IRREGULAR TREND IN SEPTEMBER

(Continued from page 665)

Company, traffic through the Canal continued to be normal. It was announced from New Delhi that Mr Krishna Menon would be flying to Cairo in response to an invitation from President Nasser.

Selective buying was again in evidence in Dalal Street. Tata Iron was done at Rs 196 with Bombay Dyeing at Rs 635.

17

Mining operations in 24 of the 26 collieries in the Raniganj coal fields were totally suspended as 38,000 workers went on strike.

Firm conditions continued in the Calcutta Stock Exchange as strong features developed in the Engineering and miscellaneous sections. Indian Irons, however, was quietly steady at Rs 35-10. The Bombay Stock Exchange also ruled steady with several scrips recording fractional gains. Tata Iron steadied up to Rs 196-8 with Bombay Dyeing slightly better at Rs 636-4.

18

For the second time in less than a week London underwriters increased war risk insurance rates on cargoes routed via the Suez Canal.

Government of India announced creation of the Ministry of Community Development.

Though Indian Irons reacted to Rs. 35-1 the undertone in the Calcutta Stock Exchange remained firm, with selected scrips in the Engineering and Miscellaneous section recording further gains. In Bombay, trading was featureless with Tata Iron almost unchanged at Rs 196 and Bombay Dyeing shading to Rs 635-10.

19

The coal strike situation in Raniganj deteriorated and cases of intimidation of willing workers by the strikers were reported. The affected collieries account for 14 per cent of India's entire coal production and over 50 per cent of that of high grade selected coals.

Jute shares were in the forefront in Calcutta as investors evinced renewed interest in the section on hopes of better prospects for the industry. The rest of the market was also steady. Indian Irons opened at Rs 35-5 and closed at Rs 35-3. Narrow price movements were witnessed in Bombay where Tata Iron shaded to Rs 195 with Bombay Dyeing marked down to Rs 631-14.

20

Reports from London indicated that despite the establishment of the Users Association, attempts would continue to be made to solve the dispute through peaceful negotiations with Egypt.

It was estimated that due to the strike in the Raniganj collieries the country was losing 10,000 tons of coal every day.

Though there was no appreciable increase in the volume of business passing, the undertone continued to be firm in Calcutta. Indian Irons, however, were idling around Rs 35-5. In Dalal Street also activity was at a low ebb in the absence of fresh interest. Tata Iron was unchanged at Rs 195 but Bombay Dyeing closed better at Rs 634-6.

21

The Second Suez Conference ended.

Prices firmed up further in Calcutta under the lead of the more speculative counters on short covering. Indian Irons opened steady at Rs 35-10 and moved up further to close at Rs 35-15. After hours it was reported upto Rs 36-4. After a quiet opening, Dalal Street also improved on short covering. Tata Iron gained couple of points to Rs 197 with Bombay Dyeing moving up to Rs 638-2 from Rs 634-6.

22 & 23

Both the Bombay and Calcutta Stock Exchanges remained closed.

24

Britain and France requested the Chairman of the UN Security Council to call a Council meeting on September 26 on the Suez Issue.

The Government of India issued orders prohibiting textile mills from stocking more than one month's average production.

The Calcutta Stock Exchange ruled steady with Indian Irons closing at Rs 35-15. In Bombay Tata Iron gained more than a point to be placed at Rs 198-8. Bombay Dyeing met with good support and closed sizeably higher at Rs 646-4.

25

The Calcutta Stock Exchange remained closed on account of a general hartal in the city. The Bombay Stock Exchange was depressed because of the Government Order prohibiting mills stocking more than one month's average production, and wholesalers from holding more than three months' stock. Bombay Dyeing reacted to Rs 636-4 from Rs 646-4. Tata Iron also receded in sympathy with textiles to Rs 197-8.

26

The UN Council met to consider the Suez Canal crisis.

A feature of trading in the Calcutta Stock Exchange was the revival of support for tea shares. Both operators and investors had presumably been influenced by the smart recovery in tea prices in the auctions. Elsewhere interest was centred on selected miscellaneous shares. Indian Irons moved narrowly around Rs 36. In Dalal Street undertone was steadier and selected scrips made sizeable headway. Tata Iron moved up to Rs 199 from Rs 197-8. Bombay Dyeing made a smart recovery to Rs 645 from Rs 636-4.

27

India and Saudi Arabia issued a joint declaration advocating a negotiated settlement of the Suez Canal dispute.

The Calcutta Tea Regulation Committee agreed on the need for curtailing the 1956 tea crop to regulate it against excessive supply.

Encouraged by higher advices from Dalal Street, the Calcutta Stock Exchange presented a steady front with prices making moderate gains all along the line. Indian Irons firmed upto Rs 36-2. In Bombay the speculative counters were in good request. Tata Iron moved to Rs 200-4 from Rs 199. Bombay Dyeing gained nearly four points to Rs 648-12. Century spurted to Rs 567-8 from Rs 559.

28

It was announced that the control and management of State collieries till now managed departmentally under the Ministry of Production, would be transferred to the National Coal Development Corporation from October 1.

The Calcutta Stock Exchange closed the week on a firm note with the attention centering on tea shares. Indian Irons after touching a high of Rs 36-5 closed steady at Rs 36-2. In Bombay Tata Iron gained another point to be finally placed at Rs 201-4. Bombay Dyeing, however, remained almost unchanged at Rs 648-2.

29

The Government of India announced certain changes in the import policy in respect of articles covered by the Open General Licences due to expire on September 30. Certain items were transferred from the OGL to the licensing list and some others added on to the OGL.

While the Calcutta Stock Exchange remained closed, Dalal Street developed reactionary tendency consequent on lower advices from the cloth market. Century reacted to Rs 555-8 from Rs 563-8. Tata Iron also declined in sympathy to Rs 198-12.

The importance of banking to the COFFEE INDUSTRY

COMMERCIAL cultivation of coffee in India dates from about 1830, and is still almost entirely confined to South India. The yearly crop varies between 20,000 and 30,000 tons, most of which is consumed in India. When a surplus of Indian coffee is available for export, it finds ready buyers in fastidious foreign markets.

Without banking, the growth of the coffee industry would have been impossible. The availability of ready funds when needed, the collection of dues in any part of the country, and the other facilities and guidance offered by a good bank—these are an integral part of the structure of the coffee industry.

We at Palai are proud that so many leading coffee plantations, and indeed important firms in every field of business and industry in South India, employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investment—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

For the Investor

The Art of Propheteering

Investment Gossip:

The weather prophet has an easy time of it. With science being what it is today, there is a mass of meteorological data to help him read the weather as it will obtain in the next twenty-four hours.

The true forecaster of weather, however, uses the meteorological data only as a guide: the true basis for his prediction, more often than not, is his pet corn. Is it acting up on him? Rain, then, without a doubt!

The crystal gazer and the palmist, equally, use the crystal and the palm respectively no more than as guides. Their speciality is, rather, psychology: they form their impressions quickly, make an assessment of the past (which quite frequently is astonishingly correct) and then proceed to bring their powers of imagination into play.

The share market tout is a less likable breed: his are rarely selfless, uninterested pieces of advice! His holdings, or his position in the market, will decide the tip that he will pass on.

But what of the jobber? There is little money to be made by an inter-change of tips among jobbers. On the other hand, the individual has himself to take a view, although it is seldom other than a short-term view. His livelihood depends upon whether or no a majority of his views are correctly taken.

The jobber in Wall Street has his dope sheet: the Wall Street Journal has all the economic information to which the market prices will respond. Add to this mine the littler bits of news from the "inside"; and a relatively simple matter to decide whether to sell short or buy long.

In Throgmorton Street, it is the Financial Times that is carefully studied for the valuable information it will render up to the reader.

India—well, India does not rest content with the specialised journals that seek to help the investor. As far as the investor is concerned, he will be satisfied if he can take a long-range view based on an assessment of economic conditions. (He will be satisfied, in other words, with following the staid advice of Watch-dog).

But the non-investor, or the jobber, cares not a fig for the long-range prospects. All that interests him is the question: Will Indian Irons (or Tata Ordinaries) move up in the course of the next day or hour?

Which is where the art of propheteering, for the worthy benefit of stock exchanges, owes its birth.

Time once was when the uses of astrology were more or less strictly martial in character. In India, horoscopes were compared: and if the "weak" periods of bride or groom were largely offset by "strong" periods around the same time, the horoscopes were said to tally, and the tedious arrangements for the wedding were set in train.

Time today is when astrology is called upon to undertake more material tasks. If the stars and planets govern the lives of humans, logic has suggested, to the jobbers, that astrology's admirable aid could just as profitably be utilised in reading the Stock Exchange future.

Which, again, is what happens. There are few of the jobbing fraternity who do not put a greater trust in astrology than, not to speak of economic indices, even in God.

All this is prelude to a conversation I had the other day. The weaker trend in prices, just before the Pujahs, could quite straightforwardly be ascribed to the Government decision on the Indian Iron dividend. Since this friend had some interests in the Stock Exchange, I asked him what course he thought the market would take.

The answer baffled me; I confess, it even astounded me.

I was asked to believe that the bear markets of the recent past were due to Saturn's conjunction with Rahu. (The Government refusal to grant a higher Indian Irons dividend was incidental—no more).

As for the future, things were getting better all the time. Why? The answer, verbatim, as follows:

"With the separation of Saturn's conjunction with Rahu this week, cheerful conditions are expected gradually hereafter. All big malefic relations will come to an end and a serious of benefic relations will now form for bulls to asume control of all speculative markets in the next two months."

The reader may wonder what earthly reason there could be for such a prediction to figure in a column For the Investor. The reason is simple.

I suggest that it is a propitious time For the Investor to buy. Not because, according to the planets, the markets should be headed upward; it is buying time because the recent bear phase has brought down share prices to a level at which many blue-chip investment scrips are a steal.

The axiom over the next five years must be: it is better to invest, than to regret it later, in the companies which comprise what I some months ago termed as the beacon light industries.

£ R$

Investment Notes:

Rallis India are ruling firm around Rs 43. Rumours have it, that the company's working results for the year ended 31st August 1956 will provide a sharp contrast to the unsatisfactory record of the past few years. There are expectations that the profit for the year will, after meeting all expenses, leave a surplus of about Rs 20 lakhs.

It is learnt that Guest, Keen Williams (Private) Limited, which specialises in mechanical engineering, particularly in the manufacture of railway specialities, will shortly be converted into a public company. About 5,90,000 shares of Rs 10 each, representing about 30 per cent of the Ordinary capital will be offered to the public. The issue price will be at a premium of Rs 10 per share, i.e. Rs 20 per share. Despite this high premium, the offer is considered to be attractive in view of an yield of at least 9 per cent, tax free.

The shareholders of the Raza Sugar Company and the Buland Sugar Company have passed a scheme of amalgamation, which will come into effect retrospectively from November 1, 1955. The new amalgamated company will have the name of the Raza Buland Sugar Company Limited. Under the scheme, every two shares of Raza will be converted into three shares of Buland. The present scheme amounts to a virtual bonus to holders of Raza in the ratio of one for every two shares.

The scheme of conversion of the Promoter's shares of the Premier Construction Company, Bombay, is understood to have taken a final shape and the scheme is now forwarded to the Government for approval.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business in the best ORIENTAL tradition, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

HIGHLIGHTS

The mink coat scandal; that was some years ago, and not in this country.

The "freezer" scandal; also some years ago, also elsewhere.

Nearer home, at the beginning of this decade we had the ubiquitous five percenter.

Anything could be done, so it was said, with the connections and contacts of this alleged commission agent.

Indeed, nothing could be done, it used to be charged, without the aid of the five per-center.

Doubly blighted, New Delhi was thus a hot-bed of scandal—five years ago, that is.

Today, there is a miraculous transformation.

Today, there is no breath, nor whisper, of scandal.

Eavesdropper, lately in New Delhi, eulogises the New Olympus, in which the spending is in crores, and in which there is no corruption.

Why is New Delhi permeated by an atmosphere of high purpose?

In answering this question, Eavesdropper traces back to the past, describes the two blights that sorely troubled New Delhi, and gives a glowing account of the New Delhi of today. See Clive Street Gossip.

The scheme for the amalgamation of the various manufacturing operations of the Unilever group of industries in this country—the Hindustan Vanaspati Manufacturing Company; Joshep Crossfield & Sons and William Grossage & Sons with the Lever Brothers (India) Limited—has been sanctioned by the Bombay High Court. This is preparatory to the conversion of the amalgamated company into a public company. Consequent on this, Unilevers, who hold the capital of the amalgamated company, are expected to offer a part of their holdings to the Indian public, subject to the sanction of the Government of India.

The Bombay Cycle & Motor Agency Limited has proposed to issue 23,000 shares of Rs 20 each out of the unissued capital of the company. Of this, 22,800 Ordinary shares of Rs 20 each are to be offered in the first instance to the existing shareholders in the ratio of two new shares for every five shares held.

The special resolution, passed by the Mysore Vegetable Oil Products on 31-3-1956 for the reduction of their capital from Rs 15 lakhs to Rs 12 lakhs, is now approved by the order of the Bangalore High Court.

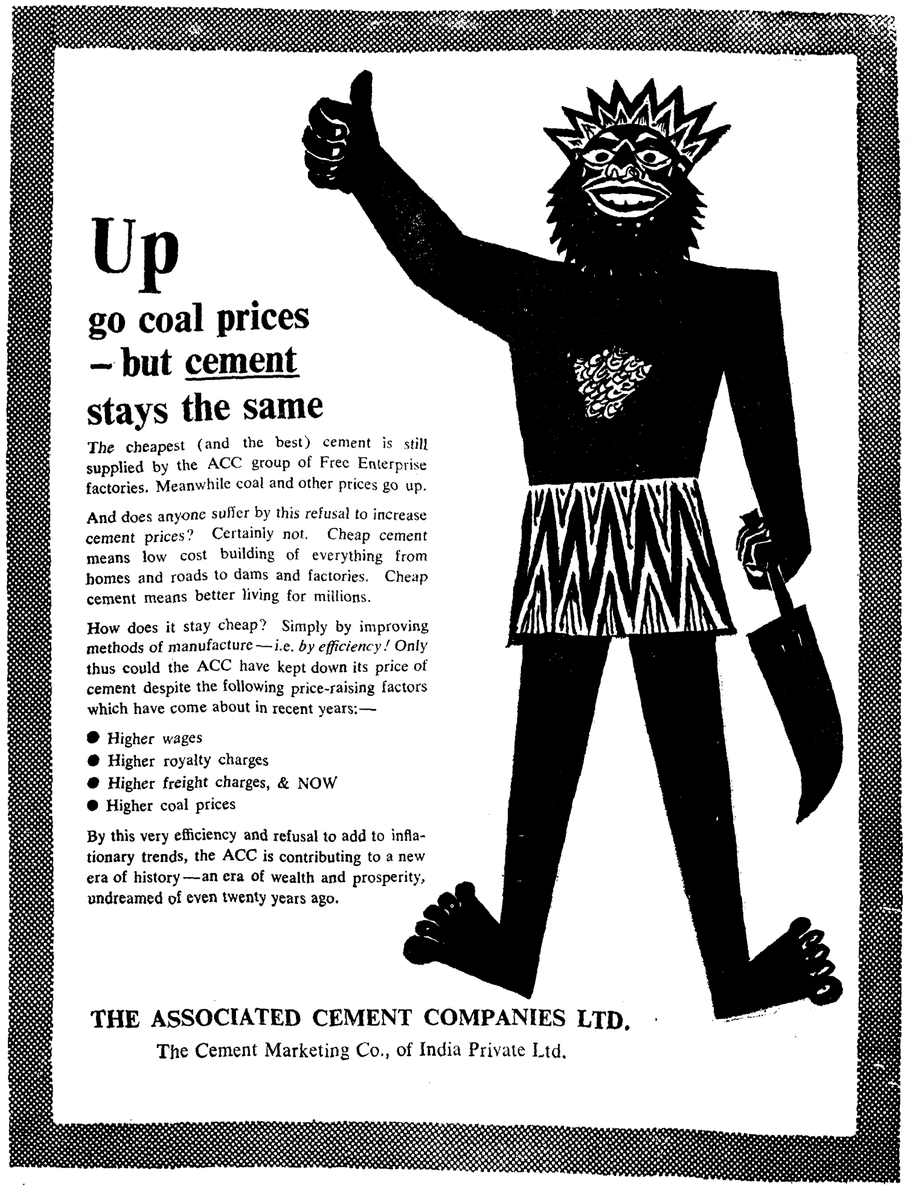
Investment Briefs:



National Carbon Company (India) Limited has recommended an interim dividend of As 12 per share for the year ended 31st December, 1956, payable on or after the 10th December, 1956. Transfer Books are closed from the 27th October to the 16th November, 1956.

Hingir-Rampur Coal has maintained the dividend at Rs 2-4 per share for the year ended 30th June, 1956.

National Electrical Industries have maintained the dividend at Rs 4-8 per share for the year ended 31-3-1956.

Kemp & Company have raised the dividend from Rs 12 to Rs 15

(Continued on page 741)

Up
go coal prices
– but cement
stays the same

The cheapest (and the best) cement is still supplied by the ACC group of Free Enterprise factories. Meanwhile coal and other prices go up.

And does anyone suffer by this refusal to increase cement prices? Certainly not. Cheap cement means low cost building of everything from homes and roads to dams and factories. Cheap cement means better living for millions.

How does it stay cheap? Simply by improving methods of manufacture—i.e. *by efficiency!* Only thus could the ACC have kept down its price of cement despite the following price-raising factors which have come about in recent years:—

- Higher wages
- Higher royalty charges
- Higher freight charges, & NOW
- Higher coal prices

By this very efficiency and refusal to add to inflationary trends, the ACC is contributing to a new era of history—an era of wealth and prosperity, undreamed of even twenty years ago.

THE ASSOCIATED CEMENT COMPANIES LTD.
The Cement Marketing Co., of India Private Ltd.

Group Study of Birla Scrips—III

Investment Special:

THE Group Study of the Birla scrips draws to its conclusion with this week's article, which analyses the balance-sheet position and future prospects of the textile units. The four companies that I have chosen offer an interesting contrast.

The first, Century Spinning, has been earning profits that enabled a high 22 per cent dividend; but earnings have tended to be on the decline. But, once again, capital work in suspense, in the latest balance-sheet is practically equivalent to the total of the fixed block, thus indicating the prospect of vastly increased profits.

The second company is the Birla exception—Jay Shree Textiles with a loss.

The third is Sutlej Cotton,

	1953	1954	1955
Profit before taxation	96,81,653	84,08.920	80,09,708
Number of Ordinary Shares ..	1,09,428	1,09,428	1,09,428
Profit per Ordinary Share ..	88.47	76.84	73.20
Net Profit ..	64,31,653	54,58,920	49,09,708
Number of Ordinary Shares ..	1,09,428	1,09,428	1,09,428
Profit per Share ..	58.78	49.89	44.87

which operates with phenomenal success—but in Pakistan.

The fourth is Kesoram Cotton which, by dint of its recent new capital issue, is preparing itself for development on an ambitious scale.

£R$

Century Spinning

Capital: Authorised—Rs 1½ crores in 1,50,000 shares of Rs 100 each; Issued and Subscribed Rs 1,09,42,800 in 27,357 shares of Rs 100 each fully paid and 82,071 shares of Rs 100 each issued as fully paid up pursuant to contract without payment being received in cash.

In common with the textile industry's experience in 1955, Century Spinning had a good year. Sales rose by half a crore to Rs 8·39 crores. The net profit, however, showed a slight fall to Rs 80.10 lakhs from Rs 84.09 lakhs. Taxation receives Rs 14 lakhs more at Rs 31 lakhs. The provision for depreciation has been increased by Rs 2 lakhs to Rs 15 lakhs. And the transfer to the Reserve Fund is one of Rs 35 lakhs against nil last year.

It would appear that higher costs have been slightly reducing the margin of profit of Century Spinning. The dividend has, nevertheless, been maintained in each of the last three years at 22 per cent. And, meanwhile, additions to block, aggregating nearly Rs 26 lakhs in the last two years, attest to the possibility of improved earning capacity.

The balance sheet discloses an ordinary capital of Rs 1.09 crores. Against this, there is a premium on shares reserve of Rs 4.43 lakhs; a reserve fund of Rs 1·05 crores; and other funds totalling Rs 1.55 crores.

As against the gross block of Rs 2.82 crores, the depreciation fund is placed at Rs 1.97 crores. Significantly, capital expenditure in progress is shown at the very high figure of Rs 2·18 crores. With additions to block of this order, the assessable profit should, in view of the higher depreciation charges, be low. In other words, the net earning per share would be substantially higher in the accounts of Century Spinning in the future.

£R$

Jay Shree Textiles

Capital: Authorised Rs 5 crores in 20,00,000 Ordinary shares of Rs 10 each and 3,00,000 Preference Shares of Rs 100 each; Issued Rs 51,00,000 in 5,10,000 Ordinary Shares of Rs 10 each (issued for cash); Subscribed, Called up and Paid-up Rs 49,17,000.

I have deliberately chosen Jay Shree Textiles Mills Limited in the list of Birla scrips to be studied. For, I wanted to indicate that there could be such a thing as a losing Birla company!

Sales of Jay Shree Textiles rose by Rs 2 lakhs to Rs 54.21 lakhs in 1955. The net profit was Rs 3.07 lakhs as against the loss of Rs 2·70 lakhs in the previous year. But the carry forward continues to be at a debit of Rs 2.83 lakhs, as compared with the debit brought forward of Rs 5.68 lakhs. The balance sheet discloses ordinary capital of Rs 49.17 lakhs and debentures to the tune of Rs 13.71 lakhs.

The gross block of Rs 69.76 lakhs has a net value of Rs 55.50 lakhs; but it would appear that there are arrears of depreciation to be provided. Liquid assets are of the order of Rs 25.82 lakhs as compared with sundry liabilities totalling Rs 20·36 lakhs.

£R$

Sutlej Cotton

Capital: Authorised Rs 75,00,000 in 5,00,000 Shares of Rs 10 each and 25,000 shares of Rs 100 each; Issued, Subscribed and Paid-up Capital Rs 15,00,000 in 1,50,000 Ordinary shares of Rs 10 each fully paid-up in cash.

Offering an almost incredible contrast are the accounts of Sutlej Cotton. Sales of Sutlej Cotton dropped sharply in the year ended March 1955 to Rs 3.18 crores from Rs 4.11 crores. The net profit also shows a similar drop from Rs 2.29 crores to Rs 1.47 crores. The provision for taxation is reduced from

Dividend Raised by Macneill & Barry

Balance-Sheet Reviews:

MACNEILL & BARRY LIMITED has produced excellent working results for the year ended 31st March 1956, thanks to the higher dividends received from the company's investment in the tea industry in respect of profits for the season 1954. In the other industries in which the company is mainly concerned—Coal, Jute and Shipping—trading conditions remained, however, depressed throughout the year under review.

In the Profit and Loss Account, the item "Agency Commission and Allowances" is shown at only Rs 62.07 lakhs as against Rs 63.06 lakhs in the previous year; but the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 53,00,286 as against only Rs 38,85,250.

In respect of allocations, the Depreciation amount has been raised to Rs 93,946 from Rs 92,230; Taxation to Rs 20.75 lakhs from Rs 16.75 lakhs; General Reserve to Rs 8,00 lakhs from Rs 2.00 lakhs and Harbour Boating Replacement Reserve to Rs 2.66 lakhs from Rs 2.21 lakhs.

It is the company's intention to expand the activities of the Harbour Boating Fleet and, to this end, new crafts have been ordered. The transfer to Harbour Boating Replacement Reserve, which is now recommended, will bring this Reserve up to Rs 10 lakhs.

Even after these increased allocations, the directors have found it possible to raise the dividend on the Ordinary shares from 7½ to 11 per cent for the year.

The balance-sheet, as at 31st March 1956, shows the total paid-up capital at Rs 2.50 crores against which Capital Reserve is shown at Rs 28.33 lakhs; General Reserve at Rs 25·00 lakhs and Harbour Boating Replacement Reserve at Rs 10.00 lakhs. Net block amounts to 88.50 lakhs as against Rs 82.21 lakhs in the previous year. Liquid assets are substantially higher at Rs 3.75 crores as against sundry liabilities of only Rs 1.44 crores.

£ R$

More Tea Results

Seven more Tea companies have presented their reports and accounts for 1955. In common with other tea companies, these have reduced their dividends substantially from the 1954 levels. For instance, Bhatkawa has recommended a dividend of only 25 per cent against 65 per cent; Hansqua 10 per cent against 25 per cent; Methoni 17½ per cent against 40 per cent; New Chumta 15 per cent against 55 per cent and Ranicherra 15 per cent against 30 per cent. Kunchunpore and Margaret's Hope have, however, passed over the dividens as against 27½ per cent and 30 per cent respectively paid in the previous year. The following tables will show the crop outturn, average price realised and the net profits earned during the past two years:—

Crop Outturn (In Maunds)

Companies:	1955	1954
Bhatkawa ...	17,728	17,698
Hansqua ...	5,195	5,318
Kunchunpore ...	4 356	4,256
Margaret's Hope	4,419	4,238
Methoni ...	11,215	9,563
New Chumta ...	5,792	5,382
Ranicherra ...	12,684	13,369

Average Price Realised (per pound)

	Rs. a. p.	Rs. a. p.
Bhatkawa ...	1 13 8	2 9 10
Hasnqua ...	1 13 7	2 15 2
Kunchunpore ...	1 11 6	2 12 8
Margaret's Hope	2 4 6	3 9 11
Methoni ...	2 5 5	3 4 5
New Chumta ...	1 10 5	3 1 8
Ranicherra ...	1 14 0	2 15 10

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

IN connection with the much-publicised communication of Mr Eugene Black, the Chairman of the World Bank, to Mr T. T. Krishnamachari in his capacity as the new Union Finance Minister, the first point we wish to make is that it is not so devastating as some sections of the press have sought to make out. The second point is that the issues raised by Mr Black can be squarely met and convincingly answered. And the third point is that Mr Black is not so unsympathetic as is generally thought and that India can hope to secure loans in proportion to the security it is in a position to offer and that the prospects are distinctly favourable for our being able to get commensurate finance, particularly for the Transport projects included in the Second Plan.

We have made it a particular point at the outset of this article to state our conclusion that the World Bank correspondence—the publication, earlier, of Mr Black's letter was unauthorised—has been grossly misunderstood and, perhaps, deliberately misinterpreted. It is true that Mr Black has not offered a blanket loan covering the foreign exchange requirements under the Second Plan; but, surely, nobody expects seriously to receive such reassurance from the World Bank Chairman. If this institution was expected to help India in its Second Plan, it could only do so within the framework of the principles and canons of banking that it had laid down for itself. Unless the World Bank had satisfied itself that, applying these criteria, India was a credit-worthy country to which apposite aid could be given, surely the World Bank would scarcely be in a position to say: We will give all that India wants.

Mr Krishnamachari's reply to Mr Black's letter contains admirable answers, which are to the point and fully informative, to all the questions raised by Mr Black. We present below the related extracts from the letters of Mr Black and Mr Krishnamachari:

MR BLACK: "I see a tendency towards this latter approach (theoretical concept of roles of public and private sectors) in your Industrial Policy resolution of last April, which reserves to the State exclusive responsibility for new undertakings in a large number of industries including oil, coal and other minerals."

MR KRISHNAMACHARI: "The industrial policy resolution was not intended to be an ideologically dogmatic document and has not been interpreted as such in India. Indeed, the formulation of this resolution by Government has given perhaps the largest single fillip to Indian private industry in recent times as evidenced by the buoyancy and confidence with which it is expanding.'"

MR BLACK: "The Bank has been impressed with the record of financial stability maintained in India over the past five years and with skill displayed in the management of public finance."

MR KRISHNAMACHARI: "I note your comment on the importance of financial stability. I doubt if the Indian record can be a source of anxiety on this score. We are fully aware of the dangers of inflation and are determined in the future, as in the past, to avoid it. You might have observed that a few days ago we raised substantially the excise duty on cloth and have been wondering whether there is a comparable example of a democratic Government insisting on taxing, in the interests of financial stability, the necessities of the people immediately before a general election.

"I would, however, like to emphasise to you that in Indian conditions, the maintenance of social stability, which is even more important than financial stability, depends wholly on the pace at which development proceeds. In so far as the administrative and organisational bottlenecks can be overcome the only obstacle to rapid development, whether in the public or in the private sector that I can foresee is not the lack of internal finance but the shortage of foreign exchange. I am, therefore, very glad indeed that the Bank hopes and expects to play an important role in providing the external finance we require."

MR BLACK: "With regard to external finance, the Bank feels that greater emphasis should be laid in the Second Five-Year Plan on measures to develop overseas earnings."

MR KRISHNAMACHARI: "The problem of foreign exchange has been giving me personally and the Government of India generally cause for considerable anxiety. You will be interested to hear that we are now engaged in phasing the projects in the plan with a view to giving high priority to those which would save or earn foreign exchange. We are examining the obstacles, whether of procedure of or policy, which prevent an increase in our exports. We are seeking to establish export markets for commodities not hitherto exported on any large scale and we are undertaking a comprehensive review of the policies and procedures that inhibit foreign private investment."

MR BLACK: "It is scarcely possible, however, for the Bank to commit itself to any specific figure for lending to India during the period of the Second Five-Year Plan. We feel that we will have to consider the pace and scale of our further loan operations in India from time to time in the light of economic conditions and prospects and taking into consideration the economic policies which are pursued by your Government."

MR KRISHNAMACHARI: "I understand your difficulty in committing yourself to any specific figure for lending to India but I trust it will be possible to come to a general understanding in regard to the order of figures involved and the phasing of your assistance as without a fairly concrete idea of when and how much external finance will be available, there is bound to be very considerable uncertainty as to the pace at which we can safely go forward."

MR BLACK: "The problem of transport is one which has particularly engaged the attention of the Banks as well as of your own Government and of private interests throughout India. We are struck by the extent to which the lack of adequate transportation facilities threatens to constitute a bottleneck in the country's economic development."

"Indeed, in view of the acute shortage of capital for development and the very high import content of Railways investment attention should be given first to the possibilities of improving the operational efficiency of the Railways and of encouraging road transport and coastal shipping; the latter between them should be capable of making a considerably larger contribution than at present."

"I think that transportation could appropriately be regarded as a top priority for any bank financing that may be devoted to the Second Five-Year Plan. As a preliminary, however, to the detailed examination of projects in this field, I suggest that it would be useful if the general problem of transport in India could first be discussed between your Government and the Bank in the light of the study of the Indian railways which I understand has recently been carried out at our invitation by a team of American Railway Consultants."

MR KRISHNAMACHARI: "The problem of transport and, in particular, of railway transport is, as you say, of very considerable importance. It does not seem to me, however, that the time is ripe for a fruitful discussion on it. The American railway consultants, Messrs Sanderson and Procter, have so far presented only an interim report suggesting that further studies should be made on certain specific points."

"It is only after these further studies have been made—and they are likely to take some considerable time—that the Railway Board and Government will be able to come to a decision in regard to what should be done."

"It would, in my view, be undesirable to postpone discussion on the financing of equipment for the railways till this general discussion as to the transport problem has taken place."

"My suggestion would, therefore, be that the bank, at this stage, might agree to finalise that part of the import programme of the railways for which orders, in any case, have to be placed immediately while further financing can depend on the result of the discussion you have envisaged."

Most of the points raised by Mr Black have thus been answered at length and adequately by Mr T. T. Krishnamachari, the Finance Minister. There is, however, one point in Mr Black's letter which we would like to deal with in some detail. This concerns the "distinct" impression that Mr Black has that the potentialities of private enterprise are commonly underestimated in India. The relevant sentence in the World Bank Chairman's letter reads. "While I recognise that the Government of India itself must play an important role in India's economic development, I have the distinct impression that the potentialities of private enterprise are commonly under-estimated in India and that its operations are subject to unnecessary restrictions there."

The unauthorised release of Mr Black's letter rendered the word "distinct" as "distant". It appears to us that Mr Black's familiarity with Indian industry and the corporate scene is more distant than distinct. For, if private enterprise today does not, in free India, wield a commanding voice, it has been because, by all accounts, it was in the past private only as to its profits and quite innocent, with some striking exceptions, of worthwhile enterprises. Moreover, there is by no means a feeling in this country that the role allotted to the private sector in the Second Plan is small or insignificant. Further,

more, the re-statement of industrial policy had the effect of removing uncertainty rather than of causing fresh apprehension in the mind of the private sector that its activities would be curtailed. Finally, let us remember that, if the State intends to assume greater responsibility for industrial development, it is because the private sector is unable to provide the capital—or even the technical personnel—to embark upon many such ventures.

As cases in point, we might cite the steel, cement and shipping industries. The first of these, in terms of the revised industrial policy statement, was for its development and new enterprises reserved to the State. Nevertheless, the existing units have been permitted, even encouraged, to take on hand substantial programmes of development. In respect of the foreign exchange needed therefor, it was necessary for Government to give guarantees to the World Bank. If Government had an ideological bias in favour of nationalisation, the steel industry would surely be one which should have attracted Government's interest. Quite to the contrary, Mr Nehru has asserted that his Government consider such nationalisation to be a futile frittering of the all too scarce capital resources.

In the case of the cement industry, more than 50 per cent of its output is earmarked for Government consumption. Government assistance in the industry's development has not been small; and yet, there is no thought that the cement industry should be nationalised.

Thirdly, there is the shipping industry, for whose development it is again Government which have to bear the brunt of the finance. The shipping industry not only requires large-sized loans from the State; specially advantageous terms need also to be offered. It has been estimated that Government financing has been of the order of 80 to 90 per cent of the total development costs of the shipping industry. Yet, shipping is in the private sector.

Does all this betoken on the part of the Government, a predilection in favour of nationalisation? The answer cannot be other than in the negative.

Mr Black would suggest that incentives or inducements be offered for encouraging foreign private capital:

"The Bank welcomes the arrangements that have been made to associate foreign firms with the construction and operation of a large number of major undertakings both in the public and the private sector, but hopes that more positive measures will be taken to facilitate foreign investment and that consideration will be given to the suggestions made by the mission in its memorandum."

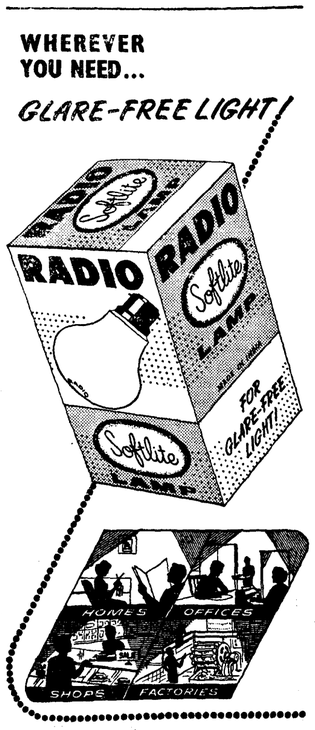
In this context, we may point out that foreign capital has not been shying away from India for lack of inducement. There is, indeed, substantial confidence in India; and the agreements in respect of the three oil refineries are proof in this regard. But world conditions are such today that, with most internal economics offering scope for prosperity, there is a disinclination to venture out—an exception always being oil. For some time at least, it is difficult to foresee a widening in the stream of foreign risk capital flowing to India, whatever the inducements offered.

Mr Black repeatedly expresses his Bank's confidence in India; the following extracts are of relevance:

"We in the Bank have great admiration for the solid achievements in the economic field which have been recorded in India during the past five years."

"We have also been impressed with the broad outlines of the development programme which your Government is proposing to follow during the next five year period."

The Bank hopes and intends to help India:



"We are anxious to play our full part in assisting India to achieve a satisfactory rate of economic growth. The Bank believes that the Indian economy has the capacity to develop the basic strength which would justify a considerable increase in overseas borrowing during the next five years. The Bank would, therefore, hope and expect to play an important role in providing external finance for your development effort."

Says Mr Black: "For the present I should like to assure that the Bank is ready to embark forthwith on the consideration and analysis of such further investment projects as your Government may desire to put forward." What more of reassurance can he give?

Mr Krishnamachari, for his part, lays stress on the flexibility in Indian planning:

"We are neither omniscient nor infallible nor are we so rigidly wedded to any course of action as not to alter it if it becomes apparent to us that we are mistaken. It is for this reason that we continuously welcome the people of India and our friends abroad telling us when and where they think we are going wrong."

We suggest that the extracts from the World Bank correspondence speak for themselves and both implicitly and explicitly indicate that prospects are most favourable for India to obtain timely, substantial and appotenor of the two letters, the conclusions seem clear that the World Bank will consider favourably every worthwhile proposition that India may put up. Finally, the concluding paragraph of Mr Black's letter forcefully suggests, and indeed invites, that India should usefully apply to the World Bank for finance required to implement the Railway projects.

Dear Money has come to Stay

By PAUL EINZIG

IN recent speeches the Chancellor of the Exchequer, Mr Macmillan, and the Governor of the Bank of England, Mr Cobbold, laid stress on the limitations of the influence of monetary devices. It is indeed high time to take stock of the situation in the light of Britain's experience during the past two years. For eight months the British Bank Rate has now been at the crisis level of 5½ per cent. In the past the bank rate at that figure was expected to produce dramatic results, in the form of a sharp setback in business activity and in prices. In 1956 no such results have occurred. The extent to which business activity has actually declined has been negligible, with the exception of the motor industry where special conditions prevail. As for prices it is true they have remained stable since April, but the effect of the impending round of wages increases is yet to be seen.

Businessmen have indeed good reason for being unimpressed by the effectiveness of the bank rate weapon. In the past the mere possibility of high bank rate induced them to reduce their inventories, partly because the cost of carrying them with the aid of borrowed money would be higher, partly because the value of those inventories was expected to decline as a result of the effect of the bank rate on prices, and partly because consumer demand was expected to fall. In existing conditions none of these three facts operate.

Any increase in the cost of financing production can usually be passed on to the buyer through adding it to the selling price of manufactures. Even in instances in which this is not possible the reduction in the profit margin through the higher interest rate inflicts more losses on the Treasury than on the ultimate receipients of the profits, owing to the high level of taxation. Moreover, so long as the post-war rise in prices continues debtors are compensated for the higher cost of their loans by the rise in the book value of their inventory. If they pay an interest of 6 per cent to their bank and the prices of their goods rise at the rate of 6 per cent per annum, then for all practical purposes they enjoy interest-free loans.

British producers have no reason to fear that the high bank rate would inflict on them losses through the depreciation of their inventories or through a decline of demand. It is the Government's declared policy to maintain full employment at all costs, and so long as full employment is maintained consumer demand at prevailing prices is ensured. In the circumstances it is not surprising if the bank rate has ceased to be looked upon as a formidable weapon.

When the bank rate was raised to 4½ per cent last year, everybody expected that, surely such a high rate could not remain in force for more than a few months. Again when the

A Call for Self-Effacement

Addressing the Baroda University Convocation, Dr John Matthai has prescribed the self-effacement of "the small group of national leaders we have at present," as a remedy for political ailments, present and prospective. This group is asked to retire from active political life not because of shortcomings or failure, but because it has turned out to be so outstanding that a robust Opposition is prevented from emerging. Taking a peep into the future, Dr Matthai visualises the possibility of disintegrating elements gaining strength to a degree that might impair the stability of the State.

In essence, the recipe is a repetition of what Gandiji advised the Congress after the advent of independence. Even when the advice came from no less a person than the Mahatma, it found no response. It is idle to speculate on what would have happened, if at that time the Congress High Command had decided to scuttle the organisation and leave the field open for new political parties. Probably, the people would have chosen the same individuals as leaders, the only visible change would have been in the labels.

In more than one State, where divergences of opinion within the Congress have resulted in the virtual break-up of the party or at least in chronic disunity among their ranks, the healthy consequences indicated by Dr Matthai have not materialised. On the contrary, political instability has only worsened, leading in its turn to the suspension of parliamentary government. The abdication of the present Congress leadership might well lead to similar results on an all-India scale, a circumstance full of calamitous implications at the present time.

Editorial Notes

To interpret the comparatively poor stannding of the Opposition groups as a pernicious consequence of the quality of the Congress leadership is indirectly complementary to the latter. If the Congress could hold together incoherent elements, the reason has to be sought in the dynamic and highly adjustable character of the organisation. The elections have demonstrated the extent of popular appreciation of the quality of the leaders and the ideology they represent.

To withdraw from responsibilities cast on them through the verdict of a general election will be tantamount to outright denial of the very fundamentals of democracy. The Congress certainly cannot be accused of any totalitarian bias and its overwhelming strength in the country will have to be regarded as a genuine reflection of its capacity to promote the interests of the masses. It is also scarcely deniable that the Congress has been consistently stealing in appropriate measure the thunder of its political opponents.

Dr Matthai's criticism, however, is valuable to the extent that as a ruling party the Congress must also give better attention to the need for an effective Opposition. An Opposition, however, cannot be an artificial creation. It cannot come as an offshoot of any one's self-denial. Once the electorate understands the need, the way will be made clear for the emergence of a more powerful challenge to the ruling party. That it has not arisen shows only that the need is not so pressing. The very fact that the present Opposition groups are broadly in agreement and are willing to co-operate with the Second Five-Year Plan reflects a situation in which the conventional ideas on Parliamentary government need revision.

*

A Logical Step

The Union Government's decision to grant a rebate of 6 pies per yard in the excise duty on mill production in excess of the first eight months' average for the year hits two birds at a shot. The rebate alleviates the impact of the duty on the consumer; it acts as a stimulant to production. As a special incentive such rebates have invariably proved effective. The most outstanding instance in recent years was that of sugar, where amidst the experiment of partial decontrol involving co-existence of a controlled and a free market, a special incentive was offered for production above a limit.

There is already clear evidence of some consumer resistance in the market for cloth, but for which the Puja price levels would have been higher. Direct intervention by the Government in the form of lifting over-staying consignments has assisted the situation. It would seem that the threat of the Government's stepping into the field of cloth trade has now receded.

The argument that there is an inconsistency between the present restriction on cloth stocks and a policy actively encouraging production is highly plausible. The restriction forms an emergency expedient calculated to hold the price level till the increased production flows in. On second thoughts the trade is bound to see the identity of purpose between the two steps. After an initial groping, the Government have again secured a firm grip on the problem. Though prices have not reacted to the extent desired, there is no longer the fear that the Government will be caught napping in the future.

*

The Kashmir Constitution

Whatever details are available of the Constitution for Kashmir, now being finalised by a Committee of the State Assembly, embody unsullied democratic principles. The State's accession to India is declared irrevocable and economic equality is to be pursued to a greater degree than under the Indian Constitution. As far as the domestic governance of Kashmir goes, the law will not recognise any difference between one citizen and another. But why at all Kashmir alone, of all the States of the Indian Union, should have the luxury of a separate Constitution remains intriguing. The State leaders who insisted on a separate Constitution will not be lacking in the political acumen to see its dangerous potentialities.

Apart from the fact that Kashmir, now a bone of contention between two States, can develop a bias for complete independence and separation from the Indian Union, the privilege accorded to the State may turn out to be a source of envy and emulation for other States within the Union. The Union Government must therefore ponder deeply on the validity of the reasons which impel them to approve of a special semi-independent political status to this strategic border State.

The Kashmir Constitution does not seem to accept the appellate jurisdiction of the Supreme Court of the Indian Union. It does not accept a governor appointed by the President. Nor does it enable the State to have common elections with the rest of India. These are important reservations and viewed in the light of Pakistan's claim on Kashmir, they bear an inescapable international significance. If Kashmir is to be given a special status and made a political entity different from every other in India, every one must be clear in his mind as to why it is so and as to how far the special status will militate against the solidarity of the Union.

The Expenditure Tax

In an article contributed to the October Issue of the Lloyds Bank Review, Dr A. R. Prest of Christ's College, Cambridge subjects Mr Nicholas Kaldor's thesis on expenditure tax to a searching analysis. A salient feature of this tax is that its history is confined to "the works of academic writers and the minds of men of affairs." In spite of a distinguished sponsorship which includes celebrities such as Mill, Pigou and Irving Fisher, this tax still floats in the realm of theoretical discussion.

To the older argument that the tax would encourage saving, Mr Kaldor has made a new contribution, namely that it would be more equitable than the taxation of income. Mr Kaldor elaborates this point by explaining how it is only by spending and not by earning, that an individual imposes a burden on the rest of the community for attaining his own ends. According to him, taxation should proceed on the basis of what an individual takes out of the national pool rather than of what he puts into it. The

Gold Revaluation Windfall

THE RESERVE Bank returns for the week ended October 12 carry out the statutory requirement (enacted in the last session of the Parliament) to effect a revaluation of the gold held in the currency reserve. The returns, as is to be expected, reflect consequential changes which, it must be added, are greatly complicated, if not positively or even deliberately mystifying.

The much talked about and long-awaited revaluation of the gold held in the Issue Department of the Reserve Bank has finally taken place. With the revaluation, gold held is shown at a value of Rs 117.76 crores as against the previous figure of Rs 40.01 crores. That is to say, the appreciation is Rs 77.75 crores.

We may be sure that the decision to take action was sooner forthcoming because of the sizeable week-to-week decline in the foreign exchange holdings of the Reserve Bank. Secondly, since the loss of foreign exchange entailed transfer of foreign securities from the Issue Department to the Banking Department, the backing for the note issue in the Issue Department, comprising gold coin and foreign securities, was threatening to go below the statutory minimum of 40 per cent of note liabilities. In other words, the limit to which transfer could be made from foreign securities was being swiftly approached. Presumably in the light of the likelihood of continuing loss of foreign exchange, the revaluation of the gold has timely significance.

There are, in the returns of the Reserve Bank for October 12, a number of consequential changes. Normally, the sharp rise in the figure of gold could have been offset by the cancellation of ad hocs for a corresponding amount. But let us remember that there was urgent need for bolstering of balances held abroad in the Banking Department. Consequently, it has not been possible to effect contraction against rupee securities in an amount equivalent to the increase in the value of gold. On the other hand, contraction as to Rs 60 crores has been effected against Foreign Securities by transfer to the Banking Department. Since, in the week under review, changes in the note liabilities were of a self-adjusting character, and since the Reserve Bank did not feel it necessary either to increase notes in circulation or to add to its cash in the till, contraction has been effected against rupee securities for an amount of Rs 18 crores. This total of Rs 78 crores roughly represents the countervailing measures taken in respect of the increase caused by the revaluation of gold.

Balances held abroad in the Banking Department are higher by Rs 50 crores at Rs 73.76 crores. The transfer, we may recall, from the Issue Department was Rs 60 crores. There would, therefore, seem to have been net loss of foreign exchange during the week for Rs 10 crores. Secondly, investments in the Banking Department should have been higher by Rs 18 crores; the rise, in fact, is one of Rs 27½ crores. This suggests that there may have been deficit financing for Rs 10 crores during the week, thus releasing Rs 10 crores of marketable securities to be additionally transferred from the Issue Department to the Banking Department.

The Central Government's deposits are higher by Rs 0.88 crores at Rs 55.44 crores; it is to be presumed that continued payments for steel imports were heavy enough to warrant deficit financing. We may also note that deposits of State Governments have also fallen by Rs 5½ crores to Rs 4.70 crores.

Banks' deposits are lower by Rs 1.80 crores at Rs 48.58 crores; and other loans and advances have, at the same time, risen by Rs 1½ crores to Rs 92.28 crores. Both these may be said to reflect the pre-Puja demand for funds from the banking system.

By far the most interesting change in the Banking Department is the sharp rise of Rs 78.40 crores to Rs 96.77 crores in other liabilities. This, of course, is consequent to the rise of this order in balances held abroad and in investments. That is to say, it represents, on the liabilities side, the increase in the banking assets consequent to the revaluation of gold. Normally, we repeat the surplus on such revaluation should immediately have been credited to Government's account; and this credit would have been utilised to reduce to this extent the Government's liability in respect of rupee securities, that is, ad hoc Treasury Bills. But there is reason to believe that Government anticipate substantial exchange expenditure on State-sponsored imports. Such imports may largely relate to steel. Consequent on import, however, payment thereagainst would be received in this country in rupees by sale of steel in the market. The proceeds from such sales would again need to be credited to Government. With a view to avoiding such sharp fluctuations in the Government balances, it may be that the Centre has decided to keep distinctly apart the amount represented by the surplus on the revaluation of gold. This could explain the sharp increase in other liabilities. At the same time, however, adjustments on this account, by way of credit to the Centre's deposits, are not to be ruled out in due course of time.

+

Puja Demand

THE Puja demand for funds, aggravated by the normal month-early disbursements, is seen revealed in the three statutory bank statements for October 5. According to the Reserve Bank statement, notes in circulation rose by Rs 21.34 crores to Rs 1430.57 crores. Moreover, rupee coin went out into circulation for an amount of Rs 0.33 crores. In the result, the Reserve Bank's cash in the till was sharply reduced from Rs 41.31 crores to Rs 19.64 crores. In the week ended October 12, also, the demand for money has persisted; and notes in circulation have risen by a further amount of Rs 7.66 crores to Rs 1438.23 crores. Rupee coin is shown lower by Rs 0.34 crores at Rs 119.40 crores. Consequently, the Reserve Bank's cash in the till has dropped once more by Rs 8.00 crores to Rs 11.64 crores. In neither week, in the Reserve Bank statement, has there been expansion in foreign securities or rupee securities in behalf of the note circulation. The important changes under this head in the week ended October 12 have been analysed elsewhere.

In the second place, both the Central and State Governments would appear to have experienced a fairly substantial net disbursement during the period. The Centre's balances fell by nearly Rs 17 crores in the week ended October 5; and they have remained stationary in the week ended October 12 in spite of possible deficit financing for Rs 10 crores. The balances of State Governments fell by Rs 8.84 crores in the week ended October 5; but part of this may have been accounted for by a purchase of marketable securities from the Reserve Bank since, in the relevant returns, investments of the Reserve Bank were placed Rs 5.03 crores lower at Rs 27.31 crores. In the latest week, there is further reduction in the balances of other Governments to Rs 4.70 crores.

The demand of member banks for funds would also seem to have been substantial. Deposits of banks have fallen successively from Rs 52.65 crores on September 28 to Rs 50.38 crores and Rs 48.58 crores on October 5 and October 12 respectively. At the same time, the other loans and advances of the Reserve Bank have been marked up from Rs 86.81 crores to Rs 89.79 crores and Rs 92.28 crores.

The returns of the State Bank for the two weeks also confirm the demand for funds. Deposits, which were placed at Rs 232.15 crores on September 28, fell to Rs 230.83 crores on October 5 and again to Rs 227.66 crores on October 12. At the same time, cash balances (including money at call) have fallen by Rs 3.86 crores in the two weeks ended October 12. This has necessitated an increase in borrowings from the Reserve Bank, the relevant figure having gone up from Rs 10.50 crores on September 28 to Rs 14.50 crores on October 12.

The latest returns available of Scheduled Banks are for September 28 and October 5. The first of these reflects slack season accretions to the resources of the member banks. Deposits are higher by Rs 2.06 crores at Rs 1095.00 crores. Borrowings from the Reserve Bank are sharply lower by Rs 4.42 crores at Rs 63.24 crores; this related, as the relevant statement of the State Bank disclosed, to a reduction in the indebtedness of the State Bank to the Reserve Bank. Cash balances were slightly lower. Investments were marked up by Rs 2.13 crores at Rs 375.61 crores, again partly due to an increase in investments of the State Bank. The advances portfolio showed a rise of Rs 2.45 crores, suggesting that the demand for funds was already noticeable in the last week of September.

The returns of member banks for October 5 fully reflects the demand for funds consequent to Puja and month-early disbursements. Deposits are sharply lower by Rs 5.70 crores at Rs 1089.30 crores. Borrowings from the Reserve Bank have risen by Rs 2.47 crores. Cash balances are shown higher by Rs 3.15 crores; no doubt, this indicates the preparations made by member banks to meet the higher tempo of demand for funds. Investments are lower by Rs 1.33 crores. And advances have risen, once more, by Rs 5.23 crores to Rs 759.67 crores.

+

The statement of the State Bank for the week ended October 12 reveals a decline of Rs 3.17 crores in deposits to Rs 227.66 crores. Borrowings from other banks are higher by Rs 5.00 crores at Rs 14.50 crores, while other liabilities, including inter-office adjustments, are shown at Rs 6.44 crores against Rs 6.39 crores.

On the assets side, cash balances have moved up from Rs 14.28 crores to Rs 14.46 crores with Investments almost unchanged at Rs 107.82 crores. Advances have declined by Rs 1.24 crores—'Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 0.32 crores and 'Bills Discounted and Purchased' for a drop of Rs 1.49 crores.

+

According to the returns of the Scheduled Banks for the week ended October 5, both Demand and Time Liabilities have shown declines, the former by Rs 2.42 crores to Rs 635.08 crores and the latter by Rs 3.28 crores to Rs 454.22 crores. Borrowings from the State Bank have risen by Rs 0.39 crores to Rs

Britain and European Free Trade

By PAUL EINZIG

FOR some time past the British Government has been struggling with a dilemma. On the one hand it was pressed by its European allies and to some extent the United States to establish closer economic relations with Western Europe to the detriment of Britain's exclusive trading position with the Commonwealth. On the other hand, the Commonwealth Governments and a large section of the Conservative Party was utterly opposed to any watering down of the system of Commonwealth preference. It seems that the time has now come to take a decision. As far as it is possible to ascertain from public statements the Government has chosen a compromise under which free trade with Western Europe would be confined to industrial products while the present status quo would be maintained for agricultural products. Moreover, the application of the proposed system of European Customs Union would be spread over a period of 10 to 15 years.

If this formula should prove to be acceptable to Western Europe it would go a long way towards the establishment of European free trade, while maintaining the preferential tariffs for the import of raw materials from the Commonwealth. Those in favour of this compromise are inclined to overlook, however, one basic difficulty. It is the unsatisfactory character of the industrial worker compared with his opposite numbers on the Continent.

There can be no doubt that today the British industrial worker is the most pampered and spoilt worker in any part of the world. When recently a German industrialist was asked how to explain the contrast between progress and prosperity in Western Germany and stagnation and recurrent crises in Britain, he replied "In my country work is practically a religious cult. In your country idleness is practically a religious cult."

Full employment has become a fetish in Britain so that any improvement through intensified competition by Continental manufactures on the British market may be ruled out. Suppose for the sake of argument the French Renault works or the German Volkswagon gained ground in Britain as a result of the abolition of the Customs barriers. The resulting unemployment in the British motoring industries would not be followed by harder work of the British workers or by a downward adjustment of their wages. The Government would be pressed to find alternative employment for the displaced workers by some artificial means tending to accentuate inflation. There would be an outcry for concealed subsidies leading to sharp disagreement among Members of the Customs Union. Indeed, it seems reasonable to assume that in existing circumstances Customs Union would not make for better political relations in Western Union but would threaten to disrupt the existing union.

Those who argue in favour of the European Customs Union on the basis of the example at the United States are guilty of the logical fallacy of arguing by false analogy. Even though there may be disagreements or conflicts of interests between member states of the North American Federation the extent of such clashes is negligible compared with those liable to arise between independent sovereign States thrown together into a Customs Union. There would be no overriding federal authority above them. Each Government would be under irresistible pressure by its Parliament and public opinion to stand up for the immediate interests of its own industries. Failure to do so would entail a change of Government.

It is true at the present moment the idea of the European common market has a strong appeal in Britain not only among Liberals and a large section of the Labour Party but even among the by no means inconsiderable section of the Conservative Party. While the diehard Tories are determined to die in the last ditch for Imperial preference, the younger Members of Parliament are strongly tempted to support the European Movement. Subconsciously and almost imperceptibly the Conservative Party has gradually adopted the programme of the Liberal Party. Imperial preference is practically the only major difference between them. If that difference is eliminated there appears to be no practical reasons why the two Parties should not amalgamate. It is true, Liberals, in an effort to provide justification for their survival as an independent party miss no opportunity for stressing differences with Conservatives in the

Development of Dyestuffs Industry

GOVERNMENT'S decision that the National Industrial Development Corporation should set up central capacity to manufacture the primary intermediates for the dyestuffs industry has come not a day too soon. It is gratifying to note also that the final decision regarding the exact scope of the NIDC project and the manner of its execution will be taken after the programme of the various private firms already in the field is clearly known and determined.

As essential raw materials for several industries, dyestuffs have come to occupy an important place in the developing economy of our country. Apart from the textile industry whose offtake of dyestuffs is perhaps the largest, dyestuffs are used in the production of coloured paper, certain categories of finished paints and coloured cement products.

The Dyestuffs Exploratory Committee of the Council of Scientific and Industrial Research and the Planning Commission have emphasised that only when the dyestuffs industry has been put on a firm footing that a country's chemical industry can be said to have reached full development.

Though the first unit of the Indian industry had been established as early as 1940, the industry had not been able to make much headway owing to the multifarious problems it had to face. Severe competition from imports and the instability of import policy have severely retarded the growth of the indigenous industry. By far the greatest handicap, however, would appear to be the dependence of the industry on imported intermediates and penultimate products.

The fact that the demand for dyestuffs is daily on the increase has imparted a new urgency to the problem of the development of the dyestuffs industry in India. Imports of dyestuffs have been on the increase in the past few years and the demand is further expected to go up by more than 30 per cent by the end of the Second Plan period. It is, however, pointed out that in view of the anticipated heavy demand for cloth, the percentage of increase may be even higher.

Apart from the natural desire to become self-sufficient in an industry whose products are meeting with a steadily expanding market, Government's decision to take active steps to foster the growth of the indigenous dyestuffs industry has stemmed from the findings of different groups of technologists, both Indian and foreign.

*

Sulekha Ink

An indigenous industry that is in the process of leaving its infancy behind is the ink industry. Unfortunately, it has not been easy for the industry to progress as swiftly as it could have because, as the Directors' Report of the Sulekha Works Limited points out, prejudice is "still prevalent amongst a certain section of people against indigenous products".

The answer, of course, lies in publicity. The ink industry falls into this pattern of an enterprise which is not capital intensive, but which requires apt advertisement's apposite aid. Sulekha Works, which has the reputation of pioneering the introduction in India of solvent in fountain pen ink, is clearly conscious of the important role of publicity. But, because production could not be raised and demand not met, the publicity carried on was somewhat less in the last year. It is, however, anticipated that the company would lay, in the future, "greater stress on propaganda in order to cover larger sphere of exploration". Sales of Sulekha have shown astrident upward tendency, having amounted, in 1955, to five times the 1951 figure. Sales in 1955 were 50 per cent better than in 1954; and it is anticipated that, in 1956, sales would show a further improvement from Rs 15.36 lakhs to cross the Rs 20 lakhs mark.

Sales of Rs 15.36 lakhs compare with the fixed block of Rs 3.11 lakhs in the 1955 balance sheet. The provision for advertisement has fallen slightly below 10 per cent of sales. The proportion will, undoubtedly, be raised in the future.

For, essentially the earnings of such an industry depend upon turn-over rather than a substantial margin of profit. As it is, with mounting sales, the net profit

World of Jute

Spurt in Sacking

DURING the last few days, prices in the Calcutta jute goods market have considerably firmed up. The improvement in the price level is particularly noticeable in the heavy goods section. B Twills Ready which were quoting at Rs 113 a week ago are now quoting Rs 115-4. At one time during the week they were done upto Rs 116-2. Most other constructions in the section have also recorded sizeable gains.

The news that burlap consumption in USA during September has been at a satisfactory level (80m yards) and that spot stocks in that country have declined sharply to 124m yards from 139m yards in August 1956, has considerably helped sentiment in the hessian section.

Evidently speculators have become once again active in the market encouraged by the possibility of a good demand for heavy goods from Government in view of the heavy floods in several parts of the country. A contributory factor should have been the figures relating to stocks of jute goods with mills at the end of September and production of jute goods by mills during the month.

Stocks of jute goods at the end of last month are slightly higher as compared with August at 124,700 tons. Hessian cloth and Bag show an increase of 1,200 tons at 29,400 tons while sacking cloth and bag have declined by 400 tons to 88,200 tons. Other varieties are higher by 400 tons at 7,100 tons.

Compared to the corresponding period of last year, stocks are 55,000 tons higher. It is to be noted that the increase is entirely accounted for by sackings which were only 32,300 tons at the end of September 1955. Hessians on the other hand are now lower by 5,000 tons.

Turning to the production figures, we find that total output of jute goods during September have declined by 5,100 tons as compared to August. Two factors should have contributed toward the lower figure. Firstly mills have worked for only 197.5 hours as compared with 203.5 hours worked during the previous month. Secondly mills have been working with 12½ per cent of their looms sealed with effect from 19th September.

A significant point to be noted is that in spite of the smaller hours worked and the smaller looms in operation, production of hessian has not been adversely affected. Actually there has been a small increase. On the other hand, Sackings have recorded a comparatively sharp decline of 4,400 tons at 43,800. It is clear that during September a sizeable number of sacking looms have been switched over to hessian production.

Taking the two sets of figures together we find that the position with regard to hessian is quite satisfactory. Hessian stocks with mills are much less than a month's production. So far as sackings are concerned, the position does not seem to be satisfactory. Stocks of sackings are still nearly equal to two months' production.

In this view, it would appear that the recent spurt in the prices of heavy goods in the market is due entirely to speculation. But considering the facts that October is a short working month and that during that month the full effect of the latest quota of resealing of looms will be recorded, it may be permissible to conclude that the quantity of heavy goods available in the coming months will be considerably reduced.

*

The jute goods market opened the week on a firm note on reports of Government orders. B Twills ready were particularly very active due to heavy bear covering in the Fatka with the quotation at one time pushed up as high as Rs 116-2. Mills' sales of all constructions and positions were easily absorbed by the market which closed the day on a steady note.

The market continued to rule steady the next day also with prices especially in the heavy goods section well maintained. Sentiment was aided by the lower production figures for September. On Wednesday attention was centred on the hessian section on reports of good US consumption of burlap during last month. Hessian Ready ruled fully steady at Rs 42-3. In the heavy goods section, price movements were influenced by the heavy selling pressure and profit taking in B Twills in the Futka. In the continued absence of foreign enquiries, the market closed on Thursday on a dull note. The undertone, however, was steady.

	Week's Opening	Week's Closing
Hessian:		
40"×10 oz Ready	42|3	42|3
40"×10 oz Jan|Mar	42	42⅛
Sackings:		
B Twills Ready	116⅛	115¼
B Twills Jan-Mar	116⅛	115⅜
Hy. Cees Green	116½	119
Cornsacks ..	116	115½
Cubans ..	137½	137
A Twills ..	138¼	137½
L Twills ..	128½	128
D W Flour ..	133	133
Sugar Bags ..	129½	129½

The raw jute market began the week on a confident note in sympathy with the goods section. On Monday fair mill business was reported done in Indian Northern and Assam Bottoms at Rs 29 and Middles at Rs 31-8 and also Karimpur Tossa and Daisee Bottoms at Rs 29-8 all per maund for November-December shipments. On Tuesday also the market ruled steady as mills continued to evince interest in forward shipment jute. With mills' buying slowing down, dull conditions prevailed on Wednesday and Thursday and prices were generally unchanged. During the two days small mill business was reported done in Assam Bottoms October-November shipment at Rs 29 per maund.

World of Tea

Tea Production and Outlook

THE latest crop returns from the chief producing countries have revealed that, during September, North India has produced 94.3 million pounds as against 92.4 million pounds in the corresponding month of last year. The total crop for the April-September period amounts to 399.6 million pounds, showing an increase of 24.8 million pounds over the corresponding period of last year. The average crop up to September-end, in three years 1953-55, was only 363.67 million pounds.

The South Indian tea crop, in August, was estimated lower at 8.8 million pounds as against 11.3 million pounds in the corresponding month of last year. The total crop for the period January-August 1956 amounts to 81.5 million pounds against 87.1 million pounds in the corresponding period of last year. In addition to fine plucking, adverse weather conditions are reported to have affected the crop outturn.

The total crop in Pakistan for the period April-August, 1956 is reported at 28.7 million pounds against 25.6 million pounds in the corresponding period of last year. In Ceylon, total production for the period January-August amounts to 251.7 million pounds against 259.0 million pounds last year. In Indonesia, total production for the period January-July is 52.1 million pounds against 57.2 million pounds in the corresponding period of 1955. Thus, the total crop, so far this year, from North India, South India, Pakistan, Ceylon and Indonesia is some 813.5 million pounds or about 13 million pounds up on last year.

Despite the increase in the North-Indian production, trade circles in Calcutta do not expect the market to suffer much in the near future as the trend of prices in the recent auctions have been much better. There is a belief that the crop in Ceylon, during September, may not show any increase in view of the reports of dry conditions and shortage of rain reported from several districts. Again, the recommendations of the Calcutta Tea Regulation Committee to destroy a certain proportion of teas of residual nature as also to stop plucking at an early date will have a generally healthy effect on the market. Also, fears are entertained that the export duty might be raised under the slab system at the end of this month since London prices have been very steady. There is a feeling that this may influence foreign buyers to cover against their commitments before the duty moves into its next substantially higher slab.

It is, therefore, considered possible that the improvement in the prices obtained at the recent auctions may be maintained in the coming weeks. In this connection, Messrs J. Thomas & Company, in their latest monthly report, have stated:

"With the hectic buying by the UK, Middle East and Eire during the closing sales of September, the outlook for tea has considerably changed and the limited offerings, during this month, will continue to receive all-round strong demand.

With the very high prices which are now being paid for Indian teas in London, there is a possibility that the rate of Export Duty may go up to As 10 per pound from the beginning of November. There should, therefore, be a tendency toward heavy shipments during the month of October.

All these factors point to a further improvement in the market during October. Prospects, during November and the later months of the season, will, however, depend upon the North Indian crop figures. If these continue to show rises, the market for Common and Low Medium teas may again sharply decline from November onwards".

Due to "Pujah" holidays, no sales were held in Calcutta this week. The next export and internal sales will take place on the 22nd and 23rd October respectively.

In the Cochin market, a total of about 475,000 pounds was offered last week. A good demand prevailed throughout the sale at irregular rates. Best Liquoring Nilgiris met with only fair support and were generally easier; but there was a keen enquiry for good Medium kinds which were firm and often dearer.

Travancore teas were generally sold at an advance of an irregular one anna per pound above last prices. Wynaad descriptions met with keen competition and, although irregular, were fully firm to dearer. Milled and Residual Dusts came to an occasionally dearer market. Black Leaf types, suitable for Egypt, were neglected. Internal Sale "U" will be held on the 23rd October, 1956.

In the Colombo market, there was a strong demand for low-grown and Medium Broken teas at dearer rates when 3,899,060 pounds were offered. High-grown BOPs, particularly Uva types, were lower following quality; but all useful liquoring BOP Fannings were fully firm to dearer.

Following rates were quoted per pound (in cents):—High-grown Broken Orange Pekoe 380; Good Medium Broken Orange Pekoe 325; Medium Liquoring Broken Orange Pekoe 270; Medium Liquoring

(Continued on page 741)

World Overseas

Britain

Increased export earnings were the main reason for the United Kingdom"s having a substantial surplus after paying her way in her transactions with the rest of the world in the first half of this year.

A White Paper points out that this surplus was a big improvement on the 1955 figures.

As the Chancellor of the Exchequer, Mr Harold Macmillan, disclosed, the United Kingdom had a surplus of £144,000,000 in the first six months of this year. This compares with one of £18,000,000 in the first half of 1955. The improvement is mainly due to an increase in export earnings of £168,000,000, while imports only rose £36,000,000. (Between the second half of 1955 and the first half of this year imports fell a little).

The improvement over a year earlier was almost entirely with the non-sterling world, with which the United Kingdom has a surplus of £31,000,000. With the rest of the Sterling Area, Britain had a surplus of £113,000,000, compared with one of £112,000,000 in the first half of 1955.

This improvement in the balance with the non-sterling countries was brought about because the earnings from exports rose by £147,000,000 (18 per cent), whereas payments for imports rose only £51,000,000; and because the invisible balance with them (excluding defence aid) improved by £53,000,000. (Defence aid fell by £24,000,000).

In contrast to recent experience, the improvement in the Sterling Area balance with the rest of the world is almost entirely due to this improvement in the UK balance.

The whole Sterling Area's balance with the rest of the world improved from £7,000,000 in the first half of 1955 to £135,000,000 in the first half of 1956. The rest of the Sterling Area's balance with the non-sterling countries was virtually unchanged.

American defence aid (net) was much lower—£9,000,000 in the first half of 1956, compared with £33,000,000 a year earlier. On the other hand, offshore sales to the US Government were higher (£32,000,000 in the first half of 1956, compared with £16,000,000 in the first half of 1955).

There was a net improvement in the reserves and oversea sterling holdings and European Payments Union deb't together of £118,000,000 in the first half-year—the former rose by £95,000,000, and the latter fell by £23,000,000.

The UK surplus of £144,000,000 in the first half of this year, say London observers, is clearly a movement in the right direction, particularly when compared with the performance last year, and from that point of view is satisfactory. But it is too early yet to draw from this result conclusions about the future, and in official circles it is felt that the task now is to maintain, and improve on, the position reached.

The result for the first half-year is not, of course, an annual rate, and it is usual for the first half of each calendar year to show a more favourable result than the second half, and particularly, on seasonal grounds, than the third quarter.

But with this note of caution, it is still true that the current surplus is satisfactory. As the White Paper points out, taking the latest 12 months together, deterioration in the net balance of oversea sterling holdings and reserves (that is, as distinct from current-account transactions) in July-December was over £70,000,000 greater in 1955 than in 1954, but improvement in January-June this year was £119,000,000 greater than the last. From an actual worsening of £162,000,000 to an improvement of £140,000,000 in the two latest half-years is a striking change, and considerably more than seasonal.

'The balance-of-payments White Paper, comments the Financial Times, 'fills in the whole of the picture that was lightly sketched by the Chancellor in his speech at the bankers' dinner on Tuesday. By and large, it is a favourable picture.

'There has been an improvement —compared with the critical period

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

I SPENT the whole of the last week in Olympus. The New Delhi I saw this time is animated by a new confidence and impelled by a new purposiveness. The entire atmosphere has undergone a vast change. Activity of every kind and a missionary zest are writ large on the face of New Delhi which has ramified into a number of suburbs. Yet more suburbs are coming up; and, on every hand, you have, in all stages of construction, imposing buildings in all manner of architecture and neat-looking villas with all kinds of conveniences. The mason and carpenter, the furniture maker and equipment fabricator ply a busy trade. The hotels are full; and, though they sting you properly, it is difficult to book a room except with special influence. Hotels and restaurants in profusion have sprung into existence; yet, the demand outstrips the supply. The Government are putting up a six-hundred room hotel appropriately yclept Ashoka; and the energy and effort that are being brought to bear upon the construction work in this regard are a heartening symbol of the intensified activity in New Delhi. An urgency is attached to this work because of the forthcoming UNESCO session, to be held in the City, which is expected to be attended by 800 delegates. The Government properly deem it important to appoint a construction expeditor; and Mr Sankaran, to whom has been entrusted this task, is appropriately a man of self confidence. He has little doubt that the 200 rooms called for to be ready by the end of the week will, in fact, be available; nor is there any apprehension in his mind that the target of another 200 rooms by next week will not be attained.

*

I have so far described the external evidence of the new activity in New Delhi. There is, surely, a contrast between the stagnancy of the post-partition era and the bustling development in the new age of India's planned endeavours. But I must record that outward shows are not, in the final analysis, important. All they offer is external evidence; and, unless there is an inner backing of strength, the outward show is mere superficiality. Fortunately, I am in the happy position of being able to draw attention to a much more vital transformation that Olympus has been enlivened by. I speak here of the spirit and the inner urge that are characteristic of the motivating forces and influences that hold sway over the minds of those who matter in Olympus today. In this sphere, the contrast between now and the beginning of this decade is even more sharp. The beginning of the 1950's was a period of a sad chronicle of demoralisation in every sense of the term. Such demoralisation was to be expected, if only that New Delhi was doubly blighted: firstly, there was the scope for corruption that had spread so swiftly in the wake of the war-time black-marketing and profiteering. If corruption was able to get a foothold in New Delhi, when India became independent, one cause must certainly be the fact that the era of shortages, which started during the war, had yet to draw to its close. Controls and corruption are habitually bed-fellows. The second blight that New Delhi was troubled with stemmed from the desolation, the lack of hope and abject frustration that the refugees from the Punjab were wrought with. Their loss was measured not merely in the lands and buildings that they left behind; nor in the farms and cattle that were now on Pakistani territory; nor yet in their other assets and belongings which, by the act of partition, no longer were theirs. The most grievous loss, as it seemed then, was the loss of hope. If the Punjabi, as a community, had been more dependent, rehabilitation may perhaps have been easier. For, the Punjabi, principally drawn as he is from the middle and upper-middle classes, was always noted for his almost arrogant independence, a knowledge of self-reliance that was based on the work that drew sweat from his brows. If the Punjabi appeared to have lost his all, it was because hope, too, seemed a casualty.

*

But hope is made of sterner stuff. It springs eternally, as some poet has recorded, in the human breast. If the Punjabi in the early 1950's was prone to frustration, it was only because he did not find it easy to be as self-reliant as he had been of old. If a new life was to be started, there was some uncertainty because there was the gnawing worry whether success would greet their efforts in the new livelihoods they were chalking out for themselves. But, imbued as the Punjabi is with an innate efficiency and pride of self-reliance, the refugee problem in New Delhi was not permitted continually or for long to cast a blight on New Delhi. Colonies sprang up with quickness, expedition and cleanliness. It would be a misnomer to term them refugee, because, almost from the start, the new colonies were hives of new businessmen. Today, rehabilitation, in mind and in body of the refugee is complete. Even the lowly coolie that you might see at the station is well dressed; and his dwelling is a near pucca house. If New Delhi pulsates with a new life today, one of the reasons certainly is the verve, the independence and the enterprise which the denizens of the land of the five rivers have displayed equally in the new environment in which they have been transplanted.

*

This aspect as a refuge for the emigrants from the Punjab is a post-partition development. New Delhi has, from the outset, stood for officialdom. The sea-change in this respect is thorough-going. Six years ago, it was the Mecca of touts and five percenters. Import licences? Export quotas? Dirt-cheap deals in disposal goods? The tout claimed that he could fix it. Hotel bars, secretariat corridors, hutment verandahs—the ubiquitous five percenter was everywhere. It was embarrassing for a non-official to be prominently noticed in the New Delhi environs; he ran the risk of being deemed one of the tout fraternity. The impression was fortified that nothing could be done in Olympus except with the apt aid of the five percenter. The corollary feeling grew that officials were becoming amenable to corrupt influences. Nor were a few succulent scandals lacking to lend credence to such an impression. Many a visitor to New Delhi was greatly distressed and wondered what it was all coming to.

*

Corruption, as I have pointed out, was a legacy which was forced upon us by the Second World War. Such tendencies were aggravated by a depletion in the higher administrative staff, while, at the same time, there was an enormous increase in applications of all sorts. If controls spread corruption, the inevitability of arrears offered fresh scope for further corruption. Pending applications were in terms of six figures. The stables in New Delhi were as ugly in the filth of corruption as the Augean stables were offensive in the mire of their dirt. One Hercules could not have single handed undertaken the labours. But it has been India's good fortune that Hercules in sufficient numbers have been forthcoming. There are, today, no arrears. The breed of the five percenters has been figuratively done away with by genocide. No longer is a tout a vital pre-requisite to the success of any mission to New Delhi. For this, we should be grateful to the fact that, in the key positions, we have had the right men with experience and with ability, and with undoubted integrity. Today, there is not a breath of scandal to tarnish New Delhi. The businessman who hies himself to India's capital can meet directly the official concerned, and get from him an on the spot decision. Perhaps, the switch in emphasis in the India of today from politics to economics, a transformation that was swiftly achieved by the successful implementation of the First Plan, has been accompanied by a more wondrous tranformation in the attitudes and aptitudes of officialdom. If Dr Appleby had seen some of these officials at work, administrative officers who have learnt the art of expeditious decision, he would have been vastly pleased with the growth of decisiveness in orders.

*

Even as the frustration of the post-partition era was eradicated

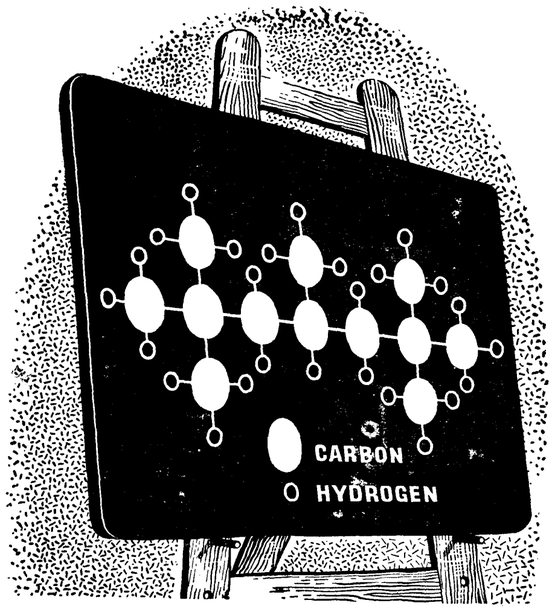
by the purposiveness of the Punjabi, so has corruption been pushed out of the picture by missionary zeal and fervour. We may be sure the officials' attitude has been influenced by the Prime Minister's personal example of drive, incorruptibility and hard work. The Nehru spirit pervades and animates New Delhi today; the Secretariat does not believe in passing the buck or keeping a file in suspense. Not a small achievement, this.

✱

It is equally certain that the idea of five-year Plans was responsible for the changed outlook and the transformed attitudes. A driving sense of high purpose is unmistakably in evidence in Olympus today. The success of the First Plan has in turn produced a keener zest for undertaking the further such endeavours. New Delhi recognises itself as the centre from which the influences flow outward to every village in this country to bring into being a new India in Free India. No citizen of New Delhi can escape the feeling that he is a participant in this great adventure.

✱

This zest in work and the new attitude toward official tasks are backed by, and founded upon, a new confidence. In the autumn of 1949, when the rupee was depreciated in tune with the devaluation of sterling, New Delhi was overwhelmed with a sense of calamity. A special session of the Parliament was convened to consider the situation. It was in January of 1950 that I undertook a special trip to New Delhi to appraise Authority on the exceptionally favourable influences released by the devaluation; and I impressed upon Dr John Matthai that his forthcoming budget must be so devised as to help the favourable influences attain their complete fulfilment. His budget, in fact, was calculated to foster and foment the propitious forces. But Sir Chintaman Deshmukh, who succeeded him soon thereafter, was still suffering from the blues generated by the mid-September crisis. In one of his first statements, he said that the financial situation was difficult, if not desperate. It was then fashionable to exalt difficulties into crises instead of regarding them as challenges. Despondency was the mood of the hour.



✱

No longer can you sense any feeling of despondency in New Delhi. The enormity of the tasks ahead is realised. The difficulties that have yet to be overcome are not under-estimated. The inadequacy of resources, physical, human, financial and administrative, is a problem which is receiving constant and constructive consideration. The heartening fact is that over and above the limitations, handicaps and inadequacies is the firm determination that the supremest effort must and shall be made; and that, by the abundant grace of God, efforts honestly made and competently directed are bound to be crowned with success.

✱

As evidence of this consummate confidence, let me refer to the official attitude toward the World Bank Chairman's letter to the Finance Minister. The communication to the press was unauthorised, and was designed to be a scoop. As happens with such scoops, the press straightaway proceeded to put a sinister interpretation upon Mr Black's intentions and attitudes toward the Second Plan. One daily paper gave the heading: World Bank refuses to make any commitment on Second Plan. Another daily carried the curt headline: World Bank's No. Official reaction, however, showed no such perturbation. "What else did the press expect?" said a Minister to me. "Did it expect Mr Black to make India an unconditional offer of unlimited

AN EDUCATION IN Oil

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

The Shaping of Public Life

DR. JOHN MATTHAI delivered a Convocation Address at Baroda, which, even amidst the innumerable national and international preoccupations of the Indian public and the Press, is bound to strike new roots of thought and discussion. A quotation from his speech should provide an appropriate start for this despatch:

> "It would be in my opinion both a useful and an interesting intellectual exercise for students engaged in the study of social sciences, especially of economics and politics, to work out different methods of approaching the problems facing the country and different solutions for them. These should necessarily be done in the objective way befitting a university. At the same time, an attempt should be made in mixed seminars composed of academic people and men of affairs to ensure their workability and their appropriateness to actual conditions. These alternative methods of approach and solution may well provide a basis for the evolution of different political programmes."

An appeal of this character can originate only from a person who combines within himself vast experience both as an academician and a man of affairs, the combination which Dr Matthai considers so desirable and which he represents in so pleasing and constructive a manner. But for this happy blend in the author the address could not have contained its rare bunch of practical issues, of equal interest to University-men and to the public at large.

Though at the outset one is tempted to give in to the despair arising from the thought of the growing impotence of the individual intellectual against the massive impact of sternly routinised ideas, one has still to concede the room left for new channels of thought and new methods of action in society. Dr Matthai's address contains indications of both. Some of the points he raised deserve a more elaborate treatment. Even in the necessarily compressed form, they have not lost in clarity or purposefulness.

Of late, there has been a great deal of anxiety on the part of the University authorities, no less than on the part of the Governments over the infectious indiscipline among the students. There is also no dearth of appeals and advice. Dr Matthai has taken the very sober view, one which he claims to draw from his own experience—that "much of the talk of indiscipline—is exaggerated and wide of the mark and does less than justice to the students as well as to universities." The solution of no problem is assisted by its exaggeration, conscious or otherwise. It is often advantageous to belittle a problem within limits. By so doing, those who have the responsibility to tackle it will imbibe greater confidence. Even if the assessment made in the address is generous to the students, it has the merit of making things look simple, and to that extent rendering the solution easier.

Dr Matthai says that he is biased neither way, that young people are much the same the world over and the experience they display in bad as well as good causes must be met with discerning sympathy and understanding rather than un-measured and one-sided criticism. Once this view permeates authority at all levels and contemporary student indiscipline comes to be looked upon as having no specially disheartening element in it, the discovery of recipes will be nearer. In other words, Dr Matthai has restored the balance and perspective which is sadly missing in the general indictment of one of the more glaring evils, which have lately crept into University life.

To the superficial and somewhat cowardly mind, all too prone to swing heavily either to the values of the past, glorifying the old traditional ways of life to the cynical exclusion of modern currents, or to the glamorous appeal of everything which is exotic and new, Dr Matthai applies a timely corrective. He has been able to draw inspiration in this respect from the courses of studies pursued in the Baroda University itself.

The very origin of Baroda University represents a challenge to the wholesale invasion of a predominantly foreign culture and outlook in India's higher education, a revolt against the policy initiated by Lord Macaulay and faithfully pursued by his successors, well meaning and mischievous.

The provision made for the study of Indian culture, particularly sanskrit, of Indian music and fine arts and of Indian systems of medicine, without the least neglect of comparatively modern studies such as technology natural and social sciences and Western medicine, must appeal to any right-thinking man as a wise blend, combining "a lively sense of the past with an urgent and practical awareness of our future demands." It is refreshing to note that this blend is being copied by more and more Universities and tends to become a universal feature of our higher education.

These experiments are held out as salutary examples, especially for countries where governments are inclined to combine politics and science to force the pace of development.

At this point, Dr Matthai's address gets diverted to its most controversial thesis. Explaining the ingredients of citizenship and the responsibilities of the Universities to promote it, he traverses nito the region of the concept of nationality, to show how the national sense in India, being robbed of a powerful negative factor which sustained it—the existence of a foreign Government—has lately tended to weaken, how the strong position the ruling party holds in the country, particularly in relation to the opposition groups, has pernicious implications in respect of the future of democratic Government in India and how a complete withdrawal of the present top-leadership in the country will be worthwhile in the interest of political stability.

In presenting this thesis, he readily grants the remarkable achievement of the present leadership in the domestic and in the international spheres and the outstanding contribution it has made to social and economic development and the country's growing prestige abroad. The case for a withdrawal of this leadership from active political life is made to rest solely on the ground that its continuation may imperil the future of the Parliamentary form of government, as the very existence of such an outstanding leadership thwarts the development and functioning of a robust and sufficiently powerful Opposition. It is also alleged that the more important divergences of opinion within the ruling party itself are being prevented from crystalising into new party divisions.

Dr Matthai is not alone in foreseeing a danger in the overwhelming strength which the Congress Party enjoys at present. Mahatmaji suggested the dissolution of the Congress Party, once independence was secured. Lately, Mr C. Rajagopalachari has been pressing the same view.

The mode of action suggested is certainly an unusual way of ensuring political stability. The less courageous, however, may feel that there is no certainty about the result and it can well be something most intolerable. As a danger-signal, the suggestion has an inestimable value.

Bombay Review

Gateway Markets

Steadier Tendency in Oils and Oilseeds Prices

THE Bombay Oilseeds market presented a steadier tendency with prices recording a slight improvement after earlier two-sided fluctuations. The initial weakness of the market was mainly due to lack of support and extensive long liquidation. Rumours of Brazilian offers of Castor Oil to the United States and reports of brighter weather mainly generated nervousness in Castorseeds, while Groundnuts were depressed following reports of gradual arrivals of the new crops. Toward the close,however, the market rallied sharply due to rumours of export business and prospects of further exports. Also, Groundnuts followed the improvement in castorseeds although the price trends reflected some hesitancy due to the possiblity of increased arrivals. Linseeds were dull and featureless.

Although price variations in Castor futures presented an uncertain pattern early in the week, the market took a turn for the better toward the close with the bulls pushing up the prices. This sudden turn in sentiment was attributed mainly to reports of fresh interest from the USA in Indian castor oil, while shippers claimed that American buyers had raised their bids for Commercial oil from 15.40 cents to 15.60 cents. It was also hinted in export circles that total erports this year might be very much higher as compared with the previous year. Castor May delivery, after touching a high of Rs 127-10 and a low of Rs 125-2, finished the week at Rs 126-12.

Trading in the Groundnut section was featured by the continued shortage of ready supplies in the market. There was a steady and sharp rise in prices, mainly attributed to the repots that the arrivals of old stocks from the interior had been seriously reduced and that the limited inflow of the new crop had suffered from larger moisture content. The strength of the market was further aided by keen purcharses of oil mills which were encouraged by the better demand for groundnut oil. Groundnut February delivery opened steady at Rs 131-12 and, after touching a low of Rs 129-12, advanced sharply toward the close to Rs 130-12, to finish at Rs 130-10.

Trading in the Linseed section remained generally dull and featureless in the absence of fresh developments regarding exports of Linseed Oil to the Communist countries. Linseed May delivery opened at Rs 26-10 and, after touching a low of Rs 26-4, finished better at Rs 26-8

*

Gold & Silver

Sentiment in the bullion market remained generally subdued despite better offtake. Silver continued to be quiet on scattered selling from upcountry centres, while Gold rallied after early quietness on the revival of spot demand.

The removal of the export ban on Chinese dollars from Tibet to India attracted heavy bull liquidation in the Silver section. Arrivals and offtake were estimated around 10 and 30 bars respectively. Forward silver opened quiet around Rs 172-11 and moved around this level before closing at Rs 172-10. The highest and the lowest levels touched were Rs 172-13 and Rs 172-9 respectively. Silver ready moved between Rs 172-3 and Rs 172-5.

A steadier sentiment characterised trading in the Gold section where an inflow of 2,000 tolas faced an outflow of 4,000 tolas. Forward Gold opened quiet around Rs 102-15; but, in the absence of offerings, rallied on shortcovering to Rs 103-3. The hightest and the lowest levels touched were Rs 103-3 and Rs 102-14-6 respectively. Spot Gold moved between Rs 103-1 and Rs 103-4. Sovereign was quoted steady at Rs 66-8.

*

Yarn

The declining trend, noticed in the Yarn market in the previous week, continued during the week under review. The majority of the operators started disposing of stocks in the ready section, with the result that the prices tumbled down to new low levels.

The market in Rayon goods failed to recover on account of the tame pre-puja demand from Calcutta and the lack of adequate enquiries from North India, Madras and Gujerat. The offtake was, it is reported, hardly half of the normal volume.

In the futures section, staple-fibre yarn October delivery declined from Rs 630 to Rs 612 per case in the absence of investment support, but improved at the close to Rs 624. In the ready section prices showed a fall of half to one anna per pound. Staple-fibre yarn 2-40s declined by an anna, but 20s and 30s were comparatively unchanged.

Conditions in the Cotton Yarn market showed similar conditions, almost all varieties losing As 4 per bundle on account of unfavourable reports from South India.

World of Cotton

Futures Easier: Spot Comparatively Steady

THE Cotton market continues to rule easy in the absence of investment and mill support. With increasing selling pressure, prices in the futures section have seen a new low for the current season.

Weather reports mainly determined the price trend. Just a fortnight ago, reports of heavy rains in some areas caused apprehensions of damage and prices, as a result, showed a recovery; but the improvement could not last long since there was again a signal of bright, clear and sunny weather in all areas. Moreover, reports from cotton areas indicated that pickings had already started and arrivals had commenced in the Punjab, Delhi and Uttar Pradesh. Also, there were reports that the quality of the new crop, arriving in the Punjab, was fairly good and that Vijay, Surti, Mathia and Dhollera varieties had also been doing well in Gujerat and Saurashtra.

For obvious reasons, prices in the futures section developed a sagging tendency under nervous long liquidation and selling by leading spot houses on an unreceptive market. Also, reports of arrivals at the terminals in Berar acted as an additional depressing factor. The selling, however, subsequently abated and values registered a partial rally under some shortcovering, partly induced by rumours of an export quota. A part of the buying was also attracted by the recent low levels. The turnover was 25,000 bales. ICC Jharilla March, after touching a new low of Rs 658, finished better at Rs 659. Similarly, ICC Vijay April closed better at Rs 764-8 after touching a low of Rs 760-8.

The Central India Cotton Association, which had been permitted by the Forward Market Commission to transact forward trading in Malwai cotton and cottonseed at Ujjain and Indore, held the "muhurat" trading on Sunday last. The business in cotton and cottonseed was done at Rs 655-4 per candy and 51-4 per "mani" of 6 maunds. The "muhurat" of the Indore ring has been fixed on the 31st October.

×

SPOT MARKET:

The Spot section ruled comparatively steady, reflecting reports of damage to crop caused by rains, especially in the Punjab area. Mills continued buying Jharilla and Vijay new crop from Berar and Khandesh. They also showed some interest in Dhollera new crop. Spinners' demand for domestic styles was, however, very low, mainly due to the nervousness regarding the quality of the new crop. The heavy excise duty on mill cloth and credit squeeze were pointed out as factors contributing to the limited offtake, although certain circles felt that the Government's decision to increase textile production and to give a rebate of six pies per yard in the excise duty in respect of extra output might be helpful to induce the mills to enter the market. Improving conditions in the wholesale market were also considered a bullish factor.

In the export section, some business was reported done in Bengal, Dhollera and Oomra varieties. There were strong rumours of an imminent release of an export quota to the tune of about 2 lakh bales, comprising 1.50 lakh bales cotton stapling ¾" and below and 50,000 bales of Bengals. There was also a talk of an increase in the export duty on Bengal varities.

In the foreign cotton section, mill were inclined to buy only spot lots of Sudan and Karnak varieties due to current high prices of Egyptian cotton. Peruvian PIMA new crop also attracted good attention, but business done was limited due to restricted offerings by shippers and lower prices offered by buyers. Limited business was done in Californian for November-December delivery, subject to import licences available.

Following rates were quoted:—Bengal Rs 660 to Rs 700; Oomra Rs 750 to Rs 760; Dhollera Rs 735 to Rs 750; Jharilla Rs 750 to Rs 775 and Vijay Rs 925 to Rs 930.

Meanwhile, import figures of foreign cotton for the 1955-56 season make interesting reading. Although about 8.93 lakh bales were licensed, actual imports are in the neighbourhood of only 5.98 lakh bales. Variety-wise, East African cotton accounts for practically 40 per cent of the imports. Imports of Egyptian cotton have been stepped up from 1.23 lakh bales to 2.19 lakh bales and Sudanese from 66,173 bales to 1.32 lakh bales.

According to the announcement made by the Egyptian Finance Minister, Egyptian cotton exporters will not be able to reduce their prices abroad without the approval of the Egyptian Exchange Control. Reductions should not exceed 10 per cent of the price of the cotton involved and will be authorised only in emergency cases where capital goods, obtainable only by barter, are required. The ban has been prompted by the practice of certain exporters of substantially reducing the prices of cotton exports through barter operations, thus helping to bring up the cost of the imports.

×

KARACHI COTTON MARKET:

The firmer trend in prices, noticed in the Karachi cotton market during the past two weeks, gathered further momentum during the week under review. The helpful factors were the absence of selling pressure and the encouraging advices from upcountry centres. Sind Deshi was quoted at Rs 96-8; Punjab Deshi at Rs 79; Punjab Roller at Rs 73-8; LSS Punjab Roller at Rs 79-14; NTRG at Rs 82-2 and 289F Punjab at Rs 82-14.

×

NEW YORK COTTON MARKET

In the New York futures market, prices moved rather erratically during the early period; but there was a rally toward the close on trade and investment buying, mainly in the forward deliveries.

The US Agriculture Department has estimated this year's cotton crop at 13,268,000 bales of 500 lbs each. This compares with the last month's estimate of 13,115,000 bales and last season's final output of 14,721,000 bales. The yield per acre is estimated at 407 lbs as against 402 lbs last month and 417 lbs last season. Ginnings, before October 1, are forecast at 5,535,000 running bales against last season's 4,815,000 bales.

×

LIVERPOOL COTTON MARKET:

In the Liverpool cotton market, the improved demand for both ready and shipment cotton was fully maintained with prices showing

Olympus

Five-in-One

Eavesdropper Writes from Delhi:

MR T. T. KRISHNAMACHARI is the fourth Union Finance Minister since independence, the fifth Indian to be the steward of India's finances, and the twelfth incumbent of that office with whom I have the privilege of contact. Over the years, the responsibilities of the Finance Minister have vastly increased; and, as though he has not enough on his hands, TTK has retained charge of the Iron and Steel Ministry. In the result, he is the only Minister who has to guide and direct five full-fledged secretaries. There is firstly the Ministry of Expenditure with Mr P. Bhattacharya as the Secretary; secondly, the newly created Ministry of Revenue with Mr A. K. Roy as the Secretary; thirdly, the Ministry of Economic Affairs with Mr H. M. Patel as the secretary; fourthly, the Ministry of Company Law Administration with Mr D. L. Mazumdar as Secretary; and, finally, the Ministry of Iron and Steel with Mr S. Bhootalingam as Secretary.

Each of these ministries has tremendously important responsibilities. The tasks connected with the framing of the annual budget and the watch over the sanctioned grants are in the charge of Mr Bhattacharya. Mr A. K. Roy is also the Chairman of the much-expanded Board of Revenue and keeps continuous watch over the progress of revenue collections and is, presumably, also concerned with a study of such fresh avenues of revenue as are in consonance with the requirements and the purposes of the Second Plan. Mr H. M. Patel, besides being in charge of money market developments and operations through the agency of the Reserve Bank, has, in his portfolio, the nationalised State Bank of India with its emphasis on expansion of rural credit, the nationalised Life Insurance Corporation, and the recently transferred Industrial Finance Corporation. Mr D. L. Mazumdar is the watch-dog, mentor, enforcement authority, friend, philosopher and guide of whatever happens in the world of joint stock companies. The detailed and continuing study of over 20,000 companies has to be started from scratch; and expert guidance and competent organisational needs have to be provided for on a basis in which the transition from the leisurely methods of the past to the alert regulation by the present law can function smoothly. The setting-up of an Institute for Chartered Secretaries is under active consideration; and a representative conference for this purpose is being held in Calcutta in the third week of this month. The deliberations will be guided by Mr Mazumdar and assisted by Mr K. R. P. Aiyengar. The Institute of Cost Accountants is also to be made a statutory body. This will be a crowning achievement for Mr G. Basu who is the originator, founder, godfather and guiding spirit of the non-official institute.

Mr Bhootalingam, in charge of the Iron and Steel Ministry, is answerable for projects which, ultimately, may come to involve a capital cost of over Rs 400 crores. Free enterprise has visibly felt the strain of expansion plans which involve an additional production of 1½ million tons of ingot steel and which has the advantage of existing facilities, trained personnel and skilled workers. All these have to be set up de novo so far as the three steel units in the public sector are concerned. The three steel sites have to be frequently visited; orders for the machinery, plant and buildings have to be placed; the construction work has to be supervised and expedited; and the thousand and one auxillary facilities have to be simultaneously brought into existence. There is also the friendly rivalry between the construction progress in Tatanagar undertaken in true yankee style and that in Bhilai where the Russian experts would aspire to make even better showing.

TTK has, without a doubt, very much more to look after than was the case with his predecessor. Of the nationalised State Bank of India, nationalised life insurance, vastly enlarged company law, and scheme of deficit financing, it may be said that Sir Chintaman Deshmukh sowed the wind, and it is TTK who is to reap the whirlwind. On this whirl-wind is superimposed the tornado of three one-million-ton steel units. This three million ton steel output is only a beginning. The third Plan envisages a few more million tons; and, to TTK, this is not a vision, but a fact that must materialise in less than a decade. In this respect, so far as steel is concerned, the shadow of the Third Plan is already on the Iron and Steel Ministry.

The whirl-winds over which he has to demonstrate his immediate prowess of riding, are the internal price situation and the foreign exchange position. So far as the first is concerned, it is difficult to say whether and to what extent deficit financing is a contributory factor. The studies undertaken so far do not lead to any precise conclusions. May be; and also, it may not be; in any case, other influences have had a more dominant part—this sums up the present thinking in this matter. Be this as it may, remedial measures are urgent and imperative. Selective monetary control is the method favoured; and this is good so far as it goes. But the real answer is that market loans should be so increased as to result in a significant reduction in the magnitude of created money. The impression I have gathered is that TTK is fully alive to the important role which market loans have to play in the scheme of financial resources for the Plan. This role is, admittedly, far more than that envisaged either in the Plan Frame or even in the Draft Plan.

Sir Chintaman was essentially timid in his approach to market loans. This was implicit in his conviction that a higher borrowing rate would secure larger subscriptions for loans from the public. His six-year regime saw a progressive rise in the borrowing rate from 3 per cent to 3½ per cent. The repercussions of this policy are reflected in the destiny of the 3 per cent 1986 loan popularly referred to as the conversion loan. This loan was issued in the summer of 1946 and was offered in conversion to the holders of 3½ per cent undated stock. The total amount outstanding in this stock was Rs 288 crores. It is an open secret that Sir Chintaman, as the then Governor of the Reserve Bank, resisted the conversion operations. He seemed to have taken the view that a considerable proportion of the holders of the 3½ per cent non-terminable loan would not elect to convert but opt for cash payment. Sir Archibald Rowlands did not view the prospects with such pessimism, and decided on conversion. The result of the conversion operation vindicated Sir Archibald's optimism (which was largely founded on the recurring urge of this journal). Holders of the loan for over Rs 280 crores took advantage of the conversion offer. Claims for payment in cash were less than 2 per cent. This constituted a record in the annals of conversion.

But, the fact is that Sir Chintaman remained convinced that the conversion into a 3 per cent undated stock was an economic blunder. And, during his long tenure of office as Finance Minis-

North Indian Notes

Role of Rural Industries

Among the various problems that came up for discussion at the first inter-State regional seminar, organised by the Ministry of Community Development, the problems of rural industries received special attention. Analysing the programmes for the development of rural industries, the group dealing with village industries suggested that marketability of products and ultimate capacity to stand on their own legs should be the basic criteria for the selection of new industries for inclusion in the programmes for development though demarcation of sectors of production or grant of long-term subsidy might be found necessary to eliminate competition in initial stages. The role of Government organizations, in the establishment of new industries, it was pointed out, lay in providing training for the improvement of existing as well as introduction of new skills, survey and research, quality control and arrangement for the marketing and supply of improved designs besides provision of long term credit and supply of scarce raw materials.

To improve the organisational efficiency, the appointment of high level experts in the State directorates of industries was considered important. Further, in view of the inability of the village level workers, to provide technical guidance in regard to industries processing non-agricultural products, the posting of single-purpose industry workers for each specific industry in the areas concerned was also found necessary.

That rural industries should have come for special attention at the Seminar, stems from the fact that there is vast scope for this development. They offer great potentialities for providing employment to the unemployed and will, incidentally, mitigate the problem of under-employment which is the chief malady of the countryside.

Already the Community Development Programmes have met with great success in the agricultural sector by way of increased agricultural production and increased wages for agricultural as well as non agricultural labour in the project areas. If the Community Development Programmes succeed in establishing new rural industries on sound lines it would go a long way in the successful implementation of the Second Five-Year Plan, by giving occupation and a source of livelihood for the millions of unemployed and underunemployed people in the country. Besides adding to the wealth of the country and raising the income of the poor, the establishment and encouragement of rural industries would also provide a decentralised base for India's economy.

*

New Company Law

Addressing the Cattack Chamber of Commerce on the scope of Government regulations and control over the affairs of companies, Shri B. R. Bhagat, Deputy Minister for Finance, declared that by and large the Government had fulfilled all the undertakings that had been given at the time the Companies Act was framed and that the basic principle of not interfering with the internal management of companies was and continued to be fully recognised. Emphasising the need for a certain amount of publicity or full disclosures of the affairs in the matter of companies whether private or public, as an essential condition for the recognition of corporate personality, he said that the new Act only sought to lift the veil of incorporation by adding to the list of disclosures a few which now compel the companies to disclose all contracts with their Directors, contracts in which their Directors are directly or indirectly interested, contracts with the managing agents and, where managing agents were partnerships, with any of their partners, the remuneration to be paid to the Directors and to the managing agents and the relations of the managing agents, Secretaries and Treasurers, etc.

He also explained to them the circumstances which led to the appointment of an Inspector so as to carry on investigations into the affairs of the company and said that this was necessary in the light of fruitful investigations that had been conducted in the past. At the same time, he assured them that no action would be taken before examining the pros ands cons of every case and only after a careful assessment of the effects on the state of the market as well as on the mind of the investor of any action that would be taken. The purpose of the Government in interfering in the affairs of the company, he said, was only to create an atmosphere of friendliness between the company management and the members of the investing public. Urging the Management to act and behave as trustees, he told them that departures from the minimum code of good conduct and rectitude tended to create a demoralizing effect on company managements as well as on the public

Speaking on the various regulatory sections of the Companies Act which require, in certain cases, the approval of three-fourths in majority of the shareholders of a company attending a meeting of the company, Shri Bhagat said, that the object of the provision was to secure as much disclosure as possible, by giving the management an opportunity to place before the members the nature of the activities in which the company is engaged, the staff employed thereon and the remuneration paid for such services, the details of the contracts or agreements in which special sanction is required before managerial personnel who hold a post of trust are instituted.

He referred to the existence of undesirable practices, which have been disclosed by a number of resolutions which have been passed by companies with the aid of majority of holdings, and drew the attention of the members present to instances of managing agents relinquishing their posts and converting themselves into Managing Directors or Directors, so as to enter into buying and selling agreements with the company without circumventing the technical provisions of the law, and also of companies trying to circumvent the provisions of Section 198 which prescribed overall limits for managerial remuneration by appointing certain relations or associates of their own in precisely identical posts designated differently.

Answering the criticisms that the law was unnecessary, complex and unproductive and that the Companies Act was one of the least administered of the Central Acts, Shri Bhagat said, that the criticism was beside the point and drew their attention to the distinction between regulatory functions and utility of commercialised services which may be assessed in terms of fee or other income.

In conclusion, he said, that the Company Law was designed to add strength to the company form of organisations and enable the private sector to fulfil its due share in advancing the economic development of the country, and appealed to all those who were primarily responsible to act in conformity with the provisions of the law, to extend their friendly co-operation, so that the objectives of the law were fully attained.

NORTH INDIAN MARKETS

Cane Price for 1956-57 Season

THE Government of India have fixed Rs 1-7 per maund as the minimum price for gate deliveries and Rs 1-5 per maund for deliveries at rail centres for sugarcane to be purchased by vacuum pan sugar factories during the 1956-57 season. These prices are the same as fixed for the 1955-56 season and are subject to the formula for linking the price of cane with the price of sugar evolved by them.

The Bombay Government have, however, in accordance with the policy adopted by them for fixation of the price of sugarcane for the 1955-56 season, decided to follow the same policy for the 1956-57 season. They have, therefore, discussed this question with the Deccan Sugar Factories' Association on September 21, 1956. The minimum price, now mutually agreed upon between the Government and the factory-owners, is Rs 45 per ton of sugarcane. This, it must be noted, is the minimum price which every factory has agreed to pay and does not affect any contracts for higher price, if any, made by the factories with the cane-growers.

Thanks to heavy arrivals and falling demand, prices of Sugar are developing an easier tendency. Another factor responsible for the setback is the approaching crushing season, which is expected to commence either by the end of this month or early next month.

The production and despatches of sugar from indigenous factories, up to 30th September, 1956, amounted to 18.59 lakh tons and 16.00 lakh tons as against 15.88 lakh tons and 11.01 lakh tons respectively in the corresponding period of the previous season. Stocks with the factories for the same period in the current year stood at 6.78 lakh tons as compared with 5.36 lakh tons last year.

There are reports that several mills have not been able to dispose of their last quota of sugar released. With the announcement of a fresh release of another 1.60 lakh tons, the total quantity, so far released out of the 1955-56 production, amounts to 14.63 lakh tons.

Demand for imported sugar is also reported to be slack as a result of which the markets in all centres have been ruling easy. As a matter of fact, the Government of India have reduced the selling price of the imported sugar, lying in Government godowns at Jamshedpur, from Rs 29-8 to Rs 23 per maund, net ex-godowns, with immediate effect. The minimum tenderable quantity for this sugar has also been reduced from 100 to 10 bags.

In the Hapur market, conditions remained stagnant due to slack outside buying enquiry and partly due to heavy rains. Mill delivery rates, therefore, fluctuated within a

Madras Review

The Peninsula

On the Eve of Reorganisation

WITH no more than a couple of weeks for the inauguration of the new States under the reorganisation scheme, speculation on future Cabinets and Chief Ministers has reached an exciting pitch. Where there is hardly any scope, or atleast possibility of a change is in residual Madras. Mr Kamaraj seems stronger than ever on the saddle.

With the disaffiliation of the Canarese and the Malayalee-speaking Districts, his status as the leader of Tamil Nad has improved a great deal. Mr C. Rajagopalachari has virtually washed, his hands completely off domestic politics, though some ungenerous elements still continue to spread the myth of C.R's potentialities as an active group commander in the future set-up. Sober persons do not attach any value to such fantastic ideas.

Mr Kamaraj has a very decisive voice in the selection of candidates for the next election and anyone can be sure that his preferences will be such that both the party's and his own strength would be well protected. If a rival were to emerge from a situation which by every token is extremely compact and reassuring, it will be nothing less than a miracle. As far as the new Madras State is concerned, Mr Kamaraj's chances of continuing as Chief Minister just now seem to be a little more than cent per cent.

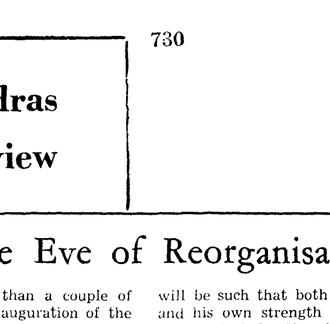
As a result of the dissolution of the present legislature, the Cabinet will lose one Minister drawn from South Canara, and the Assembly its Speaker, drawn from Malabar. Already people have started asking whether the Chief Minister would choose to replace these men immediately and if so by whom. The answer too is not difficult to guess. With very little margin for miscalculation, one can say that he will not be anxious to put new men into the vacant positions and thereby introduce strife and personal bickerings in the party on the eve of the general election. In these matters, the Chief Minister's practical sense has never played him false.

In Kerala, the question as to who will be the new Chief Minister is not easily answered. For one thing, there is none at present and amidst the uncertainties of Presidential rule, individual ambitions can run riot. With the detachment of the five Taluks from the T-C State, which have been consistently returning an overwhelming majority of Congress candidates, whether of the Pradesh Congress variety or of the lukewarm Travancore Tamil Nad Congress, the position of the Congress Party has been somewhat damaged.

There is no adequate recompense through the addition of the Malabar District, where the Congress has always found it an up hill task to contend against the Muslim League on the one side and the Communists on the other. The political balance of reorganisation in Kerala may well turn out to be a deficit, from the standpoint of the Congress party. When one thinks of the communal rift among the top leaders of the Party, the picture becomes all the more confusing. To venture a forecast of individual fortunes at this stage may be unhelpful.

Meanwhile certain developments have significance as pointers to the shape of things to come. Mr Madhava Menon, President of the newly-formed Kerala Pradesh Congress Committee, has lately been having conversations with the Praja Socialist leader, Mr P. Thanu Pillai. Mr Menon is also keeping himself in touch with some of the leaders of the splinter Congress group in T-C State. Though the PCC President formally denies any political content for these talks, it cannot be supposed that they could have any other purpose.

In the T-C State, the PSP has a pronounced bias toward the Congress as against the Communist Party—a circumstance which introduces a new element of complication in the field of inter-party alignments even if they be for the purpose of elections. Hitherto the only achievement in this direction in the T-C State is the alliance between the Communists and the Revolutionary Socialists. If the present manoeuvres of the Congress party are to provide a clue, it can safely be said that the Congress leaders are thinking more or less on the lines of a post-election situation similar to that which obtained two years ago, when no party could command an absolute majority.



The fears of the Congress are the hopes of the Communists, who are now feverishly trying to rope into a common anti-Congress front all the groups, not exluding even the rebel elements in the Congress. As for the choice of an all-Kerala leader for the Congress party, the old rivalries will be further aggravated by the accession of the Malabar District.

In Mysore, the Congress is very differently placed. There is hardly any threat of a serious challenge. But domestic rivalries have not cooled down. Just now, there are at least five names on the lips of active political workers. Mr B. N. Datar is tipped for the next Chief Ministership by one section; another holds that Mr H. Siddaveerappa has a good chance. The present Chief Minister, Mr Manjappa has also a substantial following and the ex-Premier Mr Hanumanthayya seems to be an inevitable runner. Mr Nijalingappa's supporters seem to be cock-sure about his victory in the event of a contest.

It is in Andhra that the race for Chief Ministership has become most exciting. Mr B. Gopal Reddi, the present Chief Minister met the Congress President a few days ago. The Congress High Command is sparing no pains to see that an unanimous choice would be possible. Its efforts may however prove of little avail, because already the leaders are arrayed in opposite camps and few men who count make a secret of their determined loyalties. The Hyderabad leaders have staged a graceful retreat from the scene of active contest. Mr B. Ramakrishna Rao will definitely be not in the run.

This piece of self-denial from Telangana has cleared the way for a straight fight between Mr Gopala Reddi and Mr Sanjeeva Reddi, his present Deputy in the existing Andhra Cabinet. An approximate index of the likely support each of the two can command in the combined legislature, i.e. the present Andhra Assembly and the Telangana section of the Hyderabad Assembly which together will constitute the new Andhra Assembly, is available in the form of lobby estimates.

Mr Ramakrishna Rao is known to have offered his support to Mr Sanjeeva Reddi. Mr Rao has a backing of about 40 members out of the 50 representing Telangana in the Hyderabad Assembly. In Andhra the position is more flexible, though Mr Sanjeeva Reddi's supporters claim that even there he has overwhelming strength. It would appear that the Telangana vote will be the decisive factor in the event of an election. Many leaders in Andhra as well as outside are strenuously working to facilitate an unanimous choice.

FOREIGN TRADE...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

With a network of correspondents at all important trade centres of the world the **United Bank of India Ltd.**, is equipped to render adequate service and give expert guidance in matters of foreign trade.

South Indian Notes

Dairy Industry

The first anniversary meeting of the Madras State Dairy Technicians Association, held last week in Madras, was the occasion for Mr M. Bhaktavatsalam, the Minister for Agriculture, to make a strong appeal to all who are connected with the dairy industry in the State to ensure its development along sound lines. He stressed the need for spreading technical knowledge in this field and congratulated the Association for the work it had been able to do during the short time of its existence.

The importance of developing the dairy industry and of increasing the yield of dairy products need hardly be mentioned in a country which, paradoxically, is, at the same time, one of the richest and one of the poorest countries in the world in terms of cattle wealth. The quantity of milk produced per day as also the number of milch cattle in India compare favourably with any country but comparative figures of average annual yield of milk per cow tell a very different story. The average in India is 413 lbs. as against 8000 lbs in the Netherlands 7000 lbs in Australia and 5000 lbs in the USA. The cattle census of 1951 gave the figure of average per capita consumption of milk and milk products in India as 5.5 ozs, which is far below than, what the nutrition experts lay down, as the minimum necessary. The average consumption in Madras State is even lower and ranges between 3 to 4 ozs per day.

These facts are, of course, well known as are the reasons why they are so and the remedial measures that must be taken to effect an all round improvement in the situation. The general backward condition of agriculture, poor quality cattle, insufficiency of feed and fodder, high incidence of disease, lack of organised production, improper handling of milk and milk products these are problems requiring urgent solutions, all of which depend, in the last analysis upon, what the Planning Commission called "a proper policy and progessive programme for breeding and feeding".

The need of a body such as the Dairy Technicians Association is precisely to help in the implementation of such a policy and programme. The Association is not meant primarily to provide a research centre but rather to help in the practical schemes undertaken by the State or municipal Govenrments for tackling the numerous problems connected with the production, supply and consumption of milk and milk products.

The Madras Government have lagged behind the Bombay and the West Bengal Governments in organising large-scale milk colonies as have been done in Aarey and Haringhata near Bombay and Calcutta. Mr Bhaktavatsalam in his speech referred to the pioneering work done by the City Coperative Milk Supply Union. But except to lead the way in actual practice in cooperative methods it has not as yet been able to build up a sufficiently large organisation to undertake regular supply and distribution of milk to a large city population. However, the Minister pointed out there was great scope for development of the cooperative societies. In fact he was of the opinion that a successful statewide and permanent machinery for bringing down milk prices and for ensuring proper distribution could only be built up, if, along with the Government's efforts, the people took to cooperatives. The Second Plan gives a proper emphasis on the need for cooperative Societies in this respect and the target figure of milk production through the co-operative societies is 60000 Madras measures of milk per day.

Mr A. Palaniappa Mudaliar, Registrar of Cooperative Societies mentioned at the meeting the steps which the Government proposed taking to achieve the targets laid down in the Second Plan for the dairy industry which are: (a) 150 milk supply cooperative societies are to be organised during the Plan period, (b) facilities for the grant of loan to producers to buy milch cattle are to be greatly extended, (c) seven pasteurisation plants are to be set up at a cost of Rs 9 lakhs in selected milk supply societies in order to preserve milk over longer periods, (d) machinery are to be installed for supply of milk in sealed bottles to prevent adulteration at the distribution end, and (f) to increase the supply of fodder a scheme to utilise the sewage water of the Madras Corporation will be given effect to.

Tungabhadra High Level Canal

The inauguration of the Tungabhadra High Level Canal scheme on Gandhi Jayanti Day earlier this month the beginning of work in the last phase of one of the biggest irrigation-cum-hydel power multi-purpose schemes in this country. The overall project a dam across the Tungabhadra river, a reservoir, canals to irrigate large tracts of land, generation of hydro-electric power—is the outcome of years of investigational surveys, of preparation and effort and of bold planning and technical research. Unfortunately the project has had rather a difficult passage in the process of coming into being. Its progress has been marred by more intense inter-provincial jealousies than are usually encountered in schemes affecting the interests of more than one province, and records of earlier efforts provide numerous instances of departmental delays and procrastination.

For more than fifty years there have been periodical surveys and investigations to draw up plans for utilising the waters of the rivers of Andhra to provide irrigation facilities to the surrounding areas. The then Governments of Madras and Hyderabad had held innumerable joint conferences to evolve a scheme of construction and an agreed basis for sharing the canal and for providing the maintenance cost. It was not till 1945 that work in the construction of the 160 feet high dam was started. After many initial difficulties and stoppages it was completed in 1953. The low level canals—designed to irrigate 4 lakhs acre of land in the districts of Bellary, Kurnool and Raichur—were completed near about the same time. The High Level canal, excavation work on which has now at last started, has, however, been long the subject of an acrimonious dispute between the States of Andhra, Mysore and Hyderabad. Mr C. M. Trivedi the Governor of Andhra who inaugurated the scheme referred to this in his address and said that he was surprised when he came to Andhra in 1953 by the

South Indian Markets

Prospects for Pepper

PEPPER markets have continued to rule weak with prices drifting to lower levels due to poor enquiries from foreign buyers coupled with the anxiety on the part of the growers to sell in view of the fast-approaching season. Formerly, when prices were ruling high, exporters were buying from growers and selling to overseas buyers without maintaining any sizeable stock. But the present prices, having been taken near the bottom, every exporter has tried to build up stock. In a weak market when foreign countries are buying hand-to-mouth, such holding by second hands has created unhealthy competition with the first hands.

With the proximity of the new season, there are enquiries about the estimate of the new crop, the balance of exportable surplus and the estimate of home consumption. As far as the Cochin-Travancore area is concerned, the prospects for the new crop are reported to have improved due to favourable weather during the last two months, and the crop is expected to arrive by the first week of November.

According to a report issued from Bombay, the tentative estimate for the new crop, Malabar black, is between 20,000 and 21,000 tons. The estimate of exportable surplus, as on the 1st October 1956, is about 4,000 tons—exports from November 1955 to September 1956 came to 11,825 tons. The estimate of home consumption is in the vicinity of 9,000 tons.

Shipments of black pepper, during August, were higher at 22,911 cwts as against 17,034 cwts in the preseding month and 9,363 cwts in the corresponding month of last year. Exports during the current season from November 1955 to the end of August, 1956 have been also higher by 25,158 cwts at 2.29 lakh cwts.

A close study of the export figures in August reveals that the USA has been much in the picture. During this period, as much as 19,240 cwts have been absorbed by the USA. Imports into the USA, for the first seven months of the year, have aggregated 1.91 lakh cwts against 1.93 lakh cwts during the corresponding period of last year. India has been a major supplier at 1.07 lakh cwts against 1.09 lakh cwts.

Meanwhile, conditions in the Alleppy market ruled unchanged and the rate was quoted around Rs 712-8 per candy for superior Palai quality and Rs 700 for inferior Thekkan varieties. In the London market, Sarawak was weak under pressure of offers and poor offtake, while Malabar was dull and easier. White Sarawak was quoted at 25d per pound.

*

Ginger

In the Alleppey market, the rate for Ginger is nominally quoted around Rs 550 per candy.

Sizable increase has been made in dry ginger exports from this country during August when as much as 8,107 cwts has been shipped as against only 5,757 cwts in the previous month. The two Ports, which had the lion's share of the increased exports, are Bombay and Cochin with 4,682 cwts and 3,425 cwts respectively.

Exports from the commencement of the season in November last year to August this year have also been higher at 87,297 cwts as against only 43,111 cwts in the corresponding period of the previous year. Aden being the biggest buyer.

*

Coffee

A record bumper crop of 34,000 tons of Coffee is expected during the 1956-57 season. After meeting internal consumption, nearly 14,000 tons will be available for export. By the end of 1971, production will go up to 60,000 tons.

The Coffee Board has put into effect a Rs 3-crore development scheme, spread over five years, for extensive and intensive development of Coffee. The present area under coffee in South India is 250,000 acres. The net area to be brought under cultivation under the development plan is expected to be about 23,700 acres.

The Board will give loans to growers for intensive cultivation as also for extension of the area under the crop. Extension of the acreage will, however, be subject to certain specified limitations based on existing acreage. The loan amounts sanctioned for extension of acreage will be Rs 1,000 per acre for Arabica and Rs 750 for Robusta variety. The present loan scheme will not, however, be applicable to new entrants.

A major coffee Pool auctions was held at Coimbatore toward the end of last week, when 1,350 tons were offered. Keen interest was not displayed by bidders since the movement of coffee had, of late, not been very satisfactory. Moreover, most dealers appeared to have sufficient stocks on hand, with the result that the auction did not touch the price level which prevailed in the September auction.

Following was the range of bids at the auction (price per cwts):—Plantation PB Rs 220 to Rs 225 (coast quality); Plantation "A" Rs 210 to Rs 225 (according to quality); Plantation "B" Rs 202 to Rs 210; Plantation Triage Rs 195 to Rs 210; Cherry Rs 175 to Rs 185 and Robusta Rs 156 to Rs 162.

*

Groundnuts

Conditions in the Madras Government market remained firm. Due to rainy weather, arrivals and offerings were small. Arrivals averaged 25 to 30 tons per day and these were taken up by small crushers to meet their immediate requirements. The rate for superior oil-quality seeds was quoted upto Rs 162 per candy and the bold variety at Rs 156 per candy.

In the Groundnut Oil section, the rate for the ready position improved from Rs 295 to Rs 305 per candy. Calcutta interests took up small quantities for near-by and ready deliveries. With the rainy weather in the upcountry producing areas and the difficulty of drying the kernels and thereafter crushing and delivering the oil, sellers were rather reserved.

*

Hides and Skins

In the Madras Tanned Hides market, there was a steady arrival of Cow hides, while clearances were good. Prices for medium weights were a shade easier, while light weights were about 3 to 6 pies per pound down on the previous week's level. There was little response from the UK buyers who were trying to pull down prices. Some business was, however, reported done in light weights on the basis of 30d and 27d for heavy weights.

Arrivals of Buff hides were fair and there was fairly good clearance without any change in prices. In Cow Calf, several poor selection lots were cleared from the market. A small quantity of Buff Calf was cleared from the market without any change in prices.

In the Tanned Skins section, market quality Goat skins ruled weak. Common adulterated tanned Sheep skins remained unchanged with others two annas per pound easier.

There was very little change in the pattern of trading in the export section. Transactions in goat skins were reported in 11/12 lbs. fifths at 9sh to 9 sh 3d. In Sheep skins, prime qualities met with enquiry.

The markets for Raw Goat and Sheep skins, in Bangalore and Bezwada, remained unchanged.

Reports are current that Russia, East Germany, West Germany and a few other European countries may enter the Madras market for hides and skins and that substantial quantities may be purchased. Trade circles feel that this will provide alternate markets for Madras hides and skins as against the present, so to say, monopoly market of the UK.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company has declared payment of an Interim Dividend on the Company's Ordinary Stock at the rate of £3 per cent net (tax applicable at 8s. 6d. in the £) for the year ended 31st December, 1956. Payment will be made on 15th November, 1956, to those stockholders whose names are registered in the Company's Stock Register on 26th October, 1956.

Applications for transfers received in this Office before 12 O'clock noon on Friday, the 26th October, 1956, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
I. A. MACPHERSON,
Agent.

Victoria House,
Calcutta, 16th October 1956.

HUKUMCHAND JUTE MILLS, LTD.

NOTICE TO SHAREHOLDERS

"NOTICE is hereby given that the next Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Friday, the 9th November, 1956, at 4-30 P.M. for the following purposes:—

1. To receive and pass the Directors' Report and the Audited Accounts for the year ended 31st March, 1956.
2. To declare Dividends.
3. To elect Directors in place of those retiring.
4. To appoint Auditors.
5. To pass the following resolution as a Special Resolution:—
   "RESOLVED that Sri D. P. Goenka, a Partner of the Managing Agents be and is hereby re-elected a Director of the Company."
6. To transact any other business that may be brought before the Meeting.

Dividends, if declared, will be paid to the Registered Shareholders only.

The Share Transfer Register of the Company will be closed from 1st November, 1956 to 9th November, 1956, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDAS
Managing Agents."

Calcutta,
the 9th October, 1956.

Calcutta Tramways Company, Limited

Record Traffic Receipts

Need for Greater Cash Resources

Mr. D. E. Webb's Speech

The Annual General Meeting of the Calcutta Tramways Company, Ltd., was held on October 9 at Winchester House, Old Broad Street, London, E.C.

Mr. D. E. Webb, F.C.A., the Chairman, who presided, said: Gentlemen,—The accounts of your company for the year ended December 31, 1955 show a continuation of the improved conditions of the previous year. The period was once more free from major incidents and, as a result, it has been possible to strengthen the company's position still further.

The popularity of the trams was once more evinced by the increase in the number of passengers carried to a total of 384 million. In order to achieve this figure, each tram car in service had to run about one hundred miles a day through crowded streets, continually stopping and starting, and it is a matter for congratulation to our engineers and workshop and depot staffs that they not only keep the trams in firstclas mechanical condition, but present them to the public in a condition of cleanliness comparable with the best of those in any world capital.

TRAFFIC RECEIPTS

Traffic receipts, which amounted to £1,891,939, were a record in the company's history, and were a direct result of the increase in confidence of the travelling public as a result of the absence of major disturbances. At the same time expenses rose by some £40,000, of which increased payments to the staff in India amounted to £23,000. After charging London office expenses, setting aside £80,000 to renewals and replacements account, and including £10,831 expenditure on development account, the balance carried to revenue appropriation account was £206,018 compared with £189,639 in the previous year. The amount set aside for taxation amounted to £83,000 and after paying Debenture stock interest and allocating the fixed agreed amount of £87,457 to shareholders' account, there remained a balance of £21,742 for transfer to special reserve account.

Turning to the shareholders' account, there is an item, First Debenture stock redemption account, appearing for the first time. This represents the purchase in the market of amounts of the First Debenture stock which have been bought in and cancelled at a considerable discount. It was felt that it must be in the interest of the Ordinary shareholders to acquire and cancel such Debentures as, whenever the undertaking is taken over by Government, they will become repayable at par out of the purchase price. The Second Debentures are, of course, already taken care or by the existing redemption provisions. During the year £6,305 of First Debenture stock has been purchased and cancelled at a cost of £3,902.

An interim dividend on the Ordinary shares of 3½ per cent. free of tax was paid in March, and your board now recommend the payment of a final dividend of 5 per cent., free of tax, making a total for the year of 8½ per cent., free of tax, compared with 7½ per cent., free of tax, for the preceding year.

BALANCE-SHEET

Turning to the balance-sheet, there are a few points to which I would call your attention. The expenditure on renewals and replacements account amounted to £102,495 and has exceeded the allocation of £80,000 as foreshadowed last year. The major increase has been on renewals of permanent way, and this expenditure will remain high for several years to come.

An additional amount of £15,828 has been added to the special reserve account, being overprovision for taxation in previous years. These adjustments on taxation account arise mainly from the settlement of claims for double taxation relief on which finality in respect of certain past years has still not been reached.

The liquid cash position has further improved to a more satisfactory level. On this subject I would like to draw attention to the remarks I made last year regarding the necessity for these liquid reserves and the fallacy inherent in union leaders' arguments that they can be made available for any other purpose. At that time I said:—

"I would emphasize the following points:—

(a) Your undertaking is of necessity a cash business. There are, therefore, no sundry debtors in the normal course of trade.

(b) When disturbances occur, the source of cash dries up, whilst our normal expenses continue. In any period of unrest, when our cars are off the road, our cash resources are depleted at the rate of about £100,000 a month.

(c) Once that money has been lost, we cannot make it up afterwards by working harder. It has gone for good.

(d) During a time of unrest cash ceases to come in but our creditors still have to be paid."

NEED FOR INCREASED FARES

Once more I would reiterate how badly we need an increase in fares. We are running this great undertaking on a day to day basis. The fleet of cars and the track are being maintained in an efficient state and the essential services are being rendered to the people of Calcutta, but we are not advancing as we should. Even the smaller projects for the realignment of tracks to conform with the city's all-important traffic problems, and the provision of cars of improved design, affording greater comfort and travelling facilities for the public, cost sums vastly in excess of the surplus available to meet them, resulting from the present scale of fares.

There is still a feeling in Calcutta that increased fares will mean increased profits for the shareholders. One cannot repeat too often that the amount available for shareholders is fixed under the agreement with Government. Even if the surplus on running the undertaking were to increase ten-fold the amount available for the shareholders would not increase by one rupee. Any increase in the surplus can only accrue for the benefit of the Government and the people of Calcutta. One of the great objects behind the Agreement with Government was to ensure that never again would an increase in fares be questioned on the grounds that it would benefit the shareholders. Such an increase, when necessary, can only result in a surplus to be used in improving and modernizing the undertaking and alleviating the travelling worries of the public.

CURRENT YEAR

The results of the current year to date are comparable with those under review. Receipts have remained constant whilst expenses have increased slightly, showing a small decrease in profit. I am visiting your undertaking at the beginning of November, when I hope to have conversations with Government on several matters of importance.

Our staff have rendered good service during the year under review. Whilst temporary stoppages have occurred, nevertheless on the whole our employees have shown a greater sense of responsibility in their negotiations and an increased appreciation of good employment. We sincerely hope that this points to a permanent improvement in the relations between management and staff, where both sides recognize their responsibilities, and where the seed of mutual confidence may have every chance of being sown and taking root.

The executive staff, some of whom have received promotion to more responsible tasks, have once more given of their best. Our agent, Mr. Blease, has had a worrying time due to the retirement of some of the senior members of his executive. He is, however, once more building up a firstclass team, and our thanks are due to them all.

The report and accounts were adopted.

THE INDIAN IRON AND STEEL CO. LTD.

NOTICE

In the Board's Circular Letter to the shareholders of Indian Iron & Steel Co. Ltd. dated 1st October 1956 notification has been given that the Government of India are unable to agree to any increase in the rate of dividend on the Ordinary Share Capital of the Company. At a meeting of the Board of Directors held today, the Directors have accordingly recommended payment of a dividend of One Rupee per share free of Indian Income Tax being at the same rate as the preceding year. This dividend awaits the sanction of the shareholders at the Annual General Meeting to be held on the 30th November 1956.

The Ordinary Share Register of the Company will be closed from the 20th November 1956 to the 30th November 1956, both dates inclusive and the dividend, if sanctioned, will be paid on or after the 17th December 1956 to those shareholders whose names appear on the Register of Members on the 30th November, 1956.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

9th October, 1956,
12, Mission Row, Calcutta.

Industrial Finance Corporation of India

The following is the speech delivered by Shri K. R. K. Menon Chairman of the Corporation, at the Eighth Annual General Meeting of the Shareholders held on 29th September 1956 :—

Gentlemen,

I have pleasure in placing before you the Accounts of the Corporation and the Report of the Board of Directors for the year ended the 30th June, 1956. Printed copies of the Accounts and the Report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read. I would, however, make some observations on a few points.

2. The working of the Corporation for the year ended the 30th June 1956 has resulted in a profit of Rs. 32.68 lakhs which shows an increase of Rs. 8 lakhs over that of the previous year. After setting aside a sum of Rs. 10.18 lakhs as provision for taxation we are left with a net profit of Rs. 22.50 lakhs. The whole of this amount, however, has had to be transferred to the reserve for Bad and Doubtful Debts in view of the anticipated loss in the account of the Sodepore Glass Works Ltd., to which I made a reference in my speech last year. We have, therefore, had to call upon the Central Government this year also to pay us a subvention to enable us to pay the entire guaranteed dividend amounting to Rs. 11,25,000/-. We hope that with the further provision that we shall make from the current year's profit towards bad and doubtful debts, there will be no need to set apart any amount in the succeeding years on this account. As we shall make a substantial saving in our tax liability on our current year's income, depending on the size of the amount that we are obliged to write off in the account of the Sodepore Glass Works Ltd., we anticipate that we will have sufficient balance left out of our profits this year to meet the guaranteed dividend to our shareholders without having recourse to a subvention from Government. You will observe that I take quite an optimistic view of the future. I do so, relying particularly on two major factors, namely, first the increasing measure of appreciation on the part of the industrialists of the country, and also of co-operative Societies engaged in industrial enterprises, of the ability of the Corporation to meet their needs in the matter of long-term loans, and second, the marked increase in the volume of industrial investment that is likely to materialise during the period covered by the Second Five Year Plan.

3. Evidence of the first named factor will be found in the figures relating to our activities furnished to you in the Annual Report which is in your hands. It will be noticed that the amount of loans applied for in the year which has closed reached the record figure of Rs. 27 crores 70 lakhs as compared with Rs. 11 crores 27 lakhs for 54-55 and Rs. 9 crores for 53-54. The average for all the previous 7 years put together is Rs. 8 crores 62 lakhs. I venture to think that this is a fair indication of the increasing amount of confidence that the industrial public is now placing in our institution. To deal effectively with this enormous increase in the demands made on us, and at such short notice, has been no easy task, and the measure of the modest success we have achieved in this direction is indicated by the fact that the total amount of loans sanctioned by us during the year under review was Rs. 15 crores 13 lakhs as against Rs. 7 crores 34 lakhs in 54-55 and Rs. 5 crores 27 lakhs in 53-54. The yearly average for all the previous seven years put together was only a little over Rs. 4 crores. I see no reason why this very satisfactory record for 55-56 should not be maintained in the succeeding years if our administrative machinery is geared adequately to cope with the increasing load, and our relations with the industrial and commercial sector of the public continue to be as close and cordial as they have been during the past year.

4. In connection with this last named factor of public relations it is my very pleasant duty to take this opportunity to acknowledge the assistance that we have received during the year under review from the various Chambers of Commerce & Industry whose representatives were good enough to meet me and my colleagues on the Board of Directors on several occasions for free and frank discussion of various problems of mutual interest. These discussions greatly facilitated our work during the year, and have helped in particular to focus our attention on ways and means of simplifying our procedure to the advantage of our clients as well as ourselves. I feel sure that the steps we have already taken in pursuance of these discussions would bear fruit in the near future in the shape of better business for us and more cordial relations with our clients.

5. I will refer to just one or two of the more important measures that we have adopted in connection with the drive that we embarked upon in the year under review for quickening the pace of work and effecting other general improvements. A measure of great significance, was the institution of a separate legal branch of our own, manned by full-time officers under the control of the Corporation, in our head office as well as in two of our branch offices. This measure, which has been introduced as an experiment for the present, will be extended to all our branch offices after we satisfy ourselves that there are no snags to it. It is designed to quicken the pace of work at various stages in connection with the examination of title deeds and the execution and registration of mortgage documents. This will also cut down to a very considerable extent the legal charges now incurred by us and passed on to borrowers. Many of our clients have expressed great satisfaction at this long over-due reform in our administrative set-up. We have also succeeded in considerably simplifying, and standardising to as great an extent as possible, the terms and conditions incorporated in our mortgage deeds. The previous practice of our sending for our clients' representatives all the way to the Head Office in Delhi to discuss and finalise the terms and conditions of loans was given up, and branch Managers were delegated authority to deal with our clients on the spot on our behalf. We have also liberalised to an appreciable extent the conditions under which interim loans are granted, particularly in cases where, pending the finalisation of the legal formalities concerned with the execution and registration of the formal mortgage deeds, machinery etc. ordered by our clients has to be paid for or documents relating to which have to be retired.

6. Before I leave the administrative and organisational aspects of our work I should like to mention one or two salient facts in regard to the audit that has been done of our accounts. We have now four different auditors carrying out audit throughout the year, and I shall refer briefly to each of them. Firstly, there is our own internal audit, the machinery for which has, in the course of the year, been put on a satisfactory working basis. This has been found to be of very great value to us. Secondly, there is the audit done by a firm of Chartered Accountants who are elected by the shareholders. Thirdly, another firm of Chartered Accountants appointed by the Central Government in consultation with the Comptroller & Auditor General also conducts an audit. No serious irregularity has been brought to notice by either of these firms of Chartered Accountants. Certain relatively minor matters to which our attention was drawn by them have been looked into and set right. Fourthly, there is the audit carried out by the Director of Commercial Audit under the auspices of the Comptroller & Auditor General. In the course of the year under review the Director of Commercial Audit conducted his audit in two instalments, the first one extending from the last week of September 1955 to the first week of February 1956, covering our official year ending 30th June, 1955, and the second extending from the first week of June 1956 to the first week of August 1956, covering the first half of the year 1955-56. In the audit of the accounts for the first period a large number of formal objections were raised by the audit party and, after we had commented upon them, only a few of these objections are now understood to be in the process of finalisation. We are hopeful that a few more of these items also will be withdrawn or modified as a result of further discussions. The audit of the second period is still in the process of completion.

7. There is no doubt that in the existing set-up we have a multiplicity of audit, somewhat in excess of real requirements. One might also be tempted to take the view that if the bulk of the items of original audit objections was withdrawn there must have been created quite an appreciable quantity of work at all levels most of which would have been eventually proved to be infructuous. These and other related matters have engaged our close attention and we have brought these to the notice of Government.

8. I now turn to the second important factor, which I would describe as the external factor—as distinct from the internal factors about which I have been speaking to you till now—which, in my opinion, should give us ground for hope of an even greater volume of business for the Corporation in the future. This factor is centred round the spurt in industrial investment in the private sector that it is anticipated will materialise during the Second Five Year Plan period.

9. The Planning Commission in their report on the Second Five Year Plan have given detailed figures of some of the overall targets of industrial investment in both the public and the private sectors which, they state, will show that the Second Plan period will be one of "intensive and many sided industrial effort." During the first Five Year Plan period there was a short-fall of investment in the private sector in certain industries, though, in the aggregate, the investment target of Rs. 230 crores for expansion programmes was bettered in actual performance to Rs. 340 crores. The lag in private investments occurred, according to the Planning Commission, in industries which required heavy capital investment and offered a relatively small profit margin. It is this kind of industry which might not be able to attract adequate equity capital from the investing public that would claim our special attention during the coming years, which due reference

of course to the industrial priorities drawn up by the Planning Commission in their report. The general scheme of priorities in the private sector as envisaged by them places Iron & Steel first, then heavy and medium engineering industries, including structural fabrication, automobiles, railway rolling stock, castings & forgings, industrial machinery, bicycles, sewing machines, motors and transformers etc., followed by fertilisers, chemicals, cement, refractories, jute and cotton textiles, sugar, paper and a wide range of consumer-goods industries. The programme of over-all development envisaged in the private sector during the 2nd Plan period is estimated to involve an outlay of Rs. 720 crores, comprising Rs. 570 crores of new investments and Rs. 150 crores on replacements and modernisation. Of this total estimate of Rs. 720 crores a provision has been made by the Planning Commission for Rs. 55 crores for the activities of the National Industrial Development Corporation and Rs. 15 crores for us, leaving a balance of Rs. 650 crores to be raised from other sources. While our figure of Rs. 15 crores is near enugh to the average of our disbursements during the past seven years, our achievement during the past one year leads me to think that we should be able not only to reach this target quite easily but to improve on it to an appreciable extent in the next five years. We, therefore, propose to address Government on the subject of the feasibility of increasing this figure.

10. In spite, however, of the fact that these figures relating to the industrial development in the private sector during the Second Five Year Plan that I have given you do augur well for an institution like ours which may well be described as a hand-maiden of the private sector, I think it is just as well that I invite your attention also to one or two factors which we shall have to take into account in assessing our ability to rise to our full stature in the coming years. Firstly, we must take note of the fact that we have other institutions like the Industrial Credit and Investment Corporation of India and the National Industrial Development Corporation whose fields of activity converge on ours, and indeed, overlap with ours to some extent. Secondly, it is important to bear in mind the fact that both these institutions have a greater measure of freedom in the matter of financial operations than we have, and they enjoy certain special facilities which we do not share. Thirdly, though the Central Government have so far implemented the policy of utilising the Corporation as the main channel for processing their own industrial loans, and we may hope with confidence that this policy will continue to be followed, we cannot be sure that the State Governments have been, or will be, equally helpful to us in this matter. I mention this as we have been given to understand that certain State Governments have sanctioned loans directly to certain industrial concerns, and, according to a statement contained in the Annual Report of one of the State Financial Corporations, the State Government concerned have been "offering loans at rates of interest which are only about half of those charged by us and on the basis of security which are also very much easier than those observed by the Corporation." You will agree this is a matter of vital importance to both ourselves and the State Financial Corporations.

11. The fourth, and, in a sense, the most important factor which is likely to come in the way of expanding our activities to the fullest extent otherwise possible, is the fact that, if we succeed in inviting business at the present rate and dealing with applications for loans at the pace that we have achieved last year, our own monetary resources will soon be tapering off, thereby accelerating the advent of the day when we shall perhaps be forced to borrow under conditions which might leave us little or no margin of profit after meeting our tax obligations and our working expenses. This matter is engaging our serious attention already, and we hope that we should be able to find a satisfactory solution in collaboration with the Central Government who have been apprised of the matter. It will take some time before a final decision is taken; I mention it now merely to reinforce my point that if the outlook is on the whole bright and we could be quite optimistic regarding the future, it behoves us also to take note of other factors which we shall have to take into account.

12. In my speech last year I said that we had been obliged to take over possession of the assets of certain concerns who had defaulted in their obligations to us. The position in this regard is explained in our Annual Report. You will have observed that there has been considerable progress in this matter. I am glad to inform you that one of these factories, which we sold, and another which we leased, have both now gone into production. It is gratifying that these concerns which had virtually closed down business for considerable periods have been set on their feet again and brought into full production, thanks to the intervention of this Corporation. We are taking appropriate steps with the same objective in regard to the other concerns also, and we hope it will be possible to achieve our objective consistent with the safety of the funds invested by the Corporation.

13. You will no doubt also recollect that the Board of Directors had decided to sell the factory of the Sodepore Glass Works Ltd., another of our defaulting concerns, to the Asahi Glass Company Ltd., of Tokyo and that the vendee concern were to form an Indian company to take over the assets and work the plant. This Indian company has now been formed, and necessary action in regard to the execution of the sale and mortgage deeds is well under way. Steps have also been taken by the company to make necessary arrangements for bringing the factory into production as early as possible. We expect that this factory will start working before long.

14. Another noteworthy feature of our activities in the year under review was that we sanctioned loans to Cooperative Societies of a total amount of Rs. 5 crores 50 lakhs. I should like to mention in this connection that apart from the impetus that this has given to the Cooperative movement as such the fact that as a condition precedent to our loans, the members of these Societies, drawn mostly from the lower income groups have been made to subscribe towards the industrial schemes financed by us, a total sum by way of share capital of the order of Rs. 2 crores 20 lakhs, has contributed appreciably towards helping Government's efforts at promoting savings and drawing them off for investment purposes.

15. A large majority of the concerns to whom we have lent money did quite well during the year under review, and, in the case of a number of concerns, we saw no reason to withhold the permission asked for to declare dividend in excess of the normal maximum of 6%. This very satisfactory position in regard to production and profits is reflected in the figures relating to progress of repayments furnished in the Annual Report.

16. You will have noticed from the industry-wise figures given in the Annual Report that our loans to the sugar industry aggregated Rs. 11 crores 58 lakhs at the end of the year under review. We have been advised by the Central Government that we should continue to finance Sugar Co-operative factories on the scale that we have been doing hitherto, and that as regards loans to sugar factories other than Co-operative Sugar Factories our policy in regard to their financing should not be unduly restrictive in view of the recent enhancement by the Government of the target of production for the industry.

17. We dealt with the large majority of loan applications in consultation with our Advisory Committees of which we have had four working in the course of the year viz., those for the Textile, Engineering, Chemical and Sugar industries. These Advisory Committees are now in the process of being reconstituted so as to include a larger number of technical experts in each, and also so as to provide for a wider territorial representation.

18. The figures given in Appendix E to the Annual report showing the State-wise distribution of the loans sanctioned by us in the year under review as well as in the previous years will show that as compared with the position as it obtained on 30th June 1955, there has been a marked increase at the close of our financial year in June 1956, in the loans sanctioned to concerns located in certain States. Excluding those States which, relatively speaking, may be described as industrially advanced, the figures relating to the progress in some of the other States are, I think, worth inviting your special attention to. These are—

(i) Andhra	Increase from Rs. 4 lacs up to the end of 1955 to Rs. 1 crore 29 lacs at the end of 1956.
(ii) Assam	from nil up to the end of 1955 to Rs. 45 lacs at the end of 1956.
(iii) Punjab	from Rs. 1 crore 10 lacs up to the end of 1955 to Rs. 2 crores at the end of 1956.
(iv) Travancore-Cochin ..	from Rs. 1 crore 12 lacs up to the end of 1955 to Rs. 3 crores 18 lacs at the end of 1956.
(v) Uttar Pradesh ..	from Rs. 1 crore 30 lacs up to the end of 1955 to Rs. 2 crores 95 lacs at the end of 1956.

Efforts are being made to effect substantial increases of this kind also in other States similarly situated.

19. The ministerial and officer staff of the Corporation was augmented to some extent to make good deficiencies which had existed since long. On the procedural side, certain measures were adopted which have resulted in the cutting down of delays in the day-to-day work of the Corporation to an appreciable extent. This matter continues to engage the personal attention of myself and my General Manager, and we are hopeful of effecting further improvements as soon as the additional staff to be newly recruited are in position.

20. Before resuming my seat, I should like to convey my sincere thanks to my colleagues on the Board of Directors and on the various Advisory Committees for their co-operation and guidance in all our deliberations. I should also like to convey on behalf of the Board and on my own behalf our thanks to the General Manager and the entire staff of the Corporation, both here and in the branches, for their very loyal and devoted work throughout the year in spite of the exceptionally severe strain that had been placed on them as a result of the marked expansion of the activities of the Corporation in the year under review.

OLYMPUS

(Continued from page 728)

ter, he got the chance to prove his thesis. In November 1951, the floor for the 3 per cent 1986 was lowered by the Reserve Bank. A few months ago it was again lowered. The price of the stock (issued at par ten years ago) is now below Rs 75. That is, investors, who put faith in Sir Archibald's judgment, now find that Rs 70 crores out of the Rs 280 crores have been wiped out. Sir Chintaman, while vicariously gratified by the thought that he had proved himself right, must also reflect sadly that, among the many distinguished men who had the privilege of being the steward of India's finances, no one has the record of having wrought, in his regime, a 25 per cent depression in a giltedged stock.

The damage is immense; and the repercussions are to be seen in the faint-hearted attitude to market loans. The new Finance Minister will, one may confidently hope, evolve a policy which shows more daring in planning, and more faith in his country's credit. In one of his early speeches soon after taking office, TTK referred to the 1956 New Loan results and was gratified that they provided a propitious start for the market loan requirements of the Second Plan. If such was the performance in the first year of the Plan, the increase in the coming years, in proportion to the Plan's disbursements and the boomerang effect thereof, must be in geometrical progression. The borrowing policy and techniques, open market policy and stratagems, will all be suitably revised so as to lead to the materialisation of this hope.

As I said, recourse to market loans for amounts larger than planned will mean a corresponding cut in deficit financing. Toward this end, immediate revision of ideas with regard to the pattern of giltedged prices is called for. A change from the static (and often retrograde) pattern of giltedged prices to a dynamic pattern is the task that awaits the immediate solicitude of the dynamic TTK.

Another present headache for TTK is the galloping depletion of the Reserve Bank's foreign assets. In my talks with him, I found him, however, confident that he has the situation well in hand. There is a rising and spreading black market in steel; and the deliberate policy and plans of the Government are to scotch the black market by adequate supplies of steel. Large quantities are being imported, and these imports will continue for some months. Further depletion of foreign exchange is to be expected; but this aspect of the Second Plan assumed that it was in the early part of the Plan period that the maximum utilisation of the foreign assets should take place. From 1957-58, steel imports will be confined to the amounts specified in trade pacts already concluded.

Concurrently, other measures are being actively considered. The talks with the World Bank on loans against the Transport projects included in the Plan may be expected to result far more favourably than is now considered possible in the atmosphere created (wrongly, in my opinion) by the letter of the World Bank's chairman. After two years, who knows there may materialise another surplus commodities agreement with the USA. The possibilities of iron ore and manganese exports as foreign exchange earners are being constructively pursued. I also put in a word for a similarly imaginative approach to Indian Finance's suggestion of Gold Bearer Bonds.

*

ORIENT PAPER MILLS LIMITED

NOTICE is hereby given that the Thirtyeighth Annual General Meeting of the Shareholders of the ORIENT PAPER MILLS LIMITED will be held at its registered office at Brajrajnagar in the district of Sambalpur (Orissa) on Tuesday, the 20th November, 1956 at 3 P.M. for the following purposes:—

(a) To receive and consider Report of the Directors and to adopt the audited accounts of the company for the half-year ended 31st March, 1956.

(b) To declare dividends on preference and ordinary shares.

(c) To elect Directors in place of Shri P. R. Sarker who retires by rotation and in place of Shri R. K. Somany who retires by rotation as well as under Section 261 of the Companies Act, 1956.

Shri R. K. Somany is an associate of the Managing Agents and has been on the Board of Directors since almost the inception of the Company. It is considered desirable to avail of his valuable advice by retaining him as a director of the company. The company has received the requisite special notice from a shareholder and accordingly the special notice is hereby given to the shareholders for passing the following special resolution for reappointment of Shri R. K. Somany, as a director of the company.

"RESOLVED that Shri R. K. Somany, an Associate of the Managing Agents, be and is hereby re-elected as a director of the company."

(d) To appoint Auditors for the current year and fix their remuneration.

As Special Business

(e) To consider and, if thought fit, to pass, with or without modification, the folowing ordinary resolution:

"RESOLVED that inspection of registers, books and all other documents, required to be maintained and kept open for inspection by the company, be allowed to the persons entitled thereto, on receipt of 24 hours' prior notice from them, at the registered office of the company during 11 A.M. to 1 P.M. on each working day, in accordance with and subject to the provisions of the Companies Act, 1956."

(f) To transact any other business, which may be brought forward at the meeting, with the permission of the Chairman.

The Share Transfer Books will remain closed from the 5th to 20th November, 1956, both days inclusive.

Explanatory Statement

Item (e) The resolution has been proposed to fix the time for and mode of inspection of various registers, books and documents of the company, keeping in view the administrative convenience.

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

8, India Exchange Place,
Calcutta, the 16th October, 1956.

N.B. (i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The dividends, when declared, will be payable to registered shareholders as on the 20th November, 1956 on or after the 30th November, 1956.

CLIVE STREET GOSSIP

(Continued from page 724)

amounts?" Official interest has centred round the last paragraph of Mr Black's letter in which he has referred to the transport problems and invited the Indian Government to open immediate talks with the World Bank on the projects included in the Transport Plans. The points raised by Mr Black are not construed as hostile criticism by an unwilling lender. They are the issues which will, doubtless, be raised in a scientific assessment of the credit-worthiness of India.

*

The impression of competency, confidence and incorruptibility which I thus formed during the last visit to Delhi was confirmed by unsolicited testimony. Among those who called on me at the hotel were two friends from London who were directors of a British company and who had come to this country to investigate the possibilities of adding certain important manufacturing lines to their subsidiary concern registered in India. They were very pleased, indeed, with what they saw and observed here. Above all, they were much impressed by the way they were received by the New Delhi officials and by the businesslike character of the talks they had with the concerned departments. They thus summed up their experience: "Every one of the officials we called upon was co-operative in the highest degree. Every one of them dealt with the matter in a practical spirit. There was no dilatoriness or indecision or evasiveness. We now know exactly where we stand. And it is good to know that British capital and know-how are assured of the fullest welcome and need apprehend no discrimination against it."

My pilgrimage to New Delhi has removed all my earlier qualms about the human and administrative inadequacies. No longer is New Delhi suffering from the sense of frustration which refused to see any silver lining; from the feeling of despair bordering on collapse of faith in God, man and country; from the confusion for which there seemed no end or cure; from the question marks for which there appeared to be no answers; from the sordid corruption and graft which one saw on every hand. Instead, there is, as I said, a new purposiveness, a new confidence, a new missionary spirit, a readiness and resolve on the part of every one to contribute his mite toward the Prime Minister's great adventure of creating a New India, where its sons will have a fuller and sunnier life and which will hold a respected place in the affections and esteem of the nations of the world.

BRITAIN AND EUROPEAN FREE TRADE

(Continued from page 719)

sphere of foreign policy. In practice those differences amount to little more than differences in attitude when in responsible office and when in responsible Opposition.

Politically the Conservative Government could not possibly afford to go beyond the formula of European free trade confined to manufactures without risking a disruption of the Party. Even that concession is likely to be subject to much criticism. As a gesture it will no doubt encourage Britain's European Allies. In practice even the establishment of full free trade would do little from the point of view in defence of the free world what is not already being done by N.A.T.O.—(Copyright)

Stock Exchanges

EQUITIES LOSE FURTHER GROUND

Watch-Dog Writes:

STOCK markets have continued to be in a wavering mind although they are in a healthy state. Operators, in general, are not able to look ahead with confidence in view of the uncertainty about the Government's financial policy. They are, therefore, inclined to reduce their commitments, resulting in the prices recording further losses all-round.

The Calcutta Stock Exchange remained closed due to "Pujah" holidays.

On the Bombay Stock Exchange, prices developed a sagging tendency due to lack of fresh support and pre-holiday atmosphere.

Price movements on the Madras Stock Exchange were rather erratic and there was small buying in selected counters.

The London Stock Exchange made a satisfactory showing after a cautious start.

Wall Street closed barely steady with an irregular tendency extending to one dollar or more.

*

Bombay

A moderate widespread recession in values was in evidence on the Bombay Stock Exchange during the past week. In view of the fact that bull traders had fared badly during the past many weeks, bears were active and inclined to press sales at every bulge. There was a feeling that the Government would take further anti-inflationary measures in view of the recent letter from the Chairman of the World Bank with regard to the financing of the Second Five-Year Plan. Sentiment was further affected by fears of increased taxation in the next Budget, tight conditions in the money market and the likely diversion of investible funds to the new issues to be announced shortly. The downward trend was accentuated by the closure of the Calcutta market. Thus, with sellers predominating and buyers holding back, prices reacted sharply. The closing was on a subdued note.

TEXTILES:—Except for some enquiry in Bombay Dyeing and Century at lower levels, Textile issues ruled generally quiet. Although the Government decision to give a rebate of six pies per yard in the excise duty on cloth under certain conditions helped to bring about a mild revival, the closing rates still showed moderate losses all-round.

Bombay Dyeing opened at Rs 625-10 and, after touching a high of Rs 634-6, finished the week at Rs 628-12. Similarly, Century touched a nigh of Rs 554 and, after being marked down to Rs 547-4, finished better at Rs 551. Kohinoor touched a high of Rs 353-4 and a low of Rs 348-12, to finish at Rs 350-12. Central India changed hands at Rs 149 to Rs 151; Simplex at Rs 201-12 to Rs 203 and Svadeshi at Rs 246 to Rs 250. Indore Ordinary moved narrowly between Rs 11-15-6 and Rs 12-2 and the Deferreds between 2-0-3 and 2-1-3. Finlay and Swan were quoted around Rs 342-8 and Rs 440 respectively. Shree Niwas were a steady feature at Rs 216-4.

Hydro-Electrics:—Shares in this section made a mixed showing. Tata Hydro closed half a point better at Rs 130, while Tata Power were maintained at Rs 1,310 and Andhra Valley at Rs 1,240. Ahmedabad eased off to Rs 94-11 from Rs 95 and Bombay Suburban to Rs 110-0 from Rs 110-10.

Steels:—Steel shares developed renewed weakness and prices touched new low levels. A general desire for increased liquidity also added to the amount of shares on offer which it was difficult to absorb. Moreover, the general feeling was hesitant in view of the fact that large carry-over charges would have to be paid by bulls in Indian Irons on Friday for carrying over their outstanding business to the next settlement. Tata Ordinaries opened at Rs 194-8 and, after improving to Rs 195-0, receded at one time to Rs 193, to finish better at Rs 193-12. Indian Irons commended at Rs 34-6 and, after improving to Rs 34-10, receded again at the close to Rs 34-5 due to selling pressure.

Banks & Insurance:—Bank shares met with restricted activity with the tendency remaining quiet. Bank of India, Bank of Baroda and United Commercial were all unchanged at Rs 174-8; Rs 102-0 and Rs 57-8 respectively. Central India, however, closed better at Rs 52 against Rs 51-8 and Punjab National at Rs 57 against Rs 56-8.

In the Insurance section, Orient were quoted around Rs 3,650, while New India were a share cheaper at Rs 44-0

Miscellaneous:—In this section, Bombay Burmah Old were active on speculative support on prospects of a higher dividend. The scrip opened at Rs 745 and, after touching a **high of Rs 748-2**, receded to Rs **733-12 on profit-taking**, to recover again toward the close to Rs 743-12. On reports of the delay in the Government sanction for the issue of bonus shares, Tata Oil faced liquidation, having declined to Rs 52-12 from Rs 54-0. National Rayon slumped to Rs 255-8 from Rs 259, to finish better at Rs 256. Tata Chemicals hovered narrowly around Rs 20-1, while WIMCO closed easier at Rs 175-10 against Rs 177-8—the opening rate.

Sugar shares evoked some enquiry at lower levels with Belapur changing hands at Rs 251 to Rs 252 and Phalton at Rs 161-8 to Rs 162.

Cement shares were adversely affected on heavy sales in right issue of ACC. It appeared that, in view of the good bargain by way of buying rights, certain operators sold the old issue. ACC started at Rs 169 and, after touching a low of Rs 193-4, finished better at Rs 194. Digvijay were, however, unchanged at Rs 194.

In the Engineering group, the alternate bouts of buying and selling caused irregular fluctuations in Tata Locomotive between Rs 167-8 and Rs 169, to finish the week at Rs 167-12. Premier Construction shed Rs 1¼ at Rs 208-8 with Alcock quoting around Rs 337-8.

Among Shipping shares, Scindia moved to and fro between Rs 18-11½ and Rs 19-0 to finish at Rs 18-13. Great Eastern had some support upto Rs 22-4.

Elsewhere, Premier Automobiles were quoted at Rs 103-4; Killick at Rs 172 and Hind cycles at Rs 160.

*

Madras

THE general pattern of trading on the Madras Stock Exchange, during the week under review, suggested emergence of small buying in select counters.

Textiles:—Shares in this section were in better form. Coimbatore Spinnings were bid higher at Rs 88; Janardhanas at Rs 99 and Ranga Vilas at Rs 84. Buckinghams improved to Rs 197 on better support and Adonis to Rs 11-10. Maduras were quoted around Rs 49-12.

Plantings:—This section ruled weak with sellers predominating in most of the scrips. Tea shares showed a mixed trend. Peermades dropped down to Rs 32-12, while Periakaramalais were taken upto Rs 9-9. There were some buyers of Coorgs, Chembra Peaks and Devasholas at the market rates.

Among Rubber shares, sellers were seen at one time in Cochin Malabar down to Rs 11-5, to finish better at Rs 11-8 on the emergence of buying support. Midlands were offered at Rs 20-2; Travancores at Rs 25-12; Vaikundams at Rs 34-0 and Kalpettas at Rs 32-6. Thirumbadis hovered around Rs 2-5-6 and Pullangodes around Rs 2-6-8.

In the Coffee section, Consolidated Coffees changed hands at Rs 20-8 to Rs 20-12 with Coffee Lands quoting Rs 26-3. Ouchterlonys were a narrow market around Rs 5-2.

Miscellaneous:—In this section, some buying enquiry caused FACTs and Aluminium Industries to improve to Rs 6-14 and Rs 20-0 from Rs 6-12 and Rs 19-14 respectively. Travancore Cements continued to be in good demand at the market rate. Mysore Golds noted support at Rs 2-6, while Nundydroogs were quoted higher at Rs 10-10. T. Stanes met with some support upto Rs 26-0.

(Continued from page 716)

rate was raised further to 5½ per cent in February last it was widely believed that this stern measure would produce its full effect in a month or two. Today most people in Britain have reluctantly come to the conclusion that dear money has come to stay. Quite obviously even with such a high bank rate it is barely possible to hold the economy precariously balanced. There is no safety margin, and the Government is not expected to be able to afford to lower the bank rate in the foreseeable future. The economy is still overloaded and the gold reserve is still too near danger point.

To point out these facts does not mean to minimise the Government's achievements in bringing the situation under control. But it is quite obvious that the situation will have to improve very considerably before Mr Macmillan could afford to lower the bank rate at the risk of bringing about thereby an unwanted rise in prices and an outflow of gold.

Nor is this the whole story. One of the main reasons why dear money has come to stay is that the British public is becoming increasingly conscious of the depreciating trend of their money. To induce the public to save and to invest it is necessary to make it worth their while to do so. On the basis of post-War experience the yields obtainable until recently on most forms of reasonably safe investments have come to be considered grossly inadequate. Holders of Government Loans and even of equities, have been earning for many years less than the dpreciation of the real value of their investments through the rise in prices. In order to attract sums into conservative investment, such as life insurance it is necessary for the insurance companies to be able to afford to offer much more attractive terms than they have been offering. This is only possible if the yield on Government Loans remains high.

The possibility of running the British economy once more on a basis of a 2 per cent bank rate has been discarded even by the Socialists. On the basis of Dr Dalton's disastrous experience in the early post-War years they realise that such a low bank rate necessarily accentuates the progress of inflation. They have many other inflationary policies in mind and could ill afford to aggravate the effect of such policies by reverting to cheap money policy. In order that such policy could safely be undertaken it would be necessary first of all to maintain the value of the currency over a period of years and thereby to restore public confidence in the stability of money.

FOR THE INVESTOR

(Continued from page 713)

Rs 1.28 crores to Rs 72.67 lakhs. The transfer to reserve fund has been cut by Rs 25 lakhs to Rs 50 lakhs. Other funds receive Rs 5 lakhs less at Rs 5 lakhs. The ordinary dividend has been raised by 10 per cent to 60 per cent.

	1952-53	1953-54	1954-55
Gross Earnings ..	1,22,34,293	2,29,25,635	1,47,14,905
No. of Ordinary Shares ..	1,50,000	1,50,000	1,50,000
Profit per Share ..	81.50	152.84	98.10

The table of net earnings makes reading as fabulous. Let us remember, incidentally, that Sutlej ordinary shares have a face value of Rs 10 each.

	1952-53	1953-54	1954-55
Profit after taxation	55,91,293	1,01,20,635	74,47,405
No. of Ordinary Shares ..	1,50,000	1,50,000	1,50,000
Net profit per Share	37.28	67.47	49.65

And what of the balance sheet? The ordinary capital is shown at Rs 15 lakhs. The reserve fund totals Rs 2.55 crores. And other funds are placed at Rs 56.90 lakhs. The gross block of Rs 96.10 lakhs has a net value of Rs 23.65 lakhs. Cash balances, at Rs 95.72 lakhs, could pay off the ordinary capital more than six times. Liquid assets are shown at Rs 4.70 crores against sundry liabilities of Rs 1.36 crores.

£ R $

Kesoram Cotton

Finally, we come to the accounts of Kesoram Cotton.

AUTHORISED CAPITAL: 20,000 7 per cent Cumulative Preference shares of Rs 100 each—Rs 20,00,000; 1,40,000 5½ per cent Redeemable cumulative Second Preference shares of Rs 100 each redeemable at par at any time after 31st March 1960, in accordance with Special Resolution passed on 18th January 1956—1,40,00,000; 24,00,000 Ordinary Shares of Rs 10 each in subdivision of 12,00,000 Ordinary shares of Rs 20 each in accordance with Special Resolution passed on 29-4-1955—Rs 2,40,00,000—Total Rs 4,00,00,000. ISSUED AND SUBSCRIBED: 20,000 7 per cent Cumulative Preference shares of Rs 100 each fully paid in cash—Rs 20,00,000; 4,00,000 Fully paid Ordinary shares of Rs 10 each in subdivision of 2,00,000 Ordinary shares of Rs 20 each of which Rs 7-8 per share has been received in cash and Rs 12-8 per share has been issued for consideration other than cash—Rs 40,00,000; 12,00,000 fully paid ordinary shares of Rs 10 each in subdivision of 6,00,000 Ordinary shares of Rs 20 each issued for a consideration other than cash Rs 1,20,00,000—Total Rs 1,80,00,000. The above 16,00,000 Ordinary shares of Rs 10 each represent the subdivision of 8,00,000 Ordinary shares of Rs 20 each in accordance with special Resolution passed on 29th April 1955.

The company has been carrying on business for the last 36 years. The company suffered losses upto 1930 as a result of which the values of the assets of the company were written down as on 24th January 1931, as per Reduction Scheme and the value of the Ordinary Shares was reduced to Rs 2-8 per share from Rs 10 per share. Since then the company has made steady progress. Consequently, in 1948, the company capitalised a sum of Rs 5,00,000 from its reserves and issued fully paid up bonus shares of Rs 2-8 each on the basis of one such bonus share to every holder of 3 ordinary shares of Rs 2-8 each. Further, the face value of the Ordinary shares was raised from Rs 2-8 per share to Rs 20 per share by the capitalisation of the profits of the company from time to time on four different dates between 1948 and 1954 amounting to in all Rs 1,40,00,000. In 1955 the entire 8,00,000 ordinary shares of Rs 20 each were subdivided into 16,00,000 ordinary shares of Rs 10 each.

The assets of the company consisting of land buildings and machinery etc. were valued in the year 1950 and a surplus of Rs 1,45,87,000 lies to the credit of capital reserve account of the company as on 31st March 1956.

The company is engaged in the manufacture of cotton yarn and cloth and hosiery goods. The company has now decided to extend its activities; and, with that end in view, it has proposed to instal a plant for the manufacure of continuous filament viscose Rayon yarn. Since there is good demand in the country for rayon cloth, it is expected that the rayon to be produced by the company will have a ready market within the country. A licence necessary for the establishment of a ten ton rayon yarn plant has already been obtained. In the beginning, it is proposed to instal a plant of 6/7 tons capacity. The cost of the installations is estimated to be about Rs 3,70,00,000.

The company proposes to meet about Rs 2,70,00,000 for the purchase of land, machinery and equipment and certain construction work from its existing resources. To meet the balance of Rs 1 crore, the company in June 1956 issued 1,00,000—5½ per cent (income-tax free) Cumulative Redeemable Second Preference shares of Rs 100 each.

A portion of land required for the new Rayon yarn factory has already been acquired in Hooghly District near Calcutta.

During the year ended 31st March 1956, new buildings for the various weaving departments were completed, as a result of which all weaving preparatory machines and most of the looms have now been brought under one roof. New buildings for the warehouse and cloth processing departments are under construction, and it is expected that, during the current year, this work, too, would be completed. Proposals for replacement of old and worn out machinery are also under active consideration. The company has placed orders for an additional 5,000 ring spindles, licences for which have already been obtained from Government. The new machines are expected to come into operation during the current year.

	1952-53	1953-54	1954-55
Profit after preference Dividend ..	46,95,024	44,83,130	47,52,313
No. of Ordinary Shares	16,00,000	16,00,000	16,00,000
Profit per Ordinary Share ..	2.94	2.80	2.97

Assuredly, an impressive table. The same table is recast below, but after taxation, in addition to the preference dividend. In other words, it is the net earning per share.

	1952-53	1953-54	1954-55
Net Profit ..	21,95,024	24,83,130	30,80,313
No. of Ordinary Shares ..	16,00,000	16,00,000	16,00,000
Net Profit per Ordinary Share ..	1.37	1.55	1.93

The higher net earnings in the latest year are due, of course, to the lower provision for taxation, but this was to be expected since there have been additions to block.

The balance sheet of Kesoram Cotton, as at the end of March 1955, shows ordinary capital of Rs 1.60 crores and preference capital of Rs 20 lakhs. There is a capital reserve of Rs 1.46 crores, reserve fund of Rs 45 lakhs and other funds totalling Rs 14.67 lakhs.

On the other side of the ledger, the gross block of Rs 3.59 crores has a net value of Rs 2.39 crores. Liquid assets are placed at Rs 2.52 crores against sundry liabilities of Rs 1.03 crores.

The latest available accounts are for the year March 1955. These disclose that sales have improved by Rs 4 lakhs to Rs 5.57 crores. The net profit is better by Rs 2½ lakhs at Rs 48.92 lakhs. Depreciation is somewhat higher at Rs 11.51 lakhs against Rs 9.85 lakhs. There is a transfer to the reserve fund of Rs 5 lakhs. The ordinary dividend has been maintained at 8¾ per cent absorbing Rs 14 lakhs.

The following table sets out the earning per ordinary share (before taxation and depreciation, but after the preferential dividend):

	1953-54	1954-55
	24,83,130	30,80,313
	16,00,000	16,00,000
	1.55	1.93

In such manner, we come to the conclusion of the group study of Birla scrips. With the exception of Jay Shree Textiles, it will be noted that every company has consistently had a satisfactory profit to disclose to its shareholders. Almost every company is expansion-minded, as revealed by the additions to block in some cases, and by the issue of further capital in others. It is in this wise that investment interest abounds in the Birla scrips: they offer, for the present, a satisfactory return to the shareholder; and, for the future, they promise a perhaps substantial capital appreciation.

✱

WORLD OF BUSINESS

(Continued from page 720)

in 1955 was placed, at Rs 1.14 lakhs, at more than four times the 1951 figure. The dividend has, during the same period, been raised from 5 per cent to 8 per cent.

Sulekha expects to embark upon an ambitious development programme, for which fresh capital is being sought as well as a Government loan. The satisfactory position of the balance sheet will doubtless enable success to attend the efforts at raising the necessary finance. For, as against the paid-up capital of Rs 1.13 lakhs, reserves total Rs 1.10 lakhs.

If, during the course of the Second Plan, a sizeable increase is expected in the demand for paper, it is also to be anticipated that there will be a similar expansion in the demand for inks. Sulekha is preparing to meet such additional demand.

✱

BALANCE-SHEET REVIEWS

(Continued from page 714)

company's goods, raw jute prices continued at a level due to which it was not possible to transact business at a profit.

Sales for the year are shown at Rs 2.26 crores against Rs 2.17 crores, while the net profit, before Taxation and Depreciation, is slightly higher at Rs 20,42,370 against Rs 19,85,473 in the previous year. Apart from setting aside a sum of Rs 9.00 lakhs for Deferred Renovation Reserve, the directors have reduced the Depreciation amount from Rs 9.43 lakhs to Rs 5.50 lakhs and Taxation from Rs 4.00 lakhs to Rs 4.00 lakhs to Rs 2.30 lakhs. The dividend on the Ordinary shares has been reduced to 5 from Rs 11½ per share.

According to the directors' report, the mill is now fully equipped with Sacking Warp and Weft Spinning machinery. The order for Hessian Warp machinery has already been placed. During the last few months of the year under review, the Fort William Jute Company became a subsidiary company and its business is, except for Silk manufacture, of the same nature as the business of this company.

NORTH INDIAN MARKETS

(Continued from page 729)

narrow range. Following were the rates (per maund) quoted:—Jaswant Rs 28; Simbhauli Rs 28-3; Mowana Rs 28 Daurala Rs 28-12; Amroha Rs 27-10; Bijnore Rs 27-10; Mansoorpur Rs 28 and Rampur Rs 30-4.

The Khandsari market continued to remain dull and depressed with poor demand against good stock position. Prices ranged between Rs 22 and Rs 26 per maund, according to quality.

✱

Gur

The Hapur Gur market continued to rule steady. Due to excessive rains, New Gur arrivals were almost nil last week. Old gur was in demand and the rate for this appreciated by As 8 to Rs 11-4 per maund for dry quality and Rs 10-12 for Kotha quality. Stocks of Old gur were estimated at about 15,000 maunds.

✱

Foodgrains

Steadier conditions prevailed in the Foodgrains market. At Hapur, Wheat prices recorded modest gains following heavy rains, which have caused extensive damage to crops all over the province. Arrivals were scanty, while local requirements were mostly met by fair-price shops. Wheat average quality was quoted at Rs 15 and farm quality at Rs 16-4 per maund.

Coarse grains were quoted slightly higher on reports of heavy damage to standing Jowar, Bajra and Guwar crops. Gram was marked up to Rs 11-12 per maund for Deshi quality and Rs 12-4 for the Punjab quality. Barely and Eejhar also recorded slight gains, while poor arrivals from the producing centres accounted for an improvement in the price of Maize.

Pulses were also quoted higher although trading was on a small scale. Peas dara was quoted at Rs 11-8 and the white quality at Rs 12-8 per maund. Arhar appreciated by As 4 to Rs 11-14 per maund. Standing crops of Urad and Moong were extensively damaged by excessive rains and prices of these advanced to Rs 18-8 and Rs 12-8 per maund respectively.

The Delhi grains market displayed a steadier tendency and the reports of damage to standing crops in the producing areas caused a rising trend in prices. Wheat dara quality improved by about Re 1 per maund. Maize moved up by As 8 per maund on encouraging reports from Uttar Pradesh.

In the Bombay market, prices of both Jowar and Bajra have steadily moved up by Rs 15 to Rs 20 per candy during the past six weeks. Jowar of the Sholapur quality has been firm at Rs 170 to Rs 180 per candy and that of the Madras variety at Rs 160 to Rs 165 per candy. The Old crop supplies of Bajra have also been fetching high rates at about Rs 170 per candy.

Grains dealers attribute this rise in prices to the acute shortage of these commodities which is confined not merely to Bombay, but is also in evidence at upcountry centres including some of the producing areas. It is felt that the present high prices are parly due to fears that the recent untimely rains in some areas will adversely affect the quality.

✱

WORLD OF TEA

(Continued from page 721)

Broken Pekoe 205; Medium Liquoring Pekoe Fannings 295; Medium Liquoring Orange Pekoe 245; Low Medium BOP 235; Low Medium Pekoe Fannings 275; Low Medium Dust 205; Low Medium Orange Pekoe 230 and Low Medium Pekoe 220.

In the auction held at London last week, buyers showed considerable discrimination about quality and prices moved accordingly. The main feature of the sale was the demand for useful Medium invoices with colour, and prices for these advanced by 3d to 6d per pound. Indifferent qualities, however, moved irregularly. At the close of the sale, Plain Broken Pekoe was quoted at 40d per pound as compared to 41½d in the previous week.

✱

WORLD OVERSEAS

(Continued from page 722)

in the second half of last year, when sterling was in danger—of some £250,000,000 in the current balance of payments for the first six months of 1956. And this derives directly from the rise in British exports. Imports were successfully curbed, and at the same time there was a recovery of earnings from oil and shipping after the drop last year.

'Barring some catastrophe in the Middle East, British foreign-exchange earnings from increased oil production, particularly in Persia and Iraq, should continue to grow. It is more difficult to project the trend in United Kingdom visible trade beyond the middle of the year, where the figures in the White Paper stop.

'In the past two months, export earnings have fallen below the level of the first half of 1956, while imports have continued at about the same rate. If this development is not checked next month and thereafter, the main source of the surplus so far this year will be seriously diminished.

'However, for the moment there is no reason to believe that it is necessarily anything more than a seasonal dip in export earnings, which should be made good in the last three months of the year.'

✱

INVESTMENT BRIEFS

(Continued from page 712)

per share for the year ended 31st March, 1956.

T. Stanes & Company, Coimbatore, has recommended an interim dividend of 8¾ per cent on the Ordinary shares for the year ended 30-9-1956.

Textool Company has raised the dividend from 10 to 15 per cent for the year ended 30-4-1956.

SOUTH INDIAN NOTES

(Continued from page 731)

difference of opinion about matters relating to the Tungabhadra scheme. "If both Mysore and Andhra", he added, "had cooperated, this project would have been achieved much earlier and the Government of India would have given more funds for completing this much sooner than otherwise."

Fortunately and thanks mainly to the determined efforts of Manjappa, Chief Minister of Mysore and Mr Sanjiva Reddi, Deputy Chief Minister of Andhra complete agreement—not only on the knotty point of sharing the canal waters—was reached recently and the work has begun.

The Tungabhadra High Level Canal will carry 4000 causecs of water to an additional 6 lakhs acres of land in the districts of Bellary (in Mysore) Anantpur and Cudappa. The canal will traverse Bellary district and enter Andhra after crossing Chinna Hagari River. At the 116th mile the main canal is designed to bifurcate into two, the left branch proceeding for another 50 miles to Guntakal where it will split into a number of branches. The right branch will be diverted through a ridge to drop about 250 ft near Pennahobilam. A hydel plant is proposed to be installed at this head for generating 20000 kilowatts of power for six months in a year. Lower down a barrage is to be constructed for feeding the territory through which the river Pennar flows and further down for irrigating 15,000 acres of land in Cudappa.

The Tungabhadra Project when completed is expected to banish famine forever from Rayalaseema and to rise production of foodgrains by two lakh tons. Together with the lower Bhavani the Nagarajun Sagar, the proposed Vamsadhara Project and other existing systems, the Tungabhadra canals will make South India a region served by irrigation facilities of a rare kind. Andhra, in particular will have a vaster network of canals than any other State in India except perhaps, the Punjab. Its people, who had always laid great store by the Tungabhadra Project can now look forward with pride and hope to the High Level Canal, which experts proclaim, will be a feat of engineering skill.

✱

WORLD OF COTTON

(Continued from page 727)

five to eighteen points advance. October-November delivery was quoted at Rs 24.98 cents per pound.

×

CLOTH AND PIECEGOODS:

The Cloth and Piecegoods market depicted a steady trend during the past week. Barring stray enquiries, there was not any marked improvement in the offtake, as upcountry buyers seemed to be awaiting further developments before making firm commitments. The majority of the wholesale dealers were reported to have taken delivery of the goods for which commitments had been made before the excise duty on cloth was raised.

Meanwhile, stocks with the mills and the trade are accumulating; but there are hopes that buyers will enter the market shortly in order to replenish their stocks due to better conditions prevailing in the upcountry centres.

The rate of a popular quality of Superfine Dhoties is now placed at Rs 15 per pair against Rs 15-10 in December last. Similarly, medium long cloth, which was placed at nine annas six pies per yard, is now nominally quoted at nine annas three pies. Medium sarees of 10 yards (a pair) are placed at Rs 6 against Rs 6-8-9 in December.

Conditions on the export front are reported to be slightly better. Fair business was said to have been concluded with Sudan, while Aden also accounted for some modest business. Exports to Burma is expected to pick up in the coming months as the Burmese authorities are said to have started issuing licences to the trade for the import of cloth.

EDITORIAL NOTES

(Continued from page 717)

Kaldor thesis of an expenditure tax also takes into account many of the traditionally accepted criteria of fiscal policy.

Dr Prest admits that the curtailment of private consumption on investment as against the limitation of the size of private income or wealth is an important objective of any tax system. But he is unable to decide whether a tax on expenditure could attain this objective more effectively than the alternative of income taxation. His own attempt to apply the accepted criteria to the expenditure tax has left him somewhat sceptical of its desirability or effectiveness.

He sums up the difficulties in the way of this tax under the following heads: (1) the political problem of whether it is reasonable for the State to require such a degree of information as would be needed from the tax payer about his activities; (2) transitional difficulties; (3) doubts as to the practicability of proposals for dealing with durable consumer goods; (4) the unreliability of methods to identify some forms of savings.

To these is also added the remote possibility of people accumulating savings in a country where expenditure tax exists and emigrating to another without this tax to spend their savings. Above all, the article points to the complications arising from the existence of a large number of people in various income groups who supplement their nominal money income by incomes in kind and expense allowances of multifarious shapes and sizes. The conclusion drawn is that most of what the expenditure tax seeks to achieve is capable of being achieved with a less drastic modification of the existing (British) fiscal system.

Saved . . .
5 gallons of lubricating oil every day
— Rs 7950 in a year!

THERE'S a metals plant in a large industrial city saving Rs 7950 every year — just because they asked us at Standard-Vacuum for free advice about their lubricating problems!

One of our engineers visited the plant and noticed that a good deal of oil was being wasted — because of the manner in which important machinery was lubricated. Thanks to his recommendations, the factory now uses 1500 gallons of lubricants *less* each year, and the machinery is working more efficiently than ever before.

Looking after machinery
When our expert comes to visit you, he is backed by the world's greatest lubrication experience — no less than 90 years of it. Not only is he working with the right oils, a full range of MOBIL Industrial Lubricants, but he can give you expert advice on the maintenance of your equipment.

Correct lubrication is a matter for experts. Our advisory service is free — why not ask us to help you?

First... we must have

STEEL

The expansion of the iron and steel industry has been given first priority in the Second Five Year Plan. Three new plants—each with a capacity of one million ingot tons—will be established in the public sector, while the capacity of existing plants will also be increased. This means that by 1961, India's iron and steel capacity will be well over three times the present figure... from 1.3 million tons to 4.5 million tons. And the value of industrial machinery produced in this country is expected to increase by five or six times. What does this development mean in terms of oil? More fuels and lubricants to move raw materials... more cutting and quenching oils for actual production operations... more greases, lubricating oils and technical service required to look after the many new machines. Oil not only keeps the wheels turning... it helps to make the wheels in the first place. And where oil is needed—there you'll find Burmah-Shell. ●

For the Investor

Mr Black's Letter is not so Black

Investment Gossip:

THIS friend that I talked of last week, and whose profound belief in astrology I described, came a-calling once again. I propose to report as verbatim as I can the discussion that took place. Before I do so, however, it is fitting that the reader should be appraised of the "background" information.

First, I may explain that I got to know Phatkaram Pagla, as he is yclept, through Eavesdropper, who, in his anxiety to let nothing pass his long ears, chances upon strange men with stranger outlook.

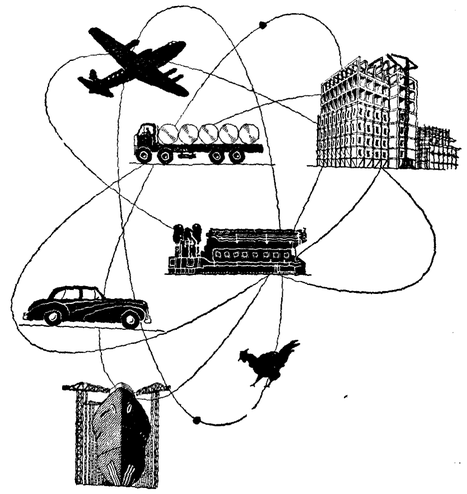
Phatkaram has many interests; most of them are not quite "legit." If a bull ring forms in Bombay bullion, Phatkaram will have a finger in that pie. If there is a squeeze in forward cotton, Phatkaram manages to be in the picture. If there is a bear depression in hessians, the ubiquitous Phatkaram has his stake in it. Phatkaram moves along with the crowd, when it comes to taking a view on Tata Ordinaries or Indian Irons.

He is the typical "astrologer" type speculator. But he is also possessed of a cunning intelligence, which he uses to "interpret" the events of the current day in manner to suit the trends foreseen by the stars. In other words, Phatkaram is the sort of man who would try to analyse the import of Mr Eugene Black's letter, and especially as relating to its significance to stock exchange activity. And his visiting me was motivated by the desire (and expectation) of having from me a confirmation of his interpretation. In the which, as the following dialogue will show, Phatkaram was disappointed.

"Don't you agree that Black's letter runs counter to the interest of stock exchanges?" asked Phatkaram.

"Yours seems to be a hasty conclusion. But let me hear your line of reasoning, before I suggest where you have gone wrong," I replied.

"All press comment seems to be agreed that Black has, in effect, said that the World Bank would be reluctant to finance India's development unless the Second Plan was modified. If," said Phatkaram, "World Bank aid is not available, it must be construed a bearish factor for stock exchanges."



"The if in your sentence is the significant word. But I think it is an inaccurate reading of the Black letter, to conclude that World Bank help will not be forthcoming."

"No, Watch-dog, you have not studied Black's letter carefully. He has stated specifically that the World Bank cannot commit itself to aid India. Black has added that its loans would depend upon the balance of payments position of a country, its other foreign exchange commitments, its internal policy, its attitude to foreign investments. Moreover, the World Bank Chairman has also strongly urged that the potentialities of private enterprise in India have been underestimated. On this point, both the Finance Minister and the Prime Minister have insisted that they cannot see eye to eye with Black. This," concluded Phatkaram, "surely shows that our hopes of getting World Bank help are meagre."

"On the contrary," I said, "it is you who have not been reading as carefully as you should. There is almost the explicit suggestion in Mr Black's letter that India could obtain aid for its Transport plan. And it is, after all, for the Transport projects that we really need foreign exchange. You've missed the main point."

"All right," said Phatkaram, "even granting that World Bank aid will be available, the debate on private enterprise discloses that its prospects for development

(Continued on page 777)

In a "Who's Who" of industry and commerce, if such existed, you would find many differing activities—and you would also find on every page the names of users of Hollerith. The reason is clear. Diverse though business is, it is united in its demand for higher and higher standards of efficiency... and in Hollerith electronic punched card accounting and the use of Hec Computers, it has a large part of the answer.

HIGHLIGHTS

For a bank, the rate of interest it offers on deposits is in inverse proportion to the confidence it commands.

If, for example, the ABC Bank—doing thriving business at usurious rates on advances—offers to give 6 per cent on deposits, make no mistake about it: it will not attract fresh deposits.

For, the depositor will have the suspicion that the higher rate offered is an index of the ABC Bank's vulnerable balance-sheet.

As with banks, so with Governments.

The flow of subscriptions to new loans may be said to be in inverse proportion to the rate of interest.

In the case of Government, the concomitant decrease in popularity as a result of higher interest offered is doubly injurious.

In the first place, the obvious conclusion is that Government's credit should be so poor as to compel increasingly favourable terms to the lenders.

In the second place, each successive improvement in terms of a loan serves to depreciate the value of earlier issues.

We are drawing attention to the terms upon which Government borrowings are made since these have a direct bearing on the Second Plan.

The Second Plan calls for enormous outlay; the larger the proportion of resources found by way of market borrowings, the lower the risk of inflation.

For this reason, a startling suggestion is offered in the Leading Article—a suggestion that is as imaginative as the one that Indian Finance put forward at the beginning of the Second World War.

We may recall for our readers the prediction, soon after September 1939, that the Second World War would be, for Government borrowings, a 3 per cent war.

We were not, in that prediction, belied.

An objective and analytic assessment of the future offers the incredible conclusion that there is only one solution for overcoming the forces of inflation during the Second Plan.

Read the Leading Article to find out why the war against inflation in the Second Plan can be waged and won only by means of a lower bank rate.

Dividend Maintains Hukumchand

Balance-Sheet Reviews:

THE difficult conditions generally experienced by the jute industry, during the year ended 31st March 1956, are fully reflected in the working results of the Hukumchand Jute Mills Limited. Although sales for the year are higher at Rs 4.57 crores against Rs 4.27 crores, the net profit, before providing for Taxation and Depreciation, amounts to only Rs 29,14,795 as against Rs 32,92,286 in the previous year.

In respect of allocations, a sum of Rs 2.36 lakhs (Rs 4.40 lakhs) has been set aside for Depreciation; Rs 2.00 lakhs (nil) for Investment Reserve and Rs 8.00 lakhs (Rs 9.00 lakhs) for Taxation. No provision is made for General reserve against Rs 3.17 lakhs made in the previous year. The dividend on the Equity shares is, however, maintained at Rs 2 per share.

Okayti Tea Passes Dividend

The working results of the Okayti Tea Company, for the year ended 31st December 1955, are rather disappointing. This is mainly due to the greatly increased cost of statutory concessions to labour, unfavourable growing conditions, a six-day strike in June and adverse market conditions.

The crop outturn is reported at 2,202 maunds against 2,250 maunds in the previous year, while the average price realised is lower at Rs 2-6-4 against Rs 3-7-3 per pound. The accounts, before providing for Depreciation, show a loss of Rs 43,282 against a net profit of Rs 2,08,529 in the previous year. Depreciation absorbs Rs 12,675 against Rs 13,136. Due to the loss incurred, the dividend is passed over as against 37½ per cent paid in 1954.

Planted area remains at 505 acres. Estimates for 1956 provide for a crop of 2,250 maunds at an outlay of Rs 4.88 lakhs.

Bombay Burmah Corporation

According to well-informed sources, the Advocate General, Bombay, is understood to have submitted the view that the holders of 100 Promoters' shares have no right in capital or revenue reserves of the concern. The company can, however, capitalise both the shares for the shareholders without giving any special right as is enjoyed by the promoters' shares regarding distributable profits.

It may be here noted that, under an agreement between late Mr William Wallace and the company in the year 1864, Founder shares (Rs 2.50 lakhs in 100 shares of Rs 2.500 each fully paid-up) are entitled to receive an extra or preferential dividend equal to one-third of such surplus net profits remaining in any year after paying a dividend of 12 per cent per annum on all shares in the company (including these 100 shares) and after setting aside any sums to the credit of the Reserve Funds as the directors may think fit.

The paid-up capital of the company at the moment is Rs 94.50 lakhs by way of Rs 50 lakhs in 40,000 Old shares of Rs 125 each fully paid and Rs 42 lakhs in 84,000 new shares of Rs 125 each on which Rs 50 only have been called up and Rs 2.50 lakhs in 100 shares of Rs 2,500 each. The authorised capital is Rs 1.57 crores at the moment.

In the meanwhile, the management has proposed an increase in the authorised capital to Rs 3 crores and alteration in the Articles of Association defining two classes of members. The meeting for the same has been convened on the 12th November, 1956. Some of the shareholders are reported to be taking objection to this alteration in the Articles of Association.

Bengal Bhatdee Coal

Thanks to a substantial rise in earnings, the Bengal Bhatdee Coal Company has raised the dividend from As 2 to As 8 per share for the half-year ended 31st December 1955. Raising are shown at 41,259 tons against 42,474 tons in the previous half-year; despatches at 42,715 tons against 44,403 tons and sales at Rs 6·18 lakhs against Rs 6.21 lakhs.

The net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 74,913 as against only Rs 17,151 in the previous half-year. The directors have, apart from providing Rs 18,000 for Special Reserve, raised the Depreciation amount to Rs 11,562 from Rs 3,100 and Taxation to Rs 28,000 from Rs 6,200.

The Bank Rate—Then and Now

Indian Finance
Established 1928
October 27, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE annual discussion has begun on whether or no, at the eve of the busy season, economic conditions in the country are such as to warrant an increase in bank rate. It has been fashionble, ever since the middle of November 1951, when the Reserve Bank rate was raised to 3½ per cent, to indulge in academic debate on the trend of inflationary pressures and to suggest, as a cure for them, a raising of bank rate. In recent years, the academic argument has been buttressed by the fact that the slack season is noticeably less slack. The resultant persisting demand for money, which seems to augur for particularly tight money market conditions in the busy season to follow, has often been adduced by the pundits as a factor justifying a higher bank rate. Moreover, many countries in the world, in recent years, have increasingly utilised, or sought to utilise, the instrument of dear money as a weapon against nascent inflationary tendencies.

Let us be clear in our mind as to the purpose that underlies changes in bank rate. Excessive business activity, which releases purchasing power in advance of an increased output of goods, is taken as a precursor of inflation. The conclusion is reached that, inevitably, too much money would be chasing too few goods in that interregnum unless some corrective action were taken. As a remedy, consequently, bank rate is raised. It was intended that the higher costs of borrowings would force manufacturing industries to run down their stocks, on which they would be paying a higher rate of interest, in preference to schemes of expansion which, by laying out more money unlikely to be productive in a short while, would have increased the inflationary pressure. At the other extreme, any suspicion that, owing to recessionary trends in the economy, purchasing power is dwindling, is usually the signal for the instrument of bank rate to be used in the reverse. Bank rate is lowered; by making cheaper the cost of money, business activity is sought to be fostered, which, in turn, is relied upon to inject fresh purchasing power into the economy.

It needs, however, to be noted that, generally, the orthodox instrument of a lower bank rate has scarcely been used except in the immediate post-war years. That is to say, orthodox monetary policy has consistently raised up for itself the bogey of inflation and has sought, in the result, to remedy the situation by means of an increase in bank rate. The expected effects of changes in bank rate, from an orthodox point of view, have already been indicated. But the effectiveness of bank rate seems to be very much less today than it used to be. In an article in last week's issue of Indian Finance, Dr Einzig has stated that "businessmen have indeed good reason for being unimpressed by the effectiveness of the bank rate weapon." The effectiveness of bank rate, in the past, has thus been described by Dr Einzig: "In the past, the mere possibility of high bank rate induced them (businessmen) to reduce their inventories partly because the cost of carrying them with the aid of borrowed money would be higher, partly because the value of those inventories was expected to decline as a result of the effect of the bank rate on prices, and partly because consumer demand was expected to fall."

In the conditions of world economy of today, however, none of these three factors obtains. Firstly, "any increase in the cost of financing production can usually be passed on to the buyer through adding it to the selling price of manufactures." Secondly, "so long as the post-war rise in prices continues, debtors are compensated for the higher cost of their loans by the rise in the book value of their inventory." In these circumstances, concludes Dr Einzig, "it is not surprising if the bank rate has ceased to be looked upon as a formidable weapon."

It seems to us that bank rate as an othodox instrument of monetary control has gradually been slipping into the limbo of economic ideals which, in practice, tend to be less and less effective. It is to the same limbo that, in the early 1930's, the gold standard was despatched. We may consider the question: Why has bank rate failed to be fully effective as an important weapon in the monetary armoury? It seems to us, in this regard, that the most striking economic development of the last decade has upset all heretofore economic theories and axioms. This development is the emergence, in most countries in the world, of stridently expansionist economies. There is a greater urgency felt by Governments, not to speak of private industry, for the need to expand swiftly in terms of the national product. That is to say, most countries have considered it vital to incur expenditure on an enormous scale in pursuance of the target of greater production. In the original stages of such rise in the tempo of activity, a time-lag between the release of additional purchasing power and the outturn of a larger volume of manufactured goods is inescapable. Indeed, in the earlier stages of such development, the time-lag has been of sufficient duration to produce external evidence of incipient inflation. But, as the tempo of activity rises, the interim between additional injections of purchasing power and the increased output of goods to satisfy the increase in money supply gets steadily shorter. The expansionist economy in itself is the insurance that, whatever the cost of money, freshly productive ventures must lead to prosperity. For this reason, bank rate has ceased to be effective, at least in so far as increase in it could help to curb business activity.

We would do well to realise that orthodox monetary control would not only be ineffective in India, but that, if applied, it might even produce results contrary to those anticipated. Such a situation arises from the insular character of the Indian money market. In the first place, although the development work on hand is not, in absolute terms, of the largest size in the world, relative to the industrial economy which is the foundation for the schemes of progress, it seems quite clear that India's planned endeavours, in the free world, certainly are of gigantic magnitude. Development, as we have pointed out, is a condition of economy in which orthodox economics is less potent or effective. India may be said, further, to be insular in that the internal economy has thus far been relatively unaffected by the possibility that internal monetary policy might deter the inflow of foreign capital. On the other hand, India is no money market centre as London is, which has to fear that lowering of bank rate might cause the considerable foreign short-term foreign funds to wing their way out.

It is, therefore, in terms of the insular character of the Indian money market that bank rate in this country should properly be discussed. In November 1951, bank rate was raised to 3½ per cent. It was perhaps coincidence that the Bank of England should, on the same day, have announced an increase in its rate. Since that time, however, although there have been fairly wide changes in the Bank of England rate, the Reserve Bank rate has remained stationary. But the damage was already done by the raising of bank rate in 1951. At that time, we may recall that there was a calamitous fall in giltedged values, and many investment institutions found that depreciation in their giltedged holdings more or less wiped out their published reserves. Nevertheless, it is possible to justify, to some extent, the raising of the bank rate at that time. For, world economy was, during the stock-piling aftermath of the Korean War, tending to be perilously inflationary. The Korean War boom had its inevitable impact on the Indian economy, and inflation of this variety was, perhaps, best remedied by the orthodox means of higher bank rate.

If it can be argued that industrial development at swifter tempo disturbs or disrupts the normal influence of bank rate, it is important that we should study the interconnection between bank rate and the Second Plan. Notably, the Second Plan has to depend for its internal resources on, firstly, borrowings and, secondly, deficit financing. Bank rate may be said to affect borrowings in that the interest at which loans can be issued may be influenced by bank rate. On the other hand, bank rate itself may be said to depend upon both the size of deficit financing and the repercussions that flow from created money of such magnitude. It is here that we have an apparent contradiction. The contradiction lies in the fact that, in order to curb the inflationary tendencies inherent in deficit financing, a higher bank rate would be necessary; but a higher bank rate will, in turn, mean that Government's borrowings will be offered at higher interest, in which case the experience is likely to be not larger but smaller subscriptions to new loans. And yet, the contradiction is only apparently so. For, we suggest that it is wrong tactics to anticipate the inflationary tendencies of deficit financing and, for that reason, to set in train measures such as raising of bank rate, so as to enable the economy to withstand deficit financing. We feel that the attention of authority must first focus itself upon market borrowings, and that monetary policy as such should evolve around the hub of the borrowing policy of the Central Government.

Nor is it illogical to have the borrowing programme as the starting point of monetary policy. The first year of the Second Plan has already shown that the scope for market borrowings has been under-estimated in the figures relating to Second Plan resources. It is agreed on all hands that a substantial raising of the target of market loans is greatly to be welcomed, since it will mean that the reliance of the Second Plan upon deficit financing can be reduced. It is obvious that the extent of the improvement in market borrowings is more or less equivalent in the magnitude by which deficit financing

reduced. It would, therefore, be proper for Government to apply themselves to the consideration of how best an increase in market borrowings could be facilitated.

It is in this regard that we may study the inter-relation between bank rate and the pattern of giltedged prices. Every rise in the bank rate is accompanied by a fall in giltedged prices in order to "rectify" the yield on Government loans outstanding. If the starting point for monetary policy is that inflationary tendencies are to be checked by constant recourse to higher bank rate, there is the certainty that each succeeding year will witness a depreciation in the earlier issues. Such a likely trend in giltedged prices will by no means conduce to a popular reception being accorded to fresh borrowings of Government. On the other hand, the spectre of bank rate rise, resulting as it would in a reshuffle of giltedged prices, is the surest disincentive to purchases of giltedged by investment institutions.

The argument that a moiety of investment in giltedged comes today from Government agencies does not, however, resolve the problem for such institutions as already carry large parcels of government securities. We here refer, particularly, to the investments of Scheduled Banks. The experience in 1951 was, we repeat, that a good many banks found that the depreciation in giltedged prices, consequent to the raising of bank rate, was of a size to wipe out their published reserves. Ever since then, investment by Scheduled Banks in giltedged has tended to be somewhat reluctant. The direct and unfortunate consequence has been that the banking system is today not only fully extended, but even overextended. The weakness of the banking system has been discussed in the World of Finance section in this issue of Indian Finance. It is apparent that this weakness must be eradicated. It needs hardly to be said that some modicum of strength can be derived from the investment in giltedged of a larger proportion of fresh resources than has been the experience in the past five years. But, so long as there is prospect of higher bank rate, there is little likelihood that banks will be emboldened sizeably to increase their giltedged investments.

At the same time, however, if, by the raising of the bank rate, banks suffered depreciation in their investments, they also benefitted to the extent and in the sense that the relation between credit rates and bank rate enabled an increase in their earnings by commission, interest and brokerage.

It has been traditional for the lending rate of Scheduled Banks to be linked with bank rate. It does not seem to us that, in the circumstances of the Indian economy as at present situated, the traditional link is helpful or desirable. Quite to the contrary, the weakness of the banking system has stemmed partly from an unseemly competition for deposits and for advances. For reasons that we shall enumerate presently, we feel that it is important for the earnings of the banking system to be vouchsafed by agreement as to a minimum rate for advances; such a measure would be ineffective unless it were accompained by another to safeguard a check on expenses of the banking system by means of a ceiling on interest paid on deposits.

It is, we suggest, up to authority to insist upon a minimum for the rate charged for advances and a maximum for the rate paid on deposits. Such measures will themselves ensure that the banking system is not weakened by, if we may use the term, internal strife. The further strengthening of the banking system must come from measures intended to increase the giltedged holdings of Scheduled Banks. Before, however, we proceed to a discussion of monetary policy which will ensure a better flow of funds to Government borrowings, let us first study the inter-relationship between bank rate and inflation, on the one hand, and Government borrowings and inflation, on the other.

The orthodox view-point is that, in the face of inflationary tendencies or pressures, a raising of bank rate will act as a corrective. In the circumstances of Indian economy under the Second Plan, inflation is dangerously inherent in the dependence on created money for financing Rs 1,200 crores out of the total planned expenditure of Rs 5,600 crores. A higher bank rate seeks to curb inflation by putting a brake upon business activity. But it is exactly the lower tempo of activity that we have, at all costs, to avoid if we are to ensure the success of the Second Plan. Moreover, the experience recently has been that a high bank rate does not necessarily succeed in curbing inflation. Indeed, as the British Chancellor of the Exchequer, Mr Harold Macmillan, pointed out two weeks ago, there is a limit to which bank rate can be raised. It follows that there is a limit to the influence that bank rate in India may or can have upon such inflationary pressures as may be released by deficit financing. The first conclusion that we may come to, in this context, is that a higher bank rate cannot be relied upon to overcome inflation in the contingency that such pressures are felt in this country in the course of the Second Plan. The second conclusion is that, in the wake of deficit financing for Rs 1,200 crores, inflation may be inevitable. The third conclusion is, clearly, that the most important problem to engage the attention of Government should be to reduce, and even minimise, the extent of deficit financing.

It is in this context that we may study the inter-relation between Government borrowings and inflation. If inflation may, by over simplification, be described as an excess of money supply in comparison to the supply of goods, the primary duty of Government should be to devise ways and means of siphoning off the excess in money supply. This end would be admirably served by an increase in market borrowings. Indeed, a higher target for market borrowings can be reckoned as disinflationary from two view-points. In the first place, it directly mops up excessive money in the economy. Secondly, by improving the source of revenue under market borrowings, the dependence on deficit financing—which holds the seeds of inflationary danger—is reduced.

We suggest that it is time for Government to look upon market borrowings as an anti-inflationary weapon in their armoury. We may add that market loans are, in this regard, a more potent instrument than higher bank rate is likely to be. If there are limitations to the extent to which bank rate can be raised or to the magnitude of its influence as an anti-inflationary weapon, a higher target for market borrowings can, if guided by an inspired giltedged policy, prove to be remarkably efficient as a dispeller of inflationary tendencies.

It seems to us, therefore, entirely logical that bank rate should be, not raised, but lowered in the course of the Second Plan. Since the traditional relationship between bank rate and lending rates of Scheduled Banks would already be broken, a decrease in bank rate would not unduly affect the earnings of the banking system. But a lower bank rate could be a component part of a highly effective monetary mechanism for the reason that it would open up presently undreamt of vistas for Government borrowings.

With a reduction in bank rate, the terms of borrowing on Government loans could be made increasingly favourable to Government. If there is a trend of lower rates for borrowing, a healthy pattern of giltedged prices will ensue. Such a pattern would compensate for the lower interest offered. The banking system would no longer perennially be in fear of depreciation in its giltedged holdings. On the contrary, the prospect of less favourable terms on subsequent borrowings is likely to induce investment institutions to subscribe increasingly to Government loans. In fine, a lower bank rate may be said to be the starting point for the creation of a virtuous circle in giltedged behaviour.

The orthodox utilisation of higher bank rate in India may achieve the contrary result of increasing inflation: for, with higher bank rate, there would be a corresponding reduction in subscriptions to Government loans; a reduction in market borrowings will increase dependence on deficit financing; and a larger volume of deficit financing cannot result other than in increasing the propensities for inflation.

On the other hand, we offer the somewhat startling suggestion that a completely heterodox lowering of bank rate can alone, in Indian conditions, ensure that the threat of inflation will be minimised: a lower bank rate will enable Government borrowings at more favourable terms; such terms on subsequent loans will bring a dynamic upward readjustment in the values of outstanding loans; such readjustment in giltedged prices will mean an appreciation in giltedged holdings of institutional investors; an appreciation in giltedged holdings will, in turn, open the way for encouraging higher subscriptions for every new loan offered; an increased total of market borrowings will reduce the extent of deficit financing; and a reduction in deficit financing will, surely, be anti-inflationary.

We must add, however, that a lower bank rate is merely the centre around which a new monetary policy must evolve. There are, we feel, four other important requisites comprising such enlightened monetary policy.

Firstly, the unbridled sale on tap of marketable securities by the Reserve Bank must not be allowed to be continued. If the resources of institutional investors, and particularly Scheduled Banks, are expected to rise substantially owing to the vast expenditure on the Second Plan, it follows that there must be a proportionate increase in the demand for giltedged for investment. The regulation of supply through the tap should form an important attribute of the Reserve Bank's open market operations.

Secondly, the banking system must be safeguarded against the dissipation arising from competition in advances and in deposits. The Reserve Bank should be guide and mentor to ensure that a floor is fixed for rates charged on advances and a ceiling imposed on the rates paid on deposits.

Thirdly, member banks must co-operate with Government by investing a larger proportion of their fresh resources in giltedged. It is, as we have shown, in the interests of member banks to do so; but, if such co-operation is not forthcoming, Government should not shirk firm action.

Finally, the directional control wielded by the Reserve Bank must continue. The central banking institution has admirably risen to the occasion in this context in the recent past. The danger of inflation is likely to be aggravated by and appear in specific sectors attracting speculative activity. A case in point is the sudden spurt in foodgrain prices this year, but the Reserve Bank's prompt action, in issuing a directive to Scheduled Banks to reduce advances against foodgrains, has helped substantially to prevent the inflationary tendencies from being further accentuated. Such vigilant watch must continually be carried on by the Reserve Bank, so that selective control could be applied in "the soft spots" that attract speculative activity.

Editorial Notes

The New States

The reconstruction of the political map of India on November 1 represents, by and large, the triumph of the monolingual principle. Bombay stands as a striking contrast. There is no concealing the fact that the form and pace of reorganisation has aroused grave misgivings in the minds of thoughtful individuals including Pandit Nehru. These misgivings could be shown out of place, only if the political leaders who displayed the greatest ardour for monolingual States are now ready to show spontaneous and ungrudging respect for the rights and privileges of groups who have become minorities in the new set-up, and to imbibe the spirit of an all-prevasive national citizenship.

Something in the nature of a mild emotional somersault must take place. The administration of Bombay and the Punjab would be a test. If the minority language groups are able to feel that the change involves no disability whatever, the first of November 1956 will be remembered as marking another milestone in the progress of democracy in India. Otherwise, more broken hearts and silent tears, if not open strife and dissensions, will be its monuments.

The present preoccupation with economic development should facilitate the disappearance of lingering antipathies. Allowing for border adjustments, all the States with the exception of Madras have emerged either with their territorial dimensions unchanged or vastly larger in area. This circumstance alone makes the States economically more viable and administrative overheads less burdensome. The States leaders have ample opportunities now to satisfy the material aspirations of the people in their charge.

*

National Communism

The disowning of Stalinism by the Soviet High Command seems to have created as much confusion in Eastern Europe as it has led to scepticism in the West. Current events in Poland should support this view. A crisp comment on these events can be that some of the lesser lights in the Communist orbit have taken Moscow's change of front rather too seriously. Otherwise, Polish leaders would not have dared to proceed in the direction of democratization as briskly as they have done.

Recovering from his political eclipse, Mr Gomulka who apparently represents the spear-head of the move to oust Pro-Soviet elements from the ruling heirarchy at Warsaw, has gone to the extent of openly defying the implicit challenge in the Soviet claim to international direction of communist parties. While denying any antipathy between Poland and Russia, he has demanded that the sovereignty of Poland must be respected. The hurried visit of a bunch of Russia's top-ranking leaders including M. Krushchev and M. Molotov to Warsaw and their intervention in the meeting of the Central Committee of the Polish United Workers Party would not have taken place, if political trends in Poland did not imply an affront to Soviet prestige and authority. Soviet military manoeuvres are also reported.

The only visible result of the visit has been a temporary withdrawal of the decision to throw the Pro-Russian Marshal Rokosowski out of Poland's political citadel. This concession cannot end troubles; on the contrary, it can aggravate them by making the highest authority a hot-bed of dissensions, where survival becomes solely a matter of secret pull and pressure.

Perhaps, no other development in the last two years could have caused as much embarrassment to the Soviet Union as these events. If democratisation in Poland is allowed to go its own way and the emphasis on national sovereignty to seek its logical expression, international communism will quickly disrupt. If on the other hand, the Soviet leaders choose to hold up openly the liberalising moves in Poland, their own recent professions will be glaringly exposed.

From the standpoint of world peace, a return to the pattern of genuinely independent States should be welcome. The economic advantages which Yugoslavia has been reaping as a result of its firm stand on national independence are not illusory; and Tito does represent a buffer. Those who succeed in treading the same path may turn out to be at least temporarily the benefactors of humanity. The Western powers need hardly gloat over this trend in the other camp. The Atlantic Community is showing serious cracks.

*

President's visit to Nepal

Amidst the surging events of contemporary Asian politics, Nepal too, inspite of a lofty isolation ordained by nature, has been compelled to throw itself into the ferment of modern ideas and aspirations. The process of the replacement of a feudal by a democratic form of Government has been unusually rapid and devoid of violence. But the fact that the ruling prince is still considered the main bulwark against chaos betrays the tardiness with which the outlook and emotions of the average citizen of Nepal get adjusted to the political structure.

Popular discontent is kept under check by the promise of swift economic development. The Government are committed to a Five Year Plan costing Rs 36 crores. In trying to secure foreign assistance adequate to fill up the chest, the Government have also to face the embarrassing criticism of being liable to toe the lender's political line. This criticism dogged the footsteps of those who sought and obtained India's financial assistance, during a crisis. China has now offered a substantial Rs 6 crores as an unconditional gift.

The present visit of Dr Rajendra Prasad to Nepal, with the Union Planning Minister in company, must reassure the country that Indian interest in its economic progress has not flagged and there are no unfair reactions to the help others are inclined to give. The policy of non-involvement scrupulously pursued by the Indian Union, while gladly contributing its mite to the pool of financial succour and technical assistance, is also of great intangible value to Nepal; a similar attitude becomes obligatory for all other benefactors. By deciding to ban religious conversions, even when they are voluntary, Nepal has closed the door against even the remotest risk to social solidarity and to one irksome source of international ill-will.

*

Restraint on Prosperity

It is a perplexing and at the same time a beneficial product of economic thought as it has developed in modern times, that scarcely any development of importance fails to inspire contradictory comments. The US economy has been hopping up from one peak to another in respect of investment, employment, production, trade and personal income. Apparently, this gigantic economy has few soft spots and a number of authoritative commentators are sure that the present growth is going to continue for a long time, producing higher employment and an ever-rising scale of living. At the same time, there are observers at the other extreme who confidently assert that the end of expansion is in sight and if it is continued any more, it will lead to disaster. In between, there are those who seem to be content, if further acceleration of the rate of expansion is avoided. What appears to trouble many leading economic commentators is an undercurrent of dread for inflation. The memories of the twenties still haunt their minds; they discern germs of depression beneath any inflationary prosperity. If the attitude engendered by this fear is channelled into healthy restraints and avoidance of excesses, it would be

World *of* Finance

Utilisation of Bank Resources

IT is quite apparent the banking system is not only fully extended, but perhaps even over-extended. For, although, in the course of the past five years, the deposits of scheduled banks have risen substantially, such accretions to the resources of the banking system have largely been utilised in an increase in advances. The additions to giltedged holdings of banks during the period have been of relatively small size. The magnitude of the over-extension of the resources of the banking system is even more forcefully brought out when the relevant figures of the State Bank are excluded for the purposes of such study. It is sought, in this article, to analyse the increase in the resources of Scheduled Banks, excluding the State Bank, and to indicate the utilisation of the increased resources.

The deposit liabilities of the member banks (hereinafter this phrase, in this article, will exclude figures appertaining to the State Bank) rose from Rs 637.02 crores at the end of 1951 to Rs 862.85 crores at the end of September, 1956. On the earlier date, giltedged investments were placed at Rs 233.98 crores and formed 35.16 per cent of the deposit liabilities. At the same date, advances were at Rs 375.71 crores, or 58.98 per cent of deposits. Bills purchased and discounted were shown at Rs 26.95 crores, representing 4.23 per cent of deposits. Advances, including bills, totalled Rs 402.65 crores, or 63.21 per cent of deposits. We must remember that disbursements on planned expenditure would necessarily percolate into the banking system, but that there might be some time lag. This, in fact, was the position. At the end of 1953, deposits were but Rs 4 crores higher at Rs 641.08 crores. But member banks increased their holdings of giltedged by more than Rs 15 crores to Rs 249.10 crores; this figure worked out to 38.86 per cent of deposits. In the meanwhile, advances fell by nearly Rs 50 crores to Rs 326.21 crores, or 50.88 per cent of deposits. Bills purchased and discounted, on the other hand, showed a rise of Rs 6 crores to Rs 33.05 crores, and the ratio to deposits improved to 5.16 per cent. Total advances, at Rs 359.25 crores, amounted to 56.04 per cent of deposits.

Since the end of 1953, however, there have been three noteworthy factors as affecting the banking system. Firstly, planned expenditure began to be reflected in a rise in deposit liabilities. Secondly, the need for finance in the conditions of an expansionist economy appeared to be rising swiftly in tempo. Thirdly, both because of the need to satisfy the demand for finance on the part of the constituents and because of the need to increase earnings as a result of the higher operating costs that were being experienced by banks, the member banks generally seemed to be inclined to shirk any substantial additions to investment in giltedged.

Thus, by the end of September, 1956, deposits rose by Rs 221 crores as compared with the figure for the end of 1953. But the additions to investments amounted to less than Rs 30 crores, so that the ratio of investments to deposits was placed at 32.33 per cent. At the same time, advances of member banks rose by more than Rs 185 crores to Rs 511.65 crores; at this figure, advances formed 59.30 per cent of deposits. In the meantime, however, bills purchased and discounted also rose sharply from Rs 33.05 crores to Rs 112.40 crores; the ratio to deposits went up to 13.03 per cent. The total of advances showed a rise of Rs 265 crores—that is, a larger increase than the rise in deposits—to Rs 624.05 crores, or 72.33 per cent of deposits.

It scarcely needs to be pointed out that a level of advances at 72.33 per cent can by no means be considered a safe or comfortable position for the banking system. Indeed, the only saving factor is that there should have been a noteworthy increase in bills purchased and discounted. Let us note that, excluding bills, advances amount to 59.30 per cent of deposits at the end of September 1956. It may even be suggested that, on this basis, advances are not perilously high.

We should, however, like to take this opportunity to stress that bills discounted as a ratio of total advances must rise more rapidly. The first impetus in this regard was given only in 1952 with the offering of rediscount facilities in respect of usance bills by the Reserve Bank. It is true that, especially in the last two years, a commendable measure of success has attended the efforts to popularise bills as an instrument of advances. But this is not to say that a proper bill market exists in India today. It is, we feel, only if efforts in this direction are undertaken both by the Reserve Bank and by member banks that it will be possible eventually to bring a commercial bill market into existence. If the present lopsidedness of the advances portfolio is to be corrected, then a commercial bill market is undoubtedly a prerequisite. We should like to add that we would welcome a greater interest on the part of member banks in giltedged. In the course of the next five years, in the economic conditions subsisting under the Second Plan, very sizeable additions to resources of member banks are inevitable. Equally, of course, there is bound to be an increasing pressure for finance on the banking system. Since, however, the long term finance needs of industry may be expected to be met from specialised institutions set up for the purpose, we make bold to suggest that a much higher proportion should be diverted, in the next five years, to fresh investments in giltedged than has been the experience in the last quinquennium.

In one sense, both a commercial bill market and an increase in investment in giltedged may be said to be in the self-interest of member banks. Action along the right lines, with proper direction from the Reserve Bank, is greatly to be wished for.

Deficit Financing for Rs 5 Crores

THE destiny of the Rs 77 crores odd that, forming the surplus on the revaluation of gold in the Issue Department, figure in the statement of the Reserve Bank in the Banking Department appears still to be unsettled. The returns of the Reserve Bank for October 19 indicate some changes which possibly might have lent themselves to partial adjustment in respect of this Rs 77 crores. But the latest returns largely maintain the status quo of the previous week in this respect.

In accordance with the pattern of monetary trends in the third week of a slack season month, notes in circulation have dropped by Rs 8.79 crores to Rs 1429.54 crores. Moreover, rupee coin has returned from circulation for an amount of Rs 0.68 crores. In the result, notes held in the banking department are higher by Rs 9.37 crores at Rs 21.01 crores.

Rupee Securities in the Issue Department are shown to be higher by Rs 4.97 crores at Rs 690.88 crores. This rise presumably relates to the sale of ad hocs in favour of the Reserve Bank for purposes of replenishing the cash balances of the Central Government. Since the Reserve Bank's position vis-a-vis cash in the till was comfortable, currency has been contracted for a like amount of Rs 4.97 crores against Foreign Securities by transfer from the Issue Department to the Banking Department.

The transfer of Rs 5 crores notwithstanding, Foreign Balances in the Banking Department are shown lower by Rs 4.17 crores at Rs 69.59 crores. The loss of foreign exchange has, thus, clearly continued, with the foreign securities holdings of the Reserve Bank declining by Rs 9.14 crores during the week.

Secondly, in spite of deficit financing for Rs 5 crores, the Central Government's deposits have declined by Rs 2.53 crores to Rs 52.91 crores. Net expenditure of Government has, in the week under review, been of the order of Rs 7½ crores.

It is to be remarked that other liabilities, in the Banking Department, continue at the high level of Rs 97.80 crores. It may be recalled that, in the last week's issue, we had suggested that the change under this head might represent the increase in the banking assets consequent to the revaluation of gold. We had added our thesis that, with a view to avoiding sharp fluctuations in Government balances, the Centre might have decided to keep distinctly apart the amount represented by the surplus on the revaluation of gold. This thesis was founded upon the view that foreign exchange released by revaluation of gold would largely be utilised in payment for imports of steel. Since the steel so imported would thereafter be sold in the Indian market, and since the proceeds would have to be credited to Government's account, we suggested that the special element representing the release in foreign exchange resources was being kept in suspense under other liabilities.

This view seems to be confirmed in the latest returns of the Reserve Bank. For, Government could easily have avoided recourse to deficit financing for Rs 5 crores by the simple expedient of transferring a moiety under other liabilities to their own account. The decision not to do so possibly arose from the intention to keep this amount separate.

The position of member banks is distinctly more comfortable. Deposits with the Reserve Bank are marked higher by Rs 1.76 crores at Rs 50.34 crores; and, at the same time, the other loans and advances of the Reserve Bank are sharply reduced by Rs 6.11 crores to Rs 86.17 crores.

The return of the State Bank for October 19 shows that this institution has contributed to the decline in the borrowings of member banks from the Reserve Bank. An improvement of Rs 4.28 crores to Rs 231.94 crores in Deposits has enabled the State Bank to reduce its borrowings by Rs 3.50 crores to Rs 11.00 crores. At the same time, cash balances have also marked a rise of Rs 1.61 crores. Moreover, easier conditions have likewise accrued to the State Bank by virtue of a decline of Rs 1.48 crores to Rs 128.70 crores in advances.

The return of Scheduled Banks for October 12 bears the impress of the Puja demand for money which was carried over into the second week of this month. Deposits are lower by Rs 3.04 crores at Rs 1086.26 crores; this decline mirrored the fall of like size in the Deposits of the State Bank in the relevant week. Similarly, it is to be noted that the rise of Rs 2.29 crores to Rs 68.00 crores in borrowings from the Reserve Bank is due entirely to the increased indebtedness of the State Bank in the week ended October 12. Indeed, since the State Bank's bor-

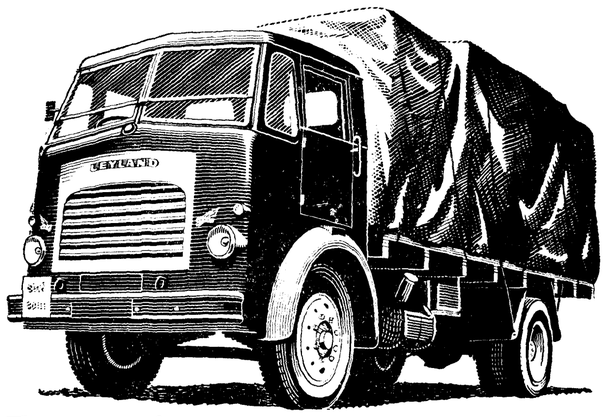
Economics of Atomic Power

By PAUL EINZIG

IN recent months the economic aspects of automation received a fair amount of attention in the British Press. It is now the turn of the economic aspects of atomic energy to become the centre of discussions. The opening of the world's first atomic power station at Calder Hall on October 17th attracted new attention to this aspect of technological progress. When Queen Elizabeth switched on the electric current generated by the new power station Britain became the first country in the world to make electricity that is generated by an atomic power station nationally available. Under the British system electric power supply is nationalised and this additional source is simply added to the electric power generated by steam, diesel engines, or hydro-electric power. The Calder Hall power station is the first of a number which is under construction or is planned. In 1957 Britain will have at least seven atomic power stations under construction at an estimated total cost of nearly £200 million.

Apart from general considerations of progress the reason why this effort to harness atomic energy for the generation of electric power for commercial purposes is of specific importance in Britain lies in the inadequacy of the means for alternative methods of power generation. Britain's coal mines are a declining asset. Even with the aid of a costly investment programme the nationalised coal industry will hardly be able to keep pace with expanding coal requirements. British coal exports are down to a fraction of their pre-War quantity, not for any lack of foreign markets but because domestic requirements must have precedence. Indeed in recent years Britain has become a large coal importer.



The possibilities of expanding hydro-electric power generation are also limited. Apart from the Scottish Highlands Britain is not very generously enpowered by Nature with potential water power and the construction of her hydro-electric power stations is very costly. The only reason why they have been proceeded with on a fairly ambitious scale in spite of the heavy capital expenditure involved lies in the fear that owing to the limitations of coal resources and of the increasing difficulties of satisfying the manpower requirements of coal mines, the country might find itself in grave difficulties unless alternative methods of power generation are developed. A number of diesel power stations have also been built or are under construction, but they will further increase Britain's dependence on imported oil.

The Government felt therefore impelled to press on with the development of atomic power generation. Indeed in many quarters the Government's programme has been criticised as not being sufficiently ambitious, having regard to the extent to which Britain's industrial future depends on the provision of this alternative power supply. There is every reason to expect that one of the effects of the publicity given to the opening of the first atomic power station will be an increase of the pressure of public opinion on the Government to speed up the execution of its present plans of atomic power generation and to supplement it by additional projects.

Another factor to contribute towards the speeding up of British atomic power production is the Suez Canal crisis. It made British opinion realise the dangers arising from Britain's dependence on imported oil in general and on Middle East oil in particular. Even if it should be possible to come to terms with President Nasser about the use of the Suez Canal, there is always the possibility of some new crisis. The possibility of the nationalisation of the Middle East oil must also be envisaged.

Having regard to all these circumstances the British Government would feel obliged to proceed with atomic energy production even if it were not a commercial proposition. In fact the cost of power generation by atomic energy in Britain does not compare unfavourably with the cost of alternative methods of generation. It is estimated that from each ton of uranium it is possible to extract heat equivalent to that extracted from 10,000 tons of coal. This figure is of course subject to confirmation by practical experience to be gained in the course of

Scientific Endeavour

The first meeting, early next month, of the panel of scientists set up recently by the Planning Commission will be an event of wide significance in the field of scientific and technical research in this country. The panel, consisting of 29 distinguished scientists with Dr J. C. Ghosh, member, Planning Commission, as the Chairman, will review and evaluate the programme of scientific research for developing national resources in the next few years. Its work will thus have a direct and important bearing on laying the lines along which the national effort will have to be directed for the fulfilment of the Second Plan. The panel will also help in co-ordinating and organising the work of scientific and industrial research in all their specialised branches' which have grown enormously in size and variety in recent years—work upon which depends to a large measure whether, as a nation, we shall be able to hold our own in the fiercely competitive world of modern technological societies. The importance, therefore, of the deliberations and the recommendations of the panel of scientists can hardly be exaggerated.

The panel, being directly concerned with the immediate employment of science in the development of the national resources, will necessarily have its primary attention focussed on what may be called the practical side of scientific endeavour; but its work will not—indeed, cannot—be entirely confined to a discussion and evaluation of only those aspects of science which have immediate practical import. For, scientific research does not lend itself to classification into such easy categories. The popular idea of practical or "applied" science being in an altogether different category from "pure" science is wholly erroneous, if it implies that there can be an advancement in one field without an effort being made to advance in the other. Unfortunately, such an idea is held even by those who should know better and is analogous to the pernicious preaching of not a few of our public leaders who advocate abolishing "theoretical" English while retaining such English as is supposed to have strictly practical uses.

The truth, of course, is that this simply cannot be done and we cannot restrict the scope of the one without gravely injuring the prospects of the other. Mr Nehru, more than whom no man has laboured to awaken in his countrymen a realisation and appreciation of the growing importance of science and of adopting the scientific attitude in life, has time and again spoken and written about the need for encouragement of research in all branches of science irrespective of whether or not they have immediate practical uses.

In the course of a foreward welcoming the forthcoming publication of the inaugural number of the Journal of the Palaeontological Society of India, Mr Nehru comments that "science has grown not only by its service directed to immediate practical needs but also in its search for knowledge of all kinds".

Before Independence, scientific research in India was carried on mainly in the Universities and in a few other learned societies or institutions with practically no help encouragement or direction from the Central Governments of those times. It was not till 1929 that the Indian (then Imperial) Council of Agricultural Research was set up; and, even then, it remained till 1940 the solitary exception to the general state of neglect of and indifference to scientific research, which characterised the attitude of the foreign rulers of India.

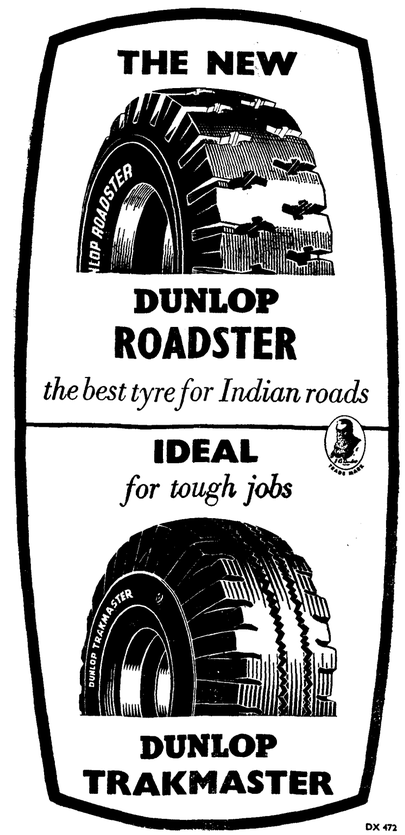
The Council of Scientific and Industrial Research, which was hastily brought into being during 1940-42, was conceived purely as an organisation for utilising the available scientific knowledge in the country in the prosecution of the war.

Independence—and Mr Nehru—changed the picture almost overnight; and the few years of our freedom have witnessed an astonishing sprouting of activities at all levels in the wide field of scientific and technological research. The creation of the department of scientific and industrial research which was later transformed into the Department of Natural Resources and Scientific Research; the starting in 1954 of the Department of Atomic Energy; the establishment of a chain of National Laboratories; the provision of large funds for the spread of scientific knowledge; and, above all, the bold promise of the future, have altered beyond recognition the place which scientific knowledge occupies in the new India.

One consequence, however, of all this rapid change and of the increasing control which the Government are daily assuming over the agencies where scientific education is imparted, has been that an invisible barrier is gradually growing to separate those centres which are started and administered by the Government from those traditional centres of research which, though they depend on the Government for funds to varying extent, are yet not directly controlled by the latter. It is as if the concept of mixed economy has willynilly imposed itself upon the world of science in our country. A private sector and a public sector, which appear to be moving apart from each other, have come into existence in a domain where the consequences of such division can only be harmful.

Perhaps, this has been an unavoidable development. It is unfortunate, nevertheless. In actual practice, this has meant that there is an increasing lack of co-operation and co-ordination amongst the various centres of scientific research. What is worse, there is a feeling, not wholly unfounded, that there is a lot of waste of money and talent, a lot of delay and frittering of resources in the institutions and laboratories in the "public" sector. Moreover, the gradual shift in the relative importance of the centres in the two sectors has given rise to a sense of apprehension that the universities and academies and associations, which have traditionally been the centres of scientific research, are being neglected.

The apprehension may be groundless, but the fact that it is there casts a heavy responsibility on the Government departments and on their advisers. Nothing could be more injurious to the cause of progress in India than if the scientists and the technological research workers feel that their efforts will go to waste for lack of proper appreciation or for want of a proper co-ordinating organisation.



This is one of the many problems which the panel of scientists is in a position to tackle and solve. It is to be hoped that it will not fail to do so.

*

Shipping Target

The report that arrangements have more or less been finalised for Indian shipping to acquire twenty-four ships with a total tonnage of 163,000 GRT is indicative of the Government's determination to reach and exceed the Second Plan target before the expiry of the Plan-period. When the target figure in the Draft Plan-Frame was drastically reduced by the Planning Commission, many critics feared that the reduction might soften the Government's efforts and plans for the development of Indian shipping.

(Continued on page 771)

World of Jute

Pakistan's Second Jute Forecast

According to an official estimate released this week by the Government of Pakistan, the jute crop in the season 1956-57 is estimated to be 5,500,000 to 6,000,000 bales. The first forecast on June 30 this year estimated the production of raw jute at 6,500,000 bales.

Explaining the difference between the first and the present forecasts, the announcement says that as against 20 per cent of the total acreage assumed by the first forecast as unlicensed sowing, actual inspection has revealed that unlicensed sowings have not been more than 10 per cent. It is pointed out that this factor alone can be responsible for reduction in the crop by 500,000 to 600,000 bales.

It is, however, claimed that the quantity as per the latest estimate together with last year's carryover of some 200,000 bales may be enough for meeting the world demand for raw jute from Pakistan. The total acreage under production including Sylhet district, is placed at 1,204,000 acres.

Past experience has taught us that it would be suicidal to place any reliance on the 'official' estimates. In the World of Jute the Pakistani Government estimates have long ceased to excite serious consideration. Those who want to know the actual position have found out different sources of information. In this regard, the trade estimates have been found to be a more reliable guide.

Writing three months ago on Pakistan's first estimate I have exposed the absurdity of the figures handed out to the outside world from time to time by Pakistan. The current sets of figures are naturally of the same variety as the first and hence as absurd. Presumably there has been no adverse developments which could have interfered with the growth of the plants, as the estimate attributes the decline in the estimated production almost entirely to the fall in the anticipated acreage under unlicensed sowings.

*

The jute goods market opened the week on a quiet note with prices both in Hessians and Sackings marked down. The reactionary tendency gained momentum in the next day also and rates were further marked down.

The figures relating to the despatches of jute goods from mills during September released by the IJMA on Tuesday showed that the offtake of goods had declined sharpiy to 82.600 tons from 105,600 tons in the previous month. Compared to the corresponding month of last year, despatches were lower by 13,800 tons. During September this year, exports were sharply lower at 68.200 tons as against 32,100 tons in the previous month and 84,800 tons in September 1955. Exports of hessian totalled only 33,000 tons against 44,300 tons in the previous month and 40.200 tons in the corresponding month of last year. Exports of Sacking were also considerably lower at 32,500 tons as compared with 44.400 tons in August 1956 and 41,800 tons in September 1955. Internal consumption had been slightly higher at 13,800 tons as against 13,500 tons in the previous month.

Brisk activity was in evidence throughout Thursday with prices especially in the sacking section fluctuating over wide limits. Speculators were again busy manipulating prices in the Fatka on persistent rumours of heavy Government purchases. Toward close prices were pushed back to almost the opening levels as no confirmation about the rumoured Government orders was available.

The following table shows the price trend during the week:

	Last week's closing.		This week's closing.

D. W. Flour ...	133	0	131	8
Sugar Bags ..	129	8	129	12

The raw jute market opened the week on a dull note with mills evincing little interest in the proceedings. Holders were keen for business in Assam and Northern Bottoms at around Rs 29 per maund.

Arrivals of raw jute into Calcutta and Mill stations during September 1955 were 4,44,342 bales of which 3,86,331 bales were of Indian origin and 58,011 bales Pakistani. Such arrivals for three months ending September 1956 totalled 11,66,342, bales of which 10,35,331 bales were of Indian origin and 1,31,011 bales Pakistani. During the corresponding period

SOUTH EASTERN RAILWAY

Opening Date of Tender Extended

The opening dates of the following tenders, which were advertised in this paper during the early part of this month, have been extended as noted against each:—

(1) Tender No. GM 16/56/K14/1(B) —for supply of 2 Nos. Diesel Engine Driven Portable Centrifugal Pump etc. will be opened on 2-11-56.

(2) Tender No. GM 17/56/K14/1(B) —for supply of 1 No. Portable 20 K.W.A.C. Generator, etc. will be opened on 2-11-56.

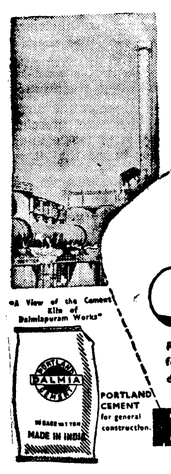
(3) Tender No. GM 18/56/K14/1(B) —for supply of 6 Nos. Portable Diesel Engine Driven Air Compressor etc. will be opened on 5-11-56.

(4) Tender No. GM 19/56/K14/1(B) —for supply of (a) 16 Nos. Pneumatic Dry Rock Drilles, etc. will be opened on 5-11-56.

(5) Tender No. GM 20/56/K14/1(B) —for supply of (a) 1 No. Diesel Engine Driven Winch capacity 10 tons etc. will be opened on 7-11-56.

(6) Tender No. GM 21/56/K14/1(B) —for supply of 6 Nos Diesel Engine Driven Portable Concrete Mixer 10/7 Cu. ft. etc. will be opened on 7-11-56.

(7) Tender No. CS 17/56/K14/1(B) —for supply of 8 Nos. Petrol Engine Driven Internal concrete vibrator etc. will be opened on 8-11-56.



(8) Tender No. CS 18/56/K14/1(B) —for supply of 1 set Diesel Engine Driven Portable Welding Set etc. will be opened on 8-11-56.

SOUTH EASTERN RAILWAY TENDERS

The Controller of Stores, Garden Reach, Calcutta—23 invites tender No. CS19/56/K6/41(55) for handling of materials at Kharagpur Scrap Yard during 1-1-1957 to 31-12-1958. Tender forms are obtainable from his office (I. B. Section) on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms Closing date is 8-11-1956 at 12 noon. Firms not on the Railway's list of approved contractors must deposit Rs 1,000/- in cash with the Chief Cashier, Garden Reach as Earnest Money and enclose his receipt together with a valid Income Tax Clearance Certificate with the tender.

World of Tea

Stoppage of Plucking from November 20

THE Calcutta Tea Regulation Committee, comprising representatives of the Tea Producing Associations of North-East India, has decided an early closure of tea plucking season this year. In view of the present "more-than-adequate" supply of ordinary teas on the Calcutta and world markets which had led to many gardens selling below their cost of production for the greater part of this season, the Committee has recommended to all member gardens in the Assam Valley and the Dooars to stop plucking on November 20. Normally, plucking season continues up to the end of December.

As regards gardens in Cachar, Tripura, Darjeeling and the Terai, the plucking will cease on November 30 at the latest in those gardens who have not reached their average total crop of the three years 1953, 1954 and 1955. Those, who have reached the average, will, however, cease plucking on November 20.

It is said that these measures should mitigate the present excess of ordinary teas in the markets and establish a better balance between high quality, medium and plain teas. The Committee does not see any danger of tea scarcity by an early end of the plucking season, since the 1956 crop in North-East India, up to the end of September, is the highest on record.

It may be added that, despite the decision to stop plucking earlier than usual, the size of the North-East Indian tea crop is not expected to fall below the record level of 533.2 million pounds reached in 1955. The stoppage of plucking from November 20 will, it is estimated, reduce the crop by some 30 million pounds only as the outturn, during this period, is not usually very large.

It is felt that, in view of the improvement in tea prices and also the decision to stop plucking earlier this season, the producers will naturally be tempted to pluck as a large crop as possible during the current month and early next month. It is, therefore, hoped that, during this period, the crop will show an increase of nearly 10 million pounds over the same period last season.

The increase of 24.76 million pounds in crop up to the end of September coupled with the possibility of higher plucking during the next two months is, therefore, expected to offset any reduction in crop by the stoppage of plucking from November 20.

Meanwhile, demand for tea has been very good as large quantities of tea are being shipped to London with a view to take advantage of the high prices prevailing there and also to avoid heavy export duty which is expected to be raised to As 10 early next month. Moreover, with the Suez Canal dispute receding into the background as a market stimulant, it appears that the present level of prices will be well maintained till the end of the year.

The Export Sale, which was kept suspended for two weeks due to intervening holidays, commenced this week, when offerings consisted of 61,700 packages. At the commencement of the sale, there was a fair general demand, but this weakened as the sale progressed. The strongest features of the sale were Whole Leaf grades and the well-made stylish kinds which were from As 4 to As 6 per pound dearer. Clean Commons and Low Mediums were a fairly strong feature and were one to two annas per pound dearer, the Fannings grades receiving more support than the Brokens, especially if they were clean and black in appearance.

The few Medium teas of orthodox manufacture with bright liquors were strong and fully firm, but the remaining Mediums were from one to two annas per pound easier. CTC sorts were also easier and declined by As 2 to As 4 per pound. Well-rolled stylish BPSs were in good demand and were fully firm to dearer, while nonwither Dooars teas were also strong and advanced by one to two annas.

Tippy sorts were generally easier and some of the more expensive kinds were sold at up to As 8 per pound below last rates. Darjeeling teas met with a slightly improved demand. Following were the rates quoted per pound:—Clean Black Pekoe Rs 2-3-0 to Rs 2-4-0; Plain BP Rs 1-12-0 to Rs 1-13-0; Medium Assam BP Rs 2-2-0 and Best CTC Assam BP Rs 3-2-0 to Rs 3-3-0.

Offerings in the Internal Sale consisted of 18,303 chests of Dusts for which there was a strong demand at rates which were generally one to two annas above last rates. Black exportable types were a strong feature and were generally fully firm, while Darjeelings met with more enquiry but at irregular rates.

Commons and Mediums were were strongly competed for, especially the cheaper kinds. Better CTCs were As 2 to As 4 per pound easier, but the poorer fibrous CTCs were generally dearer. Following rates were quoted per pound:—Medium Dooars Dust Rs 2-5-0; Medium Assam Grainy Dust Rs 2-5 to Rs 2-6; Medium Assam CTC Dust Rs 2-10 and Best Assam CTC Dust Rs 2-14 to Rs 3.

Offerings of Leaf grades of comprised 1,321 chests for which there was a good and general demand for all sorts except for the Green teas on offer which were a very weak feature.

In the Export Quota section, business was done at 30 to 32 ples per pound.

In the Cochin market, a total of 1,350,000 pounds was offered. Quality generally was well maintained although some Nilgiris were slightly inferior. The market opened to a strong general demand for the lower sorts at dearer rates, but Nilgiris were easier.

Enquiry for Nilgiris was restricted, the best liquoring descriptions being an easier market. Lower sorts registered a general decline of from As 4 to As 8 per pound. Good Medium Brokens were barely steady and their Fannings were fully As 3 to As 6 per pound lower, demand slackening toward the close. Medium, Low Medium all low-grown Brokens met with keen competition at As 2 to As 3 per pound above last rates, while Medium Fannings ruled fully firm.

Black Leaf Brokens advanced by As 2 to As 3 per pound; but Fannings, suitable for Egypt, were neglected and withdrawals of these types were heavy. Whole Leaf grades were a very strong feature and sold at dearer rates with the exception of Orange Pekoes which were firm. Following rates were quoted:—Plain BP Rs 1-11-0; Low Medium BOP Rs 2-2-0; Medium BOP Rs 2-6-0; Good BOP Rs 2-12-0 to Rs 3-0-0 and Well-made OP Rs 2-10-0.

In the Colombo market, offerings were 4,366,600 pounds last week. There was a good demand, but prices were generally lower following quality. The demand for Nuwara Eliya teas was good, but prices of all grades were lower. There was less demand for high-grown teas, Dimbula/Dickoya type

World Overseas

US Notes

THE United States trade with the rest of the world has been increasing even faster this year than has its internal economic activity. For the first half of 1956, US imports from other countries were up 14 per cent over the first half of 1955, while US commercial exports were up more than 16 per cent. At the same time, the nation's gross national product—its total output of goods and services—was showing a rise of some 6 per cent.

The United States has registered trade gains this year with every part of the world. Figures for the first half of 1956 show the following increases over the corresponding period of 1955:

Western Europe—US imports from that area up 27 per cent, exports to that area up 17 per cent;

Latin-American Republics—US imports up 16 per cent, exports up 12 per cent;

Far East—US imports up 11 per cent, exports up 18 per cent;

Middle East—US imports up 28 per cent, exports up 15 per cent.

A wide variety of products is represented in these trade gains. Among imported commodities, the following registered the largest increase: coffee, cane sugar, unmanufactured wool, petroleum and petroleum products, non-ferrous metals and ferroalloys, paper and paper materials, textile manufactures, machinery and vehicles, chemicals, and iron and steel-mill products.

Among the exported commodities, the largest increases were in grains, fats and oils, machinery, tractors, automobile parts and accessories, chemicals, iron and steel products, coal, and metal manufactures.

The tendency of foreign trade to expand faster than domestic economic activity has been characteristic this year of many other free nations. The National City Bank of New York takes note of this in a recent analysis of world commerce. The Bank points out that it has been true, for instance, of Great Britain, Western Germany, Canada and Japan—to name only a few of the leading trading countries. Even in countries where domestic business activity has levelled off or declined—such as Sweden, South Africa, and Greece—external trade has expanded. Behind the growing volume of world trade have been the gradual removal of trade restrictions, the building up of better gold and dollar reserves, and the freer flow of capital. In addition, the Bank notes, full employment of productive resources in many free countries has given added impetus to the growth of world trade in the past two years. This has compelled nations to seek added outside sources of fuel, industrial raw material and capital goods. In order to overcome bottlenecks in their economic expansion with productivity and living standards rising all over the free world, the Bank concludes, the international exchange of goods should keep on expanding, unless a major political crisis interferes.

In this regard, the US Department of Commerce points out in a special study this week that exports of some US products to Europe may decline if the Suez Canal situation should force an increase of petroleum shipments from dollar areas to Europe in the next few months. The Department does not believe, however, that such a development would affect the total volume of trade; rather, it would mean a shift in the type of exports going to Europe. And, barring such a change, the Department points out, the outlook is bright for further gains in US trade with Europe and other parts of the world for the rest of this year and into 1957.

*

Australia

Despite lower wool prices and delays in wool shipments, the value of Australia's exports in 1955-56 rose by £10,000,000.

Drawing attention to this, the Associated Chambers of Manufacturers of Australia state that the export drive was bringing useful results. There had been a credit balance in each of the last three months.

Increase in the export of manufactured goods was estimated at 20 to 30 per cent above the 1954-55 figure.

The Chambers quote Ministerial statements that substantial expenditure on overseas trade promotion was becoming more effective now that the manufacturers were more vigorously exploring export possibilities. Prospective and existing markets gave good grounds for expecting an increase of £20,000,000 a year in the value of secondary industry exports.

Some of the likely export products were fountain pens, electric shavers, diesel-electric engines, earth-moving equipments, motor vehicles, agricultural and electrical machinery, chemical and steel goods.

The Chambers state that Australian manufacturers were anxiously awaiting the commencement of the exports payment insurance scheme which will enable further increased export business to be obtained.

*

In Australia where orderly marketing of grains, fruits, meats and other farm produce has done much to remove the hazards from farming, attention was recently drawn to the economics of banana growing.

The Australia and New Zealand Bank Limited, in a recent review of the commercial aspects of banana growing in Australia, states that the facts appeared to provide a case for the exercise of some form of control, in order to achieve orderly marketing.

The Bank says that there are 4,000 commercial growers in New South Wales, and considerable numbers in Queensland and Western Australia, who produce a crop which can reasonably be expected to return at least £5,000,000 annually.

When total production has risen from one season to another, price has often fallen so sharply that the return to the producers has declined. In seasons registering a decline in production, price has sometimes risen by an even greater proportion to provide a higher total return to the growers.

The Bank draws attention to the growth of the industry since its establishment in northern Queensland those days southern markets in in the early part of the century. In Australia also drew on Fiji and Norfolk Island for supplies, but the industry expanded with the help of an import duty which later became almost an embargo.

The centre of the industry moved to northern New South Wales and eventually became able to supply most of Australia's needs, and there has also been development of banana growing in the Carnarvon district of Western Australia, and a little in the Northern Territory.

Referring to prices, the Bank's review states that the total value of the annual crop has risen sharply from about £158,000 in 1913-14, when bananas returned about 4/- a bushel, to about £1,000,000 a year in the 'thirties, when the price varied from 6/- to 10/- a bushel, and to £7,000,000 in 1953-54, when the price was more than £2 a bushel.

*

The contention that trams represent a sounder investment than buses for use in public transport is made by the Tramways Board, of Melbourne, Australia.

Melbourne has a population of 1,595, 300.

Replying to statements by a member of the City Council who was in favour of substituting buses, the Board states that this would cost two or three times as much as the trams.

A tram carries 90 passengers as against 60 on a bus, of trolley bus. This meant that 50 per cent more vehicles would be required if trams were scrapped, and they would take 50 per cent greater road space.

The Board quoted a report by the Town and Country Planning Board on the peak hour traffic over Princes Bridge, which spans the River Yarra in the heart of Melbourne. This showed that 36 passengers were conveyed by private cars for every ten feet of road space. But the trams conveyed 549 passengers for the same road space area.

*

Increasing use of diesel electric locomotives on the Australian railways system has led to proposals by the engineering companies who make them, that the various States should purchase them on time payment agreements. The locomotives run at about one-third the cost of the steam engines.

This month, the Clyde Engineering Co. Pty. Ltd., of Granville, New South Wales, delivered the 100th diesel locomotive it has made in Australia to the New South Wales Railways.

Five years ago the company delivered the first locally made diesel electric to the Commonwealth Railways, at Port Augusta, South Australia. It is now running at a profit.

The company now plans to produce 100 diesels a year after 1957. Because the States have found the railways systems a losing proposition, the Clyde Company and A.E. Goodwin Ltd. of Sydney, who make the Alco diesel locomotive, have proposed time payment, as a diesel pays for itself in net operating savings in two or three years.

Recently the offer from the Clyde Company was accepted by the Railways Deparment in the State of Victoria.

\+

Reports from operating companes indicate that Australian investors are showing increasing interest in investment trusts.

Funds invested in one of the companies, Australian Fixed Trust, exceed £18,000,000, according to the Chairman of United Investments Ltd., Mr V. G. Watson. The latter is the holding company which made £39,578 profit for the year to June 30, an increase of £30,870 from the previous year. Dividend for the year is 13½ per cent.

A new type of investment trust in Australia is now being formed in Sydney, New South Wales, and is to be called the Australian National Resources Flexible Trust.

It will invest in natural resources such as the pastoral, timber, paper, steel, chemicals and minerals industries.

The income is expected to be higher than that usually offered by unit trusts.

This is possibly because companies mentioned by the promoters such as Mount Lyell, Zircon Rutile, and King Island Scheelite, usually pay big dividends.

YOUR COLLECTION PROBLEM SOLVED?

Yes, with a copy of the BANKING ALMANAC (1956-57 Edition just published). You would have *the names and addresses of all banks at* every place in India at your finger tips.

Also contains complete particulars about Banks in India; the leading International Banks of the whole world and a mine full of other valuable information for businessmen.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THE clue to the outcome of the 1956 American Presidential elections, the results of which will be known at the end of another two weeks, lies in the answer to one question: Will Mr Eisenhower, seeking re-election, be defeated by his running mate, Mr Richard Nixon? I have, in the past few days, been bemused by this particular aspect of the forthcoming elections. For, as far as I can judge, at this distance away from America, if one man's popularity can decide the outcome of an election, it is difficult to envisage Mr Eisenhower being defeated at the polls by Mr Adlai Stevenson. Mr Eisenhower's personal popularity is a remarkable phenomenon in the American political scene. One wonders whether Pravda or Izvestzia will not, as has become fashionable in Russia, decry the cult of personality!

*

But the election issue in America is confused and complicated by a number of extraneous factors, not the least of these being the heart condition of the President and his recent operation for ileitis. If we were to disregard this issue of health; if, moreover, we were to forget that there is such a thing at stake as the seats in the Congress; and if, therefore, we restrict ourselves to a study of the capacity of the two aspirants for presidentship to undertake the duties and responsibilities attendant to that high office, I am afraid we would be more, rather than less, puzzled by the attempt to simplify the problem. Personally, I cannot see that there is any startling difference in the attitudes or beliefs of Mr Eisenhower and Mr Stevenson. They are both fine men. They will both adhere strictly to what may loosely be called the middle of the road policy. There is, in both of them, an enviable attribute of dedication to peace. Both of them are fortuitously the candidates of their parties, but both rise above the party. In fine, both are admirably fitted as men to be the chief of State of what is possibly the world's most powerful nation. If party politics were to be left out of the reckoning, the independent voter, I am sure, would be hard put to it to make a choice as between the two. Mr Eisenhower has the advantage that he is already known to the people by virtue of his first term as President. But Mr Stevenson can be said to offset such advantage by the fact that he is, apparently at any rate, a human specimen enjoying much more secure health. In the 1952 Presidential elections, Mr Eisenhower won in a landslide; and the party whose candidate he was rode into power in the Congress on the shirt-tail of his popularity. But the Republican party, as such, has steadily become weaker—in the 1954 Congressional elections it lost control of both the Houses. To the Republican party, the main fountain of hope springs from the belief that, in 1956, Mr Eisenhower will be as remarkably popular as he was in 1952.

*

I am not sure, however, that Mr Eisenhower's popularity will, in 1956, be the telling factor as affecting the election vote. Indeed, there is evidence to suggest that even the Republican party is not sanguine about its ability to wrest control of the Congress from the Democrats. Thus, you may say that the Congressional elections are not at stake for either party. The interest centres around the presidential elections; but, in the current year, they have an equal importance as relating to the new incumbent for the office of Vice-President. What is at stake for the Republican party is the Administration. Will the Republicans be able to continue, for a second four-year period, their hold upon the US administration by means of success in the presidential elections as such? An answer to this question will border on a prediction; and there is no more an unpredictable gamble than the American presidential election.

*

I do not propose, in this gossip, to predict whether or no Mr Eisenhower will be re-elected. Nor do I intend to write at length about the odds which Mr Stevenson will have to overcome if he is to be victorious. At the outset of the analysis that I am here presenting, let me make it clear that I consider it an almost impossible task for a rival presidential candidate to triumph over the popularity of Mr Eisenhower. In other words, the odds faced by Mr Stevenson are in the nature of the personal esteem enjoyed by Mr Eisenhower. And that is all there is to the battle that Mr Stevenson has been waging, and has to wage in the next two weeks. But let me not be misunderstood as suggesting that it is inconceivable for Mr Eisenhower to be defeated in his attempt at seeking re-election. The odds against Mr Eisenhower largely stem from factors originating within his own party; and it is these odds which may, ultimately, prevail over Mr Eisenhower.

*

Baseball is the national sport in America. And the dynamic character of the American (sic) language has devised telling phraseology to describe the man who faces tremendous odds. Such a man is the batter who is waiting for the pitcher's next ball (the batter is the batsman, the pitcher is the equivalent of the bowler in cricket). But, in baseball, unlike as in cricket, the batsman cannot stone-wall. He has a limited number of opportunities to hit or hit at the ball; and, failing in these, he is declared out. A batter is called out on three strikes. It seems to me that Mr Eisenhower is the woefully placed batter who has had three strikes called against him. Let me describe, for the reader, what I think to be the three strikes against Mr Eisenhower.

*

The first strike is Mr Eisenhower's health. Seeking Presidential election at the age of 66, he is, if I remember right, one of the oldest candidates aspiring for that office. Not only is his age against him; the coronary thrombosis that afflicted him last year has tagged him with the label, "heart case". It is a known fact that a man with a heart condition is required to be somewhat sedentary in his habits: he has to take things easy. If this were not enough, Mr Eisenhower underwent an operation for ileitis a few months ago, and it is known, medically, that this is an illness which can and usually does recur. Can America afford to have as its chief of State a man so uncertain as to his health? The Democrats have seen fit not to draw undue attention to this particular issue, because they have feared that a concentration of criticism based on health will be construed by the American voters as a hit below the belt. At the other extreme, the Republican party has sought to minimise the effect on Mr Eisenhower of his coronary thrombosis and his ileitis. What exactly this health issue may be is illustrated in the following fictional forecast that has been reproduced by The New Statesman and Nation in a recent week:

"Gettyburg.—Death, as it must come to all men, came last night to Dwight D. Eisenhower. Press Secrectary James C. Haggerty stated that this necessitated no change in plans for November, but rather enhanced the spiritual nature of the administration.

"Republican Chairman Leonard Hall commented that there is nothing in the Constitution, which says that the President must be alive during his administration. And Attorney-General Brownell announced that the Constitution does not in any way bar a deceased President from re-election.

"Major General Howard M. Snyder, after performing the autopsy, declared that the President was in better organic condition than any other previous candidate for the Presidency.

"Vice-President Nixon interrupted his speech to the Saigon Chamber of Commerce to state ileitis was an ailment common to all freedom loving people."

*

The second strike against Mr Eisenhower is partly related to the first. The second strike, let us put it bluntly, is Vice-President Nixon. Mr Nixon is a young man and, therefore, brash. He has shown an extraordinary ability to foment ill-will while in the process of undertaking good-will tours. Diplomacy and Mr Nixon are as chalk and cheese. But Mr Nixon's position within the Republican party has been fully secure. In the result, for all that

the Republican party has been suspecting that Mr Nixon would endanger the party's chances of success, the Vice-President has been renominated. The independent voter is not, as far as I can see it, overly fond of Mr Nixon. And the independent voter is not likely to disregard the possibility that Mr Eisenhower may be disabled; and it is not improbable that votes will be withheld from Mr Eisenhower for the reason that they may turn out, in effect, to be votes for Mr Nixon. What makes Mr Eisenhower"s position more vulnerable is the fact that a recently passed amendment to the American Constitution debars a President from standing for a third term. In effect, this means that, even if he should be able and willing in 1960, Mr Eisenhower could not seek further re-election. The implications of this amendment are serious as affecting the hold or control that Mr Eisenhower will have over the Republican party. For, once the Presidential elections are concluded, the Republican party will necessarily be paying more attention to the presidential material of the future. The duration of Mr Eisenhower's leadership of the Republican party may, therefore, be much shorter than the second four years that he might be elected as President. The independent voter will undoubtedly take note of the possibility that Republican policy is more likely to respond to and be influenced by the dictates of Mr Nixon rather than the directives of Mr Eisenhower. The second strike against Mr Eisenhower, therefore. lies in the hesitation that the independent voter may have in casting his ballot in favour of the Republican nominee because a vote for Mr Eisenhower would be a vote for Mr Nixon; and, secondly, his reluctance may be reinforced by a suspicion that the Republican party may choose to flout Mr Eisenhower once the elections are over.

*

The third strike against Mr Eisenhower is the ineptitude of the Republican party and the bungling inefficiency of Mr John Foster Dulles. A charge often laid against the press in America is that it is a one party press. Newspapers are almost invariably the protagonists of the Republican party. I am afraid that, consequently, the American press has failed to make it sufficiently known to the people that American foreign policy, as conducted by Mr Dulles, has been disastrous and calamitous. There is an insufficient appreciation—perhaps I may even say that I sense a self-deluding refusal to understand world portents correctly—of the harm that has been done by American foreign policy. The alienation of India in a number of ways; the loss of influence in the Middle East; the foothold that the Soviet Union has won for itself in the cold war arena of foreign aid; the virtual dead-letter comprised in the various futile military pacts—all these may be said to have stemmed from Mr Dulles's "brink of war" diplomacy. But America is not prepared to subject its foreign policy to an agonising reappraisal. Mr Stevenson has notably failed in his efforts to convince the American people that the country's foreign policy has gone sadly awry. It is in the internal sphere that, strangely enough, the failure of what I might call the administration's diplomacy is being attacked with success by Mr Stevenson. The Republican party has had its strangle-hold on the farm districts considerably loosened. The peace and prosperity slogan of the Republican party is distortedly being understood as piecemeal, but not well distributed, prosperity for the American people. Of peace in the world, as I have already pointed out, a proper assessment of the repercussions flowing from the American policy has yet to be made. Within America, it is recognised that an

Jack Keenan's Dream

THERE is a new breed of businessmen in the Gateway City today. There is, in these individuals, a twinge of regret that the greatly prosperous enterprise in which they were till lately concerned had summarily come to a stop. They turn their sorrowful eyes upon the Port of Goa; for, Goa it was which was the base for their exceptionally profitable trading in iron ore. The imbroglio with Portugal effectively brought an end to the money—if not for jam at least for iron ore—which they were making in the process of business transactions with Japan.

Their consolation is that they have made their pile. This, however, does not deter them from casting glances of envy on their much better placed counterparts in the eastern regions of India. Goa's loss bids fair to be Calcutta's gain: there is every possibility that exports of iron ore from India will rise in considerable quantity within the next quinquennium.

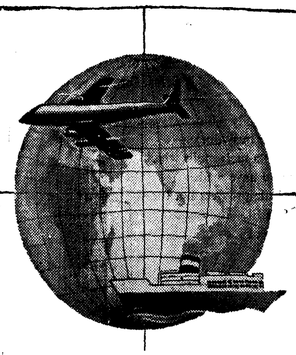
How good such prospects are, was forcefully impressed upon me by two pieces of information which have come to hand. And, as I understood the fuller implications of these items of news, my memory took me back more than a quarter of a century, to the early 1930's. Indian iron ore is no newcomer to newspaper headlines. True, in the last few weeks, developments relating to exports of iron ore have risen to a crescendo. But foreign interest in Indian iron ore is not a recent development. Indeed, 25 years ago.....

The scene was Jameshedpur. The Tata Iron & Steel Company was yet to enter its vigorous phase of prosperity. The financial straits in which it was then placed necessitated the active consideration by management of every scheme which might contribute its mite to the earnings of TISCO. In such a background, an offer was forthcoming from British interests for the purchase of substantial quantities of iron ore from TISCO. At the highest level, the feasibility of the proposal was first examined. That TISCO could quarry—mine the requisite quantities of iron ore, there was no doubt. But, then, the question was brought up as to whether or not export of iron ore on India's part was desirable. Mr Jack Keenan, who was the General Manager of TISCO at the time, vehemently opposed the idea of iron ore exports. His objection was not based on the apprehension that India could not afford to part with some millions of tons of iron ore. He seemed to think, and he ably impressed TISCO management with his views, that it would be impolitic, from a long range view-point, for India to embark at that time on an intensification of an export drive in iron ore. According to Mr Keenan, the rate of steel production in various countries was such as to make inevitable a vast depletion of indigenous resources of iron ore. He, moreover, thought that the iron ore content was swiftly headed downward. As such, he advanced the suggestion that export of iron ore in the 1930's would merely enable foreign producers of steel to defer the time at which their own resources of iron ore would be depleted. Mr Keenan foresaw that, late in the 1950's, foreign interest in Indian iron ore would be so accentuated as to place India most advantageously indeed. Wait another 30 years, he said; and foreign customers will come flocking to India.

It is curious how some men have the capacity to see the future with the greatest clarity. Mr Keenan's remarks have a particular significance today: Japan is all too anxious to lay its hands upon all iron ore that it can get; the East European countries are not at all averse to concluding inter-governmental contracts under the terms of which they would be able to obtain Indian iron ore; the sources of raw material to feed America's voracious steel mills have but a limited duration of usefulness. The time is not far off when India's iron ore will be in clamorous demand.

The latest developments in Japan are such as to conjure up a picture of great prosperity for iron ore trading by India. I understand that a vast ore dump is to be built at Kure, which is intended to raise substantially Tokyo's capacity to handle imports of iron ore. The ore dump is expected to achieve economies in respect of warehousing of iron ore. Arrangements are being made to transport iron ore by special ore boats. As American experience has shown, the use of ore carriers enables very considerable savings in transportation costs. According to Japanese officials, the ore boats are expected to facilitate larger imports of iron ore from India.

The conclusion is clear that Indian ore will gratefully be purchased by Japan. The Government of India are not unaware of this fact. This is evident in the statement made in Japan by Mr Yuji Kato, who had come to this country as a member of the Japan Industrial Machinery Mission. Mr Kato has reported that the Indian Government had proposed a long term contract with Japanese steel mills for the export of iron ore. The present proposal is that India should export 1.5 million tons in 1957, 2 million tons in 1958. 2.5 million tons in 1959 and a minimum of 3 million tons from 1960 onwards. Mr Kato also revealed that two Indian officials of the Ministry of Commerce were expected to visit Japan for holding a series of talks in this respect.



All this, I admit, is good news. But I do wish that there had been an ambitious target for Indian exports. At present, Tokyo imports 8 million tons of iron ore from Orissa, Goa and the Philippines. Since Goa as a source of iron ore has dwindled in size, Tokyo has necessarily to turn increasingly to the Philippines and India. It is, I feel, small thinking to envisage so low a target as 1½ or 2 million tons. There is no reason why the target should not be 10 million tons per annum. India can with ridiculous ease spare such a quantity; and I do not believe that it is overpoweringly difficult to make the necessary arrangements for transport. Let it also be recognised that an export of 10 million tons should present no problems.

I would like to point out that iron ore exports will benefit India in any number of ways. Firstly, an export of 10 million tons will earn for India foreign exchange amounting to roughly Rs 60 crores per annum. Secondly, the expenses incurred within the country in mining the ore will be so diffused as to spread new prosperity. Thirdly, iron ore as an article of export is something that we can spare, and spare immediately, in large quantities. Fourth, exchange earnings of this order can significantly solve our foreign exchange problem under the Second Plan. Fifthly, we shall have the goodwill of Japan—and of the East European countries—who are all anxious for a regular supply of the high quality ore that we so richly possess.

There is, I confess, the question of transport. But, as I have said before, the arrangements in this regard should by no means present an obstacle that cannot be overcome.

The proper authority for examining this question of transport facilities is the American Railway Mission which, at the behest of the World Bank, is now in this country. I do not think that such reinforcements as may be necessary to the railway system, whether as relating to additional miles of

Gateway Notes

Role of Road Transport

Speaking at the fourth annual meeting of the Institute of Road Transport in Bombay last week, Mr R. G. Saraiya estimated that during the Second Five Year Plan period there would be available for Road transport nearly one-sixth of the total load to be carried. With such a large proportion allotted to it, it was necessary for road transport to get prepared for shouldering the great responsibility. According to Mr Saraiya the volume of transport needed for the overall production envisaged in the Second Plan would be of the order of 199 million tons. Of that about 163 million tons would be accounted for by the Railways. With water transport taking care of another 6 million, there would be about 30 million tons left to be carried by road transport. In order to carry the additional load, there should be some 2,45,000 additional vehicles, including passenger vehicles, which in their turn would require nearly 10 lakhs workers.

Those well versed in matters of road transport are confident that given adequate facilities, road transport can be safely depended upon to fill competently the gap between demand and supply in transport during the Second Plan period. In recent months there has been ample evidence that Government have also realised the potentialities of a well developed road transport. The Motor Vehicles Amendment Act now before a Select Committee is expected to go a considerable way in removing the difficulties currently experienced by private road transport operators in the country.

Apart from the suitable measures initiated by Government to aid the rapid growth of road transport, it is pointed out that considerable progress can be achieved even under the present set up provided there is the realisation among the trading community that a rapid development of road transport will be in their own interest. There is also need for continuous endeavour on the part of private road transport operators to reduce road transport costs.

*

Future Demands of Electrical Energy

Speaking at the Annual General Meeting of the Andhra Valley Power Supply Company Mr J. R. D. Tata has pointed out that while the combined Hydro and Thermal resources together with those of the Bombay Electricity Board's and Railway's plants at Chola should be more than adequate to meet all demands for power in the Bombay area during 1957-58, a shortage of power will again be felt during 1959-60, what with rapid increase in the number of industrial units and the increase in domestic consumption. It will be evident, therefore, that active steps should be initiated from now on to augment the generating capacity of the combined system with a view to meet the anticipated additional demand.

The Andhra Valley Power Supply Company has already started making preparations to make its contribution toward augmenting the electrical energy resources in the area. The directors of the company have decided to proceed with the thermal expansion at Trombay. The scheme which has been approved by the Bombay Electricity Board envisages the addition of a third set at Trombay. It is expected that the third set will be ready for operation by the end of 1959.

In this connection Mr Tata has pointed out that the pace of progress of the industry will depend to a considerable extent on the legislation in this regard. According to him some of the clauses of the Electricity (Supply) Amendment Bill, which is now before a Select Committee, need modification. There is also the provision in the original Bill prohibiting the payment of dividend in excess of 3 per cent by Electricity undertakings without the sanction of the State Governments so long as any arrears of depreciation remained to be written off.

In the achievement of the main objectives of the Second Five Year Plan, electrical energy has been assigned a very important role. Apart from the need to bring cheap electrical energy to our thousands of villages for domestic purposes, the Second Plan's emphasis on the rapid development of rural industries makes it incumbent on Government to do all in their power to foster the rapid development of the electricity undertakings in the country. Private companies like Andhra Valley have demonstrated their readiness to make their utmost contribution toward augmenting the generating capacity in the country. It is to be hoped that Government on their part will enable private enterprise to go ahead with their development projects by acceding to their just requests.

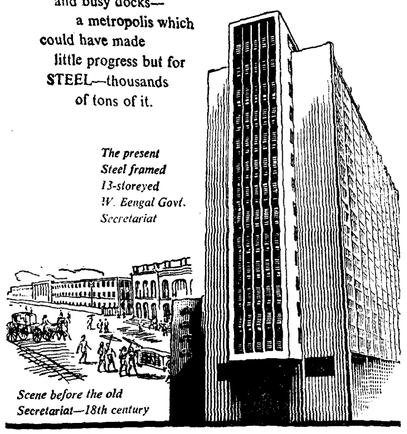
*

Protection to Antimony Industry

The Indian antimony industry is in the peculiar position of having only one unit in the entire country. Moreover, it is an industry that is solely dependent on imports for its main raw material. Another peculiarity about it is that it depends mainly on Government for the offtake of its finished product.

Production of antimony in the country in the past three years shows an irregular trend. Whereas in 1953 only 130.18 tons were produced, in the next year production shot upto 539.07 tons. In 1955 it fell to 504 tons and indications are that during the current year also a further decline will be recorded. It has been estimated by the Tariff Commission when they last held an inquiry into the industry in 1954 that demand for antimony in the years 1955, 1956, and 1957 would be of the order of 550 tons per annum.

The industry is now enjoying protection in the shape of protective duties of 31½ per cent and 21 per cent ad valorem on antimony and crude antimony respectively. The Commission have further recommended an ad hoc continuance of protection to this industry beyond 31st December 1956 for a period of one year i.e. upto 31st December 1957.



The Commission is presently holding an enquiry into the continuance of protection or assistance to the industry beyond 31st December 1957. Opening the inquiry in Bombay last week, Mr K. R. Damle, Chairman of the Commission, pointed out that Star Metal Refinery, the only producer of antimony in the country, since July 1955 had not been able to maintain a reserve

World *of* Cotton

Mixed Pattern of Trading

TRADING in the Bombay Cotton market has, of late, been recording a strange pattern. While the spot section has remained consistently firm, futures have taken a turn in the reverse. Although prices moved both ways, futures continued to drift downward on lack of buying support and consistent selling from bulls and bears. The two major questions that confronted this section were quantum of raw cotton that would be allowed to be exported during the current season and whether there would be any change in the official policy with regard to export duty.

In view of the anticipated higher acreage under cotton and higher output—more than 50 lakh bales—traders are expecting a liberal export quota. Rumours about adjustments in the export duty have started owing to the prevailing world situation in the commodity. Another factor is that the competitive capacity of other growths of Indian cotton will have to be increased in order to maintain continuity of exports and also to prevent a change in the pattern of production of overseas mills who may, if Indian prices are not competitive, switch over to American or Pakistani cotton. There is, therefore, some doubt about export duty adjustment, because of the fact that the availability of a vast home market may induce the Government not to bother much about exports.

The consensus of opinion seems to be, that the allocation of an export quota is not likely to impart steadiness to cotton prices. In spite of the rumours, futures have sought a fresh bottom under selling pressure from upcountry markets including Akola and Indore.

Jharilla contract disclosed somewhat erratic movements under alternate bouts of buying mostly by way of call fixing and selling by tired longs. Toward the close of the week, however, rumours of imminent release of an export quota to the tune of about 2.50 lakh bales Jharilla cotton paved the way for a smart upturn on active short-covering and speculative support. Reports of cloudy weather over portions of cotton tracts also aided sentiment. ICC Jharilla, after touching a new low of Rs 639-8, finished better at Rs 649-12, the highest touched being Rs 668-8.

Vijay contract was relatively dull with the advance here more in sympathy with Jharilla than reflection of any fresh buying interest. The turnover was about 10,000 bales. April delivery commenced at Rs 742 to finish better at Rs 752-4—the highest touched being Rs 785.

×

SPOT MARKET:

This section ruled very firm in view of paucity of floating stock of old cotton in the market and the relative cheapness of the new crop, prominent spinners of Bombay, Kanpur and South India having been extending impressive support to good quality cottons like Vijay, Berar, Khandesh, 320F Punjab and 216F. Thanks to the removal of limitation on stocks and the rebate on excise duties, mills are also eager to pick up as much cotton as possible now.

In the export section, some business was reported done in Oomra, Bengal Deshi, CP-1 and CP-II as there was a belief that, while Bengals would have to bear a higher burden, the duty on other growths would be reduced.

In the foreign section, good business passed in Pima, USA and East African cotton. There was moderate interest in Californians afloat and prompt shipment. There were no enquiries for Egyptian cotton.

Following rates were quoted:— Bengal Rs 660 to Rs 700; Oomra Rs 680 to Rs 720; Dhollera Rs 740 to Rs 760 and Jharilla Rs 770 to Rs 790.

×

CROP POSITION:

Heavy rainfall is reported in the Punjab and Rajasthan. It is estimated that about 50 per cent of 216F and 30 per cent of 320F crop had already been picked before the heavy rains started. While no considerable loss of quantity is anticipated, quality deterioration is likely in the case of unpicked cotton. In Uttar Pradesh, the recent heavy rains are reported to have destroyed nearly half of the crop. The position will become clear after a period of bright weather.

×

NEW YORK COTTON MARKET:

Recent declines in prices, noticed on the New York cotton market, were extended during the week under report under hedge selling in March, May and July deliveries, reflecting active movement of the current crop and commission house liquidation. Offerings were, however, absorbed by trade buying, particularly in nearby December. Spot was quoted at 34.40 cents per pound, while December delivery was quoted at 33.84 cents.

×

KARACHI COTTON MARKET:

The Karachi cotton market continued to rule steady. Following rates were quoted:—4F Roller Rs 79-4; 4F Saw Gin Rs 80-8; 289F Punjab Saw Gin Rs 80-8 and New Crop Punjab Deshi Rs 79-8.

The first estimate of the area under cotton crop for 1956/57, in Pakistan, shows an increase of 8.3 per cent over last year. The area estimated is 3,336,000 acres (American and Deshi varieties 2,623,000 acres and 713,000 acres respectively) as against 3,080,000 acres reported in the first estimate for the previous year.

×

LIVERPOOL COTTON MARKET:

In the Liverpool cotton market, futures ruled easier under light hedging, but prices improved slightly toward the close due to good amount of trade buying. The Egyptian contract was inactive, while Sudan was quiet. Egyptian contract Nov/December delivery was quoted 60.00 and Sudan contract Nov/December at 51.40.

×

CLOTH AND PIECEGOODS:

Trading in the Bombay Piecegoods market continued to be restricted, demand being confined to only immediate requirements. The removal of restrictions on stocks, held by wholesale dealers, seemed to have not enthused the trade circles. In view of the stringent money conditions and the restrictions on bank advances against cloth, traders were unable to hold any considerable volume of stocks. On the whole, except for stray demand, the seasonal activity on the eve of "Diwali" is conspicuous by its absence.

The export sector, however, registered a slight improvement. There is a belief in certain circles that the demand from foreign buyers will improve further if prices are quoted at more competitive prices. Following the issue of import licences for cloth by the Burmese authorities, demand from this country has broadened.

Judged by the current pace of cotton textile exports, the overall performance for 1956 is expected to be the lowest during the past three years. The quantity of piecegoods passed for shipment from the major Ports, for the first nine months of the year, has totalled only 563.38 million yards as against 667.10 million yards in the corresponding period of last year, showing a fall of about 16 per cent. Japan has continued to lead in the export of cotton goods in world markets accounting for as much as 697 million yards for the first seven months of the year.

Gateway Markets

Debacle in Silver

ACTIVITY in the Bombay bullion market was at a low ebb from the start of the week's session. Discouraging advices from the commodity markets were mainly responsible for the general apathy. The spot section also did not lent any support, with the result that the sentiment was quietly dull.

The Silver section received a severe jolt and fell by nearly two points on heavy arrivals of unrefined metal as also unfavourable reports from Calcutta that importers of Tibetan silver would have to pay heavy import duty. There was, therefore, preponderance of sellers as also increased bull liquidation throughout the week. Toward the close, however, there was a slight recovery due to a feeling that the inflow of the Chinese dollars from Tibet would, in the ensuing months, be restricted on account of adverse weather conditions during the winter. Arrivals were estimated around 19 bars against an offtake of 25 bars. Silver Kartik delivery started at Rs 173-5 and, after touching a high of Rs 173-7, was pushed down to Rs 171-1, finishing better at Rs 171-4. Silver spot started weak at Rs 171-12 and improved to Rs 172-0, to recede again toward the close to Rs 170-14.

Trading in Gold was rather dull. Except for an interim modest setback in sympthy with silver, values were well sustained on short-covering induced by continued fair spot enquiry. An inflow of 2,000 tolas faced an outflow of 4,000 tolas. Gold Kartik delivery opened at Rs 103-3 and, after declining to Rs 103-1-6, improved to Rs 103-8, to recede again toward the close to Rs 103-7. Spot moved narrowly between Rs 103-5 and Rs 103-7 to finish at Rs 103-6. Sovereign ruled steady at Rs 68-8.

*

Oils & Oilseeds

Prices in the Oil and Oilseeds market, after suffering a sharp setback early in the week, recovered partially toward the close.

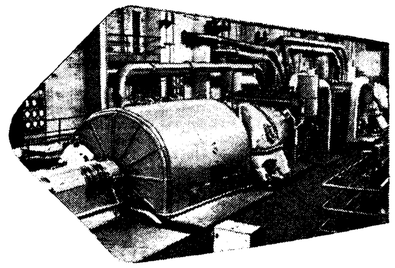
After moving sluggishly, Castorseed futures tended to advance on revival of bull support and broadening shipper interest for spot. Sentiment was also aided by reports of some business done in castor oil with the USA. The turnover was 10,000 candies. Castor May delivery started at Rs 126-10, and after touching a low of Rs 126½, advanced again toward the close to Rs 129-2. Ready was quoted at Rs 28-12 and Castor Oil, commercial, at Rs 16-2.

Weakness of spot reflecting increased tempo of arrivals at the terminal markets was responsible for the early setback in Groundnut futures. The week's losses were, however, eventually recouped on reports of unwanted rains in some producing areas, notably Hyderabad. The turnover was 10,000 candies February delivery started at Rs 126-6 and, after touching a low of Rs 126-4, moved up to Rs 129-3 following the revival of demand from crushers. Bold variety was quoted around Rs 31-8 and Groundnut Oil ready at Rs 18.

Trading in the Linseed section was featureless with hardly any movements of importance. Linseed May started at Rs 25-13 and closed better at Rs 26-2 in sympathy with other oilseeds. Linseed ready was quoted at Rs 31-0 and Linseed Oil at Rs 16-2. Kardiseed was quoted at Rs 16-12 and Ligerseed at Rs 27.

*

Yarn



Prices in the Yarn market recorded further declines during the past week due to lack of buying enquiries from the consuming centres even at lower levels. There was an all-round drop of about six pies per pound in several deniers of Art Silk Yarn.

This is rather strange in view of the approaching 'Diwali' season. Manufacturers have not been taking advantage of the rebate of As 12 per pound being given on the duty in respect of imported yarn used in manufactures for the export market. According to them, the keeping of separate accounts to the satisfaction of the authorities is not practicable. Dealers and weaving mills, on the other hand, point out that the prices charged by the indigenous manufacturers should be fair in the light of the weak trend prevailing in the market.

The Staple-Fibre Yarn market presented a dull front on account of poor advices from the Punjab. Prices, as a result, drifted further down, 2-40s being placed lower at Rs 3-0-6 per pound for the ready material. Similarly, 2-60s were also weak.

In contrast, a steady trend was noticed in the Cotton Yarn section on prospects of fair offtake in the

Mr Black's Letter Reappraised

WITH the Prime Minister joining the fray, Mr Eugene Black's letter to the Government of India on the Second Plan will cease to be regarded merely as the definition of a bank's stand on an application for credit. Indeed, after reading London press comments and Mr Aneurin Bevan's scathing criticism of the World Bank's attitude, one must perforce doubt whether Mr Black's observations were ever free from the taint of political motivation. It may be confessed, however, that from the beginning, Indian opinion was disinclined to read more into it than met the eye at first. The sequence in which it occurred seemed a strong case for its bona fides. Mr Black's letter was based on the report of the World Bank Mission. The Mission's report was largely an echo of criticisms of the Plan which had been expressed by many sections of opinion in this country. Some of the misgivings expressed in the report were shared by the Government themselves; and the Ministers have already taken some action on these lines or are mentally prepared to make changes as soon as they are seen to be necessary. The World Bank, too, had in the past shown sympathy and understanding in dealing with applications from India; and caution in making advances is enjoined on it by its charter. In these circumstances, there was no reason to view Mr Black's letter with any pronounced suspicion; and the protests against its spirit and repudiation of its implications have been a slow growth.

But such a development has come about; and it is necessary to examine its origin and try to foresee its consequences. There is no doubt that, from the beginning, city circles and the press and politicians in London felt that Mr Black had belied his reputation as a cautious banker and had, by accident or design, stepped into the very centre of a fierce controversy. The feeling was widespread that the Chairman of the World Bank should have kept most of the sentiments to himself. Even The Financial Times, which sympathised with the views expressed, did not deny the ugly implications. The Manchester Guardian asked whether the Bank set itself as an authority to decide how far under-developed countries should go in the direction of Socialism. There appears to be a general consensus of opinion that Mr Black's letter amounted to saying that countries which tread the Socialist path are not credit-worthy and cannot count on the Bank's assistance in their economic development. Mr Bevan went much farther and said that the latter is a conscious attempt to use the financial power of the US, which lies behind the World Bank, as a lever and to dictate to India and other countries what they can do and what they shall not.

These statements call for a rereading of Mr Black's letter on the part of those who, for some reason or other, had put a charitable interpretation on it. There is indeed an undue anxiety to use the Bank's influence to gain for private enterprise a larger role in future development than has been so far allotted to it. And one can perhaps see the cloven foot in the special pleas put for foreign as distinct from Indian private enterprise. Mr Black is certainly aware of the collaboration of big foreign business corporations in almost all the major projects now in progress, particularly the steel projects. He must have known, too, that, in providing the basis of modern industrial development like power and transport, the State has necessarily to take a large share of the responsibility, since these schemes cannot attract private enterprise. That these two facts have not deterred Mr Black from finding fault with the Plan on the score of under-estimation of the scope for private enterprise is sufficient to establish a prima facie case for political prejudice and motivation.

That case is further strengthened when one sees not only caution in refusing to commit the Bank to any specific scale of financial aid but also the dangling of rewards for acting on the recommendations contained in the Memorandum. The wording is, of course, diplomatic. But the meaning is plain that, if the Government show the proper response to the criticisms of the Bank, the loans also would be suitably increased. It is in interpreting this part of Mr Black's letter that the difference between an ingenuous and a suspicious

Delhi Review

North Indian Notes

A Significant Step

The Government of India's recent decision to extend the medical care under the Employees State Insurance Scheme to families of insured persons removes a fundamental defect in the scheme. As at present administered the scheme allows only the actual worker to get the medical care. For the medical care of the members of their family insured persons have to look to other sources. It will be evident that to go to a particular doctor for himself and to another for his wife and children and dependents is an irksome business involving loss of time. It is a natural desire to have one doctor for the whole family. Workers have realised the absurdity of the position from the very outset and have been demanding the inclusion of their families for medical care under the scheme. The employers have also been equally insistent for broad-basing the scheme allowing for the inclusion of the families of insured persons.

The Scheme has made rapid strides since it was first implemented in 1952 in Delhi and Kanpur. The scheme now covers over 10 lakhs of employees in 39 centres in the country. When implemented all over India, the beneficiaries will number about 30 lakhs including families of workers.

The additional cost that will be involved in extending the medical care to the families of insured persons is to be borne soley by the employers. It is estimated that by raising employers' contribution from the present 1¼ per cent to 3½ per cent of total wage bill in the implemented areas and from ¾ per cent to 1¾ per cent in the non-implemented areas enough funds will become available with the Employers State Insurance Corporation to meet its share of the cost of medical care for insured persons and their families. Since the employees State Insurance Act has provided for a contribution upto 5 per cent from the employers, the proposed increase to 3½ per cent will not come as a surprise to employers.

In this connection it may be noted that insured persons under the scheme are already paying the full contribution of about 2½ per cent of their wages under the Act. It is estimated that when the medical care is extended to families of insured persons, another 30 lakhs will be added to the present 10 lakhs who are now receiving medical care.

*

Educational Reform

Though it is widely recognised in the country that there is urgent need for reorganising our educational system, the path of reform in this regard is strewn with obstacles, some of which are still defying solution. The Planning Commission have pointed out that educational reform in our country should be preceded by a sizeable improvement in the working condition of teachers at all levels. This atleast seems to be in the realm of possibility as it depends only on our ability to find the required finance. The next obstacle, however, seems almost insurmountable. The question of the medium of instruction at the various stages has not yet been satisfactorily solved.

States which have introduced the regional language as the medium of instruction in the Secondary Stage are now in a quandary as the Universities are inclined to retain English as the medium of instruction in colleges. Speaking in Hyderabad early this week, Mr C. D. Deshmukh, Chairman of the Universities Grants Commission has said that for all practical purposes English should be the medium of instruction at the University level. It is a moot question whether the State Governments will fall in line with the Commission's conclusion.

While Mr C. D. Deshmukh has been telling his Hyderabad audience that there is no going back on the decision of retaining English as the medium of instruction in colleges, Mr Shriman Narayan has been expressing his opinion that the regional languages can be used as the media of instruction upto the highest stage of education at the 31st session of the All India Education Conference in Jaipur. He has pointed out that at the university stage the medium of instruction should be, generally, the regional language, although option should be given to the students to learn through the Hindi medium as well. To English he has given the status of a second language even in the higher stages.

Mr Narayan, however, touches the crux of the problem when he points out that the planning of the character of the young boys and girls is more important than economic planning. In this view, the role of teachers in the society becomes all important. It follows therefore, that the greatest priority should be given by Government toward meeting the legitimate rights of teachers.

GATEWAY NOTES

(Continued from page 762)

stock of 75 tons of antimony metal as recommended by the Commission in their 1954 report. The Refinery's explanation was that various factors outside its control had been responsible for the lapse on their part. A point to be considered by the Commission was whether the Refinery's selling price had been fixed on the basis of landed costs of imported antimony. In this regard Mr Damle had drawn attention to the reported offer of the refined metal at exta-ordinarily low prices by China.

THE CUTTACK ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Ranihat, Cuttack, on Monday the 19th November, 1956 at 12-15 noon, for the following purposes:—

1. To receive and pass the Directors' Report and the audited Accounts for the year ended 31st December, 1955.
2. To declare a Dividend.
3. To elect a Director in place of the retiring Director.
4. To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Register of the Company will be closed from 12th November, 1956 to 19th November, 1956, both days inclusive.

By Order of the Board,
OCTAVIUS STEEL & CO. LTD.:
A. H. GALLOWAY
Managing Director,
Managing Agents.

Calcutta, 25th October, 1956.

NOTE: A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

North Indian Markets

Quiet Conditions in Sugar Markets

QUIET conditions have continued to prevail in Sugar markets where prices have been showing an easier tendency during the past few weeks. With the recent release of a further quantity of 1.60 lakh tons for free sale by the Government, the supply position has become very easy, and prices are quoting now below ex-mill parity.

Looking to the general position, there are hardly any indications to suggest any improvement in the current rates in the near future. The new season being at hand, the mills are reported to be anxious sellers. Further, stocks at various consuming centres are reported to be comfortable. It will, however, be clear, during the course of the next or two weeks, what attitude the mills will adopt with regard to their further sales.

Meanwhile, the Central Government have allowed such factories in Uttar Pradesh which start crushing on November 4, a concession of As 4 per maund on cane crushed by November 12, 1956. But this concession will not be very much utilised due to latest heavy rains which will delay crushing of cane for the new season.

A proposal for the reduction of sugarcane price by an anna per maund has also been made by the Central Government to the Bihar Government for enabling the sugar factories of the State to start early cane-crushing. It has also been suggested that the State and the Union Government should each forego a portion of their share of cess on cane. The Bihar Government are, however reported to have opposed reduction in cane price to be paid to the growers while expressing their readiness to forego a part of their share in the cane cess.

Arrivals of Indian and British-refined sugar in Bombay, during last week, were reported to have shown a perceptible decrease at 12,200 bags. It appears that most of the outstanding purchases from Uttar Pradesh were railed and came in during the last month. Offtake, during last week, was estimated at 18,000 bags. Estimated approximate stocks, as on the 12th October 1956, were 77,200 bags.

*

Gur

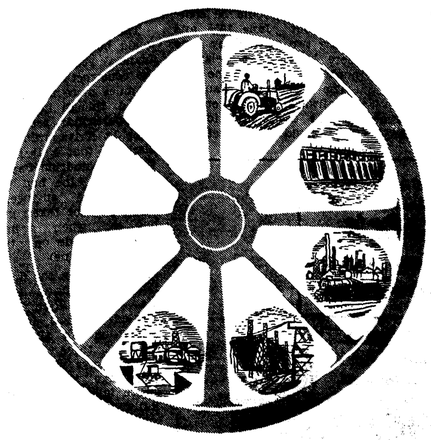
At Hapur, the Gur market continued to rule steady. New gur arrivals have been delayed and it will take another one week for the arrivals in the market.

Meanwhile, prices of Old gur developed a hardening tendency due to good demand, and last week's offtake aggregated 6 wagons, mostly to East Uttar Pradesh. Old gur stocks have gone down to about 12,000 maunds.

*

Foodgrains

Foodgrains markets in Hapur continued to rule steadier, being mostly influenced by reports of extensive damage to crops all over Northern India. Wheat was quoted at Rs 15 per maund for the average quality, while farm quality improved appreciably to Rs 16-8 per maund due to good consumer demand in the face of poor arrivals.



Rice prices, however, recorded modest fall due to increased arrivals of the new crop in the producing areas. Despite heavy stocks, prices of Gram appreciated by As 4 per maund. Barley and Bejher prices also advanced due to falling stocks. Maize was much in request for seasonal demand and prices also appreciated.

Prices of Pulses also hardened due to demand from East Uttar Pradesh. Arhar advanced by As 4 per maund to Rs 12-4 although the stock position is still heavy.

The Delhi grains market presented a steadier tendency, attributed to reports of floods in most of the producing centres. Traffic dislocation as a result of floods also aided sentiment. Wheat recorded some gains on good buying activity, but dara quality reacted toward the close on reports of more arrivals of foreign wheat at Bombay. Farm quality, on the other hand, remained about As 8 higher at Rs 18-8 per maund. Demand for Gram was good on reports of heavy damage to the standing crops in the Punjab. Maize rates were slightly steadier following encouraging advices from Uttar Pradesh. The market for

(Continued on page 771)

THE WHEELS OF THE PLAN

Our country is spending Rs. 7,200 crores in the Second Plan period on development programmes. Production in fields and factories will be stepped up to a still higher level, our basic heavy industries will be expanded, and new industries established. An enormous flow of raw materials to factories and workshops..... a ceaseless stream of finished products to internal markets and ports—that is the charge ahead of our country's transport system. India's blue-print for prosperity is keyed to her transport... and the Railways will bear the burden.

Help the Railways—Your Railways—Serve You Better

EASTERN RAILWAY

Madras Review

The Peninsula

A New Railway

AN agitation which commenced over forty years ago has now borne fruit, with the opening of the railway line between Ernakulam and Kottayam. The Hon'ble Minister for Railways, Mr Lal Bahadur Shastri said, on the opening occasion, that though he had inaugurated new railway lines in a number of places in the Indian Union, never could he find the same degree of enthusiasm over the event.

One does not claim to speak with first-hand authority on why there had been less enthusiasm in other places. But, for the experience of the Minister in this respect in the Travancore-Cochin State, an explanation could easily be offered. The area served by this line is one of the richest in agricultural production, including hill produce which enters conspicuously into trade, both domestic and foreign.

In recent decades, this part of Malabar has witnessed a phenomenal increase in the spread of education. All the sections of the people had become keenly sensitive to the absence of modern amenities, of which railway transport is obviously one of the most important. In spite of insistent demand for nearly two generations, they could not hitherto secure the fulfilment of their desire for a Railway.

These reasons are behind the extraordinary enthusiasm displayed by the public, when the Railway Minister, his entourage and other visitors travelled in the maiden trip from Ernakulam to Kottayam. Possibly, there might have been old persons and kids, who have not seen a railway before. It was indeed an exciting occasion for the population of the country-side through which the railway line runs.

The General Manager of the Southern Railway, Mr T. A. Joseph, gratefully recalled the initiative and vision showed by the late Mr Gopalaswami Iyengar for taking a final decision on the construction of this railway. That was in 1950. Since then events moved swiftly and the traffic and engineering surveys were completed within the shortest time possible.

The thirty-seven and a quarter miles of line forming the Ernakulam to Kottayam section represents the first phase of the ninety-six and a half miles of line to be shortly completed in full between Ernakulam and Quilon. The present section has been completed at a cost of Rs 2.4 crores, which is more than a third of the total cost of Rs 6 crores scheduled for the entire line.

When Pandit Nehru turned the first sod in this construction on December 24, 1952, it was expected that the first section from Ernakulam to Kottayam would be completed roundabout June 1955 and the remaining two sections by June 1957. There has been a delay of fifteen months in opening the first section. The General Manager, Southern Railways, has given the assurance that the completion of the full line would not reflect this delay, as most of the initial hurdles have already been overcome. It is now expected that allowing for the periodical outbreak of monsoon hindering out-door work, it would be possible to open the entire line for traffic by October 1956. Mr Joseph has not ruled out the possibility of advancing this date by another four months.

Mr Shastri has also disclosed that the Government would not be reluctant to consider the idea of electrifying the line, subject of course to the availability of adequate funds. Incidentally, he pointed out that electrification called for a heavy initial expenditure and a substantial draft on foreign exchange and that dieselling the section would involve infructuous expenditure, in case the line was ultimately to be electrified. Apparently there is no keenness now on the part of the authorities to introduce any change.

In the course of his address, the Railway Minister felt impelled to refer to the demand for other new lines such as the Trichur-Kollengode line, the Tellichery-Mysore and Ernakulam-Poonalur-Via-Alleppy-line. The first has already been surveyed. He made it clear that it was difficult to take up any new project with the exception of of the Tellichery-Mysore line during the first two years of the Second Plan.

The Tellichery-Mysore project would be taken up in the current financial year itself. He envisaged the construction of at least 60 to 70 miles more in the current Plan period, though he could not identify particular projects. (speaking later at Trivandrum, the Minister disclosed that a traffic survey on the Trivandrum-Cape Comorin-Tinnevelly Line had been completed and the engineering survey has yet to be taken up. He could not say when a final decision would be made on the construction of this line).

Digressing on the financial shortfall for expansion schemes under the Second Plan, the Minister pointed out how, in assessing the proportion of allotment to the Railways, those who argued that the Railways were having an unduly large share of total expenditure failed to remember that the Railways catered to the needs of both the sectors and if expenditure on the private sector was also taken into account, the railway allotment would look considerably smaller. He drew a comparison with China, where the Railways were given about 19 per cent of the total outlay on the current Plan.

The present allotment, he was sure, would not be sufficient to enable the Railways to achieve the improvement and expansion necessary to carry an extra load of 60.8 million tons plus the old arrears of 5 million tons, by the end of the Second Plan. The Department's estimate of potentialities does not exceed 47 million tons of additional traffic. Answering the contention that improvements in operational efficiency could be relied upon to achieve the result, Mr Shastri denied that it was possible to meet an extra load of 75 million tons merely through more effective utilisation of existing assets; there was a clear need for additional funds.

At the same time, he wanted the public to know that the Indian Railways were giving an excellent record in the matter of lifting traffic loads during the last five years. Against 91.4 million tons lifted in 1950-51, in 1955-56 the total tonnage lifted amounted to 124 million tons representing an increase of over 37 per cent.

In respect of wagon miles per wagon day, India does not compare unfavourably with most of the countries which have extensive railway systems. The figures for 1954-55 were, for Japanese National 63.1; for United States 42.8; for Canadian Pacific 41.6; and for Indian Railways 43.3.

But Japan has larger stretches of trunk routes completely electrified and has all the most modern signalling and equipment facilities. Another important difference between Japan and India is that while in India the public are averse to handling goods during night, in Japan they work round the clock.

Mr Shastri indicated that the Indian Railways would imbibe some of the best features of the foreign railways, but the changes could not be assimilated all of a sudden and the practical results of such changes were bound to be comparatively slow.

South Indian Notes

Transport Problems

Recent speeches of some of the spokesmen of the Union Transport Ministry have been of a variety that is likely to arouse the apprehension in the public mind that the Ministry is preparing itself to take a "have we not said so" attitude in the event of a serious transport bottleneck developing in the country. Spokesmen of the business community have, however, not minced words in this regard. They are definite that unless rail transport facilities are considerably expanded, the very progress of the Plan will be seriously retarded.

It was, therefore, gratifying to hear in Madurai last week end from no less a person than Mr Lal Bahadur Sastri himself that Government would do their best with the resources allocated under the Plan to ensure quick movement of goods. He had, however, made it clear that the Ministry's plans would work smoothly only if there was public co-operation. He appealed to the business community to utilise to a greater extent road and coastal transport even though they might mean higher cost. It was wrong to say, he maintained, that Government were not paying to road and sea transport the attention they deserved. The Motor Vehicles Amendment Bill now before the Lok Sabha was aimed at removing the obstacles in the way of a rapid growth of road transport. As for shipping, Government had already placed orders for new ships costing about Rs 38 crores, the total allotment under that head in the Second Five Year Plan.

So far as the Railways are concerned, there are indications that active steps in various directions are being taken to put railways' existing resources in wagons, engines and line capacity to the maximum possible use. In a communication addressed to Chambers of Commerce and other representative business organisations in the country, the Railway Board have invited the co-operation of the business community in the railways' campaign to "work the wagons harder". It is expected that by a more intensive use of existing resources, valuable additional transportation capacity will be obtained. In order to make the scheme a success the Railway Board have decided to reduce to five hours the existing "free time" allotted to the trade for loading and unloading of wagons. The reduced "free time" will be enforced from November 1, 1956.

It is to be noted that if there is to be no transport bottlenecks during the Second Plan period, concerted efforts are to be put forth by all concerned. The smooth movement of goods depends as much on the adequate transportation facilities provided by the railways as on the wholehearted co-operation extended to the railways' efforts by the business community. The Railway Board's plan to work the wagons harder may go a considerable way toward providing additional facilities. With the greater use of the road and sea transport by the business community, as suggested by the Railway Minister, there is every reason to hope that the transport problem during the Second Plan will not get out of control.

*

Putting the Cart before the Horse

Speaking at a teachers' meeting, Mr C. Subramaniam, Minister for education, Madras, has cautioned against taking hasty decisions in educational matters. But from what he has narrated later on in his speech, it would appear that the Madras Government have made little use of this advice.

Mr Subramaniam has pointed out that the continuance of the dual media of instruction, English in the University stage and the regional language in the school stage, is putting the students seeking university education under a severe handicap as they have to switch over suddenly to English in the college course.

While the State Government have found it easy to introduce the regional language as the medium of instruction in the school course, they have found it not so easy to persuade the Universities to follow suit with the result the poor students who want to continue their studies beyond the secondary stage are put under the great strain caused by the necessity of becoming proficient in two languages at the same time.

The recent reorganisation of college educaion has further complicated the matter. The universities quite naturally seem to take the view that it is for the schools to improve the standard in such a way that students completing their secondary stage will be well equipped to take up the thread on entering the university.

The task is evidently too much for the schools in their present condition. Apart from the special equipment and trained additional personnel, there is the problem of the capacity of the parents to bear the addtional cost that will be involved in the extended course. Mr Subramaniam is right in concluding that all points considered it is neither possible nor advisable to ask the schools to shoulder the responsibility. The change is to be made gradually. Till then, the pre-university course is the answer and it should remain the universities' responsibility.

All this confusion could have been avoided if the State Government had only proceeded step by step. Instead of viewing the entire educational setup as an integrated whole, they have committed the blunder of implementing radical changes in the secondary stage and then thinking about the future of students completing this stage. From the look of things, it appears that the problem of the medium of education in the university stage will not be amenable to an easy or quick solution. Consequently, the difficulty now experienced by students passing out of one stage and entering the other will continue to manifest itself.

*

GATEWAY MARKETS

(Continued from page 764)

near future. 40s were placed at Rs 27 per bundle, while Coarse counts were steady. 60s were, however, a little subdued.

*

Metals

Sentiment in the the Copper section remained depressed as the market was found to be in an oversold position. Bears found it possible to keep the market ridiculously low as long as the present stocks lasted. Ready was quoted at Rs 189 per cwt, while Copper scrap was nominally quoted around Rs 180 per cwt.

The position in Zinc was better than that in Copper. Movement of the metal continued from Bombay as Calcutta was quoted higher by Rs 2 at Rs 65. Landed cost in Bombay comes to about Rs 67 thereby making it impossible for any new business to be booked.

Dull conditions persisted in the Lead section where ready was quoted at Rs 82.

Following firmer London and Singapore advices, Tin improved to Rs 130-8 per cwt.

On the London Metal Exchange, Copper recorded a sharp fall to £272½ per ton from £281-10 quoted in the previous week. This fall was attributed to the continued slackness in consumer demand, bearish sentiment caused by the release of 36,000 tons of metal from stock-piling stocks by the UK Government and the reduction in RST selling price from £300 to £280.

The steadiness in Lead was maintained due to the continued purchases by the US Government for stock-piling, ready being quoted around £115½ per ton for second half-October delivery.

Zinc recorded a modest improvement to £95½ per ton following the unsettled Australian labour situation.

Tin depicted considerable strength with ready quoting higher at £814 per ton. The reports of dwindling stocks and firmness in Singapore markets were the contributory factors.

South Indian Markets

Hides and Skins Markets Subdued

THE market for Hides and Skins ruled subdued with no marked change either in the demand or export prices. Although averages 10/12 lbs in runs and fourths selections were in request on the basis of 35d to 37d, supplies were not freely available. Trading in the Skins section was also not very much in evidence due to the London Public Sale.

In the Madras market, arrivals and clearances of tanned Cow hides were on a fair level, but prices were six pies per pound lower in the case of light weights. Arrivals of Buff hides were fair and there was no change in the prices. Arrivals of Cow Calf and Buff Calf were normal. There was a good clearance of the former at firm prices, but trading in the latter was featureless.

In the export section, business in 8/8½ lbs was reported done at varying prices on the basis of 39d to 39½d for runs and 33d to 33½d for fifths. In the Calf section, there was a steady enquiry for all tannages in run selections and business was reported done from 70d for 1¼/1¾ lbs ordinary quality to 92d for super prime standards. Although there were enquiries for Buff Calf 2 lbs in super prime marks, supplies were difficult.

In Tanned Skins section, arrivals of both Goat and Sheep skins were normal, while clearances were staggered because of the London sale. Prices of Sheep skins were unchanged, while those of goat skins were easier by As 2 per pound.

In the export section, there was the usual enquiry for run selections in heavy weights, while light weights were neglected.

The results of the London auctions, held last week, reveal that there is a market at good prices for quality goods, but unwanted lines are unsaleable even at cheap prices.

✱

Pepper

Pepper markets have continued to rule weak, partly due to the proximity of arrivals of the new crop and partly due to the lack of buying pressure in the market. Growers are, however, reluctant to sell. The estimate by the trade of the next season's crop is 20,500 to 21,000 tons, indicating a fall of about 15 per cent from last year.

During September, 200 to 250 tons were reported to have been bought by East European countries and 400 to 500 tons by China. Arrivals at the terminal markets, during the same month, were 620 tons as against 800 tons in the previous month.

Meanwhile, in the Kozhikode market, Wynaad quality was quoted lower at Rs 730 and the Country variety at Rs 720 per candy. In the New York market, values softened under pressure of further unsold arrivals. Buyers generally sidelined with bids mostly half per cent under market rates. Malabar spot was quoted at 27½ cents per pound. In London, White Sarawak was quoted at 25¾d per pound.

✱

Cardamom

It is learnt that, for the first time, Cardamom auctions will be held at Cochin, and the auctions will be conducted by Messrs Carritt Moran & Company. As a convenient shipping point on the West Coast, it is expected that Cochin will be a suitable place for the marketing of this spice. The annual production in this area is 800 to 1,000 tons.

✱

Rubber

Although a higher output of Rubber is expected in India during this year, the shortfall at the end of the year is expected to be greater than in any of the previous years as consumption has been rising at a rate greater than production.

In the Singapore market, the price of rubber, after touching a low of 88 Straits dollars per 100 lbs in the third week of September, is now quoted better at 91 Straits dollars. The f.o.b. price of rubber at Singapore will be about Rs 18 below the Indian price.

✱

Cotton

According to an official forecast released by the Government of Madras, the area under Cotton in the Madras State in 1955/56 is estimated at 978,500 acres as compared with the finally recorded area of 1,003,900 acres in 1954/55, representing a decrease of 2.5 per cent.

The yield per acre is estimated to be lower than that of last year. The total yield this year works out to 300,000 bales of lint as against 301,400 bales for the previous year.

The area under Cambodia cultivation (irrigated) is 178,000 acres and (unirrigated) 158,200 acres with an estimated yield of 115,300 bales and 38,500 bales respectively. The area under Uganda cotton is 33,600 acres (irrigated) and 46,500 acres (unirrigated) with yields of 19,000 and 10,600 bales respectively. The biggest acreage is under Karunganni—406,900 acres and Karunganni ordinary 84,500 acres with estimated yields of 85,900 and 26,100 bales respectively.

✱

Groundnuts

Conditions in the Madras Groundnut continued to remain firm and the rise in the prices of oil being more pronounced than in seeds. Arrivals averaged 25 to 30 tons per day and these were taken up by local crushers. The rate for superior quality oilseeds improved from Rs 160 to Rs 162 per candy and the bold variety from Rs 156 to Rs 158 per candy.

In the Groundnut Oil section, the rate for the ready position showed a rise of more than 10 points at Rs 317 per candy. Apart from decent quantities taken up by Calcutta interests, local consuming interests also operated to meet their needs in connection with the forthcoming "Deepavali" festival. Vanaspati factories, however, did not show interest in the market.

✱

WORLD OF TEA

(Continued from page 757)

Brokens declining by about 20 cents per pound and Uva Brokens by 20 to 30 cents per pound.

Among medium-grown teas, Best Medium Brokens declined by 15 to 20 cents per pound, but there was very strong demand for those in the lower-price range, and these were fully 10 cents per pound dearer. Among low-grown teas, small Leaf Broken grades were slightly lower, while Persian Gulf types declined by 10 to 15 cents per pound.

Meanwhile, a tripartite trade agreement between Ceylon, Japan and Egypt, which is expected to come into operation shortly, will enable Ceylon to re-enter the lucrative Egyptian tea market. Egypt, which, up to the end of last year, was one of the best buyers of low and mid-grown Ceylon teas, slashed her imports following difficulties arising from a shortage of sterling. Under the tripartite agreement, Japan will buy cotton from Egypt, while Egypt will buy tea from Ceylon. Sterling payments due to Ceylon from Egypt will be paid by Japan from the sale of cotton.

In Mincing Lane, offerings were in sustained request, especially for good Medium invoices prices for which were dearer. Buying was, however, selective and prices moved according to quality. The only sign of weakness was among unattractive types lacking colour. At the moment, some trade quarters in London feel that buyers are not getting as much teas as they want.

With the present landings insufficient to offset the high rate of deliveries, stocks with the UK warehouses have again declined. For the week ended October 12, stocks totalled only about 111.40 million pounds as against about 113.60 million pounds a week earlier. However, when heavier quantities of teas, manufactured during "rush" months, begin to arrive, they may well have generally a softening effect on auction values.

The average price realised at the auction, during the week ended 12th October, was 70.75d per pound as against 69.75d in the previous week and 60.61d in the corresponding week of last year.

✱

EDITORIAL NOTES

(Continued from page 751)

unobjectionable. The latest annual economic report of the US President embodies this attitude, when it warns against the supply of credit on easy terms to everyone "at a time when the economy is working close to capacity" and against "a scramble for limited resources and a cumulative bidding up of prices." It is where inflation is condemned purely as a matter of faith without reference to particular situations that the counsel becomes destructive.

THE BENGAL FLOUR MILLS COMPANY LTD.

Notice is hereby given that an Interim Dividend on the shares of the above Company of 11¼%, free of Income Tax, for the year ending 31st December, 1956, was declared by the Board of Directors on 22nd October, 1956, payable on or after 9th November, 1956 to those Members whose names are registered in the Registrar of Members of the Company on the 9th November, 1956. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

The Register of Members of the Company will be closed from 5th November, 1956 to 9th November, 1956, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.
21, Netaji Subhas Road,
Calcutta,
22nd October, 1956.

GATEWAY GOSSIP

(Continued from page 761)

track or to the improvement of the existing lines, will be exorbitantly costly. Quite to the contrary, it seems to me that the costs involved in such development can be recouped in very quick time. Moreover, it is not at all unlikely that the World Bank would be favourably disposed to granting a loan for the development in this respect.

I may also mention, in this connection, that special help may be available to finance development work intended to increase iron ore exports. The US President has a fund at his disposal; and appropriations from this source are at his discretion. Furthermore, the purpose of the fund is specifically to enable an expansion of trade within the countries of Asia. A proposal that links development of Indian transport and port facilities with shipment of iron ore to Japan is certain to be favourably considered as deserving an allocation from the President's fund.

Most important of all, the iron ore export project can show to the world that we Indians can help ourselves; it can prove to an amazing degree how very self-sufficient India is as a nation; it can contribute immensely to filling the foreign exchange gap; it can bring into being a new pocket of prosperity in the ore mining area; and it can win us the goodwill of a number of nations that are today starved of iron ore.

✱

NORTH INDIAN MARKETS

(Continued from page 767)

Pulses remained firm on heavy demand.

In Bombay, the Pulses section displayed active conditions during the past week. Prices of Gram, Masur and Urad scored net gains of Rs 5 to Rs 7 per candy. The strength in this section was attributed to better local offtake in the face of limited arrivals from the terminal markets. The reports of damage to crops in the Punjab and Uttar Pradesh also aided sentiment.

After the recent dullness, trading conditions in the Rice section were better with prices of several qualities moving up by Rs 5 to Rs 7 per candy. The steadier tendency in Indian rice was inspired mainly by reports that the Government might constitute zones for the purpose of regulating movement in the country.

The Wheat section remained dull with traders keen to dispose of their stocks of the Punjab Pissi quality at prices ranging from Rs 170 to Rs 175 per candy.

In the Coarse grains section, prices of Jowar and Bajra maintained their last week's levels. Limited arrivals of the new Bajra from Deccan were reported to have been done at Rs 165 to Rs 180 per candy, while the old stocks of the Uttar Pradesh quality found buyers at Rs 150 to Rs 160 per candy.

WORLD OF FINANCE

(Continued from page 753)

rowings rose by Rs 5 crores in that week. It may be said that the other member banks were able to reduce their indebtedness to the Reserve Bank by Rs 2.71 crores and to the State Bank by Rs 1.40 crores. The decline in deposits and the fall in the indebtedness of the member banks (excluding the State Bank) have both occasioned a running down of cash balances. The fact that the total of advances was placed at Rs 759.49 crores against Rs 759.67 crores in the previous week is testimony to the continued demand for funds, on Puja account, in the second week of October.

+

The statement of the State Bank of India for the week ended October 19 reveals a rise of Rs 4.28 crores in deposits to Rs 231.94 crores. Borrowings from other banks have declined by Rs 3.50 crores to Rs 11.00 crores, while other liabilities, including inter-office adjustments, are shown at Rs 6.53 crores against Rs 6.44 crores.

On the assets side, cash balances (excluding money at call) are higher by Rs 1.35 crores at Rs 15.31 crores, while Investments are lower by Rs 0.18 crores at Rs 107.64 crores. Advances have shown a decline of Rs 1.48 crores to Rs 128.70 crores—"loans, Cash Credits and Overdrafts" accounting for a drop of Rs 0.21 crores and "Bills Discounted and Purchased" for Rs 1.27 crores.

+

According to the returns of the Scheduled Banks for the week October 12, both Demand and Time Liabilities have declined, the former by Rs 2.73 crores to Rs 632.35 crores and the latter by Rs 0.31 crores to Rs 453.31 crores. Borrowings from the State Bank are lower by Rs 1.40 crores at Rs 11.57 crores, while those from the Reserve Bank are higher by Rs 2.29 crores at Rs 68.00 crores. Cash and balances with the Reserve Bank have declined from Rs 88.72 crores to Rs 84.96 crores and Investments from Rs 374.28 crores to Rs 373.10 crores. Advances are shown at Rs 612.77 crores against Rs 613.84 crores; Inland Bills at Rs 97.65 crores against Rs 98.33 crores and Foreign Bills at Rs 49.07 crores against Rs 47.50 crores. Money at call and short notice stands at Rs 12.66 crores against Rs 10.80 crores.

✱

WORLD OF BUSINESS

(Continued from page 755)

Mr L. B. Shastri, the Union Minister, has on many occasions stated that such fears were quite unjustified and that the Government were acutely conscious of India's unhappy position as regard shipping. He has also stated in clear terms that the Government did not propose to regard either the additional tonnage target of the Second Plan or the allocation of funds (Rs 45 crores, including Rs 8 crores carried over from the First Plan allocation) as final. The promptitude with which the arrangements for acquiring the additional ships have been made reflects the weight that the Minister gave to his statements.

Of the 24 ships proposed to be acquired, 14 will be in the public sector and 10 in the private sector. 15 out of the 24 will be built by Hindusthan Shipyards and the remainder are to be constructed in foreign shipyards excepting one which is to be a second-hand ship. It will be noticed that number of ships to be built by Hindusthan Shipyards shows a welcome increase over the number built on the First Plan orders. Only 5 out of 13 ships (to be delivered in 1956-57 against orders made in the First Plan) have been built in the Vizag yard.

But, encouraging as the increase is, particularly in view of the fact that not the least part of the Hindusthan Shipyard's activities is concerned with replacement of tonnage, repairs and maintenance, we nevertheless feel that even the increased tempo of production is not enough and that a second shipbuilding yard is an urgent necessity. One yard for building ships in a country with a coastline of more than 3,500 miles is quite inadequate. The Government, it is true, have accepted in principle the proposal for starting a second yard. But the delay in translating it into actual fact can only retard the pace which Indian shipping must adopt if it is to lift a higher percentage of India's foreign trade, as it must aim to do in the shortest possible time.

✱

WORLD OF JUTE

(Continued from page 756)

of last year, arrivals totalled only 994,000 bales of which 646,000 bales were of Indian origin and 348,000 bales were of Pakistani. It will be seen, therefore, that though total arrivals of raw jute into Calcutta and mill stations have increased in the first three months of the current jute year nearly by 172,000 tons as compared to the corresponding period of last year, arrivals from Pakistan have been at a low ebb this year totalling for the three months in the current year to only 131,000 tons as against 348,000 tons received during the same period last year. On the other hand, there has been a sizeable increase in the arrivals of raw jute of Indian origin to the tune of 389,000 tons.

From midweek the undertone in the raw jute market became steadier on speculative buying consequent on the publication of the Second official Pakistani jute forecast which placed the size of the 1956-57 jute crop in Pakistan at 5,500,000 to 6,000,000 bales as against their First Forecast figure of 6,500,000.

ECONOMICS OF ATOMIC POWER

(Continued from page 754)

operating the Calder Hall power station but is believed to be substantially correct. The present-day cost of 10,000 tons of coal is four times as high as the cost of one ton of uranium. Even allowing for other factors entering into calculation it is expected that from a commercial point of view atomic power generation will prove to be profitable.

In addition, there is also the value of the plutonium by-product, which will be automatically produced in the course of atomic power generation to be considered. Plutonium can create heat equivalent to that created by 300 times its weight of uranium or by 3 million times its weight of coal. The possibility of feeding this valuable by-product back into the reactor which produced it, thus reducing the uranium requirements, must also be borne in mind. The full utilisation of all the potentialities of the plutonium by-product is still conditional on the solution of many a scientific and technological problem. Should present expectations materialise it would become possible in the not too distant future to generate power at well below the cost of alternative methods of generation.

From the point of view of Britain's industrial future this development is of the utmost significance. Lack of cheap hydro-electric resources have always constituted a major handicap to British industries. The development of a substantial supply of relatively cheap atomic power would go a long way towards assisting British industries in face of their manifold difficulties during the post-War period. The fears that industrial expansion might have to come to a halt for lack of adequate power supply could be eliminated. Last but no means least, Britain's balance of payments could be relieved by reducing the burdensome item of fuel imports. It is no wonder that the psychological effect of the opening of the Calder Hall power station whose maximum output amounts only to 92 megawatts, should have given rise of a wave of much needed optimism in Britain. It provided a ray of hope amidst the gloom of immediate difficulties.—(Copyright)

CLIVE STREET GOSSIP

(Continued from page 760)

abyss lies between the personal esteem for Mr Eisenhower and the popularity of the Republican party. The third strike against Mr Eisenhower may, consequently, be said to be the unpopularity of the Republican party.

✱

The odds that Mr Eisenhower will have to overcome if he is to be re-elected President for a second term are: the first strike of old age and recent illnesses; the second strike of a weak running mate in Mr Nixon and the threat of dethroned leadership; and the third strike of an unpopular party as his sponsor. EAVESDROPPER.

Stock Exchanges

MARKETS HESITANT: FEEBLE RECOVERY

Watch-Dog Writes:

STOCK markets have presented an uncertain front. Business done, during the week, has been on a small scale as both bulls and bears have been adopting a defensive policy. With the result, price movements are confined to a narrow range and are mostly irregular.

The main reason for the sluggishness in stock markets is the very tight credit position. Besides, the behaviour of the giltedged market has once again given rise to the rumours about a possible rise in the Bank Rate. Although support is not entirely lacking, operators are somewhat hesitant, while speculators are awaiting for a lead.

The post-Pujah session, on the Calcutta Stock Exchange, opened on a weak note and equities displayed an easier trend although they staged a modest recovery toward the close.

Prices on the Bombay Stock Exchange, after ruling steadier during the major part of the week, gave way at the close on realising pressure.

The Madras Stock Exchange ruled fairly active, but selling pressure was in evidence in Planting and Textile sections.

With the Suez Canal situation showing no improvement and the uncertainty on Wall Street, operators on the London Stock Exchange adopted a cautious attitude.

Wall Street closed irregular, with changes in the main body ranging principally to one point either way and losses in the majority.

Calcutta

Calcutta, Friday.

It was a week of featureless trading on the local Stock Exchange and, with a subdued undertone, equities moved both ways within a narrow groove. In general, the tendency of prices was to sag slowly from sheer lack of interest rather than from selling pressure.

The main influence seemed to have been a desire for liquidity in view of uncertainties and prospects of some attractive new capital issues. Moreover, operators were found to be worried over the growing stringency in the money market which, once again, gave rise to a feeling that the Bank Rate would be raised up in the near future. With the result, the turnover was restricted and the undertone remained hesitant at the close.

The Giltedged market was in a *paralysed state and support was* conspicuous by its absence despite the fall in some of the mediumdated issues to attractive low levels. Institutional investors showed little interest owing largely to stringent monetary conditions. 3 per cent 1986 Conversion Loan opened at Rs 74-3 and, after improving at one time to Rs 74-5, receded again toward the close to Rs 74-3-6.

In sympathy, Bank shares ruled quiet with United Commercial showing a drop of half a point at Rs 56-8. United Bank of India "D" moved narrowly between Rs 4-5 and Rs 4-7.

Jute shares were a neglected counter. Operators were generally inclined to liquidate their holdings following weaker advices from the jute goods market and in view of the obscure outlook for the industry. Howrah were marked down to Rs 22-4 from the pre-Pujah level of Rs 23-10; National to Rs 24-4 from Rs 25-1; Reliance to Rs 9-10 from Rs 9-15 and Anglo-India to Rs 182 from Rs 185. Dalhousie were, however, slightly better at Rs 97-0 against Rs 94-8. Union lost ten points at Rs 152.

Thanks to the end of the strike in the Raneegunge coalfields, Coal shares ruled fairly steady although higher levels could not be retained till the close in sympathy with the general trend of the market. Burrakur, after being taken upto Rs 16-1 from Rs 15-12, closed at Rs 15-14. East Indian were a steady feature at Rs 38-4, while Central India improved to Rs 7-8 from Rs 7-4. Raneegunge were As 3 easier at Rs 13-1. Pench Valley were quoted around Rs 20-7.

Textile scrips developed a weak tendency on bear pressure. Government's announcement regarding further relaxations in cloth policy failed to have any effect on sentiment in view of the fact that domestic offtake was at a low ebb. Kesoram, after being pushed down to Rs 16-15 from Rs 17-12, finished at Rs 17-0. New Victoria were nearly maintained at Rs 2-10 with Elgins moving narrowly between Rs 27-8 and Rs 27-10.

In an otherwise dull session, Tea shares fared well although turnover was restricted due to operators' reluctance to make larger commitments. The decision made by the Calcutta Tea Regulation Committee to curtail output from November 20 and the firmer prices obtained, both at the Calcutta and London auctions, contributed to the improvement in sentiment in this section. Most prominent scrips were Bishnauth Old changing hands upto Rs 25-10 from Rs 25-4; new shares upto Rs 23-12 from Rs 22-15; East India upto Rs 26-12 from Rs 26-8; Jutlibari upto Rs 26-14 from Rs 26-8; Tezpore upto Rs 24-6 from Rs 24-1 and Patrakola upto Rs 240 from Rs 230. Hantapara were, however, cheaper at Rs 205 against Rs 220, while Brooke Bond were a narrow market around Rs 22-6.

Sugar shares ruled generally quiet following easier advices from the commodity market. Darbhanga were offered at Rs 22-8; Ramnugger Cane at Rs 26-4 and SKG at Rs 12-6 against the pre-Pujah levels of Rs 23-0; Rs 28-14 and Rs 12-10 respectively. Belsund and Carew were, however, nearly maintained at Rs 12-1 and Rs 8-11 respectively.

THE DIBRUGARH COMPANY, LIMITED.

NOTICE is hereby given that the 28th Annual General Meeting of the Shareholders of The Dibrugarh Company, Limited, will be held at McLeod House, No. 3 Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday the 22nd November, 1956, at 4-00 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 8th November 1956 to 22nd November 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG.
Managing Director.
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 23rd October, 1956.

NOTE:

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 30th November, 1956, only to those members whose names are registered in the Books of the Company on the 22nd November, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

TIRRIHANNAH COMPANY LIMITED.

NOTICE is hereby given that the 49th Annual General Meeting of the Shareholders of Tirrihannah Company, Limited, will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 21st November, 1956, at 2-30 P.M. for the following purposes:—

1. To consider the Profit & Loss Account for the year ended the 31st December, 1955, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of the Retiring Director; Mr. P. C. Banthia being longest in Office, retires by rotation and offers himself for re-election.
4. To appoint Auditors for the year ending 31st December, 1956 and to fix their remuneration.
5. To appoint a Director in place of Mr. O. N. Goenka who vacates his office under Section 262(2) of the Companies Act, 1956.

The Share Transfer Books of the Company will be closed from 7th November 1956 to 21st November 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG.
Managing Director,
Managing Agents.

Calcutta,
23rd October, 1956.

NOTE:

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 30th November, 1956, only to those members whose names are registered in the Books of the Company on the 21st November, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

With regard to Item No. 5 of the above Notice Mr. G. T. Routledge was a Director of this Company for a long time. He vacated his office under Section 314 of the Companies Act. Your Board of Directors co-opted Mr. O. N. Goenka as a Director in his place. Mr. O. N. Goenka vacates his office in terms of Section 262(2) of the Companies Act, 1956. The vacancy may be filled up by the members.

STOCK EXCHANGES

(Continued from page 772)

Engineering shares bore the burnt of attacks during the greater part of the week and succumbed to heavy offerings on rumours of a possible rise in the Bank Rate. Also, the poor yield on Indian Irons encouraged bears to press sales while it was not clear as to when the new issue would be out. Indian Irons opened at Rs 34-2 and, after touching a low of Rs 33-14 and a high of Rs 34-5, finished the week at Rs 34-1. The settlement rate was fixed at Rs 34-2 as against the last settlement rate of Rs 35-11.

Among other issues, TEXMACO were pushed down to Rs 22-7 from the pre-Pujah level of Rs 23-10; Richardson to Rs 27-0 from Rs 28-6; Jessop to Rs 36-15 from Rs 38-14 and Burn and Company to Rs 374 from Rs 384. Indian Standard wagon had some enquiry at Rs 219 to Rs 221 with Braithwaite As 4 better at Rs 29-6.

Trading in the Miscellaneous section was generally dull with prices showing an easier tendency. Following lower London advices, Indian Copper were quoted at as low as Rs 4-4 against the pre-Pujah level of Rs 4-13. BBP turned ex-dividend at Rs 3-10, while IBP had buyers at Rs 40-14 to Rs 41-8. Orient Paper, after being pushed down to Rs 38-10 from Rs 39-2, turned ex-dividend at the close at Rs 38-4. Titaghur ruled fairly steady at Rs 39-12 with Shree Gopal cheaper at Rs 17-5 against Rs 17-13. India Steamship moved narrowly between Rs 10-0 and Rs 10-4; Sone Valley between Rs 9-2 and Rs 9-5; Martin Burns between Rs 24-4 and Rs 24-10 and Indian Cable between Rs 34-1 and Rs 34-9. Rallis met with good support upto Rs 46-8 from Rs 44-12. National Carbon came in for good investment enquiry upto Rs 30-0, but the closing rate was easier at Rs 29-11 due to profit-taking. Rohtas changed hands at Rs 21-8 to Rs 21-12; Jardine Henderson at Rs 89 to Rs 92; Dunlop Rubber at Rs 29-10 to Rs 30-0 and Shaw Wallace at Rs 13-0 to 13-4.

*

Bombay

EQUITIES on the Bombay Stock Exchange maintained a steady tone during the major part of the week although they experienced renewed pressure toward the close. In general, the market lacked confidence in the outlook in view of the fiscal and monetary policies of the Government. Further relaxations regarding stocks of cloth as well as further concession in excise duty for extra production had very little effect on the market.

The market seemed to be more worried over the growing stringency in the money market; and rumours about a possible rise in the Bank Rate caused heavy selling pressure, resulting in a sharp setback in prices. Toward the close, however, popular scrips showed modest recovery from the low levels on some replacement buying.

Textiles: Despite the concession in respect of excise duty and the relaxation of restrictions on cloth stocks, Textile shares could not stage an attractive spurt due to the adverse reports from the overseas and domestic markets. Bombay Dyeing started at Rs 632-8 and, after touching a low of Rs 615-10, finished better at Rs 621-4.

Steels: Steel shares succumbed to heavy offerings. Tata Ordinaries opened at Rs 194-12 and, after being marked down to as low as Rs 190-8, closed better at Rs 191-4.

Miscellaneous: This section was devoid of any particular feature. Tata Locomotive and Bombay Burmah Old were, however, firm on some speculative support upto Rs 165-2 and Rs 728-12 respectively. National Rayons met with some business upto Rs 254-12 on possibility of imports being restricted further. Tata Oils were on offer at Rs 53 as the Government refused permission for lower-share issue. Cement and Sugar shares were nearly maintained at last levels.

*

OLYMPUS

(Continued from page 765)

mind is masked. The Finance Minister, in his reply to Mr Black, was content with emphasising that the Industrial Policy Statement was never intended to be an ideologically dogmatic document, that the Government are only pragmatic in their approach to the problems on hand and that their treatment of foreign enterprise is above reproach. It was left to Mr G. L. Nanda to declare that the targets of the Plan would not be altered at the dictation of anybody. The Prime Minister, who spoke after the controversy had made good progress, was concerned to stress the absurdity of equating democracy to freedom of private enterprise. It is significant that neither the Communists in London nor the Communists in India have so far led Mr Black to disavow what has been imputed him. The inference is legitimate that the World Bank looks for marked modifications of the Plan as the price of adequate support in financing the Plan. The only way of disproving it is for the Bank to agree to an immediate advance of, say, Rs 250 crores for the Transport Plan which the Bank recognises to be sound and deserving of financial aid. If, on the other hand, it continues to repeat the ominous generalities and delays the loans, which India now needs, it will only provide fresh grounds for Mr Bevan's charge that the US sees in its financial power "the modern equivalent of invading armies".

FOR THE INVESTOR

(Continued from page 747)

will be limited and restricted; and, if the role of the private sector is to be insignificantly small, it will have a bearish connotation for Stock Exchanges."

It is, I am afraid, on this point that there has been the greatest amount of misunderstanding. If Mr Black was putting in a plea for a bigger role for private enterprise, he was within his rights to do so; but that did not mean that his plea was correctly based. On the other hand, if Mr Black had known the conditions in which private enterprise has been functioning in India, his brief for private enterprise might have been toned down. I explained all this to Phatkaram; and I then summed up my views:

"The great days of capitalism, as Mr Nehru has remarked, were when it was adventurous. Today, capitalism seems to be timorous. The private sector has a role in Indian development; but its role has to be limited by two factors. The first of these is its own ability to find capital. In Indian conditions, you will agree that private enterprise can by no means secure the capital for all the plans of development envisaged in the Second Plan. Indeed, the best that the private sector may be able to do is to lay its hands on the requisite funds for implementing such development as has been allotted to it. Secondly, the world trends in economic thinking are for the State increasingly to assume the responsibility for activity in certain strategic sectors. In this view-point, it is inescapable, particularly in a semi-developed country, that the onus for industrialisation should fall quite heavily on Government.

"What, therefore, should be important to the private sector is whether or not Government are providing the facilities and the incentive and encouragement for private enterprise successfully to fulfil its role. On this point, Mr Nehru has repeatedly said that such encouragement and help—including financial aid—would be given to the private sector. It seems to me," I concluded, "that, in the circumstances of an expansionist economy, the private sector in India can progress and prosper: and the vistas for development are satisfactorily large."

*

Investment Notes:

It is understood that the entire equity capital offered by East India Hotels Limited to the public has been oversubscribed. The number of applications exceeds 12,000. The company is now proceeding with the allotment.

Indian Aluminium Company has convened a general meeting on the 12th November, 1956 to consider the creation and issue of Rs 2,68,13,200 Convertible Loan carrying 5 per cent per annum to holders, as on the 20th December 1956, in the proportion of Rs 200 nominal value of stock for every 15 Ordinary shares of Rs 10 each held.

The Bagalkot Cement Company has obtained the sanction from the Government of India for the issue of Rs 25 lakhs worth of Ordinary shares. This new issue constitutes the balance of the unsubscribed capital. The shares will be issued at par in the proportion of one new share for every three shares already held. It is understood that this issue has been underwritten by one bank.

The Jehangir Vakil Mills, Ahmedabad, have decided to issue one bonus for every ten shares to mark the occasion of the Silver Jubilee of the company.

The shares of Premier Automobiles have been included in the forward list of the Bombay Stock Exchange with effect from Monday, the 22nd October. The shares will be dealt in lots of five shares.

The shares of Jaipur Udyog Cement have been admitted in the cash list of the Boombay Stock Exchange. Dealings will be in lots of 100 shares.

In Madras, the Andhra Cement Company has made an application to the Controller of Capital Issues for permission to raise additional capital of Rs 21,31,280 comprising 2,13,128 shares of Rs 10 each.

Lucky Valley (Nilgiri Hills) Tea Estates have proposed to issue 90,000 Ordinary shares of Rs 10 each and 1,100-7½ per cent Redeemable Debentures of Rs 500 each, subject to the sanction of the Controller of Capital Issues. Out of this issue, 50,000 Ordinary shares will be offered at par in the proportion of one for one. The balance 40,000 shares will be issued to the vendors for consideration other than cash. The Debentures will mature within a period of 10 years, and the first payment will start at the end of the third year and thereafter in annual instalments. The meeting, in this connection, will be held on the 17th November, 1956.

Pullagode Rubber & Produce Company has obtained permission from the Government of India for the issue of right Ordinary shares at par in the proportion of one for every two shares held.

£ R$

Investment Briefs:

Anderson Wright Limited has passed over the Ordinary dividend for 1955 as against 7½ per cent paid in the previous year.

Transfer Books of Great Eastern Shipping will be closed for the issue of new shares from the 16th November to the 6th December, 1956.

Transfer Books of Digvijay Cement Company will be closed from 31-10-1956 to 7-11-1956 for the issue of new shares.

Transfer Books of Bombay Suburban Electricity will be closed from 19-11-1956 to 1-12-1956; Tata Chemicals from 29-10-1956 to 26-11-1956 and Killick Industries from 9-11-1956 to 27-11-1956.

no more the muhannad

FIRDAUSI'S EPIC POEM, *Shah-Namah* tells us that when Alexander invaded Persia in 331 B.C., swords and other weapons of steel were hurriedly sent for from India. Throughout the civilized world India was famous as the home of quality steel. In fact, the old Arabic word for "sword" is "muhannad", meaning "from Hind."

Today, once again, steel is very much to the fore in the nation's thinking, but with a different intent. The country's steel-making capacity is being rapidly enlarged, not for purposes of war, but for peace and development.

For the Investor

The Egyptian War Bubble

Investment Gossip:

I suppose I will be told by my astrologer friend—his name is Phatkaram Pagla—that the ominous threat of war on a large scale is in entire conformity with his reading of the planetary positions.

Phatkaram had, readers may recall, paid me a visit a short while ago; and he impressed upon me, at that time, his view that the stars foretold a bullish trend in speculative markets.

I confess he was right; that is, speculative markets have indeed flared up, especially the jute goods and cotton markets. The stock exchange is not without an improved measure of support.

Perhaps Phatkaram is also right in his asseveration that the bellicosity in the West Asia area is the inevitable outcome of planetary influences.

Phatkaram exultantly informed me that the Middle East issues would last (or drag on for) four months; by implication, bull trends are to hold sway for 120 days.

I apprehend, I am afraid, such prospects: my fear is that the Egyptian War Bubble, being speculative in character, will be short-lived.

How I wish instead that stock exchanges would witness the steadiness of an investor's market. The Second Plan endeavours, the projects in plenty, the expansionist nature of the economy, the immeasurably bright prospects before the beacon-light industries—all these are influences that make mandatory a healthy, but not sharp, advance in share prices.

I tried to persuade Phatkaram of these intrinsically favourable factors; but I failed in my attempt to convert him into an investor.

All my urgings and pleadings fell on deaf ears. Phatkaram told me why my missionary efforts were unavailing.

As he put it; Phatkaram saw no sure prospect of profits as an investor. On the other hand, the speculative gamble was well worth the candle.

Quick profits were to be made; these lent themselves, partly at least, to tax evasion. The risk of loss, at least for him, was not great. For, he said, astrology is so fine a science that it never goes wrong for the intelligent reader.

That's the trouble, I am afraid. Phatkaram and his breed have a sure instinct for profits, the Midas touch with money. So long as this intuitive knowledge is intact and unsullied, speculation—and hectic speculation, at that—as a way of life will continue.

The Guest, Keen Issue

A NEW issue of sizeable proportions and substantial importance is being made some time prior to the anticipated rights issue by IISCO. Guest, Keen, Williams, Limited has issued a prospectus offering 5·89 lakhs shares of Rs 10 each at a premium of Rs 10 per share for public subscription; 50,000 shares are, however, to be reserved initially for employees of the organisation.

The total amount sought is, therefore, slightly less than Rs 1.2 crores. The subscription list is to open on the 7th of November and close on the 14th of November or earlier.

Guest, Keen has just lately been converted into a public limited company. The object of raising the fresh capital is to enable the company to expand its production, enlarge the scope and range of its activities, provide additional working capital and afford an opportunity for the participation of Indian capital.

Although money conditions are tight, and in spite of the fact that the money drawn by earlier issues from the investment market resources is considerable, a keen interest is to be expected in Guest, Keen's share issue.

For, the products turned out have for their main customer the Indian Railways; and, in view of the railway expansion schemes, Guest, Keen's manufactures bid fair to meet increasing demand.

Moreover, the figures given relating to past profit performances are likely to entice the investor.

Finally, the investor may note it that the interim dividend paid for 1956 is at the rate of 8 per cent free of income tax, as against the interim for 1955 at 7½ per cent without deduction of tax.

HIGHLIGHTS

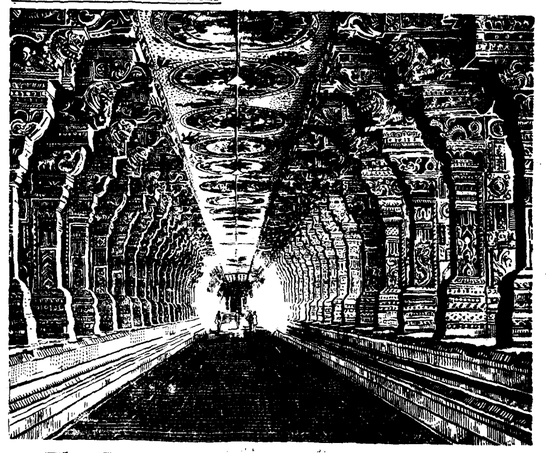
There is in business, as in society, a middle class.

This comprises the enterprises which are too small to be considered big business, but too large to fall under the category of small scale industry.

Which is most unfortunate.

The reason is that big business is well able to take care of itself, while Government deem it their duty to have an especial solicitude for small scale industry.

But the middle class in business enterprise is as important to the economy as the middle-class individual is vital to society.



What we find, however, is that organisations intended to aid industry are "inaccessible" to the middle-class sector.

In particular, the Industrial Finance Corporation would, if proper measures are taken to equip it for that purpose, be of priceless help.

In this week's Gossip, Eavesdropper examines the plight of the smaller companies. In the light of his analysis, he has constructive suggestions to offer.

These suggestions are calculated to render the IFC more accessible to the backbone of the economy—the middle-class sector.

Around India with Brooke Bond

The Corridors of Time—**Rameswaram**

Near Dhanushkodi, at the South-Eastern tip of Indian Peninsula, whence Rama launched his campaign against Ravana, stands the great and holy temple of Rameswaram. The pride and glory of this temple are the vast covered corridors which not only surround it but also form avenues leading to the central shrine. These corridors, two of which are over 700 feet long, are set with well-proportioned, richly-decorated pillars and present an endless vista of columned halls. Towering on the east side is a 170 feet high Gopuram or monumental gateway.

Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Investment Notes:

Orient Paper Mills have, it is understood, obtained the sanction from the Government of India to establish a paper mill near Amlai on the Bilaspur-Katni line. It is proposed to raise Rs 50 lakhs of fresh capital by issuing Preference shares, which will be offered to the Ordinary and Preference shareholders on the basis of the face value of their holdings.

TEXMACOs are quoting around Rs 22-6. This company is reported to have concluded an agreement with the Combustion Engineering Inc. of the USA for the manufacture of water-tube boilers. The unit in Belghuria is being expanded for the manufacture of complete steam-generating plants by 1957.

The National Sugar Mills Limited has proposed to establish a sugar mill at Ahmedpur in West Bengal. The company has been authorised to issue 2,50,000 shares of Rs 10 each for public subscription.

In Bombay, Voltas Limited has proposed to raise Rs 1.05 crores to finance the expanding activities of the company. This will be issued in the form of Ordinary shares of Rs 100 each in the ratio of 7 new shares for 10 Ordinary shares of Rs 100 each. It may be added that, in order to facilitate dealings, the company has proposed to sub-divide the

existing Ordinary shares of Rs 1,000 each into 10 shares of Rs 100 each.

Tata Chemicals are ruling firm at Rs 20-4. The company has recommended a maiden distribution of As 12 per share on the Ordinary shares for the year ended 30-6-1956.

Fears are entertained that the Central India Spinning, Weaving and Manufacturing Company may not be able to pay any dividend for a couple of years in view of the heavy burden of its modernisation programme. This means that the dividend for the year ended 30-6-56 will be passed over as against Rs 3 paid in the previous year.

The Bombay Burmah Trading Corporation has convened a meeting on November 12 to make certain changes in the Articles of Association.

The shares of the Ferro Alloys Corporation Limited have been enlisted in the cash section of the Bombay Stock Exchange. Business will be done in lots of 5 shares. The company has three classes of Ordinary shares, viz., Rs 100, Rs 70 and Rs 25. It has also two classes of Preference shares of Rs 70 and Rs 25 each.

Henceforth, all Hydro-Electric companies will be closing their accounting years on 31st March in view of the new Government rule. These companies will pay interim dividends, but it is not decided as to for which period this will pertain to.

The newly partly-paid shares of Kothari Textiles (both Ordinary and Preference) have been entered in the cash list of the Bombay Stock Exchange. Business in these shares will be done in units of 100 shares.

Investment Briefs:

Indo-Burma Petroleum has announced an interim dividend of Re 1 per share on the Ordinary shares for 1956, payable on or after 21-11-56. Transfer Books are closed from the 13th to 20th November, 1956.

Ethelbari Tea has reduced the dividend from 50 to 12½ per cent for 1955.

Sulekha Works have raised the dividend from 7 to 8 per cent for 1955.

Amedabad Advance has raised the dividend from Rs 7 to Rs 12 per share for the year ended 30-6-1956.

Morarjee Goguldas Spinning has raised the dividend from Rs 14 to Rs 15 per share for the same year.

Brooke Bond Tea Results

Balance-Sheet Reviews:

BROOKE BOND ESTATES INDIA LIMITED has presented its reports and accounts for the year ended 30th June, 1956; and, in common with other tea companies, the working results are rather disappointing. Net earnings have shown a substantial decline, while the dividend on the Ordinary shares has been reduced from 47½ to 12½ per cent.

Thanks to favourable weather conditions, the crop outturn for the year was higher at 45,093 maunds as against 40,730 maunds in the previous year, the original estimate for 1955-56 being only 42,875 maunds. The average sale price realised for the year, after deducting all tea sale charges and cost of export rights, was Rs 1-15 per pound as compared with Rs 2-14-1 for the previous year. The average price realised on the gross sale proceeds was Rs 2-1-6 per pound.

The net profit for the year, before providing for Depreciation and Taxation, amounts to only Rs 19,50,385 against as much as Rs 49,95,080 in the previous year. The directors have, apart from providing Rs 2.65 lakhs for Contingency Reserve, reduced the Taxation amount to Rs 6.20 lakhs from Rs 19.50 lakhs. The amount set aside for Depreciation is slightly higher at Rs 3.24 lakhs against Rs 3.20 lakhs.

According to the Directors' report, the market for tea, during this season, has so far been on a rather more satisfactory level; but it is not possible to forsee the new season's results in view of the unsettled international situation.

Reports in the Press have appeared regarding the Plantation Inquiry Commission's Report in which, it appears, adverse comments have been made that many companies do not provide for a proper uprooting and replanting programme in order to make good tea bushes that have outlived their natural life. But this company has had a replanting programme in operation for several years which provides for replacement of old areas in a regular cycle.

Indian Finance
Established 1928
November 3, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

CURIOUSLY enough, it is Eastern Europe which provided the stimulus, direct or remote, to the two world wars of this century. The first had its signal in the death of the Archduke of Austria. The second commenced with Hitler's attack on Poland. It was also Eastern Europe which had to face some of the worst sufferings during the two wars, especially during the second, when Hitler's hordes were marching to and fro and when the final decision was being carved out in its battle fields through the smashing advance of Russian troops.

Against this background, the current events in Poland and Hungary assume an international significance, far out of proportion to the character and dimensions of the events themselves. They may be interpreted as furnishing an important phase in the unsettlement of the "peace" settled under duress after the Second World War. That way the uprisings and the changes of Government in Poland and Hungary may eventually develop a situation in which the prospect of another war will seem to be as remote as it was in the middle of 1945. Under this interpretation, it is possible to hail the recent disorders in the two countries as the harbinger of an inestimable good for the entire world.

These uprisings are a direct offshoot of the political settlement imposed on the two countries by Soviet Russia. Hungary at least had a foretaste of communist rule immediately after the Russian Revolution but that regime was short-lived and during the inter-war period, though the threat of communism was present all along, the domestic affairs of Hungary were managed in a more or less democratic fashion with a strong preponderance of personal rule.

When Russia took Hungary over, it was in the spirit of a liberator. Then it was easy to set up an ideologically friendly regime and buttress it with all the external support it needed. In its economically paralysed state, Hungary lacked either the will or the strength to offer any challenge. It was a case of weak and at that time even grateful acceptance of a new order infinitely preferable to Hitlerian tyranny. By 1948 even the empty embellishments of a democratic administration had quietly disappeared.

Polish history since 1939 was full of heart-rendering episodes which sowed the seed of a strong anti-Russian feeling among the people. By the middle of 1948, when a pro-Soviet Government was established and was safe in the saddle, there were a large number of pockets of resistance with considerable underground support. The Soviet-sponsored regime could ride rough-shod over any kind of opposition. Just as in other countries devastated by the War, the rebel minority in Poland at that time could scarcely see the prospect of an immediate deliverance. It has taken another eight years for this prospect to emerge. Gomulka, who has resumed authority in Poland has always been a hard boiled communist. But because he was a staunch Polish patriot as well, Stalin thought it unsafe to accommodate him in power. It is well-known that while all his colleagues went to a mysterious end on the initiative of Stalin, Gomulka alone was spared that fate, as he was then suffering from a serious wound and could not accept an invitation to Moscow.

The post-war Communist empire which Stalin built out of the ruins of Eastern Europe thus contained the seeds of disruption. It is a matter for speculation how far the process would have been delayed, if Bulganin and Krushchev, for reasons still largely obscure, had not assailed the cult of personality represented by Stalin and did it with such gusto. Perhaps, the Soviet leaders had sensed a new awakening among the satellite countries in response to and nourished by the successful stand which Marshal Tito took on behalf of national independence. Krushchev might even have anticipated the repetition of the Titoist stand and his denunciation of Stalinism must also have been inspired by the desire to forestall events elsewhere.

Whatever it is, the change in domestic policy initiated by the present ruling group in Russia must surely have strengthened the urge, of which the last few days' events in Poland and Hungary are the inevitable expression. Incidentally, nobody knows exactly what transpired between Marshal Tito and Krushchev during their recent confabulations. Before the two leaders met, the Soviet High Command had issued a secret circular to the Communist parties of Eastern Europe, reaffirming the international role of Moscow. It was quite likely that Marshal Tito protested against this circular and intimated to his Russian friends the possible reactions in the neighbouring countries. If Moscow had not been already mentally prepared to some extent to a gradual reassertion of national freedom in the smaller communist States, the part played by the Soviet forces in both Poland and Hungary could have been much more fierce and revengeful. As it is, the casualties in Poland through the action of Russian army men are comparatively very low. In Hungary, barring the reported shooting of an unarmed crowd, the Russian troops seem to have used the minimum of force. It was also a situation in which Russians were acting on behalf of the new Hungarian Government. If the Russians were keen on retaining their authority in these two countries, they could have summoned the necessary reinforcements in a moment's time and used the available forces much more ruthlessly. That they did neither should lead to the conclusion that they are not unduly disturbed by the possible consequences of a change of Governments less amenable to their own counsel. From both Poland and Hungary, Russian troops would shortly withdraw.

In Western Europe and America, many hearts have leapt over these events. It is human to exult over the discomfiture of a rival. Any depletion of strength to Soviet Russia would naturally be welcome to the Western Powers. But in this case, the circumstances are such that a high degree of restraint is indicated. Firstly, the cause of international good relations is not served by the crude manifestation of joy, when the other party gets injured or incurs a loss. Russia has done the same thing in connection with the Suez crisis. In fact, this has become a natural characteristic of the cold war, and for that very reason an aggravating influence. The eventual wisdom of carrying the issue to the UN has also to be questioned for this very reason. The disturbances seem to be over and a United Nations review, instead of leading to any helpful development, may result only in keeping old sores alive. If the temporary affront to Russia is forgotten, there is scarcely any aspect of the events under discussion which should cause abiding relief or satisfaction to the Western camp. It is true that the words 'democracy' and 'democratisation' are on the lips of innumerable people both in Russia and in the Eastern European countries. But let it not be overlooked that 'democracy' carries an entirely different meaning and connotation in Russia from what it does to France, the US or Britain. When Polish and Hungarian leaders speak of democratisation, they may be thinking of nothing more than the removal of undue Russian interference in the domestic affairs of their countries. In other words, democratisation is conceived in these areas as a kind of broad equality and greater mutual respect between communist countries. This political aspiration may be reinforced by the desire for an improved economic status through greater independence in production and a freer flow of what is now familiarly described as East-West trade.

Beyond these, it would be illusory to read into the professions and terminology which have got into fashion in these countries. Historically, East European countries cannot claim to have a bias for democratic institutions as in Western Europe. As in Russia, where a feudal monarchy straight-away gave place to communism, these states too had undergone more or less the same process. In this parallelism, it does not seem profitable to hope that these countries could be converted to the political ideology represented by the West. At one time, the Western Powers' solicitude for Marshal Tito became so embarrassing that he felt impelled to remind them that he had no intention of compromising with the communist creed. During the thick of street fighting in Warsaw and Budapest, the "anti-Russian" leaders warned the people against infiltration and sabotage by pro-capitalist elements. As far as present indications go, Hungary and Poland are not likely to be less communist than Yugoslavia under Tito.

If, then, the borders of communism are not likely to shrink from the side of the Danube, can the upheavals in Hungary and Poland have any more far-reaching consequences than a quickly-forgotten though violent family squabble? The question opens up an endless vista of speculation. The relation between Russia and other communist countries may be laid on new foundations. Russo-Chinese relations are not tainted by any spirit of domineering condescension. Yugoslavia is a symbol of equality between a big and a small power in the communist camp. Between the three, the sense of ideological unity and partnership remains unimpaired. An extension of this relationship is not inconceivable. It is interesting to recall a passage from Sir Anthony Eden's speech delivered at the English Speaking Union, London, on July, 12:

"The Commonwealth is in fact the only institution in the world today which has constantly added to the role of free and

independent nations—I believe the Commonwealth is setting in all this an example to the world of the ideal relations between States, by methods of work in which interdependence is stressed as strongly as independence."

The British Prime Minister proceeded to predict that if at all a world Government was to be born, it would be on the model of the Commonwealth.

Russia has always been zealous in the support of struggles against Western Colonial powers. The present events are another proof that popular emotions reacting to new ideas quickly spill over ideological boundaries. But against this boomerang effect, Russia can draw the lesson brilliantly espoused by Sir Anthony and strive to reorder the mutual relations of the communist family of States on the lines of the Commonwealth.

A certain aloofness among these States has to be conceded, by virtue of their differences in language, race and social and historical traditions. Even the birth of the Communist state has not shown a uniform pattern. In Russia, it was through storming the capital and overthrowing the Government of the day; in Eastern Europe, it was the offspring of an international war; in China, it was a gradual over-running of the entire territory from one end to the other. The need for the coup d'e tat and invltration as means of political conversion of people may also be re-examined in the light of a more intense study of these facts. As the Warsaw Pact stands the risk of dissolution, the future of the Atlantic Pact is also likely to get more shaky. But these prospects may not lie in the lap of the immediate future.

Amidst all this speculation, one inescapable fact emerges. The spirit of nationalism is so deeply embedded in men that no one can say when or how it can be made to submit overwhelmingly to the demands of wider loyalties. The vision of a United States of Europe, held by Dr Stressman and many of his contemporaries, produced nothing. The proposal for a Union of France and Britain made by Churchill at the peak of a common threat was still-born. After the end of the war Churchill expounded the idea of a common citizenship for Britain and the United States. This too had the same fate. General Smuts dreamed of a West European-Commonwealth integration. Even now a West European Federation inter-linking with the Commonwealth remains one of the idealists' dreams.

Whenever a colossal international problem occurs, or a mammoth international blow threatens to disrupt, it is tempting to think of new unions and new bases for alliances. When the immediate provocation passes away and is forgotten, these thoughts also quickly subside. It is therefore safe to say no more about the Polish and Hungarian events than that they have relieved certain grave tensions between peoples and thereby exposed the weaknesses in the dealings among one group of States and deflated the sense of threat with which another group was looking on it. This indeed is not an inconsiderable gain in the direction of international peace.

Sugar Facts and Figures

THE growing confidence of the Government to achieve particular objectives of the Second Plan before the expiry of the plan period was reflected in the speech of Mr Ajit Prasad Jain, Union Minister for Food and Agriculture, when he inaugurated the largely attended thirteenth convention of the Deccan Sugar Technologists Association at Shakarnagar, Hyderabad, last week. He said that the rapid progress made in the sugar industry made him feel confident that "the target of sugar production fixed at 22.5 lakh tons under the Second Five-Year Plan would be achieved much before the target date". Later in the speech he expressed the hope that the target fixed for 1960 would be reached two years earlier.

The Union Minister has reasons to feel confident. After the set back in sugar production in the 1953-54 season, the industry has steadily grown and the Government's expansion programme, judging by the rapidly increasing output of a few of the factories, can be expected to show results within a year or two. But all the same there is no room for any feeling of complacency and Mr A. P. Jain in his speech gave grounds for none.

India's low yield of sugar per acre (15 tons against 62 tons in Hawaii and 56 tons in Indonesia) ill befits the largest sugar growing country in the world. The recovery percentages compare equally unfavourably with most of the other sugar producing countries. The Union Minister mentioned in particular the very low recovery percentages of sugar factories in Travancore-Cochin (3.3 per cent) Madras (9.1 per cent) Andhra (9.4 per cent) and Mysore (10 per cent). The cane yields in these states are similarly low; lower even than the very poor average cane yield per acre in India. These are well known facts but they bear retelling because of the grave necessity for improving the cane yield and the recovery percentages. It has to be remembered that the sugar industry, phenomenal as its growth has been during the last thirty years, still leans heavily on Tariff Protection which it has enjoyed since 1932. Even though apparently prosperous it has failed to exploit the advantage of a growing market to the fullest extent by its failure to adopt measures for reducing the high cost of production (an important reason for which is the inefficient and *outmoded* methods followed, by and large, at the factory stage) and for actively helping in the extension of intensive cultivation of better quality cane.

The Union Minister in the course of his speech gave details of the expansion programme of the Government which aim at increasing the installed capacity of the industry to 25 lakh tons by 1960-61. So far, the Government of India have granted licenses for expansion of 57 existing units and for the establishment of 55 new factories including three to be installed by shifting idle plants available in the country. The licenses cover a production capacity of 9.6 lakh tons of sugar. The most important feature in the issue of licenses for starting factories is the preference shown by the Government for factories to be started by the growers on a cooperative basis. 34 out of the 55 new licenses are for processing units to be started by the cane growers' cooperatives on the basis of crops grown by themselves. Of these 14 would be in Bombay, 5 in Andhra, 4 in the Punjab, 3 each in UP and Madras, 2 in Mysore and 1 each in Assam, Bihar and Orissa. 18 more such cooperatives are planned for during the Second Plan period. One such unit at Koopargaon has already gone into production in the 1955-56 season. 11 are expected to go into production in the 1956-57 season and a similar number in the following season. According to the Union Minister's estimate, the cooperative units when they start functioning will produce nearly a quarter of the country's requirements and will benefit the growers to the extent of at least Rs 3 crores annually as profits of their own factories.

While the Government's desire to ameliorate the economic condition of the cane growers is unexceptionable and will have universal support, there are likely to be doubts whether the grant of new licenses to cooperative associations of cane growers for starting factories is the most practical way to see the desire fulfilled. The question of the ideal economic unit of sugar production in Indian conditions is still strongly debated and quite a number of experts hold that the Government's principle of generally not allowing more than 2000 tons crushing per day does not favour the proper functioning of an ideal economic unit. In Cuba and in other sugar producing countries the daily crushing in a factory is anything between 2,500 tons and 10,000 tons.

Be that as it may and whatever the theoretically correct figure be, the principle followed by the Government in granting the new licenses is open to objection on other grounds as well. Mr K. T. Somaiya who presided at the conference which the Union Minister inaugurated was strongly critical in his address of the Government's licensing policy. He said that the concept of an economic unit should be based on such considerations as (1) an assured and sufficient supply of cane (2) reservation of definite areas for a producing unit and (3) zonal utilisation of resources. The Government, according to him, have not considered these factors in granting the new licenses and have encouraged starting of new factories without assuring first that the existing plants were being worked to the maximum extent and in the most efficient manner. In some instances the cooperative units which have been granted licenses for starting processing plants were too close to one another, to be certain of an even and sufficient supply of cane.

Mr Somaiya's criticism is not without force. There is always a danger that in their natural eagerness to shorten the gap of sugar imports by increasing internal production the Government might encourage the wrong kind of drive for more and more factories. At it is, the growth of the sugar industry has been, to quote Mr A. P. Jain himself from a later speech "whimsical, unplanned and incongruous". In the utilisation of the country's resources and wealth a long term view has to be taken even when the need for immediate results is great. If the Government have not satisfied themselves that the new licensees could build factories which would be economically sound and technically efficient before the grant of the licenses, the ultimate result can only be wasteful.

One of the principal obstacles in the way of expansion along proper lines of the sugar industry—as indeed of almost all other industries—is the acute shortage of trained technical man-power. The institute of Technology at Kanpur and the 22 Research Stations have, against numerous odds, achieved noteworthy results, in both the fields of training and research. But the training facilities offered by these centres are not adequate enough to train up the requisite number of sugar technologists.

The sugar industry in South India is growing up at a fast pace. 60 per cent of the new capacity licensed so far is located in the South, and a shift in location of the centre of the industry is clearly discernible. Mr A. P. Jain himself mentioned this fact of a gradual geographical change in the pattern of sugar trade in India in the near future in a speech earlier this week while inaugurating another convention of sugar technologists at Kanpur. He said that the centre of sugar production was gravitating towards Bombay and Southern India and away from UP and Bihar. He added "the price at which sugar was

(Continued on page 784)

Editorial Notes

A Sinister Move

The President of the Madras Muslim League has, with the approval of his party majority, revived the demand for separate electorates for the Muslims. Several leaders including Pandit Nehru have indicated their desire to see the Muslim League liquidating itself as a political organisation. The Indian League leaders did not care to respond to such wise counsel. On the contrary, the obnoxious claim for separate representation has now come up. Even in Pakistan, the League is fast evaporating. East Pakistan has accepted joint electorates.

It is true that there are other organisations of the community who do not quite favour this demand. The ease with which the unthinking masses are being roused into moods of violent anger by any casual signal of an affront to religion bespeaks a situation in which the uncompromising communalists can always gather into their camp the bulk of their community. Just as the existence of Congress Muslims during the struggle for freedom could not alter the sinister trend toward partition, a few pockets of sobriety may not offer a balancing counter-pull to those who have again chosen the separatist path.

It is also significant that even in the Jamait camp, there is an unfelicitous anxiety to throw a great share of the responsibility for Muslim communalism on others, the Congress not excepted. The Prime Minister has again and again rebuked communalist elements of all brands; but there is even now no sign that the evil is on the retreat.

Separate electorates have an ominous history behind it. Unless the demand is scotched here and now, it can well turn out to be the genesis of another disruptive trend. Under the Indian Constitution, which is unambiguously *secular in intention and in practice*, there is scarcely any reason for religion and politics to get mixed up. It is not clear if the present League demand is unconstitutional; if it is not, it is necessary that the Constitution should be suitably amended to make it so.

Any supercilious belittling of the consequences of the step taken by the League can confront the State with a repetition of the same sequence of events, which culminated in the division of the country. The Union Government, which has an impeccable record of fair-dealing between communities should feel bold enough to take up the challenge, so that further troubles may be averted.

UNESCO Meet

On November 5, the General Conference of the United Nations Educational, Scientific and Cultural Organisation will commence in New Delhi. The Capital of the Indian Union has been preparing for this event in a suitable manner and a number of imposing structures will survive as its monuments.

It is inevitable that the unostentatious work of the UNESCO in its allotted fields does not receive equal publicity with the more exciting activities of the Security Council, the General Assembly or even a body like the FAO. In Asia, particularly, the work of the Organisation is in need of wider recognition. The New Delhi Conference may be hoped to achieve this purpose.

Already, the UNESCO has done much in the direction of stimulating international understanding of India's educational problems and getting Indian scholars acquainted with relevant conditions abroad. The provision of scholarships and the supply of trained personnel, which are being undertaken on the initiative of the Organisation have also a vital role in the promotion of international understanding.

The Organisation's achievements in different countries will have to be assessed with reference to the wide differences obtaining in cultural and educational levels. In some of British Colonies and Protectorates, not more than 5 per cent of the people are literate. In one Portuguese Colony, 99 per cent are illiterate. The state of girls' education in such countries needs no comment. In Europe, including USSR, over 90 per cent can claim to be able to read and write. Amidst these sharp contrasts, the UNESCO has to weigh priorities carefully and make national allocations from a lean budget.

*

Family Planning

With the setting-up of the Family Planning Board, the organisational frame-work for an important aspect of social work under the planned economy has been overhauled. The Family Planning Research and Programmes Committee, its Sub-committees and the Grants Committee have ceased to exist. The change ensures more compact Central direction.

If the definition of aim by Research and Programmes Committee is a guide, the Board is undertaking an extremely onerous task, consisting as it does, in promoting, as far as possible, "the growth of the family as a unit of society in a manner designed to facilitate the fulfilment of those conditions which are necessary for the welfare of this unit from the social, economic and cultural point of view". This far-flung and ambitious aim should not be permitted to interefere with the concentration of actual work on family limitation.

Though it may take at least another twenty years before the impact of a large-scale reduction in births to be carried to the sphere of employment, the curtailment of consumption demand in goods and services will be felt within a year of the commencement of effective and sufficiently broad-based propaganda.

In concentrating on family limitation, the balance of purposes needs scarcely be upset. Because, smaller families and a smaller population in relation to material resources form the starting point, as it were, for a sound family environment, the elimination of physical and mental defects and a proper attitude toward married life in both the sexes.

If the primacy of the economic need is kept in view, the national compaign which is now commencing is bound to succeed. That there is scarcely any organised opposition to the compaign is a great advantage from the point of view of both the State and the masses. There is a clear field for propaganda and whatever doubts are entertained about response in rural areas will seem to be largely misplaced. The urge for higher standards of living has become nearly universal and strong enough to subdue the lukewarm resistance from tradition. If the authorities take due care in the routing of expenditure and do not dread rigorous accounting, there will be hardly any reason for disappointment.

*

Stores Purchase

An analysis of the Government of India's purchases during 1955-56 has revealed that the value of purchases from the cottage and small scale industries during the period has recorded a steep rise to Rs 341.14 lakhs from Rs 105 lakhs in 1954-55. The value of such purchases was placed at only Rs 74 lakhs in 1953-54.

It may be recalled that Government have been giving price preference in suitable cases to the products of the cottage and small-scale industries. The Stores Purchase Committee has recommended that Government should give preference as far as possible to the products of these industries while purchasing their requirements. Government have accepted the recommendation of the committee in this regard, and a special officer has been reviewing from time to time the stores purchased with a view to utilising the capacity from this sector to the maximum extent.

In the context of the Second Five Year Plan, this recommendation assumes special significance. For under the Plan industries in this category will come to occupy an increasingly important place in the nation's economy. It is essential, therefore, to ensure that the products of these industries find a ready market.

World of Finance

Hefty Deficit Financing

THERE has, as revealed in the statement of the Reserve Bank for the week ended October 26, been deficit financing for an unseasonably large amount. An intriguing question is posed for the student of the money market by the rise, in the week under review, of Rs 29.81 crores in Rupee Securities. The returns of the Reserve Bank are otherwise true to the pattern of the last week in a slack season month.

Active notes have registered a drop of Rs 10.65 crores to Rs 1418.89 crores. Rupee Coin has risen by Rs 1.41 crores to Rs 121.49 crores, thus indicating the return from circulation of rupee coin to this amount. Consequently, the Reserve Bank's cash in the till is more comfortable by Rs 12.06 crores at Rs 33.07 crores.

Member banks would also seem to be better placed, as evidenced in the rise of Rs 1.05 crores in their deposits to Rs 51.39 crores. They have besides been able to reduce their borrowings, as attested by the decline of Rs 2.82 crores to Rs 83.35 crores in the Other Loans and Advances of the Reserve Bank.

Recourse to created money has been to the tune of Rs 29.81 crores; Rupee Securities in the Issue Department show a rise of this order to Rs 720.69 crores. Since the Reserve Bank's cash in the till was of adequate proportions, this rise has been offset by the transfer of Rs 29.81 crores from Foreign Securities in the Issue Department to Balances Held Abroad in the Banking Department.

It is noteworthy that, in spite of the sale of ad hocs to the Reserve Bank for Rs 30 crores, the Central Government's deposits have risen only by Rs 1.24 crores to Rs 54.15 crores. We may presume, therefore, that the Centre has already made the payments in whose behalf money was created. The substantial rise of Rs 21.99 crores in the balances of State Governments strongly indicates that the payments in question were made to the State Governments. But a large disbursement by the Centre in favour of the States is unusual at this time of the year. We have, in this light, to consider whether, in the week under review, it might have become necessary for the Centre to make pressing payments to the States.

Our own view is that the impending reorganisation of states would have necessitated a number of inter-Governmental transactions. In particular, budget appropriations relating to States which, by reorganisation, are merged and lose their former identity would need to have been dealt with before the 1st of November. The replenishment of the Centre's balances by Rs 30 crores, by means of deficit financing, is likely to have been made with a view to such payments to States. The Reserve Bank returns for October 26 indicate that a substantial sum has already been handed over; and it is not improbable that the next statutory bank statement will reflect the payment of further sums.

The return of the State Bank for the week ended October 26 discloses a fall of Rs 2.34 crores in deposits to Rs 229.60 crores. The State Bank has nevertheless been able to reduce its borrowings by Rs 2 crores to Rs 9.00 crores and to improve its cash balances by Rs 0.69 crores. Furthermore, the State Bank's advances have gone up by Rs 1.06 crores to Rs 129.76 crores. Obviously, the "encashment" of other assets must have facilitated these changes. This is borne out by the drop of Rs 4.63 crores to Rs 5.98 crores in Other Assets. It may be recalled that, in the week ending October 12, the Other Assets rose by nearly Rs 3 crores to Rs 9.42 crores; and in the following week by another Rs 1.19 crores to Rs 10.61 crores. It would appear, thus, that the addition to Other Assets has, in the last three or four weeks, been largely "liquid" in character; and that these assets have been encashed in the week under review.

The statement of Scheduled Banks for the week ended October 19 reveals changes none of which stray from the norm of the returns to be expected in the third week of a slack season month. Deposits are sharply higher by Rs 11.32 crores at Rs 1097.58 crores, suggesting the return of funds from the mofussil. Borrowings from the Reserve Bank have been reduced by Rs 6.75 crores to Rs 61.25 crores, though the indebtedness to the State Bank shows a fractional increase of Rs 0.31 crores to Rs 11.88 crores.

Notably, the increase in deposits is reflected in an improvement in cash balances. Cash in Hand is higher by Rs 3.06 crores at Rs 39.46 crores; balances with the Reserve Bank have been marked up by Rs 1.36 crores to Rs 49.92 crores; balances with other banks show a rise of Rs 0.11 crores to Rs 10.29 crores; and money at call and short notice has registered a rise of Rs 0.68 crores to Rs 13.34 crores. The increase in cash balances aggregates Rs 5.21 crores.

There has been, moreover, a slack season decline of Rs 1.65 crores in advances; and since this is partly offset by a rise in bills purchased and discounted, the net fall in total advances is one of Rs 1.39 crores to Rs 758.10 crores.

We may remark that the return of the State Bank for the relevant week indicates that this institution is responsible for the changes in the return of member banks in the manner following: (a) It accounts for Rs 4.28 crores of the overall rise in deposits of Rs 11.32 crores; (b) the reduction in its indebtedness to the Reserve Bank amounts to Rs 3.50 crores as against the decline of Rs 6.75 crores in the borrowings of Scheduled Banks from the central banking institution; and (c) its advances have fallen by Rs 1.48 crores as compared with the decline of Rs 1.39 crores in the advances of Scheduled Banks.

+

The statement of the State Bank of India for the week ended 26th October reveals a drop of Rs 2.34 crores in deposits to Rs 229.60 crores. Borrowings from other banks have declined by Rs 2.00 crores to Rs 9.00 crores, while other liabilities, including inter-office adjustments, are higher at Rs 7.66 crores against Rs 6.53 crores.

On the assets side, cash balances have increased by Rs 1.33 crores to Rs 16.46 crores with Investments shown at Rs 107.44 crores against Rs 107.64 crores. Advances have risen by 1.06 crores to Rs 129.76 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 1.20 crores and "Bills Discounted and Purchased" for a drop of Rs 0.63 crores.

+

According to the returns of the Scheduled Banks for the week ended 19th October, both Demand and Time Liabilities have risen, the former by as much as Rs 11.06 crores to Rs 643.41 crores and the latter by Rs 0.26 crores to Rs 454.17 crores. Borrowings from the State Bank are lower by Rs 0.39 crores at Rs 11.18 crores and those from the Reserve Bank by Rs 6.75 crores at Rs 61.25 crores. Cash and balances with the Reserve Bank have improved from Rs 84.96 crores to Rs 89.38 crores. Investments are slightly lower at Rs 372.74 crores against Rs 373.10 crores. Advances are shown at Rs 611.12 crores against Rs 612.77 crores; Inland Bills at Rs 97.23 crores against Rs 97.65 crores and Foreign Bills at Rs 49.69 crores against Rs 49.07 crores.

Inflation and Corporation Reserves

By PAUL EINZIG

THE British price level has remained stable during the last six months, but its stability does not appear to inspire much confidence among the British public which is becoming increasingly inflation-conscious. Judging by various recent statements or actions, it is a widespread belief that the present price stability is temporary, and creeping inflation is expected to resume its course. A group of plantation companies has just decided to form an investment trust to which its holdings of Government securities will be transferred, for the purpose of their replacement by types of securities which would not lose their purchasing power through a further progress of inflation. The chairman of the group, Sir John Hay, when announcing the decision, explained it on the basis of the need for protecting the reserve of the corporations concerned from "slow but continued erosion." The total involved is only £1½ million, but the action taken is symptomatic. It indicates the growing feeling that, amidst a secular inflation, Government loans are no longer suitable for the requirements of corporation reserves.

Sir John Hay pointed out that the reserves concerned are needed for providing for re-planting and the replacement of assets. Hitherto the reserves have, in accordance with tradition and long-established custom, been invested in Government loans and other first-rate fixed interest bearing securities. But inflation means that replacement costs more in money, and that money so invested loses purchasing power.

Because of the decision to entrust the change of the investment to a newly-formed trust company, this transaction has attracted much public attention. In a large number of instances similar changes have been made without any such publicity. The annual reports of many firms make passing reference to the increase in the relative proportion of equity holdings among their investments. Even highly conservative institutions have felt impelled to resort to such hedging against inflation. For one thing, in recent years the prices of Government bonds have undergone very wide fluctuations, apart altogether from the depreciation of their real purchasing power as a result of inflation. The result of this was that irredeemable Government loans, or those with long redemption dates, have ceased to be considered conservative investment. But even relatively short-dated Government loans have come to be considered as unsuitable except as reserves against liabilities expressed in terms of the monetary unit, in which case the depreciation of the purchasing power of the unit does not entail any losses to the owner of the reserves.

Lord Beveridge in a recent public speech complained bitterly about the effect of inflation on his superannuation benefit granted in 1945 by University College, Oxford. His compliment gave rise to some sarcastic comments from quarters where he is considered to be one of the patron-saints of inflation. Little did he realise when he laid the foundations of the British "welfare state" by producing the Beveridge Plan of social security, that the effect of the inflationary influence of that plan would be insecurity for him and for millions of members of the middle classes who had hoped to enjoy a comfortable old age thanks to retirement pensions or to having saved part of their earnings. The fact that one of the principal authors of British post-war inflation has now come to realise what he had done is likely to create a profound impression on British opinion.

Hitherto the argument of the inflationary school, that thanks to the inflationary monetary policy, Britain's producing capacity has been increased and the standard of living raised, has carried widespread conviction. It has been argued that much real wealth has been created at the cost of a depreciation of the money which, while causing a re-distribution of wealth, does not impoverish the community as a whole, so that on balance the community stands to benefit by the increase in its real wealth. There are many people—amongst them economists of high standing such as Professor Pigou—who, while condemning runaway inflation, would welcome or at any rate tolerate a continuous rise in prices by, say, 2 to 3 per cent a year. What they fail to realise is that, once the public has become thoroughly conscious of the continuous character of the erosion of money, the advantages of inflation are likely to decline and its disadvantages increase.

Should a very large number of firms and other investors follow the example of Sir John Hay's group, it would become increasingly difficult for the Treasury to obtain the renewal of its maturing debt, except on very unfavourable terms. As it is, 5½ per cent has come to be regarded as the yield that should be expected on Government loans, which is above the figure at which it stood prior to the memorable conversion of the 5 per cent War Loan by Mr Chamberlain in 1952. This means that the cost of financing the ambitious investment programme of nationalised industries is bound to be very high. The Treasury will have to find many hundreds of millions within the next few years, to provide the funds needed for capital expenditure on the coal mines, railways, atomic energy, etc. At the present level of interest rates this will add considerably to the burden of the public debt, in addition to the higher interest charges on conversions of maturing loans.

Paradoxically enough, it is the British organised industrial workers who are primarily responsible for the increase of "unearned incomes" of capitalists represented by the yield on government loans. Their excessive wages demand is the main cause of the non-stop depreciation of money which tends to divert corporation reserves from government loans to equities. Wages inflation forces the authorities to maintain high short-term interest rates as a disinflationary measure, and prolonged high short-term rates are bound to affect the level of long-term rates. In order to restore the confidence of investors in the stability of the value of government loans, it would be necessary to achieve a stability of prices, not for mere six months but for several years.

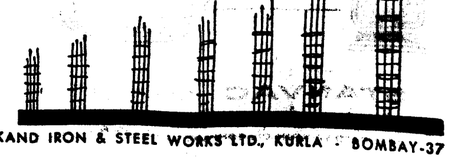
Mukand makes reinforced concrete...



It's perfectly true... even though we're not in the concrete business. For we manufacture and supply the rolled steel bars which reinforce concrete and make possible the construction of dams, factories, homes and offices all over the country.

Last year we produced over twenty thousand tons of rolled steel bars and this year our target is 40,000 tons to meet the increasing demand from the public and private sectors. By 1961, we are confident of producing 1,20,000 tons. In fact, our steel rolling mills—the largest in Western India—are working round the clock, putting the steel in concrete.

The Foundry Industry

THE annual meeting of the Indian Foundry Association, Calcutta, held on 26th October, must have helped a great deal the mutual understanding of problems between the industry and the Government. In his address as Chairman of the Association, Mr K. L. Jalan traversed the full field of the industry's prospects and current difficulties. Mr Manubhai Shah, Minister for Heavy Industries, had also to cover most of this ground in presenting the official points of view and the difficulties the Government had to face.

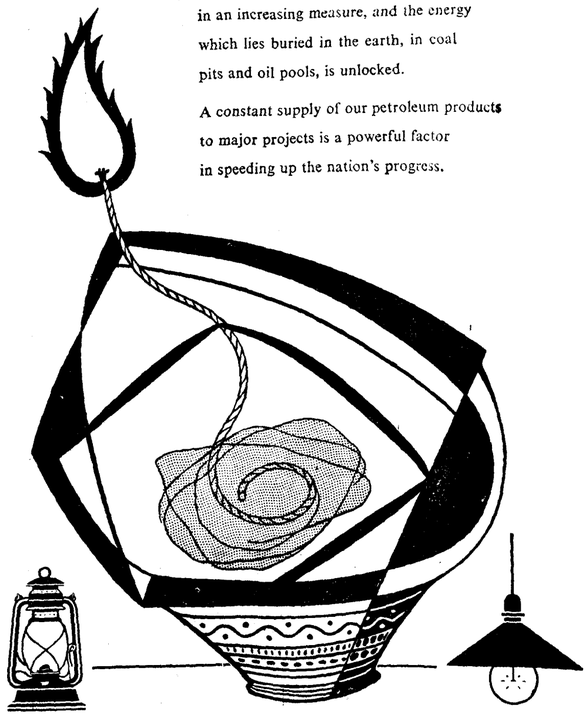
From this exchange of ideas, a number of important points emerge; and one would be struck by the growing volume of co-ordination between the Government and the industry in tackling day-to-day problems. Both agree that there will be shortage of pig iron for at least another three years. Mr Shah appears to be a little more hopeful about the level of domestic output to be reached by the end of the Second Plan. Against the figure of 1½ lakh tons given by Mr Jain as the likely import for 1956-57, Shah's estimate is around 2 lakh tons. The difference must be agreeable to the industry, as also the hope expressed by the Minister that the entire requirements of pig iron for the foundries will be met from domestic production even by 1959.

There is agreement that the technique of low shaft furnace if widely accepted in India, will bridge the gap much earlier. However, not the same degree of enthusiasm is forthcoming from the two sides. While the industry seems to be confident, the Government are still looking upon this technique as an experiment. The two schemes they have approved are conceived in this spirit and Mr Shah has counselled against hurry, as large-scale pilot experiments are still considered necessary before the technique could be accepted as dependable. That in a few countries, notably East Germany, low shaft furnaces are in extensive use and in some places worked even in giant steel plants is an encouraging circumstance.

The controversy over the export of pig iron could be seen in proper perspective in the light of the fact that the foundry owners themselves were fastidiously refusing to try certain qualities domestically available. When they started accepting these qualities, having found that it is good enough, the exports tended to drop.

Fuel is another serious worry for the industry. The Fuel Research Institute has confirmed the industry's estimate of demand for hard coke for the Second Plan Period. The possibility of priority supplies to State foundaries and the uncertainties caused by the introduction of equalised prices for coal have aggravated concern in this respect. The setting up of low temperature carbonisation plant does not alleviate the position, as these plants do not yield foundry coke.

The answer to the problem is to be sought mainly through production at Durgapur. The Government are likely to encourage the present hard coke manufacturers to expand capacity. Eventually, a diversification of methods of production of hard, metallurgical and soft coke may come to the rescue. The experiments and researchs now being made in the Fuel Research Institute and the new methods which are gaining currency in other industrialised countries can also be expected to make their contribution, in due course.



It is significant that on the question of transport about which Mr Jalan disclosed his fears, Mr Shah omitted to say anything. The omission is understandable, for the reason that the issue lies outside his province. Or, he himself may be equally concerned.

(Continued on page 813)

In every country and in all ages, men
have associated light with knowledge
and power, prosperity and progress.

In India today, progress is reflected
in lights that shine in more and more homes
in villages and cities, as the power
of fast-flowing rivers is harnessed
in an increasing measure, and the energy
which lies buried in the earth, in coal
pits and oil pools, is unlocked.

A constant supply of our petroleum products
to major projects is a powerful factor
in speeding up the nation's progress.

Price Trends

PRICES in the jute markets have advanced sharply in the past few days under heavy bear convering. Hessian 40"×10 oz Ready which was quoting at Rs 41-10 a week ago are now quoted as high as Rs 44-8. B Twills have gained nearly five points to be placed at Rs 119-8.

In the beginning of the week, the incentive had come from expectations of sizable orders from the Government of India. A day or two later, shippers began to evince keen interest in the proceedings while local operators were especially keen on accumulating such categories of heavy goods as D. W. Flours and A Twills.

By midweek, hectic conditions prevailed as reports of growing tension in the Middle East began to reach the market-place. With the confirmation of earlier reports that Britain and France have joined the war against Egypt and on the news that the Suez Canal has been closed for traffic, there has been heavy bear covering in the market. As mills have not shown any interest, prices have firmed up considerably.

Apart from the hope that any warlike preparation anywhere in the world will increase world demand for jute goods, the present flare-up in Egypt has farreaching significance for the Indian jute mills industry.

In the first instance, the disturbed situation in the Suez Canal area will put the Continental jute mills in an unenviable position. Even now, their position is by no means satisfactory.

In a press note issued early this week, the Indian Central Jute Committee describes the plight of the Swedish jute industry. Protection, it is said, for the home produced jute goods has been urged by the Swedish Textile Workers Union in view of their inability to compete with imported goods of Indian Manufacture.

The Union has argued that higher customs barriers have been put up by other countries to protect their jute industry and that the jute manufacturers in Sweden should not receive less protection than their counterparts in the linen, cotton and wool trades.

The case for protection of the Swedish jute industry in the home market has been strengthened by the recent loss of business to India. A big agricultural organisation has placed an order for 1,000,000 jute bags in India at a price considerably lower than the one quoted in the Swedish offer.

Sweden's largest jute mill states its ability to compete with foreign producers has been considerably weakened. In August 1955, Pakistan wrote down its currency by 30 per cent but simultaneously fixed the jute prices at the previous pound sterling level and further introduced a higher duty on jute in order to protect her growing jute industry. India immediately took counter-action by lifting the export duty on jute products. The result, in spite of the increased customs protection for textile introduced in Sweden in July 1955, has been a further widening of the difference between Indian and Swedish sales prices. The Indian manufacturers, the mill claims, pay £20 less per ton than European jute mills for raw jute.

What applies to the Swedish jute industry applies also, in a smaller or larger measure, to the jute industries in other European countries.

Latest reports from Dundee indicate that there is still a large quantity of raw jute to be received from Pakistan out of the orders already placed. It would appear that no serious hope is being entertained in the country of getting the needed quantity of raw jute from Pakistan in time. This view is further strengthened by the willingness of spinners to pay high prices for spot raw material.

Viewed from this angle, it would be evident that the deterioration in the Middle East political situation will further increase the difficulties of the Continental mills. If the flare-up turns into a conflagration, exports of raw jute from Pakistan will be seriously affected rendering the raw jute position of these mills quite precarious.

World *of* Tea

Export Duty Unchanged

THAT the Government of India have been fixing the export duty on Tea on the basis of the weighted average prices ruling in the London market during the preceding month, is a known fact. Fears were entertained that the export duty would be increased at the end of November in view of the firmer prices prevailing in the London market.

The Committee of the Calcutta Tea Merchants' Association, therefore, requested the Government of India to refrain from increasing the export duty on tea during November. Also, the Indian Tea Planters' Association requested the Government to implement the Plantation Inquiry Committee's recommendations that the average of London auction of six months and not any one month's price should determine the world price of tea. It is now encouraging to note that the Government of India have decided that the export duty should remain at the same level as in force in October, viz, As 6 per pound.

Meanwhile, offerings in the Export Sale, held in Calcutta this week, consisted of 62,200 packages. The market opened with a good general demand, but this weakened as the sale progressed. Medium Assam Broken Pekoes opened steady; but eased later and at the close were selling about one annas per pound below last rates. CTC teas and the better kinds of orthodox manufacture were As 3 to As 4 easier.

Whole Leaf grades were one to two annas lower and sometimes more, while Clean Common Brokens were one anna dearer. Clean black Fannings and non-wither Dooars teas were a strong feature and were often one to two annas per pound dearer. Darjeeling teas met with better demand and selected lines were sold at dearer rates. Following rates were quoted:—Clean Black Pekoe Rs 2-1-0; Plain BP Rs 1-13-0 to Rs 1-13-6; Medium Assam BP Rs 2-1-0 to Rs 2-2-0 and Best CTC Assam BP Rs 3-0-0.

In the Internal Sale, offerings consisted of 18,949 packages of Dusts. There was a fair general demand at easier rates. The sale eased as it progressed and, at the close, most kinds were selling a full 4 annas per pound below brokers' valuations.

The best liquoring CTC descriptions were one to two annas per pound easier, while the medium CTCs were an irregulars As 2 to As 4 easier. Assam Dusts of orthodox manufacture declined by As 2 to As 4, while black exportable types and non-wither Dooars eased by As 2 to As 3. Following rates were quoted:—Medium Dooars Dust Rs 2-2-0 to Rs 2-3-0; Medium Assam Grainy Dust Rs 2-3-0; Medium Assam CTC Dust Rs 2-8-0 to Rs 2-9-0 and Best Assam CTC Dust Rs 2-14-0.

Leaf grades consisted of 1,617 packages for which there was a fair demand at irregularly easier rates.

In the Export Quota section, rate was at one time marked upto 30 pies per pound. At the close of the week, a large quantity of business was reported done at 27 pies with buyers over.

In the Cochin market, a total of just under 500,000 pounds were offered in the Internal Sale "U". There was a good demand at rates which were generally an irregular one to one and a half annas per pound below last levels. Nilgiri descriptions were well supported at irregularly easier levels, while Good Medium sorts registered a slight decline.

Mediums from Travancore and the Wynaad met with less interest and were one to two annas per pound easier. Milled and residual eypes found useful competion and were firm on last prices. There was less demand for Black Grainy descriptions and these sorts were generally one to two annas lower.

Offerings in the Colombo market were 4,683,232 pounds. There was a strong demand at dearer rates except where quality showed a decline. High-grown teas met with a very strong demand at dearer rates. In medium-grown teas, there was very strong demand for all Broken grades, particularly for those with useful colour, at advances ranging from 10 to 20 cents per pound. Among low-grown teas, stylish Middle East types were fully firm.

In the Chittagong market, Leaf offerings consisted of 16,102 packages and Dust offerings 3,208 packages. There was a very good demand for Leaf grades. The chief feature of the sale was probably the keen competition for Fannings and Broken Pekoes which were frequently sold at As 2 per pound over last rates. Tippy teas were again sold well, many lots fetching over Rs 3 per pound.

There was a useful demand for Dusts from both blenders and Karachi operators. Plain Sylhet Dust was quoted at Rs 1-14-0. Following were other rates:—OP Rs 2-4-0; Pekoe Rs 1-13-0; BOP Rs 2-1-0; BP Rs 1-11-0; BPS Rs 1-12-0; OF Rs 2-6-6 and PF Rs 1-13-6.

Tea stocks in London, as on the 19th October, amounted to 97.05 million pounds as against 98.06 million pounds in the previous week. Total amount, to be landed on the same date, was 11.68 million pounds. Deliveries totalled 10.86 million pounds, while landings were 9.86 million pounds.

The average price realised at the auction, during the week ended October 26, were 70.45d per pound as against 70.75d obtained in the previous week and 61.01d in the corresponding week of last year.

World Overseas

US Notes

ECONOMIC expansion in the United States is resulting in a record volume of corporate bank borrowing and securities sales, the US Department of Commerce reports, during the first half of 1956. American corporations used capital funds at an annual rate of $36,000 million for new plans and equipment and additions to inventories—an all time high about one-fourth more than in 1955.

Internal financing still fills the major part of these corporate capital requirements, although the rapid investment expansion has caused companies to make relatively greater use of external financing.

The share of investment covered from internal sources was roughly two-thirds in early 1956, compared with more than four-fifths in 1955.

Companies have been relying more heavily on outside money mainly because their expanding needs have been rising faster than their earnings. In securing external funds, corporations have been borrowing from banks and selling new securities in capital markets at record rates.

The net increase in corporate bank debt in the first six months this year amounted to $3,500 million, compared with a rise of $1,000 million in the same period last year.

In the third quarter of the year, bank borrowing by corporate business tapered off somewhat. But since requirements normally rise in the final months of the year, it is likely that the previous annual record of $5,000 million of net corporate bank borrowings, set in 1951, will be exceeded in 1956.

Net new funds raised through sale of corporate stocks and bonds during the first half of the year also amounted to $3,500 million, about $500 million more than in the first six-months of 1955.

Indications are that the 1956 net inflow of funds from new security sales may equal or exceed the previous record of $8,000 million, set in 1952. Expanded corporate demands for borrowed funds this year have been superimposed on demands of consumers and business generally.

With these, already high by any prior standards, the continuing pressure on available financial resources has tended to push interest rates upward. Thus, the cost of borrowed funds is now at a new post-war peak. But the Commerce Department does not see this as "unduly burdensome" on corporate business.

Corporate interest payments, it notes, currently are running at an annual rate of $5,000 million, a rise of only $500 million over last year. These payments constitute 11.5 per cent of gross corporate profits, well below any pre-war experience for prosperous years.

The bulk of the corporate capital investment this year, moreover, is going into plant and equipment rather than inventories. If current plans are realized, the total investment for these productive facilities in 1956 will amount to $29,000 million, about $5,000 million more than in 1955.

The value of inventory accumulation for the year, at current rates, is estimated at $7,000 million, about $2,400 million more than a year ago.

Despite this inventory rise, the ratio of business stocks to sales has increased hardly at all during the past year. Inventories on hand at the end of August represented only 1.5 months sales for all business. Within this total, the manufactures stock-sales ratio has risen from 1.6 to 1.8 months during the past year, while the ratio in trade has remained virtually unchanged.

In fact, retail inventory accumulation has not quite kept pace with the growing volume of sales —a reflection of the record of consumer income and spending in the United States.

*

France

By P. CHAMPENOIS

THE Federation of Mechanical and Metal Transformation Industries recently made public its activity report for 1955. The figures and facts in this report are of prime importance to French industrial and economic life.

The federation comprises 80 different professional groupings and 7,000 firms. A total of 600,000 persons are employed, and last year's turnover was reported at 1,000,600 million francs ($2,875 million. Principal fields of activity include mechanical and thermal equipments, machine tools, industrial and mining machinery, civil engineering equipment, agricultural machinery, precision instruments, hand tools, hardware and household articles.

Actually, the results obtained by this vital force in the country do much to provide an over-all picture of the effort and activity of French industry, inasmuch as the mechanical and metal transformation industries are influenced by the slightest economic, social or fiscal factor by dint of the many diverse fields which they touch.

The results for 1955 in each major branch are as follows:

Metal transformation (heavy consumer demand), a 10% production increase, following the 1953 recession and a 6% rise in 1954.

A similar rise for the equipment industries, although the over-all increase is less than the preceding figures given. However, certain firms in this branch have shown amazing progress.

For precision instruments, a comparable production increase.

Farm machinery, with motorized products taking the lead, are climbing steadily.

In all sectors, the weekly work schedule amounts to roughly 46 hours, except for metallic construction with its 51-hour week. Since in certain countries, such as Germany, Switzerland and England, the weekly working hours in these same sectors are from 4 to 10% higher, it is evident that the production of French mechanical industries has not yet reached its maximum. Thus, by careful study of problems relating to prices, export development and technical progress, French mechanical and metal transformation industries will be able to increase their activity. Expansion is under way, and the various enterprises in this branch of the economy are determined to have it continue.

Mechanical and metal transformation exports abroad now represent more than 105 billion francs, an increase of 26% over 1954, resulting from the over-all effort. However, imports of the same products have also increased 20% over 1954. Sales to the overseas territories have dropped 5%, although the latter are still an impressive 170,000 tons, valued at 61 billion francs.

Sales abroad have been developed in most countries. A breakdown of exports to continental or monetary zones shows:

	per cent
Western Europe (OEEC countries and Spain)	... 60
USSR and East European countries	... 3
America (Dollar zone, especially USA)	... 5
Central and South America	... 20
Middle and Far East	... 9
Africa (French Union excluded)	3

The European market remains the number one outlet for the French mechanical industries, despite the constant development of overseas markets. In addition, the value of French techniques is being recognized by other industrial nations.

A relentless effort is being made to increase exports as much as possible, and businessmen from the various branches maintain a close liaison with all organizations designed to contribute to this expansion.

Missions have been organized with an eye to assuring direct and continued contact with various countries. The latest was sent to China, and a permanent mission has been established in Africa.

Other groups of foreign technicians and businessmen have been invited to visit French plants, and engineers from other countries have been welcomed for periods of work and study.

The mechanical and metal transformation industries have stressed the importance of a more widespread participation in foreign fairs and expositions. After the International Textile Fair in Brussels, the Vienna Fair of 1955, and the Sydney Exposition in Australia earlier this year, preparations are being made for the exhibition to be held in Lima, Peru, in 1957.

Progress all along the line has been the keynote of the French mechanical industries, despite a few irregularities here and there in this progress. But in the world of today, could a flawless progress record do any more to guarantee opportunities for tomorrow? This question is not easy to answer, but meanwhile an unflagging perseverance on the job is this industry's answer.

DURING my recent stay in New Delhi, I sought to emphasise, in my discussions with authority, the need for accessibility. In particular, I had in mind two institutions or organisations which are intended to fulfil a most important purpose in the national economy, but which, all too unfortunately, have the outward appearance of being difficult to approach. The Company Law Administration has admittedly an onerous responsibility to carry; but it seemed to me that its responsibilities were not restricted to the discharge of the routine duties in the administration or enforcement of the law. There is, as I shall show later, another aspect to the functions of this administration; and this facet has, until a few days ago, been largely obscured. The second institution about whose accessibility I was concerned is the Industrial Finance Corporation of India. Here, too, the IFC's role in the development of Indian industry is clearly an important one; what is more, the financial aid that the IFC has, in the years that it has been in existence, offered is of substantial proportions. But I feel that, as with the Company Law Administration, an important aspect of the functions of the IFC has thus far been neglected. To put it more bluntly, the Company Law Administration and the Industrial Finance Corporation are both "inaccessible"—but I will come to this in my own time.

*

Let me digress a bit. The rise in the cost of living, the inflationary years since the beginning of the Second World War, the black marketing and profiteering —who exactly has been affected by all this? Not labour. Labour has been fortunate firstly in having been in short supply during the war and secondly in having Government for its Godfather since independence. As a result, the wages that labour has earned have steadily risen since 1939. The rise in his earnings as such has more than compensated the labourer for the higher cost of living. Incontrovertibly, it costs the labourer more to eke out his living today; but, as undoubtedly, his earning has risen in sufficient proportion not merely to enable his standard of living to maintain its status quo, but also perhaps even to include in the list of the necessities of life items which formerly were luxuries. At the other extreme, we have what may blandly be described as the capitalist. He has a right to grouse that taxes were never so high and that what remains to him is but a fraction of his gross earnings. But the Indian citizen belonging to this class of society benefits from the fact that he is essentially a businessman; and, as a business man, his earnings are today many times what accrued to him in, say, 1939. If inflation and taxes are restrictive upon the net earnings, inflation is responsible for expanding the size of his earnings. I do not think it would be wrong to say that this species has not unduly suffered. But the man who has been practically squeezed out of existence is the middle class individual, the lower as well as the upper middle classes, whose salary has not risen in proportion to the higher cost of living, but who is faced with a substantial increase in the money he has to lay out for the necessities of life. Pity the middle class man: inflationary profits do not kindly touch him; nor does he possess the beneficence of a sympathetic government. But the middle class individual is always thought of as the backbone of society. His existence is essential to the proper functioning and continuance of democratic government and the democratic way of life. It is he who is expected to fulfil the offices of an intellectual critic. It is he who is relied upon to be the keeper of his country's conscience. I am not very sure that Government have put in train measures which involve a more appreciative understanding of the usefulness of the middle class individual. I am, however, hopeful that Dr Kaldor's specific recommendation of some mercy for the middle class will be acted upon by Government. However, engaged as we are in this battle against poverty within the country, the unimpeachable case of the middle class individual may have to wait for justice. What worries me is the fact that the middle class in another section of national endeavour is also suffering from a lack of sponsorship.

*

As with society, so in business there is a middle class. That is to say, we have a field of activity which cannot be classified as big business. At the same time, it does not fall under the category of small scale industry. Big business, for its part, is well able to take care of itself. Small scale industry, even as labour does, receives the bountiful, kindly and engaging attention of the Government. In the process, the middle class in business activity finds itself in sore straits. It is not befriended by Government. It is not in a position to help itself. Must its future be that, slowly and gradually, it will cease to exist? That, of course, is a rhetorical question: a sensible answer cannot be other than stridently to assert that progress and development of the country depend upon the progress and development of middle class business activity. It is such activity that strikes the mean between the capital-intensive but labour-saving proclivities of big business and the small-capital but labour-intensive character of small scale industry. It is middle class business activity that, in the national economy, attempts, and largely succeeds in that attempt, to strike an equilibrium between capital costs and manpower employed. Especially for a country such as India, where capital is scarce and labour plentiful, but where progress in production is of the essense, the via media of middle class activity is a vital necessity. And yet, as I say, the middle class in business activity is, for no fault that can be directly ascribed to it, most unenviably placed and stands in need of the friendly help and co-operation of authority.

*

I do not intend to generalise on this subject. It would be futile if I should think that I had done my job by drawing attention to the problem and if, consequently, I left it to authority to act in the light of the problems that I have stated. There is undoubtedly a great deal that can and has to be done in behalf of middle class business. It would not fit in with the Indian Finance philosophy of constructive criticism, if I were to leave this article dangling on the suggestion that Government could take action on the proper lines. Fortunately, the trend of my talks in Delhi was such as to enable me to give constructive thought to the ways and means in which the lot of the middle class entrepreneur could be improved; and it is in this regard that I make bold to suggest that the IFC and the Company Law Administration should both be much more accessible to middle class business than they have hithertofore been.

*

Let me first take up the question of the accessibility of Company Law Administration. By all tokens, the new Company Law is as complicated a piece of legislation as we have never before had in this country. The formalities that, on pain of penalty, have to be complied with are myriad in number. The documents to be filed with the Registrar are not a few; the actions that may be taken by company managements have to be within the four corners of a rigid law as it stands in the books. These requirements will not impose too difficult a strain upon big business. For, big business, whether by virtue of the resources it commands or by reason of the affiliation with groups of companies, is able to seek and to pay for the best of professional advice. Expert brains in legal and tax matters are at the disposal of big business to think out its problems. Compliance with the law thereafter is a relatively simple matter. But the middle class businessman does not have the resources to afford retaining the services of expert advisers. His approach to Company Law may consequently be somewhat haphazard; but there is the overweening anxiety that he may fall foul of the law through ignorance. But ignorance in law does not constitute defence. What, then, is the small businessman to do? He cannot get expert advice, because his means do not enable such services to be utilised. He is scarcely likely to master the intricacies of the new law. In the result, is he blissfully to commit infringements of the law, and to pay the price therefor at a later date? Let us remember that the new law was not of his making and that its enactment was not directed at closing such loopholes as might have enabled him to drive a coach and four through the provisions of the old law. Thus, a law directed at targets other than the middle class businessman is likely to act as a snare for only the middle class businessman. This is not right. This is not justice. But right and justice would be vouchsafed to the middle class businessman if the Company Law Administration, cognisant of the complexities of the new law, were to offer advisory services to those

engaged in middle class business activity. I mean, of course, *medium joint stock companies.*

✱

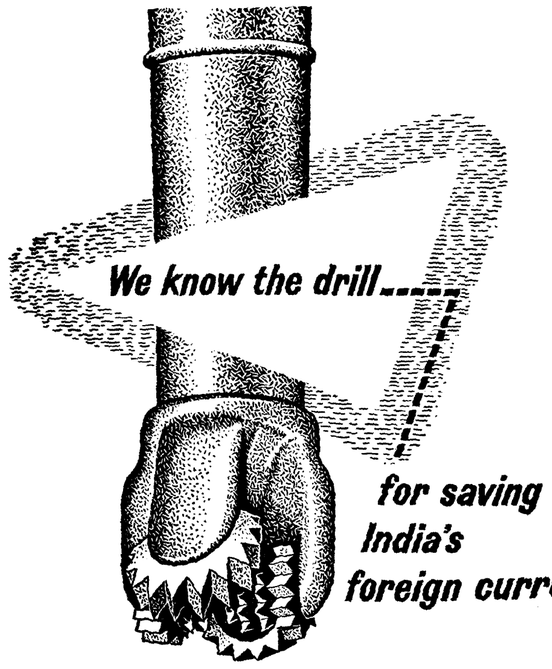
The preceding paragraph is a resume of the lines on which I had thought aloud in my conversations with the concerned authority while I was in New Delhi. I am glad to find that expeditious action has been taken by Government, and that there is now an explicit recognition of the difficulties that may be experienced by middle class concerns. According to a Press Note issued by the *Company Law Administration*, the offices of the regional directorate are "offering advice and guidance to those who approach it in regard to the implementation of the various provisions of the Act." Each Directorate "is staffed with the necessary technical personnel and companies, especially the smaller ones, are requested to use freely the facilities provided by this organisation for getting their problems connected with Company Law solved." *In other words*, Company Law has now been rendered more easily accessible to the smaller companies. *I anticipate* that the offices of the regional directorates will be inundated with anxious enquiries. *It heartens me to think that* correct action has been taken in time to prevent contravention of *Company Law* by middle class *business*—which could not, obviously, have retained the services of costly experts.

✱

If, in this manner, an easier comprehension of the complexities of Company Law has been brought *within the purview of the medium* and smaller companies; and if, therefore, there is for enterprises belonging to the "middle class" sector a greater accessibility to Company Law, I am afraid that the usefulness of the Industrial Finance Corporation of India continues to be restricted. We may address ourselves to the question: In what sense and to what extent has the IFC been able to contribute to the development of the Indian economy? The search for an answer will inevitably take us back to an analysis of the purpose behind the creation, 8 years ago, of the IFC. Let me first make it clear that the IFC has done a notably good job; and each successive year of its existence has witnessed increasing aid being given by the IFC to Indian industrial enterprises.

✱

In the latest year, loans applied for totalled nearly Rs 28 crores as against just over Rs 11 crores in 1954-55. Similarly, loans sanctioned *during 1955-56 were, at* Rs 15 crores, more than double the sanctioned amount of Rs 7.34 crores in 1954-55. Speaking at the *Eighth Annual General Meeting* of shareholders, Mr K. R. K. Menon, the Chairman, stated that he saw no reason why "this very satisfactory record" for 1955-56 "should not be maintained in the succeeding years if our administrative machinery is geared adequately to cope with the increasing loans, and our relations with the industrial and commercial sector of the public continue to be as close and cordial as they have been during the year". I entirely agree with Mr Menon that there is even greater scope for the IFC to finance development of industry; but, as I pointed out in my New Delhi discussions, there is need for some reorientation in IFC policy. Why this is necessary, I shall now show.



✱

In the light of the conditions in the capital market of the last eight years, the IFC has fulfilled its proper role of filling an important gap in the capital market.

✱

In the investment market of *today, there is some readiness* on the part of the public to subscribe for new issues sponsored by well-established and well-known houses. More-over, specialised institutions such as the ICIC have

Authority's Solicitude for Banking Situation

IN the two months that he has been India's *Finance Minister*, Mr T. T. Krishnamachari has had his hands full with a number of important *economic* questions that have been thrown into the lime-light. Even before he formally took charge of office, he was required to take a decision that could not brook delay. The textile *situation*, as it *obtained* on the eve of the Pujas, was hardly conducive to any complacent assessment of prospects. Stocks were low, demand was expected to be even more strident than in previous years; there was every reason to apprehend the flourishing *growth of a black market*. Mr Krishnamachari took the immediate step of empowering Government for imposing a much higher level of excise on cloth produced by the mills. Secondly, with a view to meeting the present short supply position of cloth, *TTK also devised a scheme* to furnish the incentive for increasing production in the remaining *months* of this year.

He was hardly settled in office *when* a matter affecting the Second Plan foreign exchange resources came up for high level discussions. The correspondence *between the* World Bank Chairman and India's Finance Minister has focussed the spotlight on the dimensions of the foreign exchange *that* we shall require as well as on the specific fields in which we may hope to get apposite aid from the World Bank. The reply to *Mr Eugene Black's letter called* not only for an efficient analysis of the Indian view-point on the foreign exchange problem; Mr *Krishnamachari had moreover* to call into play all his powers of tact and diplomacy. That his reply has effectively answered all the major points raised by Mr Black, and that the *position today* is most hopeful for considerable help forthcoming from the World Bank, are a credit to his statesmanship even as they are an index of Mr Krishnamachari's busy pre-occupations since he became France Minister.

Early this week, however, Mr Krishnamachari has stolen the *time to pay us a visit in this* Gateway City. The purpose behind his visit to Bombay indicates that the state of the banking *system is correctly acknowledged* by the Finance Minister as one of the more important economic problems that he will have to deal with in the course of the next few *months. Discussion on the* position of the banking system has *steadily risen* in crescendo; and Indian Finance has, particularly during the last three months, analysed the *situation from all* possible *angles* in a number of articles. The problem as such is simply *stated*. As Indian Finance has recurrently pointed out, a number of factors has had the cumulative effect of weakening the banking system to the extent and in the sense that the resources of Scheduled *Banks are* not only fully *extended*, but perhaps overextended. This, of course, must have been the starting point of the discussions that the Finance *Minister has* had with Reserve Bank officials and with the elite in Bombay's banking society.

From the meagre data available of the proceedings at these discussions, I hesitate to offer any set of *plans* or suggestions with a view to resolving this particular problem of the banking *system*. A solution is, nevertheless, urgent. The heavy drain on foreign exchange resources has had a *contractionist* effect on money supply; consequent to the *development* plans in progress, the pressure for finance on banks extends beyond the period normally known as the busy season; and, as a result, the slack season has tended to become noticeably less slack.

It has happened, therefore, that the banking system starts out the 1956-57 busy season *with a fully* extended position in respect of *advances*. As on October 19, the advances of Scheduled Banks, including bills purchased and discounted, were placed at Rs 758.10 *crores and* formed over 69 per cent of deposits. If we exclude the *relevant* figures relating to the State Bank of India, the ratio of advances to deposits in the case of the other banks works out even higher at 72 per cent. This, obviously, leaves the *Scheduled Banks little* room for manoeuvre for busy season advances in 1956-57. Does it mean, in consequence, that we have no alternative to a severe restriction on the demand for money that can be entertained by the banking system? For, it does not seem very likely that, during the next busy season, the resources of the banking system will be so enlarged as to permit any worthwhile increase in advances; thus, unless some positive action is taken toward equipping the banking system with a further cushion of safety, Scheduled Banks will, to put it bluntly, be unable to meet the full demand for money during the forthcoming busy season.

From what I gather, such a credit squeeze, as it will in effect be, is being held to be not only the only available course of action, but even considered a favourable state of affairs in the light of anticipated inflationary tendencies. I am afraid I do not hold with this contention that a credit squeeze is just what the Doctor ordered for the Indian economy. On the contrary, it is important that all legitimate demand for money is fully met; a failure in this regard can only retard such projects as we have embarked upon in terms of the Second Plan. We need, therefore, to think constructively of measures which may help to strengthen the banking system, and which, at the same time, will enable Scheduled Banks to take on the responsibility for finding the finance for the busy season.

It is necessary to understand correctly the manner in which an import surplus has a contractionist influence on money supply. If the balance of payment position is unfavourable, it is reflected in a drawing down of the foreign exchange reserves. What this means is that foreign exchange payments have been made of a size in excess of receipts. But such payments have been made at the behest of the Indian importer who has "purchased" foreign exchange from the Reserve Bank. The payment for foreign exchange has the effect of diminishing the importer's deposits with his bank. In other words, a foreign exchange deficit is indirectly reflected in—or rather has the effect of causing—a decline in the deposits of the domestic banking system. The inflow of money to the Reserve Bank, in payment for the foreign exchange purchased from the Central Banking Institution, serves to make comfortable—and perhaps even plethoric—the Reserve Bank's cash in the till. Currency is, consequently, contracted.

What is the biggest single factor responsible for the steep decline in foreign exchange reserves? There is considerable talk that capital imports, and their increasing tempo for implementing the Second Plan, are the main factor contributing to a drawing down of foreign exchange holdings. As far as I can gather, however, the biggest single item of import has been steel. I understand that, during the current year, money laid out on the import of steel may be of the order of Rs 90 crores. If steel alone is to cost Rs 90 crores in foreign exchange during the year, I wish to point out that its impact is not only two-fold—as affecting, firstly, the foreign exchange holdings of the Reserve Bank and as relating, secondly, to the deposits of the banking system—but that there is a third *important repercussion* as well. The procedure for the import of steel, as far as I know, has largely been for private parties to arrange for the purchase of steel from abroad, to obtain the necessary accommodation from their banks, to sell the steel on receipt to Government—and finally to receive payment therefor from Government. This involves two important consequences. In the first place, the pressure on the banking system for advances against steel is likely to be sizable and will have aggravated, and will continue to aggravate, the position of the banking system in regard to advances. In the second place, since the private importer is to be reimbursed by Government, the delay in settlement of bills by the State lends to advances in this behalf the character of a long outstanding. Money, in brief, is locked up.

If, therefore, steel imports may be held to be substantially responsible for the extended position of the banking system, it follows that relief must come from the same source. I suggest that advances against steel should be treated on an entirely different footing, since these relate primarily to a pressure upon the banking system for what are effectually Government purchases. *I do not* mean to imply that Government payments should promptly be made in respect of purchases of steel—though, generally speaking, prompt Government payments for all their transactions would be greatly desirable. But I fancy that special provision could be made by the Reserve Bank to reimburse the banking system by means of special advances against loans given for financing steel imports. This would release a corresponding amount for meeting the extension in advances during the next busy season.

The second suggestion that I have is the establishment of a discount house. To say that, with the existence of re-discount facilities for commercial bills with the Reserve Bank, we have in India a properly functioning bill market is to exaggerate the role played by commercial bills in the present banking economy. The commercial bill market is effective only in that, during the busy season, a portion of the requirements of constituents for advances is made against bills instead of being straight overdrafts. But there is no market for commercial bills as

Handloom Exports to US

The fact that Indian handlooms have gained popularity in world markets, especially in the USA, in recent years, has opened up the possibility of developing a new source of foreign exchange. In the context of the Second Plan, for the implementation of which quite a sizeable amount of foreign exchange is required, anything that promises to help toward augmenting our resources in this regard is most welcome. The trend of handloom exports in the past two years is highly encouraging. Indian exports of handloom fabrics, it is estimated, have been of the order of 65 million yards valued at about Rs 70 crores in 1955.

A three-member American handloom expert team is now in India on a study tour of the country. These experts who have been obtained by the Government of India through the offices of the Ford Foundation, will advise the Government on the measures to be adopted for promoting the export of Indian handloom textiles to North America. They will make recommendations relating to the suitability of production for export, their adaptation to meet export requirements and increase in production. The team will also examine the organisation to be set up both in this country and the USA to develop service and maintain production of improved handloom textiles for export and for the marketing of these products in the most effective manner in North America.

The three-member team consists of experts in different spheres of this industry. Boris Kroll, the leader of the team, is an expert hand-weaver, designer, specialist in upholstery and drapery fabrics, manufacturer and wholesaler. Robert Hickerson, the person who rehabilitated Japan's silk industry, is a textile engineer, expert on silk industry and US customs on imports, consultant on rayon, ramie and hemp industries. Bonnie Cashin, one of America's leading designers of sportswear and women's apparel, is the third member.

Pointing out that the US would provide a large potential market for Indian handloom fabrics, Mr Boris Kroll, has said that though the tariff rates payable on handloom exports would undoubtedly be a handicap, the absence of competition would offset the disadvantage. Miss Cashin is confident that Indian handlooms will be popular in the fashion industry in America.

*

Progress of Protected Industries

Speaking at the First Quarterly meeting of the Association of Indian Industries, Bombay, recently, Mr K. R. Damle, Chairman, Tariff Commission, has emphasised the need for the manufacturers in protected industries to do their utmost to reduce their cost of production and to improve the quality of their products. It is equally important that they extend their fullest cooperation to the Tariff Commission by readily making available to the Commission authoritative information about the industries whenever called upon to do so.

Giving a detailed account of the present working of the industries in this category and plans for their development during the Second Plan, Mr Damle has pointed out that some of the protected industries which will be developed during the plan period include such basic industries as Cotton Textiles Machinery, aluminium Soda ash, caustic soda, and dye stuffs. Others include ball-bearing, bicycles, electric transformers, electric motors plastics glass, calcium carbide and matches. Industries like sewing machines hurricane lanterns, coated abrassives, starch and glucose which have been enjoying protection till now, have been deprotected. Under the Second Five Year Plan, Rs 80 crores have been allocated for the development of the protected industries.

Mr Damle has estimated that the aluminum industry will receive probably the highest capital investment of Rs 22 crores. Automobiles, soda ash and caustic soda industries come next, each getting about Rs 16 crores with dyestuffs and intermediate industry getting about 9 crores, and other protected industries getting among them Rs 3 to Rs 5 crores.

SOUTH EASTERN RLY. TENDERS.

The General Manager invites tenders for the sale of a large accumulation of condemned empty containers such as condemned Oil, Paint and Tar drums, Kerosene tins and condemned empty gunny bags, etc., available at the South Eastern Railway's Scrap Yard at Khargpur. Tender No. S/4/S/4 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 on production of Cash Receipt for Rupees five only from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23 by local firms and on remittance of Rupees five only by Money order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 by outside firms. The cost of the tender forms is not refundable. The materials may be inspected on any working day before the closing date of the tender. The closing date is the 27th November, 1956 at 12 noon.

S 29. GENERAL MANAGER.

GATEWAY MARKETS

Erratic Movement in Copper Prices

PRICE movements in the Bombay Metal market, especially in Copper, during the past week, were rather erratic due to alternate bouts of buying and selling. The initial weakness of the market was generally in line with the steady fall in world prices; but the decline in prices locally was relatively heavy on account of the nervous unloading by weak holders. The rate was marked down at one time to Rs 178 per cwt.

But the improvement in the price to Rs 190-4 toward the the close of the week, was attributed due to bear-covering following the reports of tension in the Middle East. The fact that the domestic prices were much below the landed cost of the metal, also aided the rally.

The internal demand for copper continuse to be good with the Railways making steady purchases. Calcutta interests think that prices are likely to be maintained as good enquiries are coming from the public sector.

Demand for Zinc was poor, the rate being quoted around Rs 64-8 per cwt. Lead remained steady at Rs 82-0 Tin met with good demand at Rs 132 as the immediate delivery position was tight.

Following rates were quoted on the London Metal Exchange (per ton):—Copper spot £273 buyers; Lead second half-October delivery £115½; Zinc second half-October delivery £97¾ and Tin spot £820.

*

Gold & Silver

Although price fluctuations were confined to a narrow range, both Gold and Silver displayed a steady undertone in anticipation of seasonal demand.

Except for a temporary setback. Silver maintained a steady undertone. Operators were generally disinclined to extend commitments either way owing to uncertain international political situation. The turnover was small. An inflow of 62 bars faced an outflow of 25 bars. Silver Kartik delivery changed hands at Rs 172-5 to Rs 172-12, to finish at Rs 172-10. Spot opened at Rs 172-12 and after easing to Rs 171-15, improved toward the close to Rs 172-6.

Gold also suffered a mild sympathetic recession, but later took a definite turn for the better due to increased demand in view of ensuing "Diwali" festival. An inflow of 1.009 tolas encountered an outflow of 1.000 tolas. Gold Kartik delivery started at Rs 104-1 and improved to Rs 104-6 the lowest rate touched being Rs 103-11-6. Spot moved between Rs 104-4 and Rs 104-9, to finish at the later level. Sovereign was quoted around Rs 67-10.

*

Oils and Oilseeds

Prices in the Oilseeds market, after initial firmness, eased off slightly toward the close due to scattered liquidation Castor May delivery started at Rs 136-12 and improved to Rs 137-4 on Gujerat buying. At this level, there was heavy liquidation, resulting in the price dropping down to Rs 134-8 at close. Castor Ready was quoted around Rs 30-4 and Castor Oil, commercial, at Rs 16-10.

Groundnut futures gave ground on speculative selling and liquidation. The turnover was about 10,000 candies. Groundnut February delivery, after opening at Rs 135-4 and improving to Rs 135-10, receded to Rs 134-6, to finish better at Rs 134-10. Ready Bold was quoted around Rs 34-0 and Groundnut Oil at Rs 19-4.

The market for Linseed remained dull in the absence of active interest on the part of operators. Linseed May delivery started at Rs 26-12 and fluctuated between Rs 26-10 and Rs 26-14, to finish at Rs 26-11. Linseed Oil was quoted at Rs 16-6.

Meanwhile, the Forward Markets Commission has granted permission to the Bombay Oilseeds Exchange to conduct hedge trading in Cottonseed with immediate effect. The futures trading in this commodity has, therefore, resumed after a lapse of 13 years. The first "Muhurut" transaction was put through at Rs 78-4 per candy, which later rose to Rs 82.

The Art Silk Yarn market continued to remain depressed and prices reduced further on account of lack of demand from consuming centres. The sluggishness in the rayon cloth market coupled with heavy arrivals of rayon yarn from a broad also imparted a bearish tone to the market.

Popular deniers of art silk yarn were marked down by about six pies per pound, while in others the decline was sharper by as much as As 2 per pound. Importers were, therefore, anxious to dispose of their stocks, while the weaving mills were not found to be enthusiastic in making fresh commitments.

The position in respect of Cotton yarn was, however, better, thanks to the absence of any pressure from mills. There are expectations that the demand will revive after 'Diwali'.

Bombay Review

World *of* Cotton

Increase in Indian Cotton Consumption

FIGURES of Cotton consumption for the entire 1955-56 season are now available. It is encouraging to note that there has been a welcome increase not only in the aggregate consumption of cotton during the season, but also in the specific case of Indian cotton. The consumption of *Indian cotton* amounts to 43.65 lakh bales as compared with 41.38 lakh bales in the preceding season. In line with the recent trend, the consumption of foreign cotton has been lower at 6.03 lakh bales as against 6.30 lakh bales. Thus, the overall consumption of cotton has moved up from 47.68 lakh bales to 49.68 lakh bales.

It will be seen that the consumption of Indian cotton has been steadily moving up in recent years, while that of foreign cotton has been declining. From 29.87 lakh bales recorded in 1951-52, it has improved to 46.12 lakh bales in 1952-53, followed by a further acceleration in the 1953-54 season to 39.89 lakh bales. Simultaneously with this steady increase in Indian cotton consumption, foreign cotton has recorded a progressive decline. As against a consumption of 10.84 lakh bales in the first year of the Plan, the following season recorded a figure of 8.48 lakh bales, which was further reduced to 7.19 lakh bales in 1953-54; to 6.25 lakh bales in 1954-55 and to 6.03 lakh bales in 1955-56. This is sufficient testimony for the growing self-sufficiency that the country has been establishing in the matter of raw cotton.

×

FUTURES TRADING:

Conditions in the futures market remained depressed and both the contracts touched new low levels for the season on an avalanche of general selling and complete absence of support. Protracted delay in the release of anticipated export quota, increased tempo of new arrivals at the terminal centres and disappointing spot advices were the principal demoralising factors. Mill Support was absent due to unsatisfactory reports from the cloth market, which acted as a damper. Lower levels, however, attracted some buying support toward the close, especially in Vijay contract. Jharilla March, after touching a new low of Rs 636 early in the week, finished the week better at Rs 645-8. Vijay April touched a low of Rs 733, to finish better at Rs 744-8. The turnover was estimated at 25,000 bales.

SPOT MARKET:

The Spot section, however, reported a better trend. Mills continued buying new crop and some business was reported done in Dholleras and Bengals. There was fair demand for domestic staple styles. Coverage was also extended to some leading spinners up to January delivery for all principal new crop descriptions.

The general expectation of an early announcement of a fresh export quota led to larger enquiries early in the week; but business was slow toward the close as exporters preferred to take a "wait and see" attitude. It is stated that there have been some encouraging enquiries from Japan and Hongkong for Indian styles.

In the foreign section, a fair turnover was reported. Due to reported critical situation in the Middle East, spot lots of Egyptian and Sudanese cottons were sold at higher levels. Some business was also reported done in new crop East African cotton, subject to import licence. There was active interest in recent arrivals of Californians and US cotton afloat; and business was done in the former for October-November delivery against import licences issued previously.

Following were the rates quoted: Bengal Rs 665 to Rs 720; Oomra Rs 680 to Rs 715; Dhollera Rs 740 to Rs 760; Jharilla Rs 775; Vijay Rs 890 to Rs 920; AR-BP-52 Rs 1,680 to Rs 1,700; ER Bushoga Rs 1,550 to Rs 1,565.

×

CROP OUTLOOK:

A favourable and bright weather has been prevailing generally over all cotton tracts. There is an increased tempo of arrivals of Kapas in Akola and adjoining markets.

Reports from Vienna suggest that the gross harvesting of cotton in the USSR will be higher than that of last year. *It is said that, though* the area under cotton and yield per acre has declined, the crop will prove to be quite good due to extremely favourable weather that prevailed in most of the cotton-growing areas of that country.

×

KARACHI MARKET:

A firm trend was in evidence in the Karachi cotton market due to the keen interest evinced from abroad. Local spinner demand was also good. Sind Deshi was quoted at Rs 95; Punjab Deshi at Rs 80; 4F Punjab Roller at Rs 80-4; LSS Punjab Roller at Rs 80-8; NTRG at Rs 82-8 and 289F Punjab at Rs 83-8.

×

NEW YORK COTTON MARKET:

In the New York cotton market, futures eased early on fairly extensive hedge selling in current crops along with Commission House liquidation. The declines were, however, held in check toward the close by good trade demands at scale-down limits, particularly around the 33¾ cents-level. Traders continued to move cautiously, reflecting a belief that a considerable amount of the crop is being carried unhedged in the South. Middling Spot was quoted at 34.40 cents per pound and December delivery at 33.78.

LIVERPOOL COTTON MARKET:

In the Liverpool Cotton market, futures opened quiet, but prices steadied up toward the close on small trade buying. Occasional mill-fixing maintained a steady undertone, while sellers were not pressing. Small profit-taking in the Sudan contract was absorbed and prices improved further with the aid of Commission House buying. Egyptian Contract November-December delivery was quoted at 60.00 and Sudan Contract November-December at 51.80.

Olympus

Gunboat Diplomacy

PROFOUND shock is the reaction all over the world to the deplorable developments in Egypt. The sense of dismay has been heightened by the fact that, just prior to the Israeli aggression against Egypt, the Suez Canal crisis appeared to be nearer resolution. Indeed, the focus of interest had been transferred to East Europe, where the disturbances in Hungary and Poland signified the declining prestige and power of the Soviet Union. In such circumstances, the prospect of greater freedom for countries which had had a satellite existence was cheerful news for the free world. Unfortunately, it is possible to suggest that the turn of events in East Europe has indirectly been responsible for the grave and explosive situation in the area Mr Nehru describes as West Asia.

The attempt has been made to view the Suez Canal seizure and the Israeli attack on Egypt as two separate and entirely different events. This is tantamount to suggesting that history is a jig-saw puzzle composed of seemingly unrelated pieces and capable of presenting a distinguishable picture only with the reconstruction of events in retrospect by posterity. But history is by no means a post facto chronicle of our times. If history, on the other hand, is taken to mean the story of man, it has naturally to follow certain inflexible laws. In the past, the axiom has held true that action produces reaction Today, action touches off a chain reaction. As such, no country is proof against the threats to peace in other parts of the world; and no country can, therefore, be permitted lightly to aggravate the chances of a world-wide conflagration.

The menacing clouds over West Asia consist of the unresolved Suez crisis, the Israeli-Egyptian War and the intervention of Britain and France in this gambol. But the storm clouds are not a recent phenomenon. They may be said to have made their appearance some years ago, when, finally, Egypt enforced the closure of the Suez Canal to ships flying Israel's standard and when, secondly, the tripartite conference of America, Britain and France resolved to defend the victims of aggression in the Middle East.

The storm burst when the Suez Canal was nationalised by Egypt. We were, at that time, hard put to it to understand the strange brand of diplomacy which Sir Anthony Eden was displaying. It was we felt, perhaps the proddings of Conservative back-benchers which compelled the British Prime Minister to take what amounted to a recalcitrant attitude in the dispute. The bellicose utterings could conveniently be explained as being intended to be a sop to Britain's wounded amour propre. We had, however, all along been hopeful that, through negotiation, both the Western Powers and Egypt would be able to formulate plans that were mutually acceptable. It pains us now to see that that hope has been belied.

The Suez debate in the UN Security Council was not wholly fruitless. An important gain for the safeguarding of world peace was the agreement between the two parties on the six principles which ought to form the basis for negotiation. It was with distinctly less uneasiness of mind that we were since waiting for developments; but, again, most of us were lulled into a false sense of security by the belief that the delay in developments was due to the dilatory progress expected of diplomatic exchanges of opinion.

The uprisings in East Europe served besides to obscure what had been the world's most important problem. It seems to us that the implicit weakness of the Soviet Union so suggested has emboldened Britain and France to decide on measures which surely must be said to constitute the downfall of diplomacy as we have known it.

Tactically, Israel's aggression could not have come at a more opportune time for the two Western Powers that have cut so sorry a figure in the imbroglio. The danger of Russian interference was minimised by the USSR's reverses in Hungary and Poland; and it was hardly likely that, in these circumstances, the Soviet Union could or would, in the Egyptian War, repeat the manoeuvre that, indirectly, it precipitated in Korea. Secondly, a big-brotherly show of strength by America was ruled out, because that nation is contentedly preoccupied with its presidential elections.

In such a background, Britain and France have sought to exploit what they must consider an heaven-sent opportunity to intervene in Egypt's affairs. The world has been told that an ultimatum was issued to the two warring nations to withdraw all armed forces within twelve hours; failing which, with a view to saving the Suez Canal from harm's way, Britain and France have seen fit to "intervene."

Mr Nehru, who is a staunch friend of Britain, must be greatly troubled by this gilb diplomacy which is really muddle-headed thinking in disguise. The Indian Prime Minister is as violently the enemy of colonialism: hence his harsh denunciation of the intervention as "naked aggression."

Mr Eisenhower is unfortunate in that peace is drifting disturbingly away on the eve of the American elections. The US President has valiantly shown himself to be a man of peace dedicated to peace. He has urged moderation and negotiation upon Britain and France. He

Delhi Review

Industrial Development in Bihar

Despite the fact that all the requisites for an alround industrial development are present in abundance in the state, Bihar has been content with taking a back seat in the comity of industrially advanced states in the country. Its position as the rich-poor state seems to have undergone no substantial alteration even after Independence. It would appear that the stagnation has resulted mainly from the paucity of risk capital within the state. Entrepreneurs from other parts of the country have also been chary of entering this area as the policy of the State Government has not been of a variety that can inspire investor confidence.

In a memorandum presented to Mr Manubhai M. Shah, Union Minister for Heavy Industries, during his recent visit to the State, the Bihar Chamber of Commerce has drawn pointed attention to the unenviable position of the State compared to other States. Though the State produces 50 per cent of the total minerals produced in the country and has a population of about 40 millions, it has only 1,10,000 persons employed in registered factories, whereas Bombay with a population of 36 millions has more than 5,37,000 persons in this category and West Bengal with a population of 25 millions 4,91,000. The memorandum further points out that 'the industrial development in this state has been retarded by a number of factors, prominent among which, are lack of adequate capital with the local people and lack of confidence of outside investors in the policy of the State Government, the Sales Tax policy, principally taxation of raw materials in this state, absence of adequate transport facilities in South Bihar and transport bottlenecks and absence of roads and inadequate rail facilities in North Bihar, lack of electric power in both North and South Bihar and, last of all, absence of purposive policy of encouraging industrial development in the State by the Government."

From the memorandum, it would appear that it would be shirking responsibility to blame the Central Government for the industrial backwardness of the State. Though it is true that the State is handicapped by lack of adequate finance, this hurdle in the way is not incapable of being cleared if the State Government has only paid serious thought to the problem.

Mr Manubhai M. Shah who made an extensive tour of the State has come to the conclusion that Bihar possesses all requisites for industrial development. Referring to the paucity of capital, he has expressed the belief that there ought not to be any difficulty in obtaining the needed finance with so many financial corporations now functioning in the country. His advice is that the State Government should draw up a bold scheme for providing electricity to every district. Instead of setting up a large power-house at a central place and laying down extensive distributive system which will involve huge capital outlay and much time, it will be advisable to have smaller units of 10,000 kwt in each of the districts of the State. The State should build up power in every district whether industries exist or not.

It is gratifying to note that the State Government have at long last realised that it is not enough to have huge potentialities but they must be exploited if any benefit is to be derived from them. Mr Mahesh Prasad Sinha, the State's Minister for Industry, has revealed that his Government are now determined to assist development of industries in their area.

Considering the urgent need for fostering the industrial development of this region of the country and in view of many natural advantages, the plea of the Bihar Chamber of Commerce to locate the proposed heavy machinery industry here merits the most careful consideration. The Chamber has pointed out that the Chotanagpur area will be an ideal site in this regard as it has not only an abundance of coal in its neighbourhood but it is within easy reach of all the major steel plants, Tata, IISCO, Rourkela, Durgapur and Bokaro.

NORTH INDIAN MARKETS

Prospects for Gur

ARRIVALS of new Gur have begun to gather momentum. In the Hapur market, arrivals are at an average of 300 maunds per day as against only 50 maunds during the period September 15 to October 3. In the Meerut market, a quantity of as much as 6,000 maunds is reported to have been put on the market by producers.

Meanwhile, the quotation for new season gur ranges between Rs 13 and Rs 16 per maund at Hapur, and between Rs 13 and Rs 17-8 at Meerut. Buyers have been mostly from the eastern districts of Uttar Pradesh. Old gur prices have also advanced due to buying enquiry from Gujerat—the biggest consuming area.

It is expected that large-scale crushing for the manufacture of gur will take place as soon as "rabi" sowings will be over. This is mainly due to expectations of a larger cane crop during the current season. The quality of the crop is also expected to be better. It is said that the much-feared damage to crop on account of pest has been more than compensated by the recent rains. The floods also appear to have not disturbed the statistical position of cane.

There is a concensus of opinion that cane supply, during the new season, will be substantially larger than in the last season. The Government of India have also announced some incentives to encourage early crushing by sugar factories. It is, therefore, considered certain that more cane will be available for gur manufacture.

Sugar

Conditions in Sugar market continued to remain depressed as crushing for the new season was expected to begin shortly. Outside buying enquiry was slack and mill delivery prices drifted to lower levels. Following rates are quoted in the Hapur market:—Jaswant Rs 27-14; Simbhauli Rs 28-4; Mowana Rs 27-4 to Rs 28-8; Daurala Rs 28-12 to Rs 29-8; Amroha Rs 27-8; Bijnore Rs 27-8; Mansoorpur Rs 27-11 to Rs 30-0 and Rampur Rs 30 to Rs 31-0.

The Khandsari market continued to remain dull on poor buying enquiry in the face of good stocks. Prices ranged from Rs 22 to Rs 26 per maund, according to quality. In the Meerut market, demand was practically nil. Inferior grades wrre quoted at Rs 20 to Rs 23 and superior grades at Rs 24 to Rs 26 per maund.

Meanwhile, production and despatches of sugar from indigenous factories in the current season, amounted to 18.59 and 16.49 lakh tons up to October 15, 1956, as against 15.90 and 11.48 lakh tons respectively in the corresponding period of the last year. The stocks with the factories on October 15, 1956, stood at 6.32 lakh tons as compared with 4.95 lakh tons last year.

It is learnt that 55 co-operative sugar factories will be working in the country by 1960/61. Licences have already been issued for the setting of 34 sugar factories, and the Government have proposed to issue licences for the remaining. The total output of these factories is expected to be more than a quarter of the total sugar production in the country.

Out of the licences already issued, 14 are for factories in Bombay; 5 in Andhra; 4 in the Punjab; 3 each in Uttar Pradesh and Madras; 2 in Mysore and one each in Assam, Bihar and Orissa. One of these factories has already started production and eleven of them are expected to start functioning during the 1956/57 season and the remaining in the following two years.

*

Foodgrains

Quietly steady conditions prevailed in the Foodgrains market. At Hapur, Wheat average quality recorded slight gains to quote Rs 15-2 per maund. Farm quality advanced by As 6 to Rs 16-8 due to good demand against poor arrivals.

Despite quiet advices from the Punjab and Madras, Gram prices continued to rule steady on good Bombay support. Maize continued to attract good seasonal consumers' demand with prices rising by As 2 per maund.

Peas was much in request from east Uttar Pradesh and Bihar, dara quality quoting upto Rs 12-10 and the white quality upto Rs 13-8 per maund. Arhar prices also registered slight gains to Rs 12-8 per maund. Prices of other pulses developed a hardening tendency in sympathy.

In the Delhi grains market, a mixed trend was seen. Farm quality Wheat registered a rise of As 8 to Rs 19 per maund on increased demand in view of 'Diwali" festival. Dara wheat, however, eased by As 8 to Rs 14-8 per maund on reports of further imports of foreign wheat. Demand for Gram was small and prices reacted modestly. Arrivals of new Maize in the Uttar Pradesh markets were good, with the result rates were quoted slightly lower. Bajra also eased slightly.

In the Bombay foodgrains market, steady conditions prevailed during the past week. The recent upward tendency in Pulses gathered further momentum with the prices registering an all-round improvement. Traders attributed the steadier trend to the paucity of local supplies resulting from smaller arrivals from the growing areas. The inflow was said to have been adversely affected by the relatively higher prices prevailing at the terminal markets.

Trading in the Wheat section revealed a quiet undertone. Pissi quality were sold at Rs 170 to Rs 172 per candy.

Madras Review

The Peninsula

A Pleasing Parting

THE meeting of the Madras Legislative Council and Assembly at which the Kerala and Canarese members took farewell of their Tamilnad Colleagues are reminiscent of a similar occasion, when the Andhra State was established. This time, there was a little more concordance between feeling and expression than on the previous occasion. There is now scarcely any ill-feeling left between the Malayalee, Canarese and Tamilian. There is no point of territorial dispute, which is kept alive.

The scene could appropriately and faithfully be described as the parting of members of a family after division, where everyone goes to his allotted house with a real sense of bereavement and keen on maintaining fraternal amity. This is how the picture is presented by the Ananda Vikatan, through one of its cartoons. The farewell speeches in the legislature echo this spirit and sentiment, barring one or two exceptions even where a generous interpretation might render them in good taste.

One D.P.P. member, while offering his good wishes to the outgoing members said that he always held that the Malabar members who persisted in speaking in the House only in their mother-tongue should go away from the State. Another gentleman drawn from the Congress Party took the opportunity to find fault with the policies adopted by the Madras Government in regard to family planning. Of course, he is not alone in thinking that moral standards would be lowered and the modesty and chastity of youth jeopardised to some extent by the free and persistent advocacy of family planning methods.

A key-note of the good wishes was the emphasis on the cultural unity of all the language groups and on the need for unity of political outlook among all the States, inspite of administrative separation. On this point the communist members were found to be as zealous as those of any other party. One Communist member reminded the House of a song from Barati, in which the poet stressed the oneness of India despite diversity in languages.

One Congress spokesman said he never looked upon the Canarese or Malayalee as belonging to separate groups and even felt sorry that Tamils being proverbially a non-fighting type, the departure of the Malabar and South Canara members would rob the proceedings of the House of much of its pep and humour. A lady member, who can claim to speak intimately of both Malabar and Tamil Nad pointed to the affinity between the two States and to the common culture of both.

A few others could not lift their feet off the immediate political ground. One referred to the existence of a section among the people favouring a larger bilingual State, but complimented the Chief Minister, Mr Kamaraj, for reading the pulse of the people correctly and deciding that the time was not opportune to form a Dakshin Pradesh. Another thought that though they were separating, all of them would soon rally round to bring a larger "Dravidastan." As an Opposition member, he regretted the reduction in the strength of the Opposition as a result of the splinter of Malabar and South Canara.

Speaking in the Council, Dr Lakshmanaswami Mudaliar referred to his quandom scepticism on the formation of linguistic States and appealed to the outgoing members to be ambassadors of goodwill, when they went to their regions, so that they could bring about harmony and friendship between the different States. Dr Mudaliar expressed the hope that they would harmoniously work for the common good, unmindful of the statements over public questions made in the legislatures on controversial issues and keeping in view the supreme need to promote the unity and the welfare of all people, wherever they might be.

Dr Mudaliar also indirectly touched on the current controversy over the sharing of river waters. He pointed out that the people of Madras were not at all keen on depriving others of their resources; what they would like to have was only a share, when that was possible without anybody suffering thereby. He enunciated this principle of mutual advantage as the best foundation for inter-State relations. He stressed the fact that the differences between Tamil, Malayalam and Telugu were small and the similarity comparatively bigger.

Mr K. Balasubramania Iyer drew attention to the Constitutional provision for a common citizenship for India and appealed to all of them to be extremely jealous of their responsibility it cast on them. In both the Houses, glorious tributes were paid to the useful and exemplary role played by Mr K. Gopala Menon as Speaker of the Legislative Assembly and Mr A. B. Shetty as Minister of Health. Mr Shetty has been a member of the Madras Assembly since 1926 and, in the words of Mr P. Ramamoorthi, dealt with things in such a way that though the people thought he agreed with them, they would not blame him if the results were disappointing later. He is the living embodiment of the saying, "do not be deceived by appearances'. During the last few years, many Ministers have come and gone but Mr Shetty remained and continued as Health Minister. Though not a Doctor himself, his comprehensive knowledge of medicine made people believe that he was a doctor."

Mr C. Subramaniam, who had something to say in appreciation of almost everyone of the departing group, acknowledged that he himself owed to Mr Shetty the art of remaining calm in the midst of provocation. The most interesting speech of the farewell session was made by Mr Shetty himself. In fact, one is tempted to describe his speeches as an outstanding contribution to the study of the art of public life. If one were asked to give a title to the speech, the suggestion may well be "How to be successful as a politician".

Mr Shetty complimented Mr Ramamoorthi as "one of the brainiest men in the House or even outside" and slyly reminded the Communist party that though they might be able to liquidate the aristocracy of wealth, the aristocracy of intellect would remain. Then followed a lesson in the understanding of democracy, addressed of course, to the party to which Mr Ramamoorthi belonged. "The primary assumption underlying democracy is that all men are equal but in the practical every day life, men are not equal."

Mr Shetty's references to some of the other members of the House invariably provoking laughter, revealed an ingredient of scholarliness and wit, which of late has become rare in our legislatures. Mr Uppi Saheb was described as having a lean and hungry look but not dangerous like Cassius,

(Continued from page 794)

sprung up to assist in the inflow of capital toward such enterprises. It is apparent, thus, that large enterprises are no longer dependent, as they had been in the last eight years, upon the IFC for raising long-term finance against their development needs. The small and medium enterprises should, therefore, engage the special solicitude of the IFC. The reasons for the relative inaccessibility of the IFC to the medium and small business concerns are much the same as those which, we have found earlier, have posed problems in respect of the new Company Law. That is to say, the legal and other expert help is beyond the purse of the "middle class" concerns. Moreover, the corporate units in this sector cannot draw upon the facilities available through the offices of the new investment institutions. Thirdly, the smaller companies are scarcely in a position to compete in the public capital market for their requirements of share capital. In the result, the only important source of finance for development is comprised by the IFC; and there is the explicit direction that the IFC is intended to help such companies. In the preamble to the Industrial Finance Corporation Act, it is laid down that "it is expedient to establish an Industrial Finance Corporation for the purpose of making medium and long-term credits more readily available to industrial concerns in India, particularly in circumstances where normal banking accommodation is inappropriate or recourse to capital issue methods is impracticable". The problem for the middle class concerns, I repeat, lies firstly in the fact that they are not in a position to command the services of experts whose help is necessary in drawing up the documents and papers and in devising apposite schemes in respect of applications; and secondly in the fact that they cannot hope for success to attend their efforts to raise capital in the open market. If, therefore, the IFC is to be made accessible to the middle class concerns, measures have to be taken which will resolve the two problems. The most heartening fact about this particular aspect of medium class concerns is that we do have tailor-made solutions. The prospect is cheerful for a number of valid reasons. Firstly, the IFC has been subjected to a vigorous spring cleaning under the direction of Mr K. R. K. Menon. The spring cleaning has included measures which would "quicken the pace of work at various stages in connection with the examination of title deeds and the execution and registration of mortgage documents". The good job done by Mr Menon in this respect leads me to hope that he will take the necessary initiative in making the IFC more accessible and imbue it with the functions of an issue house.

✱

The first requirement, as far as middle class business is concerned, is that advisory services are made available. Since the smaller companies are not likely familiarly to be acquainted with the form, format and formality of the applications to be made to the IFC, I suggest that it is the responsibility of the Corporation to offer advisory services. Article 8 of the Act provides for the setting up of one or more advisory committees for the purpose of "assisting the Corporation in the efficient discharge of its functions". Surely, if companies were enabled to present their case to the Corporation in a manner that avoids the need for later explanations and endless debate, the advisory committee may be said to be assisting the Corporation. If the IFC could see its way to bringing into being an advisory committee of this nature or to appointing a trustworthy advisor-cum-public relations officer the first problem of the middle class concerns will have been resolved.

✱

The second difficulty of the smaller companies is, as we have seen, their inability to tap the open market for their requirements of capital. If underwriting facilities should be available, the smaller companies would stand to benefit. The Industrial Finance Corporation Act specifically provides for business of this nature. Sub-Section (b) of Article 23 authorises the Corporation to transact the business of "underwriting the issue of stock, shares, bonds or debentures by industrial concerns". The first annual report of the IFC made it a particular point to state that conditions were not propitious for the IFC to take up the duties of under-writing. The report of the Board of Directors of the IFC explained the Corporation's standpoint in the following words:

"In view of the present situation in the money market and the stock exchanges, the Corporation does not consider it advisable to undertake underwriting commitments for the time being. The Corporation would be justified in underwriting an issue of shares or debentures only if it was reasonably satisfied that there was likely to be an adequate response from the public and the market.

"For the reasons mentioned above, the Corporation does not consider it advisable to guarantee loans floated in the public market at present."

✱

That was in 1949. In the conditions of today, however, it cannot any longer be held that underwriting is not feasible for the IFC. On the other hand, I feel that the time is right for the IFC to embark upon this important aspect of its functions, duties and responsibilities. If under-writing facilities are available, the medium size companies would be able to make fitter use of the services offered by the IFC.

✱

Let us hope that, in the not too distant future, the IFC will equip itself for thus being made greater use of by smaller companies. In the contingency that the hope materialises, we need, however, to indicate how the IFC could lay its hands upon fresh resources. But I fancy that there is not much margin remaining in its powers to borrow against bonds. The IFC Act lays down that money raised by the IFC in the form of bonds guaranteed by Government shall not exceed five times the total of its capital and reserve fund. But this does not mean that there is no untapped source of resources for the IFC. On the other hand, there is a rich avenue of resources which could be channeled into the IFC to fulfil its allotted purpose. I am here thinking of the counterpart fund that, in terms of the recently concluded surplus commodity agreement with the USA, has to be set up for the specific purpose of providing aid to the private sector. This counterpart fund is likely to be of the order of Rs 30 crores. I suggest that the counterpart fund be handed over in toto to the IFC for effectively financing projects in the private sector. What is more, I believe that the American authorities would welcome a decision to the effect that this sum of money will largely be set apart for aid to the smaller companies. For, it would mean that there would be the greatest diffusion of the aid; and this is an end devoutly hoped for, I am sure, by American.

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE is hereby given that the Board of Directors of the above Company have declared an Interim Dividend of Re. 1 (One) free of Income-tax per Ordinary Share for the year ending 31st December 1956 payable on 21st November 1956 to those members whose names appear on the Register of Members as on 13th November 1956.

The Register of Members of the Company will remain closed from 13th November 1956 to 20th November 1956, both days inclusive.

By Order of the Board,
STEEL BROTHERS & COMPANY LIMITED,
Managing Agents.

"Clive Buildings",
Netaji Subhas Road,
Calcutta.
29th October, 1956.

THE TEEN ALI TEA CO. LTD.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 23rd day of November, 1956, at 3.15 p.m. for the following purposes:—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.

(2) To declare a dividend.

(3) To elect a Director in place of the retiring Director.

(4) To elect Auditors for the ensuing year, and to fix their remuneration.

And as special business:—

(5) To consider and if thought fit to pass the following resolution, namely:—

"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected".

The Share Transfer Book of the Company will be closed from 17th November, 1956 to 23rd November, 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.
A. H. GALLOWAY,
Managing Director
Managing Agents.

Calcutta, 31st October, 1956.

NOTE:—

A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956, provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

Stock Exchanges

A CHEERFUL ATMOSPHERE

Watch-Dog Writes:

THANKS to the bear-covering and replacement buying, a remarkable improvement in the prices of most scrips has been recorded during the week. The main factors, that have influenced a sudden change in sentiment, are the reports with regard to the growing tension in the Middle East and higher advices from the commodity markets.

General conditions on the Calcutta Stock Exchange were better with speculative issues showing a notable recovery.

A cheerful atmosphere prevailed on the Bombay Stock Exchange where leading scrips forged ahead to fresh higher levels.

On the Madras Stock Exchange, selected industrials came in for good attention.

The London Stock Exchange had another week of unsettled conditions and prices fluctuated a good deal following developments in the Middle East situation.

Wall Street closed barely steady.

*

Calcutta

Calcutta, Friday.

ALTHOUGH the local Stock Exchange started the week on an unispiring note, heavy short-covering and replacement buying, following the reports of the tension in the Middle East, resulted in a remarkable recovery in prices toward the close. The turnover was, however, moderate as operators were inclined to restrict commitments in view of the uncertainties and reports of a number of companies queueing up to offer capital for public subscription and the unsatisfactory behaviour of giltedged securities. The undertone at the close was fully steady.

Business in the Giltedged section was virtually at a standstill as buying interest was almost absent. Investors were unwilling to enter into fresh commitments in view of the uncertainty of the immediate outlook. 3 per cent 1986 Conversion Loan opened at Rs 74-1, and after improving to Rs 74-8, finished the week at Rs 74-4.

Except for some enquiry in United Commercial which changed hands at Rs 56-0 to Rs 56-12, Bank shares ruled generally quiet and steady.

Despite higher advices from the jute goods market, Jute shares remained neglected as operators were generally inclined to liquidate their holdings on the feeling that the industry would not be making much profit as the cost of raw jute was much higher in relation to that of manufactured goods. Howrah were offered at as low as Rs 21-12 against Rs 22-4; Dalhousie at Rs 34-0 against Rs 97-0; Anglo-India at Rs 168 against Rs 172 and Megna at Rs 84-8 against Rs 87-8. The only exception to the general trend was National, which met with some speculative support upto Rs 24-12 from Rs 24-1.

Thanks to the news of the end of the strike in the Raneegunge coalfields, Coal shares ruled steady although enquiries were confined to only few selected scrips. Burrakur were lifted upto Rs 16-14 from Rs 15-12 on speculative buying, to finish at Rs 16-12. Central India had buyers at Rs 7-6 to Rs 7-9 and Borrea at Rs 24-8 to Rs 24-10. West Bengal were quoted around Rs 6-6.

Restricted business and continued inability to take a view were responsible for a softening in prices of Textile scrips which could not stage a rally due to adverse reports from the cloth and piecegoods markets. The only bright feature were Elgins which came in for a good deal of attention, being lifted upto Rs 29-12 from Rs 27-8. Kesoram moved narrowly between Rs 16-14 and Rs 17-0 and Cawnpore between Rs 9-0 and Rs 9-2. New Victoria were rather sticky around Rs 2-10.

Of all the sections, Teas resisted the general decline in prices. Although the turnover was limited, selected scrips received good support at improved levels, thanks to renewed buying enquiry. Apart from the fact that prices obtained at the past few auctions had been quite satisfactory, operators were enthused over the decision made by the Calcutta Tea Regulation Committee with regard to the curtailment of crop with effect from November 20. The news, that the export duty remained unchanged, was also a contributory factor. Among the few prominent scrips were Bishnauth Old changing hands at Rs 25; new shares at Rs 23 to Rs 23-5; Bateli at Rs 25 to Rs 25-8; Baghmari at Rs 23-6 to Rs 23-10; Hasimara at Rs 32-6 to Rs 32-12; Jutlibari at Rs 27-9 to Rs 28-1 and Patrakola at Rs 230 to Rs 232.

Conditions in the Sugar section remained quiet although a few scrips tended to move up slightly in sympathy with the general trend of the market. Most prominent amongst these were Carew improving to Rs 8-14 from Rs 8-8; Ramnugger to Rs 25-2 from Rs 24-14 and Cawnpore to Rs 19-1. Darbhanga, after touching a high of Rs 22-13, finished at Rs 22-6. Belsund were a few annas cheaper at Rs 11-12.

Engineering shares, after ruling quiet early in the week, firmed up toward the close, thanks to higher Bombay advices. India Irons opened at Rs 33-12, advanced gradually to Rs 34-11 on renewed bull support, to finish the week at Rs 34-9. In kerb trading on Friday, there were buyers at Rs 34-6-6 with sellers at Rs 34-7. TEXMACO scored one full point at Rs 23-2, while Jessop finished at Rs 37 after touching a high of Rs 37-12. Richardson were taken upto Rs 27-12 from Rs 26-10, to finish at Rs 27-4 on profit-taking. Braithwaite closed better at Rs 29-4 against Rs 28-13.

Miscellaneous issues followed the general trend of the market. Indian Copper firmed up to Rs 4-9 from a low of Rs 4-2 following higher advices from the London Metal Exchange. BBP were enquired upto Rs 3-12 from Rs 3-10 following the official statement with regard to a major development scheme. National Carbon remained steady at Rs 28-13, while Orient Paper changed hands at Rs 37-8 to Rs 38; Shree Gopal at Rs 16-15 to Rs 17-4; Titaghur at Rs 40-2 to Rs 40-10; India Steamship at Rs 10 to Rs 10-4; Rohtas at Rs 21-8 to Rs 21-15 and Jardine Henderson at Rs 93 to Rs 95. Indian Cable met with some liquidation, being marked down to Rs 22-14 from Rs 34-10. BIC were dull, but steady at Rs 11-1 Dunlop Rubber were quoted around Rs 29-2 with Rallis having some support upto Rs 47-4 from Rs 46.

Bombay

EQUITIES on the Bombay Stock Exchange, during the short week under review, displayed a firmer tendency due to heavy short-covering and some replacement buying. Leading Textile and Steel scrips forged ahead, while selected issues in the Miscellaneous section met with keen enquiry. The turnover was, however, small as operators were jittery about prospects of unusual stringency in the money market in the coming busy season and of the textile industry in the near future. The undertone at the close was fully steady.

Textiles:—The uncertainty regarding the trend of profits of textile mills for the current year in the light of conditions obtaining in cotton piecegoods market served as a depressant in this section and caused a steep decline in prices early in the week. There was, however, a substantial recovery toward the close on rumours of reduction in excise duty and due to higher advices from the cotton market.

Bombay Dyeing, Century and Svadeshi were in particular request and the scrips, after touching low levels of Rs 616-4, Rs 542-8 and Rs 243-6, finished the week at Rs 626-4; Rs 549-8 and Rs 252-8 respectively. India United appreciated to Rs 12-5-6 from Rs 12 and Deferreds to Rs 2-1-9 from Rs 2-0-7 on the announcement of interim dividends. Central India were, however, on offer at

Fourth Drawing of First Debentures (5% Registered) 1976.

Holders of First Debentures (5% Registered), 1976 are hereby advised that the Fourth Drawing will be held at 11 A.M. on Wednesday, the 12th December, 1956, at the Registered Office of the Company, Chartered Bank Buildings, Calcutta.

For & on behalf of
SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LD.
J. A. STEVEN,
Deputy Chairman.

Chartered Bank Buildings,
Calcutta, 24th October, 1956.

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that the Tenth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta 1, on Thursday, the 29th November, 1956, at 11 a.m. for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1956, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.

(3) To appoint Directors in place of those retiring.

(4) To appoint Auditors and to fix their remuneration.

As Special Business

(5) To fix the remuneration of four Directors who are not Managing Directors.

(6) To consider and if thought fit, to pass the following resolution which will be proposed as an Ordinary Resolution in compliance with the provisions of Section 228 of the Companies Act, 1956:—

"That subject to the rights and powers of the Company's Auditors to visit all or any of the Company's Branch Offices and to have access at all times to the books and accounts and vouchers of the Company maintained at such Branch Offices, the Accounts of the Branch Offices of the Company need not be audited by a person qualified for appointment as auditor of the Company pursuant to Section 226 of the Companies Act, 1956."

(7) To consider and if thought fit, to pass the following resolution which will be proposed as a Special Resolution:—

"That with effect from the commencement of the Companies Act, 1956, and in compliance with the provisions of Section 314 thereof, consent be and the same is hereby accorded to Mr Sree Lal Mehta, a relative of Mr. Girdharilal Mehta, a Managing Director of the Company, holding and continuing to hold an office or place of profit as an Assistant to the Company on such terms as to remuneration or otherwise as have been or may be agreed from time to time between such Assistant and the Company."

The Transfer Books of the Ordinary Shares of the Company will be closed from the 14th November to the 29th November, 1956, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, Clive Row,
Calcutta, 1, 1st October, 1956.

Notes.—Payment of any Dividend declared will be made only to those Members whose names are registered in the books of the Company on the 29th November, 1956, or to their Mandatees.

No application for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

THE MEGNA MILLS COMPANY, LIMITED.

Notice is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 16, Strand Road, Calcutta-1, on Friday, the 30th November, 1956, at 11-00 a.m., for the following purposes:—

1. To consider and pass the audited Accounts of the Company for the half-year ended 31st March, 1956, and to receive and adopt the Directors' and Auditors' Reports thereon.
2. To declare Dividend recommended by the Directors.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS:

5. To consider and, if thought fit, to pass, with or without modification, the following Resolutions:—
   As an Ordinary Resolution.
   "RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."
6. As a special Resolution.
   "That the regulations contained in the printed document submitted to this Meeting and for the purposes of identification signed by the Chairman thereof be and the same are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The Share Transfer Books of the Company will be closed from 16th to 30th November 1956, both days inclusive.

By Order of the Board,
R. L. McINTOSH,
Secretary.

16, Strand Road,
Calcutta, 29th October, 1956.

Note: A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a Member of the Company.

WORLD OF COTTON

(Continued from page 797)

the Bombay piecegoods market remained dull during the past week. Offtake continued to be subdued and the usual pre-Diwali demand was conspicuous by its absence this year. Dealers, however, hoped that the offtake would pick up after Diwali in view of the reports of brisk activity in the consuming centres at the moment.

The major factor, that has brought the movement of cloth stocks virtually to a standstill in recent weeks, has been the rumour about a possible reduction in the excise duty, which has discouraged traders from lifting stocks from the mills. According to the available figures, the all-India stock figure for mills has risen from 154,328 bales in August to 201,431 bales in September. A major part of the impact of this accumulation has been borne by Bombay mills, their figure of uncleared stocks having shot up from 141,000 bales in August to 168,000 bales in September.

Statistics of textile exports for September are now available. There has been an improvement in the case of exports of coarse, medium and superfine, while a slight decline has been noticed in the case of fine varieties. The variety-wise break-up of textile exports for the first nine months of the current year together with the corresponding figures for the previous year are (figures in million yards):—Coarse 135.65 against 133.73; Medium 373.49 against 466.14; Fine 13.90 against 30.71 and Superfine 13.03 against 17.72.

THE OODLABARI COMPANY LIMITED

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14 Old Court House Street, Calcutta, on Wednesday, the 28th day of November, 1956, at 3.0. p.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.

(2) To declare a dividend.

(3) To elect Directors in place of the retiring Directors.

(4) To elect Auditors for the ensuing year and to fix their remuneration. In this connection Special Notice is hereby given that the Company has received from Sri. Jiwanmall Sethia, a member of the Company, notice of an intention to propose Messrs. Kothari & Co., Chartered Accountants, to the office of Auditors of the Company in place of the retiring Auditors, Messrs. Price, Waterhouse, Peat & Co.

And as Special Business—

(5) To consider and if thought fit to pass the following resolution, namely—
"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected".

The Share Transfer Book of the Company will be closed from 20th November 1956 to 28th November 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.
A. H. GALLOWAY
Managing Director,
Managing Agents.

Calcutta, 30th October, 1956.

NOTE:—

(i) In connection with the business to be transacted under item 4 and item 5 of of this Notice, please see annexed Explanatory Statement.

(ii) A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

EXPLANATARY STATEMENT

Item 4. In the Special Notice given in accordance with Section 225 of the Companies Act 1956, by the Company to the Shareholders under item 4 of the annexed notice for Annual General Meeting intimation has been given of intention to move a Resolution for the appointment of Messrs. Kothari & Co., to the office of Auditors of the Company for the current year in place of the retiring Auditors, Messrs. Price, Waterhouse, Peat & Co.

Item 5. With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

THE INDIA JUTE COMPANY, LIMITED.

Notice is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 16, Strand Road, Calcutta-1, on Friday, the 30th November, 1956, at 11-15 a.m., for the following purposes:—

Sugar Facts & Figures

(Continued from page 786)

going to be produced by Bombay and other States of South India would be lower than the prices of UP and Bihar products—the bulk of additional sugar capacity and new licenses had been granted this year chiefly to South India". The need, therefore, for establishing an Institute similar to the one at Kanpur in the Deccan is both obvious and urgent.

Unfortunately, the Union Minister did not deal adequately in his speeches either at Hyderabad or at Kanpur with the problem of shortage of Technicians and did not indicate in any detail what the Government proposed doing to overcome the shortage. Many of the existing factories, some with an experience of more than two decades behind them, are finding it difficult to keep to their production schedule for want of technical personnel. The new units will naturally face a more acute shortage. It will be a pity if the rapidly growing sugar industry in India were suddenly faced with a crisis owing to a lack of forethought in the minds of those who are responsible for creating facilities for training sugar technologists in our country.

THE PENINSULA

(Continued from page 800)

Mr P. T. Rajan received the compliment of representing a party but having his followers wholly outside the house, one shining in solitary glory within. Mr V. Balakrishnan was "an unattached member but not without attachment, as he was always found the proud champion of women's rights and having a soft corner for nurses." This observation led the ex-minister on to the hope that there would be more women members to add grace and sweetness to the proceedings of the House. (This time, the Congress seems determined to oblige).

In the vein of a teacher of political technique, Mr Shetty commended Mr Bhaktavatsalam's habit of speaking in a low voice when no body will hear everything, Mr Padayachi's technique of reading very swiftly and Mr Kamaraj's trusted practice of meeting any demand from any quarter with the evasive assurance of "Parkalam" (let us see); Mr Shetty commends the latter formula to the Chief Ministers in all other States!

One should not omit to make mention of the reference made by both the Congress and Communist members to the great examples set by Mr C. Rajagopalachari and Mr Sivashanmugham Pillai as guiding lights in the business of Parliamentary work.

On the eve of the implementation of reorganisation, the Madras Government made two popular announcements. On the question of the future of Thirutanni Taluk, they disclosed their recommendation that it should be settled by a Boundary Commission, instead of by the Zonal Council—an announcement which had the immediate effect of bringing the concerned Satyagraha to an end. The Government also decided to enhance the dearness allowance of all non-gazetted officers and gazetted officers drawing a salary of over Rs 300, by a sum of Rs 5, to be given effect to from November.

GATEWAY GOSSIP

(Continued from page 795)

such. It would greatly help the banking system if such a market could be created; both the Reserve Bank and Scheduled Banks need to ponder over the question; but I doubt whether such arrangements could be made in a short time.

But I would like to urge the suggestion that we could profitably have a discount house as enlarging the institutional facilities in the Indian money market. The plea of the private sector and of the banking system is that there is an untoward delay in the settlement of Government bills. This difficulty could be resolved if facilities existed for the discount of Government bills with an organisation suitably fashioned. Indeed, the steel bills could also be discounted with such an institution. The discount house would, in turn, be assured of rediscount facilities with the Reserve Bank. The three entities interested in the establishment of a discount house could be allotted an equal interest in the shareholding. The three entities are: the Reserve Bank, the State Bank and the other member banks. It should not be difficult to bring a discount house into being before the 1956-57 busy season gets into stride; it will then be, thereafter, a relatively simple matter for Scheduled Banks to be well disposed to advances against Government bills. It is proper, I think, that the resources of the banking system should be as fully available as possible for meeting the financial needs of what I may loosely call the non-Government sector.

I have a final word to say about the manner in which the banking system can be strengthened. Because there is no real commercial bill market in existence, bills discounted are also taken to be part and parcel of the advances portfolio; and it is the ratio to deposits of these two added together which gives the appearance of an over-extended position of the banking system. If, however, commercial bills could be regarded as liquid assets—which they would be if they could be freely discounted in a bill market—the liquidity ratio of the banking system would not cut the sorry figure that it does today. It is, I feel, very much in the interests of the banking system to bring into being, with as little delay as possible, a really effective bill market.

WORLD OF BUSINESS

(Continued from page 790)

German Industries Fair

The German Industries Fair Hannover has, in the ten years of its existence, developed from the Export Trade Fair of early days into one of the most important international markets. Today, the Fair combines on a total area of nearly 7,000,000 sq ft. an exhibition space of 2,400,000 sq. ft of covered halls and 1,400,000 sq. ft of open air space; the Hannover Fair Grounds are the largest in Europe.

Hannover is the only place in Germany, which has the entire range of the production goods industry of Western Germany. The Industries Fair is the most important trade fair for the following German industrial groups: mechanical engineering; electrical engineering; chemistry; rubber manufacture; precision mechanics and optics; iron and steel; tools, office equipments of all kinds and for the consumer's goods groups; china; glass; jewellery and silver-ware clocks and watches and cutlery.

The Hannover Fair also offers all foreign countries the opportunity to advertise their own industry through special information offices. The next Fair will take place from April 28th to May 7th 1957 and from September 15th to 25th 1957.

OLYMPUS

(Continued from page 798)

has quoted the tripartite conference as the basis for the American intention to support and defend the victim of aggression.

But neither India nor America, nor indeed any of the Commonwealth countries, was consulted or earlier informed about Britain's intentions in Egypt. We may concede the altruistic aim of the two Western powers to safeguard the Canal. It may be that Britain is not against Egypt, but only against Colonel Nasser. Russia may not interfere; nor, perhaps, the USA. It is conceivable that normalcy will return and that we shall not have a Third World War. But we suggest that Britain and France would do well to subject their recent jejeune diplomacy to an agonising reappraisal; and they should, we think, remember that the Middle East is synonymous with oil—and that oil is dangerously combustible.

★

STOCK EXCHANGES

(Continued from page 802)

at Rs 133 to Rs 136 on rumours of the company's inability to pay any dividend for the next two years in view of the heavy modernisation programme. Simplex changed hands at Rs 200 to Rs 202 and Kohinoor at Rs 343 to Rs 346.

Steels:—Steel shares, after initial weakness, firmed up toward the close on buying support. Tata Ordinaries commenced at Rs 190-12 and, after improving to Rs 192-4, receded again to Rs 191-12, to finish steady at Rs 192-4.

Miscellaneous:—In this group, Associated Cement met with keen enquiry upto Rs 196-8 from Rs 193-4. National Rayon were lifted upto Rs 261-8 from Rs 256-4 on reports of the company's excellent advance sales. Tata Locomotive jumped upto Rs 169-8 from Rs 168 on expectation of a dividend of Rs 6 per share. Bombay Burmah, after opening at Rs 718-2, moved up to Rs 727-8 on speculative support. Tata Chemicals hardened to Rs 20-4 from Rs 20-1 on the announcement of a maiden dividend of Rs. 12 per share.

Shipping shares were quiet. In the Automobile section, Premier Automobiles had buyers upto Rs 107-12 from Rs 106-8 in view of the forward listing. Elsewhere, Belapur Sugar were taken upto Rs 252-8 from Rs 250; Scindia Steam upto Rs 19-3-8 from Rs 19-1 and Premier Construction upto Rs 208-8 from Rs 206-12.

Hesitant Undertone in October

The stock markets opened the month on a quiet note brought about by the disappointment caused by the refusal of the Government of India to allow any increase in the rate of dividend to the shareholders of the Indian Iron and Steel Company Limited.

The Indian Iron announcement together with the disinclination of operators to extend commitments in view of the forthcoming Puja holidays kept interest in the stockmarkets at a low ebb. The stringency in the money market and the anxiety engendered by the decline in cloth exports also excercised a restraining influence.

In Calcutta, India Irons which closed September on a firm note at Rs 36-4 declined sharply to Rs 35-11. In Dalal Street, prices ruled quietly steady due to profit-taking and absence of buying support. Tata Iron declined to Rs 198 while Bombay Dyeing on realising pressure receded to Rs 631-4.

2

All markets in the country remained closed as the entire nation paid its respectful homage to Mahatma Gandhi, on the occasion of his 87th Birthday anniversary.

3

The Calcutta Stock Exchange continued to remain closed due to Mahalaya. In Dalal Street, conditions were easier on long liquidation and absence of fresh support. Tata Iron receded to Rs 196-12 from Rs 198-8 with Bombay Dyeing declining by three points to Rs 630-10. Indian Iron came back to Rs 34-15-6 from Rs 35-12.

It was reported that in view of the bumper sugarcane crop the Government of India was considering a proposal to evolve a formula that would enable factories to start early crushing this year.

The statement of the Reserve Bank of India for week ending September 28, 1956 disclosed decline in Notes in Circulation to Rs 1,409.23 crores from Rs 1,417.70 crores in the previous week.

4

The stock markets were generally depressed as a result of Government's decision not to allow an increase in dividend for Indian Irons in respect of the year ending March 1956. Indian Iron after opening at Rs 34-15 closed quiet at Rs 34-13. Other sections of the market were also depressed in sympathy with the market leader. Tea shares, however were an exception as selective support was forthcoming in view of the very strong and general demand at the week's export tea sale in Calcutta.

In Bombay, the undertone was subdued though selected textiles shares fared better than others. Tata Iron was shaded at Rs 196 from Rs 196-12 but Bombay Dyeing advanced by nearly four points to Rs 634-6.

5

The approaching Puja holidays in Calcutta and end of account considerations in Bombay, kept business in the stock markets in both the centres at a low ebb. Indian Irons after opening slightly better at Rs 35 encountered pressure in later dealings and closed the week at Rs 34-13. Tata Iron met with moderate buying support and closed 8 annas higher at Rs 196-8. Bombay Dyeing was also better at Rs 635-10.

6 & 7

The official wholesale price index (with August 1939 as 100) advanced by 0.2 per cent to 419.1 during the week ended September 22, 1956 as compared with 418.9 for the previous week. The index was lower by 0.3 per cent when compared with the corresponding week of the previous month but was higher by 19.6 per cent than of a year ago.

Both the Calcutta and Bombay markets remained closed.

8

Britain announced commencement of production of electricity on commercial scale from atoms at its first full-scale nuclear power plant in Calder Hall, Cumberland.

The stock markets in India were worried over the Indian Finance Minister's hint about State Trading in cloth in case cloth prices did not decline to an equitable level. That together with the imminence of holidays in Calcutta had a restraining influence on business in the stock markets. In Calcutta, Indian Irons opened at Rs 34-11 and declined further during the day's session to close at Rs 34-7. In Dalal Street, Tata Iron lost ground to be placed at Rs 193-12 from Rs 196-8. Textiles, had to bear the brunt of the selling pressure and Bombay Dyeing declined sharply to Rs 622-8 from Rs 635-10.

9

On the eve of the long Puja holidays, the Calcutta stock market encountered little support and prices moved within a narrow groove. Indian Irons opened at Rs 34-10 and after moving upto Rs 34-11 closed quiet at Rs 34-7. After opening steady, Bombay developed a reactionary tendency with prices coming back to previous closing levels. Tata Iron shaded to Rs 193-8 from Rs 193-12. Though most textile shares were generally unchanged on balance, Bombay Dyeing was lower at Rs 618-12 as against Rs 622-8.

10

The Calcutta Stock Exchange remained closed. (The market remained closed from October 10 to October 21 on account of Pujas).

According to official statistics released by the Chief Inspector of Mines, Coal output in India in August increased to 3,307,647 tons from 3,164,647 tons in July 1956.

In the Bombay Market prices recovered on a wide front under short covering and replacement buying. In the steel section, Tata Iron advanced to Rs 194-12 from Rs 193-8 with Indian Irons steady at Rs 34-6. Textiles were better with Bombay Dyeing recovering to Rs 624-6 from Rs 618-12.

11

Fighting flared up on the Jordan-Israel border between Arabs and Jews.

Notes in Circulation during the week ending October 5, 1956 showed a sharp rise to Rs 1430.57 crores as against Rs 1409.23 crores during week ended September 28.

Lacking follow-through support, equities in Bombay developed a sagging tendency. Tata Iron declined to Rs 194 from Rs 194-12 while Indian Iron was marked at Rs 34-4-6. Textiles shares were generally lower with Bombay Dyeing quoting Rs 620-10 as against Rs 624-6.

The Black-Krishnamachari correspondence was released for publication.

12

The Government of India's decision to give a rebate of excise duty on higher mill output imparted confidence to the textile section. Bombay Dyeing, Century and Standard participated in an upward movement. Bombay Dyeing gained nearly 10 points to Rs 630, Century moved up from Rs 548 to Rs 553 and Standard advanced to Rs 487-8 from Rs 475.

A Press Note issued by the Ministry of Commerce and Consumer Industries said: As an incentive to increased production of cloth, the Government of India has decided to give a rebate of excise duty at the rate of six pies per yard on all cloth produced by a textile mill in excess of its average monthly production during the eight months, January to August, 1956.

13

On the intervention of Dr B. C. Roy, Chief Minister of West Bengal striking workers in Raniganj Coal fields decided to call off the 27 day old strike unconditionally.

Textile shares continued to forge ahead in Bombay on speculative support. Steel also gained some ground in sympathy. Bombay Dyeing gained another 4 points to be placed at Rs 634-6. Tata Iron was maintained at Rs 195 with Indian Iron couple of annas higher at Rs 34-9.

14

Russia vetoed that part of the Anglo-French Resolution approving the 18 nation plan for international control of the Suez Canal.

Forward trading in Castor seed was inaugurated at the Hyderabad Oils and Seeds Exchange.

15

Conditions in the Bombay Stock Exchange were quiet in the absence of fresh support. The fact that stocks were accumulating in cloth markets induced selling pressure in Textiles. Tata Iron shaded to Rs 194-8 from Rs 195 as did Indian Iron to Rs 34-7. Bombay Dyeing reacted to Rs 629-8 from Rs 634-6 with Century declining to Rs 560 from Rs 554.

16

Notes in circulation increased further to Rs 1438.23 crores during week ended October 12 as compared with week ended October 5 when they were Rs 1430.57 crores.

The Bombay Stock Exchange also remained closed.

It was reported that Indian shipping would acquire 24 ships with a total tonnage of about 163,000 GRT during the Second Five-Year Plan. Acquisition of the additional tonnage was estimated to exceed the provision of Rs 37 crores made in the Plan.

(Continued from page 817)

18

According to official figures released, the average index of industrial production in India during the first half of 1956 (revised with base year 1951=100) rose from 127.3 to 136.8. The index was higher by 9.3 per cent than that for the corresponding half year of 1955 and by 7.5 per cent as compared with the index for the previous half-year.

The official wholesale price index (with the year ended August 1939=100) declined further by 0.2 per cent to 417.8 during the week ended October 6, 1956 as compared with 418.8 for the previous week. The index was lower by 0.51 when compared with the corresponding week of last month but was higher by 18.2 per cent than that of a year ago.

19

Japan and Russia signed an agreement to end the 11 year state of war and to restore diplomatic relations.

Prices developed a sagging tendency in Dalal Street in the absence of interest and in sympathy with lower advices from the commodity markets. Though business passing was at a low ebb, steels were quietly steady with Tata Iron placed at Rs 194-12 and Indian Irons at Rs 34-11. Textiles were shaded with Bombay Dyeing coming back to Rs 631-4 from Rs 632-8.

20

Mr V. K. Krishna Menon said in Cairo that there were new developments in the Suez Canal question.

Meanwhile, reports from Warsaw said that Mr Khrushchev had threatened to use force if the Polish Communist Party did not abide by his suggestions.

The Bombay Stock Exchange was officially closed. In Kerb trading sentiment was easier with Tata Iron quoting at Rs 192-8.

21

Speaking in Bombay on his return from Cairo, Mr Krishna Menon was hopeful of a peaceful solution of the Suez Canal problem.

Reports from Warsaw continued to speak about "manoeuvres" by Soviet troops on Poland's border and Poles' protest against them.

22

Prices in the Calcutta Stock Exchange on the first working day after the Puja holidays were easier on selling pressure all along the list on lower advices from Bombay. In Dalal Street textiles shares were adversely affected by the discouraging export figures for the first 9 months of the current year. A contributory factor had been the stringency in the money market. It was apprehended that since credit position was already very tight, the position would be much more acute when the busy season begins.

Indian Irons opened at Rs 34-2 as against Pre-Puja closing of Rs 34-7 TEXMACO declined to Rs 22-12 from Rs 23-8. National lost fourteen annas to Rs 24. Indian Copper reacted to Rs 4-3 from Rs 4-11 while Orient Paper was sold down to Rs 38-8 from Rs 39-2. In Bombay Tata Iron declined to Rs 190-8 from Rs 194-12 and Bombay Dyeing was pushed down to Rs 616-14 from Rs 631-4.

23

Several adverse factors seemed to have combined together to make business in the stock markets extremely uninteresting. The tight money conditions, apprehensions about a World Bank Loan to India and the large number of attractive forthcoming new issues had made both operators and investors cautious.

In Calcutta, Indian Iron opened easier at Rs 33-12 and closed slightly better at Rs 33-14. In Bombay Tata Iron was slightly better at Rs 191. Textile shares were also steadier with Bombay Dyeing done at Rs 620-10.

24

Fighting broke out both in Hungary and Poland between demonstrators and troops. At the same time a wave of unrest swept North Africa.

According to the Statement of affairs of the Reserve Bank of India for the week ending October 19, 1956, Notes in Circulation declined to Rs 1429.53 crores from Rs 1438.23 crores as at week ended October 12.

Irregular conditions were noticeable in the Calcutta Stock exchange with operators hesitant while the undertone in Bombay was quietly steady. Indian Iron after opening Rs 34-1 declined to Rs 33-15 to close better at Rs 34-2. In Dalal Street Tata Iron was fractionally better at Rs 191-4 but textiles were quiet with Bombay Dyeing receding to Rs 618-12 from Rs 620-10.

25

Reviewing world events at a press conference in the Capital, Prime Minister Nehru expressed the hope that chances of settlement of the Suez Problem were brighter.

Mr M. M. Shah, Union Minister for Heavy Industries said that India would import 2 million tons of steel and 1 million tons of cement during the current financial year to meet the country's requirements.

Extremely dull conditions prevailed in the country's stock exchanges as investors were reluctant to extend commitments in view of the prevailing uncertainties. In the absence of buying support, even small offerings had the effect of pushing down price levels considerably. Indian Iron opened steady at Rs 34-3 but receded to Rs 34-1. Tata Irons was unchanged at Rs 191-4. Textiles in Bombay were, however, slightly better.

26

While in Hungary disturbances continued for the fourth day, riots broke out in Singapore.

Egypt, Syria and Jordan signed a military treaty to establish a joint command over the military forces of the three Arab States.

The Official wholesale price index (with the year ended August 1959-100) advanced by 0.2 per cent to 418.1 during the week ended October 13, 1956, as compared with 417.4 (revised for previous week). The index was lower by 0.2 per cent when compared with the corresponding week of the last month but was higher by 16.6 per cent than that of a year ago.

Prices continued to lose ground in the stock markets due to unabated selling pressure. Indian Irons opened at Rs 33-14 and closed lower at Rs 33-12. Tata Iron lost a point to be finally placed at Rs 190-4 Textiles developed a reactionary tendency with Bombay Dyeing declining to Rs 618-2 from Rs 621-4.

27

Budapest Radio announced the formation of a new National Government in Hungary under the Titoist Prime Minister, Mr Imre Nagy.

An Irregular trend was noticeable in Bombay stock exchange where in earlier dealings textiles steadily moved up on rumours of reduction in excise duty on cloth.

In later dealings, sentiment was depressed on apprehension about award under Plantation Labour Law. Tata Iron closed quietly steady at Rs 190-12 and Bombay Dyeing at Rs 620.

28

Situation in Hungary and Singapore were reported to be well in hand.

29

Israeli Radio announced that Israeli forces had attached Egypt and had occupied positions on the road leading to the Suez Canal area.

While the Calcutta Stock market continued to rule dull with Indian Irons idling around Rs 33-12, in Bombay, Tata Iron improved to Rs 191-12 with Bombay Dyeing done at Rs 620.

30

Israeli flying columns were reported to be only 18 miles from Suez. Mr Anthony Eden announced that the British and French Governments had called upon Egypt and Israel to stop the fighting and withdraw from the Canal area.

The middle East military developments led to hectic bear covering on the Stock Exchanges. Sentiment was also aided by higher advices from the commodity markets. Indian Irons opened steady at Rs 33-15 and was done upto Rs 34-3 after hours. Tata Iron moved up to Rs 192-4 from Rs 191-12. Textiles were also better with Bombay Dyeing higher at Rs 626-4 from Rs 620-10.

31

It was officially announced by Allied forces Headquarters that an offensive had been launched by bomber aircraft under Allied command against military targets in Egypt.

The war psychology pushed up prices of speculatives further. In Calcutta, Indian Irons opened higher at Rs 34-8 and after having been done upto Rs 34-11 closed at Rs 34-9. In Dalal Street, in kerb trading Tata Iron forged ahead to Rs 194-12.

During the week ended October 26, 1956, Notes in circulation were further lower at Rs 1418.88 crores.

For the Investor

IISCO'S Impressive Figures

Investment Gossip:

WITH the cease-fire in Egypt, the wind seems to have gone out of the sails of the bulls in the stock markets. And, once again, prices have slumped all along the list.

The Egyptian war bubble, which, to the great delight of the speculative elements, appeared to be assuming menacing proportions consequent on Russia's warning to Britain and France and Israel, burst to nothingness on the cease-fire order; and the bulls in the stock markets were caught napping.

The re-election of Eisenhower with the Democrats in control of both the Senate and the House of Representatives, did not influence the stock markets in this country either way. It is, however, generally taken for granted that, in the new set-up, the US policy will be, on the whole, favourable to India.

Meanwhile, operators have been obliged to bestow attention on matters with which they are vitally concerned. Shareholders in Indian Irons have been supplied with the company's accounts for the year ended March 1956 together with some important papers. One of them is a circular dealing with the forthcoming right issue.

This circular reiterates the intention of the company to issue 5,183,708 ordinary shares of Rs 10 each for cash at a premium of Rs 3-8 per share ranking in all respects pari passue with the existing ordinary shares. It is, however, made clear that these shares will not participate in any dividend declared in respect of any period ending on or before the 31st March 1957. The fact, that the new shares will be able to participate in the dividend only after March 1957, has caused some disappointment in market circles.

The disappointment is more than compensated for by the main accounts and the progress report of the 1953 extension works at Burnpur and the Gua ore Mines, issued as a supplement to the Directors' Report. Suffice it here to note that steady progress continues to be made on all sections of the extensions, and work is proceeding according to schedule. It may be mentioned that the object of the 1953 extensions programme is to increase the designed production of the Burnpur works to an output of 1,300,000 tons of Iron and 700,000 tons of saleable steel per annum.

As space and time are against me this week, (the Indian Irons Balance sheet has been received on Thursday) I must be content with giving only the highlights of the accounts.

Even a cursory glance reveals that the company has excelled its previous year's performance. Sales of finished steel are higher at Rs 26.99 crores as against Rs 24.55 crores in the previous year. Net profit, before providing for Taxation and Depreciation, is considerably higher at Rs 9.45 crores as against Rs 8.33 crores recorded in 1955. Depreciation at Rs 1.20 crores is unchanged, while taxation at Rs 2.88 crores is higher as compared with Rs 2.25 crores. Taxation Contingencies are Rs 2 lakhs higher at Rs 23 lakhs. General Reserve gets nearly Rs 40 lakhs more at Rs 85 lakhs. Works and Ore Mines Reserve gets Rs 1 crore, the same as last year.

Two new items of Reserve appear in this year's accounts, the first being a transfer of Rs 29,47,838 to an Extensions Special Reserve. This, the Directors have pointed out, has been allotted in accordance with the requirements of an agreement entered into by the company with th Government of India as a corollary to the revised retention prices of steel fixed by Government for the five-year period 1st April, 1955 to the 31st March, 1960 on the recommendations of the Tariff Commission. Under the agreement, the amount arising from the effective increase over the 1954-55 retention prices shall, after allowance for Taxation, be transferred to a special fund, to be utilised solely for the purpose of financing the expansion programme.

The second item is transfer of Rs 7,00,000 to General Development Reserve representing the approximate tax-saving by reason of the Development Rebate applicable in respect of plant and machinery installed during the year. A significant point to be noted in this connection is that though, this year, the amount under the head is comparatively small, in coming years substantial amounts will accrue to this Reserve in view of the large Development Rebate likely to be earned as the various stages of the expansion programme are completed.

Investment Notes:

The Dalmia Cement (Bharat) has decided to raise further capital by a right issue for financing the expansion of the Dalmiapuram Cement Works in the Madras State. Ordinary shares totalling 3,180,000 will be offered to the existing ordinary shareholders at par in the ratio of 3 shares for each share held. Preference shares totalling 356,250 of Rs 10 each will be offered at par to holders of preference shares in the proportion of 6 shares for each preference share held. The shares will carry cumulative tax-free dividend at 6 per cent, rising upto 9 per cent in line with increased ordinary dividend.

Expectations of an increase in dividend, which have been pushing up the rate of Titaghur Paper Mills gradually from Rs 39-13 to Rs 40-10 during the past few days, have proved correct. The directors have now recommended an increase in dividend on the 'A' and 'B' Ordinary shares from As 12 to As 14 per share in addition to the maintenance of the bonus at As 4 per share. The dividend on the Preferred Ordinary shares is, however, maintained at As 8 per share.

In Bombay, Premier Automobiles have spurted to Rs 116-8 from Rs 108-8 as a sequel to the promotion of the scrip to the forward list and expectations of a dividend after a break of several years. The directors have now confirmed the market's hopes by proposing a dividend of 6 per cent on 'A' Ordinary shares for the year ended 30th June, 1956 as against nil in the preceding year.

£ R $

Investment Briefs:

Tirrihannah Tea has reduced the dividend from 40 to 30 per cent for 1955.

Teen Ali Tea has reduced the dividend from 60 to 20 per cent for 1955.

Moheema Tea has again passed over the Ordinary dividend for 1955.

Tavoy Tin has again passed over the dividend for 1955.

India General Navigation has maintained the dividend at 5 per cent for 1955.

In Madras, Peninsular Plantations have recommended an interim dividend of 5 per cent for 1956-57, payable on or after 15-11-1956.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policy-holders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business in the best ORIENTAL tradition, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

HIGHLIGHTS

This time in 1951, the money market was full of forebodings that the impending busy season would experience stringency of extraordinary severity.

This was regarded by the Reserve Bank as a challenge to its constructive techniques, and as an opportunity for launching the bill market scheme.

The terrors, thereby, proved more formidable in fancy than in fact.

On the eve of the 1956-57 busy season indices and indicators have raised like fears of unparallelled stringency.

T. T. K. is alive to the problem. Sir B. Rama Rau is alert to his responsibilities.

This time, the tremours conjured by fancy may thus be falsified by fact.

Such is the assurance vouchsafed in the World of Finance section.

Dividend Doubled by Central India Coalfields

Balance-Sheet Reviews:

THE Central India Coalfields Limited has produced excellent working results for the year ended 31st March, 1956 despite the increase in the cost of production generally experienced by the coal industry. Thanks to a substantial rise in earnings, the company has been able to double the dividend to As 8 per share for the year under review.

In this connection, it would be recalled that, in the formulation of the Second Five-Year Plan, the Government had announced the target for production of coal at 60 million tons by the end of 1961. As the present production is about 38 million tons, it will be necessary to increase production by about 22 million tons to achieve the target. The Private sector has been allotted 10 million tons as its share, the balance increase to be effected by the Public sector.

In view of the above, the Central India Coalfields Limited has formulated plans to increase production of coal substantially at its mines. It is, for this purpose, that the company has increased its share capital from Rs 1 crore to Rs 2 crores; and an application has been made to the Government for the grant of licence.

It is a known fact that the Award of the All-India Industrial Tribunal (Colliery) Disputes has brought about a very heavy increase in the wages of the colliery labour amounting to more than 40 per cent of the previous emoluments. The cost of production to the industry has been further increased by the Tribunal which has awarded labour additional paid festival holidays for seven days in a year. Besides this, the new Mines Regulation have also come into force. The cumulative effect of the Tribunal award and the Regulation has been a very heavy increase in the cost of production of coal, although the announcement of an increase in the selling price of coal by Rs 3 per ton, announced by the Government in order to counterbalance the increase in cost, is considered to be totally inadequate.

The company's sales for the year have shown a sharp rise to Rs 22.73 lakhs from Rs 17.19 lakhs, while the net profit, before setting aside for Depreciation, amounts to as much as Rs 6,43,113 as against only Rs 2,58,037 in the previous year. After raising the Depreciation amount from Rs 1.25 lakhs to Rs 3.97 lakhs, the directors have doubled the dividend to As 8 per share.

According to the directors' report, working at both the collieries of the company continues to be fairly satisfactory although the Pure Chirimiri Colliery is badly handicapped due to occurrence of severe roof trouble inside the mine. Total raisings for the year were 162,721 tons and despatches were 154,307 tons. The supply of empty wagons continues to be a big problem as in the past, and the raisings of the company are also limited to a great extent due to inadequate supplies of the same.

India Jute & Megna Mills Results

Despite the difficult conditions generally experienced by the jute industry during the half-year ended 31st March, 1956, both the India Jute Company and the Megna Mills Company have reported satisfactory working results, the former having raised the dividend on the Ordinary shares from 1¼ to 3¾ per cent and on the Deferred shares from 1¼ to 3 per cent, and the latter from 1¼ to 3¾ per cent on the Ordinary shares.

The India Jute Company has shown an increase in sales from Rs 97.59 lakhs to Rs 1.01 crores, while the net profit, before Depreciation, amounts to as much as Rs 7,62,047 against a loss of Rs 28,534 in the previous half-year. A sum of Rs 1.85 lakhs against Rs 1.86 lakhs has been set aside for Depreciation. In the case of the previous half-year, the payments of dividends were possible out of transfer of Rs 2.86 lakhs from Contingency Suspense.

The Megna Mills Company Limited has shown a rise in sales

Imaginary Grievances

A WELCOME offshoot of the controversy over Mr Eugene Black's letter is the revival of public interest in the role of private enterprise in the next phase of India's planned development. Spokesmen of the Government, particularly the Prime Minister and the Finance Minister, have felt called upon to emphasise the fact that India is not committed ideologically any more than she is militarily; that the pragmatic approach to our economic problems indicates a very large field for private enterprise; that the Government still aim to develop our resources on the basis of a mixed economy; and that private enterprise, foreign or Indian, has no just grievance against the Government. While this is primarily an answer to Mr Black's charge of underestimate of the possible contribution of private enterprise and scope for further encouragement of it, it is also a good description of the present position, as also the prospects that lie before private enterprise in India.

Nevertheless, those sections of Big Business who have nursed resentment on account of the policy of nationalisation see in Mr Black's letter the occasion to renew the attack on the Government, with a view to securing more advantages for private enterprise. This is no doubt understandable. It is not alone businessmen, but dis-interested critics of the Plan who were at first inclined to regard Mr Black as an ally to their cause and to make the most of his comments. But more important than the criticisms you make is the company you keep. Even if the World Bank's attitude to the Plan had failed to provoke world-wide protest, no Indian critic would be wise to make common cause with a foreign institution which, despite its good record of the last ten years, is indisputably under the sway of the US Government.

What is involved in the question of the place of private enterprise under the Second Plan is not a few economic principles or theories or doctrines, nor even matters of practical judgment about the best ways of attaining certain specific ends. The chief task of the Government in India is to effect a wise correlation of economic and social aims, to reconcile the conflict between long term and short term ends, to steer clear alike of ideological rigidity and unprincipled wobbling in practical policies. Without such correlation, one or the other of two important objectives will suffer—genuine economic progress or the consciousness of the common people that progress is being achieved. Likewise, ideological rigidity will provoke political opposition, while unduly practical policies without the moorings of theory might cause derision in knowledgeable circles.

No criticism of the Plan will carry weight with the Government unless it shows awareness of all these important considerations. All that the dangers of deficit financing or the uncertainty of resources or the inexperience of the public sector can do is to make the Government more wary and less dogmatic, more ready to adopt particular proposals to the requirements of each stage. They cannot scare the Government away from the position they have taken up.

The most serious defect in Mr Black's letter is its lack of appreciation of the special circumstances of a democratic government in a country which, politically and economically, stands midway between the undeveloped countries of the East and the highly industrialised countries of the West. It is no tactical advantage, therefore, to the cause of private enterprise. On the other hand, what looks like a spring-board is really a pitfall. If Indian businessmen are intent on enlarging their scope and also restraining India from taking to extreme forms of Socialism, they must show full awareness of the circumstances in this country, deep sympathy with the position of the Government and the people and determination to prove at every stage that the public interest will be furthered, not imperilled, by greater reliance on private enterprise.

It is no longer a matter for argument and counter-argument. Recent trends both within the cuntry and in the world at large have determined the kind of economic policy that the Government have to pursue. It is natural that an elected government in an underdeveloped country should show an ideological preference for planning and, for the public sector. The theoretical arguments against State ownership and administration can be of no avail because, firstly private enterprise in India can put no claim to superiority of experience and ability and, secondly, it has in the past created a lot of public distrust and opposition by its deviations from the path of fair dealing with the State and the consumer. The attitude of looking to some kind of fortuitous help from foreign sources like the World Bank or the terms granted to foreign companies which collaborate with the Government in particular projects is also equally futile. Indian businessmen must recognise that the terms granted to foreign companies are terms that are conceded to superior technical skill of an indispensable kind. They are not concessions to private enterprise as such and cannot be extended to Indian businessmen.

It is in the context of the conditions within the country, and by their own record of work, that they can hope to improve their position. Government and public opinion will insist that the field accorded to private enterprise is by no means small or restricted, and that, if they are so inclined, businessmen in India can not only do well by themselves, but also prove that the pace of progress can be quickened by allotting to them a bigger part of the tasks of planning.

In judging the Government's treatment of private enterprise, it is essential to remember that it is much more than what is usually meant to as "Big Business". For the greater part of the country's economic activities is outside the public sector; and, even in the future, there is no conceivable rate of growth in the public sector which can make it bigger than the private sector. What the Government have done for the agriculturists, the cooperative societies, the artisans and cottage industries and for the small-scale and medium-scale industries must be borne in mind in this context.

Even if we consider only big business in this context, the advantages of having an Industrial Finance Corporation and a network of industrial laboratories for research are not small advantages. The services of the Consulates and the various Ministries of the Government in obtaining essential goods from abroad are also equally valuable. Even in the matter of production programmes, it is no longer valid, as it was five years ago, to make out that the Planning Commission are indifferent to the needs of industry and industrialisation. Recent revisions of targets for such industries as cotton textiles, cement, sugar, to mention only the more important, have widened the scope even for profit-making.

Despite all the hue and cry made about the enlargement of the public sector, the fact is that Government have only furnished the basis of modern industrial development which private enterprise could not have provided for itself. Even the expansion in steel production now projected is possible only because the State has concluded special understandings with foreign governments which reduce the need for domestic capital and ensure adequate technical assistance. Once this basis is furnished and a steady increase of domestic demand through a rise in the national income is assured, private enterprise has almost ideal conditions for serving itself and the nation.

It is too late in the day to cavil at labour laws or levels of taxation. If Indian industry can reduce costs and expand demand and output and show that it can, even of its own free will, serve the larger social ends for which Government seek to enlarge the public sector, no ideological predilections will stand in the way of its expansion.

Public opinion in the country is still largely uncommitted to either of the opposed schools of social thought. One might even go so far as to say that it abhors regimentation of economic life even more than it fears the vagaries and possible misdeeds of private businessmen. But no popular electorate will afford sanction to a marked reversal of present policies unless industrialists, businessmen and traders improve their dealings with the Government and the people. The opportunity for private enterprise is clear. It remains to be seen whether it will seize the chance or continue to nurse imaginary grievances.

Task for the Two Leaders

NEVER before had a general election in the US taken place amidst so tempestuous an intertational scene, as prevailed this time. The imminent threat of a world war might or might not have influenced the voting. But the verdict in favour of another term for President Eisenhower is an unmistakable pointer, no less than the overwhelming majority the Democrats have secured in the Congress. The rout of the Republican party and the resounding triumph of its leader are both indicative of the determination of the majority of American people to pursue world peace steadfastly and with strength and to see that in this respect their national policy is unambiguously bipartisan.

The Eisenhower record in the internationa sphere is such a purposeful and inspiring

(Continued on page 890)

The Governor of West Bengal

In spite of the anxiety of the Congress party to enlist more and more women as state functionaries, their number has hitherto remained comparatively negligible. The Union Cabinet has one member from the fair sex. There is another among the ambassadorial ranks; in State Cabinets, they are few and far between. There had been only one Governor, Mrs Sarojini Naidu.

It is, therefore, a rare personal distinction for Miss Padmaja Naidu to be the second woman to be appointed for a gubernatorial job. It is also remarkable that both the women-governors are connected with Bengal. Miss Padmaja Naidu herself looks on her appointment as the repayment of a family debt; she is uniquely fitted for her new assignment.

Though unable to lay claim to the dazzling brilliance of her mother, Miss Naidu brings to her task a range of constructive experience beyond what her mother could command. She has a good record as a parliamentarian. For several years she has been a pivotal figure in organisations connected with the development of small-scale industries in Hyderabad. A reputed social worker, she has contributed a great deal to the preservation of communal amity in her State. Her intimate friends acknowledge in her the presence of those rare gifts and graces which could be cultivated only in a domestic environment presided over by a person like Mrs Sarojini Naidu.

Considering the peculiar problems of West Bengal, the choice of Miss Naidu assumes a special appropriateness. The development of cottage industries, the rehabilitation of refugees and the promotion and sustenance of good-will between communities are all tasks for which Miss Naidu's experience and outlook mark her out for the role of a valuable guide and counsellor for the State Government.

*

Advice on Sugar

The Union Food Minister chose to be unsparing, when he addressed the Annual Convention of the Sugar Technologists' Association, at Kanpur. Describing the growth of the industry in India as whimsical, unplanned and incongruous, Mr A. P. Jain reminded the producers of UP and Bihar of the urgency of changes calculated to impart sufficient competitive strength to the units in the two States. Mr Desraj Narang, the President of the Conference, went even to the extent of envisaging a time, not far distant, when the different factories and organisations within India would be severely competing with each other.

The central problem stems from the broad fact of wide regional disparities in costs of production. Yields in Northern India are relatively very low and the scope for cost reduction in the Deccan and the South tilts the regional balance further against the North. The UP and Bihar producers cannot be unenthusiastic for economy, though the soporiferous effects of protected prosperity may not quickly leave. The Government themselves should be clearer in their minds on the limits at which production have to be restrained.

It is somewhat ridiculous that amidst a domestic shortage, there is also a suggestion for subsidised export. This kind of mix-up of facts and fancies can throw dust even into the eyes of the most sober policy-makers and obscure immediate issues. Mr Jain, we are afraid, is also not sufficiently considerate to the industry, when he advises technological improvements and economy in cost and at the same breath insists that these should be carried out without any displacement of labour. The contradictions of the economy are mostly a matter for the Government to get over.

*

Tracking Dubious Income

The Government of Bihar have lately been particularly assiduous in the matter of chasing ill-gotten wealth. The most recent step is a circular to Government officers demanding details of income and wealth, not only their own, but of all close relatives, along with explanations for new visible assets. The intention is to keep track of the material fortunes of individual Government servants and to see that under the rigid scrutiny involved, they are kept off the sordid temptations of office.

How far this intention would be served is extremely doubtful. A dishonest officer will more often than not be careful enough to disguise wealth acquired through dubious means. This kind of inquisitiveness will only perfect the art of concealment, which is already highly developed in other sectors of income. That way, instead of morally elevating the official world it will tend only to aggravate corruption and to put a premium on underhand methods.

While the unscrupulous will try to evade the eyes of the State, the honest will find in this demand a new source of irritation. What is worse, they may also be exposed to the blackmailer who through ill founded charges may easily bring any reputation to contempt. Administrative difficulties appear to be insuperable. Indirect methods such as a tax on expenditure and the ministers and higher ranks of officers setting an example of strict probity and unostentatious living are likely to be more effective, in this direction. Exemplary punishment to those who are guilty of taking bribes should be another powerful deterrent.

*

A Promising Stewardship

Mr H. S. Suhrawardy can justly feel proud that in the short time since he became the Prime Minister of Pakistan, he has been able to bring about a distinct and noticeable change for the better in the political condition and in the tone of administration in his country. His adroit handling of the "electorates" issue perhaps saved Pakistan from conditions verging on near chaos.

His statements after his return from China suggest, if one carefully reads between the lines, that the direction of Pakistan's foreign policy is being set for a different course. Even if it is ultimately found that the course is not so very different after all, there is no doubt that he has succeeded, partially at least, in arresting the helpless drift which had become a characteristic of Pakistan's foreign policy in recent months.

The change which Mr Suhrawardy has been able to bring about in the internal administration of the country is even more noticeable. At long last, the food problem is being boldly and realistically tackled. With commendable speed and decision, the Central Government have sanctioned Rs 14 crores for increasing food production in the two wings of the State. This is over and above the sanction of Rs 5 crores already made for the import of 85,000 tons of fertilisers for the next crop. The Government have expressed its intention of spending Rs 20 crores within a year in an all-out effort to increase food production and keep food prices down.

Other schemes and activities which bear witness to a newly found enthusiasm on the part of the administration include export promotion and the various measures being planned by the Pakistan Industrial Development Corporation. It is reported that seven new trade offices are being opened at Hongkong, Rangoon, Beirut, Khartoum, Nairobi Berne and New York, and schemes have been finalised for increasing export of jute manufactures, cottage industry articles and cotton.

The Indian Government and the people of India who sincerely want Pakistan to prosper will welcome these signs of change and the efforts of Mr Suhrawardy and his Government for the economic development of the country will have their warmest sympathy. Improvement in the economic condition of the people, however, takes time. Whether Mr Suhrawardy will be given that time is more than anyone can say at the moment. But if he can carry out his intention of holding the general election early—as difficult a task as any—present indications of his popularity and prestige make it fair certain that he will have a fresh lease of office.

T. T. K. Meets Bankers

FINANCE Minister T. T. Krishnamachari, who recently consulted with the Bombay bankers on the banking situation, is having this week a similar meeting with Calcutta bankers. Bankers as a community fight shy of speaking on their problems: and we doubt if these consultations will result in T. T. K. receiving enlightenment on the concrete measures that are appropriate in the context of the impending busy season. The following are the salient facts which should engage the constructive consideration of Authority.

1. On the eve of the 1956-57 busy season, credit conditions are already unprecedentedly stringent. The short loan market is all borrowers, no lenders. The nominal rate is 3¼ per cent. But bankers would gladly pay 3½ per cent if that rate would lure deposits.

2. The slack season now drawing to a close was slack only in name. All through this season, money kept in good demand, and banks bid for deposits at full rates.

3. In the ten months ended October, the Reserve Bank's advances on usance bills attained the cumulative total of Rs 330 crores. This is, it is true, a measure of the rapidly increasing vogue of banks replenishing their resources through usance bills, and of the Central banking institution's readiness and ability to extend this facility to the extent required. It is also true that, in 1956 slack season, the advances against usance bills persisted at a substantial level. In earlier years, the slack season was distinguished by the disappearance of this mode of Central banking credit for a spell of three to four months. The demand for credit against usance bills on the part of the banks was pronounced throughout the slack months this year.

4. On the part of the banks, they have valiantly met the financial requirements of their constituents by utilising fully the additional deposits and by large recourse to the Reserve Bank for accommodation against usance bills. In the result, loans and advances made by the banking system stand at a high altitude.

5. This is reflected in the ratio of deposits to advances. This ratio is now in the vicinity of 70 per cent. Such is the position on the eve of the busy season. What is the margin left for banks to cope with the demand associated with the busy season? To those who are accustomed to think on set lines, a rise in the bank rate suggests itself as an inevitable step. It is forgotten that a high bank rate does not in any way add to the supply of money. Equally is it overlooked that even in countries which have raised the bank rate into a fetish disillusionment about its utility is dawning. Above all, in a country like India, where the projected activities are largely in the public sector, a rise in the bank rate is fraught with adverse effects which will greatly impede the furtherance of such activities. So, the bank rate weapon is not suited in any way for India situated as it is. For the time being, a rise in the bank rate must be ruled out.

For the money market situation current and prospective, the appropriate technique is the present bank rate of 3½ per cent and the alert pursuit of selective credit control. For enabling banks to meet the busy season's requirements, the Reserve Bank may be trusted to extend the discount facilities against usance bills to the fullest extent necessary. As we have said, the cumulative total of this mode of finance in the current year is Rs 330 crores. The Reserve Bank would not flinch if the total reached Rs 500 crores or Rs 600 crores. The Reserve Bank looks upon this scheme as the other side of controlling credit. Expansion of currency or credit against usance bills has a self-liquidating character. There is the assurance that the bills in question pertain to genuine productive activity. This assurance is reinforced by the inspection and vigilance methods which have now been perfected by the Reserve Bank. Such inspections do not occasion delay; nor are they capricious. Bills considered ineligible are a fraction of the total so far presented and accepted. There is understanding, sympathy, celerity and expanding magnitude in the way the bill market scheme is being operated by Authority.

Banks are welcome to meet all genuine demands for accommodation; and reimbursement is ready at hand through the pledge of the documents created by such advances. A procedure which, thus, generates self-expansion and self-liquidation is the encouraging answer to the anxious question posed by the 1956-57 busy season.

At the same time, we should urge upon the financial authorities to look into the gaps that are manifest in the institutional facilities of the money market. The time is ripe, and the conditions are propitious for the setting-up of (1) a Discount House, and (2) an Issue House. The State Bank of India and the Industrial Finance Corporation could, and should, take the initiative under the guidance of the Reserve Bank, even as they have already done in the matter of the pilot scheme introduced in selected areas.

+

Yet More Deficit Financing

WITH respect to Rupee Securities in the Issue Department and to Investments in the Banking Department, the returns of the Reserve Bank for the week ended November 2 are capable of offering two hypotheses, one of which is the more likely and the other the slightly far-fetched. But it is, nevertheless, important to take note of both probable hypotheses as measured in their impact upon the Reserve Bank figures.

The month early demand for money has occasioned a rise of Rs 24.69 crores to Rs 1443.59 crores in active Notes. There has besides been outflow of Rupee Coin for Rs 0.65 crores, thus resulting in a drop of Rs 0.65 crores to Rs 120.74 crores in Rupee Coin. Consequently, the Reserve Bank's cash in the till has been run down by Rs 25.45 crores to Rs 7.62 crores.

There has clearly been deficit financing for Rs 30 crores, as indicated by the rise of Rs 29.81 crores to Rs 750.50 crores in Rupee Securities. This has been offset by a transfer of Rs 29.81 crores from Foreign Securities in the Issue Department to Balances Held Abroad in the Banking Department.

In spite of deficit financing for Rs 30 crores, the deposits of the Central Government are shown lower by Rs 2.00 crores at Rs 52.15 crores. It is, moreover, to be noted that Balances Held Abroad have registered a rise of only Rs 16.49 crores as against the transfer of Rs 29.81 crores from the Issue Department. The loss of foreign exchange has, thus, been Rs 13.32 crores during the week. It is possible to suggest that recourse to deficit financing was had for the purpose of meeting month-early disbursements; and the depletion of foreign exchange in recent weeks may partly have been due to commitments met by Government in regard to the loan of Rs 20 crores to Burma.

The second noteworthy fact to be presented in the latest Reserve Bank returns is the sharp rise of Rs 28.25 crores to Rs 83.39 crores in Investments. Moreover, the deposits of State Governments have, at the same time, risen by Rs 19.37 crores to Rs 47.18 crores; and the indebtedness of Governments to the Reserve Bank stands reduced by Rs 3.82 crores. The first hypothesis that may, in this regard, be advanced is that State Governments might have sold some securities to the Reserve Bank—hence explaining the rise in Investments—and received credit therefor in their cash balances —as made manifest in the increase in their deposits. We may recall that, when the the figures appertaining to the Centre's New Loan for 1956-57 were reflected in the Reserve Bank statements of the time, we had advanced the view that there was some indication of fairly substantial investment in the New Loan by State Governments. It may be that State Governments have now found it desirable to liquidate a portion of their holdings and to receive cash therefor.

There is, as we have said, a slightly far-fetched second hypothesis. In the last week's statement, we suggested that deficit financing, combined with an increase in the deposits of State Governments, was suggestive of payments being made by the Central Government to such State Governments as were to lose their identity by merger consequent to the implementation of States Reorganisation. Accordingly, it is

Economic Effects of Satellites' Liberation

By PAUL EINZIG

AT the time of writing it would be premature to assume that Poland and Hungary have definitely succeeded in gaining their freedom from Russian domination. Nevertheless, the development of the crisis in Eastern Europe appears to justify an attitude of guarded optimism. Quite conceivably, the other satellite States may also benefit by this progress toward the restoration of the full sovereignty of Eastern European countries. It is a matter of opinion whether the Communist regimes in these countries will be able to remain in power after the withdrawal of Russian troops from their territories. Conceivably, the mere threat of reoccupation by the Red Army in case of a successful attempt to overthrow Communist-controlled Governments will be sufficient to secure their position in spite of the unpopularity of Communism in those countries. So this article is written on the assumption that the system of satellite States dominated by Moscow will be replaced by a system of substantially independent Communist States. Even if other Left-wing Parties will participate in the Government, the regimes are likely to remain substantially Communistic. The main difference will be that national Communism will take the place of Moscow-dominated international Communism.

It would be of interest to examine the effect this change is liable to produce on the economic cold war. There can be little doubt that it will affect not only the military and political power of Russia but also its economic power in the international system.

The exploitation of the satellites will come to an end. During the

Durgapur Steel Works

THE satisfaction in India at the signing of the final agreement between the Government of India and the Indian Steel Works Construction—the consortium of thirteen British companies—for the construction of the iron and steel plant at Durgapur will be tempered by the realisation that the cost estimates as well as the time schedule are likely to be greatly affected by the closure, even if temporarily, of the Suez Canal. The finalisation of the Agreement for the Third Iron and Steel Plant in the public sector has taken a longer time than in the cases of the other two and there was a time when it looked as if the negotiations would break down altogether. The patient efforts of the representatives of the Iron and Steel Ministry who have been conducting the talks prevented this but not before a number of changes from the earlier terms had been made. An important aspect of the alterations relate to the increase in cost estimates which, it is now given out, will be in excess of the original estimate of Rs 115 crores by about Rs 23 crores.

The Government have not given as yet any detailed explanation of the rise except to indicate that several changes have been made in the plans after consultation with the consulting Engineers. It appears that the changes involve not only provision for additional equipment and materials but also substitution in many items of different kinds of machineries for those originally planned. The bills of the British firms who are to supply the plant, machineries and equipments are now estimated to run upto £63 million as against the original figure of £50 million. Incidentally, it is to be noted that the British Government and the British banks have not been asked in the final agreement to make a corresponding revision in the amounts of the loans to be advanced by them. They remain at the original figures of £15 million and £11½ million respectively.

Although the details are known yet of the basis of the fresh estimates and of the factors which have been taken into consideration in framing them, it may be assumed that the eventuality of the Suez route being closed to traffic was not one of them. It is a depressing thought that the clauses in the Agreement governing the sharing of the costs, which have been so carefully drafted to provide a strong incentive to both the parties for keeping costs down, are to be rendered partially ineffective by Anglo-French acts of aggression against Egypt. It is impossible to say precisely to what extent the blockage of the Suez Canal is going to affect the construction costs but there is little doubt that it will mean an additional burden to India. It is, moreover, not only on the count of costs that the adverse effects are likely to be felt. The time schedule may also be thrown considerably out of gear if there is not a speedy return to the normal flow of traffic through the Canal.

The Durgapur plant is scheduled to work to its full capacity of an annual production of one and quarter million of steel ingots besides 360,000 tons of pig iron in five years time from now. The two blast furnances and the rolling mills are scheduled to go into operation in three years time. What a great pity it will be if this time table, on which depends to a considerable extent India's programme of industrialisation, were to be dislocated because of what Mr Hugh Gaitskell the Opposition Leader in UK, described in a nationwide broadcast last Sunday as "the criminal folly of Sir Anthony Eden."

*

Paper Mills in Madras

The invitation of the Madras Government to industrialists for the starting of two paper mills in the State should have an eager and generous response. At present there is no paper mill in Madras and the entire demand of paper is met by supply from outside the state. It is not that the essential ingredients for the production of paper are not there. Bamboo, timber, chemicals, water supply and power are available in adequate measure. Recent investigational surveys by two teams of experts, one German and the other an Italian, have pointed out that with the resources of bamboo, eucalyptus, wattle and other soft woods available within the borders of Madras State it is possible to set up, as business proposition, two mills for the production of ordinary writing and printing paper in the Nilgiri-Mettur area. The sites suggested are Bhavanisagar and Mettur.

The Madras Government Press note also points out that facilities which the entrepreneurs may expect include financial assistance from the Industrial Finance Corporation and the Industrial Credit and Investment Corporation.

The paper industry in India which has made rapid srides after the Second World War has very bright prospects. With growing industrialisation, spread of literacy and education, and a rise in national income and the general standard of living, the present internal demand for writing and printing paper of 240,000 tons per year is expected to rise to 350,000 tons by 1960-61, which means, that to meet the rising demand it will be necessary to have, by the end of the Second Plan period, an installed production capacity of 450,000 tons. Existing capacity together with the projects for which licenses have already been issued are expected to reach the figure of 422,000 tons by 1960-61. If, therefore, the balance of 28000 tons can be met from the two mills which the Madras Government have invited industrialists to set up, India will have become self-sufficient in writing and printing (apart of course, from newsprint) paper and boards. To do so the two mills have a daily production of 50 to 60 tons each—not at all a difficult proposition.

The scope of expansion in the internal demand for paper is also illustrated by comparative figures of per capita consumption (in 1955) of paper of a few countries of the world. In UK the average is 150 lbs, in Sweden 85 lbs, in Germany 77 lbs, in Canada 175 lbs, in USA 300 lbs whereas in India it is 1.4 lbs which is even less than the average of per capita consumption in Egypt where it is 4 lbs. Since the raw materials for the production of paper except for specialised paper and vicose conversion are available in abundance in India, there is no reason why the expansion in demand, which is certain to take place, will not be met by indigenous production. The Government of India and the Planning Commission have allocated the paper industry to the private sector. It is, therefore, upto private enterprise now to grasp firmly and quickly the invitation of the Madras Government for starting the two-mills at Bhavanisagar and Mettur.

World of Jute

Sharp Decline in Sacking Stocks

A SIGNIFICANT feature of the figures relating to stocks of jute goods at the end of October 1956 released on Thursday by the IJMA is the sizable decline recorded under Sacking Cloth and Bag. As compared with the previous month, total stocks are lower by 8,503 at 116,700 tons. While Hessian Cloth and Bag are higher by 1,569 tons at 30,900 tons. Sacking Cloth and Bag are substantially (11,400 tons) lower at 77,200 ton as against 88,600 tons at the end of September 1956. Other varieties are higher by 1,400 tons at 8,600 tons.

While a decline in stocks during October is not unexpected in view of the satisfactory shipments during the month coupled with the anticipated lower output due to the intervention of holidays and loss of working days in some mills due to labour trouble, the large-sized decline in stocks of heavy goods has come as an agreeable surprise.

Compared with the corresponding month of last year, the present statistical position of jute goods does not seem to be a matter to enthuse over. At the end of October 1955, stocks were at the very low level of 62,300 tons with Hessinas at 29,700 tons and Sackings at 29,000 tons. It may be recalled that a year ago the problem was one of coping with the utter neglect that hessian was facing in world markets in marked contrast to the good demand for heavy goods.

The position is just the reverse today. The emphasis is now on a reduction in the output of sacking and mills have been steadily switching over sacking looms to hessian production. During the past 12 months, stocks of sacking have been continuously rising. From 30,800 in November 1955, they have touched a high of 93,200 tons in July this year. In August there has been a sizable decline and in September the position has remained unchanged.

*

Opening on a steady note, the jute goods market ruled firm upto mid-week. Toward close, prices moved in an irregular fashion. The undertone, however, remained steady throughout. In earlier dealings prices advanced sharply on heavy bear-covering induced by the growing tension in the international situation. Hessian Ready gained Rs 1-8 to quote at Rs 44-4 while B Twills spurted to Rs 118-12 from Rs 116-14. Opening after the Diwali holiday, the market ruled rather quiet due to selling pressure by mills and unloading by bulls. Hessian Ready on Monday lost six annas to Rs 43-14 with B Twills also losing more than a point to be placed at Rs 117-8.

Hectic activity was witnessed on Tuesday as there were keen buyers in every section. Mills were also reported to have sold large quantities. Presumably the speculators had been encouraged by the possibility of a further deterioration in the Middle East military situation, consequent on the Russian threat of armed intervention. Hessian Ready appreciated by nine annas to move up to Rs 44-7 with B Twills at one time touching a high of Rs 119-4.

With the cease-fire in Egypt, prices receded sharply on Wednesday. The speculators, however, made a vain attempt to bolster up sentiment on the strength of the conflicting reports from Middle East. The fact that mills sold considerable quantities of both hessian and sacking for Jan/March shipment also accelerated the down-trend. The market closed the day on a quiet note with Hessian Ready coming back to Rs 44 with B Twills placed at Rs 117-8.

With the release of stock figures for October on Thursday, prices, especially in the heavy goods section, staged a moderate recovery. Had it not been for the selling pressure by mills and the bull liquidation, the recovery would have been very well pronounced. The Hessian section continued to rule quiet with Hessian Ready placed at Rs 43-14. B Twills ready recovered to Rs 118 to be finally placed at Rs 117-12.

The following table gives the price trends during the week:

	Week's Opening	Week's Closing
Hessian:	Rs. a.	Rs. a.
40" × 10 Oz.		
Ready ...	44 4	43 14
Jany.-March ...	43-12	43 2
Sacking:		
B Twills—

Sugar Bags ...	132 0	132 0

*

The raw jute market opened on a firm note with mills showing active interest. On the opening day, good mill business was reported done in Assam and Indian Northern Bottoms at Rs 31 per maund. In the subsequent two days mills did not evince much interest, but on Tuesday small mill business was reported done and Assam Bottoms continued to be quoted around Rs 31 per maund. In the next two days a quieter tendency prevailed in sympathy with the goods section and Assam Bottoms declined by a rupee to quote Rs 30 per maund.

World of Tea

Strong Demand Continues

THE strong demand for Tea continues to be in evidence. In the Export Sale held in Calcutta this week, offerings were 56,272 packages. There was a strong general demand, clean Commons and Low Mediums being the strongest features of the sale. BOPs and black Fannings were often As 2 to As 3 per pound dearer. Medium teas of orthodox manufacture were well supported, BPs being one anna per pound dearer.

Some of the best BOPs were, however, sold about As 2 below last rates. Non-wither Dooars were another strong feature and were upto As 2 per pound dearer, and there was more buying of CTC teas, which were sold well except for the very best. Well-made whole Leaf grades and stylish BPSs were As 2 per pound dearer.

Darjeeling teas also shared the general trend of the market. Following rates were quoted per pound:—Clean Black Pekoe Rs 2-2-0 to Rs 2-3-0; Plain BP Rs 1-14-0 to Rs 1-15-0; Medium Assam BP Rs 2-3-0 and Best CTC Assam BP Rs 3-0-0.

The offerings, in the Internal Sale consisted of 19,589 packages of Dusts. At the start of the sale there was a fair general demand, but at easier rates. Commons and Mediums were about As 4 per pound easier although the powdery types were stronger than the grainy sorts. Medium and poor CTC types were As 2 to As 3 easier, while the better sorts were As 3 to As 4 below last rates. Middle East types were generally neglected and many were withdrawn, while the few Darjeelings and the poorer fibrous types received good support and were dearer to buy.

Towards the close of the sale, however, only a very few lots could be sold and withdrawals were very heavy. This week's quotations, therefore, should be considered to some extent, nominal. Following rates were quoted: Medium Dooars Dust Rs 1-15; Medium Assam Grainy Dust Rs 1-15 to Rs 2; Medium Assam CTC Dust Rs 2-6 to Rs 2-7 and Best Assam CTC Dust Dust Rs 2-11.

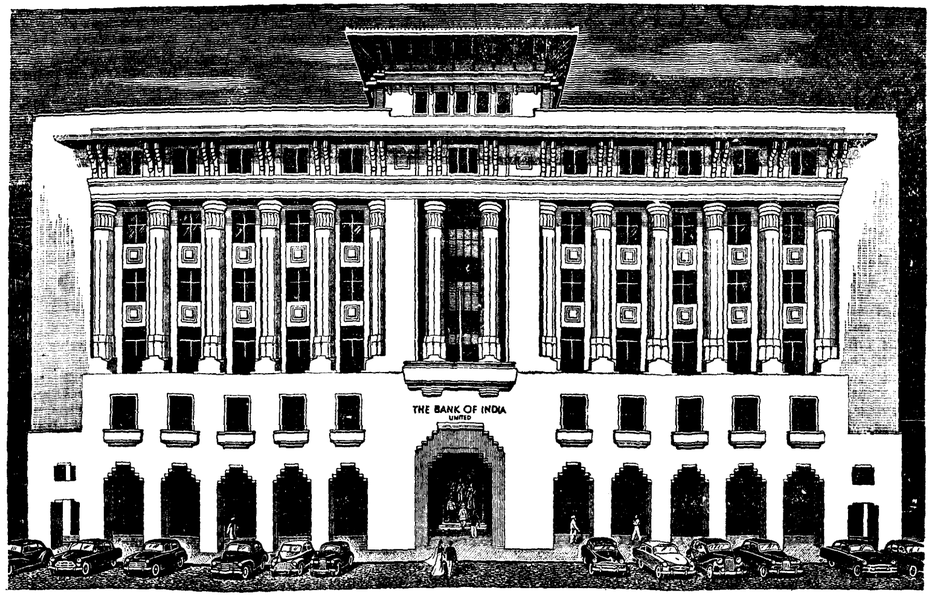
Offerings of Leaf grades consisted of 1,138 packages for which there was a fair demand at irregular rates.

In the Export Quota section, business was done at rates varying from 25 to 30 pies per pound.

Toward the close, rate was quoted at 27 pies per pound with buyers at this level.

In the Cochin market, a total of only 650,000 pounds was offered, 630,000 pounds being withdrawn prior to the auction. The quality of the limited offerings was well maintained. There was only a small selection available from all districts and this met with fair demand at irregularly easierrates.

The few best liquoring sorts were about steady, but lesser Nilgiris registered a drop of As 4 to As 6 per pound. Good Medium descriptions were in very limited quantity and, when available, sold at a drop of As 2 to As 3 per pound. Medium, Low Medium and low-grown sorts declined by one to two annas per pound.



Black Leaf Brokens ruled very barely steady, while similar Fannings were much easier following less enquiry. Whole Leaf grades generally declined by As 2 to As 4 per pound. Following rates were quoted:—Plain BP Rs 1-9-6; Low Medium BOP Rs 2-0-0; Medium BOP Rs 2-3-0; Good BOP Rs 2-14-0 (nominal) and well-made OP Rs 2-9-0.

At the auction held in Colombo last week, offerings were 4,099,300 pounds. There was active demand for all useful liquoring sorts. Among high-grown teas, there was active demand for the better Dimbula/Dikoya BOPs which generally advanced by 30 to 60 cents per pound. Light liquoring kinds showed little change.

There was stronger support for Broken grades of Medium-grown teas of western districts. Among low-grown teas, the demand for Persian Gulf types were sold at 5 to 10 cents per pound lower. There was good demand for high and medium-grown Fannings from western districts at dearer rates.

In London auctions, 8,364 packages of Ceylon tea were offered this week. There was a strong demand. Best quality showed considerable irregularity, but coloury medium descriptions were mostly 2d to 4d per pound dearer, while low medium kinds often appreciated by 3d to 6d. Also, 2,598 packages of Southern India teas were offered. There was a strong request at generally dearer rates, especially for the poorer sorts.

Tea stocks in London, as on the 26th October 1956, were 98.12 million pounds as compared with 97.05 million pounds in the previous week and 97.12 million pounds a year ago. Landed between 20th and 26th October 1956 were 11.52 million pounds, while deliveries during the same period were 10.05 million pounds.

The Bank of India Ltd. Head Office building in Bombay

A half century of Banking

'IT is believed not only that there is ample scope for a Bank of this kind but that there is a very pressing need in the trading community for a larger measure of the financial facilities which such a Bank would afford, and that there is every prospect that, if worked on sound principles and under prudent and careful management, such a Bank, while supplying a need to and conferring a boon on the people of India, would, at the same time, itself become a prosperous and lucrative concern.'

These words are from the first prospectus of the Bank of India Ltd., which started on 7th September 1906 with an issue of Rs 50,00,000. Small beginnings indeed, but then its founders predicted a great future.

Today, with 36 Offices throughout India, the Bank has amply proved itself. It is represented overseas by 11 Branches, it has 92 Foreign Correspondent Banks abroad and Agents in most foreign centres. Its staff, in India alone, totals over 2000. The Bank has a Paid-up Capital of Rs 2,50,00,000, a Reserve Fund of Rs 3,52,00,000 and a Working Capital of nearly Rs 100 crores.

Not chance, but prudence, caution and wise stewardship have been the cornerstones of the Bank's success. Thus, for the past 50 years it has withstood the trials of two world wars, banking crises, market fluctuations and political changes; and continues to play a vital, ever-increasing role in Indian commerce and industry.

All types of Banking business transacted :

Current Accounts — Savings Bank Accounts — Fixed Deposits — Loans and Overdrafts — Cash Credit Accounts — Discount of Bills and Hundis — Safe Custody — Foreign Exchange and Letters of Credit — Demand Drafts & Telegraphic Transfers — Executor and Trusteeship — Safe Deposit Vaults — Guarantees etc.

US Notes

Latest official figures show that consumer debt in the United States now exceeds $40.000 million, some $3,900 million above the total a year ago. The major part of it is instalment, or time-payment, debt of more than $30,700 million.

Figures like these have caused observers of the US economy to wonder whether Americans have been saving enough money. Bankers in particular point out that sound practices of thrift on the part of the public can help offset inflationary tendencies and meet the need for investment funds that must originate from savings. What constitutes "enough" savings can be, of course, a matter of debate; but the fact is that Americans, by virtually every standard and definition, may well be saving more money —even while they are spending more—than at any time in the postwar period.

One of the measures of savings most commonly used by economists and statisticians is that of "liquid savings"—including currency, deposits, securities, and shares savings and loan associations. These seem to be moving toward a postwar high. They are up 49 per cent from a year ago, compared with a rise of 8 per cent in personal income.

Figures for the first half of 1956 reveal that Americans put away $7,300 million in the form of liquid savings, compared with $4,400 million in the same period of 1955, and experience shows that more money usually is saved in the second half of the year than in the first. Liquid savings in the second half of 1956 need only match the $10,500 million saved in the second half of 1955 to push the total for the year to a new postwar annual record.

By another definition, the total excess of disposable personal income over actual consumption expenditures is considered to constitute personal savings. Under this formula, the American people in the first half of 1956 saved at the following annual rates: $18,600 million in the first quarter, and $31,200 million in the second quarter. These figures compare with annual rates of $13,900 million and $16,700 million in the corresponding quarters of 1955.

Putting it another way, savings in the first two quarters this year piled up at annual rates of 6.6 and 7.4 per cent respectively of the total disposable income. These rates were higher than in any postwar year with the exception of the Korean war years of 1951 through 1953 when the economy was under a moderate form of direct government control.

It should be noted here that some economists also consider the repayment of installment debt as a form of savings, on the assumption that periodic debt repayment requires the accumulation of funds for a specific purpose—usually to complete purchase of goods that apply to personal living standards.

A recent study by the survey research centre of the University of Michigan, which periodically analyses consumer spending habits, finds that most Americans save for two dominant reasons—as protection against possible emergencies, and to attain a specific objective. Among the objectives most commonly cited are a house or automobile, and sending children to college. The survey also shows that the growth of government social security programmes and private pension plans has by no means dampened the public's interest in saving. "Both improvement of living standards and accumulation of reserve funds are viewed as positive goals which people in general wish to attain", the survey notes. The statistics bear out this appraisal.

*

Sweden

Sweden's balance of payments on current account showed a deficit of Kr. 427,000,000 (£29,000,000) for the first six months of this year, as compared with Kr 130,000,000 for January-June 1955 according to a survey published by Svensk Export, organ of the General Export Association of Sweden. The trade deficit decreased by Kr. 28,000,000 to Kr. 957,000,000.

Imports totalled Kr 2,462,000,000 in the second quarter of 1956, including an all-time peak of Kr. 1,018,000,000 for April, as compared with Kr. 2,537,000,000 for April-June 1955. Exports showed a similar increase and amounted to Kr. 2,613,000,000 as against Kr. 2,180,000,000 for the second quarter of last year.

However, the export surpluses registered for June and July were followed in August by an import surplus which exceeded the 1955 August figure by Kr. 40,000,000 the journal recalls. This brought the trade deficit for the first eight months of the year up to close on Kr 1,000,000,000, or practically the same as for the corresponding period of 1955. The revised National Budget forshadows an import surplus of Kr. 1,550,000,000 for the entire current year, as against Kr. 1,400,000,000 for 1955. In the light of the figures for the first half of 1956 these estimates seem to be somewhat too pessimistic, Svensk Export says.

The 'shipping net'—including the net revenues of Swedish shipping companies from foreign shipping and dues paid by foreign vessels in Swedish ports, etc.—is assessed at Kr 540,000,000 for the first half of 1956, or Kr 65,000,000 more than in January-June of last year. According to the index of the Swedish Board of Trade, average tramp freights have been 18 per cent higher and tanker freights 48 per cent higher than in the first half of last year.

Known capital transactions are estimated to have resulted in a net outflow of Kr 40,000,000, as compared with Kr. 4,000,000 last year, while a decrease from Kr. 20,000,000 to Kr. 10,000,000 is noted for 'other current payments, net.'

Sweden's aggregate foreign exchange reserves decreased by Kr. 279,000,000 to Kr. 2,272,000,000 (£157,000,000) in January-June 1956, as compared with a decrease of Kr. 191,000,000 to Kr.2,322,000,000 in the same period of last year. Over two-thirds of the decline this year were accounted for by the second quarter. 'Deferred payments' have shown a continued deruction, which explains the fact that foreign exchange reserves have dwindled whereas the balance of payments on current account has improved between the two periods under review.

The Stockholm Chamber of Commerce has just published an interesting and informative 70-page booklet on Swedish economic life called 'Product of Private Enterprise'. Written by the American journalist Gunnar Beckman and edited by Mr Arne Ostrom, it aims at throwing light on the predominant scope of private enterprise in Sweden and the decisive role it has played and is playing in the building-up of Sweden's prosperity.

In about a dozen chapters the book presents a series of representative branches of Swedish industry and particular companies which are typical exponents for enterprises that have contributed to the creation of Sweden's world-wide exports. The forest industry, mining and steel industry, shipbuilding, engineering, and water power construction are among the subjects dealt with. Amply illustrated, partly in colour, the book also contains some pages of tables and diagrams giving a clear picture of Swedish exports of major products, volume of industrial production, investments, consumption, etc. According to these graphs private business accounts for no less than 93 per cent of the total value of the output. Using worker totals as a yardstick, private industry employs 91 per cent, co-operatives 4 and public enterprises 5 per cent.

The introduction, giving some general views on the development in Sweden, as seen through the eyes of the private enterpriser, is rendered in part below:

How to raise living standards is a problem to exercise people's minds everywhere—both in lands where standards already are relatively high and in those where they are not. Attention has often been drawn to Sweden, since it is one country where notable material advance has been made in a comparatively short time. It would thus appear timely to underscore what we believe to be the mainspring of our country's progress: private enterprise, the Stockholm Chamber of Commerece writes.

In the middle of 1950s, Western Europe was producing 60 per cent more goods than before the war. For Sweden the increase was 87 per cent. Some countries can show greater expansion, but even before the war the output of Sweden's industries was relatively high. Since the war real national income has increased on an average 3½ per cent each year. The rise in real wages for workers in industry, communication, etc., has been approximately 70 per cent since 1939.

The improvement in individual living standards is reflected in many ways: it is perhaps most apparent in the construction, spaciousness and modern equipment of homes. But there are other factors also, such as automobiles, telephones and radios, in all of which Sweden leads Europe in numbers per capita. This country is among the leaders in the number of film theaters, and only the United States uses newsprint more lavishly.

Such a development could only be supported by a great advance in industrial efficiency. Valuable natural resouces—and Sweden has such—alone never would have sufficed to bring it about.

In the postwar decade productivity in industry has increased some 20 per cent. Through mechanization agricultural productivity has improved by approximately 30 per cent. Today farming, although occupying only one fifth of the population instead of nearly a third as in the 1930s, can still feed the country and even have a surplus for export.

To achieve these results, heavy capital outlay has naturally been required. Before 1939 capital investments took nearly a quarter of the national income. Since the war the proportion has been even higher.

Investments presuppose savings—whether by industry or by individuals. After 1938, capital spending in industry was facilitated by liberal depreciation rules—recently limited, unfortunately—and companies wisely took advantage of them to plow earnings back into the business. But individuals have also been earning so much more than what they required for basic needs that many have been able to save between five and ten per cent of their incomes in most of the postwar years. The technical effectiveness of industry has made these savings possible—just as savings themselves enabled industry to build up efficiency in the first place, it is emphasized in the introduction to this new book on Sweden.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

TIME was when one used to consider the common cynicism about politicians somewhat facile. But the events of the last few days in the Middle East and Eastern Europe have reduced to pitiful nonsense the activities of scribes like us who comment upon world affairs in terms that have plainly been shown up to be somewhat simple-minded. Though nothing would make me subscribe without reservations to Dr Johnson's famous dictum on politics as the last haven of scoundrels, the amount of sanctimonious humbug that has accompanied the crudest kind of bullying in the last few days has been sickening. I do not number myself among those who are so unworldly as to wilt at the spectacle of a reasonable amount of hypocrisy in political and international contexts. But as I read the speeches made at the UN and reports of events in Egypt and Hungary side by side, I must confess I was filled with an unprofessional amount of disgust.

*

The Gods must have been specially mischievous during the last week, for, it was the simultaneity of the events in Hungary and Egypt that brought forth in the clearest possible manner the glibness with which professional rulers mouth moral platitudes, while they grimly pursue their selfish ends. The records of the debate in the Security Council and the UN General Assembly during the past week would provide much bitter amusement to any one who wanted to examine the lengths to which humbug can go in these matters. The Soviet representative, strident in his indignation at the unprovoked aggression by Britain and France in Egypt, has apparently no complaints about what is happening in Hungary. The British delegate sheds bitter tears about the ruthless suppression of Hungarian patriots by the barbarous Red Army, but he is able to argue without serious embarrassment that his country is in Egypt in order to police (without being asked to do so by any one) that particular part of the world. At the moment of writing, Britain is still policing the place even after the two disturbers of peace in the area have solemnly agreed to stop fighting and the policeman himself has been asked to desist from his self-imposed duties. He must be indeed a remarkable policeman who continues to extend his good offices after he is told by the householder—in this case the UN—that he does not need his protection. The crowning bit of irony came when Russia sent indignant notes to Britain, France and Israel that it would be obliged to act on its own on behalf of Egypt because of Britain's attempt to re-establish colonial slavery over the people of Egypt by choosing the pretext of police action. Hints of rocket-propelled attacks were made. One feels sad to see that such threats have had more sobering effects on the parties concerned than any amount of moral pressure. Russia does not notice anything incongruous in thus working itself up to a mood of righteous indignation even to the extent of starting a war what time it is mowing barbarously the legitimate aspirations of the Hungarian people. Again, it suggests to the Security Council that it should authorise American and Russian troops to move into Egypt if Britain and France failed to obey the UN resolution. As I write, no report has come in of Britain suggesting to the Security Council that Britain and America should be authorised to enter Hungary if Russian troops do not stop butchering Hungarians but, if they did, it would only be a case of "the retort courteous". For, throughout last week, the parallelism between the activities or events in Egypt and in Hungary has been close. There is, first, the resolution in the Security Council which is vetoed by Britain in the first case and Russia in the second; and then the question is taken to the General Assembly, where a vote is obtained to ask the parties to stop fighting. Long speeches are made on all the occasions in which all that the speakers need do is to borrow each other's expressions. Nothing could have been more farcical if the undertone of tragedy behind the events discussed was not so insistent.

*

To me, the saddest thing about the whole business has been the shattering of Britain's post-war reputation as a sturdy force on behalf of peace. And yet, Britain itself is so deeply divided over the action taken by its Government that it would be rash to imagine these acts as indicative of a complete and immediate loss of British political maturity. Indeed, the indications are that the majority of the British people are appalled at the ineptitude shown by the Eden Government in their tackling of this particular situation. Sir Anthony Eden has come out of this mess completely discredited. It has not been the first time his leadership has come under severe fire; but, in the alternation of bluster and pusillanimity he has shown over the earlier handling of the Suez issue and in his latest incredible adventure in Egypt, he has revealed himself to be a man who cannot be relied on to lead men in times of stress. Never since the days of Lord North—and Sir Anthony has very many things in common with Lord North—was England so deeply divided over an international issue that faced it. The shoddy subterfuges resorted to by the Government in their attempt to get control over the Suez have isolated the Government completely from the sympathy of the greater part of the world as well as the majority of its own countrymen. But, unlike many an earlier occasion of severe isolation. Britain as Mr Bevan put it in a brilliant speech, stood on this occasion unaccompanied by honour. It was a sad day for Britain—and many hearts outside Britain grieved that Britain should have put itself so irretrievably and so completely in the wrong. It is an error of judgment that has cost Britain dear; for, by it, the Government have divided the country deeply, alienated the members of the Commonwealth—even to the extent making some of them think of leaving it—and found themselves arrayed against America over a fundamental issue. It was also an error of judgment that has cut deeply at the root of international good faith; for, if Britain so unequivocally put itself in the place of an aggressor, what guarantee of international good behaviour was there? Even after the initial error of judgment, Britain has persisted in a course of action that has deeply embarrassed its friends. It has, for instance, shown itself unwilling to obey the dictates of the UN, and prevaricated and has actually effected a landing in the Egyptian mainland after the United Nations had told it in so many words to stop fighting. It is a case of disrespect for the world body that will not fail to be imitated by others who find the UN decisions unfavourable to them. Britain has thus shown the way for flouting and undermining the authority of the world body.

*

Not the least serious consequence of Britain's ill-timed adventure has been the sudden diminution of the moral authority of the West when it most needed it. It does not lie in the mouth of Great Britain to lay down the law on civilized behaviour among the nations of the world and on the impropriety of interfering in the affairs of other countries when it itself is engaged in armed aggression in a territory where it has no business. As a matter of fact, Britain has had the hardihood to do precisely such a thing, but uninvolved spectators find the posture extremely grotesque. The oddity is not in any way diminished merely because the other side is adopting equally ludicrous stances. It is true that world opinion will have to come to its findings undistracted by these absurd posturings on either side, but folks who have been disposed to believe that, on the whole, the West tried to live up its professions, would now find such faith apparently misplaced. The Communist propagandists, whose resources of casuistry are endless, may be trusted to make the most of the equivocal position in which the West finds itself unenviably placed by Britain's action.

*

But the world should not be allowed to shut its eyes from what in fact is happening in Hungary. Despite the efforts made by the Russians to keep any kind of news from Hungary trickling to the outside world, the general picture of Russia trying to put down the spontaneous movement toward greater freedom among the Hungarian people is fairly clear. The peoples of the world, who spoke with impressive unanimity about aggression against Egypt, have no right to deny the same sympathy to the people of Hungary. No hair-splitting about the Warsaw pact and the dubiety about the legal Government of Hungary and its sovereignty should be allowed to obscure the fact that, in Hungary today is taking place the most unashamed attempt to put down the legitimate aspirations of the people by show of arms by a foreign power. It may be true that Russia is merely alarmed at the pace at which its slight loosening of the grip is being taken advantage of

by satellite countries. But it is not proper to argue about the legitimate interests of the Russian Government while striking the proper moral attitude about the sovereignty of a people in the case of Egypt.

*

In a sense, therefore, the fate that brought together two glaring instances of aggression, one from the West and another from the East, may be a beneficent one. The nations of the world have now been put on their mettle: would they erect two standards, one to judge their own and their friends' conduct and another to judge that of others? Will Russia allow the same principles that it urges against Britain to be applied to it? If it will not, then the hollowness of its professions will be shown up at least to the uncommitted peoples of the world. Already Russian conduct in Hungary is a serious embarrassment to its friends. Maulana Azad, who had said some nice things to say about the way Russia was moving away from totalitarian regimentation in his printed address to the UNESCO conference in Delhi, was obliged to delete them in the actual delivery of his address. The omission was more eloquent than anything he could have said. The Soviet Union must realise that it is not possible to have only moderate Pancha Shila or Pancha Shila only for others. If it believes in letting the East European countries having the kind of government they want, it cannot logically insist that they should promise in advance that they will be friendly to it, though, of course, it would be to the advantage of that country to be so. Even from the point of view of the Soviet Union, it is better to have a friendly and neutral neighbour than a sullen ally who is seething, as Hungary was, with discontent.

As far as the United Nations is concerned, it is necessary for it to seize this opportunity of general disillusion about great powers' political morality to create a uniform code of ethics about conduct in such matters. It should also utilise the lull that is to follow the cease-fire both in Egypt and in Hungary to see that a permanent settlement of the Arab-Israeli problem and the Suez issue is arrived at; and, last but not the least, it should attempt to normalise that relationship between Russia and the satellite countries. In other words, here is an oppor-

Gateway Gossip

Bombay Review

Solid as a Rock

MY first excursions into urban life and the experiences that go with it took place in Bombay. And what an exciting time it was! Reaching the Gateway City soon after the first world war had ended victoriously for the Allied cause, I found Bombay the centre of frenzied activity. Fluctuations in fortunes were violent; and the trials and tribulations that had to be suffered by the new wave of enterprise were of a character to allow only the fittest to survive. Those that were weak were rudely pushed aside and cast into the limbo of involuntary liquidation. The precursor to the debacle that was to follow was, of course, the postwar boom in business activity. Cotton mills were being equipped with an ever increasing number of spindles and looms; and the prosperity that was spread by the cotton mill industry was diffused. The boom did not, however, last long. It came to an abrupt end—posterity can now pronounce the verdict that over-speculation and an undesirably quick tempo of activity had wrought the havoc. Untouched by either the frenzy of activity or the depression of inaction was the Bank of India Limited.

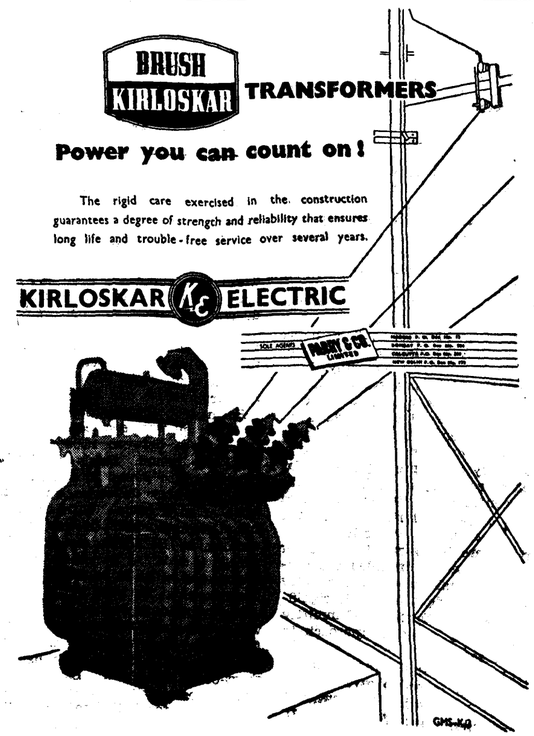
In order to appreciate why and how the Bank of India came unscathed from the turbulent twenties, one has to go back to the early 1900's when the Bank was established.

Around the turn of the century, we witnessed the first wave of indigenous enthusiasm for and in productive endeavours. True, cotton mills under Indian aegis had long since made their appearance. But the intensification of activity in the Indian business sector had to wait for the dawn of 20th century. It was around this time that the Indian enterpreneur, in the face of classic difficulties, displayed the most heartening and courageous brand of enterprise. Mr J. N. Tata was, at the time, a name to conjure with. He was, in the first decade of the 20th century, to undertake what was then considered to be the foolhardy risk of setting up a steel plant in this country. I have mentioned Mr Tata's name, merely to indicate that the turn of the century saw, for the first time in India, the blossoming forth of the insistent desire, on the part of Indian enterpreneurs, to embark upon business enterprises of great pith and moment.

While, in a small way, the beginnings of enterprise had already been in evidence by the early 1900's, there was an effective brake to satisfactory progress in that finance was insufficiently available. Indian banks plying their business, and meeting the demands of Indian commerce, trade and industry, were less than a handful. Clearly, if the Indian businessmen's enterprises were to develop and progress, a vacuum—the vacuum of bank finance—had first to be filled in. It was left to three individuals of great foresight and indomitable initiative to envisage an institution that would thus cater to the interests of businessmen. Late in 1906, a triumvirate composed of Sir Sassoon David, Sir Cowasjee Jehangir and Mr Ramnarain Hurnandrai did not allow their less optimistic friends to deter them from their intention to bring the Bank of India into being. A prospectus was issued; and this prospectus clearly indicated the motivating force behind the establishment of the Bank of India.

> "It is believed not only that there is ample scope for a Bank of this kind but that there is a very pressing need in the Trading Community for a larger measure of the financial facilities which such a Bank would afford and that there is every prospect that if worked on sound principles and under prudent and careful management, such a Bank, while supplying a need to and conferring a boon on the people of India, would at the same time itself become a prosperous and lucrative concern."

It has been the Bank of India's good fortune to have doting Godfathers in the powerful triumvirate that I have enumerated. Assured of their support, and benefiting from their particular solicitude for the soundness and longivity of the institution, the Bank of India never had to rely upon stray customers or constituents for enabling it to grow. To the contrary, under the wise tutelage of the three beneficent Godfathers, the Bank of India eschewed all desire to carve out a sensational career for itself. Similarly, the choice of the Manager to direct the day-to-day working of the Bank has always fallen upon individuals of merited ability, whose adherence to sound —even conservative—canons of banking was never in doubt. Mr H. P. Stringfellow was the first of the short list of Managers that the Bank of India has had in its 50 years existence. Mr Stringfellow's services were requisitioned from the Alliance Bank of Simla Limited; and the Directors found in him just those attributes of unquestionable character and staid competence which were intended to make the development of the Bank of India a growth of consolidation.



We appreciate the importance that the Bank's management places upon steady consolidation by the fact that the first branch was not opened until fourteen years after the Bank had been established.

Mr Stringfellow was connected with the Bank of India in a managerial capacity until 1922. His ability and his competence and the confidence that the Bank commanded, were both responsible for the fact that the Bank of India survived the 1913 crisis in Indian banking and insurance. During the war years, the Bank was not lured into a sensational expansion of business, but instead preferred to continue its steady consolidation of its position.

Mr A. C. Gray, who was later knighted, proved himself a worthy successor to Mr Stringfellow. Mr Gray took up the stewardship of the Bank just when the depression following the first post-war boom had begun to cast its blight upon the Indian industrial scene. But neither the depression of the early 1920's nor the world wide crisis in confidence of the early 1930's was permitted by the management to affect the steady progress of the Bank of India. Gradually, consistent with the consolidation of its position, the Bank branched out. The new branches were ensured as paying their way; and this paved the way for further consolidation and further expansion.

The two depressions left behind, without making their mark upon the Bank of India, the new phase of increased activity began when the Second World War broke out. In 1941, with the war disturbing the Indian economy, Sir Alexander Gray made way for Mr A. C. Clarke. The fabulous forties were not allowed to turn the head of the management. Once again, consolidation and expansion—but expansion only after consolidation. Then, in 1946, Sir Cowasjee Jehangir, Second Baronet, assumed the Chairmanship of the Bank—an office that had been held by the First Baronet until 1934.

Gateway Notes

Clarifying a Creed

Whatever might be the political fortunes of national Socialist parties, there is no doubt that the aims propounded by them are gaining increasingly wide acceptance in most parts of the world. On the one side, capitalist countries have been showing quick adaptability to the urge for equality of opportunity among their citizens. On the other, where a broad economic equality has been realised the urge for the restoration of individual rights as against those of the State is finding triumphant expression.

If passing turmoils are kept out of account, it is possible to envisage a pattern of social and political environment tending to get universal, more or less on the lines conceived by democratic socialism. This circumstance must strengthen the hopes of national parties who for some reason or other are finding themselves unable to reach the seats of power. It is a case of triumph of ideas without equivalent success for their contemporary sponsors.

But obstacles are still formidable. It cannot also be overlooked that changes in the direction of a socialistic pattern are taking place more through the pressure of material circumstances than through the spread of enlightened conviction. This is particularly so in Eastern countries; and it is here that the combined initiative of Asian socialists should discover its most urgent call.

At the Conference held this week at Bombay, there was the inevitable preoccupation with the threat of war. The conference has made a fervent appeal to the United Nations to exercise its authority with celerity and with courage, irrespective of the military strength of the party challenging its authority.

World peace is an inherent major premise of a socialistic order. The conference would have failed in its duty, if it had not taken notice of the present situation, in so emphatic a manner. Normally, however, the most important function of the Socialist parties in Asia lie in the direction indicated earlier.

As an essential pre-requisite, they will have to close their ranks, so that they could present the fundamental concepts of socialism without confusion and the torturing chaos of personal rivalries. In the field of economic research particularly, there is abundant scope for comparing notes, provided the special circumstances of each country are not lost sight of. It is significant that the Economic Committee approve of a guarded approach to nationalisation.

At least in India the socialist leaders have failed to give the intellectual lead which the national circumstances demand of them. If some one else is doing it, they must honestly admit it; if not, they must regain the initiative which properly belongs to them.

*

Busiest Port in India

The administration report of the Bombay Port Trust for the year 1955-56 issued early last week shows that Bombay Port has been very popular with all those who have had goods to send out of the country as well as those who have had goods to be received from countries overseas. For, during the last year, the port has handled a cargo of 10,305,799 dw. tons which is an increase of 2,721,338 dw tons over the figures for the previous year.

While the share of the docks department at 4.5 million tons, both imports and exports, is not very much changed as compared with the previous year, that of the bunders has shot up to 5.81 million tons against 2.94 million tons in 1954-55.

The steep rise in the volume of cargo handled by bunders has earned Bombay Port a prominent position among the major ports in the country. As it is estimated that the volume of cargo handled by Calcutta will be lower than that handled by Bombay in 1955-56, the Gateway city is now entitled to the appellation, the busiest port in India.

The port cleared 72,201 inward and 82,931 outward passengers on the overseas route and 375,316 inward and 403,262 outward passengers on the coastal routes.

The year had closed with an aggregate revenue of Rs 961.9 lakhs as compared to Rs 678 lakhs for the previous year. The total expenditure on general account amounts to Rs 676 lakhs compared to Rs 605 lakhs in the previous year. There is, thus, a surplus of Rs 285.91 lakhs and the revenue estimates envisaged a surplus of only Rs 117.43 lakhs. The improvement over the revised budget so far as the general account is concerned is due to an increase of Rs 57.42 lakhs in receipts and a saving of Rs 111.06 lakhs in expenditure.

The increase in receipt is mainly due to the recoveries of wharfage, demurrage fees, storage of goods in warehouses, handling charges, cranage and surcharge.

A large part of the saving of 111.06 lakhs is accounted for by the slow progress of various repair scheme, and other minor works. Of the 111.06 lakhs, Rs 41.12 lakhs represent a contribution proposed to be made by the Port Trust toward depreciation of the Marine Oil Terminal assets, disallowed by Government.

GATEWAY MARKETS

Hectic Activity in Oilseeds

THE Bombay Oilseeds market, after starting on a firm note, recorded substantial improvement in prices toward the closing stages of the week, thanks to heavy bear-covering and speculative buying. Increased demand for castor oil from overseas buyers, depleting floating stocks in the local market and developments in the Middle East, were the main factors responsible for the bullish fervour in seeds and oils.

Business to the extent of 800 tons in castor oil was reported done with the USA at between 16.00 to 16.20 cents per pound. Fairly big business was also done in Feb-March and April-May deliveries up to a price of 16.25 cents. With the result, Castorseed May delivery, after opening at Rs 137-2, steadily advanced to finish at Rs 141-0. Ready was quoted at Rs 30 and Castor Oil, commercial at Rs 16-4.

The Groundnut section responded well to the rising tendency in prices, following unfavourable weather and lower crop ideas. With heavy short-covering from Saurashtra and increased demand from Calcutta, rates for both seed and oil were pushed up. Groundnut February delivery opened at Rs 135-12 and steadily advanced toward the close to Rs 138-10. Bold quality ready was quoted at Rs 33-8 and Groundnut Oil at Rs 18-8.

Although trading in the Linseed section was featureless, prices showed some improvement in sympathy with the general trend of the market. Linseed May opened at Rs 27-0 and closed at Rs 27-6. Linseed ready was quoted at Rs 31-8 and Linseed Oil at Rs 18-8.

Trading in Cottonseed futures started last week afer a lapse of 13 years. The opening was on a bullish note and the rate was pushed upto Rs 82-0 from Rs 78-4 quoted in the "Moorat" session for February 1957 contact. The closing rate of the week was still higher at Rs 85-0; and this rise was attributed to the fact that the trading commenced at sustantially a lower rate than the general expectations which ranged from Rs 85 to Rs 90 per candy

*

Oils & Oilseeds

Prices on the Bombay Bullion Exchange, after ruling firm during most part of the week, developed a slightly easier tendency toward the close due to profit-taking. The initial firmness was mainly due to better Calcutta advices and the tense Middle East situation; but prices could not make much headway as operators were inclined to book profits at the higher levels.

In Gold section, inflow was 5,000 tolas against an outflow of 3,000 tolas. It was reported that 2,000 tolas of Kolar gold were sold by the National Bank around Rs 105-9.

Trading commenced this week in both the metals in Mangsir delivery. Gold Mangsir delivery started at Rs 105-9 and, after touching a high of Rs 105-10 and a low of Rs 105-1, finished at Rs 105-7-6. Gold Kartik started at Rs 105-9, and after touching a low of Rs 105-1, finished at Rs 105-7-6. Spot was quoted around Rs 105-9. Sovereign was quoted around Rs 69-12 against Rs 69-8 in the previous week.

The overall situation in Silver had been comparatively easy as judged by the discount for spot supplies. Silver Mangsir delivery opened at Rs 174-7 and, after touching a low of Rs 173-14, finished better at Rs 174-0. Silver Kartik delivery opened at Rs 173-12 and, after touching a high of Rs 173-15 and a low of Rs 173-4, finished the week at Rs 173-12. Spot was quoted around Rs 173-9. Arrivals of the metal were estimated at 33 bars against an offtake of 10 bars.

*

Yarn

The Yarn market experienced brisk activity with prices recording a sizable improvement on buying interest induced by the political developments in the Middle East.

Art Silk Yarn futures reacted bullishly and finished around the best levels for the week. December delivery touched a nigh of Rs 777 from Rs 765. quoted in the previous week, to finish at Rs 775.

The Staple-Fibre Yarn section also presented a firm appearance with prices of 2-40s rising by nearly As ½ per pound. In the case of 2-40s, prices showed rising a tendecy on reports of limited stocks at up-country consuming centres.

The Cotton Yarn section exhibited steadier conditions with prices showing a moderate rise in sympathy with the commodity section.

*

Metals

The Non-Ferrous Metal market also reacted bullishly to the latest developments in the Middle East. In view of the fact that arrivals of new consignments are likely to be interrupted, it was expected that the local market would register comparatively higher prices than on the London Metal Exchange.

Bombay Review

World *of* Cotton

Firmness in Spot and Futures

THANKS to the developments in Egypt, the Cotton market, which had been ruling weak for quite some time, has turned firm. There is a belief that the world cotton supply position will have to be reassessed in the context of delayed shipments, particularly of longer-staple variety, from Egypt —a major cotton producing country. Moreover, as the consumption of cotton continues at a high level, there are indications that the tempo of mill activity will be maintained and stepped up in future.

A section of the trade has, therefore, been advocating more vigorous steps to increase the tempo of production of long-staple cotton in India. According to them, only by stepping up the production of this variety, the possible inroads in the balance of payments position of the country can be avoided. Trade circles believe that mill consumption, during the current season, will be around 4.6 million bales and that consumption may be more if expansion is allowed in the organised sector of the textile industry.

As stated earlier, the main propelling force for the firmness in the spot and futures sections were the reports of deterioration in the West Asian situation, which led to franctic short-covering and bull buying in most commodity markets. After a disappointing start, cotton futures tended to rally and the upward movement was accentuated further in Jharilla contract on nervous short-covering initiated by the news of Russian warning to intervene in the Middle East crisis. Again, toward the close, sentiment was adversely affected by slackening mill enquiry for spots, reflecting continued slow cotton piecegoods movement.

The turnover was about 25,000 bales in Jharilla and 10,000 bales in Vijay contract. ICC Jharilla March was quoted around Rs 660 and Vijay April around Rs 760. The undertone remained firm, but uncertain.

The Spot cotton market was steady with fair demand from mills for new crop, particularly Dhollera, Jharilla, Vijay and the Punjab varieties.

In the export section, some business was reported done in Bengal and Dhollera varieties.

In the foreign section, spot lots of Sudan, Egyptian and Karnak were in good demand following the developments in the Middle East.

It is reported that the first auction of East African cotton at Kamplala will start on November 13 and will be subsequently held for five days during the month. It is expected that about 15,000 bales will come up for bidding, making a total of 90,000 bales.

Following rates were quoted:— Bengal Rs 690 to Rs 740; Oomra Rs 710 to Rs 740; Dhollera Rs 725 to Rs 760; Jharilla Rs 750 to Rs 800; Vijay Broach Rs 900 to Rs 910; ER/BP Rs 1,680 to Rs 1,700; ER Bushoga Rs 1,550 to Rs 1,565; Karnak Rs 2,850 to Rs 2,950, Sudan Rs 2,250 to Rs 2,600 and American Good Middling 1 5/32" Rs 1,340 to Rs 1,350.

×

COTTON OUTLOOK

New crop prospects at the moment are considered very satisfactory, although the main damper in assessing the outlook is the sluggish cotton textile situation, which was reflected in the "Murat" session. Despite unfavourable weather reports, the cotton production estimate continues to be pitched at a high level; but the general impression is that this will make no major difference, provided the turnover in the piecegoods markets picks up substantially in the coming weeks.

×

KARACHI COTTON MARKET

The Karachi cotton market continued to rule steadier due to good trade demand and on rumours that, during the fortnight, about 75,000 bales of foreign business had transpired, principally with China and France. NT Roller ready was quoted at Rs 83-8; Sind Deshi at Rs 84-8 and Punjab Deshi at Rs 78-8.

Olympus

The UNESCO Session

THE timing, if nothing else, of the ninth session of the UNESCO must be providing the Goddess of Irony plenty of the kind of perverse amusement she feeds on and which human contrariness never fails to provide. The UNESCO was avowedly born of the faith that, "since war begins in the minds of men, it is in the minds of men that the defences of peace are to be constructed." Ten years after its birth, it would seem apparently to have failed in its principal object of erecting defences in the minds of men. Even as it goes into session in New Delhi this week, it has the mortification of seeing war-like alarms and excursions in West Asia and Eastern Europe. It would appear that, whatever its success elsewhere, it has not succeeded in building the fortifications against war in the minds of those that direct the destinies of nations. To many delegates, if not all, therefore, articulation of their deepest convictions would be particularly difficult since these convictions are being so flagrantly violated in the wide world of practical action by fellow human beings and possibly fellow nationals.

But the laugh is not all, or even principally, on the side of the Goddess that delights in human discomfiture. Irony's weapon, it is worth recalling, is double-edged: it is, therefore, not improbable that, in clumsily brandishing it, she is not hurting herself as much as she is hurting others. The chasm between human aspirations and human performance is not merely a measure of human infirmity: it is equally a measure of man's unconquerable spirit. Thus, despite appearances to the contrary, the UNESCO's very existence is the best guarantee that "the collapse of conscience" in the world of practical action will not leave mankind entirely unprovided in moral resources. For, as Mr Nehru put it memorably, the UNESCO is the conscience of the world community.

Secondly, if the events of the last few days have shown a shocking cynicism among those that wield power, they have also given a heartening and impressive evidence of the common man's angry repudiation of such blatant disregard of moral values. This shows that the UNESCO has behind it the massive idealism of the majority of mankind to whom the decencies of human fellowship are important.

Thirdly, nothing in recent events has disproved any of the basic assumptions behind the principal aim of the UNESCO: on the contrary, they have merely reinforced their validity. The UNESCO's work is never done until the minds of men are rid of prejudices and suspicion, of envy and hatred. It is a task that is not very easy, as is indeed proved by the fact that, after ten years of strenuous engagement in it, the UNESCO has to witness events that apparently demonstrate its futility.

But, inevitably, the success of the UNESCO is never measurable in these terms at all; for, human prejudice and predilection to violence are not easily eradicated. But, given goodwill from all quarters, the UNESCO can succeed in pressing into the service of mankind the resources of technology, science and other agents of human ingenuity. Indeed, it has done so with a large measure of success in the last ten years. Only starry-eyed meliorative cranks can imagine that efforts to spread to the widest commonalty the fruits of the best educational and scientific endeavour in the world succeed automatically.

The difficulties in the way of the percolation of the best that has been thought and said and felt are formidable. The most important of these difficulties is the one that does not get mentioned in public: it is the apathy, among very many admittedly able men, toward the aims of UNESCO. In their most charitable mood, these regard an enthusiasm for the kind of activities that the UNESCO sponsors as somewhat naive: and, in their more peevish mood, they consider them a species of charlatanism. Others, somewhat more sympathetic to the aims of the UNESCO, still regard the inescapable organisational demands of the body most irksome. They complain that the whole set-up is too bureaucratic for their taste. All these are, perhaps, the complaints of the culturally privileged who are unwilling to make the necessary sacrifices in the discharge of their plain social duties to the less privileged.

Other obstacles are no less formidable: there, for instance, is widespread illiteracy in the countries to which the fruits of knowledge have to be taken; then, there are areas insufficiently served by communications in which it is difficult to achieve quick and wide diffusion of the beneficence of the UNESCO's efforts; and then there are those inequalities of various sorts, between region and region, the most exasperating of which is, of course, financial. To combat these difficulties is no easy task; and yet the UNESCO has manfully addressed itself to it with considerable success in the last 10 years.

In the field of education, for example, it has initiated successfully a number of projects in what is called "fundamental education." The idea is to initiate teachers into methods of teaching that are comprehensive of all aspects of life. The UNESCO has taken an active interest in national institutions devoted to education in various countries and helped in making available vital co-operation between various countries in this regard.

In the scientific field, the achievement of the UNESCO in fostering international co-operation has been significant. It has arranged for exchange of information, personnel and material through its "science co-operation offices" in the various parts of the world. It has also been responsible for the establishment in Switzerland of an institute for the study of the peaceful uses of atomic energy. It is co-operating with the other agencies of the UN in studying technical questions relating to the effect of radio-activity on life, etc. Of some importance to the Asian and African countries is the fact that the UNESCO has pressed into service the resources of scientific knowledge to make regions of the world habitable and therefore useful to mankind.

In social sciences, the UNESCO is co-operating with various institutes devoted to the study of social relations: recently, it has established an international social science centre in Calcutta. Obviously, the study of causes of international tensions is of the highest significance from the point of view of the UNESCO's avowed principal objects.

In this connection, one of the most important services rendered by the UNESCO was the publication, under its auspices, of some excellent monographs on the subject of Race and Race Relations. Through these publications, the massive weight of the highest scientific authority was lent to the democratic faith that notions of racial superiority and inferiority were absurd as well as immoral. After these publications, it is no longer possible for interested charlatans to propagate "scientific" mumbo jumbo on this subject of Race.

Another aspect of the UNESCO's work in the field of social science is its promotion of research on the impact of technology on human relations. This is a subject of utmost importance to the future of mankind. More and more, underdeveloped countries are dazzled by the immediate material prizes that await quick technological advance; and there is altogether too little

Self-sufficiency in Scientific Instruments

An urgent problem that is confronting Government is the need to ensure the availability of technical personnel in sufficient numbers to build and man the various developmental projects and industries programmed to be set up under the Second and subsequent plans. The Planning Commission have emphasised the need for planning for technical personnel well in advance in view of the anticipated steady demand for skills especially in the fields of steel and cement. After pointing out that since shortages of personnel have been experienced in a variety of categories, they have suggested that it would be necessary to make a rough assessment of the demand and to draw up training programmes accordingly. It is estimated that as a result of the implementation of the programmes under technical education in the Second Plan, institutions imparting training to engineering personnel will increase from 123 to 155. The Engineering Personnel Committee of the Commission has, however, placed the probable requirements in this regard at a much higher level. The conclusion reached by the Committee is that even with the expansion of facilities for engineering education proposed in the Second Plan it would be necessary to provide for additional training facilities for nearly 2,300 engineering graduates, civil, mechanical, electrical, telecommunication, metallurgical and mining. In addition about 5,940 persons trained for posts at lower level in the above fields of engineering would be needed.

The expansion of training facilities brings in its wake another important problem. Already there is an increasing demand for scientific instruments due to the development programmes in the engineering, housing and industrial sectors. It is to be expected that such demand will increase with the opening of new technical institutions and the increasing tempo of activity envisaged in the above sectors under the Second Plan. The Government have not been slow in anticipating the heavy demand for scientific instruments. They have set up a Surveying, Drawing and Mathematical Instruments Committee under the chairmanship of Dr A. N. Khosla, to recommend measures for the development of the industry engaged in the manufacture of scientific instruments. There is already a neucleus of the industry in the country in Roorkee, Calcutta and Dehra Dun. The National Instruments factory at Calcutta has undergone considerable expansion while the Ordnance Factory at Dehra Dun has embarked upon a programme for the manufacture of civil scientific instruments. The Roorke products are well-known in the country for their quality.

Inaugurating the first meeting of the Surveying, Drawing and Mathematical Instruments Committee, Mr Nityananda Kanungo, Union Minister for Consumer Industries, said that the production of scietific instruments should be stepped up in such a way as to meet the entire requirements of the country from indigenous production. Pointing out that the country was importing quite a good number of these instruments, he said that an important task of the Committee would be to make recommendation on the programmes of production in the public and private sectors. It was his opinion that since the field was large, it should be possible for both the sectors to flourish. Before drawing up its plan, the committee had to assess the country's requirements of scientific instruments in the different categories.

It is to be hoped that private enterprise in this country will begin to take an active interest in fields such as the Scientific Instruments Industry and other similar new vistas that are being daily opened up in the wake of the industrial revolution that is going on in our country, instead of bemoaning their imaginary losses and the glory that was once theirs.

*

Saving of Foreign Exchange

Addressing the tenth meeting of the Development Council for Internal-combustion Engines, Power Driven Pumps, Compressors and Blowers, the Union Minister for Heavy Industries, emphasized the importance of those industries in the economy of the country and pointed out how an increase in production of these goods would save the country in terms of foreign exchange to the tune of Rs 25 to 30 crores. Dealing with the progress the industry had made so far, the Minister said that production of deisal engines, in 1956 on the basis of six months output would be 154, 880 H.P. as against the actual production of 100,000 in 1956 and the second plan target of 205,000 H.P. while the production of pumps during 1956 would be 56180 as against 34441 in 1955 and the plan target of 86000 and pointed out that the progress made by the industry offered sufficient ground for the belief that the target set for the Second Plan would be realised in three years and even exceeded by 1960-61 and stressed the need to diversify production so as to cover all major categories of engines and pumps required.

In the course of his speech, the Minister referred to the existence of three gaps in the production of diesel engines (1) inadequate capacity for production of virtual engines in the range of 3 to 50 H.P. (2) low production of one Hp engines, which find industrial application of different kinds and (3) absence of indigenous capacity for the manufacture of vertical engines above 50 H.P. and suggested by way of solution to the Second that existing manufacturers of medium horse power engines should take up the production of low H.P. Engines as a sideline, since this would make production of low horse power engines more economical. Further in view of the insufficient demand for some particular subranges of vertical engines in the range of 10 to 200 H.P. maximum interchangeablity of parts it was pointed out would keep costs down.

Referring to the import policy regarding those goods, Shri. Manubhai Shaw said, that import policy had to ensure that other manufacturing industries are not handicapped due to scarcity of machines, engineering goods and raw materials the policy being so oriented as to help the rapid growth of indigenous manufacturing over the entire field. At the same time he assured that full consideration would be given to specific instances of indigenous production in case they are adversely affected by the import policy.

In conclusion the Minister emphasized the importance of technical personnel for the implementation of the Second Five Year Plan and expressed satisfaction at the record of the Development Council for deisel engines in this field.

NORTH INDIAN MARKETS

Steady Trend in Foodgrains Prices

CONDITIONS in Foodgrains markets continued to rule steadier, thanks to better offtake. In the Hapur market, Wheat average quality was quoted at Rs 14-12 as against Rs 12-8 per maund quoted last year. Farm quality was maintained at Rs 16-4 due to small supplies of this quality and good consumer support.

The market for Rice continued to rule quiet following increased arrivals of the new crop, Basmati quoting at Rs 23-0 to Rs 28-8 per maund, according to quality. Gram was in good demand and prices were quoted at Rs 12-0 for local qulity and Rs 12-6 for the Punjab produce. Barley and Bejher recorded sharp gains to Rs 12-12 and Rs 12-6 per maund respectively in view of good demand for seeds in the face of poor stock position. The new Bajra crop has started to arrive.

In the Pulses section, Peas and Arhar were mostly in demand. Peas dara quality was quoted at Rs 12-6 per maund and Rs 13-4 for the white variety. Offtake of Arhar was heavy, rate quoting upto Rs 12-4 per maund.

In the Bombay market, conditions remained quietly steady with prices moving within a narrow range. Turnover in the Wheat section was limited with only stray enquiries from the retailers. The Punjab quality was placed between Rs 165 and Rs 170 per candy.

There was also limited trading in the Rice section where prices of old crop showed a modest improvement of Rs 2 to Rs 3 per candy. It is generally felt that the spread between the prices of seasoned rice and the new crop, which has started moving on a limited scale, will increase with the growing shortage of the former variety.

The markets for Jowar and Bajra continued to rule firm. Common varieties of Jowar were placed at Rs 165 to Rs 170 per candy, while superior qualities continued to attract demand at prices ranging from Rs 170 to Rs 180 per candy. Business in Pulses remained more or less dull.

*

Sugar

Sugar markets remained dull and, despite better buying enquiry, prices showed an easier tendency in view of the easy supply position. Following mill delivery rates were quoted (per maund) in the Hapur market:—Jaswant Rs 27-14; Simbhauli Rs 28-4. Mowana Rs 27-8 to Rs 28-4; Daurala Rs 28-0 to Rs 29-4; Amroha Rs 27-4; Bijnore Rs 27-4; Mansoorpur Rs 27-10 to Rs 29-4 and Rampur Rs 30-4.

Some of the sugar factories in Uttar Pradesh have decided to start cane-crushing season earlier than usual in response to the Gov-

The Peninsula

The End of a Dynasty and a State

DURING the entire process of integration and reorganisation of States in India, the only important political entity to lose its identity completely is Hyderabad. Of all the Indian leaders, Pandit Nehru alone had been keen on avoiding the disintegration of this State. Once he frankly told the people of the State about his desire to keep it in tact so that it might be able to function as a cultural link between the south and the north. But in the general ferment, the Prime Minister's wish received scant respect.

As a true democrat he does not now regret the disappearance of the State and without the least mental reservation he took it as a matter of personal obligation to be present on the occasion of the inauguration of Andhra Pradesh. The Asaf Jahi dynasty which ruled the major part of Deccan for seven generations has come to an end. For several years, people in Hyderabad were whispering of an astrologer's prediction that the present Nizam would be the last of the dynasty. Whether it is a prediction come true or the inexorable outcome of the drastic step taken by Sardar Vallabhai Patel in 1948, one of the oldest ruling dynasties in India has now come to an uneventful and mostly unlamented end.

It is, of course, natural that the Muslim population of Hyderabad and possibly the rest of India should have unexpressed sympathies for the Nizam. In Pakistan, the sponsors of the Hyderabad liberation movement have flourished another of their challenging but ineffectual statements. The rest of the world is indifferent. Within Hyderabad, the majority do not care to think feelingfully of their erstwhile sovereign.

The Nizam has disinherited his son, the Prince of Berar and has made his grand-son the heir to the estate. The curtain has fallen on the last act of a somewhat tempestuous drama which had its fame beginning with Sardar Patel's appeal to the Princes on the 5th of July 1947 and which reached its climax in the police action toward the end of the succeeding year.

In referring to the demise of the Princely order in the course of one of his addresses at Hyderabad on November 1, the Prime Minister said that the princes as a caste or tribe had no more any function in India; but they would continue to be respected as individuals. Probably, he wanted to impress the fact that old antipathies or prejudices should in no way colour the attitude of the people in future. The disappearance of the State and its splitting up into three parts symbolised, according to him, not only a political change of importance, but also the gradual basic changes India was bringing about to get out of the old picture and the old inheritance which was a limiting factor to growth.

He pointed out that the Hyderabad City especially developed during the last hundred years in its own way—the princely way; "we do not want this way to continue any longer in India". But there was another aspect—the evolution of a composite culture, linguistic or other, which was good because the mix-up was enriching other cultures as well. Pandit Nehru appealed to the people of India to keep an open door to the different culture of the world and to look to the mixed culture of Hyderabad as something which ought to be sedulously preserved. To the ministers and legislators of Andhra Pradesh, he made the special request that in view of the peculiarly complicated problems in Andhra, they should proceed with a wide vision and a wide approach.

Mr Sanjeeva Reddi, in the course of his broad-cast address on the occasion of the inauguration, did not omit to give a special undertaking in this behalf. He assured the minorities and Government servants belonging to Telangana that their interests would in no way suffer in the new dispensation and that the agreement reached between the leaders of the two regions in this connection would be scrupulously implemented. He recalled how the Ceded Districts, Telangana and Andhra used to be one great entity once upon a time. The Ceded Districts and the coastal areas called Sircars went over to the East India Company, one after another. The present was just a reunion of the broken elements.

Though the historical unity of Andhra was again emphasised, it was not done with a view to deny safeguards of special treatment, where necessary formed part of commitments. The employees of the former Hyderabad Government who have now become servants of Andhra Pradesh were assured that their interests would be fully protected. Mr Reddi told the minorities in the State that there would be no obstacle against their advancement and that the administration would go on without any distinction of caste, religion or language.

Mr V. B. Raju, another member of the Andhra Cabinet, reinforced these assurances. He said that the interests of no person whose mother tongue was other than Telugu would suffer for that reason. Taking another peep into the history of Hyderabad, he speculated on how but for the imperialist urges of the British, the Kutubshahi dynasty would have continued to hold sway over the entire Telugu speaking area, which has now been reassembled under the title of Andhra Pradesh.

One practical concession has already been announced, in deference to the needs of the Urdu-speaking population. The Chief Justice, Mr Subba Rao, declared the Government's intention to constitute a special branch or branches consisting of Urdu-knowing judges, which would deal with cases of advocates, who did not know English sufficiently. This would be a transitional measure. At the same time, he appealed to the advocates who knew English and who were accus-

SALE OF 130 CONDEMNED WAGONS.

The General Manager invites tenders for the Sale of 130 Condemned wagons stabled at Mathurakati Scrap yard, South Eastern Railway, Khargpur. Tender No. S4/S/3/3 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—22 on production of Cash Receipt for Rupees five only from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23, by local firms and on remittance of Rupees five only by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 by outside parties. The cost of tender forms is not refundable The wagons may be inspected on any working day before the closing date of the Tender. The closing date is the 27th November, 1956 at 12 noon.

S 28. GENERAL MANAGER.

SOUTH EASTERN RLY. TENDERS.

The General Manager invites tenders for the sale of a large accumulation of condemned empty containers such as condemned Oil, Paint and Tar drums, Kerosene tins and condemned empty gunny bags, etc., available at the South Eastern Railway's Scrap Yard at Khargpur. Tender No. S/4/S/4 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 on production of Cash Receipt for Rupees five only from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23 by local firms and on remittance of Rupees five only by Money order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 by outside firms. The cost of the tender forms is not refundable. The materials may be inspected on any working day before the closing date of the tender. The closing date is the 27th November, 1956 at 12 noon.

South Indian Notes

Agricultural Production

Ever since the National Development Council expressed the opinion in May this year that it was necessary to raise the targets of agricultural production which had been tentatively proposed in the Second Five Year Plan, there has been a series of discussions between the Planning Commission and the Union Ministry of Agriculture on the one hand and the State Governments on the other. As a result of the review, a fairly complete picture of the revised five year targets of additional agricultural production is now available. If the revised targets are realised, agricultural production as a whole would increase by about 28 per cent, the increase in the production of foodgrains being nearly 25 per cent and in that of commercial crops about 34 per cent. According to the earlier proposals in the Plan, agricultural production was to increase by 17.4 per cent, food production by 16 per cent and the production of non-food crops by 21 per cent.

It is now accepted on all hands in the country that the success of the Second Plan depends to a large extent on the nation's ability to raise its agricultural production during the next five years to a level at which it can make up the present shortage and meet the demands of the growing population and those generated by large development expenditure.

It is, however, realised that the achievement of the revised targets is not going to be easy. The State Governments, the Union Ministry of Agriculture and the Planning Commission are all agreed that the task calls for the maximum effort possible.

That the achievement of the revised targets will be quite within the realm of possibility provided the requisite national effort is forthcoming will be evident from the achievement in this regard of countries like China.

Speaking in Coimbatore, His Excellency Chiang Chi Hsien, leader of the Chinese Agricultural Science Study Mission, which is making a study tour of India on the invitation of the Government of India, has given some revealing statistics about the Chinese agritural advance in production and practice in the course of the past five, six years.

Whereas in 1949 the total production of grain in China was only three-fourths of the production of 1936, by 1955 the production of grain had increased to 186 million tons i.e., 60 per cent higher than that of 1949 and 22 per cent higher than that of 1936. As a result of the increase in production, the country was able to export as much as 17 million tons of rice in 1955. China had also become self-sufficient in cotton within the same period, production of cotton having increased by 78 per cent as compared with production before the country became independent.

Mr Chiang attributed the increase in production mainly to the agrarian reforms and the organisation of agricultural producers' co-operatives. The rapid development of agricultural science had also gone a long way in helping China achieve the increased targets.

*

Employees State Insurance

The working of the Employees State Insurance scheme in Madras city and Coimbatore in the past two years has amply justified its description as a milestone in the country's progress. The apprehensions that the introduction of the scheme will encourage labour absenteesm or disturb the cordial relationship that existed between workers and employers have yielded place to an appreciation of the benefits that accrue to labour. Far from exibiting a hostile attitude to the scheme, workers who have not been covered by it, are now clamouring for their early inclusion.

The success of the scheme in Madras is not a little due to the enthusiasm evinced in its implementation by the State Government. Speaking at the inauguration of the scheme in Madurai, recently Colonel V. M. Albuquerque, Director, General, Employees State Insurance Corporation, has paid a high tribute to the unity of purpose and resolve in the implementaion of the scheme in this State.

Explaining the progress achieved in working the scheme since its inception in the country Col. Albuquerque has pointed out that the nature and scope of the medical care which originally consisted only of outdoor and home treatment, has been considerably improved by an addition of specialist services. Impatient treatment has also been accepted on a scale of approximately two beds for one thousand employees. At present these beds are provided as a temprorary measure in existing hospitals, but the Employees State Insurance Corporation has already sanctioned a programme of construction of annexes to existing hospitals or of separate hospitals in areas where the number of beds exceeds a hundred.

With the inauguration of the scheme in Madurai, Tuticorin and Ambasamudram about 38.000 more workers have come under the perview of the scheme. Taking the country as a whole, the beneficiaries will number nearly eleven lakhs in 42 centres.

Mr Bhaktavatsalam, State Minister for Agriculture, seems to be convinced that the Employees State Insurance scheme is going to occupy a prominent place among the development schemes designed to improve the lot of the common man. Speaking on the working of the scheme in Madras, Mr Bhaktavatsalam has emphasised the need for the fullest cooperation between the Corporation and employers. In this regard he has revealed that it is the policy of the Corporation to utilise the employers' facilities for medical treatment.

The recent decision of Government to extend medical care to the families of the insured persons will go a long way toward making the scheme a great boon to labour.

SOUTH INDIAN MARKETS

Rise in Rubber Output and Consumption

BOTH production and consumption of Rubber have risen substantially in September as compared to August. The increases were 543 tons and 238 tons respectively. The production and consumption, during September, are 2,293 tons and 2,545 tons as against 1,750 tons and 2,307 tons respectively in August.

According to the returns received from the manufcturers, the quantity of rubber imported during the month of September are:—338 tons of Group I; 773 tons of Group II; 69 tons of Group III; 170 tons of Group V and 400 tons of Group VI.

Stocks with the estates and dealers and stocks with the manufacturers, as on 30th September 1956, total 6,973 tons, including 1,519 tons of imported rubber. During the month, 1,750 tons of rubber of all grades was imported. This was 1,249 tons more than the previous month's imports and the highest in any month during this year. There was no export of rubber during the month.

The following table shows the production, consumption, and stock figures for the last three months: (in tons)

	1956. Sept.	1955. August	1956. July
Production ...	2,293	1,750	1,730
Consumption ..	2,545	2,307	2,648
Stocks with Estates	3,816	3,448	3,274
Stocks with the Manufacturers ...	3,157	2,027	2,257

It is reported that the American plans for the production of synthetic rubber seem to be set at a target of very nearly the world output of natural rubber by 1958. One of the reasons adduced for the marked increase in the consumption of synthetic rubber is the steadiness of its price, which has been ruling at $22.50 per 100 pounds for over four years without being changed even after the factories were taken over by private owners.

*

Pepper

Pepper markets have taken a slight turn for the better during the week, thanks to improved offtake both locally and from overseas. Due to fast approching cold season, demand for the commodity is reported to be gradually rising. In the Kozhikode market, Wynaad quality had buyers at Rs 750 to Rs 760 per candy and Country variety at Rs 735 to Rs 750. In the New York market, values showed an easier tendency due to scattered profit-taking. Malabar spot was quoted at 31 cents per pound.

According to latest statistics, India exported as much as 240.000 cwts of black pepper upto September, 1956 as against 209,000 cwts in the same period of last year. During September alone, exports amounted to 11,100 cwts as against only 5,300 cwts in the same month of last year. Italy was the main buyer, while the USA and China took the second and third place respectively

*

Groundnuts

The Madras Groundnut market ruled a shade quieter during the past week when the rate for superior oil-quality seeds was quoted at Rs 157 and bold variety at Rs 154 per candy. Arrivals were small due to rainy weather around 40 tons a day and these were taken up by small crushers to meet their immediate requirements.

In the Groundnut Oil section, offerings were reported to be small due to the non-availability of oil following rainy weather conditions. Operators were also adopting a cautious attitude as there were no eager buyers or sellers in view of the disturbed conditions in the Middle East. The rate for the ready position was quoted around Rs 284 per candy.

Present Issue:

(a) 3,56,250 preference shares of Rs. 10 each at par offered in the first instance to the holders of preference shares of Rs. 40 each, in ratio of 6 preference shares of 10 each for each preference share of Rs. 40 held.

(b) 31,80,000 ordinary shares of Rs. 2-8 each at par offered in the first instance to the holders of ordinary shares of Rs. 2-8 each, in the ratio of 3 ordinary shares of Rs. 2-8 each for each ordinary share of Rs. 2-8 each held.

CONSENT OF THE CENTRAL GOVERNMENT HAS BEEN OBTAINED TO THIS ISSUE BY AN ORDER OF WHICH A COMPLETE COPY IS OPEN TO PUBLIC INSPECTION AT THE HEAD OFFICE OF THE COMPANY. IT MUST BE DISTINCTLY UNDERSTOOD THAT IN GIVING THIS CONSENT THE CENTRAL GOVERNMENT DO NOT TAKE ANY RESPONSIBILITY FOR THE FINANCIAL SOUNDNESS OF ANY SCHEME OR FOR THE CORRECTNESS OF ANY OF THE STATEMENTS MADE OR OPINIONS EXPRESSED WITH REGARD TO THEM.

As the Government of India has sanctioned expansion of Dalmiapuram Cement Works in Madras State from the present capacity of 750 tons of cement daily to about 1,250 tons per day, further capital is being issued for which sanction of the Controller of Capital issues has been obtained vide letter No. R-332-CCI/56, dated 3rd October, 1956, as amended vide letter, dated 1st November, 1956.

The newly issued shares shall participate in dividend declared for the accounting year 1957 and any subsequent financial period. The newly issued ordinary shares of Rs. 2-8 each shall rank pari passu in all respects with the existing ordinary shares of Rs. 2-8 each. The newly issued preference shares of Rs. 10/- each shall rank pari passu with the existing preference shares of Rs. 100/- and Rs. 40/- each in proportion to the Capital paid up in the matter of dividend and assets on winding up and shall carry the right to a preferential cumulative tax free dividend of 6% per annum, but will participate in dividend at 7% in the event of a dividend above 10% being declared on Ordinary Shares and will be entitled to 7½% in case of dividend at 20% and above being paid on ordinary shares and also an additional ½% rising upto 9% along with 10% further rise in the dividend on ordinary shares but will have no further rights to participate in the profits or assets.

The voting rights attaching to the newly issued preference shares of Rs. 10/- each shall be in accordance with the provisions of section 87 (2) of the Companies Act, 1956 while the voting rights attached to the existing preference shares of Rs.100/- and Rs. 40/- each are wider.

The Renunciable Letters of Rights will be issued to persons who are registered as on 30th November, 1956, as the holders of the shares carrying the Right, and for this purpose, the share transfer register shall remain closed from 19th November, 1956, to 30th November, 1956, both days inclusive. The Letters of Right are expected to be posted by 10th December, 1956. Those who do not receive their Letters of Right to which they may be entitled by 15th December, 1956, should write to the Company.

Normally one Letter of Right for each class of shares, that is preference and ordinary shall be issued to the shareholders for full number of shares of each class respectively to which they may respectively be entitled. But if any shareholder desires to renounce the whole or any part of his Right in favour of one or more persons for one or both class of shares, he may intimate in advance to the Registered Office of the Company the denomination in which he would like to get the Letters of Right to avoid wastage of time over getting split letters later on. This, however, does not prevent Right holders from applying for splitting of Letters of Right after issue but within the time allowed for the purpose. The last date for receiving requests for splitting Right Letters would be 31st December, 1956.

On and after 31st January, 1957, preference shares of Rs. 40/- each and ordinary shares of Rs. 2/8/- each shall cease to have any preferential right of subscribing towards fresh issues of capital.

The last date for receiving Acceptance forms duly completed in all respects will be 31st January, 1957. The shareholders will have to pay full value of the shares accepted along with the Acceptance form. The form can be sent and the total amount paid in one of the following two ways:

(i) By sending the form together with remittance for full value to the Registered Office of the Company at Dalmiapuram, so as to reach there not later than 31-1-1957.

OR

(ii) By handing over the form and the amount of full value to the Bankers of the Company, M/s. National Band of India Ltd. in any of its branches in India on or before 31-1-1957.

Allotment letters will be issued as early as possible after completion of Allotment but no other receipt or acknowledgment or Acceptance Forms will be sent. Share certificates will be issued within 9 months of allotment.

The working results of the Company for the past few years are as follows:—

Year.	Production of Cement in tons.	Gross profits earned before providing for depreciation and Managing Agents' Commission.	Depreciation provided.	Dividend on		
				Pref shares.	Ordy. shares.	Deferred shares.
		Rs.	Rs.			
1952 ...	2,28,950	40,01,482	11,31,311	6%	6½%	Nil
1953 ..	2,20,256	40,75,904	12,48,101	6%	10 %	10 %
1954 ...	2,70,000	64,90,088	10,60,722	6%	10 %	10 %
1955 ...	2,66,285	68,23,654	5,37,945	7%	12½%	12½%

The total original value of the gross block at the end of the 1955 has been Rs. 1,86,81,654. Total depreciation including initial depreciation provided till end of 1955 has been Rs. 1,29,96,995. The 250 tons plant was installed before war some time in 1939 and the 500-ton plant was installed after war in 1949 bringing the daily production of the works to the present level of 750 tons per day.

All correspondence regarding the new issue should be addressed to the Registered Office of the Company. Shareholders are requested to make it a point to quote always their register of members folio number. The reference will avoid all possibilities of mistake and ensure prompt attention. It is presumed all shareholders have already taken note of their number. Those who have not, are requested to do it now. They will find it at the left side over their name appearing on the envelope in which the circular regarding the new issue has been sent to them or on the letter of right that will be sent.

GENERAL ASSURANCE SOCIETY LIMITED

*

Extracts from the Chairman's Address of Shri B. L. Jalan delivered at the 49th Annual General Meeting of the General Assurance Society, Limited, on the 7th November, 1956 at Ajmer.

When we met here about a year back on the same occasion we had noted with gratification the happy signs of reassuring developments on the international horizon. The Suez Canal dispute has assumed proportions of a world wide conflagration. Even our insurance industry could not escape these diplomatic overtures as we recall that the London Underwriters raised the war rates on both cargo and hull, negotiating through the Suez Canal. Before serious and frantic efforts, led amongst others by our own Prime Minister, could materialise the whole situation has worsened by invasion of the Egyptian territory by Israel and military intervention of England and France. The world opinion, including the public opinion in Britain, has expressed itself in unequivocal terms. It is hoped that peace forces will ultimately prevail and wrong perpetrated will be retraced.

On the other hand, we will recall that early in the year the Russian leaders themselves finally exploded the myth of a happy Soviet Society by denouncing the communist regime of about 30 years since the dawn of the Stalin era. We have not forgotten the outbursts of discontent in East Germany. Recent popular developments in Poland and Hungary have further exposed the role of the Soviet activities in the so-called people's democracies of the Eastern Europe.

Nearer at home, we have witnessed during the last few months a few unhappy events arising out of the State Reorganisation programme. Such untoward occurrences do not augur well for the unity of the country and smack of fissiparous and parochial tendencies.

With the even faster means of transport and communications and increasing rate of intercourse between peoples, the world is becoming smaller and a more compact unit. Historically, therefore redistribution of areas, intranational or international seem to be a bit anachronistic. One wonders if the country should not have been divided on the more convenient geographical and administrative regional bases, facilitating balanced economic growth. Indeed, ever since the formation of Andhra, I have been suggesting the redistribution of the country on the basic of geographical zones. The idea of zones appears to have fascinated our Prime Minister also and the Government have taken some steps in this direction.

While we met here last year, an unprecedented round of floods had overtaken the country including the Punjab and Delhi. It is unfortunate that they have appeared this season again with more severity.

These floods have a even larger bearing on the general economic situation in the country and generally on the fulfilment of our planned progrmmes. The commodity prices have shown an upward tendency during recent months. This tendency has been more spectacular in respect of food grains and other agricultural crops. Between May, 1955 and September, 1956 the General index of wholesale prices (with the year ended August 1939 as the base) showed an increase of 78 points or 23 per cent. But the index in respect of food articles has advanced by 117 points or 43 per cent. As against these the rise in prices in respect of manufactured articles has been much less marked; the index advanced only 4 per cent.

On the one hand, these variations in prices have to be set against the decline in prices a year before, and on the other, against the several measures of controls invoked or proposed by the Government. The changes in the price structure have to be studied further in the light of the food policy followed and the monetary expansion generated by the Government. Actuated by the crop of 1954-55, almost all reserves of food grains had been liquidated. Furthermore, there has been an expansion of money supply during 1955-56 to the tune of Rs. 264 crores against and in addition to an expansion of Rs. 127 crores a year earlier. Three-fourths of the expansion was accounted for by the increase in currency alone.

Disregarding these basic circumstances of the situation, we seem to seek the remedy in increased tempo of taxation and rigid controls. The Government do feel that the features of the situation are only temporary and more of a correctional nature. If so, taxation cannot and will not cut any ice. Moreover, so long as the tempo of government spending continues in the search of "green fields and pastures new" of public sector, taxation, particularly direct, will only defeat its own purpose. If currency inflation is the established feature, it is immaterial whether the purchasing power is brought to the market by this or that sector.

Public memory is proverbially short but I am sure we have not forgotten the difficulties involved in rigid commodity controls on production, distribution and prices prevalent during the War and immediate post-war periods. Such controls not only do not check prices, but are notorious for creating artificial scarcities and other complications. These measures only indicate the philosophy guiding the economic policy of the Government. Thus the nationalisation of the Imperial Bank and Life Insurance in the country and promulgation of the Companies Act were followed in quick succession by the Industrial Policy resolution of the Government of India dated the **30th April, 1956.**

I recall that the Prime Minister had, in the larger interest of the country, given an assurance that it was not the intention of the Government to nationalise existing industries because that does not create fresh capital and income in the country. The resources of the State could be better utilised in sponsoring new and neglected lines of economic activity. Hardly had the echoes of the Prime Minister's assurance died out, that the Imperial Bank and Life insurance were nationalised. I am constrained to say that we have not quite followed this confusion. I will strongly urge the Government that the Prime Minister's assurance should be carried out both in letter and spirit.

I agree that we have been presented with a **fait accompli** and it is no use crying over the spilt milk. But as the question of nationalisation of life insurance touches the frontiers of our fundamental economic philosophy I will like to examine these arguments.

The Government appears to have given the assurance that they will continue to make available to the private sector of industry the same proportion of funds as heretofore. If that be so, it is not understood how does the Government intend to employ this industry as a source of funds for the implementation of the Second or for that matter, Third Five-Year Plan. If, however, this was the intention; there was an easier recourse available to the Government, namely, increasing the limit of investment in Government and allied Securities from 50 per cent to 60 per cent or even 70 per cent. It may be interesting to note here that the total investment of life insurance companies in the United States in Government securities including those of the Federal, State, Local and Foreign Governments total about Rs 5760 crores out of total assets of about Rs. 40230 crores in 1954. This share constituted less than 15 per cent of the total assets. In the same year such securities constituted a share of 54.9 per cent in India. As against this the share of business securities represented 45 per cent in the United States of America and only less than 15 per cent in India.

Among the two arguments of malpractices and misappropriation of funds, I will take the latter first. The business of about 165 insurers was nationalised. A searching investigation was conducted by the Government of the affairs of all companies, by specially appointed investigators and custodians. Misappropriation of funds was detected in three or four cases. There is reason to believe that except in one case, misappropriation may have been resorted to after the act of nationalisation. Misappropriation of funds in one or even three or four cases cannot, by any same judgment be a sole reason for nationalisation of an industry which was conducted by more than 165 companies and which is older than half a century. There are always certain rotten apples in every basket. No body argues, I am sure, that because there have been stray instances of the so called 'scandals' in government enterprises, the government have no right to start these or other industries. Moreover, there cannot be any doubt that such cases were only stray instances and certainly not the general rule.

There has been, similarly, a vague talk about other malpractices in the industry. The only source of malpractices was the fierce internal competition. This was sought to be checked by limits on commission, which gave rise to the evil of rebating. Now certain type of competition reflected in one form or another will be present in every industry in the free sector as a result of market mechanism. If this mechanism was allowed to have its play, uneconomic units would have faced the wall and industry would have returned to normal functioning. If it was desired not to allow any company to collapse, it was the responsibility of the controlling authority to institute and implement suitable means to curb the tendencies. The Government took the initiative and shouldered this responsibility. But the Government control not only failed to curtail the fierce competition, it gave rise to worse problems. Further, the Government also failed to devise suitable ways and means to improve the situation. This failure of the Government and the worse problems as a consequence thereof, have become the crime of the industry and strangely enough the Government have taken recourse to it as argument for nationalisation.

In view of what I have said so far we can get only one conclusion that it was ideological predilection which actuated the fateful step. However, we have, on the contrary, repeated assurances of our Prime Minister that the policy of India will not be governed by ideological fancies and prejudices in the internal and economic no less than international affairs. We hope that this cleavage will draw closer and closer and it will be possible to reconcile government measures with the avowed objects enunciated by our Prime Minister.

The Government proposed in the first instance to allow insurance companies to operate life insurance business abroad. A conference was also called to devise a formula as to what companies should be allowed to do so. We also offered our services for the

same. All of a sudden however, it was announced, without taking us in confidence, that the Gove. - ment had already decided that the Life Insurance Corporation itself will transact this business.

Although the problems of general insurance are no less embarrassing, they are akin to those in the sister industry. The main problem is the internecine competition. Owing to tariff rates there is perhaps some way out in fire and miscellaneous departments, but there appears to be no remedy against the cut-throat competition and rate-cutting in marine insurance. It appears that this section has become a definite drain to the industry. Whereas other measures will no doubt be necessary, one wonders if the restrictions on commission rates may not be abolished. If it were done, perhaps, the only problem left to be tackled will be of cut-throat competition. I should, however, make it clear that I do not suggest that the overall limit on expenses should also be removed.

We are told that the Government were contemplating some measures to curb the evils. Least we should repeat the mistake I would wish that the government take the entire industry in confidence and seek their advice on the problems confronting them.

Among the new measures, perhaps some kind of test for the business-worthiness of the companies was being proposed. If this is an effective measure it will no doubt be very useful." But this is only the negative aspect. I believe we should explore posibilities of ways and means to deal with 'uneconomic units'. If some voluntary efforts can be initiated as for example amalgamation of smaller uneconomic units with larger units, the industry will benefit immensely.

It is also understood that there may be stricter inspection of companies. It may achieve some results but what will actually help the industry is a constructive approch. We should devise a programme first to put the industry on sounder footing and provide conditions for its smooth functioning. The type of inspection envisaged will play then a very important role in combing out any discrepancies which may be left over.

We have taken a very salutary and welcome step in establishing a Reinsurance Corporation of India. I recall with great pleasure that I had submitted a Scheme to the Government about three years back for establishing such a Corporation. We are glad that this Corporation will be collectively owned and operated by the companies themselves.

Now coming to the results of the working of the Society, as you must have noticed from the Accounts, the same have been divided and we have presented exclusively the results of the operations of the General Department.

The Profit and Loss Account has shown a net profit of Rs. 95,646 which is transferred to the Appropriation Account. This includes a sum of Rs. 1,34,125 transferred from shareholders Life Profit Account representing the surplus allocated to Shareholders out of the actuarial valuation conducted for the period ending 31st December, 1954. On the contrary our profit was depleted by the loss on exchange on account of the devaluation of the Pakistani rupee to tune of Rs. 2,64,530.

It would not be out of place if I mention here in the interest of achieving the better underwriting results we did not hesitate to sizably curtail the production in Accident Department in the midst of overall expanding business. Thus, whereas our Fire and Marine premium income showed increases the premium income in the Accident and Miscellaneous Department was curtailed by more than 50 per cent.

We had a carry forward from the last year of Rs. 1,07,856. After providing for the dividend declared for that year there was a net surplus of Rs. 47,856 brought forward to the Appropriation Account. Adding to this the net profit for the year and tax adjustment with Life Department, we had a balance of Rs. 1,71,667 for appropriation. As you are now aware, I am glad to say that your Directors have recommended a payment of a Dividend at the rate of 6 per cent on the Paid-up Capital of the Society.

I am confident, you will agree with me that the overall atmosphere is cheerful and optimistic and there is every reason to believe that we will make further strides of progress. In the midst of expanding economy and accelerated pace of inoustrialisation, the Society will not only have its own share of promise and success, but it will, in its own humble way contribute to the rebuilding of the nation as one of the sinews of modern progress. Whereas Life Insurance was an integral part of the Society's business and strength, I can assure you that, in its own sphere, the position of our existing business will be jeopardised on no account. Indeed, this will only promptus to further consolidate our position and serve the industry with renewed vigour.

WORLD OF FINANCE

(Continued from page 867)

possible to interpret the latest week's sharp increase in the balances of State Governments as indicating further payments being made by the Centre. If this second hypothesis were to be correct, there would have been the need for Government to have recourse to deficit financing for a much larger sum than suggested by the increase of Rs 30 crores under Rupee Securities in the Issue Department. Therefore, it may be that deficit financing has actually been for a sum of Rs 60 crores; that, thereafter, there has been a transfer of Rs 30 crores of marketable securities from the Issue Department to the Banking Department. The vastly increased resources of the Centre may then have been utilised, firstly, toward meeting month early disbursements; secondly, toward making payment of sums due to some State Governments; and, thirdly, toward payment to the Reserve Bank in behalf of the foreign exchange to be paid over to the Burma Government.

We must emphasise that the first hypothesis is much more likely to be an accurate one. That is to say, there has been book adjustment by the Reserve Bank in respect of securities bought by the Central Banking Institution from State Governments: the accounts of the State Governments have, in the Banking Department, been duly credited.

It is not, however, improbable that there should be an element of each hypothesis to account for the changes in the Reserve Bank returns. Part of the increase in the balances of State Governments would, in such a view, be accounted for by sales of securities to the Reserve Bank; and a further part of the rise in the deposits may have stemmed from payment being made by the Central Government.

It is to be noted that the fairly acute money stringency that is being experienced both in Calcutta and in Bombay has been particularly aggravated by month early disbursements. As a result, Scheduled Banks had inevitably to increase their borrowings from the Reserve Bank. The Other Loans and Advances of the Reserve Bank have gone up steeply by Rs 11.38 crores to Rs 94.73 crores; and part of the increased resources of member banks has presumably been utilised in increasing balances with the Reserve Bank, as evidenced in the rise of Rs 2.48 crores to Rs 54.87 crores in deposits of Scheduled Banks.

+

The statement of the State Bank of India for the week ended November 2 reveals a slight decline in deposits to Rs 229.37 crores from Rs 229.60 crores in the previous week. Borrowings from other banks are higher by Rs 2.03 crores at Rs 11.03 crores, while other liabilities, including inter-office adjustments, are lower by Rs 0.58 crores at Rs 7.08 crores.

On the assets side, cash balances are shown at Rs 16.20 crores against Rs 16.46 crores and Investments at Rs 107.10 crores against Rs 107.44 crores. Advances have risen by Rs 0.96 crores to Rs 130.72 crores—"Loans, Cash Credits and Overdrafts" accounting for a decline of Rs 3.31 crores and "Bills Discounted and Purchased" for a rise of Rs 4.27 crores.

+

According to the returns of the Scheduled Banks for the week ended October 26, both Demand and Time Liabilities are higher by Rs 2.96 crores and Rs 3.44 crores at Rs 646.37 crores and Rs 457.61 crores respectively. Borrowings from the State Bank have risen by Rs 0.33 crores to Rs 12.21 crores, while those from the Reserve Bank have declined by Rs 3.44 crores to Rs 57.81 crores. Cash and balances with the Reserve Bank are lower by Rs 2.05 crores at Rs 87.33 crores, and Investments by Rs 1.21 crores at Rs 371.53 crores. Advances are shown at Rs 612.06 crores against Rs 611.12 crores; Inland Bills at Rs 96.68 crores against Rs 97.29 crores and Foreign Bills at Rs 51.63 crores against Rs 49.69 crores.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED.

At a Meeting of the Board of Directors held on the 31st October, 1956, the following Dividends were recommended to be paid for the half-year ended 31st March, 1956, without any deduction for Income-tax paid by the Company:—

On 1st Preference Shares	8% per annum
On 2nd Preference Shares	4½% " "
On Preferred Ordinary Shares	10% " "

On "A" and "B" Ordinary Shares—Dividend @ Annas 14 per share and a Bonus of Annas 4 per share.

By Order of the Board,
F. W. HEILGERS & CO.
(PRIVATE) LIMITED,
Managing Agents.

DALMIA CEMENT (BHARAT), LIMITED

Registered Office: DALMIAPURAM, Madras State.

NOTICE

is hereby given that the register of members and the share transfer books of the Company shall remain closed from 19th November 1956 to 30th November 1956, both days inclusive for the purpose of the issue of new capital to the holders of Preference shares of Rs 40/- each and Ordinary shares of Rs. 2/8/- each in accordance with the Resolution of the Company in General Meeting dated 1st October, 1956.

CLIVE STREET GOSSIP

(Continued from page 874)

tunity to enter into houses that have long been shut to it. It should seize the chance and enter them and effect the spring- cleaning that they so urgently need. The difficulties in the way of such an enterprise are not to be underestimated. But the price of not attempting it would be heavy indeed. If the present mood of disenchantment with the big powers is allowed to run to waste, the big powers will withdraw into their shells of political cynicism; and no subsequent assaults on such positions of safety would be availing.

*

One heartening feature of the present confusion is the virtual unanimity of the views of India and the United States. These two countries should now attempt to bring their massive influence to bear on the other nations of the world and should try to transform what seemed the darkest week since the war into one that augurs the bright dawn of peace.

EAVESDROPPER

THE PENINSULA

(Continued from page 880)

tomed to argue in Urdu to switch on to English exclusively, so that they could facilitate a uniform practice.

The synchronisation of the birth of Andhra Pradesh with deepavali, the festival of lights, evoked from Mr Sanjeeva Reddi a few illuminating comparisons and interpretations. The word 'Andhra' itself was held to mean the emergence from darkness to light. "A new light is shining today in the hearts of three crores of Andhras". Today, Andhra Pradesh stands foremost among all the States of India. "A" is also the first sound in the Vedic mantra "Aum." Mr Reddi could think or signs that civilisation flourished in Telangana long before in other parts of the world. With these proud and auspicious reminiscences, he wished a great future for a State, extending over 110,000 sq. miles with a coast-line of 540 miles and with four sacred rivers, Krishna, Godavari, Pennar and Tungabhadra, yielding a rich and bountiful economy.

INDIA STEAMSHIP COMPANY LIMITED

Ordinary General Meeting

NOTICE is hereby given that the Ordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company, "India Steamship House", 21, Old Court House Street, Calcutta on Wednesday the 12th December, 1956 at 10-30 a.m. in order to transact the following business:—

1. To receive the Directors Report and audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1956.
2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1956.
3. To confirm the payment of Interim Dividend and to declare a final Dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March, 1956.
4. To approve the continuance of Directorship of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L., (Oxon), and if thought fit to pass the following resolution as a Special Resolution in respect of which a special notice as required under Section 281 of the Companies' Act, 1956 has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

   "RESOLVED that pursuant to provisions of Section 281 of the Companies' Act, 1956, Sir, A. Ramaswami Mudaliar, K.C.S.I., D.C.L., (Oxon), who has attained the age of 69 years do continue to act as a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him."
5. To approve pursuant to Section 261 of the Companies' Act, 1956, the continuance as a Director of Sir A. Ramaswomi Mudaliar, K.C.S.I. D.C.L., (Oxon), who was reappointed a Director at the Ordinary General Meeting held on 20th December, 1955, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the said Act has been received by the Company and the relative Explanatory Statement concerning which as required by Section 173 of the said Act, is annexed hereto.

   "RESOLEVD that pursuant to the provisions of Section 261 of the Companies' Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L., (Oxon), a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards, Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents, do continue his appointment as a Director."
6. To appoint a Director in place of Sir B. P. Singh Roy, K.C.I.E., who retires by rotation and is eligible for re-election and to consider, and if thought fit, to pass the following resolution as Special Resolution of which a special notice as required under Section 261 of the Companies' Act has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

   "RESOLVED that pursuant to the provisions of Section 261 of the Companies' Act, 1956, Sir B. P. Singh Roy, K.C.I.E., a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards, Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents and who retires by rotation be and is hereby re-elected a Director of the Company."
7. To appoint a Director in place of Maharajadhiraja Sir Udaychand Mahtab Bahadur of Burdwan, K.C.I.E., who retires by rotation and is eligible for re-election.
8. To appoint a Director in place of Mr. S. C. Roy who retires by rotation and is eligible for re-election.
9. To elect Mr. R. K. Mitra, a Director of the Company who retires by rotation and is eligible for re-election.
10. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 26th November, 1956 to 12th December. 1956 both days inclusive.

By Order of the Board,
A. MUKERJI.
Assistant Secretary,
INDIA STEAMSHIP CO. LTD.

Calcutta,
The 31st October, 1956.

The dividend, if sanctioned, will be made payable to those Shareholders whose names stand on the Register of the Company on the 26th November, 1956 and the Dividend Warrant will be posted from 8th January, 1957 onwards.

N.B.—Member entitled to attend and vote is entitled to appoint a proxy and the proxy so appointed need not be a member of the Company.

Explanatory Statement as required by Section 173 of the Companies' Act, 1956.

1. In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L., (Oxon), has attained the age of 69 years and hence his continuance as a Director needs your approval by a resolution in respect of which a Special Notice has been received from a Shareholder in accordance with the requirements of Section 190 and 281 of the Companies' Act, 1956. Sir A. Ramaswami Mudaliar joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interest of the Company that the Board should avail of his valuable advice which is of great asset to the Company, by retaining him as a Director of the Company.

2. In respect of Item No. 5 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholders of the Company as required by section 261, proposing that the appointment of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L., (Oxon), as a Director, be approved in accordance with the provisions of the said Act. The Managing Agents of the Company, Messrs. Lionel Edwards, Ltd., have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L., (Oxon), became a Director of the Company in the year 1947 and has for the last several years been associated as one of the Directors of the Managing Agents, who are entrusted with the management of the affairs of the Company and of which he has been the Chairman since the date of his appointment. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice and guidance, it is desirable that his continuance as a Director be approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

3. In respect of Item No. 6 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir B. P. Singh Roy, K.C.I.E., as a Director, be made and/or be approved in accordance with the provisions of the said Act. The Managing Agents of the Company, Messrs. Lionel Edwards, Ltd., have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir B. P. Singh Roy, K.C.I.E., became a Director of the Company in the year 1945, and has for the last several years been associated as one of the Directors of the Managing Agents who are entrusted with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice and guidance as a Member of the Board, it is desirable that his appointment as a Director be made or approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting (being the Thirtyninth Ordinary General Meeting) of the Company will be held at the Registered Office, 12 Mission Row, Calcutta at 11 a.m. on Friday the 30th November, 1956 for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March 1956, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend on the Ordinary share capital. The dividend, if declared, will be paid on or after the 17th December, 1956 to those Shareholders whose names appear in the Company's Register on the 30th November, 1956 or to their mandatees.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following resolutions which will be proposed as special resolutions.

   (1) That sub-clause 3(16) of the Memorandum of Association of the Company be deleted and substituted by the following two sub-clauses:—"16(a) To subscribe contribute or guarantee money for any national, charitable, benevolent, political, public, general or useful object or fund or for any exhibition." "16(b) To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance".

   (2) That Article 150(18) of the Company's Articles of Association be deleted and substituted by the two following sub-clauses:—

   "(18a) Subject to the provisions of Section 293(1) (e) of the Companies Act 1956 to establish maintain support and contribute or subscribe to any national, charitable, benevolent, political, public, general or useful object or fund and any institutions, society or club, which may be for the benefit of the Company or may be connected with any town or place where the Company carries on business".

   "(18b) To give pensions, gratuities, allowances, bonuses, profit sharing bonuses or benefits or other charitable aids payments or monies to or for the benefit of persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the wives, children, dependents or connections of such person or persons as may appear to the Directors just and proper whether any such person his widow children or dependents or connections have or have not a legal claim upon the Company".

6. As special business to consider and if thought fit to pass the following resolution, namely:

   "That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day. Provided, however, that the register required to be maintained under Section 307 of the Act shall be open for inspection of the members or holders of debentures of the Company between the times above mentioned only during the period prescribed by sub-section 5(a) of Section 307".

The Share Registers and the Transfer Books of the Company will be closed from the 20th November 1956 to the 30th November 1956 both days inclusive.

A member entitled to attend and vote at the Meeting is entiled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Calcutta,
5th November, 1956.

OLYMPUS

(Continued from age 878)

thought bestowed on the heavy human cost involved in such an advance. The probable impoverishment of the quality of the lives of the people, in the process, needs to be studied carefully.

In the field of culture, the UNESCO's achievements have been unpretentious but of vital significance. The importance of the implementation, largely by the UNESCO's efforts, of the Universal copyright convention by almost all governments of the world will be appreciated only by those who know something of the scandalous literary piracy that used to go on in the past. Likewise, the evolution and implementation of the international convention for the protection of cultural property in the event of armed conflict and for the regulations over archaeological excavations constitute an inestimable piece of service in the cause of preventing culture from becoming a casualty of primitive barbarism.

Other activities of the UNESCO, like development of museums and libraries, are not likely to hit the headlines, but their quiet influence will be gratefully acknowledged by their myriad beneficiaries. The Delhi public library, for instance, which is a joint effort of the UNESCO and the Government of India, is incomparably the most precious gift that the UNESCO could have given to library-starved Delhi. Similarly, the UNESCO is rendering inestimable service by facilitating exchange of vital data through microfilm reproduction of documents in other libraries and museums and by obviating difficulties caused by exchange control, etc., in the obtaining of books and periodicals.

In all these activities, the UNESCO is sustained by its faith in the validity of its basic assumption that it is the minds of men that need to be conquered and that this is best done by making the fruits of education and culture freely available to all. Among the projects to be specifically discussed in the current session is one designed to promote a better mutual appreciation of the East and the West. The UNESCO was born of the faith that the highest aspirations of mankind, whether of the East or the West, are common and it is this fact that makes any kind of hope for the future of mankind possible. The UNESCO also believes in the value of diversity in the manifestations of the human spirit. Therefore, there can hardly be a more stimulating and a more rewarding endeavour than an effort to understand the unity of ultimate ideals and the diversity of the manifestations of these ideals.

✱

WORLD OF COTTON

(Continued from page 877)

NEW YORK COTTON MARKET

Cotton futures, in the New York market, moved rather irregularly in slow dealings last week. Prices opened unchanged for near positions to slightly lower for other deliveries. Scattered hedging and liquidation then generally depressed prices. There was, however, a slight rally toward the close on some trade support. Middling spot was quoted at 34.45 cents per pound and December delivery at 33.85 cents.

Meanwhile, the US surplus cotton sales programme has been progressing satisfactorily. It is strongly suggested in Washington cotton circles that the September exports will even be higher than those of August. In view of the generally encouraging progress of cotton exports, trade sources in the USA are firmly convinced that the present export programme will be quite successful and that exports for the current season will be more than 5 million bales.

×

LIVERPOOL COTTON MARKET

The reactionary price trend, which was recently noticed in the Liverpool cotton market, gave way to a sharp advance during last week following the news of active hostilities breaking out in the Middle East. Fears of a hold-up in the shipping through the Suez Canal, which would result in heavy delays in shipments of cotton, were reflected in active short-covering in both the American and Sudan varieties. Egyptian contract was quoted higher at 60.00d and the Sudan contract at 54.80d per pound.

×

CLOTH AND PIECEGOODS

The Cloth and Piecegoods markets in Bombay continued to present a dull appearance on account of limited demand, both in the domestic and export sections, although developments in Egypt imparted a steadier tone.

It is reported that the volume of business in the domestic section is only 25 per cent of the customary figure, while the performance in the export section is even poorer, at 15 to 20 per cent. There is, however, a general belief that the demand will broaden in the coming weeks in view of the reports that stocks at important consuming centres have declined substantially

In the export section, Burma continues to help the trade with demand for printed chintz, mulls, coatings, cheaper shirtings and towels. West Africa is reported to be showing good interest in grey bafts. Enquiries from Hong kong, Singapore, UK and Canada remain, however, limited.

Stock Exchanges

MARKETS HESITANT

Watch-Dog Writes:

THE latest developments in the Middle East have again largely influenced trading in stock markets during the week. They have upset all economic calculations and let the markets guessing as to what next is to follow.

Operators are generally inclined to await further developments in view of the conflicting reports regarding the cease-fire" order. Although there has been a slight recovery in prices, the undertone still remains hesitant.

Equities on the Calcutta stock Exchange, after being marked down on a broad front, recovered partially toward the close on bear-covering.

Trading on the Bombay Stock Exchange was rather dull with price movements confined to a narrow range.

The Madras Stock Exchange gave a poor performance, and the general despondency continued as regards Plantation shares.

The London Stock Exchange ruled firm on reports of the "cease fire" order in Egypt and the President Eisenhower's re-election.

Wall Street hailed the President Eisenhower's re-election for a second term and the entire list showed a broad front of advances ranging to two points or more.

✱

Calcutta

Calcutta, Friday.

TRADING on the local Stock Exchange, during the past week, was again influenced by the reports of the Middle East situation. The opening was quiet and, with the speculative issues giving way on renewed offerings due to clearing adjustments, prices in sympathy were marked down on a broad front. Thanks to some bear-covering and the emergence of support, prices showed a slight recovery at the close.

Business, however, continued to be restricted as operators were inclined to await further developments in the international political situation. Also, investors were found to be shy due to lack of any specific inducement although they seemed to be earmarking funds for the new capital issues.

Tendency continued to be quiet in the Giltedged section. Apart from a little enquiry for short-dated issues, conditions were dull with prices showing further fractional falls. The State Loans were particularly affected in the absence of any worthwhile support. 3 per cent 1986 Conversion Loan moved narrowly between Rs 74-0 and Rs 74-4.

Except for some speculative interest in National Jute shares continued to be neglected despite firmer advices from the jute goods market on reports of the substantial decline in stocks. Operators were disinclined to enter into any commitments on the feeling that the industry would not be making much profits in view of the firmer tendency of the raw jute section. National, after being taken upto Rs 24-8 from Rs 23-14, finished steady at Rs 24. Nuddea opened at Rs 35 and, after being marked down to Rs 32-8, recovered to Rs 34 at the close. Howrah were offered at Rs 22-2, while Kelvin lost nearly 12 points at Rs 198. Dalhousie were nearly maintained at Rs 94-8.

Enquiry in the Coal section was confined to only a few selected scrips. Burrakur were pushed at one time upto Rs 17 from Rs 16-2 on speculative buying, to finish at Rs 16-15. Amalgamated were enquired upto Rs 22-12 from Rs 22-8 East Indian were, however, cheaper at Rs 31-9 against Rs 33-4 and South Karanpura at Rs 8-7 against Rs 9-8.

Trading in the Textile section continued to be restricted as operators were hesitant to extend commitments in view of their anxiety with regard to the prospects for the industry in the near future. Elgins were the only bright spot, having sustained support upto Rs 29-8. Kesoram lost half a point at Rs 16-8 with New Victoria easing off to Rs 2-9 from Rs 2-10. Bengal Nagpur met with some enquiry at Rs 9-8.

Quieter conditions in the commodity market had an adverse effect on the Sugar section where the only two bright spo's were Carew having support upto Rs 8-12 from Rs 8-10 and Darbhanga upto Rs 22-12 from Rs 22-10.

Tea shares recorded only a moderate turnover although prices off selected scrips ruled fairly steady. Operators were showing anxiety about the prospects for exports in view of the latest developments in the Middle East. Bishnauth old changed hands at Rs 24-10 to Rs 24-14; Gungaram at Rs 190 to Rs 192; Hasimara at Rs 30-14 to Rs 31; Hantapara at Rs 196 to Rs 202; Patrakola at Rs 228 to Rs 228-8 and Tezpore at Rs 23-12 to Rs 23-14.

Attention was mostly concentrated, during the week, on speculative stocks. Although lack of support and renewed offerings due to clearing adjustments caused a sharp setback in Indian Irons, there was a marked recovery toward the close, thanks to the excellent reports released by the company for the year ended 31st March, 1956. The scrip opened at Rs 34-2 and, after touching a low of Rs 33-4 finished better at Rs 33-7 on Wednesday when the settlement rate was fixed at the last quoted level. From Thursday onward the scrip changed hands on the ex-dividend basis at Rs 33-1 to R. 33-7, to finish the week at Rs 33-1.

Among other Engineering scrips, TEXMACO started at Rs 22-12 and, after touching a low of Rs 21-15, finished better at Rs 22-6. Jessop changed hands at Rs 36-8 to Rs 36-12, Burn at Rs 374 to Rs 376 and Richardson at Rs 27-4 to Rs 27-7.

In the Miscellaneous section, Indian Copper, after being marked down to Rs 4-5 from Rs 4-8 on lower advices from the metal market, improved at the close to Rs 4-6. Orient Paper were subjected to heavy selling pressure and the scrip, after touching a low of Rs 36-10 from Rs 37-7, recovered partially at the close to Rs 36. Titaghur Paper were steady at Rs 40-8, thanks to the announcement of an increase in dividend from Re 1 to Rs 1-2 per share. Shree Gopal moved narrowly between Rs 17-5 and Rs 17-8.

Elsewhere, India Steam and BIC were narrow markets around Rs 9-15 and Rs 11-1 respectively. Bone Valley were on offer at Rs 9-3 against Rs 10 on lack of enquiry. Rohtas changed hands at Rs 21-7 to Rs 21-10; Dunlop at Rs 28-14 to Rs 29; National Carbon at Rs 27-3 to Rs 27-12 and Karanpura Development at Rs 17-15 to Rs 18-4. Indian Cable ruled remarkably steady at Rs 33-4.

✱

Bombay

Bombay, November 8.

CONDITIONS on the Bombay Stock Exchange remained generally dull during the past week when price movements were rather irregular due to alternate bouts of buying and selling. After a steady opening, equities tended to harden on bull support and nervous shortcovering, on reports of the continued tension in the Middle East and the Russian threat of immediate action. In midweek, however, the sudden change in the Middle East situation following the cease-fire order had a restraining influence, resulting in prices being marked down. Again, toward the close, the market turned better with leading scrips recovering some of the lost ground due to short-covering. The undertone remained quiet

TEXTILES:—This section recorded small losses on balance, although leading scrips like Bombay Dyeing, Kohinoor and Century continued to be in request. The possibility of exports being affected as an aftermath of the Suez trouble and the reports of poor offtake in the cloth market acted as a damper. Bombay Dyeing opened at Rs 628-12 and, after touching a high of Rs 634-0 and a low of Rs 625-10, finished steady at Rs 628-2. Century moved between Rs 547-4 and Rs 554-0; Kohinoor between Rs 346-0 and 349-12 and Svadeshi between Rs 252 and Rs 255, to finish the week at Rs 551; Rs 348 and Rs 255 respectively. Simplex were done at Rs 199 to Rs 201: Finlay at Rs 338-0 to Rs 339-8; Svadeshi at Rs 437-8 to Rs 438-12 and Central India at Rs 132-8 to Rs 133-8. Ahmedabad Advance remained steady at Rs 200 with Shree Niwas closing better at Rs 216-14 against Rs 215.

STEELS:—Steel shares, after starting on a quiet note, gained strength on heavy short-covering following the news of a substantial rise in production at the company's Works during October. Tata Ordinaries, after opening at Rs 193-4, receded at one time to Rs 192, improved again to Rs 192-8, closing finally at Rs 193-8 Indian Irons opened at Rs 34-9-6 and receded to Rs 33-12-6, to finish better at Rs 34-4.

MISCELLANEOUS:—Scrips in this section came in for selective support. Premier Automobiles met with keen enquiry upto Rs 116-8 from Rs 108-8 following the announcement of 6 per cent dividend after a break of several years, Bombay Burmah were supported upto Rs 728-12 from Rs 720 on talks of higher dividend, to finish at Rs 725. Scindia Steams, after being taken upto Rs 19-4 on expectation of a higher dividend, eased off at the close to Rs 18-15-6 on profit-taking. ACC changed hands at Rs 194-4 to Rs 195-8, while Digvijay remained dull at Rs 194.

Sugar shares ruled steady. Belapur were supported upto Rs 251; Bhopal upto Rs 17-14 and Phalton upto Rs 162. Premier Construction, after opening at Rs 208 and improving to Rs 212-8, receded at the close to Rs 211. National Rayon evoked considerable interest and the scrip, after being marked upto Rs 268 from Rs 259-8, finished the week at Rs 261-4. Tata Chemicals had buyers at Rs 20-2 to Rs 20-4 following the announcement of a maiden dividend, while Tata Oils ruled steady at Rs 52-12. Shivrajpur Syndicate closed better at Rs 36-12 with Alcock ruling steady at Rs 330

BALANCE-SHEET REVIEWS

(Contineud from page 864)

from Rs 1.43 crores to Rs 1.46 crores, while the net profit is higher at Rs 7,35,188 against only Rs 1,55,590 in the previous half-year. The amount set apart for Depreciation is slightly lower at Rs 2.75 lakhs against Rs 2.85 lakhs.

£ R$

Morarjee Goculdas Spinning and Weaving

Although sales are maintained at Rs 2.79 crores, the Morarjee Goculdas Spinning & Weaving Company has reported a substantial increase in earnings for the year ended 30th June, 1956. The net profit, before Taxation and Depreciation, works out to Rs 36,14,576 as against only Rs 17,42,993 in the previous year.

Thanks to a rise in earnings, the Depreciation amount has been raised to Rs 18.46 lakhs from Rs 4.92 lakhs and Taxation to Rs 8.00 lakhs from Rs 1.11 lakhs, although no provision is made for Other Funds as in the case of the previous year when a sum of Rs 4.20 lakhs was set apart against this account. Even after these increased allocations, the directors have found it possible to raise the dividend on the Ordinary shares from Rs 14 to Rs 15 per share.

✱

WORLD OF BUSINESS

(Continued from page 869)

between. If, as he claims, only 4 out of the 165 insurers were guilty of misappropriation and possibly not more than one of them succumbed to the devil before nationalisation, the allegations of Government spokesman must undoubtedly be regarded as exaggerations. Anyway, it is refreshing to see a factual and outspoken attempt to challenge the official stand.

But when Mr Jalan proceeds to enlist the support of authorities like Mr Eugene Black in his criticism of Government policies, he seems to be treading unprofitable ground. It is also not wise to see the immediate post-nationalisation problem for life insurance with a magnifying glass. The expert ingenuity and considered foresight which Mr Jalan properly regards as indispensable for the management of nationalised insurance will be duly forthcoming. The Government have chosen some of the most reputed men from among those who have been guiding the destinies of the erstwhile companies.

The working results of the General Assurance Society roughly reflect current difficulties for insurers. For the Society, the year 1955 shows a considerable loss on the marine account; this is a sphere in which cut-throat competition is allowed to prevail and every one will agree with Mr Jalan that until the present methods of securing business are given up, this field of general assurance is not likely to be an asset for most companies. In other branches, the General Assurance Society's performance has been satisfactory. For 1955, the company will pay a dividend of 6 per cent.

ECONOMIC EFFECTS OF SATELLITES' LIBERATION

(Continued from page 868)

last ten years, Eastern Europe provided one of the worst examples of Colonialism in history. There was ruthless exploitation of the satellite States, the interests of which were entirely subordinated to those of Soviet Russia. This colonialism was all the more shocking as it had not for its justification the existence of a need for developing a backward country by a more advanced country. Poland, Hungary, Czechoslovakia and Roumania are culturally and economically at a more advanced stage than Russia. Their exploitation was a case of advanced people being exploited by a backward people.

Soviet Russia benefited to a high degree by being able to commandeer the resources of the satellite States. Now that this may come to an end, it will be thrown back on its own resources. This means that, other things being equal, the progress of industrialisation will have to be slowed down in order to maintain the supply of consumer goods in Russia even at their present highly inadequate level. In particular it will be necessary to divert industrial capacity from the expansion of heavy industries to the expansion of light industries to that end. And agricultural expansion will have to be given a higher priority, to replace land products hitherto commandered from satellites.

The politico-military effects of the change will operate in a similar sense. Quite obviously Soviet Russia can no longer depend on the support of the armies of the former satellite States. And, since it is the opinion of Russian military leaders that the restoration of the independence of these States is liable to weaken Russia's defences, the Kremlin will have to decide to increase the number of Russian divisions which must be kept in readiness. This, again, means a diversion of productive capacity from civilian to military purposes; and, since industries producing consumer goods must be maintained and even increased, the expansion of heavy industries is bound to be affected by the increased military requirements.

Hitherto, we have assumed that the supply of consumer goods in Russia would be maintained at its present level. In fact, one of the results of the Polish and Hungarian revolts is likely to be growing pressure on the Soviet Government to increase the volume of consumer goods in Russia. This will become necessary in order to safeguard the regime against being overthrown as a result of the growing discontent of the long-suffering Russian consumer.

Most revolts originated not through love of freedom for its own sake but through discontent caused by economic oppression. The American War of Independence provides one of the innumerable instances. The British Revolution of the 17th Century began with John Hampden's refusal to pay shipmoney. All experts on Eastern Europe agree that, had Poles and Hungarians not been driven to despair by the reduction of consumer goods supplies as a result of Russian exploitation, and the forced expansion of heavy industries ordered by Moscow, they would not have dared to risk extermination by irresistible waves of Russian announced divisions. Notwithstanding censorship, the Russian masses are bound to realise sooner a later that, as a result of repudiation the authority of the Soviet Government, Poles and Hungarians are now able to achieve a higher standard of living. In order to avoid any violent outbreak of this discontent in Russia itself, Moscow will have to make considerable concessions by increasing the volume of consumer goods.

This must mean that light industries have to be expanded to the detriment of heavy industries, and that the exportable surpluses of goods available for the requirements of economic cold war will be less plentiful. The Soviet Government will be in a less favourable position to carry out gigantic capital investment programmes in other countries for the sake of causing economic or political embarrassment to the Western Powers. Even in the absence of any diversion of productive capacity for such purposes, the expansion of Russian heavy industries will have to be slowed down very considerably. Should Russia continue nevertheless to build steel works and dams in uncommitted countries, this means that the expansion of Russian heavy industries would have to be further curtailed to a corresponding extent.

Liberalisation in Eastern Europe may also mean that the countries which regained their freedom will trade more extensively with the Western world. In this sphere, Russia's loss would be the gain of the non-Communist industrial countries.

It would be unduly optimistic, however, to suppose that, from the point of view of the free world, the change is an unmixed blessing. There may be, unfortunately, another side to it. If it should be possible to maintain in Eastern Europe National Communist regimes enjoying full sovereignty, Communism may become more attractive to Socialists in non-Communist countries. Many of them are at present opposed to Communism because they do not want their countries to be dominated by Moscow. If it should prove possible for Communist countries to maintain their independence from Moscow, their example is liable to increase the number of Communists in the Free World. In countries such as France and Italy, where the proportion of Communists is already very high, this might easily tip the balance of power in their favour.

While the change in Eastern Europe tends to reduce materially Russia's power for evil, it also tends to strengthen the disrupted forces within the free countries. To avoid unwarranted optimism, it is well to bear in mind this aspect of the situation.—(Copyright).

GATEWAY GOSSIP

(Continued from page 875)

The second post-war boom, partition, the mild recession and devaluation—all these *did not touch* the Bank of India. In 1954, Mr D. R. Thom succeeded Mr Clarke as General Manager and continues to hold that position.

It has been almost without event, this growth of the Bank of India from an institution that started out in 1906, with a capital of Rs 50 lakhs and working resources aggregating Rs 67 lakhs to the colossus that today has a paid-up capital of Rs 2½ crores and a balance sheet total very near the Rs 100 crore mark at Rs 97.36 crores. If I have used the word "event" in respect of the progress of the Bank of India, I may make it clear that the days through which it has lived were themselves greatly eventful. But, in the case of a bank, the greatest compliment that one can pay is to say that it has had an uneventful career. I remember that, in the 1920's, when most banks were having recurrent crises in the confidence they commanded from their constituents, the Bank of India alone stood solid as rock. When you look at it, the ultimate compliment that we pay to a woman is that her's has been an uneventful life.

The ultimate tribute for the Bank of India, therefore, must similarly be said to be that there is not a single sensation or flurry in its 50 years of solid and substantial progress. As an old Gateway citizen, I feel I have the right—and indeed the obligation—to wish many happy returns of further jubilees that will undoubtedly—and indeed inevitably—follow in due course.

*

NORTH INDIAN MARKETS

(Continued from page 879)

Gur

The Gur maret at Hapur continued to rule quiet and the rates for new Gur moved between Rs 13-0 and Rs 15-4 per maund, according to quality. Arrivals averaged 1,500 maunds daily and there was good buying, both from Gujerat and East Uttar Pradesh.

Old gur was also in request during the past week. Stocks of these were placed at 9,000 maunds.

GATEWAY MARKETS

(Continued from page 876)

Copper ready was quoted higher at Rs 201 per cwt on reports of scarcity of all types of this metal. In sympathy, Lead moved up to Rs 84-0 from Rs 82-0 although the stock position was heavy and the demand continued to be slack. Zinc was quoted lower at Rs 68-0 against Rs 70 in the previous week; but trade circles believe that prices may record a rise as a result of threat to new supplies. Also, Tin recorded a drop to Rs 137-8 from Rs 140-8 per quarter despite firm Singapore and London advices.

On the London Metal Exchange, Copper ready was quoted at £285 per ton; Tin at £877; Lead at £117½ for first-half November delivery and Zinc at £99½ for first-half November delivery.

*

SOUTH INDIAN MARKETS

(Continued from page 881)

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were small due to rains, while clearances were fair and prices ruled steady. Arrivals and clearances of Buff hides showed no change. Arrivals of Cow Calf and Buff Calf were the same as in the previous week and prices for these remained unchanged.

In the export section, operators were awaiting further developments in the Middle East. Only very few transactions were reported done.

In the Tanned Skins section, arrivals were interrupted due to rains. There was a clearance of about 34,200 sheep skins and 2,000 goat skins. Prices for these showed only minor changes over last levels.

In the export section, there was better enquiry for fifths and inferior fifths in best marks of Goat skins. The market for Sheep skins ruled weak with prices showing an irregular tendency.

The market for Raw Skins ruled firm; and larger arrivals of sheep skins were reported.

*

Coffee

The Coffee Board is reported to have disposed of 3,695 tons of coffee during September, over 1,900 tons being sold in the internal market. During the first nine months of the current year, 25,056 tons were reported to have been sold from the Pool as against 12,956 tons in the corresponding period of last year. It is reported that the question of the disposal of the remaining stock will be discussed in the second week of November.

*

GOVERNMENT OF INDIA TREASURY BILLS

During the week ended November 2nd 1956 Government of India Treasury Bills for Rs 62,71,75,000/- were sold in favour of the Reserve Bank of India.

Task for the Two Leaders

(Continued from page 865)

combination of sobriety, firmness and moderation that his electorate could not afford, especially in these highly critical times, to think of an alternative regime. The apparently unfriendly complexion of the Congress is not likely to bother the President seriously. It may well be that he is going to have the best of both parties, in the practical conduct of affairs at home and abroad.

It is no irrelevant coincidence that the recent threat of a global conflagration receded largely against the initiative of two men, Eisenhower and Nehru. Among the handful of men who are now capable of swaying world events, these two alone have preserved their political sanity and cared to throw in their weight against the infectious spread of bellicosity. But the situation is getting increasingly precarious. It must impel the two men, who form the sole bulwark against an atomic war, to come more closely together immediately and seek means to convert a temporary relief into a settled, normal condition. It can be hoped that neither of them will belittle the seriousness or the urgency of the task devolving on them.

The task would prove harder than what it appeared a month ago. Several chords which bound international groups and facilitated constructive collective action have either broken or have loosened. The political consequences of the Anglo-French military adventure in the Middle East may not be altogether wholesome. Even before this unfortunate development, certain contradictions were noticeable between British and US attitudes on international issues. The wave of sentiment on behalf of a European Federation dashes against and corrodes the already shaky structure of the Atlantic Community. The conduct of the Soviet Union in Hungary is surprisingly disheartening. For the sincere peace-maker, there has occurred a bewildering proliferation of problems and a sinister confluence of them. Against this challenge, the only hope rests on the unimpeachable qualities of the leadership in the US and in India —and the inherent love of peace in man.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray?
At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what?
Merely that steel tubes *pipe up water* from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

TATA STEEL
SERVES THE NATION

For the Investor

New Trend in the New Issues Market

Investment Gossip:

Gateway Gossip, in this issue, refers to the relation between the investment market and the money market. Its conclusion: there need be no essential relation between the two.

While the money market was passing through an intensely stringent phase and was full of forebodings of yet severer stringency in the coming months, the new issue of Guest, Keen, Williams was made; and it met with instantaneous over-subscription.

Early next month, Hindustan Lever will make its bow in the Indian capital market; and the money squeeze may be even tighter. All the same, the new issue is assured of overwhelming success.

By the same token, the impending new issues of Burmah-Shell Refinery and Dunlop are sure to evoke lively interest in investment circles.

What is the lesson of developments such as these? The answer is simple: up to a point, and in certain cases, there is no essential relation between the conditions in the money market and the receptivity of the new issues market. Stringent money or easy money, the new capital issues of concerns in whose management the investors can have complete confidence are assured of enthusiastic response.

Just as, over the past three or four years, the investor has become increasingly selective in his preferences, the new issues, too, have tended to be more and more selective. It is not without significance that most of the recent new issues have been less concerned with the timing, and more solicitous of the predilections and tastes of the investors.

Another important inference to be drawn from these trends is that the large body of bonafide investors confine themselves to selective purchases from among existing securities and to a likewise selective buying of shares in such new issues (even at a premium) as satisfy their insistance on good, trusty and honest management. These investors have strictly kept themselves aloof from the shares which monopolise the fancy and excite the gambols of pure speculators.

It may, thus, be said that a small but powerful group has come into being whose sole concern is unalloyed gambling and who are in no way susceptible to the criteria relevant in the case of genuine investors; that such speculation foists its interest and activity on a few shares deemed suitable for such purpose; that speculators as such are not generally involved in transactions outside the speculative counters; that, in the result, speculators are isolated from investors, and speculative scrips are, similarly, isolated from investment scrips.

It happens that some of the speculative scrips like Indian Irons, Indian Copper, TEXMACO, Orient Paper have also attractive investment potentialities. The genuine investors, however, are showing a growing disposition to let them alone, as they are puzzled and confused by the wild and wide price gyrations.

It is clear that the state of money rates is of comparatively minor relevance in the determination of the choice of bonafide investors when there is an opportunity to put out their funds in a bonafide investment scrip.

The speculators are, however, affected by monetary stringency; and their style is cramped in such conditions.

£ R$

Investment Notes:

In an otherwise dull Jute section on the Calcutta Stock Exchange, Bally Jute are receiving good support upto Rs 177. It is learnt that there will shortly be a change in the managing agency from Jardine Henderson Limited to Birla Brothers, subject to the Government sanction. Market circles are keenly awaiting the full details. In this connection, a meeting has been convened on the 10th December.

The managing agents of Dalmia Cement (Bharat) Limited are resigning their rights to subscribe to the new Ordinary shares of Rs 2-8 each in favour of the registered holders of the Ordinary shares of Rs 10 each as on 30-11-1956 in the ratio of three Ordinary shares of Rs 2-8 each for every Ordinary share of Rs 10 each on payment of compensation of As 8 for every Ordinary share of Rs 2-8 each. Those, who obtain the right, will have to give an undertaking not to dispose of their shares for a period of two years.

Unilever Limited has offered 5.57 lakh Ordinary shares of Rs 10 each of Hindustan Lever Limited—formerly known as Lever Bros (India) Private Limited—at Rs 16-8 per share, payable in full on application. As shares are considered to be an attractive investment, it is expected that the issue will meet with a warm response.

The founder-holders of Voltas shares are expected to release to the public a large number of shares from their holding in the form of rights at a premium of Rs 11 per share of Rs 100 each.

Kemp & Company is likely to decide for a bonus issue in the ratio of one share for every share held in view of the completion of 75 years and the under-capitalised position.

In Madras, Lucky Valley Tea Estates have not passed the resolution regarding the proposed issue of capital and acquisition of the adjoining estates.

An ordinary general meeting of the Bangalore Transport Company Ltd. will be held on December 20, 1956, to consider and pass the resolution regarding taking over the undertaking of the company by the Government of Mysore with effect from October 1, 1956, resulting in the voluntary winding up of the company. The share transfer books will be closed from December 17 to 20.

Shevroy Estates have raised the dividend from 7½ to 10 per cent for the year ended 30-4-1956. Transfer Books are closed from 23-11-1956 to 29-11-1956.

The Tata Iron and Steel Company, Limited, reports that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of October 1956 was:—

		(Tons)	(Tons)
Pig Iron	..		96,700
Steel Ingots	..		91,100
Saleable Steel:			
Semis	...	22,400	
Finished	...	49,400	71,800

Rane (Madras) Limited has obtained the Government sanction for the issue of 45,960 Ordinary shares of Rs 5 each as bonus to the existing Ordinary shareholders in the ratio of one for every share

Excellent Results of India Steamship

Balance-Sheet Reviews:

THE India Steamship Company Limited has produced excellent working results for the year ended 31st March, 1956, thanks to the support and patronage extended by the Indian and Overseas shippers. Income by way of freight is higher at Rs 5.26 crores as against Rs 4.01 crores, while the net profit for the year, before providing for Taxation Reserve and Depreciation, amounts to as much as Rs 80,22,918 as against only Rs 24,18,299 in the previous year.

In view of the substantial rise in earings, a sum of Rs 15.00 lakhs has been set apart for General Reserve and Rs 1.42 lakhs for Taxation Reserve, in addition to the Depreciation amount being raised from Rs 22.88 lakhs to Rs 41.50 lakhs. Even after these increased allocations, the directors have found it possible to recommend a final dividend of As 8 per share on the Ordinary shares, making a total dividend of Re 1 per share for the year as against nil in the previous two years. In other words, the last dividend, paid by the company on the Ordinary shares, was for the year ended 31-3-1953, at As 8 per share.

According to the Directors' report, the company is pursuing its policy of expansion of the Fleet. Accordingly, two new vessels "Indian Resolve" and "Indian Resource" have been acquired, and they started on their maiden voyage in March 1956 and June 1956 respectively. As these ships started operating after the closing of the financial year under review, their earnings are not reflected in the freight earned during the year.

During the year under review, the company's fleet made 26.5 voyages against 22 voyages last year. The round voyage of a company's ship took on an average 13.7 days less than in the previous year. This was as a result of special steps that have been taken to obtain a better turn round for the ships both in India and abroad. This is in spite of the fact that the delays and detensions in Ports continued as in previous years.

As can be judged from the working of the company, prospects for the current year appear to be bright. The company's fleet has been maintained in Lloyd's highest class.

HIGHLIGHTS

It is of importance for the reader to know the trends and prospects in Congress attitudes and policies.

For, the upheavals in East Europe have weakened all opposition to Government in this country.

The Congress bids fair, at its present popularity and prestige, to sweep into power in the next elections.

From this point of view, the trends in the Congress thinking of today will most probably be the Government policies of tomorrow.

If, then, it is desirable to know what the Congress attitude is, we are fortunate in having been given a comprehensive picture of it.

This comprehensive picture is available in the Five Notes that were prepared in connection with the recently held AICC session.

One defines the role of Congress; the second assesses the social gains of planning; the third gives a pen picture of Congress ideology; the fourth indicates the economic conundrums raised by the Second Plan; and the fifth analyses the resources for implementing the Second Plan.

In the Leading Article, the reader will find a study of these five important documents—the Five Notes.

Dividend Raised by Burn & Company

Burn & Company Limited has also presented excellent working results for the year ended 30th April, 1956. The turnover has substantially increased in comparison with the previous year.

While output at most of the company's Works was not unsatisfactory, the increase in the value of the sales from Rs 6.32 crores to Rs 8.32 crores is, to a great extent, due to increases in prices owing to higher cost of steel and due also to the fact that the various refractory works at Raniganj and Durgapur worked a full year whereas, in the previous year, four of the Works were closed for about eight months.

The net profit for the year, before providing for Depreciation and Taxation, amounts to as much as Rs 1,07,50,747 as against only Rs 55,85,251 in the previous year. The directors have, after setting apart Rs 12.42 lakhs (Rs 12.32 lakhs) for Depreciation; Rs 40.00 lakhs (Rs 15.75 lakhs) for Taxation; Rs 2.67 lakhs (Rs 3.00 lakhs) for Taxation Contingency Reserve and Rs 52.42 lakhs (Rs 10.50 lakhs) for Other Funds, raised the dividend on the Ordinary shares from 15 to 20 per cent.

The company has concluded negotiations with the Magnesite Syndicate Limited of the United Kingdom for the purchase, on favourable terms, of the mines, properties and leases of that company at Salem and, in order to provide for this project, a sum of Rs 18 lakhs has been set aside from the profits as an initial contribution towards the finance involved.

The directors have, in their report, stated that a certain amount of unrest is apparent from time to time in all the Works. They are of the opinion that the results for the year are due to the favourable trading conditions prevailing in India just now rather than to any outstanding effort from the workers.

After the close of the year under review, the unrest in the Howrah Works became more and developed into a series of minor stoppages of work. Eventually, key sections of workers refused to carry out their duties, thus bringing about within a short time the total closure of the Works for the six weeks ending 24th July last. Workers resumed work from that date on the same terms as they were previously enjoying.

Carron Tea

In common with other Tea companies, the Carron Tea Company Limited has reported a substantial decline in earings for the year 1955. Although the crop outturn is higher at 7,625 maunds against 7,551 maunds, the average price realised is only Rs 1-13-7 against Rs 2-3-10 per pound.

The net profit, before Depreciation, amounts to only Rs 78,024 against as much as Rs 5,12,694 in the previous year. The directors have transferred Rs 19,062 against Rs 72,674 for Depreciation and Rs 40,000 against Rs 75,000 for General Reserve. No provisions are made for Taxation Reserve, and Building and Machinery Reserve as against Rs 1.60 lakhs and Rs 65,000 respectively allocated to these items last year. The dividend has been reduced to 7½ per cent from 25 per cent. Estimates for 1956 provide for a crop of 7,000 maunds.

£ R$

Hasimara Tea

The Hasimara Tea Company has also reported a substantial decline in earnings for 1955. Drought was again experienced at Hasimara early in the year which, together with a strike of labour that affected three of the four Hasimara divisions seriously from 22nd August to 8th September, reduced the cop outturn fom 79,641 maunds to 75,909 maunds. The average price realised per pound is only Rs 2-3-3 against Rs 2-3-11. The net profit, before providing for Taxation and Depreciation, amounts to only Rs 10,90,010 against as much as Rs 54,52,684 in the previous year. With the result, the allocation to Depreciation has been reduced from Rs 5.41 lakhs to Rs 3.78 lakhs; Taxation from Rs 15.47 lakhs to Rs 3.34 lakhs and other Funds from Rs 7.00 lakhs to Rs 1.87 lakhs. The dividend on the Ordinary shares has been reduced from 60 to 10 per cent. Estimates for 1956 provide for a crop of 78,200 maunds.

£ R$

Huldibari Tea

In common with other tea companies, the Huldibari Tea Association has reported a decline in earnings for 1955. Although the crop outturn is higher at 22,090 maunds against 20,092 maunds, the average price realised per

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE most important contribution which may be said to have been made at and by the recently concluded AICC Session in Calcutta lies in the crystallisation and enunciation of the beliefs and attitudes pertaining to the Second Plan that today hold sway with the leaders in the Party. The notes issued in connection with the session are remarkable in their comprehensiveness, coherence and compactness in the adumbration of Congress policy. Although these documents do not have attached to them the special importance inherent in a Government announcement, we need to remember that the members of Congress who authored these notes have, in their official capacities and responsibilities, an important say in Government affairs. Secondly, both the trend of politics within the country and happenings abroad have been of such character as more or less to ensure the continuance of the Congress party in power not only at the Centre but also in all the State Governments. It is possible to suggest, therefore, that the motivations implicit in the policies delineated at the Congress Session are tantamount effectively to the rationale upon which Government policy will be based in the next five years. This fact would sufficiently justify a studious analysis of the sentiments expressed at the Congress Session. To this is added, as we have remarked, the most hearteningly correct coherence in outlook that has exemplified the notes published on the occasion.

For the purpose of our study, we need to pay special attention to the notes prepared by Mr U. N. Dhebar, Mr Jagjivan Ram, Mr Khandubhai Desai, Mr Manubhai Shah and Mr T. T. Krishnamachari. While there is some overlapping, each one of these important members of the hierarchy in Congress has largely succeeded in confining himself to a more detailed examination of a particular aspect of the role of Congress in the India of tomorrow. In the result, each note contains much that is valuable; and the five notes combine to present a comprehensive picture of Congress policy which, in turn, is reflected in the statement on economic policy which has been released to the press. Our task of analysis has necessarily to be interspersed with comments and we shall take up the notes in the order already indicated.

*

Mr Dhebar's note has been prepared in his capacity as the President of the Congress party; and he, therefore, very properly has addressed himself to the task of placing the role of Congress in India's historical perspective. The first sentence of his note is to the effect that "one of the most important contributions the Congress organisation has been privileged to make is in fashioning the unity of this country." The unifying force without parallel that the Congress has been is a fact that has its evidence in the freedom that we have won. The Congress President can also justifiably claim that the party "still continues to be the main cementing force." But the unity of the past, and the oneness that existed before independence, were derived from the inescapable need for a common front in the waging of a war for freedom. The peoples of a subject nation are in such view always possessed of an inevitable rallying of forces because of the existence of a common goal. The danger to unity, after freedom is achieved, is, however, real. Mr Dhebar may have been thinking of the upheavals in Eastern Europe when he asserted that "a feeling of oneness that is dependent only upon the capacity of the Police or Military to maintain the unity has very little survival value."

If the magic of nationality is the feeling of oneness, we have to be on our guard against causes which may break India's solidarity. Mr Dhebar feels that the first threat to the unity of the country is social antagonisms; the second is economic disparity.

The social or internal antagonisms are by no means a new phenomenon in this country. The legacy of caste which has been bequeathed to us, and the pride of parochialism which we have sadly succumbed to, have both the perilous seedlings of disunity. It was communalism which killed the Father of the nation; it is parochialism which, hardly a few months ago, threatened a wave of disorder. Mr Dhebar defines the role of the Congress in this context in the following words:

"Congress has a mission to carry the original process of synthesis to its logical end and revive and revitalise the old spirit of adventure and synthesis, once again, whereby the nation can break through its external crust of a rigid existence and drink once again from the natural, indigenous springs those waters which gave it vitality and capacity for synthesis."

On the other hand, on the economic plane, Mr Dhebar points out that the struggle is not between the poor and the rich, "so much as a struggle by a large body of persons living under sub-human conditions and denied minimum opportunities for a decent life in the present peculiar social and political context."

It is in such terms that the Congress has to meet the challenge of the next quinquennium. The basic objective is increasingly to create the conditions wherein the social antagonisms will have less of a chance to wreak their havoc and in which economic disparity will gradually be less glaring. But, for this purpose, the Congress has to equip itself to meet the challenge. It has, therefore, to be correct as to its approach. Mr Dhebar has suggested that the approach to the question of unifying and keeping united the country should be based on the following three criteria:

"(1) Clarity about the basic situation that confronts us.

"(2) Clarity about the policy and programme to meet the same.

"(3) Defining the role of the organisation in implementing the policies and programmes thus outlined."

The situation within the country is aptly summed up by the Congress President in the following terms:

"First and foremost, there are certain tendencies that we have inherited from the past. Then there are unresolved social conflicts. There is feudalism, provincialism, linguism, a tribal outlook, a rigid caste system. There are other factors also—the colossal illiterate population, the regional backwardness and an ever-increasing population. There will be hardly any room for nationalism or democracy to grow if these forces also flourish simultaneously."

If the basic situation is that we are passing through a socio-economic revolution, the Congress has to be clear in its mind as to the policy and programme that it has to adopt. Within the party, argument rages as to whether the social revolution should precede the economic revolution or vice versa. It is here, we suggest, that Congress thinking has tended to be unsure of itself. Mr Dhebar confesses this: "Our minds are diffused with some such thoughts and the dark mists of confusion sit heavily upon them."

Obviously, in Indian conditions, the revolution that we are passing through cannot be over-simplified as being social or economic. It is a finely woven admixture of both. Economic betterment will not suffice to bring peace and contentment unless such process is accompanied by the removal of the artificial barriers set up by caste and communalism. As Mr Dhebar points out, the Congress has, on the one hand, a battle to wage against revivalists "as indicated by the approach of Hindu Maha Sabha, Ram Rajya Parishad, Jana Sangh". On the other hand, the Congress has "to fight the concept of a purely economic man..as indicated by the policies of the Communist Party." To wage the war on two fronts, the Congress President recognises the need for a dynamic approach in solving the difficulties. As he puts it. "Policies that we adumbrate and the programme that we lay down must not be lacking in dynamic content; otherwise we lag behind; the dynamic masses will march ahead of us and a gap will be created which perpetually goes on increasing till the bonds that unite us with the masses are finally snapped."

This brings Mr Dhebar to the role of the Congress in carrying out such policies as have been drawn up. It is unfortunate that the feeling should have grown among some sections within the country, that the fruits of freedom automatically follow the gaining of independence; in other words, freedom has led to inertia. But what is needed in the context of socio-economic revolution is dynamic action. Such action can be directed only if the personnel in the organisation is of the highest quality. In such a view, care has to be taken to ensure that the Congress party is able to take the masses with it in its march forward. If the personnel in the Congress were to think of their task merely in terms of leadership, they will have failed the party and the country. For, as Mr Dhebar states, "the broad masses of India, once they are on a move, will think of a picture of their own rather than accepting a picture that a middle-class worker wishes them to accept." There is, consequently, the need "to adjust our minds to the urges and aspirations of the masses rather than expect the masses to fashion after ourselves."

Secondly, Mr Dhebar calls upon the Congress to galvanise the mass mind. The task of Congress personnel may be said to be as follows:

"We have to prepare them for eliminating all social barricades of castes, creeds and communities and language and what not. We have to carry conviction to them that neither revivalism nor communalism can deliver the goods in India. We have to enable them to throw up their own leadership in fields and factories to build up a co-operative structure of society. We have to enable them to produce more wealth. Shall we be able to do this from our seats in the legislature or from the chairs in the Ministry or from bureaucratic bossing in the organisation or on the other hand by living with the masses and identifying ourselves with them?"

Mr Dhebar's thesis on the role of the Congress organisation is pithily summarised in one sentence: "The bedrock of the Congress organisation must be constructive activity."

★

Mr Jagjivan Ram has sought to give an indication of what he calls the social gains of planning. His starting point is that there are limitations to democratic planning. Two problems need to be solved. First, the cynic might charge that democracy could scarcely coexist with caste, and that private enterprise and social order evolving into socialism were incompatible. The note points out that, fundamentally, the slow pace of change since independence can be ascribed, firstly, to the limitations posed by democracy and, secondly, to the fact that, on gaining independence, Government "could not write on a clean slate." But it is remarked that, even under the First Plan, with land reform being vouchsafed the largest modicum of attention, the social gains are not inconsiderable. Firstly, there is the new concept of the dignity of labour. Secondly, labour legislation has been carried through with a view to improving the lot of this class in society. Thirdly, we have had the legal abolition of untouchability. Fourthly, the Constitution guarantees fundamental rights. Finally, and most important of all, the Zamindari system has been abolished. All these are, as Mr Jagjivan Ram points out, "as a pillar of the new, free and equalitarian society we are trying to build." He then goes on to cite the specific progress that has been recorded in such matters as the welfare of scheduled castes and rehabilitation of displaced persons.

What, then, is the gain accruing to the country from the First Plan? One may say that it lies in the new found dignity of labour; in the reorientation of social thinking with a view to providing for the scheduled castes and tribes and minorities; in a new concept of capitalism in which it is being made to conform more and more to social needs; in the birth of a new era for those that live on the land by virtue of the abolition of Zamindari; and in the embarkation on a new adventure to build a new India by means of the Second Plan.

Mr Jagjivan Ram would appear, with some pride, to be pointing to these gains; and he is contemptuous of the critics:

"To sum up, the financial, economic and administrative measures adopted under the First Plan are bringing into being a new social order and outlook. In an overall view the objective facts appear to bear in the right direction. There are no internal centres of power which can hamper or obstruct the process. The Government is systematically and purposefully establishing an order in which reward is related to service and in which the State does what it can to ensure that all citizens enjoy an equality of opportunity. This is the new and great adventure. There are, of course, sterile cynics and doubting Thomases who prefer to live in their own glass houses. To them all is bleakness. They project their own darkness around themselves and get lost in it."

★

We now proceed to the note prepared by Mr Khandubhai Desai. If Mr Dhebar made it his task to indicate the role of Congress; and if Mr Jagjivan Ram set out on a description of the socio-economic revolution, Mr Desai has felt it necessary to dissertate on Congress ideology. He emphatically states that the objective of a socialistic commonwealth is not sought to be achieved in a doctrinaire sense. To the contrary, he urges that the objectives of a socialistic pattern "can never be achieved just by distribution of the existing wealth, which is very inadequate, and the doctrinaire approach of theoretical nationalisation of the existing instruments of production." The Congress, therefore, by no means holds the belief that nationalisation is a panacea for India's economic ills. What, then, is postulated by the Congress idea of a socialistic pattern? Briefly, the aim is that glaring social and economic inequalities must disappear; that the problem of unemployment and under-employment must be solved; and that an improvement in productivity is also necessary to solve the two problems of poverty and unemployment. The contradiction is that the need for an increase in productivity requires stress being laid on the capital-intensive industries; but the problem of unemployment points to the desirability of labour-intensive projects. This contradiction can be resolved and the overall progress of the nation can be achieved, says Mr Desai, "if certain large scale industries with modern equipment are also developed side by side with labour-intensive production in specific consumer goods industries." The case for small scale industry is based on the following line of argument:

"The widespread development of small-scale and cottage industries throughout the country while providing gainful employment to large numbers of people will also help to secure an equitable distribution of national income and prevent the growth of conspicuous inequalities which the Congress insists on removing."

Thus, while Congress is aware of the vital necessity of developing large scale industries, it recognises equally that small scale industry needs to have a prominent part in the Second Plan. In other words, the conditions of the Indian economy, with poverty and under-employment chiefly discernible in the masses comprised by the rural area, demand—at least for some years—the co-existence and the simultaneous development of both large scale and small scale industry. As Mr Desai puts it: "The emphasis placed on balanced development of both small-scale and village industries and organised industries is, therefore, not the outcome of any sentiment but is based on practical considerations."

The apprehensions that the setting up of the State Trading Corporation brought in its wake have, to some extent, been set to rest by Mr Desai. He says categorically that, in the distribution of consumer goods, the Congress does not aim at State trading. But State trading may be utilised as an instrument of strategic control with two purposes in view: firstly, Government may intervene if they believe that there is the accumulation of wealth in the hands of the few to the detriment of society as a whole; secondly, State trading "is not ruled out by the Congress both as a means of adjusting prices for various regions in a large country like India or as a means of raising sources for future development." We may remember, in this regard, that Government for some considerable time have in effect been trading in steel, cement and coal. The system of retention prices for steel and cement and the fixation of selling prices in coal can be construed as an indirect form of State trading.

The Congress, according to Mr Desai, stresses that those who own the means of production hold them in trust for the community and that "the workers engaged in them are co-equal partners in production and are entitled to be treated as such." However, Mr Desai also points out that, in this conception of trusteeship on the part of owners and workers, there can be no room for class conflicts; and if disputes arise, they "will have to be treated in a fair manner without trouble or dislocation of production."

Mr Desai's final point is, we are afraid, somewhat disquieting. He states that private enterprise "will play increasingly less and less dominant part in our production", even as "the public sector will go on expanding under the Plan, which will necessarily play the dominant role in the economy."

We suggest that Mr Desai has misunderstood the reiterated statements on the private sector. The scope left to private enterprise is, in terms of the revised industrial policy resolution, vast and substantial. Even in the fields of activity reserved for the State, the industrial policy resolution provides that the suitable co-operation of the private sector may be taken. As far as we can see, Government's approach to the industrialisation of the country is based on a very simple formula: on the one hand, the State must assume control over the strategic sectors of production—but, even in these, the co-operation of the private sector may be sought. On the other hand, in relation to the needs of the economy, the State will make good any shortfall in production or any inability to embark on new enterprises as may be evident in the private sector. Firstly, we feel that Mr Desai has used the word "enterprise" where he meant "sector". Secondly, we are also of the view that Mr Desai has misunderstood this important aspect of not only Government but also Congress policy.

★

Mr Manubhai Shah has entitled his note "Economic Aspects of the Implementation of our Development Programmes". First, he states that the objective of a socialistic pattern of society postulates that major decisions regarding production, distribution, investment and institutional changes should be guided by two criteria: in the first place, it will be borne in mind that the benefits of economic progress must be made available to the relatively less privileged classes of society; secondly, in order that prosperity may grow and spread, foundations are sought to be built on which there could be larger expansion of intensified agricultural production and on which a diversified industrial sector could be rapidly built up and stabilised. In this view, the programmes of the Second Plan will have "the four-fold objective of (1) raising output per unit resources; (2) raising per capita productivity; (3) better distribution of purchasing power by creation of larger job-opportunities and (4) strengthening the bargaining power of essential but weaker units of production through co-operative organisations, credit facilities, State protection by reservation of fields of production, financial assistance and other promotional incentives."

Mr Shah, like Mr Jagjivan Ram, is greatly exercised over the importance of land. He has cited the relevant statistics to prove that yields per acre in India could be doubled. But the economics of agricultural development "call for several programmes complementary to the establishment of adequate extension organisations." The setting up of proper marketing facilities, the National and State warehousing corporations—all these will be necessary to provide an adequate safeguard to the primary producer. For the immediate future, Government would have to be ready for a price support programme, at the one extreme, and anti-inflationary devices at the other. Mr Shah has referred to "the recent agreement which India has concluded with the USA in regard to wheat and other farm surpluses, which will greatly assist in keeping the price movements within a narrow range of natural seasonal fluctuations."

Agricultural yields have to be improved. Marketing facilities have to be created. On the question of industrial development, Mr Shah states, in particular, that the climate must be fostered for the existing factory industries (a) to utilise more fully the installed production capacity and (b) to embark upon adequate expansion and/or modernisation. Secondly, he stresses, as Mr Desai did, the need for both heavy industry and small scale industry. In this regard, he says the co-existence of these different sectors "is not only possible and profitable, but is entirely essential and necessary in order that the creative urge of every citizen of this country is manifested and glorified into his or her creation, next to hearth and home, and integrated into a mighty national structure."

Mr Shah has put in a plea for regional economic development; at the same time, however, he points to the important contribution that could be rendered by the economic utilisation of natural resources at sites near about the sources of raw materials.

Mr Shah more correctly understands the attitude to the private sector than does Mr Desai. While greater emphasis has to be placed on the development of an expanded public sector, "private industry is given full scope to develop alongside the State undertakings"—"but it should be so directed and regulated as to prevent it from seizing advantages which may act adversely on the welfare of the people." Mr Shah points out, correctly, that "there are serious lacunae in our industrial structure which the private enterprise cannot be expected to fill"; and the State would have the responsibility to see that these vital gaps are "quickly filled."

It is heartening to see that Mr Shah relates the question of fair wages, wage structure and profit-sharing to the increase in productivity and to an understanding of priorities of claims on profits of labour, consumer interest and capital. Mr Shah, again like Mr Desai, asks for increasing participation of labour in management; but he, too, warns that labour leadership will have to make efforts, both intensive as well as extensive, "to instil a greater sense of national discipline in our workers, inspiring them progressively to shed inefficiency, malingering and absenteeism."

The reduction in economic and social inequalities is to be sought in both directions. Mr Shah states that the raising of income at the lowest level is "by far the more important and basic aspect of the problem". This, of course, is because prosperity, like poverty, is indivisible.

As far as the lowering of incomes at the top is concerned, there is the recognition that "the scope for reducing inequalities through stepping up the rates (on tax) is not large". But the supplementing of estate duty by "gift taxes, death duties and succession duties will have to be examined." In this context, Mr Shah adds: "We have also accepted the principle of higher rates of sales tax on luxury and semi-luxury articles. Some form of capital levy, introduction of excess profits tax, higher taxes on conspicuous consumption and luxuries, etc., etc., should be considered. All these measures will help to reduce excessive concentration of wealth and incomes at higher levels."

Mr Shah repeats, with the greatest emphasis, that the Plan's approach at combining, under democratic conditions, economic growth and speedy reduction of inequalities must be "free from all doctrinaire rigidity". Care has to be taken to see that "the process does not damage the productive system as would jeopardise the very task of development, nor should it vitiate the processes of democratic changes."

★

To complete the picture of Congress approach to the Second Plan, we have Mr. T. T. Krishnamachari's note on resources. The Second Plan was termed by Mr Nehru as an act of faith. It is so in many ways, not least in the confidence that it should inspire in us as to our ability to undertake and execute the projects and programmes comprised in the Second Plan. It is this approach, again, which was necessary in an appraisal of resources; and Mr Krishnamachari reveals, in his note, that he is cognisant of the need for confidence. As he puts it, for an under-developed country, we have "to find its first resource in courage and leadership since by definition the material resources have yet to be developed". Basically, in such a view, "the problem of resources is in the first instance a problem of the determination that our countrymen as a whole reveal in the implementation of the Plan and of the fortitude with which they face the task."

For instance, in the matter of resources, we require to be confident as to the usefulness of deficit financing. Much is being made of the possibility that deficit finance for Rs 1,200 crores may lead to disastrous inflation. The Finance Minister's view is that there are circumstances in which "a failure to deficit finance may inhibit the marshalling of the real resources existing within the system". Of course, some safeguards are necessary. On the one hand, there needs the attempt to mop up such excessive purchasing power as may be released by deficit financing; and, on the other hand, the production of essential consumer goods must be stepped up to meet any increase in supply and thereby to check any excessive rise in prices. While Mr Krishnamachari has no doubt in his mind that, as a check to inflation, increased production of consumer goods is the most satisfactory solution, we would like, in this context, to advance the suggestion that the scope for Government to mop up excessive money supply, by means of more ambitious borrowing programmes, is most hopefully vast. But the Finance Minister, while he is sure that deficit financing has its role to play in the implementation of the Second Plan, is not unaware of the need to be on guard against inflationary tendencies. He has stated, for example, that, in regard to cloth, "if, in the light of experience, further licensing of capacity in the organised sector is found necessary, this will have to be undertaken, even if it involves a strain on the capital resources available". That is to say, although Government deem it an important objective to foster small-scale industry, their attitude is to be flexible enough to allow of necessary expansion in the organised sector

CZECHOSLOVAK INDUSTRIAL EXHIBITION CALCUTTA

Cathedral, Lower Circular Road,
December 2nd—[illegible]th, 1956, Between 3—9 p.m. Daily

for the purposes of fighting inflationary tendencies.

As we have recurrently pointed out, the first year of the Second Plan has got off to an auspicious start in respect of new taxation. Mr Krishnamachari has noted that, in this respect, "a good beginning has been made". The Finance Minister is of the view—and he has the confidence—that the internal resources can be raised. On the one hand, the tax system would need to be broadened; and, on the other hand, the existing loopholes in it would have to be closed. The present tax structure, as Mr Shah pointed out, does not allow of vast scope for additional taxes. Mr Krishnamachari's suggestion is: "We will necessarily have to think of ways and means of making the tax structure more elastic having in view the need for a greater acceleration of the implementation of the social and economic objectives of the Plan."

Naturally, the coming years will impose a strain upon the Indian economy. For, in order that an increasing proportion of India's output becomes available for investment, there has to be a restraint on consumption, even though production is intended to increase substantially. India's finances are to be directed on the basis that economic policy, and especially fiscal policy, is "orientated towards more effective mobilisation of resources". Accordingly, the basic criterion for judging fiscal policy will be "whether it helps development, and not whether it conforms to some conventional or accustomed standard or pattern".

*

We have thus been given a more or less complete picture of the Congress approach to the tasks and responsibilities of the Second Plan. Mr Dhebar has defined the role of Congress in the next five years; Mr Jagjivan Ram has analysed the social gains that we may expect from planned endeavours; Mr Khandubhai Desai has presented the motivations behind the Congress ideology; Mr Manubhai Shah has sought to make clear the ability of the private sector and the public sector, no less than small-scale industry and large-scale industry, to co-exist; and, finally, Mr Krishnamachari has made a statement of faith on the resources for the Second Plan. These form the basis for the statement on economic policy as evolved by the AICC Session.

The Second Plan has to be implemented, and its success must be triumphant. To that end, the statement on economic policy summarises the strategy that can lead India to the goal in the following words: "The expansion of production in all directions and a degree of restraint on consumption beyond desirable limits."

A careful analysis of the notes prepared for the AICC Session suggests, in our view, that the Congress Party is fully aware of the problems that it has to tackle; and that, in such recognition, it has equipped, and is equipping, itself in fitting manner.

Myths that Becloud Economic Development Policy

By EUGENE R. BLACK

I want to talk about the less developed countries, not just because they hold the key to the Bank's future, but because I am convinced they will determine in large part the future of the world.

I think it is clear that a great transformation is going on in these countries—a transformation which historians may well regard as the most significant fact of the Twentieth Century.

In the past 15 years more than 500 million people in Asia and Africa have gained their national independence. But the fact of national independence has not yet brought the human betterment which the people of the less developed countries so urgently need and desire. That challenge still lies ahead. And I doubt whether any group of leaders in history has faced any more difficult or exacting challenge.

Economic development is a fickle process. It creates new problems even as it solves old ones; it satisfies immediate demands only to create new and larger demands. And, most important, it destroys old attitudes towards life and work, even as it creates materials for a better life.

In the less developed areas of the world today the old stabilities are still crumbling as the minds of more and more millions are opened to new hopes and ambitions. The process of development has brought, with its benefits, turmoil and discontent which could thwart further development if not threaten the very foundations of world order.

Yet we also know that economic development is necessary for the kind of world in which people everywhere live and grow in peace. We know that the problems economic development creates—the turmoil and discontent, the new hopes and ambitions—can only be made manageable with more economic development. The process must go on. It must go on steadily in the less developed countries until some new stability is achieved which is compatible with the security and welfare of people everywhere.

Let us make no mistake, economic development in these countries today is not just a process; it is also an idea—a rallying cry for more and more millions who are aroused against their traditional poverty. Here is a great potential for good. If the human energy in the less developed countries can be effectively harnessed to constructive economic development, these areas can well enjoy an unprecedented rate of growth.

What is needed to make good the promise of these countries is a recognition that there are impartial, dispassionate methods of planning, organizing, and carrying out development policy —methods which provide substantial insurance that concrete results will be achieved and that benefits will be spread broadly among the people. If national passions can be tempered enough to give these methods a chance to work, the result in terms of world peace and prosperity is likely to be very impressive.

I think there is a growing awareness of the importance of objectivity in development policy in the less developed countries today. But a great deal more is needed, and to get it we must first clear away several myths which becloud development policy.

Let me cite a few of these myths by way of example.

First there is the myth that today only governments can produce economic growth fast enough and of the right character.

Let me concede at once that there may be no substitute for government in a great many instances when it comes to getting development off the ground. In most underdeveloped countries the government has, and probably must have, the primary responsibility for providing basic facilities on which sustained growth can flourish.

But it is a dangerous myth to believe that economic development is a matter for government alone. The great and growing reservoir of human energy in the less developed countries today cannot possibly find a constructive outlet if all decisions affecting economic growth are left to the state. The enthusiasm and potential contribution of every individual must be courted in a successful development program. And that means leaving a wide area of freedom for individuals to follow their own development initiatives and encouraging them to do so.

Then there is the myth that inflation is a handy device for making development painless.

I am glad to say I think this myth is almost ready for burial. There is a growing awareness of how inflation erodes savings, destroys the criteria for judging the soundness of investment, and plays havoc with a country's balance of payments.

But it is still difficult to find objective thinking about the practical steps needed to combat inflation. Probably the hardest decision we in the Bank have to make comes when we feel we must suspend lending to a member country because we believe inflation is undermining its credit and the vitality of its development efforts.

Our action is almost bound to give rise to acute resentment. I will defend to the limit, however, the Bank's obligations to withhold support from governments which fail to deal effectively with inflation or with the threat of inflation. The myth that inflation is harmless is dying, but we still have a long way to go before it is securely laid to rest.

Finally, I would like to mention the myth that the private foreign investor to-day is merely an up-to-date version of the old colonizers. Sometimes I think all our stereotypes of foreigners are at least 50 years out of date. We tend to believe that while our own lives are changing, the rest of the world is standing still. This kind of myth is by no means peculiar to the less developed countries.

The facts are that to-day there are not, in my opinion, enough foreign investors clamouring at the gates of the less developed countries. Those who are established, or would like to be established, have changed in their attitudes and outlook just as have the people of the less developed countries themselves.

Certainly the private foreign investor wants and is entitled to a fair return on his contribution. But I could point to a host of examples to prove that the return asked to-day is far different in amount and character from that which the foreign investor took 50 to 100 years ago.

The danger to-day is not that the foreign investor will ask too much of a developing country, but that the developing countries will do too little to attract him.

To-day the foreign investor cannot go into a country unless he is actually wanted by the people of the country. By indulging the myth that the private investor is trying to force an entry to engage in some sort of evil exploitation, the less developed countries are cutting themselves off from one of the most productive sources of development assistance available to them.

The capital and skills which the private investor brings with him may not be available from anyone else. Particularly he brings with him the skills of industrial management—skills which have to be seen in action to be learned.

If a country is bent on industrialising and having the benefits spread broadly among the peoples, it can do itself no better service than to seek out the private investor abroad who is willing to risk his capital on the chance of a fair return on a successful venture.

(These are excerpts from the address of President Black at the 11th annual general meeting of the World Bank.)

Editorial Notes

Breed and Feed

The recommendations of the International Rice Commission are such as would carry relief to minds oppressed by the prospect of a long-term food deficit for India, if not also for the world. The range of the Commission's recommendations is mostly non-controversial, as it concerns cultural practices, breeding, manuring, storing and similar problems. As experiments are being carried on in all these spheres, it is natural that this international body should apply its mind most vigorously to the question of exchange of information. Already, the necessary organisational structure is in existence.

The Commission recommend the continuance of this structure particularly in Asia and the Far East and its expansion in certain directions. The services of a rice-breeding expert to assist governments in this region are to be continued. Another training centre on rice-breeding under the expanded Technical Assistance Programme of the FAO is considered desirable. A reconstituted ad hoc working group for the study of soil-water-plant relationship is also suggested. From the standpoint of national economies where rice production is predominant, it is the hybridisation project recommended by the Commission which should hold the greatest appeal.

Dr P. S. Deshmukh, commenting on this project, hopes that the new varieties of rice, which might be evolved through it, will increase the overall yield by 20 to 100 per cent, if not more. The Union Minister for Agriculture also refers to the fact that the Government are planning the establishment of three more giant plants of the Sindri size for the manufacture of fertilizers. Dr Burns, discussing the technological possibilities of Indian agriculture, has found that the principal source of a substantial increase in production should be sought in the application of nitrogenous manure, of which cultivated land in India was being virtually starved for centuries together. Naturally, this, along with the prospect opened up by better seed varieties, has appealed most to the experts.

The Commission have wisely left the question of the mechanisation of rice production to be handled by an advisory group, recommended to be set up for this purpose and drawing the majority of its members from Asia and the Far East. Though only the technical aspects of mechanisation seem to be envisaged as falling within the legitimate sphere of discussion for this group the current economic background and aims will intrude.

The Commission's request to the FAO to continue assistance to Governments for the establishment and development of projects in farm management is especially appropriate with reference to India, where amidst the hurried transformation of the entire agrarian picture, the relation between the organisation of agriculture and production has yet to acquire the status of a sober and scientific study.

*

Self-Sufficiency in Oil

A month or so ago, the senior geologist expressed the pleasantly surprising view that India was in a position to plan for production of oil on a scale designed to meet half its crude oil requirements. If the opinion had not been that of a recognised expert in the field, it would probably have been dismissed as an over-optimistic estimate of our potential resources of mineral oil; and, a decade or even five years ago, such a pronouncement from any one would have seemed wild and irresponsible. But, now, the outlook is altogether different; and the figures mentioned recently by Mr K. D. Malaviya, the Union Minister for Natural Resources, raise hopes which are even brighter than those conveyed by the Company Geologist's pronouncement.

The Maharkotiya discovery is primarily, though not entirely, responsible for this dramatic change in outlook. Early indications that there are widespread oilfields and traps in areas other than the Digboi region have been more or less confirmed by surveys now being conducted by teams of foreign experts. There are also signs that Government are moving toward the adoption of a bold and clear policy for oil. Most of all, there is a new oil consciousness in the country which, in a way, ensures [illegible] exploration work will be undertaken; besides, it provides a basis for the growing confidence that it may [illegible] very long before the objective of [illegible] plete self-sufficiency in oil will cease to be thought of as a flight of fancy.

Mr Malaviya, who returned recently from an extensive tour abroad, expressed this confidence in the course of a review of the progress of oil exploration in India before the members of Parliament last week. He said that, by 1959, it would be possible to step up oil production to 3 million tons a year. He also voiced the hope that, by 1962, production would rise to 5 million tons annually. This means that, if current estimates, which place our annual requirement of oil by the end of the Second Plan period at 7 million tons, prove within reasonable limits to be correct, then, there will be justifiable grounds for hoping that, in the near future, India will have made spectacular progress toward achieving self-sufficiency in an industry which, next to steel, is perhaps the most important in laying the foundations of an industrialised country.

It would be absurd, however, to shut one's eyes to the difficulties which must be surmounted before such a desirable state of affairs is brought into being. Apart from the great technical and geophysical difficulties which are incidental to the work of oil exploration, one of the major difficulties which Government are facing is the almost impregnable obstacle of the world price structure of oil which, from the points of view of both the producer and the consumer in India, bears no relation to the cost of production in either India or in the Persian Gulf area, even though the latter possesses more than three-fourths of the oil of the world. The price structure, governed by the Gulf of Mexico prices, is mainly based on the cost of production in America, where it is very much higher than in areas close by the source of the raw material. The Government of India are naturally reluctant to enter into agreements with foreign interests on terms which will bind them to the higher price structure. But, at the same time, it is doubtful whether an unilateral effort to alter the pattern of oil prices can ever be successful or even wise.

While reviewing these difficulties, Mr Malaviya mentioned that he had no doubt that the centre of oil production would shift from the Gulf of Mexico region to the Middle East; in which event, he said, a change in the price structure would be inevitable. He did not elaborate the point, and it is futile to speculate as to how long it will be before a radical change in the world prices structure of oil will approximate a more rational basis. Unfortunately, oil in the modern world is inextricably mixed up with a host of issues other than the purely economic ones; and a policy for oil cannot be evolved in strict isolation in any country much less in an under-developed country.

One thing, however, is clear. Government, in their praiseworthy efforts to increase the production of oil, cannot afford at this stage to allow considerations of sentiment to influence their policy. In this field, quick results in the endeavour to reduce Indian dependence on foreign imports will have to be the sole aim and must provide the only criterion by which to judge.

Focus on Kashmir

One of the tragic offshoots of the recent flare-up in the Middle East is a deterioration in Indo-Pakistan relations. It is customary for every new Prime Minister of Pakistan to herald his administration with a heroic verbal gesture on Kashmir, in which the degree of emotion imparted to references to India would depend on the measure of

Turn of Giltedged for T.T.K.'s Attention

IF THE STRINGENCY in the money market has engaged the close attention and constructive study of Mr T. T. Krishnamachari, the debacle in the giltedged market calls for even more immediate solicitude and more prompt action on the part of the Finance Minister. That, soon after he took charge of the Finance Ministry, T. T. K. should find himself confronted with anxious problems in three of the components of the money market, namely, foreign exchange, money and giltedged, and that, at the same time, alert and firm handling is required on the prices front also, is a measure of the responsibilities imposed on the Finance Minister not only by the main requirements, but by the many repercussions, of the Second Plan which, in addition, is now to be pursued amidst the threats and alarms of war. In the last few issues, we have dealt with the likely solutions for the conundrums presented in the context of the foreign exchange position and the banking situation. The disquieting trends in the last ten days in the giltedged market call for correct diagnosis and swift cure.

The catastrophic price declines roundabout mid-November 1956 are somewhat reminiscent of the landslide in mid-November 1951. If the present recession is not checked at once, and if this retrogression is not soon replaced by a progression, the financial estimates for the Second Plan will go irrecoverably awry. T.T.K. has rightly been emphasising that every aspect of financial, economic and fiscal policy has to be adjusted in relation to the paramount need to ensure the success of the Second Plan. From this point of view, no time should be lost, and no efforts spared, to re-establish the giltedged market on a healthy and confident and confidence-inspiring basis.

The Reserve Bank has, since November 15, 1951, looked upon the giltedged market as a dumping ground for continued sales. If the Bank has made any purchases, they have been on a footing of exchange, that is to say, it has bought securities provided the seller buys some other securities from it. Outright purchases in open market operation have been few and far between. In the last few days, however, the Central Banking institution has been buying securities provided they are maturities before 1961. The bank could not have bought any big parcels, as banks in general would not care to part with early maturities lest they be left with too high a proportion of mediums and medium-longs. So, the relaxation in the Reserve Bank's policy could not make much difference to the influences now pervading the giltedged market.

What are the influences now holding sway over giltedged prices and prospects? Firstly, 3 per cent 1986 loan (usually referred to as the Conversion Loan) has been proclaimed to be completely out of favour with the concerned officials. It could sink to calamitous depths; and the Reserve Bank would shed no tear. So, it has sunk, friendless and helpless, to Rs 73. Originally, official support was believed to be forthcoming at Rs 81; that floor was pierced a good many months ago. It is now over eight points below what, for nearly five years, was regarded as the floor.

Secondly, the Reserve Bank seems to have lost faith in the efficacy of open market operations for maintaining and sustaining a definite pattern of giltedged prices.

Thirdly, while, understandably in the light of current stringency in the money market, there are now no buyers for giltedged, there is a spate of selling principally on account of such holders of the recent State loans as had made their subscriptions on the basis of loans secured for margins. Sellers in Madras and Andhra Loans predominate in this respect. State Loans have lost, on the average, anything like two rupees on the issue prices.

It was a sad day for the giltedged market when the Reserve Bank formally withdrew its support for the Conversion Loan at Rs 81. To this day, we have not understood why this most damaging step was taken. By way of purchases in the years when this support was known to be available, the Reserve Bank could not have been loaded with any considerable amount of this stock. And, at the time when the floor was given up, the Reserve Bank could not have been faced with an avalanche of this scrip. The support supposed to be available from the Reserve Bank made its effect felt mainly through the creation of the right psychology. In such circumstances, the removal of this prop was inexplicable—except on the theory that the Conversion Loan was, so to say, the pet enemy of Sir Chintaman Deshmukh. We have no doubt in our mind that this policy must be reversed without any delay.

Nor can we understand the recent policy in giving up all pretence of maintaining a definite pattern of giltedged prices. Such a lack of policy amounts to a policy of drift, of defeatism, of downright disloyalty to the Second Plan. In this respect, too, the evolution of a positive and confident policy is urgent and imperative.

Finally, as regards the plethoric selling orders in State Loans, there is nothing unusual in the market being flooded with impatient holders soon after a new loan or new issue is out of the way. The point is that the right step should be taken in the right spirit and at the right time.

Heeding the warning that, failing a stitch in time, we will be faced with nine stitches, Mr Krishnamachari, in co-operation with the State Finance Ministries, must take immediate steps to repair the damage done to the giltedged fabric.

And, in repairing the damage in these respects, open market purchases are the recognised technique. Open market purchases can, in the first instance, be financed by the utilisation of the amounts received in excess of the targets for the Central and State Loans. If the finance thus made available be found inadequate, extra funds should be freely available if a fraction of the plentiful deficit financing is utilised for the purpose. Madras and Andhra, in particular, had the satisfaction of receiving loan amounts well in excess of the targets. Their Finance Ministers must seek the consent of Mr Krishnamachari to use the excess for effective open market support to the loans now quoting at a considerable discount. Over Rs 10 crores could thus be placed at the disposal of the Reserve Bank for open market operations. Time is the essence of success. It is equally important that open market purchases are made on a comprehensive and effective scale and in confident and strident style. Giltedged outlook must be restored to the faith which made the recent Central and State Loans the triumphs they were.

[Since this article was written, we understand that the Reserve Bank through its Madras Branch has been making State Loan purchases in behalf of the concerned Governments. More, the Life Insurance Corporation has also supported State Loans.]

Reverse Ad Hocs?

Interesting changes in the Investment portfolio are the most noteworthy feature of the returns of the Reserve Bank for the week ended November 16. For, the statement otherwise follows the general pattern to be expected in the third week of a slack season month.

Active Notes have declined by Rs 9.30 crores to Rs 1143.66 crores. Rupee Coin returning from circulation has been for Rs 1.39 crores. The Reserve Bank's cash in the till has, consequently, gone up by Rs 10.69 crores. Neither Foreign Securities nor Rupee Securities in the Issue Department show any change.

In the Banking Department, the comparatively more comfortable position of Scheduled Banks is attested to by an increase in balances with the Reserve Bank accompanied by a substantial drop in the indebtedness to the central banking institution. While Banks' Deposits are marked higher by Rs 0.74 crores at Rs 53.21 crores, the Other Loans and Advances of the Reserve Bank are lower by Rs 7.33 crores.

The interesting changes involving Investments in the Banking Department need to be studied in relation to the Central Government's Deposits, balances of State Governments and the Investment portfolio. Firstly, the Centre's balances are marked down by Rs 11.58 crores at Rs 51.42 crores; secondly, Deposits of other Governments are lower by Rs 7.88 crores at Rs 12.18 crores; thirdly, Investments are sharply reduced by Rs 15.07 crores at Rs 59.22 crores.

There are two possible explanations for these changes. On the one hand, the series of inter-Governmental transactions, which began toward the middle of October and in anticipation of States Reorganisation, may have continued. On this reading, the Central Government might have made payment to State Governments; and this would account for the decline in the Centre's Deposits. The State Governments may, thereafter, have utilised a part of their resources in the purchase of marketable securities from the Reserve Bank; and this would be responsible both for the lower level of Investments and for the reduction in States' balances.

The second hypothesis relates to possible reverse ad hocs. It may be that some payment was made to the Centre by State Governments; then, the Central Government may have decided that their balances were comfortable enough to warrant cancellation of ad hoc Treasury Bills for Rs 15 crores; since this would have affected the cover against note liabilities in the Issue Department, and since the Reserve Bank may have preferred to maintain its cash balances at Rs 18.14 crores, a transfer from Investments in the Banking Department to Rupee Securities in the Issue Department may then have been necessitated.

We shall know which hypothesis is correct only when the figures relating to outstanding Treasury Bills (which are published in the Reserve Bank of India Bulletin) are released.

Finally, in the Reserve Bank statement, we may note that there has been further depletion of foreign exchange. The decline is to the tune of Rs 6.71 crores, and the foreign exchange holdings of the Reserve Bank in both departments are placed at Rs 553.67 crores.

Disinflationary Effect of Suez Crisis

By PAUL EINZIG

The aggravation of Suez crisis at the beginning of November gave rise to anticipation that Chancellor Macmillan would decide in favour of accentuating the disinflationary credit squeeze. This view was based on the assumption that the military expenditure and its consequences were bound to produce inflat onary effects. And since Mr Macmillan decide against counteracting such effect by means of an autumn Budget the only obvious alternative was to seek to counteract it by means of yet another dose of monetary disinflation. This appeared to be necessary also from the point of view of trying to correct the effect of the blocking of the Suez Canal on the British balance of payments. One of the reasons for the weakness of the Stock Exchange and especially of Government Loans, was the widespread anticipation of higher Bank rate.

Beyond doubt, the military expedition to Egypt resulted in an increase in public expenditure though its extent to date is estimated to be only between £35 million and £50 million. Considering that the Budgetary situation is fundamentally sound, such a slight increase need not produce any noteworthy inflationary effect.

On the other hand, it would be a mistake to try to minimise the effect of the Suez crisis on the balance of payments. From that point of view too, however, the fact that the balance of payment was at an equilibrium before the crisis will make it easier to face the adverse effect of the crisis. Although sterling had to be supported ever since the beginning of the Suez dispute and considerable losses of gold have been incurred. this has been due to the withdrawal of foreign balances from London. At present foreign holdings are so low that further substantial withdrawals are unlikely.

Nevertheless, the outflow of gold is likely to continue partly owing to seasonal influences and partly as a result of the deterioration of the balance of payments. While the decline of exports is not likely to be very large, the balance of payments is bound to be affected considerably through the diversion of oil imports. Sterling oil from the Middle East has to be replaced by dollar oil and this necessarily causes loss of gold.

It has been suggested that one of the ways in which the balance of payments could be corrected could be an accentuation of the credit squeeze. By reducing domestic consumption it would tend to cause a fall of prices and would increase the exportable surplus even if the total output should suffer as a result of temporary shortage of oil. Alternative methods of correcting the balance of payments would be exchange control, devaluation, or the realisation of some of the Treasury's foreign securities.

A Conservative Government would be reluctant to resort to exchange control. Nevertheless, Mr Macmillan is less dogmatic about this than his predecessor. At the beginning of the second world war he sharply criticised the Chamberlain Government for the slowness and inadequacy of the Government's initial measures of exchange restrictions. So on the whole it seems probable that in case of an aggravation of the situation Mr Macmillan would not hesiate to restore exchange control but amid the situation such as it is, the fundamental Conservative reluctance to introduce controls will not be overcome.

The idea of a devaluation has been rejected out of hand. It was emphatically repudiated by Government spokesmen on the occasion of the recent Debate on the economic situation. Devaluation would certainly not help towards counteracting the effects of the diversion of oil purchases.

In all probability the solution the Government will choose will be that of the realisation of some of the Treasury's dollar securities. While it would be deplorable from the point of view of weakening the reserve and thereby further deferring convertibility it would be the smallest of the evils.

The Government is not likely to seek to correct the situation by a new disinflationary drive. Apart from other considerations an accentuation of the credit sequeeze is not necessary in existing conditions. There are indications that the uncertainty created by the crisis has caused a decline of consumer demand at any rate for luxuries and secondary necessities. The fall of Stock Exchange quotation and the

Ports measure the nation's pulse...

Watch the cranes at any one of our six major ports—loading India's raw materials she must have. It is in these ports that the economic pulse can best be measured. And as the economy expands, the pulse beats faster.

During the next five years Rs. 71 crores will be spent on developing major ports and harbours, and five crores for some 150 minor ports along India's coastline. Also four crores will be used to build new lighthouses and modernize existing ones.

In most of India's big ports, ships are fuelled by the Bunkering Service operated by Burmah-Shell. We supply many special lubricants for vessels of all kinds; diesel oil and petrol for port equipment; bitumen for surfacing dock roads and roofs; and grease for slipways...in fact we are rather proud of our part in India's nautical life.

Taming Trade Balance

THE reception which economic facts have accorded to the new Commerce Minister is none too cordial. If Mr Morarji Desai was obliged to lay down a highly onerous job in his own State, neither is his new office a bed of roses, at least for the time being. One of the most unfriendly aspects of the national economy in relation to the Second Plan has to be found in the deterioration in the foreign trade balance over the last two years.

If one probes into all the causes of this set-back, the position may not appear as gloomy as what is indicated by the trend in money values. The adverse balance of trade will be found to have arisen largely from the high content of what may be described as developmental imports. But against this welcome expansion in the import of capital goods and machine parts, which are indispensable for the progress of the Second Plan, one has to weigh the deterioration in the terms of trade and the unsatisfactory conditions to which a few important items in the export trade have fallen.

First one may turn to the terms of trade. The index (base year 1952-53=100) took a favourable lookdown to 99 in 1953-54 and in the subsequent year dropped for their down to 91. The year 1954-55 has been the most agreeable to India in this respect, ever since the commencement of the First Plan. Since then, however, the trend got into the reverse direction, moved up to 97 in 1955-56 and in April to June 1956 it rose back to par. The extensive downward adjustments in export duties, though consistent with the requirements of the particular items of exports, must have had its part in this transformation of the terms of trade.

Here, there is a real dilemma for the country. While for one reason the duties have to be reduced or withdrawn and the export prices kept as low as possible, steps taken in that direction have actually resulted in a smaller net total return on the total export of commodities. As long as the sellers' market prevails for the machinery and engineering goods needed for the Second Plan, there is no easy escape from this dilemma. It is only the calculation of the eventual saving that the country will come by years hence that can provide the psychological relief possible in the situation.

The consequences of the recent developments in the Middle East are variously assessed by Government spokesman. While some of them seem to be concerned over the delays and bottlenecks which might occur in the production and transport of machinery from abroad, their more optimistic colleagues have chosen to put on a brave face. It is safe to assume that some delays would become inevitable, judging from the frantic calls from Europe for oil supplies from America and the likelihood of fuel ration in the affected countries. It would be wise to make allowances for production and more certainly transport of machinery ordered by India from Western Europe overstepping the schedule time-limit. How far costs will also go up and India will have to pay more depends on a number of circumstances, including the individual contracts concerned.

Turning to changes in value, one could trace a rough parallel with the trend in terms of trade. In 1953-54, India had an adverse balance of trade to the extent of Rs 50 crores; in the next year the gap increased to Rs 63 crores; and in 1955-56 it moved up further to about Rs 81½ crores. In the first six months of the current year, the unfavourable balance is estimated to be around Rs 123 crores.

In spite of the reliance which could be placed on the drafts on the sterling balance and the type of large-scale foreign accommodation as in the case of the Commodities Agreement with the USA, and similar arrangements with Russia, which incidentally, is expected to lend more during the tenure of the Plan, the situation is frankly uncomfortable.

In the recent deliberations of the Import and Export Advisory Councils, there was all-round recognition of this fact. It is always wise to look unfriendly facts straight in their face, instead of belittling them or evading their significance. Neither the Union Ministers nor the representatives of private industry have made the latter mistake.

In analysing details, Mr D. P. Karmarkar, Minister for Trade, drew attention to the poor performance of jute manufactures, the reseating of looms and the adverse impact of the increase in export duty on raw jute by Pakistan. Cotton textiles too have disappointed considerably; against an export of 581 million yards in the first 9 months of 1955, the corresponding figure for the first 9 months of 1956 is 538 million yards with a reduction of about Rs 3 crores in earnings. The Minister pointed out how the growing pressure of home demand and the upward trend in prices impede exports. Obviously, the recent decisions taken toward increasing domestic production, as for instance, in the case of cloth have not had time to fructify.

Mr Karmarkar explained how the decline in the terms of trade in the first half of 1956 has been somewhat alleviated by the improvement on the quantitative side. Against the fall of their index of declared values dropped from 94 for the first half year 1955 to 91 for the corresponding period in 1956. The volume index of exports rose from 108 to 109. The comparatively better performance of tea, which is now having an expanded international market, should have helped this rise conspicuously there are hopes of an even still better turn in the fortunes of Indian tea as an export item, as the external price is tending to rise and the Soviet Union and countries in Eastern Europe are expected to take larger quantities.

On the import side, the average value for the first 9 months of the current year runs to nearly Rs 66 crores as against the monthly average of Rs 54 crores for 1955. The Minister for Trade quoted figures to indicate how materials intended for development purposes like steel and cement have sharply tilted the scales. To this extent, the adverse balance is the consequence of a well-understood policy, whose fulfilment is zestfully pursued. It is disclosed that out of the total imports of 1.8 million tons of steel in 1956, 1.5 million tons have already arrived. "Yet complaints of shortage of steel are more numerous than was the case some months ago."

Naturally, there are certain points on which there could be no two opinions. The priority given to developmental imports could not be interfered with. As far as possible, the progress of the Plan will have to conform to schedule. The problem of bridging the foreign trade gap therefore resolves itself into one of curtailing supplies for non-essential imports and stimulating exports, without squeezing the domestic economy. As to how far the belt should be tightened internally is the crucial problem.

Mr Morarji Desai says, "we cannot earn foreign exchange by starving the people". At the same time, he is anxious to restrict imports to the minimum. The observations of Mr K. B. Lall, Joint Secretary to the Ministry of Commerce strike a slightly different note from that of his Chief. "It will be necessary for us to think more and more of getting things which are necessary for development rather than for enjoyment. Things for enjoyment should be produced here but if we cannot produce them, we should go without them for the time being" There is also some contradiction between Mr Desai's hope of giving priority to employment and any step cutting imports which will necessarily throw out men from the whole-sale and retail trade.

Mr Lakshmipat Singhania could list a number of items like fish, fruits, vegetables liquor, chemicals, drugs, medicines, cutlery, hardware, dyes, paper, cotton and art silk, further restrictions on the import of which will result in a saving up of Rs 50 crores. Mr Singhania envisaged a cut on even steel imports which, according to him, could be met by converting scrap into steel in India.

Among other commodities which are considered by one or the other of the members of the Import Advisory Council as deserving the axe figure news-print and spare parts. There were also voices appealing for further liberalisation of imports of many commodities based on familiar arguments.

Reviewing the discussions in the two Councils, one gains the general impression that it was a good stock-taking; but not so good in the matter of precise suggestions as to how the balance of trade could be better adjusted. In fact, one of the Government spokesmen threw the responsibility for discovering new avenues for exports on private industry.

World of Jute

Firm Conditions

FIRM conditions continued to prevail in the jute markets with prices both in the goods and raw jute sections gaining considerable ground in the past few days. Hessian 40"×10 oz. Ready, which was quoting at Rs 46-2 a week ago, closed on Thursday at Rs 47-6 after having been done upto Rs 47-12. B Twill's Ready moved up from Rs 120-8 to Rs 122-12 to close at Rs 122-8. In the raw jute section Assam Bottoms November/December shipment was done upto Rs 32-8 per maund. The undertone at the close on Thursday in both the sections was firm.

After a steady opening, the jute goods market firmed up on the release of figures of Despatches of jute goods during October. Exports were more than 5,000 tons higher at 73,394 tons as against 68,215 in the previous month. During the corresponding month of the previous year, exports amounted to 72,157 tons.

During last month, exports of hessian were 609 tons lower at 32,430 as compared with the previous month when exports totalled 33,039 tons. In the corresponding month of last year hessian exports stood at 33,483 tons. It is with regard to exports of sackings that a sizable increase had been recorded during the last month. Exports of sacking in October 1956 were 7,142 tons higher as compared with September 1956 when exports amounted to 32,505 tons. In the corresponding month of the previous year sacking exports were 37,356 tons.

The fact that boom-like conditions prevailed in the raw jute market in Pakistan gave a powerful impetus to the Indian raw jute markets. It would appear that due to a variety of reasons and mainly due to poor arrivals for the time of the year, raw jute prices in that country had shot up considerably in the past few days with the result that Indian rates had become quite cheaper in comparison. With the raw jute market displaying a firm trend, the goods market had also to move up in sympathy.

Perhaps the most powerful incentive had been provided by the figures relating to Burlap consumption in USA during last month. It was announced during the week that, during October 1956, consumption of burlap in USA had amounted to over 85 million yards. The figure compared with 80 million recorded in the previous month. During the corresponding month of last year burlap consumption amounted to only 74 million yards.

During the period July to October 1956, burlap consumption in USA had amounted to over 309 million yards as compared with 273 million yards during the corresponding period of last year. A significant fact to be noted in this regard is that the October figure is the highest for the past four years.

The picture, however, becomes somewhat dim when it is found that burlap stocks in USA had also risen. During October 1956 total stocks in that country had gone up by 4 million yards to 262 million yards recorded in September. It is also to be noted that last month's stock figures are the highest in the past sixteen months.

Apart from the strength derived from such factors as the satisfactory despatch figures during October, the firmness of the Pakistani raw jute market and the sizable increase in US Burlap consumption during the last month, prices in the Calcutta jute goods market received impetus also from good buying support from shippers and small orders for sacking from Burma. A fair amount of overseas business had been reported done in hessians.

The following table shows price trends during the week:

	Week's Opening Rs. a.	Week's Closing Rs. a.
HESSIAN:		
40"×10 oz Ready ...	46 2	47 6
40"×10 oz Jan/March	44 14	45 10
SACKINGS:		
B Twills Ready ...	120 8	122 8
B Twills Jan/March	120 0	121 12
Heavy Cess Green ...	119 8	121 0
Cornsacks	121 0	122 4
Cubans ...	141 8	144 0
A Twills ...	140 0	141 12
L Twills ...	132 0	139 0
D W Flour	137 8	134 0
Sugar Bags	134 0	137 0

The raw jute market also firmed up toward close as there were keen buyers for all varieties. On Thursday good business was reported done in Assam at Rs 32-8, Daisee Mesta at Rs 30-4 and Jungli Mesta at Rs 29-8 all per maund basis Bottoms for November/December delivery. Even at these rates sellers were very reserved. Earlier, fair amount of business had been reported in Indian Northern at Rs 32 and Deshal at Rs 31 basis Bottoms for November/December shipment. As pointed out above, sentiment in this section had derived considerable strength from the Pakistani raw jute market where prices had sharply advanced in the past few days.

Figures for arrivals of raw jute into Calcutta and mill stations during last month, however, do not seem to lend support to ideas of raw jute scarcity. Arrivals of raw jute during last month totalled 6 lakh bales made up of 5.26 lakh bales of Indian origin and .74 lakh bales of Pakistani. Such arrivals for the four months ending October 1956, were 17.72 lakh bales of which 15.61 lakh bales were Indian and 2.11 lakh bales Pakistani.

It will be found that arrivals of raw jute during the past four months ending October are 1.85 lakh bales higher than those during the corresponding period of last year. It may further be noted that during the past four months, arrivals have been steadily rising. From 3.12 lakh bales in July, arrivals of raw jute have increased to 4.16 lakh bales in August, then to 4.44 lakh bales in September and to 6 lakh bales in October. A significant feature in the figures is the drastic reduction in Pakistan's share. Whereas during the corresponding period of last year monthly raw jute arrivals from Pakistan amounted .74 lakhs, .88 lakhs, 1.86 lakhs and 1.54 lakhs, in the period July/October 1956, the comparable figures are .28 lakh, .51 lakh .58 lakh and .74 lakh bales.

In view of the reported scarcity of raw jute in Pakistan coupled with the fact that raw jute prices in Pakistan are ruling nearly three points higher than current Indian prices, it may be expected that arrivals of raw jute from Pakistan in coming months will further dwindle. Consequently, Indian mills have to depend almost entirely on internal sources for the raw material.

INVEST WISELY AND WELL

You may be prudent enough to save a portion of your income, but perhaps you are hesitant to decide on a safe investment.

Let this not disturb you. Your Bank is in touch with the leading brokers and will make their expert advice available to you quickly and without charge.

Your Bank will also keep your investments in safe custody and collect and credit to your account interest and dividends as and when they fall due.

It does not matter where you reside—the State Bank of India has a net-work of offices through which it offers to place these and other services at your disposal.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than five hundred offices waiting to serve you throughout India.

SISTAS 58-2

World of Tea

Strong and Excited Demand

A very strong and excited general demand at dearer rates continues to exist for all except a few descriptions. The disruption in normal tea flow to Britain as a result of re-routing many ships round the Cape remains a market factor for the time being, although less concern is currently felt in London with regard to the delays on future domestic stock position. It has been estimated by the trade that stock of tea, at the end of December, should still be sufficient for about two months at the present rate of consumption.

Offerings in the Export Sale, held in Calcutta this week, amounted to 58,400 packages. With the exception of the best CTCs and some of the better liquoring Medium BOPs, all descriptions were sold at dearer rates. Fannings and the poorest kinds were as much as As 2 to As 4 per pound dearer, while the other kinds were one to three annas per pound dearer.

Darjeelings and Whole Leaf grades shared in the general advances in prices. Following rates were quoted per pound:—Clean Black Pekoe Rs 2-6-0; Plain BP Rs 2-2-0 to Rs 2-3-0; Medium Assam BP Rs 2-6-0 to Rs 2-7-0 and Best CTC Assam BP Rs 3-2-0.

Offerings in the Internal Sale amounted to 23,871 packages of Dusts for which there was a good general demand at dearer rates. Non-wither Dooars were a strong feature and were As 2 to As 3 per pound dearer, while the strongest feature of the sale were the poor residue types which were As 2 to As 3 dearer. Commons, Dooars and Medium Assams advanced by one to two annas, but the leafier kinds showed the greater advance in prices.

CTC Assams also shared in the general advance and were dearer, but the better kinds were fully firm. Following rates were quoted per pound:—Medium Dooars Dust Rs 2-1-0 to Rs 2-2-0; Medium Assam Grainy Dust Rs 2-2-0 to Rs 2-3-0; Medium Assam CTC Dust Rs 2-9-0 and Best CTC Assam Dust Rs 2-11-0.

Offerings of Leaf grades consisted of 1,695 packages for which there was a strong and excited demand at much dearer rates. The few Green teas, on offer, received more support than in recent weeks and sold at about brokers' valuations.

In the Export Quota section, the rate opened higher at 34 pies and advanced gradually toward the close to 40 pies per pound and at these levels business was reported done. At the close, there were sellers at only 42 pies per pound.

Despite a large number of holidays, exports of North-East Indian tea, during October 1956, were higher at 37.57 million pounds against 29.14 million pounds in the corresponding month of last year. This sharp increase is mainly attributed to shippers' anxiety to effect despatches before the increase in export duty, which was expected to be imposed from the beginning of the current month.

In the Cochin market, a total of 1,525,000 pounds was offered. Nilgiri quality generally showed a falling away, but teas fom other districts were often improved. There was a strong and active demand from the outset for all descriptions at dearer rates with the exception of high-grown teas, which ruled easier.

Best liquoring Nilgiris came to an irregularly lower market and lesser sorts registered a drop following quality. Good Medium, Medium and Low Medium Brokens met with keen competition at rates which advanced by As 2 to As 4 per pound; but similar Fanningsp appreciated to a lesser extent than their corresponding Brokens.

Black Leaf Brokens followed the general upward trend of the market, but their Fannings eased slightly on last rates. Whole Leaf grades were fully firm with the exception of high-grown sorts which came to an easier market. Following rates were quoted:—Plain BP Rs 1-12-0; Low Medium BOP Rs 2-4-6;Medium BOP Rs 2-8-0; Good BOP Rs 2-12-0 and Well-made OP Rs 2-10-0.

In the Colombo market, offerings consisted of 4,830,378 pounds. The quality from Western districts was maintained, but Uva teas continued to decline. There was a limited selection of Nuwara Eliya teas, which were sold at firm rates.

The market for high-grown teas was fully firm. There was a strong demand for Medium-grown teas. Orange Pekoes were about 20 cents per pound dearer and Pekoes about 10 cents dearer. Among low-grown teas, small Leaf BOPs were about 10 per cents per pound dearer, while Middle Eastern typer were 10 to 20 cents higher.

A feature of the auctions held in London was a further narrowing in "price concertina". Prices for plain descriptions hardened, and this trend was maintained throughout the sale as a result of slight softening in the price of Plain Broken Pekoe. For teas above 6sh to 6½ sh, however, an irregularly easier tone appeared some time following quality.

In the auction held this week, offerings were 22,662 packages including 15,495 packages of tea from Nothern India. A strong and active demand prevailed and advances of 2d to 6d per pound were generally for all kinds. There was a particular enquiry for the Medium kinds which were sold considerably in excess of valuations, especially those with colour. Low Medium and Common teas met with keen competition and prices showed advances of 3d to 4d per pound. Common Broken Pekoe was quoted at 4sh 10d per pound.

Tea stocks in London, as on the 9th November 1956 were 94.49 million pounds as compared with 97.51 million pounds in the previous week and 95.20 million pounds a year ago. Landed between 3rd and 9th November 1956 were 9.53 million pounds, while deliveries during the same period were 11.54 million pounds.

EDITORIAL NOTES

(Continued from page 945)

insecurity the incumbent feels in relation to the domestic political set-up.

Mr Suhrawardy is too sober a politician to under-estimate the strength or determination of his rivals or the fickleness of his own present supporters. Even normally, the pose of a crusader for the liberation of Kashmir would have been unavoidable for him, though in some of his initial references to India, he managed to keep off vitriolic expressions.

The unanimous confirmation of the State's accession to India by the Kashmir Constituent Assembly and its synchronisation with the rebuff which Pakistan invited from Egypt should have damaged Pakistan's morale so badly that there is some justification for Mr Suhrawardy trying to distract his people's attention by throwing out a fresh challenge to India. The argument which he resorts to maintain that the Kashmir Assembly is spurious and that the Constitution it has drawn up can have no international validity are too flimsy and outdated to merit a serious answer from the Government of India.

But the situation in which the Pakistan Premier appeals to the Security Council for intervention and certain other leaders in Pakistan demanding police action against India, cannot so lightly be dismissed. The world has not recovered from the bias for irresponsible military adventures and the reversion to the law of the jungle in international dealings. Pakistan's stand on the Egyptian issue and the British Premier's naive declaration that in deciding on cease-fire, he was responding to the decision of the Baghdad Powers more than to any other circumstance can inspire a new affinity in isolation between Pakistan and Britain. The international interest in sustaining the Baghdad alliance is wider and undoubtedly covers the US also.

That the US has now become the sole bulwark of world peace among the Big Powers is an overwhelmingly comforting thought. But in this, there is no assurance that political potentates precariously perched in power in this or that country will not seek an adventurist course.

THIS week's debate in Parliament on *Foreign Affairs has done much* to clear the air of a good deal of misgiving, not all of which was simulated with ulterior motives about recent trends in our foreign policy. In a brilliant speech initiating the discussion, Mr Nehru reassured those, who feared that there have recently been distortions in actual practice of the admittedly sound principles that guide our foreign policy. He went, as is his wont, behind the actual events and described in vivid terms the moral ferment caused by the events in Egypt and Hungary. It is common knowledge that events have not only strained the resources of diplomacy of almost all the governments of the world, but have created, in Mr Nehru's terse phrase, 'a Crisis in Conscience, a spiritual trisis almost in people's minds.' As I said two weeks ago, there was all over the world a spontaneous drawing back of breath at such callous and cynical disregard of appearances on the part of big powers. The shocked astonishment at such behaviour cut across party lines and national frontiers: true-born Englishmen were roused out of their phlegmatic reserve into protesting against such cavalier sacrifice—to put it at its lowest—of Britain's public-school virtues: and Communists, despite their preternatural myopia to Communist cruelty, saw only all too clearly the ruthlessness of the Soviet forces in Hungary and resigned when their papers would not print what they described. I, for one, cannot recall—at any rate since the Second World War—anything to equal such an impressive unanimity among ordinary folks about the rights and wrongs of a situation. The result was that, while politicians and diplomats cut disgustingly sorry figures trying to square moral circles with a variety of dubious legerdemain, the common people were morally sure of themselves and found the spectacle of Eastern kettle calling the Western pot balck and vice versa not in the least amusing.

✱

Apart from the reaction of the people, who were more or less *spectators;* the events themselves have set in motion forces of far-reaching consequence. The first of these is the demonstration that brandishing of swords and rattling of sabres are going to cow no one down. As Mr Nehru put it: 'Looking below the surface of things into the deeper changes that are coming out, first of all we see these rather gross and brutal exercises in violence and armed might against weaker countries. Prima facie this appears to be a triumph of violence and armed might and it puts every militarily weak country in peril. Its independence is in danger. More particularly, every country in Asia and Africa must feel this danger. But there is another aspect to it, namely the exhibition of violence and armed might has failed and is going to fail.'

✱

How does Mr Nehru prove this case? Firstly, he discusses the loss suffered by Britain and France in their misdirected adventure in Egypt. I discussed at length, on an earlier occasion, the tremendous blow dealt by this episode to Britain's reputation as at worst a devil and at best a fair devil. Since I wrote last, there have been widespread rumours of prior collusion among France, Britain and Israel; these rumours, which appear to be well-founded, show up Britain's sanctimonious pretensions about a desire to separate combatants in Egypt in even more lurid a light than was the case before. The economic damage is no less grievous than the moral disaster. Even in a preliminary assessment, this has been reckoned to be very great; and, though the Government defeated a labour motion on the subject, there is very real evidence of genuine concern over the situation. Facile hopes of automatic American supply of oil have been falsified since the US is very properly insisting on the withdrawal of troops from Egypt before it would even consider the request. And the fact that the Suez Canal was functioning properly until the Anglo-French intervention, must be a bitter pill to swallow for many a supporter of the British Government.

✱

Again, if the argument was that the intention behind all these manouevres was to prevent Russia from getting a foot-hold in the Middle East, it is clear that the policy has, as Mr Nehru correctly pointed out, only too spectacularly failed. Never has the Soviet Union been so deeply involved in the Middle East and never has its prestige been so high in that area as at the present moment. Thus, from Britain's point of view, not one discernible moral, economic or diplomatic advantage has been gained by this misadventure. On the contrary, Britain has involved itself in needless trouble on all these counts.

The moral about the utter futility of a show of force is even more impressively demonstrated by the events in Hungary. In Mr Nehru's words, 'There, too, on a first view of events, one sees the great forces of the Soviet Union triumphing in a military way in Budapest and in Hungary. But at what cost? What the final outcome will be, I do not know, but I have no doubt in my mind that, sooner or later, the Hungarian people, who have demonstrated so vividly their desire for freedom, for having a separate entity and not being overshadowed by any other country, are bound to triumph. I cannot say what the intervening difficulties may be because of this world situation, which is very, very complicated. But everybody must realise that all these events have powerfully affected the prestige of the Soviet Union in such matters with all . . . . . not only with many countries which are supposed to be the uncommitted countries. I am rather thinking more not of governments but of all people, in every country, including the East European countries, including, if I may say so, the peaple of the Soviet Union itself.'

✱

I am anxious that critics of Mr Nehru, who felt that he was being unduly considerate in his estimate of the Soviet Union's role in recent events in Hungary, should realise the full implications of the things he has said on Hungary in his speech. Judging by the comments evoked by the speech, it would appear that the critics have become mollified merely because Mr Nehru has now named the Soviet Union in so many words in this speech and said that its prestige has been damaged. If this was all there was to it, I must say that Mr Nehru's critice are as easily assuaged as they are quick to take offence. I am afraid that they have failed to notice that Mr Nehru's condemnation of Soviet actions in Hungary in this speech goes far deeper than is implied by his direct pejorative reference to it.

✱

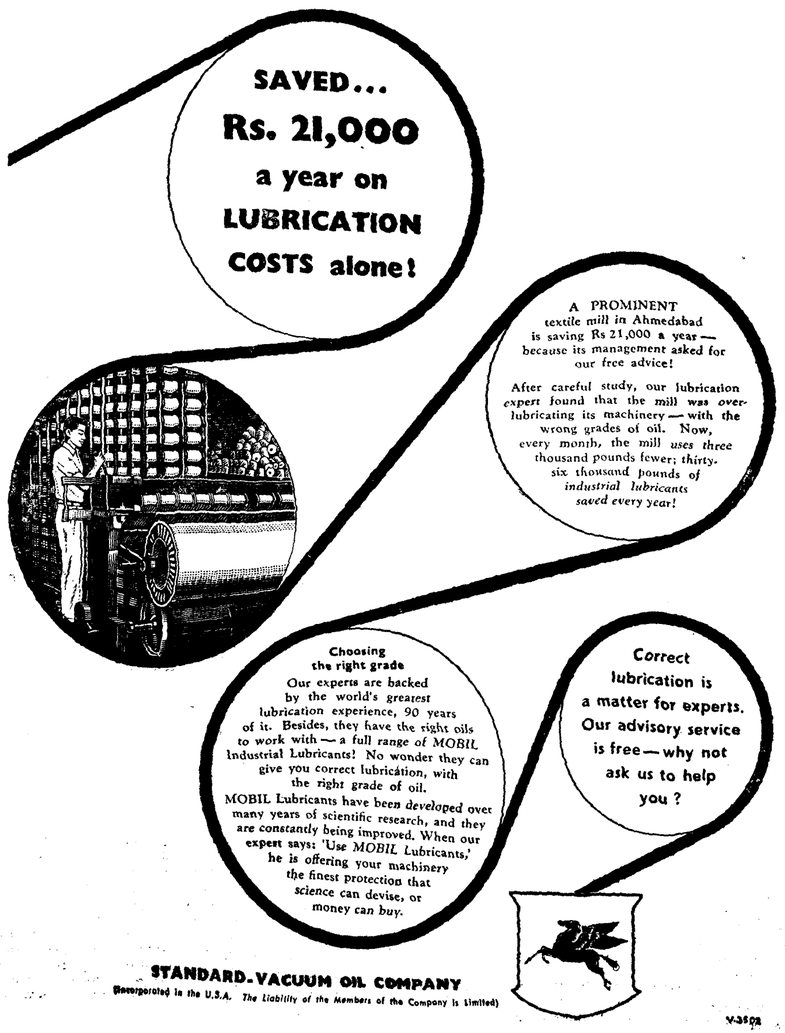
It is very likely that the guess I am going to hazard, purely from the internal evidence of the speech itself, is wide off the mark, but I shall risk it. My feeling is that Mr Nehru's views on Hungary were very nebulous and unsettled, until even after the AICC meeting and the voting in the UN. To the disability caused by admittedly meagre stock of genuine information on what actually happened on the crucial dates and what was actually happening thereafter, was added the understandable resistance to tendentious propaganda from all sides. In the circumstance, Mr Nehru had to depend upon versions given out by the interested parties; and, to be fair to him, he clearly stated in his address at the AICC meeting that what he was then saying was based on M. Bulganin's version, which he was candid enough to concede might be one-sided. His comments were, therefore, cautious and tentative and even apologetic. It was only as recently as the end of last week, I think, that Mr Nehru finally made up his mind about the exact nature of what was happening in Hungary.

✱

What is the evidence for this theory? And what is it that clinched the issue for him? My view is that Mr Nehru's conviction that the Hungarian revolt was a genuine popular upheaval stemming from a passionate desire to be rid of any kind of foreign interference crystallised, not when the fighting was still on, but, paradoxically, when actual fighting ceased. It was at the moment when the Hungarians, especially the citizens of Budapest, launched a movement which was a species of Satyagraha, a quiet war of attrition by means of passive resistance, refusing work despite hunger and distress, that Mr Nehru felt convinced that here was no plot directed by fascist elements from outside, as was claimed by Communist propaganda, but a genuine national movement.

✱

I say this, because I know Satyagraha is a thing that Mr Nehru understands, for, it is something he has actually practised for the better part of his life. The passages in his speech, in which he refers to this phase of the Hungarian struggle, grows with an almost instinctive, understanding, warm and humane compassion and they also convey a sense of a barely controlled indignation at the brutality of those who dare attempt to suppress by violence such idealism. Mr Nehru's sense of history is immediately summoned up by him and he links the present non-violent upsurge not only with the teachings of his master, but also with instances of Satyagraha from Hungary's own history He has no doubts at all that 'the present movement in Hungary is a popular movement, with the great masses of the people behind it, with the workers and the



young people behind it', not because of the earlier armed conflicts, but because of the later Satyagraha. In his own words, 'The fact that the people as a whole are behind it has become even more potent by this passive resistance in spite of the heavy armed strength arrayed against them'. My own hypothesis of the decisive effect of this development on Mr Nehru's views on the Hungarian situation is fortified by the fact that, as recently as Friday, when Mr Nehru made his first statement before Parliament on the international situation, he did not mention that the upsurge in the country was a genuine popular movement.

*

Whether this reading of what actually happened is right or wrong, is irrelevant. But what is relevant is that in Mr Nehru's unmistakable sympathy with the passive resisters of Budapest is implied a far more severe denunciation of the Russian occupation of Hungary than in any direct references to the loss of the prestige of the Soviet Union among neutrals, which seem to have satisfied many critics. Mr Nehru's reference to this aspect of the movement lends to it the impressive authority of the whole Indian independence movement led by Mahatma Gandhi. In other words, in my view, India has been talking until Mr Nehru's latest statement with its political voice: I do not say that all that it said during this period was wrong, but I say that it was falsetto. In the latest statement of Mr Nehru, however, it has once again found its true voice and the timbre of this true voice is to be seen, not so much in the passages denunciatory of Soviet Russia, as in those that breathe an instinctive sympathy with the passive resistance of the Hungarian people.

As a matter of fact, this aspect of the Hungarian movement raises once again questions of far-reaching moral importance to the world. Many will recall the endless debates during the period immediately before and after the commencement of the Second World War, over the efficacy of non-violence in dealing with Hitler. Many will remember Gandhiji's memorial appeal to the Czechs and his advice to the Jews who came to him seeking advice on how to overcome Hitlerism. His advice, consistent with his own

The New Issue Market

THE IMPENDING offer to the public of a portion of the equity shares of Hindustan Lever stresses the significant fact that stringency in the money market does not constitute an adverse factor for the issue of new capital in respect of what, in market parlance, are described as *blue chips*. At the present moment, the pressure for funds is exceptionally severe; and money rates have registered alround increases. Even so, banks are finding it hard to entice new deposits. In fact, bankers are seriously worried over their plight in the 1956-57 busy season; and Authority is being urged to take special steps to help banks cope with the expected seasonal demand for finance on an unprecedentedly large scale. Authority, too, has bestirred itself; and consultations and discussions are currently taking place.

While such is the present and prospective stringency in the money market, the new issues market seems ready to accord a rousing welcome to every offer of new stock by well-established and well-reputed houses. It was only three weeks ago—monetary conditions at that time, be it noted, were unseasonably stringent—that Guest, Keen, Williams threw open for public subscription a goodly number of ordinary shares at a hefty premium. Investors were not daunted by the prevailing tightness of money or the proposed magnitude of the premium in the issue price. There was instantaneous over-subscription; and applications are to receive only partial allotment. One may be sure that the offer of the Hindustan Lever stock will evoke a like greedy response from the public; that there will be a similar over-subscription; and that applicants can hope only for partial allotment. This latter circumstance, in its turn, accounts for investors applying for amounts in excess of their original intention. Thus is over-subscription aided and abetted. Such has also been the case in respect of earlier new capital issues of this calibre—Metal Box, Imperial Tobacco, National Carbon, etc.

Dunlop Rubber and Burmah-Shell Refineries are shortly to issue shares for public subscription; and, judging by the appetite shown by investors for blue chips, these offers will prove doubly gratifying—gratifying to the companies concerned and gratifying to the lucky investors who are able to participate in the new offer.

The success attending these new issues provides a refutal of the taunt that Indian investors are unduly shy. They are nothing of the kind, if the investment offered has the assurance of being bonafide in every respect. It is a curious coincidence that over-subscription on this scale has greeted the new issues of the Indian affiliates of internationally well-known concerns. The reasons are understandable; and, as the proof of the pudding is in the eating, investors' preferences for such shares are justified by the performance of the companies in line with expectations.

I may hasten to add that the equity stock of Indian concerns of acknowledged repute and standing has been equally prized by investors. To this category belong the new capital issues (as rights shares) of Tata Steel, Indian Iron and Associated Cement.

I may also add that a considerable amount of new capital has been secured by well-known houses like Birlas; and most of the capital has been in the form of preference shares.

In all these respects, Indian capital has triumphantly proved that the oft-repeated platitude about the shyness of Indian capital is a popular fallacy. The Indian investor is shrewd, has good discernment, studies a proposition from the point of view of relevant criteria, and knows a good thing when he sees it. It has so happened that, among the new issues, recent experience has been singularly happy. This was not the case in respect of new issues made in the boom following World War I or roundabout the mid-forties. Many an investor burnt his fingers badly; and these ugly memories are not easily erased. If shyness still lingers in certain investment circles, the blame belongs to the breed of unscrupulous company promoters. The New Company Law has certainly made it difficult for their breed to feed fat on gullible investors.

Unscrupulous company promoters must be given no quarter and shown no mercy. But it is of great importance to remember that well-established business houses are not the only scrupulous company promoters; that, as a matter of fact, many a businessman of modest standing may have a first-class proposition to offer to bonafide investors. In the case of such modest new issues, present institutional or other facilities for securing the requisite capital are far from adequate. One may almost say that they are non-existent or non-operative. The Industrial Finance Corporation of India and the more recent State Corporations have a big role to play from this point of view. They have the requisite authorisation; but they have not so far bestirred themselves in this direction. Their charter clearly lays down that they must provide finance in those cases where ordinary commercial banking facilities will not be suitable and where issues of capital in the open market are not practicable.

The simple question is: How are these "modest" new issues to be made practicable in the open market? The answer is in the hands of the IFC and its State affiliates. They must actively and liberally exercise their power to underwrite stocks, debentures, etc. The genuine investors will come to regard this underwriting as a sign and symbol of the bonafides of the proposition.

The IFC will have to equip itself as an agency to study the technical aspects of the propositions coming up for its consideration and as an appropriate issue house. The law authorises it; and the needs of the time demand it. This provides at once an opportunity and a challenge to the IFC and its State associates.

Development of Asian Countries

In a thought provoking speech at the annual meeting of the Central Board of Irrigation and Power, Mr M. C. Chagla, Governor of Bombay, laid the "most important emphasis" on the need for greater basic research in India. In this connection he pointed out that it was essential for Indian industrialists to realise the importance of basic and fundamental research and called upon them to emulate the example of their counterparts in western countries where research laboratories formed part and parcel of the industrial units. Government should also bestow more attention on the problem than they were doing currently and should set up more research laboratories for carrying out basic and fundamental research on a bigger scale.

The most urgent problem that faced India, according to Mr Chagla, was the production of wealth. Against that basic need, exports and imports received only secondary importance. An essential prerequisite was self-sufficiency of food. It was a sad fact that despite immense water resources, the yield per acre in India was the lowest in the world. Hence, the first task to which the nation should address itself was the proper harnessing of the country's water resources with a view to improve irrigation. A kindred problem was the harnessing of water power resources for the production of electricity without which the development of villages would be very slow.

Mr Chagla's suggestions for the expansion of the activities of the Central Board of Irrigation and Power covered grounds that extended beyond the borders of India. Viewing the Asian countries as one unit, he pointed out that since the entire region was industrially backward, what applied to India applied equally to all the Asian countries. Consequently the Indian Central Board of Irrigation and Power and their counterparts in other Asian countries had an important role to play in the development of the region. In that view it would be in the common interest of the countries in the region to pool their scientific and technical knowledge toward bringing about the overall development of Asia.

✱

Progress of Indian Shipping

According to the Indian National Steamship Owners' Association, Indian tonnage now stands at 511,077 g.r.t. with the recent acquisition of a 5,000 g.r.t. cargo vessel by the Malabar Steamship Company and of a 7,400 gross ton tanker by the Western Shipping Corporation. This compares with the tonnage of 390,707 g.r.t. at the beginning of the First Plan. The target under the First Plan was to add 215,000 g.r.t. after allowing for obsolescence to the extent of 60,000 g.r.t. thus increasing the total tonnage to over 6,00,000 g.r.t.

The Planning Commission in their proposals for the Second Five Year Plan have observed that though it will take some time for the entire tonnage to be actually put into commission, the target is likely to be achieved. During the Second Plan, they have proposed an addition of 3,00 000 g.r.t. after allowing for the obsolescence of 90.000 g.r.t. bringing the total tonnage to 9,00.000 g.r.t. by 1960-61. Recently it has been announced by Government that orders for ships worth a few crores more than the allotted amount under the Second Plan have already been placed.

But from the figures made available now by the Indian National Steamship Association, it is clear that the process of putting into commission the new ships is rather slow. Nearly eight months after the beginning of the Second Plan, Indian tonnage has only reached the half-million ton mark as against the First Plan's target of 6,00,000 g.r.t. There is thus still considerable leeway to be made between target and achievement even under the First Plan.

It is, however, gratifying to note that Indian companies have now some 36 vessels with an aggregate of some 200.000 g.r.t. under construction or on order in Indian and foreign yards, and that delivery under the present orders expected to be completed by 1958. Of these new ships 16 of 58.000 tons are under construction or on order at the Hindustan Shipyard, Visakhapatnam, and 20 of 143.000 tons in as many as five countries, namely, Germany, Japan, Italy, Belgium and Yugoslavia.

✱

WORLD OF FINANCE

(Continued from page 946)

The return of the State Bank for November 16 shows that Deposits are higher by Rs 2.93 crores at Rs 230.65 crores. This has enabled a reduction of Rs 2.50 crores to Rs 8.00 crores in borrowings. Cash balances are marked by nearly Rs 1 crore. The investment portfolio shows negligible change. The addition to bills, under Advances, continues: while loans, cash credits and overdrafts are lower by Rs 1.77 crores, bills discounted and purchased have gone up by Rs 2.02 crores to pass for the first time this year (and perhaps for the first time in the State Bank's history) the Rs 40 crore mark.

The statement of Scheduled Banks for November 9 reveals that the increase in Deposits has been small at Rs 0.91 crores. But, thanks to a steep fall in Advances, an improvement in cash balances has been enabled over and above a reduction in borrowings. The indebtedness to the State Bank is lower by Rs 2.31 crores at Rs 11.04 crores, while borrowings from the Reserve Bank have gone down by Rs 4.58 crores to Rs 64.26 crores.

Cash in hand has jumped by Rs 4.72 crores to Rs 38.81 crores. Balances with the Reserve Bank are, possibly due to the reduction in borrowings from that source, marked down by Rs 2.95 crores at Rs 48.82 crores. Balances with other banks and money at call are negligibly changed.

The decline in Investments of Scheduled Banks bears looking into. In the latest week, they have gone down by Rs 1.39 crores to Rs 365.93 crores; and, since October 5, the decline has totalled Rs 8.25 crores.

Advances are sharply lower by Rs 8.97 crores. Though foreign bills also show a decline, one of Rs 2.09 crores to Rs 50.37 crores, inland bills disclose the contrary trend with a rise of Rs 4.64 crores to Rs 107.84 crores. Preparations for the building up of the bills portfolio continue, suggesting that, in future weeks, the member banks may increasingly avail of advances from the Reserve Bank against usance bills.

+

The statement of the State Bank of India for the week ended November 16 reveals a rise of Rs 2.93 crores in deposits to Rs 230.65 crores. Borrowings from other banks have declined by Rs 2.50 crores to Rs 8.00 crores, while other liabilities, including inter-office adjustments, are higher by Rs 0.31 crores at Rs 7.20 crores.

On the assets side, cash balances have moved up from Rs 17.01 crores to Rs 17.54 crores, while investments have moved down from Rs 106.95 crores to Rs 106.61 crores. Advances are higher by Rs 0.26 crores at Rs 128.37 crores —"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 1.77 crores and "Bills Discounted and Purchased" for a rise of Rs 2.02 crores.

+

According to the returns of the Scheduled Banks for the week November 9, total Demand Liabilities have risen by Rs 2.62 crores to Rs 641.54 crores, while Time Liabilities have declined by Rs 1.71 crores to Rs 454.63 crores. Borrowings both from the State Bank and the Reserve Bank have declined, the former by Rs 2.31 crores and the latter by Rs 4.58 crores to Rs 11.04 crores and Rs 64.26 crores respectively. Cash and balances with the Reserve Bank have improved from Rs 85.86 crores to Rs 87.63 crores. Investments are lower by Rs 1.39 crores at Rs 365.93 crores. Advances are shown at Rs 604.09 crores against Rs 613.06 crores; Inland Bills at Rs 107.84 crores against Rs 103.20 crores and Foreign Bills at Rs 50.37 crores against Rs 52.46 crores. Money at call and short notice stands at Rs 17.31 crores against Rs 17.27 crores.

STOCK AND COMMODITY MARKETS CHARTS:

The study of stock and commodity markets trends with the help of Charts is becoming increasingly popular in this country. One Chart pertaining to Share and another pertaining to the Commodity markets have just been released, for the period 1951 to 1956, by Sri Mukund Gucuji. These two Charts should be a very useful guide not only to market operators, but also to all those interested in the study of market mechanism. These are priced Rs 5 each and can be had from the publishers, 273, Girgaum Road, Bombay.

Bombay Review

World *of* Cotton

Supply and Distribution Prospects

IT is now possible to make an attempt, on present available indications, at assessing the supply and distribution prospects of both Indian and foreign cotton in the 1956-57 season. Although the present new crop arrivals in the interior markets are reported to be stained due to the recent rains, it is expected that the quality of subsequent arrivals will be fairly satisfactory due to the favourable bright weather that followed the rains.

Taking into account the latest weather reports, cotton production is estimated around 51 lakh bales, which is 8 lakh bales more than the final crop estimate of the last season. Consumption of Indian cotton is estimated around 46.00 lakh bales as against the actual consumption of 43.65 lakh bales in the previous season. Thus, the gap between production and consumption of Indian cotton is only about 5 lakh bales, which is certainly on the low side. It is, therefore, unlikely that any quota larger than 3.50 lakh bales will be announced during the season.

With regard to foreign cotton, estimates are that overall imports, during the season, may not exceed 7.25 lakh bales. Under the Indo-US Trade Agreement, India will be importing about 1.50 lakh bales of American cotton in the first year of the total of 5.00 lakh bales to be imported in the course of the next three years. India will also be taking up cotton of the order of 40,000 bales under the Indo-US-Burma triangular deal. Thus, imports of American cotton may be around 2.25 lakh bales during the season.

With regard to Egyptian cotton, the question of transport and the question as to how much of her cotton will be available for the rest of the world, after providing for the needs of Russia and other Communist countries, will decide the offtake by India. In the absence of Egyptian cotton, the only alternative will be that of Sudan. Even here, how this cotton can be transhipped to India remains a problem.

×

BERAR COTTON:

Meanwhile, there are reports that the cotton crop in Berar districts has suffered a 10 per cent damage by unexpected and untimely rains in the first week of November; but this is likely to be made up by late sowings in some areas. No substantial reduction is, therefore, feared in production which has already been estimated at about 9 lakh bales. The area under cotton, during the current season, is about 3 per cent less than the acreage of 3,847,000 in the last season. The lower acreage is mainly attributed to higher prices of Jowar at the time of sowing which attracted the cultivators to shift from the cash to food crop.

×

FUTURES TRADING:

Opening easy on reports of arrivals of about 22,000 bales of new crop cotton in the upcountry centres, rates lanquished on weak advices from the oilseeds markets. Tables were soon turned as selling subsided and speculative bulls entered the market on talks that an export quota of about 2 lakh bales was imminent. Hopes were entertained that an export quota consisting of 1½ lakh bales of ¾" staple variety and 50,000 bales of Bengal might be issued by the Government. This gave a fresh impetus to the bulls who bought sizeably, while shorts rushed frantically to cover their outstandings. The turnover was 25,000 bales. ICC Jharilla March delivery, after touching a high of Rs 659 and a low of Rs 649, finished at Rs 655-8. Similarly, ICC Vijay finished the week at Rs 756-8 after touching a low of Rs 753 and a high of Rs 759.

×

SPOT SECTION:

Despite the rumours of an immediate announcement of export quota, the Spot section continued to rule steadier with mills showing good interest in Khandesh, Berar, Jharilla, Jaydhar and Luxmi varieties. Shippers were reported to have bought superior quality Bengals for immediate delivery, and Wagad and Kalagin for March-April delivery.

On the export front, traders were eagerly awaiting the announcement of the export quota, while some business was reported done in Oomra, Deshi and Bengal.

In the foreign section, Sudan and Egyptian cotton continued to meet with good demand from Southern and Ahmedabad mills. Some shipment business also took place in El Paso cotton for Nov-December delivery and East African for March-April shipment, subject to licences being obtained in respect of both the cases.

Following were the rates quoted: Bengal Rs 665 to Rs 740; Oomra Rs 730 to Rs 750; Dhollera Rs 730 to Rs 760; Jharilla Rs 760 to Rs 800; Vijay Rs 880 to Rs 890; AR-BP-52 Rs 1,750 to Rs 1,760 and ER-Bushoga Rs 1,620 to Rs 1,630.

×

NEW YORK COTTON MARKET:

In the New York cotton market, rates for December and March positions moved up briskly on good demand, reflecting optimism over prospects of reducing cotton surplus in the next season. Support was, however, limited in near-by positions as traders were watching shipping developments closely in view of the dockers' strike in the Atlantic and Gulf Ports. Sales were about 75.000 bales. Middling Spot was quoted around 34.55 cents per pound.

×

LIVERFOOL COTTON MARKET:

In the Liverpool cotton market, near positions improved sharply in both contracts on reports of extension of the United States dock strike to Gulf Ports. Sellers in these deliveries were reserved. The week's session closed steady with a good advance in prices. Egyptian contract November-December was quoted at 60.00d and Sudan Contract November-December at 58.80d.

×

CLOTH AND PIECEGOODS:

After witnessing extremely dull conditions for nearly three months, the Bombay Cotton Piecegoods market registered a perceptible improvement in activity during the past week. Although transactions did not assume larger proportions, the change in the market sentiment provided a measure of

Gateway Markets

Castorseed Firm: Groundnut Quiet

TRADING in Oilseeds has been highlighted, during the past few days, by hectic activity accompanied by spectacular rise in prices. Bullish advices from overseas markets and continued keen demand for castor oil from the USA has fanned the bullish fervour. Moreover, hopes for liberal export policy with a view to earn foreign exchange have also acted as incentives. As the rise in prices has been rather too steep, it is but natural to expect profit-taking at higher levels.

Castor futures have been involved in a veritable boom with the May 1957 delivery recording a new high level of Rs 162-8 on the opening day of the week. The virulent advance in the market has been attributed to a spell of hectic buying accompanied by covering on behalf of the scared sellers. The consistent encouragement from abroad has, however, contributed substantially to the current firm spell. The US quotation for commercial Castor Oil is stated to have risen afresh by a cent to 18.25 cents per pound, while the Continent has indicated gains of nearly £4 at £156 per ton.

The turnover was 10,000 candies. Castor May started at Rs 162-8 and, after touching a low of Rs 160 on profit-taking, improved toward the close to Rs 161-4. Castor ready was quoted at Rs 33-4 and Castor Oil, commercial, at Rs 20-0.

Groundnuts were quiet in slow dealings with reports of arrivals acting as a damper, although the downward trend was arrested due to firm advices from the castorseeds section. February delivery started at Rs 145-14 and, after improving to Rs 147-4, receded again to Rs 145-2, to finish better at Rs 145-4. In the ready section, the rate was quoted around Rs 31-12 and Groundnut Oil at Rs 18-14.

Trading in the *Linseed* section remained dull. May delivery opened at Rs 28-12 and, after touching a low of Rs 28-4, improved at the close to Rs 28-6. Linseed ready was quoted around Rs 33-12 and Linseed Oil at Rs 18-12.

Cottonseeds also yielded some ground under lack of support. The rate started at Rs 87 and, after advancing to Rs 88-8, receded toward the close to Rs 86 on profit-taking.

*

Gold & Silver

On the Bombay Bullion Exchange, Silver succeeded in consolidating most part of the small but noteworthy recovery, while Gold turned quiet after early spell of steadiness.

The Silver section displayed a firmer tendency, the sentiment having been favourably affected by reports of a rise in silver prices in Kalimpong and the general feeling that imports from Tibet would stop in the winter season. Uncertainty regarding the international political situation and expectations of increased demand for spot as a result of the prevailing high agricultural prices provided further stimulus. There were, however, signs of caution at upturns owing to increased tempo of local arrivals.

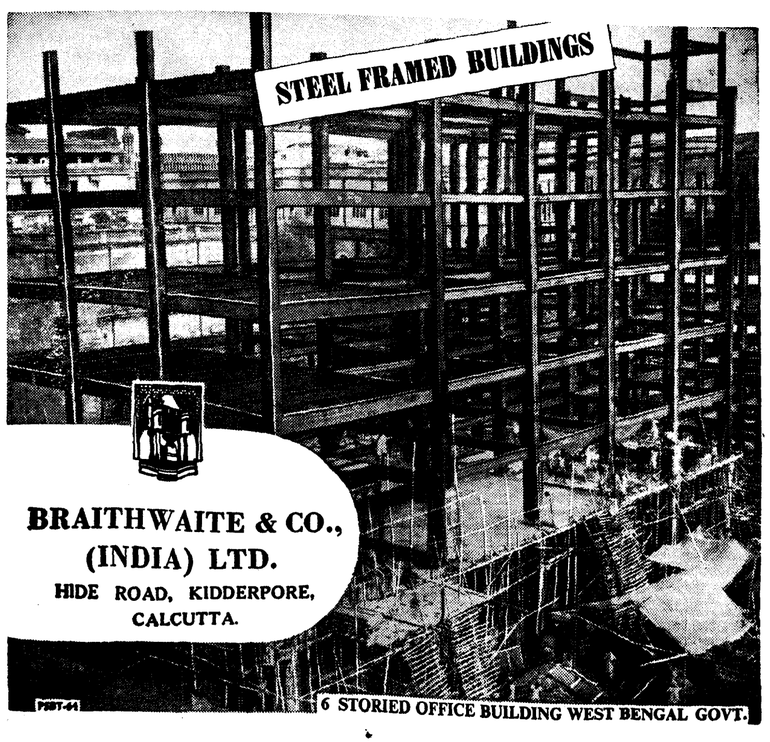
Arrivals amounted to 10 bars against an offtake of 19 bars. Unrefined metal receipts in refinery amounted to 21 bars. Silver Kartik delivery opened at Rs 173-15 and, after improving to Rs 174-0, declined toward the close to Rs 173-11. Mangsir delivery started at Rs 174-12 and fluctuated between Rs 175-1 and Rs 174-7, to finish at Rs 174-15. Silver ready moved between Rs 174-8 and Rs 174-10.

Gold lacked support at higher levels and appearance of profit-taking erased gains. Arrivals amounted to 4,500 tolas against an offtake of 3,000 tolas. Unrefined metal receipts totalled 3,500 tolas. Gold Kartik delivery started at Rs 105-4-6 and, after improving to Rs 105-6, finished at the last quoted level. Mangsir delivery opened at Rs 105-11 and, after touching a low of Rs 105-8 and a high of Rs 105-14, finished at Rs 105-11. Ready moved between Rs 105-9 and Rs 10-11, while Sovereign was quoted around Rs 69.

*

Yarn

The Yarn market displayed an uncertain trend and, on account of poor offtake, prices registered a further decline. Prices in the Cotton yarn section, however, showed a steadier tendency due to higher prices prevailing for raw cotton. Reports, that demand had revived for cotton piecegoods, also imparted a better tone to the section although offtake did not improve perceptibly.



In the forward sections of Art Silk yarn and Staple-Fibre yarn, heavy fluctuations were witnessed. The former for December delivery suffered a setback of Rs 15 per case, while the latter dropped down by about Rs 21 per case.

In the ready section, there was a decline of one to two annas per pound in art silk yarn; but the decline was smaller in the case of Japanese yarns on account of paucity of stocks. Price movements in staple-fibre yarn were confined to a narrow range, the decline being more pronounced in the case of 2/40s medium. The offtake from the consuming centres is reported to be very negligible.

*

Metals

Price movements in the Metal market were confined to a narrow range. Political situation being still full of war potentialities, sellers were somewhat reserved. Closely following the London market, Copper fluctuated narrowly around Rs 201-8 per cwt. Zinc was quoted very steady at 69-8 due to shortage of supply and on reports that shipments of Russian Zinc would be delayed by one month. Lead was quoted around Rs 84 as there was no incoming shipment of the metal. Tin was quoted firm at Rs 141 following good demand North Indian markets.

Foreign Trade Dilemmas

DISCUSSION of the foreign exchange requirements under the Second Plan has been going on in the country almost since the draft Plan-Frame was before the public. The gap in resources has always had two aspects, the overall deficit and the shortfall in foreign exchange requirement. Much resourceful thinking has gone into the Government's plans to make good this deficiency as has been evidenced by a series of agreements with friendly governments. These will ease the strain on our external economy which is likely to be caused by essential imports both for the purposes of development and of providing ourselves with a cushion against inflationary pressures. It is quite on the cards that a substantial expectation of foreign aid and other forms of facilities in the nature of extended credits is fundamental to our programme of development: and, as explained in the World of Finance article last week, there is no reason why these facilities should not be forthcoming in the measure anticipated. But this consideration does not absolve us of our responsibility in the matter of maximising export earnings along normal channels of foreign trade and of minimising imports.

This subject has been causing special anxiety in recent weeks owing to a variety of factors. First among these has been the serious dislocation to schedules and earnings caused by the quarrels in the Middle East and the more recent Anglo-French military action and consequent blocking of the Suez Canal. This has aggravated what was already a creeping worry over fall in exchange earnings accompanied by mounting import bills during the current year, which necessitated substantial drawing from our sterling balances. The disruption of traffic through the Suez Canal, which carried 69 per cent of our exports and 61 per cent of our imports, is sure to add to the problems arising out of our desire to effect basic changes in the pattern of our external trade so as to make them subserve the purpose of development plans. But, to the resourceful, they also offer new opportunities: in any case, these events have compelled us to think about these subjects in greater detail and somewhat broader terms than we have been doing over the last two years. Such considerations are what have lent special interest and urgency to the deliberations of the Advisory Councils on Export and Import which met in New Delhi last week.

The Imports Advisory Council, which was the first to meet, recognised many of the problems arising out of the current situation. And, though Mr Morarji Desai appealed to the business community to co-operate with him in "controlling and if necessary curtailing import trade", there was a general recognition that the demands of the situation did not make any extensive modification possible. Since most of our imports in the next few years are of basic commodities required for industrialisation, and the "non-essential" imports have already been cut very nearly to the bone, further reduction in absolute terms is difficult to manage. But something can be done in rearranging priorities even among the essential imports and utilising to the fullest possible extent indigenous sources of production, especially of consumer goods. In fact, Mr Singhania, the President of the Federation of Indian Chambers of Commerce, thought that a saving of Rs 50 crores could be effected by reducing the import of fish, fruit and vegetables, liquors, spices, tobacco, gum, wood, timber, chemicals, drugs and medicines, cutlery, hardware, dyes and colours, glassware and earthenware, paper, cotton yarns and manufactures and other yarns and textiles. In view of the very considerable pressure that deficit financing is likely to exert on the internal economy and the changes of domestic production not being equal to the occasion, it is necessary to go cautiously on any programme of slashing imports. Though Mr Desai has a reputation as a puritan, he showed a lively awareness of the difficulties of the situation when, for example, he confessed his painful (in more than one sense) experience with some indigenous razor blades, which shows that not all consumer goods imported are luxury articles.

But, when all is said and done, the best way to set about solving the difficulties over foreign exchange requirements of a developing economy like ours is not by reducing imports, but by expanding exports and by obtaining suitable external credits on reasonable terms. The first part of the problem was considered at length by the Export Advisory Council, which met on Sunday. Addressing the Council, Mr Karmarkar drew attention to the worsening of the export earnings in the first nine months of the current year. During this period, India earned only Rs 439 crores as against Rs 457 crores for the same period last year. This was partly due to the fall in the external prices of some of the commodities that were exported. As a consequence, though we exported more in terms of quantity (the volume index for the first half of the year was 109 against 108 for the corresponding period last year), the earnings were less (the value index having declined from 94 to 91).

In the course of his address, Mr Karmarkar reviewed the performance of our traditional earners of foreign exchange and pointed out that, of all commodities, tea has done best this year. Its performance in quantitative terms has been better; and even the price factor has fortunately tended to show a turn for the better. Vigorous efforts to increase its popularity abroad are being made: the President of the Tea Board is at the moment in the US, trying to persuade the Americans to drink more Indian tea. Efforts are also being made to export more tea to Russia and East European countries. Jute goods, our other principal item of foreign trade, have not, owing to a variety of factors, done as well as was hoped for. In textiles, recent revisions in policy are expected to improve the performance of the industry: in the last nine months, it has been, both in quantity and value, worse than in the corresponding period of last year. However, an encouraging feature has been the improvement in the export figures of handlooms—46 million yards valued at Rs 6.67 crores against 45 million yards valued at Rs 6.37 crores in the corresponding period of last year. Interestingly new three-cornered arrangements between India, the US and some other countries like Burma and Indonesia are expected at once to secure raw materials and export markets.

One of the difficulties in the way of increasing exports has been the increase in domestic demand and consequent distortion of prices—a by no means unfamiliar dilemma of any scheme of export promotion. Self denial, easily preached, is particularly agonising, especially when the increase in demand represents the first fruits of prosperity after centuries of privation.

But, when all is said and done, these traditional earners of foreign exchange can at best hold their

own. It is necessary to explore other sources of such earnings. The most hopeful source of new earnings is mineral ores, especially iron ores. In the last year or two, a good deal of attention has been given to this source both by the Government and by the trade, though the attempt to channelise trade in this commodity through the State Trading Corporation has created a good deal of friction and litigation. It should not be beyond the wits of the Government and the trade to evolve a modus vivendi that will make possible the fullest and the most efficient exploitation of this source of earning. An annual target of 5 million tons of iron ore, yielding about Rs 150 crores, can and should be attempted.

Another important aspect of our export drive is, as has been pointed out in past discussions in the Export Advisory Council and elsewhere, the need to diversify them and to cash in on our new standing as at least a partially industrialised country. Mr Singhania desired that this change in pattern of export trade should be deliberately worked out at the shortest possible time by allowing more and more export of finished and semi-finished goods. Mr O. T. Jenkins, likewise, argued that more engineering goods can be exported with advantage. The Second Plan has, of course, provided for export of fans and sewing machines and so on, but the possibilities of both increasing the number of commodities and expanding the areas to be served should be explored.

Part of the discussion on the changing pattern of trade took the form of attempts to find fresh worlds to conquer. In this connection came up, once again, the difficulties created by the Suez crisis. In the first place, dislocation makes it difficult to reach our traditional buyers; and, on the other hand, it gives us a golden opportunity to capture markets that were served by others. Again, the new pattern of trade agreement with various countries, especially in East Europe, has opened up opportunities that were not there before and a skilful utilisation of these may solve a great many of our exchange difficulties.

Delhi Review

Food Production

"If there is a will, there is a way" is an adage that is applicable equally to individuals and Governments. When told about the need for revising the targets of food production considerably above that had been originally fixed by the Planning Commission, the Union Food Ministry promptly came out with the demand for a commensurate increase in the allocation under agriculture. It has, however, been made clear to them and other State Food Ministries that while the upward revision of the targets has remained, the demand for an increase in funds cannot be conceded for the simple reason that additional money is not available.

Subsequent discussion have shown that with concerted effort on the part of all concerned, the new overall target of 28 per cent increase can be achieved. Some time ago, Dr Deshmukh disclosed the welcome information that by active pest control, a saving of nearly 1 million tons of foodgrains can be effected.

It is now said that three manurial schemes recently initiated by the Ministry of Agriculture are expected to give a substantial impetus to the drive for the attainment of the new target. The schemes envisage larger and better utilisation of local manurial resources for the production of manure in villages, production of compost manure from night-soil in village panchayat areas and intensification of green manuring.

It is estimated that the level of manure production in village can be raised to 2½ tons per head of adult cattle from the present one ton by conserving all locally available resources and converting them by improved methods into compost. In other words, the production of compost manure in each village can be estimated at 600 tons if all the local resources of organic matter are fully utilised. The second scheme aims at putting 5½ million acres of land under green manure crops all over the country. The third scheme relates to the production of compost manure from night-soil in village panchayat areas.

In addition to making better use of manurial resources for stepping up food production, another concrete step to put through a programme of setting up 4282 seed farms during the Second Plan period to supply quality seeds to cultivators has been taken by the Union Ministry of Agriculture. This proposal has been finalised recently after the discussions which the Union Ministry of Agriculture had with the States' representatives after they had conferred with the Planning Commission on the subject of achieving higher agriculture targets.

Plantation Enquiry Commission's Report on Coffee Industry

Of all the recommendations made by the Plantation Enquiry Commission in their Second Report dealing with the Coffee industry, the one relating to the regulation of the internal distributive trade may be expected to receive unanimous popular support. It is a long-standing demand of the consumer in this country that he should be supplied with adequate quantities of coffee at an equitable price consistent with the increase in the internal production of the commodity. For some inexplicable reason nothing has been done to remedy the unsatisfactory state of affairs in the internal trade of coffee. The neglect of the consumer's interest will become apparent when it is noted that internal consumption accounts for nearly three-fourths of the total products.

After making note of the fact that the middle class in South India consumes the bulk of the coffee distributed internally, the Commission have recommended that the Coffee Board should arrange for the sale of a certain portion of coffee output which is consumed internally. The Board should start a separate organisation for manufacturing coffee powder which can be packed in pliofilm packing of 1 lb and ½lb with the prices marked on the packages and retailed through ordinary trade channels including co-operatives. In order to keep the price low, it has been recommended that a "consumer subsidy fund" should be created out of half the "surplus" in export realisations, i.e., the actual export value less the calculated value for export on the basis of internal auction value and the excess in value as a result of gain in the weight of coffee in storage due to absorption of moisture. The other half is to be earmarked for a "price assistance fund" for paying the basic price to the producer.

The commission have come to the conclusion after a study of the value of fixed assets of coffee plantations, that the generality of coffee companies has not shown sufficient appreciation of the fact that coffee tree is a wasting asset and consequently adequate provision is necessary for this depreciation. The present position, therefore, is that working funds of the companies would not be sufficient to meet the entire expense of replanting.

In order to remedy this serious defect, the commission have recommended the creation of a Coffee Replanting Fund to which each coffee estate, of 25 acres and above, should be required to contribute a fixed amount of money. The fund should be used for the specific purpose of financing a programme of replanting.

Other recommendations of the Commission include the setting up

North Indian Markets

Bullish Trend in Foodgrains Prices

FIRM conditions have continued to prevail in the Hapur Foodgrains market. Wheat average quality has recorded a further improvement of As 10 per maund to Rs 16, while farm quality is transacted at Rs 17. This steady rise in prices is attributed to smaller arrivals from the producing centres and brisk buying from outside.

Rice prices, however, rule quiet due to heavy arrivals of the new crop in the market, the rates for Barmati moving between Rs 23 and Rs 29 per maund, according to quality. Sowings of the "rabi" crop are in full swing all over Uttar Pradesh; and harvesting of late paddy crops is also taking place.

Gram has registered an improvement of As 8 per maund, the Punjab quality quoting Rs 13-6. Barely and Bejhar eased slightly due to falling demand for seeds, while prices of other Coarse grains have continued to rule steady.

Continued heavy offtake and appreciable advance in the futures section due to heavy speculative buying have accounted for a further improvement in the prices of Pulses. Peas dara quality has improved to Rs 13-10 from Rs 12-12 and white quality to Rs 14-5 from Rs 13-8 per maund. Arhar prices have advanced by As 8 to Rs 13-5. Firm advices from the South and West Bengal have been responsible for the marked improvement in the prices of other pulses.

In the Delhi grains market, prices of foodgrains have advanced further owing to decrease in the arrivals of farm Wheat and shortage of stocks. Demand is better due to which the rate has recorded a rise of about Re 1 to Rs 20-8 per maund. Barely is also in good demand in sympathy with the firmness in wheat. Rice prices are rulling quiet, while Gram has firmed up further on better outside advices.

The Bombay grains market continues to rule firm, the upward trend in prices being more pronounced in the Rice section. Several qualities have moved up by Rs 8 to Rs 10 per candy on account of good demand in the face of smaller arrivals from upcountry centres. The rise in prices is also aided to some extent by the Reserve Bank's decision to withdraw credit restrictions on paddy and rice.

Activity in the Wheat section, however, continues to be limited in view of the fast depletion of local supplies. With the continued ban on imports of indigenous wheat, the market is faced with the increasing shortage of good quality wheat. There are fears that the shortage will be more acute in the coming weeks. The Punjab Pissi quality is quoting at Rs 160 to Rs 185 per candy.

Trading in the Coarse grains section reveals a sustained shortage of good qualities of Jowar and Bajra. Sholapur Jowar is fetching as high Rs 195 per candy, while inferior varieties are transacted at Rs 150 to Rs 175 per candy. In the Pulse section, Urad has improved by Rs 5 per candy.

*

Sugar

Sugar markets have continued to rule quiet in view of the easy suuply position following the release of a further quantity of 1.60 lakh tons for free sale. Thus, total release, out of the 1955-56 production, amounts to 16.31 lakh tons. Old stock with the factories, as on the 31st October 1956, stood at 5.42 lakh tons as against 4.32 lakh tons last year. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Jaswant Rs 27-14; Simbhauli Rs 28-4; Mowana Rs 27-4 to Rs 28-0; Daurala Rs 28 to Rs 29; Amroha Rs 27-4; Bijnore Rs 27-4; Manscorpur Rs 27-8 to Rs 29 and Rampur Rse 30-0.

Taking advantage of certain concession allowed by the Government, about 15 mills in the Uttar Pradesh State have already begun new cane-crushing operations.

The Khandsari market continues to rule dull and depressed and the rates are moving between Rs 22 and Rs 26 per maund according to quality.

*

Gur

Brisk ready demand has accounted for steady conditions in the market for new Gur, although daily arrivals amount to an average of 4,000 maunds. Demand is mostly from the consuming areas of Bombay. Old stock is fast dwindling and is put at about 5,000 maunds. Following are the prices (per mound) quoted in the Hapur market:—New Gur Rs 13 to Rs 15 per maund according to quality and Old Gur at Rs 11 per maund.

Sowings for "rabi" operations are expected to finish after a weak when gur arrivals are likely to go up further.

*

Lac Crop

According to a report issued by the Indian Lac Cess Committee, the yield of the Katki Lac crop in India, for the current year, is expected to be higher than in the previous two years. The yield is expected this year to be 447,000 maunds as against 333,000 maunds for 1955 and 219,000 maunds for 1954.

The normal yield based on the average production of 10 years preceding 1955, is 251,000 maunds. This increase is mainly due to the good crop expected everywhere, specially in Bihar and West Bengal where 157,000 maunds and 68,500 maunds are expected this year as against 80,500 maunds and 17,500 maunds respectively last year. The estimates of production for the different States have been adjusted to correspond with the States formed on November 1, 1956.

*

WORLD OF COTTON

(Continued from page 953)

relief to the trade and industry. Slightly improved conditions were also reported on the export front.

As the stock position in up-country centres is reported to be tight, the general feeling is that the demand for cloth will gather momentum in the coming weeks although there may not be any significant rise in prices. The main consuming centres, that have evinced interest, include Kanpur, Delhi and Madras.

On the export front, regular business is passing for Burma against outstanding import licences. Moderate business is also reported to have been concluded with West Africa in grey goods, while some bookings have been done in grey shirtings and drills with Mombasa. Fair enquiries are reported from Sudan for mulls and voils. Only negligible quantities have been booked for Saudi Arabia.

Madras Review

The Peninsula

Geared to Economic Pursuits

In South India, the reorganisation of States appears to have led to a quick reawakening of determined interest in economic problems. A few relatively minor inter-state disputes linger; but these no longer evoke the emotional attention of the people as they used to, till Nov. 1.

Expansion of the Cabinet is, of course, a preoccupation, as a balance of power has to be stuck between the fusing party elements. In Mysore, it would appear, this question is being deferred for the post election situation. In Andhra Pradesh, Mr Sanjeeva Reddi seems to be more hard pressed for expansion, though in his first selections, broad regional claims have not in any way suffered. New names for the Andhra Cabinet are expected to be announced shortly

In Andhra, an interesting legal issue was raised by an imaginative advocate, who sought a writ of prohibition against the former State of Hyderabad, its Chief Minister and his Cabinet colleagues and the President of the Hyderabad Pradesh Congress Committee, with a view to preventing the disintegration of the Hyderabad State. It was the contention of this gentleman that the entire States Reorganisation Aca was ultra vires of the Constitution. Two learned judges of the Andhra High Court unostentatiously disposed of the petition by ruling that as Hyderabad itself had ceased to exist, the directions which the petitioner sought had no meaning, as they could be carried out only against non-existent bodies. They did not feel impelled to pronounce any judgment on the legality or otherwise of the reorganisation.

Andhra Pradesh thus survived a lone challenge. Barring a few strange and often entertaining distractions of this kind the authorities are now free to concentrate on deliberations and practical steps calculated to meet the material aspirations of their new wards.

Kerala is, however, a little off the track. The reshuffling of judicial jurisdictions and the decision to do away with the High Court Bench at Trivandrum have provoked protests in many parts of the Travancore State. The Trivandrum Bar Association has observed a High Court Day and has been boycotting the courts for several days in succession. The dispensation of civil justice is also at a stand-still in places where District Courts had functioned and where they were scrapped under the reorganisation scheme.

In Kerala, where Presidential Rule inevitably continues, public interest is focussed more on these agitations their political implications and the party alignments which are emerging for purposes of the next elections. Even the Governor of Kerala has not taken charge and the Adviser's regime, inspite of all that it has brought to the State by way of improvement in administrative efficiency and a jealous protection of its economic interests, has still not succeeded in winning the hearts of the people.

Mr P. S. Rau, who is officially reborn as the acting Governor of Kerala, is rounding off his good work in the State, by launching a campaign of spraying of cocoanut trees. Inaugurating the campaign, Mr Rau said that he was tackling the cocoanut root and the leaf disease on a war footing and that the Government of India have been approached for the necessary approval and financial assistance for the scheme.

When it is recalled that about 70 lakhs of cocoanut trees in the State are affected by this disease and not even two percent of them, have received the consistent spraying needed for recovery, the beneficial character of the present scheme could be appreciated. The cocoanut farms were fast becoming a source of despair. It is now possible to hope that, a nearly universal pest which was responsible for impoverishing many peasant homes in the State over the last two decades would now be wiped out. It must also be said that the absence of a democratic Government has not stood in the way of progress of schemes under the Second Plan. All that can be said is that the Government taking charge after the elections if it is sure of its popular hold and is enthusiastic, may be able to breathe new life into the schemes.

In other States, the pre-eminent claim of economic development has not even formally suffered. In Madras and Andhra, land legislation is likely to be speeded up. Andhra has to integrate the disparate reforms of Hyderabad and the original Andhra States. Even before the inauguration of the new State, the Chief Minister of Andhra indicated that land reform would be a top-priority assignment for the new Government.

In Madras, the anaemic response to the Bhoodan movement might provoke a reaction in the form of direct measures by the Government. While addressing a public meeting convened by the Madras City Bhoodan Committee, Mr C. Subramaniam, Finance Minister, deplored the fact that there was more of lip service to the movement than real change of heart.

He gave the warning that if the movement did not gain momentum, the great experiment might fail, which in turn might compel the State to introduce legislation for the realisation of a more equitable land distribution. Actually, the Minister made use of the term 'equal' distribution. As this expression has acquired a conventional looseness about it, the State Government's intentions could be read in a more liberal spirit.

The organisational changes in the sphere of small industries are equally noteworthy. Since November 1, the development of the handloom and small-scale industries has come under the charge of a single regional administrative head. Of the six regions of India, the Southern region comprises Madras, Mysore and Kerala, with its headquarters at Madras. The regional head will have a suitable batch of deputies and a liasion committee consisting of the relevant heads of departments in the region. There will also be a subsidiary Corporation of the National Small Industries Corporation which now functions at Delhi.

In this connection one might refer to the prospective establishment in Madras, Kerala and Mysore of three centres for studies in regional planning. These centres are officially described as 'industrial and management research units for planning' and will function under the auspices of the Indian Statistical Institute. The Mysore unit will be located at Bangalore and will be under the charge of Dr A. T. A. Laermonth, who will be assisted by a small team of research workers.

In Andhra, brisk work has already commenced on the formulation of schemes to be undertaken in the

South Indian Notes

Leadership of Trade Unions

Speaking at the annual general meeting of the shareholders of T. I. Cycles of India Ltd., Madras, Sir A. Ramaswami Mudaliar has drawn attention to some of the problems which face private industry in the country today. Among the difficulties that have stemmed directly from the Administration, the new Company Act, which came into force from April this year, seems to have assumed a predominant role. Pointing out that the Act has brought in its wake many problems to industry, he has observed that the implications of the various provisions are such that even with "the best legal advice, it is difficult to be absolutely certain that the provisions of the act are correctly understood and fully implemented." It is unfortunate that while companies are doing their best to meet the statutory obligations that have increased enormously after the new Act came into force, they are not able to derive the satisfaction that the provisions of the Act have been properly observed by them.

The second point on which Sir Ramaswami has sought to focus Government's attention pertains to labour relations. In view of the fact that the scope of membership has been widened by recent legislation the time has come for an examination of the question of leadership of trade unions. According to Sir Ramaswami there is no case for the continuance of outside leadership in most cases. It is his opinion that labour-management relationship can be made quite cordial if there is no outside interference. The greatest drawback in the system that allows outsiders into the leadership of trade unions is that in negotiations between the workers and management the special problem of the unit concerned are relegated to the background. If the leadership is derived from the workers themselves then the difficulties of the management concerned as well as the handicaps of the workers can be placed in proper perspective and consequently there will be better chances of an early settlement of disputes. It can no longer be seriously argued that workers are ignorant of their rights and privileges. Since Government themselves are big employers they would do well to consider the suggestion in the light of what Sir Ramaswami has said.

Referring to Government's policy of giving encouragement to cottage and small scale industries in the manufacture of cycle parts, Sir Ramaswami has made it clear that the large scale manufacturers have no cause for complaint against this policy. He has, however, emphasised the need for ensuring that the parts so manufactured are quite upto the standards prescribed by the Indian Standards Institute. Government should remember that the cycle is the commonman's vehicle and as such it represents, in a large majority of cases, a substantial portion of his savings. It is, therefore, absolutely essential that every cycle that is allowed to be sold in the country is of the highest standard. Hence, it is incumbent on Government to exact the highest standard from small scale manufacturers of cycle parts.

Though Sir Ramaswami has referred to this point in connection with the cycle industry, it is equally applicable to other industries as well. In the interests of the consumer it is of the utmost importance that Government ensure that small scale industrialists whenever they are given licenses to manufacture components that go into the making of complete articles, strictly conform to the highest standards.

Medical Research

The substantial increase in the provision for medical research to Rs 412 lakhs in the Second Five Year Plan as against only Rs 12 lakhs in the First Plan, is a clear indication of the importance attached by Government to medical research in the promotion of public health. Symptomatic of this growing awareness is the considerable progress made by the Indian Council of Medical Research in recent years.

Speaking at the annual meetings of the Scientific Advisory Board and the Advisory Committees of the Council held in Mysore last week Mr V. K. B. Pillai, Secretary Union Ministry of Health, said that the problem of medical health in India related mainly to environmental sanitation, provision of drugs in adequate quantity, improving the nutrition of the people and limiting population growth. Climatic conditions, customs, and other factors peculiar to our country should be taken into consideration while effecting improvements in environmental sanitation. Mr Pillai disclosed that the ICMR had constituted a full fledged committee on environmental hygiene and sanitation. The Council's activities had met with practical gains in the field of communicable diseases.

Referring to the complaint that research in indigenous system of medicine or in Indian herbs had not been given adequate official attention, Mr Pillai declared that during the last five years the Government of India had been taking all possible steps to develop research in that field. A sum of Rs 6.5 crores had been separately provided in the Second Plan for developing the indigenous system of medicine.

While pointing out that research had already been initiated on many of the projects which had been listed in the Second Five Year Plan, Mr Pillai emphasised the need for new plans for medical research to be drawn up with a view equally to study the diseases of man and the factors that promote his mental and physical well-being.

*

House Mortgage Banks

The Madras Government's proposal to organise House Mortgage Banks in every important town, if implemented, will meet a widely-persent need. A kind of State organisation is also contemplated, wherein a Central House Mortgage Bank will function as apex to a fairly broad-based structure.

The Land Mortgage Banks have contributed considerably to the simplification of the problem of rural indebtedness. Their contribution would have been even more substantial, if from the very outset, the institutions were designed to provide finance for production and for improvements on agricultural land. In many Provinces, these banks could not maintain a rate of interest sufficiently attractive to the loanees. In Madras there are already four District House Mortgage Banks.

There is thus a fund of practical experience to go by. The main difference between the Co-operative Construction Societies and the House Mortgage Banks lies in the circumstance that while in the first place, the loanee invariably has the capacity to repay the debt, in the second there can be no such assurance. Where social and political forces have undermined the importance of particular towns, localities or groups, the mere provision of cheap finance for renewal

WHY NOT SET UP A PAPER MILL?

Let us help you to set up a small or medium paper mill in your district. We will help you in every way, including survey of local raw materials possibilities, market survey, supply of machinery, erection of mill, choice of production lines, technical advice, training of personal at our plant, marketing of products—in fact, everything for the economical and profitable operation of a compact mill capable of producing of a variety of papers and boards. Investment of Rs. 3 lakhs to Rs. 15 lakhs for 1 to 5 tons daily output.

For full particulars please write to Box No. 55 C/o Indian Finance 116, Lower Circular Rd. Calcutta-14.

Madras Review

South Indian Markets

Export Council for Leather

IT is officially announced that an Export Promotion Council for Leather has been formed with the support of the Government of India to maintain and promote the export of tanned hides and skins and leather goods. This is the eighth in the chain of such Councils, sponsored by the Government to maintain and develop export markets for Indian products.

The Export Promotion Council for leather will undertake marketing studies in individual foreign countries, send trade missions abroad and appoint representatives or agents for purposes of collecting and disseminating, among exporters, statistical and other information regarding the export trade. Two of the Council's immediate objectives will be to institute quality control on tanned hides and skins intended for export, and to diversify the exports of these commodities by establishing direct contacts with consumer countries.

Meanwhile, arrivals of tanned Cow hides in the Madras market, during the past week, were as usual and clearances had been good. Prices advanced by one anna per pound. Buyers appeared to be coming forward at higher prices and a fair amount of business had been concluded.

Arrivals of Buff hides were comparatively free, but there was less demand, resulting in the accumulation of stocks. Good quantities of Cow Calf were, however, cleared and prices advanced by As 2 to As 3 per pound. In Buff Calf, clearances were good and prices advanced by 6 pies to one anna per pound.

In the Tanned Skins section, market quality Goat and Sheep skins showed no change in prices. Better qualities, however, advanced by As 3 to As 4 per pound. In the export section, the position remained unchanged as Madras holders appeared to be quoting higher prices, resulting in the absence of any fresh business being negotiated.

In the Raw Skins section, Bangalore goat skins were quoted at Rs 10 per 100 skins lower, while sheep skins advanced by Rs 15. In Bezwada, however, prices for goat and sheep skins remained unchanged.

*

Groundnuts

The Madras Groundnut market ruled somewhat quiet during the past week, mainly due to the absence of sustained buying. Arrivals averaged 80 tons a day and these were taken up both by small and big crushers. The rate for superior oil-quality seeds was quoted around Rs 166 and bold variety around Rs 160 per candy.

In the Groundnut Oil section, the rate for the ready position declined to Rs 337 from Rs 352 per candy. Calcutta interests took up only small quantities in near positions, while no interest was shown in the forward positions. Bazar interests also bought only small quantities.

*

Pepper

The markets for Pepper continued to rule barely steady. In the Alleppey market, both superior and inferior qualities remained at the uniform rate of Rs 650 per candy. The inflow and outflow were equal around 40 candies each. In the Kozhikode market, Wynaad quality was quoted at Rs 770 and the Country variety at Rs 750 per candy.

In the New York market, Black pepper, available from warehouses, was somewhat higher-priced as a result of the continuing port strike. Very little buying was reported at the higher prices. Malabar spot was quoted around 29½ cents per pound. The Singapore market ruled quiet.

Arrivals of pepper, during October, totalled 400 tons which included new pepper. Total exports, during the month, were 700 tons of which only 40 tons were taken by the USA. Europe was a larger buyer, taking 550 tons.

*

Rubber

The International Rubber Study Group has stated that the output of natural rubber, during the first nine months of the year, amounts to 1,345,000 tons, while consumption is higher at 1,392,500 tons. Synthetic production, over the same period, totals 910,000 tons with consumption at 827,500 tons.

*

Coffee

Coffee prices in the world market have continued to rule high, thanks to the unseasonal rains which have affected Latin American coffee countries. Brazil, in particular, is reported to have suffered some damage. Total world production is placed at 42 million bags of which 36 million bags will be available for export.

As far as India is concerned, the coming coffee crop is expected to be about 40,000 tons against the Coffee Board's estimate of 36,000 tons. The export of coffee may, therefore, rise to a possible 12,000 tons.

AMLUCKIE TEA COMPANY, LIMITED.

NOTICE is hereby given that the 80th Annual General Meeting of the Shareholders of Amluckie Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Saturday, the 15th December, 1956, at 10-30 A.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of a Director who retires by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. T. K. Basu be and is hereby re-appointed a Director of the Company."

   Special Notice dated 13th November, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. T. K. Basu is presently a Director of the Company, which is a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company, and he is an associate of the Managing Agents within the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director by a Special Resolution, of which Special Notice has been given to the Company.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business

5. To consider and, if thought fit, to pass the following resolution:—

   "That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggragate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 1st December 1956 to 15th December 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. Doig.
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
16th November, 1956.

NOTE: (1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

(2) Payment of the proposed Dividends, if declared, will be made on or after 24th December, 1956, only to those members whose names are registered in the Books of the Company on the 15th December, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(i)(d) of the Companies Act, 1956.

T. I. CYCLES OF INDIA LIMITED

HERCULES CYCLES IN GOOD DEMAND

COMPANY'S EXPANSION PROGRAMME

STATEMENT OF SIR A. RAMASWAMI MUDALIAR.

The Seventh Ordinary General Meeting of the shareholders of T. I. Cycles of India Limited, Madras, was held on Tuesday, 6th November 1956, at the Registered Office of the Company. Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, presided.

The Secretary read the notice of the meeting and placed before the meeting the proxies received which were recorded.

The Chairman delivered his speech and thereafter, asked the shareholders whether they had any questions to put in the light of the speech and in the light of the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 30th June 1956 which had been in their hands for some time. No questions were asked.

The following resolutions were unanimously adopted.

The Directors' Report and the audited Balance Sheet and the Profit and Loss Account for the year ended 30th June 1956 was adopted.

A resolution that a dividend of 6 per cent for the year ended 30th June 1956 be paid was adopted.

Sir Ivan Stedeford and Shri A. M. M. Murugappa Chettiar, the retiring Directors, were re-elected.

Messrs. Fraser & Ross and Shri F. S. Gopalakrishnan, the retiring auditors, were reappointed Joint Auditors of the Company for the year 1956-57 and their remuneration fixed.

The meeting terminated with a vote of thanks to the Chair.

The following is the text of the Chairman's speech:

Gentlemen,

It gives me very sincere pleasure to welcome you to this Annual Meeting of the T.I. Cycles of India Limited. The Directors' Report and the Audited Accounts and Balance Sheet for the year ended 30th June 1956 have been before you for some time and, with your permission, I shall take them as read.

The year under report has been full of events, some of which pleasant and some causing concern and anxiety to your Directors. Taking the latter first, during the year, there have been some labour difficulties which affected the progress of your Factory. In my last report, I referred to the "go slow" movement which was spreading among industrial workers in many industries and in different parts of the country. Unfortunately, the movement overtook your Factory workers sometime in November of last year and, in spite of every effort made by the management, the workers went on strike from the 19th of December. The Factory came back to normal only in April. During all this period, the Managing Directors and the supervisory staff at the Factory were constantly in touch with the labour officers and the Ministry of Labour both in the State and at the Centre and extended to them every measure of co-operation possible to bring the strike to an end. In spite of all this, owing to bad leadership of outside leaders, the old workers whom we had trained and who were happy in their work with us did not resume work. However, very soon after, wiser counsels prevailed among the workers themselves and the Factory had its full complement of workers, both old and new, early in April. The piece work system was accepted and is now working with satisfaction both to the workers and to the management. The wages of the workers on the piece rate are higher than they were before and have given much satisfaction.

I refer to more pleasant events which occurred during the year. A most modern and up-to-date canteen was completed and declared open by the Chief Minister of Madras in May 1956. The occasion was taken by the Chief Minister and the Minister for Labour to advise the workers against being misled by interested people. The construction of the administrative building, which I referred to in my last speech, has practically been completed. Factory 'B' has been extended to house the machinery for the manufacture of free wheels and it is expected that free wheels will be manufactured from the beginning of 1957.

Under the Development of Industries Act, your Company has been permitted to manufacture 2 lakhs bicycles and 1 lakh set of bicycle components on a single shift. Your Board of Directors have accepted this target and are arranging for the necessary equipment and machinery to be installed in the Factory to achieve this target on the basis of a single shift. Certain balancing equipment has been found to be necessary, the licence for which has been obtained and orders for such machinery, have been placed abroad. With this additional plant and machinery, the capacity of your Factory on single shift will be as fixed in the target and it is obvious that any additional demand that may be made will then be more easily achieved on a balanced basis by doubling the shift.

It gives me special pleasure to repeat what I stated last year that the quality of your products are so well appreciated that Hercules cycles are in great demand throughout the country. Thanks to their whole-hearted co-operation, we have continued to enjoy the benefit of Technical advice from our colleagues in Birmingham. The present monthly output is, on an average, 15,000 bicycles. But the demand is greater than what we can conveniently meet especially as there is a back-log of orders owing to closure or partial working of the Factory during the earlier months of this year. According to the Second Five-Year Plan, it is estimated that at the end of 1960, the annual offtake will be about 1.25 million bicycles and, according to present trends, this target is not an impossible one.

Several manufacturers have been licensed to produce complete bicycles and in addition, many scores of operators have been given licences to produce cycle parts. The desire to have small scale units spread all over the country, partly to manufacture parts and mostly to assemble completed cycles, which the Government has in view, is a commendable one and large-scale manufacturers have no reason to criticise this policy. The assembly of cycles from parts manufactured by various persons or factories is a normal thing in many countries. There is, however, one safeguard which is absolutely necessary and which I trust the Development Councils and the Government would always keep in mind. The cycle is a poor man's means of transport and it is necessary that he should get the best product in return for the hard earned savings which he invests in a cycle. The quality of every part should therefore be strictly tested and only those who produce parts of the desired quality should continue to have licences extended to them for the manufacture thereof. I am aware that the Indian Standards Institute is setting up standards for indigenous cycles and cycle parts with the help of technical experts. I hope that no false sense of sympathy for the cottage industrialist or the small scale industrialists will influence anyone to lower the standard prescribed by the Indian Standards Institute.

The new Companies Act has come into effect from 1st April this year and it has brought in its wake many problems to industry. All the implications of the various provisions of the Act, some of which at first sight seem to be rather contradictory, have not yet been fully ascertained. The statutory obligations of a company have increased enormously as a result of the Act and your Directors have done everything possible to ensure that the provisions of the Act are properly observed. But with the best legal advise, it is difficult to be absolutely certain that the provisions of the Act are correctly understood and fully implemented. The day to day administration of the business has become complicated in the light of the provisions of the Act. I do venture to hope that second thoughts will be paid by the Government towards revising some of the provisions and making other provisions more certain and definite than they appear to be now.

I have referred to the Canteen that was opened which is subsidised to a certain extent by your Company with the result that the workers get cheap and healthy food at the Canteen. I have always believed that amenities of this kind are far more valuable to the workers than merely increased bonuses or even merely increased wages. The management will continue to follow this policy without, however, in any way derogating from the cash earnings of the workers which is now satisfactorily fixed on a piece rate system. The economic progress of the country and particularly the success of the Five-Year Plan depends very largely on the co-operation which the industrial workers extend. It is no consolation even to the Government to criticise the employers continuously if productivity diminishes on account of the intransigence of workers. Most employers are anxious that the industrial units under their control should produce as much as possible and that there should be industrial peace.

While appreciating the efforts of the Government to improve the conditions of workers and recognising the various legislative measures that have been adopted for the purpose, it seems to me that the time has come for the Government to examine whether in most cases, leadership of trade unions should not be confined to those who are engaged in that industry, especially as the scope of membership has now been widened by recent legislation. There seems to be no case for outsiders to lead labour union movement in most instances and I feel that there are better chances of an understanding between the management and the workers if direct relationship is established between the two without the intermediary of an outsider who knows neither the management's difficulties nor much less the real handicaps of workers. The stage has come when workers have been sufficiently educated about their rights to be in a position to find their own leadership from within.

I would like to conclude by expressing the appreciation and thanks of the Company to the Government of Madras and to the Government of India for all the help, assistance and encouragement that we have continuously received from both the Governments during the last few years. The Minister of Commerce & Industry, who fostered the cycle industry, is now in charge of Finance but continues to show the same interest in the industry. The Minister of Heavy Industry and other Ministers, both state and central, have assisted us with their wise advise and counsel from time to time. I trust that they have also noted with satisfaction the progress that this Company has made in all directions. Lastly, I should like to pay my tribute to the office staff and the supervisory staff in the Factory and the workers for the co-operation that we have received.

WORLD OF BUSINESS

(Continued from page 948)

The Union Finance Minister evidently feels that the widening of the foreign balance deficit in the early phase of the Second Plan should not evoke any grave concern. Probably he lays great faith on adventitious props to the balance of payments. That the Commerce Minister should take a more orthodox view is natural. The principal difficulty arises from the fact that the marginal area of essential imports, in which further cuts can be made, is too narrow to make any substantial impression on the total deficit. In this position hopes should rest more on the stimulation of exports, consistent with the legitimate requirements of domestic consumption.

SOUTH INDIAN NOTES

(Continued from page 962)

or repair of houses offers no abiding solution.

The individual owner's inability to repair a house often reflects a change in social conditions and in such case, the House Mortgage Banks may only become an instrument for the transfer of property. Deep down, there is the pitiful circubstance of economic desolation, against which institutions like mortgage banks can provide no more than ephemeral relief. If they function as the spearhead of a genuine economic regeneration, which implies efforts in many other directions, their value is beyond question.

OCTAVIUS STEEL & CO., LIMITED

Notice is hereby given that the Thirty-fifth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office, No. 14 Old Court House Street, Calcutta, on Friday the 14th December, 1956 at 12 noon for the following purposes:—

1. To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December 1955.
2. To declare a dividend.
3. To elect a Director in place of the retiring Director.
4. To elect Auditors for the ensuing year and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 8th December, 1956 to 14th December, 1956, both days inclusive.

By Order of the Board,
B. GHOSE,
Secretary.

14, Old Court House Street,
Calcutta,
21st November 1956.

NOTE:—A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and the proxy need not be a member.

THE PENINSULA

(Continued from page 961)

first phase of the Second Plan. It is expected that in another couple of weeks, many schemes would be finalised. An aerial survey of the Sileru Power Project is now progressing. The survey covers the catchment area and the reservoir extent. As the project is to form part of the Machkund Basin development, it is being taken up as such as against an independent scheme. The project is scheduled to be completed within 10 years at an expenditure of about Rs 24½ crores.

The formation of Andhra Pradesh has facilitated the constitution of the Nagarjunsagar Control Board. The Chief Minister of Andhra Pradesh is to be the Chairman and the other members of the Board are drawn from among his colleagues in the cabinet, Secretaries to Government, besides the Administrator and Chief Engineer of the Project and the Chairman of the Central Water and Power Commission.

From the Chief Minister's observations at the recent meeting of the Anantapur District Plan and Development Committee, there seems to be every likelihood of a general overhaul of these bodies. Mr Sanjeeva Reddi thinks that the present set-up involves considerable waste of time and energy and he visualises a change-over to more compact committees composed of important officials and non-officials who will meet once in three months and freely discuss problems. Mr Reddi indicated that he would soon take up this question of reorganising the Planning Committees, their methods and the procedure adopted. As these questions have to be discussed at State level, he has decided to bring them to a suitable forum at Hyderabad after which the necessary decisions would be taken.

*

OLYMPUS

(Continued from page 958)

Thus, there is really no need, as has been done in some quarters, to take an alarmist view of the foreign exchange position. The drop in sterling balances from Rs 746 crores on March 31 to Rs 560 crores on November 9, a drop in slightly over seven months of Rs 186 crores, is attributable to the financing principally of imports of steel. Secondly, the adverse balance of Rs 121.86 crores for the first six months of the current year is not very different from what was assumed in the plan—a deficit on current account of Rs 1120 crores for the Plan period, or Rs 224 crores a year.

An increasing adverse balance of trade is not very unusual in a developing economy like ours. The overall position is, as is revealed by Mr T. T. Krishnamachari's note to the AICC, well under control; and, if drive and determination are brought to the task of export promotion and the securing of foreign credits by negotiations of the kind with which we are already familiar, there is no reason why we should not fulfil the targets of the Plan.

DISINFLATIONARY EFFECT OFSUEZ CRISIS

(Continued from page 947)

decline of industrial profits have induced the investor classes to curtail their spendings. A decline in their demand tends to result in a curtailment of production and this may lead to unemployment or short-time working. In vew of the uncertainty of the oil supplies managements and workers have become increasingly reluctant to work overtime. As a result there is a decline in the amount paid out in wages and this decline is liable to continue. Above all, there is in addition at least at a possibility of an enforced curtailment of production through oil shortage. This would act as a powerful deflationary force. In such circumstasces, it seems probably that most Trade Unions will abstain from pressing unduly their inflationary wage demand. If so, the right thing will happen for the wrong reason.

Further disinflationary monetary measures are, therefore, not considered necessary. Indeed, it is possible that, should the fears of a decline of production through oil shortages or through a prolonged decline of consumer demand materialise, the Government could well afford to relax its disinflationary measures. It might then become possible to lower the bankrate without running the risk of accentuating inflation. Indeed, a reversal of the disinflationary policy might become imperative in order to prevent the development of a deflationary spiral. The decline of consumer demand and of capital investment might easily assume such proportions as to necessitate measures to encourage spending by producers and consumers alike.

These observations are based on the assumption that the Middle Eastern situation will not become aggravated and that, on the other hand, it will lead to prolonged international tensions and to difficulties regarding the oil supply. An early reopening of the Suez Canal for traffic would avert oil shortage and, if accompanied by a relaxation of the tension, consumer demand would resume its normal course. An aggravation of the crisis on the other hand, might lead to more extensive military preparations leading to strong inflationary effects.

As Special Business.

(5) (a) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Branch offices of the Company at:—

Bombay,
Ahmedabad,
Ambala,
Jamshedpur,
New Delhi,
Nagpur,
Kanpur and
Secunderabad.

and to fix their remuneration.

(b) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch offices of the Company at:—

Madras,
Bangalore,
Coimbatore and
Trivandrum

and to fix their remuneration.

To consider and if thought fit pass the following resolution with or without modifications:—

As an Ordinary Resolution

(6) "That the accounts of the Branch office of the Company at Karachi, Pakistan, be not audited under the provisions of Section 228(1) of the Companies Act, 1956."

The Share Transfer Books of the Company will be closed from the 8th December 1956 to 21st December 1956, both days inclusive.

Dividends, if any declared at this meeting will be payable to Shareholders registered on the Company's Books on the 21st December 1956, or their mandatees.

By Order of the Board,
S. N. MUKERJEE,
Chairman.

9, Hare Street,
Calcutta,
13th November 1956.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

CLIVE STREET GOSSIP

(Continued from page 952)

teaching and practice, was to offer non-violent resistance to Hitler without any trace of fear or malice. This was considered a piece of extremely simple-minded advice and was not acted upon. I, for one, will not blame them and I am sure that Gandhiji would not either, for the simple reason that the demands it makes on human courage and endurance are of Himalayan proportions. Perhaps, it is true, as many who discarded Gandhiji's advice said, that the success of non-violence depended as much on the character of the enemy as on the character of the Satyagrahi himself. But the point is that the experiment of pitting non-violence against an admittedly ruthless enemy void of moral squeamishness had not been attempted, until the present movement in Hungary started. In other words, what is happening in Hungary to-day is, in a sense, of historic significance. Interestingly, as recently as a week ago, in a Brains Trust over the BBC programme, the possibility of passive resistance in Hungary was discussed. Dr Bronowski, himself a Hungarian who has made England his home, posed the question: 'Would an unarmed force of volunteers, who would place themselves between the Russians and the Hungarians and say, 'shoot if you will, but over our dead bodies' be effective?' This was done not as a piece of idle rhetoric, for Dr Bronowski offered to join twenty or thirty thousand volunteers, who were willing to cross Hungary and place themselves between the aggressors and their victims. But the other members of the Brains Trust had no doubts that the Russian answer would be a 'ruthless rain of lead'. It was reported that Dr Bronowski was sadly seen to agree that such indeed would be the case.

*

It now appears that, even as this discussion was going on, the Hungarians themselves were preparing for a kind of resistance very similar to that mentioned by Dr Bronowski. In the light of the later events, is it barely possible that the despair of the Brains Trustees may prove to have been unwarranted and even facile? He would indeed be a brave man who would so assert; but a study of Satyagraha as practised by Gandhiji would seem to suggest that its strategy definitely reckoned on the outraged moral sense of the onlookers impelling them to positive action to bring pressure on the aggressor. Satyagraha thus assigns a definite role to the conscience of the world in its strategy. Gandhiji skilfully used all the means at his command to draw the attention of the world to the non-violent non-co-operation with the oppressor and thus rouse the dormant moral responsibility of the community. His use of the Press, for instance, for this purpose was remarkably successful. Even without such conscious strategy, the Hungarian situation, as I have already remarked, has stirred the peoples of the world to an uncommon degree and there is evidence that the Russians are deeply embarrassed at finding themselves isolated from very many nations who were, like India, disposed to be friendly with them. The heart-searching, even within the Communist countries, has probably been as agonising as without. In Hungary itself, the fact that the Government are wanting to persuade rather than coerce the passive resisters into submission and the reports that Russian troops have been ordered to show restraint in dealing with the insurgents, seems to point to a degree of success for the passive resisters that one could not have dared hope some time ago. If the Hungarian experiment in Satyagraha succeeds, the intolerable agony of the last few weeks would not have been in vain.

NORTH INDIAN NOTES

(Continued from page 559)

of a Warehousing Corporation, under the aegis of the Coffee Board, to take over from the pool agents all functions connected with the marketing of coffee except the curing coffee; the taking over of the export trade in coffee directly by the Coffee Board; an intensification of yield at economic cost in the existing areas; and extension to the minimum necessary to meet the growing internal demand. Special recommendations have been made by the Commission for assistance to small coffee growers. Small holders should be induced to come into joint farming co-operative societies partnered by the State. The setting up of primary multipurpose coffee growers co-operatives with wholetime managers has also been recommended.

Mr K. G. Sivaswamy in his note of dissent says that the managing agency system existing in the coffee industry should be abolished. He says the working of proprietory concerns and director controlled companies as compared with rupee companies under Indian and non-Indian managing agencies shows the latter had less increase in reserves between 1946 and 1953, less working funds in 1953 per acre, less increase in capital formation in 1953 over 1946 and more percentage of aged plants than the former. Their upkeep charges and commission to managing agencies and directors were high.

*

BALANCE-SHEET REVIEWS

(Continued from page 940)

pound is lower at Rs 1-10-11 against Rs 2-10-5. The net profit, before providing for Depreciation and Taxation, amounts to only Rs 4,30,944 against as much as Rs 20,12,483 earned in the previous year.

The directors have, after providing Rs 1.82 lakhs (Rs 6.43 lakhs) for Taxation; Rs 1.19 lakhs (Rs. 88,590) for Depreciation and Rs 34,029 (Rs 1.50 lakhs) for Other Funds, reduced the dividend to 12½ from 80 per cent. No provision for General Reserve is possible as against Rs 4.60 lakhs allocated to this item in 1954.

Estimates for 1956 provide for a crop of 21,500 maunds at a total cost of Rs 23.73 lakhs, which is equal to 22.08 annas per pound, inclusive of the recent additional imposition of West Bengal Entry Tax of one anna per pound.

£R$

Zandu Pharmaceutical Works

The Zandu Pharmaceutical Works Limited has maintained satisfactory progress during the year ended 31st March, 1956. Sales have shown an increase to Rs 51.75 lakhs from Rs 42.98 lakhs in the previous year.

The profit, subject to tax, is slightly higher at Rs 3.01 lakhs against Rs 2.69 lakhs. This profit, together with the previous year's balance of Rs 1,548, makes a sum of Rs 3.03 lakhs out of which the directors have recommended a dividend of 7 per cent on the Ordinary shares. A sum of Rs 80,000 is transferred to Taxation Reserve and Rs 86,180 to General Reserve.

The directors have, in their report, stated that the demand for the company's products has been sustained, the volume of sales having considerably increased.

DUNCAN BROTHERS & COMPANY, LD.

Notice is hereby given that the Fifty-seventh Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No 31, Netaji Subhas Road, Calcutta on Saturday the 15th December, 1956 at 11 A.M. for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1955.
2. To confirm the dividend paid on the Preference shares and Interim dividend on Ordinary shares and to declare a final dividend on the Ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact such other competent business as may be brought before the Meeting.

The Share Transfer books of the Company will be closed from 6th to 15th December, 1956 both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,
DUNCAN BROTHERS & CO., LD.
R. H. DUGUID.
Director.

Calcutta, 21st November, 1956.

Note. A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE INDIAN CABLE COMPANY LIMITED

The Directors have decided to recommend at the forthcoming General Meeting of the Shareholders to be held on the 21st December 1956, Dividends for the year to 31st March 1956, as follows:

(a) Dividend on Cumulative Participating Preference Shares @ 12½% free of Income Tax.
(b) Cash Bsonus on Cumulative Participating Preference Shares @ 2½% free of Income Tax.
(c) Dividend on Ordinary Shares @ 12½% free of Income Tax.
(d) Cash Bonus on Ordinary Shares @ 2½% free of Income Tax.

By Order of the Board,
B. J. WOODLEY,
Managing Director.

Calcutta,
13th November 1956.

Stock Exchanges

SPRINKLING OF MINOR GAINS

Watch-Dog Writes:

STOCK markets, which had been ruling weak during the past few weeks, have now staged a splendid recovery. Although the volume of business has hardly shown any expansion, the tone has improved perceptibly, thanks to the optimistic market interpretations that the Government would take further measures to meet the enhanced demand for funds. Stronger advices from various commodity markets and the reports with regard to the Supreme Court's order for the stay of the Plantation Award, are also contributory factors.

Tea shares highlighted the week's trading on the Calcutta Stock Exchange where selected scrips in other countries shared the general improvement in prices.

Although activity on the Bombay Stock Exchange was not large, prices were held mostly steady in thin and slow dealings.

On the Madras Stock Exchange, selected features were noted in the Planting section; but interest was confined to favourites.

Conditions on the London Stock Exchange were rather unsettled as operators were unwilling to extend commitments in view of the many political and economic uncertainties.

On Wall Street, Steels forged ahead, while shares of the Ship-building companies met with good demand on prospects for the construction of new oil-tankers and war vessels.

*

Calcutta

Calcutta, Friday Evening.

CONDITIONS on the local Stock Exchange, during the past week, showed a slight improvement due to professional support and some replacement buying at the recent low levels. Although profit-taking in mid-week pared off some of the earlier gains, an improved sentiment was discernible toward the close. The main factor, that influenced a sudden change in sentiment, was the hectic activity in Tea shares where prices showed a remarkable recovery following the improved outlook for the industry. The market finished the week with a sprinkling of minor gains on balance.

The Giltedged section continued to remain in a depressed state as support was non-existent. Institutional investors were content to keep their money in fixed deposits, which now give a satisfactory return with no risk of capital depreciation. With the result, prices tended to a fall even on small offerings. 3 per cent 1986 Conversion Loan opened at Rs 73-5 and, after improving at one time to Rs 73-12, receded again to Rs 73-8, finishing better at Rs 73-9.

In sympathy with giltedged securities, Bank shares turned quiet with prices showing an easier tendency. Punjab National were marked down further to Rs 50 from Rs 53-8. Allahabad Bank were offered at Rs 168 with United Commercial nominally quoted at Rs 56.

Jute shares continued to be a neglected counter. Despite the firmer advices from the jute goods market, operators were found to be in no mood to enter into commitments on the feeling that the mills would not be making decent profits in view of the rising raw jute prices. The only redeeming feature of trading was a slight improvement in the prices of selected scrips toward the close in sympathy with the general trend of the market. Prominent amongst these were Hooghly having recovered to Rs 25 from a low of Rs 20-2 and National to Rs 24 from Rs 23-8. Bally met with some support upto Rs 177 from Rs 174 on reports of the likely change-over in the management from Messrs Jardine-Henderson to Messrs Birla Brothers. Operators were keenly awaiting the full details with regard to this. Fort William were, however, offered down to Rs 19-15 from Rs 22-14; India to Rs 126 from Rs 142 and Standard to Rs 88-8 from Rs 95.

The outstanding feature in the Coal section was perhaps Burrakur, which advanced further to Rs 19 from Rs 18-8 on renewed speculative buying, although the closing was a shade quieter at Rs 18-6 on profit-taking. An interested party seemed to be cornering these shares with a view to securing a majority vote for opposing the amalgamation of this company with the Standard Coal. The meeting in respect of the amalgamation proposal is expected to be held shortly. South Karanpura, after improving to Rs 10 from Rs 9-4, receded again to the latter level on profit-taking. Central India moved narrowly between Rs 7 and Rs 7-4 and Western Bengal between Rs 6-5 and Rs 6-9.

Thanks to the reports of a better turn in the piecegoods market, Textile scrips ruled steadier. The only bright spot were, however, Elgins which met with sustained support upto Rs 29-10 from Rs 28-8. Kesoram changed hands at Rs 16-12 to Rs 17 and New Victoria at Rs 2-4 to Rs 2-6.

Tea shares, which remained neglected till the end of last week, met with a revival of buying interest. There was a broadening of enquiry for the shares, especially of the Assam gardens, as investors were encouraged by higher prices obtained both in Calcutta and London auctions. It was also felt that the outlook for the industry would considerably improve in view of the reports that many gardens in North-East India had ceased plucking with effect from the 20th November. Scrips, which made a remarkable recovery from the recent low levels, were Brooke Bond being taken upto Rs 20-13 from Rs 19-14; Bishnauth new upto Rs 25 from Rs 24-10; Dhelakhat upto Rs 24-1 from Rs 23-2; Grob "A" upto Rs 35 from Rs 34-6; Hantapara upto Rs 220 from Rs 203; Killcott upto Rs 20-6 from Rs 19; Patrakola upto Rs 232 from Rs 217 and Tezpore upto Rs 24-2 from Rs 22-12.

Sugar shares remained practically unchanged; but enquiry was selective due to quieter advices from the commodity market. Carew eased off to Rs 8-10 from Rs 8-13 and Balrampore to Rs 5-15 from Rs 6-8. Cawnpore were quoted around Rs 18-2.

Engineering shares, after ruling weak in the early part of the week, staged a mild recovery toward the close on the emergence of bull support. Price movements in the speculative issues were, however, subjected to settlement adjustments on Wednesday. Indian Irons opened at Rs 33-9 and, after touching a low of Rs 33-1, improved gradually to Rs 33-7, finishing at Rs 33-2. The settlement rate was fixed at Rs 33-1 as against the last settlement of Rs 33-7.

In sympathy with Indian Irons; TEXMACO receded at one time to Rs 21-14 from a high of Rs 22-15, to finish better at Rs 22-2. Burn & Company remained, however, firm at Rs 372, thanks to the announcement of an increase in dividend for last year. Jessop changed hands at Rs 35-6 to Rs 35-10; Richardson at Rs 26-6 to Rs 26-8 and Braithwaite at Rs 27-3 to Rs 27-5.

The Miscellaneous section provided a few firm spots on dividend and investment considerations. Prominent amongst these were Indian Cable which, after being pushed upto Rs 34-8 from Rs 33 on rumours of the dividend being doubled, receded toward the close to Rs 33-8 on the announcement of the dividend being raised by only 2½ per cent as bonus. Indian Aluminium forged ahead to Rs 17 from Rs 16-8 following the recent announcement of an interim dividend even on the right issue. NICCO met with sustained investment demand upto Rs 28-4 from Rs 27-4. India Steamship were keenly sought after upto Rs 10-11 from Rs 10-1, thanks to the announcement of a dividend of Re 1 on the Ordinary shares after a period of two years. National Carbon recovered to Rs 27-6 from a low of Rs 26-14 on the emergence of investment enquiry.

Elsewhere, Orient Paper fluctuated rather erratically between Rs 35-10 and Rs 36-9 on alternate bouts of buying and selling, to finish the week at Rs 35-13. Titaghur, however, improved steadily to Rs 40-1 from Rs 39-9. Shree Gopal were cheaper at Rs 17-1 against Rs 17-8. Alkali Chemicals, after being marked down to Rs 20-10 from Rs 22-4, recovered partially at the close to Rs 21-14. Rohtas, Dunlops, Gillanders and Martin-Burns were narrow markets around Rs 21-2; Rs 27-2; Rs 13-2 and Rs 25 respectively. BIC were on offer at Rs 10-8 to Rs 10-10 and Rallis at Rs 41-12 to Rs 42-4. Sone Valley were almost maintained at Rs 8-15 and so also BEP at Rs 3-6.

THE TITAGHUR PAPER MILLS CO. LTD.

NOTICE is hereby given that an Annual General Meeting of The Titaghur Paper Mills Co. Ltd., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 p.m. on Wednesday the 19th day of December 1956, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the half-year ended 31st, March, 1956, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th December 1956 to 19th December 1956, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO.
(PRIVATE) LIMITED.
Managing Agents.

Chartered Bank Buildings,

Since time immemorial man has expressed his feelings through music. From the primitive drum beat to the highly developed symphony, music is the cherished heritage of all peoples. Music binds us together through its universal appeal.

Like music, shared aims and effort form a close bond. This is evident in India today where technicians from abroad are working with their counterparts here to develop industries, erect giant projects, increase trade and commerce.

A constant supply of our petroleum products essential to such joint enterprises is a major note in this new symphony of progress.

a better life for all

WHEREVER INDIAN ALUMINIUM COMPANY has extended its production operations—from Bengal to Travancore, from Travancore to Bihar, from Bihar to Bombay—it has continuously sought to provide a better life for all its employees, and for its customers everywhere, in the shape of better products for a variety of new applications.

And now the industry moves to Orissa, where the Company is installing a new smelter which will more than double the country's production of aluminium. As in other phases of India's national effort, this smelter is dedicated to an era of plenty and a better life for all.

For the Investor

No Lack of Investible Funds

***Investment Gossip*:**

UNOFFICIALLY, the Hindustan Lever share, the subscription lists for which are to be opened on December 3, is already placed at a premium of Rs 4 on the issue price. That is to say, the fortunate investors who receive allotment against their share applications are already more or less assured of a paper profit of Rs 4 per share.

To me, the Hindustan Lever issue is important for the great light it throws upon the state of the investment market and climate in this country. For some considerable time now, it has been fashionable to describe capital as being shy and the investment market as being dead. In the recent past, moreover, the state of the money market has been adduced to draw the conclusion that investible funds will be in very short supply.

But the fact is, it is investible funds which are in adequate supply; the scarcity has regard only to resources for speculative purposes.

It is this fact which accounts for the success which has attended the new issues of the past two or three months; and it is this fact which ensures the triumph of the issues to be expected in the near future.

It is true, the turnover in the non-speculative scrips has tended, and continues, to be small. Its apparent implication is that investors do not have the funds to embark upon fresh purchases. But the real reason, to me, for the lack of activity would lie in the paucity of investment scrips available in the market. Indeed, readers may recall that, some months ago, the Calcutta Custodian of insurance funds, who was entrusted

The Annual Meeting

*

An Exciting Drama

*

***Investment Special*:**

Dramatis Personae:

Phatkaram Pagla
Moneylall Rupeemull
C. (for Chota) Investor
M.C. (for Middle Class) Shareholder

The Chairman of the Company
And a cast of hundreds

(The scene is laid at the registered office of the company. The action in this one-act drama purports to describe the proceedings at the annual general meeting. Seated at the rear, and on a raised platform, are to be seen the Chairman and the Board of Directors. In front, and facing the Board of Directors, are a number of chairs which are all filled. As the curtain rises, the atmosphere is charged with excitement, and there is a buzz of conversation among those seated on the stage. Immediately after, from the right, enter the Chairman and the Board of Directors, who mount the platform and sit in the chairs set out for them. There is a general clearing of throats; and as action gets under way, we make bold to state that any resemblance to any happenings in real life is no coincidence).

Chairman: The meeting will now come to order. We meet here today, the annual general meeting of the company, for the purposes duly set out in the notice to shareholders that was circulated at the proper time. May I take it that it is unnecessary to have the notice convening read out at this meeting by the Secretary? (Pause). Since there has been no request for re-reading of the notice convening the meeting, we may now proceed with the next matter on the agenda. The Secretary will now read the minutes of the last meeting; these require your confirmation and ratification.

Secretary: At the last annual general meeting of the company which was held on.....

(The audience does not seem to be paying attention to the Secretary. There is a general sense of uneasiness and muted conversations are audible. In particular, one word seems to be repeated over and over again: Dividend. The Secretary has accomplished his task and the Chairman rises once again).

Chairman: Those who consider the report a faithful record of the last meeting would signify assent by rising their hands. (Pause). Any against? (Pause). I sign in confirmation.

(There is once again a buzz as there is the shuffle of papers preparatory to the address of the Chairman. After taking a sip of water from the glass near at hand, the Chairman rises to make his speech).

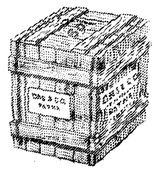
Chairman: I have pleasure in welcoming you to this meeting of our greatly prosperous company. The results achieved during the year under review are sufficiently known to you, since the accounts and balance sheet have been in your hands for some time now, and since these papers are fully informative even to the details. Never before has the company made so much money. Never before have the workmen drawn so high a level of wages. Never before has there been so much of capital works in progress. Never before

(Continued on page 1022)

HIGHLIGHTS

* To see us as they see themselves: that is, for example, the attitude of the American businessman toward Indian industrial policy.

To compare the role of the private sector in this country with the achievements of free enterprise in America: this is what the Indian industrialist tries to do.



To envisage the development to be undertaken in the next two decades, as a continuation, if not a repetition, of the process in the last two decades: such is the easy assessment of the future.

But all these are attitudes which are not quite correct. If at all America and India are comparable, it is the America of the TVA with the India of the DVC.

Secondly, the private sector in India, like US free enterprise in the early thirties, has its scope limited firstly by the resources it can lay its hands on and secondly by the vastness of the tasks to be undertaken.

Finally, the Indian development of the last two decades was attuned to a policy of protection; the plans for progress in the next two decades are intended to lay firm foundations for intensified industrialisation.

Read the Leading Article for the first in a series on the unique attributes of India's mixed economy.

PLM
GIVE YOUR WARE PACK LABEL MARK CARE...

Crores of rupees are paid by the Railways every year to meet claims for damaged or lost consignments. This colossal drain on our National Exchequer can be easily and almost wholly prevented if only you, as a consignor, help the Railways by taking a little care.
Ensure that your consignment is always securely packed, properly labelled and correctly marked..... to prevent losses to our Railways.....to guarantee your goods reaching the destination on time.....to avoid all the unnecessary trouble involved in claims cases
THIS IS HOW YOU CAN HELP
● Pack the goods in strong cases. Nail properly and securely.
● Enclose a spare label.
● Remove all traces of old markings.
● Line the case with shock-absorbing and water-proof material.
● Mark correctly.
● Address neatly, boldly & indelibly.
● Indicate the nature of goods consigned.

Excellent Results of Titaghur Paper Mills

Balance-Sheet Reviews:

THE Titaghur Paper Mills Company, Limited has produced excellent working results for the half-year ended 31st March, 1956. The cumulative effect of the company's renovation programme has resulted in the level of production having been raised to near the installed productive capacity of the paper-making machines. This has been reflected in the production of saleable paper for the year ended 31st March 1956, having been the highest in the history of the company.

In this connection, it would be recalled that, in a circular letter issued to the shareholders toward the end of October last, it was mentioned that the company had decided to widen its activities by establishing a third Pulp and Paper Mill at Choudwar in Orissa in view of the increasing demand for paper of all qualities. This decision was made, because the limited space at the company's two Mills is so fully occupied that any appreciable expansion on the existing site is physically impossible.

Further, their situation in an extremely congested industrial area precludes the possibility of securing adjoining land for expansion purposes. In this respect, the assistance of the Government of Orissa is being obtained in acquiring the land. The site will have the advantage of being close to the bamboo forest areas leased to the company by the Orissa Government. A licence has been granted by the Central Government for a mill with an initial production of 12,000 tons per annum.

In the first instance, the mill has been planned as a 2-Machine unit, with the possibility of further extension later. The first phase will cover the instillation of one paper-making machine and auxiliary equipment together with the requisite chemical and preparatory plant to provide the pulp required. This Phase is estimated to cost Rs 1.75 crores. When completed and in production, the second phase will begin, covering the installation of a second paper-making machine together with auxiliary equipment etc. This phase is estimated to cost a further Rs 65 lakhs.

The cost of the first and second phase of the new Mill will be financed to some extent from the company's own resources, the balance being provided by the Industrial Credit and Investment Corporation, which has agreed to make a loan of Rs 1 crore, repayable after 15 years. The loan will be drawn as and when required and for this facility, the company has agreed to meet a small commitment charge for the undrawn balance.

Meanwhile, sales for the half-year under review have risen to Rs 3.24 crores from Rs 3.21 crores, while the net profit, before providing for Taxation and Depreciation, is higher at Rs 55,12,289 against Rs 52,87,129 in the previous half-year. In respect of allocations to various Funds, Depreciation has been reduced to Rs 7.73 lakhs from Rs 7.84 lakhs; Taxation to Rs 15.50 lakhs from Rs 17.00 lakhs and Development Rebate Reserve to Rs 2.00 lakhs from Rs 2.75 lakhs.

The amount set aside for Taxation Contingency Reserve is, however, raised to Rs 3.50 lakhs from Rs 1.00 lakh; Dividend Equalisation Reserve to Rs 1.50 lakhs rom Rs 1.00 lakh and Reserve for New Mill Project to Rs 11.00 lakhs from Rs 10.00 lakhs. No provision is made for General Reserve as against Rs 1.00 lakh. Apart from maintaining the Bonus at As 4 per share, the dividends, both on the 'A' and 'B' Ordinary shares, have been increased by As 2 to As 14 per share.

£ R$

Indian Cable Raises Dividend

The working of the Indian Cable Company, Limited, during the year ended 31st March 1956, has resulted in a substantial rise in earnings, thanks to an increase in sales of more than 29 per cent.

An outstanding change in the activities of the company is the taking over, on the 1st January 1956, from the British Insulted Callender's Cables Limited, the entire selling and engineering organisation built up by them and their predecessors in India over the past fifty years. From the same date, the company was appointed on a commission basis as Representatives for British Insulted Callender's Cables Limited in India.

Sales for the year have risen steeply to Rs 6.15 crores from only Rs 4.99 crores in the previous year. The net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 1,28,89,383 as against only Rs 83,02,226. Allocations to all Funds have been raised, Depreciation to Rs 14.47 lakhs from Rs 10.90 lakhs and Taxation to Rs 68.00 lakhs from Rs 33.02 lakhs.

In view of the wide fluctuation in world prices of copper coupled with the fact that the closing stock of copper was considerably higher than in the previous year, the directors have considered it advisable to set aside a further sum of Rs 10.00 lakhs to Basic Stock Reserve, bringing the total amount under this item to Rs 30.00 lakhs. A sum of Rs 5.00 lakhs has been provided for Reserve for Replacement of Fixed Assets in view of present-day replacement costs.

The directors have not, however, set aside any amount for General Reserve as against Rs 2.42 lakhs in the previous year. Due to the increasing volume of business, they have thought it advisable to increase the Reserve for Bad and Doubtful Debts from Rs 2.50 lakhs to Rs 6.00 lakhs. Even after these increased allocations, they have found it possible to recommend a Cash Bonus of 2½ per cent on the Ordinary shares in addition to maintaining the dividend at 12½ per cent.

The most prominent features in the Balance Sheet are the increases in the values of Fixed Assets from Rs 96.55

The Personality of India's Mixed Economy—I

Indian Finance
Established 1928
December 1, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE place of private enterprise at this stage of India's planned development is subject to much misconception and misgivings both in India and abroad. There are not a few within the country who believe that complete nationalisation is as inevitable as, from the point of view of the Socialists, it is desirable and that the present policy only tends to raise false hopes and prolong the agony. There are others who are equally convinced that the shortcomings of State management will become more and more apparent and that the nation will soon witness a clash between the public's preference for private enterprise and the politicians' pressure for widening the scope of State ownership and management. The Government, in these circumstances, are exposed to fire from both sides; and the natural tendency of official policy to bow to the facts on hand without undue concern for the reactions of opposition groups of the left or the right has not served either to place the policy in a better light before the public or to meet the points raised by the comparatively informed sections of it.

Few people realise that, in the present position, a clear definition of the place of private enterprise is manifestly impossible. Though the party in power is committed to a socialistic pattern of society, the need has been felt by Congressmen of all ranks to emphasise, at every suitable opportunity, that this does not involve slavery to any doctrine or creed. It is significant that the Socialist leader, Mr Jaya Prakash Narayan, has not only preferred Bhoodan work to active leadership of the Party, but has of late been emphasising the simple but altogether unrecognised truth, that progress is not to be equated to higher production and that Socialism should be concerned as much with the quality of men as with the output of goods.

One should expect this streak of idealism to be even more pronounced in Congress leaders who care for the Socialist creed in its negative aspect of opposition to inequality and exploitation more than its positive advocacy of nationalisation and stringent State control. The emphasis on the quality of social life and the pattern of society rather than forms of economic organisation is the best expression in contemporary conditions of what has been loosely termed India's spiritual outlook. While formerly it might have led to some kind of indifference to the economic needs and aspirations of the masses, our democratic forms of government have ensured that such needs shall be the primary objective of State policy. Till some improvement in living conditions is effected, the belief that this paramount task can be tackled better by the State than by private enterprise will be strong and irresistible. But, once the massive poverty of the common people has been dealt with, the concern for true welfare will reassert itself, and that latent trend is already visible in various ways. To the extent that a system of private enterprise is a guarantee of freedom in personal life, there will be readiness to modify the basic principle of socialism.

It should thus be clear that at the present stage, the important question for the Government and the people is whether the increase in production of the necessaries of life and the provision of the capital equipment, now and in the years to come, can be left to private enterprise. To the industrialist in India and in foreign countries like the US the question does not seem to admit of two answers. Indian industrialists point to the impressive percentage increases in the output of important goods like cotton textiles, cement, sugar, etc., during the last two decades and assert that they can accelerate the rate of increase if they are given a free and fair field. The American industrialist is so certain of the inferiority of State enterprise to private enterprise and of the Government in India to that of his own country in point of efficiency that he attributes Indian preference of the public sector to some kind of national perversity. In reality, there is no similarity between the industrial development of the last two decades and the development that is required in the next two decades in this country. On account of these basic differences, the relative merits of private and public enterprise or the efficiency of public administration in India as compared with other countries are almost wholly beside the point.

In the past, increase in industrial production in India was achieved on the basis of protective tariffs which handed over the home market more or less in its entirety to the indigenous industry; of import of capital equipment and skill from abroad regardless of cost; and of readiness for a slow rate of growth, if any at all, in total internal consumption of the goods concerned. The political structure also was such that no attempt was made to ensure that the rewards of the industrialist were not unconscionably high. In fact, the general rule was not only to continue the protective duties indefinitely but also to increase them without regard for possible economies in production.

It is unthinkable that progress in the future should be sought on the same basis as in the past. There is need to revise it both in point of ideology and in point of the practical steps necessary to bring about the vastly higher rate of increase in production. It is impossible that, on all the increase in the goods which will be required to support the higher standards of life now aimed at, the same rate of profit per unit of output can be paid to private industrialists. What is even more important is that, even if the same wide margins of profit were to be allowed, neither the private sector nor the country as a whole has all the physical or financial resources required for such expansion of production. Is it possible to import all the requisite machinery from abroad? Can we leave it to the stimulus of higher prices to produce all the additional raw materials and other essential goods necessary to sustain the higher levels of production? Can private enterprise take steps to ensure adequate supply of technical personnel and skilled labour?

These questions certainly do not admit of two answers. Protective tariffs and freedom to import capital goods may help to replace meagre imports of consumer goods with indigenous production. They are worse than useless for bringing about an increase in the standard of living of the masses, which calls for the generation of power on a large scale, establishment of basic and heavy industries, provision of facilities for the technical education and training, reconstruction and expansion of agricultural production. In short, planning. If private industrialists contend in all seriousness that these mammoth efforts are well within their capacity to achieve, they will only afford proof of their limited understanding. On the other hand, they ought to recognise that the State is busy providing the essential conditions of real industrial development and direct their efforts to ensure that the super-structure they build on these broad and sure foundations will be adequate for the people's needs. What is being done now is beyond the ability of private industrialists to achieve.

Ideological preferences are not inexorably involved in the present policy of reserving for the public sector the bulk of the work of planned development at the present stage. Even if there had been a rightist party in power, its actions would not have been radically different. It is like capitalist America entrusting the development of the Tennessee Valley to a special statutory authority instead of private enterprise. It is this realisation that is behind the industrial policy statement which refuses to make the three spheres mutually exclusive. It is only when the present programme of power development and heavy industries and expansion of co-operatives is completed, that the question can at all be appropriately raised whether the vast outburst of productive activity necessary for making effective and full use of these developments can be ensured by the initiative of the State alone. It is often forgotten that all our experience of economic planning is limited to a few instances, and that, in regard to free economies, no adequate theory of economic growth has yet been formulated on the basis of what has happened in each important country.

Among free economies, we have the stagnant primitive economies of Asian countries; the predatory economies of the imperialist countries of Western Europe; and the wholly unique national economy of the United States of America. A study of the growth of these economies can yield no lessons of value for backward nations which are unwilling to leave these economic developments to pure chance or the uncertainties of development under private enterprise. American opinion is not alive to the differences between the conditions here and those in which the US economy grew to maturity and then went forward by giant strides to its present position of unprecedented prosperity. It is apt to assume that every deviation from the American method is a complete and irretrievable step toward economic totalitarianism. For this conclusion, there is no adequate warrant. If Communist planning has so far meant a great deal of suffering for the masses and relentless centralisation, due allowance must be made for the military preoccupations

of socialist regimes which could never consider themselves safe in a world dominated by capitalist powers. The world is yet to see an example of economic planning by a Government which is democratic, which is not obsessed with militarist ideas, which is doctrinally open-minded, and which is determined to pursue the genuine welfare of the common people without being content with statistics of a flattering kind. The economic policies of such a Government are bound to be different from those of the US and the USSR alike. A great deep insight into realities of our economic life and sympathy with the Government's aims are necessary for the purpose.

International Law

By Smt. SMRITIKANA GANGOOLY, M.A.

INTERNATIONAL Law has been regarded by many erudite writers and scholars of immense reputation as the vanishing point of jurisprudence. If it has a jural basis, it has a very weak foundation. In view of its inherent weakness, the Austinian School of Jurisprudence offers a heavy broad-side against its legal position. The fundamental weakness of International Law, it is said, arises from the mere fact that it is a law not above the States but among the States. It is at best half law and half morality and as such its affinity with ethics is far more close than that of its affinity with the system of law. These jurists, however, who mainly view International Law as a muscle-made and gun-begotten law devoid of teleological sanction mainly concentrate their attacks on the laws relating to Internationaal warfare. The laws of war, it is said, are more honoured in their breach than in their proper observance and they are conducted more in accordance with the principles of expediency rather than of moral considerations. The phrase "Law of War", they argue, is a rhetorical rhapsody remote from reality and evidently, in these days of "Shooting War" and "total diplomacy", no nation can strictly adhere to the accepted norms of moral conduct set by International rules and regulations.

The further limitations to International Law arise from the very nature of its institutional set up. There is no legislature, in the sense of national law-making body, to keep the law abreast of new needs in the International society; no executive power to enforce the law; and, although certain administrative bodies have been created, these, though important in themselves, are far from adequate for the mass of business which today ought to be treated as of international concern. There exists also convenient machinery for the arbitration of disputes and a standing court of justice, but the range of action of these is limited because resort to them is not compulsory.

International Law, moreover, is not all-inclusive in its nature inasmuch as it leaves a great varieties of subjects to "domestic jurisdiction." These include a mass of subjects such as naturalization laws, the choice of a State's own form of government and the jurisdiction of a State over its own subjects. Moreover, the whole sphere of international economic relations, except where mutual concessions have been arranged by treaty, belongs to domestic jurisdiction. It is, therefore, said that law can never play a really effective part in International relations until it can annex to its own sphere some of the matters which at present lie within the domestic jurisdiction of several national States. All these criticisms, however, incline to a pattern of rigorous positivism which tends to reduce International Law to such small proportions that it becomes automatically a species of subjective law and the community of nations becomes in principle a slightly attenuated anarchy.

With the adoption of the Declaration of Human Rights and the emergence of the Sociological School, a rigid definition of International Law as a "law between and among States" is being increasingly abandoned. "International Law", as Professor Subimal Mukherjee redefines it, "is a law for equitable and just regulation of inter-unit relations within the world community." If this definition of International Law, with its dynamic presumption, is admitted, it becomes invested with an independent purpose of its own. It is no longer looked upon, as in the days of jural positivism, as a mere reflective and registering agency but becomes evidently a "teleological and functional law." It will not be perhaps irrelevant to mention here that Article II, paragraph III of the UN Charter has laid down that "all the members shall settle their international disputes by peaceful means in such a manner that International peace and security, and justice, are not endangered." Professor Mukherjee lays particular emphasis upon the word "justice" and the teleological maxim contained in this declaration.

From this concept of International Law as a standard of norm or justice flows, therefore, the presumption of an International legal system in which passions must give place to principles and force to justice. To-day, the Leviathan of Hobbes no longer absorbs our attention because "the crowned head of the Leviathan has been chopped off; the sword and the sceptre have been snatched away."

Moreover, the definition as given by Professor Mukherjee is illuminating in certain respects because it does away with certain misconceived and narrow dogmas which reduce International Law to the Status of a "passive subjective species of law." The Positivist writers have been content with a definition of International Law as a "Law between and among States". Professor Ross has improved upon this traditional concept by defining International Law as "the law valid for self-governing communities." He thus makes International Law binding not only upon the States but also self-governing communities. Professor Mukherjee makes further improvement upon the former definition by making International Law as a law to regulate the "inter-unit relations within the world community." This is a very wide connotation of the terms of the law because it not only makes States and self-governing communities subjects for international regulation but makes individuals the subjects of International Law. Professor Mukherjee's view need not be regarded as too optimistic because the tendency of the modern law is to regard individuals as subjects of the law of nations. As Lauterfacht has admirably observed, "as a result of the Charter of the United Nations —as well as the other changes in International Law—the individual has acquired a status and a statute which have transformed him from an object of International compassion into a subject of International right."

Secondly, with the rolling away of time, the laws of war, which had very little sanctity in the past, are now being given increasing attention, respect and concern. In the present phase, however, though the individual states commit many breaches in the system of International Law, they do not challenge the validity of the laws of War. In fact, they recognise and accept such laws though they also endeavour to interpret them in such a way as would favour their own interests and justify their behaviour patterns in given courses of action. During the League era, no adequate arrangement existed for punishing the offenders of International Law. Under the UN system, however, the sanction vehicles, both economic and military, have been adequately strengthened to cope with the exigencies of the situation. Moreover, our diagnosis of the present analysis would remain totally inadequate if we fail to realise that the laws of peace and the great majority of treaties are on the whole regularly observed in the daily intercourse of States and this is no small service to International life, however far it may fall short of the ideal by which we rightly judge the achievements of the system.

Thirdly, in the face of new forces and the dynamic situation, the positivist contention of law as a "mere command" addressed by a political superior to a political inferior must of necessity be discarded. To say that International law has no jural basis because it is not produced by an International legislature, executed by an international executive and enforced by an international judicature, is evidently misleading because of an inadequate appreciation of the sociological nature and functions of law. Law, for the students of Politics as well as History, is partly built upon a regular legal procedural system and partly in the general social environment. In fact, most of the characteristics which differentiate International Law from the law of the State and are often thought to throw doubt on its legal character (viz.,—its basis in customs, the voluntary nature of submitting disputes to International judicature and the absence of regular processes either for creating or enforcing it) are familiar features of early legal systems. It is only in quite modern times, when we have to regard it as natural that the State should be constantly making laws and enforcing ones, that to identify law with the will of the state has become a plausible theory. International Law, like customary national law, has deep roots in the traditions of the past; it is the accumulated heritage of the experience and necessities of international existence and as such the difference between it and the law of a State is a difference only of degree and not of kind. Moreover, International Law has grown not only through customs and conventions, but various law making treaties, usages and International regulations enacted by different International conferences have imported into it the elements of jural sanctions.

In the context of this analysis, it becomes clear that International Law should not be fettered in its functions by the rigid consent of several states but it should be capable of developing through judicial deduction from normative principles endorsed by prevailing public opinion. With the abandonment of rigid positivism, International Law at once becomes a method, a philosophy and a process. As a method, it seeks to formulate rules based upon the dynamic needs and necessities of International existence. As a philosophy, it is based upon the Postulate of collaboration rather than of competition. As a process, it seeks to achieve an objective as well as subjective integration of different inter-unit relations into a great community of world in which it will be possible to give a shape to the transparent soul of the world ambition of creating a Parliament of man and federation of the World.

Editorial Notes

A Near Casualty

Amidst all the fuss and fury of public comment on the Prime Minister's statement on international events ever since the Anglo-French landing in the Suez area, a great invisible gain involved in India's policy has remained obscure—the unimpaired survival of the Commonwealth. The assault on the Commonwealth came from divergent quarters. Elder statesmen of the status of C. Rajagopalachari and leftist firebrands demanded that India should forthwith separate from the Commonwealth.

Had Pandit Nehru listened to this angry counsel, he would not only have not provoked any serious protest from Indian public opinion, but would have actually evoked a chorus of approval and acclaim. That he did not succumb to a bewitching temptation reflects statesmanship of a rare order.

While power blocs are giving in on both sides, whether it be on account of the rashness of a British Premier or as a consequence of the Soviet fear-complex seeking expression in contemporary events in Eastern Europe, Pandit Nehru had the cool vision to see in true perspective the enduring benefits of an international association which at least provided a forum for the discussion of common problems, scrupulously respected the sovereign authority of the participants, fostered mutual cooperation over a wide area of activities, preserved and strengthened subtle emotional links, subjected national economic aims and policies to the unobtrusive and friendly scrutiny of a wider group and engendered the habit of resolving mutual differences without recourse to a show of fist and brandishing of weapons.

The existence of a powerful and sprawling association of nations like the Commonwealth and the methods by which it functions form a kind of international asset which it would be silly to throw away at the slightest provocation or misconduct on the part of a single individual or party in one country. The value of the Commonwealth, from the standpoint of world peace, is forcefully brought out by the sharp difference in public reaction in France and Britain to the Anglo-French move against Egypt.

While the French people could to some extent afford to be indifferent to what other nations thought of their government's conduct, the British people, on the contrary, were instinctively thrown into a wider orbit of thought and reflection. Even the fiercest critics of the Commonwealth should concede that the impact of the Middle East action on the Commonwealth became an anxious topic of discussion in Britain. The Commonwealth exercises a certain ineffable restraint on the conduct of its members in very many spheres. That on the issue of a ceasefire in Egypt each of these countries voted its own way speaks for the unfettered freedom they enjoy in the matter of external relations. If any international association deserves to be perpetuated, the Commonwealth can claim the privilege. The Prime Minister of India should be warmly congratulated for not recklessly wrecking it, in a moment of international excitement and confusion.

*

The Ariyalur Disaster

It is inevitable that accidents should occur in a railway system sprawling a sub-continent and covering over 30,000 miles of track. In India, what has to be regretted is that, major accidents have lately become shockingly frequent and the casualties tending to cross into three figures. The country has hardly recovered from the news of the Mahbubnagar tragedy, when it had to hear of a more terrible one at Ariyalur on the Southern Railway. The circumstances of the two accidents have a gruesome resemblance; and it is possible to speculate that if the steps contemplated after the Mahbubnagar disaster were promptly taken, another of its kind would not have occurred so soon on its heels.

Mr Lal Bahadur Sastri's resignation and the Prime Minister's un-hesitating acceptance of it have served to establish a healthy precedent in the sphere of Ministerial responsibility. It is now known that Mr Sastri tendered his resignation immediately after Mahbubnagar, but was prevailed upon by the Prime Minister to stay on. After hearing the sincere tributes to the retiring Railway Minister from his Chief and the ennobling revelations accompanying his resignation, his exit from the Union Cabinet will have to be reckoned as a real loss to the country. It has to be appreciated only in so far as it is intended to affirm an indispensable principle guiding the conduct of Ministers and a constitutional propriety, which for some reason or other, no one has cared to observe hitherto.

Both the accident and the resignation, let us hope, will lead to more vigorous and unsparing efforts on the part of the administration to ensure safety for rail travel. From what the Deputy Minister, Mr Alagesan, has said, the Department has already definite ideas as to what could be done in this direction. The Monsoons are particularly treacherous against trains and it was not impossible to put into force the contemplated measures much earlier. If rules have got to be revised, no time should be lost in doing so. What is necessary now especially after the highly conscientious step taken by the Railway Minister, is not so much to track down individual responsibilities for what has happened, as to strive to make the running of trains particularly during the rainy season, as immune from danger as is humanly possible.

*

Toward Uniformity

The Central Sales Tax Bill stems from the Sixth Amendment to the Constitution and is intended to carry the administration of sales tax in inter-state trade and the law concerning it to a workable level of clarity and orderliness. Imprecision in the wording of the concerned Constitutional provisions has been largely responsible for much of the confusion in understanding which, in turn, led to a series of references to the law courts.

The present Bill enables the State Governments to raise additional revenues by levying tax on inter-state transactions at present fiscally immune. The State Governments will have to respect the conditions prescribed and to keep clear of the bounds indicated. For this purpose, a delegation of powers from the Central to the State Governments is envisaged, both for the levy of the tax and for the setting up of the necessary organisation. That the law and the rules there-under would by no means be simple could already be discerned from the nature of the provisions of this Bill.

In trying to define the locale of sales with a view to clarify relative jurisdictions and the restrictions on the State Governments' power in the matter of imposing a tax in the course of export or import or of inter-state trade or commerce, there is naturally a keenness to impart as much precision as possible. It might be hoped that the general principles enunciated in the Bill would be spontaneously approved by the overwhelming majority of the State Governments.

*

The Economics of Beggary

A statistical survey undertaken by the Indian Institute of Economics, Hyderabad, of beggars in the City introduces the reader to one of the most lurid sectors of Indian social life and raises a fundamental issue of public policy.

Among the 2419 "samples" studied, there is a well-to-do merchant who became a hostage to partition, the widow of a contractor killed in the police action, family men with as many as six children, beggars by birth, quack astrologers, youngsters deprived of their parents early in life and a few who have chosen to run away

World of Finance

Planned Giltedged

THERE are reasons to think that the Madras Government have anticipated Indian Finance's suggestion (made in the last week's issue) for the utilisation, in open market operations, of the amounts received in excess of the originally fixed targets for the Central and State Loans. It is possible that the Andhra Government, too, have taken similar action. For, reports received from Madras go to show that the Madras office of the Reserve Bank has been buying Madras and Andhra State Loans, and that the rot in these stocks has, thereby, been arrested. But, judging from the behaviour of the Central Loans and of other State Loans, it appears as though no special support in these respects has been forthcoming. If the Madras Government have sought and secured the approval of the Union Finance Minister for this manner of open market purchases, other State Ministers should follow the example set by Madras, and obtain the Centre's consent to embark upon open market operations in like fashion.

State Finance Ministers have, it may be pointed out, the power to invest reserves and other surplus funds in their own securities. The question of the Centre's sanction arises only in so far as such purchases may affect the ways and means position of the State in question. In the circumstances created by a heavy landslide in the giltedged market, and particularly in the State Loans, and in the light of the need to preserve and sustain the favourable impression created by the unexpectedly marked success of this year's new loan operations, Mr T. T. Krishnamachari is not likely to lay too much emphasis on any temporary ways and means conundrums that may be created by the adoption of our suggestion. As some of the State Finance Ministers may not be fully verst in the rites of open market strategy, the Reserve Bank should give them appropriate advice and timely guidance.

The occasion calls for courage and not complacency; for initiative, not conservatism. There is need for concerted action, in bold style and in adequate measure, on the part of the Union Finance Minister, the State Finance Ministers and the Reserve Bank. There may be those who urge that a set-back in giltedged values is a natural phenomenon in the transition period between the slack and busy seasons; that, during this period, institutional selling of securities is unavoidable as banks would convert some of their quick assets into cash in preparation for the busy season's demand for funds; and that, once this special circumstance provoking sales of giltedged is out of the way, prices of Government securities would recover. This belief in so-called "natural forces" is out of place in the context of planned economy, which, to be sure, also means planned money, and which, we wish to underline and emphasise, definitely connotes planned giltedged. In simple terms, planned giltedged means that, when institutional and other investors are buyers of giltedged stock, the Reserve Bank would feed the market to the extent required and in the manner appropriate; and that, when such investors turn sellers on any considerable scale, the Reserve Bank would come out as buyer and thereby impart a degree of stability to giltedged prices. Over the past three years, the Reserve Bank has unloaded considerable parcels of securities both from its own portfolio of investments and from the Government's Cash Balances Investment Account. The absorbing capacity displayed by the market in this respect has been so outstanding as to receive mention in the annual report on Currency and Finance. The Reserve Bank should have a policy of give and take, of sell and buy. There can be no success for the plan for securing the resources to finance the Plan if this concept of planned giltedged is not clearly understood and firmly acted upon by Authority.

For the successful accomplishment of the tasks connected with the Second Plan, not only should there be unquestioning and unfaltering acceptance of the indispensability of planned giltedged as the cardinal principle of our monetary policy, but there should be a more correct understanding of the techniques applicable to planned giltedged and a more resolute and a more confident application of such techniques as and when necessary. The Reserve Bank of India Act recognises the purposes of open market operations. These operations are traditional; but it is important to note that techniques in respect thereto are conditioned today by the financial requirements of the Second Plan.

To readers of Indian Finance, it should be clear that open market strategy aimed at imparting health and vitality to the giltedged market (and, therefore, to new loan programmes) can be carried out not only by the easily understood procedure of purchases from the open market but by the less understood process of stepping up tap rates in open market sales. As regards purchases by the Reserve Bank, the aim and object is so to buy as to lever up prices. This simple truth is not always appreciated by some of the officials entrusted with open market operations. We knew an officer who, when confronted with an offer of securities, would pull a wry face and say he was not interested; then ask for the price and say it was too high; thereafter enquire what lot the seller was offering and opine it was too big; and finally agree to buy half the lot at a few annas lower than the quoted rate. All these moves would be appropriate if the Reserve Bank was out to augment its stock in the giltedged portfolio; but it was suicidal tactics when the main concern of the Reserve Bank was to clear the mar-

The Suez Slump

PAUL EINZIG

DURING November the London Stock Exchange was very much under the influence of the ups and downs of the Suez crisis. There were more downs than ups, but the Stock Exchange was more than willing to respond to such hopeful news or views that emerged from time to time. The extent to which the Stock Echange has become sensitive to the political and military factor of the Middle East is illustrated by the fact that the "Financial Times," which in the past took no interest in such matters, has adopted the practice of publishing a summary of politico-military news in the first column of its front page. This new practice implies that more importance is attached on the Stock Exchange to political and military news in existing circumstances than to even the weightiest economic information.

The section of the Stock Exchange that is primarily affected is the market in oil shares, but hardly any other section has escaped the depressing influence of the tension. The downward course of quotations cannot be explained on the ground of war fears. After all, in existing conditions nuclear war means extermination, in which case it makes very little difference whether one holds equities, Government bonds or liquid cash. On the other hand, in case of a non-nuclear war, there is certain to be advanced inflation, in which case it is preferable to hold equities rather than bank balances.

One of the reasons of the declining trend lies in fears of repercussions of the international crisis on the domestic political situation. Government supporters are sharply divided according to whether they favour a refusal to evacuate Port Said or whether they want to comply with the United Nations ruling. The so-called 'Suez group' of Members of Parliament is no longer just a handful of Right Wing Tories. It is now sufficiently numerous to bring down the Government if the solution accepted should meet with its strong disapproval. The Government is endeavouring to steer a middle course between the demands of the Suez Group and those of Mr Hammarskjoeld. This feat of tight rope walking may or may not be successful during the coming critical weeks. It is fraught with dangers of a Cabinet crisis which may conceivably necessitate general election. The result of which would be incalculable. The mere possibility of the return of a Socialist Government sends cold shivers down the spine of businessmen and investors. No wonder that each time a new complication arises on the international horizon it has its repercussions on the Stock Exchange. Even though the Government has succeeded so far in avoiding a split in the Party—thanks largely to the Opposition attacks which have re-united the Tories—the outlook remains uncertain. Economic prospects are closely linked with prospects reopening of the Suez Canal. The announcement of petrol rationing and cuts in oil supplies provided a forceful reminder of the extent to which Britain's economy depends on the use of that waterway. Early estimates for the time required for clearing the Canal had to be repeatedly re-considered in the light of the realisation of the full extent of the damage. Moreover, President Nasser realises that he holds this valuable trump card and is determined to prevent the United Nations from making a start with the clearance of the Canal unless and until all foreign troops have left Egyptian soil. It is feared in many quarters that his definition "foreign troops" includes also the troops of the United Nations.

In such circumstances it would be unduly optimistic to expect the Canal to be restored to normal traffic in the very near future. It is feared that industrial production in Britain will be affected by oil shortage even though its extent may be mitigated by an increased import of dollar oil.

It is no wonder that each time the news about the Middle East crisis is unfavourable the anticipation of a prolonged blockage of the Canal should result in a weak tendency of the Stock Exchange. The longer President Nasser prevents the clearing of the Canal, the more British industries are exposed to the paralysing effect of an oil shortage. At the present stage it is difficult to foresee how individual firms or even individual industries are liable to be affected. For this reason all equities tend to decline whenever the prospects of an early settlement appear to weaken.

World of Jute

Irregular Trends

PRICES in the goods section of the jute market have developed a sagging tendency toward the close of the week. It would appear that, with the improvement in the Middle East situation, overseas buyers have become reluctant to pay high prices. Consequently local shippers have also become somewhat quiet. The continued firmness of raw jute, however, has helped goods prices to keep fairly steady despite paucity of foreign business.

Though the raw section has been moving in sympathy with the goods section, the undertone is fully steady. As has been noted last week, raw jute prices in India have been largely influenced by the recent developments in the Pakistani raw jute markets. It has been reported that, as a result of the steep rise in Pakistani jute prices, Dundee spinners and manufacturers have been allowed to raise their prices twice within a week. From the scramble for the raw material even at the enhanced rates, it is evident that foreign buyers of raw jute do not expect an early downward revision of raw jute prices. In this context, therefore, it is no matter for surprise that raw jute prices in India are also ruling high. With the possibility of a price decline rather remote, Indian mills whose raw jute stock position is none too satisfactory have no other alternative but to continue to buy.

Meantime, there are indications that the next jute crops in India and Pakistan which together account for 97 per cent of the total world production of raw jute will be bumper ones. For instance, reports from Uttar Pradesh show that jute production in the State in 1956-57 itself will reach the figure of 100,000 bales, just 10,000 bales less than the production target fixed for the final year of the Second Plan. It is confidently anticipated that the State will be able to reach the target well ahead of schedule.

The progress of jute cultivation in Uttar Pradesh since it took to jute growing in 1948 is really impressive. Whereas in 1948, the growing of jute was started in only six districts, during the last five years it was extended to as many as 24 districts. A significant point is that UP leads other jute growing States in India in respect of yield per acre. Yield improved from 2.26 bales in the final year of the First Five-Year Plan to 3 bales in the current season. A farmer in Gonda has set up an all-time record in jute production by producing 10.2 bales of jute per acre this season.

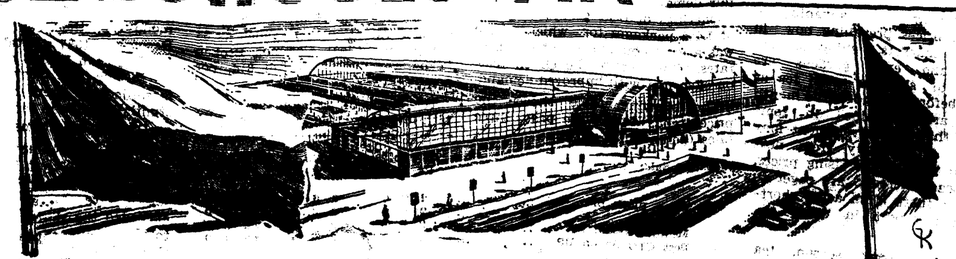
From Pakistan the news has come that, in view of the anticipated increase in world demand for raw jute next year, the Pakistan Government have decided to increase raw jute production by 500,000 bales next year.

×

The jute goods market opened the week on a steady note but soon encountered selling pressure on rumours of dock strikes. In the Fatka bulls started unloading and as a consequence prices declined. Hessian 40"×10 oz Ready receded from Rs 47-6 to Rs 46-14 while B Twills Ready dropped Rs 1-4 to come back to Rs 121-4. On Monday, the market opened on a quiet note and prices were further marked down all along the list in the absence of overseas business. Hessian 40"×10 oz Ready was pushed down by more than a rupee to Rs 45-11 with B Twills Ready also declining sharply to Rs 119-4.

The market displayed a steadier tendency on Tuesday and prices firmed up considerably in later dealings. The announcement by the Union Minister of Transport in the Lok Sabha that Port workers had withdrawn their strike notice revived confidence and shippers who earlier had come to the conclusion that, with the dock strike threat looming large, there was no point in extending their commitments, began to evince renewed interest in the proceedings. There was good demand from them for ready goods. But mills were not interested at the quoted rates. The fact that some business was reported in hessians with UK also aided the recovery movement. Hessian 40"×10 oz Ready gained seven annas to Rs 46-2 with B Twills recording a gain of 14 annas to be placed at Rs 120-2.

With shippers continuing to show moderate interest, the market opened steady on Wednesday but toward close sentiment was depressed by persistent rumours of re-imposition of export duty on jute goods by the Central Government. Price levels, however, showed little change from previous closing at the end of the day's session with Hessian 40"×10 oz Ready quoting at Rs 46-5 and B Twills at Rs 120-4.



The full effect of the rumour on market sentiment was fully evident the next day. The market encountered selling pressure all along the list and by close Hessian 40"×10 oz stood six annas lower at Rs 45-15 with B Twills dropping fourteen annas to come back to Rs 119-6.

The following table gives price trends during the week.

	Week's Opening		Week's Closing	
Hessian:				
40"×10 oz Ready	46	14	45	15
" Jan-Mar	45	4	44	12
Sacking:				
B Twills Ready	121	4	119	6
" Jan-Mar	120	10	120	0
Hy cees Green	120	4	120	8
Corn Sacks	121	2	120	0
Cubans ..	144	0	145	8
A Twills ..	140	2	141	8
L Twills ..	133	0	132	8
D W Flour ..	138	0	138	0
Sugar Bags ..	137	0	135	8

The raw jute market opened the week with buyers showing interest at slightly reduced levels. Assam Bottom November-December delivery, however, continued to be nominally quoted at Rs 32-8 per maund. A slightly easier tendency was noticeable on Monday in sympathy with the goods section and Assam Bottoms was marked down to Rs 31 per maund. Though fair mill business had been reported done next day, price levels remained unaltered. With mills continuing to show interest in the market prices steadied up toward close with November-December delivery Assam Bottoms adding 8 annas to its quotation to be placed at Rs 31-8 per maund. Business done during the week included small quantity mill business in Deshal Tessa Bottoms at Rs 31-8, Indian Northern Bottoms at Rs 31-8, and Daisee Mesta Bottoms at Rs 28-8 to Rs 29, all per maund.

World *of* Tea

Sharp Rise in Export Quota Price

THE upward movement in Tea prices, that was noticed during the past two weeks, has gathered further momentum during the week under review. The strong demand, especially for Common and Low Medium sorts, noticed from the beginning of the current month, is expected to improve further in the coming months.

The strong statistical position is mainly responsible for the rising demand. While the production in the world during the current season is expected to show some decline from the recorded level of last year, the offtake has been showing a steady improvement. Although the outturn of North-East India crop, up to the end of October, 1956 at 486.6 million pounds, shows an increase of 27.6 million pounds over last year, the increase is expected to be more than neutralised by stoppage of plucking in most of the gardens from last week. The increase of some 4 million pounds in Pakistan's crop is of no significance in view of the rising internal consumption.

Stocks of tea in the UK are reported to be low. In this connection, the Tea Trade Committee, London, has announced that, with the higher price now obtaining in world market, there will have to be an increase in the retail price of some teas. Considerable efforts are being made to buy and ship adequate quantities of tea. Furthermore, 22 ships are loading with tea at this moment—13 in Calcutta; 5 in Colombo and 4 in Cochin. More tea is known to be coming from Chittagong, East Africa and other sources.

Ireland is also expected to buy substantial quantities to make good the earlier shortfall in her purchases. Russia is reported buying good quantities at Calcutta auctions and her total purchases are expected to amount to 20 million pounds this season. Trade circles, therefore, expect that the present trend of prices will be maintained.

With a view to take advantage of the high prices prevailing now in overseas markets, shippers, exporters and even gardens are anxious to ship as much tea as possible before the end of the month as fears are entertained in some quarters that the Government may raise the export duty from next month in view of the rising prices. While tea interests are eager to ship early, there is an acute shortage of tea export in quota the market.

During the current season, tea quota for about 346.5 million pounds has been released for export by the Government, while exports have already reached some 350 million pounds. Thus, the quota now available is very inadequate to meet the present demand for export of tea. For obvious reasons, the export quota price has been showing a rising tendency. From 40 pies quoted last week, the rate was pushed up to 96 pies during the week under review, the closing rate being 93 pies per pound. It is generally felt that, unless a further release of quota is announced immediately, quota prices are expected to rise further from the present level.

Meanwhile, in the Export Sale, held in Calcutta this week, offerings amounted to as much as 64,804 packages. There was a good general demand with Commons and tea for price, the strongest feature of the sale, being As. 2 and sometimes upto As. 4 per pound dearer, especially the Fannings grades. Nonwither Dooars were also a strong feature and were upto As. 4 dearer, while Medium Assams with good liquors were from one to two annas dearer.

Low-priced CTC sorts, which consisted mainly of fibrous grades, were in strong demand; but the higher-priced CTC sorts were virtually neglected. The cheaper Whole Leaf grades advanced by As 2 to As 3 per pound, but the more stylish kinds were only fully firm. BPSs were well supported and were As 3 to As 4 dearer. There was a fair demand for Darjeeling teas.

In the Internal Sale, offerings amounted to 24,291 packages of Dusts for which there was a good general demand. The market opened at firm to dearer rates, but this eased as the sale progressed. The very best CTC Assams were the strongest feature of the sale and were firm, while the remaining CTC teas were irregular and closed at easier rates.

Medium Assams and Commons were half to one and a half annas per pound dearer at the beginning of the sale; but, at the close, all were a full As 2 per pound lower. There was much less support for the poor residue teas. Darjeelings were irregular although there was fair demand.

Offerings of Leaf grades consisted of 1,445 packages for which there was a good demand at about firm rates. Once again, the Green teas, on offer, met with improved demand.

The following table shows the price trends doring the past three sales (per pound):—

	Sale No. 23 Rs. a. p.	Sale No. 22 Rs. a. p.	Sale No. 21 Rs. a. p.
Export Sale:			
Clean Black BP	2 7 0	2 6 0	2 5 0
Plain BP	2 6 0	2 3 0	2 1 0
Medium Assam BP	2 8 0	2 7 0	2 5 0
Best CTC Assam BP	3 2 0	3 2 0	3 4 0
Dust Sale:			
Medium Dooars	2 0 0	2 2 0	2 0 0
Medium Assam Grainy	2 1 6	2 3 0	2 1 0
Medium Assam CTC	2 8 0	2 9 0	2 9 0
Best Assam CTC	2 12 0	2 11 0	2 12 0

In the Cochin market, offerings were just under 650,000 pounds. There was a strong general demand for all descriptions. Best Liquoring high-grown and Good Medium sorts met with more interest than in recent sales, selling at irregular rates. Keen competition was again seen for Medium teas from Travancore and the Wynaad at prices which were generally one to two annas per pound above last levels. Milled and Residual types were well supported and advanced an irregular one to two annas per pound. Black Leaf grainy descriptions were again virtually neglected.

Offerings in Colombo auctions were 4,843,074 pounds. The demand for Nuwara Eliya teas was good, but Broken grades were generally lower following quality. Leaf grades were, however, dearer.

Among high-grown teas, best quality Brokens were firm; but those below best, unless thin liquoring, were strongly competed for at advances ranging from 10 to 20 cents per pound. The demand for medium-grown Broken grades were strong at an advance of fully 10 cents per pound. Among low-grown teas, good competition raised prices by about 10 cents per pound for both small Leaf and Persian Gulf types.

In the Sale No. 11, held at Chittagong, offerings amounted to 15,971 packages of Leaf grades and 4,381 packages of Dusts. There was an increased demand for Leaf grades with prices quoting As 4 per pound above brokers' valuations. Particularly strong were all teas suitable for export, and there was a good enquiry for Tippy descriptions. OP was quoted at Rs 2-6; BOP Rs 2-3; BPS Rs 1-15; OF Rs 2-9 and PF Rs 2-2.

There was a useful general demand for Dusts and prices showed a small advance of one to two annas per pound. Plain Sylhet Dust was quoted at Rs 1-14-6.

Offerings in London auctions, this week, were 28,504 packages, including 22,267 packages of Northern India teas. The keen market, experienced last week, was fully maintained and, as a result of keen competition, prices again showed further advances. Low, Medium and Common teas rose by about 6d to 7d per pound, but the best qualities did not register high prices. There was a good enquiry for export. The strong demand for Broken Pekoe was an outstanding feature and prices for these often exceeded brokers' valuation by as much as 8d per pound. Clean Common Broken Pekoe was quoted at 5sh 8½d. per pound.

Tea stocks in London, as on the 16thNovember, 1956, were 96.20 million pounds as compared with 94.49 million pounds in the previous week and 91.41 million pounds a year ago. Landed between 10th and 16th November, 1956 were 13.77 million pounds., while deliveries during the same period were 12.06 million pounds.

The total afloat on November 16 was 52.41 million pounds, including 42.94 million pounds from Calcutta; 1.21 million pounds from Chittagong; 0.51 million pounds from Cochin and 2.65 million pounds from Colombo.

INVESTMENT GOSSIP

(Continued from page 983)

with the task of making purchases in the open market, was unable to lay his hands on all the scrips that he had intended to buy.

I suggest that the investor is not today having his head turned by any profit that might accrue to him on the sale of his scrip at current quotations. Instead, he is happy in the dividend that he receives; and he is holding on to his investments, not only in the hope, but also in the almost certain belief, that capital appreciation is in store for the scrips that he has in his portfolio.

Let us go back to Hindustan Lever Limited. The offeror of the shares is Unilever Limited, London; and the shares available for public subscription number 5.57 lakhs, the issue price being Rs 16-8 per share. Ten per cent of the offer is being reserved for applications from employees. The number of shares on sale by Unilever Limited, London, forms 10 per cent of Unilever holding in Hindustan Lever Limited.

Hindustan Lever is now a gigantic concern, with a capital of Rs 5.57 crores, and a number of companies has been merged with Hindustan Lever.

The prospectus of Hindustan Lever, which is published elsewhere in this issue, gives the full details relating to profits and performances of the entities that form Hindustan Lever. I need not repeat them here; but I will content myself with pointing out that Hindustan Lever will attract Section 23A of the Income-Tax Act. For this reason, the bulk of the earned profits has to be distributed among the shareholders. In this light, the prospectus states: "The Directors would expect to recommend for the year ending 31st December, 1957 a total dividend of not less than Rs 1-6 per share free of income-tax". This, of course, is subject to there being no substantial change in rates of taxation or trading conditions.

In the recent issue by Guest, Keen, Williams, it is now known that the small applications themselves were for an amount that exceeded the shares on offer. The total over-subscription was roughly three times the amount on offer. In the case of Hindustan Lever, it seems fair to expect that there will be even greater over-subscription.

THE INDIA MACHINERY COMPANY, LTD.
Dassnagar, Howrah.

DISCUSSING the outlook on resources for the Second Five-Year Plan, Mr T. T. Krishnamachari lists the conditions for its success in the most sensible order. Referring to what he calls the psychological background to the problem, he says, "Basically, a country with an under-developed economy like ours has to find its first resources in courage and leadership since by definition the material resources have yet to be developed. The problem is, therefore, not of a certain quantum of visible resources and the formulation of a plan that can be put through with that quantum. It is, on the other hand, of a small visible quantum with a much larger potential on its back and our seeking to draw out, as fully as may be, that latent potential." Shorn of its statistical verbiage, the plan is merely a stark formulation of the cost of development in terms of human courage and determination for self-improvement. In other words, the most important resource we have to look for is the determination and grit among our people and the readiness to make the present sacrifices that the plan demands for bringing about future prosperity.

*

The most tangible form which this call on the inner resources of the people will take will be the demand to bear stoically any additional taxation for the purposes of the plan. The various sources from which we are to find the money for the projects under the plan and the gaps between the needs and the funds available have been discussed so often that there is no need for me to recapitulate them here. As a matter of fact, it has become a particularly childish parlour game among those who discuss the plan, especially since a "gap" is also provided in the reckoning. It is time, I think, that this vagueness in the matching of resources with the requirements is removed, at least in formulation. I am not suggesting that these expectations of funds should be made rigid and finally binding; but it is time that the gap of Rs 850 crores is frankly and unequivocally accepted as something to be filled by additional taxation. And, having accepted the position, it would then be time to ask the people frankly to make the necessary sacrifices in their present well-being for the sake of the future.

*

To people who ask whether it is possible to raise the extra resources of the order of Rs 850 crores by additional taxes, Mr Krishnamachari's answer is to the following effect: given courage and determination, which are his first demand on the people, the task is not impossible. In this optimism, he is, I think, entirely justified. In the first place, the Second Plan's estimate of receipts from taxes at 1955-56 rates—Rs 350 crores—is almost certainly an under-estimate: in my view, it will be about Rs 500 crores, for, the expansionist forces released by the plan and the large disbursements by Government during the plan period are sure to increase the area available for taxation. Secondly, determined efforts to tackle the extensive tax evasion that is admittedly going on on all sides, is sure to bring in a substantial amount. And lastly, though there is an obvious limit to additional sources of taxation, it is by no means true that it has been reached. The most telling confirmation of this proposition is the ease with which Sir Chintaman Deshmukh and Mr Krishnamachari, between them, found additional revenue of the order of Rs 60 crores a year or Rs 300 crores for the plan period.

*

It is thus clear that determination to collect all the taxes due to the Government and a certain ingenuity in devising forms of taxes that do not impinge too obviously and too immediately on the public can take care of the gap. In the words of the Finance Minister: "The internal resources required can be raised through effort and a persistence in the matter of broadening the tax system, closing of existing loop-holes in it and making it more equitable."

While there is a great deal of discussion of new forms of taxation, including tax on expenditure, on wealth, on capital gains and so on, there is comparatively little discussion of the steps to be taken to collect such taxes as are already there and which are notoriously evaded on an extensive scale. I wish Mr Krishnamachari had dealt with this aspect of the matter in greater detail in his note; but, presumably in a note which was dealing in general with the problems of resources, including resources of foreign exchange, a discussion on this particular aspect would have taken a disproportionately large space. Certainly, it is a subject on which there is a great deal to be said: In the estimate of some, not particularly given to exaggeration, the evaded taxes themselves can easily take care of the gap and reduce substantially the deficit finance provided for. But then it is a subject on which there is a good deal of controversy. Professor Kaldor's estimate was disputed by the Central Board of Revenue as being on the high side. Sir Chintaman himself was of the view that the extent of evasion was being exaggerated, but Mr Krishnamachari has gone on record as of opinion that there is more extensive tax evasion than was conceded by the Finance Ministry at the time Professor Kaldor's report was released to the public. While it is futile to quarrel over the exact figures, the slightest acquaintance with the business world will reveal the fact that tax evasion of staggering proportions is rampant.

*

Something like a fatalistic helplessness seems to have seized the country in general and the Government in particular in the face of this admittedly complex problem. I may be wrong in this assumption, but it seems to me that the general moral indignation at such blatant evasion of the just dues of the Government that gave birth to the Taxation Enquiry Commission somehow spent itself. The reasons are various. In the first place, there is a general impression that large incomes ceased to be earned after the war and that, since no large incomes have been earned in recent years, evasion of taxes has also not been on an extensive scale. This impression is entirely wrong. One need only recall the orgy of money-making during the period of jute control in 1949-51, to realise that it is naive self-deception to imagine that tax-evasion ceased on V-J day.

*

Secondly, and paradoxically, the legal resources of the tax-evader and frustrating attempts at making him disgorge his ill-gotten wealth are apparently endless. With an almost cynical disdain, he makes use of the Constitution to obtain immunity from the processes of law that are set in motion to bring him to book. For instance, the Investigation Commission Act was declared ultra vires the Constitution; and such powers as the Government salvaged from the impugned act by amending the Income Tax Act, have been sought to be nullified with the help of the Constitution. While we justly feel proud of our courts for their fearless and impartial evaluation of the conduct of Government by constitutional touchstones, in our more worldly moments we are overcome with a weariness and a sense of helpless resignation at such an unequal fight in which wickedness is cynically using the instrument of justice for its own purposes. It would be an exaggeration, but not too great an exaggeration, to say that, at the rate at which provisions of the Income Tax Act are being declared unconstitutional, the time is perhaps not far off when there will be hardly any act left to administer. It would be hardly a matter for surprise, therefore, if the Central Board of Revenue, obliged to spend half its time in the corridors of the Supreme Court, began to wonder whether the game was worth the candle.

*

But it would be very wrong to allow such weariness to overcome us and sap our determination to carry the fight to the bitter end. It would be morally wrong to let the known tax dodger get away with it, particularly when millions of honest tax payers have, at great privation, rendered unto the Government their dues. It would also be politically suicidal for the Congress party to give the impression that it is prepared to compound with evil; that, while it asks the people to tighten their belts and pay higher taxes and higher prices in the interests of national deve-

lopment, it is prepared to overlook deliberately the fact that the wicked flourish like the green bay tree.

*

And most importantly, from the economic point of view, the argument is conclusive: The evaded tax will—to put it at the lowest—go a long way to fill the gap and we would be spared a whole series of new levies if only the taxes already due are collected with greater determination. Mr Krishnamachari has indicated in his note that closing of existing loopholes in the tax structure is part of his programme for filling the gap. This plugging will have to take two forms: one, the amendment of the Act to put an end to avoidance of tax by arrangements that just manage to be on the right side of the law. This aspect of the matter has received continuous attention from the Government and the various amendments of the Act made from time to time have succeeded in a large measure in plugging this particular source of loss of revenue.

Likewise, the *admittedly* unequal war between the Government and the dishonest trader will have to be pursued with relentless vigour and wiliness. More data, more collation, more intimate and close watch over the happenings in the business world, and more cunning in tracking down the real owner of the income who hides himself beyond a whole series of dummies and benamis should yield better results.

*

But the first requisite is that there should be a clear and unambiguous declaration by the Congress that it will relentlessly pursue its war against *tax dodging*. Its election manifesto should expand the rather cryptic expression "Closing existing loopholes" in terms I have here discussed. It should, in other words, inspire in the people the confidence that none will be allowed to batten on the sacrifice they are called upon to make. Such an assurance is necessary, if for nothing else, at least for the tactical reason of preventing some other party appropriating this programme and thus stealing the thunder of the Congress's claim to be the custodian of the people's welfare.

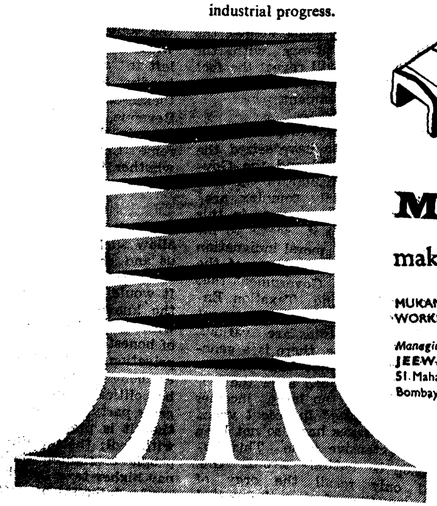
THE SUEZ SLUMP

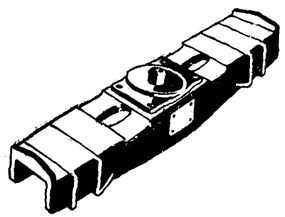
(Continued from page 988)

In itself the weakness of the Stock Exchange need not give rise to fears of repercussions on the economy. It is true, one firm of stockbrokers failed to meet its engagements towards the middle of November. It is considered unlikely, however, that many more such weak positions would be revealed even if the downward trend should become accentuated. The extent to which security holdings are financed with the aid of borrowed money has become materially reduced in the course of the prolonged credit squeeze. Quite possibly the credit squeeze itself may become accentuated as a result of the decline on the Stock Exchange because banks will be insisting on repayment of credits granted to industrial firms against Bonds or equities. To that extent the decline on the Stock Exchange might have a salutary effect in that it would compel industries to resist firmly the new wave of wages demands.

Having regard to capital depreciations through falls in Stock Exchange values, the psychological reason for excessive wages demands will become distinctly weaker. Moreover, even critics of the trade unions must admit that since the beginning of the Suez crisis they have behaved in an exemplary fashion in sharp contrast to the political side of the Labour movement which has endeavoured to exploit the crisis for the benefit of its Party-political ends. There have been virtually no strikes, and even though the machinery through which wages claims are handled is taking its normal course, it is widely expected that, having regard to the political and economic difficulties, the claims will not be pressed too rigidly. From this point of view at any rate the crisis has been, and is likely to be, beneficial to some extent. Indeed it is possible that had it not been for the crisis industrial equities would have declined to an extent a result of the paralysing effect of large strikes. Those strikes may yet materialise but at the moment they appear to be much less menacing than they did two months ago.



—(Copyright)



Probably not—unless, of course, you're building railway wagons! Bogie bolsters provide the pivot point and carry the load too. Naturally we, at Mukand, *are* interested in bogie bolsters because we *manufacture them*. But *they* are only one of the many items we cast for the railways. Among the *others are:*

buffer plungers and casings, axle boxes, cross heads, drag castings, bogie columns, steam elbows, brake hanger compensating beam brackets, etc.

The Second Five Year Plan calls for a total of 1,20,869 *new* locomotives, coaches and wagons. All this means that there will be a vast demand for railway parts. The Mukand steel foundry—one of the few casting these—is working round the clock to meet the needs of Indian Railways. By 1958 we plan to produce at least 7,800 tons of steel castings annually. And as our expansion programme gathers momentum we at Mukand will contribute more and more to India's industrial progress.

are you interested in Bogie Bolsters?

Bombay Review

Finance for Medium Industry

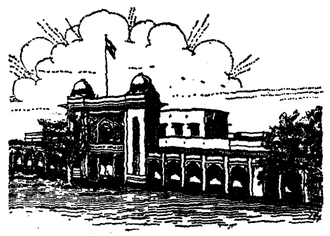
IT was appropriate that, at the Conference dealing with the problems connected with the working of industrial finance corporations, Sir B. Rama Rau focussed attention on the tasks of these institutions in particular reference to (a) the Second Plan and (b) medium and small concerns. He also referred to the pilot project now being worked by the State Bank of India for the financing of small industries; and he sees immense possibilities for co-operative endeavours between the State Bank, the Industrial Finance Corporation and the Government agencies entrusted with the development and financing of small-scale and cottage industries. From this point of view, the pilot project, to which Sir B. Rama Rau made particular reference, is of great significance to the accepted aim of the Government to assign, in the Second Plan, an important role to the small-scale industries.

The authorities connected with the industrial finance corporations evinced a praise-worthy solicitude for apt aid to the medium and small enterprises. They also seem to realise that, in the context of the Second Plan, this solicitude has to be very much more than lip sympathy. The degree of transformation from lip sympathy to concrete and understanding aid will depend upon the manner in which existing inhibitions and complexes are tackled.

These inhibitions suggest timidity, adherence to safety-first propositions. In general terms, it may be said that, over all the activities of finance corporations, the Sodepore Glass Works has cast a deep shadow. It is understandable that the authorities of the corporations would particularly avoid the kind of situation to which the Sodepore Glass led the IFC in the Parliamentary inquisition. Let us admit that the Sodepore Glass episode was unsatisfactory from every point of view. But, let us realise that this episode would constitute the biggest tragedy in industrial finance in this country if its ghost were to afflict the authorities of the Corporation every time they consider a proposal of medium status. By all means, learn the lessons that the Sodepore Glass episode teaches; but it will be dangerous to generalise from one single instance. Is IFC the only or the first institution which has fared badly in one of its adavances? Do not banks have this kind of experience now and again? Is every debt a good debt? Has the Reserve Bank, the bank of banks, escaped episodes of this nature? Did not the Reserve Bank lend a large amount to a bank just before it closed its doors, and find itself obliged to write off the entire loan? The then Governor of the Reserve Bank was not hauled over live coals, nor has the Bank suddenly developed an extra-timidity. Oh! for a sense of proportion! Bad debts can be avoided only in a world which follows Polonius's advice of being neither lenders nor borrowers. Ours is an imperfect world; we do have a number of borrowers; the State has set up institutions for lending; and let those institutions realise that bad debts are something which they must and can take in their stride.

The Second Plan has rightly been described as a great adventure. And institutions destined to participate in this adventure need to have an adventurous, not a timid, attitude—a hopeful, not a defeatist, outlook. If the ... week's conference in this city has instilled in the Corporation's authorities the resolve to show a brave approach and correct understanding to those who come to them with their little troubles and their many problems, it has discharged a significant service in the first year of the Second Plan—a plan in which industrial finance in adequate measure will be a decisive factor for success.

Industrial finance corporations have so far functioned mainly as mortgage banks. This is because of the preoccupation with a Safety First policy, and also largely because this line of activity was all that could be tackled in the early stages. Now that the corporations have to embark on the next stage—a stage whose requirements are determined by the role they have to play in the Second Plan—it will not do if they are content with the limited service of a mortgage bank. Industrial finance has to be emphasised in the coming years. This means that action has to be taken in respect of the power vested in the Corporation to underwrite stocks and debentures. If it is contended that the IFC is not equipped with the personnel trained in the responsibilities of underwriting, the answer is that it is time it took steps so to equip itself. From this point of view, the changes thus called for involve a question of policy. Is the IFC to be now called upon to give vitality and reality to the power which the Act confers on it to do underwriting work and which has remained dormant all these years? Mr T. T. Krishnamachari is the authority to make a policy decision in this respect, and, thereafter, give the necessary directive to the IFC authorities.



The other issues raised at the last week's Conference pose problems of precedure or shift in emphasis or questions of public relations, such as approach. In all these particulars, Mr K. R. K. Menon is fully alive to the needs of the situation; and, already, a great deal has been accomplished, particularly in regard to the elimination of procedural delays and complexities.

A reorientated IFC, together with its counterparts in the States, must be regarded as one of the essential institutional services with which the Indian money needs urgently to be provided.

Over the past four weeks, the Finance Ministry has been making an intensive study of the requirements of the money market in the context of the larger demand for finance on account of the heightened tempo of production, industrial and agricultural. This problem was posed by the special circumstances envisaged for the impending busy season. It could not, for obvious reasons, be treated as a short-term issue or as a transitory phase. Fundamental changes have been taking place in the structure, character and needs of the Indian money market. Such changes may be of an even more drastic nature when the full impact of the present development plans is felt by the national economy. So, the fuller equipment of the Indian money market has to be viewed as a long-range problem. It is, therefore, of great importance to give constructive thought to the institutional facilities of the money market.

It is believed that the bankers, with whom the Finance Minister has had consultations, have not been very helpful from the point of view of concrete suggestions. It is, therefore, hoped that the Conference of industrial finance corporations would have devoted a great deal of time and thinking to practical measures designed to help the IFC and its State associates to play an enlarged role in the sphere of industrial finance.

Human Approach to Health Problems

The need for a human approach to health problems was emphasised by Rajkumari Amrit Kaur, Union Minister of Health, in her inaugural address to the fourteenth session of the Bombay Medical congress held in Bombay last week. Among the problems that confronted Government with regard to medical education, the most difficult was how to produce the large number of doctors who were urgently required without lowering standards.

An essential point to be borne in mind by those who were responsible for the training of a doctor was that medicine was as much a social science as it was a natural science. But more often than not, both the teacher and the taught tended to forget that in the make up of the human being there were vital factors over and above what could be discerned through the help of the latest advances in the natural sciences. A doctor who had acquired a complete understanding of the mechanism of the human body could be said to have traversed only half the distance between the starting point and the goal which was the acquisition of competence to deal with all the health needs of the people. Such a goal could be achieved only by a study of man in relation to his external and internal environments.

Unless the medical student was enabled to realise that along with physical disability, social and emotional disabilities also played a big role in bringing about the illness, his usefulness to society would be indeed insignificant. For any treatment that had not taken into consideration the emotional and social disabilities would not be effective. Rajkumari Amrit Kaur, however, revealed that there were unmistakable signs that "the trend in medical education today is beginning to veer round towards a proper balance between the teaching of both physical and social factors."

The importance attached by Government to this aspect of medical education is clearly brought out by the high priority given in the Second Five Year Plan to the establishment of departments of social and preventive medicines in the medical colleges. It is gratifying to know that steps will be taken to provide every medical college in the country with a separate department for the study of social medicine with well-organised urban and rural fields attached to it.

Wage Increase: Employers' Point of View

In a statement issued early this week, Mr Homy Mody, President of the Employers' Federation of India, has characterised the recent demand of the INTUC for a general wage increase as irresponsible, for it is backed by a type of reasoning which pays scant respect to facts. The confusion in the thinking of the INTUC is apparent in its reference to the appointment of Wage Boards in the same breath as its demand for an immediate wage increase.

It is wrong to say that the emoluments of industrial workers have remained static, for it is common knowledge that in the past five or six years labour has secured a number of benefits such as Provident Fund, retrenchment and lay-off compensation, sickness insurance and improved working conditions under the Factories Act. Basic wages in a number of occupations have also gone up during the period. In short, it is an undeniable fact that the wages of industrial workers are very much higher than those of other categories of labour in the country.

Mr Mody, nevertheless readily concedes workers' right to claim a fair share in the fruits of their labour. What he objects to is the manner in which the claim is made now by the INTUC. In the first instance, the whole question of wages is at present being studied by the Joint Consulative Board of Industry and Labour on which the INTUC is adequately represented. Secondly, steps have already been taken by the Union Ministry of Labour to constitute the wage boards for industries.

It stands to reason, therefore, that when it has agreed to abide by the awards of Wage Boards, labour should not precipitate matters by a demand for an immediate increase in wages. It cannot also be argued by labour that it has to put up such demands now and then to establish its rights. For, Mr Mody has made it clear that as productivity increases no one can deny labour's right to claim a fair share in the increased prosperity.

An important factor that should not be lost sight of both by employers and labour is that the country has just now embarked on tremendous tasks on the successful completion of which depends the future prosperity of the nation as a whole. Any disagreement at this juncture between them will ultimately result in delaying the achievement of the targets under the Second Plan. It is to be hoped that they will not so act as to lay themselves open to the charge that they have let down the nation at one of its most crucial hours.

GATEWAY MARKETS

Overall Stability in Metal Prices

AFTER a month of hectic fluctuations in prices, the Metal market in Bombay has exhibited a spell of stable trading during the week under review. The market is gradually reacting to changes in the international situation, while the overseas markets have shown that the supply position has been reasserting itself as seen in the modest drop in prices during the last few days. Traders expect that there may not be a major fall in prices if the world markets continue to be steady, since the domestic demand has been excellent with the Government and industrial consumers promptly lifting supplies.

Although Copper prices have tended to ease with London losing nearly £8 at £272½ per ton and Bombay Rs 5 at Rs 193 per cwt, the overall stability in the metal has considerably reduced the hazards of the trade. The supply position is, however, comfortable as lasge shipments have arrived some time ago. It is stated that the receipt of the metal in Bombay has remained more or less unaffected by Suez developments during the current month and the traders were confident that the quantity will reach the October level of about 2,500 tons.

Zinc has been closely following London and the undertone is one that cannot be termed as weak. Stock position is reported to be healthy and demand quite good. The rate for the ready metal is quoted around Rs 64 per cwt. There is nothing special to report with regard to Lead, which is quoted around Rs 84-0. Demand for the metal has been good with no marked scarcity of supplies. Tin is quoted steady at Rs 142-8.

On the London Metal Exchange, Copper continued to rule steady in view of the uncertain international situation, rate being quoted at £272½ per ton. Sellers were reported to be reluctant to offer, while buyers were extremely cautious.

The general position remains unchanged in the case of Zinc, which is quoted around £101 per ton for second half-November delivery. In Europe, consumers continue to cover their requirements fully, while the demand in America is not particularly good as motor car industry has failed to revive anticipated levels.

In respect of Lead, the situation appears to be healthy with supplies being limited, rate being quoted around £117 per ton for second half-November delivery. Present prices are almost close to American prices, which suggests that some of the lead, which is normally shipped to America, may have been diverted to Europe.

Tin is quoted around £847½ per ton. The market for this metal continues to be sensitive to international developments.

*

Oils and Oilseeds

Sentiment on the Bombay Oilseeds Exchange remained buoyant though price movements were rather erratic due to alternate bouts of buying and selling.

Castorseed, after making an advance to a new peak on shortcovering, reacted sharply in mid-week on heavy liquidation on fears of a change in the Government's export policy after December. Fears were also entertained in some quarters that the present export duty of Rs 175 might be stepped up to Rs 250, while others were disposed to believe that free exports might not be allowed in 1957. Again, towards the close, prices showed a sharp recovery under predominance of buyers. Castor May delivery, after touching a high of Rs 168, receded to Rs 164 at which level heavy buying pushed up the rate to Rs 171 at the close. Ready was quoted around Rs 35-12 and Castor Oil, commercial at Rs 21-8.

Groundnuts also made substantial headway under scarcity of contracts. Groundnut February delivery opened at Rs 141-8 and steadily advanced to 149-12. Ready Bold was quoted at Rs 31-12 and

World *of* Cotton

Revival of Activity in Piecegoods Market

LATEST reports from the cloth markets have indicated that the improvement in offtake, witnessed last week, has been maintained during the week under review and prices have also continued to rule steady. The offtake by the Delhi and Calcutta dealers has been particularly better. Trade circles believe that the demand from the up-country centres will broaden further in the course of the next few days.

The outlook for exports has also turned more cheerful. Export demand has registered a marked improvement with shippers reporting better business with several foreign destinations. If the present demand persists during the rest of the year, it is felt, that India will be able to cover a part of the lost ground in the export sector.

The shipping period for exports to Burma has been extended to the end of March next year. Indonesia has also turned its eyes toward India for meeting its immediate needs in view of the blockade of the Suez Canal and the consequent delay in the arrivals of textile goods from the European countries. There are also possibilities of India entering into a tripartite agreement with Indonesia for the supply of cotton textiles against import of cotton from America. For these reasons and in view of the firmness of foreign cotton prices, mills are now inclined to quote slightly higher rates for superfine qualities.

According to the provisional figures, the production of cloth in October is placed at 420.3 million yards as against 463.0 million yards in the previous month and 437 million yards in October, 1955. Similarly, the output of yarn has dropped down to 140.4 million yards. The output of cloth, for the first ten months of the year, was, however, higher at 4,381.3 million yards as against 4,241.0 million yards in the corresponding period of last year; but, the total quantity of goods passed for shipments, during the same period, was lower at 627.31 million yards against 740.71 million yards.

×

COTTON FUTURES:

The sharp recovery in the futures market, that was noticed last week, was only short-lived. Prices suffered again a setback on reports of the Government decision not to announce export quotas at the present stage in view of the high level of prices. Operators were apathetic and even the news of scattered rains throughout the country did not provide any incentive for the market to move up. The justification for the Government's action appeared to stem not from the price behaviour of the futures market, but from the price pattern of the ready section. Cotton circles, however, feared that foreign demand might be slack which the Government would announce the quotas at a later stage.

Meanwhile, the turnover in the futures section was 20,000 bales. ICC Jharilla March, after opening at Rs 642-8, receded gradually to Rs 631-12, to close better at Rs 636-4. Similarly, ICC Vijay April finished better at Rs 740-8 after opening at Rs 749 and touching a low of Rs 737-8.

×

SPOT MARKET:

The Spot section ruled quietly steady and the turnover was 2,500 bales. Buying was cautious with spinner purchases mostly confined to 197-3 and Vijay for April delivery.

In the export section, stalemate prevailed owing to the absence of export quota. Shippers showed some interest in superior Bengal styles, prices of which ruled steady due to limited offerings. Other exportable varieties did not attract much enquiry.

In the foreign section, American varieties were in keen request following the announcement of import quota of USA Cotton. The Government have decided to issue licences for the import of 1.5 lakh bales of American cotton with stapling 1 1/16" and above. The licences will be issued against contracts made after November 7, and the shipping period will expire at the end of July, 1957. Spot lots of Sudan, Egyptian and East African also attracted some buyers.

Following rates were quoted:—Bengal Rs 660 to Rs 730; Oomra Rs 720 to Rs 750; Dhollera Rs 690 to Rs 710; Jharilla Rs 720 to Rs 780; Vijay Rs 850 to Rs 860; American 1⅛"Nov-December Rs 1,310 to Rs 1,320 and American Good Middling 1 5/32" Rs 1,400 to Rs 1,410 for Nov-December delivery.

×

KARACHI COTTON MARKET:

Prices in the Karachi market continued to rule firm, mainly due to the keen interest shown by overseas buyers. Inquires from China and Japan were noted for NT and a sizable business was reported to have been done in this variety. Local spinner demand was also reported to be good. Following rates were quoted:—4F Roller Rs 83-4; Punjab Roller Rs 86-4; NT Roller Rs 89-4; 289F Punjab Roller Rs 90-4 and 289F Punjab Gin Rs 96-4.

×

NEW YORK MARKET:

Cotton futures fluctuated narrowly in limited dealings as the majority of traders were on the sidelines, awaiting fresh incentives. Leading spot firms, who were recently fairly good sellers of nearly December and March, were inactive. Middling Spot was quoted at 34.55 cents per pound.

The recent advance in the new crop position is generally credited to forecasts of a material reduction in the next season's acreage. The 1955 loan cotton, amounting to some 6 million bales, will come to the CCC on December 31, but it will be about March before this cotton is catalogued for sale.

*

GATEWAY MARKETS

(Continued from previous page)

Grondnut Oil at Rs 18-12 for Railway Receipt.

Linseed showed a sympathetic rise. May delivery opened at Rs 29 and, after touching Rs 29-4, finished at Rs 29-2. Ready ruled firm at Rs 35 and Linseed Oil at Rs 18-12.

Cottonseeds were cheerful. February delivery moved between Rs 83-8 and 84-4 during most part of the week, to finish the week lower at Rs 82-8 on profit-taking.

*

Gold & Silver

Trading in the Bullion market was featurelees with price movements confined to a narrow range due to lack of support. Turnover was small, as operators were unwilling to extend commitments.

In the Gold section, Mangsir delivery opened at Rs 105-3 and, after touching a high of Rs 105-5 and a low of Rs 104-15, finished at Rs 105-2-6. Spot hovered narrowly around Rs 104-14, while Sovereign was quoted around Rs 70-0. Arrivals were 3,000 tolas as against an offtakes of 4,000 tolas. Unrefined metal receipts were heavy at 4,500 tolas. Tender for 2,000 tolas of Mysore gold were offered for sale on Monday.

In the Silver section, Mangsir delivery opened at Rs 174-8 and, after touching a high of Rs 175-2 and a low of Rs 174-6, finished the week at Rs 175-0. Ready, after touching a low of Rs 173-10, recovered toward the close to Rs 174-4.

*

Yarn

The Yarn market displayed a firmer tendency during the past past, the rise in prices being more marked in imported yarn. The market derived inspiration, largely from the fact that imports in future would be delayed on account of the Suez Canal situation and that there would be a drastic cut in imports during the next licensing period.

Both the ready and forward prices of Art Silk Yarn remained firm. The improvement in respect of Staple-Fibre Yarn futures was placed at Rs 20 per bale. In the case of ready goods, prices improved, ranging from six ples to two annas per pound, depending upon the supply position. In staple-fibre yarn, prices rose to the extent of one anna per pound.

The increase in the internal production, during the current year, is estimated at about 25 per cent over the level reached last year and the output in the ensuing year is expected to be still higher due to the expansion plans on hand.

In the Cotton Yarn section, the offtake was better, the rise in price being shared by lower counts too.

LIVERPOOL COTTON MARKET:

Activity in the Liverpool cotton market remained subdued in view of the international situation. The absence of any material weight of hedge selling at this period gave rise to a feeling that a sharp reaction would set in when conditions would become less disturbed. On the whole, offerings were mainly restricted to profit-taking at limits on the scale-up. Egyptian contract Nov-December was quoted at 60.00d and Sudan Contract Nov-Dectmber at 60.30d.

Constitutional Propriety

PARLIAMENT was taken completely by surprise by the announcement by Mr Nehru that Mr Lal Bahadur Shastri, Minister for Railways and Transport, had tendered his resignation and that he had decided to accept it in the interests of "constitutional propriety". As has not been unusual with the Lok Sabha in the recent past, such a gesture on the part of Mr Shastri released a wave of emotion; and members who were insisting only on Saturday that he should resign were stricken with remorse and wanted the resignation withdrawn. Later in the evening on Monday, some thirty MPs addressed an appeal to Mr Nehru that he should not accept the resignation. They had also asked for a meeting of the Congress Parliamentary Party to consider the issue. At the time of writing, it looks very unlikely that these efforts to persuade Mr Nehru to reconsider his decision to accept Mr Shastri's resignation would succeed. For, Mr Nehru seems quite convinced that it was necessary to avoid giving the impression that, "whatever happens, we carry on in the same way". Mr Nehru's feeling on this matter appears to have been so strong that, when certan members approached him directly to ask him to change his mind, he is reported to have told them that he could not do it and that, if serious disasters like this occurred again, he himself would resign.

Inevitably, there was much discussion, in the lobby circles, on the constitutional and conventional aspects of this episode. As a matter of fact, such discussion ironically put the facts of the disaster itself into the shade. Looking for precedents, it was soon found that none existed in India's short history as a parliamentary democracy: on the other hand, if Mr Shastri had chosen to take the view that he was not personally responsible for the disaster at Ariyalur, he could have quoted precedents for his position. For instance, last year's epidemic of jaundice in Delhi, directly the result of negligence of the Health Ministry, did not make the Minister for Health admit her personal responsibility in the matter. As for Mr Nehru, he too had precedents in the matter of not accepting Mr Shastri's resignation; for instance, Sir Chintaman had offered to resign, on the budget leakage, but the offer was not accepted on the ground that the Finance Minister himself was in no way responsible for the actual leakage. Again, it was interestingly revealed on Monday that in the case of Mr Shastri, there was another precedent of this kind: for, after the Mahboobnagar disaster in September, Mr Shastri, it was revealed, had offered his resignation but it was not accepted on the ground that he was not personally responsible for the deficiencies of his department.

Obviously, it was time to see that extraneous and extenuating considerations were not allowed to make one shirk inconvenient convention and thus corrode insidiously the general democratic health of the nation. As Mr Nehru sensed, such indeed was the danger and the popular impression was that democratic conventions did not weigh much with the present parliament. It is true that the responsibility sought to be attached to a Minister under democracy is onerous, and perhaps impractically so, but it is of the essence of the role of a Minister as Executive head that he should shoulder it. It is entirely to Mr Shastri's credit that he should have seen this aspect of the matter clearly and that he should have refused to reconsider withdrawal of his resignation when urged to do so by the Prime Minister on Friday. And, if one remembered that it is yet to be determined how far even departmental inefficiency was responsible for the disaster at Ariyalur —for, on the meagre information available, it looks as though it is not unlikely that this was one of those deadly pranks of nature that no human agency could normally have foiled—Mr Shastri's action is seen to be even more conscientious.

It is nonetheless a pity that Mr Shastri's usefulness to the country in what may turn out to be a crucial Ministry in the coming years should have been curtailed by an accident. Mr Nehru described Mr Shastri as a "man of the highest integrity, and loyalty, devoted to ideals, a man of conscience that he felt deeply whenever there was any failing in the work entrusted to his charge." During his tenure of office, Mr Shastri had tackled with vigour and imagination the problems of his ministry; and, of the manifold advances made in equipping the Railways with its basic requisites like locomotives and coaches, in the spectacular achievements of Chittaranjan and Perambur, Mr Shastri may legitimately be proud. The ingenuity which he brought to readjusting freight rates and passenger fares; the increasing efficiency of wagon turnover and removal of transport bottlenecks; the satisfactory handling of the problems connected with Railway labour (despite provocative acts as those in Khargpur earlier this year); the vigorous pursuit of the projects under the Plan; and, above all, the constant thoughtfulness of the amenities for the lower class passengers, are to be seen as the workings of a keen and conscientious mind. By the same token with which democracy pins responsibility for the disaster at Ariyalur on him, it should give unstinted praise to Mr Shastri for the achievements of the Railways during the last few years. And it is gratifying to report that, to judge by general comment on Mr Shastri both before and after his resignation, such indeed has been the case.

Of the disaster itself, it is difficult to speak without a profound sense of awe at so stark a tragedy. The cause of the accident is unhappily very similar to the one that happened but two months ago in the former Hyderabad State Territory—the embankment being eroded by floods caused by rain and possibly by breaking of the bunds of tanks. Whether a more alert inspection of the track would have averted the disaster is a matter that will be brought to light by the inquiry now proposed. It would appear that the breach of embankment took place within a very short time, since four trains had passed over the bridge within six hours prior to the disaster and the last train that went over it without mishap was a passenger train that crossed it at 3 AM—that is to say, about two hours earlier. The bridge itself, constructed in 1928, is intact and safe even after the disaster, except for a small damage caused by the accident. This would seem to indicate that structural defects are not accountable for the accident and it is the embankments and abutments of stone chips and earth that need constant inspection and repair and, in extreme cases like the one under discussion, of caution and prior information of the actual conditions of the track and bridge. The smallness of the period in which the breach had occurred—Mr Shastri reported to Parliament that the gangman on duty actually inspected the site just an hour

THE GROB TEA COMPANY, LIMITED

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 21st day of December, 1956, at 3 p.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.

(2) To declare a dividend.

(3) To elect a Director in place of the retiring Director.

(4) To elect Auditors for the ensuing year and to fix their remuneration.

And as Special Business

(5) To consider and if thought fit to pass the following resolution, namely—

"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected."

The Share Transfer Book of the Company will be closed from 13th December, 1956 to 21st December, 1956, both days inclusive.

Calcutta,
29th November, 1956.

NOTE: A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

Delhi Review

North Indian Notes

Rajasthan's Second Five-Year Plan

The Government of Rajasthan have organised a Development Festival lasting for a week from Saturday with a view to focus public attention on the targets to be achieved during the Second Five Year Plan. The main objective of the celebrations is to spread the message of the First and Second Five Year Plans among the people of the State.

Apart from the great importance attached to the Second Plan generally, Rajasthan is particularly interested in it as for all practical purposes, largescale development in this state may be said to have begun only with the commencement of the present plan. For, due to its preoccupation with the organisation of a stabilised administrative set-up—Rajasthan has come into being only about six years ago—it could not properly address itself to the tasks of the First Five Year Plan. In the last two years, however, the pace of progress has been rapid and at the end of the First Plan, the state has become not only self-sufficient but is in a position to export foodgrains.

By far the most significant reform undertaken by the State during the First Plan period is the abolition of the Jagirdari system. As a result of this step, the tiller of the soil in the state has been restored to his rightful place. Considerable progress has also been made in stream-lining the administrative machinery.

As against the final allocation of Rs 2508.90 lakhs for the First Plan, the expenditure incurred during 1951-56 amounted to Rs 1963.28 lakhs. The first plan laid emphasis on irrigation, roads, education, health and agriculture. The actual achievements during the period are as follows. In the sphere of food production the progress was more than anticipated. In 1956 it increased by 3.3 lakh tons as compared to 1951. The irrigated area went up from 11 to 16 lakh acres. Increased educational facilities were provided by opening new schools, colleges and multi-purpose schools. Approximately 36.5 per cent of the children of the age group of 6 to 11 were at schools in 1955-56. Fifty new dispensaries were set up and 2400 miles of roads were constructed and repaired. As many as 2400 new cooperative societies were established. At the end of the First Plan period, the power generating capacity stood at 35,000 kw as against 13,000 kw at the beginning of the Plan. About one-fourth of the State was brought under the Community Development Programme, and the main obstacle to land reform was cleared by the abolition of the Jagirdari system.

In the drawing up of developmental programmes under the Second Five Year Plan, care has been taken to consolidate the gains already secured and to carry forward the progress that has been initiated. The outlay on the present Plan as finally approved by the Planning Commission is Rs 97.40 crores. This has been distributed between the different programmes as follows: Irrigation Rs 2680 lakhs, Power Rs 1300, Education 900 lakhs roads Rs 899 lakhs, Agriculture, animal husbandry, cooperation and forest Rs 870 lakhs, Miscellaneous Rs 650 lakhs, National Extension Service Rs 649 lakhs, Health Rs 640 lakhs Industry and Mining Rs 554 lakhs. The principal targets are as under. The area under irrigation is to be increased from 34.80 lakh acres in 1966 to 52.55 lakh acres in 1961. In the agriculture sector the target is additional production of 7.86 lakh tons of foodgrains, one lakh bales of cotton, 35000 tons of sugarcane and one lakh tons of oilseeds. Nearly 2848 miles of roads will be constructed and 1574 miles of roads will be repaired. The target in the field of education is that 55.5 per cent of children in the age group of 6 to 11 and 40 per cent in the age group 11 to 14 years will go to schools. It has been planned to spend Rs 19.83 i.e., 20 per cent of the total allocation in the first year of the Second Plan.

NORTH INDIAN MARKETS

Slight Improvement in Sugar Prices

GOOD demand from almost all consuming centres has accounted for slightly steadier conditions in Sugar markets during the week, although release of fresh quota by the Government has made the supply position comfortable. Mill-delivery rates have, therefore, improved fractionally. Following rates are quoted in (per maund) in the Hapur market:—Jaswant Rs 28-2; Simbhauli Rs 28-8; Mowana Rs 27-8 to Rs 28-8; Daurala Rs 28-12 to Rs 29-8; Mansoorpur Rs 17-10 to Rs 29-0; Amroha Rs 27-6; Bijnore Rs 27-6 and Rampur Rs 31-8.

The total offtake of sugar during the 1955-56 season—November, 1955 to October, 1956—totalled 17.48 lakh tons as against 12.17 lakh tons in the previous season. Most of the factories in West Uttaer Pradesh have already begun their crushing operations. According to the latest figures, the production and despatches of sugar from indigenous factories amount to 0.42 lakh and 0.63 lakh tons during the current season up to November 15, 1956 as against 0.34 lakh and 0.64 lakh tons respectively in the corresponding period of the previous season. Stocks with the factories, as on November 15, 1956, stood at 5.03 lakh tons as compared with 3.81 lakh tons on the corresponding date of last year.

The market for Khandsari continued to remain dull and depressed and the rates moved between Rs 22 and Rs 26 per maund, accordingly to quality.

Gur

Appreciable decline was witnessed in the prices of New Gur following the increased daily arrivals at an average of 8,000 maunds and slack outside demand coupled with want of sufficient wagons. The rate declined to Rs 12 from Rs 13-8 per maund.

Arrivals are likely to increase further. Despatches to Gujerat, the Punjab and Madhya Pradesh, during the past week, were about 4,000 maunds.

Old quality stocks have now shrunk to about 4,200 maunds. The rate was quoted around Rs 10-8 per maund.

*

Foodgrains

Quietly steady conditions prevailed in the Foodgrains market. At Hapur, Wheat prices ruled almost unchanged at Rs 15-14 per maund for the average quality and Rs 16-14 for farm quality. Arrivals were small at an average of 50 maunds daily and the demand was met by fair-price shops.

The market for Rice ruled quiet as arrivals of the new crop were on the increase in the market. Gram also ruled quiet, quoting Rs 13 for local quality and Rs 13-6 for the Punjab quality. Pulses, however, continued to meet with good demand, mostly from Madras and Bengal. The market for Arhar ruled steady with the rate hovering around Rs 13-6.

It is reported that the Uttar Pradesh Government are worried about the scarcity conditions created by the recent heavy rains and floods and have approached the Centre for increasing their original quota of one lakh tons of imported wheat to 2 lakh tons of foodgrains including 30,000 tons of rice. Renewed spell of rains in the first week of November has hindered prospects of "rabi" sowing and it is feared that large tracts of land in Bulandshahr, Meerut and most of the eastern districts will remain unsown.

The Delhi grains market ruled quiet on reports of unauthorised arrivals of wheat from the Punjab. But, on increased demand, the rate remained unchanged at Rs 20-8 per maund for farm quality. Buying in Barley was small; but Bajra continued to meet with demand locally as well as from outside, causing a mild rise in the rates. Maize was quiet in the absence of buyers.

Also, the Bombay grains market presented a quiet appearance. There was a slight decline in Rice prices due to cautious attitude of traders who felt that consumers might offer resistance to the steady rise in prices. There was, however, no major setback in prices, thanks to the sustained strength of the Andhra market.

Trading in the Wheat section was limited in the absence of fresh arrivals. Khandwa quality was quoted at Rs 225 to Rs 230 per candy and the Punjab quality at Rs 170 to Rs 180.

The strength in the Coarse grains section abated noticeably with the prices of new crop Bajra declining by about Rs 10 per candy following the improved arrivals from Uttar Pradesh and the Deccan. Superior quality fetched Rs 200 to Rs 230 per candy.

The market for Pulses ruled rather weak as traders were inclined to lighten their commitments.

*

Shellac

The Shellac market in Calcutta continued to rule quiet and only a small business passed at lower rates, Pure TN Shellac quoting Rs 116 per maund. Shipments during November till the 21st were 25,900 packages. Figures of shipments from India, however, reflect the improvement in trade last month. The volume shipped rose from 23,336 packages in September to 32,381 packages in October.

On the London market, spot and nearby positions have moved up a little on technical trading. Sellers are showing some reserve in view of the shipping situation. Sellers' prices have risen for nearby positions, whereas buyers' offers are unchanged. December delivery is quoting 340sh. per cwt buyers with sellers at 360sh.

Madras Review

The Peninsula

Toward More and Cheaper Coffee

IT is a pity that not one of the numerous public addresses presented to the Emperor of Ethiopia when he was in India cared to mention the most enduring debt which this country, which indirectly owes its very history to Ethiopia. Perhaps here in this ancient land of Buddha there is a lurking fear of being overheard by the connoisseurs, that India contributes not more than one percent to the total world production.

No wonder the Encyclopedia omits any reference to India in its fairly elaborate article on coffee. India does not find a place among the chief producing countries which are mostly in the Western hemisphere. Even its rightful place as an important coffee-consuming country is denied, while the UK with more or less the same level of annual consumption is admitted into this category.

Within India, consumption of coffee is concentrated in the south, though lately this reputed nerve and heart stimulant has been gaining its way into the affections of North Indian connoisseurs. But for various reasons the drink cannot hope to usurp the place of the cheaper and the long-established tea, even among those engaged in the lofty pursuits of literature and love. The coffee houses of Europe reputedly breed both.

The Nizam is reported to be one of the most ardent devotees of coffee, his habitual consumption being about 50 cups a day. The ordinary folk must be thankful that the Nizam has few imitators. For them, the Second Report of the Plantation Enquiry Commission dealing with the coffee industry should bring the vision of distant relief. The majority of them are consuming poor quality, and paying dear.

The two principal aims of the recommendations of this Report are to increase production and to make coffee consumption financially less burdensome. The case for a substantial increase in production is established by the fact that while consumption has increased by 130 per cent between 1939 and 1954, production has not kept pace. Average yield in India remains at about 60 per cent of the yield for most of the important coffee-growing countries, inspite of the fact that during the past few years, there has been an increase of 44 per cent for one leading variety.

Playing an important role in the economy of South India, the industry provides employment to over two lakhs persons and contributes to the Central exchequer about Rs 1 crore, representing roughly 10 per cent of the value of its total annual production. Though over the last 15 years a considerable extension of the area under coffee cultivation has been achieved, 47 per cent of the area owned by the estates is not utilised therefor. The Commission calculate that at least 25 per cent is undoubtedly suitable for coffee cultivation.
