degree of recession, Britain may not run up its stocks at all.

Secondly, and as a result of this caution in commodity markets, the trading balance of the overseas sterling area has now plainly begun to deteriorate; although the central gold reserves have increased every month this year, thanks mainly to Britain's own trade surplus, the rate of increase since March has been slackening. It is possible that the worst effects of the overseas sterling area's troubles have yet to be felt, in the customary season of summer strain immediately ahead.

Thirdly, there has unfortunately been some renewal of speculation against the pound. This has been prompted partly by the troubles of the overseas sterling area, partly by foreigners' belief that costs (especially wages) in Britain are going to go on rising faster than costs in other countries, and partly by the fact that Ministerial speeches that were designed to scare British trade unions into moderation have scared Zurich bankers into speculation instead. The strength of this speculation, in the months immediately ahead, may depend mainly on whether these onlookers are more impressed by a possibly continuing improvement in Britain's own trading balance or by a possibly continuing deterioration in the whole sterling area's monthly gold reserve figures. At the moment, reason seems to be on the side of the

moderate optimist—but only provided that American buying of raw materials does not go really sour.

Fourthly, although this may be a matter more for the medium term than the very short term, Britain's own trade surplus—and, eventually, the exchange rate of the pound—cannot be maintained if Britain's wage costs per unit of output continue to rise much more swiftly than equivalent costs in America, Germany and our other industrial competitors. In one part of its attempt to damp down this winter's round of wage bargaining, the Government has already failed: the trade unions are clearly going to present as large claims as ever. But it is not so certain that claims will be granted: that will depend on whether employers are kept sufficiently short of money to reject the unions' demands, even at the cost of possible strikes.

★

That seems to be a fair summary of the present situation. Can partisans of both sides perhaps accept it? Discussion can then turn to consideration of the policies that ought to be adopted in the various contingencies that might now arise.

The worst of these contingencies would clearly be if, under the shadow of a widening gap in the overseas sterling area's accounts and possibly also of some sort of American recession, there was a real run on the gold reserves this summer and autumn. In that—at the moment unlikely—event, there would be an intensification of present demands by conservatives on both sides of the House that the hatches should be battened down and various sorts of spending directly controlled. But how? The physical control most frequently called for, and which Mr Macmillan said this week that he would like to have the power in reserve to impose, is a restoration of licensing restrictions on "inessential" commercial building. The arguments for this are presumably that it sounds politically attractive, and that a fair proportion of the money held back from commercial building (in contrast to the money that could be held back by most other forms of rationing) might possibly be saved instead of merely diverted to chasing after other resources. But the sums now being spent on "inessential" building are derisory, the impact of control would be inconveniently localised (mainly in central London), and any ban on new commercial projects now would not have its main effect on the use of steel (or of money) for another eighteen months and more. As a supposed remedy for a sudden sterling area crisis, this prescription has about as much relevance as the very slow unfurling of a very small and leaky umbrella in a hurricane belt.

The other control recommended by the conservative planners (whether Labour or Conservative in the reference books) is import licensing. In a grave dollar crisis and American recession, there might be some case *in extremis* for discriminatory controls on dollar imports. But they, too, would take a long time to come

into effect, and they could be contemplated only as a last resort. General import controls, of course, would be an actual impediment to the problems of a sterling area crisis. Any new licensing of imports now would merely divert British purchasing power from them to British goods that ought to be exported; they would invite—and get—retaliation from customer countries; and they would commit Britain still more firmly to a policy of not buying raw materials when they are cheap, in order to stock up with them once they have become dear again. Britain's policy in any American recession should clearly be to keep the channels of non-dollar trade as wide open as possible, instead of joining in a sad scramble with other affected countries to put on restrictions against each other's "inessential" trade.

For the other ill contingency that needs to be guarded against—the possibility of another extravagant round of wage increases this winter—physical controls are clearly quite beside the point. Not even the controllers pretend that restrictions on the use of money for buying imports would lead to there being less money about. Indeed, those who pretend that they disbelieve in the efficiency of Bank rate for this purpose are really, as Sir Oscar Hobson has put it, showing that "they believe in it so much that they funk its consequences." The debate here, therefore, merges into contemplation of the third and most vexing contingency. If the Government manages to avert the worst this year with the weapons it is already using, can it also be sure that those weapons are well-fitted to cope with the not-so-profitable best?

★

It is, on balance, this not-so-profitable best that now seems the most likely outcome for 1956. Unless something goes very wrong in the overseas sterling area and provided that wage increases granted this winter are a little less voracious than those granted in late 1955 and early 1956, Britain seems likely to end the year with a moderate balance-of-payments surplus—but at two probable costs. One of these costs is that British industry may have run down its stocks, and be obliged to re-accumulate them next year when (if the apprehended American recession passes like a summer's day) prices may well be higher. The other cost is that it is almost certain that production will have lagged on its upward way this year. It is very doubtful whether gross national product will rise by more than about £200 million in 1956, against the accretion of £500 to £600 million that we should aim to get in a good year. At best, we may find that we have bought stability this year at the cost of £300 to £400 million worth of desirable things that we would otherwise have produced and enjoyed.

As a once-for-all price, this might be well worth while; indeed, given previous failings in the containment of inflation, it is a price that had to be paid. But as a continuing policy, it is a counsel of stagnation. The task next year, if all goes well this year, should

be to re-stimulate production—without at the same time re-stimulating a balance-of-payments crisis and another extravagant bout of wage demands. There is a flat contradiction between any such task and a restoration of building and import controls. You do not stimulate production by laying down that there are certain profitable things that some controller will not allow industry to produce. And experience in 1945-52 should finally have dispelled any intelligent planner's suspicion that re-stimulation of production can be achieved with greater economy in the use of imported materials by a system of licences and allocations. The main consequence of allocations then was to redistribute stocks to the disadvantage of businesses that were otherwise particularly well placed to increase production; while declining businesses had all the raw materials they wanted, their more go-ahead competitors found themselves continually in danger of exceeding the raw material quotas that had been set for them by their performance in some base period of lower output. The willingness of expanding concerns to plan for increased production once they felt confident that they could always get the raw materials they wanted was the major lesson of the relatively halcyon years from late 1952 until 1955.

The need, therefore, is surely to stand by the policies of 1952-55, but with one amendment. The amendment

Nasser's Two Voices

FROM Russia to Ruritania, the Birthday of the Revolution is a great day for parades, fireworks and changes in the constitution. Next Saturday Egypt is providing the full programme. Its military *junta* is to dissolve itself, after choosing a president of the republic. ("Nasser for President!" is a foregone conclusion.) Its electorate, newly registered this year, is to accept or reject a new constitution. Later, a nebulous body called the National Union, picked from among the right-minded, is to choose a corporative National Assembly; this will have powers to criticise but not to initiate legislation.

When sceptics enquire whether this new paper pattern will make any difference to present arrangements, they usually mean: will it impose any checks and balances on military rule? A much more interesting question is whether it will give Colonel Nasser personally any greater control of policy than he has ventured to assume hitherto. For up till now he has spoken with two voices so discordant that it is only charitable to deduce that he has never yet been supreme—that he has been ruling by committee, and has often been ruled by it. Otherwise, how can one reconcile the balanced expositions uttered inside his study to visitor after visitor with the stream of irresponsible demagoguery that issues most, though not all, of the time

is that if expansion goes off the rails, either through an excessive increase in costs or through balance-of-payments troubles, the Government needs to be able to pull back inflation more swiftly and with less interruption to the forward march. The experience of the last year has suggested that there are two time lags to be considered here. One is the time lag between a change in policy and the impact of that change upon the economy. This lag has been exaggerated in recent discussion. The fault from late 1954 onwards did not lie so much in the slowness of Bank rate's operation as in delay and timidity in putting it into effect. The second, and more important, lag is between the damping down of demand when monetary or fiscal policy finally does take effect and the movement of resources into expanding industries. When excess demand is removed, the workers who have been producing the things that are no longer wanted should be freed to produce things that still are; at the moment, however, they tend to be kept at their old jobs, but on a four-day week. The problem, in other words, is one of mobility. It is about this, and not about the initial weapons of disinflation, that new thinking is clearly required; there is an urgent need to cast out conservatism here as well. But the subject cannot be dealt with at the tag-end of a long article. It is hoped to devote a separate article to it in *The Economist* next week.

from *al Goumhouriya*, the government newspaper, and from Cairo radio?

The control that he has never assumed at home has also been lacking in foreign policy. Admittedly, first appearances are all to the contrary. Colonel Nasser looks like a leader because, nearly everywhere in the Levant and Arabia, he is hailed as a hero for a number of personal feats. He is acclaimed, first, for asserting the right of all peoples to be masters in their own lands by bringing British occupation to an end; next, as a champion of neutrality; next, as the eliminator of a parasitic aristocracy; and, lastly, as a soldier captaining the one army that looks strong enough to frighten Israel. Egypt's very considerable repertory of publicity channels—its export of films, glossy magazines and sophisticated schoolmasters—all add to the impression that Colonel Nasser is paramount. Yet closer scrutiny reveals the conclusion to be false, or anyway premature. He leads only when he says what his allies want to hear, and therefore leads them, like the Duke of Plaza Toro, from behind.

Abroad as at home, Colonel Nasser is handicapped by the discordance of his two voices. If he wants what the sober voice says he wants—a period of tranquillity in which to bring better living standards to the Egyptian people—then his radio voice is defeating his purpose.

He is caught in a paradox. He needs a quiet life in order to develop his plans—for the high dam or for industrialisation in order to absorb the rising tide of population; but he is not getting it because his second voice stimulates disquiet—political disquiet abroad to-day, social disquiet abroad and at home tomorrow.

★

This judgment is best amplified by analysing two samples of his policy—his professed creed of neutralism, and his attitude to war with Israel. Neither at home nor abroad is he as “neutral” as Mr Nehru. At home, Mr Nehru plans a place in the community for Muslims, whereas Colonel Nasser looks like denying one to the Copts; abroad, Mr Nehru aspires to judge on their merits the respective approaches of the western world and Russia, whereas Colonel Nasser, when using his second voice, succumbs to the current Arab predisposition to condemn the one and extol the other indiscriminately. Arabs like to hear this refrain; being of the race of doubting Thomas, they believe only what they have seen, and easily accept the tale that withdrawing westerners are vile imperialists, whereas the up-and-coming Russians are not. (The bias is such that even Soviet gestures towards Israel are quickly forgotten, whereas each western one is engraved as a fresh score on a long black record.) The targets of neutralism are a middle course and a life of tranquillity; yet to all appearances Cairo is ranging wide of both. Its radio, strays so far off course as to encourage several different fomenters of unrest—communists, parochial Saudis who pursue the narrow objective of worsting fellow kings on Hashemite thrones, and embryo Syrian Napoleons who dream of the fruits of upheaval.

To a western eye, the Egyptian attitude towards another Palestine war seems equally liable to slip out of the control of the helmsman. In the quiet of his study, Colonel Nasser does not want a war. He is a soldier, with battle experience and capable of shrewd military appraisal; he knows that he has allies who are militarily weak, that his own army is imperfectly trained in the use of its weapons, and that if war broke out, the Arabs could easily lose it. Yet Egypt's second voice, apparently unchecked, utters just the kind of battle cries that invite over-confident Syrians to open fire or disgruntled Palestinians to start the rebellion inside Jordan that would prompt intrusion, first by Arab neighbours and then by Israel, bent on a share of the fragments. A combination of assurances to Mr. Hammarskjöld with shouts of “tally-ho!” to discontented Jordanians is a policy too illogical to have emerged from the mind of any one statesman.

The importance of next week's changes, therefore, is the chance they afford Colonel Nasser to take full charge for the first time. His moment of decision is at hand. The choice is between the leadership on the cheap that is won by pandering to public taste but yields no hold over events, and on the other hand the uphill job of

telling home truths that listeners may not like to hear, but without understanding of which there can be no constructive results at home and none of that consistency of purpose that offers the only hope of real neutrality. If he wants the free world to accept his neutralism, he must recognise that a voice intended to stimulate disorder in the Middle East cannot fail to be anti-British and anti-western, and therefore pro-Soviet and pro-Communist.

For weeks, perhaps even months, to come it may be difficult to judge which choice Colonel Nasser is making. His habit is to feel his way slowly. One criterion will be the appointments that he makes to the cabinet posts of the new regime—whether his choice falls on firebrands from the *junta* or on the several sober men, civilian as well as military, who would be ready to serve a constructive dictator. All that is certain, until he has been tested in his new role, is that if he continues to waver between incompatible utterances he will alienate many foreigners who began by admiring his courage, but who feel less and less sure what he really wants.

★

As if to mark that the choice is Colonel Nasser's alone, and that no old-style western pressure is being sought, or is desirable, the last British soldier, true to promise and more than punctually, has left Egyptian soil this week. Even so, it would be misleading to suggest that any such choice can be made in a vacuum and without regard to other people's policies. In the eighteen months since the British promise to quit was given, Egypt has been swayed this way and that both by Soviet and by British policy. It has been attracted by well phrased protestations that neutralism is all the Soviet Union expects of new acquaintances; equally, it has been repelled by the familiar British propensity to angle for bases in ways that suggest that old occupiers are for ever up to new tricks. (According to Arab reasoning, there can be no other explanation of a search for allies among countries militarily so weak that, were atomic war to rage, their only significance would be as a field of fire.)

These Egyptian notions about both Russia and Britain may be illusory, but they are deeply embedded; and they will survive as long as the West is swimming against the tide of local opinion on neutralism, whereas Russia is swimming with it. They are the more serious because they lead minds astray, not only in Egypt, but in the very considerable Arab area in which Cairo is incontestably the greatest influence today. Unless some method of countering them is devised, they will continue to blind Middle Eastern eyes to the need for a would-be neutral to keep some of its links with old acquaintances unless it is to drift willy-nilly into the orbit of the new tempter. Can President Nasser bring home a point that Colonel Nasser has failed to carry? If so, he will have started to tackle his problem of control.

Naval Bases?

THE foxes have their holes; but can the British navy rely on having the bases which it wants across the world? It is not the purpose of this article to open again the question of the kind of navy required for modern warfare, still less to ask, as some contumacious airmen and other folk do, whether a navy is required at all. For the purposes of the present argument the role of the navy as spelled out in a series of defence White Papers can be taken for granted. The question then is twofold: what bases does the navy need and what prospects are there of it having them in the years immediately ahead?

It should be said at once that this problem of bases is not peculiar either to the navy or to Britain. The need for wide-flung airbases and staging posts is vital for western defence; and, as a Note this week in our American Survey shows again, the cutting edge of the deterrent air power of the United States rests crucially at present upon the assured use of forward bases upon foreign soil. The issue of British naval bases is singled out in this article, however, because it is being given special urgency by the accelerated transformation (or, as some would say, disintegration) of the remaining parts of the British Empire which have hitherto given shelter to the British fleet.

The possession of naval or indeed any military bases on islands or in enclaves under undisputed British sovereignty is progressively harder to maintain. Only in Malta have proposals for integration with the United Kingdom offered any reconciliation between colonial desires for enhanced status and the navy's needs. No such reconciliation is yet in sight for Singapore or Aden. Hong Kong is held on sufferance from the Chinese. Gibraltar may not be held on sufferance from Spain, but its value is clearly reduced by its being a bone of contention between the two countries. And, as the problem of reconciling the “self-determination” of colonies with the need to secure a string of naval (and air) bases between Britain and Australasia grows more acute, the weakness of the arrangements made with some of the independent members of the Commonwealth, for Trincomalee in Ceylon and even Simonstown in South Africa, is beginning to appear.

Is it necessary, indeed is it possible, to isolate a class of “strategic colony” which must be kept under British control indefinitely to maintain the network of bases? If Britain without dependencies is to maintain naval offices in every ocean, can base facilities be secured in some other way?

The role of the navy, as defined in the White Papers, is, like that of the other services, to play its part in winning (i) the cold war and (ii) any limited or “warm” wars that may break out and, if the worst comes to the worst, in waging (iii) the incalculable global or hot war. In cold war, the navy's part ranges from “showing the flag” to being a *présence*

Britannique on any disturbed coast; any warship off a coast is *ipso facto* a small British base of sorts; and an aircraft carrier is both a sea and an air base. Naval power remains the key to western ability to send out a “fire brigade” to all parts of the globe; the lesson of Korea shows that. The argument that simply says “naval bases are no use anyway as they are so vulnerable to thermo-nuclear bombs” is shortsighted. Bases are intended to support the deterrent to action that might lead to such an all-out conflict.

This is not, of course, the role of any one navy alone. It is essentially the joint task of the combined naval forces of the West, and in these the American fleets are predominant. Britain today needs not a navy to command the seas it needs, but one to carry out its share in securing command of the sea for the western allies.

The United States possesses no such “colonial” bases as Malta or Singapore outside the Pacific; it uses (i) Nato bases; (ii) leased bases, and (iii) it minimises its dependence on any but American home bases by a large “fleet train” of repair, store and refuelling vessels. Such adaptations to the baseless fabric of the Commonwealth-to-be are no doubt within the power of the Royal Navy; indeed the Americans are known to be critical of British dependence on a “short-legged” navy as compared with their own concept of a “long-legged” navy. But before this is assumed to be the complete answer to British colonial difficulties, the matter must be gone into further.

★

In the first place, British bases are part of the Anglo-American web of sea-power; the Americans take them for granted. They assume that Singapore will be denied to the Communist powers; and they assume that from Aden or Cyprus, Mombasa or elsewhere naval power will be exerted to preserve Middle East oil. Because Britain has the existing colonial bases, the British navy's share in the western naval task is that which can be contributed by ships operating from these bases. Nato naval bases are poorly located to influence either the Middle East or south-east Asia.

The next and, practically, perhaps the all-important point is that a “long-legged” navy is an expensive substitute for a “short-legged” one, whose well-spaced string of bases confers on it greater mobility and gives it therefore greater economy in the use of ships and men. A naval base has four functions: (i) it provides storage for fuel, ammunition, provisions and supplies; (ii) it offers facilities for resting and training crews between cruises; (iii) it possesses, on a greater or less scale (according to whether it is a fleet main base or a forward base) facilities for docking, repairs and maintenance, and (iv) it is a command

centre, where the use of naval forces for any contingency is planned and organised. The fourth function is not easy to organise in a "leased" base; a measure of sovereignty or alliance seems necessary for it. Commercial ports, vital in war, cannot provide normal base facilities.

To state the functions of bases is thus to review the difficulties of doing without them. While oil-fired ships can stay at sea for very long periods, and new metal alloys and other devices have lengthened the periods they can stay at sea before careening is necessary, they must frequently return to base to rest personnel and to overhaul the increasingly complex equipment they carry. The fleet train can only undertake minor repair jobs; refitting needs a naval dockyard. This means simply that a long-legged navy, operating far from its dockyards with the aid of a fleet train, usually needs twice the number of ships to do the tasks of ships based on a string of overseas bases. The US sixth fleet rotates to its home bases every six months, which at least doubles the ships needed and perhaps far more than doubles the number of men. Bases, in short, economise in ships and men.

It is this which, apart from strategic factors, explains the Admiralty's anxiety to hold Malta and Singapore as main fleet bases, notwithstanding their well-known disadvantages. The existing string of colonial bases enormously cheapens (or conceals the real cost of) the work now performed by the navy. The cost of holding a base has to be set against the cost in ships

and fleet trains of doing without it or possibly of building alternative bases in safer areas (Mombasa might be developed, at immense cost, to compensate for losing Trincomalee and Aden; even at an almost prohibitive cost, however, no new Australian naval base could fully offset the loss of Singapore). The loss of a base is the equivalent of losing many ships.

The navy cannot be blamed for pressing its case for bases when "strategic colonies" move towards independence. But it can say, and should be asked to say, what is the minimum number of bases it needs between Britain and Australia. Thus, while there would be no sense in giving up Hong Kong before it is necessary, it is clearly not an essential forward fleet base. A reasoned review suggests that the navy, with its present assignment, and as it is now constituted—largely with obsolescent ships—needs Malta and Singapore as main fleet bases, and if deprived of Aden would need forward base facilities at Mombasa.

Even such a minimum would, however, require "longer legs"; and if in the future the navy could absolutely count on none but home, Nato and Australian bases, the need for an immensely costly long-range navy with large fleet trains would become imperative. Nothing short of a radical revision of the navy's role can alter this reckoning. And the world-wide provision of sufficient and safe air bases, which will be discussed in a further article soon in *The Economist*, largely turns upon a similar calculation of relative range and cost.

Students on the Red Carpet

ONE evening last week Platform 3 at Euston station was black with Africans. Several hundred people from Nigeria and the Gold Coast were waiting to greet 120 of their compatriots who had disembarked that morning at Liverpool. There was, however, one little group of white people: the Director General of the British Council and some of his senior staff were there to meet the twenty-thousandth colonial student whom the council has welcomed to this country—a beaming Nigerian, splendid in a long white robe.

Ever since 1950, when it took over this work from the Colonial Office, the British Council has been helping students through the bewildering confusion of their first hours in Britain. Its couriers are at the ports and airports, armed with a list of students whom the colonial authorities have asked them to meet—though they always collect three or four times as many in the end. Rain or fine, frost or heatwave, the chief courier wears the same outfit, on the theory that word has gone round the Empire to look for a man in an ulster and a green hat. He rounds up his flock, checks what and where the students are going to study, whether they are being met and whether they have anywhere to stay. From the terminus in London they are taken to the

British Council's headquarters and thence delivered to their various destinations: some to digs they themselves have arranged; some to catch trains to other parts of the country; some to one of the British Council's three hostels in London; and those who have nowhere to stay to one of the hotels which can be absolutely relied on not to slam the door in a coloured student's face. All are guaranteed a bed for the first night.

This service is valuable both directly and indirectly. A girl from Hong Kong will say confidently that her friends are meeting her; but they meant at Birmingham, and after the crowds have dispersed at St Pancras, there she is forlorn. A young Malayan who thinks that Tilbury is London is advised to cancel the taxi he has booked to take him to Ealing. A deadlock is resolved between a West Indian and a customs official who worried by the powerful smell of rum that pervades his suitcase. It is explained to a frightened Nigerian that all those people rushing off in the same direction are going home after work, not fleeing from the hydrogen bomb.

In such ways the student is saved not only from despair but also from falling into the wrong hands. It has been said—indeed the last Director General said

it himself—that representatives of the Communist party once gathered in force at the ports to pick up students as they came in. There seems little evidence of this today. The party will certainly get to work on a group which may contain the future political leaders of colonial territories, but this is easier to do in students' organisations than it is on Euston station.

Another danger that has been averted (and is now exaggerated) concerns the West Indian nurses. They usually come over on Italian ships which take emigrants to South America, call for them on the way back and deposit them at Genoa. The £75 the girls have scraped together includes a 3rd class rail ticket, but often they have nothing over, and arrive tired, hungry and penniless. The sight of a welcoming West Indian face, even if it belongs to a procurer, can thus be a beautiful thing. Today, when these trains are met by the British Council, the Red Cross, the Church Army, the West Indian Student Unit, and the West Indian Welfare Section (just set up by the Colonial Office to look after people other than students) and the London County Council, there is not much scope for private enterprise, and the police are on the look-out for certain well-known faces in smart cars.

★

Not all the students are grateful for this help. The West African, entrenched in his family, is suspicious and stand-offish; the Asian from East Africa may try to throw his weight about. The West Indian girls, in spite of bold reds and shocking pinks and plumes in their hats, are shy and docile. But for poise and assurance one must look to the Far East. A Chinese student from Malaya, for example, will face the complexities of London life with smiling charm and nimble wits, with all the confidence of his ancient civilisation, and often of considerable wealth.

It is not, however, the immediate reaction that matters. The contact so established can usually be maintained. The student will probably be back next day to consult the council's files of willing and suitable landlords. He may attend the "introductory course," which will explain to him some of the strange ways of the British; that the way to have a bath is not to stand in the middle of the bathroom floor and pour jugs of water over your head; that having rented a room you cannot ask eight friends to come and spend the weekend with you there; that when you go shopping you pay the marked price and do not haggle. He may go with parties to visit historic buildings, beauty spots, factories and theatres, and accept some of the many offers of private hospitality which are made to the council. In his first year he can also attend lectures and debates at the council's centre in Hanover Street.

It is not primarily the university students who need these services; they have their own organisations. But university students form only about a third of the 12,000 or so colonial students who are now in the country. Rather more than another third are in technical colleges

or reading for the bar, and the rest are engaged in various other forms of study such as nursing. Some of these latter two-thirds are apt to be bitterly disappointed with Britain. They have been brought up on pictures of Westminster Abbey and the lights of Piccadilly Circus, and on the homesick reminiscences of English teachers. They have arrived here in high excitement, only to find that it is a cold, grey place with cold, grey people. They can spend three years here and see no more of Britain and the British than can be seen between a dreary Victorian boarding house and a dreary Victorian technical college. It is possible, perhaps, to be too sentimental about this. A glittering shop-window in an ugly industrial town will be more exciting to many an African than Tintern Abbey. But this much certainly is true: that it would be better for colonial students not to come at all than that they should go away hating the place.

Many of them do dislike it, if the report published last year by Political and Economic Planning is any guide; and there lies a strong case for extending the welfare services. The British Council needs larger premises for its student centre in London, so that it can take on all students and not merely freshmen. It would be sensible to meet and find accommodation, not only for colonial students, but also for many of the 18,000 other overseas students who may be equally at sea in Britain. In principle it has been agreed to do this, though arrangements with the individual countries have still to be made.

The whole problem, however, cannot be solved by the British Council, even if it can overcome the disadvantages of being short of money and office space and of not being Lord Beaverbrook's favourite organisation. The technical colleges have to recognise (as some do) that their colonial students are a special responsibility. It is no use waiting until a student, as once happened, is suffering from malnutrition as a result of eating nothing but baked beans for three months. It is no use waiting until he has a breakdown (as Africans have more than other students) and then deciding it was because he had not the necessary preliminary knowledge to tackle his course. Some technical colleges already run introductory courses for overseas students, and a recent conference agreed that others should follow. Precept has to be put into practice.

It is important not to expect too much from these services. The ever-increasing influx of colonial students—the annual entry has risen from about 100 in 1939 to 4,650 in 1955—is not stocking the colonies with technologists; the majority of students are working at a low level—such as that of the ordinary national diploma. Nor will the sight of Windsor Castle and tea with a Rotary Club send ecstatic propagandists for Britain back to unstable colonial territories, or necessarily make them feel they would be on the right side in a world struggle. But an inexpensive dose of professional tact and welcome can often save these people's visit here from being one of too bewildering and humiliating discovery.

Notes of the Week

Immorality Play

LAST week's spate of varied pronouncements on neutrality by American leaders needs to be seen against the background of the Administration's fight to get its foreign aid programme through Congress. But, as usual, most newspaper readers in other countries are unlikely to bear this background in mind. For them, the confused record will read somewhat as follows.

On June 6th, Mr Eisenhower recalled that neutralism came naturally to the United States when it was a young nation. He even remarked, during his last press conference before illness again overtook him, that if a "neutral" was attacked it would get general sympathy, while if a country allied to a great power was threatened people would say it had "asked for it." Next day the White House, beset by indignant allied diplomats, explained that the President had never thought that alliance with the United States could bring a country anything but greater security. On the same day Mr Nixon gave warning that uncommitted countries could be neither bribed nor cowed into aligning themselves with America. But on June 9th Mr Dulles declared that "the principle of neutrality which pretends that a nation can best gain safety by being indifferent to the fate of others" was an "increasingly obsolete" and, almost always, an "immoral and shortsighted conception."

Few people will see the full texts of these statements and discover that the President, the Vice-President and the Secretary of State were all hammering away at the need to aid both allied and uncommitted countries without expecting subservience, gratitude or any reward other than the strengthening of freedom. On the other hand, Mr Dulles's ill-chosen adjective "immoral" has already echoed round the world; and how many minds in other countries will be even momentarily crossed by the thought that he was primarily concerned to arouse American taxpayers, not other peoples, to do their international duty?

Ironically, as recently as June 4th Mr Nehru too imputed base motives to "uncommitted" nations—those that seemed indifferent to India's claims on Goa—and demanded that they should take sides in that dispute. It is worth remembering that neutrality is inherently subjective. (Mr. Khrushchev, incidentally, has told M. Pineau that he will tolerate a neutral Germany but not one that is "neutral against Russia.") Neutrality is, moreover, the natural attitude of any society that perceives no danger to itself. An outstanding phenomenon of our time has been the increase in international perception, the awakening to the need for nations to support each other against a threat—military or political—that ultimately threatens all. Nowhere has this awakening been more dramatic than in the United States; nowhere would a retreat from the gates of per-

ception be more disastrous for the world. But one or two emotive or thoughtless words from the President or the Secretary of State, aimed at a domestic audience, can cancel out months of patient effort for international understanding.

After Mr Marshall

MR MARSHALL did his best to erase the impression made during his last hours in London by accompanying his final acts as Chief Minister of Singapore with as big a bang and as small a whimper as possible. Both in the Legislature and in a valedictory broadcast he poured some final salvos into the tatterdemalion imperialism which, in his view, still stands between Singapore and "merdeka." He achieved a final disservice to his own case, however, by raising the temperature of debate to a point at which hostility to Seato itself was openly voiced by the parties most likely to succeed the Labour Front in power. Mr Lim Yew Hock, in taking over as Chief Minister, felt constrained to insist that his is only a caretaker government, and that his policy was to reopen talks with the Colonial Office as soon as possible. It is perhaps significant, and certainly encouraging, that one of his first moves was to make contact with the Chief Minister of the Federation of Malaya.

One course of action is clearly open to Mr Lim. He can seek at once to embody in a further constitutional change, without prejudice to Singapore's stand as stated both by Mr Marshall and by Mr Lee Kuan Yew (leader of the People's Action party), those heads of agreement which were settled in London before the talks broke down over Britain's say in the security of the base and the city-state. He could make a start with plans for full Singapore citizenship, for "Malayanisation" of the civil service, for the raising of local troops, and for internal self-government. But to proceed with the plan for a completely elected cabinet and an enlarged legislature conceded by Mr Lennox-Boyd at the London talks would almost certainly involve Mr Lim in an election, and probably in defeat at the polls. Even Mr Lee Kuan Yew is apparently now less impatient for fresh elections. The PAP evidently wants time to consolidate its political organisation, although Mr Lee and his even more eloquent colleague, Mr Lim Chin Siong, will probably seek to demonstrate without delay, by means of the "Protest Week" and other occasions for rabble-rousing, that they are already the real leaders of Singapore. But there is evidence that Singapore would be grateful for at least a short respite from political fever. There may be a brief interval in which the Colonial Office and the new Chief Minister between them can seize the initiative—although they will have to work fast.

Phlegm in Latin Throats

COMMUNIST editors in the West were placed in a most awkward situation when Mr Khrushchev's "secret speech" was released by the State Department. With no censorship at their disposal, they could not prevent other newspapers from splashing it on their front pages. Were they to follow suit and reveal what was still a secret in Moscow, or should their readers be left to learn the horrid truth from a non-party source, without any mitigating comment? Paradoxically, the Anglo-Saxon *Daily Workers* have chosen to brave it out, while their usually vigorous Latin counterparts—*Unità* and *L'Humanité*—have been prudently silent.

The New York *Daily Worker* actually blamed the Russians for failing to break the news themselves, and thus allowing the State Department to exploit the situation. It criticised Mr Khrushchev for not mentioning the persecution of the Jews in his catalogue of crimes, and firmly concluded that the record was still far from complete. This language, mixed with a fair measure of self-criticism, is certainly an important novelty and a symptom of the new mood. Admittedly the Anglo-Saxon parties are only poor relations in the communist family. Signs of ferment can also be seen, however, in the big communist parties of France and Italy. If their newspapers manage to clear their throats and speak up, there will be something really new on the western front.

After Tonbridge

THE result of the Tonbridge by-election is a symptom of something more than the known simmering discontent among the Government's normally most loyal supporters. Admittedly, the extent of the apparent swing to the left there—nearly 8½ per cent—needs to be taken with a large pinch of salt. At least two local factors came to Labour's aid: a great improvement in their own organisation, and a row among the Tories about the Government candidate. But annoyance about an imported candidate would only cause abstentions; and although the most dramatic feature of the poll was that the Tories turned out 9,000 less votes than they did in this constituency at the last general election, the most interesting was that Labour turned out all but 400 of its vote at that time. There are always more than 400 customary Labour supporters in a constituency of this kind who just do not know that a by-election is going on, and it is quite clear that some Tonbridgians who voted Tory last year must have voted Labour this time. There has been a genuine swing, and almost certainly bigger than the country-wide swing of about 3 per cent that most people had deduced from the recent local election results, the public opinion polls and other straight fights in by-elections during this Parliament. If there was a general election today, Labour would at last start as favourites in the betting.

What are the morals? The Tories should conclude that it is better to be pilloried for sheep than for their present bleating lambs. The Cabinet might well ponder

whether the Tonbridge result would have been any worse if Parliament was now debating a Bill to deal with rent restriction. Labour, on its side, should take note that it has achieved this success at a time when old fashioned Socialist ideologies are not being deliberately flaunted in a nervous public's face. The first batch of Labour's "new policy" documents is soon to appear; their authors should be warned that the professional propagandists of the right are awaiting these more eagerly than the propagandists of their own party.

The Unseen Cloud

EIGHT miles above the earth, a cloud made up of little pieces of coral rock from the Pacific atolls and fused silica from the Soviet hinterland floats on the surface of the dense atmosphere, hurled up there by the force of H-bomb tests and too small and light to come immediately down again. Each year, however, some of these particles float to earth, like leaves sinking in water, and they carry down the radio-active debris left over from the bomb itself. In March last year, the Medical Research Council set up a committee to find out how dangerous this fall-out was likely to become. Its conclusions were published this week.*

The whole world is slightly radio-active. The committee had to decide how much additional, man-made radiation the population could tolerate before this began to take its toll on the human body, both in the form of long-term genetic effects and of the more immediate manifestations of delayed radiation sickness like cancers and leukaemia. Its findings are unexpected. It has made the disconcerting discovery that there is more danger today in the slap-happy use of X-rays in hospitals and shoe shops than all the H-bombs so far exploded. The amount of new radiation created by H-tests is less than 1 per cent of the natural level, and over a lifetime of 50 years would add less than a 2,000th part to the radiation a man would get from natural sources. The radiation from diagnostic X-rays is equal to a fifth of the world's natural radiation, and the committee considered this serious enough to need closer investigation.

Although the H-bomb's own cloud is not immediately dangerous, that does not mean it will not become dangerous if it grows significantly in size. H-bomb tests, if continued at the present rate of one or two a year, will not add appreciably to the debris in the stratosphere; but an increase in the rate of firing and the size of bomb would do so, while a thermo-nuclear war would be frank disaster. The destroyed fabric of H-bombs consists partly of a long-lived radio-active material known as strontium 90, which has many of the characteristics of calcium—including the one of being absorbed into the bones of men and animals, where it could build up radio-active deposits inside the body in sites where they can do most damage and from which there is no way of removing them. As the cloud circles the earth, a fine layer of strontium is deposited across the globe; the concentration has increased sixfold since the first H-test two years ago. The present level in man seems to be about a thousandth of the maximum dose

The Freeze Begins at Home

THE problem of MPs' pay is one of those awkward affairs where sharp things need to be said to all sides—to the public, to the Government, and to MPs themselves. The public needs to be told that it ought to pay a higher salary if it is going to get the sort of service from its MPs that it should require. This is not wholly—or even mainly—a question of the quality of candidates now coming before party selection conferences, although there is some evidence that this is deteriorating. The real issue is what one expects an MP to do when he gets to Westminster. The sort of member a wise constituent ought to want is a man who, when, say, some colonial politician comes to London, can afford to invite him out to lunch; at the moment a majority of members just cannot do so.

To the Government the obvious comment is that one suspects that it will not agree to any increase, for fear that Parliament's example might help to knock away the already slender props under Mr Macmillan's "plateau"; that this refusal will cause a lot of bad blood and inconvenience in the House; and that the inconvenience will be entirely its own fault. Two years ago a £500 rise to MPs would have done the economy no harm.

The Tory backbenchers, who blocked the £500 rise two years ago, deserve the sharpest criticism of all. They believed then that more pay for MPs would cost them votes in the general election; the election came less than a year later, and hardly a heckler mentioned the subject. Since Tory MPs, as a whole, tend to be better off than their opponents, the dominant impression that remains from that time is one of rich men's sanctimonious meanness.

Finally, however, the Labour and Liberal MPs who are now agitating for a rise are doing a great deal to lose public sympathy, by asking for too much of it. Their request is for the £1,500 that they unsuccessfully voted themselves two years ago, increased to £1,672 to make exact allowance for the rise in the cost of living since then; this is the worst sort of wage formula for present public exhibition. Their allegation, too frequently, is that MPs are worse off than ever before; this is untrue, since they got an approximately 25 per cent rise in 1954, and are therefore better off than they were at the beginning of the last Parliament. Their suggestion is that an outside committee should arbitrate—on a subject which Parliament can obviously handle with more knowledge and experience than anybody else, though also with more invidiousness. A battle that should be fought on the issue of Parliament's efficiency is thus deteriorating once again into an undignified appeal to the public, blinked out through large spaniel's eyes. In a campaign from which nobody emerges very well, however, those who are asking for a rise probably emerge least badly; it is hard that they, almost certainly, are going to be the ones who will get no prizes.

Army in Slums

THE report of the Select Committee on Estimates on the Army's works and buildings is a shocker. It restates bluntly that the continued use of "sub-sub-standard accommodation" (a tour of which deeply shocked Sub-committee

B) is having "the unfortunate effect of driving people out of the Army, instead of encouraging them to join it or remain in it." Service slums continue to play their part in running down the professional element in the services, frustrating such attractions as increased pay, and riveting ever more firmly upon the country the high cost and vast inconvenience of conscription. This is the falsest of false economies.

Who is responsible? It is clear that constant changes in defence planning have exaggerated further the lack of administrative control in the services; departments that have had most money in the past suffer least, and facile slogans about economising on the tail instead of on the teeth have caused cuts in parts of the tail that are really essential. The Army's vast storage schemes, many of which were unnecessary, wrecked many excellent service housing plans. The War Office has been ready to eliminate housing from its estimates in favour of more cherished plans whenever Treasury cuts have been enforced. The Treasury, as the committee makes very plain, must share this responsibility for bad Army estimating methods: its device of an "all-round percentage" cut is the worst incentive to careful planning and close costing, and the more the Treasury suspects inflated estimating the more it insists on percentage cuts. These revelations emphasise again how important it is that a ruthless Minister of Defence should be in charge of the major reassessment of defence expenditure that is now in prospect—instead of leaving the allocation of some arbitrarily determined cut to be decided by a vague process of collective bargaining.

On Not Annoying Councils

MR SANDYS has gone a long way towards scotching any remaining hopes that his forthcoming White Paper on local government reform will settle anything of importance. Last week he recited to the County Councils' Association the case for reform, emphasising the great changes in the scope and cost of the public services and in the distribution of industry and population which have occurred since the present local government system was forged in the 1880s. He then promptly set his own words at naught by indicating that the Government has no intention of imposing major adjustments in the face of the known opposition of the local authority associations. The White Paper proposals, when they do appear, will pay "most careful attention" to these associations' views.

In other words, the structure and relations of counties and county boroughs will be left much as at present. Yet, curiously, in the very same speech Mr Sandys demonstrated the anarchic tendencies of the present arrangements. He chided the county councils for opposing extensions of city boundaries, out of fear of losing rateable value, while failing to provide alternative outlets for the cities' congested populations. He declared that the counties' failure to utilise the Town Development Act might force the cities to solve their problems unilaterally with the aid of compulsory powers—in other words, to sprout a rash of municipal housing estates all round the adjacent counties.

Who is to knock the heads of the counties and county boroughs together? Although Mr Sandys himself has so

far rejected the responsibility—and has emphasised the fact by cutting down his own department's efforts at regional co-ordination—eventually he will probably feel constrained to force the warring local authorities to work together in joint planning boards. But before plumping for this second-best palliative, the minister should ask himself how many services—besides housing and town and country planning—are suffering seriously from local government inefficiencies; the list would certainly include water supplies, fire services, and the still disintegrated health service. No reform could meet the needs of all these services. But the elimination of the smaller counties and county boroughs, combined with a new deal for the middle-sized towns, would at least make the machine work a great deal more smoothly—and would do so without any of the sacrifice of local roots so feared by the Conservatives. This fact gives Mr Sandys a last chance to make some constructive reform.

Blot on Japan's Hansard

THE voters who on July 8th will elect half of the upper house of the Japanese Diet cannot feel much respect for its members after the disorderly end of its last session. There has been nothing so bad since the famous riots in 1954. After brawls in the usually decorous upper house, eventually quelled by 500 police, the ruling Liberal-Democrats were able to force through only part of the controversial legislation they hoped to have on the statute book by midsummer. They secured the creation of a council which will propose alterations to the present American-written constitution, probably including the removal of the famous "no war" Article Nine. They have increased central control over education at the expense of locally elected school boards, in the face of demonstrations by teachers and students and an appeal from the teachers' section of the International Confederation of Free Trade Unions. But the Socialist opposition succeeded in blocking other important Bills, including one regulating the issue of textbooks to schools and the all-important one for electoral reform.

The blame for the senatorial rioting lies about two-thirds with the Socialists and one-third with the Liberal-Democrats. The government, by proposing to alter the voting system in a way that would give it more seats, violated the rule that a majority should never use its strength simply to grind the minority's face in the mud. This might have cost it a good many votes next month, had the Socialists not forfeited sympathy by the way they handled their opposition to the other Bills. Western onlookers may share their suspicion of some of these Bills, especially those that threaten to divert the Japanese education system from its present liberal ways; but there are limits to the obstructive tactics permissible to a parliamentary opposition. At first the Socialists used filibusters and repeated motions of no-confidence, devices which are familiar enough in the West though they may well irritate Japan's more autocratic leaders; but when these failed they turned to violence, twice blockading the president of the house in his office. Japanese politicians have yet to show that they understand the rules of the parliamentary game.

Barriers for Books

BUYING a book from abroad has been a tedious business in our postwar era of currency controls. All but the most ardent seekers after knowledge blench at the thought of getting foolscap forms from a bank, justifying one's request in triplicate, applying to the Bank of England's exchange control authorities, and waiting, perhaps for weeks, to get eight and sixpence worth of dollars cleared. For six years, however, Unesco has lightened these labours. Individuals and organisations in 23 countries have been able to buy a Unesco coupon in their own currency and send it abroad to buy books, scientific equipment, or educational films and filmstrips. Orders for British books come mainly from people without bank accounts in remote places, including colonial territories; libraries in towns as far apart as Jakarta and Ankara are also regular customers. Outgoing requests come from students and laymen who want to learn, from books and periodicals not available in Britain, more about solar energy research, mill layout, and other variegated but sober matters.

Unesco now proposes to wind up this civilised device. It is argued that the easing of exchange restrictions makes its continuance unnecessary. The real niggers in the woodpile are apparently certain Continental firms that have used it for sizeable transactions of doubtful educational value. Member governments are now considering whether to approve the burial of the coupon scheme.

It would seem fairly easy, however, to ensure that the innocent should not suffer with the guilty. While it is no hardship for a firm dealing in large sums to work through normal financial channels, these are still discouragingly complicated for the humble individual seeking to break through the currency barriers, whether he is a clergyman on Rathlin Island who wants to get a Zagreb chess journal, a Trinidadian studying radio-telegraphy, or a Falklands schoolmaster halfway through a correspondence course from a Connecticut art school. Unesco could easily limit the scheme so that it could not be exploited for large-scale commercial purposes, without abandoning one enterprise, among its myriad activities, which actually does help to carry knowledge across seas and frontiers instead of merely piling up platitudes on that very theme.

Blueprint for Somaliland

THE pronouncement of policy for British Somaliland by the Minister of State for the Colonies, Lord Lloyd, was an imaginative attempt to offer a poor territory a viable future, put forward, unfortunately, in somewhat pedestrian and unimaginative terms. The core of the proposals is that self-governing institutions should be developed in the colony, so as to put it in a position to consider an *Anschluss* with Somalia—the former Italian Somaliland—when under the terms of the United Nations trusteeship it becomes independent after 1960. It will be virtually impossible to sustain a British Somaliland (and a French Somaliland) under full colonial control next door to an independent Somalia—especially as, in recent years, Somali nationalism

has been growing, even though the Somali tribes never had a single homeland.

Somaliland is a poor, arid, and therefore desperately backward territory whose main economic hope must be the discovery of oil—on the Somali side of the new Ethiopian frontier. It is already heavily grant-aided, and Lord Lloyd has now promised it more educational and economic help. But in saying that "the primary object of all these developments is to make the Protectorate ready for internal self-government" he remained vague about the powers of the new Legislative Council, and about the time factor. 1960 is four years away. What the British Somalis can achieve in administrative training in this period will have a direct bearing on the part they will play in administering any united Somalia in the future, and therefore on the relations of that country to the Commonwealth. And, situated opposite Aden, the Somali coast is of very considerable strategic importance.

Italian Parties Still Apart

THERE has been a flurry of activity among Italian politicians as a result of the local elections—although the upshot seems to be to leave things, at the moment, very much as they were. The elections brought into the lime-

Limited Commitments

Now, though nations must never perpetrate wrong, it by no means follows that they are bound or would be wise or right in all cases to interfere to prevent its perpetration. Each case must stand upon its own merits. We are not charged with the general police of the universe. We cannot undertake knight-errantry throughout the whole world. We may interpose to protect our immediate friends, or special allies, or close connections, those to whom we are bound by affection, those to whom we are linked by interest—without entailing upon ourselves the obligation to defend also the distant and the unrelated. We may properly enough take up arms to resent one wrong or to beat back one encroachment, yet with equal propriety decline to punish analogous wrongs elsewhere, or to repel all similar encroachments. We must do what we can—what most concerns us—what lies within our special power, our close cognizance, our easy reach. It is no accurate or cogent logic that would constrain us, because we have protected the weak and baffled the robber in Europe and at home, to pursue the same course at the antipodes and in another hemisphere. To do so would be simply out of our power and beyond our scope. It is a policy which we could not carry out, and which therefore we should not be wise and are not called upon to undertake. In many cases we should not be able to pronounce a certain and authoritative judgment, and in many more we should not be able to enforce our sentence, or to enforce it without doing more harm than good. To announce that we disclaim the vocation of righting all wrongs and punishing all crimes all over the world, may possibly be an encouragement to the wrong-doer—but it is an encouragement which we cannot help affording.

The Economist
June 14, 1956

light two controversial projects which, when they are not occupying the centre of the Italian political arena, can usually be found lurking in the wings: the enlarging of the present centre coalition by an "opening to the left," and the unification of the two Socialist parties.

In more than a hundred municipal centres, including key cities like Rome, Milan and Florence, the return to proportional representation has deprived the Christian Democrats and their allies of a working majority. The Christian Democrats might have avoided the problem of running minority administrations by joining forces with the Nenni Socialists, or, more improbably, with the extreme Right. But if they turned to the left they would forfeit the support of the right-wing Liberals; if to the right, that of the Social Democrats. More important, a move to the left would link them, through Nenni, with the Communists and these local liaisons would compromise the national government. In the event, their national council decided against venturing into uncharted seas; it voted against alliance with either the extreme Left or the extreme Right.

The rather surprising successes of both the Nenni Socialists (at the expense of the Communists) and of the Social Democrats gave rise to hopes that a new day might be dawning for Italian Socialists who, if they could join forces, would command about a fifth of Italy's votes and become a force to be reckoned with. Last week delegates of the two parties met to discuss unification—their first official contact since 1947. But according to all reports the meeting was not a success. Signor Nenni's refusal to break his pact with the Communists must have reinforced the doubts of those Social Democrats, including Signor Saragat himself (who did not attend the meeting with Nenni), that the unification of the two groups would lead, not to a renaissance of democratic socialism in Italy, but to its permanent subordination to communism.

What is Truth in Turkey?

FOR all their appearance of toughness, Turks can be thinned to a fault. Last winter there were incipient signs that the Menderes Government had resolved to conquer this failing; it showed a willingness to respond to the pressure of public opinion and to amend its economic policy accordingly. It even mentioned amendment of the 1954 press law. Last week that hope was dashed. A new press law, far more stringent than its predecessor and covering not only writers but proprietors and publishers, as well as speakers at meetings, has been passed by the Grand National Assembly by a five to one majority. (In all, about 160 of the 540 members seem to have abstained.)

At the root of the trouble is an economic policy that is unpopular because prices are high and necessities scarce. In April, speaking at the opening of the Adana dam, Mr Menderes displayed his irritation at criticism—often unbridled—by asserting, with some exaggeration, that the press was "preparing revolution in the country." The new law includes some features that reveal the way the economic wind has been blowing—for instance, one clause lays down sentences of up to three years for publishing "false news which would curtail the supply of consumer goods, or raise prices, or cause loss of confidence in the authorities."

PROGRESS IN ELECTRONICS

Impedance measurements on a radial ultrasonic transducer developed for continuous cleaning processes.

... end beyond vision

Whenever a new research project is initiated, none can foresee its end. Even applied research with limited objectives is likely to open up new avenues which invite exploration.

In the field of ultrasonics, modest beginnings have led to developments which few could have foretold. Mullard developed the first ultrasonic soldering iron for soldering aluminium. Now, from the same laboratory, have come other

industrial applications which include ultrasonic drilling, and ultrasonic cleaning of small engineered parts.

These new inventions will influence the production techniques of many industries, bringing benefits in the shape of better products, cheaper products, and greater efficiency. And as the applications of electronics extend in scope, Mullard Research may well have a part to play in the future of your own industry.

Fear not, dear lady. A mod. kitch. always looks thus when it is bg. blt. One day soon, glue-pot, sawdust and long-suffering joiner gone, you will find that the architect was right after all: it will be a dream kitchen. Nowadays such dreams are made, to a large extent, of hardboard, a most workable building material that is seen—and taken for granted—in shelves, partitions and cupboards at home, the office and the factory. But this versatile board is only one of the things that Bowaters make. The full catalogue runs from delicate tissues to newsprint rolls $4\frac{1}{2}$ miles long. For the enjoyment of living, Bowaters provide paper for magazines and books, for wrapping sweets and biscuits. For the business of living, Bowaters provide packages for commerce and industry, even building material. Directly or indirectly all benefit from the diversified activities of the Bowater Organisation.

 The harvest of the forest is given many forms by **BOWATERS**

The Bowater Paper Corporation Limited

Another binds newspapers to print denials of their assertions without comment. But who is to say which is right, story or denial, in a case where both are a matter of opinion, not of fact? The outlook for fair judgments on moot points is not bright in a country which has just retired 16 judges, many of whom, when their record of cases is examined, turn out to have given verdicts in favour of offenders accused under the old press law.

How Civil a Service?

THE Commons debated last week whether civil servants are really civil. Once upon a time it was enough for a civil servant "to be directed to say" and to conclude that he was one's "obedient servant"; but now that the state's power has become so great, and the citizen's stature so much reduced, this is too formal at one end and too patently untrue at the other. Members in the debate were diligent in their search for ways of improving relations between the bureaucracy and the public; but the argument repeatedly returned to the point at which public relations is defined as the sum total of contacts and impressions. Salesmanship without a saleable product is otiose from the start; and basically it is Government policy which the departments must interpret as humanly as possible to the public. A bad policy—such as rationing—cannot possibly produce good public relations, even if the staff of ration offices are hand-picked for sweet temper and efficiency (which they aren't). The real difficulty about the departments' public relations is simply that there is so much of them; they touch the public at so many spots that they are bound to touch many sore ones.

The one concrete proposal that emerged from the debate was related to the power of civil servants over ministers rather than over the public; but Mr Crossman's suggestion that the affairs of some departments should be under constant review by a standing committee of members of the House may be worth more consideration than Mr Brooke seemed to think. It clearly would not work well in relation to the Foreign Office; or in connection with any policy that was a straight issue between the parties. But it is worth considering in relation to the colonies, for example, and very possibly the Home Office. Members have recently been unduly worried at their inability to thrust their noses into the day-to-day operations of the nationalised industries. There is a rather stronger case, despite their ability to ask questions in the House, for wondering whether they might not benefit from more scope for inquiring into day-to-day operations in Whitehall.

Pruning a Crown Privilege

LAST week the Lord Chancellor told the House of Lords of certain proposed modifications in the use of Crown privilege to withhold certain documents in court cases. This privilege has become important since 1947, when the Crown Proceedings Act made the Crown liable in tort or in delict in the same way as private persons.

The privilege can be claimed for two classes of document. The first is the kind of document where disclosure would injure the public interest, for example by endangering public security or prejudicing diplomatic relations. The second is the document which is withheld in "the interests of the proper functioning of the public service." The Government will continue (quite rightly) to use its privilege in the first class of document, but it will narrow the second class by freeing from it some of the sorts of documents that are most frequently involved in litigation. Unfortunately, however, it is not going to free enough. Very broadly, the Government's policy will apparently be to provide the court with such documents as the reports of accidents in which a Government employee or premises are involved (thus meeting, for example, the strictures passed on it in a notorious recent case when privilege was claimed for a report by a prison doctor which might have been relevant to a claim for negligence against the Crown); to be very cagey about producing reports by service doctors or welfare authorities in divorce cases; and flatly to refuse to produce departmental memoranda and minutes, even in cases where a plaintiff is seeking to show that a Minister has acted *ultra vires* or on wrong principles.

In defending this last decision, the Lord Chancellor maintained that it was important that civil servants should be able to commit their opinions freely to paper, in the knowledge that they would not be produced in court. The Government has therefore rejected the Bar Council's suggestion that a judge, and not the Minister concerned, should decide whether a document should be withheld; the Lord Chancellor argued that the judge would consider a particular document as such, rather than the effect on the public service of disclosing the class to which it belonged. Anybody acquainted with Whitehall will understand the pressures that have led to this decision. But they are pressures of a thoroughly undesirable kind. The Government ought to lean over backwards to assist the judicial process; in order to save civil servants' faces it is instead leaning over as far as it dare—and much further than it ought—in precisely the opposite direction.

WEEKLY AVERAGES

Letters to the Editor

Time Grows Short in Cyprus

SIR—At the conclusion of your article of June 2nd, you state that the political programme you outline "may underestimate the strength of Turkish feeling."

It most certainly would do so. Experience has shown the resolution of each Balkan nation not to submit to the rule of the other. And has it not been demonstrated only too often to the various national minorities that even the most liberal constitution, purporting to guarantee their rights, is in practice little more than verbiage?

The course you propose would create just such a situation since under the constitution Greek Cypriots would "enjoy an elected majority": it follows that Turkish Cypriots would be reduced to the status of a permanent minority. A change would have been brought about, but for the worse; an internal strife would have been transformed into a far more dangerous external one with Turkey. The ordinary westerner might give a sigh of relief at such a "final settlement," but perhaps in Cyprus, Greece and Turkey moderates would see only that the extremists had won.

In the House recently doubts were expressed on both sides as to the efficacy of the principle of self-determination. It is the first time that a western government has recognised—and before irreparable damage has been done—that stubborn facts can stand in the way of its simple application in this area of mixed populations. The Government has chosen a harder way in refraining from a short-cut solution on that high-sounding phrase. The insinuation that this is on account of oil interests casts no slur on the present Government, only on previous ones and on those western statesmen who disposed of similar intricate Eastern and Central European problems in too careless a manner.

There is need for deeper and more original thinking than automatic resort to the panacea which has been a catastrophic failure whenever it has been applied in this part of the old world.—Yours faithfully, LEO GESTETNER
Hampstead, N.W.3

Kashmir and Goa

SIR—In *The Economist* of June 9th you write, in regard to Kashmir, of "a legalistic attitude ironically akin to the Portuguese position on Goa." The Portuguese attitude in regard to Goa does not rest on mere legalistic grounds. There are many other reasons for the Portuguese to stay in Goa: historical (the Portuguese have been there for just under 500 years); moral (Portugal can-

not trade people who feel themselves to be Portuguese); religious (Goa is a centre of Christianity and roughly half of the population is Catholic); racial (it is an acknowledged fact that there is no race prejudice in Goa and that the Goans have full Portuguese citizenship); political (Goa is an integral part of the Portuguese nation); and, finally, cultural reasons (the Goans are "westernised" in their outlook and in the Indian Union they feel themselves to be foreigners). But what you write is true enough: at least it uncovers the two faces of Mr. Nehru. When the Portuguese use the legal argument, Mr. Nehru brushes it aside; when he himself claims Kashmir for legal reasons, he wants all the world to side with him.

One last point. The Indian claim to Goa is now ten years old. During these ten years no agitation has been traced in Goa and no significant number of Goans abroad have shown any willingness to join India. What has happened is just the opposite. Is it not time for Mr. Nehru to give up his ridiculous claim? To make a mistake is natural. But to insist on it!—Yours faithfully, M. DA SILVA
London, W1

Leave in the Civil Service

SIR—The recent vote in favour of the Government's offer on pay and leave by the conference of the Civil Service Clerical Association indicates that these proposals will be generally accepted and come into force on July 1st.

I find it remarkable that there has been no public reaction whatsoever to the Government's proposals. The Royal Commission in their report recommended a very drastic reduction in leave amounting in some grades to nearly half. The Civil Service Association naturally refused point blank to accept such cuts and the Treasury were quick to appreciate that unilateral enforcement was impractical. Accordingly there were negotiations of which the present package proposals are the result.

The Government's proposals are that civil servants now in post shall suffer virtually no cuts in leave, the only changes to be consequential ones arising out of the replacement of the six-day week by the 10½-day fortnight. The civil servant of the future, however, is to be sacrificed on the altar of the Royal Commission's principles and his leave will be limited on the basis laid down in their report. In other words we are witnessing the creation of a class structure within the Civil Service dictated only by the date of entry to its ranks. This is not the first time that the Government has dis-

tinguished between present and future civil servants.

The argument in favour of the Government's proposals is that future civil servants will know the conditions of entry and can stay out if they so wish. Although superficially attractive, the contention is not a valid one, for it implies that the would-be civil servant has freedom to contract whereas clearly he is in no position to negotiate on the terms of his engagement. Moreover, taken to its logical conclusion, the Government ought not to have general conditions of service at all, but should instead make individual contracts and thus obtain the best possible terms from each entrant.

Surely the only reasonable principle governing the condition in the Civil Service ought to be the work done and responsibility carried in each grade. There is no room for distinction based on dates of entry.

The consequences of the present proposals are obvious. The quality of the Civil Service will deteriorate since the generous leave allowances which have been an attraction in the past will have gone. In view of the enhanced economic importance of the Civil Service today, it behoves the public to safeguard this quality. If it is right for civil servants in post to retain the present scale of leave, then the taxpayer should be prepared to bear the small additional cost involved in giving future entrants the same terms of service.—Yours faithfully,

C. W. KOENIGSBERGER

London, N.W.2

Disinflation by Funding

SIR—Your article and ensuing letters lead me to raise some layman's queries.

Whilst it is not denied that funding can deflate, has the technique of control of inflation by subsequent funding resulted in milder or more rampant inflations? It seems that funding has never cured the endemic tendency to inflation in all economies where money power is centralised even though it may have procured a halt for breath.

Might this not be due to the fact that funding is an easy way out for those who have over-spent? The harshness of the measure falls on the less vocal (and often financially naïve) section of the populace who still persist in buying, or are willy-nilly saddled with, long-term fixed interest obligations. Gradually, distrust of such obligations may force the authorities away from orthodox funding or into more naked methods of enforcing their will.

If we wish to avoid either unpleasantness, cannot some means be found of controlling the spending? This may be a begging of the whole issue, but by control is meant action before spending is undertaken and not after. Theoretically we may have such control. I don't know. But, if so, how may it be made effective?—Yours faithfully,

LAYMAN

Arms and Men

ADMINISTRATION OF WAR PRODUCTION.

By J. D. Scott and Richard Hughes. Her Majesty's Stationery Office. 556 pages. 37s. 6d.

MIRACLE OF WORLD WAR II.

By Francis Walton. New York and London: The Macmillan Company. 587 pages. 52s. 6d. \$7.50.

TO the student of public affairs the seventeenth volume of the British civil history of the second world war may be the most interesting; it is certainly one of the most readable. The names of the authors lead one to expect clarity and wit in the writing, and their own experience of affairs at the centre of two of the Ministries described is reflected in their appreciation of how things really happened:

at these levels documents give little real guidance; matters of importance are discussed and settled by word of mouth by those with authority to settle them out of hand: the action taken goes on to official paper, perhaps, but seldom the full reasons for it: the more important the proposal the more likely it is to be scribbled on an old envelope, and administrative suggestions from comparatively exalted quarters that are unacceptable are more usually "lost" than contraminuted.

It is this atmosphere which makes it hard for the historian who was not himself in the history to do justice to the power of individuals in influencing events.

The history is one of contrast. The Admiralty remained one body controlling both ships in action and ships in building: writing the history of its production administration is "painting half a face." Despite the geographical split between Whitehall and Bath, the organisation remained basically unchanged.

The Ministry of Aircraft Production, torn from the Air Ministry in 1940, suffered at first from the calculated lack of administrative order that contributed to the short-term successes of Lord Beaverbrook and makes it impossible for the official historian to continue to refer to persons by their functional title. On the Minister's departure to the more resistant organism of the Ministry of Supply, MAP, after changes of structure which followed the coming and going of persons of importance, settled down to a well-planned existence.

The Ministry of Supply differed in the great number of Directors-General in the organisation chart, but this was only an expression of the widely diffuse and unconnected production problems that were the responsibility of that Min-

istry. The shifts of power were less dramatic, perhaps because so much resided throughout in the hands of the eminent civil servant who recently retired from the War Office.

The Ministry of Production followed a succession of committees of varying authority charged with the central balancing of production. It began uneasily because its functions appeared to other departments to be controlling rather than co-ordinating. Much of its strength came from the development of the Joint War Production Staff towards the co-ordination of production and strategy, a function that had earlier been performed by the Defence Committee (Supply) under the chairmanship of the Prime Minister.

By the second half of 1943 it began to be realised that a working machine had come into being. The test came when reductions in some programmes and shifts of production and labour became necessary in order to secure the required balance of the armed forces and their equipment. By this time the central planning organisations knew what was happening and could forecast the effect of change; production departments could enforce their authority; and regional organisations were geared to follow through the detailed consequences of decisions taken centrally. In the field of American supplies, co-ordination became necessary earlier, and in the later stages the combined approach under the leadership of the Ministry of Production became highly effective.

This book can be recommended to other historians, to students of the theory of administration, to lovers of state planning (who may get little comfort) and to those who were entangled in the events described. These may appreciate more clearly what was happening around them than they did at the time.

Mr Walton's book, by contrast, is a history of the achievements of American war production told from the point of view of industry, rather from that of officials. Its great virtue is his understanding of the problems on the factory floor that were caused by the shift from passenger cars to aeroplanes, from hardware to machine guns, from sewing machines to aircraft instruments. Especially interesting is his exposition of the problems of fitting military designs to the normal American production layout. In the case of British and Continental equipment, such as the Merlin engine and the Oerlikon Gun, complete re-design of thousands of parts was necessary before production could begin. The initial growth of production of all military equipment was hampered by

the wide use in American industry of the specially designed, single-purpose, machine tool. And a further problem arose from the paradox that, although the majority of military weapons are used only for a fraction of their potential life, being either abandoned or destroyed or never used, yet the manufacturing tolerance required is of necessity far closer than in normal engineering practice.

Mr Walton shows how the British and French contracts placed before Pearl Harbour developed war capacity particularly among firms not normally in the armament business (the specialists were reserved for American army needs). But he surely over-emphasises the harmful effect which lend-lease had upon American production, and forgets that the recipients were fighting to survive until American production was a reality. Few of them would accept the conclusion that in the distribution of lend-lease there was "no vigilance, no careful study of cases."

He is scathing about Roosevelt's production directives for 1942 and 1943. Of course, the figures were high, wide and handsome, but they had the touch of imaginative unreason which made Business and the Administration realise how vast was the need: and in the end these objectives were on the whole achieved.

Presidential Phenomenon.

EISENHOWER THE PRESIDENT.

By Merlo J. Pusey. New York and London: The Macmillan Company. 300 pages. 21s.

BOOKS that appear in leap years about leading American politicians inevitably invite consideration as campaign biographies. So regarded, Mr Merlo Pusey's "Eisenhower the President" deserves high marks. It is free from nonsense, errors and gross laudation. It contains a certain amount of information damaging to its subject and at several points the author takes issue with his hero, as well as frequently with his entourage. The stock myths are sparingly invoked, there is a total absence—well, almost total—of saccharine about the private life, family history and spiritual experiences of its subject, and the whole product is presented in highly literate prose and paragraphs of more than one sentence. In fact, as one reads on, the conviction increases that this is meant to be something more than the opening shot in the 1956 campaign.

However, if one looks at "Eisenhower the President" in this other light, if one starts applying to it the standards that Mr Pusey's earlier exercise in biography, "Charles Evans Hughes," suggests; then pleased surprise gives way to serious disappointment. The book then takes on the less pleasing aspect of a biography too brief to include a frank presentation of the hero's weaknesses and errors—for instance, the "Let Asians fight Asians" phase of the 1952 campaign—but at the same time spacious enough to contain such confidential material from the White House files as

that giving a highly favourable account, from the Administration's point of view, of the Indochina crisis of 1954. This is selective biography. It will indeed add to our knowledge of these years, but only if we can fill in for ourselves what Mr Pusey does not give us. Again, it is repeatedly apparent that the author has more criticisms in his mind than get on to his page, but this can only be learnt by a study of his silences—about Mr Brownell, for example.

More surprisingly, Mr Pusey never seems to appreciate what a truly remarkable phenomenon he has chosen to expound—a President more popular than any other in the history of the Republic, who has achieved the goal of every politician of winning the credit for all his administration's successes without being blamed for any of its failures. How this has been done, by what remarkable gifts of personality, skill in salesmanship, or happy conjunction of planetary influences, Mr Pusey never seems to inquire. Yet in a year when seemingly nothing except a bouncy cardiogram—or perhaps a "belly-ache"—can prevent Mr Eisenhower's re-election this would seem the interesting question to ask and at least to try to answer.

End of the Unsinkable

A NIGHT TO REMEMBER.

By Walter Lord.
Longmans. 199 pages. 16s.

IN 1927, when Mr Lord was a small boy, he crossed the Atlantic in the *Olympic*, the *Titanic's* sister ship. Already, it seems, the disaster of 1912 had cast its obsessive spell over him. His researches into what happened during the last nine hours of the *Titanic* in the freezing waters of the North Atlantic began with badgering the *Olympic* stewards; they have stretched over twenty years spent in assembling evidence, studying contemporary reports, analysing testimony given at the official inquiries, and interviewing survivors. In this book, he presents a synoptic "You were there" account of an awful, spell-binding disaster that remains rooted in the imagination of millions who have a much less compulsive recollection of innumerable horrors that occurred in two world wars.

What explains the hold that the sinking of the *Titanic* still exerts over men's minds today? One element must surely be the unfolding of a tragedy so classical in its elements and so strictly governed by the dramatic unities—the false confidence of man posing himself against nature as its main theme, and the confrontation of 2,200 men, women and children, as courageous and as craven as most, with a three-to-one chance of escaping death at a moment when they were never more self-assured or, as they thought, more secure.

Mr Lord's method is minutely detailed—for some tastes, perhaps, almost too *pointilliste*—and no one is ever likely to come nearer to setting down precisely what occurred, what was said, and what people did between 11.40 p.m. on April

14, 1912, when the *Titanic* struck the iceberg, and 8.30 on the following morning, when the *Carpathia* had picked up the 700 survivors. The momentous is mixed with the trivial—as in war itself. The night baker was impressed with the collision because it upset a pan of rolls about the floor. Some people collected fragments of ice as souvenirs. Below decks, the boatswain gave the crew half an hour to live. In the first class smoking room, bridge had been resumed. No alarm, no bells, no sirens; polite knocking at cabin doors, unhurried dressing and the donning of lifebelts. And all this time the builder of the *Titanic*, Thomas Andrews, knew that with five compartments flooded the unsinkable was doomed. Ten miles away, the 6,000-ton freighter *Californian* had tried to warn the *Titanic* of icebergs, only to be told to get off the air; and by the time that the *Titanic* started to send SOS signals the *Californian's* radio was manned, not by the wireless operator, but by the third officer, an amateur who could not make the set work.

There is bitter irony in so much of the *Titanic's* story: devoted service (none greater than the *Carpathia's* work of rescue) mixed with gross blundering; the "best traditions of the sea" as exemplified by Second Officer Charles Lightoller, confused with some of the worst behaviour (although one finds it difficult, at this distance, utterly to condemn those who failed under so agonising a test); the bad luck that ran against the odds even of this perilous gamble against ice in the North Atlantic at such a season; the inadequate and yet only half-filled lifeboats. None of the "ifs" came to the rescue of the *Titanic* that night, and men are still somehow chastened because their fathers were arrogant enough to suppose that they might.

The South Slavs

PEASANTS, POLITICS, AND ECONOMIC CHANGE IN YUGOSLAVIA.
By Jozo Tomasevich.
Stanford University Press. London: Cambridge. 755 pages. 60s.

IT is a rare and exhilarating experience to read a first-class book about the South Slav people. Its rather general title belies the detailed, scientific and scholarly character of the work. The author's main concern is to describe conditions and changes in life among Yugoslav peasants from the beginning of the twentieth century to the outbreak of the Second World War. This is no mean task since the South Slavs are divided into many different groups living in different climatic and geographical regions and with widely diverse historical and social backgrounds. The problem of how to treat them as a whole has stumped many a writer before. Undeterred, Dr Tomasevich tackles the problem boldly by prefacing the section on agriculture—which constitutes the major part of the book—with a short section outlining the history from earliest years of the peoples and regions that now constitute Yugoslavia.

It might be said that the book is top heavy, as the short political section gives broad outlines, lacking in depth and detail, while the account of peasants and agriculture is long, penetrating and detailed in the highest degree. But it is clear that the author's decision to include some political history, however brief, is justified, since many readers could not understand the agricultural problems without some knowledge of the historical setting, and the lives of peasants cannot be divorced from the political life of the countries they live in. The political history in parts one and two (covering the results of the First World War) and the first chapter of part three is written with admirable lucidity. Here, and throughout the book, the author is not afraid to state his views on controversial matters, and although himself a Yugoslav by origin, his opinions are singularly free from prejudice.

The rest of part three gives a careful analysis (with the aid of many tables and charts) of the numerous factors affecting peasant life and agricultural work. Dr Tomasevich is neither stunned by nor anxious to stun his readers with his massive collection of statistical data. He shrewdly recognises that the use of statistics can often be misleading and that many of the sources available on this subject are weak. Nor is he one of the dry-as-dust or neutral-at-all-costs historians. He grew up himself in one of the poorest regions of Yugoslavia and he shows a deep understanding of peasant life and awareness of peasants as human individuals.

Overpopulation and underproduction on the land together with lack of adequate investment and credit for agriculture have long been the curse of the Yugoslav peasant. Here at last full material is made available for study of these problems; there are excellent footnotes and bibliography. Some further material on the growth and movement of population has been made available in Yugoslavia since this book went to press, and a carping critic might say that less than full attention has been paid to Slovenia; but there is no doubt that this is an outstanding book unlikely to be superseded for a long time to come.

Living With the Cold War

THE PATTERN OF WORLD CONFLICT.

By G. L. Arnold.
New York: The Dial Press. London: Allen and Unwin. 256 pages. 21s.

"THE real issue" in the contemporary world, writes Mr G. L. Arnold, "lies between libertarian revolutionaries and others who can envisage the transformation of society only in terms of the Soviet experience since 1917." This is the basic theme of a powerful, acutely argued and pungently written book. The author believes that the political analyst can best help the politician "by reducing his concepts to the sort of methodical order that corresponds to the world we actually live in," and

he finds the most significant feature of this world in the "long-term processes released by the collapse of the nineteenth-century system of world trade."

The international division of labour originally created by the European industrial revolution "could last only until the outlying regions had begun to build up their own industries." In these outlying regions economic backwardness has been linked with political subordination to industrialised powers, and modern nationalist movements seek to put an end to both conditions. But they are confronted with great difficulties in modernising themselves; hence the attraction of the idea of "rapid economic development under dictatorial control," which draws them towards the Communist solution of their problems. Mr Arnold claims that the Soviet Union has achieved extraordinary results in high-speed industrialisation because "no other political system could have starved the population quite so effectively." The human cost of such a system is not enough to discredit it in stagnant, overpopulated societies with no traditions of democracy, and in the author's view the underdeveloped countries of Asia, Africa and Latin America will move towards Communism unless the West enables them to make the economic transition more easily by means of large-scale capital aid.

Mr Arnold does not regard economic aid as a substitute for armaments in the defence of the West, but as a necessary supplement to them. The cold war, he

argues, is "a struggle to determine the character of the society about to emerge from the impact of modern technology upon countries hitherto outside the historical mainstream." For the West to win it would be to "make co-existence possible," since only with prolonged failure to expand beyond their present limits will the Communists "come to recognise that the remainder of the world cannot be pressed into the strait-jacket imposed on their own society." Until then the Western nations "must learn to live with the cold war, even if it lasts a generation."

Public Libraries

THE CHANCE TO READ.

By Lionel McColvin.
Phoenix House. 284 pages. 35s.

SOCIAL welfare is notoriously a dull subject, not amenable to the lively treatment which the recorders of wars, divorces, prize fights or mountaineering can bring to bear. And such interest as most people can muster in social welfare concentrates in the main on its battles—prescription charges, old age pensions, comprehensive schools and the like. A book about so old-established, uncontroversial and above all so cheap a service as the public libraries cannot expect to arouse passions. Except, of course, among librarians; and this exception will guarantee a good sale.

Mr McColvin devotes the greater part

of his book to a survey of the public library services of the world, and in this most people will find something of interest. The bibliophile on holiday will learn that he must avoid Toulouse and Lyons (Closed in August); the Russo-ophile can rejoice to know that in the Russian Soviet Federative Socialist Republic 65 "bookmobiles" had in 1950 an average readership of 1,650 per van; there is a tantalisingly brief reference to the Bush Book Club of Queensland; French-speaking Quebec, it appears, looks to France for its books, but its Catholicism recoils from much of what it finds there.

Such argument as the book has is a plea for attractiveness in public library facilities, and for freedom from the kind of censorship that is imposed in Quebec and elsewhere. (Subtler problems of unofficial censorship nearer home are not touched on.) The habit of library use is a delicate plant, which will be stunted and even destroyed by discourteous service, inconvenient hours, dreary premises, or charges for borrowing. So if library services are to be provided from public funds, they should be given ungrudgingly, or the expenditure will fail to secure its objects; and these funds should not be used to further propaganda or partisan causes. Since, in these respects, Mr McColvin's strictures are directed at foreign libraries, his English fellow-librarians may be imagined as glowing self-righteously over this book, and thrusting it upon their readers' notice.

BEGINNERS, PLEASE

answers 300 investment questions sent to the Investors' Chronicle in the first year of the feature, 'Beginners, Please'.

Expert Commentators said:

"... the best book on investment for years ... the ideal method of prescribing this sort of information." *Stock Exchange Journal* (the quarterly publication of the London Stock Exchange)

"After reading this book the beginner need have no further fear he will lose his way." *The Economist*.

"An admirable index and glossary make it an excellent reference book ... worthy of study by mature investors as well as novices." Sir Oscar Hobson in *News Chronicle*.

"It seems to me to meet all the need of new investors and I would be surprised if it failed to widen the knowledge of many more experienced investors." *The Observer*.

A NECESSITY FOR THOSE WHO LIKE TO BE JUST THAT LITTLE BIT MORE WELL-INFORMED

The Annual Register of World Events for 1955

This uniquely impartial, comprehensive and authoritative work of reference has been published annually, without interruption, for almost two centuries. Its content and character have evolved with the years it has recorded so that it remains today an unrivalled reflection of the times we live in.

Special attention is devoted to Finance, Trade and Industry, with reports and statistics that enable the reader to assess and compare developments at a glance. The editors, advisers and contributors are men and women of great experience and repute in their widely varying fields. The General Editor is Sir Ivison S. Macadam, C.V.O., C.B.E.

Sweden in Monochrome

A HISTORY OF SWEDEN.

By Ingvar Andersson.

Weidenfeld and Nicolson. 487 pages. 36s.

PROFESSOR HECKSCHER, the great Swedish economic historian, once remarked that a small country had no right to demand that its history be studied, merely because it had happened. His own survey of Swedish economic history, translated into English two years ago, brilliantly revealed the interest of Swedish history: in particular the late but dramatic transformation of a country with a primitive agrarian economy into a major European power controlling a Baltic empire, an achievement based on a monopoly of copper supplies and on the development of a high-grade iron industry. Dr Andersson's general history of Sweden from the early Middle Ages to the present day, now translated, is a concise and balanced survey by a distinguished Swedish historian whose own work has centred on the sixteenth century.

In a stimulating introduction Professor Michael Roberts defines the problems and issues of Swedish history, stressing its many facets and its highly individual structure. Asking whether it is possible "to read without excitement the extraordinary epic of Sweden's rise to greatness," he explains that for him "Swedish history has this challenging quality: that it is almost impossible to approach it without taking sides." But if the appetite is whetted by Professor Roberts's analysis and enthusiasm and by his emphasis on the importance of Sweden's role in the relations between Russia and the West, it is too quickly sated by Dr Andersson's cautious and detached treatment. The constant feud between the monarchy and the nobility, the main theme of Sweden's internal political history, the ability of the metallurgical industries to meet technological challenges, the epic story of Sweden's military conquests and defeats, are presented in monochrome. The internecine struggle between the "Hats" and the "Caps" in the eighteenth century requires more explanation to make it intelligible and interesting to English readers; while Swedish foreign policy, constantly sensitive to Russian strength, needs to be expounded with the aid of better maps than those provided.

Mr Roberts tells us that among Swedish historians academic controversy runs high upon a score of crucial issues, and praises Dr Andersson for being dispassionate and judicious. In this useful textbook Dr Andersson's caution makes it easier to appreciate the lack of passion than the quality of his judgments.

Cyprus Out of Date

CYPRUS CHALLENGE.

By Percy Arnold.

The Hogarth Press. 222 pages. 21s.

THIS is a pleasantly written detailed account of an editorship in Cyprus during the war years. Mr Percy Arnold succeeded the late Mr W. J. Makin as

Editor of the *Cyprus Post* and held the position for two and a half years covering 1943 to 1945. During this time he swallowed the *Enosis* case hook, line and sinker, and the book might well have been written by any of the Archbishop's supporters except that these might not have been so intemperate in their attacks on the Cyprus Government and its British officials. Copious quotations are given from the columns of the paper and this makes the whole book appear rather out of date. In the year 1956, reading the title "Cyprus Challenge" one thinks at least of the Archbishop and of Eoka, but the whole story ends with the end of the war. It has much elaborate sarcasm and great quantities of small beer. There is an apparently well-informed chapter on cabaret girls and an interesting page devoted to a pair of Siamese twins in a bottle. There are also one or two misprints and mis-spellings.

It is true that British officials in Cyprus have, in the past, made many mistakes and for various reasons, but it is asking too much to expect us to believe that all the British officials, both in Cyprus and in London, were complete fools all the time. One detail may be noted. In the treatment of AKEL Mr Arnold prefers to regard it as a genuine labour movement and seems to criticise the way in which it was "harried" by the Cyprus Government of those days. But more recent developments have proved those officials to have been right, for AKEL has since blossomed out as the main Moscow-led agency in Cyprus, organised by Moscow-trained leaders and financed by Soviet funds. The record of AKEL has been consistently anti-British, and it came as no surprise when the present Cyprus Government outlawed the organisation and banned its newspapers last December.

The book ends when Mr Arnold is, apparently, thinking aloud as he stands by the rail of the ship that is bearing him away from Cyprus. He muses on the past and reflects how centuries earlier Richard Cœur-de-Lion had himself been in the same waters "bringing to an end the long Greek rule of Cyprus." But the cold fact is that, Greek emotionalism apart, Cyprus never at any time formed part of any Greek state and, despite Mr Arnold's Enotist friends, the culture of the island today is not Hellenic but Byzantine.

Shorter Notices

THE HISTORY OF THE FACULTY OF ACTUARIES IN SCOTLAND 1856-1956. By Andrew Rutherford Davidson. *The Faculty of Actuaries*, Edinburgh. 290 pages. 20s.

The Faculty of Actuaries in Scotland has been celebrating its centenary this week. Mr Andrew Davidson's book is something more than a ceremonial volume marking this happy event. There is, naturally, much of domestic history in his account of the Faculty's march from the Victorian epoch into the Second Elizabethan; but Mr Davidson also conveys to the general reader

a picture of the qualities that make the complete actuary—intellectual liveliness, practical caution, the gift of imaginative inference from facts that have been scrupulously gathered and logically processed. The contribution of members of the Faculty to this art of forward-looking measurement has its deserved monument in these pages.

HUSBAND AND WIFE IN ENGLISH LAW.

By R. L. Travers.

Duckworth. 112 pages. 7s. 6d.

This is a valiant but only partially successful attempt to compress the law relating to husband and wife into 112 small pages. Apart from the fact that the book is marred by inadequate proof reading and a few out-of-date expressions, its arrangement is in places illogical and its use of material uneconomic. For example, in the chapters on ending a marriage it would surely be better to begin with the reasons for which it can be ended instead of the three bars that make it impossible to obtain a divorce. Again, it is not relevant to take up space in describing the law of education: if everything relating to children were to be included, the book would have to be much larger. With a more ruthless revision and polishing, this would have been a good short companion to the Royal Commission's report. As it is, it can only take its place as one of a number.

TURKEY.

By Geoffrey Lewis.

Benn. 212 pages. 21s.

This book is a new contribution to the publisher's Nations of the Modern World Series; it is not simply a revised version of the book on Turkey published in this series by Dr Toynbee and Mr Kenneth Kirkwood in 1926. The first part of the book begins with an excellent summary of the chief institutions and history of the Ottoman Empire and goes on to trace the development of the Turkish Republic right up to 1955. The second part deals with various aspects of modern Turkey from mineral resources and communications to the modern Turkish character and the attitude towards religion. It is full of facts and figures and contains some shrewd comments, but the author is not so successful in distinguishing the wood from the trees as he is in the first part of the book; and it is a pity that there is not a more adequate analysis of the important economic problems facing Turkey today. But on the whole this is a good and useful background introduction to Turkey.

Only the Advance Towelmaster Service

ensures* a clean, dry towel for everyone every time

What a difference the Towelmaster Service makes. Instead of sad, sopping roller towels or overflowing paper bins you have this gleaming white cabinet, offering a length of clean, soft, dry towel to every user—at all times. Why, from the point of view of prestige alone, the Towelmaster is a fine investment. And the cost? Only 5/- for a roll 45 yards long—enough to dry 180 pairs of hands.

There is no capital outlay. You can budget precisely

for the year ahead. A minimum of two cabinets is installed and maintained free of charge. All you pay is 5/- for each roll of towelling used. Minimum usage is one roll per cabinet per week.

And the Towelmaster is as efficient as it looks. Pull gently and down comes a length of snowy-white towel, sufficient for a really good dry. The used lengths automatically roll themselves back into the cabinet out of sight (into a separate compartment, of course).

The people to contact are: Advance Linen Services Ltd. (Dept. A7), Stratton House, Piccadilly, London W.1. Telephone: Mayfair 8886

* We collect and deliver every week; you always have a spare roll in reserve for each cabinet.

THE BRISTOL OLYMPUS is in full production at 12,000 lb thrust without reheat. Avro Vulcan bombers for the Royal Air Force are powered by the Olympus and it is the engine fitted to the English Electric Canberra which holds the world's height record. No other engine can produce so much power at high altitude, or match it in economy of fuel consumption. These qualities are also those required of an engine for commercial airline use and a civil version of the Olympus is now available to the world's operators.

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Inside Story

Washington, D.C.

PRESIDENT EISENHOWER'S "bellyache" may be less of a medical worry than his heart attack, but it comes at a more awkward moment. When he was last out of action Congress was not in session and there was a general lull in developments abroad. Now he has gone back into hospital just as his leadership has suffered a sharp rebuff in the House of Representatives and amid a cluster of disturbing signs that American foreign policy is wilting from lack of lucidity at the top.

The first important meeting the President had to miss was one with the leaders of both parties in the Senate; he had hoped to persuade them to put back part of the \$1.1 billion which the House had just sliced off next year's foreign aid programme in spite of his direct appeal against such a cut. Nor is this the only legislation that is thrown into danger. In an election year Congress likes to pack up early and the four to six weeks of the President's convalescence will coincide with the period in which legislative measures of special importance to him will perish if they are not pressed.

Even more serious is the unhappy vagueness in which his enforced absence leaves American foreign policy. For this the President himself was partly responsible. Two days before he was taken ill he tried at his press conference to remove the fuzziness about military pacts and neutralism which had come over Congress. But for once his briefing system broke down. Although over 80 per cent of the cut in foreign aid had been made in military assistance because the House Foreign Affairs Committee had the impression that the European members of the North Atlantic Treaty Organisation had ceased to take their military obligations seriously, Mr Eisenhower spoke as if the main difficulty was over economic aid to neutrals. In an unprepared speech before questions began, he outlined what appeared to be a new American doctrine on the subject of neutralism, but one which unfortunately had not been cleared with the State Department.

After recalling that the United States had been neutral for a century and a half, Mr Eisenhower made two points. The first was that the existence of neutrals might even turn out to be to America's advantage since an attack on such a country would outrage world opinion more than would any trouble involving a member of a military pact. The White House promptly retracted the implications of this naïve observation, but Mr Eisenhower's further point was taken more seriously in Washington because it seemed in line with earlier official ruminations. He insisted that the term "neutral" when used in connection with military

alliances must not be confused with neutrality "as between right and wrong or decency or indecency." He added that on Saturday the Secretary of State would "etch [the details] clearly in simple form for us so that we can all understand exactly what it is we are trying to do." On Saturday Mr Dulles obliged. He said that

the principle of neutrality, which pretends that a nation can best gain safety for itself by being indifferent to the fate of others . . . has increasingly become an obsolete conception and, except under very, exceptional circumstances, it is an immoral and shortsighted conception.

Mr Dulles had doubtless remembered that the next guest due in Washington was not Mr Nehru but Dr Adenauer and that the foreign aid programme had been cut primarily because of the failure of German divisions to join the Nato forces. The immediate need for a fit and vigorous President to give decisive shape to American policy was thus dramatically displayed at the very moment of Mr Eisenhower's physical collapse.

★

It would be less necessary to insist on the unavoidable effects of his second illness were it not for the over-zealous efforts of doctors and politicians to prove that no one could be fitter than he for another four years in the highest office. No sooner had the President been operated upon than a stream of assurances was passed out to the waiting newspapermen that he would be able to stand for a second term, that he would be playing golf again in mid-August—this tends to be treated as a standard of his ability to run the country—and that he would be in better condition as the result of the illness than he was before. Since this was also said about his heart attack it not unnaturally provoked the comment that it would only require an ulcer to make Mr Eisenhower immortal. As before, Mr Adams, the President's Chief Assistant, and Mr Hagerty, his Press Secretary, moved into the hospital and smoothly began to demonstrate that the President was still at the helm.

All discussion of this subject is of course bedevilled by the fact that the Republicans do not think they can win the next election with any candidate except Mr Eisenhower. It was bad enough last September, but there would now be less than five months in which to build up any conceivable successor into a national figure. In these conditions the candidate would probably have to be the Vice President, Mr Nixon, but even many of his admirers admit that, utterly unwarranted as they feel this to be, he does arouse

a degree of dislike that amounts almost to revulsion among far too many people.

On the Democratic side the presidential nomination has become much more worth having just as Mr Adlai Stevenson has eliminated Senator Kefauver. But on Saturday, the day after the President fell ill, Governor Harriman of New York threw his hat in the ring—literally, since he was at the convention of the Hatters' Union, replying to an appeal by another labour leader that he take himself out of Mr Stevenson's way. At the nominating convention Mr Harriman will have some ninety-four votes from New York delegates and some support from the Rocky Mountains, where his father built the Union Pacific Railway. A great unanswered question is whether he has any assurance that he will be able to pick up votes that have been pledged to Mr Kefauver. Mr Stevenson's managers tend to think that their candidate's real danger is not that he will be defeated by Mr Harriman, but that a deadlock will be created between them, to the benefit of a compromise figure such as Senator Symington.

In any case the Democrats are a long way from being out of the wood. The President may well find it morally impossible to let his party down by withdrawing, and many Americans would then probably give him their votes as a present to make him feel better and to rebuke those who had the bad taste to talk about his condition. Moreover, both parties might be wrong in thinking that no other Republican could win. Mr Stevenson is at his wits' end to find an issue that is both worthy of him and attractive to the voters. They are bored with foreign policy, civil rights for Negroes will probably blow up in the Democrats' faces at their convention, and the embers of the farm revolt seem to be flickering rather low.

Yankee, Go Home!

TO support its impassioned plea for more giant bombers capable of flying from the United States to an enemy target and back, the Strategic Air Command has been arguing that America's foreign bases are becoming less and less secure. Recent developments in such widely scattered places as Iceland, Morocco and the Philippines appear to substantiate this analysis. Iceland formally notified the United States this week that it was seeking a revision of the defence treaty of 1951 with a view to obtaining the withdrawal of American forces. It is still possible that the Icelandic elections, due on June 24th, will lead to the reversal of a policy voted by parliament in March, but it is unlikely. Consequently, some 4,500 airmen and army personnel may be compelled to leave vital strategic installations built at a cost of \$150 million. Not only would this evacuation seriously imperil the North Atlantic Treaty Organisation's northern defences and the American outposts in Greenland, but it might encourage other reluctant hosts to follow Iceland's heady example.

The situation in Morocco is somewhat less urgent but even more complex. Under agreements negotiated with France in 1950, the United States set up four Air Force bases, a naval air base and a radar system extending from north of Oujda to Marrakesh—at a total cost of more than \$450 million. Now that France has recognised Moroccan

independence, the status and future of these installations are in doubt. The Moroccan government is saying that no previous pacts concern it and that the United States must negotiate directly with Rabat. While maintaining that it has bought the land involved, the French government seems prepared to support the Sultan's position. It is probable that the Moroccans will want a large annual payment in exchange for American use of the bases, but up to now the State Department has been strongly opposed to "rental" arrangements of any kind. The problem of sovereignty and of the precise status of American installations in a recently established nation is also arising in the Philippines. President Magsaysay is asking that American claims of sovereignty over Philippine stations be replaced by a long-term leasing agreement.

There are, however, two foreign areas from which American strategists can draw comfort. Shortly before leaving for the United States, Dr Adenauer announced that the Federal Republic would contribute part of the cost of maintaining American forces in western Germany for another fiscal year. Although the amount, about \$140 million, is only a third of the contribution made in the last fiscal year, it represents a useful compromise. Finally, there were indications that American forces might acquire two or three more bases in Spain—the one place where the Department of Defence feels that there is little risk of eviction.

Boom in Plans

FROM A CORRESPONDENT IN NEW YORK

UNLESS the President's latest illness makes businessmen pull in their spending plans, their outlays on new plant and equipment in the third quarter of this year will reach the record annual rate of \$36.7 billion. These expenditures should therefore do even more to offset the expected decline in economic activity during that quarter than they did to counter the effects of the soft spots in automobiles and housing during the earlier part of the year. This latest survey of spending plans, which comes jointly from the Department of Commerce and the Securities and Exchange Commission, confirms the more detailed findings of the similar but broader survey conducted in April and early May by the Department of Economics of the McGraw-Hill Publishing Company.

The McGraw-Hill survey covers a very wide sample of industrial companies and examines their programmes as far ahead as the end of 1959. It provides data not only on plans for investment, but also on how companies expect this investment to develop, in terms of future capacity, future sales, introduction of new products and stability of output. This is, therefore, a summary of business thinking about prospects for the next four years. It suggests that capital investment, in new factories and other productive equipment, which has traditionally been the most unstable element in the United States economy, may well turn out to be the most stable in the years ahead.

The first, and most important, fact reported is that businessmen now plan to continue spending on new plants and equipment at an extremely high level until 1960. The sharp rise in capital investment which began in 1955, and has continued strongly into 1956, is only the start of a long

term trend. Plans for 1957 already amount to \$39 billion, about the same as for 1956, and far above the \$30 billion invested in new plants during 1955. In the past McGraw-Hill surveys have always shown a sharp drop in plans for the more distant years—indicating a lack of definite intentions—but there is no such decline in the preliminary plans for 1958 and 1959, which are also far above 1955.

This may reflect a need for larger investment than in

earlier periods, or a greater tendency to plan ahead. Apparently both factors exist. Companies covered by the survey are increasing their research activity greatly, and as a result new products and processes are likely to be introduced with great rapidity. Nearly a third of the firms are devoting a significant share of their 1956 capital investment to new products, and probably two-thirds are installing new cost-reducing processes; this turnover of products and processes is expected to increase in the years ahead, and will obviously require new investment of a continuous nature. As a consequence, many more concerns are now planning on a long-range basis. Almost 90 per cent of the companies surveyed by McGraw-Hill this year were able to give investment plans as far ahead as 1959, compared with less than 50 per cent in a similar survey in 1948. In many individual companies and industries—including the oil and electricity industries, and a wide variety of manufacturing firms—the peak for such capital outlay is planned, not for 1956, but for one of the next three years. McGraw-Hill also surveyed the makers of capital goods, who report that, for the first time they can remember, customers are asking for steady delivery of machinery over four or five year periods, instead of bunching all orders into a single boom year.

It is in manufacturing industry that the changes in technology, the drive for new investment and the increasing tendency to plan ahead all show up most clearly. Manufacturing companies, as a group, plan to increase capital investment by 48 per cent in dollar terms in 1956 over 1955 and to maintain or increase spending again in 1957, and probably in 1958 and 1959 as well. In physical terms, manufacturing industries will increase their capacity by 8 per cent in 1956, and by an estimated 18 to 20 per cent in the following three years. They expect total sales of manufactured goods to increase by 24 per cent between 1955 and 1959, with at least half the increase coming from new products. The largest increases in capital investment

this year will be in the automobile industry (up 81 per cent to \$2 billion) and in steel and chemicals. Tremendous expansion is also under way in the aluminium, pulp and paper, rubber and cement industries. The automobile industry is expanding its assembly lines, to avoid the expensive overtime required in 1955, and also the supporting plants which manufacture components. Moreover the automobile industry is spending large amounts this year on facilities for new models, and on even more automatic processes.

Some observers question whether the car makers will, in fact, need all the new equipment they have planned, now that automobile demand is running behind their original estimates. The same question might be asked about expansion in other lines. Total manufacturing capacity is now almost 50 per cent greater than before the Korean war, and another 15 per cent in the next two years—as indicated by this survey—might be a great deal to absorb. Admittedly, at the end of 1955, many companies had too little capacity in reserve to feel comfortable, but excess facilities will appear soon enough should business slacken any further.

The answer to this question may be found in the supplementary survey which McGraw-Hill conducted among the makers of equipment. This showed no great pressure to hasten deliveries. In fact, the impression is that much of the new capacity scheduled for 1956 and early 1957 may actually be delivered somewhat later. As already noted, companies are thinking in terms of programmes spread over three or four years, without much emphasis on the near-term dates. In the case of heavy equipment, such as that for the steel industry, there are serious shortages of items like heavy steel plates and forgings, large electric motors and roller bearings, which will mean delays in any case. If equipment deliveries are stretched out, expenditure in 1956 will be less and in the succeeding years somewhat more. The problem of sudden excess capacity will not then occur to the same extent.

The plans of manufacturing industry, for the entire four-

year period from 1956 to 1959, show a total increase in capacity that is roughly in line with the trend of sales. This is a very different situation from that in the late nineteen-twenties, when capacity was expanded in a manner that could not have been justified by the wildest sales forecast. It would not be surprising if some construction is slowed down in the next few months, particularly in the motor

industry, but in general these adjustments may be no greater than would in any case have been necessitated by the tight supply of materials. It is important to remember that only about half of all capital investment is going for expansion—the rest is for modernisation, dictated by the rapid pace of technical advance. Of the amount invested in expansion, again perhaps half is for the development of new products or processes. This imparts a stability to the present rate of capital investment which would not be found in an economy with less interest in innovation.

More Power to Them

ONCE again the perennial debate between the proponents of public or private financing of electric and nuclear power is obscuring an important issue of policy. The Joint Committee on Atomic Energy has been holding hearings to determine whether present plans for the development of atomic power for peaceful uses are adequate or whether the United States is falling seriously behind Russia both in the technology and the actual building of reactors. A group of Democratic Congressmen, led by Senator Gore of Tennessee and Representative Holifield of California, think that a "crash programme" is needed if the American lead is to be maintained or even if the United States is to keep up with the Soviet Union. Mr Gore believes that the United Kingdom may also be forging ahead of the United States in the design and construction of reactors both for use at home and for export. Consequently, he has put forward a Bill authorising the Atomic Energy Commission to spend between \$500 million and \$1 billion for the construction of six nuclear power plants.

Mr Strauss, the chairman of the AEC, flatly opposes this scheme on the ground that America—with its reserves of natural fuel—does not need to engage in a "kilowatt race" with Russia. Moreover, he argues that a "crash programme" financed out of public funds would lead to the construction of uneconomic and already obsolescent types of reactors and would divert resources and scarce manpower from research. Mr Strauss asserted that the United States was still well ahead of all other countries in the development of peaceful uses for atomic energy and promised that the AEC would continue to build experimental prototypes of every promising reactor in order to find "the safest and most economic." All Mr Strauss wanted from Congress was that it should provide some form of government insurance against accidents in nuclear power reactors and that it should take steps to overcome the drastic shortage of engineers and technicians.

As the hearings developed, however, these complex issues were overshadowed by politics. Democrats and labour leaders lined up behind Senator Gore, while Republicans and industrialists accused him of trying to "nationalise" electricity. As if to disprove Mr Gore, the privately owned electricity companies set up a nuclear "task force" and announced that they had, to date, put aside over \$300 million to design and construct atomic power plants with a total capacity exceeding 1.1 million kilowatts. Simultaneously, the AEC signed its first actual contract providing federal funds to help a private firm—the Yankee Atomic Electric Company in New England—to build and operate a plant generating electricity from atomic fuel. Finally, President

Eisenhower added another \$112 million to the \$1,816 million he had already asked Congress to appropriate for atomic energy in the fiscal year starting July 1st; the additional money is to accelerate the development and production of nuclear weapons and of atomic power plants for civilian use.

Petrol Century

THE "100-octane petrol" campaign, which has just started in Britain, began in America last February. First to claim its century there was the Sun Oil Company, which installed in its service stations in Florida a pump dispensing five grades of petrol, blended on the spot to suit the motorist's exact requirements. An answer to this challenge soon came from the Esso Standard Oil Company, which introduced this month a new top-grade petrol, sold as an addition to the company's existing premium and regular grades. The new "Golden Esso-Extra" has an octane number of over 100 (research rating), and sells in New Jersey for about 32 cents a gallon. This compares with 29 cents a gallon for the existing premium grades which have an average quality of about 97 octane. The motorist is thus expected to pay an extra 3 cents a gallon for the privilege of calling at the golden pump. The Socony Vacuum Company, unwilling to break away from the traditional two grades of petrol, has countered by raising the octane numbers of both.

Esso contends that 20 per cent of the 1956 cars cannot give their best performance even on the present 97 octane premium petrol, and that by 1960 half of the cars on the road will need higher quality petrol than is now available. But if only two grades were sold, and the quality of the top grade increased, many motorists who do not need the higher quality fuel might be forced to pay for it. The three grade system also means that, since less of the very top quality has to be produced, refinery costs can be kept down. Similar thinking is behind the Sun Company's innovation, but Esso claims that it is cheaper to blend new grades of petrol at the refinery than at the pump. Socony Vacuum, by keeping to two grades, avoids the expense of new special pumps, which both Sun and Esso have to install.

In its trans-Atlantic crossing, the "100-octane petrol"

BRUSH in ASHFORD

'A good day's work'

Judging by the expression of quiet satisfaction on his face, our weather-beaten friend has done a good day's work at Ashford Market. But we'd like to draw his attention to another good job of work—the building of Ashford's new power station (Ashford 'B'), the largest post-war diesel generating station in the country. Despite the swamp-like nature of the site, the construction was completed in less than fifteen months.

EMERGENCY MEASURE. At the end of the war, after a five-year building gap, the country's electricity capacity

was 20% short of requirements. At Ashford the power is provided by five 2MW Mirrlees/Brush diesel-electric generating sets. The engines are Mirrlees KVSS type 12-cylinder vee-form engines — each direct coupled to a Brush 2,000 kW alternator. As the need was urgent, Brush diesel-electric stations were the obvious answer. The Brush Group produces about a third of the total U.K. output of industrial diesel engines and generating sets — and is the world's largest exporter of this type of equipment.

campaign has changed little in appearance. And the motorist, be he British or American, may perhaps be forgiven for wondering, as he reaches into his pocket, whether he will be able to make much use, in the dense city traffic and ubiquitous speed limits, of his super quality petrol in his ultra high compression engine.

Crowded Channels

Washington, D.C.

IN the past television has brought congressional investigations into the homes of millions of viewers. Now the television industry itself is being investigated and studied by no fewer than three congressional committees, the Federal Communications Commission and the Department of Justice. The major networks are being charged with exercising an "economic stranglehold" on the entire industry. But what lies behind this alleged monopoly is one of the most baffling problems faced by both the industry and the government—nature's perverse refusal to supply enough proper radio frequencies for television and all the other uses to which frequencies are put. More precisely, the problem is not the absolute lack of frequencies but the complete failure of the government's previous efforts to find a way of making enough of them available to television.

★

When television first began, a decade ago, the Federal Communications Commission allotted it twelve channels in the so-called "very high frequency" (VHF) range. Transmissions in this range have an unpredictable habit of penetrating beyond the horizon and a station may have a radius of as much as 150 miles, depending partly on the height of the transmitting tower. Automatically, this situation created a limit to the number of frequencies that could be apportioned to individual cities without causing interference. The problem is most acute in the crowded eastern part of the country where a town such as Bridgeport, Connecticut, with nearly 200,000 inhabitants, is in the radius of interference of Philadelphia, Schenectady, New York City and New Haven. Consequently Bridgeport could not be allowed to share even one of the twelve channels. And if one were allotted to it at the expense of New York, this would not only deprive New Yorkers of some of their choice of programmes but might also deprive Bridgeporters as well. For at the moment they can receive almost all of the New York channels on their sets, and there is much doubt whether a local station could survive the competition. In short, with a twelve-channel VHF system, there is an insoluble conflict between two major objectives: variety and competition for as many viewers as possible among programmes on the one hand, and, on the other, local broadcasting to encourage community interests.

Five years ago, the FCC thought it had found the answer to the dilemma. It opened up a band of 70 frequencies in the "ultra high frequency" (UHF) range for television and scattered new UHF allocations among 1,240 communities. Most of the cities which already had VHF channels got additional UHF ones. Moreover, the commission set

aside a number of these new allocations, particularly in the larger cities, exclusively for educational television, to be sponsored by non-profit organizations. Theoretically the system was ideal. Each community of any size could have at least one local station, and all could have more variety.

But there were two flaws. First, UHF is technically inferior to VHF in that a given transmitter invariably reaches fewer homes and reception is often bad. Second, and more important, people with VHF sets would not pay the \$50 to \$100 needed to convert their sets to receive UHF. Without conversion there is no audience, and with no audience there are no advertisers. The results have been dismal. Of some 325 applications for UHF stations approved by the FCC, only 95 have resulted in stations that are still on the air. The applicants in 170 cases decided that wisdom was the better part of valour and never built the station; another 58 made the effort but have since gone out of business. Many of the 95 still operating are in an extremely shaky condition. Realists have arrived at a simple rule of thumb: no UHF station is likely to succeed if people in its viewing area already have available two or more VHF channels.

The failure of UHF would be bad enough, but there is another fundamental problem. For television, like radio, operates under a network system, in which the contents of programmes are supplied by a central organisation in New York. Local affiliates are theoretically free to accept or reject network programmes, but since they are the best (or at least apparently the most popular) they are seldom turned down, particularly during the best viewing hours in the evening. But as half of the country's largest centres of population have only two channels, and as there are two strong networks with affiliates in all of them, the operation of a third or fourth network, which everyone considers desirable, is under a formidable economic handicap. Already one of the original four networks has collapsed, and the third, the American Broadcasting Company, is only barely managing to keep its head above water.

Many solutions are proposed for this problem, but most are wildly impracticable for one main reason: they would require millions of viewers, who are now reasonably satisfied with what they have, either to convert their sets to UHF or to lose one or more of the channels they can now watch. The one formula with a possible chance of success bears the ominous name of "non-disruptive deintermixture." It might make possible as many as a score of UHF "islands" in a VHF sea.

★

If it is granted that UHF as a nationwide system is already dead, probably the best proposal to improve the present structure comes from those who would find a way of providing perhaps another twenty-five VHF stations out of the present twelve channels. This could be done partly through the use of directional antennae to cut down interference. One plan, for example, would increase from 52 to 84 the number of leading centres of population that could have at least three competing stations. By putting into commercial use the VHF channels previously reserved for education, the ideal of competition could be achieved in nearly all the 100 major centres which have 85 per cent of the country's homes. Obviously such a plan would greatly improve the chances for survival of the American

Broadcasting Company and would broaden the choice of programmes for millions of people.

Outside of this plan—which would make no contribution whatever to the other objective of more local programmes—the only hope appears to be in the allocation of more VHF channels to television. This means taking them away from the military services. Here again, it would be necessary to convert sets, but at a lesser cost than for the reception of UHF. Furthermore, manufacturers could easily switch to 15- or 20-channel VHF sets without much additional cost and eventually, it is hoped, all sets would be able to receive all channels. With this kind of system, every community of any size could have at least one channel without any problem of interference.

All of these matters are now before the FCC and are being watched closely by fully half the members of Congress whose constituents will be affected by the outcome. Whatever emerges from the proceedings, it now seems almost a foregone conclusion that the great experiment of UHF has been a failure. The 36,000,000 families who have television sets have exercised their inalienable right not to pay money to be educated or to have their local communities more fully represented in the television spectrum.

English-Speaking Affairs

NOWADAYS the American programme for foreign aid usually seems to be considered newsworthy only during the annual arguments over the quantity of dollars which the American taxpayer is to provide and during the equally regular criticisms of the use which is being made of those dollars. As a result the general public in Britain and elsewhere is seldom reminded of the constructive generosity which inspired, and still inspires, the programme or of the many good things, more lasting than dollars, that have come out of it. Nor does the average Englishman realise the extent to which foreign aid has been changed from an emergency scheme into a permanent American undertaking. This second point is hardly brought out enough in the survey¹ of foreign aid which has just been published under the joint auspices of the English-Speaking Union and the British American Associates. But there is much timeliness in a pamphlet which, in twenty factual pages, explains the development of ten years of foreign aid, from the Marshall Plan through the Korean War, when aid became mutual, up to the moment when military co-operation seemed to have achieved its purpose of containing Russia's armed strength and when technical assistance began to counter the alternative Soviet bid to dominate the backward areas of the world with ploughshares instead of guns.

Another survey,² about to appear from the same group, is of a simpler type but also serves admirably the purpose of collecting together background information which is otherwise to be found only in a number of different sources. In compressing the essentials of the United States into "a pocketful of facts," a few have inevitably been a little distorted and a few squeezed out. Nevertheless this

¹United States Aid to the World 1945-55. The Commonwealth-American Current Affairs Unit, 37 Charles Street, London, W.1. 1s. 3d.

²USA in Brief. 1s. 6d.

pamphlet would be a very suitable introduction to put in the pocket of any Briton visiting the United States for the first time. But as long as exchange restrictions prevent most ordinary Britons from visiting the United States for the first or any other time, the introductions have to be performed on this side of the Atlantic. For the last three years the Commonwealth-American Current Affairs Unit has been supplying a solid factual basis for Anglo-American understanding, something which, rather surprisingly, is not provided by any other body in the same easily available and unpretentious way. It would be a pity if, through lack of funds, the unit had to be closed down or absorbed in some other organisation which could not give such concentrated attention to the educational work.

SHORTER NOTES

The National Association for the Advancement of Coloured People has been banned in Alabama, on the ground that it has caused "irreparable injury to the property and civil rights" of the people of the state by helping to organise the boycott of buses by Negroes in Montgomery and by "employing" two Negro women to seek admission to the all-white state university.

★

The Senate has passed a Bill, which has still to be considered by the House, which imposes new and much stiffer penalties for possessing, smuggling or trading in heroin, the drug which is said to be used by 80 per cent of all addicts in the United States. The Bill makes it possible for the death penalty to be imposed on people who sell heroin to juveniles or who are convicted for the third time of peddling the drug.

★

Preliminary results of the latest survey by the New York Stock Exchange indicate that there are now about 8 million shareholders in the United States, compared with 6,500,000 early in 1952. Over half are women and on the average each holds shares in four different companies.

★

The Secretary of Agriculture has now decided, after further study of the new Farm Act and a certain amount of pressure from Congress, that this year farmers whose crops suffer from drought or other natural causes may benefit from the soil bank scheme, as well as those who plough under crops already planted. Next year farmers will not be eligible unless they leave land actually idle and crops unplanted.

★

The State of Louisiana has won the latest round in its dispute with the United States over whether its offshore boundaries is three leagues, about 10½ miles, out to sea as the state claims or 3 miles as the federal government argues. The question is pending in the Supreme Court, but meanwhile the Department of the Interior has been obliged to put off leasing potential oil-bearing tracts in the area under dispute by an order made in a state court.

The case of *Leptinotarsa decemlineata* . . .

To farmers in many countries of Western Europe the result of an all-out attack of Colorado Beetle needs no description. It simply means no crop. In Switzerland, for instance, where this pest has long been a major problem, it is virtually impossible to grow potatoes without effective insecticidal protection.

Both the adult beetles and the larvae feed continuously on the foliage throughout their lives; the adults emerging from the soil in May are the first of several annual generations.

A number of insecticides will give good control of the pest,

but the most effective from all points of view is dieldrin, developed by Shell. Dieldrin halves the number of sprayings needed and is completely successful at the very low dosage of 3½ oz. per acre. Good control has been obtained with as little as ½ oz!

Dieldrin is now used on a large part of the Swiss potato crop and its greater efficiency

has much reduced the cost of providing protection for this essential harvest.

Dieldrin, aldrin, endrin . . . these three advanced insecticides developed by Shell are complementary to each other. Between them they control most of the major insect pests which menace agricultural production and public health throughout the world. Have you an urgent pest problem in your area?

dieldrin

dieldrin, aldrin and endrin are

insecticides for world-wide use

German Eyes on Moscow

FROM OUR SPECIAL CORRESPONDENT IN BONN

DR ADENAUER'S negotiations with M. Mollet at Luxemburg, successful as they were, have given rise not to the wave of satisfaction that might have been expected over the recovery of the Saar, but to a fresh burst of argument about the federal government's dealings, or lack of dealings, with Russia. This was set off by Dr Adenauer's indignant report when he got back from Luxemburg of what the French delegation there reported Mr Khrushchev to have said about German unity during M. Mollet's visit to Moscow. In the ensuing disturbance the real step made towards German unity through the impending return of the Saar has been almost forgotten.

Even if Dr Adenauer's version of Khrushchev's words had not at once been corrected by M. Pineau, the Chancellor would inevitably have been assailed at once with demands that he should use the existing diplomatic machinery between Bonn and Moscow to find out the Soviet government's view for himself. German feelings about reunification are too sensitive, and the German refusal to admit the division of the country as final too intractable, for a simple "Nyet" to be accepted without question—all the more when the Nyet is a party political weapon in the Chancellor's hands. As it has happened, the Russians themselves have found ways of feeding the discontent of German opinion with complaints that the Chancellor, not they, is to blame for the failure to make use of the newly-laid wire between Moscow and Bonn. Mr Zorin, who dines out a good deal, has been making his dissatisfaction with the federal government's studied disregard of him widely known in Bonn.

At the same time a special correspondent of the Munich *Süddeutsche Zeitung* has returned from Moscow with a notebook well-filled with conversations with important Russians. The correspondent, Herr Kempfski, made his own inquiries about what Khrushchev had told Mollet, and reports that it was "he would rather have twenty million Germans on his side than seventy million in a unified Germany which, though neutralised, was politically anti-Soviet." This corroborates M. Pineau and differs from Dr Adenauer's version. The difference may seem a fine shade, but it acquires significance for Dr Adenauer's German critics when it is taken together with the charges of intransigent hostility which Mr Semyonov and his colleagues are levelling against the Chancellor.

As Herr Kempfski reports them, these amount to a refusal on the West German side to act in the spirit of the agreement reached between Dr Adenauer and the Russians in September. Semyonov, a deputy foreign minister and former

High Commissioner in Germany, complained to Kempfski that the federal government had done nothing to fulfil its promise to begin talks on a trade agreement and on a cultural agreement, nor had there been any sign of the "policy of relaxation of tension" to which both sides in the Moscow talks had agreed. Herr Kempfski reported other complaints from Moscow. Thus, the West German ambassador in Moscow, Herr Haas, and his staff were studiously avoiding not only political contacts but every other contact, even of the most non-committal kind, with the Russians. Bonn was putting difficulties in the way of Soviet citizens wishing to visit West Germany. Applications for visas were not being granted until the time for the visit was past, a practice of which the Russians are good judges. The talk (to which, as it appears, the Russians attached more than casual importance) of an invitation from the Chancellor to Mr Bulganin to visit Bonn seemed to have been forgotten. Finally Dr Adenauer, from his utterances, evidently continued to regard the Soviet Union as a deadly enemy. All these things appear to have caused a decline, comments Herr Kempfski, in those political forces in Moscow which expected from the assumption of diplomatic relations an important change in relations between Moscow and Bonn; so that the Russians now more than ever put all their hopes on Herr Ulbricht.

In this mood the well-known Soviet thesis that unity is a matter for discussion between the two German governments themselves is stated in Moscow with more emphasis than ever. First, Herr Kempfski was told, Bonn must normalise its relations with East Berlin; but this alone will not create the conditions for unity, there must then be a period in which, in "an improved political climate," the East Zone régime can strengthen itself politically and economically to a point at which there can be no question of West Germany simply "swallowing" or "mechanically absorbing" the German Democratic Republic. This is the guarantee against future German hostility in which the Soviet leaders are interested far more than in any neutralisation by treaty. The prediction was offered to Herr Kempfski that the day would come when things would be going so well in the East Zone that the German Democratic Republic would be able to offer free elections, and "Adenauer's successors" would be afraid to accept.

If this is an accurate statement of Soviet intentions towards Germany, it gives new fuel for the unending debate on all-German policy. Dr Adenauer's critics are divided about the first step they would take—whether to explore

further in Moscow, or to press for a reformulation of German policy by the western powers, or to take the bull by the horns and talk to East Berlin. Dr Dehler, the Free Democrat leader, suggested the last course in a speech at the weekend, though he clung to the idea that talks could be undertaken without actually recognising the East Berlin rulers as a government. Such recognition would be universally distasteful. Reluctance to contemplate it is struggling hard with the fear that there may be no other way to German unity. The pressure for an all-German initiative from Bonn is strong. A glimpse of the Russian programme for German unity will not stop its growth; West Germans will allow themselves to hope that communist calculations of the political strength of Herr Ulbricht's regime will in the end prove false. But—as Dr Dehler's proposal shows—the pressure for talks has not yet reached the point at which the German parties are prepared to face squarely the decision to recognise, or not to recognise, the East German regime as a government. The advocates of talks still hope that there may be a way round, to give them the best of both worlds.

The Khrushchev Version

WESTERN readers can now follow Khrushchev's journey through the Stalinist night in detail. But for the Russian public, apart from the initiated few, the speech delivered four months ago behind closed doors still remains a secret. This difference is no mere accident. It must have been considered that the Soviet masses were not ready for such a shock without anaesthetics. For the Western observer there is little new in this confession beyond the admission of facts for so long denied. Anyone who wanted to make the effort could study the seamy side of Stalinism in, say, Mr Deutscher's biography. Even for the western communist the real blow is that outsiders had been telling him the truth and that the big lie came from his own party. But for millions and millions of Russians these revelations are new and fantastic. They will shatter a whole conception of history and life; they may lead to a tremendous revision of hitherto accepted values.

Even the 1,400 delegates to the Soviet party congress were probably not really considered ripe for such hammer blows and something unknown but dramatic must have precipitated Khrushchev's outburst. On February 14th, in his official report, he delivered a mild attack on the "cult of the individual," merely removing the lamp burning before Stalin's ikon. Ten days later, in his marathon indictment, he proclaimed that incense had really been burning before the evil spirit of the Soviet Union. Three-quarters of the audience were people under fifty; a quarter were under forty. All had been brought up in the cult of Stalin. For the younger ones his official biography and the "Short Course of Party History" were the only source of Soviet history, the quintessence of political knowledge.

As a prelude Khrushchev declared that this fountain was a poisoned one. Stalin assumed in these books entirely false postures for the benefit of the masses and of posterity; he himself directed the limelight on to his own person. The delegates to this congress had had no doubt that Stalin was Lenin's legitimate heir, that he actually was "Lenin now." But Khrushchev produced the long-hidden "testa-

ment," in which Lenin had requested Stalin's removal from the key post of Secretary-General. To remove Lenin's mantle completely, he then read a letter from Krupskaya, Lenin's wife, who, incensed by Stalin's rudeness, appealed to—of all people—Zinoviev and Kamenev, two men who up to then had been known to the listeners as vile traitors who were justly sent by Vyshinsky to the execution squad.

Each paragraph in this seemingly rambling, interminable speech must have increased the disarray of the audience. Was Stalin a friend of the people? He had not visited the Russian countryside since 1929 and knew it only through the distorting prism of eulogistic Soviet films, in which peasant tables "threatened to collapse under the weight of geese and turkeys." Was Stalin the hero of the war against Germany? On the contrary, according to Khrushchev, he toyed with the globe instead of studying the map and courted disaster. He did not prepare the country for the conflict, he paid no heed to warnings of an impending attack (those of Sir Stafford Cripps are now admitted) and he weakened the Red Army by the wanton execution of its leading officers. It is now recognised that the victims were not guilty of treason; this was demonstrated by the survivors who, like Marshal Rokossovsky, left a concentration camp at the beginning of the war to win laurels on the field of battle.

Generals were not the only innocent victims of Stalin and here came what was probably the most shattering confession. Stalin's blood baths, hitherto presented as purges salutary for the health and growth of the Soviet body politic, are suddenly shown as a result of Stalin's prosecution and persecution mania. He was right, in Khrushchev's opinion, to fight against both the right and left oppositions, but instead of winning their members back to the fold, he liquidated them ruthlessly at a time when they no longer represented any real danger. The murder of Kirov, in December, 1934, the prelude to the reign of the guillotine, may well have been the work of an *agent provocateur*. And Stalin was behind it all, ordering, aiding and abetting, replacing Yagoda by Yezhov as head of police to "catch up" with the schedule of executions, personally justifying the use of torture to extract confessions. The massacres of the late thirties, the rule of terror, mass deportations—these were his achievements, his masterpieces.

The delegates to the congress must have thought that they were watching a surrealist nightmare as Khrushchev proceeded with the film of the last quarter of a century. He showed Stalin so dizzy with power that he was sure he could overthrow Tito by lifting a finger; he showed him recommending beatings to force innocent Jewish doctors to confess to an imaginary "plot." He painted a world of fear and suspicion, in which even the most faithful servants were not sure of to-morrow. Molotov and Mikoyan apparently owe their life to Stalin's timely death and—a piece of special pleading—Khrushchev quoted Bulganin's remark that when you sat with Stalin you never knew where you were going to be sent next, home or to jail.

No wonder that there was "consternation in the hall" and delegates fainted as innocent blood appeared on the bronze statue. If these men and women were barely able to take it, the dissemination of the Khrushchev version throughout the Soviet Union by gradual stages is perfectly understandable. The sophisticated can already glean much of it in *Voprosy Istorii* and somewhat less in *Kommunist*, the theoretical organ of the party. But for the propagandists

(Continued on page 1105)

(Continued from page 1104)

remains the gigantic task of filling the vacuum created by the end of the cult and of explaining the new image of Stalin to the masses. Time and skill are needed to spread this new version first to the eight million party members and then to outsiders. And when it has filtered to the very bottom half-truths may prove no shield to protect the Soviet leaders from angry curiosity.

The picture presented by Khrushchev is naturally incomplete and one-sided. Stalin was once Russia's sun, now he overshadows the Soviet past. But he is not placed against a background; the indictment is directed against a man rather than a system. Khrushchev is reluctant to retrace his journey right back to the beginning of the night, to the sources of Stalinism, to the silencing of all opposition and the ruthless collectivisation. Indeed, he seems most enraged by Stalin's execution of his own followers. The list of innocent victims always begins, like a revengeful refrain, with the names of Kossior and Chubar, Postyshev and Rudzutak who, like Khrushchev, were faithful to Stalin but did not manage to survive.

The case of Beria provides another instance of Khrushchev's eclecticism. Beria is not covered by the excuse extended to all other lieutenants of Stalin—that they were the reluctant instruments of his crimes. Even Semyon Ignatiev, minister of state security at the time of the "doctors' plot," only did what Stalin ordered. But not Beria. While others trembled and obeyed orders, he alone could fool Stalin and prod him on to even bloodier paths. Could not Beria use the plea of "superior orders" as much, or as little, as his executioners? Will the Russians continue to accept the wild accusation that he had been a British agent before 1917 now that Khrushchev has disclosed the tricks of the "Stalinist school of falsification?"

Khrushchev could not and would not tell the whole truth. Historical events, however, are so closely interconnected that one revelation leads on to another. He accused those who were in opposition and yet made a step towards the rehabilitation of Zinoviev and Kamenev. He wanted to put the blame on Beria and yet it is Yezhov that appears the blackest. The Khrushchev version itself must precipitate a major mental crisis in the Soviet Union. Only when the country emerges from the present catharsis will it be possible for the Russians to draw a balanced historical portrait of Stalin and an analysis of his rule.

Canadian Fireworks Fizzle Out

FROM OUR OTTAWA CORRESPONDENT

CANADA'S political crisis quietly petered out this week. After the Royal Assent had been given to the pipeline Bill on the afternoon of June 7th, just in time to enable the government to fulfil its agreement with the Transcanada Pipeline Company, a further political row seemed possible over the government's urgent need for money. Its interim supply covered only the two months from April 1st. At the beginning of this week, it faced payment of civil service salaries—let alone other commitments—with virtually empty coffers. Both the Conservatives and the CCF were tempted to press their demand for an immediate election by obstructing a further interim Supply Bill. The government foresaw the danger and attempted to forestall it by issuing an appeal for cooperation. Just before last weekend Mr St. Laurent appealed for the passage through all its stages on the following Monday of a bill granting one month's further interim supply. Mr Drew, the Conservative leader, immediately asked for a prior statement of the government's intention for the remainder of the session, since there had been reports that the government planned an early adjournment.

After a weekend of painful indecision, the Conservative leader finally accepted an assurance that no early adjournment was planned and agreed to pass the Supply Bill quickly. The CCF party would, on its own, have reached the opposite decision and continued to obstruct in the hope of forcing a dissolution. But it fell in with the decision of the larger opposition group.

It thus appears that the present session of parliament may drag its way through July without more fireworks. The Opposition will presumably rely on attempts outside parliament to impress on the electors the enormity of the government's handling of the pipeline question. It also no doubt hopes that parliamentary ineptitude and the apparently declining vigour of the Prime Minister may put fresh cards in its hand before the election—probably next summer.

Until this week, it had also been a matter of serious doubt whether Mr St. Laurent would go to the Commonwealth meeting in London, leaving Mr Howes as acting Premier. The doubt arose both because of Mr Howes's lack of interest in parliamentary affairs and because of the possibility of friction within the Cabinet. But Mr St. Laurent has decided to go to the conference anyway and will leave for London next Friday.

New Chapter for Peru

BY A CORRESPONDENT

PERUVIAN electors will be going to the polls on June 17th to choose a successor to General Manuel A. Odria, the latest in the line of right-wing and often military Presidents who, with one short interval, have governed Peru since its emergence as a sovereign republic. Elections are also to be held for two vice-presidents and for members of both houses of Congress; but in Peru, as in so many other Latin American republics, the power of the President

is virtually supreme, and politics are a question of personalities rather than of parties.

There are two principal candidates for election to the Presidency—Dr Hernando de Lavalle y Garcia and Dr Manuel Prado y Ugarteche. Dr Lavalle, a well known corporation lawyer, has finally emerged as the official candidate with the powerful backing of President Odría and his *Partido Restaurador*. Dr Prado, who was President of Peru from 1939 to 1945, was responsible for a policy of co-operation with the allied powers. By Peruvian standards he is a moderate conservative but he has attracted the support not only of his own followers, the *Movimiento Democrático Pradista*, but also of various right-wing opponents of President Odría, including the ultra-conservative Miró Quesada family who own the Lima newspaper *El Comercio*. He is not yet fully recovered from the effects of a heart attack last December.

Peru's record for electoral honesty, and even for permitting the electoral process to take its course, is unenviable. But on this occasion, although the date of the elections has already been postponed a fortnight, it looks as if they will now take place as scheduled. President Odría has firmly denied all suggestions that he should stand for a second term, a move that would have been unconstitutional although not unprecedented, and he has allowed nearly all exiles to return to Peru for the elections. Perhaps an even more significant sign that the elections will be freely held is the suggested rapprochement between President Odría's sympathisers and their candidate, Dr Lavalle, and the *Alianza Popular Revolucionaria Americana* (APRA). The Apristas claim that they could command 75 per cent of the votes in a free election and, although this claim is undoubtedly exaggerated, their votes could well swing the elections in favour of Dr Lavalle.

Indian Reservations

But a firm agreement between President Odría's supporters and the APRA would be surprising. Dr Lavalle, if elected, is likely to continue the policies sponsored by President Odría. These have restored economic order and made Peru attractive to the foreign investor, but at the same time they have slowed down the pace of domestic development through the restriction of credit and have done little to promote the welfare of the Peruvians of Indian descent, who represent over half the population. The APRA, on the other hand, is an example, unique in South America, of a doctrinaire left-wing, although non-communist, party, whose principal aim is an improvement in the economic and social status of the Indians and their integration into the life of the country. Nationalisation of land and industry also forms part of the Aprista programme, but they have dropped

their opposition to "Yankee imperialism" after realising that foreign assistance is essential for Peru's economic development.

The Apristas' only previous excursion into government was disastrous. It took place after the notably free elections of 1945 (which incidentally were made possible by President Prado) when APRA support carried the liberal Dr José Luis Bustamante y Rivera to the presidential palace. Inexperience in the techniques of government combined with a natural unwillingness to compromise over the reforms they considered necessary, and the bitter opposition of many right-wing leaders, in particular the Miró Quesada family, led first to the resignation of the Aprista cabinet ministers and then to a congressional deadlock; the anti-Aprista members of both houses refused to attend, so that the Apristas, left to themselves, were unable to form a quorum. Support for Dr Bustamante turned ultimately to armed opposition, and in October, 1948, the Apristas, in conjunction with the Navy, staged a spectacular revolt at the port of Callao. The rising was put down and the APRA was once again outlawed. Its founder and leader, Sr Victor Raúl Haya de la Torre, later sought asylum in the Colombian embassy in Lima, from which he did not emerge until April, 1954. But Dr Bustamante's right-wing opponents were unsatisfied and themselves turned to armed rebellion, this time successfully. The leader of that revolt was General Odría, who had earlier resigned from Dr Bustamante's cabinet because of the latter's refusal to oppose the Apristas.

An alliance between Dr Lavalle's forces and the APRA may well secure the election of the former as President of Peru and secure for the latter the benefits of legal recognition. But the evolution of a policy acceptable to both parties is likely to prove difficult and even dangerous for the Apristas; by joining with a clearly right-wing group, they may compromise their beliefs and lose their cherished position as champions of the under-privileged Indians.

Swiss Money for Italy

THE announcement that 50 million Swiss francs (some £4 million) worth of bonds of the European Coal and Steel Community will be issued to the Swiss public later this month, as the first of a series of issues, was of particular interest to Italy; for it is thought that Italian pig iron and housing developments may be important beneficiaries of the loan. Swiss money has in many cases become a most important source of finance for private Italian industry in the last two years. For some time the steel industry had been exploring the possibility of raising a direct \$20 million loan in Zurich, and Olivetti and two other large companies recently approached the Zurich market for long-term loans at 4½ per cent and are raising between them some 46 million francs. And these are small fry beside the big loans previously raised—50 million francs each by Italian Caltex and Pirelli in 1955, another 50 million by Montecatini at the end of 1954, and several others.

Not all Italian borrowers of course have enjoyed the same confidence as these leading firms. The Swiss railways have

NOW...

A low-price Burroughs machine for complete mechanized accounting!

THE NEW DIRECTOR

This latest addition to the long line of Burroughs machines—the Director Accounting Machine—enables any business to realize fully the advantages of mechanized bookkeeping. A combination of modern features—including a full keyboard date permitting rapid date-changing, and simple front-feed form insertion—distinguish the Director as a most efficient machine.

So low in price that even small accounting jobs can be mechanized, this machine is of exceptional value to the smaller business—or for the larger firm requiring a number of accounting machines. See it right away—call your local Burroughs office today.

Burroughs Adding Machine Ltd.,
356-366 Oxford Street, London, W.1.

CHANGEABLE CONTROL UNIT

—for speedy job-changing versatility.

Flexibility of form design
With its adjustable form guides, the

machine is adapted to the form, not the form to the machine.

Converts to an adding machine
A flick of the listing key converts the machine from bookkeeping to listing operations.

EUROPE in PERSchwepptive

The perschwepptive of Russia reveals the hitherto unrecorded existence of a powerful SCHWEPPTH Column.

There is for instance, co-existent with a Five Year Plan, a Five Year Plan to end Five Year Plans, which includes a Five Year Plan for being totally inconsequent and digging up all statues of Workers looking steadily towards the sky as if they had just seen something tremendously encouraging above the horizon. There is also a Five Months Plan for being the person who occasionally takes an extra day off; a Five Fortnightly Plan for realising that though the New is obviously tremendously good in Russia, the isolated Old had individual moments when, intermittently, it was not bad either; and there is a Five Week Plan for reading Tolstoy

and Dostoevsky as great literature rather than as significant pointers demonstrating trends in the social evolution of a corporate body towards its destined counterpoise in the pattern of the body corporate. Not unconnected with the above is a Five Day Plan for intermittently allowing yourself to wonder whether the names of the inventors of the microscope, the microphone, Annie Get Your Gun, Macadam roads, and the Bridge of Pythagoras, really perhaps didn't absolutely certainly end in ov or ovitch. There is some support for a Five Minute Plan for getting up ten minutes late in the morning. Occasionally we put in motion the Five Second Plan for being a person not absolutely clear about his motives and definitely indistinct about his political allegiance.

Written by Stephen Foster. Designed by George Hill

SCHWEPPEPVERSCIENCE LASTS THE WHOLE DRINK THROUGH

agreed to lend the Italian railways 200 million francs to finance electrification, but only with the guarantee of the Italian government and in return for a promise from it, not yet implemented, to modify Italy's peculiar patent laws, which have long been a source of grievance to a number of foreign manufacturers. Holding companies and banks have also played a useful part during the last two years as intermediaries in raising capital abroad particularly for smaller companies. IMI, for example, a large state-backed credit organisation, has borrowed 50 million francs each from the Swiss market and from the International Bank of Settlements at Basle, and the office it has opened in Zurich has been helping Italian businessmen to borrow in Switzerland on their own account.

Side by side with the big public loans which are financing long-term development in the south—those from the World Bank, for example, and a French 12 billion franc loan now expected—private foreign capital, particularly from Switzerland, has thus begun to play a vital part in Italy's expansion; last year, net capital imports doubled to over £54 million, a remarkable proof of foreign confidence in Italy's economic promise. Most of the increase was due to larger loans abroad, which rose from £4 million to £28 million, but the passage of the new law to encourage foreign investment may help to encourage fixed investment as well.

Australian Labour Crisis

FROM OUR CORRESPONDENT IN CANBERRA

THIS week's decision by the federal executive of the Australian Labour party to dismiss the party's New South Wales executive is a much more drastic course of action than many rank-and-file members had expected. A special federal conference of the party in Melbourne received the decision on Wednesday without opposition, however, and the affairs and assets of the New South Wales branch are being taken over on behalf of the federal executive.

In deciding to press for the dismissal of the state executive, the federal leader of the party, Dr Evatt, evidently acted on the belief that in the long run the Australian Labour party would be better off as a united party, even if the immediate effect was a reduction in its numbers and strength. The decision, in effect, completes the purge of mainly Roman Catholic right-wingers which began with the dismissal of the Victorian executive last year. The dismissed Victorian members formed themselves into a break-away group under the title of the Anti-Communist Labour party. The new group, which advocated many policies similar to those of the official Labour party, but opposed what it described as Dr Evatt's tolerance of communism, fared disastrously at last December's general elections. Its seven members in the House of Representatives all lost their seats.

No Velvet Glove

Any improvement in Labour's future electoral prospects is likely to be slow and hard. For the past few weeks Labour moderates, particularly in the parliamentary party,

had been making desperate efforts to secure a conciliatory attitude at this week's special conference. In the event, however, the executive evidently felt that it could not ignore the factual reports accusing the New South Wales executive of association with the Anti-Communist Labour party, as well as of having been improperly elected and of disobeying instructions from the federal executive. The importance of this week's decision is underlined by the fact that New South Wales—the largest Australian state—sends to the federal parliament almost half of the Labour MPs, ranging from extreme left-wing to solid right-wing supporters. Feuds in Sydney therefore have important consequences in Canberra.

A considerable amount of support for the Australian Labour party has come in the past from Roman Catholics. In recent years this support has moved more, and more towards the right wing of the party, and, at the last four federal elections, as Catholic dislike of Dr Evatt's policies has increased, a solid body of Catholic voters has drifted to the Liberal and Country parties. These votes will return to Labour only when many Catholics are satisfied that the Federal Labour party no longer possesses "dangerous" tendencies. Labour, to regain power in Australia, must ultimately win back these votes. Without them it could scarcely recapture the House of Representatives, and certainly never the proportionally-elected Senate.

One ironical aspect of the situation is that at the end of this month, when newly elected Senators take their seats, two members of the Anti-Communist Labour party will hold the balance of power. The two Senators are violently at odds with Dr Evatt's conduct of the opposition and are unlikely to support any move that might bring him into power. Nevertheless, they may well side with the official opposition on many matters into which their views on communism do not enter, and this is liable to embarrass the government's legislative programme.

A Flurry of Bills

This explains the haste with which the Liberal-Country Party government of Mr Menzies has introduced new bills since the newly elected parliament took office. During the past couple of years, many Australians had felt that Mr Menzies's government was running out of ideas. Since the new session began, however, there has been one major bill after another. First came the "little budget"—small in the number of its proposals but extensive in their effect. Since then has come a series of measures dealing with television, trade insurance, industrial arbitration, the regulation of waterfront labour, and shipping. An important housing bill is due for debate any day.

It is becoming apparent that the tax increases introduced by Mr Menzies in March will, in the main, form the government's revenue proposals for the next budget year. They have been accepted by the parliament in which, for the rest of this month, the government controls both houses in its own right. Here the government's views of economic necessity and political expediency have happily coincided, since, by raising taxes in March, it has smoothed the way for the budget in September. The two breakaway Labour members in the Senate will not now have to be asked to vote for a budget rigorously increasing taxes—an action they might not have been prepared to take.

Albanian Communists Take Stock

BY A CORRESPONDENT

WHEN Stalin died, Enver Hoxha, then Albania's party boss, prime minister, minister of foreign affairs, of defence and head of the army—to mention only a few of his titles—gathered the population of the capital in Tirana's biggest square, made them kneel and take a two thousand word oath of "eternal fidelity" and "gratitude" to their "beloved father", the "great liberator", etc., to whom they owed "everything." In his report to the recent third party congress, inspired by the "precious decisions" of the Soviet twentieth congress—the "boundless experience of the CPSU" being, according to Hoxha, "the mother's milk feeding the child"—he repudiated Stalin, accusing him of "open and shameful deviation from the Leninist principle of collective leadership."

But the "mother's milk" must have gone sour by the time it reached Tirana, for Enver Hoxha proved to be in his most aggressive mood. Not only did he attack the western powers as in the good old days, identifying them with the "German-Japanese imperialists and fascists" but his whole interpretation of the new policy of "co-existence" was heavily impregnated with Stalinism. The most important statements were those concerning Albanian - Yugoslav relations. Hoxha apologised to the Yugoslavs for the strained relations between the two countries after the

ex-communication of Tito by the Cominform. But he threw all the blame on Beria's "diabolical provocation" and he defiantly refused to rehabilitate "Koci Xoxe and his friends," the first victims of the "anti-Tito" campaign. The accusations against them, he said, "are completely supported by the facts" and their punishment was "absolutely right." The Albanian Communist party, he argued, "made no mistakes because . . . it had built up its general line on the experience of the glorious CPSU, the Leninist policy of which has been and will always be right."

But the Yugoslavs do not seem to be impressed by this argument. Though comrade Pospelov, secretary of the Soviet Communist party who attended the congress, is a fraternal delegate, gave the Albanian central committee, and Enver Hoxha in particular, the Kremlin's blessings, *Borba* immediately picked up the gauntlet. On May 29th it recalled that "Xoxe was executed in 1948 on the charge of having prepared a coup d'état in Albania on instructions from Yugoslavia", and then went on to state:

The very fact that Hoxha justifies the accusations of 1948 in their entirety, from which the slanders against Yugoslavia cannot be detached, is not in conformity with his alleged desire to have "the bitter past buried" and to promote

Jugoslav-Albanian relations in the spirit of mutual understanding and friendship.

Hoxha's analysis, continued *Borba*, contained many assertions "with which we cannot now or ever agree, and whose reiteration can only obstruct the normalisation of relations between the two countries."

The congress, however, unanimously backed Hoxha, Shehu and the central committee and finally re-elected them to the new enlarged executive (whose membership was increased from 27 to 43). The two names from the 1952 central committee which are missing in the new one are those of Bedri Spahiu and Tuk Jakova. The latter was Tirana's envoy in Belgrade on the eve of the Tito-Stalin conflict. Both were the last survivors, together with Hoxha, of the first central committee of 1941. Both were more or less mixed up in the Xoxe affair, but escaped by confessing and passing over in time to Hoxha. They both lost their position in the Politburo in 1952 and were dismissed from their ministerial posts, and Spahiu from the chairmanship of the Soviet-Albanian Friendship Society, last year.

In economic matters the Albanian communists are still in the Stalinist jungle of percentages. These have led specialists of the Economic Commission for Europe to the conclusion that the plan for oil has been fulfilled. Yet the prime minister, Mehmet Shehu, in his report to the congress, listed oil with natural bitumen and coal among the sectors where the plan has partially failed. The Albanian leaders boast that "factories, transport-means, railways, roads, tractors, agricultural machinery, bridges, higher institutions, museums, ports and even trees along the streets are new." But the price the Albanians have had to pay and the hardship imposed upon them are appalling. Moreover the five-year plan had to be cut down; according to Shehu, in 1953 the government had to "remove certain projects" and "postpone the construction of certain others." The remaining projects, however, have cost "double" the sum envisaged for the whole.

Toil and Tears

Albania is the only country behind the iron curtain where there is still rationing. There seems to be no hope that it will end before 1960, and then only if the planned targets for industrial and agricultural production are reached. The prospect held out by Hoxha was of more "sacrifices" and Shehu asked for "sweat, effort and tireless work." To remedy the disastrous food situation, the second five-year plan provides for an increase in grain production from 360,000 tons in 1955 (when there was a good harvest) to 516,000 tons in 1960. To succeed in this the Albanian communists, encouraged by Pospelov, intend to speed up collectivisation—one of the worst failures of the first plan. By 1960, according to Shehu, there will be 1,800 agricultural co-operatives (now 694) covering 70 per cent (now over 24 per cent) of the land. During the last quarter of 1955 alone, as many kolkhozes were set up as in the whole period for 1946 to 1954, and since the beginning of this year their number has doubled. Apparently, "today the Party and the State are strong enough to meet the great task"—of forcing the peasants to join the collectives "voluntarily." Meanwhile, it is reported that discontent against the regime continues to grow in the countryside and sympathy for the Yugoslavs has never been stronger among the Albanians.

This evening gown of nylon net has been treated with a Beetle Fashion Finish—a B.I.P. product—to impart a pleasing crispness durable to repeated dry cleaning.

In textiles and transport, in lacquers and laminates, plastics today play their part. Their role may be contributory, it may be fundamental, but the wonder of plastics is in their versatility, their infinite possibilities. Types and grades are innumerable, each with its own properties—and limitations—presenting a wide field of choice to the intending user. The leading plastics materials manufacturers maintain extensive consultative and development services, and none is better qualified to advise and assist than B.I.P.

the Wonder of Plastics

This operator is applying an insecticidal lacquer to the interior of a ship. The efficiency of the insecticide over a long period is maintained by the use of Beetle Urea Resin—a B.I.P. product—in the lacquer formula.

The complete front and other major bodywork components of this Midland Red bus are made from light, strong structural plastics mouldings. These are fabricated from glass fibre impregnated with Beetle Polyester Resin—a B.I.P. product.

B.I.P. Services

The full resources of the B.I.P. Research, Technical Development and Design Services are freely at the disposal of manufacturers interested in the possibilities of plastics. Advice will gladly be given on any problem concerning plastics, irrespective of the type of material involved.

THE BUSINESS WORLD

Trinidad Oil Realities

AFTER a week of emotionalism, Mr Macmillan's announcement on Thursday that the Government was willing to allow the Texas Company's offer for the ordinary stock of Trinidad Oil to go through, subject to a number of proper safeguards, let in a breath of realism that was overdue. There were, as the Chancellor explained, two main sets of considerations involved in this offer. One set concerns the conditions under which the Texas Company should be required to operate in Trinidad and in this country if its offer succeeds. The other, much wider, issues involve, on the one hand, Britain's standing as a major investor itself and the immense benefits that it has derived from investment abroad; and, on the other hand, the scarcely less important gains that the United Kingdom and the Commonwealth have derived from investment and enterprise brought in by the United States. The first set of considerations called for the safeguarding of British interests at home and in Trinidad; the second demanded the avoidance of any decision that by being discriminatory itself would expose this country to the risk of discrimination by other countries.

None of these assurances is more important than the safeguarding of the interests of Trinidad itself. Trinidad Oil owns a refinery there which in the year to June last had a throughput of 28 million barrels. Its own production in the island was 8 million barrels (the rest of its crude comes from Venezuela) and it has a one-third interest with Shell and British Petroleum in exploration in the northern areas. All this is of vital importance to Trinidad and to the Caribbean Federation in which Trinidad is destined to play a leading role; it was a primary responsibility of Britain—moral as well as economic—to ensure that no change in the ownership of Trinidad Oil would prejudice the development of Trinidad itself. It was soon apparent that the colony had no doubt about the prospects of future expansion under the Texas Company, and to deny them would have damaged the colony's hopes of economic advance.

The conditions that the Texas Company is invited to accept in Trinidad sound palatable enough to the company and should give full assurance to the colony. The refinery is to be operated fully and if possible extended; exploration for oil is to be intensified; proper safeguards for good staff relations and training and promotion of local men are required. In its marketing operations in this country, Texas (which will own, if the offer is accepted, 75 per cent of Regent) will receive payment in sterling, under arrangements similar to those that govern other American oil companies in sterling area markets. There will be some loss of tax, and dollars will have to be provided for profits remitted to Texas. But for many years, there will be an inflow of dollar investment by Texas to this country and to Trinidad. The Canadian interests of Trinidad Oil that Texas will acquire are no doubt full of promise, but their scale and certainly their present yield are modest.

This said, it is difficult to see exactly what the tremendous fuss of the last ten days has been about. Against the world oil background, Trinidad Oil is picayune; at a fair guess it produced one seven hundred and fiftieth part of all the oil that the world's oil industries produced last year. But the £63½ million that the Texas Company offered for its ordinary stock (a juicy catch crop, incidentally, for the dollar reserves) is still big money, and big money from an American bidder, destined to pass to undeserving shareholders, gives the left-wing emotionalists two birds for one barrel. From the unhappy mid-century imperialists on the right has come all the evocative symbol-language—"birthright," "betrayal," and "mess of pottage."

There is an immense point of principle here that the Government came within danger of fumbling. It is to foster to the fullest extent the free flow of investment across frontiers and across the exchanges. There is nothing in the size of the Trinidad Oil offer or in the nature of its operations that makes it any exception to this rule. Malice and pride are no substitute for

economic truth. Part of that truth is that Trinidad Oil can no longer afford, out of its own resources, to stay in the hunt with the major oil companies. Mr Simon Vos, the chairman of the company, put this "blunt truth" at the head of his statement last week-end. It has no "cheap crude oil"; its own insufficient production in Trinidad costs a dollar and a half a barrel and it has no access to Middle East crude costing "anything from 20 to 40 cents per barrel". Its net profit after taxes last year (to June 30th) was £2.3 million, and it set aside in depreciation and retained earnings roughly £3½ million. Earnings at this rate are creditable enough but they do not go far towards building £25 million refineries, such as the company has in mind on Southampton Water.

That programme would involve major changes in the entire conception of the company, which has hitherto carried out all its refining in Trinidad, shipping the products to the British market where, under the "Regent" sign, it has concentrated primarily on the gasoline and road diesel fuel markets. Its share of the whole British market in oil products was put at 6 per cent by Mr Macmillan on Thursday, though presumably its share in gasoline and diesel fuel would be higher—perhaps twice as high. Regent has been much less ambitious in supplying the market for heavier fuels. But the latter are the grades where the prospects of future expansion in a fuel-hungry age seem most bright, and to supply them would presuppose a radical shift in marketing policy, backed by a full-scale refinery in the British market and the certainty of Middle East crude to feed into it.

How would the Texas Company's resources ride with such possibilities? It is, as it were, already a second cousin of Trinidad Oil, for the latter owns a 50 per cent interest in Regent, while the other half is owned by Caltex, the joint marketing company of Standard Oil of California and of the Texas Company. Texas has a half interest in Bahrein, a 30 per cent interest in Aramco, and a 7 per cent share in

the Iranian Oil consortium. These are great resources, capable of paying, as Trinidad Oil unaided could not hope to do, the £25 million bill for the refinery and also of finding the 5 million tons of crude to put through it. There is much to be said for building expansion of this kind on the foundation of an existing marketing organisation; and it is almost certainly here, in the British market, that Texas sees the opportunity of expanding sales and lowering costs, and of loosening the fetters of high cost production in Trinidad. Mr Vos's statement referred pointedly to the Texas Company's "larger markets in the South American Continent and in West Africa—where the Trinidad Oil Company have no business—" as being likely to require the full output, and indeed an expansion, of the refinery in Trinidad. Can it be gainsaid that, irrespective of ownership, all this would provide a much more logical and economical pattern of operations than Trinidad Oil's present arrangements? Is this not precisely what Trinidad Oil might itself have begun to do if its resources had been big enough?

These are the realities. They show up the emptiness of counter-proposals (of which there have been many) based on pride or economic nationalism—that this or that Government should take over Trinidad Oil; that the Government should use British Petroleum so to say as its creature to make a counter-bid (to what end, one might ask, now that BP is entrenched in Western European refining and is as secure as it has ever been for supplies of crude?); or, vaguest of all, that there should be "a consortium." If any other major group saw greater advantages to itself in developing Trinidad Oil's interests on better lines, it could and no doubt would make a better bid. But it was the Texas bid that was made; and all that had to be decided about that, once the future development of Trinidad was assured, was whether it was a reasonable price to pay for a good and developing asset. That will now be for the shareholders to say. The Government has clearly reached the only proper decision.

The Brewers Speak Out

SOME years ago the brewing industry was described in these columns as "taciturn." Much less was then, and still is, known about it than about other industries of comparable importance. But in the last few years at least some of the leading brewers have begun to speak more freely about their industry's awkward issues. A number seem now to be addressing their annual speeches not only to their shareholders and to the City, but also to their employees and tenants, and to the public at large: Mr Simon Combe of Watney Combe Reid, for example, on the encroachment of clubs, Mr Edward Thompson of Ind Coope and

Allsopp on redundancy, Mr R. H. Butler of Mitchells and Butlers on licensing restrictions, and Mr F. J. Yardley of W. Butler on the abandonment of uneconomic projects.

Generally, brewers are recognising that outside competition for mass purchasing power is the major challenge to their industry. The high taxation of beer is still a frequent complaint, but it is being put into perspective. As a young brewer, Mr Alan Seaward of Usher's Wiltshire Brewery, recently put it:

... nearly all our trade associations appear to work on the untenable assumption that if we wait long enough

some brave new Chancellor is going to arrange for beer to be reduced to 6d. a pint... the answer is a lemon... To suppose that 3d. or 4d. can be taken off the pint is the economics of *Alice in Wonderland*. . . . The real difficulty we are up against... lies in the disadvantages we suffer by law in the marketing of our products.

Other younger brewers, perhaps less inhibited than the older generations, have tackled controversial subjects; among them Mr E. D. Simonds of H. and G. Simonds on the "jungle" of the licensing laws, and Mr B. Dixon of Flowers on inefficiency among licensees.

In his annual statement this week, Colonel W. H. Whitbread gives added impetus to this movement towards frankness, beginning with a douche of realism. He does not allow his shareholders any complacency about the slight increase in beer sales which last year interrupted a fairly steady decline since the end of the war: "... we cannot count upon the recurrence of the combination of... exceptionally fine weather and freely circulating money." It would be a disaster if last summer lulled the brewers into a false sense of security.

Winter sales of beer, certainly, have held up after that thirsty summer. Between October, 1955, and April, 1956, beer output was 12.97 million barrels, against 12.65 million in the corresponding months of 1954-55, a rise of 2.5 per cent. The improvement of public houses and their use by a widening range of customers, notably women, may be reflected in these better figures. And the new collective advertising may be showing results. But other trades selling marginal pleasures under heavy competition, such as the cinema, have in recent years found such encouraging ripples on an ebbing tide to be illusory.

Colonel Whitbread argues that even if beer consumption continues to fall, profits can still be increased. His point is that beer has improved in quality over the years and become more profitable. This is partly a result of bottling, which enables it to be sold in the form which the present-day consumer prefers and for which he—and she—is prepared to pay more than for draught. The scope for bottling (or other forms of packaging) remains large; less than two-fifths is now packaged—a long way to go before the American four-fifths. But there is a second reason; brewers' properties could earn more profits, not only from wines and spirits, soft drinks, sandwich bars, coffee bars, even milk bars, confectionery and so on, but also as hotels and motels as road travel grows. Here the surface has been barely scratched: but some brewers appear likely to miss this bus—or coach—as many of them did with catering.

Tenants have lately been pressing brewers to help them meet higher wages, fuel charges and rates; and adjustments of retail margins, prices, and rents are being made up and down the country. On the score of rates, the licensees are in the same boat as shopkeepers, restaurateurs, and cinema-owners, and are facing heavy increases in rates under the new assessments, and

tenants are passing on part of the burden to the brewers. Colonel Whitbread argues that public house assessments should be adjusted on a more favourable scale than other shops and businesses, because the trade is already more heavily burdened by taxation than other wares—a point which tobaccoists, for example, might question—and they certainly sell it under stricter trading restrictions than other retailers. It may be a fair case in theory, but it would be difficult to satisfy in practice. But the burden of rising costs is not solely a matter for bargaining between tenant and brewer, and eventually passing the buck to the customer in higher prices. Beer is in a competitive market: the customer may choose not to pay these higher prices. Already some licensees have asked brewers not to raise prices further, particularly prices of draught beers. The only real and lasting answer to rising costs comes from greater efficiency and better service. What is being done to achieve them?

★

Part of the answer lies in improved administration of the licensed house. Tenants are being selected more carefully and trained more systematically. But there is also a trend towards the employment of managers rather than tenants. The economic reasons are clear enough. The increasing capital and running costs of public houses often put them beyond the means of tenants. On the other hand the widening range of goods that public houses sell makes it uneconomic for the brewer to supply the lion's share of the upkeep costs and allow the tenant to take the profit on everything but drink. Increasing competition from other trades makes it essential to develop this fringe of new attractions to the full, but not all tenants have the right outlook, the technical knowledge, or the money to do it. Colonel Whitbread faces this unavoidable clash of interests. The profits on beer alone, he claims, are insufficient to justify the cost of maintaining, improving and rebuilding licensed properties; the retailer gets so large a proportion of the profit from all other commodities sold in the public house that "there is bound to be a trend... to put more and more houses under management." The common platitudes about "mutual goodwill between the two sides of the trade" are beside this point: the trend is the result of changing trade conditions, "of which the retail trade organisations should take notice."

Have these retail organisations asked for this pointed reminder? The figures show that the managed houses owned by Whitbread, at any rate, have been earning substantially more profit. In a competitive market this must mean that they have served the customer better. If the tenant cannot do this, is the brewer to put him before the customer? About five out of every six public houses in England are run by tenants. Tenancy is likely to predominate for a long time because, like independent retailing generally, it offers economies of specialisation and decentralisation

★

that the manufacturer does not lightly abandon. In a managed public house the brewer gets the full retail profits of a managed retail outlet, but also the work, the risks, and the costs of financing. The enterprising tenant is still valued by brewers; but if the choice is to see a house go downhill or replace the tenant by a manager, the brewer's course is clear. Nothing but

good can come from giving this delicate problem a good airing in the trade; and if it makes the less enterprising tenants worry about staying in business, so much the better for everyone.

Last autumn Whitbread's bought a substantial interest in the Cheltenham & Hereford Breweries in order to protect this concern from a takeover bid made from outside the industry. Colonel Whitbread's spirited defence of this action is not marred by the usual hysterical criticism of take-over bids or the suggestion that outsiders have no right to buy out an undertaking in order to make it more profitable by increasing its efficiency or changing its use. Indeed, he recognises there are "very substantial financial reasons" for these bids, "especially where the management is not proving effective." If it is not making the most effective use of its assets, it may attract a bid. No existing use of property is sacrosanct; and some brewers are wisely selling off uneconomic properties and putting the money to good use in the business. His own argument is that

"I am convinced that the continuance of old-established concerns, run on progressive lines, is in the public interest and, consequently, sound business. It is this conviction that lies behind our policy of co-operating with sound concerns by providing them with both financial and commercial assistance and thus enabling them to continue as individual entities."

Colonel Whitbread's wish to keep control in the brewing industry will be demonstrated as more than paternalism if he brings into play the drive and efficiency of his own organisation.

The company's purchase of interests in several other small companies—Norman & Pring of Exeter, Tennant Brothers of Sheffield, Dutton's of Blackburn, and others

—marks a different development. Not only the public house but also the medium-sized or small brewer evidently needs new money. The question is whether it is to be supplied through outright purchase by a larger company; by trade investments which leave the local brewer largely independent and give him access to the large brewer's technical and commercial expertise; or by selling him national (or regional) bottled beers on which he earns more profit than he could on some of his own. Whitbread's method combines the last two. The brewing industry is gradually becoming concentrated into less than its present 300 or so enterprises: in this concentration there will be room for all three methods.

Such concentration is likely to remain a long way short of single-firm monopoly. Even if the number of brewing firms were to fall to a hundred or fifty, it is difficult to see any one brewer controlling a third or more of the supply of beer in the country, or "any substantial part thereof," in the words of the 1948 Monopolies and Restrictive Practices Act. When almost all beer was draught, each firm had the natural protection of the high costs of frequent delivery from outside. The significance of bottling is that it gives beer a longer shelf life and so, by making it more mobile, enables it to be sold over larger areas. Although the number of firms in business is likely to fall, competition between those remaining may thus be intensified. There is more competition between brewers today than there was before the war, when there were 600 or more firms.

★

Bottling, assisted by personal mobility, the growing free trade, and advertising, is in fact loosening up the tied house system. When people move about, or use registered clubs, they learn the taste of new beers, and ask for them in their "local." Whitbread's bottled beers are stocked in "well over half" the licensed houses in the country (this means in more than 36,000 in England and Wales alone). Other brewers are also trying to achieve national (or at least regional) distribution. This development has occurred entirely since the end of the war, which shows the rate of social and economic change with which the brewers are contending.

The chief sources of the brewing industry's problems are high taxation, out-of-date licensing, and most of all competition from other pleasures. Significant reliefs in taxation are not at present in sight: modernisation of the licensing laws may come slowly from the industry's essay in persuasion of politicians, justices and the public. But competition has increased, is increasing, and is unlikely ever to diminish. Beer now attracts hardly more purchasing power than in 1949, although the public is now spending 40 per cent more. Radical changes in the industry's traditional techniques and attitudes are unavoidable: they require straight thinking and plain speaking.

Business Notes

Record British Exports

THE bare figures of British overseas trade last month look—and indeed are—a little too good to be true. But even after excluding the exceptional items that boosted British exports in May, the total still sets a new record, and the trade deficit has been brought within bounds. Exports rose by no less than £27.4 million to £283.8 million fob in May; this included about £5½ million for the *Empress of Britain*, which was delivered to Canada last month, and about £2½ million worth of lease-lend silver which is being returned to the United States. Exports of so large a capital item as a big liner are few and irregular, and the silver is not a true export but the repayment of a loan. But without these items, exports were still about £4½ million above the previous record of £271.3 million in March. May had two more working days than April, and the daily rate of exports (again excluding those items) was virtually the same as in April. Imports, despite the longer month, rose by only £1.7 million to £329.1 million c.i.f. That may owe something to lower commodity prices and therefore is not necessarily of advantage to the

UNITED KINGDOM TRADE
£ million—monthly averages or calendar months

	Imports c.i.f.	Exports f.o.b.	Re-exports	Trade deficit
1955 1st Qtr.	335.1	247.3	10.6	77.1
2nd "	299.8	217.0	8.2	74.6
3rd "	327.1	243.2	9.5	74.3
4th "	334.3	261.0	11.2	62.1
1956 1st Qtr.	328.3	258.4	13.6	56.2
April	327.4	256.4	13.7	57.3
May*	329.1	283.8	13.5	31.9

* Provisional.

sterling area as a whole. With re-exports at £13.5 million the trade deficit fell sharply by £25.4 million to £31.9 million, and the average monthly deficit in the first five months was £51.1 million, £14½ million less than in the same period of last year.

When the value of trade in the first five months is compared with the same period of 1955 more qualifications must be entered. The average monthly value of exports, at £263.1 million, was 6½ per cent higher than in the same period of 1955. But as export prices have risen since then, the increase in volume was probably about three per cent. The real increase in volume, however, was rather more than that, because exports in the early months of 1955 were inflated by the over-spill from the dock strike of October, 1954. Imports in the first five months of this year, at £327.8 million, were 1½ per cent higher than in 1955, but were probably unchanged in volume.

The most heartening feature of the trade figures is the further rise in exports to North America; last month's shipments set a new record of £39 million after leaving the ship and the silver out of account. On this basis, shipments to the United States amounted to £21½ million; average value for the first five months of 1956 is £17½ million, some £3½ million higher than in the first five months of last year. Shipments to Canada amounted to £17½ million, and the average monthly value of £13.7 million was about £2½ million higher than for the same period of last year.

No Lead from the Markets

IF investors have been watching the markets to see whether the tide is turning they have had this week to be content with a purely negative satisfaction. Nothing further adverse has occurred. Gilt-edged have held steady; industrials have rallied most modestly; sterling has held its own; and such changes as there have been in commodity prices have in the main been upwards. That was the humble best that the favourable British trade figures (favourable even when the non-recurrent items are excluded), the better news of President Eisenhower's health, and the upward turn of Wall Street, could produce. Rises from 177.2 to 179.6 in the *Financial Times* industrial share index and from 85.69 to 85.86 in the Government securities index on Tuesday and Wednesday have no decisive ring about them.

With the number of Stock Exchange markings running at rather better than half the level of a year earlier (despite the large number of deals in Trinidad Oil) markets remain too thin to encourage the Bank of England to permit any of the long queue of gilt edged borrowers to come forward. Local authorities have been obliged to satisfy their needs through the mortgage market or to wait, but the hardship may not yet be great for at this time of year rate payments come in well. To the extent of holding the queue, but to that extent only, the market can be said to be being groomed for the big Government refunding operation that must occur in the next few weeks to replace the £824 million of 2½ per cent National War Bonds, due for redemption in August. Otherwise official policy towards the markets remains unchanged, and throughout this week, as indeed in the much weaker markets of last week, the Government broker has remained a persistent seller of stock.

For undertakings contemplating large issues the market remains discouragingly thin. A flow of small capital issues has included stock offers for three water companies, Newhaven Seaford and Ouse Valley, West Hampshire, and

Great Yarmouth, and there have been a few industrial share placings, of which the 5s. ordinary shares and £1 seven per cent second preference shares of Boosey and Hawkes, the musical publishers, and the 5s. ordinary shares of Norcross, the industrial holding company with iron ore interests, are the most important. The market, however, has not yet shown itself capable of providing capital on a large scale.

Self-Employed Pensions Now

THE Government's response to representations on their proposals as set down in the Finance Bill for self-employed pensions has been most reasonable. Much still depends on the multitude of Government amendments promised for the Report stage, but it is already clear that many rough edges have been rubbed down. The "two job" man who was hitherto excluded from benefit if one of his employments carried pension rights (however insignificant, as in the case of a part-time Town Clerk in a small Scottish town) is now promised the proposed benefits so far as his unpensionable work is concerned. But the partially-provided-for employee is not to be helped further. The moral would seem to be that people should take up work with concerns which have either a good pension scheme or no scheme at all; at any cost an employer operating an indifferent scheme should be avoided.

The qualifying premium is still limited to 10 per cent of earned income—an amendment to increase it to 15 per cent being rejected on the grounds that it would "enable many people who entered the scheme early to provide for themselves pensions distinctly greater than their normal earnings"—a reasoning which would be true only if earnings were high early in a man's career. Against this the maximum yearly contribution is to be increased from £500 to £750 with a corresponding rise in the limit of the earned income in respect of which the contribution which can be paid from £5,000 to £7,500. This proposal brought a political firework from Mr Gordon Walker in spite of the fact that no more than £1 million is involved—and this, presumably, being the gross figure, ignoring the tax to be recovered when pensions are paid. This concession will be of value to the late developer who has to be content in the early years of his career with a relatively low income and may hope to enjoy a high income for the shorter period during which he is at his earnings' prime. It will also be of value to those persons whose incomes are subject to wide fluctuations from year to year.

Recognising Back Service

FOR those who find themselves too old at 40 to derive full benefit from the long overdue relief now proposed there is a valuable concession akin to back service provision. The rate of the qualifying premium is to be raised by steps from 10 per cent for people now aged 40 or less to 15 per cent for persons who were born before 1908. This increase will be subject to adjustment if they enjoyed any existing

pension rights relating to a previous pensionable employment. For each rate for a qualifying premium there is to be, in Mr Brooke's words, "a corresponding appropriate figure for the maximum limit" of earned income—a proposal that was not clarified. It should not be thought that this help for the elderly is stretching generosity too far; a man of 55 earning £3,000 a year would have been able under the original proposals to set aside £300 to secure an annuity at 65 of about £330. Now he will be able to set aside £450 to secure about £550—not a big retirement benefit for a man in that income group.

The self-employed have been naturally grieved by the Chancellor's refusal to extend to them the right to take a part of their retirement benefits in the form of a tax-free lump sum but their representations have been unavailing. The Financial Secretary understood clearly the discrimination which is involved but he rejected the amendment on the grounds that the basic principle that exemption of tax from contributions must lead to the taxation of the benefits that emerge must be observed. If existing schemes offend that principle there was no question of doing two wrongs to make a right and he suggested, indeed, that the time will come when existing schemes will have to be re-examined.

Throughout the Government have made it plain that they are anxious to get on the Statute Book quickly a simple workable scheme for the benefit of the self-employed, to persuade people to save for their retirement and to check the drift of professional people out of the professions into salaried employment because of the much more attractive tax relief arrangements which industry is able to offer. It may have taken time, but the lesson has been well learned.

How Steel Stocks Shot Up

ANY rather sudden slowing down of output is likely to cause stocks to build up temporarily—the more so during a general shortage when orders are in any case being delivered well in arrear and when the company where output is slackening is reluctant to accept that its demand

CONSUMERS' & MERCHANTS' STOCKS OF STEEL

'000 tons	1955 June	1955 Dec.	1956 March	% Change in Stocks December to March
Consumers' Stocks:				
Sheet	453	531	582	+ 9.6
Plate	559	566	612	+ 8.1
Tinplate	108	110	134	+21.8
Total of above products	1,120	1,207	1,328	+10.0
Other steel	2,170	2,213	2,342	+ 5.8
Total all steel	3,290	3,420	3,670	+ 7.3
Merchants' Stocks	218	226	254	+12.4
Total Consumers' and Merchants' stocks....	3,508	3,646	3,924	+ 7.6

will go on falling. This—admittedly a rationalisation—seems to be one way to account for part of the quite remarkable rise in consumers' and merchants' steel stocks

during the first three months of 1956: it certainly cannot account for the whole of the 7.6 per cent increase, which amounted to more than the increase in stocks during the whole of 1955. As the table shows, stocks of the products used by the metal consumer goods industries that were feeling the squeeze, sheet and tinplate, rose more than the average, as did stocks in the hands of merchants, which might fit the above explanation. An alternative rationalisation is required of the increase, also more than average, in stocks of steel plate, which go into such capital goods as ships and railway wagons: perhaps here the familiar postwar phenomenon of shortage encouraging hoarding was still at work.

This building of stocks implies that steel consumers in Britain used only 6½ per cent more steel in the first quarter than in the same months of 1955, though deliveries from home production and imports were nearly 13 per cent higher. There is no doubt that supplies of certain steel products are still very tight; but the total extent of "shortage" is becoming increasingly difficult to assess clearly. At the moment, it is becoming harder rather than easier to meet demand, since the ban on overtime by maintenance men is affecting output quite significantly, though very unevenly between works in different areas. Output last month, as a result, was down to 396,400 tons a week, slightly lower than in May, 1955, and much lower than in March or April this year.

Halifax Walks Out

THE Halifax Building Society has notified the Building Societies Association of its intention to resign. The resignation cannot take effect until September 30th, and on June 30th the society intends to issue a statement; there would thus be time for discussion and negotiation, though

whether any new talks would stand much chance of success seems doubtful. In the light of what has now happened the resignation of Mr Fred Bentley from the general managership of the Halifax society is seen to have been inevitable: he could hardly have continued to hold in double harness the chairmanship of the association and the

general managership of a non-member society: he has preferred, with the general good will of the members, to hold the chairmanship of the association.

The resignation of the Halifax society from the association, if it takes effect, will be deplored. The association is an advisory body with only one operational rule, which the Halifax society observes with a wide margin; it insists that members should maintain a minimum liquidity ratio of 7½ per cent. It is a useful forum for building society discussion, and none the worse for admitting so many diverse

viewpoints. It speaks with authority for the building society movement in dealings with Government and public. It will be less effective if the biggest society in the movement leaves it. The loss of that society with its £264 million of assets will mean that the association instead of speaking for societies with 90 per cent of the movement's resources will represent a little over 75 per cent.

The quarterly figures from the association, such as those plotted in the accompanying chart, should not however suffer. The Halifax would, if asked, no doubt continue to supply its figures. The trend of new subscriptions and of withdrawals by shareholders and depositors shows that this is a moment when the association ought to have been strengthened rather than weakened. A persistently high rate of withdrawals is severely limiting the funds that the societies have available for new mortgage lending; this suggests that the rates now paid by the societies are barely sufficient to hold money against the counter-attractions of other forms of saving. The small societies are feeling the strain more than the large ones; it may also be claimed by the Halifax society, and in particular by its president, Mr Algernon Denham, that the figures support his scheme for a two-tier interest system under which the small societies would pay a quarter per cent more than the big ones. But the broader lesson of the figures really is that the return offered to building society investors as a whole is too low. Three per cent net (with a growing number of small dissentients) is still the rule. No concession at all has been made since the whole structure of interest rates was turned topsy turvy by the 1 per cent rise in Bank rate in February, and was followed by the inducements offered to other forms of saving in this year's Budget. The resignation of the Halifax society—not it is believed on the issue of interest rates—will not solve the problem; nor will other societies be any more likely to adopt the Halifax point of view. The logic of the figures alone is bound to force both share interest and mortgage interest upwards.

Clause 9 Withdrawn

AMERICAN and other overseas residents in this country who have been living for the past six weeks under the shadow of Clause 9 of the Finance Bill can breathe again. Their representations have been effective and Mr Macmillan has agreed to withdraw his proposal that the overseas earnings of individuals who are domiciled abroad but resident in this country should be taxed on the whole amount, and not merely on that part which they choose to remit here. To the extent that it is a victory for common sense over formal logic his decision is praiseworthy: Edmund Burke said all that needs to be said on the conflict between expediency and right in the same House when it debated the taxation of the American Colonies 160 years ago.

The Americans, now as then, had a strong case. They cannot be expected to expatriate themselves from the merely warm frying pan of United States tax rates and jump into the roaring fire of the British tax scale. If they are to come to live and work here—and it is to our advantage that they should—they are not to be blamed for thinking that some fiscal carrot is needed. Clause 9 would have robbed them

of the carrot and beaten them with a harder stick than American taxmasters wield.

Granted, however, that the Chancellor has taken the right course regrets must yet remain. The sound fiscal principle (supported by the Royal Commission and already on many Statute Books) that earnings should be taxed where the duties are performed disappears. Foreigners working in this country will continue to enjoy an oasis of privilege denied to the natives who work by their side. And it is most reprehensible that the clause should have been introduced if the Government were not prepared to defend it against the pressure which was bound to be brought against it. Expediency may have deserved to win; yet mere British taxpayers may still be allowed to point out that the remittance basis is itself open to some abuse: when remittances of income only are liable, any foreigner working or resident here who possesses capital assets at home or can borrow on loan account there is free to remit his capital to this country tax free and in its place to build up untaxed savings in the United States out of the unremitted income. To many foreigners working here, as in the past, the payment of United Kingdom tax will continue to be a voluntary act of grace on their part. They may not be able to afford to live here if they pay British tax on their full incomes. Let them in charity spare a thought for the British who have to.

Less Large Coal

So far this year about 2½ million tons of coal have been imported and about 4½ million tons supplied for export or foreign bunkers; the National Coal Board has been losing about £3 10s. a ton on the coal it brings in and making an export premium of, say, £1 10s. a ton on what it sends overseas. A few weeks ago it agreed to increase its exports to the Schuman Community in the third quarter of the year by a million tons, which suggests an export total of 8-9 million tons: its import plan is for 6½ million tons, though it may get by with rather less. At the end of the coal winter Britain had about 3½ million tons more coal in stock than at the same time in 1955. Inland consumption in the first 22 weeks of the year was about a million tons higher than in the same period of 1955; although the coke ovens have taken 1½ million tons more coal so far this year, and the power stations over a million more tons, coal consumption in other industries has dropped.

Domestic consumers have bought slightly more coal than by this time last year, though less anthracite and boiler fuel; the total supplies of large coal are down by about 1½ million tons. Mr Aubrey Jones, Minister of Fuel and Power, was asked in the House this week about the abolition of fuel rationing, for which plans had been made this spring; he said

to end (restrictions on domestic coal supplies) now would necessitate further imports of large coal at a considerable cost to our balance of payments, and I could not advocate such a course at a time when our foreign exchange resources must be most carefully husbanded.

The latest official guess is that if coal rationing were ended domestic consumption might rise by at least 2 million tons; present domestic consumption amounts to about 30 million tons of coal a year, plus, presumably, some large part of

the 5 million tons of concessionary coal that miners choose to sell rather than waste. The abolition of rationing is also likely to await the report upon coal prices and distributive margins that a committee is now preparing. On coal prices, Mr Jones weathered his periodical barrage of questions from Mr Nabarro and company. He got in some effective counter-battery shots: recalling of Mr Nabarro's prophecy last summer that Britain's coal imports would have to be doubled in 1955, whereas they are in fact being halved, the Minister advised his faithful foe "to be a little chary of too forceful prognostications." This exchange, no doubt, served merely to exacerbate the vendetta; and at a later meeting of Tory MPs Mr Nabarro and his supporters refused all Mr Macmillan's persuasion to treat the coal industry as one entitled to a degree of independence.

Japan Backs Harwell
