A reinforcing factor is found in the need to augment the resources of the small cultivator, particularly those having holdings of 10 acres and below. From the summary of the Report available, it is not clear how much of the available area is capable of being annexed to these small estates for conversion into coffee cultivation. One of the recommendations of the Commission is cited along with the provision of subsidiary employments such as raising small crops and rearing cattle, poultry etc. whatever area is available for distribution would be handed over to these small cultivators, in preference to any other competing claimants.

The small holdings, in which category the Commission are inclined to include holdings below 25 acres, are found to be comparatively uneconomical and consequently a drag on production. The principle of ceilings is not intended to be made applicable to plantations. If it were, the Commission might have felt impelled to adjust their ideas a little, so that the requirements of a larger production are compromised with those of a more equitable contribution of property under the present relationship between land and population.

As it is, it is found that the 23,000 acres of estates under sterling and non-Indian ownership, representing less that 10 per cent of the total area, produces about 25 per cent of the total crop. Estates of 100 acres and above, accounting for 50 per cent of the total area contributes about 63 per cent of the total production. From the standpoint of production the preference for larger units is therefore unassailable.

The Commission are not anxious that the small holdings should be perpetuated as such; they suggest that as far as possible the individual owners in this group should be induced to go into a Joint Farming State Partnered Co-operative Society, which will take into its fold a number of subsidiary pursuits and thus reduce the over-all costs of production. As far as co-operation goes, the Commission do not see any big prospects for the establishment of large-sized farming societies, among the small growers, unless it is with the active support of the State. Anyway, the farming societies pooling the land for cultivation is not favoured.

The better alternative according to the Commission, is to permit each individual holder to cultivate his existing holdings along with any area added to it, while the co-operatives can take up the entire charge of processing, marketing, supply of manures, etc. The few sporadic experiments in co-operative farming in India lend support to the view that a wholesale transformation of the productive structure on the basis of co-operation is not necessary at this stage; it may even be disappointing in results.

For both the big and small estates there is a problem of finance, particularly for purpose of rehabilitation. While the small holders are in unmistakable need of external help, the bigger ones are not so. The latter have been earning high profits and the Commission considers, have also been distributing an undue slice of it. The percentage of dividend in recent years ranges between 20 to 30 on ordinary capital, which is invariably inflated through the issue of bonus shares. Had the companies been more concerned with the future of the estates, they would not have squandered current earnings so lavishly. Through distributed dividends. The result has been that the trees have become overaged and there is insufficient finance for the replacement. The most important recommendation of the Commission is that in future the companies should be restrained in the matter of distributing dividends, with a view to enable them to put by adequate funds out of their own earnings for the urgent needs of replanting.

The Commission are not satisfied with the estimates of costs as being computed at present. An independent expert organisation is therefore called for, on the basis of whose estimates, price fixation and other attendant purposes could be served.

By implication, the Commission take the coffee Board to task for neglecting certain vital tasks, though perhaps the Board is not formally answerable. In future, the functions of the Board are to be concerned equally with the regulation of production and the oversight of their efficient functioning and the charge of export trade as with propaganda and research. The Commission have recommended that powers should be conferred on the Board for regulating coffee area according to the needs of production, and should be vested with powers for licensing production. It is also to be made the principal agency for enforcing payments by the estates to the "Coffee Replanting Fund" to be created for the purpose of financing a phased programme under the direction of the Board.

In distribution, the co-operative sector is to be encouraged, multipurpose growers' societies are to be formed and an independent Price Board is envisaged along with a Warehousing Corporation and possibly a Plantation Finance Corporation. The Coffee Board will have a more compact area of functions. The Commission also think that the Board could hand over the coffee houses run by it to the private agencies after an initial phase under its own management.

In fact, propaganda through moving vans and cinema shows which visit villages and labour quarters, advertising in urban areas and industrial localities, participation in fares and exhibitions by coffee demonstration units are recommended as more effective from the standpoint of propaganda, than the setting up of permanent coffee houses.

Over the complexion of the Board too, there is evident disatisfaction. But the solutions suggested are contradictory. While the majority in the Commission argue for the enlargement of the elected elements restricting government nominations to the minimum and the abolition of representation of the State governments, Mr K. G. Sivaswami, the author of a lone dissenting minute, would have the entire structure scrapped, as it does not conform to the needs of the consumer and an official whole-time board in charge of production and finance acting in consultation with elected advisory bodies of different interests, put in its place.

How does the consumer fare in the Report? In a rather half-hearted way, the Commission recognise that the retail distribution of coffee is earning high margins of profit; and that even the powder sold in the Coffee Houses is priced high. But the regulation of distribution is considered difficult, though the Commission do suggest that the Coffee Board should arrange for the sale of a certain portion of the coffee output which is consumed internally, preferably through a joint stock company or an All-India Co-operative Society, of which the Board subscribes 51 per cent of the shares.

For the rest, the consumer can hope to have standardised plio-film packages of 1 lb. and ½ lb., with prices earmarked. Under this method, the wide regional differences in prices could be eliminated. How far the standard price itself will fall below current levels cannot be predicted. Presumably, the Commission feel that under the present set-up, no big difference could be envisaged. Therefore they proceed to suggest a peculiar arrangement by which the consumer price could be kept within reason-

Madras Review

South Indian Notes

Development of Minor Sports

With the emphasis laid on rapid industrialisation in the Second Plan, it is anticipated that heavy demands will be made on all kinds of transport services in the country during the next five years. While it is true that the railways must inevitably continue to carry the bulk of the traffic, it has been admitted that it is essential to plan for the development to the maximum extent possible of all important means of transport if the nation is not to be confronted with transport bottlenecks at crucial moments. In this regard, shipping, especially Coastal shipping may be expected to make valuable contribution.

It needs scarcely be said that a natural corollary to the development of shipping is an increase in port facilities. During the First Five Year Plan, as a result of various developments, the major ports have been placed in a position to handle about 25 million tons of traffic as against 20 million tons at the commencement of the Plan. As far as the minor ports are concerned in the First Plan, only 18 out of over 150 minor ports had been included for special attention for development. The Second Plan includes a provision of Rs 40 crores for entire development programme relating to major ports while a provision of Rs 5 crores has been included for the programme relating to minor ports.

The Government have now divided the ports into three categories 'major', 'intermediate' and 'minor'. Calcutta, Bombay Madras, Cochin Vishakhapatnam and Kandla come under the first category. The 18 minor ports, among which are Negapatnam, Cuddalore, Tuticorin, Kakinada, Kozikode Mangalore Okha and Bhavanagar and which were taken up for special attention during the First Plan, are now raised to the status of 'intermediate' ports. The remaining 132 small ports are placed under the category 'minor' ports.

From the fact that the major ports can handle only about 80 per cent of India's seaborne trade, it is evident that the intermediate and minor ports are playing a vital role. Their development has become doubly important in the context of the Second Five Year Plan as it is generally believed that with the allotment made under the Plan, the Railways will not be in a position to cope with the increased traffic. For shipping to shoulder the additional responsibility, a prerequisite is a commensurate improvement in port facilities. In this regard the position of the south eastern region is far from satisfactory.

It is common knowledge that the two major ports of Vishakhapatnam and Madras are already working much beyond their capacity. According to Mr Lal Bahadur Sastri these two ports are 'now having to deal with more than twice the tonnage of cargo they were built for.'

The development of minor ports, therefore, is of special importance to this region. With the completion of the Pondicherry Pier Project, which was inaugurated last week, a significant addition will be made to port facilities on the Coramandel coast.

The Pondicherry Pier Project is estimated to cost nearly Rs 35 lakhs, including the cost of the land. Designed by Indian engineers the pier will project 1200 feet into the sea. It will be equipped with the most uptodate mechanical appliances, such as electric cranes, mobile crane and a diesel locomotive for mechanically hauling the trollies. The port will be served by a metre gauge railway connected to the main railway system. With these developments, the Pondicherry port is expected to rank as an important intermediate port in this region, capable of handling 200,000 tons of cargo per annum.

✱

Harnessing of Godavari

India is yet to go a long way to reach its minimum requirements in irrigation and power. This was revealed by Dr K. L. Rao, Director, Central Water and Power Commission in Hyderabad last week. As against a minimum requirement of 120 million acres at present there are only 50 million acres under irrigation. Even when all the schemes under the First and Second Plans are completed, there will still be a leeway to be made to the tune of 20 million acres. As for power, the present production is running at a rate of only 3 million kilowatts whereas the minimum requirement in this regard is 15 million kilowatts.

Referring to the achievements during the First Plan. Mr Rao said that projects costing Rs 700 crores had been included designed to bring about 11 million acres under irrigation and to give half a million kilowatts of electric energy. Under the Second Plan it had been proposed to undertake eight major projects at a cost of Rs 275 crores. In the third plan 38 major projects had been included. In this connection. Dr Rao pointed out that the waters of the Godavari could be harnessed to give the Andhra Pradesh plenty of water for irrigation and power. When once the major projects were completed, the navigation facilities on the river would automatically increase. According to Mr Rao ships could pass right from the hinterland to the Bay of Bengal.

SOUTH INDIAN MARKETS

Rubber—Demand Exceeds Supply

ACCORDING to the figures released this week by the Rubber Board, production of Rubber has shown a further rise to 2,326 tons in October from 2,293 tons in September and 1,750 tons in August. Consumption has, however, declined to 2,103 tons from 2,545 tons. Stocks with the estates and dealers, and with the manufacturers, at the end of 31st October 1956, are higher at 3,927 tons and 3,607 tons as against 3,816 tons and 3,157 tons respectively at the end of the previous month.

In other words, opening stock as on the 1st October 1956 was 6,973 tons, while production and imports during the month were 2,664 tons, thus making a total quantity available of 9,637 tons. After allowing for consumption of 2,103 tons, total stocks with the estates, dealers and the manufactures, as on the 31st October 1956, were 7,534 tons.

It is estimated that the consumption of rubber in India, during the current year, will reach the unprecedented high level of 30,000 tons, leaving a wide gap between demand and supply. Actual consumption, during the first ten months of the current year, is 25,500 tons, whereas production for this period is only 17,730 tons, leaving a gap of nearly 7,800 tons. This is substantially higher than the gap of some 5,000 tons during the whole of 1955.

With a view to bridge the gap between supply and demand, the establishment of a synthetic plant has been suggested; but trade circles are sceptical about the utility of such a scheme. It is pointed out, that the synthetic scheme will involve an investment of Rs 12 crores, being spent on foreign exchange.

Meanwhile, a quantity of about 39,000 tons of Sole Crepe rubber was sold in the Cochin market last week. Demand was weak and withdrawals were heavy for all types. In view of the high demand for Sole Crepe in world markets, sellers, who managed to obtain export licences, are shipping their stocks for sale in the London market. Because of the small quality of Sole Crepe available for auction, there will be no sale in the next month. The first auction, in the new year, will be held on the 14th January, 1957.

✱

Pepper

Pepper markets, after ruling quiet during most part of the week, turned steadier toward the close on reports of the end of the dock strike in New York. In the Alleppey market, rates were quoted at Rs 662-8 and Rs 650 per candy for superior Palai and Thekkan varieties respectively. At Kozhikode, Wynaad quality was quoted at Rs 810 to Rs 825 and the Country variety at Rs 770 to Rs 785 per candy.

Inflow of new crop, which showed improvement in quality, continued to increase; but not to the usual expectations during this time of the season. Growers were more disposed to await further developments.

In the New York market, conditions remained steady, but quiet with grinders showing limited interest. The news of the end of the strike had no material effect on market sentiment. Malabar spot was unquoted.

The Singapore market ruled quietly steady with small business passing in spite of speculators trying to manipulate in anticipation of renewed demand from Europe in the near future. Lampong seemed to have lost its position in the world market as most of the big European firms were now taking very small interest.

✱

Groundnuts

The Madras Groundnut market ruled quiet with prices showing an easier tendency. Arrivals were only 75 tons due to rainy weather. Although these were not fully dried, small crushers were taking up these in order to meet their immediate requirements. The rate for superior oil-quality seeds was quoted around Rs 163 as against Rs 167 per candy in the previous week, while bold varieties were done at Rs 160 per candy.

In the Groundnut Oil section, the tendency was quiet following the Government announcement that no export of groundnut oil would be allowed at the current high price. The rate for the ready position, after improving at one time to Rs 342-8, declined toward the close to Rs 338 per candy.

✱

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were slightly less than usual due to

(Continued on page 1009)

A copy of this Offer for Sale, having attached to it the documents required by Section 60 of the Companies Act, 1956, and specified below, has been delivered for registration to the Registrar of Companies, Bombay.

Consent of the Government of India has been obtained to this Offer by an Order, of which a complete copy is open to inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

The Application List for the ordinary shares now offered for sale (including the shares preferentially offered to the employees of Hindustan Lever Limited as mentioned below) will open at 10-30 a.m. on the 3rd day of December, 1956, and will close at 3 p.m. on the 5th day of December, 1956, or later, at the discretion of the Offeror.

HINDUSTAN LEVER LIMITED

[FORMERLY LEVER BROTHERS (INDIA) PRIVATE LIMITED]

(Incorporated on 17th October, 1933 under The Indian Companies Act, 1913)

SHARE CAPITAL

Authorised : **Rs. 5,57,00,000 in 55,70,000 Ordinary Shares of Rs. 10 each** .. .. *Issued and fully paid :* **Rs. 5,57,00,000**

Unilever Limited, London (sometimes referred to in this Offer for Sale also as "the Offeror") is the beneficial owner of the whole of the issued capital of the Company which, with the exception of seven shares, is registered in their name.

LOAN CAPITAL

The Company has created no mortgage or debentures and has no other loan capital

The Company has bank overdraft facilities secured by guarantee by Unilever Limited or by hypothecation of stock in trade, but on 31st October, 1956, no amount was outstanding. The Company has a current account with Unilever Limited and from time to time is indebted for goods and services supplied in the normal course of the Company's business. On 31st October, 1956, this account showed an amount due by the Company to Unilever Limited of Rs. 21,19,922.

OFFER FOR SALE

of

5,57,000 ORDINARY SHARES OF Rs. 10 each fully paid

at Rs. 16-8-0 per share (including a premium of Rs. 6-8-0) payable in full on application.

Unilever Limited invite applications for the purchase from them of the above shares.

In addition to paying the purchase price to Unilever Limited the purchaser (or transferee) will have to bear the stamp duty on the transfer of the shares from Unilever Limited.

Applications must be made on the official form and in the case of applications from the public must be forwarded to the brokers to the Offer named below or to any of the branches of the National Bank of India Limited at the addresses stated on the application form.

It is intended to reserve a maximum of 55,700 (i.e. 10%) of the above 5,57,000 shares for offer in the first instance to the employees of Hindustan Lever Limited at the above price of Rs. 16-8-0 per share (including a premium of Rs. 6-8-0) payable in full on application. Applications from employees for these shares must be made on BLUE application forms and must be for 25 or 50 shares only.

Applications for the shares offered for sale to the public must be made on WHITE application forms and must be for 50 shares or a multiple thereof.

Any of the shares reserved for the employees of Hindustan Lever Limited which are not purchased by them will be available to meet applications from the public.

The shares offered for sale will rank for any dividends which may hereafter be declared.

Directors

ANDREW JOHN CHANDOS HOSKYNS-ABRAHALL, Gold Croft, Bhulabhai Desai Road, Bombay, Company Director (Chairman).
STEPHEN HENRY TURNER, Everest House, Carmichael Road, Bombay, Technical Director (Vice-Chairman).

HINDUSTAN LEVER LIMITED—Continued

HISTORY

The Company was incorporated in India as a private company on 17th October, 1933, under The India Companies Act, 1913, with the name Lever Brothers (India) Limited. Shortly after incorporation the Company took over the Lever soap business established in India in the nineteenth century by Lever Brothers of Port Sunlight, Cheshire, since when the Company has carried on business continuously.

On 8th October, 1956, but with effect from the close of business on 31st December, 1955, by virtue of Orders of the Bombay High Court the Company was amalgamated under Sections 391 and 394 of the Companies Act, 1956, with the undernoted Companies whose assets thereby vested in the Company subject to their liabilities, duties and covenants:—

(1) THE HINDUSTAN VANASPATI MANUFACTURING COMPANY PRIVATE LIMITED
(Sometimes referred to in this Offer for Sale also as "HVM")
(2) WILLIAM GOSSAGE & SONS (INDIA) PRIVATE LIMITED
(3) JOSEPH CROSFIELD & SONS (INDIA) PRIVATE LIMITED

These companies (hereinafter collectively referred to as "the merged companies") have now ceased to exist. Previously they were closely associated with the Company all being wholly owned subsidiaries of Unilever Limited. Since the amalgamation the Company has been carrying on the combined business comprising the manufacture and sale of soaps, detergents, toilet preparations and glycerine, together with vanaspati, margarine, edible oils and oil cake, formerly products of HVM which since 1932 has been the largest producer of its kind in India.

Following the amalgamation, the Company was converted to a public company on 27th October, 1956 and changed its name to Hindustan Lever Limited on 1st November, 1956.

BUSINESS

The Company's main aim has always been to sell good quality products at fair prices. Its products now include SUNLIGHT and LIFEBUOY soaps, LUX toilet soap, LUX soap flakes, RINSO soap powder, VIM scouring powder, DALDA and LOTUS brands of vanaspati, BLUE BAND and other margarines, and MARVO cooking medium. The rights in India to all the trade marks applied to these products are the property of the Company. The Company has arrangements with companies of the Unilever Group outside India by which it manufactures and sells their products in India for its own account; these products include PEARS transparent soap and talcum powder, REXONA toilet soap, BREEZE toilet soap, ERASMIC shaving stock, and shaving cup soap, HIMALAYA BOUQUET toilet and talcum powder, PEPSODENT and GIBBS S.R. toothpastes and GIBBS dentifrice, CALIFORNIAN POPPY hair oil and ERASMIC coconut hair oil. The Company also produces industrial and B.P. quality glycerine which it sells under its trade marks PYRAMID and WHEEL. The Company also sells the soapless detergent powder SURF; supplies of this product are at present imported from the United Kingdom, but local manufacture is planned.

The Company's products are distributed throughout India. The Company's sales offices in Bombay, Calcutta, Delhi and Madras and its depots at Gauhati, Cochin and Bangalore deal directly with over 13,000 wholesalers and stockists in over 3,000 towns. The Company's 375 salesmen are in touch with about 2,00,000 shops that deal in the Company's products.

As a member of the Unilever Group, the Company has access to Unilever's international knowledge and experience of the manufacture and marketing of detergents, edible fats and toilet preparations. To a great extent because of its membership of the Group, the Company has made a valuable contribution to the development of the soap and vanaspati industries in India and continues to do so.

The basic raw material of the Company's soap and vanaspati manufacturing businesses is vegetable oil. The quantities (to the nearest thousand tons) of such oil processed by the Company and by HVM whose business is now amalgamated with the Company, during each of the five years ended 31st December, 1955, are given below; a predominant part—about 88% in 1955—is purchased within India.

1951	..	81,000 tons
1952	..	91,000 tons
1953	..	89,000 tons
1954	..	97,000 tons
1955	..	1,04,000 tons

PERSONNEL

For many years the training of Indian employees for higher posts, whether technical or commercial, has been an important part of the Company's policy and selected personnel are sent overseas for special courses of instruction and for observation of advanced practices. More than 85% of the managerial staff are Indians.

In recent years during which relations between employers and workers in all industries have been subjected to many strains and stresses the Company has been loyally served by its workers and has on its part endeavoured to think and act progressively in all matters pertaining to wages, conditions of work, retirement provisions and welfare. The wages and salaries paid by the Company have been acknowledged on several occasions by Labour Tribunals as the highest in the Industry.

The number of people employed by the Company exceeds 6,000.

SUBSIDIARIES

The Company has four wholly owned subsidiaries. They are:—

United Traders Private Limited and Van den Berghs (India) Private Limited, neither of which are trading at present, and Levers Associated Trust Private Limited and Levindra Trust Private Limited, both of which are trust companies managing the Provident Fund of the Company's employees.

FACTORIES

Situation and Address	Approximate Area Acres	Nature of Tenure	Main Products
Haji Bunder, Sewri, Bombay ...	24.0	Leasehold To 1983 with option for renewal to 2032	Soap, toilet preparations, glycerine, vanaspati, margarine and oil cake.
Garden Reach, Calcutta {	3.4	Leasehold To 2008	Soap, toilet preparations and glycerine.
	9.0	Freeho d	
Athpur, Shamnagar, West Bengal ...	15.2	Freehold	Vanaspati
Grand Trunk Road, Ghaziabad, U.P. ...	19.7	Freehold	Vanaspati
Edamalaipatti Pudur, Tiruchirapalli, S. India ...	39.5	Freehold	Vanaspati

The Factories are well situated for the purposes of securing regular supplies of raw materials and ensuring efficient distribution of manufactured products to all parts of the country. They are equipped with modern plant and machinery, adequately provided with railway sidings, water and power and are maintained in good working condition.

Negotiations have been completed for acquiring a lease from the Government of Bombay of a site of about 0.9 of an acre in the area known as Back Bay Reclamation on which the Company proposes to erect a Head Office building to house members of its staff at present dispersed over five buildings in Bombay City.

AUDITORS' REPORT

The following is a copy of the Report received from the Company's Auditors, Messrs. A. F. Ferguson & Company:—

The Directors,
Unilever Limited,
Blackfriars,
London, E. C. 4, England.

Bombay, 12th November, 1956.

Gentlemen,

We have examined the audited accounts for the five years to 31st December, 1955, of Hindustan Lever Limited (formerly Lever Brothers (India) Private Limited) and those of its subsidiary companies at that date, all of which were wholly owned, namely:—

United Traders Private Limited
Levers Associated Trust Private Limited
Levindra Trust Private Limited

and those of the following companies (hereinafter collectively referred to as "the merged companies"), whose assets and liabilities were on 8th October 1956 transferred to Hindustan Lever Limited, namely:—

The Hindustan Vanaspati Manufacturing Company Private Limited (hereinafter referred to as "HVM")
Joseph Crosfield & Sons (India) Private Limited
William Gossage & Sons (India) Private Limited

We have also examined the audited accounts of Van den Berghs (India) Private Limited which was a wholly owned subsidiary of HVM but which, on 8th October, 1956, on the abovementioned transfer of assets and liabilities, became a wholly owned subsidiary of Hindustan Lever Limited.

We have also examined the audited accounts of the following companies (hereinafter referred to as "the liquidated companies"), for the four years to 31st December 1954 and the period to 27th July 1955, namely:—

The North West Soap Company Private Limited
The Premier Soap Company of India Private Limited

which, as wholly owned subsidiaries of Hindustan Lever Limited, went into voluntary liquidation on 28th July 1955, and held their final meetings in the liquidations on 23rd October 1956.

Throughout the years under review we have acted as auditors of all the above companies.

No audited accounts of any of the above companies have been made up since 31st December 1955.

1. PROFITS

We report that the combined profits of Hindustan Lever Limited, its subsidiary companies as at 31st December 1955 and the liquidated companies, and the profits of each of the merged companies, (in the case of HVM, combined with those of its former subsidiary company)

HINDUSTAN LEVER LIMITED—Continued

all arrived at on the basis set out below, were as follows:—

Year ended 31st December	Hindustan Lever Limited and its subsidiary companies	HVM and its subsidiary company	Joseph Crosfield & Sons (India) Private Limited	William Gossage & Sons (India) Private Limited	AGGREGATE		
	Profits before taxation				Profit before taxation	Taxation as defined in (ii) below	Profit after taxation
Col. 1	Col. 2	Col. 3	Col. 4	Col. 5	Col. 6	Col. 7	Col. 8
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1951	1,28,85,262	11,67,798	35,228	37,766	1,41,26,054	61,36,005	79,90,049
1952	1,80,39,423	4,52,080	36,087	39,961	1,85,67,551	80,65,2 0	1,05,02,271
1953	1,64,71,799	82,80,750	35,753	39,170	2,48,27,472	1,07,84,433	1,40,43,039
1954	1,71,65,259	(53,31,230) Loss	35,758	38,052	1,19,07,839	51,72,468	67,35,371
1955	1,90,86,815	57,34,820	36,569	39,509	2,48,97,713	1,08,14,944	1,40,82,769

(i) The profits shown in columns 2 to 6 inclusive have been arrived at after charging all expenses of working and management, interest, and depreciation and after making such adjustments as are in our opinion necessary. Depreciation has been charged throughout the five years on a consistent basis and, in aggregate, exceeds the total income-tax allowances exclusive of initial allowances and development rebates.

(ii) The taxation shown in column 7 has been calculated on the profits shown in column 6 at the rate of 6.95 as. in the rupee. This is the combined rate of income-tax and super-tax applicable to the profits of the companies for each of the years under review before taking into account the effect of dividend distributions out of such profits. In respect of 1955, the Finance Act, 1956, imposed on companies taxation additional to the basic rate of 6.95 as. to the extent that dividends declared during 1955 exceeded 6% of issued capital. On the basis of the Finance Act, 1956, and the present issued capital, the additional taxation payable by Hindustan Lever Limited in future years will be as follows:—

On the first Rs. 33,42,000 of dividends	Nil
On the next Rs. 22,28,000 of dividends	2 as. in the rupee
On the balance of dividends over Rs. 55,70,000	3 as. in the rupee

The aggregate actual taxation paid or calculated as payable by Hindustan Lever Limited, its subsidiaries and the merged companies is as follows:—

Year ended 31st December	Rs.
1951	60,74,497
1952	75,94,460
1953	90,12,026
1954	80,44,480
1955	1,38,42,031

2. DIVIDENDS

The following rates of dividend were paid in respect of the five years to 31st December 1955 by Hindustan Lever Limited and the merged companies:—

The capital of each company consisted wholly of fully paid ordinary shares of Rs. 10 each

Year ended 31st December	Hindustan Lever Limited		HVM		Joseph Crosfield & Sons (India) Private Limited		William Gossage & Sons (India) Private Limited

We are, gentlemen,

Yours faithfully,
A. F. FERGUSON & CO.
Chartered Accountants

HINDUSTAN LEVER LIMITED—Continued

PROSPECTS

The consumption of products of the types manufactured by the Company is likely to increase as the standard of living is raised. The Company expects to win a fair share of any increased prosperity that may accrue to the industries concerned.

Assuming a continuance of present rates of taxation the Directors estimate that the consolidated net profit of the Company and its subsidiaries for the year ending 31st December 1956 (after taking into account taxation of Rs 108 lakhs of which Rs. 19½ lakhs is in respect of the capitalisation of Rs. 157 lakhs of profits on 11th October 1956) will not be less than Rs. 90,00,000. On the 1st November 1956 the Company paid an interim dividend of 8 annas per share absorbing Rs. 27,85,000. If the estimated net profit is realised and there is no substantial change in trading conditions the Directors would expect to recommend that a final dividend for the year 1956 of 6 annas per share, free of income tax, be paid before the end of May 1957.

For the future it is the intention of the Directors (in the absence of unforeseen circumstances) to recommend the distribution of a large part of the Company's profits by way of dividend. For example, if the estimated level of profit for 1956 is maintained and there is no substantial change in rates of taxation or trading conditions, the Directors would expect to recommend for the year ending 31st December 1957 a total dividend of not less than Rs. 1-6-0 per share free of income tax. On the sale of the shares now offered the Company will become a Company to which Section 23A of The Income Tax Act, 1922 applies.

As will be seen from the Auditors' Report one of the merged companies (HVM), the business of which is now carried on by the Company and is primarily concerned with the manufacture and sale of vanaspati, incurred a loss in 1954. In that year the price of Indian groundnut oil fell heavily. The profits of the particular business was indeed of the Vanaspati Industry as a whole—are governed to a great extent by price fluctuations in the Indian groundnut oil market. These fluctuations in recent years have been very wide.

STATUTORY AND OTHER INFORMATION

The Offeror was the promoter of the Company but no sum was paid to the Offeror for its services as promoter.

During the two years preceding the date hereof the Company issued 20,00,000 Ordinary Shares of Rs. 10 each credited as fully paid to Unilever Limited in consideration of the vesting in the Company of the assets of the merged companies and it also issued during this period 15,70,900 Ordinary Shares of Rs. 10 each credited as fully paid to Unilver Limited by capitalising Rs. 1,57,00,000 of profits standing to the credit of general reserve.

No amount has been paid to the Company by way of premium on any shares within the two years preceding the date hereof.

Apart from the dividends referred to in the report of the auditors, the shares above referred to, the sum of Rs. 5,22,590 being remuneration paid to the directors and secretary of the Company and the sum of Rs. 2,84,43,747 being payments made to or to be made to Unilever Limited for goods and services in the ordinary course of the Company's business, no amount or benefit has been paid or given within the two years preceding the date hereof to the promoter or any officer of the Company. It is not intended that the Company should pay or give to the promoter any amount or benefit other than such amounts as may become payable to the promoter in the ordinary course of the Company's business. It is not intended to pay or give any amount or benefit to any officer of the Company other than normal remuneration.

Except as beneficial owner of the whole of the Company's issued share capital and as a creditor of the Company from time to time in the normal course of the Company's business, the Offeror has no interest in the profits or property of the Company. The other members of the Company have no beneficial interest in the profits or property of the Company.

Since incorporation the Company has capitalised profits standing to the credit of general reserve (including the Rs. 1,57,00,000 referred to above) as follows: 20th March 1937 Rupees Six Lakhs; 29th December 1937 Rupees Eleven Lakhs; 22nd July 1939 Rupees Three Lakhs; 20th August 1940 Rupees Two Lakhs; 17th November 1942 Rupees One Lakh; 6th September 1943 Rupees Six Lakhs; 19th February 1945 Rupees Thirteen Lakhs; 7th September 1945 Rupees Twelve Lakhs; 24th December 1946 Rupees Six Lakhs; 31st December 1951 Rupees Fifty Lakhs; 22nd August 1952 Rupees Sixty-two Lakhs; 11th October 1956 Rupees One Hundred and Fifty Seven Lakhs. The Company applied the amounts capitalised in paying up in full ordinary shares of the Company of Rs. 10 each of a nominal amount equal to the profits capitalised. All the shares were allotted to the Offeror or its nominees, or subsidiaries of the Offeror incorporated in the United Kingdom or their nominees

The Company has not issued any redeemable preference shares and does not at the present time intend to do so.

The premium receivable on the shares now offered for sale will be retained by the Offeror. No part of the proceeds of this Offer for Sale is receivable by the Company. The Offeror will pay all the expenses in connection with this Offer for Sale except the stamp duty on the transfers from the Offeror to the persons in whose names the shares are registered which will be payable by those persons. The Offeror will also pay brokerage as indicated below. The total expenses, including brokerage, payable by the Offeror are estimated to be Rs. 3,50,000.

No commission (except brokerage as hereinafter mentioned) was paid during the two years preceding the date hereof or is payable to any person in consideration of his subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for shares in the Company.

All the directors are whole-time directors and are not required to hold any qualification shares

No director had any interest in the promotion of the Company and neither the promoter nor any director has any interest in any property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it other than the promoter's interest as a member of the Company and beneficial owner of the whole of its share capital.

No sums have been paid or agreed to be paid to any director in cash or shares or otherwise by any person to induce him to become or to qualify him as a director or otherwise or for any other purpose whatsoever for services rendered by him in connection with the promotion of or formation of the Company.

Mr. A. J. C. Hoskyns-Abrahall is the beneficial owner of £200 Unilever Limited 8% Cumulative 'A' Preference Stock,

The Articles of Association of the Company contain provisions to the following effect:—

(a) The profits of the Company which shall from time to time be determined to be divided shall be divisible among the members in proportion to their capital paid up on the shares held by them respectively.

(b) Unless otherwise determined by a general meeting the number of directors shall not be less than three and not more than eleven.

(c) The directors including the Managing Director, if any, shall be paid out of the funds of the Company by way of remuneration for their services such sums as the Company in general meeting may from time to time determine, and such remuneration shall be divided among them in such proportions and manner as the Directors may determine, and, in default of such determination within the year, by the Chairman. If any Director shall be called, upon to perform extra services or make special exertions or efforts the Board may arrange with such Director for such special remuneration for such extra services or special exertions or efforts either by a fixed sum or otherwise as may be determined by the Board and such remuneration may be either in addition to or in substitution for his normal remuneration. A Director who is not a resident of Bombay City may be paid such sum as the Board may consider fair compensation for travelling, boarding, lodging and other expenses incurred in attending meetings of the Board in that City. If any Director is called upon to go or reside out of Bombay City on the Company's business, he shall be entitled to be repaid any travelling or other expenses incurred by him in connection with the business of the Company.

(d) Save as required by the Companies Act, 1956, no restrictions are imposed by the Articles of Association on the Directors' powers of management and the control of the Company's affairs is vested by the Articles of Association in the Directors.

(e) Subject to the provisions of the Companies Act, 1956, the Board may appoint from time to time any one of its number as Managing Director of the Company for a fixed term not exceeding five years at a time upon such conditions as it thinks fit and may vest in such Managing Director such of its powers as it thinks fit and such powers may be made exercisable for such period or periods, and upon such conditions and subject to such restrictions as it may determine. The remuneration of the Managing Director shall be determined in the same manner as that of a Director.

The Board has not appointed a Managing Director and it is not its present intention to do so.

(f) The Directors may from time to time at their discretion raise or borrow or secure the payment of any sum or sums of money for the purposes of the Company Provided, however, where the moneys to be borrowed together with the moneys already borrowed (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceed the aggregate of the paid up capital of the Company and its free reserves (not being reserves set apart for any specific purpose) the Board shall not borrow such moneys without the consent of the Company in General Meeting. The provisions of the Articles of Association relating to borrowing are qualified by the relevant provisions of the Companies Act, 1956.

(g) Every Officer or agent of the Company shall be indemnified out of the assets of the Company against any liability incurred by him in defending any proceedings, whether civil or criminal, in which judgement is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Companies Act, 1956, in which relief is granted to him by the Court.

(h) Save as hereinafter mentioned in regard to joint holders, on a show of hands every member who (being an individual) is present in person or (being a corporation) is present by a representative, shall have one vote. Upon a poll every member who (being an individual) is present in person or by proxy or (being a corporation) is present by a representative or proxy shall be entitled to one vote for each share held by him. No person may vote in person or by proxy if there remains unpaid any call or other sum due on any of his shares.

(i) If there be joint registered holders of any shares, any one of such persons may vote at any meeting either personally or by proxy in respect of such shares, as if he were solely entitled thereto, provided that, if more than one of such joint-holders be present at any meeting either personally or by proxy, that one of the said persons so present whose name stands higher on the Register of Members shall alone be entitled to vote in respect of such shares, but the other or others of the joint-holders shall be entitled to be present at the meeting. Several executors or administrators of a deceased Member in whose name shares stand shall for the purpose of the Articles be deemed joint-holders thereof.

(j) The Articles of Association contain no restriction on the transfer of fully paid up shares. The Directors may decline to register a transfer of any partly paid shares to a person of whom they do not approve and may also decline to register a transfer of partly paid shares on which the Company has a lien.

(k) The special rights attaching to any class of shares may be varied, modified, commuted, affected, abrogated or dealt with by any agreement between the Company and any person purporting to contract on behalf of that class provided that such an agreement is ratified in writing by the holders of at least three-fourths in nominal value of the issued shares of that class or is confirmed by a resolution passed at a separate General Meeting of the holders of shares of the class and supported by the votes of the holders of at least three-fourths of the shares of that class.

MAIN OBJECTS

The main objects of the Company include the manufacture and sale of soap, soap powders, detergents, toilet requisites, vanaspati, margarine, edible oils, cattle food and foods of all kinds.

All the objects of the Company are in law main objects and therefore a copy of the objects clause of the Company's Memorandum of Association is annexed hereto and forms part of this Offer for Sale.

HINDUSTAN LEVER LIMITED—Continued

CONTRACTS

The following contracts, not being contracts entered into in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:

No.	Date.	Particulars.
1	2nd May, 1955.	Assignment of the Trade Mark, "Breeze" registered in India under No. 128300 to Erasmic Company Limited of Unilever House, London.
2	1st February, 1956.	Assignment of the Trade Mark "Bris" registered in India under No. 163139 to Erasmic Company, Limited of Unilever House, London.
3	12th November, 1955 to 18th September, 1956.	Correspondence between the Company and the Government of Bombay by which the latter has accorded sanction to the grant of a lease of a site at Backbay Reclamation, Bombay of approximately 4258 sq. yards for a period of 99 years at a ground rent of Rs. 12 As. 8 per sq. yd. on condition that the Company erects thereon an Office Building of not less than Rs. 12 lakhs in value within the first four years of the said lease.
4	27th September, 1956.	Agreement between the Company and its workmen employed in its factories at Sewri, Bombay, represented by Lever Brothers Employees' Union, Bombay, fixing generally the terms and conditions of employment for the years 1955 to 1960 both inclusive, and, in particular, fixing pay-scales, dearness allowance, grading of hourly-rated jobs, provident fund, gratuity and incentive payment and bonus.
5	10th October, 1956.	Resolution passed by the Company in general meeting on 10th October, 1956, voting as the annual remuneration of all the Directors collectively a sum not exceeding Rs. 8 lakhs to be apportioned among them as they may determine.

UNDERWRITING

This Offer is not being underwritten.

APPLICATIONS FROM THE PUBLIC, which must be for 50 shares, or a multiple thereof, must be made on the official WHITE application form and will be declined if not so made. WHITE application forms, together with a remittance for the full amount payable on application, should be sent to any of the branches of the National Bank of India Limited, or to the Brokers to the Offer, at the addresses as given on the application form. A separate remittance must accompany each form.

APPLICATIONS FROM THE STAFF OF HINDUSTAN LEVER LIMITED for the shares reserved in the first instance for them, and which must be for either 25 or 50 shares, must be made on the official BLUE application form and will be declined if not so made. These forms are obtainable only from the offices of Hindustan Lever Limited mentioned in the last paragraph of this Offer for Sale. BLUE application forms, together with a remittance for the full amount payable on application, should be sent to the Secretary of Hindustan Lever Limited at Scindia House, Dougall Road, Ballard Estate, Bombay. A separate remittance must accompany each form.

All remittances should be made by cheque or draft drawn on a bank in any one of the following towns, Bombay, Calcutta, Madras, Bangalore, Amritsar, Cawnpore, Delhi, New Delhi, Tuticorin, Cochin. Application forms sent with cheques or drafts drawn on banks in towns other than those stated above may be refused.

Cheques or drafts should be made payable to "National Bank of India Limited A/c Unilever" and should, for the applicant's protection, be crossed "A/c Payee only".

The Offeror reserves the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or the balance of the applicant's remittance will be returned, in which event bank commission, if any, will be payable by the applicant.

Acceptance will be notified by the despatch of a definitive share certificate in the name of Unilever Limited together with a blank transfer executed by that company or on its behalf as transferor. These documents will be sent by registered post at the risk of the applicant.

The Company has agreed to waive the transfer fee for the registration of such transfers from the Offeror.

A brokerage of 4 annas per share will be paid by the Offeror to the Managing Brokers in respect of all acceptances. The Managing Brokers will pay 2 annas per share to Certified Brokers of any recognised stock exchange and to the National Bank of India Limited on the basis of acceptances of applications received and bearing their stamp. In addition to the 2 annas per share, the Managing Brokers will pay to Messrs. Place, Siddons & Gough, Messrs. Kothari & Sons and the National Bank of India Ltd. remuneration for any additional services rendered by any of them to and at the request of the Managing Brokers.

The consent in writing of the above-mentioned Bankers, Solicitors and Brokers to act in their respective capacities has been obtained and none of them has withdrawn their consent to the issue of this Offer for Sale. Messrs. A. F. Ferguson & Co. have also given and have not withdrawn their written consent to the issue, of this Offer for Sale with their Report included in the form and context in which it is included.

The foregoing written consents, copies of the contracts numbered one to five above and the written statement of the adjustments made by the Auditors in arriving at the figures shown in their Report and giving the reasons therefor have been attached to the copy of the offer for Sale, which has been delivered to the Registrar of Companies, Bombay, for registration.

The documents mentioned below may be inspected at the Registered Office of the Company, Scindia House, Dougall Road, Ballard Estate, Bombay, during usual business hours (excluding Saturdays) until the Application List has been closed.

(1) The Memorandum and Articles of Association of the Company.

(2) Copies of the Contracts numbered one to five above.

(3) Copy of the order of the Central Government giving consent to the Offer for Sale.

(4) Copy of the order dated 8th October, 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants) of The Hindustan Vanaspati Manufacturing Company Private Limited, in the Company.

(5) Copy of the order dated 8th October 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants) of Joseph Crosfield & Sons (India) Private Limited, in the Company.

(6) Copy of the order dated 8th October, 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants) of William Gossage & Sons (India) Private Limited, in the Company.

(7) The original Report of Messrs. A. F. Ferguson & Co., as set out herein and a copy of their statements as to the adjustments made by them in arriving at the figures shown in their Report and giving the reasons therefor.

(8) Copies of the balance sheets and profit and loss accounts upon which the Report of Messrs. A. F. Ferguson & Co., Bombay, is based, for the 5 years ended 31st December, 1955.

Copies of the Offer for Sale and WHITE application forms may be obtained by the public from all Indian branches of the National Bank of India Limited and from the Brokers. Copies of the Offer and BLUE application forms may be obtained by the staff from the Registered Office of the Company at Scindia House, Dougall Road, Ballard Estate, Bombay, and from the Company's offices at 4 Lyons Range, Calcutta; 12|1 Delhi-Ajmeri Gate Scheme, Delhi; 11|14 Armenian Street, Madras; Mattancherry Main Road, Cochin; 2 Central Street, Bangalore; Athgaon Road, Gauhati; Grand Trunk Road, Ghaziabad; Edamalaipatti, Pudur, Tiruchirapalli.

Dated at Bombay this seventeenth day of November, 1956.

Killick Industries Limited

Private Sector is neither Anti-social nor Anti-national

Joint-stock Company is a "Co-operative Society"

Mr E. D. Sheppard, the Chairman, urges a system of "Joint Endeavour"

Speech of Mr E. D. Sheppard, Chairman of Killick Industries Ltd., at the Company's Ninth Ordinary General Meeting on 27th November, 1956.

Gentlemen,

You will recall that during the course of the speech which I made last year at this Meeting, I attempted an analysis of the political and social thinking prevailing in the country in so far as it affects the formulation of economic policy. As a conclusion from this analysis I suggested that there was no alternative to the co-ordinated efforts of both the State and of Free Enterprise, and that in order to achieve as quickly as possible a better life for all in India, the fullest advantage must be taken of the contributions which each system is best capable of making. In effect this implied the application of "Mixed Economy" or as I would prefer to call it of "Joint Endeavour".

Since then the Avadi Session of the Congress Party has decided that the economic development of the country is to be directed towards the achievement of "A Socialistic Pattern of Society". Various policy pronouncements and Acts of Parliament which have followed in the wake of this decision give the impression that it is to be implemented by a process of establishing uniformity and an official discouragement of incentives or individual gain. Indeed the thoughtful mind cannot help but feel the strongest misgivings that, if it is along these lines that the Socialistic Pattern is to be pursued, it will eventually lead to frustration, and the belying of the hopes for a fuller life which so many millions of people have pinned on it.

In a recent article entitled "The Dynamic Society," a leading economist has dubbed the philosophy which forms the basis of this type of economic thinking as being "like a dog in a barnyard. It cannot lay eggs itself and it will not let the hens do so." This writer points out that when men are not allowed to strive for their dreams and to enjoy the fruits of their strivings, they consume everything they produce from day to day and so make it necessary for the State to force them to abstain, in order to save and build tools for the future.

The same Economist points out that there are two methods by which the economic donkey can be propelled forward. One is to offer him a carrot and the other is to beat him. In both the cases the result is forward movement. Similarly there are two dynamic economic systems prevailing in the world today. One is that of Free Enterprise, or development through individual incentive, and the other that of the authoritarian State and its methods of compulsion.

We in India have rejected the stick theory and the concept of the authoritarian state as being alien to the traditional Indian way of life. Can we not therefore accept as a nation the logical corollary of introducing the carrot in its stead? We are not prepared to accept interference with our political freedom, or with such matters as the freedom of speech, and of the Press; why then should we take a completely different stand in relation to economic freedom? In this sphere people who would resist to the utmost limitations being imposed on their social and political rights, accept without murmur controls over such matters as production, profits, wages, and prices, and feel that it is prefectly reasonable for Government to regulate them. In my view this is an inconsistency which could lead to a frustration of the National Economy.

The terms "Capital" and "Capitalist" have over a period of years been misinterpreted and distorted so much that in the public mind they are now associated with systems which are completely at variance to their real activities. "Capital" is widely identified with an undesirable concentration of power and the accumulation of personal wealth, rather than what it in fact is, namely the savings of people which have been created by hard work and self-denial and which are thus available to start more good things growing. Now a similar process of distortion is in being which seeks to identify the term "Private Sector" with something that is anti-social and anti-national. "Private Sector" is a term which is at variance with the system which it purports to describe. There is nothing "private" about the finances and accounts of the major industrial units existing within the so-called "Private Sector". These units of Free Enterprise are as public as they can be. They are subjected to continuous and close audit, and are available for scrutiny to a wide range of people. The goods which these industries produce and the products which they market are sold only because there is public requirement for them and at a price which this public is prepared to pay. Shareholders of these so-called "Private Sector" units in fact represent a wide cross section of public society. The recent passage of the new Companies Act into law has stripped the last vestige of even legitimate privacy from these Joint Stock companies.

Furthermore, the tendency to associate the "Private Sector" with the relatively few major corporate industries is itself quite wrong. The truth of the matter is that the so-called "Private Sector" consists of all business activity and commercial endeavour except those few units which are operated and owned by the State. The vast range of these business and commercial interests varies from the largest industrial concerns on the one hand to the small shopkeepers carrying out their day to day trade in the bazaar on the other, and it is all these who are denoted by the misused term "Private Sector".

If it is necessary, as it apparently is, to differentiate within the mixed economy between those activities which are State controlled and State regulated on the one hand, and those which operate through the initiative of individuals on the other, then I would suggest that a more accurate description of the two sectors would be to rename what is today called the Private Sector as the "People's Sector" and the Public Sector as the "State Sector". Such renaming would, I feel, go a long way towards removing the unfortunate and erroneous association of ideas in the minds of the public regarding the structure of Free Enterprise.

We hear also a good deal of talk these days by socialistic planners of the desirability for increasing co-operative societies. I submit that a Joint Stock Company is nothing but a co-operative society in the fullest sense of the term. Its capital is created by co-operative faith in its venture, its direction is provided by those who reflect in their persons co-operative choice, its factories are worked by co-operative endeavour and finally its products are sold only if there is co-operation from the consuming public. The doctrinaire socialist, who suppresses or distorts facts that do not fit in with the theories that he has imbibed during his student days, tends to brush this argument aside with the remark that a handful of shareholders cannot be described as a co-operative society. To meet this contention I think it will interest you to know that in the major industries in India the ratio of shareholders to workers employed is approximately as follows:—

Steel—1 shareholder to 1 worker.

Cement—1 shareholder to 1 worker.

Textiles—1 shareholder to 2 workers.

Electricity—10 shareholders to 1 worker.

Surely the logical result of a dispassionate appraisal of all the facts is that the existing policy, namely that of a constantly increasing State Sector, and by implication a proportionately smaller People's Sector should be exactly reversed and the best interests of India would be served by the State doing only those things which the people cannot do by the exercise of their own initiative and judgment in the arena of the world market place. Can any Government truthfully say that it knows this market place better than its people know it.

On the subject of the use of terms which come to have a meaning foreign to their purpose, one must also comment on the "Classless Society" so much in current vogue. Inasmuch as this term denotes a society from which has been banished hereditary privilege and unwarranted opportunity, and means the creation of a social organisation to which each one is entitled to contribute on merit alone, its implication can only be welcomed. Unhappily this is not the concept that is meant by those who so constantly refer to it. The type of "Classless Society" which these people appear to have in mind is one in which all men are dragged down to a level of uniform poverty.

Such a society must of necessity be a third class society. Any deliberate attempt to abolish a clash by taxation or any other legislative means will never succeed in abolishing "Class". For in the vacuum so created an official bureaucratic aristocracy would emerge at once. What it would

KILLICK INDUSTRIES LIMITED, Chairman's Speech—Continued

achieve would be to abolish variety, character, and those inspirational gifts which alone save a country from colourless uniformity. It is the personal vision and the difference between people that count and help towards the making of a nation. This difference of outlook must inevitably express itself in a search after varying environments. "Class" is not a matter of money and still less is it one of social ambition. It comes from the free exercise of choice in culture, environment, and the differences which life has to offer, it cannot be "ironed out" for the human soul does not lend itself to the process of laundry.

It is interesting to note the revulsion which has appeared in England against the dose of doctrinaire socialism that was injected into the economic system of that country for the five years immediately after the last war. In practice Socialism has meant the creation of huge irresponsive public corporations and the extension of bureaucracy. Nationalisation has not succeeded in changing the lives of the workers but has only added to the steady concentration of power in the hands of official classes. Trade Unions have become the strongholds of restrictive practices, limiting not merely industrial output but, far more important, liberties of individuals and those of minorities It has become very clear to me that what people want is, as far as possible, to be allowed to choose from a bigger selection of things—material and spiritual. The way to satisfy them is not to cut down to a common size every one else's choice. That is precisely the way to deprive the community of the flexibility, the diversity, and the incentives upon which the policy of plenty and a dynamic society must depend. The right way is to create incentives that lead to an increase in the total national product and thereby level upwards and not downwards.

I would like, during the course of my talk this afternoon, to deal especially with the plight of the middle class of our country and the constantly increasing bleakness of the future which faces it.

That the middle classes are depressed, that they are being destroyed by taxation and the high cost of living, that some Finance Minister of the Government of India must do something about it —and that none ever does; these are the truisms which have been with us ever since 1947.

What is this middle class and whom does it comprise. I would suggest that it embraces all those people who work with their brains and derive their income from salaries and professional fees or from the active management of property, those who do most of the organising and creative and inventive work from which the nation gains its vitality. The spread of this class stretches from the clerk and salesman at one end to business executives, and professional men at the other. The thread which unites them is social rather than financial. The contributions which these people make come from intelligence, character and example. For the most part they do not clock in and clock out for eight hours a day, but are always on duty. They are compelled to keep up a standard of living not merely for the sake of appearances, but in order to play their part in the social life which they guide and nurture.

Universal adult franchise in our country encourages politicians to look solely to the masses and to ignore the middle class as though it were negligible. Since independence the well-being of the industrial working class has been the special care of the Central and State Governments, as also that of the majority of parliamentarians. As has recently been stated by the Labour Minister of the Government of India, there has been a rise in the real wages of this class. Not only can no one object to this, but indeed if the raising of the standard of life of all people in the country is to be achieved, then we must regard the betterment of the living conditions of this particular class as a matter of great satisfaction and unstinted pleasure. At the same time one hears that the agricultural class, which of course constitutes the great majority of the Indian people, has also taken a few albeit faltering steps forward, on the path to a better life. It is the hope of all people that this trend will be emphasised and speeded as rapidly as possible.

But what of the middle class? When attention is focussed on their betterment there appears to be a curious lack of interest in it. No political champions come forward to safeguard their interests. As has been suggested earlier, the reason for this may well be purely one of numbers—in a population of 360 millions they do not appear to warrant the interest and attention of those standing for parliament and whose political future is decided by the counting of heads. Consequently the middle class is left friendless and unsupported. Unless this process of deterioration in its standard of life, and therefore in the morale of the people constituting this class, is arrested, an irreplaceable component of the industrial and commercial structure of the country will be dangerously weakened, and no amount of planning or legislation will be able to replace it or revive it.

But are the numbers of the middle classes really so negligible? The figures I gave you earlier of the relative numbers of workers and shareholders in various industries show that the number of shareholders—about 90 per cent of whom belong to the middle class —is by no means inconsiderable. They represent an integral and vital part of the social structure of all countries and can wield an influence out of all proportion to their numbers. I would liken them to the leaven of the mass and without leaven the mass cannot rise. In India today too much time and attention is devoted to the mass and far too little to the leaven of the mass.

It is true to say that over the past years there has been an erosion of incentives in the case of most salaried people, whether serving in public life or in a private capacity. The general standard of living of salaried workers has been considerably reduced. This has been brought about principally by means of taxation. To the plethora of already existing taxes which have hit the middle class hard the last budget added even more. It was a measure of the extent to which tax-payers have been demoralised in the country over the past few years that after the last budget, which in real terms made India—still in a relatively early stage of industrial development—the highest taxed nation in the world, there was a feeling of relief that it had not been even more penal on individual earnings. This matter of taxation has been written and spoken about at such length and in so much detail that there is nothing new which can be said about it. All the arguments of disincentives, of inequity, and of the frustration which will result, have been put forward time and time again. I feel however that the time has now come when the inroads of taxation upon the earnings and on the standard of life of the middle class must be faced up to if there is not to be a collapse in the morale of that class which will be irreparable.

Turning now to the affairs of your own Company, you will doubtless have observed that the profit is lower than that of the previous year. This is accounted for by the reduced profits of the Kohinoor Mills Co. Ltd., and the Ahmedabad Electricity Co., Ltd. for the period reflected in the accounts, and the reasons for which are well known to most of you. There was also, as anticipated, a loss on the first year's working of John Baker & Sons Steel File Factory, though this was fortunately considerably less than was estimated when this undertaking was planned.

I am glad to say that both the Kohinoor and Ahmedabad companies are now working at a normal rate of profit and that the steel file factory should—barring unforeseen eventualities—return a satisfactory profit for the current year.

Another factor which also contributed to the reduced profits is less easy to remedy. I refer to your Company's share in the Managing Agency commission of the Associated Cement Companies Limited which is received in the form of a dividend from Cement Agencies Limited. This became subject to the tax on dividends over 6% introduced in the 1956 Budget which had the effect of reducing the amount received by Rs. 1.25 lakhs. It is difficult to see what can be done about this so long as this inequitable tax remains on the Statute Book.

The expansion and diversification of your Company's activities continue to receive the closest attention of your Directors. As you will have seen from the Report permission has been received from Government to increase the production of the steel files factory and a licence has been granted for the manufacture of nuts and bolts, dogspikes and coachscrews. In addition several other projects both large and small are in process of detailed examination.

Also your Directors have recently come to an agreement with the shareholders of Messrs. Killick Nixon & Co., Ltd., to purchase all the shares of that company and the matter is expected to be finalised early in the New Year. Killick Nixon & Co. Ltd., will then become a wholly owned subsidiary of this Company. Among their assets is this Building in which we are now meeting. Their Shipping and Trading interests will lend a healthy balance to the predominantly Industrial activities which have hitherto represented the bulk of your Company's business.

Taking everything into consideration therefore I feel we can face the future with confidence and I have little doubt that when we meet here again next year the picture which I shall then be able to lay before you will be a happier one, though it may well be that the figure in the accounts which will show the most significant increase will be that under the heading "Provision for Taxation".

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to shareholders.

THE AMALGAMATED ELECTRICITY COMPANY LTD.

The Registers of Members and Transfer Books of the Company will be closed from 17th to 28th December, 1956, both days inclusive, in connection with dividend payment.

NATIONAL INSURANCE COMPANY LIMITED

Shri Lakshmipat Singhania on the Future of Indian Insurance.

Life Insurance Playing a Great Part in Collection of Small Savings and Utilising the same in Nation Building.

The following is the speech delivered by the Chairman Shri Lakshmipat Singhania at the 19th Annual General Meeting of the National Insurance Company Limited, held on 27th November, 1956:—

Gentlmen,

I welcome you to this meeting with a mixed feeling. This year embarks a new era in your company's future on account of the rational changes brought about by the nationalisation of the life business which has been conducted for the last 50 years. Actually, the company had completed its half a century's public service when it handed over the life business to the State this year. The nationalisation of insurance has opened a new chapter in the history of insurance in India which will now be carried by the State Sector. Your company will henceforth confine its activities only to general business like, fire, marine, accident, guarantee, motor accident, etc.

Events happening in the world today are beyond the expectations of all peace loving nations, specially India, which has worked so hard during the last 10 years, ever since becoming free to bring about world peace. So much so that neutrality itself is being questioned on account of invasion and interference of liberty in Egypt and Hungary. The world of today which till recently was preaching the gospel of peace has all of a sudden taken recourse to the law of jungle where might was right and mutual distrust the order of the day. Coexistence has yielded ground to co-destruction and the United Nations has become a place for debates and arguments between the power blocs. Military pacts are replacing trade agreements and science which could have been utilised in the service of humanity is without the least hesitation occupied in destroying it. I simply fail to understand what man has made of man. This is all due to an unlimited desire for power based on force and subordination rather than on mutual goodwill and understanding and if this continues we may not be far away from a third World War which will be a war of destruction of humanity. Our peace loving Prime Minister is working hard and making all attempts even today and I am sure he will continue upto the last to guide the world towards peace.

Under such unsettled circumstances, it is not unnatural that the economic life of our country has been disrupted and fear about the fulfilment of our ambitions crept in. The country has recently completed its First Five Year Plan and embarked on the Second Five Year Plan. This type of planning, the biggest experiment in democratic planning in the living world, has increased the national product by 18% and per capita income by 11% over 1950-51. The Plan has recorded a sharp rise in industrial production, even more than the plan targets, and the index of industrial production has gone up from 100.1% in 1951 to [illegible] in 1955. Similarly, the index of agricultural output has gone up from 100.0% to 120.0% during the same period. But more than anything else, it has made the people plan-conscious and created a momentum which is expected to gather greater and greater force in course of time.

The Second Plan which estimates to spend Rs 7,200 crores that is, Rs. 4,800 crores in the public sector and Rs. 2,400 crores in the private sector of national economy is expected to increase national product by 25% and per capita income by 14% over 1955-1956 level. The most important feature of the Second Plan is a greater emphasis on industrial production, specially of heavy and basic industries.

The Second Plan is ambitious, but the greatest handicap is the shortage of Rs. 960 crores in foreign exchange requirements which will have to be met from foreign borrowings. The world events and the closure of Suez Canal will increase our this gap to a further extent and thus hamper our Second Five Year Plan. During the first four months of the current year our adverse trade balance has shown an unprecedented rise and has reduced our sterling reserves to the extent of about Rs. 130 crores.

The private sector is, in my opinion, a misnomer as most of the production in the country uptil now has been carried by this sector and even a tiller of the soil or a small shop keeper in the farthest corner of the country is a private entreprenuer. The public sector, which again I feel in the present contrast of things is a misnomer, should be called only a State Sector. The so-called private sector is a more representative sector than any other sector although it cannot be called a free sector not being free in its functions and may be termed as "people's sector".

The country has adopted the socialist pattern of society as its ultimate objective. The term 'socialist society' in my opinion is quite wide. Therefore, any sector which deals as a people's sector should cover in the pattern of socialist society. However, the adoption of the practice in the present contrast is to encourage more of state sector which unfortunately may lead to concentration of power in few hands than public at large. This is a very doubtful question whether in doing so, the country is going to be benefitted by way of increased production and lower cost as otherwise the very object of decentralisation of economic power its hit at the root. The people of a free nation in a democratic set up should be allowed to have equal opportunities to work and live instead of being compelled by statutory laws, because in that case it leads to totalitarian system of working rather than to democratic methods. We want our people to be independent rather than dependent and thus a burden on the State.

Of late, the public finance has been squeezed to a much greater extent. According to the two Plans the disbursements are not keeping pace due to the delayed fulfilment of the planned objective whereas the system of collections are continuing on the same footing. The result is that the money supply with the public increased to the tune of Rs. 204.82 crores from Rs. 1979.49 crores in 1950-51 to Rs. 2184.31 crores in 1955-56 during the First Five Year Plan which means an increase of 10.4% against an increase of 18% in the national income. By the end of August, 1956 the total money supply registered a decline and came down to Rs. 2140 crores. At the same time, money disbursed goes to such areas and people who have no habit of investment or banking and has created a problem before the country and the scarcity of finance in the market has been evident in recent months. The only remedy in my opinion is unhampered production and distribution of consumer goods in India to have better circulation of such money. This would also help raising the standard of living of the people and maintain price at a low level as other methods adopted for collection of small savings would not or rather cannot keep pace in present circumstances.

The Government in its zeal to take up a built up industry nationalised the Life Insurance business on the 19th January, 1956 and took over the activities of all companies carrying on life business in India. It is not necessary for me to go in detail at this moment into the merits and demerits of nationalisation. It is a fait accompli. The question is whether such nationalisation is going to benefit the country as a whole, more than what has been done in the hands of the people. The progressive figures of last few years of this business reveal that insurance industry was playing its part with the economic growth of the country. If you take new insurance business of the first plan period, the total business jumped from Rs. 139.5 crores in 1950 to Rs. 229.5 crores in 1954. That means a rise of 65% in four years whereas the national income has risen by 18% only. It was expected that within few years Indian insurance would reach a new business of Rs. 1000 crores. Since during the Second Plan national income is expected to rise more than during the First Plan, achievement of this target was more than certain. I wish that Government should not lose sight of this important factor as life insurance was playing a great part in collection of small savings from door to door and utilising the same in nation building by investing in Government securities, housing and industries. I wish that this important source should flourish greater and we should have place in parity with the world insurance according to the economic condition of our country. It is difficult to visualise what is going to be at the moment but I wish to emphasise with all force at my command that if the figures are not rising to our expectations we would be doing a great disservice to the Nation for interfering with an industry which was serving the country so well.

It was also expected at the time of nationalisation that foreign life business of the Indian companies, here I take pride in saying that the National was one of the leading companies doing foreign life business, would be returned back to the Indian companies. But unfortunately, Government has changed its mind and it seems that they are going to carry the same themselves. I do not know what is going to be the future of this business. As I have said on so many previous occasions, I wish that our country should do their utmost to increase this business which is an invisible export and a foreign exchange earner. With the taking over of foreign life business, our foreign general business will also be hampered and building of that organisation in foreign countries by Indian insurers will be another uphill task.

Coming to compensation, I feel that we cannot call the compensation proposed to be paid worth the name. It is hardly one percent of the life fund Government has taken over. Banking and Insurance is practically the same business. While nationalising the Imperial Bank of India Government paid certain compensation which was considered to be inadequate and worked out at 8% of total Assets. But in case of insurance companies compensation is not even 1% of the total Life Fund. Moreover, that is not an investment to be made by the Government but only a pre-payment of the surpluses which the Insurance Companies had rightfully earned during decades of

NATIONAL INSURANCE CO., LTD., CHAIRMAN'S SPEECH— (Contd.)

successful working of this industry. Even that has not been paid uptil now although it is about 11 months since Insurance was nationalised. I hope the authorities would do their best to pay off this compensation which would help a long way at least in rehabilitaing the general business and also helping those who had all their investments in insurance companies and lost all income due to nationalisation.

The utilisation of the life fund in nation building activities is of no less importance. I will only deal with the investment in the private sector which at the time of nationalisation was of the order of about 16 per cent. It was emphasised and re-emphasised by the Government that this percentage in the private sector would be maintained, which was helping the investment market to a great extent. But since nationalisation nothing or very little money has been invested in private industry with the consequence that the investment market has been deprived of a great support. I hope that the Government would keep up to the assurances given at the time of nationalisation and maintain the tempo by investing in private industries thus augmenting speedy economic growth of the country.

Now coming to your company, as I have said earlier, we have suffered the most. Not only the life business has been nationalised by the Government but the company's subsidiary, namely the National Fire & General Insurance Co. has also been taken over and your company has to rebuild completely both at the head office as well as the various branches where the business so far was run as a combined business. I am confident that in course of time we would again build up the company and serve the nation in the same way as we have been traditionally doing for the last 50 years.

You must have noticed that in the present balance sheet only the results of the general departments have been shown. This is because the accounts of the life department have been published by the Custodian and which I understand have already been circulated to the shareholders. Henceforth, only the accounts of the general departments would be submitted.

The total net premium income of all the departments was Rs. 19,24,761/- comprising Rs. 4,59,753/- of Fire, Rs. 6,40,214/- of Marine and Rs. 8,24,794/- of Miscellaneous. Against this, previous year's total business was Rs. 15,07,617/- composed of Rs. 4,23,855/- of Fire, Rs. 5,26,642/- of Marine and Rs. 5,57,120/- of Miscellaneous. Therefore, there is an overall increase of Rs. 4,17,144/-. Though the net result shows a loss in the balance sheet, it is mainly due to the loss in devaluation of Pakistan currency amounting to Rs. 66,555/- and provision for the increased reserve of unexpired business in all the departments, that is from 60% to 100% in case of Marine and 40% to 50% in case of Fire and Miscellaneous Departments. The loss during the year has been set off against the brought forward balance of the last year and the company is still in a position to pay a dividend of 6 percent free of income tax during the year absorbing Rs. 90,000/- which has been recommended for your consideration and the balance is to be carried over to the next year.

In the end, I solicit the good wishes and co-operation of you all in the great task of rebuilding this renowned institution of 'National', and bringing the same on the forefront.

With these few words, I propose that the Directors Report and the Audited Accounts for the year 1955 be adopted.

WORLD OF FINANCE

(Continued from page 988)

ket of such excess in floating stocks as was depressing prices. In such a situation, the official concerned should have boldly said: "Right. I take your entire lot at the stated price. Have you any more to sell? If so, I shall offer two annas more". Technique on the latter lines would instantaneously arrest the selling pressure and tune up the prices.

As regards the plan of stepping up tap prices and thereby raising the prices of securities while the Reserve Bank is, at the same time, unloading its stock, we suggest a close study of the technique triumphantly employed in the early forties by Sir Jeremy Raisman in the case of taking up the tap rate for 3½ per cent Rupee Paper from Rs 96 to Rs 100 and by Sir Archibald Rowlands in the mid-forties in the case of raising the tap rate from Rs 96 to Rs 100 in respect of 3 per cent 1970-75. In both cases, the Reserve Bank was successful in taking up the price by four rupees what time it succeeded in selling vast amounts of these scrips. We commend such a study to Mr Krishnamachari as the style and verve of such an operation would particularly appeal to his special quality of initiative and drive.

The conditions now ruling in the giltedged market call, in the first instance, for the purchases strategy and, in the second instance, for the tap rate strategy. The immediate task is to rid the market of excessive floating stock. Our own estimate is that an outlay of Rs 15 crores will transform the condition of floating stock from plethora to famine. Once this is effected, there should be an interregnum to allow the giltedged market to pile up resources. Past experience has shown that such an interregnum is not of an extended duration. When the buying pressure begins to grow and strengthen, it should be deemed the green signal for the strategy of boldly stepping up tap prices on sales.

+

Increase in Banks' Borrowings Against Usance Bills

A further drop in active notes, a continued depletion in foreign exchange holdings and deficit financing for Rs 5 crores are the noteworthy features in the statement of the Reserve Bank for the week-ended November 23. Notes in circulation are lower by Rs 4.05 crores at Rs 1439.61 crores. Rupee coin has returned from circulation for an amount of Rs 0.99 crores. Consequently, the Reserve Bank's cash in the till has improved by Rs 5.05 crores to Rs 23.19 crores.

It would appear that the Government were in need of funds, and recourse has, therefore, been had to deficit financing for Rs 5 crores. Rupee Securities are, thus, Rs 4.97 crores higher at Rs 765.47 crores. Contraction to corresponding extent has been effected against Foreign Securities by the transfer of Rs 4.97 crores to the Banking Department.

The Centre's Deposits are shown higher by Rs 3.27 crores at Rs 54.69 crores. The increase, of course, reflects the replenishing of resources by sale of ad hocs in favour of the Reserve Bank. The Deposits of the State Governments are also higher by Rs 0.54 crores at Rs 12.72 crores.

Member banks would appear to have been impelled by special reasons to maintain their borrowings from the Reserve Bank at a high figure. For, although it is the fag-end of the slack season, it is to be noted that Deposits of banks are lower by Rs 1.17 crores at Rs 52.04 crores and that borrowings from the Reserve Bank are higher, as reflected in the rise of Rs 0.72 crores to Rs 83.48 crores in the Other Loans and Advances of the Reserve Bank. It is to be presumed that, just prior to the date on which the raise in the Reserve Bank's rate for advances against usance bills became effective, Scheduled Banks sought to maximise their borrowings from the central banking institution under this head.

This is reflected in the fact that the advances taken by Scheduled Banks against usance bills are shown to be Rs 45.34 crores—this figure being the highest since the week-ended June 1 this year. Secondly, it is to be noted that the rise in outstanding advances against usance bills is one of Rs 4.54 crores. Thirdly, the total amount of advances extended by the Reserve Bank against usance bills has been marked higher by Rs 13.94 crores at Rs 372.17 crores. It is possible that the member banks might have liquidated the bulk of their outstandings in respect of borrowings against commercial bills, and taken out fresh borrowings for as large a figure as possible, so that they might receive the benefit of the lower interest rate for the maximum possible period.

There are two more important points which we may note in the latest Reserve Bank returns. In the first place, in spite of the transfer of Rs 4.97 crores from foreign securities in the Issue Department, Balances Held Abroad in the Banking Department have fallen substantially by Rs 6.83 crores to Rs 84.63 crores. The net depletion in foreign exchange resources, during the current week, has, therefore, totalled Rs 11.80 crores. The second remaining point to note is that Investments are marked higher by Rs 1.91 crores at Rs 61.13 crores. This seems to indicate that the Reserve Bank continues to be a purchaser of securities with maturity up to 1961, without the erstwhile limiting proviso of "switch over".

The return of the State Bank for November 23 fully reflects the trends to be expected in the fourth week of a slack season month. Deposits have risen by Rs 2.15 crores to Rs 232.80 crores. Secondly, advances have been marked down by Rs 0.94 crores to Rs 127.43 crores. These, together with a running down of cash balances by Rs 1 crore, have enabled the State Bank to reduce its indebtedness to the Reserve Bank by Rs 4.71 crores to Rs 3.29 crores. For the first time in four weeks, the State Bank's portfolio of bills discounted and purchased shows a fall: the decline is one of Rs 1.17 crores to Rs 39.00 crores.

The slack season accretions to the deposits of Scheduled Banks have raised the figure to Rs 1108.59 crores—the highest level since the week-ended August 31. This has been accompanied by a pronounced fall of Rs 5.14 crores to Rs 598.95 crores in advances—also the lowest figure since August 31. It would thus seem that member banks have needed more than 10 weeks to recover the funds, the demand for which had been generated by the State Government loans issued in the first week of September.

The higher level of deposits and the lower level of advances both account for a decline in the indebtedness of member banks, on the one hand, and an improvement in their cash balances, on the other. While the decline in borrowings from the State Bank is nominal at Rs 0.30 crores, the indebtedness to the Reserve Bank has been reduced sharply by Rs 7.61 crores to Rs 56.65 crores.. While cash in hand is lower by Rs 1.69 crores, and while balances with other banks are more or less unchanged, deposits with the Reserve Bank are shown to have risen by Rs 2.15 crores to Rs 50.97 crores; and, moreover, money at call marks a rise of Rs 1.71 crores to Rs 19.02 crores.

Finally, in the matter of advances, while loans, cash credits and overdrafts have shown a decrease, the expansion in the portfolio of inland bills purchased and discounted continues at a brisk pace. Inland bills have risen by Rs 4.8; crores to Rs 112.68 crores—and this would seem to be the highest figure recorded by member banks under this head. Foreign bills, however, show the contrary trend with a drop of Rs 0.73 crores to Rs 49.64 crores. In the result, the total of advances shows but a small decline of Rs 1.03 crores to Rs 761.27 crores.

×

The statement of the State Bank of India for the week ended November 23 reveals a rise of Rs 2.15 crores in deposits to Rs 232.80 crores. Borrowings from other banks have declined by Rs 4.71 crores to Rs 3.29 crores, while other liabilities, including inter-office adjustments, are shown at Rs 7.29 crores against Rs 7.18 crores.

On the assets side, cash balances have moved down from Rs 17.54 crores to Rs 16.15 crores, while Investments remain almost unchanged at Rs 106.62 crores. Advances are lower by Rs 0.94 crores at Rs 127.43 crores "loans, Cash Credits and Overdrafts" accounting for a rise of Rs 0.23 crores and "Bills Discounted and Purchased" for a drop of Rs 1.17 crores.

×

According to the returns of the Scheduled Banks for the week ended November 16, both Demand and Time Liabilities are higher, the former by as much as Rs 9.26 crores at Rs 650.80 crores and the latter by Rs 3.16 crores at Rs 457.79 crores. Borrowings from the State Bank are lower by Rs 0.30 crores at Rs 10.74 crores and those from the Reserve Bank by Rs 7.61 crores at Rs 56.65 crores. Cash and balances with the Reserve Bank have risen by Rs 0.46 crores to Rs 88.09 crores. Investments have declined by Rs 0.41 crores to Rs 365.52 crores. Advances are shown at Rs 598.95 crores against Rs 604.09 crores; Inland Bills at Rs 112.68 crores against Rs 107.85 crores and Foreign Bills at Rs 49.64 crores against Rs 50.37 crores. Money at call and short notice stands at Rs 19.02 crores against Rs 17.31 crores.

(Continued from page 988)

able bounds. This arrangement is as follows:

The surplus in export realisations, i.e., the actual export value less the calculated value for exports on the basis of internal auction value, should be set apart in equal proportion for "a price assistance fund and a consumer subsidy fund." The price assistance fund should be drawn upon to make up the loss when the Board is at any time unable to pay the basic price based on cost plus return from the amount realised by sales of crop. The other fund should be available for helping the Indian consumer to get coffee on reasonable prices. Towards the same end should be utilised another surplus income resulting from a gain in weight of coffee in storage which is the consequence of absorption of moisture during storing.

The export trade in Coffee is just now expanding. The Commission are anxious that this trend should be kept up, through scrupulous adherence to quality. Whether the proposed countervailing export duty equal to the Central excise might turn out to be a stifling factor would depend on the international prices ruling from time to time. Tea bears a similar levy. Even at the current increased level of exports, the proportion it bears to the domestic consumption is less than 50 per cent and a quota of the price surplus, which comes eventually to the consumer's pocket should not raise unduly rosy hopes.

The Commission, however, have promised further relief in the form of extenders like chicory, coffee tablets and possibly a blend of chicory and cherry, the latter recommended for liberal imports. As for quality, there is hardly any mention of it, with reference to domestic consumption. After all "the middle class in South India, forced, on account of their low purchasing power, to buy the cheapest variety" cannot hope for better quality and lower price at one stroke!

ANGLO-INDIA JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting being Seventy-ninth Ordinary General Meeting of the Members of the Company will be held at the Registered Office at 31, Netaji Subhas Road, Calcutta, on Friday the 28th day of December, 1956 at 12 O'clock noon for the following purposes:—

1. To consider and to adopt the Profit & Loss Account for the half-year ended 31st March, 1956, and the Balance Sheet as at that date and the Reports of the Directors and Auditors.

2. To declare dividends.

3. To appoint Directors in place of those who retire by rotation at the meeting and in this connection to consider and, if thought fit, to pass the following resolution of which special notice of intention to propose it as a special resolution in accordance with Sections 190 and 261 of the Companies Act 1956, has been received by the Company. It is stated in the special notice that Mr. K. P. Goenka, a director of the Company who retires by rotation of directors at this Annual General Meeting, is a director and member of Duncan Brothers & Company Limited the Managing Agents of the Company and therefore an "Officer" and "associate of the managing agents" within the meaning of the Act who may only be appointed by Special Resolution as a director whose period of office is liable to determination by retirement of directors by rotation.

"That Mr. K. P. Goenka, be and is hereby appointed a Director of the Company whose period of office is liable to determination of directors by rotation."

4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS.

5. To consider and, if thought fit, to pass with or without modification, the following resolution which will be proposed as a Special Resolution:—

(i) That the requirements of Articles 85, 86, 90, 125, 177, 181 & 182 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September, 1956.

(ii) That the Articles of Association of the Company be altered in manner following:—

(a) That Articles 85 and 86 shall be deleted and the following new Article 85 substituted therefor:—

"85. In addition to any other meetings, General meetings of the Company shall be held within such intervals as are specified by Section 166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act at such times and places as may be determined by the Board. Such general meetings shall be styled Annual General Meetings and shall be specified as such in the notices convening the meetings."

(b) That Article 90 be deleted and the following new Article substituted therefor:—

"90. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and to fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extra-ordinary Meeting shall be deemed special business."

(c) That in Article 125—Line 1, the words "Second Ordinary" shall be deleted and the words "Annual General" substituted therefor.

(d) That Article 177 shall be deleted and the following new Article substituted therefor:—

"177. At every Annual General Meeting the Board shall lay before the Company a Profit and Loss Account made up to the 31st March immediately preceding and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of schedule VI to the Companies Act, 1956, so far as they are applicable to the Company but save as aforesaid the Board shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient."

(e) That in Article 181—Line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

(f) That in Article 182—Lines 1 and 3, the words "Second Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" where it appears shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 14th to 28th December, 1956, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & CO., LD.
Managing Agents.

Calcutta, 26th November, 1956.

Note:

(a) Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or if no such instructions have been received, to the registered address of all shareholders whose names appear on the Company's Register at the date of declaration. No application is necessary for payment of dividend.

(b) A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

BALANCE-SHEET REVIEWS

(Continued from page 984).

lakhs to Rs 1.28 crores as a result of factory expansion; in Book Debts to Rs 2.86 crores from Rs 1.82 crores as a result of increased turnover and in the value of factory stocks to Rs 13.48 lakhs from Rs 10.25 lakhs.

£ R$

Amluckie Tea

The company has reported a substantial rise in crop outturn to 10,669 maunds in 1955 from 7,632 maunds in 1954, but the average price realised is only Rs 2-2 against Rs 3-6-7 per pound. The net profit, before Taxation and Depreciation, amounts to only Rs 3,79,969 against as much as Rs 10,71,154 in the previous year. The directors have, after providing Rs 43,906 (Rs 39,183) for Depreciation; Rs 1.24 lakhs (Rs 4.34 lakhs) for Taxation and Rs 93,615 (Rs 1.65 lakhs) for Reserve Funds, reduced the dividend to 19 per cent from 72 per cent. Estimates for 1956 provide for a crop of 10,400 maunds.

£ R$

Dividend Reduced by Duncan Brothers

Duncan Brothers & Company, Limited has presented the report and accounts for the year ended 31st December, 1955. The working results reveal a slight rise in earnings although the directors have reduced the dividend on the Ordinary shares from 12 per cent to 11 per cent for the year.

Sales are higher at Rs 1.18 crores as against Rs 80.94 lakhs in the previous year, while the item "Agency Commission and Allowances" is shown at Rs 53.94 lakhs against Rs 57.23 lakhs and "Dividends on Investments" at Rs 10.47 lakhs against Rs 7.37 lakhs. The net profit, before providing for Taxation and Depreciation, amounts to Rs 50,39,398 against Rs 49,42,604.

In respect of allocations, the directors have, apart from providing a sum of Rs 2.50 lakhs for Contingency Reserve, maintained the Investment Reserve at Rs 5.00 lakhs and Depreciation at Rs 1.18 lakhs. The amount set aside for Taxation has been raised to Rs 24.50 lakhs from Rs 22.0 lakhs, while Geneal Reserve has been reduced to Rs 5.00 lakhs from Rs 7.50 lakhs.

The directors have, in their report, stated that, on consequent upon the enactment of the Companies Act 1956, some diminution in the measure of the company's prosperity must be anticipated.

£ R$

Bokakhat Tea

In common with other tea companies, the Bokakhat Tea Company has presented disappointing results for 1955. Although the crop outturn is higher at 4,655 maunds as against 3,801 maunds in 1954, the average price realised is only Rs 2-2-2 againsts Rs 3-2-1 per pound. The accounts, before providing for Depreciation, reveal a loss of Rs 41,032 against a net profit of Rs 3,30,780 in the previous year. A sum of Rs 17,938 against Rs 23,062 has been set aside for Depreciation. Naturally, the dividend has been passed over as against 10 per cent paid in 1954. Estimates for 1956 provide for a crop of 4,800 maunds.

Selimbong Tea

Similarly, the Selimbong Tea Company has reported a crop outturn of 2,271 maunds against 2,236 maunds, while the average price realised per pound is only Rs 3-1-0 against Rs 3-12-4. The net profit, before Depreciation, amounts to Rs 1,236 against 1,42,462 in the previous year. A sum of Rs 17,122 (Rs 20,531) has been provided for Depreciation. The dividend is passed over against 5 per cent.

£ R$

Investment Notes:

AT the annual general meeting, held this week by Jardine Henderson Limited, it was announced that, subject to the receipt by the vendors of certain necessary consents, this company had recently purchased from Braithwaite & Co. Engineers Limited, London, a substantial block of shares in Braithwaite & Co. (India) Ltd., and that, on completion of the sale, the latter company will cease to be a subsidiary of the London Company. It is understood that the Management of Braithwaite & Co. (India) Ltd., will continue on the same lines as heretofore and that Braithwaite & Co. Engineers Ltd. will still retain a large holding in their Indian company. This represents the first incursion into the expanding engineering industry by Jardine Henderson Limited, whose chief interests have hitherto been confined to the Jute, Tea and Coal industries. In this connection, it might be recalled that Jardine Henderson recently relinquished the managing agency of the Bally Jute Company.

Despite the premium and the stamp duty, a great rush for the shares of Hindustan Lever Limited is expected. The subscriptiln list, which opens on December 3, will be closed on December 5.

The new issue of Ordinary shares by Guest, Keen, Williams Limited has been over-subscribed by nearly three times. It is learnt that allotments are being made on the basis of 20 shares for every 50 shares applied for; 30 for 100; 40 for 150 and 50 for 200. The allotment is expected to be completed before the middle December.

In Bombay, Premier Constructions have now turned out to be a popular feature, the quotation for the shares firming up to Rs 212-8 from Rs 190 quoted a week ago. There are expectations that the company will be able to raise up the dividend for 1956 in view of the improved performance by various units in the Walchand group.

Tata Locomotives are quoted around Rs 172. This company has given an encouraging reward for the patience displyed by its shareholders. After paying all arrears of dividends on the Preference shares up-to-date, the directors have recommended a maiden dividend of 6 per cent on the Ordinary shares for the year ended 31st March, 1956, as a result of the Government having accepted the recommendations of the Tariff Commission in regard to the rise in costs and other manufacturing expenses.

Hindusthan Electrics have scored 10 points at Rs 100. The market's optimism about the outlook for the company has been justified by the directors' decision to recommend a dividend of 6 per cent not only for 1955-56, but also for 1954-55.

Ambica Mills, Ahmedabad, have, it is understood, received the necessary sanction from the Government for increasing the paid-up value of the shares from Rs 50 to Rs 100 by capitalising part of the Reserves.

On the Madras Stock Exchange, Plantation shares have recorded a smart improvement from the recent low levels, thanks to the announcement of the Supreme Court's stay order with regard to the Plantation Award. The Stock Exchange authorities have, therefore, lifted the minimum prices, fixed on November 8.

McLEOD AND COMPANY, LTD.

Notice is hereby given that the 33rd Annual General Meeting of the Members of McLeod & Co., Ltd., will be held at "McLeod House," No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 24th day of December, 1956, at 4 p.m. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1955, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint Directors in place of Messrs. C. L. Bajoria and A. T. Doig, who retire by rotation and who, being eligible, offer themselves for re-appointment.
4. To appointment Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business.

5. To consider, and if thought fit, to pass the following resolutions:

(a) "That Lord Sinha of Raipur, who attained the age of sixty-nine years on the 22nd August, 1956, and who was, at a general meeting held on the 27th December, 1954, appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation be and is hereby permitted to continue in office as such Director, and it is hereby declared in conformity with the provisions of Section 281 of the Companies Act, 1956, that the age limit prescribed by Section 280 of the Act shall not apply to him."

Special notice dated the 1st October, 1956, of intention to propose the above resolution has been received by the Company.

(b) "That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes."

The Share Transfer Books of the Company will be closed from 10th December, 1956 to 24th December, 1956, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO., LTD.
C. Hockley,
Secretary.

"McLeod House,"
3, Netaji Subhas Road,
Calcutta-1. 21st November, 1956.

NOTE: Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 24th day of December, 1956, or to their Mandatees.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. Lord Sinha of Raipur, has been a Director of the Company since 16th October, 1952, and attained the age of sixty-nine years on the 22nd August, 1956. Unless, as provided by Section 281 of the Companies Act, 1956, a resolution is passed by the Company in general meeting specifically declaring that the age limit prescribed in Section 280 shall not apply to him, he will not be eligible for re-appointment as a Director of the Company when his current term of office terminates by retirement of Directors by rotation. Resolution (a) in item 5 of the above Notice, of which special notice of intention to propose it has been received by the Company, is intended to satisfy the statutory requirements and will enable Lord Sinha to be re-appointed a director at all material times in the future.

2. Resolution (b) in item 5 of the above Notice is intended to enlarge the statutory borrowing power of the Board of Directors to enable them to borrow moneys from time to time for the purposes of the Company in excess of the limit prescribed by Section 293(1)(d) of the Companies Act, 1956. The effect of the resolution is to restore the position which prevailed under the Company's Articles prior to the 1st April, 1956.

ANGLO-INDIA Jute has maintained the dividend at Rs 3½ per Ordinary share for the half-year ended 31st March, 1956.

In Mackinnon Mackenzie jute group, India has raised the dividends from 1½ to 3½ per cent each, on the Ordinary and Deferred shares, and Megna from 1½ to 3½ per cent.

NICCO has, it is understood, raised the dividend from 15 to 20 per cent (including a bonus of 5 per cent) for the year ended 31st March, 1956.

Cannanore Spinning & Weaving has announced an interim dividend of 7½ per cent for the year ended 31st March, 1957.

Stock Exchanges

INTEREST ON SELECTED COUNTERS

Watch-Dog Writes:

CONDITIONS in stock markets are still far from cheerful. In the absence of any stimulating news, activity is confined to only a few selected counters. Although bulls have been trying to pull up prices, there is lack of follow-up. The general outlook for the markets does not, however, appear to be bearish at the current level of prices.

In the week's dealings on the Calcutta Stock Exchange, the pride of place went to the Tea section. Prices in other sections ruled quietly steady.

Equities on the Bombay Stock Exchange ruled generally firm, thanks to short-covering and replacement buying on encouraging corporate news.

Business on the Madras Stock Exchange was on a small scale. Sentiment, especially in the Planting section, was not encouraging though the Supreme Court had given a temporary stay of the implementation of the Award.

On Wall Street, some hesitancy developed and the list showed mainly fractional changes either way with losses slightly in the majority.

*

Calcutta

Calcutta, Friday Evening.

THANKS to renewed activity in the Tea section at enhanced levels, conditions in other section on the local Stock Exchange ruled steadier during the past week. In general, the improvement in sentiment, was noticed in the previous week, was fully maintained, although the volume of business continued to be small. Despite encouraging corporate news, operators were inclined to restrict their commitments in view of the international political situation, the fears entertained with regard to increased taxation in the forthcoming Budget and the rising trend of interest rates on advances. Also, investors were inclined to reserve their funds for the new capital issues, resulting in the non-availability of funds for normal transactions in the market. The market finished the week on a steady note.

The Giltedged was a dejected market where sellers continued to predominate, resulting in a further fall in prices from last levels. Institutional investors were totally absent and the volume of business was extremely limited. 3 per cent 1986 Conversion Loan opened at Rs 73-6 and, after improving at one time to Rs 73-12, receded toward the close to Rs 73-2 as against Rs 73-12 quoted in the previous week.

In sympathy, Bank shares ruled quiet. Punjab National were nominally quoted at Rs 50-0 and United Commercial at Rs 56.

Sellers continued to predominate in the Jute section where enquiries were few and far between. Persistent rumours with regard to the imposition of export duty on jute goods depressed sentiment of the operators who were inclined to liquidate their holdings. Howrah were marked down further to Rs 21-4 from Rs 21-12, while National met with some speculative buying upto Rs 23-8 from Rs 23-5. Among higher-priced scrips, Alliance were offered at Rs 103 against Rs 111; Anglo-India at Rs 156 against Rs 162; India at Rs 124 against Rs 126 and Delta at Rs 152 against Rs 173-8. Dalhousie were, however, nearly maintained at Rs 92-0.

Coal shares met with limited interest as operators were awaiting the announcement of the Government decision with regard to the increase in coal prices. The only bright spot was Burrakur, which were lifted further upto Rs 20-12 from Rs 18-1 on renewed cornering by an interested party to obtain the majority vote for opposing the proposed for the amalgamation of this company with standard Coal at a meeting, to be held on the 4th December. In sympathy, South Karanpura were lifted upto Rs 10-11 from Rs 9-10. East Indian were, however, marked down to Rs 31-1 from Rs 31-9 and Raneegunge to Rs 10-13 from Rs 13-1.

Despite the improvement in the conditions obtaining in the piecegoods market and in the offtake of cloth, Textile scrips were devoid of support. Elgins were marked back to Rs 28-9 from the recent high of Rs 29-10, while Kesoram shed half a point at Rs 16-6. New Victoria were rather sticky around Rs 2-3.

Limited interest was shown in the Sugar section where the only bright feature was Ramnugger Cane. This scrip, after being marked upto Rs 26 from Rs 24-6 on buying from interested quarters, finished a shade easier at Rs 25-12 on profit-taking.

In the week's dealings, the pride of place naturally went to the Tea section where prices forged ahead from last levels on renewed demand. Apart from the higher prices obtained in London auctions, there was a feeling that the outlook for the industry has considerably improved and that the supply and demand would almost be balanced in view of the stoppage of plucking in many of the North Indian gardens with effect from last week. The reports of an increased demand for exports were also a contributory factor.

Most prominent scrips were Baghmari rising further to Rs 27-0 from Rs 24-8; Bhatiawa to Rs 30-8 from Rs 29-8; Brooke Bond to Rs 21-8 from Rs 20-12; Bishnath old to Rs 26 from Rs 25-6; Grob 'A' to Rs 36-4 from Rs 35; Grob 'B' to Rs 18-14 from Rs 17-8; Hasimara to Rs 33-4 x.d. from Rs 30-14; Hantapara to Rs 237 from Rs 228; Patrakola to Rs 236 from Rs 232; New Dooars to Rs 325 from Rs 311 and Tezpore to Rs 25-5 from Rs 24-2.

Price movements in the Engineering were confined to a narrow range in the absence of sustained activity. Indian Irons opened at Rs 33-2 and, after touching a low of Rs 32-13, improved toward the close to Rs 33-5. TEXMACO improved to Rs 22-7 from Rs 22-1, while Jessop and Richardson closed better at Rs 34-12 and 25-14 after being marked down at one time to Rs 34-7 and Rs 25-7 respectively. Indian Galvanizing were a steady feature at Rs 20-8 with Braithwaite better at Rs 27-10 against Rs 27-5.

The Miscellaneous section provided a few bright spots on dividend and other considerations. Prominent amongst these were Indian Aluminium, NICCO and Titaghur Paper. Indian Aluminium, after being taken upto Rs 18-14, eased off at the close to Rs 16-6 on profit-taking, while NICCO received consistent support upto Rs 29-7 from Rs 27-12 on reports of the increased dividend. Titaghur Paper, after ruling firm at Rs 40-2 on the announcement of the increase in dividend, turned quiet at the close at Rs 39-12.

Elsewhere, Orient Paper fluctuated rather erratically between Rs 35-8 and Rs 36, to finish the week at Rs 35-10. Indian Cable lost further ground to quote Rs 32-2 against Rs 33-8. India Steamship were a firm feature around Rs 10-0. Indian Copper were a narrow market around Rs 4-4 with BIC on offer at Rs 10-7. Alkali Chemicals changed hands at Rs 20-10 to Rs 20-12; Martin Burns at Rs 25 to Rs 25; Metal Box at Rs 37-13 to Rs 37-14; Rohtas at Rs 20-9 to Rs 21-1; Dunlop Rubber at Rs 26-13 to Rs 27 and National Carbon at Rs 26-10 to Rs 26-14.

EDITORIAL NOTES

(Continued from page 987)

from chronic domestic infelicity. Some of these persons display remarkable ingenuity in the art of kindling the instinct of charity; quite a few spend the bulk of their meagre earnings in intoxicants.

Marriage and breeding are accepted as a matter of course. More often than not, children are born at intervals of less than two years and the majority seek infantile graves. A small percentage realise earnings above Rs 50 per month. About a third of the beggars examined live alone and the majority of them are pavement-dewellers; nearly half of the total number covered by the Study have only the sky for a roof. That more than 400 are able to secure rent-free accommodation is an indication of private charity, in a field where it is frequently most inconvenient to the donor.

A refreshing aspect of beggar-life as depicted in this survey consists in "a general condition of health more than usually expected or imagined", a keenness to augument earnings with the aid of subsidiary occupations and the wide prevalence of business acumen. There are a number of charitabl institutions in the Hyderabad City including a Trust created by the Nizam on an endowment of Rs 5 crores. But not one among the beggars has ever received any help from this Trust or is even aware of its existence.

The sponsors of the Survey are impelled to ask how far it is proper for the State to be indiferent to a problem of this character. They themselves have offered a bunch of suggestions, which would fall within the sphere of the Public Health, Education, Cooperation Municipal and Police Departments, as also non-governmental institutions and trusts.

ORIENTAL INDUSTRIAL INVESTMENT CORPORATION. LIMITED.

NOTICE is hereby given that the THIRTEENTH Ordinary General Meeting of the ORIENTAL INDUSTRIAL INVESTMENT CORPORATION, LTD. will be held at the Registered Office of the Company, 56 Aga Khan Building, Dalal Street, Fort, Bombay, on Friday, the 28th December 1956, at 3 p.m. to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 30th September 1956.
2. To declare dividends as recommended.
3. To elect Directors in place of Mr. Ramniwas Ramnarain and Mr. Harilal Ravilal, who retire by rotation, but are eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.

NOTICE is also hereby given that the Transfer Books of the Company will remain closed from 21st day of December 1956 to 28th day of December 1956, both days inclusive.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
K. U. ADVANI PRIVATE, LTD.,
Secretaries.

Bombay, 14th November, 1956.

AGRA ELECTRIC SUPPLY COMPANY LTD.

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the sixty-second Ordinary General Meeting of the Company) of the abovenamed Company will be held at its Registered Office No. 12, Mission Row, Calcutta, on Wednesday, the 26th December, 1956, at 11-0 a.m. for the following purposes:—

1. To receive and adopt the Audited Accounts for the half-year ended 31st March 1956, and the Directors' and the Auditors' Reports thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

"That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 73 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 20th December, 1956, to the 26th December, 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.
S. N. MUKERJEE,
Managing Director,
Managing Agents.

The company, which was originally incorporated as a Private one, was converted into a Public Limited Company from 1-12-1955.

INVESTMENT SPECIAL

(Continued from page 983)

has there been so much of capital works in progress. Never before have Government received so much in the form of taxes. Indeed, almost every entity, that is directly or indirectly connected with this company, has benefitted substantially from the great work of development on which we have been applying our wholehearted efforts and energies. For our part, we greatly regret that our efforts to secure a proper participation in the increased profits for the shareholders have been unavailing. As you are all aware, the management represented to Government in this matter and sought an increase in dividend. It is unfortunate, however, that Government should have decided that an increase in the dividend was not justifiable. We are sure that shareholders will be properly appreciative of the strenuous attempt made by the management to secure a higher distribution to the shareholders. And now, if I may, I will pass on to a review of the extremely prosperous year which the company has passed through; and I shall describe the imaginative development that has been undertaken further to increase the earning capacity of the company what time that increase in productive capacity is to the national interest.....

(The Chairman continues his speech and relates the factors responsible for the higher earnings in the year under review. He then goes on to describe the projects that are shortly to be taken on hand. The audience listens raptly to the speech, and the Chairman receives a round of applause as he concludes his speech).

Chairman: The next item on the agenda is a consideration of the accounts for 1955-56 and the dividend to be paid thereon. This is, I know, a formality.....

(At this point he is interrupted by a number of voices in the meeting hall. After order is restored a gentleman is seen addressing the Chairman).

Phatkaram Pagla: I am a jobber on the Calcutta Stock Exchange and I fully agree with the Government's contention that the dividend should not be raised Of course, I am aided in my market operations by the decision not to raise the dividend. For, I am by disposition, a bear operator; and the Calcutta Stock Exchange, especially by virtue of its rules and regulations, is particularly conducive to a depression in prices. I, therefore, support the move to pass the accounts and I maintain that the dividend should not be raised.

Moneylall Rupeemull: I am afraid, however, that I must press for a higher dividend. There is here no question of a formality as far as the passing of accounts is concerned. It has happened before, at company meetings, that the dividend proposed is amended. Although I am aware of the fact that Government have imposed—rather, that it is Government which have fixed the dividend, it is necessary for the shareholders to prevail upon the Government to change their decision. For my part, an increase in dividend is greatly desirable, because it will serve to push up the share prices—and capital gains are tax free.

C. Investor: My share holding in the company is 50 shares. I have been advised by the foremost of authorities in this matter to continue to keep my holdings in the company, because I am told that the growth prospects are assured. But what about return for my investment? When every other industry is free to pay higher dividends, I may be permitted to ask why Government should discriminate against our shareholders alone. Do they believe that, in our company, all the shareholders are capitalists? I think that I am representative of the shareholders of this company and Government would be betraying the socialistic pattern that they desire to achieve, if they deny the small investor like me the right to higher participation in the mounting profits. I do not think, in this view, that the accounts in their present form can be passed.

M. C. Shareholder: I have had my investment in the company since its inception. It has long been my view that the industry in which our company is engaged had a most prosperous future, if only because of its basis for industrialisation. For many years now, I have been patient. How much longer am I to be patient about the dividend that is rightly mine? Is it fair or equitable that every other entity connected with our industry should be enjoying the fruit of prosperity—save, of course, the people such as I who originally advanced the money for bringing the company into existence? I do not understand our Government. If they believe that the small investors, such as I, have a role to play in the industrialisation of this country, they need to change their present attitude. In particular, I think it is unjust and unfair that no increase in our dividend should be permitted.

Chairman. I fully sympathise with the views that have been advanced, but there is little that can be done. The sense of the meeting is, that we adjourn to next week at the same time.

M. C. Shareholder: We as shareholders will take up the matter with Government.

First Investor: No, not at the same time. I took French leave from office, but I cannot do so every day. I suggest that the time of the meeting should be in the afternoon to facilitate the countless shareholders, like me, who might wish to attend.

Second Investor: Also, the Government Director may be requested to attend the meeting. We want him to know how bitter the middle class shareholders feel about the arbitrary freezing of our dividend.

Chairman: I agree that the adjourned meeting should be held in the afternoon. Notice to this effect will be sent. Meanwhile, if you so desire, the shareholders may send a deputation to wait on New Delhi.....

C. Investor: I suggest that the Directors should accompany us.

Chairman: This is not possible, since management has already represented its case for a higher dividend. Our attempt to secure an increase in the dividend was a failure, and another trip to New Delhi, on our part at least, would be unnecessary.

M. C. Shareholder: But the Directors are as much a shareholder as we all of us are. So I think that the Directors must accompany any deputation that the shareholders might send.

Chairman: (after hurriedly consulting his colleagues): It is an extremely delicate matter which you have posed. While your Directors have the fullest sympathy with the shareholders of this company, and while they spared no efforts to present the management's case, they find it extremely difficult to accompany any delegation that might go to New Delhi. I have, moreover, been asked to convey to any proposed delegation the most heartfelt wishes of your Directors for the success of the enterprise upon which the delegation may embark.

(The meeting comes to an abrupt close).

Investment Briefs :

Guzdar Kajora Coal has again passed over the dividend for the half-year ended 31st December, 1955.

Bengal Fine Spinning and Weaving has maintained the dividend at 6 per cent for 1955.

Smith Stanistreet & Company has maintained the dividend at 20 per cent for the year ended 30th June, 1956.

Delhi Cloth and General Mills have raised the dividend from 2½ to 2½ per cent for the year ended 30th June, 1956.

Amalgamated Electricity has recommended a final dividend of As 6 per Ordinary share, making a total of 7½ per cent for the year ended 31st March, 1956, payable on or after the 29th December, 1956.

Hindusthan Engineering has maintained the dividends, both on the Ordinary and "A" Ordinary shares, at Rs 15 per share (including a Bonus of Rs 3 per share) for the year ended 30th June, 1956.

Hindustan Construction has raised the dividend from 10 to 12½ per cent for the year ended 31st Aupust, 1956.

Amalgamated Coffee has again passed over the dividend for the year ended 31st March, 1956.

Blue Mountain Tea and Waterfall Estates have reduced the dividends from 20 per cent each to 15 per cent each, for the year ended 30th June, 1956.

Mysore Chrome has passed over the dividend for the year ended 30th June, 1956.

OLYMPUS

(Continued from page 996)

and a half before the disaster when the water level was well below the girders—seems to suggest that, during monsoon at least, bridges have to be constantly watched. Mr O. V. Alagesan who visited the scene of disaster is reported to have said that this would be done in future. But this is a precaution that is already provided for in the revised Way and Work Manual. This fact seems to show once again that it is no use framing rules if they are not followed.

While the ghastliness of the disaster is sure to shock every one and while the repetition of such disasters, especially in a particular part of the country, is likely to arouse widespread misgiving and apprehension, it would be premature to condemn the administration before full facts are actually known. The Government have very properly instituted a judicial inquiry into the causes of the disaster and the full facts will doubtless be made available to the public. It is of utmost importance that the inquiry should be completed expeditiously and the report made available to the public with the least possible delay. (Past experience in this regard has not been happy: the judicial inquiry report on Mahboobnagar disaster is yet to be published.)

Meantime, urgency is lent to the tasks of the Committee of experts appointed to examine the bridges on the former Nizam State Railways and to advise procedure for inspection of bridges elsewhere. The committee may well be asked to inspect bridges elsewhere too and let the Government have its considered view on their safety, the steps to be taken to inspect them and the precaution to be taken, especially during the monsoon season. The record of railway permanent way staff especially of gangmen no duty has been excellent. These folks have shouldered and discharged with credit highly technical responsibility all these years. If procedure is made foolproof and inspection rendered rigorous and responsibility firmly fixed, then we should be able to avoid such horrible accidents in future. It is some comfort to know that all possible aid has been expeditiously rendered to the victims by all agencies of succour. Though nothing will relieve the grimness of the tragedy, sympathy and imagination in rendering aid to the bereaved will go a long way in assuaging the sorrow caused by the calamitous event.

AN EDUCATION IN *Oil*

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray ?
At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what ?
Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

For the Investor

The Psychological Crisis

Investment Gossip:

"NEVER since the Liaquat Ali Budget," an investor writes to me, "has confidence been so shaken in Stock Exchanges." Mr T. T. Krishnamachari's Mid-Year Budget, he adds, is bound calamitously to affect the investment climate. The Finance Minister, he goes on to suggest, may suitably amend his proposals, if he expects the investment market to help in the implementation of the Second Plan. This friend concedes that the incidence of the taxes is not great; but holds that the greatest damage is in the psychological sphere. "Will India have quarterly Budgets next year?" is his plaintive question. He concludes: "All incentive has been killed."

I confess that Mr Krishnamachari quite took my breath away—not by his specific taxes, but by the courage that Government have displayed in announcing them at the present time. Let me first, however, deal briefly with the new taxes.

Capital Gains: We have had this before, we have known for some time we would have it again. I have not studied the Finance Bill as yet; but as far as I can gather, nobody sincerely feels that he will be hard hit by the capital gains tax. The apprehension is, that the rates will be stepped up in time to come; and it is for this reason that the tax has been criticised.

Secondly, while on the matter of the capital gains tax, there does not seem to be great objection in principle to the impost. But it has been suggested that the time is wrong, because it acts as a disincentive, and will spoil the investment climate. So, we may ask ourselves: Is the timing wrong? From Government's viewpoint, they have a right to participate in the gains accruing from the general toning up of the economy. It follows that, in a period of improving values (for this state of affairs, Government can, by virture of their planned endeavours, take the credit), the national exchequer should benefit when capital gains are realised.

We come, next, to the dividends tax. Here, we have to note two points. This is a tax applicable to corporate earnings—not to individual income. Secondly, the incidence is in most cases small, as has been adduced by some financial commentators who have studied particular company cases. With the notable exception of the steel companies, Government have frozen no dividends. In the context of the current state of the Indian economy, some restraint in dividend distribution is desirable: and so, the justification for a higher dividends tax.

What will be the indirect effect of the dividends tax? On the one hand, companies may perforce build up their internal resources by way of undistributed profits; and this benefits the investor in the sense and to the extent that profits ploughed back will further increase the earning capacity of his company.

On the other hand, in order to avoid the dividends taxes, companies with a small capital base—and large undistributed profits—may decide to capitalise their reserves and to issue bonus shares. This trend is likely to be accentuated; and bonus issues will certainly benefit the investor; besides, it will bring fresh stability to the investment market.

Finally, we have the Development Deposits. During the war, companies with staggering profits were required to lodge, under EPT, all profits above the standard profit with the Government; two thirds of this was as outright impost, one-third was a refundable deposit carrying an interest of 2 per cent. In the second stage of EPT, all 100 per cent of profits in excess of the standard profit was deemed to be tax. And yet, no investor could seriously object.

Moreover, also during the hectic war years, when there was a spate of company promotions, the Controller of Capital Issues required the deposit of that element in a share issue which related to the amount of money for purchase of plant and machinery. Plant and machinery were difficult to obtain; so, to safeguard the investor, (lest the subscribed moneys were frittered away), a specific amount had either to be deposited with Government or to be invested in Government Securities with the Reserve Bank as joint holder.

That measure was to safeguard the investor. The position is no different today. In the wake of industrial expansion, the tax free allowances accruing to companies are considerable: since these might be dissipated, the new measure insists that a moiety of such reserves be deposited with Government; and a company could always draw on these funds for bonafide expansion projects.

Thus, the Development Deposit is in favour of, and not against, the investor.

All in all, I wouldn't say that this is a budget that drastically curtails bright prospects For the Investor. Quite to the contrary, I would suggest that the psychological crisis that the Stock Exchanges were overtaken by is a crisis of the making of speculative elements. The investor is NOT hard hit by Mr T. T. Krishnamachari's Mid-Year Budget.

£ R $

Investment Notes:

THE Government of India have granted permission to six tea companies in Gillanders Arbuthnot group for the issue of bonus shares in the following proportions: Ananda-Bag one for one; Betjan one for one; Gairkhata one for two; Jutilbari one for five; Lackatoorah one for two and Tengpani one for one. These bonus shares have not participated in the dividends declared for 1955.

The response to the equity issue offer of the Hindustan Lever Limited has been excellent. The total applied for was already 4½ times the actual offer. Shares are unofficially quoted around Rs 18-8.

The name of the Chartered Bank of India, Australia and China is shortened to The Chartered Bank in which name the business of the Bank will hereafter be conducted. This is effective from the 6th December, 1956.

Tata Industries have presented the following production figures of iron and steel at the Steel Works at Jamshedpur for November, 1956:

	Tons.	Tons.
Pig Iron ...		94,700
Steel Ingots ...		85,800
Saleable Steel:		
Semis ...	19,100	
Finished ..	46,000	

T. Stanes & Company, Limited has recommended a further dividend of 1½ per cent on the existing capital, including the proposed issue to non-residents out of the profits for the year ended 30th September, 1954, pending sanction. This distribution is in addition to the recent interim of 8¾ per cent paid on November 15, 1956. Transfer Books are closed from the 17th to the 24th December.

£ R $

Investment Briefs:

Indian Wood Products have announced an interim dividend of 10 per cent for the year ended 30th September, 1956, payable on or after 25th January, 1957.

Following Tea companies have recommended dividends for 1955:—Ananda-Bag 10 per cent against 30 per cent in 1954; Betjan 20 per cent against 100 per cent; Lackatoorah 30 per cent against 10 per cent and Tengpani 7½ per cent against 65 per cent. Gairkhata, Jutlibari and Talpoo have passed over the dividends against 70 per cent; 35 per cent and 30 per cent respectively.

Birla Cotton has recommended a dividend of 15 per cent on the increased capital for the year ended 31st March, 1956, against 30 per cent on the old capital.

Consolidated Coffee has reduced the dividend from 22½ to 20 per cent, while Coffee Lands have raised the dividend from 18 to 20 per cent for the year ended 30th June, 1956.

Belapur Sugar has maintained the dividend at Rs 16 per share for the year ended 30th September, 1956.

Sri Krishna Rajendra Mills, Bangalore, have announced an interim dividend of 7 per cent for the year ended 30th September, 1956.

Deccan Sugar has raised the dividend from 10 to 15 per cent for the year ended 31st May, 1956.

HIGHLIGHTS

The talk of the town is Mr T. T. Krishnamachari's bold Mid-year Budget.

There are, as to any question, many angles from which we need to examine the significance of the Budget.

For example, is the Budget a bear factor For the Investor? It would so seem, judging by the landslide in Stock Exchange prices. But read Watch-dog's refreshing Investment Gossip, which tries to assess the import of the Budget to the investor as distinct from the speculator.

Again, there is the strictly economic aspect: Are the new inposts justified? And if so how? There are questions dealt with in another Budget study, the Leading Article.

Finally, there is the purely political aspect: What were TTK's motivations? And does he get a message across to the nation? For answers, read the despatch from the Olympian scribe.

Maiden Dividend by Aluminium Corporation

Balance-Sheet Reviews:

THANKS to record sales and profits, the Aluminium Corporation of India Limited has recommended a maiden dividend of As 8 per share on the Ordinary shares for the year ended 31st March, 1956 after clearing all arrears of dividends on the Preference shares. Although the market for the company's products has remained competitive throughout the year, the Corporation's sales are satisfactory. In fact, sales, during the year, have reached an all-time peak. Moreover, fresh facilities for supplying new finished products have been added.

Again, during the year, special efforts have been made to supplement, renew and modify the various plants of bauxite and coal mining, power generation, alumina production, metal production and rolling facilities, not only to enhance the quality and production, but also for ensuring longer life of the plants. In brief, the Corporation plant is maintained today in the most up-to-date and efficient condition.

Sales for the year have risen to Rs 90.90 lakhs from Rs 72.88 lakhs in the previous year, while the net net profit, before providing for Depreciation, amounts to as much as Rs 25,37,986 against only Rs 12,99,694. Apart from maintaining the Depreciation Fund at Rs 7.00 lakhs, General Reserve is raised from Rs 2.00 lakhs to Rs 4.00 lakhs.

It may be noted that, unless the arrears of dividends on the Preference shares are completely cleared, no divdend on Ordinary shares can be declared. At the rate of clearing two years' arrears of dividend on the Preference shares per annum, it will take five years to pay up all the arrears of preferential dividend and they only dividend can be declared on the Ordinary shares.

It has, therefore, been suggested that the issued and paid-up capial of the Corporation be increased by the issue, at par, of further one lakh Ordinary shares of Rs 10 each as fully paid-up, ranking in all respects pari passu with the existing Ordinary shares by capitalising Rs 10 lakhs out of the profits of the year and that all the arrears of dividend on the Preference shares, up to 31.3.1956, of Rs 11 lakhs be cleared, partly in cash to the extent of Rs 1 lakh and the balance in the form of one lakh fully paid Ordinary shares of Rs 10 each, issued as above.

The directors have, therefore, recommended the clearance of all the arrears of dividend on the Preference shares, partly in cash and partly in specie in the form of Ordinary shares the issue of which will be subject to approval. The Industrial Finance Corporation of India have approved this scheme and they have been guided in this matter by the consideration of conserving the liquid funds of the Corporation for the purpose of carrying out future expansion scheme and also of the fact that statutory depreciation for the year has not been provided fully and a large amount of unabsorbed depreciation in respect of previous years has not yet been met. The directors have also thought it fit to recommend payment of dividend on the Ordinary shares, the first since the inception of the company 18 years ago.

McLeod & Company Raises Dividends

Although the revenue from Jute, Tea and Insurance Departments has been lower, McLeod & Company Limited has reported excellent results for the year ended 31st December, 1955, thanks to the improved results from the Engineering Department and an increase on dividend income.

Sales for the year have declined to Rs 1.48 crores from Rs 2.45 crores; but the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 32,70,147 against only Rs 25,77,115 in the previous year. Apart from providing a sum of Rs 3.35 lakhs for Investment Reserve and maintaining the Convertible Notes Redemption Reserve at Rs 2.00 lakhs, the Depreciation amount has been raised to Rs 78,247 from Rs 72,613; Taxation to Rs 10.00 lakhs from Rs 9.20 lakhs and General Reserve to Rs 3.50 lakhs from Rs 3.14 lakhs. Even after these increased allocations, the directors have found it possible to raise the divi-

New Tax Proposals in Proper Perspective

Indian Finance
Established 1928
December 8, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

CONSTERNATION has greeted the emergency budget presented last week by the Finance Minister, Mr T. T. Krishnamachari. Stock exchanges have reacted sharply to the new tax proposals. Criticism has been levelled at the Finance Minister for introducing a Mid-Year budget; and Mr Krishnamachari's indication that the 1957-58 budget will be a "lame duck" one has not been found reassuring. On the one side, justification has been forthcoming for the new imposts. On the other side, the cry been raised that all incentive for investment by the private sector has now been killed. At the one extreme, there are objections to the taxes because they will realise only Rs 16 crores. At the other extreme, the new taxes —for Rs 16 crores—are held to be an intolerable new burden. How are we to reconcile all these contradictory viewpoints? Should Mr Krishnamachari have waited till budget time for his new proposals? Are the taxes unnecessary at the present moment? Can the capital gains and the dividends taxes be justified? Has Mr Krishnamachari's latest foray been lacking in ambition? In short, is there justification for the Mid-Year budget? These are all the questions which have been posed by Mr Krishnamachari's bomb-shell of last week; and the answers to them will unequivocally be that, as Finance Minister, Mr Krishnamachari is most efficiently in the process of formulating a tax policy for the Second Plan.

We shall first address ourselves to the specific proposals. The first of these can by no means be described as unexpected. The levy on capital gains—a levy that is not new to this country—was almost certain of making its appearance in the course of the Second Plan. Indeed, on the eve of the 1956-57 budget, the general anticipation, not to say apprehension, was that Sir Chintaman Deshmukh would introduce a measure to such effect. But the mere fact that it is a tax which has been expected will not justify the impost. The justification for the tax on capital gains is, however, easily found. Let us, in the first place, appreciate why capital gains are possible at the present time of Indian history. Planned efforts have been undertaken to increase the tempo of industrial activity. Greater production is sought, and purchasing power is more abundantly released. These constitute a virtuous circle which is reflected not only in a rising trend in present profits, but also in an increase in intrinsic values. Secondly, we may suggest that the multipurpose projects of Government are increasing the value of the land and property in those particular areas. For the improvement thus offered, a betterment tax is levied; but there has been no objection to the imposition of such a tax, since it was Government which were responsible for the higher values of today. We suggest that the analogy of the betterment levy holds true of all assets in this country. Partly, perhaps, due to inflation, but much more because of the gradually improving standards of living, assets are steadily increasing in value. It will not be disputed that it is largely to the credit of the Government that planned efforts are being reflected in an improvement in living standards. Surely, in such a view, Government are entitled to insist that a moiety of the capital gains that they have directly made possible should attract tax and should, consequently, find its way to the national exchequer.

The position is much the same in the matter of the dividends tax. Briefly, the taxes on dividends are to be at the rate of 2 annas in the rupee on a distribution between 6 per cent and 10 per cent, 4 annas in the rupee between 11 per cent and 18 per cent, and 6 annas in the rupee on dividends which are in excess of 19 per cent. These constitute a substantial stepping up from the rates which had been proposed by Sir Chintaman in his budget for 1956-57. While it is true that Section 23(A) companies are being doubly squeezed, by means of the dividends tax at one end and the statutory requirement of a minimum distribution of profits at the other end, the justifiability of the dividends tax generally cannot be questioned. If industry is in a position to pay higher dividends, it is because its earnings have been rapidly on the rise. If its earnings have been increasing, it is because of the improvement in the economic climate of the country. If an improvement in the economic climate has been brought about, it is because Government policy has been directed specifically toward such an objective. Why, then, should Government not be free to insist that a part of the increased profits should be earmarked for the national coffers? Secondly, the intention of the tax is that, for the immediate future, some restraint is placed on the distribution of dividends by industry. Such dividend restraint is necessary from two points of view. On the one hand, every rupee distributed as dividend may add to possible inflationary tendencies. On the other hand, each rupee of undistributed profit adds to industry's inner resources for financing development, expansion, rehabilitation, modernisation and replacement of plant and machinery. Moreover, let us recognise that the dividends tax relates to an impost on the profits of a company, not on the earnings of the individual. It would appear that the extent to which the generality of Indian public companies is affected by the higher dividends taxes is, while not negligible, of small proportions. Indeed, it cannot be seriously charged that the rates of corporate taxes in this country are too onerous. If, moreover, we remember that the income-tax element in the tax payable by companies is being credited to the shareholder upon his dividend, it will be seen that the incidence of tax on the company as such is most favourably low. While we do not wish, at this stage, to offer a detailed study on the impact of the dividends tax, it is our duty to point out that its significance for the stock exchanges has been grossly exaggerated.

There is, however, one point about the dividends tax on which we must record our criticism. According to Section 23(A) of the Income-Tax Act, limited companies attracting the definition of this section are required to distribute either 60 per cent or 100 per cent of their assessed profits. We may remark that one of the new proposals is to the effect that, in the case of industrial Section 23(A) companies, the percentage of assessed profits to be distributed has been relaxed from 60 per cent to 50 per cent; we are not sure whether this discrimination in favour of industrial companies may not be ultra vires the Constitution. But, as we say, Section 23(A) requires that certain minimum proportions of the assessed profits must be distributed as dividend. It happens, therefore, in the case of these companies, that the dividends distributed, as required by the Statute, are at a high percentage. Now, Government would penalise these companies, because their dividends are too high! This is surely contradictory: Government cannot punish a company merely because it obeys a Government law! We feel that the dividends tax is, as far as Section 23(A) companies are concerned, paradoxical and contradictory, unjust and unfair. The intention of Section 23(A) is that the individual will receive the largest possible amount as dividend and will, on such dividend, pay the higher taxes prevalent on an individual's income. But the dividends tax is intended to build up the internal resources of industry for its expansion projects. If it is conceded that it is unjust to levy a penal tax for the reason that a company obeys a law, the provisions relating to Section 23(A) need to be revised.

One mode of revision is to exempt or lighten the dividends tax in its application to Section 23(A) companies. The other method is to do away with the requirement that Section 23(A) companies must distribute a certain minimum percentage of assessed profits. Before, however, we proceed to suggest what the better course would be, we will take up for consideration the last of the important proposals made by Mr Krishnamachari last week.

Briefly, a moiety of the development rebate and depreciation reserves accruing to a company is henceforth to be deposited with the Reserve Bank. There has been much hue and cry about this provision in the Finance Bill; but its applicability has yet to be interpreted accurately and carefully. Let us assume that this provision in the law would require a company to maintain with the Reserve Bank, or invest in Government securities, an amount equivalent to a moiety of the development rebate and depreciation reserves. Is this an onerous requirement? During the war, in the first stage of EPT, was not a company required to deposit one-third of its profit above the standard profit with the Government, the other two-thirds being tax? Again, in the war years, when companies raised fresh capital for purposes of expansion, were they not required to deposit with the Reserve Bank, or invest jointly with the Reserve Bank in Government securities, a quantum equivalent to the amount required to buy plant and machinery which, at that time, were not available? And, in the light of such restrictions in the war years, cannot Government be justified in requiring the compulsory deposit of only a part of the undistributed profits? In this regard, we need to make two things clear. Firstly, the intention of the proposed tax is to prevent flagrant misuse of the funds of a company. Secondly, it is intended to encourage industry to expand, since Government will freely

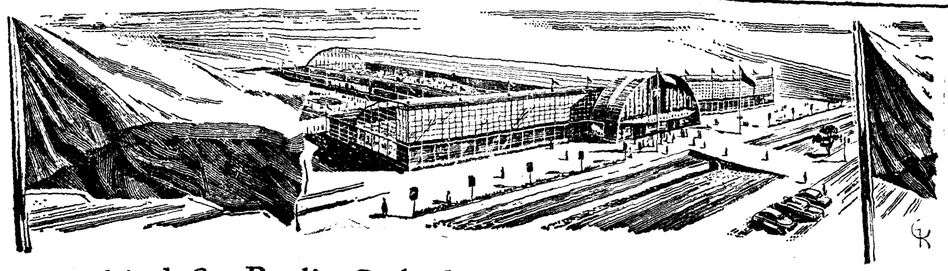
permit these deposits to be drawn upon for purchase of new plant and machinery. Indeed, the deposit can be described as an incentive to expansion, since the moneys with the Reserve Bank are usable only for purposes of expansion projects.

The others are levies, import and excise, to which no serious objection has been voiced. They are all in the category of restrictions on conspicuous consumption. The justification for the new taxes lies, not in the fact that they raise an additional Rs 16 crores or so annually toward the Second Plan, but in the orientation of fiscal policy to the objective of conserving and utilising all possible resources of industry in plans of expansion and development. The dividend taxes are intended to increase the size of undistributed profits. The development deposits are intended to keep separate and undissipated a moiety of undistributed profits for expansion purposes. In the wake of the increases in production that these all enable, the intrinsic value of assets will increase; and thus is the tax on capital gains justified.

But, as we have earlier remarked, some relief is due to Section 23(A) companies. The present Section 23(A) does not permit the building up of undistributed profits to a level exceeding the capital. Secondly, it insists on the payment, by way of dividend, of 60 per cent of the assessed profits. Thirdly, in the case of companies whose reserves are already equivalent to their share capital, 100 per cent of the assessed profits must be paid out as dividend. Fourthly, the Commissioner of Income-Tax is empowered to use his discretion in relaxing these requirements in the case of industrial companies. Fifthly, the new measure suggested by Mr Krishnamachari is that, in the case of industrial companies, only 50 per cent of the assessed profits need be paid as dividends. Sixthly, the new development deposit requirements will affect only the industrial Section 23(A) companies. Seventhly, there is the possibility that the discrimination between industrial and non-industrial companies will be ultra vires the Constitution. Finally, for every sector of corporate activity—whether Section 23(A) or not—the building up of inner resources is to be welcomed.

The original intention of Section 23(A) was, we repeat, that, in a closely held company, the profits should be statutorily distributable, so that they would attract the higher income-tax on the individual's income.

We feel, at the present stage, that the important objective should be to effect restraint in the distribution of dividends and, at the same time, to enable internal resources being built up by companies. Since, as we have already pointed out, the new provision for industrial Section 23(A) companies may be found to be discriminatory in law, we offer a solution which would meet all objections, not least the unfair position of Section 23(A) companies in the matter of compulsory distribution of profits and the dividends tax they consequently attract. We suggest that the minimum distribution for all Section 23(A) companies should be reduced to 40 per cent of assessed profits. Secondly, the restriction on the size of reserves may be removed. Thirdly, a tax should be levied—but not so onerous as the dividends tax—on all reserves in excess of 100 per cent of the share capital. Finally, a moiety of the reserves thus built up will be required to be deposited with the Central Government. It will be seen that, in the case of industrial Section 23(A) companies, they will automatically be enabled to find their resources for expansion. In the second place, the discrimination between industrial and non-industrial Section 23(A) companies will be removed. Thirdly, the unfair extent to which Section 23(A) companies are affected by the dividends tax will be minimised. In the fourth place, the revenue lost by Government as tax on the amounts distributed can be recovered by the smaller levy on certain prescribed undistributed profits. And again, finally, the compulsory deposit of a moiety of reserves, in the case of non-industrial Section 23(A) companies, will be resources available to Government on a long term basis for utilisation in the implementation of the Second Plan.



The Personality of India's Mixed Economy—II

IN the midst of the fierce antagonism of rival social creeds, it is apparently idle to ask that one should treat the place of private enterprise in the Socialist economy or the place of State ownership and control in an individualist economy as an open question even in the long view. For, the advocates of private enterprise assume that, once a country is set on a course of nationalisation of industry, it must inevitably slide down the inclined plane which leads to regimentation and stagnation of economic life through absolute denial of the freedom and initiative of the individual citizen. Likewise, all Socialists, particularly the Communists, refuse to visualise any considerable good to the common man in an economic organisation in which the State takes fewer tasks directly on itself. These ideas are the result partly of the passions generated by controversy and partly of the inconclusiveness of historical experience. The concessions which in the actual implementation of its principles and programmes each system makes to its opposite, if only as a matter of practical expediency, are much more important than the apparent intensity of its devotion to its creed. These concessions represent the triumph of the facts of life over views and beliefs, the initial scaffolding for the bridge that will ultimately cover the gulf between the rival schools. The significance of these concessions will be assessed by both sides; on the one side, the attitude is one of regret and apology; on the other, there is a temptation to taunt the slow emergence of a common ground. Those who are not tied down to any specific social doctrine and are, therefore, free from partisan passions would prefer to wait for more and more of such common points to emerge, so that not only will the prospects of world peace be improved, but there will also be more light on the most effective ways of pursuing the common good.

India's economic policy derives its distinctive character from the fact that Indian

The Visitors from China

Though this time the visit of the Prime Minister of China has been admirably timed, public enthusiasm over the visit would have been more pronounced had it not been for the simultaneous presence in the Capital of the Dalai Lama and the Panchen Lama, not to speak of the host of lesser lights, come in connection with the Budha Jayanti celebrations. The coincidence of the visit of Chou En Lai and the Lamas might have meant some mutual distraction. It certainly gave a hectic time for India's Prime Minister who was obliged to reflect on and discuss the problems of mankind, shifting hurriedly between the, unworldly tenor of Budhistic thought and precepts and the utterly mundane and rather sordid environment of current international crises.

That peace was a key-note of the speeches made by the Prime Ministers of India and China and the two Lamas has a significance deeper than what meets the eye. The two holy men who have now come under the temporal authority of the Chinese Government can speak for a great message which exalts peace above everything else. That the followers of Budhism have often been guilty of the grossest violations of this law is beside the point. If, as Pandit Nehru points out, inspite of a universal desire for peace, the threat of war has only aggravated, the reason is to be found in the practical ineffectiveness of the majority U. N. representation based on population or a world plebiscite can be dreamt of, to rectify this condition.

It is Pandit Nehru's hope that the new strength and force represented by the one thousand million people of China and India will influence world events to a very great extent. This hope will be realised, only if there is tolerance and understanding between the leaders of the two nations. The two have already shown their ability to get together on the material plane and the visit of the Lamas must symbolise a deeper union.

The talks between the Prime Ministers should have facilitated a more informed and catholic appraisal of contemporary events in Hungary and in the Middle East. Pandit Nehru has entrusted his Chinese counterpart with a special message of friendliness to Pakistan. It is quite probable that at least as a quid pro quo, he himself would feel obliged to interpret China in the present world and Far-Eastern set-up, with realism and sympathy to President Eisenhower, at the forthcoming meeting.

Sino-US relations are clouded by an unhappy chain of events in recent years. In Pandit Nehru, there is a mutual friend, who can offset their impact and retrieve the enormous damage resulting therefrom to mutual good will.

*

An Unsound Principle

In India, special privileges for employees in Government and quasi-Government services have grown haphazardly. Free travel for Railway staff extending to several relatives is a legacy from company managements, stabilised in a welfare state. In the altered circumstances of the day, it is no longer possible for an officer's wife to seek a free special saloon for a haircut fifty miles off. But against the demise of such pedantic misuse, there is now a wider availability of the concession, consequent on the enlarged jurisdiction of the Railway Board.

Civilians employed in the Army have their own special concessions. Recently the Government of India announced that they would meet ninety per cent of the cost of rail travel for their officers. The State Governments have their own schemes of privileges and relief, sometimes regulated on an income basis. On the whole, these compare humbly with the sum total of extra benefits, let alone regular pay and allowances, derived by the Union Officers, a circumstance which is not without embarrassment to the State Governments. In the provision of concessionary quarters and the level of amenities involved, differences are equally striking.

The Life Insurance Corporation of India has now offered free insurance policy to every employee within certain cadres and on certain conditions. This group of employees who claim to be hard hit by nationalisation, deserves sympathetic treatment. But a free policy which eventually cuts into the profits of the private policy-holder, does not embody a sound principle. By the same token, a State Bank employee can claim a free deposit account or an officer in Rourkela, a prefabricated house. The poor fellows employed in the Nepa Mills may have to be content with a house of cards and note books and writing pads for their family.

With the rapid expansion of the State's function as an employer, the issue of amenities to Government and quasi-Government employees will have to be taken up in right earnest and certain broad principles laid down, calculated to ensure some measure of uniformity and fairness between the various Departments. Neither the employees nor the public would be happy with the present jumble of accidental accretions and improvised schemes.

*

In Divided Mind

As a piece of practical guidance to the State executives, the PSP Resolution on election strategy seems to be of doubtful value. The Resolution reiterates the strategy approved at the Gaya Conference, at the same time giving freedom to the executive to permit assignment through agreement between different Opposition parties constituencies, in some exceptional and extraordinary cases.

In this form it should be reckoned not so much as a clear and unambiguous directive as the grudging indication of the sharp differences of opinion prevailing among the party leadership and the anxious groping which still continues for an easily intelligible and workable formula. These differences were voiced with fervour and with some heat at the Conference.

Mr Ashok Mehta went to the extent of declaring that if anyone tried to put the Communists into power he would be doing it over Mr Mehta's dead body, and he described any electoral adjustment with the Communists, 'alien to PSP principles' as a terrible mistake. But he could not convince colleagues like Mr H. V. Kamath and Dr K. B. Menon, who felt that a Congress Government was the greater of the two evils. The Resolution has found a prompt welcome from Mr S. A. Dange, who sees in it the genesis of a united action, which would "halt the growth of totalitarianism in our country and protect the masses from the growing attacks of the police state of the Congress Party."

The PSP Resolution marks a triumph for Mr Jaya Prakash Narain. The correspondence between him and Mr Ajoy Ghosh, on contemporary events in Hungary has at least one good result. The General Secretary of the CPI has admitted serious mistakes on the part of his party and there is even a vague undertaking toward greater national freedom for party attitudes. If the Indian communists choose to be faithful to this undertaking and are disposed to view national and international issues primarily from the standpoint of India, an ad hoc electoral alliance between the PSP and the Communists may not be fraught with as much danger as Mr Mehta dreads. But over the extent of the change of heart on the other side, the PSP leaders can pardonably cherish misgivings.

If the Resolution seeks to strengthen the Opposition in every State, the party will have to march hand-in-glove with the Mahasabha in one place, the CPI in another, the Ganatantra Parishad in a third and the Muslim League in a fourth, a rather ridiculous prospect.

*

Taming a Social Evil

The Lok Sabha has passed a Bill for the suppression of immoral traffic in women and girls. Incorporating certain decisions arrived at the International Convention of 1950 for the suppression of traffic in persons, this Bill seeks to make brothel-keeping and the procuring or importing a woman for prostitution a penal offence. There is a complementary provision for the establishment of protective homes.

Sterling's Plight: Difficult But Not Desperate

THE present plight, as well as the near prospect, of sterling in the international exchange market is grave; but it does not follow that an alarmist view of its future is warranted. If sterling is today under severe pressure, if the United Kingdom's dollar and gold reserves have suffered a considerable decline, and if, in anticipation and as a consequence of these developments, there is a spate of speculative selling of sterling, there is no occasion for surprise; on the other hand, general expectation has been on these lines. This week's announcement by the British Chancellor of the Exchequer in regard to a heavy fall in gold and dollar reserves means that what has been expected has taken place. That the Suez Canal crisis would precipitate a number of complicated problems, was a situation to which the British authorities were fully alive, and to deal with which they would, doubtless, have thought out plans in advance. The question is, therefore, whether Britain is in a position to carry out plans which will, in effect, counteract the strain which the crisis has imposed on sterling.

It may be said, with some degree of assurance, that the Eden Government will do anything in their power to prevent a debacle in sterling. On the political front, the Egypt adventure has brought humiliation to Britain. In every respect, the prestige of the present Government has been tarnished. It is unthinkable that they will be content with a passive, helpless role while sterling is assaulted from all sides in the international exchange market. The unconditional offer of the withdrawal of Anglo-French forces from the Suez zone has shaken, but not routed, the Eden Government. The devaluation, voluntary or otherwise, of sterling will, however, force Sir Anthony Eden and his colleagues out of power. Twenty-five years ago, Ramsay Macdonald was thrown out just by such a development. The sheer survival and the remaining shreds of self-respect of the Eden Government will urge them to defend and fortify sterling against the guerilla warfare of international speculators. The question, therefore, is: Have the British Government enough means and reserve resources to defend sterling?

This leads us to an examination of the measures which the UK could take on the negative side to reduce the demand for dollars and on the positive side to augment the supply of dollars. So far as the former is concerned, the immediate task pertains to the payment, due to be made this month, in respect of the principal and interest on the loans of the USA and Canada. On the US loan, the instalment of principal amounts to $56 million; and the interest amounts to $ 82 million. The corresponding amounts of the Canadian loan are $ 15 million and $ 22 million. The British Government could ask, and have in fact already asked, for the waiving of interest. It may be taken as more or less certain that both the USA and Canada would readily agree to the request. This would involve a reduction of $ 104 million in the dollar bill to be met. Another step to give relief in this respect is a cut in the domestic consumption of oil. Mr Macmillan has levied a duty of 1 shilling per gallon and this should go some way in reducing the demand for oil which, presently, constitutes a tough problem not only from the point of view of transport but also from the point of view of payment in dollars.

To the extent that part of the difficulties confronting the UK and Western Europe stems from the closure of oil supplies from the Middle East, the inevitable solution lies in alternative arrangements for the supply of US oil. At one stage (that is, prior to Anglo-French action in Egypt), the US Government were getting ready with plans to supply oil to countries which found themselves temporarily cut off from Middle East oil. These plans were not proceeded with, in the angry reaction of the US authorities to the Anglo-French action in Egypt. When recently approached, Washington gave clear hints that this kind of aid or other similar aid was linked with Anglo-French compliance with the UN demand for immediate withdrawal from Port Said and other occupied areas. This compliance put off in a futile effort to save face, is now assured; and one may be sure that the US would be prepared to go full steam ahead with plans to help the UK and Western Europe in respect of the stresses and strains caused by the Suez affair. The United Kingdom, in particular, will find Washington greatly responsive to its pleas for help in the financial and economic corner in which it finds itself today. US aid on any reasonable scale is calculated to buttress sterling.

Meantime, the UK could, under the provisions of the IMF constitution, withdraw a considerable amount of dollars from the Fund. The sum against which Britain can draw is of the order of $ 1,300 million.

Lastly, the dollar securities now at the disposal of the British Treasury can be pressed into service and will yield timely and substantial relief.

On an assessment of the courses open to the British Government to lighten the strain, on the one hand, and to augment dollar resources, on the other, it must be clear that they have the need, the will and the means to provide a stout defence for sterling. We may be sure this will be done. From the point of view of the exchange market, it means that second thoughts must cause an abatement in the speculative sales of sterling for all forward positions. It must also be borne in mind that, as and when sterling survives the present crisis, the sales now being made will be of value in accelerating the pace of recovery as the bears will by then be in a hurry to cover their sales.

To sum up, the present predicament and the near prospect of sterling are admittedly difficult. The future prospect of sterling, however, is not by any means so desperate as is now thought in some quarters.

+

Arrest of Rot in State Loans

Authority has made a prompt response to Indian Finance's plea for immediate open market operations designed to give support not only to the Centre's loans but to the State Loans. It also seems more than likely that such operations are being financed, in accordance with our suggestion, by the utilisation of the amounts received in excess of the targets for the Central and State loans. The intervention of the Reserve Bank has thus been prodded by the State Governments and made possible by the funds which the States, presumably with the concurrence of the Centre, has been able to provide from out of the loan receipts in excess of targets. So far, so good. The open market strategy, which was in effective evidence toward the last weekend, has produced the expected results. The rot in the market for State Loans has been arrested. In fact, the declining trend has been replaced by a mild rising trend to such effect that the Reserve Bank has been able to step up its purchase prices for some of the Loans by an anna or two. Even so, the present rates for the Loans are well below the issue prices. The authorities must pursue these operations until prices recover to the level of the issue prices. Once prices are thus restored to the basis of the issue prices, it may be expected that the normal demand for State Loans (which demand has been growing in a striking manner and has been observed to persist all through the year) will receive and, in due course, provide opportunities for the State Governments to sell through the tap a large part of the stock now being taken up in pursuance of open market purchases. It stands to reason that, as and when developments take place on these lines, the concerned State Governments will realise a tidy profit on the operations connected with open market strategy. Past experience shows that open market operations may be trusted to result ultimately in a profit.

In the light of such an encouraging experience over the past twenty years, it is difficult to understand why, on crucial occasions, giltedged securities are made to feel friendless and, thereby, allowed to suffer precipitate price declines. Such has been the fate of the 3 per cent Conversion Loan and the 3 per cent 1970-75. It was only after the former had fallen from over Rs 81 to below Rs 73 that support was forthcoming from official quarters. It cannot be doubted that, had such support been forthcoming at an earlier stage, this stock would not have recorded the calamitous decline of 8 points. Was it deliberate policy on the part of the Reserve Bank to bring about a drastic downward readjustment in the price of the 3 per cent 1986 Loan? We can only pose the question. The answer is beyond our ken, past our understanding. We can only hope that Mr T. T. Krishnamachari will resolutely act to end, once and for all and convincingly, the policy of diffidence and defeatism which, during his predecessor's regime, had remained the basis of open market strategy and of giltedged outlook.

Usance Bills as Backing for Seasonal Finance

While there is an abatement in the discussions with regard to the special measures that may be necessary to enable the banking system to cope with the increased demand for finance that is expected in the 1956-57 busy season, it is evident that banks are actively proceeding with the steps designed to keep them in a state of alert preparedness. The main emphasis is on the fullest utilisation of the bill market scheme. It is estimated that additional funds to be provided in the coming months may be between Rs 125 crores and Rs 150 crores. That the bill market scheme, sympathetically liberalised on the side of the Reserve Bank and intelligently pressed into service by the

Gold and the Suez Crisis

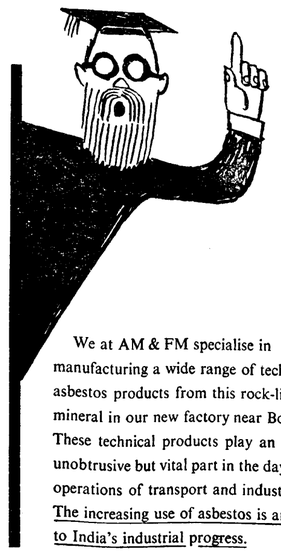
PAUL EINZIG

THE price of gold since the beginning of the present crisis in the Middle East has been subject to much comment in the financial Press. Since times immemorial there was a rise in the price of gold each time there was a feeling of uncertainty owing to a political or an economic crisis. On the present occasion, too, the price of sovereigns and of gold coins in general has responded to the Suez crisis in accordance with this well established rule. There has been a sharp increase in the premium on coins compared with their bullion value. On the other hand, the price of bullion has been remarkably weak in all European markets.

In the London market the price of gold declined to 260 shillings 8¾ pence an ounce on November 27. On the basis of the current rate of exchange this was equal to $34.88. This is lowest dollar price since the reopening of the London gold market. It is slightly below the price that can be realised through sale to the United States' authorities. Even at $34.88 it was not profitable however, to ship gold to New York because the cost of shipment, insurance, loss of interest etc. would amount to something between 12 cents and 15 cents an ounce.

The most popular explanation of the weakness of gold bullion is that it is due to selling by Central Banks for the purpose of providing dollars for oil purchases. Presumably several European central banks preferred to resort to this method of financing the abnormal dollar imports rather than draw upon their dollar reserves. Even so, the absence of adequate demand to absorb such selling is somewhat puzzling. After all, if the international political uncertainty induced many people to buy sovereigns the same consideration should have induced them to buy gold bars. And yet they prefer to buy sovereigns at a considerable increased premium rather than bars at a discount.

Hoarders and potential hoarders have always preferred coins to bullion. Throughout the post-war period coins have commanded a substantial premium over their bullion value even though during recent years that premium declined considerably. Its increase during the present crisis indicates the degree of this preference. Gold bars are cumbersome and have a limited market because they have to be weighed and the ordinary hoarder is distrustful about their fine gold content. He prefers coins with which he is familiar and in which he has confidence. Post-war experience has confirmed his faith in coins, because even though sovereigns have been counterfeited on a very large scale for the sake of benefiting by their premium, as far as is known all counterfeit sovereigns that have got into circulation are of full weight and fineness. For some time the supply of sovereigns that has come on the market as a result of large-scale counterfeiting has largely contributed towards the reduction of the premium. Thanks to the vigorous action taken by the British Treasury against the practice of counterfeiting in a number of countries, this source of supply has become materially reduced even if it could not be eliminated altogether. As a result, the sudden increase for the demand in soverigns has found the market unprepared. Hence the sharp rise in the premium.



The second reason for the contrast between the tendency of sovereigns and bullion lies in the fact that in the Middle East sovereigns are the favourite medium of hoarding. The international political uncertainty affected the Middle East even more than Europe, and demand by Arab countries must have made itself felt in Western European markets. This demand was entirely confined to sovereigns. Other gold coins were marked up in sympathy with the appreciation of sovereigns.

A recent Vienna report stated that gold coins were practically the only valuables which a number of Hungarian refugees were able to bring out of Hungary. Indeed the reason why the Russian troops and the frontier guards of the Hungarian puppet Government display such zeal in preventing refugees from crossing the border refugees who are caught are searched and their gold coins are confiscated. This is only one example of the extent to which gold coins are still used during periods of acute political uncertainty.

It would be a mistake, therefore, to imagine that the decline in the

Problem of Coastal Shipping

Answering question in Parliament last week on the Government's efforts to augment India's shipping tonnage, Mr Lal Bhadur Shastri, the Union Minister for Transport (as he then was and for the moment still is) quoted figures which show that the Government have lost no time and have apparently spared no effort to arrange for acquiring additional shipping tonnage. He said that within six months of the first year of the Second Plan, the shipping Companies, both in the private and in the public sector, had been able to place orders for ships worth over Rs 36 crores, which is almost the entire sum allotted in the Second Plan for the purpose. In terms of tonnage, this represents perhaps a little more than 1,81,000 tons which in the background of the Plan target of 3,00,000 additional tonnage, can be viewed as a reassuring measure of the Government's earnestness.

The orders placed by the Government are, however, for new ships, which unavoidably take a long time to build; and heartening as the Union Minister's reply was, the realisation that the majority of the ships will not be delivered till nearly the end of the Second Plan period if not even later, should curb any feeling of undue elation. It should also help to underline the importance of the outcome of the reported fresh approach by the Government of India to the USA for acquiring a dozen of the 10,000 ton "Liberty" ships. If the USA Administration is able to supply these ships as part of her economic aid programme or through the grant of a long term loan, it will not only help India in a vital aspect of her plans for industrialisation but will also be a factor of immeasurable value in cementing Indo-American friendship.

On the assumption, which let us hope will prove to be true, that the 12 'Liberty' ships will be available for use well within the Second Plan period, the additional tonnage acquired might even exceed the target figure while this is a welcome prospect, there is one point which needs elaboration. The point concerns the utilisation of the additional tonnage in the most advantageous way for serving national interests.

The Government, while furnishing the details of the plan for acquiring new ships, have not mentioned what percentage of the acquired tonnage will be utilised for coastal trade. The question assumes importance, when it is remembered, firstly, that the role of coastal shipping in overcoming the stupendous transport problems likely to be encountered during the next five years, is a major one, and, secondly, that the development of coastal shipping in India has been far from satisfactory.

Since August 1950 coastal trade in India has been reserved for Indian national ships, but even this protection has not yet placed coastal shipping on an economic and self reliant footing. Aggregate figures of quantity of cargo in deadweight tons carried on the coast, which were 24.49 lakhs in 1951, 26.08 lakhs in 1952, 28.84 lakhs in 1953 and which dropped down thereafter to 28.49 lakhs in 1954 and to a little more than 25.00 lakhs in 1955 are evidence that coastal tonnage has not kept pace with requirments. Comparative figures of gross tonnage engaged in the coastal trade reveal how tardy has been the development in coastal shipping. At the beginning of this year the tonnage in vessels stood at 2,44,000 gross tons as against 2,00,000 gross tons in 1950, an increase of only about 22 per cent in place of the hope of a 55 per cent increase entertained by the Indian Coastal Conference and set as a target in the first Five Year Plan.

The reasons why the development of Indian coastal shipping has been slow, hesitant and rickety, despite the protection granted to it in 1950, are many and varied. But they are all closely connected with the central problems of the structure of freight rates and of the coordination of rail-cum-sea cargo traffic.

The Rail-Sea Coordination Committee, of which Chairman is Mr S. N. Lakur, the Chairman of the Railway Rates Tribunal, is at present investigating into these and related problems. The Committee was appointed in June 1955 and was requested to submit its report within six months. That it has not yet done so goes to show how complex the problem has become in the context of the big question mark in the Second Plan, viz: whether the country's transport capacity will be adequate to cope with the volume of traffic likely to be generated by the quickening tempo of the Plan. Since one of the main terms of reference of the Committee relates to recommendations on the rationalisation and coordination of cargo movements by railways and coastal shipping, the Committee is certain to deal with the structure of freight rates of coastal shipping both in its relation to the cost of operation and in its relation to the existing freight rate structure of the Railways. It is pointless to try to anticipate whether the Committee will recommend an increase in the freight rates of coastal shipping and, if so, how much it will be over the 5 per cent increase sanctioned by the Government in October 1955, but the shipping interests concerned are fairly emphatic in their opinion that without some increase to compensate for the growing costs of operation, coastal shipping is unlikely to respond adequately to the exacting needs of the Second Plan.

One characteristic peculiar to Indian coastal shipping is its great dependence for its earnings on the transporation of a very limited number of item and on a severely restricted list of customers. The mainstay of the coastal shipping trade is the coal carried for the Southern Railway. The railways book about a million tons of cargo annually in the form of coal which is nearly 40 per cent of tht entire tonnage of cargo lifted. It is well-known that the railway authorities have not always refrained from rubbing in this point in their dealings with shipping interests. In fact, a peculiar complication of coastal shipping in India is that the Railways, who are the largest single customer of the shipping trade, can claim that transporation charges for the coal which is carried by sea for the use of the Southern Railway system would be lower if it were carried by the railways themselves. The Western and the Central Railway system, carry their own coal, a diversion of which by the sea route, it is sometimes pointed out, would be costlier.

The argument is not entirely convincing. Coal is low grade cargo and the space which the railways save by transporting it by sea is utilised by carrying goods with higher cargo returns. Moreover, the specially quoted telescopic rates charged by the railways for transporting coal are probably lower than what a strict adherence to costing and economic principles would dictate. The freight rates of the railways are being examined by the Sir Ramaswamy Mudaliar Committee and it is widely believed that the Committee will recommend fixing of freight rates at higher levels than what obtain at present, in which case the difference in cost of transportation of coal as between the alternative routes will be substantially reduced if not altogether eliminated.

It will be wrong, however, to suggest that but for the special railway rates in bulk transportation, the development of the coastal shipping industry would have been smoother and faster. If the shipping lines have not been able to attract industry, part of the blame must surely lie at some of the remediable defects in the industry itself. The delay in clearance, the uncertainty of sailing dates, the frequent rejection of items of cargo, which are comparatively awkward to handle—these are some of the complaints frequently heard against the shipping lines. Neither additional tonnage nor a higher rate structure will by themselves solve the problems of the industry unless ways are speedily found to remedy these defects.

The Indian Coastal Conference is understood to have pressed before the Rail-Sea Co-ordination Committee the introduction of a system of reservation of a certain volume of trade of certain categories for coastal shipping, such as, bulk cargoes required within a hundred miles or so of the hinterland of ports, salt from east coast ports to destinations served by Calcutta, and cargoes like cement, foodgrains and fertilizers which are now carried by railways between ports.

It is doubtful whether such a system would be the ideal solution for the problem of providing the coastal shipping trade with the additional cargo it must increasingly carry in order to prosper. For, one thing, such a rigid reservation will greatly hamper the mobility and quickness of action which transport in India must have if it is to prove itself equal to the demands likely to be made on it in the near future. Moreover, it will restrict to a harmful degree the earning capacity of the Southern Railway system. There is also the point that the relief to be gained by coastal shipping from reservation of interland trade and inter-port trade may not be as substantial as might be claimed.

A few months ago, a Study Group has estimated that India must have another 200,000 tons gross of coastal shipping before the end of the Second Plan period, if it is to play its part in the Plan. The estimate is by no means high pitched. A proper and easily adjustable system of allocation of traffic between rail and sea and an integrated freight system will go a long way to ensure the optimum utilisation of transport facilities. The shipping industry in such circumstances can legitimately hope to benefit by the growing volume of trade. But the Government, which exercise control over the movement and price of such commodities as coal, salt, foodgrains and fertilisers, have a large share of responsibility in seeing that it does so. Before the Government decides on the allocation of the additional tonnage to be acquired, to coastal shipping—in particular of the ships delivery of which can be expected early, they will, it is to be hoped, help in creating conditions to ensure not only that the cargo is there to be lifted but also that it is and economic proposition for the coastal shipping trade to lift it.

National Insurance Co., Ltd.

Addressing the 49th Annual General Meeting of the National Insurance Company Limited held in Calcutta last week Mr Lakshmipat Singhania, the Chairman of the Company, drew attention to the taking over of the National Fire and General Insurance Co, which was a subsidiary of the National Insurance Company Ltd, by the Government, in the course of nationalisation of Life Insurance in India, and observed that this has necessitated the complete rebuilding of the business of the company both at the head office as well as at the branches, where the business so far was run on a combined basis.

The Chairman next presented the balance sheet of the company which, as he pointed out, shows only the results of the general departments. It discloses the total net premium income of all the departments at Rs 19,24,761, comprising Rs 4,23,855 in Fire, Rs 5,26,642 in Marine and Rs 8,24,794 in Miscellaneous. The figure represents an overall increase of Rs 4,17,144 against the previous year's total business of Rs 15,07,617 composed of Rs 4,23,855 in Fire, Rs 5,26,642 in Marine and Rs 5,57,120 in Miscellaneous. The balance-sheet shows a

World *of* Insurance

Life Insurance Corporation of India

Position Regarding Overseas Business

WHEN life insurance in India was nationalised and taken over by the Life Insurance Corporation of India, there was considerable speculation as to the manner in which the Corporation would transact life insurance outside the borders of India. By the terms of the Life Insurance Corporation Act 1956, all the business of life insurance companies stands transferred to the Corporation. That necessarily embraces the foreign business of Indian companies. Indian Companies had a substantial portfolio in Burma, Malaya, Pakistan, Ceylon and British East Africa. All the existing business, therefore, naturally vested in the Corporation. The problem for the Corporation is not merely of servicing existing policyholders; it is mainly related to maintaining and expanding the organisation of companies. In the context of India's requirements of foreign exchange necessitated by the expanding demands of Second Five Year Plan, earning of foreign exchange by all available means has to be accorded top priority. The Life Insurance Corporation of India has, therefore, to discharge its obligations in the matter of foreign exchange through the medium of life insurance outside the borders of India by finding the quantum of foreign exchange normally earned by the companies in the shape of transferable surplus. It is to this, that the mind of the Corporation requires to be exercised.

At one stage, Government of India proposed that foreign business should be entrusted to one or more general insurance companies, who had substantial portfolios outside. This idea could not find favour. It was then suggested that life companies, who had substantial portfolios outside the borders of India may be given the responsibility of servicing existing policyholders and of transacting further life business as company enterprises. A conference accordingly was held in Delhi of company representatives, which ended with the Government of India announcing that Corporation itself will service and transact further life business outside the borders of India.

This view followed from legal and technical grounds arising out of Life Insurance Corporation Act, 1956. The Act appropriated for the Corporation all business of the Companies, irrespective of the fact whether it was transacted in India and outside. It was, therefore, not within the competence of the Government of India to "denationalise", as it were, a part of the business without an amendment of the Act. This legal difficulty precluded the Government from permitting the companies to transact business outside the borders as private enterprise. Whether the Companies could transact the business as agents of the Corporation and whether companies divested of all powers within the country would have agreed to play the limited role, are matters which have not been properly explained.

Senior officials in the Ministry of Finance seem to have realised that the sensible course for transaction of business outside the borders can only be through the companies. They accordingly examined whether foreign business can be denationalised, companies compensating the Government of India on the same terms at which Government compensated the companies inside India. Whilst this may be theoretically and practically sound, legal technicalities stood in the way, with the result that Government had to announce that the Corporation itself would transact life business directly outside the borders. This, of course, obviously means registering the Corporation as such in foreign countries.

The Corporation has now come out with a press note to the effect that the Life Insurance Corporation of India 'is not to book" any further business in Pakistan, Ceylon and Burma. This 's because of the restrictions placed on the Corporation by the Governments of those countries following the nationalisation of insurance in India. The Corporation, however, will continue to serve the present policyholders in those countries.

The press note goes on to say that, as far as Malaya, British East Africa and the Fiji Islands are concerned, the Corporation will continue to book further life business.

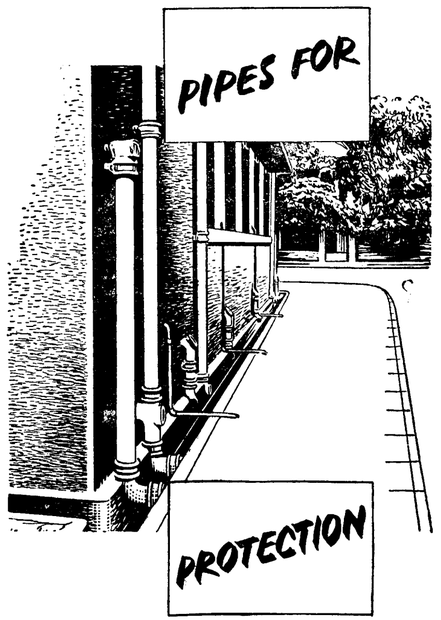
It is obvious that the Governments of Pakistan, Burma and Ceylon have refused to register, under local laws, the Life Insurance Corporation of India. The attitude of the Governments of those countries has no doubt been influenced by the consideration that to permit the Corporation to trade in competition with private companies, indigenous and foreign, will mean to acquiesce in the projection of the Government of India as an entity in the national trade and affairs of the countries.

Although Malaya, British East Africa and Fiji Islands have permitted the Corporation to function, it is not quite certain what the attitude of these countries will be when they attain political maturity.

It will thus appear that the Corporation has been foiled in its endeavour to register in Pakistan, Burma, Ceylon and may also be thwarted in other countries. That will limit the activities of the Corporation within the borders of India. The endeavour for decades of the companies to find a foothold in foreign territories was meeting with conspicuous success in some areas, such as Burma, Ceylon, Pakistan and British East Africa. They were expanding further overseas. It is, therefore, as much a matter of regret as it is unfortunate that the Corporation could not follow this up.

What is of paramount importance to the Indian economy is the almost permanent loss of one of the recognised avenues of earning foreign exchange. Valuation surplus and profits are recognised as transferable, although exchange regulations are rather strict in many countries, notably in Burma, Ceylon and Pakistan. Foreign exchange balances add to India's strength. If the avenue of earning foreign exchange through life business overseas has been blocked due to a fault of the framers of the Act or due to the shortsightedness of the relevant Department of the Government of India, Government have only to thank themselves, but they do owe a word of explanation to the public.

The growing importance of foreign exchange earnings has attained urgency, because of the growing imbalance between imports and exports. A study of the import and export figures for the first half of the current year reveals that, compared with the previous half-year, India's imports have greatly increased while exports, instead of keeping pace with imports, have substantially declined. The rising trend of imports is inevitable following efforts at industrialisation. Foreign exchange earnings must be stepped up. If, therefore, due to some lacuna or fault in the Life Insurance Corporation Act, 1956 or due to some misunderstanding in the administration thereof, avenues of earnings foreign exchange through active life business outside the borders of India are going to be permanently silted, it points to the need to amend the Act or to remove the lacuna in administration so that earnings of foreign exchange remains unimpaired, if not accelerated.



THE PROBLEM OF WAGES.

The Differing Points of View.

Efficiency in the working of the various offices of the Life Insurance Corporation of India is being seriously impaired due to continued dissatisfaction among its 27,000 employees all over India following divergence of opinion amongst the Corporation's management and the staff on grades, allowances, salaries, bonuses, etc. The difference has resulted in mass demonstrations in Bombay, Delhi, Calcutta and other principal cities. Life insurance is a personalised undertaking and thrives on excellence of service. The two-month old Corporation is having all manner of teething troubles. For its smooth functioning, it requires of co-ordination and the zealous support of its employees. The differences, thus, require to be composed. It is all the more necessary because millions of policyholders require to be serviced by the standard of service it can render. They are least interested in domestic quarrles.

The main burden of grievances of the employees seems to have been resolved by the statement late in October of Mr H. M. Patel, Chairman, Life Insurance Corporation. He assured the staff that the Corporation scales were meant for new entrants. While fitting the existing employees into the new scales, the Corporation would ensure that they continued to receive, year after year throughout the duration of their service, the same emoluments as they would have received if they had conti-

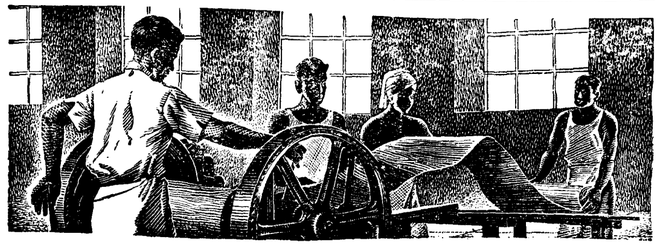
World of Jute

Favourable Factors

TRADING in the jute goods market has been on a quiet note most of the time during the past week. In earlier dealings, hessian has been particularly under pressure due to speculative activity in the Fatka. Toward close sentiment has been sought to be bolstered up by rumours about devaluation of sterling. On Thursday a more probable rumour has succeeded in attracting the attention of marketmen. Rumour has it that jute goods stocks at the end of November have shown a sharp decline from the previous month's level. From the trend of shipments during the month, a decline in stocks is generally anticipated. According to a notification issued by the Joint Chief Controller of Imports and Exports, jute goods licensed for shipment during November totalled 79,880 tons compared to 72,732 tons in October.

The revival of interest in world markets in Indian jute goods has stemmed from a number of factors. It is obvious that raw jute is playing an important role in the present situation. Being completely at the mercy of Pakistan for the supply of their raw materials, the continental mills have been priced out of world markets. In Dundee, for instance, conditions are far from satisfactory though outwardly the industry seems to be doing quite well. In the present context of a buyer's market in jute goods, protection to the indigenous industry seems to have imposed severe handicaps on other industries in the UK. Industrial users of jute goods in the country have been finding it increasingly difficult to pay the higher prices asked for by Dundee for its products, and in recent times there has been a steady increase in the consumption of substitute packaging materials. It is estimated that at present 11 per cent of the annual jute consumption in UK has been accounted for by substitutes. There are indications that, left to themselves, consumers in that country will be only too glad to take the comparatively cheaper Indian goods.

The American jute market has also been quite favourable to Indian goods. Though no substantial increase in the demand for burlap in US is foreseen in view of the heavy purchases by consumers in the past few months, the fact that burlap still figures as a low priced commodity will ensure a steady offtake for Indian hessian. A significant development in the American burlap scene is the report that all available burlap in Japan will be required for sacking this year's bumper rice crop in that country. With Japan out of the reckoning atleast for the time being, with the continental mills struggling to keep themselves just alive, and with Pakistan's production not yet so high as to be able to supply the bulk of world demand, it seems quite likely that Indian jute goods will enjoy continued popularity in world markets.



★

The jute goods market opened on a quiet note in the continued absence of foreign business. Hessian 40"×10 oz opened unchanged while, due to overnight speculative interest, heavy goods were better with B Twills Ready gaining eight annas to quote at Rs 120-4. On Tuesday, after a steadier opening, prices developed a sagging tendency all along the list. Hessians were particularly weak due to selling pressure in the Fatka. Hessian 40"×10 oz Ready reacted to Rs 45-8 with B Twills Ready also dealing in sympathy to Rs 120. The reactionary tendency continued to be in evidence when the market opened on Wednesday but mid-way through the days session prices were pushed up due to purchases by bull speculators who were influenced by rumours of sterling devaluation. Scattered business was also reported both in hessian and sacking on shippers account. Hessian 40"×10 oz Ready recovered to Rs 46-2 with B Twills also moving up to Rs 120-12. Heavy speculative buying lifted up prices on Thursday. Hessian 40"×10 oz Ready gained four annas to be finally placed at Rs 46-4. B Twills Ready forged ahead sharply to be done at Rs 122 against previous closing of Rs 120-12. With the time for the release of stock figures drawing near, the attention of marketmen has naturally been diverted to speculations about the size of stocks with mills at the end of November. In view of the satisfactory shipments during the month, it has been generally expected that stocks will show a decline as compared to the previous month. On Thursday it was rumoured that the decline had been quite heavy. From the speculators' special interest in sackings it is to be inferred that compared to hessians, sacking stocks have recorded a sharper decline.

The table below gives opening and closing prices for the week.

	Opening	Closing
	Rs. a.	Rs. a.
Hessians:		
40" × 10 oz. Ready ...	46 0	46 6
40" × 10 oz. Jan./March ...	45 4	45 4

L. Twills ...	134 8	135 0
D. W. Flour .	140 4	140 12
Sugar Bags .	131 8	140 0

The raw jute market has been displaying an irregular trend during the week, sentiment having been largely governed by the day-to-day developments in the gunny section. The market began the week on a quiet note as mills showed interest only in lower rates. Toward midweek, moderate mill interest was noticeable and consequently the undertone became steady. With the goods section displaying a firm tendency, the raw jute market also encountered fresh interest, on Thursday. Fair mill business was reported done throughout the day, with Assam Bottoms placed at Rs 31-4 per maund. Business done during the week include: Deshal Bottoms at Rs 30-4, Murshidabad District Tossa Bottoms at Rs 31, Daisee Mesta Bottoms at Rs 29, Daisee Mesta Kiddles at Rs 31-8, and Jungli Mesta Bottoms at Rs 28, all per maund.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

A LEADING BANK IN SOUTH INDIA

World of Tea

Setback in Export Quota Price

THE price of Tea Export Rights, which had been showing a rising tendency during the past few weeks, has suffered a setback during the week under review. A great shortage of export quota has been experienced with the recent heavy foreign demand, because the Government's export quota releases have been very small so far this season. The main factor, which is apparently inhibiting the Government in making a bigger quota release, is their anxiety to ensure that enough tea remains for internal consumption. But traders are under the belief that the current season's crop is much bigger and that, even with the crop regulation scheme now in force, the total production will remain adequate for demand.

With the result, the export quota price developed a steady upward trend and touched a new high of 102 pies per pound toward the end of last week. The rate declined at one time to 81 pies, to quote now 93 pies. The main factor to this setback in price is the Government's announcement with regard to the increase in the export duty from As 6 to As 8 per pound for December.

The quota releases made so far, totalling 50 per cent of the gardens' best-year crops, are equivalent in quantitative terms to about 346½ million pounds. Thus, there seems to be considerable scope for further releases, even assuming that fair quantities of the 1956 crop were shipped out under special export licences earlier this year along with part of the 1955 carry-over.

As far as production is concerned, Northern-India gardens are expected to produce, this year, about 540 million pounds, and the figure for South India is estimated around 125 million pounds. Domestic consumption is estimated around 200 million pounds. This means, roughly 465 million pounds should be available for export from the 1956 crop, although a clearer picture of the supply position should be available in the coming week, when North-India's November output will be known.

Selling prospects for the industry are still considered to be reasonably satisfactory. As the supply position is not expected to improve during the rest of the current season, it is confidently hoped that tea prices will be maintained at reasonably high levels, increasing further the foreign exchange earnings tea.

The news of the increase in the export duty has, no doubt, a softening effect on the export auction prices. In the Export Sale held in Calcutta this week, most kinds were sold at slightly lower rates despite a fairly good general demand. CTC teas received more support than in recent weeks and were firm to occasionally dearer. The better orthodox Assams and non-wither Dooars were about As 2 per pound lower, while Medium, Low Medium and Plain Fannings were sold at one to two annas below last rates.

Whole Leaf grades were irregular although a few of the cheaper lines were slightly dearer. Darjeeling met with a fair demand, but were irregular. Following rates were quoted per pound, figures shown within brackets being the previous week's rates:—Clean Black Pekoe Rs 2-6-0 (2-7-0); Plain BP Rs 2-5-0 (Rs 2-6-0); Medium Assam BP Rs 2-7-0 (Rs 2-8-0) and Best CTC Assam BP Rs 3-2-0 (Rs 3-2-0).

In the Internal Sale, offerings amounted to 23,068 chests of Dusts for which there was a good general demand. The strongest feature of the sale was the black leafy Dusts from all districts, which were As 4 to As 5 per pound dearer, while the large grainy CTC Assams were also well supported and were fully As 2 dearer. The remaining CTCs were in good demand and sold well.

Commons, Dooars and orthodox Assams, all showed an irregular decline of about one anna per pound while non-wither Dooars were also one anna easier. Following rates were quoted:—Medium Dooars Dust Rs 1-15-0; Medium Assam Grainy Dust Rs 2-0-6; Medium Assam CTC Dust Rs 2-8-0 and Best Assam CTC Dust Rs 2-13-0.

A total of 2,223 chests of leaf grades were on offer, and there was a fair demand for teas with a clean leaf appearance although prices were generally about As 2 per pound below last rates. Residue descriptions were well supported and were firm and sometimes dearer. The Green teas, on offer, received fair demand at about last rates.

In the Cochin market, about 1,350,000 pounds were offered. Nilgri quality generally showed a marked falling way, but that of teas from other districts was maintained. A strong and active demand prevailed throughout at enhanced rates for all descriptions except high-growns, which were again easier following quality.

All Nilgiris met with useful support at a drop of As 2 to As 4 per pound, buyers following quality closely. Good Medium Brokens advanced by one to two annas, while Medium and Low Medium were keenly competed for at As 2 to As 4 above last rates.

Black Leaf Brokens and Fannings followed the upward trend of the market. All Whole Leaf grades were upto As 4 per pound dearer with the exception of Nilgiris, which ruled irregularly easier. Following rates were quoted:—Plain BP Rs 2-0-0; Low Medium BOP Rs 2-7-6; Medium BOP 2-10-6; Good BOP Rs 2-14-0 and Well-made OP Rs 2-12-6.

Port delays resulting largely from labour disputes have hit production and prices of tea in the Colombo market. Production for the ten months ending October 1956 is lower at 301 million pounds as against 318 million pounds in the corresponding period of last year. The lower production is attributed, partly to the slowing down of production by estates in view of shipping delays and accumulation of stocks.

In London auctions, offerings were 26,105 packages including 23,340 packages of Nothern India teas. Buyers were very selective and demand was mainly centred on well-made useful liquoring teas. There was a much weaker market for the thin liquoring Assam Broken Pekoes; but Low Medium and Common teas met with a good demand, although prices showed little change over last levels. The rate for Clean Common Broken Pekoe was nominally quoted at 5sh 6d per pound.

Tea stocks in London, as on the 23rd November 1956, were 94.89 million pounds as compared with 96.20 million pounds in the previous week and 88.48 million pounds a year ago. Landed between 17th and 23rd November 1956 were 10.46 million pounds, while deliveries during the same period were 11.77 million pounds.

WORLD OF BUSINESS

(Continued from page 1034)

net loss for the year, and this is accounted for by the loss sustained to the extent of Rs 66,555 due to the devaluation of the Pakistan currency, on the one hand, and the provision for increased reserve of unexpired business on all the departments, from 60 per cent to 100 per cent in the case of Marine, 40 per cent to 50 per cent in the case of Fire and Miscellaneous Departments, on the other hand. In spite of this the company is still in a position to pay a dividend of 6 per cent, free of income tax during the year, the loss being set off against the balance brought forward from last year.

The

QUALITY

that Endures

Three hundred years of history have helped to shape the character of Lloyds Bank. An unwritten charter of confidence has been fashioned from the experience of generations of customers whom it has faithfully served.

In its character is the quality that endures.

This story begins in 1888...

The world still awaits the adventure of Wireless . . . it's the age of the horse-drawn carriage. And people who talk of flying aren't airmen as yet; they're poets.

Calcutta is India's capital, and at one of its busy wharves, there's a picturesque mailboat from England, self-conscious in its new power of Steam.

Look away for a moment to something else that is new. There! In those crates . . . the first few cakes of a new soap: *Sunlight*. The crates say: 'Made in England by Lever Brothers.'

Bobbing away on porters' heads, the cakes go off to some obscure bazaar of old Calcutta and from there . . . on to journey's end: the homes for which Levers have made the soap.

That's how it was one summer day of 1888. Lever Brothers (then, a three-year old British enterprise) thought the world of *Sunlight*. Soon, thousands of bazaars were stocking 'the tablet that foamed' — and families became converts for good.

Little by little, the motor car arrived (the model with the turkey-croak hooter); then the telephone began to jangle in Indian homes. And in those homes, time wasn't standing still either. People were asking for new and varied products to meet their changing needs. So, Levers — developing in step with them — produced for the home such things as *Lifebuoy* . . . *Vim* . . . and *Lux Toilet Soap*.

This is becoming a story of familiar names, isn't it?

In 1922, Levers started making soaps in Calcutta — encouraged as they were by the increasing demand for their products. In 1934, a second factory went up in Bombay.

In 1926 came Dalda Vanaspati from Holland. And, with it, there started a revolution in India's nutrition — the use of a hardened vegetable oil for cooking. To manufacture *Dalda* in India, a new Lever Company was born in 1932: 'HVM' — the Hindustan Vanaspati Manufacturing Company Limited.

And still the Indian home called for newer and 'different' products. And so there came to India *Pears Soap*, *Erasmic* and *Gibbs* products, *Himalaya Bouquet* toiletries, *Rexona Soap* — familiar members of the Lever family. Marketing of these products led to the formation of yet another Lever Company in 1935: 'UTL' — United Traders Limited.

Now, you can't separate the tale of these products from the tale unfolding *within* Levers. The people in their factories and offices were changing, for one thing. Foreign experts were joined by the young men of India and today over four-fifths of Levers' executives are Indians.

Meanwhile, Levers were buying all the raw materials that India could offer. These purchases grew as manufacture expanded — till, in 1955, about 88 per cent of the oils and fats that Levers needed was supplied by India's fields and coconut groves.

An international partnership — that's what soon grew up in Levers. Foreign technical and marketing experience linked up with the talents and resources of India. Result? The Indian housewife today is supplied with products that are among the world's best.

Today, we are sixty-nine years from the crate of soap that, almost unnoticed, started Levers in India. Today, a new chapter in our story has opened with the association of Indian and foreign capital in Levers. Indian and British Directors work together on the Board, too. Here's a joint venture that serves the nation and advances with it.

Yes, the future arrives with each tick of the clock. And Levers face that future with a new name: 'HINDUSTAN LEVER LIMITED.' So the stories of HVM and UTL end, in a sense — because they've merged with 'Lever Brothers' to form Hindustan Lever.

But the Lever story goes on. For India's story goes on, and Levers have grown with India's needs and progress. As it has done for sixty-nine years, Hindustan Lever will continue to serve the Indian home.

THE INDIA MACHINERY COMPANY LIMITED

Dassnagar, Howrah.

OF the members of the rather bizarre crowd in India that self consciously describe themselves as 'intellectuals', none is more simple minded than a type that I shall call "the Nostalgic Nehruite". He is a fairly ubiquitous character and you will run into him in the oddest of places. You may find him, for instance, in the outer fringes of the communist party, though it is difficult to say these days whether or not his unctuous intonation of Hosanna to Mr Nehru is not just the new party line. You may also see him straying into the "Congress-of-Cultural - Freedom" lot, where probably his qualified praise of Mr Nehru is suitably muted out of deference to the chagrin felt in those quarters over the Prime Minister's "neutralism". Oftenest, however, you will find him in the naive sections of the intellectual left. You can recognise him by the fixation he has of the Nehru of the thirties. He will tell you that his present acceptance of Mr Nehru's leadership is out of lingering old loyalty and "inspite of him", and out of considerations of 'faut de mieux'. But he cannot disguise the fact that, to him, Mr Nehru's development, politically and morally, has been one of degeneration from revolutionary intellectual into a pedlar of political and economic worldly wisdom. Not for him, therefore, the Nehru of the fifties, the apologist of the Commonwealth, the temporiser over Goa, and above all, the compromiser over Socialism.

*

It seems hardly necessary to point out that all this is adolescent nonsense, and is the result of a certain kind of intellectual romanticism. The world's young always prefer their heroes dashing, and no fairy tale lets you interview the Prince Charming when he has become old and querulous with rheumatic pain. Nehru, the knight errant of progressive forces in the thirties, is, in the fifties, no rationaliser of personal psychological inadequacies of a number of young men, but an adult grappler with the intractable problems of life. It may be true that he was more interesting in the earlier role they assigned him of Hamlet of Indian politics, but he has since had other roles to play on the world stage. If one were to continue the Shakesperean analogy, we should perhaps call him the Prospero of our age, a wiser and maturer man with greater understanding and compassion than Hamlet ever showed to anyone. In fact, the preference of this picture of Nehru of the thirties which is, incidentally, not the true picture of the Nehru of the fifties, is possible only for those who have not grown up, and to whom ideology is a kind of minor vice. Unlike the communists, whose ideological affairs are full-blooded and orgiastic, these timid souls conduct their affaires decoeur on a perpetually flirtatious level and have always shied at the idea of marriage and settling down. Fancying that Mr Nehru was one like them, they find his complacence in political house keeping of the fifties something of a betrayal of their days of camaraderie.

*

Interestingly, this is an analysis of Nehru's development that is not confined to the emotional left; in fact, it is shared by people who would make odd company with them. Indeed, it is really a case of extremes meeting. These are folks who consider that time has knocked the nonsense out of Nehru and that he is now a "dependable and sober man". He does not spout red revolution any longer and he may, given time and tact, be tamed to ineffectiveness. This view has had something of a jolt since the Avadi session of the Congress, when Socialism reared its "ugly" head once again and has since then shown no intention of retiring into decent obscurity. But even so, the hope that nothing would be done too precipitously lingers.

*

The interesting thing about the analysis is that both its premises and conclusions are entirely wrong. It is the most important virtue of a book* crammed with good sense, that it brings out this truth with a wealth of documentation and persuasive charm. "Few legends are less justified," says Mr Moraes, "than the legend of Nehru as a man of vacillation and instability. If Nehru knows anything, he knows his mind. Over many years he has thought, read and observed deeply and on most matters he had reached definite conclusions. Indeed his activities, writings, and speeches, long before he assumed the Prime Ministership, reveal inexorably the shape of things to come." Mr Moraes' book is, in a sense, a detailed exposition of this thesis: The roots of Nehru's foreign policy, his attitude to communism, to Asian problems and international co-operation are traced back by him to Nehru's thoughts of the days when none in the Congress bothered about these things at all. Likewise, every aspect of the present idea of "Socialistic pattern of Society", and planned development including the firm and unwavering committal to the democratic way of effecting the change, has been foreshadowed by Mr Nehru's expressed view as early as his visit to Soviet Russia in 1927. On all the big basic issues, including those on democracy and non-violence and socialism, Nehru had made up his mind much earlier than is generally imagined.

*

Mr Moraes himself presents a picture of this development which I feel is somewhat simplified. According to this, having made up his mind on most basic issues fairly early in his career, Mr Nehru "was, like Fabius, willing to wait and bide his time". According to this view, there was "a strong calculating streak in his character which even his closest associates appear never to have suspected". This led him to "temporise and subordinate his long term aims" to "larger considerations" and "the long view". This reading of a close and calculating politician, who was evidently biding his time till Gandhiji and Patel should remove themselves from the scene, and is at long last putting into practice all his pet ideas, is somewhat melo-dramatic.

It is doubtless that the earlier popular picture of Nehru as spoilt child of the Congress family asking petulantly for the moon, and the Mahatma and the Sardar mollifying it by a variety of bribes and sophistry, is a silly caricature. It is also true that Nehru was no starry-eyed idealist with no particular grasp of detail or ability to master organisational complexity. Mr Moraes is quite correct in debunking the notion of Nehru as a pedlar of generalities and a poor organiser. Even during the pre-independent days, his eye for detail and capacity for inspiring confidence in a team was revealed in a variety of contexts. But, in redressing the balance in a distorted picture of Nehru as a "beautiful and ineffectual angel beating in the void his luminous wings", Mr Moraes has set the picture awry in a different direction. He has clipped the wings all right, but in the process made it appear a devil. The fact of the matter is that Nehru's ideals, like those of any man of intelligence and sensibility, have been continually developing and acquiring newer dimensions by fresh thinking. In his autobiography, Nehru writes that he "has had continually the feeling of growing up", and "dynamic" and "dynamism" are favourite words with him. Though Mr Moraes is quite right in saying that nothing that Mr Nehru thinks today is radically different from the hard core of political philosophy he had evolved for himself in the thirties, he has had its rougher edges sawn off, and the doctrinaire rigidity of some of his ideas, never very unbending, has relaxed further since then.

*

There are a hundred reasons for this mellowing, as they are bound to be in any growing man of intelligence, but the most important single influence in this regard in Mr Nehru's case was Gandhiji.

*

Mr Moraes discusses, inevitably, the relationship between Gandhiji and Nehru in a number of contexts and his comments are both acutely perceptive and illuminating. But, because of the central thesis of his, which visualises a man whose basic philosophy has undergone no substantial modification over the years, he under-estimates some of the decisive changes wrought on Nehru by Gandhiji. One of the

paradoxes of the Nehru-Gandhi relationship was this: Nehru, who had a natural science tripos from Cambridge and who was romantically in love with science, was in his political philosophy a man who generally argued in the thirties from first principles: he has had his head filled with all manner of "isms" and he could never accept any of the various moves that Gandhiji advocated until he had rationalised them in terms of his "first principles". Gandhiji, on the other hand, whom everybody considered hopelessly mystical in his attitude to things, had no doubt his first principles, too, but they were moral. In politics, he was greatly pragmatist and experimental, and had no absolutes whatsoever. In a celebrated letter to him, quoted by Mr Moraes in this book, Nehru passionately declaims against the cussedness of the working committee in not choosing to understand what socialism means. The sentence in it is particularly ironical in the light of later events: "It is hardly becoming for a reasoned argument to be answered by the cheap remark that the conditions in India are 'different' and the economic laws that apply elsewhere do not function here." Gandhiji's reply, characteristically, informs Nehru that he has looked up the dictionary for the meaning of the word "Socialism" and he finds that the dictionary does not take him very far. I cannot help recalling, in this context, that precisely the same situation obtains today when all manner of socialists are saying that Nehru is misappropriating the title of a Socialist; and Mr Nehru is stung into fury and tells them there are many brands of socialism and it is nobody's monopoly, and we must think of it in the Indian context.

*

I would consider this an enormously significant change—this conversion of Nehru from the absolutism which, to be fair to him, was qualified—of the thirties to the more pragmatic view that every

5 gallons of lubricating oil every day

— Rs 7950 in a year!

THERE'S a metals plant in a large industrial city saving Rs 7950 every year — just because they asked us at Standard-Vacuum for free advice about their lubricating problems!

One of our engineers visited the plant and noticed that a good deal of oil was being wasted — because of the manner in which important machinery was lubricated. Thanks to his recommendations, the factory now uses 1500 gallons of lubricants less each year, and the machinery is working more efficiently than ever before.

Looking after machinery

When our expert comes to visit you, he is backed by the world's greatest lubrication experience — no less than 90 years of it. Not only is he working with the right oils, a full range of MOBIL Industrial Lubricants, but he can give you expert advice on the maintenance of your equipment.

Correct lubrication is a matter for experts. Our advisory service is free — why not ask us to help you?

The Middle Class

THESE days, what does one hear at Company Meetings? Generally, I suggest, the theme that has been chosen by company chairman more often than not is simply summed up in one word: Disincentive. But the disincentive that is described is usually of the "snobbish" variety. For example, the rigours of the New Company Law usually come in for comment; and no new budget escapes notice, particularly from the point of view of its impact on the private sector as such. The rates of income tax on individuals also have their share of discussion; but the debate is carried on at the level of the higher salaries. I have long felt that an important area of society in this country has been friendless; and that it has possessed no sympathetic spokesman.

This void was filled the other day by Mr E. D. Sheppard, when he addressed the shareholders of Killick Industries Limited. He has built up a most logical argument before he reaches what I think is the focal point of his speech. The starting point of his discussion is the unique character of India's mixed economy; and this he defines anew. The term, mixed economy, has certain academic connotations; and, says Mr Sheppard, "Joint Endeavour" is more apt a descriptive of Indian conditions. That is to say, the State and all its citizens have certain tasks to fulfil; and for success in their implementation, we need co-operative action or, to use the Killick Chairman's phrase, "Joint Endeavour."

It follows that the climate must be created wherein it will be possible for all the participants to contribute their joint endeavour. In this regard, Mr Sheppard is dismayed by the impression he has received that there is to be "an official discouragement of incentives or individual gain." It seems to me that, while personal gain cannot be the overriding consideration in trade or industry, it is necessary at the same time to recognise that the motivation of private profit is vital for the expansion in activity of individuals. Indeed, so long as we have decided that Indian development is to be secured through democratic processes, there is the implicit need for the individual to play a part in development; and, therefore there is the explicit need to offer him inducement and incentive.

Mr Sheppard next addresses himself to what he calls distortions and misrepresentations. Firstly, capital today is "not an undesirable concentration of power and the accumulation of personal wealth" but rather "the savings of people which have been created by hard work and self-denial." Secondly, the private sector is neither anti-social nor anti-national. Thirdly, there is nothing "private" about the finances or working of the private sector. Fourthly, it is not the major corporate industries which alone constitute the private sector; rather, all activity outside of the units operated by the State belongs to the private sector. Finally, suggests Mr Sheppard, the private sector should more aptly be renamed the "People's Sector" whereas the public sector would be known as the State Sector.

Mr Sheppard's next point is that "a Joint Stock Company is nothing but a co-operative society in the fullest sense of the term." He has given the ratio of shareholders to workers in four industries to adduce this conclusion. The joint stock companie's "capital is created by co-operative faith in its venture, its direction is provided by those who reflect in their persons co-operative choice, its factories are worked by co-operative endeavour and finally its products are sold only if there is co-operation from the consuming public.

Another popular definition is, again, a misconception: the classless society which we aspire to "denotes a society from which has been banished hereditary privilege and unwarranted opportunity"; unhappily, the classless society that most people have in mind "is one in which all men are dragged down to a level of uniform poverty." This, Mr Sheppard says, would be a third class society, because "Class" can never be abolished by taxation or other legislative action. Class is a matter neither of money nor of social ambition; it is, instead, derived "from the free exercise of choice in culture, environment and the differences which life has to offer it".

Then, the Killick Industries Chairman reverts to the idea of incentives, and states that a dynamic society depends upon the creation of inducements "that lead to an increase in the total national product and thereby levels upwards and not downwards." This takes Mr Sheppard on to his central theme—the plight of the Indian middle classes.

As Eavesdropper so recently pointed out, the middle class has neither friends nor spokesmen. The politicians ignore it as if it were negligible. After placing the role of middle class in Indian society, Mr Sheppard warns:

"Unless this process of deterioration in its standard of life, and therefore in the morale of the people constituting this class, is arrested, an irreplaceable component of the industrial and commercial structure of the country will be dangerously weakened, and no amount of planning or legislation will be able to replace it or revive it."

In the past few years, "there has been an erosion of incentives in the case of most salaried people"; their general standard of living "has been considerably reduced". And, for such a state of affairs, taxation has mainly been responsible. So, suggests Mr Sheppard,

"... the time has now come when the inroads of taxation upon the earnings and on the standard of life of the middle class must be faced up to if there is not to be a collapse in the morale of that class which will be irreplaceable."

Mr Sheppard's conclusion is clear: the survival of an important segment in society, the middle class, lies now in doubt: it is for the Finance Minister to see that the middle class is not squeezed out by taxation.

EDITORIAL NOTES

(Continued from page 1031)

where rescued girls will be provided shelter. In the course of the debate on this Bill, a number of unverified assumptions found expression, as for instance, that the capitalist system bred prostitution and that Communist regimes have done away with it.

Though facts are inadequate to examine the validity of these alluring theories, it is generally true that the proximate coexistence of extreme poverty and abundant wealth provides an inviting environment for prostitution. It must, however, be conceded that pecuniary afflictions alone do not supply the motive. If it were so the evil must have been confined to the poor, which is far from the case.

The present Bill is obviously not inended to strike at the roots of the evil, with one single blow. What is sought to be eliminated is its presence in a formal and conspicuous way. Whether this will lead to its surreptitious emergence in more elusive forms must remain a haunting new fear. Some kind of segregation could be regarded as a prophylactic to general morality, as long as the evil is looked upon as largely inevitable. The stirrings of conscience, which have prompted this Bill, must be utilised to re-examine the social conditions in which carnal buying and selling is extensively practised. It is these conditions which are eventually answerable and have to be tackled.

Raising of Cloth Production Target Urged

In estimating the increase in the per capita consumption of cloth from 16 yards in 1955-56 to 18.4 yards in 1960-61, the Planning Commission have admitted that it may become necessary to provide for a per capita consumption of about 20 yards of cloth by the end of the Second Five-Year Plan. Subsequent discussions in the country have shown that it will be prudent to formulate cloth production plans on the basis of a minimum per capita consumption of 20 yards.

Addressing the shareholders of the Ahmedabad Advance Mills Mr A. D. Shroff cautioned Government that unless they took early steps to increase mill production substantially, the country would soon be overtaken by an acute cloth shortage. He based his argument on the assumption that the per capita consumption of cloth in 1960 would be in the neighbourhood of 22 yards. Consequently, the total requirement would be 10,000 million yards.

The Planning Commission have estimated that by 1960-61 when the Indian population would be 408 million, the per capita demand would be 18.4 yards requiring 7,500 million yards. This together with the 1,000 million yards of exports planned would bring the total to 8,500 million yards. Since mill production has been pegged to 5,000 million yards subject to an increase of 350 million yards for export only, the entire increase in production has been assigned to handlooms and powerlooms.

According to Mr Shroff, Government had in the first instance grossly under-estimated the increase in demand for cloth in the next five years. Secondly, even assuming that the total requirement would be only 8,500 million yards in 1960, it would not be possible for the handlooms and powerlooms to produce more than 2,200 million yards. That would leave about 1,200 million yards un-accounted for. On the estimate of 10,000 million yards, therefore, the gap to be filled would be much wider—nearly 2,800 million yards. In other words, mill production would have to be stepped up to 7,800 million yards. It was not an easy task for the mill sector to increase its capacity to produce 7,800 million yards. But Mr Shroff pointed out that though the expansion programme would call for an investment of nearly Rs 133 crores, the mill industry was prepared to undertake the responsibility.

Referring to the difficulty experienced by the consuming public recently, Mr Shroff averred that it was no extraordinary or unexpected phenomenon. The shortage was due purely to production not keeping pace with demand. Instead of accepting an explanation which was quite obvious, Government had put all sorts of constructions on the development and had victimised the mills by a substantial increase in the excise duty on all varieties of cloth (except coarse dhoties and sarees) from 1st September, 1956.

From the frequent appearance of scarcity conditions in the cloth supply position and the consequent high prices the consumers are obliged to pay for one of the most essential commodities, it would appear that unless Government take early steps to ensure that adequate supplies of cloth are available to the people, of course at equitable prices, they will run the risk of their attention being frequently diverted from the highly important tasks they have undertaken for implementation during the next five years.

*

Trombay Thermal Power Station

In the context of the completion of many big projects during the past five years and plans for the setting up of many more during the Second Plan, the news that a thermal power station is nearing completion in Trombay in Bombay State, may not excite any special interest in the general reader. But when he is told that the new Trombay Thermal Power Station is capable of producing 100,000 kilowatts of electrical energy and that such production represents one-half of what has been achieved by companies in the electricity supply industry during the last five years, he will certainly be interested to know more about this big project.

It may be recalled that the Planning Commission have estimated that an addition of 3.5 million kW will be required during the next five years. They have apportioned the installed capacity as follows: 2.9 million kW to State-owned undertakings, 300,000 kW to companies in the electricity supply industry and 300,000 kW to the lignite project and steel, cement, paper and other factories which will have their own generating plant. Thus the total installed capacity of power plant in the country will increase from 3.4 million kW in March 1956 to 6.9 million kW by March 1961. The Planning Commission have, however, pointed out that "as more systematic load surveys are undertaken and details of industrial programmes are determined, the estimates may have to be reviewed."

The Tata Hydro electric system has been playing a prominent role in the rapid progress that has been achieved in the industrialisation of the Bombay-Poona region by efficiently catering to the electricity needs of the region. Recently Mr J. R. D. Tata revealed that the system had taken further steps to augment electricity resources in the region by deciding to instal a third set at Trombay.

With its two sets of generators which will shortly commence working, the Trombay Thermal Power Station will produce 100,000 kW power and it is said that this power station is one of the most modern in the world. A significant feature of this undertaking is that the hydro-cum-thermal power provided by it will be the cheapest in the whole of India.

Apart from the fact that coal fired thermal stations should continue to occupy an important place in regard to provision of electrical energy in the country, the Trombay Thermal Power Station has become an urgent necessity in view of the undependability of the hydro electric system due to the vagaries of the monsoon on the one hand and the ever increasing demand made on the electricity supply industry on the other.

GATEWAY MARKETS

Easier Conditions in Oils and Oilseed Markets

RESUMING at higher levels and moving further up, Oils and Oilseeds markets retreated on lower foreign advices, weakness in the ready section, heavy profit-taking by option dealers and selling pressure from up-country centres. In general, bull operators were active sellers in futures, while spot houses were reluctant to buy in view of apprehensions regarding the change in the export policy.

In the Castorseeds section, buyers were virtually absent. With the result, values tumbled down under selling pressure from exporters, reflecting lower advices from the United States. May delivery opened somewhat higher at Rs 171-8 and declined gradually to finish at Rs 157-8, the highest touched being Rs 172-0. Ready was quoted at Rs 37-8 and Castor Oil, commercial, at Rs 22-0.

Groundnuts made a quiet start on reports of increased arrivals and discouraging spot advices. Although there was a recovery in mid-week, prices sagged again toward the close. Groundnut February hovered idly around Rs 145-8. In the ready section, Bold quality was quoted at Rs 30-0 and Groundnut Oil Railway Receipt at Rs 18-6.

The Linseed section presented, however, a firm front on reports of some demand for Linseed Oil from Australia. Linseed May opened at Rs 30-0 and, after touching a high of Rs 30-2, receded toward the close to Rs 29-0 on profit-taking. Linseed ready was quoted at Rs 36-0 and Linseed Oil at Rs 20-0.

Prices in the Cottonseeds section were barely maintained. February delivery opened at Rs 88-8 and, after touching a high of Rs 89-0, receded toward the close to Rs 86 in sympathy with the general trend of the market.

*

Gold & Silver

Quietly steady conditions prevailed in the bullion market. After a firm start, bull operators liquidated on lower spot advices, higher receipts and weakness in other commodity markets.

Increased tempo of arrivals early made a sharp erosion in Gold values. The downward trend was, however, eventually halted and the market rallied partially on improved spot demand, particularly from Madras. But lack of follow-up support and profit-taking trimmed the recovery. Arrivals amounted to only 500 tolas against an offtake of 3,000 tolas. Unrefined metal receipts totalled 2,300 tolas. There was no sale of Mysore gold.

Gold Mangsir started at Rs 105-8 and moved between Rs 105-10 and Rs 104-15-6, to finish at Rs 105-3. Spot moved between Rs 104-13 and Rs 105-0, while Soverign was quoted better at Rs 68-2 against Rs 68-0.

Silver continued to be inactive and fluctuated listlessly on small orders, mainly confined to jobbers. Arrivals

Bombay Review

World of Cotton

AShort-lived Recovery in Prices

THE long-awaited announcement with regard to the export quota of Cotton has been made this week. The Government of India have reviewed the export policy for raw cotton and have decided to release a quota of 50,000 bales of Bengal Deshi and 1,50,000 bales of other exportable varieties of short-staple cotton of ¾" and below for purpose of export. It has been further decided that the export duty on Bengal Deshi should be raised from Rs 50 per bale to Rs 100 per bale.

In the initial stages of the week, prices in the cotton market tended to improve on renewed suggestions about the prospects of an export quota since prices had substantially come down since the 'no quota' announcement was made. It was this trend of opinion, coupled with the firm trend in oilseeds and other commodities, which brought some measures of support in the futures section. The cumulative effect of these factors pushed up the price levels but the Finance Minister's surprise budget proposals produced a recession in prices. The market was almost caught napping and the tendency was to liquidate one's holdings.

The rise, however, witnessed in prices at the week-end as a sequel to the announcement of export quotas, proved short-lived. The rates drifted lower on account of the tapering off of the initial enthusiasm over the export prospects. The Jharilla contract, which was initially pushed up to Rs 647, receded to Rs 636, while the premia for ready cotton fluctuated within a narrow range.

Because of the doubling of the export duty on Bengal Deshi to Rs 100 per bale, it was stated that the competitive position of this growth had been weakened, particularly when Pakistan had been offering exports at lower prices, Japan, a main customer of Indian Cotton, had, for the time being, withdrawn from the market due to shortage of sterling, while the Continental buyers were not willing to pay higher prices. Thus, the premium on the export quota was marked down from about Rs 110 to around Rs 90 per bale. There was also an appreciable drop in the premium on the export quota for other varieties.

Thus the export quota announcement exerted little influence on the futures market. After a somewhat higher start, values drifted lower under persistent selling pressure on an unwilling market. Continuous arrivals of new crop at the terminals were also a contributory factor. ICC Jharilla March, after touching a low of Rs 631-8 from Rs 647, finished the week at Rs 632. ICC Vijay April opened steady at Rs 747. As buyers were absent, values took a downward trend under consistent general liquidation, resulting in the rate being quoted as low as Rs 734. The closing rate was a shade better at Rs 735.

The Spot section ruled comparatively steady with mills showing good interest in Khandesh, Berar and Jharilla varieties. They were also buyers of new crop Vijay and the Punjab variety.

In the export section, there was some demand for Bengal and Oomra following the announcement of the export quota, while Dholleras ruled somewhat easier. Business to the tune of 60,000 bales was reported to have been done with foreign buyers, subject to the issue of export licences. In spite of the uncertain export prospects indicated now, the general opinion is, that shipments will be effected in due course and the Government will be announcing another instalment of an export quota some time later in view of the bigger crop visualised for the current season.

In the foreign section, some business was reported done in American cotton. Spot lots of Sudan and Karnak were also in demand. In view of the increased offtake of long-staple Egyptian cotton by Communist countries and the equivalent decline in the quantum available for export to other countries, interest is now centred round the progressive development of Sudan as a producer and exporter of long-staple cotton.

Following rates were quoted:—Bengal Rs 600 to Rs 725; Oomra Rs 705 to Rs 735; Dhollera Rs 680 to Rs 700; Jharilla Rs 720 to Rs 760 and Vijay Rs 830 to Rs 840.

×

CROP PROSPECTS

According to latest reports, arrivals of new crop have been every day increasing in upcountry markets, particularly in Berar and Khandesh. Most of the badly rain-damaged cotton appears to have been already marketed and fresh arrivals show some improvement in quality. Pickings have been completed in Khandesh, but arrivals are comparatively slow at some centres.

Arrivals in the Punjab are reported to be heavy, but prices for the Punjab descriptions have been comparatively better owing to continued coverage by shippers against prior commitments.

The Karachi cotton market continued to rule firm as overseas enquiries and local mill demand were both brisk. Following rates were quoted:—4F Roller Rs 83-0; Punjab Roller Rs 86-8; 289 FNT Roller Rs 89; 289F Punjab Roller Rs 90-8 and SG Rs 96-8.

×

NEW YORK COTTON MARKET

Prices in the New York cotton futures market continued to ease due to hedging in current crops and commission house selling. The declining trend in loan entries was an unsettling influence in the current situation.

According to some trade reports, proposers of a compensatory payments plan for cotton farmers will make a drive for such a legislation when Congress convenes in January. Such a plan will permit cotton to seek its own market level with farmers receiving government payment on the difference between the market and some determined parity objective. Spot was quoted around 34.45 cents per pound.

×

LIVERPOOL COTTON MARKET

Trading on the Liverpool cotton market showed some improvement on American buying, which offset renewed hedging pressure, particularly in distant mixed contract positions. Egyptian contract Nov/December delivery was quoted at 60.00d and Sudan contract Nov/December at 61.30d.

×

CLOTH AND PIECEGOODS

The Cloth and Piecegoods markets, which witnessed steady conditions during the past two weeks, turned again dull following a perceptible diminution in the offtake. There was only moderate demand for ready goods. Although there were good enquiries, business materialising was negligible. There was even an inclination on the part of dealers to liquidate their stocks at slightly lower levels. The only re-

Olympus

T.T.K.'s Christmas Gift

ONE of the more recent discoveries about the admitted versatility of Mr T. T. Krishnamachari is a certain capacity for wily caginess when the situation calls for it. It is probable that the office and the occasion brought to the fore this perhaps unsuspected attribute, for such a closeness is a valuable gift in a Finance Minister. On Friday morning after question hour, Mr Satya Narain Sinha, Minister for Parliamentary Affairs, made the usual announcement regarding the next week's programme. With an exaggerated casualness, he dropped the information that, at 4-30 in the afternoon, the Finance Minister would make a "Statement". This created some mild interest, some members even going so far as to suggest that more taxes were in the offing, but they were frankly sceptical of such a possibility. So much so, when Mr T. T. Krishnamachari arrived at five minutes before the appointed time, he had an almost empty house, for, most members had left to attend the Civic Reception to Mr Chou En-Lai. Even those who were present did not have any notion of what was coming. In fact, not until the Finance Minister started his speech with the ominous words, "Ordinarily a speech is not necessary on the occasion of introducing a Bill. As titles, however, indicate, these two Bills are Finance Bills....", did the members sit up and take notice. But even then, the polysyllabic jargon of the detailed analysis of the economic situation was deceptively luring the members to relax and not until he came to his "detailed proposals" did the members really get at what was happening.

What was interesting from the point of view of Parliamentary tactics was the fact that, in a sense, these proposals were not a surprise packet at all. It is true that nothing in what the Finance Minister had been saying in the last few days could have prepared the public for early action. But, in retrospect, when the proposals did come, they were the inevitable culmination of his earlier utterances. This analysis of the economic situation on Friday was not particularly different from that in his note to the AICC or in his various replies to questions in Parliament. But the note of urgency was kept at a fairly low key on the earlier occasions by the languid manner of presentation and by the deft use of jargon, which appear as insubstantial as the manna from heaven!

Among the minor conundrums posed by the new proposals is their timing. Though the earlier excise levies on cloth in September have familiarised us with mid-year Finance Bills, the surprise at the new proposals was general. For one thing, the levy on cloth had the direct justification of a desire to siphon off excess profits that were being made under conditions of scarcity: and, though a similar claim has been made for the present proposals also—especially in relation to art silk yarn—the urgency seems somewhat exaggerated. Likewise, though it is undoubtedly true that the price situation has markedly deteriorated in the last two weeks, the disinflationary effect of the current proposals does not seem likely to be significant. Again, the embarrassments over the foreign exchange position, which is stated to be another reason for the present proposals, are only remotely and indirectly likely to be relieved by the new set of import duties on luxuries. And finally, and perhaps most bafflingly, from the point of view of extra revenue, the timing and actual proposals seem somewhat odd. It is quite true, though Mr T. T. Krishnamachari did not mention it in so many words,—in fact, some aver cynically that Mr T. T. Krishnamachari's speech is more remarkable for what it left unsaid than for what it said—that the huge budget deficit of the State and Central Governments for the current year is somewhat serious and is making inevitable large drafts on created money. But then, the total estimated yield from the proposals now made, especially for the States, is infinitesimal when compared to their needs of the current year. (The budget deficit is of the order of Rs 400 crores).

Even of the Rs 16 crores sought to be obtained by the new proposals, the amount that can be netted in for the current year is only of the order of Rs 6 crores. For, the proposals that will come into immediate effect are those relating to excise and import duties: all proposals for direct taxation—and these are the really interesting proposals—are expressly stated to become effective only for the next assessment year, 1957-58. In other words, these proposals could easily have formed part of the regular budget to be presented next spring without making the slightest difference from any financial or fiscal point of view.

What, then, was the real reason for bringing forward these proposals now? The most commonly canvassed reason here is that they are intended to let the public at large know that the Congress and the Government are determined to put teeth into their professions of Socialism. Interpreted in terms of party political manouevres and not to put too fine a point on it, these proposals are considered, especially by non-Congressmen, to be an election stunt. The Leftists, especially, are inclined to be querulous since, according to them, the Congress is getting the best of both the worlds by seeming to mulct in a big way the conventionally rich by these proposals and yet not doing so in fact.

As to the proposals themselves, it would be premature to comment on them without studying the Bills in detail. As I said earlier, the really interesting part relates to direct taxation. And though the Stock Exchanges have promptly and characteristically reacted adversely, the levies themselves are deferred levies and the losses suffered by frenzied selling may well turn out to have been needless. (This reading is, of course, on the assumption that selling did result in ultimate losses, which, notoriously, need not always be the case).

First among the new proposals is the decision to revive the capital gains tax. This is a levy to which every one has reconciled himself, especially since the publication of the Kaldor report. As is well known, capital gains tax was first introduced in 1947, but was dropped in 1949. The new proposals retain the definition of capital gains already in Section 12(B) of the Income Tax Act, but make some important changes in the mode of computation of taxes on these gains. For instance, instead of separately reckoning the tax on the Capital gains on a slab system and adding it to the tax on the rest of the total income of an assessee as was the practice in the past, the present proposal is to take a third of the capital gains as part of the total income and tax it at the appropriate rate. This, obviously, means more revenue. Another provision relates to the mode of computation of the gains. For the purposes of determination of the actual gain made by the transfer, sale, or exchange of the capital asset, the assessee is allowed to substitute the fair market value on 1-1-1954 for the original cost as the amount to be subtracted from the amount for which it is transferred, sold or exchanged. (In the old law a similar option existed, but the relevant date was 1-1-1939.) A somewhat stringent provision in the new proposals relates to the withdrawal of exemptions from the operation of the Section 12(B) formerly granted to certain kinds of transfers, like those consequent on gift and compulsory acquisition. The latter especially is open to the objection that this is an indirect way of nibbling at the fair compensation principle.

There is not likely to be much serious opposition to the new levy on the capital gains. Even the Matthai Commission, which had recommended in 1954, against its levy "for the time being", had conceded that a change in the situation might make it "an eminently suitable subject for taxation". The change contemplated by the Commission has, in fact, taken place. We are on the eve, in the words of the Taxation Enquiry Commission's report, "of an era of continuously rising prices and profits and capital values, owing to the accelerated tempo of the development or otherwise."

The other proposal relating to direct taxation is the increase in supertax on dividends declared in excess of six per cent. This proposal is, again, less a revenue than a fiscal measure and is interestingly linked with the allied proposal regarding deposit with the Government of a percentage of the depreciation and development rebate reserves.

The idea seems to have a number of interesting aspects: Firstly, and obviously, putting more money out of circulation; and, secondly, it aims at the deliberate ploughing back into productive purpose of substantial portions of the profits earned. As the Finance Minister explained, these fiscal devices are better than legislative fiats restricting dividend distribution. Thirdly, with the proposals for compelling the handing over to Government of a portion of the depreciation and development rebate reserves, the deliberate and purposeful employment of all the resources of the economy along lines charted by the Plan, has become more pronounced. In other words, with these proposals, planning in India has entered a new and highly interesting phase. It is very premature to comment on the possibilities, since, in the first place, the full implications of the proposals are to be studied in detail: and, secondly, we must also watch the provisions in actual operation. On a first view, the only comment possible is that these are proposals of far-reaching and decisive importance. Some consider them the thin end of the wedge to make the private sector finance the public sector, and fear

Delhi Review

Development of Electrical Manufacturing Industry

FROM present indications, it may be safely assumed that the Indian Electrical Manufacturing industry will be called upon to increase substantially its output in coming years. Apart from the fact that it has been estimated that the demand for electric power will increase at the rate of 20 per cent per annum coupled with the plan to raise the total installed capacity of the country to 6.9 million kW in the course of the next five years India's enormous utilisable hydro-power resources which have now been roughly estimated at 35 million kW at 60 per cent load factor by the Central Water and Power Commission, also points to the vast power potential yet to be harnessed.

As the survey has taken into account only resources capable of development on technical and economic considerations, is based on readily available data and covers only four of the six regions into which the entire country has been divided for the purposes of the survey, it may be expected that when the survey for the entire country is complete, it will be disclosed that the hydro-power resources are much more than 35 million kW.

With the considerable progress already made in generation and utilisation of electric power and with the plans for further sizable development in this direction, it is to be expected that there will b a tremendous increase in the demand for electrical goods required for servicing the increased power generation.

Speaking at the fifth meeting of the Development Council for Heavy Electrical Industries last week, Mr Manubhai Shah, Union Minister for Heavy Industries, estimated that production of electrical goods in the country would have to be raised to Rs 60 crores, per year from the current rate of Rs 20 crores. Referring to the working of the electrical manufacturing industry he pointed out that it had made rapid progress in recent years. The total production which was valued at Rs 7 crores in 1951 had risen to Rs 17.5 crores in 1955. The production of transformers had gone up from 194,000 KVA to 564,700 KVA during the period 1951 to 1955. The production of electrical motors had increased from 143,000 HP to 252,000 HP. Similar increases had been recorded in the production of cables and wires and switchgear and control gear.

With a view to meeting the demand for heavy electrical equipment required for power projects Government have recently decided to set up a heavy electrical equipment plant in the public sector near Bhopal. This factory is expected to go into production in 1960. According to Mr Shah there is easily scope for at least one more unit of the size of the proposed factory at Bhopal.

So far as other electrical goods are concerned, the field is almost entirely left open to the private sector. As the Minister for Heavy Industries as pointed out, the country is far from self-sufficient in many kinds of transformers motors of large ratings and special purposes motors, cables etc., it is upto private enterprise to take steps to expand where possible and instal new factories where necessary in order that the gap between supply and demand is filled as quickly as practicable.

*

Progress of Community Development Programmes

Speaking at the Second Inter-State Regional Seminar on Community Development at Hardwar, Mr S. K. Dey, Union Minister for Community Development, entered a strong plea for a close association of members of Parliament and State Legislatures with the programmes of community Development. In this connection he revealed that the Union Ministries concerned were contemplating the establishment of Extension Agencies with a view to impart special impetus to the development programmes of the States.

Evidently Mr Dey's sense of urgency has stemmed from the impressive progress of the Community Development Programme. According to the latest reports, there were 622 community development blocks and 853 NES Blocks in operation in the country by the beginning of November 1956. The total number of villages covered was 1,32,563 and population covered 110.3 million. On the agricultural side, according to surveys over a period of two years conducted by the National Sample Survey Organisation, the increase in production in the projects vis-a-vis the areas immediately outside has been of the order of 20 to 25 per cent.

Upto June 30, 1956, nearly 2800 key village centres had been started and 275,000 number of pedigree animals and birds supplied to the villagers. The additional area brought under irrigation and reclaimed totalled 2,509,000 acres and 1,423,000 acres respectively. Nearly 70,000 people had received basic and refresher training in cottage industries and crafts. Additional employment was found for 88,000 people in addition to part-time occupation for another 5,14,000 people. On the social side, medical, veterinary, public health and sanitation facilities, as also facilities for education are being brought increasingly within the reach of the villagers. People's contribution in cash, kind and labour in the execution of the programme is also impressive. Upto the end of June 1956 it was Rs 30.42 crores as against Government expenditure of Rs 51.50 crores. Thus public contributions amount to over 50 per cent of the total Government expenditure, working out at Rs 4009 per one thousand persons.

The fact that within six months of the inauguration of the Second Five Year Plan considerable progress has been achieved in Community Development and National Extension—the target for the first Plan was the coverage of 123,000 villages with a population of about 80 million—indicates that there will be no difficulty in achieving the target of bringing the entire country under the national extension service. It is, however, to be admitted that mere extension alone will not enable the nation to achieve the real aim of the community development programme.

NORTH INDIAN MARKETS

Grains Market Quiet

QUIET conditions have prevailed in Grains market during the week under review, thanks to Government's decision to expedite shipping and other arrangements in connection with the programme for the import of foodgrains. Early last month, two shiploads of American wheat, under the Indo-US Farm Products Deal, berthed in Bombay; and it is understood that 35 steamers have so far been chartered to bring more wheat.

In regard to Rice imports from Burma, under the five-year arrangements for the purchase of two million tons, the 1956 programme of shipment has also been completed. India is to receive three lakh tons this year. Out of this, about 2.45 lakh tons have already been despatched, and arrangements for the shipment of another 24,700 tons have already been made. It is expected that, by the end of the year, the remaining 30,000 tons will be shipped to India. It is understood that five lakh tons are due to be imported from Burma at the rate of 33 pound sterling per ton against this year's price of 34 pound sterling per ton.

Meanwhile, prices of foodgrains in the Delhi market developed a slightly easier tendency. Farm quality Wheat registered a fall of As 8 per maund to Rs 20 on increased unauthorised arrivals. Rice held steady with minor changes, while Gram improved modestly on increased demand. Maize was also in good demand due to which the rates were quoted slightly better. Bajra showed small losses for want of buyers. After an early spell of steadiness, Moong rates softened on increased arrivals. Urad was steady.

In the Hapur market, Wheat was quoted lower at Rs 15-12 per maund for average quality and at Rs 16-12 for farm quality. Rice prices also ruled quiet with the increased arrivals of the new crop in the market. Offtake of Gram was better, local quality quoting Rs 13 per maund and the Punjab quality at Rs 13-4. Bajra was much in request due to good seasonal demand and prices appreciated fractionally to Rs 14-12. Despite good demand, Maize eased during the week to Rs 12-8 on better supplies from the producing centres of near eastern districts. The market for Peas ruled quiet although bulls tried to give support to prices.

In the Bombay market, a substantial improvement in the prices of seasoned Rice provided the main feature of trading. This was attributed to a fairly active trade demand in the face of continued small arrivals. Several qualities, on balance, gained Rs 8 to Rs 10 per candy.

In the Wheat section, traders reported further depletion of supplies of superior qualities on account of the continued ban on imports into the City. Only a moderate business was reported done in the Punjab farm quality at Rs 210 to Rs 220 per candy.

Prices of Bajra recorded a modest fall of about Rs 5 per candy following the receipt of supplies from Uttar Pradesh and the Deccan. The tendency of Jowar continued to be steady with the Sholapur quality finding buyers at Rs 190 to Rs 195 per candy.

The Peninsula

A Golden Deed

IT is seldom given for the head of a government, howsoever powerful, to "strike gold" as his first deed in office. Mr S. Nijalingappa can claim this rare privillege. He says that taking over of the Kolar Mines is the first significant act he has done after his assuming charge of the office of the Chief Minister.

There is a saying that what is lightly got is cheaply valued. In this case, the erstwhile management, the foreign company, honestly feels that the conditions of the purchase form a fine bargain for the State. The privilege of taking over India's only gold mine would have been denied to Mr Nijalingappa, if the State Government were disposed to accommodate the Company's demands to a greater extent and yielded forthwith to the pressure of the Centre on that behalf.

The question of compensation is now a closed chapter and it would be futile to say anything about it. From the Government's side, they contend that the monies paid to the company in return for their interest are ample, taking all the economic facts into consideration. This is not so cheap a bargain as the other side will strive to interpret it.

But personally for the new Chief Minister, the pleasure is something of a legacy, behind which lie the determined and persistent efforts of previous Administrations and some of his colleagues in particular. In his address at the public meeting at Oorgaum, on November 29 he recalled latter fact with due courtesy and gratefulness. The Prime Minister, his colleagues in the concerned Ministeries, the former Cheif Minister of Mysore and the industries Minister, Mr S. Siddaveerappa and the general body of legislators of the old Mysore State where all mentioned as having contributed to the achievement of nationalisation.

Nor did he overlook the great work of the pioneers of England who developed these mines to their present state. In the last 80 years these men were operating the mines, Mr J. T. M. Taylor, whose family was associated with mining in Kolar all through came in for special mention. Mr Nijalingappa hoped that Mr Taylor would help the Government in operating the mines, as he believed that the Government would do well in utilising his experience, drive and power of organisation.

This out-spoken reference should close all speculation as to the continuance of the top personnel in the actual administration of the mines. The management has changed. It is now certain that the future administration of the mines will continue to seek the benefit of regular advice from those who could undoubtedly claim the best and the most intimate technical knowledge concerning their operation. This is a welcome reaffirmation of policy.

Mr Nijalingappa made a fervent appeal to the workers, reminding them of the great task the State Government has undertaken and of the great value of their co-operation for success. He wanted them to feel that a change in the management did not involve a change in their interests. As far as the workers were concerned, he gave the assurance that their interests would be fully taken care of and the existing amentities would not only be maintained but would be increased. It was a good augury for labour relations that he promised to open discussions shortly on the related problems with the workers' representatives. The Minister's claim that he and all other ministers were also workers and that he saw God in them smacked of hyperbole.

In the course of the speech, the Chief Minister was also drawn into a wider area of present-day economic problems. The advice that he gave would be appropriate for any audience in Mysore or outside. Kolar is a thoroughly cosmopolitan area, representing a mixture of Kanarese, Tamil and Telugu workers, with a conspicuous sprinkling of a few other groups also.

It is therefore very necessary that the compactness of the labour interest should be protected against the inroads of linguistic dissensions. The Chief Minister's speech itself which was in English was rendered in Tamil so that a substantial percentage of the workers present could understand him then and there. As one who had occasion to know first-hand the sinister expressions which new ideas of social separateness could take, the mere sight of that multi-lingual audience hitherto free from any sectional animosities must have instilled in him a new faith.

One likes to repeat his words: "It is good to know that we are the citizens of the sanest nation in the world. Prime Minister Nehru has raised the country in the estimation of other nations. Our history, culture, literature and art has influenced the World in the right direction for centuries. The country is now following the path shown by Mahatma Gandhi. Therefore all should feel proud of this heritage and every body should rise above narrow considerations, especially when the country is called upon to solve many big problems." Amidst laughter, he also put across another appeal to lessen efforts of the people in the direction of increasing the population.

Mr Nijalingappa is not stranger to Kolar. His previous visit, however, was in a totally different capacity. He came as a political prisoner eighteen years ago and his only association with the gold fields was through his gaol-mates, of whom forty to fifty were undergoing terms for smuggling gold.

There is a slight historical error in the claim that the Kolar Gold Mines have been nationalised for the first time. It is true that what is meant is only that a private concern would yield place to State ownership and management.

There are records to show that Tippu Sultan was operating some of the mines through an agent of his. The venture did not proceed far enough, persumably owing to the poor state of technical advance of that time and the lack of adequate finance.

The present industry owes its first origin to a twenty-year old mining lease, which an Irish soldier secured from the Chief Commissioner of Mysore in 1873. This lease was surrendered back within four years, after which the then Government entered into an agreement with another group of industrialists, also drawn from the army. Certain changes and revivals of this lease had been made subsequently, until Messrs John and Taylor and Sons took over.

The most recent agreement between them and the Mysore Government dates back to 1935. The lease period contracted for therein was cut short and two months ago an Act was passed in the Mysore legislature to take over the mines. It is only since 1949 that the owning company was having their headquarters in India and functioning through a subsidiary rupee company. Of all the four mines which were working from the beginning, the Mysore Mines, the Champion Reef, the Nundydroog and the Oargaon mines, the last was closed in 1953.

New Mysore's Second Five Year Plan

In the re-allocation of the funds allotted to the States under the Second Five-Year Plan, after the Reorganisation of States, Mysore has received Rs 14,456.16 lakhs as against Rs 8,060 lakhs in the original allocation. This sizeable addition has been made because to greater Mysore has been added parts of Bombay, Hyderabad, Madras and Coorg. Bombay has given to Mysore from out of its original allotment Rs 3,644.03 lakhs, Hyderabad Rs 1,865.73 lakhs, Madras Rs 510.60 lakhs and Coorg Rs 375.78 lakhs. The total additional allotment received is Rs 6,396.14 lakhs.

The New Mysore State covers an area of over 74,000 square miles with a population of over 19 millions. On a rough estimate the land area of the new State will be nearly 2½ times and the population nearly double that of old Mysore. The new State, unlike the old, is not land-locked but has a coast line of 300 miles with a number of good minor ports.

Evidently in view of the excellent potentialities for hydro-electric devlopment in the region, the new State's Second Five-Year Plan has laid emphasis on irrigation and power. The allotment under this head is Rs 6,043.81 lakhs and compares with the allotment of Rs 3,790.75 lakhs for the old state. Taken together, agriculture and community development and irrigation and power account for nearly Rs 90 crores out of the total of Rs 144.56 crores. It is evident that the planners think that without rapid development of agriculture and power capacity progress in other directions cannot be maintained. The third place from the point of size of allotment goes to public health which gets Rs 1321.50 lakhs. The next place is given to education with an allotment of Rs 1,141.40 lakhs and then comes industry with Rs 1,046.24 lakhs.

In view of the fact that the integrating areas are industrially backward the new State will be faced with the problem of catering to the needs simultaneously of a part represented by the old state which is industrially developed and a comparatively less developed region. It is gratifying to note that the plan has given the highest priority to generation of electricity. In this regard it is pointed out that along with hydro-electric projects, plans should be drawn up even now for starting a thermal station in view of the undependability of the hydro electric system which is governed by the vagaries of the monsoon.

It is somewhat disappointing to find that transport and communication is given the last place in the list under the Second Plan as it gets an allotment of only Rs 117.71 lakhs. With the prospects of getting any great help from the railways rather remote it stands to reason that the new State itself will have to shoulder the responsibility of improving communications within its borders. This has become urgent because one of the major drawbacks of some of the integrating areas is lack of adequate internal communications.

*

Means and Ends

According to the chairman of the Praja Socialist Party, Mr Ganga Sharan Sinha, the economic policy that is now being followed by the Congress will not lead the country to a socialistic pattern of society but will only breed a kind of State Socialism. In support of his contention he points out to the prevailing notion among Congressmen that nationalisation is part of socialism. Instead of viewing nationalisation as only a means to reach the goal of socialism, the current trend in Congress thinking seems to equate it with the end itself. Moreover, nationalisation has come to mean only the transfer of management from private individuals to a Government servant without any radical alteration in the basic structure of the enterprise taken over. There is thus a fundamental difference between the Congress viewpoint and that of the PSP which understands by nationalisation the taking over of private enterprises in the larger interests of society and running them with the active participation of workers, consumers and experts.

The second point on which the PSP finds confused thinking on the part of the ruling party is land reforms. An overall picture of the agrarian situation in the country will reveal the haphazard manner in which this important problem is being tackled by various State Governments. Mr Sinha complains that though it is loudly proclaimed that great strides have been made in land reform, the stark fact remains that in practically every State, evictions of the actual tiller of the soil is going on unimpeded as before. Entering a strong plea for co-ordinated development of agriculture and village industries the PSP chairman points out that there should be some relationship between the prices of agricultural products and industrial goods in order that the agriculturists can cope with the rising trend in prices of industrial goods.

Though it will be rather difficult to dissociate the context of the coming elections from the PSP criticism of nationalisation as it is being implemented, it is undeniable that undue emphasis has been laid on nationalisation by Congress.

South Indian Markets

New Arrivals Depress Pepper Prices

PEPPER markets, which had been ruling steady, during the past few weeks, have turned quiet under pressure of arrivals, both at Cochin and Alleppey. New arrivals, which averaged 125 candies until now, are reported to have augmented to 250 candies with chances of further increase hereafter. Trade circles are expecting a further fall in prices as there is very small hedge selling by exporters in any of the foreign markets. In the Alleppey market, offtake was 125 candies which was out through at rates varying from Rs 550 to Rs 650 per candy, according to quality. In the Kozhikode market, Wynaad quality was quoted at Rs 800 and the Country quality at Rs 750 to Rs 760 per candy.

Farm reports regarding the standing crop are encouraging. Trade estimates place the new pepper crop at round about last season's output. Carry-over from the previous season is estimated at 4,000-tons and, with this, the total supply of the season will exceed 28,000 tons.

Although Communist countries are coming in for substantial quantities of Indian pepper, their bulk purchases now and then fail to give proportionate boost to prices. A steady flow of orders from abroad is necessary to keep pepper prices at a satisfactory level.

In general, operators are still banking upon the belief of a potential demand from Russia during the current month. But, with the closure of the Suez Canal, chances of Russian buying in the near future seems to be remote. If at all Russia buys, she is expected to buy in lots of only a few hundred tons for shipment and not in quantities of thousand tons to be shipped during a particular month as was the case in the past.

It is also surprising to note that New York is not putting in any notable enquiries although Malabar pepper is the cheapest. Although demand from Europe and the USA is reported to be poor, Sarawak and Lampong are steady due to sizable buying by a speculator there. The only redeeming feature is, that the present price is considered to be cheaper. In the New York market, Malabar spot is quoted at 29¾d per pound and Black pepper at 22¼d. In Singapore, Black Sarawak is quoted at 89 Straits dollars per picul of 133.3 pounds.

*

Coffee

Coffee stocks with the Coffee Board, as on 1st November 1956, were about 9,972 tons. Assuming that the internal market will absorb 2,000 tons per month for November and December, the total required will be about 4,000 tons, leaving very nearly 6,000 tanas for carry-over. The November and December figures will indicate the extent of arrival of the new crops which, by the close of last year, was 3,778 tons.

*

Groundnuts

Prices in the Madras Groundnut market, after showing an easier tendency, steadied up a little toward the close. Arrivals averaged 60 to 70 tons per candy and these were taken up by small crushers. The rate for superior oil-quality seeds, after touching Rs 153 from Rs 160, improved at the close to Rs 158 per candy. The rate for Bold varieties was quoted around Rs 155 per candy. Big buyers did not show much interest due to the prevailing high prices.

In the Groundnut Oil section, the rate for the ready position was quoted at Rs 330 per candy. Calcutta interests and Madras vanaspati manufacturers bought only small quantities in order to meet their immediate requirements.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were as usual during the past week when clearances were good. Prices advanced by a further six pies per pound although UK buyers showed strong resistance. Inferior fifths continued to rule firm, partly on account of large sales having been effected and partly to an increase in the local demand.

Arrivals of Buff hides were fair and some quantities were reported to have been cleared at unchanged prices. A fair quantity of Cow Calf was reported to have been cleared at a further one anna advance.

In the Tanned Skins section, market quality Goat Skins were unchanged to one anna higher, while Sheep Skins were As 2 to As 3 per pound higher.

In the export section, the position was very firm, particularly for Goat Skins of good quality.

In the Raw Skins section, Bangalore goat skins were reported to be Rs 10 to Rs 15 per 100 skins higher with no change in Sheep Skins.

*

Cashew

According to latest informations, the new African crop will amount to 80,000 tons, which will be the highest on record. Equally optimistic are the estimates regarding the Indian crop. If climatic conditions are not unfavourable, 1957 is likely to turn out as a bumper year for Cashew. The possibility is reflected in the forward contracts offered by the American buyers of Cashew kernels. Their offers do not exceed 40 cents as against the spot price of over 50 cents per pound.

It is also reported that arrivals of cashewnuts from Africa will be delayed by a few weeks on account of the re-routing of ships round the Cape. Usually, the inflow of African nuts starts in December. Cashew processors on the West Coast are expecting larger supplies of raw nuts in 1957.

THE SALEM-ERODE ELECTRICITY DISTRIBUTION CO. LTD.

The Directors have decided to recommend to the forthcoming Annual General Meeting of the Shareholders a dividend at the rate of 10% on Ordinary Shares, for the year ended 31st March, 1956 payable without deduction for income-tax paid by Company.

OCTAVIUS STEEL & CO. LTD.
Managing Agents.

Calcutta,
5th December, 1956.

THE CALCUTTA STEAM NAVIGATION CO., LTD.

Notice is hereby given that the 148th Annual General Meeting of the members of the above-named Company will be held at the Registered Office, No. 5, Fairlie Place, Calcutta, on Thursday, the 27th December, at 11-30 a.m. to transact the following business:—

1. To consider and adopt the Profit & Loss Account for the half year ended 30th June 1956, together with the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors.
2. To declare a dividend.
3. To appoint Directors.
4. To appoint Auditors and to fix their remuneration.

Special Business.

5. To consider and if thought fit, to pass, with or without amendment the following resolution which will be proposed as an Ordinary Resolution:

"Resolved that the Capital of the Company, divided into 12,600 fully paid up Ordinary Shares of Rs 100/- each, be sub-divided into 1,26,000 Ordinary Shares of Rs. 10/- each and shall henceforth be numbered from No. 1 to 1,26,000 inclusive so that the former Share No. 1 shall now be represented by 10 shares numbered 1-10 inclusive and so on."

6. To consider and if thought fit, to pass, with or without amendment the following Resolution which will be proposed as a Special Resolution:

"Resolved that the Articles of Association of the Company be altered in the following manner:—

Article (4) shall be deleted and the following new Article substituted therefor:—

The Capital of the Company is Rs. 12,60,000/- divided into 1,26,000 Ordinary Shares of Rs. 10/ each.

The Share Transfer Books of the Company will be closed from the 12th December to 27 December, 1956 both days inclusive.

By Order of the Board,
HOARE MILLER & CO., LTD.,
Managing Agents.

5, Fairlie Place,
Calcutta,
Dated 4-12-1956.

Note:—A member entitled to attend and vote at this Meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

Items 5 and 6: In response to requests from a number of shareholders and as it is undoubtedly in accordance with the modern trend and will lead to greater convenience in registering share transfers, and as your Company are empowered under Article 60 of the Company's Articles of Association to sub-divide the shares, your Directors have decided to recommend to members in General Meeting by an Ordinary and by a Special Resolution respectively that the shares of Rs. 100/- each should be sub-divided into Rs. 10/- shares and that the Articles be amended to give effect to such recommendation. The Directors and Managing Agents are interested in these resolutions only as Shareholders of the Company.

GOLD AND THE SUEZ CRISIS

(Continued from page 1033)

Price of gold bullion during the present crisis indicates the beginning of the twilight of the rule of gold. It is true, the extent to which gold is used for the purposes of reserve to secure the domestic note circulation and credit structure has declined considerably during the last quarter of a century. The popularity of gold as a medium of hoarding has always been affected by the determination of the United States not to raise the official dollar buying price of gold and by the determination of Britain and other countries not to devalue their national currencies in terms of gold and dollars. So long as this attitude continues gold is not a suitable hedge against domestic inflation unaccompanied by a depreciation of the exchange value of the currencies of the countries concerned. On the other hand, gold is needed as much as ever for the settlement of adverse balance of payments on international account. Above all gold has retained its traditional role as a medium of hoarding during periods of wars, threats of war or internal upheavals. There is as yet no indication that the Keynesian prophecy that the value of gold would decline to that of scrap iron—the latter itself is now much more valuable commodity than it was thirty years ago when Keynes made that prophecy—will ever come to be realised.—(Copyright)

THE TINNEVELLY-TUTICORIN ELECTRIC SUPPLY COMPANY LIMITED

NOTICE is hereby given that the Annual Ordinary General Meeting of the Shareholders will be held at the registered office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 28th day of December, 1956 at 3-25 P.M for the following purposes:—

By Order of the Board,
JARDINE HENDERSON,
LIMITED,
D. FORDWOOD.
Secretary,
Managing Agents & Secretaries.

A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a Member of the Company.

OLYMPUS

(Continued from page 1044)

that such raids on the resources of the private sector may cripple it because of lack of adequate working finance. More abstractly, it is considered to be invasion of the control of the companies over their own funds. On the other hand, there are those who welcome the proposals as a more overt committal to socialism, and a device to put an end to directors playing with the funds of the company in speculation, in interlocking operations and much else that is notorious. But the ostensible purpose of the requirement is to regulate investment along productive channels. The Government will apparently hand over the money the moment the company needs it for any project of modernisation or expansion for which the Government have given their sanction. The one way in which Government can disarm completely the criticism that this proposal is merely a further extension of the tentacles of the State and has nothing to do with the exigencies of the Plan is to see that maximum despatch and expedition are shown in the disposal of plans of expansion submitted for approval and that, in the approval of schemes, there are no doctrinaire inhibitions. Extension of this magnitude of the State's power, however plausibly inevitable in a planned set up, does require special justification as a worthwhile expedient despite its irksomeness to the citizen. It cannot be denied that the danger of bureaucratic procrastination and cussedness is very real. Therefore, though one may exonerate the Government of any intention to raid surreptitiously on the savings of the private sector, the fear that the State may, in practice, be unwittingly doing it by executive inaction is not imaginary. This is an aspect of the matter that Mr T. T. Krishnamachari should give special attention to and see that the machinery to be set up in this regard is equal both in imagination and expedition to its unprecedented tasks. His record in the Commerce Ministry is, in this context, something from which the public may take heart.

deeming feature was, that the supply position in consuming centres was tight.

Conditions on the export front were, however, better. Shippers have reported an improved turnover with foreign countries, mainly Aden, Sudan and East Africa. Singapore also evinced fair interest, while the UK continued to show interest in the usual lines.

CLIVE STREET GOSSIP

(Continued from page 1040)

country has to evolve its own socialism. In this regard, it is important to note the increased emphasis on cottage industry that the Nehru-inspired Second Plan is placing. Very many critics are inclined to treat this as a frank contradiction and as something that is bound to break down in actual practice. However that may be, its Gandhian slant cannot be gainsaid. In an interview with Mr Nehru in May last, Mr Stachey tackled Nehru on this very question and Nehru answered him in terms that must sound startling to many who believe that Gandhiji has been put on the shelf by Mr Nehru.

✱

The fact of the matter is, that Mr Nehru has evolved for himself over a period of years a political, economic and social philosophy that has its roots in his master's teachings. There are obvious differences in emphasis, and he is not a Gandhian in the sense in which Vinobha Bhave is. But the obscure instinct that made Gandhiji name him his political heir was abundantly justified. It is my firm opinion that, in the weeks following Gandhi's assassination, Nehru's agonised introspection must have brought home not only the enormous weight of his new dignity as a leader of men whom Gandhiji led until the other day, but also the inevitability of doing it along the lines that Gandhiji had indicated. Today, he is the true voice of Gandhiji, in his insistence on the purity of the means, on the need of thinking in terms of human beings rather than in terms of dazzling progress at terrible human cost, in his pragmatic approach to Indian economic problems and in a countless other things.

✱

There is another aspect of Mr Nehru's personality which Mr Moraes discusses with understanding and insight; and that is the inevitability of the foreign policy of Nehru in the background of his own experiences and observations and in the lessons he had learnt in the course of his reflections on the revolutions of our times. The seeds of the foreign policy now practised were sown as early as 1920 in the resolution of the Congress, in which India's desire to co-operate with other nations was affirmed. In the thirties, Mr Nehru was almost solely responsible for placing the Indian struggle in the context of developments abroad and in giving it a significance as part of the movement of the oppressed peoples of the world for a better deal for themselves. In the years since Independence, the logical consequences of these early ideas have been put into practice. Mr Moraes' perspicacious analysis of these and other aspects of Nehru's attitude to world affairs—to Asian and African problems, to communism, and so on—must be read with great care by Americans to whom the book is apparently primarily addressed. The chief ingredients of this attitude are: the realisation that there has occurred in recent years basic shifts in historic scenes: Asia and Africa, which were being considered mere marginalia to European history, have suddenly loomed large and threaten to take up the whole page of history. It is no longer possible to ignore these developments.

✱

But it should equally be realised that none, certainly no Indian, is anxious to shoulder with aggressive self-consciousness the black man's burden. Mr Nehru and all thinking Indians—for, in nothing has Mr Nehru the whole hearted backing of the country as in his foreign policy—realise the true meaning of the indestructible historical fact of the encounter between Asia and Europe, which is the subject matter of the last four hundred years of history. The change wrought by this historical accident is no less decisive in the history of the world than those caused by the great geological shifts. Cultural patterns have been modified fundamentally. You cannot map the intellectual contours of an Indian without finding eminences that are traditionally and unmistakably associated with the West, side by side with the basic substratum of the East. The same is true of the Westerner. The results, it is true, have not been always happy. Only recently, I saw a temple in Madras in which a mammoth neon sign was blazoning forth the sacred name of God, as though it were a brand of toothpaste. But at its best, this coming togther of the continents has had the effect of bringing out the best in both, often in the same person. Mr Nehru is the best Asian example of such a synthesis. Firmly rooted in his philosophy is a deep and abiding regard for the person of man, a passionate faith in his inviolability and profound compassion for the down trodden, which his love of his own country and its history has only enlarged. In many ways, therefore, he is the best example of the man of the atomic age, in which geographical frontiers have finally been reduced to anachronistic nonsense.

EAVESDROPPER

✱

GATEWAY MARKETS

(Continued from page 1042)

amounted to 45 bars against an offtake of 12 bars. Unrefined metal receipts amounted to 22 bars in the form of coins.

Silver Mangsir started at Rs 174-7 and, after touching Rs 174-8, receded to Rs 174-2, to finisn better at Rs 174-3. Spot moved narrowly between Rs 174-3 and Rs 174-5.

✱

Yarn

Although prices in the Bombay Yarn market showed a substantial improvement after the announcement of an incease in the import duty on Art Silk Yarn, higher levels could not be retained till the close due to fears that the general demand for yarns would considerably decline in near future. Art Silk Yarn 120 dull cones Dedember delivery, after touching a high of Rs 793 from Rs 789, receded again at the close to Rs 788. The excise duty made the Staple Fibre Yarn December contract to improve at one time to Rs 633 fom Rs 627, to finish the week at Rs 629.

Higher duties changed the atmosphere in the ready market where all varieties improved by about an anna per pound. The rise was noticed more in art silk yarn varieties.

Conditions in the Cotton Yarn market remained, however, depressed due to the absence of any support from handloom weavers. The offtake of coarse and medium counts was reported to be very low with prices remaining pactically unchanged. There was a general reluctance to augment stocks in view of a declining trend in raw cotton prices.

✱

WORLD OF INSURANCE

(Continued from page 1035)

nued in their original scales of pay and dearness allowance, i.e., pre-nationalisation scales.

Mr Patel said that not only the present emoluments, but increments as they become due would be fully protected. The fitting in of these employees in the new grades would not reduce either the amount of their contributions to the Provident Fund or the gratuity or pension fund where pensionary rights existed.

As regards bonus, Mr Patel said that Corporation as a State enterprise must necessarily conform to the Government policy, which was opposed to the grant of bonus. He has, however, guaranteed 75 per cent of the bonus received in the past in 1957. The remaining quarter would be credited to staff amenities fund.

The employees' Association's objections centre round the main basic grades which covar the bulk of the employees. The Association agrees that Mr Patel's clarification has more or less resolved monetary disabilities previously envisaged for existing employees, but the acceptance of a basic grade of 55—220 practically amounts to a "wage freeze" in as much as it almost amounts to repudiation of enhanced company grades of 70/80—300/325 laboriously earned after a long period of trade union struggle. Besides, should the Corporation employees accept a basic grade of 55—220 in 1956, it is the view of the Association that it will effectively prejudice and hamper the wage struggle of the Central Government and similar category of employees since, the Association fears its acceptance of the low grade will be cited as an effective precedent.

The Association is understood to be taking a long view and is not immediately concerned with amenities of existing staff although that consideration loomed large in every discussion. It is, again, unable to appreciate Mr Patel's reluctance to recognise the existing company grades, although he is prepared to guarantee all amenities, not on basic pay basis, but as personal pay. The Association, therefore, is apprehensive that a rather low basic grade has been devised with ulterior motives which the Corporation is endeavouring to force down the throat of the employees sweetened by guaranteed amenities to the current generation.

The historical genesis of employer-employee relations of the Corporation is not very old unless traced to the company regime. It must be admitted that the Corporation, on the whole, has made a good gesture in the context of Mr Patel's statement. The implications attributed to the grade can be resolved by peaceful negotiations, if both sides approach the issue with understanding, tact and constructive thinking. The Corporation, because of its obligations to the insuring public, can hardly afford to lock out. It is, therefore, imperative to find an early solution to the impasse, satisfactory to all sides.

THE PATNA ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that the Annual General Meeting of the Company will be held at its Registered Office, No. 14, Old Court House Street, Calcutta on Friday the 28th day of December, 1956 at 3-40 P.M. for the following purposes:—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955 and the Balance Sheet as at that date.

(2) To declare a Dividend.

(3) To appoint auditors and fix their remuneration.

(4) To appoint Directors in place of those retiring.

And in this connection, Special Notice as required by Section 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed, as an Ordinary Resolution, namely—

"That Pandit G. M. Misra who has attained the age of 69 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act shall not apply to him."

NOTE: 1. The Share Register of the Company will be closed from 21st December, 1956 to 28th December, 1956, both days inclusive.

2. A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend and, on a poll, to vote instead of himself.

By Order of the Board,
OCTAVIUS STEEL & CO. LTD.,
A. H. GALLOWAY,
Managing Director
Managing Agents.

Calcutta,
5th December, 1956.

EXPLANATORY STATEMENT

In connection with item No. 4 of the annexed Notice for Annual General Meeting of the Company, since Panit G. M. Misra who has been a Director of the Company for over 3 years, has attained the age of 69 years it is necessary, under Section 281 of the Act, that the resolution re-appointing him as a Director should declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move the resolution, as set out in the annexed Notice, has been received by the Company. The Directors, other than Pandit G. M. Misra and the Managing Agents have no interest in the said resolution.

Stock Exchanges

RECOVERY AFTER A JOLT

Watch-Dog Writes:

STOCK markets have had a fresh jolt. The announcement of the new tax proposals had a devastating effect during the week's session. Increased selling pressure caused prices to slump heavily in almost all sections, particularly of the speculative issues. Replacement buying, induced by second thoughts about the implications of the proposals, however, brought about a slight all-round recovery in prices toward the close.

While the severity of the jolt that the market has received cannot be minimised, the general view is that the market may have already witnessed worst spell. With hardly three months left for the general elections and clear indications that there will be no February Budget, the overall impression is, that the markets will have some breathing space to consolidate their positions.

Equities on the Calcutta Stock Exchange, after suffering a sharp setback, met with a revival of interest and recovered some of the lost ground on encouraging Bombay advices.

Industrials on the Bombay Stock Exchange staged a notable recovery on short-covering attracted by the recent low levels, although profit-taking erased some of the gains at the close.

Dull and erratic price movements characterised trading on the Madras Exchange.

Although profit-taking occasionally increased in late dealings on Wall Street, this did not prevent the market from setting a new recovery high.

✱

Calcutta

Calcutta, Friday.

THE local Stock Exchange, which had been listless for some weeks past, succumbed to nervous selling by weak holders on the opening day of the week following the news of the adjournment of the general meeting held by the Indian Iron & Steel Company, Limited. But the nervousness was more pronounced when the new tax proposals were announced. The sharp slide brought matters even to a stage when a special clearing had to be ordained in all the speculative issues. This, too, had no effect and operators went on liquidating their holdings.

Second thoughts on the tax proposals brought forth a recovery in prices on Tuesday from when market developed a slightly steadier tendency, thanks to short-covering and some replacement buying at lower levels. Turnover, however, continued to be restricted and the undertone remained steady at the close.

The Giltedged market suffered a severe setback early in the week with some of the long-dated issues recording sharp falls. The slide in prices, however, was partially halted following the decision of the authorities to extend limited support. With the result, prices of several issues registered a moderate rise at the close. 3 per cent 1986 Conversion Loan, after touching a low of Rs 72-10 from Rs 73-4, improved toward the close to Rs 73-2.

Bank shares ruled quiet with Punjab National changing hands at as low as Rs 49-8. United Bank of India "1)" moved narrowly between Rs 4-6 and Rs 4-8.

Prices in the Jute section tended to lower levels in the absence of any support on reports of the threatened strike at some of the mills and the uncertainty about an improvement in the working results of mills. There were more sellers than buyers in evidence. National were particularly weak and the scrip was offered at as low as Rs 21-0 from Rs 21-12 following the reports of the dividend being halved. Hooghly were marked down to Rs 30-12 from Rs 22-0; Nuddea to Rs 29-12 from Rs 33-8 and Ganges to Rs 51 from Rs 63. Alliance changed hands at Rs 101-8 to Rs 104, while Delta showed a drop of more than 20 points at Rs 138.

Among Coals, Burrakhr continued to be an outstanding feature. Although this scrip suffered a setback to Rs 19-8, there was a sharp recovery toward the close to Rs 21-8 on the emergence of speculative buying. South Karanpura, after being marked down to Rs 9-15 from Rs 11-1, recovered partially to Rs 10-4. Western Bengal changed hands at Rs 6 to Rs 6-2 and Central India at Rs 6-12 to Rs 6-15. Bengal lost another 40 points at Rs 445.

Despite better advices from the cloth and piecegoods markets, Textile scrips lacked support. Elgins were marked back to Rs 27-4 from Rs 28-8, while Kesoram hovered idly around Rs 16-0. New Victoria eased off further to Rs 1-14 from Rs 2-1.

Except Ramnugger Cane which met with consistent support upto Rs 25-4 from Rs 24-12 from interested quarters, Sugar shares remained generally quiet. Darbhanga were marked down to Rs 20-14 from Rs 22-10.

Tea shares remained, on the whole, steady although prices suffered a sharp setback early in the week following the announcement of the tax proposals. Fears were initially entertained that, with the dividend super-tax rates having been made much steeper, tea companies would be most affected since their profits and distributions tended to vary widely from year to year. Another bearish factor was the announcement of the increase in the export duty from As 6 to As 8 per pound for December. But the feeling among certain operators that selling prospects for the industry were still good in view of firmer prices ruling in export auctions, caused a revival of interest, resulting in a slight recovery in prices.

Most prominent scrips were Bishnauth Old changing hands at Rs 23-6 to Rs 23-12; Brooke Bond at Rs 19-14 to Rs 20-2; Dhelakhat at Rs 21-14 to Rs 22-4; East India at Rs 23-12 to Rs 24; Hasimara at Rs 30 to Rs 31-2; Hantapara at Rs 195 to Rs 216; Killcott at Rs 21 to Rs 22-12 and Tezpore at Rs 23-2 to Rs 23-8.

In the Engineering section, the news of the adjournment of the annual meeting and the announcement of the tax proposals caused a sudden slump in Indian Irons which, in turn, affected other scrips. Even the sharp slide in prices brought matters to a stage where a special clearing had to be ordained on Saturday. Thanks to encouraging advices from Bombay, there was a gradual recovery in prices toward the close on renewed bear-covering following the approach of the settlement day.

Indian Irons started the week lower at Rs 30-8 and after touching a new low of Rs 29-15, recovered gradually to Rs 31-4. The settlement rate was fixed at Rs 30-11 as against the last settlement of Rs 33-2. In sympathy, TEXMACO was marked down at one time to Rs 19-5, to recover toward the close to Rs 21-4 on rumours of an interim dividend for 1956. Jessop touched a low of Rs 30-0 from Rs 32-12 and Richardson Rs 22-4 from Rs 23-12, to finish the week better at Rs 31-6 and Rs 23-8 respectively.

Miscellaneous issues moved in sympathy with the general trend of the market. Despite the announcement of a maiden dividend, Aluminium Corporation was marked down to Rs 11-7 from Rs 11-14, while Indian Aluminium turned ex-dividend at Rs 15-12. NICCO were pushed down to Rs 26 from Rs 28-8 on profit-taking, to finish better at Rs 26-9. Indian Copper developed a hardening tendency to Rs 3-11 from Rs 3-6. Orient Paper met with heavy selling pressure and, after touching a low of Rs 31-12 from Rs 35-6, closed better at Rs 34-6. Titaghur changed hands on the ex-dividend basis at Rs 37-0 to Rs 37-4; India Steamship at Rs 9-7 to Rs 9-10; BIC at Rs 9-9 to Rs 9-13 and Rohtas at Rs 19-4 to Rs 19-7. Dunlop Rubber continued to be offered, the rate easing off further to Rs 25-8 from Rs 26-12. Indian Cable and National Carbon lost nearly Rs 1½ each at Rs 30-12 and Rs 25-8 respectively.

✱

NORTH INDIAN MARKETS

(Continued from page 1045)

Sugar

Good demand from almost all the consuming centres has resulted in a further improvement in Sugar prices. Most of the factories in Uttar Pradesh and Bihar have begun crushing operations for the new season. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Jaswant Rs 28-6; Simbhauli Rs 28-8, Mowana Rs 27-14; Daurala Rs 29-0; Amroha Rs 27-10; Bijnore Rs 27-10; Mansoorpur Rs 29-14 and Rampur Rs 318.

The sugar market in Bombay developed a firmer tendency on account of a sizable improvement in offtake. Rumours, that the Government might permit the export of some quantity of sugar to neighbouring countries, also aided the upward trend. Good business was reported done with the Deccan mills and the North Indian factories.

BALMER LAWRIE & COMPANY LIMITED

NOTICE is hereby given that an Interim Dividend on the shares of the above Cmpany of 5%, free of Income Tax, for the year ending 31st December, 1956, was declared by the Board of Directors on 3rd December, 1956, payable on or after 24th December, 1956 to those Members whose names are registered in the Register of Members of the Company on the 24th December, 1956. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

The Register of Members of the Company will be closed from 17th December, 1956 to 24th December, 1956, both days inclusive.

By Order of the Board,
BALMER LAWRIE & COMPANY LTD.,
D. MANSON,
Secretary,

21, Netaji Subhas Road,
Calcutta,
4th December, 1956.

THE PATNA ELECTRIC SUPPLY CO. LTD.

The Directors have decided to recommend to the forthcoming Annual General Meeting of the Shareholders a dividend at the rate of 7½% for the year ended 31st December, 1955 payable without deduction for income-tax paid by the Company.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta,
5th December, 1956.

THE KALITI TEA COMPANY, LIMITED

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Saturday, the 29th day of December 1956, at 12 noon, for the following purposes:—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December 1955.

(2) To elect a Director in place of the retiring Director.

(3) To elect Auditors for the ensuing year, and to fix their remuneration.

And as special business:—

(4) To consider and if thought fit to pass the following resolution, namely:—

"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected."

The Share Transfer Book of the Company will be closed from 22nd December, 1956, to 29th December, 1956, both days inclusive.

OCTAVIUS STEEL & CO., LTD.,
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 5th December, 1956.

NOTE:—

A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT.

With reference to the resolution relating to inspection of Book, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

(Continued on next page)

The Personality of India's Mixed Economy—II

(Continued from page 1030)

leaders are not only eager to make the most of these common points, but are also anxious to add to them by our own example and experience. At the present moment, this may seem a somewhat extravagant claim to make. But enough was said in these columns last week to show that Socialist thought in this country is keen to seek the genuine happiness of the individual citizen without being satisfied with the limited narrow objectives of increased supply of material goods or the achievement of equality in some aspects of industrial and social life. If doctrinaire socialism holds sway in politically influential circles, and even among those who have more of democratic sympathy than socialistic allegiance in their mental make-up, it is only because they are convinced that, at the present stage, our economic development must come through the initiative and agency of the State and any softness shown to private business will only prejudice and retard the progress of the general good.

For this attitude, there is ample justification in the present position of our national economy and in our experience of the ways of private business in recent years. The doctrinal open-mindedness of the Government and of the intelligentsia in this country can become effective only when the following conditions are satisfied. Firstly, State action in breaking the various circles within which the national economy has hitherto been imprisoned must be fully successful. That is, the potentialities for economic progress must be fully developed by the provision of power, transport, heavy industry, plenitude of technical knowledge and other basic conditions. Secondly, it must become clear that State action alone will not be sufficient to realise all the possibilities. Thirdly, individual initiative, in the familiar forms of private enterprise, must outlive its unsavoury association of the past and develop a new approach to its place in the national economic life. Fourthly, the experiences of other countries with rival social ideologies and with different forms of social organisation must be less equivocal than they are at present. None of these changes can occur in a short period. Nor can one foresee definitely how long it will take for each of these developments to take place.

But there is more recognition in India than perhaps anywhere else in the world that the economic problem is not, any more than the political, a matter of clear-cut choice between the two ideologies. There is, in most of the countries, an all too facile assumption of finality about the present disposition of affairs. Few governments in Europe or America can envisage the future except in terms of a nerve-racking cold war or a cataclysmic showdown. Likewise, in the economic sphere, it is either communism or capitalism. India realises the intrinsic impossibility of mutual exclusiveness of the two sets of ideas. It refuses to accept that the cold war must continue or that it can be ended only by a third world war. Eclectionism in economic policy and neutrality in international affairs are thus closely related. They are, in fact, two sides of the medallion. But, while the wisdom of India's foreign policy has been proved to the hilt by recent developments in international affairs, there is bound to be before long new trends in the economic policies of the communist as well as the capitalist powers which will show that India's hopes of a synthesis of the two antithetical creeds are reasonable and well-grounded.

Such trends are inevitable, because the two warring creeds have one point in common, that both have to be democratic in their economic objectives, if not methods. No government in modern times can dare overlook the interests of the common man either in the name of an economic theory or on the strength of the political power it wields. The idea that communist governments can go on oppressing the common man because they have taken care to concentrate all political power in the hands of a few fanatics at the top and because they have covered themselves with secret police and other familiar devices of a tyrannical regime has been proved false by the policy of de-Stalinisation in Soviet Russia and by recent developments in Eastern Europe. Communist dictatorship can have a comparatively easy task only so long as the common people are prepared to believe that communism alone can serve their interests, that its first concern must inevitably be to protect itself from its enemies at home and abroad and that self-defence involves serious privations for the common people. This belief, which Stalin so sedulously cultivated with the help of diehard capitalists in other countries, has not been able to survive him. Even if his methods were really necessary, they had an unconscionably long trial of more than three decades; and the lords of the Kremlin rightly recognised that they could not be continued any longer. The reaction against economic policies which starve the people of the necessaries of life has been even quicker in the satellite countries of Eastern Europe, because the people had two counts against Soviet Russia and their nominees in the satellite governments, namely, political oppression and economic exploitation by Soviet Russia.

Communist methods outside Russia have from now to be watched with the greatest interest. There never was much chance of China being a slavish imitator, much less a mere camp follower, of Russia. In Eastern Europe, it remains to be seen whether popular uprisings will lead to an abandonment of communism along with the overthrow of the tyranny of communist leaders. In Poland, Mr Gomulka has taken a firm and powerful stand between Russia, on the one side, and the forces of counter-revolution, on the other. Hungary is not so fortunate in this respect and may, for that reason, witness changes of far-reaching significance. But, even if the movement initiated at the twentieth Congress of the Communist Party at Moscow leads only to greater freedom to the former satellite countries to choose their own path to socialism, immense gains are bound to flow from it for the synthesis which India is seeking. What have been till now known as the satellite countries are not all in the same stage of industrial and economic development. Czechoslovakia, for instance, is a highly industrialised country; and there are already signs that it is preparing to take the benefits of its industrialisation to the masses as soon as the weight of Russian exploitation is lifted from its back. Mr Gomulka in Poland has been able to retain his power because of his promise of generous treatment of consumer needs. Yugoslavia has enjoyed the freedom to chalk out its own path to socialism for a long time, though there have not been much of concrete results to show for it.

There is no mistaking the fact that the era of liberalisation of communist economies has begun. It would be wrong to deny its possibilities simply because orthodox communists within Governments and without have refused to consider the possibilities. There are, it must be noted, two main reasons for their closed minds in this regard. The first is the complex that they are eternally threatened by their enemies and that military preparedness would have to be their paramount aim for as long as they can foresee. The second reason is that Marx did not attempt to see beyond the establishment of the proletarian dictatorship. He did not stop to consider the impact of a powerful communist nation on international politics, as he could not by the very nature of his premises question the solidarity of the international proletariat. His dialectic was not applied to the society of nations which was unified into a single class society similar to that which obtains within each nation. The identification of communism with a form of government which is a relentless totalitarianism at home and a similar subversive force abroad will not be as true in the future as it has been in the past. What happens to social organisations after a country has achieved all the essential initial tasks of a communist regime, such as liquidation of vested interests and provision of the basic conditions of economic development, is today anybody's guess. The impact of economic regimentation on the individual's sense of well-being can be judged only when the common people in communist countries have broken the spell cast on them by Stalin and have made it clear what deviation from orthodoxy they will allow or even insist on in order that they may live their lives like men and not as cogs in a militarist machine. While these changes are in the womb, the changes in the capitalist economies like that of the US are even more significant to that synthesis of the rival systems, in which the under-developed uncommitted countries are today most interested.

WORLD OF FINANCE

(Continued from page 1032)

member banks, can make available aid of this magnitude, is the general expectation and hope. The twilight period between the slack season and the busy season is best utilised for the securing of the relevant data and for the fixing of individual credit limits. This important task is, we may be sure, being pursued with vigour; and, as limits are finalised, the concerned banks are arranging to convert the advances given to the relevant constituents to a usance bill basis. The process accounts, doubtless, for the reduction of banks' advances and the expansion of banks' bill port-folios in recent weeks. If our assumptions be correct, we may expect even more substantial increases in inland bills discounted by banks. It may well be that this item in the weekly consolidated statement of scheduled banks touches and exceeds the altitude of Rs 206 crores.

By the same token, the item "Other Loans and Advances" in the Reserve Bank's banking department return might approach the Rs 200 crores mark at the peak of the busy season. For making the loans to member banks against these anticipated requirements, the Reserve Bank will constantly need to replenish the cash in its till. There are three methods by which such replenishment could be effected. In the first place, a moiety of the foreign balances in the banking department can be transferred to the Issue Department; currency created against the foreign assets so transferred; and such currency handed over to the Banking Department in lieu of the foreign balances which the latter department has parted with. This mode of reinforcing the cash position in the Banking Department is hardly practicable with the present low level of foreign balances and with the continued pressure on them.

The second course open to the Reserve Bank is to utilise, in the same way, a moiety of the Investments held in the Banking Department. In current circumstances, there is a severe limit to this procedure also, as Investments (outside of stock held in Finance Corporations and State Bank shares) may not be very considerable.

This takes us to the third method. Bills held under "Other Loans and Advances" in the Banking Department may be transferred to the Issue Department, and currency expansion can take place, with the bills shown under the separate head provided in the Issue Department. This head has, all these 20 years, remained dormant; and we suggest that conditions in the impending busy season should bring this head into prominence. We further suggest that all the expansion effected in the coming months should be against usance bills; and that, as far as possible, this modus operandi should be resorted to, to the exclusion of the other two methods. For one thing, we can the more easily follow the ups and downs, the how and how much, of the seasonal demand. For another, this will impart a self-liquidating character to seasonal currency.

The last week in November has witnessed no substantial changes in the Reserve Bank statement, although it is noteworthy that the Centre's deposits have fallen to just below the normal minimum of Rs 50 crores.

Notes in circulation were lower by Rs 1.07 crores at Rs 1,438.54 crores; and the return of Rupee Coin has been of sizeable amount, the figure under this head having risen by Rs 2.95 crores to Rs 125.27 crores. Both Rupee Securities and Foreign Securities, in the Issue Department, are unchanged.

The Central Government's deposits have been allowed to sink below the Rs 50 crore mark with a drop of Rs 4.70 crores to Rs 49.99 crores. Since, in the next week, Government would feel the pressure to meet month-early disbursements, ad hocs may figure substantially in the next Reserve Bank statement. Deposits of State Governments are somewhat higher by Rs 3.22 crores at Rs 15.94 crores. At the same time, however, borrowings of State Governments also show a rise of Rs 1.16 crores to Rs 2.96 crores. Other Deposits are largely unchanged at Rs 13.37 crores.

Investments show a fall of Rs 1.52 crores to Rs 59.61 crores. Balances Held Abroad, in the Banking Department, are lower by Rs 5.34 crores, thus testifying to the continued depletion of foreign exchange resources.

Scheduled Banks were able slightly to improve their position vis-a-vis the central banking institution. Although their deposits have declined by Rs 0.97 crores to Rs 51.07 crores, they have also been able to reduce their borrowings, as indicated by the fall of Rs 2.64 crores to Rs 80.84 crores in the Other Loans and Advances of the Reserve Bank. The running total of advances given by the Reserve Bank against usance bills marks a rise of only Rs 5.27 crores as compared with last week's increase of nearly Rs 14 crores.

An increase in Deposits has enabled the State Bank to reduce its indebtedness to the Reserve Bank and to extend its Advances. Deposits are higher by Rs 2.10 crores at Rs 234.90 crores. Borrowings have declined by Rs 1.06 crores to Rs 2.23 crores. Cash balances, in the aggregate, show a minor change. Advances have been marked up by Rs 1.68 crores to Rs 129.11 crores. This rise is equally shared by overdrafts and bills purchased and discounted.

The return of Scheduled Banks for November 23 is also largely featureless. Deposits are lower by Rs 3.04 crores at Rs 1,105.55 crores. On the other side of the ledger, the total of Advances has increased by Rs 1.03 crores to Rs 762.30 crores. It is interesting to note that cash credits and overdrafts have declined by Rs 5.11 crores, and that this has been more than offset by a rise under bills. In the latest week, inland bills mark an increase of Rs 4.34 crores to Rs 117.02 crores; and, since October 26, the rise has totalled Rs 20.34 crores. The reason for the strengthening of the bills portfolio has been explained earlier in this section.

+

The statement of the State Bank of India for the week ended November 30 reveals a rise of Rs 2.10 crores in deposits to Rs 234.90 crores. Borrowings from other banks have declined further by Rs 1.06 crores to Rs 2.23 crores, while other liabilities, including inter-office adjustments, are higher by Rs 1.31 crores at Rs 8.60 crores.

On the assets side, cash balances are shown at Rs 16.63 crores against Rs 16.15 crores with Investments remaining almost unchanged at Rs 106.60 crores. Advances show a rise of Rs 1.35 crores to Rs 129.11 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 0.63 crores and "Bills Discounted and Purchased" for Rs 0.85 crores.

+

According to the returns of the Scheduled Banks for the week ended November 23, total demand liabilities have declined by Rs 3.77 crores to Rs 647.03 crores, while time liabilities have risen by Rs 0.73 crores to Rs 458.52 crores. Borrowings from the State Bank are lower by Rs 1.12 crores at Rs 9.62 crores, while those from the Reserve Bank are higher by Rs 0.76 crores at Rs 57.41 crores. Cash and balances with the Reserve Bank are lower by Rs 1.40 crores at Rs 86.69 crores. Investments are almost unchanged at Rs 365.50 crores. Advances are shown at Rs 593.84 crores against Rs 598.95 crores; Inland Bills at Rs 117.02 crores against Rs 112.68 crores and Foreign Bills at Rs 51.44 crores against Rs 49.64 crores. Money at call and short notice stands at Rs 18.30 crores against Rs 19.02 crores.

Govt. of India Treasury Bills

During the week ended the 30th November 1956 Government of India Treasury Bills for Rs 5,00,000 were sold in favour of the Reserve Bank of India.

BALANCE-SHEET REVIEWS

(Continued from page 1028)

dends on the Ordinary shares from 17 to 22½ per cent and on the Deferred shares from 12 to 17½ per cent

£ R$

Anglo-India Jute Repeats

The difficult conditions generally experienced by the jute industry, during the half-year ended 31st March 1956, are fully reflected in the working results of the Anglo-India Jute Mills Company Limited. This mill continued to work with 12½ per cent of the looms sealed until the 8th January 1956. This figure was reduced to 10 per cent from the 9th January 1956 and again to 5 per cent with effect from 20th February, 1956. Despite these measures, the demand for jute goods did not materialise on the scale anticipated; and there has been a large measure of over-production during the current year, which resulted in increased stocks and a sharp fall in goods prices. Moreover, the mills' position was aggravated by a rise in the price of the raw material due to floods, transport difficulties and the greater demand due to increased production.

Although sales for the half-year under review are slightly higher at Rs 2.53 crores against Rs 2.51 crores, the net profit, before providing for Depreciation, amounts to only Rs 6,43,443 as against Rs 10,25,632 in the previous half-year. The Depreciation amount has been raised slightly to Rs 5.25 lakhs from Rs 5.00 lakhs; but no provisions are possible for Taxation, General Reserve and Other Funds. After transferring a sum of Rs 3.00 lakhs from Contingencies Reserve, the directors have been able to maintain the dividend on the Ordinary shares at 3½ per cent for the half-year.

According to the directors' report, the rationalisation of the company's group of mills is proceeding. After the closing of Jagatdal Mill, Upper Mill was worked on double shifts and this continued until the sealing of 5 per cent looms on the 17th September when single shift working was resumed, the balance loom-hours being absorbed by Lower and Middle Mills.

The erection of new machinery and electrical equipment at Middle Mill is being carried out speedily, and it is hoped that it will be completed shortly. Investigations are still in progress for finding a suitable new use for the building and facilities of Jagatdal Mill.

£ R$

Amalgamated Electric

After stepping the provision for Depreciation from Rs 4.55 lakhs to Rs 5.13 lakhs, the Amalgamated Electricity Company has reported a net profit of Rs 10.68 lakhs for the year ended 31st March 1956 as against Rs 10.43 lakhs in the previous year. Other allocations are: Rs 11,506 for arrears of Depreciation: Rs 73,732 for Contingencies Reserve and Rs 60,419 written off towards intangible and other assets. A sum of Rs 33,300 goes to Tariff and Dividend Control Reserve and Rs 33,299 to Consumers' Benefit Reserve. With a final dividend of As 6 per share, the total dividend for the year amounts to 7½ per cent.

Sales of energy, less rebate, allowed to consumers, disclose an improvement of Rs 4 lakhs over the previous year at Rs 57.07 lakhs lakhs against Rs 53.08 lakhs. Total units generated are higher 33,215.557 against 28,981,874 in the previous year.

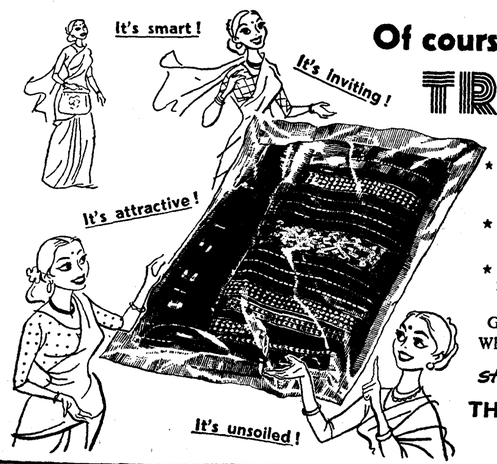
Carrying coal to the country

History of EIR, it was once said, was the history of coal. The Eastern Railway carries forward that tradition.
Nearly 80% of the annual production of 38 million tons come from the Bengal-Bihar coal regions; 76% is carried by Eastern Railway in 2,500 wagons a day.
During the second Plan the production in the country will increase by 22 million tons—of which 13 million tons will be from the fields on the Eastern Railway. That means loading 1,625 wagons a day more.
Helping carry coal to every nook and corner.....to provide motive power for the wheels of industry to move... to feed all the ovens, furnaces and boilers...is the day-and-night job for us.

EASTERN RAILWAY WILL DELIVER THE NATION'S COAL



EASTERN RAILWAY

TR 1061

Of course...it's wrapped in

TRAYOPHANE

The new name for Trayons Transparent Film

★ TRAYOPHANE makes your products look *smart*, elegant!
★ Its perfect transparency means greater *visibility!*
★ TRAYOPHANE *protects* your product from dust, dirt and grease!
★ The vivid, brilliant colours of TRAYOPHANE make your sale *easy!*
★ And TRAYOPHANE is *cheap* too! A sheet 30" × 20" costs less than six pice! It's available in rolls and sheets.

Give your product Trayophane sales-appeal! Why not write to us for a free sample catalogue?

Stops the eye – starts the sale!

Erratic Price Movements in November

Both the Calcutta and Bombay Stock Exchanges remained closed on the opening day of the month on account of Diwali holiday. In the kerb in Bombay Tata Iron was quoted between Rs 194-4 and Rs 194-8.

The situation in the Middle East took a turn for the worse as Allied bombers continued their assault on military airfields in the Nile delta and Canal zone. All navigation in the Suez Canal was stopped as a result of the sinking of an Egyptian naval frigate by Anglo-French aerial bombing of Canal Zone.

Speaking in Hyderabad Prime Minister Nehru declared: "In all my experience of foreign affairs I have come across no grosser case of naked aggression than what Britain and France are trying to do." In Washington President Eisenhower categorically stated that the USA did not accept the use of force as a wise or proper instrument for the settlement of international disputes.

2

The Middle East crisis imparted a bullish trend to the stock exchanges in the country on the expectation that stock-piling by western countries would help principal export commodities. In the Diwali session on the Calcutta stock exchange sentiment was buoyant and Indian Irons was done at Rs 34-6. Tea shares were particularly firm following the announcement that the tea export duty would be maintained at six annas per lb.

The 76-nation General Assembly of the United Nations adopted a U.S. sponsored resolution calling for an immediate cease-fire in Egypt and withdrawal of Israeli troops to the armistice lines. Meantime the French Defence Ministry announced that military operations in the Middle East would be directed towards the realization of the conditions necessary for the temporary occupation of the Canal Zone.

3 & 4

The Planning Commission raised the targets of agricultural production in the country under the Second Five-Year Plan. If the revised targets are realised agricultural production as a whole will increase by about 28 per cent, the increase in the production of foodgrains being nearly 25 per cent and in that of commercial crops about 34 per cent.

The stock markets remained closed.

5

The news that the Suez Canal had been blocked coupled with the announcement from Allied Military Headquarters that British and French paratroops had landed in Egypt and that the former had captured Port Said airport, engendered a reactionary trend in the stock markets. In Calcutta, sentiment was particularly depressed following publication of terms regarding the right issue of Indian Irons. The fact that the right issue would not participate in any dividend declared in respect of any period ending on or before March 31, 1957 was considered quite disappointing by operators and consequently Indian Irons after opening steady at Rs 34-2 reacted to close at Rs 33-9. The scrip was reported after hours as low as Rs 33-5. In Bombay sentiment was weak on persistent bull liquidation coupled with some bear covering. Tata Iron after steady opening shaded to Rs 192 in sympathy with Indian Iron. In the Textiles section Bombay Dyeing receded from Rs 626-4 to Rs 625.

6

In the British House of Commons, Prime Minister Sir Anthony Eden announced that Britain was prepared to stop further military action in Egypt and that he was ordering a cease-fire at midnight that night.

The undertone in the Calcutta stock market remained hesitant though in later dealings there were indications of revival of interest at lower levels. The Russian threat of armed intervention in the Middle East also helped the recovery movement. In Bombay a moderate rally was noticeable with selected textiles in good request. Indian Irons after opening at Rs 30-13 steadied up to close at Rs 34. Tata Iron gained more than two points to close at Rs 194-4. Bombay Dyeing advanced from Rs 625 to Rs 632-8.

7

In the United States election, Mr Eisenhower was re-elected President. But President Eisenhower failed to carry the Republican party to success in Congress.

Speaking in Bombay Mr O. V. Alagesan, the Union Deputy Minister for Railways said that the blocking of the Suez Canal following the armed conflict in the Middle East had already affected India's economy by upsetting the nation's schedules of imports and exports.

Equities encountered selling pressure consequent on the sudden change in the Suez situation. Prospects of early restoration of peace in the Middle East induced nervousness among operators and the more speculative issues developed a reactionary tendency. In Calcutta, prices all along the list were marked down with Indian Irons moving within a narrow range. The scrip closed at Rs 33-7 as against opening of Rs 33-8. In Dalal Street, Tata Iron dropped Rs 1-4 to come back to Rs 193 while Bombay Dyeing was pushed down from Rs 632-8 to Rs 627-8.

8

The U.N. Special Assembly voted two resolutions—to set up the U.N. police force and to direct U.K., France, and Israel to withdraw their troops from Egyptian territory.

Prices especially in the Calcutta stock exchange recovered on bear-covering and moderate fresh support. Indian Irons after opening Rs 33-5 ex dividend closed steady at Rs 33-5. In Dalal street, conditions continued to be rather dull. Steel, however, met with some support on better production news. Tata Iron gained half a point to be done at Rs 193-8 while among textiles Bombay Dyeing was fractionally better at Rs 628-2.

9

Sentiment in the stock exchanges was depressed following the announcement by INTUC president that labour would press for higher wages. In Bombay steel shares met with realising pressure while textiles developed a reactionary tendency. Tata Irons came back to Rs 191 from Rs 193-8. Bombay Dyeing receded to Rs 618-2 from Rs 628-2. Trading was on a subdued note in the Calcutta Stock Exchange, Indian Irons declined to Rs 33.

10

Dr Panjabrao Deshmukh, Union Agriculture Minister, disclosed in Calcutta while inaugurating the annual meeting of the Indian Central Jute Committee that the target of jute production in India had been raised to 5,500,000 bales of raw jute during the Second Plan from the original target of 5,000,000 bales fixed by the Planning Commission.

Both the Calcutta and Bombay Stock markets remained closed. In kerb trading Tata Iron was nominally quoted at Rs 190-12.

11

The three-day session of the A.I.C.C. concluded. The official resolution which was adopted by the A.I.C.C. with a minor amendment said that in the strategy that could lead India to her goal in the sphere of national economy—a Socialistic co-operative commonwealth—two factors stood out prominently; expansion of production in all directions and a degree of restraint on consumption beyond desirable limits.

In Madras, prices especially in the Plantations section slumped heavily on selling pressure. A Press Note issued by the Madras Stock Exchange Association said that in view of the continuous fall in the prices of Ordinary shares of Plantation Companies ever since the publication of the award of the special Industrial Tribunal for Plantations, and in view of the prevailing crisis the Council of Management of the Madras Stock Exchange had decided to fix minimum prices with immediate effect for all the ordinary shares of Plantation Companies quoted in the official list at the closing rates as on November 8.

12

The U.N. Secretary General announced in New York that the first contingent of the International Police Force would leave for Egypt the next day.

Prime Ministers of four of the five Colombo Powers began a discussion of the international situation in New Delhi.

13

Trading continued to be quiet on the Calcutta Stock Exchange but there were indications that selected scrips were receiving support at lower levels. An irregular trend prevailed in the Bombay Stock Exchange where equities after a steady opening developed a sagging tendency on unloading by bulls coupled with bear-selling. Toward close, however, thanks to some replacement buying prices recovered. Indian Irons in Calcutta ruled unchanged throughout the day's session at Rs 33-2. In Bombay Tata Iron was better at Rs 191-0. Textiles were easier with Bombay Dyeing receding to Rs 608-12.

14

According to a spokesman of the Indian High Commissioner's Office in London, India's sterling reserves which stood at £560 million in March fell to £460 million in October 1956. It was said that the decline was due to India's accelerated rate of withdrawals from her sterling balances in recent months.

The Reserve Bank of India withdrew restrictions on bank credit against paddy and rice. The Bank also announced that from November 21 the rate of interest on Advances to Banks under the Bill Market scheme would rise by another 1/4 per cent to the bank

§Includes stock on hand.

(a) After transferring Rs 12,50,000 from Reserve Fund; Rs 2,09,000 from Dividend Fund and Rs 1,02,872 from Depreciation and Renewal Fund.

(b) Dividend for four years from 1st April 1951 to 31st March, 1955 at 6¼ per cent per annum.

(c) Rs. 5 lakhs to be capitalised and issued as Bonus shares of Rs. 50 each in the proportion of one share for every five shares held.

(d) After transferring Rs. 1,84,474 from taxation reserve.

(e) Arrears for 1946, 1947 and 1948.

(f) After crediting Rs. 1,13,664 being excess provision for bonus for 1951 and Rs. 6,77,776 being E.P.T. and after transferring Rs. 1,50,000 from Dividend Equalisation Fund.

(g) After transferring Rs. 1,80,000 from Reserve.

(h) After transferring Rs. 3,37,000 from Dividend Fund.

(i) After transferring Rs 3,00,000 from Machinery Replacement Reserve and Rs 15,400 from Reserve Fund.

(j) In addition to dividend, a Bonus of one ordinary share of Rs. 10 each at par of Jay Shree Tea Gardens for every 20 ordinary shares of Kesoram Cotton Mills will be issued.

(k) After transferring Rs. 70,000 from General Reserve and Rs. 37,500 from Dividend Equalisation Reserve.

(l) Dividends for 5 years from 1949 to 1954 at 5 per cent per annum.

(m) Dividend to be paid out of Dividend Equalisation Fund.

(n) After transferring Rs. 1,00,000 from Dividend Equalisation Fund.

(o) Managing Agents have foregone their commission of Rs. 50,000 and have instead charged 10 per cent on net profit.

(a) Dividend for three years ended 1952 at 6 per cent per annum.

(b) Pref. Dividend for the year ended 31-12-51.

(c) After transferring Rs. 1,00,000 from Contingencies Reserve.

(d) After transferring Rs. 3,50,000 from General Reserve.

(e) Dividend for year 1949.

(f) After transferring Rs. 2,58,000 from contingencies Reserve.

(g) After transferring Rs. 6,00,000 from Improvement Reserve.

(h) Dividend for three years ended 31-12-52, 31-12-53 and 31-12-54 at 8 per cent per annum

(i) After transferring Rs. 1,75,000 from Revenue Reserve; Rs. 49,000 from Building and Machinery Reserve and Rs. 20,000 from Taxation Reserve.

(j) It is proposed to issue bonus shares in lieu of dividend.

(k) After transferring Rs. 1,85,000 from various Reserves.

(l) Dividend for the year 1951, 1952, 1953 and 1954 at 5 per cent per annum.

(m) The Indian Estates of The Patrakola Tea Co., Ltd. were transferred to this company at book value as on 1-12-1954.

(n) After writing back Rs 1,51,566 being provision for taxation in part provided in 1954.

(o) After transferring Rs 1,00,000 from Taxation Equalisation Reserve,

(p) After transferring Rs 1,50,480 from General Reserve,

(q) After transferring Rs. 40,000 from Revenue Reserve.

(r) After transferring Rs. 95,000 from General Reserve.

(s) After transferring Rs. 1,65,000 from General Reserve.

(t) After transferring Rs. 1,00,000 from Revenue Reserve and Rs. 1,20,000 from Building and Machinery Reserve.

(u) After transferring Rs. 90,000 from Revenue Reserve.

(v) After transferring Rs. 1,75,000 from Revenue Reserve.

(w) After transferring Rs. 1,25,000 from General Reserve.

(x) After transferring Rs. 1,50,000 Revenue Reserve.

(ag) After transferring Rs. 1,20,000 from Revenue Reserve.

(ae) After transferring Rs. 40,000 from general reserve and after crediting Rs. 1,46,362 being profit on realisation of fixed assets.

rate, namely 3½ per cent per annum.

Narrow price movements characterised trading in the Calcutta Stock Exchange. It was a featureless session and business passing was at a low ebb. Indian Irons opened at Rs 33-3 and closed quiet at Rs 33. A quietly steady tendency was noticeable in the Bombay Stock Exchange where Industrials in later dealings declined on selling pressure. Tata Iron closed 4 annas lower at Rs 190-12. Bombay Dyeing was unchanged at Rs 608-12.

15

India accepted Russian offer of credit to the extent of 500 million roubles (Rs 60 crores) thus bringing the total Russian credit to India to Rs 115 crores.

The Calcutta Stock Market continued dull but toward close some slight support for selected scrips was noticeable. Indian Irons moved within narrow limits around Rs 33-3 throughout the session. Mainly in sympathy with commodity markets Dalal Street presented a steadier appearance and widespread modest gains were recorded all along the list. Tata Iron advanced from Rs 190-12 to Rs 192-8. Bombay Dyeing gained more than 10 points to be placed at Rs 619-8.

16

In a survey of international affairs in the Lok Sabha, Prime Minister Nehru sounded a clear warning that the danger of a world war should not be discounted.

The Calcutta Stock Exchange ruled generally unchanged. Indian Irons opened at Rs 33-4 and closed fractionally better at Rs 33-5. The Bombay Stock Exchange, however, continued to forge ahead. Tata Iron moved further from Rs 192-8 to Rs 193-4. Bombay Dyeing gaind another 2 points to be placed at Rs 621-14.

17

Addressing the Import Advisory Council meeting in New Delhi Mr Morarji Desai appealed to traders to cooperate with the Government in cutting down imports in view of India's difficult foreign exchange position.

While the Calcutta Stock Exchange remained closed, generally steady conditions were noticeable in the Bombay Stock Exchange which after a firm opening encountered profit taking toward close. Tata Iron remained unchanged at Rs 193-4 while Bombay Dyeing shaded to Rs 620.

18 & 19

Addressing the Export Advisory Council Meeting in New Delhi Mr Morarji Desai stressed the vital importance of exports for the successful implementation of the Second Five Year Plan. In the first six months of 1956-57 the adverse balance was nearly Rs 121.86 crores. During the first nine months of the current year, India had earned in all only Rs 439 crores. During the corresponding period last year, earnings amounted to Rs 457 crores.

A Constitution Bench of the Supreme Court admitted the petition for special leave to appeal filed by the United Planters' Association of Southern India on behalf of the managements of 227 Coffee, Tea and Rubber estates and also granted ex-parte stay of the operation of the Award of the Industrial Tribunal under which they would have to make payments totalling over Rs 17 crores.

The Calcutta Stock Exchange ruled steady, sentiment having been helped by encouraging corporate news. Indian Irons opened at Rs 33-9 and after advancing to Rs 33-11 closed at Rs 33-9.

In Bombay fractional gains were recorded. And Tata Iron recorded a gain of 12 annas to be placed at Rs 194. Likewise in the textile section Bombay Dyeing improved by 14 annas to Rs 620-14.

20

The Plantation Enquiry Commission in its Second Report dealing with the Coffee industry recommended the creation of a coffee replanting fund to which each coffee estates of 25 acres or more should contribute a fixed amount of money.

The UK Minister of Fuel announced that Petrol rationing would be introduced in Britain on December 17.

The first detachment of Indian troops for the UN emergency force landed in Egypt.

The Calcutta Stock Exchange developed a reactionary tendency due to lack of fresh interest. The more speculative scrips encountered renewed selling pressure. Indian Irons after opening at Rs 33-7 reacted to Rs 33-4. The Bombay Stock Exchange after a quiet opening gave way under selling pressure. Tata Iron came back to Rs 192-12 from Rs 194. Bombay Dyeing was marked down to Rs 621-4 from Rs 626-14.

21

The UN Secretary General called on Britain, France and Israel to explain their failure to withdraw their forces from Egyptian territory in accordance with the UN Assembly resolution.

Tea shares were in the limelight in Calcutta. The rest of the list was dull but steady. Indian Iron after opening at Rs 33-3 closed quietly steady at Rs 33-1. Quiet conditions continued to prevail in the Bombay Stock Exchange in earlier dealings. Toward close steels and selected textiles attracted some support at lower levels. Tata Iron gained 1/4 point to Rs 193. Bombay Dyeing was nearly 4 points higher at Rs 625.

22

Attention continued to be centred on tea shares in the Calcutta Stock Exchange. This coupled with the fact that the more speculative issues encountered some support at lower levels imparted a steadier appearance to the market as a whole. Though turnover was small price levels were well maintained in the Bombay Stock Exchange as well. Indian Irons after opening at Rs 33-6 closed one anna higher at Rs 33-7. Tata Iron was shaded at Rs 192-12, while Bombay Dyeing was unchanged at Rs 625.

23

In Madras the Council of the Management of the Madras Stock Exchange announced that minimum prices fixed on November 8 for the Ordinary shares of planting companies quoted in the official list would be lifted with effect from November 23.

In the Calcutta Stock Exchange the recovery movement proved to be short-lived one. Tea shares, however, continued to receive selective support. In Bombay turnover was moderate and the undertone quietly steady. Indian Irons moved within narrow limits opening at Rs 33-3 and closing at Rs 33-2. Tata Iron reacted further to Rs 191-8 from Rs 192-12 with Bombay Dyeing coming back to Rs 623-12 from Rs 625.

24 & 25

The USA announced that it would support an Afro-Asian resolution in the UN calling for the immediate withdrawal of British, French and Israel forces from Egypt.

The Calcutta and Bombay Stock Exchanges remained closed.

26

Tea shares were again the only steady spot in the Calcutta Stock Exchange which otherwise ruled extremely dull. Though trading in the Bombay Stock Exchange began on a steady note, profit taking erased the little gain that was recorded. Indian Irons in Calcutta opened at Rs 33-1 and closed at Rs 33. In Bombay Tata Iron shaded to Rs 191-4, but Bombay Dyeings were better at close at Rs 626-4.

27

Mr Lal Bahadur Shastri announced in the Rajya Sabha that the threatened strike by the All-India Port and Dock Federation from December 1 had been called off.

But for increased activity in tea shares at advancing prices conditions in the Calcutta Stock Exchange were unchanged. While due to lack of support and scattered bull liquidation prices developed a sagging tendency in Bombay. Indian Irons opened at Rs 32-4 and closed at Rs 32-3 Tata Iron dropped one point to be finally placed at Rs 190-4. Bombay Dyeings receded from Rs 626-4 to Rs 622-8.

28

The more speculative issues led a recovery movement which was widespread in the Calcutta Stock Exchange. Burrakur coal was particularly active on interested buying. Tea shares were in request at advancing rates. Indian Irons after opening at Rs 32-15 moved upto Rs 33-2. On short covering and replacement buying equities in the Bombay Stock Exchange moved up. Tata Iron gained nearly 2 points to be placed at Rs 192. Among textiles Bombay Dyeings were higher by 6 points at Rs 628-12.

29

In the Calcutta Stock Exchange the previous day's rally was further extended with the speculative scrips meeting with fresh support. Sectionwise tea shares continued to be buoyant. Indian Irons after opening at Rs 33-2 moved up to close at Rs 33-5 on rumours that the dividend of Re 1 will be maintained on the increased capital of the company. In Bombay, Bombay Burmas was in the limelight on expectations of a higher dividend. Steels ruled steady with Tata Iron unchanged at Rs 192-12.

30

Mr T. T. Krishnamachari, Union Finance Minister introduced in the Lok Sabha two Finance Bills to give effect to a number of direct and indirect tax proposals which were estimated to bring in an additional revenue of Rs 16 crores a year.

The Calcutta and Bombay Stock Exchanges closed quietly steady. In kerb trading in the evening prices tumbled down soon after news of new taxation was known.

For the Investor

If Leakage, So What?

Investment Gossip:

ONE

WE need not concern ourselves here with the ethics of budget leakage. What is pertinent to this column is the stock exchange gambols of budget leakage. From this point of view, the question is this: Did the stock exchange witness, a few hours prior to the budget announcement, a spate of selling orders of more than the usual magnitude and from other than the professionals in the ring?

On the day following the budget, one who is in the best position to answer such a question complained to me that three "parties" were responsible for the heavy sales which brought prices tumbling down. He also added that these "parties" are reported to have bought in Bombay considerable quantities of artificial silk yarn. He definitely referred to budget leakage as a certainty.

My subsequent enquiries went to show that the impression was positive and wide-spread about the alleged leakage. So, it was no matter of surprise that Mr Asoke Mehta, participating in the debate in the Parliament, spoke of reports in the market place that there had been leakage again.

Mr T. T. Krishnamachari was emphatic and convincing in his assertion that the vigilance on this occasion was such that leakage was unthinkable.

Let us view in retrospect the happenings on that crucial day. Indian Irons from a level of near Rs 33 was hammered down to below Rs 32 in an hour's trading round-about noon. The general body of operators and brokers were quick to locate the brokers, who were putting through the large transactions which had such a damaging effect. When, by the evening, the teleprinter gave details of T. T. K.'s statement in the Parliament, they put two and two together and drew conclusions as to the "parties" on whose behalf the bear raid was carried out by the aforesaid brokers.

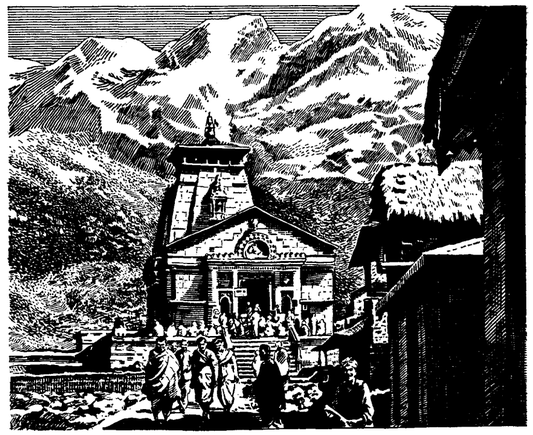
But there can be another version which can equally fit in with the known facts. Mr Satynarayan Sinha made the announcement, that morning, that the Finance Minister would make a statement in the evening. What could a statement at an evening hour by the Finance Minister mean? Could such a statement be other than some kind of emergency budget? If so, could a budget in present circumstances be other than additional taxation proposals?

These are simple questions which automatically rise in the thinking of the gents who get in and get out of the share market after a brief, but extremely competent, incursion. Sometimes, there may be an element of inside information. But, most times, it is "hunch", it is quick and shrewd interpretation, infallible guessing, and adroit and swift execution. They have developed a sharp sense in this matter; and, nine times out of ten, they turn out to be correct.

For my part, I have, again and again, wondered at the unerring instinct and daring such men display. When, in the thirties, the economic pundits were worrying their heads as to the repercussions which the devaluation of the US dollar would have, the phatkawallas gauged the likely effects with a sureness which then amazed me.

Judged purely in relation to the Stock Exchange gambols on the eve of the budget, there need be no hypothesis of leakage. It is, however, a different matter if these "parties" had also made sizable purchases of artificial silk yarn.

I am not sure if any official enquiry would lead to conclusions more precise than this. Many such enquiries in the past have only ended in smoke.



The investor has, however, to revise his estimate of the budget reactions; and this he must do in the light of the observations I have made. If there were precipitate declines in share values on the budget news, this was not due to operations based on a close study and careful appraisal of the pros and cons of the taxation measures. It was the result of a mass assault by "parties" who came on the market, sold heavily, covered quickly, and departed with a tidy fortune.

The happenings on the budget day and on the following two or three days were in the nature of an interlude. That interlude is now like an ugly dream. For those whose business is not occasional forays, but continuing stake in investments, second thoughts on the budget will turn out to be a correct guide.

Such second thoughts have made it clear that the evil effects of the new taxes were unduly exaggerated. A steadily expanding economy can take such new taxes easily in its stride.

Around India with Brooke Bond

A shrine in the high Himalayas—**Kedarnath**

The road to Kedarnath, a shrine of Lord Siva perched on the high Himalayas, is long, uphill and arduous. And yet every year from April to October, streams of visitors can be seen proceeding towards this shrine which many devout Hindus dream of visiting at least once in their lifetime. At a height of 11,760 feet and about 300 miles north-west of Hardwar, the temple has a unique location under the shadow of the mighty snow-covered peak of Mahapantha.

Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Mr Martin's Address

Investment Gossip:

TWO

In his address to shareholders at the last annual general meeting of the Indian Iron & Steel Company Limited, Mr T. Leslie Martin, the Chairman, has found himself similarly placed to the Indian Finance Minister in recent years. I will explain the similarity. The budgets of the last few years have always envisaged a revenue deficit; and, on each succeeding budget day, the Finance Minister found himself in the fortunate position of being able to assert that the revised estimates reveal instead a revenue surplus.

While, in a Finance Minister, a sharp fluctuation by way of a substantial difference between budget

HIGHLIGHTS

There are a breed of men who are colour blind; and their queer form of blindness prevents them from being able to see any silver lining in any cloud.

On such as these, you can always count to out-Jeremiah Jeremiah in their prognostications of gloom.

Of course, from time to time, this breed is on the alert look out for a subject fit for their triumphant wail of woe.

In recent weeks, the subject they have chanced upon is foreign exchange, and the impact of a depletion in such resources on the strength or otherwise of the Indian rupee.

Today, it is in these circles fashionable to make a show of weeping about India's foreign exchange position.

Such gloom can by no means be justified. Such gloom is unjustified from both the long and the short term view of foreign exchange.

As for the long term view, the assessment of resources, internal and external, for the Second Plan is neither diffident nor defeatist.

From the short term point of view, the facilities of the IMF are always available in substantial measure to meet any emergency.

To know the measure of help that may be forthcoming from the IMF, read World of Finance.

We may remember that the Indian rupee has always been a strong currency. We emphasise that the Indian rupee will continue to remain a strong currency.

figures and revised estimates may be a reflection on his ability correctly to assess the future, no such sentiment attaches to Mr Martin's wrong prognostications at last year's annual general meeting. On the contrary, it is prudent in a company chairman to warn his shareholders that circumstances might so devolve as adversely to affect the earnings of a company; and, if proved wrong, the result is merely a happy surprise to the shareholder.

Mr Martin has pointedly refused to make any forecast; and has instead confined his remarks to facts and factors contributing to the happy position in 1955-56.

In the first place, greater efficiency in relining technique has enabled the output of the Burnpur Blast Furnaces to be affected to a much smaller extent than had been originally apprehended.

In the second place, the change over to tar firing has enabled the company to utilise a greater proportion of steel scrap in the furnaces.

Thirdly, the sanction of a larger allotment of iron for the Kulti Foundry contributed to an increased production tonnage in iron pipes and general castings.

In the result, the profit for 1955-56 increased by Rs 70 lakhs.

At this juncture, although Mr Martin himself does not make any prediction, he cautiously warns shareholders to remember that "it is not unlikely we will have to contend with increasing difficulties in the operation of the existing plant owing to the disorganisation caused by the expansion works in progress." As such, "no appreciable increase in output can justifiably be looked for" in the next two years.

Mr Martin then turns his mind to the all important question of dividends. Shareholders are keenly aware of the strenuous efforts made by the management to persuade Government to an increase in the dividend. However, says the IISCO Chairman, the one heartening bit of news is that, in their letter, Government have suggested that the mobilization of the available resources for the expansion programme is in the interests of shareholders "as ultimately they will have their full share of the increased profits."

Finally, Mr Martin has discussed the further extensions being taken on hand by IISCO; and attention to these was drawn in detail in this column on a previous occasion.

Investment Notes:

IT has already been mentioned in these columns last week that the response to the equity issue offer of the Hindustan Lever Limited has been heavily oversubscribed. After setting aside 55,700 shares for the staff, the balance of 5,01,300 shares is offered to the public for which 41,000 applications have been received. According to the latest reports, the company has decided to accept 20,052 applications to the extent of 25 shares each, the successful applicants being picked by secret ballot.

There is a growing evidence that the impact of the supplementary Budget will compel several companies to issue Bonus shares. Kesoram Cotton, Sutlej Cotton and New Swadeshi Mills are expected to consider the issue of capitalisation. Certain other popular mills in Bombay and Ahmedabad are also expected to follow suit.

Century Spinnings are now quoted around Rs 537. The company has decided to give bonus shares in the ratio of three for two shares held, subject to the sanction of the Controller of Capital Issues.

The Government of India have approved of a scheme for the setting up of a cotton spinning mill at Naini near Allahabad by Swadeshi Cotton Mills of Kanpur. For implementing the scheme, the Central Government will advance a loan of Rs 25 lakhs to the Uttar Pradesh Government who, in their turn, will advance the loan to the company.

The extraordinary general meeting of the Bombay Burmah Trading Corporation, which was scheduled to consider certain special resolution on Monday, has once again been postponed till January 3, 1957.

Indian Plastics Limited has, after wiping out the arrears of dividends on the Preference shares, proposed a dividend of As 4 per share on the Ordinary shares for the year ended 31-3-1956.

£ R$

Investment Briefs:

National Iron & Steel has raised the dividend from As 4 to As 10 per share for the year ended 31-3-1956.

Delhi Cloth and General Mills have raised the dividend from Rs 2-4 to Rs 2-8 per Ordinary share for the year ended 30-6-56 and not from 2½ to 2¾ per cent as stated in our issue dated 1st December, 1956.

Associated Cement Companies have maintained the dividend at 10 per cent for the year ended 31-7-1956.

Patna Electric has maintained the dividend at 7½ per cent for the year ended 31-12-1955.

Loyal Textiles have raised the dividend on the Ordinary shares from 5 to 7½ per cent for the year ended 30-6-1956.

Teekoy Rubber has maintained the dividend at 9 per cent for the year ended 31-3-1956.

Rajagiri Rubber has raised the dividend from 20 to 25 per cent for the year ended 30th June, 1956.

Group Results of Tea Companies

Balance-Sheet Reviews:

TEA companies of three big managing agency groups—Gillanders Arbuthnot, Williamson Magor and Duncan Brothers—have presented their reports and accounts for 1955. The working results of all the companies are rather disappointing; and the decline in earnings is entirely due to the increased burden of expenditure imposed on the industry by the Government. The increase in expenditure is, in the main, due to increase in staff salaries and allowances, wages paid to labour, holidays with pay and a provision for a bonus to be paid to labour for 1955.

With the result, all the companies have reduced their dividends substantially from 1954 levels, although there are a few exceptions. In Gillanders group, Lackatoorah has tripled the dividend to 30 per cent, thanks to the profits being nearly maintained at the 1954 level. In Duncan Brothers group, Dauracherra has maintained the dividend at 20 per cent. Although a dividend of only 5 per cent was initially declared for 1954, a special dividend of 15 per cent was again recommended on the 28th March, 1956. This has been possible due to the retrospective exemption from taxation in India of agricultural income arising in Pakistan and taxable in that country.

In this connection, it may be added that the Government of India have granted permission for the issue of bonus shares to six out of the seven companies in the Gillanders Arbuthnot group. The dividends, now recommended by the companies in this group, will be paid only on the old capital. Following table shows the amounts capitalised from Reserves and the proportion of the bonus issue granted in each case:

	Amount Capitalised (In Lakhs Rs)	Bonus Issue Ratio
Ananda-Bag	3.50	1 : 1
Betjan	3.20	1 : 1
Gairkhata	2.50	1 : 2
Jutlibari	1.50	1 : 5
Lackatoorah	2.00	1 : 2
Taipoo	Nil	Nil
Tengpani	4.00	1 : 1

In Duncan Brothers group, Dauracherra and Teliapara have been able to recommend the dividends only after transferring Rs 5.50 lakhs and Rs 11.50 lakhs from Taxation Reserves, being excess provisions no longer required. In the case of Patrakola, the profits would have been still higher, but for a loss of as much as Rs 20.09 lakhs on Exchange resulting from the devaluation of Pakistani currency. The directors of these three companies have, in their reports, stated that the dividends in all the cases are payable only at a later date.

Following tables show the profits earned and the dividends recommended by the respective group of companies for 1955 as compared to 1954:

Grob Tea

The Grob Tea Company, in the managing agency of Octavius Steel & Company Limited, is no exception to the general decline in profits. Although the crop outturn is higher at 19,684 maunds against 16,574 maunds, average price realised per pound is lower at Rs 2-0-0 against Rs 2-15-7. The net profit, before Taxation and Depreciation, amounts only Rs 7,89,442 as against as much as Rs 20,25,704 in the previous year. The directors have, after setting apart Rs 1.21 lakhs (Rs 91,808) for Depreciation; Rs 3.20 lakhs (Rs 7.80 lakhs) for Taxation and Rs 1.00 lakh (Rs 2.28 lakhs) for General Reserve, halved the dividend to 25 per cent.

£ R$

Midnapore Zemindary

The Midnapore Zemindary Company has incurred a loss for the year ended 13th April, 1956. In consequence of the vesting in the West Bengal Government of the company's rent receiving interests from the 15th April 1955, the company has had no income from property during the year under review other than a small amount from its "raiyati jotes", which have since been acquired with effect from the 10th April, 1956.

The accounts, before providing for Depreciation, show a loss of Rs 11,46,820 as against a net profit of Rs 9,70,135 in the previous year. A sum of Rs 18,374 against Rs 21,523 has been provided for Depreciation and Rs 70,000 against Rs 5.50 lakhs for Taxation. The dividend on the Ordinary shares has been passed over as against 3 per cent.

The directors have decided that, until the amounts due to the company by the acquiring State Governments, by way of compensation or otherwise, have been finally determined, and until the the company's tax assessments are up-to-date, it will be inappropriate to consider any further repayment of capital.

Bisra Stone Lime

Despite a decline in raisings and sales, the Bisra Stone Lime Company has maintained its profits for the half-year ended 31st March, 1956. Raisings of Limestone were on a reduced scale, the tonnage mined being 338,574 tons as against 415,913 tons in the previous half-year. Sales were similarly reduced to 364,865 tons from 415,797 tons owing to the decreased requirements of one of the major steel producers. Production of Dolomite was increased by 4,934 tons to 20,972 tons as against 15,978 tons, while sales also increased to 21,399 tons from 18,502 tons. Output of Lime increased slightly to 632,819 maunds, while sales are shown at 580,333 maunds against 564,899 maunds.

The net profit for the half-year under review, before Taxation and Depreciation, amounts to Rs 5,91,413 against Rs 5,20,938 in the previous half-year. Depreciation absorbs Rs 43,855 against Rs 41,405; Taxation Rs 2.25 lakhs against Rs 2.70 lakhs; Taxation Contingency Reserve Rs 23,000 against Rs 16,000 and Other Funds Rs 2.28 lakhs against Rs 2.90 lakhs. The dividend is maintained at As 14 per share.

£ R$

Agarpara Jute

The difficult conditions generally experienced by the jute industry, during the half-year ended 31st March 1956, are fully reflected in the working results of the Agarpara Company Limited. Sales have declined to Rs 1.07 crores from Rs 1.21 crores, while the net profit, before providing for Depreciation, amounts to Rs 31,907 as against a loss of Rs 3.67 lakhs in the previous half-year. A sum of Rs 1.34 lakhs (Rs 1.23 lakhs) is set aside for Depreciation. After transferring a sum of Rs 2.50 lakhs from General Reserve, the dividend on the Ordinary shares is maintained at 2½ per cent. In the case of the previous half-year, a sum of Rs 5.00 lakhs was transferred from General Reserve to recommend the dividend.

£ R$

Hindustan Motors

The accounts of the Hindustan Motors Limited, for the year ended 31st March 1956, reveal a profit of Rs 43.51 lakhs, including a sum of Rs 5.19 lakhs brought in from previous year. After providing Rs 37.35 lakhs for Depreciation, the balance of Rs 6.16 lakhs is carried over. Depreciation amounting to Rs 145 lakhs remains to be provided for up to the end of this year under review. Sales during the year totalled Rs 7.73 crores.

Production of a number of components and parts required for the Hindustan Landmaster cars was developed indigenously during the year, and imports thereof were stopped. Studebaker cars and trucks are also being progressively manufactured in the plant. Necessary steps are being taken to manufacture chassis frames, axles, gearbox, etc., of Studebaker vehicles, and arrangements for purchasing equipments for the same are also being made.

With the implementation of the Second Five-Year Plan, the demand for vehicles is expected to increase considerably In anticipation of this, the company is making efforts to produce more parts and units to meet the increased demand for vehicles The directors, in this connection, have stated that, in spite of an improvement in sales, the working results have not shown much improvement, mainly due to the low prices fixed by the Government.

£ R$

Hind Electric

The market's optimism about the outlook for this company has been justified by the recent decision made by the directors to recommend a dividend of 6 per cent not only for 1955-56, but also for the year 1954-55.

The net profit for the year ended 30th April 1956, has risen to Rs 5.23 lakhs from Rs 4.18 lakhs in the previous year after raising the Depreciation amount from Rs 70,000 to Rs 5.81 lakhs and allocating Rs 75,072 (Rs 53,831) for managing agency commission. After providing a sum of Rs 1.15 lakhs for Taxation in respect of 1954-55, the directors have written off Goodwill and rights at cost to the extent of Rs 1.22 lakhs; Rs 12,910 as preliminary expenses and Rs 27,720 as commission on shares. General Reserve gets Rs 2 lakhs.

The outlook for the company, during the current year, is considered to be bright as the production of manufacturing activity in the company's operations has substantially broadened.

Erosion of Misgivings

Indian Finance
Established 1928
December 15, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

MR O. T. JENKINS' Presidential speech at the Annual Meeting of the Associated Chambers of Commerce was not marked by any special kindliness for the economic and fiscal policies being adopted by the Government to ensure success of the Second Plan. Amidst the general approval of the Plan and readiness to co-operate wholeheartedly, there was a tinge of sarcasm in the ACC President's words. The President of the Associated Chambers plied his shafts against diverse targets. Personal taxation was described as confiscatory. The priorities accepted between increased production and more equitable distribution were found faulty. The appeal to spiritual values, as intended to stimulate the interest and enthusiasm of ordinary men, was pleasantly ridiculed. Mr Jenkins frankly warned the public that the changes now taking place might serve only to replace a plutocracy by an entrenched bureaucracy, reminding them of Hamlet's bracketing of the arrogance of the rich man with the insolence of the official and his listing both among things that made life not worth living. He also blandly reminded the Government that, as far as the problem of labour went, the public and the private sectors were travelling in the same boat.

Against this lively and colourful speech, where appreciation and indictment were blended, the Resolutions passed at the meeting look tame but wholly co-operative. The difference in content and tone is easily explicable. The President was employing his gifts of eloquence to pick holes in, if not to assail the foundations of, social aims and economic methods, with which the interests he represents naturally find it hard to reconcile. The Resolutions, on the other hand, are intended to convey to the Government the immediate practical difficulties in the way of private industry and to convey certain specific suggestions toward their alleviation.

The President of the Associated Chambers of Commerce must have been thinking that there would be nothing lost by adding a little spice and embellishment to a speech assaulting a pattern of economy which takes an inexorable course. For an under-developed economy weighed down by population, and trying to catch up in record speed to increasing standards of living, State initiative in all the vital spheres becomes inevitable. Even in Britain, where conditions are totally different, such initiative is approved by at least a near majority of the people. In India, it has the indubitable sanction of an overwhelming majority and those who are in the opposite camp have little confidence in the matter of effectively sustaining their point of view. The establishment of State enterprises and direct state assistance to private enterprise through loans and subsidies have become the natural requirements of economic stability and social progress. Anyone battling against these ideas and institutions will be spending his efforts in vain.

The Resolutions, pitched to a practical key, steer clear of basic policies. In fact, the majority of the Resolutions cover points on which the Chambers and the Government are in broad agreement and are concerned with tackling day to day problems, in which both are equally interested. Quite properly, the pride of place is given to the need for a massive expansion of the country's transport system during the Plan period and in particular for urgent efforts to improve co-ordination in rail, road and river transport.

Congestion in the major ports appears to have become chronic; in Calcutta, for instance, ships lie in wait for as long as twelve days, a period equivalent to the extra time now taken by ships to go round the Cape of Good Hope. There is an unanswerable case for placing the operation of the major ports on an emergency footing, as has been made out by the mover of the concerned Resolution. Both he and others who spoke in support had a number of other helpful suggestions. These must receive the weight due to what comes from those who know where the shoe pinches. From the nature of steps suggested, particularly for the expeditious clearance of goods arriving at the Calcutta Port, overall changes in organisation will have to proceed hand in hand with attention to various details. For some time, vigilance and imagination on all levels of authority seem imperative.

On the question of finance for the private sector, the Resolution is guilty of clear exaggeration, when it says that the private individual investor has been completely extinguished or absorbed in the socialistic pattern of society. Though, on the whole, response from this quarter to industrial issues may, in some circles, thought to be disappointing, it cannot be denied that, when the parties behind the issue carry unassailable prestige and reputation, over-subscription has been found to be the general rule. The foreign companies are conspicuous in this respect. It is, of course, true that the sources of investment funds are registering new shifts and tending to a new balance. This is inevitable when the State has come to occupy the dominant role as a financier of industry. As the Resolution concedes, the Government are fully alive to the need for and the desirability of foreign capital no less than to the restraint called for in the use of deficit financing. On these questions, there is scarcely any scope for disagreement. Likewise, the Associated Chambers are able to see eye to eye with the Government on much of the scope and methods for augmenting fiscal resources and in stimulating savings among sections of the people where idle funds are believed to be held.

The fear entertained that foreign capital might be scared away by the public sector's attempt to 'dominate industry' is legitimate only within limits. Either directly or indirectly, foreign capital has been flowing even into countries where there is hardly a private sector in industry. In trade and in finance, ideological barriers are being pierced, even in

(Continued on page 1113)

Suggestions on Coal

MR D. C. DRIVER has, in his speech at the annual general meeting of the Coal Consumers Association of India, addressed himself to an examination of the prospects for coal under the Second Plan. He has studied this question carefully and deeply; and this has enabled him to offer a number of worthwhile suggestions—25 in number—for consideration by Government and the other concerned entities. We shall here confine ourselves to four or five of the more important and less technical suggestions advanced by Mr Driver.

The first point made is that planning for coal should be in terms of 8 years, and not 5 years. It may be recalled that the private sector in the colliery industry had last year asked for an assurance against non-nationalisation for a specific period of years, the reason being that it was otherwise not in a position to embark upon development plans whose results would be reflected only after three or four years after the completion of the projects. While we can appreciate that Government could scarcely give an assurance such as had been asked, it is an extremely good notion to adopt the suggestion offered by Mr Driver; an 8-year plan for coal would be welcomed by the industry to the extent and in the sense that the plan covers a period of time that is long enough to witness the results achieved by development. Consequently, with the yard stick of an 8-year plan, the private sector in coal may be greatly emboldened to take up development work expeditiously and courageously.

Secondly, Mr Driver has urged that measures should be instituted to foster and encourage the carriage of coal by road. Not only would the transport cost be cheaper; a second advantage is that the pressure on railway wagons will to that extent be alleviated. Moreover, since, as a prerequisite, the roads and bridges on the way would have to be strengthened, gainful employment could be provided to the distressed refugee population in and around the area.

Mr Driver deems it exceedingly important that the electrification of the railways should be accelerated. The advantages of electrification are substantial: it has been reckoned that an electric locomotive can give 2½ times the work of a steam locomotive; and the coal consumption in the former case is scarcely 25 per cent of the quantity required for getting the same traction from a steam engine.

This leads Mr Driver to suggest that, in the programme of manufacture of the Heavy Electrical Machinery plant, priority should be accorded to the production of machinery for the electrification of railways.

Finally, in view of stepped up targets for steel production, Mr Driver has called for the collation of acurate data on the reserves of metallurgical coal. In this regard, Mr Driver has also emphasised that recent research has discovered that metallurgical coal could be made available by proper blending of Raniganj coals.

In brief, Mr Driver's study of coal under the Second Plan has enabled and impelled him to offer suggestions with a two-fold usefulness: on the one hand, economic utilisation of coal; and, on the other hand, how best coal production can be increased.

Editorial Notes

"Safety First"

The soul of good in the Ariyalur tragedy lies in the fact that it has served to restore perspective and a new sense of priority for the problems of rail transport. Hitherto the dominant note in public demand has been centred on amenities: more spacious coaches with appurtenances of comfort, faster travel, capacious and well-lighted platforms and waiting rooms, and a number of similar items were asked of the Administration and are being conceded one by one. Air conditioned third-class coaches on trains geared to timings with record speed are the latest to be offered.

Unfortunately it took a series of major accidents coming in quick succession to awaken the authorities to the technically obvious question as to whether the track will bear all the new load and the new speed. The debate in Parliament over the South Indian tragedy has brought out a number of highly disturbing revelations.

The Deputy Minister confesses to a general deterioration in discipline among railwaymen, the emergence of an emotional vacuum between the disappearance of the old fear of punishment and the imbibing of a spontaneous sense of duty. When one of the leading spokesmen of the Government makes an admission of this character, it is time that the Government, no less than the Opposition parties who are also directly involved, examine the cause thereof and discover remedies which would restore the proper attitude in the Railway employees.

Equally serious are the lags in organisation. Apparently nothing has been done over the last several years to improve track conditions; even where, as in the Nizam's State Railway, they were known to be sub-standard. The need for more extensive and regular on-the-spot inspections by members of the Railway Board has long been recognised; but practically the old schedules are allowed to continue, inspite of the expansion of the Board itself. There is an assurance that henceforward the members would go out more often on inspection visits.

The construction of huge multi-purpose projects, dams and canal systems have also called for a re-orientation of ideas on the safety of track. The subject appears to be wholly overlooked. It looks as if for sometime the railways should proceed on the slogan of 'safety first'. Public opinion is not likely to condone recurrence of disasters, resulting from negligence.

*

Whose Initiative ?

The Peking offer made to Chiang Kai Shek may well mark a big turning point in Far Eastern politics, though a spontaneous and quick response has to be ruled out. Chiang Kai Shek is obliged to consult the wishes of his protector, the US. The US, in turn, will have to calculate repurcussions in terms of a re-demarcation of spheres in the Far East impinging on the cold-war. These calculations, again, can be made only with reference to the interpretation which the US and its allies put on Russian intentions in Eastern Europe and beyond. It is this colossal link-up which imparts to the offer the character of a highly complicated international issue; and consequently, freezes hopes of any immediate outcome.

The Indian Prime Minister's visit to US may not be barren of consequences affecting Sino-US relations and, incidentally, the future of Formosa. Pandit Nehru is bound to reinforce through personal appeal his persistent demand for the admission of China into the UN and the automatic ejection of Chiang's representative. The US refusal to comply with this demand undoubtedly springs from the importance attached to Formosa as a separate political entity in the cold-war strategy.

To the extent that neither China nor India can independently or even together influence US attitude on its commitments as the leader of the anti-Communist bloc, Eisenhower is disabled to give a satisfactory assurance to his guest. A simpler solution will be for Chiang Kai Shek himself to take the situation into his own hands, to jump the US overlordship and accept the Peking Government's offer for what it is worth. This of course, he will do, only if he is satisfied with Peking's bonafides. There can be no assurance on this.

*

A Windfall for Congress ?

Mr S. K. Patil has again shown his remarkable ability as an election boss. He was put in charge of Kerala on the hope that the deftness and drive displayed in the last Andhra elections which ended in a resounding victory for the Congress, would be utilised with the same result.

In the confused political setup of Kerala, where the Congress has all along been undermining itself through internal strife and dissensions, even a wizard of organisation like Mr Patil may find it a tough job to ensure a victory. However, he has had a dashing start. It is no mean achievement to have been able to bring round the powerful group of Muslim leaders in Malabar. The Muslim League as a body is reported to have decided to scuttle itself and merge into the Congress. When this step is taken, the Congress will be strengthened to a decisive degree and be in a position to meet squarely any combined opposition which may emerge.

The infusion of the League into the Congress party is advantageous to the latter, from the point of view of elections. The Muslim community in Kerala stands to gain much more. It is no use belittling the impact on inter-communal relations in India, when the Pakistan Premier, amidst open sabre-rattling against this country is tempted to refer to the Indian Muslims as his countrymen. The Prime Minister of India has also hinted of the possibility of 'some little trouble'. In this unpleasing context of Indo-Pakistan relations, it behoves the Muslim League leaders here to spurn the fraternal gestures from across the border and to demonstrate as convincingly as possible the complete identity of their political interests with the rest of India's population.

It is now for the Kerala Congress to see that the advent of the new element, instead of providing new props and outlets for communalism, promotes a genuinely catholic outlook among its leaders, whose absence hitherto remained the bane of the party.

Thanks to Sir Mirza Ismail's sensible advice, some Muslim leaders of Mysore have also chosen to join and work on behalf of the Congress. If these political conversions bespeak a real change of heart, the party will surely be enriched by the new adhesions.

*

Tibetan Population

The sponsoring of a campaign for increase in population by a women's organisation in Tibet might go some way to salvage the Communist conscience, mauled by the Peking policy of restricting births, at least as a temporary measure. The reasons for this departure in national policy are obscure. Tibet is comparatively sparsely populated, but this cannot be a sufficiently weighty consideration with the Chinese Government, who are now undoubtedly thinking of raising the standards of living and consumption expenditure. The outside world is left to wonder why a special policy is being adopted in respect of a hefty border region. One possible explanation appears to be that China wants to make Tibet a powerful and compact unit, a question not devoid of interest for India.

*

The Czech Exhibition

The Czechoslovak Industrial Exhibition currently running at Calcutta provides glimpses of an economy which has registered marvellous progress since the end of the Second World War. The exhibits displayed, ranging from plough to a complete cigarette-manufacturing machine throw light on the high degree of craftsmanship, skill and technical perfection, attained by the Czech industrial system. Actually, only a tiny fraction of the immense and expanding area of the country's productive apparatus is put on show here; but this is enough to facilitate understanding of the full shape.

Amidst all the vicissitudes and tragedies of their chequered history, the Czechs have been able to preserve and develop a tradition of industrial efficiency which runs almost without break over generations. Owing to circumstances well-known, progress during the post-war decade has been incomparably rapid and today the country, inspite of the lack of basic raw materials like iron ore, can boast of an industrial set-up, imbued with unassailable competitive strength and stability. The exhibition also serves as an opportune symbol of the prospect of a fruitful and widening exchange of goods between India and Czechoslovakia. The labels on the exhibits displayed point to the attraction of these capital goods to Indian industrialists.

Foreign Exchange "Nest-egg"

IMF's Emergency Aid Provisions

ONE of the factors that impelled Mr T. T. Krishnamachari to present a mid-year budget to the nation was the realisation that the balance of payment position required action on urgent, though by no means desperate, lines. Since the beginning of this financial year, the foreign exchange holdings of the Reserve Bank have declined by Rs 207.83 crores. The amended Reserve Bank of India Act requires that the holdings of foreign securities as backing should be at a minimum of Rs 400 crores. In this view, and in the light of the pace at which foreign exchange resources have been depleted in the last eight months, it had become necessary to re-assess Second Plan resources as they referred to foreign exchange requirements. Although the running down of sterling balances has not been totally unplanned, a number of other factors had coincided to require immediate thinking on the problem by the Government. From the strictly short-term point of view, there can be no doubt that it is desirable to discourage such imports as cannot be termed essential. Secondly, with the closure of the Suez Canal to traffic, greater attention is called for in the planning of priorities in respect of imports. Thirdly, from the longer term point of view, a revision of foreign exchange requirements has become necessary because of two facts: firstly, the import prices of many of the articles that we shall need in implementing the Second Plan have risen; and, secondly, a clearer perspective of the projects to be included in the Second Plan has entailed the need to make provision for a larger amount in foreign exchange outlay.

As far as the balance of payment position, over the Second Plan period, is concerned, the trend of developments is such as to suggest the validity of the estimates made a month ago in this section. It will be recalled that, in the issue of November 17, we had indicated that the resources which we would have to find externally for the Second Plan would have to be raised to Rs 1,200 crores as against the Second Plan estimate of Rs 800 crores. In that article, we presented a table which suggested the manner in which India might be able to come by requirements of foreign exchange on such a scale. We reproduce the table below:

	(In Crores of Rs.)
Spillover from First Plan of unutilised Foreign Aid credits ...	100
Foreign Exchange saving consequent to recently concluded Surplus Commodities Agreement with USA	137
Gross amount available on Steel credits	83
World Bank aid for Railway projects	400
American aid	150
Assistance from Colombo Plan countries and others ...	80
Russian Credits	60
Foreign Exchange earnings consequent to Export Promotion	190
Total ...	1,200

Of all these figures, we do not feel any explanation further to the one which had given in the previous article is necessary. The logic underlining the ability of India to achieve those targets, which was reasoned out in that article, remains unchanged. The only development is a factor greatly favourable to India. This consists in the clarification of World Bank policy in the matter of loans to this country. When the previous article was written, there was some uncertainty about the extent to which World Bank facilities would be available for financing India's import requirements. Since then, the further correspondence between Mr Eugene Black and Mr Krishnamachari is almost explicit in its indication of an assurance from the World Bank for a considerable quantum of aid from that source.

What we have so far described is a sweeping survey of the balance of payment position over a period of years. While this aspect of foreign exchange does merit the closest study, developments of the recent past have served, at least for the time being, to focus our attention on the short-time aspect. Difficulties and discomforts of this variety are by no means India's alone. Indeed, since the Suez crisis, both Britain and France have, by the compulsion of events, been brought to face with a difficult, if not desperate, plight with regard to foreign exchange. In the last week's World of Finance, we pointed out that the hammering in sterling was largely the result of speculative sales. In the examination of sterling's plight, we suggested that the British Government could not conceivably be thinking in terms of devaluation, but that they would try to use all the means and reserve resources at their command to defend sterling. We then described the three avenues through which Britain could find the necessary strength to beat off the speculative pressure on sterling. Of these three, one of the measures needs to be carefully studied since it provides an example of the parallel action that could be taken, at a pinch, by India.

Briefly, the British Government have already indicated that they intend to exercise their right to purchase dollars from the International Monetary Fund. It may be mentioned that France has already taken advantage of this facility with a purchase of $ 236 million from the IMF. By this procedure, Britain will be able to obtain, from the IMF, a total of $ 561 million less any re-purchases that might be outstanding.

This facility is made available by the IMF, specifically so that countries faced by emergent conditions may be able to raise a fairly substantial amount in gold and dollars. Indeed, India has before utilised this facility; and the re-purchase of rupees by India during the year ended April 1956 was for an amount of $ 27.5 million. Altogether, the emergency purchase made by India was of the order of $ 100 million; and the whole of this has been repurchased by India with convertible currency or gold.

If, consequently, the foreign exchange depletion should continue unabated, and if in the meantime we do not receive the foreign aid that we expect during the Second Plan, India can always buttress its position in foreign exchange. Such drawings are permitted by Article G, Section 3(a)(iii), and this was interpreted by the Executive Board of the IMF, in August last year, as follows:

> Where the Fund's holdings of a member's currency are not less than seventy-five per cent of its quota, and to the extent that such holdings would not be increased above two hundred per cent of its quota, the purchases which the member may make during a period of twelve months ending on the date of a proposed purchase shall be determined as follows:
>
> (a) The total purchases shall not exceed twenty-five per cent of its quota;
>
> (b) Provided that, if the member has made purchases during the period, it may then purchase an amount equal to the difference between twenty-five per cent of its quota and the total of such purchases adjusted on the basis that a re-purchase by the member or sale of its currency during the period is deducted from a previous, but not subsequent, purchase or purchases during the period.

Effectively, this means that, in a period of 12 months, the normal availability of dollars from the IMF is restricted to 25 per cent of the quota of the member nation. Each member nation has, besides, the right automatically to withdraw what is technically described as the gold tranche. This represents the payment of subscriptions to capital which were effected in gold.

We may point out, in this context, that the IMF has before permitted the purchase of a larger quantity of dollars than is strictly allowable in terms of the relevant article. We may also add that further purchases of dollars can be made in subsequent years, the only limiting factor being the ceiling placed by the article that the Fund's holdings of a member's currency should not exceed 200 per cent of its quota. One more pertinent fact about purchase of dollars from the IMF is that repurchase is normally expected to be completed in three to five years time.

We may now see to what extent India can avail of the facilities offered by the IMF. India's payment in gold to the IMF was for an amount of $ 27.49 million. As we understand it, this gold tranche would readily and automatically be available whenever India wants it. Secondly, India can purchase dollars from the IMF for one-fourth of its quota, which is $ 400 million; this means that, in any period of 12 months, India could with little formality draw upon the IMF for its first tranche of $ 100 million. The total funds available to India, in a period of 12 months, would be around $ 128 million. It would be wise to remember that this is a nest egg of foreign exchange reserves with which we could meet any emergent or difficult development in our balance of payments.

It may even be possible to arrange with the IMF for the withdrawal of the whole of the Indian quota of $ 400 million; this is a foreign exchange nest-egg of the order of Rs 200 crores. That India could count on such help from the IMF, is indicated in the next article in this section, which shows that Britain has arranged with the IMF for the withdrawal, if necessary, of its full quota of $ 1300 million.

In Defence of the Pound

WHILE reiterating the spreading conviction that voluntary devaluation of sterling will be an economic disaster, and forced devaluation a political disaster—a disaster which the present Government, for sheer survival, would do their utmost to prevent—we may refer to the action taken in the spheres of reinforcement, a general indication of which was given in this column last week. The two major steps in this regard pertain to the arrangement for drawing on the International Monetary Fund; and to dollar loan arranged with the Export-Import Bank on the security of the US industrial shares held by the British Government.

After the recent big decline, Britain's gold and dollar reserves stand at $ 1965 million. The loan to be secured from the Export-

Import Bank is to be added to the reserves; and this will be roughly $ 600 million. It has been finalised with IMF that Britain could draw at once $ 561 million, being the initial gold contribution plus 25 per cent of the quota. It has been further arranged that $ 739 million, the balance of its quota, could be drawn, if need arises, in the course of the next twelve months. Washington has been approached for the waiving of the current instalment of interest ($ 82 million) due on December 31. The US Administration is sympathetic; but the final decision rests with the Congress, which means that the payment as due will be made on December 31 on account; and, if the Congress decides favourably, the amount will be released. In any case, the relief by this means is relatively a minor matter; for, it is beyond question that the reinforcement for sterling, through the special arrangements already made with Export-Import Bank and IMF, is more than adequate for the time being. The immediate prospect for sterling is reassuring; and recognition of this factor is reflected in the improved sentiment toward sterling in international exchanges.

While, therefore, the international speculators in exchange will be more wary of forward sales of sterling, there continues the possibility of banks in general preferring to maintain, and keep maintaining, an oversold position in sterling, and an overbought position in US dollars, Swiss francs, and West German and Dutch currencies. There is a disposition on the part of bankers to consider that the ordering of their exchange commitments in this way is, firstly, a matter of prudence and may, secondly, turn out to be profitable. The accumulated sales of sterling in the sense of precaution may be considerable; for, bankers interested in sterling transactions are spread all over the world. It may, in this view, be said that there should now be a very large over-sold position in sterling.

If the Eden Government survive up to the next summer, the chances are that, by that time, an appreciable moiety of such sales would have been covered. This, and the likely immediate covering of sales by speculators, may be expected to impart increasing strength to the British Government, provided the USA comes generously to the help of Britain in the solution of some of the economic problems posed by the Egyptian adventure.

If, however, the Eden Government should, for any reason, be replaced by a Labour Government, there is bound to be a further spate of sales of sterling. Banks and Big Business are traditionally suspicious of Labour in power.

+

New Loans not less Important than New Taxes

The purpose and effectiveness of open market operations have, in the past three weeks, been brought home to the State Governments; and it is significant that every State has taken steps in this respect, and that, while most States have entrusted such operations to the Reserve Bank, Madhya Pradesh and Madhya Bharat have utilised the agency of the State Bank of India. The States were stung to action by the precipitate decline in the prices of the State Loans; and it may be claimed that this calamitous fall has not been without a "soul of goodness" if the States have, thereby, been initiated into the rites of open market strategy. Hitherto, open market operations were understood more or less in the sole context of the Centre's loans; and, with States increasingly resorting to market loans, it was essential that there should be a wider appreciation of the uses and virtues of open market operations. 1956 will be a landmark in the extension of this technique to the whole range of State loans.

The practice is in no sense an innovation. Some of the State Loans in the earlier stages were buttressed with a provision that a specified percentage of the total loan in question would be bought from the market every year. Some public authorities like the Calcutta Port Trust made it a practice to invest their sinking fund accruals in their own debentures. Thus, we had already the germs of open market strategy in practices such as these. With every State making an annual debut in the sphere of market loans, the technique in this respect must needs be streamlined. The developments of the last three weeks are of interest in that this process has begun, and begun well. The authorities of the Reserve Bank and the State Finance Ministers have to evolve the close ties and the complete understanding which are vital to the smooth working of open market strategy designed in the interest of State loans. With regard to many of the States, such ties were conspicuous by their absence; and there are reasons to think that not a few of the State Finance Ministers had any clear idea of what exactly has to be done and how the requisite finance is to be found. In these respects, the Reserve Bank's role as the financial adviser of the States in such matters has to take on a more active aspect.

In the past few days, we have heard a great deal of the need to raise more resources for the Second Plan and of the Centre and States between them finding anything like another Rs 100 crores a year by way of additional taxation. In all this discussion, no mention has been made of the significant contribution which borrowings can make, if a confident and confidence-inspiring credit policy were pursued. The diffidence of the past seems to have been banished. But, we are yet to see signs and tokens of confidence. Drive and daring in open market strategy in respect of the Central Government's securities will be the surest sign and the most convincing token in this regard. The constituents of such a courageous and imaginative policy must engage the constructive attention of Authority what time we are all called upon to expect new taxes, not once or twice in a year, but every time the Parliament is in session. We are not opposed to new taxes; all that we urge is that market loans are equally important.

+

Hefty Increase in Active Notes

Month-early disbursements, accompanied perhaps by the onset of the new busy season, have occasioned a sharp rise in Active Notes, as disclosed in the returns of the Reserve Bank for the week ended December 7. A second noteworthy feature is that, for the first time in many months, there has been net addition to the foreign exchange holdings of the central banking institution, although the rise is small.

Active notes have risen sharply by Rs 25.54 crores to Rs 1,464.08 crores. Currency has been expanded for Rs 19.88 crores against Rupee Securities and this has been effected by the sale of ad hocs for Rs 20 crores in favour of the Reserve Bank. Currency has been contracted for Rs 9.94 crores against Foreign Securities by transfer to the Banking Department. Rupee coin has gone into circulation for Rs 1.89 crores, resulting in a drop of like amount in Rupee Coin in the Issue Department. The Reserve Bank's cash in the till has consequently been drained by Rs 17.49 crores.

The Central Government's balances would have been credited with the proceeds from the sale of Rs 20 crores of ad hocs to the Reserve Bank. But, presumably, the Centre had to incur expenditure for substantial amount. For its deposits have risen by only Rs 2.37 crores to Rs 52.36 crores. Net disbursements have, therefore, been of the order of Rs 17½ crores.

The pressure of expenditure has also been felt by State Governments, whose deposits have declined by Rs 1.90 crores to Rs 14.04 crores. The State Governments have besides been obliged to increase their borrowings from the Reserve Bank by Rs 3.24 crores. Net disbursements of State Governments must, in this view, have amounted to Rs 5.14 crores in the week under review. Other deposits show negligible change at Rs 14.17 crores.

Member banks do not seem to have been greatly strained in meeting the month-early disbursements. Their deposits show a rise of Rs 0.39 crores, although this has been accompanied by a rise in their borrowings from the Reserve Bank, as indicated in the increase of Rs 3.73 crores to Rs 84.57 crores in the latter's Other Loans and Advances. It is, however, to be noted that borrowings against usance bills have been sizeable: the running total of advances made by the Reserve Bank against usance bills shows a rise, during the week, of Rs 12.57 crores as

(Continued on page 1127).

Road Sense

Our cities and villages are far apart... only 0.2 miles of road exist in every square mile, and the average of roads to each lakh of population is only 68 miles. Some Rs. 271 crores is being spent in the Second Five Year Plan to build a better road system—so that every village is within five miles of a national highway. The objective is to provide black top surfaces on all main arteries.

The Burmah-Shell Refinery is daily producing 600 tons of bitumen, besides special grades of bitumen that can be used cold. These grades permit road construction where heating bitumen is not possible.

Bitumen is distributed by Burmah-Shell in drums, and in Bombay by road vehicles which carry bitumen in bulk direct from the Refinery to the customer.

All this is part of the *road sense* which we have gained by being **in India's life and part of it.**

Would the top blow off?

It might...if there was an acute shortage of CAF (compressed asbestos fibre) Jointing. Not only would many engineers "hit the ceiling", but there would be "blown" gaskets everywhere, with disastrous results. But thanks to the new AM & FM factory at Ghatkopar, Bombay, the chances of this happening are remote. We make this vital material in sufficient quantities to meet the entire demand of Indian Industry.

CAF Jointing is used wherever a good, strong, efficient seal is needed—sealing flanged joints in pipe-lines, making cylinder head gaskets, boiler joints, etc. This jointing holds fast and remains leak-proof against steam, water and oil at varying temperatures and pressures.

This is just one of the many unobtrusive but important parts that this versatile raw material — asbestos—plays in our daily lives. We at AM & FM make a wide range of technical asbestos products to meet the varying needs of India's industry. The increasing use of asbestos is an index to India's industrial progress.

The Defence of Sterling

PAUL EINZIG

EVERYBODY was prepared for a sharp fall in the British gold reserve during November. Nevertheless the announcement that the amount lost was $279 million came as a shock. It even shocked the Opposition into temporary silence, following on the announcement of the figure by Mr Macmillan in the House of Commons. For once, Party politics were cast aside, and the official spokesman of the Labour Party was almost uncritical in his endorsement of the Government's measures in defence of sterling.

One fact emerged forcefully from the statement and from the brief debate that followed it. The Government is as determined as ever to defend sterling at its present parity. There is no question of seeking to take the line of least resistance by devaluing sterling. Such a step would doubtless bring temporary relief, for at its lowest level sterling would command more confidence, and foreign sterling balances would be replenished, short positions would be covered, and many deferred sterling payments would be effected. In spite of this, Mr Macmillan will resist the temptation of solving his problem, with a stroke of the pen. Instead, he is going to try to solve it the hard way.

In the absence of devaluation it is necessary to restore confidence by means of strengthening both the technical position and the fundamental position. The first aim is sought to be attained by reinforcing the diminished gold and dollar reserves. To that end, the Chancellor intends to use the Treasury's dollar securities for the purpose of raising a dollar credit, and he also intends to draw on the dollar facilities at Britain's disposal at the International Monetary Fund. He also applied to the Washington Administration for consent to defer the payment of interest on the loan of 1946. Between them these measures should go a long way towards increasing the means with which sterling can be defended.

Needless to say, if pressure on sterling were to continue at the same rate at which it was going on during November, the above measures would only secure a few months' respite. Fortunately there is no reason to expect the continuation of the drain on the same scale after the turn of the year. By that time the seasonal factor will have turned in favour of sterling. And the chances are that before very long the Suez Canal will be reopened for traffic, so that dollar oil requirements will become reduced to more normal proportions. In any case, as a result of the compliance of the British and French Governments with the United Nations demand to evacuate Egypt, there now appears to be a better chance for obtaining dollar facilities to finance abnormal dollar oil imports.

The tension in the Middle East and in Europe is likely to continue, or it is likely to revive from time to time. Even so, it is not likely to be as acute as it was in November. It is even possible that, as a natural reaction to the realisation that we were at one time on the verge of the third world war there may be a genuine effort on the part of the opposing camps to improve their relations. As a result, the psychological factor of war fears is likely to affect sterling to a less extent in the near future than it had affected it in the recent past. In addition, years of the advent of a Socialist Government as a result of a split in the Conservative Party over Egypt are now a matter of the fact.

Moreover, military expenditure is expected to decline as a result of the withdrawal of British troops. In particular expenditure overseas involving the use of foreign exchange will be lower. The release of reservists called up in connection with the Egyptian intervention will also help towards reducing military spending.

What is much more important from the point of view of the prospects of sterling, however, is the change in the general economic atmosphere. As a result of political and economic uncertainties, consumer demand has declined considerably. In spite of the approach of the Christmas season, retail business is unusually slack. This is bound to lead to the accumulation of inventories, which again will induce industrial firms to put more effort into their export drive. So long as it was very easy to unload everything in the domestic market, most firms were rather half-hearted about their export markets. Hence the long delivery dates and uncompetitive prices. Now that domestic markets have become difficult, there will be large quantities of goods released for export, and producers will do their best to export them.

Although the improvement of the international situation and the restoration of normal traffic conditions through the Suez Canal may encourage some revival of consumer demand, the economic outlook will remain sufficiently obscure to prevent a revival of the inflationary boom. The motor industry is expected to remain for some time under the influence of petrol rationing and the increase of import duty on petrol. Mr Macmillan's warning about the possibility of higher Income Tax in the next Budget should go a long way towards preventing a return of the buying fever that has been going on continuously for many years.

Moreover, the situation carries the possibility of a certain amount of unemployment and short time working, and this itself is sufficient to discourage consumption by employees, which represents a large portion of domestic consumption. What is even more

(Continued on page 1126)

World of Tea

Production and Prospects

DESPITE the sharp increase of 12½ million pounds in Northern India crop in the eleven months ended November 1956, tea crops in the major producing countries are only slightly higher than in the previous year. Production, during the ten months ending October 1956, has totalled 1,003.9 million pounds as compared with 1,000 million pounds in the corresponding period of last year.

Tea production in North India has been showing a steady decline from August onward; and, due to the stoppage of plucking from the 20th November, production has shown a sharp decline in November to 47.16 million pounds as compared to 62.13 million pounds in the corresponding month of last year. Thus, total production for the period April/November 1956 amounts to 533.75 million pounds as compared with 521.14 million pounds in the corresponding period of 1955 and 498.75 million pounds being the average for the last three years.

Crops in Ceylon and South India, upto October 1956, were lower at 301.1 million pounds and 103.8 million pounds against 318.6 million pounds and 110.4 million pounds respectively. The Indonesian crop, up to September 1956, at 67.3 million pounds, also shows a decline of 3.6 million pounds.

In general, the supply and demand position shifted considerably since mid-season when North India was forging rapidly ahead in crop. The North Indian producers most prudently decided to call a halt to the plucking season on November 20th, considerably earlier than in some seasons. The majority of the estates have now reported closure of plucking, and the final North Indian crop is unlikely to exceed 54 million pounds. From the reports so far available, the other tea producing countries are considerably behind in their crops as compared with 1955; and, with the North Indian lead substantially reduced, no excess of supply over demand is now visualised.

At this stage, it will be interesting to study the latest monthly report, issued for November, by the well-known firm of tea brokers, Messrs J. Thomas & Company. The report states:

"Most of the factors, which turned the market in the seller's favour during November, are likely to persist during the current month. Although the export duty has been raised to As 8 per pound, this increase has been fully absorbed in the first sale of December, which registered a similar decline for the bulk of the teas on offer.

Any surplus of supply over demand, which may have been anticipated earlier this year, is now more than likely to be offset by the tea regulation scheme in force in North India on the one hand and the favourable shipping programme on the other. The original estimate of 25 million pounds on account of purchases by the USSR and the other East European countries is now more likely to be fulfilled and this added outlet for Indian tea combined with the continuing strong demand from the outmarkets should help to ensure a good market for the remaining months of the season. Apart, therefore, from any unusual upset in the international situation, the market expectations appear to be good and prices for the bulk of the teas should stabilise at current levels. It is hoped that the Common and teas will not register any further advances now, as a reaction would then become inevitable during the closing months of the season.

Although a further release of Export Quota Rights is anticipated towards the end of the year, when final North Indian crop figures become available, it is expected that there will be an acute shortage of Export Quota Rights during the coming months, necessitating an increase in the offerings in the Internal Sale.

It is estimated that about 130 million of Leaf teas now remain to be sold on the Calcutta market and the Export sales are expected to close by the end of April, 1957."

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 60,656 packages. The market opened with an easier tendency, but the demand improved as the sale progressed. Dooars and Assams with good cup quality and clean appearance were keenly competed for and were from one to two annas per pound easier, especially the Fannings grades. The poorer liquoring sorts, on offer, were, however, one anna per pound easier. The higher-priced Medium EOPs and Orange Fannings were generally upto As 2 per pound easier.

CTC teas were in good demand at lower rates, a few selected invoices being fully firm. The majority of the offerings in this

STATE BANK OF INDIA

NOTICE

NOTICE is hereby given that the Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Wednesday, the 2nd January 1957 to Saturday, the 26th January 1957, both days inclusive.

B. P. Patel,
Managing Director.

Bombay,
the 5th December 1956.

World of Jute

Statistical Position

When the figures relating to stocks of jute goods with mills at the end of November 1956 were released, it was found that they were not to the entire satisfaction of marketmen. Evidently, speculators who bought heavily just before the figures were published had based their calculations on a steeper decline in stocks.

As compared with October, total stocks at the end of November have declined by 14,800 tons to stand at 101,900 tons. Hessian stocks are lower by 6,200 tons at 24,600 tons while sacking stocks show a larger decline of 9,800 tons at 67,500 tons. Other varieties are, however, 1,200 tons higher at 9,800 tons.

Compared with the corresponding month of last year, stocks are 38,900 tons higher. As against 27,900 tons on 30th November 1955, hessian stocks are now 3,300 tons lower. Sacking stocks on the other hand are 36,700 tons higher.

The following table shows the stock position of jute goods in the past seventeen months:

	Stocks of Gunnies. (000 tons)
1955-56:	
July	81.5
August	79.2
September	69.7
October	62.3
November	63.0
December	63.5
January	78.4
February	89.4
March	95.0
April	107.9
May	119.7
June	127.0
1956-57:	
July	137.9
August	133.5
September	123.2
October	116.7
November	101.9

Production of Gunnies during the month has recorded an increase of 3,400 tons at 83,800 tons as compared with the previous month's production of 80,400 tons. The higher output is evidently due to the larger number of hours worked. As against 203.5 in October, mills have worked for 209 hours during November. For the same number of hours worked, production had amounted to 90,500 tons during the corresponding period last year. Of the total production of 83,800 tons during November, output of hessian has amounted to 36,800 tons. This compared with 34,700 tons produced last month and 34,600 tons in November 1955. Production of sackings at 41,800 tons compares with 40,500 tons last month and 49,900 tons in the corresponding month of last year. During November, output of other varieties has remained unchanged at 5,200 as compared with the previous month and is against 6,000 tons in November 1955.

The following table shows the trend of jute goods production in the past five months as compared with the corresponding period of last year.

PRODUCTION OF GUNNIES

	Hessian	Sacking	Others	Total
	(000 tons)			
1955:				
July	34.3	45.0	4.8	84.1
August	33.2	43.7	4.5	81.4
September	35.4	47.2	4.8	87.4
October	30.7	43.5	4.6	78.8
November	34.6	49.9	6.0	90.5
July-Nov., 1955	168.2	229.3	24.7	422.2
1956:				
July	34.3	52.9	6.9	94.1
August	35.4	48.2	6.0	89.6
September	35.5	43.8	5.2	84.5
October	34.7	40.5	5.2	80.4
November	36.8	41.8	5.2	83.8
July-Nov., 1956	176.7	227.2	28.5	432.4

The jute goods market opened the week on a quiet note due to selling pressure in the Fatka. Hessian 40"×10 oz Ready declined to Rs 46 from previous closing of Rs 46-6 with B Twills reacting to Rs 121-12 from Rs 122. The next day, prices steadied up a bit in sympathy with the raw jute section and Hessian 40"×10 Oz Ready recovered slightly to Rs 46-2 with B Twills Ready quoting at Rs 122-2. On Monday, the market opened rather quiet but midway through the session, prices recovered due to some speculative buying especially in hessians. Hessian 40"×10 Oz Ready moved up further to Rs 46-4. B Twills, however, was quiet at Rs 122. In the continued absence of foreign business, prices developed a sagging tendency on Tuesday. Selling pressure was especially heavy in sacking while hessian ruled comparatively steadier. While Hessian 40"×10 Oz Ready remained steady at Rs 46-5, B Twills lost one rupee to come back to Rs 121.

Toward the close of the week, the market displayed a steadier trend mainly due to the fairly large business reported done in wool packs. The fact that raw jute prices in Pakistan continued to rule firm was a contributory factor. B Twills Ready quickly regained entire ground lost and moved up to close fully steady at Rs 122-8. It was hessian's turn to become inactive but in sympathy with sacking, prices in this section also were well maintained.

The following table shows price trends during the week:

	Week's opening.		Week's closing.	
Hessians:				
40" x 10 Oz. Ready ...	46	0	46	4
40" x 10 Oz. April/June ...	44	4	44	10
Sackings:				
B. Twills Ready ...	121	2	122	8
B. Twills April-June ..	121	0	121	10
Hy. Oces Green	120	4	122	4
Corn Sacks ...	123	4	124	2
Cubans ...	147	0	147	8
A. Twills ...	144	0	144	12
L. Twills ..	134	8	134	12
D. W. Flour ..	140	0	141	0
Sugar Bags ...	139	0	138	8

Though until late in the week no sizable mill business has been reported, the raw jute market continued to rule steady with sellers reserved. It was evident that in view of the continued firmness of the Pakistani market and the knowledge that most Indian mills were not in a comfortable position as regards their raw jute stocks were imparting strength to holders.

EDITORIAL NOTES

(Continued from page 1108)

Oils and Oilcakes

Addressing the Export Advisory Council last month, the Union Minister for Trade, Mr D. P. Karmarkar, has pointed out that oils and oilcakes constitute a very helpful source for increasing the country's foreign exchanges in view of the fact that demand for these products in the world markets is on the increase. But unfortunately, the trend of exports in this regard in the current year does not seem to hold much promise of help from this direction. For, according to the Minister, earnings from this item during the past six, seven months are much below than those for the corresponding period of last year. The reason adduced by him for the decline in exports is the inability of the country to "spare as big a proportion of our production as the world is in a position to absorb" because of the increase in the domestic demand.

It would appear that Government's export policy in regard to oils and oilcakes if rendered more realistic than it happens to be now, can go a considerable way in augmenting earnings. The present method of changing the policy at frequent intervals has not been conducive either to an orderly growth of the oil mills industry or to promotion of oil and oil cakes exports. A point that seems to have completely escaped the attention of Authority is that India does not enjoy any monopoly in respect of any of the vegetable oils. In recent years production of oilseeds and oils in other countries has considerably increased and consequently the trade has become highly competitive.

EROSION OF MISGIVINGS

(Continued from page 1107)

the spirit of unconcealed self-interest. The terror that socialistic pattern of society holds for foreign capital has become largely outworn and illusory. That feeling on this subject is far from severe is indicated by another Resolution, where the pragmatic approach of the Government is appreciated, and its potentialities conceded for attracting foreign investment in proper volume and variety. A spokesman, commenting on this Resolution, also referred to the great reservoir of goodwill toward India in the industrialised countries of the West and the somewhat tardy but growing recognition that, given fair and reasonable terms, India was a country which, from the investment point of view, no international industrialist could afford to neglect." The Union Finance Minister has reaffirmed the Government's intention to eschew any rigid formula even in the matter of the ratio of foreign investment in individual enterprises. The total impression this Resolution and the discussion thereon tends to create is that there are no serious misgivings on the part of Western investors about the economic climate of India, present or prospective.

The problems projected by commodity taxation appeal more or less similarly to the Government and to the Associated Chambers. Both see the need for greater centralisation. But here is a sphere in which the Federal concept and the Constitutional provisions embodying it offer resistance. Barring this handicap, the Union Government have always been keen to understand the difficulties of private business and to offer relief. The proposed replacement of the State sales tax on mill-made textiles, sugar and tobacco by a surcharge on Central Excise brings down two birds at a shot. It simplifies collection and throttles evasion.

More striking is the growing identity of interest between the State and private industry in the field of labour relations. Foreign controlled enterprises in India generally have the advantage of being ahead of others in respect of emoluments and amenities to labour. While recommending production incentives and other measures calculated to induce individuals and groups to make sustained efforts and to give of their best, the Chambers have asked the State, in the capacity of the largest employer in the country, to give a lead for a progressive policy consistent with the limitations of the economy as a whole. In other words, what is demanded is the substitution of the present haphazard set of practices and levels of emoluments by a workable uniform code applicable to industries in both the sectors. For the State, the problem is more complicated, as it has to reconcile, in a more direct way than any unit in the private sector, the interests of the taxpayer, the consumer and the employee. This will form one of the most onerous tasks of the future.

World Overseas

US Notes

As 1956 draws to a close it is becoming increasingly clear that the year's gains in economic activity rest on a far more diversified base than had been realized heretofore. The prevailing view up to now has been that 1956 has been a year marked by a phenomenal gain in business investment on outlays for construction of new plants and equipment and other purposes. This certainly is true of expenditures for new plants and equipment alone which are estimated to reach an annual rate of $38,000 million in the four quarter of 1956, up more than $5,000 million from the first quarter. But the boom in producers goods has not dominated the American economy nearly as much as was anticipated. Latest figures show an essentially healthy balance among various sectors of the economy. As a matter of fact, through the year the gain in consumer expenditure for goods and services exceeded the increase in business investment for all purposes by a wide margin and this happened despite the fact that output of producers goods, such as machinery and equipment, was receiving greater emphasis than last year as compared with consumers durable goods, such as automobiles and home appliances. In addition, government purchases also rose. In the case of state and local governments, the increase was especially marked, as outlays rose significantly for such public facilities as schools, roads, hospitals, and water supply systems. Thus, a comparison of the third quarter of 1956 with the third quarter of 1955 shows the following increases in annual rates for the major components making up the gross national product:

The nation's total output of goods and services consumer spending-up 9.0 per cent; total business investment-up 2.8 per cent; government spending-up 3.7 per cent; durable consumer goods spending was off by an annual rate of $4,200 million and services even more than that. At the same time, consumers were saving 6.4 per cent of their total spendable income—their income after taxes—as compared with 5.8 per cent last year. These figures serve as a reassuring note for 1956 as well as for the 1957 outlook for it is clear that the economy will be far less vulnerable to any drop in capital investment outlays—if one should develop. Most economists now look to further increases in wages and salaries next year, and this should certainly sustain a high level of consumer spending. It is considered highly unlikely, in any case, that capital goods spending would drop enough to bring about a reversal in employment or earnings sufficient to affect consumer income to any appreciable degree. There also is the prospect that governmental expenditures for public services will again be increasing. All this then seems to add up to another good year in 1957 aside from possibly disruptive international developments which cannot now be foreseen. The real question mark next year may be how consumers and businessmen react to rising price levels. Reassuring in this regard is the fact that price rises, all things considered, have been fairly moderate this year, and have not been a serious deterrent to consumer buying or industrial production. All in all, inflationary prssures are being kept well under control.

A year ago, on December 5, 1955, the two largest labour organizations in the United States—the American Federation of Labour (AFL) and the Congress of Industrial Organization (CIO)—formally merged into one big federation. This brought together under one roof 140 unions with a total membership of more than 15 million.

What kind of year has 1956—the first year of 'labour unity'—been for the American working? On the whole, it has been a year in which he has consolidated the gains won in previous years, and has continued to better his wages and conditions of employment to a significant degree.

Wage increases won in 1956 have averaged about 10 cents an hour. This is somewhat more than gains registered in previous years. Supplementary unemployment benefits, established last year in the automobile and glass industries, were extended this year to steel and rubber. This means that more than 2 millin workers now are eligible to receive regular payments from their employers, in addition to state payments, during temporary periods of unemployment. At the same time, more unions were agreeing to long-term contracts, generally desired by employers as a stabilizing influence during this period of economic expansion. Workers in the steel and meat industries, for instance, are now covered by three-year contracts. Labour relations, all things considered, have been rather peaceful this year. Only three major strikes have taken place. Of these, the strike at the Westing house Electric Corporation was a holdover from 1955, and was settled early in the year. The month-long steel strike this past summer was a remarkably friendly dispute, apparently settled to the eminent satisfaction of both labour and management. The third, the recent strike of Longshoremen at east and Gulf Coast Ports, was brought to a temporary halt by government action after one week, while labour-management negotiations continue. In 1956, as in 1955, straight wage increases generally have been about matched by increases in "fringe" benefits, including profit-sharing and bonus plans, vacation and holiday pay, and pension and insurance programmes. In steel, as an example, the union won a total pay raise estimated at 20.3 cents an hour for the first year of its three-year contract and 9.8 cents of this represented fringe benefits.

The U.S. Chamber of Commerce estimates that the total cost to American companies of these fringe —or non-wage payments to workers has risen from 22.5 cents per payroll hour in 1947 to about 50 cents this year. Of this, the cost of pensions and similar payments, including file and medical insurance for workers, rose from 6.6 cents an hour to about 15 cents. Payments for time not worked, including vacation, holidays and periods of illness, climbed from 7.4 cents to more than 15 cents. The cost of these worker benefits, arrived at through free collective bargaining agreements between labour and management, has risen far more sharply than has the cost of legally required benefits. Company payments for such government programmes as social security and unemployment insurance have increased comparatively little from 4.5 cents an hour in 1947 to more than 7 cents. When expressed as a percentage of the total wage bill, fringe costs to companies do not appear to have gone up spectacularly. They approximated 15 per cent of payroll costs in 1947. And about 22.5 per cent this year. But this is because wage rates themselves have been showing such significant gains. Wages, on the average, now stand at more than 81 dollars for a 40-hour work week,

WORLD OF TEA

(Continued from page 1112)

category were, however, As 2 per pound easier. Stylish Whole Leaf grades were a strong feature of the sale and were upto As 2 dearer, while well-made BPSs also received good support and were fully firm.

A few selected lines of Darjeeling teas were sold well, but the majority from this district were As 2 to As 4 easier. Tippy sorts also showed a decline of about As 4 per pound. Following rates were quoted:—Clean Black Pekoe Rs 2-7-0; Plain BP Rs 2-4-0; Medium Assam BP 2-6-0 and Best CTC Assam BP Rs 3-0-0.

In the Internal Sale, offerings consisted of 25,216 packages of Dusts. There was a quieter tone in the sale Room than in recent weeks. Demand eased as the sale progressed and the majority of the offerings was sold at lower rates. The clean black exportable types received much less support and were often as much as As 3 per pound easier.

The greater number of CTC Assams on offer, met with less demand and were upto As 2½ easier, while the remainder including Commons, Dooars and Orthodox Assams were As 2 lower at the commencement of the sale; but, at the close, were As 2½ easier. Following rates were quoted:—Medium Dooars Dust Rs 1-13-6 to Rs 1-14-0; Medium Assams Grainy Dust 1-14-6 to Rs 1-15-0; Medium Assam CTC Dust Rs 2-6-0 and Best Assam CTC Dust Rs 2-10-0 to Rs 2-11-0.

There was a fairly good general demand for 2,427 chests of other grades on offer at about one to one and a half annas below last rates.

In the Export Quota section, the rate opened at 90 pies per pound and declined gradually towards the close to 81 pies.

In the Internal Sale held at Cochin, offerings consisted of about 480,000 pounds. There was a strong general demand for all, but high-grown descriptions. Nilgiri sorts met with only restricted enquiry and registered a drop of As 2 to As 4 per pound, while Good Mediums found fair support at around last rates. Mediums from the Wynaad were the strongest feature of the sale and advanced by As 2 to As 4, while those from Travancore were irregular. Residuals and Milled Dusts met with keen competition at As 2 to As 3 per pound above last levels. Black Grainy descriptions followed the upward trend of the market and were, on the whole, up to an anna per pound dearer.

In the Colombo market, demand was less general than lately with the quality of teas on offer much inferior and prices dropped sharply. As the sale progressed, demand was fairly good at the lower levels. Against the trend, a limited selection of best quality BOPs with useful liquor were dearer; but all other medium-grown Brokers declined by 30 to 50 cents per pound. Following quality, corresponding Leaf grades remained firms.

Medium and low-grown BOPs registered a decline of 30 to 50 cents per pound. Persian Gulf types declined by about 20 cents. Buyers from all parts operated quietly at the lower levels.

In London auctions, about 17,350 packages of teas were offered this week. There was a good general demand at higher prices for practically all descriptions. The weakest feature of the sale was the best quality CTC manufacture, which met with a very irregular demand and prices declined by about 2d per pound. Coloury Medium sorts and all clean common varieties met with keen competition and prices advanced by ½d to 1d per pound. Clean Common Broken Pekoe was quoted at 5sh 5½d per pound.

Stocks of Tea in London, as on the 30th November, were 86.42 million pounds as compared to 94.89 million pounds in the previous week. The total amount, to be landed on the same date, was 2.36 million pounds. Deliveries during the week totalled 12.57 million pounds and landings in the same period 4.10 million pounds.

Total afloat on November 30 was 81.39 million pounds, including 61.11 million pounds from Calcutta; 4.16 million pounds from Chittagong; 6.56 million pounds from Cochin; 8.90 million pounds from Colombo and 664,000 pounds from other Ports.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

AS the characteristically parochial Puja is followed by the broadly cosmopolitan Diwali; and as the Diwali provides an advance feeling of the cold weather festivities and jollities, to one who, for four decades, has thrilled to, and been thrilled by, these recurrent demonstrations of the youngness of hearts and the fellowship of men, there comes the nostalgic thought that the magic and spell of today lacks something of the quality of yesterday. In particular, the season that precedes, marks and follows the Christmas carnival in Calcutta had so fascinating a personality, that the dimming of it in any way or to any extent must evoke sombre, even sad, thoughts. Yet, if the fifties be compared to the thirties, one cannot help realising the cumulative effects of changes that have wrought a progressive decline in this respect. The transfer of the capital from Calcutta to Delhi may be said to have initiated the process. The blow was sought to be softened by the pretence that Calcutta would function as a de facto capital for part of December and January every year. The Viceroy would with his complete paraphernalia and in full pomp and state, encamp in Calcutta for a spell of five weeks. He would, at this time, hold a meeting of his Executive Council, at which it was customary for the Finance Member to place the financial statement foreshadowing the budget due to be announced some ten weeks later. The Viceroy and his Cabinet colleagues severally and jointly participated in important functions and made significant pronouncements. From this point of view, the annual session of the Associated Chambers of Commerce served as an occasion for the Viceroy to make a weighty statement of economic import and for the members in charge of Finance, Commerce and Railways to express the official reactions to the matters agitating the business world.

*

The ACC meeting in the last ten years lacks the grandeur and the spectacular brilliance of those days. But, with the easy adaptability which Britain in general has shown in its relations to an independent India, the Associated Chambers, too, has effected readjustment to such effect that its annual session reflects sober, realistic and constructive thinking and goes through the settled agenda with business-like competency. The second Monday of December continues to be the opening date for the annual function; the Finance Minister continues to deliver an important address dealing with major economic problems; resolutions continue to be moved and adopted on matters to which Government's attention must needs be drawn; and a high level of public, as opposed to sectional, interest continues to be maintained. It needs hardly be added that the Monday lunch and the ensuing cocktail at the Bengal Club continue to be gratefully appreciated by the members and the guests alike.

*

Until some years ago, the most important event in India's economic scene, next to the budget at the end of February, was the annual meeting of the Associated Chambers of Commerce. Its importance was derived from two factors. The Associated Chambers, at that time, was reckoned to be the most authoritative spokesman for and in behalf of the private sector of industrial activity. For their part, Government, in recognition of such importance, were always represented at the meetings by all the senior members of the Cabinet, upon whom would devolve the duty of answering any questions raised in the discussion on resolutions; and the Viceroy always initiated the Sessions. But such a picture has not obtained for some few years. There are, again, two reasons for this position. On the one hand, with the dawn of independence, the ACC ceased to be the authoritative, or even the most important, spokesman for private industrial activity. The initiative consequently, in this regard, passed into the hands of Chambers of Commerce under Indian auspices. Secondly, on independence, the ACC was imbued with the stigma of a new vested interest—the consideration that this organisation represented a section of activity in this country whose interests could conceivably quite often be in opposition to the national policy or interest of India. At the present day, however, economic developments have turned full circle: the importance of foreign investment has increasingly come to the fore in such manner, and integrity and fair mindedness have so typified their attitudes, as to transform the annual meetings of the ACC into a forum at which the respective view-points of Government and foreign capital could be frankly and fully discussed.

*

This week's session of the Associated Chambers of Commerce was being looked forward to with even keener anticipation. The fact that Mr T. T. Krishnamachari had recently announced mid-year tax proposals was sufficient to spread the feeling that the proceedings of the ACC meeting would contain substantial seeds of excitement. But the session has produced, in fact, not the unwholesome excitement that is derived from bitter controversy, but instead the zestful air of electricity that stems from agreement on the broad basis which is to be the foundation for India's great adventure in the form of the Second Plan.

*

There is surprising, and therefore heartening, common ground in the views in the speeches made by Mr Krishnamachari, on the one hand, and by Mr O. T. Jenkins, as the President of the ACC, on the other. There is, moreover, an astonishing lack of major controversy or difference of opinion in the attitudes of these two spokesmen. Mr Jenkins has addressed himself to the task of analysing the role of the private sector in India's planned development. He does not suffer, as so many other spokesmen have suffered, from the apprehension that the scope for the private sector is far too small. On the contrary, his attitude to economic planning is refreshingly correct. He deplores the controversy being waged as to the rivalry between State and private enterprise, and suggests that it is "becoming too controversial for the health of the country." Mr Jenkins is here reminded of the Lilliputians, "who fought a war to decide whether an egg should be best eaten by breaking it at the large or at the small end." Mr Krishnamachari feels similarly about the controversy, and he has denounced the proneness to overdraw the distinction between the public and the private sectors. The Finance Minister concedes that some of the charges against the private sector, "perhaps belonged to the category of witch hunting." The public sector was not being created to serve ideological ends; and India has to think, not in terms of the public or the private sectors, but only of the ultimate objective of both sectors. Mr Jenkins has also emphasised that what is vital for the Plan is the discovery of the means whereby private and public enterprise could work together at maximum efficiency and in mutual confidence.

*

The line of action thus suggested is what Indian Finance described last year as the co-operative co-existence of the two sectors. Since the time, the re-statement of Industrial Policy has clarified the manner in which Indian industrialisation is to be sought. In this context, it may be borne in mind that Government leave room for themselves to accept and invite co-operation from the private sector in all the three categories listed in the Industrial Policy. In India's mixed economy the limits have now been fixed. Mr Jenkins has pertinently pointed out that there is no reason why we should not "all go forward most happily together." Mr Jenkins has remembered what other spokesmen have tended to forget: India's mixed economy is not a recent phenomenon, and "a large section of the heavier branches of Indian industry has always been in Government ownership". The trading between the two sectors, as it were, was in the past most amicable; and Mr Jenkins suggests that there is no reason "to suppose that the more newly established projects will prove not less active contributors to our mutual prosperity". The ACC President has also made a reference to what was termed by Indian Finance as the scandal of scandals—the proneness

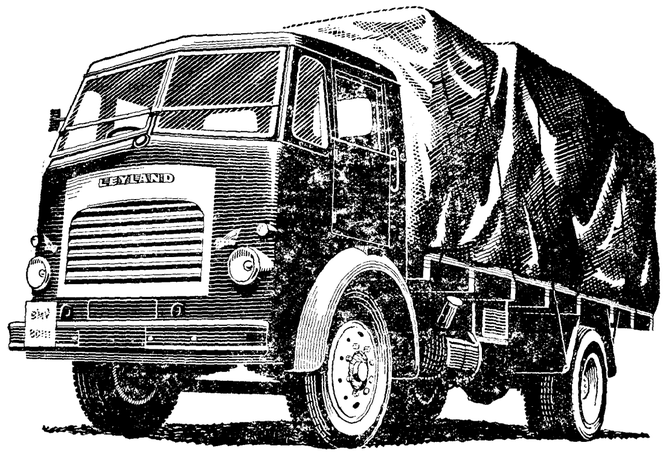
to disturb and disrupt confidence by saying the wrong thing at the wrong time. He calls this a luxury "which can with great advantage be foregone by all of us." He adds that we need all the confidence that we can muster and that "it is as much an asset as our raw materials, and we must all in the interests of the State do nothing to diminish it." Here, too, Mr Krishnamachari pithily expresses the same sentiment by stating that the public and the private sectors would better justify themselves by results if "they supported and supplemented each other."

*

Allied to the question of disruption to confidence by contradictory statements is the present tendency of attacking the leaders responsible for running Indian enterprises. Mr Jenkins remarks: "Our administrative services can compare with any in the world. It is a fact in which we should take pride and we should take all steps to maintain and never to lower the standard".

In their attitudes on the all important question of taxation, while Mr Jenkins and Mr Krishnamachari have their differences, there is nevertheless great similarity of thought. As for the differences, Mr Jenkins emphasised that the confiscatory taxation of earned income at the higher levels was likely to cost India dear in terms of technical talent. While the short-term tax concessions for foreign technicians do attract people with specialised skills, the fact remains that there is the real possibility of an emigration of talent from India. But Mr Jenkins concedes that a mere scaling down of taxation will not convert the dishonest tax-evader into a law abiding tax-payer. It is here that we find Mr Krishnamachari in agreement with Mr Jenkins. But first we may see where the Finance Minister's views on taxation differ from those of the ACC President's.



*

The Finance Minister has pointed out that income-tax, in its early stages, was considered "an unpardonable encroachment of the liberty of the individual." But, at the present day, a country that did not impose income-tax "was generally considered extremely backward." Moreover, the least taxed countries were not always the most developed. Therefore, Government did not think that there was, in taxation policy, any such thing as "optimum in the field". One of the factors influencing the Finance Minister was the wide gap between the existing resources and the expenditure envisaged under the Second Plan. The difficulty was that more money could not be found by increasing the tax on the few, while, at the same time, Government would not tax the many because they had so little to spare. In the result, what was being considered was a change in the basic structure of taxation, which had to be done fairly early in the Plan-period if it was to contribute toward it. The Finance Minister has then explained the reasons for the new taxes in his mid-year budget, and these explanations are more or less on a line with the argument advanced in these columns last week. Of the capital gains tax, he has stated that, in a dynamic economy, there was bound to be appreciation of property values; and a small portion of this "should go to the State which had created conditions for the appreciation of these values." Secondly, the dividends tax was connected with Government's intention to control reserves. It is because Government desire more money to be invested that they had put a check on the distribution of profit. He has, however, assured the business community that the control over reserves was intended primarily to ensure that they were utilised in directions which would make the fulfilment of the Plan targets easier.

*

Where Mr Jenkins and Mr Krishnamachari see eye to eye is in the need to tone up the Income-Tax Department. While Mr Jenkins has asked for a reduction in the marginal rate of taxation, he has also stated that this would be ineffective unless it was "backed by improved measures of detection and by more severe and publicly bestowed punishments". Another prior condition, according to Mr Jenkins, is that the pay and training of the Income-Tax Officers must be improved. Mr Krishnamachari has agreed that the salaries of income-tax personnel must be raised; and, moreover, assurance must be given to these personnel against undue influence from higher quarters, "which is not uncommon in a democratic set up." That Mr Krish-

Bombay Review

Tramp Activity in the World of Shipping

'TRAMP shipping is in its sphere considered to be a little lower placed than the position occupied by tourist traffic on the air lines. Indeed, one may say that the snob distinction between tramp shipping and regular lines is as great as the distinction, from the snobbish point of view, between air-conditioned and III class travel on the Indian railways. But, just as tourist traffic carried by air lines forms an important element in earnings; and even as it is III class passenger receipts which account for the bulk of the railways' income, tramp shipping is equipped to play a very special role in the development of Indian shipping. This is the point that was forcefully brought out by Mr A. H. Bhiwandiwalla when he addressed the annual general meeting of the Great Eastern Shipping Company Limited. Mr Bhiwandiwala makes no bones about the fact that Great Eastern's prosperity is derived from its "tramping activity". He has likened the difference between tramping activity and regular lines to the difference in approach of the wholesalers and retailers. According to him, "The adventurous and enterprising spirit with which shipowners have been imbued from the dawn of history attains its high water mark in tramping."

Unfortunately, the importance of tramping activity has not been recognised in this light either by Indian shipowners or by the Government. Great Eastern's Chairman complains that Indian shipowners have yet to realise that "Liners and tramps are like two wings, each equally indispensable to the life and growth of India's shipping industry."

Mr Bhiwandiwalla has then tried to clear up the confusion there is on the thinking on the economics of shipping. He urges that, in times of normalcy, the objective of a nation's shipping fleet should be to work to full operational efficiency; by implication, there should be the optimum utilisation of tonnage. In such a view, there would be nothing "sacrosanct" about the carriage of Indian cargo in Indian ships. In India's particular case, the problem is one besides of substantially increasing the tonnage. Does it really matter whether the new tonnage carries Indian cargo or foreign cargo? Mr Bhiwandiwalla cites the examples of Norwegian and Greek shipowners whose "essentially rapid progress . . . would not have been possible if the Governments of those countries had imposed the restrictions which are fettering the Indian tramp operators at present."

Let us see for ourselves the economics of this line of thinking. We may assume that there is, say, 50,000 tons of Indian shipping which is being utilised not in the carriage of Indian exports or imports, but in moving cargo from, say, Japan to Australia. It is true that, if this tonnage had been available, it would to that extent have reduced the freight paid out to foreign shippers who carried the Indian cargo. At the same time, however, it is to be noted that, on the carriage of cargo between Japan and Australia, foreign exchange earnings will have accrued. What, therefore, is lost in one direction is made up in another.

Mr Bhiwandiwalla carries this reasoning one step further. It is reasonable to suggest that a regular line may not always carry an optimum load. But time chartering of ships provides gainful employment "for an assured period and makes the shipowner immune from the risks of fluctuation in the freight market". In other words, the time charter aspect of tramp activity is used as an instrument of "hedging", and the shipowner so employed can then "afford to take the risks of the freight market by building and/or purchasing more ships at the prevailing high level of prices in the place of those chartered out." Having regard to the fact that time chartering can act as a cushion, Mr Bhiwandiwalla appeals to those in authority to "exempt at least tramp operators from the restriction of letting out of their vessels on a time basis."

Mr Bhiwandiwalla then briefly refers to the securing by the company of the agency of the Hellenic Lines Limited. In the result, the earnings of the company have benefitted considerably. Moreover, agency business "has also enabled your Company to establish valuable contacts and cement mutually remunerative business relationship, besides providing valuable experience in new trades and lines."

In 1956, for the first time, Indian shipping acquired an Indian-owned tanker. This tanker has been chartered out by Great Eastern to Stanvac for carriage of refined products on the coast. Although it is clear that a tanker fleet must form an essential part of a nation's shipping, its building up will require considerable funds; and Mr Bhiwandiwalla expresses the hope "that the Transport Minister will be successful in his endeavours to secure additional allocation of finance for shipping."

The most important aspect about the future, however, is the total inadequacy of the Indian fleet, in general, and the shortages experienced in coastal traffic, in particular. Coastal traffic may, during the Second Plan, have to handle a progressively higher volume of cargo rising from the present 3 million tons annually to 5 million tons per annum. But the shipyards of the world have their order books full; and delivery cannot be expected under three or four years. Furthermore, "second-hand tonnage is extremely scarce and the very few ships that are offered are quoted at fantastic prices."

In the light of this problem, one of Great Eastern's directors, Mr Vasant J. Sheth, toured the more important of the ship building countries to discover "if any way could be found out of the prevailing tonnage crisis." Mr Sheth has reported that the only country from which some aid may be forthcoming is America. For, the USA, during the war, had a number of Liberty ships in action which, since the mid-forties, have formed the core of America's "mothball fleet". Efforts have been made to purchase such Liberty ships from America; and America's "generous tradition of assistance to under-developed countries" may be relied upon to assure the success of these endeavours. Legislation in this regard would have to be passed by Congress; and Mr Bhiwandiwalla hopes "that the necessary legislation will be passed shortly and that at least 12 Liberties will be released to our country."

Gateway Notes

Wage Increase for Workers

Government spokesmen seem to be specially interested for some time now in frequently startling the business community. The mid-year budget which has been quickly followed by a Bill purporting to correct certain irregularities in banking practice in the country but which seeks to do much else besides has engendered renewed apprehension among the industrialists that Government pay scant heed to the welfare of the private sector. It may or may not be true that the coming elections have something to do with the concerted move on the part of Authority to make the position of the business community extremely uncomfortable. But it cannot be denied that some ministers atleast are going out of their way to express their opinions on matters which may be considered, in a manner of speaking, as sub judice.

Speaking in Ahmedabad last week both Mr Khandubhai Desai, Union Labour Minister and Mr Gulzarilal Nanda, Union Planning Minister, described the INTUC's demand for a wage rise as reasonable. While the Labour Minister seemed to be content with saying that a wage increase for labour was part and parcel of the overall objective of the Second Plan, Mr Nanda elaborated his contention with facts and figures. According to him not even five per cent of the labour force in the country was receiving a living wage. While it might be true that the State of economy could not stand a sizable increase in the wages of labour, fairness required that there was a just distribution of whatever was available.

Pointing out that even after the demand for a wage increase was conceded, there would be quite a large number of workers who would continue to get wages which could not be described as a living wage, the Planning Minister contended that it was idle to maintain that a rise in wages would be detrimental to the progress of the developmental projects under the Second Plan. Referring to the argument that wages, far from remaining stagnant, had risen by 30 per cent in the past eight, nine years, Mr Nanda averred that whatever increase that had taken place had only compensated workers for the loss sustained by them since 1939 and hence the wage level obtaining currently could by no means be described as fair.

To say that the support extended to INTUC's demand by two responsible Union Ministers had profoundly shocked the business community would be a mild description of the reaction among the employers to the Ahmedabad speeches of the Labour and Planning Ministers. Mr H. P. Mody characterised the statements as deplorable in the extreme while Mr Naval H. Tata, Vice-President of the Indian Merchant's Chamber wondered why Ministers should display undue haste in siding with the workers when they themselves had delegated powers to deal with the problems of such nature to the Wage Boards.

*

New Taxes Criticised

The new taxation proposals have brought into bold relief the wide divergence in the approach to economic problems between Government on the one hand and the business community on the other. In presenting his latest measures to increase Government's revenue, Mr T. T. Krishnamachari has pointed out that apart from the urgent need to find additional resources to fulfill the Second Plan, the new imposts have become expedient in order that India can be saved for democracy. The successful implementation of the development projects is, therefore, of paramount importance. Further it is to be borne in mind that the nation has set before itself the ideal of building a socialistic pattern of society.

Spokesmen of the business community in the country do not agree that it is necessary to adopt shock tactics to achieve the end in view. Mr A. D. Shroff thinks that the cumulative effect of the new taxation proposals will create a definite trend toward gradual disappearance of democracy. He argues that since the country does not have sufficient resources to carry out the Second Plan, Government's insistence on going ahead with its implementation will inevitably result in the disappearance of democracy in the economic sector.

Characterising the compulsory deposit as a sort of forced loan, he says that the proposal in this regard is the most serious blow for the private sector in India. The imposition of a capital gains tax and the penal super-tax clearly indicate lack of knowledge of conditions of industrial growth on the part of Government.

The Indian Merchants' Chamber also point out that the procedure followed by the Finance Minister is both unusual and from the point of view of building up healthy traditions in a democratic set up, extremely inappropriate. They maintain that the Finance Minister's justification for the additional levies cannot stand close scurtiny. Far from helping production to rise, the proposals will set in motion forces and factors which will work against the realisation of economic stability. For, how can it be seriously maintained that the new taxes which are not at all conducive to the creation and maintenance of the required climate for investment support can work the miracle of higher industrial production. The Committee conclude that the cumulative effect of the new levels and budget changes will set in train serious repercussions in diverse spheres of national endeavour with disastrous consequences to national well being.

GATEWAY MARKETS

Forward Trading in Non-Ferrous Metals

THE Government of India have, on the recommendations of the Forward Markets Commission, decided to permit forward trading in Copper, Zinc, Lead and Tin throughout the country for a period of three years in the first instance. They have also accepted the recommendation of the Commission to grant recognition to the Bombay Metal Exchange Limited, Bombay, for conducting futures trading in these metals throughout India for a period of three years, as soon as the Exchange carried out modifications in its Articles of Association and bye-laws to the satisfaction of the Commission. The Government have proposed to review the position after one year from the date of the grant of recognition in the light of the working of the forward market and other developments.

Meanwhile, the Bombay metal market continued to rule quiet on London advices. Copper ready was quoted at Rs 195. Demand for Lead was moderate and the rate for the metal was quoted at Rs 84. No arrivals of this metal are expected in the near future. Tin was quoted at Rs 142 and the metal continues to meet with good demand on reports of shortage. Zinc hovered narrowly around Rs 67.

On the London Metal Exchange, Copper spot was quoted at £271½ per ton against £278 in the previous week, mainly due to lack of large-scale demands from consumer interests. While no serious shortage of copper is anticipated in the near future, there does not appear to be any material pile-up available for sale.

Tin Spot was quoted lower at £813 per ton against £854 in the previous week. There are reports of the possibility of a strike at the Penang Works of the Straits Trading Company.

Lead was quoted lower at £112½ per ton for first-half December delivery. Fears were expressed in America that, without Government support through stock-pile purchases, the price of this metal would likely to stage a slip-back.

Zinc was quoted at £98½ per ton against £102½ in the previous week. Statistically, the chance of any further recession in prices does not seem to be inevitable as the demand from motor car industry in America is showing signs of improvement. Near-by position is still reported to be rather tight, mainly due to European deliveries being effected to America.

*

Gold & Silver

The Bullion market fluctuated listlessly in thin dealings last week. Trading in the new deliveries began this week, and the turnover was small.

Gold moved aimlessly with trading confined to a very narrow groove, although sentiment was favourably influenced by expectations of the offtake picking up owing to the marriage season and the reports regarding depletion of gold reserve in the UK. Arrivals and offtake were estimated around 4,000 and 4,500 tolas respectively.

Gold Magshar delivery moved between Rs 104-11-6 and Rs 104-14-6 and Posh delivery between Rs 105-2 and Rs 105-5. Ready was quoted better at the close at Rs 105-1-6 after starting at Rs 104-14. Sovereign ruled almost steady at Rs 68-8.

Trading in the Silver section was featureless. Operators were generally inclined to take a cautious attitude, partly due to the severe setback in share values and partly to reports of increased arrival of Tibetan coins. The underlying sentiment was, however, well maintained.

Magshar delivery moved between Rs 173-12 and Rs 174 and Posh between Rs 174-10 and Rs 174-14. Spot silver closed lower at Rs 172-12 after improving at one time to Rs 174. Arrivals and offtake were estimated around 30 and 20 bars respectively.

In general, the trend of demand for both the metals has given rise to the opinion that the season has

World of Cotton

Demand for Export Varieties

THE recent announcement with regard to the release of an export quota has failed to enthuse the Cotton trade. The apathy appears to have arisen from the fact that the quota is small compared to the commitments which the trade has already made with the foreign buyers. Trade was expecting a higher outturn in the crop this season. Moreover, arrivals in local markets have been heavy and, due to the tight credit position, the holding power of operators is also restricted. Again, there is a feeling that the increase in the export duty will affect adversely India's competitive position in the world cotton market, particularly where Pakistan has been offering her short-staple varieties at lower prices.

Meanwhile, rumours are current that the Government will soon announce a special export quota of about 50,000 bales to China as a goodwill gesture. It is reported that the cotton to China will be of 25/32" staple in view of that country's peculiar needs, or even higher staples. It is also stated that Pakistan is, at present, selling staple varieties to China at very advantageous rates and, if permitted, India can offer good competition to Pakistan in China. Knowledgeable sources have pointed out that the Government might think of releasing an ad hoc quota of staple cotton to China. Possibly, exports to China may mean some enhancement of the export duty which will bring in an extra revenue to the Exchequer. This perhaps explains the remarkably steady tone in cotton futures, of late.

×

FUTURES MARKET:

Price movements in the futures section have, however, been irregular, as various rumours regarding export quotas are compelling them to be cautious in commitments. Opening quiet, rates drifted lower on selling by bulls and professionals, prompted by weaker advices from oilseeds markets. At lower levels, however, reports from the commodity markets encouraged the erstwhile sellers to support the market. Values improved steadily under extensive trade support, stimulated by reports of business with the Continent. Renewal talks of special export quota for China and firmer spot advices were additional helpful influences. The turnover was 25,000 bales. Jharilla March opened around Rs 639 and, after touching a low of Rs 635-12, improved toward the close to Rs 643-12. Vijay April opened at Rs 739-8 and, after receding to Rs 735, improved at the close to Rs 744-4.

×

SPOT MARKET:

The Spot section displayed a steady tone. Mills continued buying Khandesh and Berar Jharillas. There was also some enquiry for new crop Vijay and Dhalleras.

In the export section, prices ruled firm and some business was reported done in Bengal and Oomra Deshi.

In foreign cottons, spot lots of Sudan, Egyptian and afloat US were in good demand, although the prolonged silence by the Government over the import policy in regard to East African cotton caused some concern to the trade and industry. Almost 30 per cent of the new crop in that country has already been marketed.

Following rates were quoted (per candy):—Bengal Rs 680 to Rs 750; Oomra Rs 740 to Rs 780; Dholleras Rs 700 to Rs 720; Jharilla Rs 735 to Rs 770; Vijay Rs 840 to Rs 850; AR/BP/52 Rs 1750 to Rs 1760 and ER/Bushoga Rs 1600 to Rs 1625.

×

COTTON ESTIMATES:

The all-India second estimate of cotton for 1956-57 put the current year's area at 15,955,000 acres against the corresponding adjusted estimate of 15,422,000 acres for 1955/56. The total output is now estimated at around 54 lakh bales as against about 44 lakh bales last season. Following are the state-wise production figures (in lakhs of bales):—Bombay 28.5; Madhya Pradesh 3.8; Mysore 4.8; Punjab 9.3; Madras, Andhra and Rajasthan 3.1, 1.8 and 2.1 respectively.

According to latest reports, crop is now moving in volume in Berar, Khandesh and the Punjab. Arrivals in Berar are expected to increase in the coming weeks. Weather has been favourable, and no fresh reports of damage to crops have been received. The marketing has been in full saving in the Punjab.

There is also an increase of about 8 per cent in area under cotton in Pakistan. The 1956/57 estimate at 3,336,000 acres as against 3,080,000 acres in 1955/56 includes provision for cultivation of American and Deshi varieties. The acreage of the former is expected to be around 2,623,000, while that of the later at 713,000 acres.

×

NEW YORK MARKET:

In the New York cotton market, futures sagged following an irregular start. Selling was influenced by the decline in loan entries for the third consecutive week with traders feeling that the loan programme was not tightening up free market supplies as had been anticipated earlier. Part of the pressure was attributed to uncertainty over the loan rate on the 1957 cotton crop. Middling spot was quoted around 34.50 cents per pound.

Cotton circles in Bombay are worried about the halting progress in respect of the issue of licences for the import of US cotton. Enhanced freight rates will come into force after January 15, 1957. It is, therefore, natural that importers should be anxious to get the licences as early as possible. It is generally felt that, unless licences are issued immediately, mills, importers and US importers will have to cancel their early-December bookings.

×

LIVERPOOL MARKET:

Trading in the Liverpool cotton market remained slow and values eased slightly under some American selling and local liquidation in spot basis for United States qualities. Egyptian contract Jan/February was quoted at 60.00d and Sudan contract at 61.30d per pound.

Meanwhile, it is reported from Egypt that all cotton barter deals have been stopped from December 1. This is done by the Egyptian Government to stabilise prices and increase foreign currency earnings.

×

CLOTH AND PIECEGOODS:

Conditions in the Cloth and Piecegoods markets ruled steadier with prices showing a slight improvement due to better offtake. Interest from Calcutta, Kanpur and the South improved. The general opinion is that the offtake will gather momentum in the ensuing weeks. Another encouraging factor is the commencement of forward sales by mills after a lapse of about three months. Transactions in super-fine qualities are reported done at higher rates, thanks to the firmness of Egyptian cotton.

On the export front, satisfactory business is reported done with Indonesia. Regular enquiries are also reported from Burma over a wide front. Demand from Aden has registered a significant improvement, while Sudan has continued to evince interest in Indian goods.

Olympus

Second Thoughts on the Second Plan

THE Second Five-Year Plan has been officially in operation for the last eight months; and, even as it was getting into its stride, fresh assessment of some of its basic assumptions has become necessary. This is not a wholly unexpected development, for, the planners have wisely insisted at all times that their estimates and targets were tentative and subject to continuous assessment as events unfold themselves. Such reassessment is not so much with regard to basic social objectives, on which there is near unanimity in the country, at least in their practical implications. Nor is there such controversy over the concrete economic aims, such as the strengthening of the industrial base of the economy and the diversification of production of consumer goods in the interest of employment and greater balance in the distribution of prosperity. There is doubtless some controversy over the means to be employed in realising these aims, but the familiar debate over the relative importance of the private and public sectors is becoming more and more unreal in the context of fresh developments.

But, on the question of resources for the Plan, on the estimate of expenditure under the Plan, and on the dangers likely to be encountered in a development Plan, a substantial portion of which is sought to be financed by anticipated future prosperity—for that is what deficit financing is, in its most respectable form—there has always been the liveliest controversy. And, despite the seeming finality of the Plan figures, none, least of all the Planning Commission, was so foolish as to imagine that the last word has been said on the subject. Since some kind of hypothetical position has to be taken as a starting point of discussion, if the Plan is not to be reduced to a meaningless document of mere hopes, certain figures were adopted. Their tentativeness is to be seen from the fact that the collective saving envisaged was not in terms of actual experience, but in terms of a percentage of national income—a percentage which was not considered as unduly onerous when compared to performance elsewhere. Admittedly, no finality can be claimed to such reckoning, and never was.

In recent months and more particularly in recent weeks, considerable rethinking has taken place as, in the actual performance of the tasks, difficulties have been encountered. For instance, the using up of available foreign exchange has been at a somewhat alarming rate; and this made devising of measures for conserving and augmenting these resources particularly urgent. Likewise, the deterioration in the international situation has made us more keenly aware of the impact on our plans of events on which we have no control. The heartening thing in this context is that we have not entirely been caught by surprise by these developments; that such depletion of resources as has been there is due in a large measure to conscious acts like steel imports; and that important steps have been taken to augment these resources, examples of which are the commodity exchange agreement with the US, long term credit agreement with the USSR and, lastly and most recently, assurance of substantial aid from the World Bank for specific projects.

No less urgent than the review of the foreign exchange situation has been the rethinking on the impact the tempo of development and other factors were having on the internal economy of the country. Though no general deterioration has taken place, the pressure of inflationary forces on what Mr T. T. Krishnamachari called "strategic points" in the economy has been severe in recent weeks. This development, again, was not something that has taken us by surprise.

And, lastly, and somewhat alarmingly for those who had thought that the Plan was already erring on the side of over-ambition, the cost of the Plan is showing signs of going up. In his recent speeches, Mr Krishnamachari had indicated that an increase in the outlay might become inescapable. The reasons for the higher figure are, firstly, a rise in the cost of certain projects owing to increase in price level both in and outside the country, and, secondly, inclusion of certain new expenditure not originally planned. It is now estimated that the cost of the Plan, as far as the public sector is concerned, would go up by another four to five hundred crores.

These were some of the problems that faced the members of the National Development Council when they met here last week end. In effect, they had to consider a question that seemed to pull in different directions: On the one hand, increase in the cost of Plan was apparently inescapable and, on the other, resources for even such of the expenditure as has already been planned were found to be inadequate. As though this were not difficult enough, they had to reckon on the distinct possibility of inflationary pressures on the economy and the consequent need for scaling down the extent of deficit financing originally planned for. In other words, the unbending logic of economic development stared them straight in the face, asking them the unrelenting question whether they were willing to pay the price for the things they wanted. For, reduction of deficit financing meant an inevitable increase in other heads, mainly taxation. The National Development Council had in effect to think hard about the means of raising additional resources by taxes, since reduction of deficit financing has become inescapable. Though the discussion was confidential, the official release at the end of the meeting mentioned that decisions to reduce the extent of deficit finance and increase that of taxation have been taken by the Council.

It is interesting to note that unofficial guesses of the revised estimates of Plan resources correspond fairly closely with the estimates given in the World of Finance Article in Indian Finance of November 17. In his opening address to the Council, Mr Nehru indicated that the outlay on the Plan will have to be raised by about Rs 400 to Rs 500 crores, which is roughly corresponding to the outlay of Rs 5,200 crores given in the Indian Finance article. Likewise, the figure of deficit financing of Rs 700 crores suggested in the same article appears to be almost the same as the one likely to be attempted. The increased target for resources from taxation is also more or less estimated to be of the order of Rs 1,200 crores.

As I said earlier, the discussion was in camera and, therefore, it is to be expected that it was frank and free. So far as can be gathered, the Chief Ministers of States find the prospect of additional levies unwelcome, but do not see how the unpleasant task can be avoided. They would be quite happy if the Centre would find the money somehow. Though they are unwilling to surrender some of their own sources of revenue to the Centre, they calculate cannily that such surrender would make their importunities on the Centre for greater funds more justified. They have, therefore, agreed in principle to forego rules taxes on mill made cloth, tobacco and sugar, in return for their share of a surcharge on excise duty on these commodities to be levied by the Centre. Any increase in the surcharge, which they calculate is sure to take place, will be blamed on the Centre and they would, to that extent, escape the odium of a fresh levy. There was also some complaint that the States were not always able to find the "matching contribution" insisted on by the Centre in respect of certain specific projects; and the matter was to be further reviewed. Here again, one can see the reluctance of the States to play the role allotted to them and depend too heavily on the Centre.

But Mr Nehru's forceful exposition of the need for tackling inflation mainly by increasing production, especially agricultural production, appears to have gone home. Discussing the impact of events on our plans, he said that a "stage has been reached when all kinds of brakes would have to be clamped down....we cannot allow inflation to run away with us. That is quite certain....Obviously, the question of inflation revolves round the productive capacity of the country. We can meet the situation only by increasing production, especially agricultural production....For, in the final analysis, it is agricultural production that is going to increase our capacity to meet these demands and the needs of the country."

Mr Nehru's preoccupation with agriculture was not just a fad, but something that has been borne in on him by recent events in Poland and Hungary. He dwelt on this aspect of the matter at some length, in his address, and pointed out the political consequences of the stampeding of the people into too fast a pace of industrialisation without adequate expansion of agricultural production. It was evident that the Prime Minister was deeply worried that our own pace of industrialisation in the Second Plan should not lead to such difficulties. Apart from the fact that our mode of planning eschews totalitarian methods of coercion and terror, the humanitarian aspect of the question and the ultimate political folly of such a policy are patent. The emphasis on agriculture is, therefore, of central importance to the success of the Plan. Actual steps to be taken for the increase of agricultural production were debated in the discussion that followed the speech; and it is expected that the coming months will presumably witness energetic action on agreed lines.

North Indian Notes

Development of Chemical Industry

BOTH Mr Manubhai M. Shah, Union Minister for Heavy Industries, who inaugurated the annual session of the Indian Chemical Manufacturers' Association in Calcutta last week and Lala Charat Ram, the President of the Association, agree that there is vast scope for free enterprise in the development of the Indian Chemical Industry. Pointing out that India is now entering a chemical age, Mr Shah has observed that the country's goal is something more than self sufficiency. The role of the public sector in the industrial development of the country is that of a major partner in the national endeavour. In cases where investment is huge the state has necessarily to step in. Even so it will be wrong to conclude that private enterprise will be slowly pushed out of the field.

Lala Charat Ram has put the entire matter in its proper perspective and consequently has arrived at the inevitable conclusion that the scope for 'our initiative and enterprise is still great within the 'limited' fields allotted to us by the new Industrial Policy Resolution'. He points out that just as businessmen ask Government not to base their policies on a purely doctrinaire approach, they in their turn should guard themselves against a purely doctrinaire opposition to Government policies. He goes on to declare that the 1956 Industrial Policy Resolution 'offers a new opportunity to private enterprise to justify its existence in a socialistic state and its future will depend upon its performance during the years ahead.'

Turning to the future of the Chemical Industries, Lala Charat Ram is confident that they will carry out the tasks assigned to them under the Second Plan in an efficient manner. During the past few years considerable progress has been achieved and today the products manufactured make a long list. It is, however, to be noted that if the industry's progress is to be smooth, improvements in various directions have to be effected. In this regard much depends on Government policies. For instance, a proper development of the Deystuffs and the intermediate industry is inevitably governed by the import policy. The present policy of Government of imposing restrictions only when they are assured of adequate stocks and subsequent regular supply is not conducive to the growth of new industries. The fact that adequate capacity exists in the country and that the machinery is in perfect condition should be enough to impose strict import restrictions. It is doubtful if his counterparts in other industries will be able to see eye to eye with him in this regard. For, during the recent discussions on the import policy of Government, powerful voices have been raised against restricting imports on the basis of anticipated indigenous production.

*

Pump Industry

The Indian Pump Industry has made rapid strides in the past few years though it has not been fortunate enough to utilise its entire installed capacity. As against 8 organised units manufacturing power-driven pumps (centrifugal) with a capacity of 33,460 pumps per annum in 1950, there are at present 27 registered firms engaged in the manufacture of power-driven centrifugal pumps and their total rated capacity has been estimated at about 65,000 pumps per annum. Four additional firms have been licensed to manufacture pumps bringing the total number of manufacturers to 31. In addition to the above, there are about a dozen small unregistered firms engaged in the manufacture of pumps.

Though the Planning Commission have estimated that the demand will be of the order of 85,000 by 1955-56 at the commencement of the First Plan, it has now been found that consumption in 1955-56 has been in the neighbourhood of 40,000. The Commission have estimated that the demand may be around 85,000 to 96,000 pumps per annum by 1960-61.

Speaking at the Third Annual General Meeting of the Indian Pump Manufacturers Association, Mr C. N. Pradhan, president of the Association, pointed out that the existing units were themselves capable of meeting the entire demand that was likely to be met with during the Second Five-Year Plan period. It was, however, to be noted that for the Indian pump industry to undertake the tasks assigned to it, Government should take early steps to remove certain obstacles which were retarding progress. Though the indigenous industry was quite capable of meeting in full the demand for pumps from 1" to 14", pumps above 6" delivery continued to be imported without restriction on the plea that indigenous manufacturers were unable to execute orders for pumps of higher delivery capacity within stipulated delivery perods. A closer examination would reveal that the fault did not lie with the indigenous manufacturers but with the Government departments who were not prepared to allow sufficient delivery time.

The indigenous manufacturers were also handicapped for want of adequate raw materials. Pig iron, scrap and hard coke were all in short supply or were not available readily to the industry. While it was true that the supply position in pig iron had necessarily to remain somewhat unsatisfactory till the new steel plants commenced production, there was reason to hope for considerable improvement in the position if Government took energetic measures to overhaul the system of distribution of pig iron. A similar situation obtained in the supply of ball-bearings and motors, two other essential materials required by the industry.

NORTH INDIAN MARKETS

Steadier Tendency in Sugar Prices

SUGAR markets have ruled steadier although the turnover continues to be on a small scale. Factories in Uttar Pradesh and Bihar have fully begun their new season and it is estimated that production of indigenous sugar in the country, during the 1956-1957 season, will touch a new high. As gur prices have already recorded a fall, little incentive is left to the producer of cane to crush it for gur. Naturally, there is likely to be large diversion of cane to the factories. Following rates (per maund) are quoted in the Hapur market:—Jaswant Rs 28-5; Simbhauli Rs 28-8; Mowana Rs 27-14; Daurala Rs 29-4; Amroha Rs 27-12; Bijnore Rs 27-12; Mansoorpur Rs 29-4 and Rampur Rs 31-8.

Although production in the new season has started well, it is difficult to have any realistic estimate of the outturn. Rates for the new season's sugar are already quoted at As 8 to As 12 per maund higher than the current prices on rumours of likehood of export being allowed of some quantity of Indian sugar to the Middle East.

The current world trend to higher per capita sugar consumption is likely to continue as long as real income continues to increase. In this connection, the monthly bulletin, issued by the FAO, states that the total world sugar consumption for 1956 at 39.8 million metric tons i.e. a per capita average of 40.48 pounds compares with the pre-war capita average of 31.48 pounds only.

According to the same bulletin, world consumption of sugar, excluding that in the Soviet Union, Eastern Europe and China rose by 1.3 million tons over the 1954 figure to 31.5 million tons in 1955. In the group of countries, excluded from this total, consumption was estimated to have risen from 6.2 to 6.5 million tons between 1954-55.

Again, the bulletin expresses doubt that consumption increases can continue at this rate upto 1957. By the end of 1956, sugar in major countries will be substantially reduced and the 1956-57 crops do not give promise of being much greater than those of the previous year.

The Khandsari market continued to rule dull and prices ranged between Rs 22 and Rs 26 per maund according to quality.

*

Gur

The Gur market in Hapur ruled quiet with prices showing an easier tendency, the decline being more pronounced in new gur. Offtake aggregated 15 to 16 wagons daily, mainly to the consuming areas of Gujerat and Madhya Pradesh. Daily arrivals last week were at an average of 6,000 to 7,000 maunds.

*

Foodgrains

Quiet conditions prevailed in the Foodgrains market, the increasing sales through fair-price shops being the main damper. Wheat prices recorded a modest fall to Rs 15-10 per maund, while farm quality was transacted at Rs 16-12. Rice prices also eased slightly due to good supply position of the new crop. Good demand and steady advices from Madras and the Punjab accounted for firm conditions in the Gram section. Bajra and Maiza prices were, however, unchanged due to slack demand. Beginning of arrivals of the new crop from the producing areas resulted in a slight fall in Jowar prices to Rs 13 per maund.

In the Peas section, prices recorded a slight decline due to absence of demand. Arhar eased appreciably and were quoted at Rs 13-4 per maund. Prices of other pulses ruled quietly easy.

In the Delhi grains market, conditions remained quiet. Farm quality wheat hardened by about As 8 per maund on lack of stocks. Although Basmati rice was soft early in the week, there was a recovery toward the close on better enquiry. Maize was slightly higher on account of better demand. Among Pulses, Masoor rallied up by about Rs 1½ per maund due to short supply. Gram prices also recorded modest gains on some demand for the commodity.

In the Bombay grains market, prices moved within a narrow range. Prices of new crop Rice tended to ease following a moderate improvement in the arrivals from the producing areas. The tendency in old crop, however, remained steady.

Trading in indigenous wheat was of a restricted nature on account of

The Peninsula

Chou En Lai in Madras

By the time he came to Madras, Mr Chou En Lai had already exhausted his views on most of the burning questions of the day. The newspaper men who met him in the South could pardonably feel that what they could get from this extraordinarily important visitor should either be mere rehashed versions of statements made in New Delhi and other places or a few courtesy remarks on what he saw here.

It was therefore natural for some of us to rate our expectations low and look forward to be content with small morsels as against the "meated meals" reporters could have, when the Chinese Prime Minister was in the first lap of his Indian tour. There was one presumably lively meeting which lasted for nearly two hours, a conversation between Mr Chou En Lai and Mr C. Rajagopalachari at a luncheon at the Rajbhavan on Dec. 5. One would have undergone any risk to know what the two said between them. It was a quiet luncheon and the bilateral conversation remains a completely closed book. Perhaps C. R. himself might some day recall this conversation for public consumption, till which time public curiosity would have to be kept in suspense.

But for the rest Mr Chou En Lai not only did not disappoint but exceeded expectations, except on one point and that is in respect of Hungary. Perhaps the visitor's silence on this tantalising topic was as much due to the lack of earnestness on the part of questioners at the Press conferences as to his own keenness not to be drawn into argument, especially when the Indian Prime Minister had made known his views fairly emphatically.

His comments on Mr Suhrawardy's description of the Anglo-French invasion of Egypt were naturally identical with what he said when he addressed members of the Parliament in New Delhi. He had no hesitation in challenging the Pakistan Prime Minister's description of the step taken by the two Western powers and had no doubt that it was naked colonial aggression. When this topic was raised at the Press Conference at Mahabalipuram, the questioner must have had in his mind the forthcoming visit of Mr Chou En Lai to Pakistan. There could have even been mild hope that the Chinese Premier would show some indulgence to his prospective host at least in the matter of phrasing. He did not show any.

The references he made on this occasion to Chiang Kai Shek and his group were even more cordial than what was heard before. There was not the faintest touch of personal animosity or rancour, when Chou En Lai referred to the person who now functions as a big thorn on the bodypolitic of China. "Chiang Kai Shek and his group are all Chinese and we think they should and they eventually will come back to the mainand". What is even more significant is his friendly assertion that Chiang does not like to see a permanent split in the Chinese people. "That is why we think that they will come back to their fatherland That is our view and we are going to make every effort possible to bring about the peaceful liberation of Taiwan."

It will be pleasantly recalled that in an earlier reference to this highly intriguing topic, the world was made to understand that Chiang was being offered one of the highest positions in Peking, it was implied that even a Ministership would be much too small for the Generalissimo, once he felt ready to come back and be a part and parcel of the new set up.

The visiting Prime Minister's remarkable gift for evasion found expression when confronted with a demand for views about Marshal Tito's concept of socialism and Mr V. K. Krishna Menon's statement in New York gently anticipating the release of the ten Americans, now being held in China. On the first, Chou En Lai said that he had not read Marshal Tito's speech and therefore could not offer any comment. On the second he parried the question by saying that Mr Krishna Menon always held optimistic hopes and "he is a good friend of ours in our common cause for the promotion of peaceful co-existence".

Mr Chou En Lai apparently can claim a critical knowledge of art; otherwise he could not have expressed his appreciation of the dance recitals at Rajbhavan, on which occasion he said: "In your dance one could see that your artists have been faithfully keeping the best traditions of Indian art and culture throughout the centuries. They have at the same time absorbed and blended with their own culture the good and useful elements of other nations' culture. In this way you have enriched and enhanced your own culture and have been able to make endless new contributions to world culture and art."

This tribute to the value of imbibing elements from exotic cultures must surely prick the delusive chauvinism and bigotry of those who are wont to think in terms of cultural and linguistic touch-menotism under the mistaken notion of protecting any 'special heritage'.

While on art, the Chinese Premier could speak as a knowledgeable person, on certain other subjects he was found to be extremely modest. When the Chief Administrative Officer of the Perambur Integral Coach Factory asked for some suggestions, the reply was 'I am not an expert in the line, I can only compare.' He showed that he could make unbiassed comparisons, even when they went against his country. For instance, he said that China too had coach factories but they were not as good as the one at Perambur. The Integral Coach Factory came in for the highest appreciation from him. He described it as something which he had never seen before, in point of modernity, cleanliness, training and organisation. He indicated that China would be sending some persons to learn from this factory.

One of the principal messages of Mr Chou En Lai's visit to Madras was embodied in his appeal for more and more of Indo-Chinese contacts in different spheres and at different levels. Whether it be in factory organisation or in agricultural development as in the Community Projects areas or in education, one could see that he was constantly comparing notes and zealously trying to observe new things.

He made a special compliment to Madras, when he said that Madras has made an outstanding contribution to the great culture of India. An appeal specially addressed to youths was keyed to a political note. This was only to be expected, when one of the world's topmost Communist leaders was addressing a mass rally of students. At the rally at the Madras Corporation stadium he found an appropriate occasion for emphasising the identity of aims between India and China and of their recent history, the survivals of colonialism in both, the great headway that living standards and the cultural level of the masses had to make and the role of the youth in particular in the future building up of the two nations.

Some figures he gave of the progress of education in China since 1949 are worth quoting. In the last seven years the number of students increased from 116 000 to 380,000 in higher educational institutions; from 1,268,000 to 5,860,000 in middle schools; and from 34,319,000 to 57,700,000 in the primary schools; the number of students who graduated during these seven years was given as exceeding the total number of graduates for the previous five decades. Mr Chou En Lai described Chinese youths as 'a gigantic force, full of enthusiasm and vitality for the socialistic construction of their father-land.'

Madras Review

South Indian Notes

New Taxes will Retard Industrial Progress

Mr M. A. Chidambaram, President of the Southern India Chamber of Commerce, Madras devoted the major portion of his address to the half-yearly meeting of the Chamber held last week to an analysis of the economic situation that is obtaining today in the country. Referring to the mid-year proposals of the Finance Minister for fresh taxation he said that they would impede the programme of economic development. The capital gains tax, the increased tax on dividends and the proposal to control the depreciation and development reserves of companies would seriously retard the growth of industries in the private sector. It was surprising that Government had no hesitation in taking away a large slice of the available funds from the private sector to finance their programmes under the public sector at a time when private enterprises were hard put to it to get adequate bank accommodation.

The fact that enormous resources were required to finance the projects under the Second Plan was no justification for imposing excessive burdens in the shape of penal taxes on the people. The logical course would be to spread the plan over a longer period and thus avoid the additional burdens. While admitting that Corporate savings had to play a great part in the future developmental scheme. Mr Chidambaram averred that since in India corporate form of enterprise was not yet fully developed individual savings should be encouraged.

Referring to the tight money conditions prevailing in the country, the SICC President pointed out that the dispersal of huge funds among sectors not accustomed to thrift and banking habits had been mainly responsible for the emergence of stringent conditions even during the slack season. It would appear, therefore, that unless the banking habit was sufficiently inculcated among the rural population, whatever remedies that were devised would prove to be quite ineffective after a while.

The growing deficit in foreign trade was another aspect in the country's economy that called for urgent and sustained attention. Mr Chidambaram said that while it was gratifying to note that Government were taking active steps in devising measures to stimulate exports, it was a matter for regret that the railways were not able to cope up with the increased traffic. Even in the early stage of the Second Plan the transport position was far from satisfactory. As the development programmes got under way, the railways would be required to carry heavier loads. As essential pre-requisite to increased exports was adequate transport facilities.

While it is true that the new tax proposals have undermined the confidence of the business community in Government's attitude toward the private sector, second thoughts on the mid-year budget have revealed that they are not as onerous as they appeared at first sight. In the present tight conditions in the money market, however, the provision regarding compulsory deposits will place companies in a precarious position. In view of the fact that most companies are in various stages of implementing their expansion programmes, it is to be hoped that something more concrete than a mere assurance that difficulties in the matter of refunds will be reduced to a minimum, will be done by Authority.

*

Gift of an Interva l

The phenomenon of growing unemployment among the educated in our country while there is an acute shortage of technical personnel to man the large number of projects already established and under way, has focussed attention on the need for reorganising education so that training facilities are closely linked to the future requirements of the economy. It has also become clear that the growth of educational facilities in future should be in directions which do not accentuate further the problem of educated unemployed.

Delivering the convocation address of the Andhra University last week at Waltair, Mr C. D. Deshmukh, Chairman of the University Grants Commission pointed out that though no sizable improvement in the situation could be expected in the next five years, within less than two-plan periods thereafter, the problem of educated unemployed would cease to be troublesome.

It should not, however, be concluded that the solution would evolve itself. Concerted effort had to be put in during the next five years by all concerned. In the first place the Universities should bring about conditions conducive to sustained efforts being put forth by the students. The most important point to be noted by the students was the fact that 'the characteristic gift of a University was the gift of an internal.' It was a gift that could come only once in a life-time and that too to a small proportion of the population. Students should realise that if they fritter away such a precious gift which, in a way, was a special favour conferred on them by the society at large, they would place themselves open to the charge of having wasted valuable national assets.

Mr Deshmukh, however, made it clear that the student could not be expected to play his part without the active help of society whose responsibility it was to see that he got at least minimum comforts while at the University. Here was the rub and the problem was naturally engaging the serious attention of the University Grants Commission. Paucity of funds and the consequent inability of the Universities to maintain high standards of teaching were urgent problem to be tackled. A kindred problem was the equally urgent need for the amelioration of the unsatisfactory conditions of service in the universities.

It was clear, therefore, that unless funds allotted to education under the Second Plan were substantially increased, many urgent and desirable improvements could not be carried out. Mr Deshmukh rightly observed that the maintenance of our Universities at a high standard should be considered as an act of patriotism by the citizens.

SOUTH INDIAN MARKETS

Hides and Skins Steady

PRICES in the Madras Tanned Hides and Skins market ruled generally ready during the past week. Although fresh business with the UK is very difficult to confirm at present as buyers there have made plenty of purchases in recent weeks, Madras sellers are still trying to resist any talk of lower prices. It is generally felt that, in view of the Christmas and New Year holidays, that sellers should not attempt bulk offerings or force sales, which trend will only pull down the market and impair the confidence of the buyers in England.

Arrivals of Cow hides were moderate last week, while clearances were fair. Some of the top class premium marks were reported to have been sold on the basis of 60d for 5-5½ lbs averages; 49d for 8-8½ lbs and ordinary marks on the basis of 51d for 5-5½ lbs. There is a good local demand for inferior fifths, which tends to maintain prices.

Arrivals of Buff hides were fair and some clearances were done at unchanged prices. Arrivals of Cow Calf were poor, but the small quantities were cleared and sold at a further advance of one to two annas per pound. Prices for Buff Calf Continued to rule firm on account of enquiries from the UK.

In the Tanned Skins section, Goat skins advanced by about As 4 and sheep skins by about As 5 per pound. Arrivals of both kinds of skins were fair.

On the export front, there was very little change to report as London auctions were in progress. Sellers were not inclined to consider fresh sales unless at increased prices. There was, however, no support from the buying countries.

In London auctions, there was a good attendance of buyers, and there was good competition for all types. Average realisations were 1sh to 1½h per pound above October levels.

In general, tanners have preferred to wait and watch. They hope that higher prices may be obtained locally; but it is feared that they will be disappointed as London buyers are already resisting the present high prices.

In the Raw Skins section, Bangalore Goat skins are reported to be Rs 20 per 100 skins higher and sheep skins Rs 10 higher.

*

Groundnuts

For the first time in Madras, forward trading in Groundnuts started from December 5 with the inauguration of the Madras Oil and Seeds Exchange. Hedge transactions were reported to have been done in December and January deliveries in which price movements were confined to a narrow range.

Conditions in the ready section remained quiet. Arrivals last week were estimated at about 400 tons and crushers took up this quantity. The rate for superior oil-quality seed showed a drop of Rs 6 at Rs 150 per candy, while bold variety was quoted at Rs 148.

In the Groundnut Oil section, the rate for the ready position declined from Rs 328 to Rs 310 per candy. Circar districts and Calcutta interests showed some interest in their purchases.

*

Pepper

Pepper markets have continued to rule quiet and dull as reports from overseas and upcountry are uninspiring. There is a feeling that, if sizable demand does not develop from overseas within a short time, it will be hard to absorb the supply in view of the fact that inland enquiry, particularly from Calcutta, is on the wane. The future of the market depends upon the buying policy of America as chances of

Progress of Expansion Programme

*

Mr T. Leslie Martin, the Chairman, Describes Further Extensions

The following is the speech delivered by Mr. T. Leslie Martin, Chairman of The Indian Iron & Steel Company Limited, at the Annual General Meeting of the Shareholders held on 30th November, 1956 :—

Gentlemen,

In my address to you last year I stated that it was extremely unlikely that the production and trading results of that year would be repeated and that the large increase in the revenue and consequent profits could only be regarded as a windfall. Happily, my prognostications have proved entirely wrong and very wide off the mark. From the Report and Accounts for the year 1955-56, which have been in your hands for some days, you will have seen that the results of the previous year have actually been exceeded. Today I do not intend to make any forecast but will confine my remarks, in the main, to facts and will explain to you, briefly, the factors that have contributed to this happy position.

PRODUCTION

The Company's total production of 7,06,986 tons of iron fell short of the figure of the previous year by less than 9,000 tons. The output, however, of your Burnpur Blast Furnaces which provide the hot iron for steel making fell from 5,17,899 tons to 4,73,172 tons. This was due to the fact that No. 2 Furnace was off production for periodical re-lining. The loss of production on this account, however, proved to be much less than had originally been envisaged as, by improved re-lining technique, the work was completed in a very much shorter period than on any previous occasion.

With the change over of two of the Steel Melting Furnaces from Producer Gas Fuel to tar firing we were able, and are now in a position, to utilise a greater proportion of steel scrap in our furnaces than was formerly the case. As an offset to the inevitable drop in the availability of iron for steel making resulting from the closure and re-lining of No. 2 Blast Furnace, an intensive drive for the procurement of steel scrap from local sources was launched and carried out with such success that it was possible to make good the anticipated deficit and even to surpass last year's production tonnage of ingot steel by some three thousand tons. A further benefit was received by reason of the fact that the Rolling Mills were able to produce a larger proportion of the output in the form of finished steel commanding a larger margin of profit than semi-finished steel such as billets, blooms and slabs.

The production of iron from your Kulti Blast Furnace was 233,814 tons as against 197,702 tons in 1954-55, since both Furnaces were in full production throughout the year. In addition to the benefit of the consequent increased availability in the sale of pig iron, full advantage was taken of a larger allotment of iron, sanctioned by Government, for use in the Kulti foundries. This enabled an increase in the production tonnage of Spun Pipes and General Castings of some sixteen thousand tons which again had a marked effect on the satisfactory trading for the year under review.

PROFIT

Taking these factors into account an increase in profits of some Rs. 70,00,000 has been realised for the year. From this amount we are required, in accordance with the terms of the Agreement entered into with Government (to which reference is made in your Directors' Report) to set aside Rs. 29,47,838 to a Special Fund to be utilised solely for the purpose of our expansion programme.

As to the future, I can only say, in view of the excellent results for the year 1955-56, that despite the many difficulties encountered your Burnpur Works have worked to full capacity and that until this capacity is augmented by the extensions now in progress, which will gradually come into operation, no appreciable increase in output can justifiably be looked for. Also, it must be remembered that it is not unlikely we may have to contend with increasing difficulties in the operation of the existing plant owing to the disorganisation caused by the expansion works in progress. I would, therefore, ask you to bear this in mind when forecasting possible results over the next year or so.

In this connection I should like to take the opportunity to pay tribute to the very efficient manner in which the task of the Planning and Co-ordination of the extensions works is being carried out by your Consulting Engineers, the International Construction Co., Ltd., and to the spirit of co-operation between them and the Works Management which has enabled all difficulties encountered to be smoothed over with the minimum of inconvenience to either side.

FINANCE

So far as the financial figures for the year under review are concerned there can, I think, be few points on which you will require further enlightenment. The Accounts as drawn up in conformity with the provisions of the new Companies Act 1956 give even fuller particulars than the previous very full disclosure it has always been the practice of your Board to make. There is, however, one item on which I might perhaps remark. You will notice that the Accounts show the transfer of a sum of Rs. 7,00,000 to General Development Reserve. You may feel some doubt on the necessity for such transfer, having regard to the very large amounts set aside on the other extensions reserves. I would, therefore, like to explain that the sum in question represents the approximate reduction in the normal taxation liability for the year by reason of the Development Rebate allowed by Government exempting from taxation 25 per cent of the cost of the new plant and machinery installed. The consideration underlying this concession is that the saving in tax should be set aside for development purposes. We count to a large extent on the continuance of this rebate for financing both the 1953 and 1955 extensions and it is very desirable that this position should be recognised by the immediate institution of a General Development Reserve as a separate item of the reserves.

DIVIDENDS

In view of the substantial increase in the amount of profits earned your Directors had naturally wished to mark the position by some increased distribution on the Ordinary share capital. Every endeavour was accordingly made to obtain the approval of Government to the admission of the shareholders to an increased participation in the profits, but as reported in the Board's Circular Letter of the 1st October, 1956, Government have found themselves again unable to agree at this stage to an increase in the rate of dividend. Though the position is disappointing to us all and is one which your Directors greatly regret, as I advised you under similar circumstances last year, the orders of Government cannot be ignored nor their legality challenged without serious detriment to the interest of the Company. It is incumbent on us, therefore, to accept the decision of Government with good grace. To the extent that profits earned are retained in the business the finance of the expansion programme and the ultimate repayment of the loans that are being incurred is facilitated. Also, we may derive such consolation, as we may, for the present restriction of dividend from the assurance that has been given by Government in their letter dated 22nd September, 1956. It has been stated in that letter that the mobilisation of the available resources for the completion of the expansion programme is in the long term in the interests of the shareholders "as ultimately they will have their full share of the increased profits".

1953 EXTENSIONS

You will, I trust, have a full appreciation of the progress made with the 1953 extensions programme from the descriptive booklet that has been issued as a supplement to the Report of your Directors and will have noted that the programme is scheduled to be brought to completion by the end of 1958 in two stages.

FURTHER EXTENSIONS

Particulars of the further expansion to an annual output capacity of 800,000 tons of saleable steel which at the request of Government, has been agreed to, have been given in the Board's Circular Letter of the 5th November, 1956. In my speech to you last year I explained that no decision as to the undertaking of this further expansion could be arrived at until the revised sales retention prices of steel, to be operative as from the 1st April, 1955, had been notified by Government and we had thereby been enabled to forecast with some reasonable degree of accuracy the future financial position of the Company. The revised retention prices were communicated to the Company in February, 1956, and were fixed at a satisfactory level. The further expansion was, therefore, approved by your Board and the necessary financial negotiations for securing the finance to cover the cost put in hand. As you are aware, this programme provides mainly for an increase in the finishing mills capacity. It is scheduled for completion under normal conditions early in the second half of 1959.

The outline of the general financial arrangements in this connection, which has been shown in the Board's Circular Letter, will be placed before you for formal consideration. At the Extraordinary General Meeting to be held tomorrow. I will, therefore, not comment on this occasion other than to express our great appreciation of the full understanding and sympathetic consideration that has been shown by Government in the fixation of the current sales retention prices of steel and at all stages of the subsequent negotiations even though it did not prove possible for them to see eye to eye with your Board on the question of the price at which the proposed rights offer of additional Ordinary share capital should be made.

INTERNATIONAL SITUATION

All that I have said on your immediate and future prospects and the completion of both the extension schemes must be judged in the light of the rapid developments which are taking place in the entire international sphere. No one can tell what ultimate direction these may take but it would seem that world-wide impact on almost every national activity may result, which could seriously upset the implementation of all important schemes dependent upon sea transport, foreign exchange, the manufacture and delivery of imported plant and machinery together with the thousand and one other national requirements for industrial or other developments.

In conclusion I should like on your behalf to express our appreciation of the services rendered by your General Manager, Mr. J. McCracken, and by all the staff and workers whose able and willing combined efforts have made possible the very satisfactory results that have been achieved.

NOTE: This does not purport to be a report of the proceedings of the Annual General Meeting, which will be sent to shareholders in due course.

THE INDIAN IRON & STEEL COMPANY, LIMITED—(Contd.)

RAJAHBHAT TEA COMPANY, LIMITED.

NOTICE is hereby given that the 47th Annual General Meeting of the Shareholders of Rajahbhat Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered office of the Company, on Thursday, the 10th January 1957, at 4-10 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. R. H. D. Campbell who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.
5. To consider and, if thought fit, to pass the following Resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 24th December 1956 to 10th January 1957, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. Bajoria,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
10th December, 1956.

NOTE:—1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 17th January, 1957, only to those members whose names are registered in the Books of the Company on the 10th January 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1)(d) of the Companies Act, 1956.

THE EQUITABLE COAL CO LTD.

Notice is hereby given that the payment of Interest for the period from 1st July to 31st December, 1956, on the 5½% Registered Debenture Stock 1963-68 of the Company will be made to those stockholders whose names appear on the Company's Register on the 31st December, 1956 or in accordance with their instructions.

For THE EQUITABLE COAL CO., LTD.,
MACNEILL & BARRY LTD.,
A. H. Forster,
Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta, 11th December, 1956.

DEJOO VALLEY COMPANY, LIMITED

NOTICE is hereby given that the 49th Annual General Meeting of the Shareholders of Dejoo Valley Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 10th January, 1957, at 4-00 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. O. N. Goenka who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 24th December, 1956 to 10th January, 1957, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. Doig,
Managing Director
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
10th December, 1956.

NOTE:—1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 17th January, 1957, only to those members whose names are registered in the Books of the Company on the 10th January 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE SALEM-ERODE ELECTRICITY DISTRIBUTION COMPANY LIMITED.

NOTICE is hereby given that the Preference Share Register of the Company will be closed from 22nd December, 1956 to 29th December, 1956, both days inclusive.

A dividend at the rate of 6½% per annum free of income-tax on the Preference share capital of the Company for the half year ended 31st December, 1956 has been declared payable on 2nd January, 1957.

OCTAVIUS STEEL & CO. LTD.
Managing Agents.

Calcutta, 10th December, 1956.

THE TINNEVELLY-TUTICORIN ELECTRIC SUPPLY CO. LTD.

The Directors have decided to recommend to the forthcoming Annual General Meeting of the Shareholders a dividend at the rate of 10% on Ordinary Shares, for the year ended 31st March, 1956 payable without deduction for income-tax payable by the Company.

OCTAVIUS STEEL & CO. LTD.
MANAGING AGENTS.

Calcutta,
5th December, 1956.

THE INDIAN IRON & STEEL CO., LTD.

At the adjourned Annual General Meeting of the Indian Iron & Steel Co., Ltd., held on Friday, the 7th December, 1956, the following resolution was passed:

"That a dividend of Rs. 1 per share without deduction of Income Tax be declared in respect of each of the Company's 51,83,708 Ordinary shares of Rs. 10 each and that such dividend (other than that retained by the Company under the agreement dated 6th December, 1952, relative to the shares held on Investment Realisation A/c.) be paid on or after the 17th December, 1956, to Ordinary shareholders whose names appear on the Company's Register on the 30th day of November, 1956, or to their mandatees."

The Shareholders added a rider to the above resolution that they wish to place on record that they passed the dividend resolution under protest and without prejudice to their case to be put forward by a representative deputation of shareholders which will shortly present itself to Government in Delhi for the purpose of fully explaining their views.

THE INDIAN IRON & STEEL CO., LTD.
MARTIN BURN LTD.
A. G. Gidley,

Managing Agents.

SOUTH INDIAN MARKETS

(Continued from page 1123)

immediate Russian buying are reported to be receding since Singapore rubber interest is reported to have sold big parcels on Sarawak black to Russia through the UK.

In the Alleppy market, superior old pepper was quoted at Rs 600 per candy and new crop at Rs 575 to Rs 587-8 per candy, according to quality. In the Kozhikode market. Wynaad quality was quoted at Rs 740 and the Country variety at Rs 725 per candy. In the New York market, some modest spot Malabar business was reported done at 26½ cents per pound, reflecting pressure by local sellers. Trade sources have stated that shipment market is is now on a parity with the local market with no discounting of forward months. Lampong, Malabar and Sarawak were all quoted at 26½ cents per pound, ex-dock.

✱

Coffee

A major Coffee Pool auction was held at Coimbatore toward the end of last week, when 939 tons were offered. The attendance was rather thin and the interest displayed by the dealers did not appear to be keen.

Following were the range of prices (per cwt):—Plantation "A" Rs 206 to Rs 212; Plantation "B" Rs 199 to Rs 203; Plantation PB Rs 220 to Rs 223; Plantation Traige Rs 190 to Rs 196; Native Cherry Rs 160 to Rs 175 and Robusta Rs 150 to Rs 155.

✱

Tobacco

It is understood that an agreement has been reached between the State Trading Corporation of India and the Tobacco Monopoly in the Soviet Union for the export of 2,000 tons of tobacco to that country. India has been successful in persuading the Tobacco Monopoly in Czechoslovakia to take 150 tons of Indian tobacco as a trial order. If the trials are successful, larger orders may be expected in 1957 and 1958. Also, the Tobacco Export Promotion Council has aroused some interest in Indian tobacco in Egypt. Some business may be expected.

BURN & COMPANY LTD

NOTICE

Notice is hereby given that the Board of Directors has sanctioned payment of the dividend on 6% and 7% Preference Shares of the Company for the half-year ending 31st December, 1956. Payment will be made on or after the 10th January, 1957, to those shareholders whose names appear on the Company's Registers on the 31st December, 1956, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
S. N. Mukerjee,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta,

THE DEFENCE OF STERLING

(Continued from page 1112)

important, the mere possibility of unemployment is sufficient to discourage excessive wages demands. Amidst prevailing conditions, the trade unions are not likely to press their claims too much. Most of them will be prepared to accept a relatively moderate rise. Had it not been for the difficulties caused by the Suez crisis, they would have held out for maximum demands, and would have been willing to face major strikes if employers had refused to concede their claims.

Mr Macmillan foreshadowed a further reinforcement of the credit squeeze, should this prove to be necessary. In reality, in the changed situation there is every likelihood of a decline in the volume of credit through voluntary repayments as and when the inventories are liquidated and not replaced by repeat orders.

The decline in consumer demand means a fall in imports of consumer goods. Together with the improvement of export prospects, this should accentuate the seasonal improvement of the balance of payments during the early months of 1957. Taking everything into consideration it seems safe to conclude that Mr Macmillan will be able to defend sterling against any further pressure in the new year. Apart altogether from the reinforcement of the gold reserve with the aid of dollar credits, it is likely to recover appreciably through the replenishment of sterling holdings and the improvement of the balance of payments. (Copyright)

✱

GATEWAY MARKETS

(Continued from page 1118).

been delayed this year by about a fortnight. This is attributed to the delay in the marketing of cotton, rice and groundnut.

✱

Oils and Oilseeds

After early irregularity, the Bombay Oilseeds market developed renewed vigour under the leadership of groundnuts. The buoyancy in the Groundnut section was attributed to persistent talk of export quota of HPS groundnuts and groundnut oil. A part of the buying was also induced by rumours of restriction in imports of coconut oil and copra. Groundnut February delivery opened at Rs 149-12 and shot up to Rs 153-4 at the close. In the ready section, bold variety continued to be quoted at the previous level. Groundnut Oil ready and deliveries closed steady with only minor changes in values.

Castorseed was inclined to show a sagging tendency although the firmness of groundnuts held extreme declines in check. Rumours of American offers in castor oil coupled with uncertainty over Government of India's proposal acted as the main dampers. Castor May delivery opened firm at Rs 159 and, after touching a low of Rs 153, recovered gradually to Rs 158-8 at the close. Castor ready lost half a point at Rs 36, while Castor Oil, commercial quality, was quoted at Rs 21-8.

Linseed and Cottonseeds sections remained generally inactive. Linseed May opened at Rs 29-7 and closed at Rs 29-14. Ready was quoted around Rs 34-12 and Linseed Oil at Rs 19-8. Cottonseed February delivery opened at Rs 87-12 and improved steadily toward the close to Rs 89-12.

✱

Yarn

Firm conditions continued to prevail in the Bombay Yarn market where prices of both Art Silk and Staple-Fibre yarns witnessed a sudden improvement on account of higher excise and import duties imposed on them. The announcement of the increase in the duties also gave rise to a controversy between traders and manufacturers of yarns as to who should bear the additional burden. In the absence of any agreeable settlement, some traders were reported to have refused to accept deliveries from the manufacturers.

CLIVE STREET GOSSIP

(Continued from page 1116).

namachari lays more credence on Dr Kaldor's estimate of tax evasion than on the Central Board of Revenue's refutal of such assessment, is indicated by his assertion that, if 80 per cent of the people liable to taxes paid them, the Finance Minister could increase the size of the Plan by 25 per cent.

✱

We suggest that Mr Jenkins has shown great and proper appreciation of the rationale underlining Government policy generally. For, even when he asks for some relief in taxation, he has admitted that some prerequisite measures will be necessary. The ACC President is also confident in the ability of the private sector to contribute fully toward the implementation of the Second Plan. While all these are points that we can welcome, it is our duty to urge that free enterprise should neither hesitate nor delay in proceeding with the development that has been allotted to it and is expected of it. There is the need for all in this country to recognise and to realise the stake that hinges on the success or otherwise of the Plan. If targets are not achieved, whether in the public sector or in the private sector, there will be no opportunity for the one to blame the other. For, by then, should the Plan fail, we may be having another Government. In this regard, in appealing for co-operative co-existence between the two sectors of activity, Mr Krishnamachari has very correctly warned: "It will not be an exaggeration to say that, if the Plan fails, the prospects of democracy in a large part of the world would perhaps be dimmed."

EAVESDROPPER

✱

The spot market, however, showed a steady rise in prices to about As 3 per pound in all deniers and varieties. Staple-Fibre yarn December and February deliveries shop up by more than Rs 25 per bale on the week's trading.

Conditions in the Cotton Yarn section remained, however, unchanged. As a matter of fact, some varieties showed a minor recession in prices in view of the easy trend in raw cotton. Daily offtake is reported to be limited in all yarns.

THE TINNEVELLY-TUTICORIN ELECTRIC SUPPLY COMPANY LIMITED

NOTICE is hereby given that the Preference Share Register of the Company will be closed from 22nd December, 1956 to 29th December, 1956, both days inclusive.

A dividend at the rate of 6½% per annum free of income-tax on the Preference share capital of the Company for the half year ended 31st December, 1956 has been declared payable on 2nd January 1957.

4. To elect Directors.
5. To elect Auditors and to fix their remuneration.
6. To transact any other business that may be brought before the meeting.

The Share Transfer Register of the Company will remain closed from 14th December to 21st December 1956, both days inclusive.

By Order of the Board of
Directors,
BIHARILAL LAHOTY,
Managing Director.

Calcutta, the 16th November 1956.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and that the proxy need not be a member.

WORLD OF FINANCE

(Continued from page 1111)

compared with the rise in the previous week of Rs 5.20 crores.

Finally, Investments are marked up by Rs 0.58 crores at Rs 60.19 crores. After transfer of Rs 10 crores of Foreign Securities from the Issue Department, Balances Held Abroad in the Banking Department show a rise of Rs 11.72 crores; and this is the first time in recent months when a rise has been registered under this head.

The return of the State Bank for December 7 reveals that, despite the demand for month-early disbursements, the impact on deposits has been negligible. Deposits show a small decline of Rs 0.43 crores to Rs 234.47 crores. But, in order to meet the heightened pressure for advances, the State Bank has had to increase its borrowings from the Reserve Bank by Rs 3.52 crores to Rs 5.75 crores. Cash balances are slightly higher. Advances have marked a rise of Rs 3.52 crores; and bills purchased and discounted, as part of the portfolio, have touched a new high at Rs 40.47 crores with a rise of Rs 0.62 crores.

+

In the week ended November 30, deposits of Scheduled Banks rose by Rs 4.27 crores to Rs 1109.82 crores. While borrowings from the State Bank are higher by Rs 0.86 crores at Rs 10.48 crores, those from the Reserve Bank have declined by 2.74 crores to Rs 54.67 crores. Cash balances are unchanged, although money at call records a sharp fall of Rs 3.14 crores to Rs 15.16 crores. Advances have risen smartly by Rs 3.22 crores to Rs 597.06 crores. Inland bills show a decline for the first time since the week ended October 26, but it is a nominal one of Rs 0.58 crores. Foreign bills, on the other hand, have risen by Rs 1.39 crores to a new peak of Rs 52.83 crores. In the result, the total of advances has, during the week, gone up by Rs 4.03 crores to Rs 766.33 crores.

The statement of the State Bank of India for the week ended 7th December reaveals a slight decline in deposits to Rs 234.47 crores from Rs 234.89 crores in the previous week. Borrowings from other banks have moved up again from Rs 2.23 crores to Rs 5.75 crores, while other liabilities, including inter-office adjustments, are shown at Rs 9.29 crores against Rs 8.60 crores.

On the assets side, cash balances are lower by Rs 0.55 crores at Rs 16.08 crores, while Investments are higher by Rs 0.26 crores at Rs 106.88 crores. Advances have risen by Rs 3.52 crores to Rs 132.63 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 2.90 crores and "Bills Discounted and Purchased" for Rs 0.62 crores.

+

According to the returns of the Scheduled Banks for the week ended November 30, both Demand and Time Liabilities have risen—the former by Rs 3.88 crores to Rs 650.91 crores and the latter by Rs 0.39 crores to Rs 458.91 crores. Borrowings from the State Bank have risen by Rs 0.86 crores to Rs 10.48 crores, while those from the Reserve Bank have declined by Rs 2.74 crores to Rs 54.67 crores. Cash and balances with the Reserve Bank, and Investments show only a little change at Rs 86.73 crores and Rs 365.46 crores against Rs 86.69 crores and Rs 365.50 crores respectively. Advances are shown at Rs 597.06 crores against Rs 593.84 crores; Inland Bills at Rs 116.44 crores against Rs 117.62 crores and Foreign Bills at Rs 52.83 crores against Rs 51.44 crores. Money at call and short notice stands at Rs 15.16 crores against Rs 18.30 crores.

THE UNITED PROVINCES ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the Eighteith Ordinary General Meeting of the Company) of the abovenamed Company will be held at its Registered Office No. 12, Mission Row, Calcutta, on Thursday the 10th January, 1957, at 11 a.m. for the following purposes:—

1. To receive and adopt the Audited Accounts for the year ended 31st March 1956, and the Directors' and the Auditors' Reports thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution namely:—

   "That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 73 years, be and is hereby reappointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 4th January, 1957, to the 10th January, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

Stock Exchanges

LANDSLIDE IN VALUES

Watch-Dog Writes:

A FEELING of panic continues to prevail in stock markets. With confidence already shattered by the supplementary Budget, the Finance Minister's warning regarding the possibility of further taxation caused a sharp decline in prices on a wide front.

There is still a lack of confidence in view of apprehensions about Government's monetary and fiscal policies, while, on the other hand, the encouraging corporate reports and hopes of many leading companies issuing bonus shares in the coming months, have been providing a buffer to absorb the shock.

Equities on the local Stock Exchange recorded an all-round decline in prices due to renewed selling pressure.

Sentiment on the Bombay Stock Exchange remained depressed. Despite wide-spread losses, short-covering helped most scrips to improve slightly from the lowest levels.

The trading pattern in all sections of the Madras Stock Exchange portrayed lack of any investment interest.

Although conditions on the London Stock Exchange were rather irregular, the undertone remained satisfactory.

Wall Street closed heavy at or around the week's lows with a fairly broad front of losses ranging mostly to a point or more.

*

Calcutta

Calcutta, Friday.

IN general, the week under review was the most anxious on the local Stock Exchange for a long time past. After prices had tumbled down as a result of nervousness which the supplementary Budget brought in its train, a rallying endeavour was made early in the week on hopes that the tax proposals on dividends would induce many joint stock enterprises to issue bonus shares. This was, however, short-lived and prices again suffered a sharp setback on renewed selling pressure following the Finance Minister's speech in Parliament with regard to the possibility of further taxation.

With the result, even the best shares, which were the most marketable, suffered the worst. Mere enquiry without any selling orders was at times sufficient to put prices down.

On the whole, the market lacked confidence in view of various fears entertained with regard to the Government's monetary and fiscal policies. The closing tone was on a weak note.

The Giltedged market continued to rule quitely steady and sentiment was further helped by the entry of the State Bank of India as a buyer. 3 per cent 1986 Conversion Loan opened at Rs 72-14 and, after improving at one time to Rs 73-8, finished the week at Rs 73.

Bank shares ruled quiet, reflecting the increased control on banking companies by the Government.

Despite steadier advices from the jute goods market, Jute shares continued to be neglected. Brokers reported that sales in some cases had to be effected at even sacrifice prices in the absence of any buyer. Howrah were marked down further to Rs 20 from Rs 21-4; National to Rs 19-14 from Rs 21-4; Hooghly to Rs 19-15 from Rs 20-1; Bally to Rs 150 from Rs 154 and Nuddea to Rs 29-8 from Rs 30-12.

Except Burrakur which continued to receive speculative support at every decline in prices, little interest was shown in the Coal section. Burrakur, after opening at Rs 21-10 and being marked upto Rs 22-5, receded toward the close to Rs 21-8 on profit-taking. Bengal lost another three points at Rs 446, while New Beerbhoom came in for business, after a long time, at Rs 16 against Rs 19-12. Centralr India, after touching a low of Rs 6-5 from Rs 6-15, recovered to Rs 7.

Despite better advices from the cloth and piecegoods markets, Textiles continued to lack support and price movements were rather irregular. Kesoram changed hands at Rs 15-11 to Rs 16-2, while Dunbar were in offer at Rs 205 against Rs 249. New Victoria moved narrowly between Rs 1-13 and Rs 1-15.

Tea shares were no exception to the general trend of the market and prices developed a slightly easier tendency due to general profit-taking. But a general belief, that the outlook for the industry continued to be better in view of the firmer prices still ruling in London auctions, imparted fresh strength to selected scrips. Prominent amongst these were Banarhat having support upto Rs 322 from Rs 319; Tellapara upto Rs 217 from Rs 214 and Tezpore upto Rs 23-8 from Rs 23. Baghmari, however, eased off to Rs 25-4 from Rs 25-8; Bishnauth new to Rs 20-14 from Rs 21-4; Dhelakhat to Rs 20-8 from Rs 22-6 and Hasimara at Rs 30-12 from Rs 31-2. Brooke Bond were nearly maintained at Rs 20-2.

Except Dharbhanga which met with some support upto Rs 20-14 from special quarters, little or no interest was shown in the Sugar section. Ramnugger Cane was cheaper by about As 8 at Rs 24-9 and Balrampour by As 4 at Rs 5-11.

Price movements in the Engineering were mostly influenced by the speculative activity in Indian Irons. Indian Irons, after opening lower at Rs 30-9, receded further to Rs 29-3 on renewed selling pressure, to finish the week better at Rs 29-9 on short-covering. In sympathy, TEXMACO were marked down to Rs 19-14 from Rs 21-5; Richardson to Rs 22 from Rs 23-8; Jessop to Rs 29 from Rs 31-4 and Burn & Company to Rs 322 from Rs 328. Braithwaite were, however, almost maintained at Rs 26-2.

Miscellaneous issues followed the general trend of the market. Orient Paper, which were marked up further to Rs 34-13 from 34-6 early in the week on persistent rumours of a bonus issue, receded towards the close to Rs 32-12 on profit-taking. Titaghur, however, met with good support, changing hands at Rs 37-7 to Rs 37-10. Shree Gopal lost As 4 at Rs 16 with India Pulp maintained at Rs 22-12.

Among other scrips, Indian Copper, after being taken upto Rs 3-11 from Rs 3-9, eased off again at the close to Rs 3-6. Similarly, India Steamship turned quiet at Rs 9-3 against Rs 9-10 and BIC at Rs 9-2 against Rs 9-11. BBP shed another four annas at Rs 2-15. Rohtas were pushed down to Rs 18-8 from Rs 19-9 following the news of the appointment of a Commission of Enquiry into Dalmia-Jain group of companies. Dunlop were offered at Rs 26 against Rs 26-9; Jardine Henderson at Rs 90-8 against Rs 95; National Carbon at Rs 25-15 against Rs 26-14; Indian Alrminium at Rs 15-4 against Rs 16 and Martin Burns at Rs 23-6 against Rs 24-5. Metal Box were a steady feature at Rs 27-8 and so also Alkali Chemicals at Rs 18-14.

*

GATEWAY GOSSIP

(Continued from page 1117)

Great Eastern's Chairman has pointed out that the company has taken the initiative in trying to arrange the release of the mothball Liberty ships; and, in this light, he states that out of the 12 Liberties proposed to be released to India, the Great Eastern "can legitimately claim an allotment of six Liberties for our coastal fleet." Great Eastern is prepared and is in a position "to finance up to 50 per cent of the cost of these ships from its own resources."

The last important point made by Mr Bhiwandiwalla relates to port facilities and dock labour. The former are woefully inadequate and the latter is just in the process of improving the quantum of co-operation that it extends. He calls upon the Government to accord "topmost priority to the improvement and expansion of dock facilities" and he trusts that "increasing co-operation between employers and dock labour will improve the turnround of ships and will enable them to carry more efficiently the increased overseas and coastal traffic."

*

WORLD OVERSEAS

(Continued from page 1114)

compared with less than 50 dollars in 1947.

Now that the results of the national elections of November 6 are all in, it is evident that the American people continue to want public works and other improvements —even if they have to pay for them higher taxes. The election returns show that voters in all parts of the United States approved some $12,400 million of a record-breaking $2,700 million of state country and municipal borrowing proposals for new facilities. In the United States, state and local government has primary responsibility for a substantial portion of such public projects as schools, housing, hospitals and highways when state or municipal governments want to borrow funds to finance such projects.

Through special bond issues, the proposals usually are first submitted to the voters for approval paying for the projects nearly always entails higher taxes—a burden which the voters apparently are willing to shoulder. Leading the 1956 borrowing parade among the states is California, which asked and received voter approval for $800 million in new bond issues. It is followed by New York, with $500 million. Kentucky bond issues include Baltimore, Maryland; Cincinnati, Ohio; and Wichita, Kansas. A look at the purposes for which bond issues were approved on November 6 shows that the voters attach a high degree of importance to such essential facilities as schools, hospitals and highways. Judging from the proposals defeated, they seem to care less for such things as Convention Halls. There was a noticeably sharp increase this year in bond issues for schools and hospitals. The largest amounts approved by the voters are to go for educational facilities. In California alone, for instance, the city of San Francisco approved a $27 million issue for school construction, as did San Diego. Fresno approved an $11.8 million school bond issue. Even such small cities of Shasta and Larkspur approved issues of $3 million and $1.1 million, respectively. Voters in the state of Alabama approved $6 million of new bonds for hospitals. Among others, dade county, in the state of Florida, voted $10 million for this purpose, and St. Claire County, in Illinois, one million dollars. Looming large in the new bond total this year are issues to support highway construction, such as the $500 million, approved by voters in New York State, and the $100 million in Kentucky, and also water, sewerage, flood and drainage control projects, street improvements, and similar services only time will tell what all these new issues will mean to the bond market. Already borrowing costs have been rising and yields on state and municipal bonds have been climbing. With money tight, dealers appear concerned about the possibility of still higher yields in the months to come. This would mean lower prices for the bonds themselves.

*

NORTH INDIAN MARKETS

(Continued from page 1121)

continued ban on imports. Good lots of the Punjab Pissi quality fetched Rs 200 to Rs 215 per candy.

In the Coarse grains section, Bajra tended to ease with a distinct improvement in the inflow of the new crop. Superior lots from Uttar Pradesh ruled firm.

Jowar prices were steady with the Sholapur quality fetching Rs 190 to Rs 195 per candy. There was a slight improvement in the supply position.

*

Shellac

The Calcutta Shellac market ruled quiet during the past week. Pure TN Shellac was quoted around Rs 111 per maund. Shipments, during December till the 8th, were 5,617 packages.

It was another dull week on the London market with prices showing further declines from previous week's levels, December delivery shellac being quoted at 330 shillings. November exports from India promise to be better than October which, in turn, were above September. Figures are:—September 23,402 packages; October 32,714 packages and November (up to the 21st) 27,582 packages. Supplies are adequate except for a few special lines.

THE HOWRAH AMTA LIGHT RAILWAY CO. LTD.

NOTICE is hereby given that the Board of Directors has sanctioned payment of dividend on 5% Cumulative Preference Share Capital of the Company for the half-year ending 31st December, 1956. Payment will be made on or after 1st January, 1957 to those Preference Shareholders whose names appear on the Company's Register on the 31st December, 1956 or to their mandatees.

By Order of the Board,
MARTIN BURN LTD.,
S. N. Mukerjee,
Managing Director,
Managing Agents.

Calcutta,
The 15th December, 1956.

WINGS THAT SERVE INDIA

Every day at noon
there are 50 I.A.C. planes flying !

THEY travel the skies of India. They carry businessmen and tourists, families and freight. They provide the quickest, most comfortable means of getting from place to place and, every day they are bringing the people of India closer together.

Indian Airlines Corporation operates 132 flights every day and covers 20 million miles every year. And as each year passes, more and more planes are brought into operation to satisfy India's ever-growing need for swifter, more comprehensive communication.

what the eye doesn't see...

There are some things you don't see disappearing. You don't see the loss of heat from a badly-insulated steam pipe—but you see the bills, because heat costs money. So it is well worth having your steam systems properly insulated. The best insulating medium for this purpose is undoubtedly Newalls 85% Magnesia, produced by our associates Newalls Insulation Co. Ltd. But it's not just a good product we have to offer... we can offer free technical advice on any insulation problem. Heat or cold insulation is a science. Our highly trained staff can advise you exactly on the thickness to which insulation material should be applied. Too little or too much insulation means less economy—and it is our job to save you money. Practically every industry uses asbestos in one form or another. In our new factory at Ghatkopar, we make a wide range of technical asbestos goods to satisfy the varying needs of India's economy. **The increasing use of Asbestos is an index to India's industrial progress.**

For the Investor

For Mr Gutt's Attention

Investment Gossip:

In preparation for the New Look of stock exchanges, the Finance Ministry is now engaged in a study of the rules and bye-laws of the various stock exchange associations, as one of the conditions for recognition is the prior approval by Government of such rules and bye-laws.

Mr Gutt is reported to have met the Committee of the Calcutta Stock Exchange at a recent conference; and similar personal discussion with the committees of other stock exchanges is, presumably, on his agenda.

So far as forward dealings and clearing house facilities are concerned, the most important feature which should engage his close scrutiny is the satta system, which, as at present devised, puts a premium on bear operations. I have written so repeatedly on this question that Mr Gutt should be clear in his mind as to the changes to be effected in the rules if the bears are not to continue to be presented with a hefty satta on a silver platter.

Commonsense suggests that the bonafide investor should be provided with facilities. Here is the satta which has, year after year, conferred on the bears a truly unearned fortune.

It is no argument that the system has been in force for a considerable time and that, therefore, it should not be interfered with. You may as well say that all abuses are of long standing, and they should be endowed with perpetuity.

The simple question is: Does the satta system favour the bear and stimulate bear operations? If Mr Gutt had gone about seeking a straight answer to this simple question, he would no doubt insist on the modification of the rule to such effect that bears do not get a premium on the shares they do not deliver and, obviously, cannot deliver.

All that needs to be done is so to modify the rule as to require buyers and sellers of shares to give a specified advance notice of the number of shares they will actually take delivery or effect delivery.

If Mr Gutt is still not clear on this point, he must seek light from the President of the Calcutta Stock Exchange, who should be in the best position to appraise him of the how and how much of persistent drain caused by the satta on the investment funds passing through share transactions.

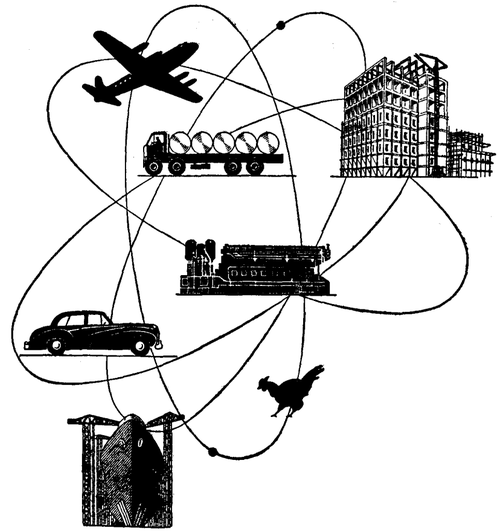
Investment Notes:

Adoni Spinning & Weaving Company is to increase its capital by Rs 2.5 lakhs by the issue of 1.50 lakh Ordinary shares and one lakh 6 per cent tax-free "B" Cumulative Preference shares, both of Rs 10 each, at par, in the ratio of one new Ordinary for every existing share and two new "B" Preference shares for every three Ordinary shares held as on the 10th January, 1957. This issue is in connection with the expansion of the existing spindleage of the company. Transfer Books are closed from the 4th to the 10th January, 1957.

Puthuthottam Estates, Madras, have stated that the cost of the Plantation Tribunal's Award will be Rs 12 in respect of arrears for the 4½ years from March 1952 and Rs 3.35 lakhs per annum recurring.

£R$

Investment Briefs:



Metal Box Company has announced an interim dividend of 6¼ per cent on the Ordinary shares for the year ended 31-3-1957.

Britannia Biscuit Company has recommended an interim dividend of 3 per cent for the year ended 31-3-1957. Transfer Books will be closed from the 4th to the 11th January, 1957.

Chamong Tea has passed over the dividend for 1955 as against 20 per cent in the previous year.

Investment Trust of India Limited has declared a dividend of 4½ per cent for the year ended 30-9-1956.

Emerald Valley Estates have announced an interim dividend of 6¼ per cent for the year ended 31-12-1956.

In a "Who's Who" of industry and commerce, if such existed, you would find many differing activities—and you would also find on every page the names of users of Hollerith. The reason is clear. Diverse though business is, it is united in its demand for higher and higher standards of efficiency... and in Hollerith electronic punched card accounting and the use of Hec Computers, it has a large part of the answer.

HIGHLIGHTS

Dear money as monetary policy never endeared itself in the affections of Indian Finance.

But, in recent years, authority in many parts of the world has looked upon dear money as panacea for all economic ills, known or unknown.

It has thus happened that, in the UK, bank rate was raised successively; that, in the US, a deliberate tight money policy was adopted; and that, in some of the West European nations, finance was sought to be attuned to dear money.

Fortunately, except for the increase in bank rate in November 1951, India has desisted from measures designed progressively to raise the structure of interest rates.

In the circumstances of the Indian economy, there is much to be gained from cheap money; and much that might have been risked in an unduly enthusiastic dear money policy.

Indian finance had, however, in the past preferred to mark time on the side-lines, and did not enter vociferously into the debate: Cheap money versus Dear Money.

That was because we believed that criticism would at that time have been unavailing; the experiment, once it had been set in motion, had to be continued to its (fortunately, as experience has shown, not so) bitter end.

The dear money experiment in the sixth decade of the twentieth century would now appear to have been more or less completed; its results are now available for the world to judge.

The lesson drawn from the experiment may very well be, as the World of Finance section points out this week, that, in 1957, the world will forswear dear money; and that, instead, we may witness, in the next twelve months, a downward readjustment of interest rates.

Impressive Results of ACC

Balance-Sheet Reviews:

DESPITE the overall rise in the cost of production, the Associated Cement Companies Limited have produced excellent working results for the year ended 31st July, 1956. The net profit shows a rise of Rs 22.69 lakhs from Rs 2.31 crores to Rs 2.53 crores, after meeting all expenses of operation and management and after allowing for Depreciation, Taxation and bonus to employees.

Cement sales have risen from Rs 21.23 crores to Rs 22.13 crores; but this was offset by a more or less indentical rise in manufacturing expenses from Rs 12.32 crores to Rs 13.18 crores. Despatches were 29.62 lakh tons as against 28.22 lakh tons.

In respect of allocations, the provision for Depreciation has been stepped up from Rs 1.07 crores to Rs 1.34 crores, while the Taxation amount is slightly reduced from Rs 1.99 crores to Rs 1.17 crores. General Reserve absorbs Rs 7.37 lakhs against nil, while a sum of Rs 55 lakhs (same) is set apart for Plant Reinstatement Reserve; Rs 32 lakhs (Rs 20 lakhs) for Development Reserve; Rs 19.51 lakhs (Rs 14.82 lakhs) for Deferred Taxation and Rs 15 lakhs (same) for Gratuities Reserve. After recommending a dividend of Rs 10 per share, a balance of Rs 2.98 lakhs is carried forward to next year.

The company has made commendable progress with the expansion programme. The construction of the new Cement Works at Sindri was completed during the year, and the first unit with an annual capacity of 100,000 tons per year was commissioned in September, 1955. The second similar unit was put into commission in December 1955, raising the capacity of the Sindri cement factory to 2 lakh tons per year.

In view of the increased quantities of Calcium Carbonate sludge which are expected to be available from the Government fertilizer factory from the beginning of 1958, it has been decided to instal at Sindri a third similar unit with a capacity of 100,000 tons of cement per year.

Work has also commeced on the construction of two new cement factories at Mancherial and Porbandar, which will be equipped with dry process plants. A start has also been made on the modernisation and extension of the Kymore Cement Works which is planned to have a capacity of 5.75 lakh tons of cement per year.

Satisfactory progress has been maintained on the installation plant at the Kistna Cement Works for raising its capacity from 90,000 tons to 2.55 lakh tons per year. This additional plant is expected to go into production in the beginning of 1957.

Work on the extension of the Chaibasa Cement factory has been progressing satisfactorily and the increased capacity of 300,000 tons per year from this factory is expected to be obtained by the end of 1957.

£ R$

Sholapur Mill

The Sholapur Spinning and Weaving Company Limited has reported a profit of Rs 7.85 lakhs, subject to Depreciation, for the year ended 31st March, 1956. This compares with losses of Rs 60 lakhs and Rs 23 lakhs in the preceding two years. Sales of cloth and yarn have improved to Rs 2.50 crores.

The modest profit reflects the improvement in the working of the company to a certain extent. The Government have agreed to accept the monthly instalments at a reduced rate for the repayment of the loan advanced to the company in order to enable the company to launch its programme of renovation, modernisation and rehabilitation of the old machinery. When the entire programme is completed, the effect is bound to be more pronounced in the coming years.

£ R$

Indian Copper Corpn.

It is believed that the company's current working is satisfactory. Although the profit margin has narrowed down following the fall in the international metal price, the company's output is being sold at reasonable profit. Indigenous production amounts to a fraction of the total demand. The com-

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

IT is not easy to make an assessment of Mr Nehru's meetings with the American President, Mr Eisenhower; nor can we read too much into his brief visit north of the 49th parallel on that continent. Again, on his way back home, Mr Nehru met the British Prime Minister and Dr Adenauer; but what transpired on each of these occasions can only be guessed at.

And yet, there is an indefinable aura of success surrounding the tour. In particular, Mr Nehru would appear to have completely won over the American people, at least in the sense that there is a greater sympathy for and a more understanding desire and readiness to appreciate India's foreign policy as conducted by Mr Nehru.

It would not do to underestimate the significance of the easy rapprochement between the American people, on the one hand, and Mr Nehru, on the other. Each has made a profound impression on the other; and this contrasts substantially with the earlier experience, in 1949, when Mr Nehru had visited America previously.

Somebody has remarked, that it is a natural tendency to hate or dislike that which one does not understand. This perhaps could have accounted for the relatively uncomfortable, not to say fairly critical, assessment of each country by the other in the past. But Mr Nehru has now by his visit impressed upon the American people the high integrity and the impeccably moral approach that characterise the Indian attitude in world affairs. On the other hand, Mr Nehru has also greatly benefitted to the extent that he recognises America to be sincerely in search of the same ends that India has as its goal—world peace.

Thus, the significant gain from the unprecendentedly long personal discussions between Mr Nehru and Mr Eisenhower is that both now know that both countries count peace as the most important target to be aimed for; and they have, moreover, agreed to differ only in some of the means to be employed in achieving that peace. It is not improbable, even in this regard, that the means toward peace used by India and America should, in the near future, have closer identity than has obtained in the past.

This week, India hails the conquering hero's return.

The Personality of India's Mixed Economy—IV

THE Democratic Government of an underdeveloped country which is not only pragmatic in the sense of being free from rival social ideologies but also aims at the genuine welfare of the people, as distinct from mere rising trends in production, will need to base its economic policies, sooner or later, on some recognisable theory of economic growth and some definite concept of welfare. It is well known that these two are precisely the weak spots of modern economic and social thought. In spite of much that has happened during the last two decades, an adequate theory of economic growth, one that will be equally valid in all the varying social conditions in which economic growth is known to have occurred, is well nigh the despair of the modern economist. Likewise, social thought, which concentrates on the problems of man as a member of society, is disabled by its very nature for enquiry into his problems as an individual, much more into the solutions which will assure him peace and contentment. Nevertheless, it is difficult to see how the disparities in economic development between the different countries of the world can be removed without fairly reliable ideas about the conspectus of social conditions most conducive to economic progress. Nor can one see the end of the strife and discontent, which is common to rich and poor nations alike, without clear ideas of what constitutes genuine welfare and of the measures to secure it for the individual.

India's economic policies today are unique because these two blind spots of social thought have a close bearing on them. For the same reason, they are lacking in clear-cut outlines and are unintelligible and confusing to those who cannot feel an instinctive sympathy with their aims and their special difficulties in the circumstances of today. Far from having an obligation to sketch their theory of growth or define their concept of welfare, the Government of India may justly claim that, through their policies, they may be able to arrive at the truth in this regard. It must be conceded, even by the worst critics of the Government, that neither a theory of economic growth nor a definition of welfare is an immediate necessity for purposes of present policy. Whatever may be the political, social and economic conditions for optimum growth, there are certain defects in the present milieu the removal of which need not wait for further exploration of this dark continent in the intellectual world. Likewise, whatever may be the true content of welfare for the individual, there can be no doubt about the place therein of a sufficiency of the material necessaries of life, a fair standard of education and physical health, a congenial job and harmonious relations with the neighbourhood and with one's fellow citizens.

In fastening on these two essentials, economic growth and individual welfare, without obsession for any theory concerning either social ideologies, India has given a new purpose and direction to economic policy. But these are largely unconscious aims which one can with effort detect from the apparent cross-currents of the Gandhian thought, with which official policy is coloured, and the more decidedly socialist tendencies of politicians, who believe that frankly Socialist measures are needed to improve or ensure their chances at the polls. The tendency of the Government to adopt socialist measures even where they are not necessary for attaining given ends and the fact that socialist measures, like all measures of far-reaching social significance, are apt to gather their own momentum and make a retraction impossible, are simple facts which have so far been taken into account only by the capitalist critics of the Government at home and abroad.

The Government are unaffected by the criticism, except when it is seen to prejudice the chances of getting foreign aid on a scale sufficient to ensure the success of the Plan. While it is dealt with as well as possible from time to time, there is no similar effort made to persuade people at home to preserve the same open mind which the Government claim for themselves in their despatches to the World Bank or the US Government. Nevertheless, the importance attached to community projects, the respect for Vinobhaji and his Bhoodan movement and the efforts to set up independent peasants and artisans show that the old Gandhian ideals are preventing the Government from making themselves the pioneers of cast-iron social ideas. It is well to remember, while on this question, that most of the measures of controls for industry, or even nationalisation, are to a large extent forced on the Government by the serious shortcomings of private enterprise in this country. In the present conditions, there is no way of preventing the abuse of power by private capitalists. If the standard of business management and the social sense of businessmen in India had been comparable with those obtaining in the advanced industrial nations of the West, there can be no doubt that the present gravitation toward nationalisation could have been considerably moderated. Private enterprise, too, has not so far learned to present its case properly to the Government, not to speak of the masses who constitute the electorate. And this is not due only to its uneasy conscience. It is attributable also to the incapacity to see clearly that economic inequalities will be permitted only as the minimum price of progress and that it is for the businessmen to show how private enterprise will function in a society which attaches to the removal of wide differences of income almost the same importance as increase in the production of food and clothing.

It will be seen, therefore, that, as against the influence of Gandhian economic thought, there are numerous forces to strengthen and accelerate the present trend toward doctrinaire socialism; the defects of the business classes and of business administration in this country, the inexperienced and uneducated state of the electorate, the low calibre of politicians who can neither grasp the large principles and aims now at stake nor bring a severe practical viewpoint to bear on each Bill that comes before the Legislature, and, last but not least, the exigencies of a Plan which aims at far more than our available resources will easily permit. In these circumstances, we have perforce to set the latent longing for doctrinal open minds, as well as the desire to find a synthesis of rival creeds and the essence of individual welfare, side by side with the unquestionable trends to nationalisation and the rigid structure of a socialist economy.

If the former is to prevail against the latter, special steps and special precautions have to

Editorial Notes

National Discipline

There are certain aspects of national work, conducted under State auspices or otherwise, which do not receive a due and consistent measure of publicity. The National Discipline Scheme, of which the Deputy Minister for Rehabilitation spoke to a Press Conference at Bombay, falls into this category. Nearly a lakh of boys and girls mostly drawn from among the refugees, have already undergone training under this scheme.

Mr J. K. Bhonsle testifies to the excellent results obtained and says that the Prime Minister's special interest might lead to the creation of a Ministry for this purpose. The Opposition and possibly a substantial section of the ruling party do not look with approval on the proliferation of Ministries. On pure merits, there can scarcely be another endeavour which can as much justify the establishment of a new Department as this one. If, by the end of the Second Plan, over five million youths are to be brought under the scheme, a new and separate administrative set-up is clearly called for.

One of the principal aims of this scheme is to inculcate a spirit of nationalism and patriotism.

In democracies functioning on the Western model this purpose is not being served by any special arrangement or training. The environment in the home, in the school, and the unostentatious example of elders are found to fulfil this purpose. If these could be trusted to be of similar use, there would have been no need for any special effort.

The experience of the refugee children, unless it tallies with the results obtained from the training of non-refugees, cannot provide a sure clue to the possibilities of a scheme, applied on a thoroughly national scale. There is a vital difference in the emotional roots of the two groups, a difference which cannot be overlooked when their future outlook is sought to be shaped in a more or less uniform pattern. The endeavour is a great sociological experiment and it is safer to watch every step, before a new one is taken.

"Family Planning" for Universities

In India, the threat of numbers is extending to more spheres than one. Addressing a gathering of academic men at Calcutta, Sir C. D. Deshmukh appealed for family planning in the field of universities. As Chairman of the University Grants Commision, Sir Chintaman wants everyone of his wards to be prosperous.

The thirty and odd crores which the Commission are in a position to disperse annually, may not provide more than bare assistance to the thirtythree universities, during a period of their universal development and expansion. A larger number would mean a smaller slice for each, which at least the existing universities will not like. It can plausibly be argued that with the advance of literacy and higher education there must be more and more universities. Where a number of colleges spring up mainly through private philanthrophy, the emergence of a University adds more feathers to the donors' plumes.

As the Government are the ultimate authority for the sanction of a new university, "family planning" is easier to practise in this sphere. Whatever may be Sir Chintaman's views on the subject, the present all-India picture will be admitted to be anything but satisfactory. Extending the family analogy some of the Universities are fat and flabby while others are under-nourished and anaemic, a picture of inequality which craves for a little socialistic touch!

*

A Timely Step

Two features of trade union organisation have given cause for disquiet and trouble in recent years. One is the existence of more than a single union, invariably wedded to clashing political ideologies, the other is the emergence of national organisations, with unified command and enlisting the loyalty and support of colossal number of workers spread all over the country.

Frequently, trade union leaders blame management as manoeuvring for divisions in the ranks of labour and the creation of puppet unions, designed to perpetuate the split. The managements have a counter-argument. They put it down to the tyranny of union leadership, from which freedom-loving workers are disposed to get away. That multiple unions are a source of incessant worry to the management gives colour to their interpretation. But, whatever be the truth there seems to be scarcely any voluntary escape from a condition which has tended to become highly infectious.

The periodical appeals for single unions by the spokesmen of Government cannot alter the fact that as long as rival political groups are interested in seducing labour, no improvement can be expected. Mr V. B. Raju Minister for Labour in the Andhra Cabinet, pleads for the acceptance of the democratic procedure in the formation of unions, meaning thereby that only the body which gains majority support from the workers is entitled to recognition. He suggests that the management should adopt a convention to this effect. In Madras, the Government have proposed legislation for the same purpose.

It is rather unfair to insist on single unions, till the workers' interests are completely disaffiliated from those of the politicians; there is yet a long way to reach that condition. Under the proposed change, the individual worker, who does not approve of the politics of the majority will find himself more and more isolated and helpless. The law must take note of this possibility.

Once the laws of the State become comprehensive, unequivocally embody all the legitimate aspirations of the working class and are properly enforced, there is no reason why a government based on adult suffrage should be held to ransom by huge organisations representing essential services. There is a good deal to be said in favour of not only one union for one establishment or industry, but independent local or regional unions for the same industry or service.

*

Expenditure on Community Projects

The Report of the Estimates Committee on the Ministry of Community Development is highly appreciative of the role of the Community Development Projects in the economic and social reconstruction of India and of the fundamental soundness of all the principal aspects of work. In one important particular, however, the Committee feels impelled to express grave dissatisfaction; the phrasing employed for this purpose is commendably restrained and courteous; but the severity of the indictment is betrayed by the facts mentioned.

While withholding and judgment on the existence of a section of opinion "which holds that figures of contribution on the part of the people in the shape of labour and money are often exaggerated and that faked accounts and muster rolls are sometimes produced in order to draw larger amounts from the Government", the Committee draws special attention to the type of irregularities enumerated by the Accountant General of Rajasthan and warns that "in the interest of prudence and public interest" the opinion referred to above should not be ignored.

The Committee feels inclined to lay particular stress on this aspect of the working of the Community Development Programme, in view of the fact that positive safeguards or checks against dissipation of public funds in this manner have not yet been evolved. Neither the C. P. A. nor the P. E. O., are found capable of providing the vigilance required. It is unhesitatingly stated further that there is no machinery at present to check whether the money voted by Parliament is properly spent and whether adequate and satisfactory results are being achieved.

The Rajasthan story is far from reassuring. Stores are purchased without tenders; neither the receipts nor disposal of stores are properly accounted for. Grants-in-aid are made and utilised without any specifi instruction regulating their use; works are not inspected, public contributions are not recorded; funds are drawn in anticipation of expenditure and often merely to avoid the lapse of a grant; and there is scarcely any dependable way of chasing the materials manufactured.

The Estimates Committee, though inclined to take a fatalistic view of the past, is anxious that these conditions are not permitted in the future. It also points out that the responsibility for working with a spirit of the strictest financial propriety lies as much with the government and the officials as the public workers in charge of the projects. The most stringent precautions and checks calculated to ensure against possible misuse or dissipation of these funds which are to be regarded as a sacred trust, are called for.

World of Finance

1957 Interest Rates: Downward Rather than Upward

AS the old year is rung out and the new year is rung in, we seem to sense a weakening of the world's faith in the paramount efficacy of Bank Rate as the weapon of weapons in the money market armoury. Guided by the pundits of economic orthodoxy and goaded by the financial commentators, who prophesied that the revival of dear money and the pursuit of dearer and dearer money would, once and for all, cure Britain of the recurrent balance of payment difficulties, the British Government made a high Bank Rate the main plank in their economic policy for dealing with the gathering crisis. 1956 was therefore, a year of high Bank Rate for Britain; and the experience of the past twelve months suggests the disheartening impression that the determination hitherto employed in enforcing a 5½ per cent Bank Rate was worthy of a better cause.

The issue posed was Bank Rate versus selective credit control. Britain has chosen the Bank Rate technique. India, on the other hand, has adopted selective credit control strategy. The Reserve Bank is now endowed with statutory powers for effective exercise of this kind of control. With regard to foodgrains and pulses, and again with regard to cloth, the necessary directives were issued to the banking system. The expected results have materialised; and we should certainly be able to claim that the virtues of qualitative control have been fully established. It has also been authoritatively declared that there is, at present, no intention of raising Bank Rate; and it has been rightly recognised that, whatever a high Bank Rate might have done or failed to do in other countries, a high Bank Rate, in the circumstances in which India is placed and particularly in the context of the Second Plan's requirements, would give rise to a number of adverse influences. So, appropriate to the busy season which has presumably begun, the structure of interest rates has been allowed to register upward readjustments what time the Reserve Bank's official minimum remains unchanged at 3½ per cent.

It is not unlikely that an opposite pattern comes to prevail in London in the course of the new year. The Bank Rate, for some months more at any rate, will remain at the high altitude of 5½ per cent, while the structure of interests rates is coaxed downward. In the mid-December auction of Treasury Bills in London, the average rate of accepted tenders fell from over 100 sh to below 100 sh (£4-19-1.54 on December 14 as compared with £5-0-10.28 on December 7). While the concerted action of the Discount Houses is primarily responsible for the lower Treasury Bill rate, hints from official sources cannot be ruled out. Between now and the end of February, tax collections will be at a high tempo; the 63-day Treasury Bills, issued up to the second week of December, have been withdrawn. Such bills sold in the earlier weeks are due to mature; and their maturity will coincide with the busiest phase of tax gathering. Thus, the British Treasury is in a position to enforce a cheaper Treasury Bill rate if it thinks that such a development should be brought about. There are reasons to think that the authorities have at last woken up to the hurt which the high Treasury Bill rate has been causing to national finances.

It is also being increasingly realised that while what Bank Rate was designed to achieve and what, at best, it was achieving in a slow, lingering, torturing process, the intervention in Egypt has produced results swiftly and strikingly. In terms of unemployment, difficulties for industry, etc., the damage is likely to assume such dimensions as to make deflation, not inflation, the pre-occupation of Authority. In the USA also, high interest rates have failed to reverse the tide of inflation; and only the hurt remains. Some of the countries in West Europe seem to have revised ideas on Bank Rate. Taken all in all, 1957 may well witness a general lowering of Bank Rate and a downward readjustment in the pattern of interest rates.

+

Abatement in Foreign Exchange Drain

The pace of depletion in the foreign exchange holdings of the Reserve Bank would appear to have slowed down considerably in December. In the period April-November 1956, the average weekly loss of foreign exchange amounted to Rs 5.99 crores. Since the end of November, and until December 21, the decline in foreign exchange holdings has totalled only Rs 2.66 crores. It is important for the student of the money market to realise the reasons for the improvement and to understand its possible significance.

On the face of it, we may rush to the impression that more balance is being achieved in foreign trade, and that this is responsible for the reduction in depletion of foreign exchange. But a little closer scrutiny will indicate that this is only the superficial explanation, and that there are a number of factors which could, and probably would, have contributed to the more satisfactory experience in this regard.

In the first place, the speculative crisis in confidence in sterling will, as we had foreshadowed, have extended to this country as well. Banks may have chosen to keep an oversold position in sterling, even though devaluation may have been considered unlikely. For, in spite of the British Government's determination to avoid devaluation at all costs, the speculative pressure on sterling had the inevitable effect of depressing sterling quotations. On the part of banks, therefore, prudence will have suggested the advisability of an oversold position in sterling. Consequently, the sterling transactions of the Reserve Bank may, in the past few weeks, have involved some extent of purchases from such member banks as are known actively to participate in the financing of India's foreign trade.

In the second place, the time for the annual closing of banks' accounts is drawing near. While it has been the experience of banks in India generally to possess a high ratio of advances to deposits, we have to remember that, if anything, exchange banks operating in India will in this context be in an even more acute plight. In the result, some many of them, for the purposes of their balance-sheet of Indian operations, may have decided upon measures in the nature of 'window-dressing'. In order to replenish their cash balances, so that their liquidity ratio would make better showing, it is entirely possible that some of the exchange banks should have sold ready TT to the Reserve Bank. This, of course, would have been reflected in a rise in the foreign exchange holdings of the Reserve Bank.

In the third place, it is not improbable that Mr T. T. Krishnamachari's mid-year Budget, one of the intentions of which was to place a brake upon the import of the less essential articles, is in the process of beginning to take effect. The flow of orders on to the London market may have perceptibly slowed in the last few weeks; shipping documents in this regard would consequently have been fewer in number and for a smaller aggregate sum of money; and the outflow of foreign exchange may, for this reason, also have slowed down.

In the fourth place, one of the results of the Suez Canal closure has been to spotlight the scarcity in shipping tonnage available. Imports ordered, but waiting for ships, may have delayed the despatch of the relevant documents against which the Indian importer would have to make payment. It may, thus, be said that the diminution in available shipping facilities has already begun to be reflected in a slowing down of the drain upon India's foreign exchange reserves.

Nevertheless, the four reasons that we have cited are not to rule out the possibility of an improvement in exports. Indeed, since the Suez crisis, in spite of the fact that shipping tonnage is in short supply, the main lines of Indian exports are unlikely to have been affected. On the contrary, it may be suggested that the demand for and the shipments of both tea and jute goods have grown in volume since the closure of the Suez canal and the belligerent conditions in the West Asia area. It is, thus, possible that the amelioration in the foreign exchange position is also partly accounted for by the recently improved showing of Indian exports.

The significance of the slowing down in foreign exchange depletion is fairly obvious—more time has been "won" for the efforts to buttress and bolster our resources of foreign exchange. There is the prospect that India's foreign exchange reserves will be sufficient to tide us over until the end of June next year; and, by that time, instalments of foreign aids and

Soviet Gold Sales

By PAUL EINZIG

SINCE the beginning of December, gold bars with hammer and sickle mark reappeared on various European bullion markets. Soviet gold sales in London are estimated to have amounted to about £5 million, and it believed that an approximately similar amount was sold in Zurich and to continental markets. Modest as the total of about $30 million may appear in comparison with the large gold movements to which we have become used during the post-war period, the transactions have aroused much interest. This is the highest figure of Russian gold sales since 1953, and it may well be only the beginning of a much larger gold movement.

The resumption of Soviet gold sales deserves attention, because it is contrary to the Soviet Government's established policy. Although the gold output in the USSR is believed to be running at a high level, the rulers of the Kremlin pursue the end of piling up the largest possible gold hoard. This has been the official policy—apart from one brief interval—throughout the post-war period. In the late forties, when timber was desperately needed for the reconstruction of the devastated towns and villages, large quantities were exported to pay for essential imports. The Soviet Government preferred to delay reconstruction rather than part with any gold.

After Stalin's death this gold hoarding policy came to be modified for a short period. During the short-lived Malenkov regime it was decided, in the interests of increasing the volume of consumer goods,

(Continued on page 1194)

World of Jute

Raw Jute Problems

RAW Jute has figured prominently in the news of last week. Speaking at the annual meeting of Jute Importers Association held in Dundee Mr H. B. Pirie, Chairman, warned Pakistan that if she did not abandon her short-sighted policy with regard to raw jute production, the whole world's jute trade would be adversely affected. Admitting that it was quite a legitimate wish on the part of Pakistan to earn as much as possible from her raw jute exports, he pointed out that it was sheer folly to adopt dubious methods to secure the end in view. The continued attempt by her to secure high prices for her raw jute by creating an artificial scarcity through crop restriction would ultimately result in eliminating weaker sections of the overseas jute goods industry from the field. There will, consequently, be a progressive diminution in the offtake of jute from Pakistan.

Mr Pirie's remarks in this regard deserve to be carefully noted by the world of jute as a whole. He said 'If, however, through shortages, Pakistan earns in any one year an increase at a high uneconomic price, then I fear for her future as well as that of the whole world's jute trade.'

It may be inferred from Mr Pirie's speech that Pakistan's jute policy has already done considerable harm to the Dundee jute industry as well. Unless there is an early improvement in the supply and a downward revision in the price of raw jute is made by Pakistan, the competivity of the Dundee industry is bound to go down. Already there are indications in the UK that consumers in the country are finding it increasingly difficult to pay the inflated prices for jute products from Dundee especially when they can get the same at considerably cheaper rates from elsewhere. Recent statistics have also revealed that there has been a steady increase in the consumpton of substitute materials in the UK.

It is now a well-established fact that consumers of jute goods in the world in general will have no hesitation in turning to substitutes the moment they find jute goods prices are tending to be high. It has been the bitter experience of the jute trade that once some ground is lost to the much more powerful substitutes trade, it is an uphill task to regain it for jute goods.

Dundee's warning to Pakistan has great significance for India also in that Pakistan's jute policy is still exerting a powerful influence over prices here. The fact that our mills are dependent on Pakistan for part of their requirements of the raw material has been largely responsible for the continued high prices for raw jute of Indian origin. Being left with no other alternative but to pay high prices for raw jute, mills are naturally obliged to quote higher prices for their manufactures also. As has been pointed out above, consumers of jute goods in the world have entirely different ideas about the prices they can pay for jute products they want. If the prices are not attractive, well, they have other sources of supply to turn to. If world markets for jute goods shrink, it is certainly a matter for grave concern to the world's largest jute goods industry. It is, therefore, of utmost importance for the future of the Indian jute goods Industry that consumers of jute goods are not driven to substitutes. The only way of ensuring this is by making available in adequate quantities jute goods wherever wanted at attractive prices. This will be possible only when India becomes 100 per cent self-sufficient in raw jute.

*

After earlier weakness sentiment in the jute goods market revived considerably around the hessian section. The market, however, closed the week on a quietly steady note. It would appear that the improvement in the price levels in the hessian section had been brought about mainly by reports of a squeeze in Ready 40"×10 oz hessian. A contributory factor had been the report that some business had been done locally in hessian.

Under pressure from speculative sellers prices displayed an easier trend at the beginning. Hessian 40"×10 oz Ready declined sharply from Rs 47-2 to Rs 46-12 with B Twills Ready also losing ground to come back to Rs 120-12 from Rs 121-12 Prices declined further all along the line on Monday in the absence of foreign interest. Had it not been for the fact that Mills did not evince much interest at the prevailing levels the decline would have been sharper. At close on Monday the undertone was quiet with Hessain 40"×10 oz Ready quoting at Rs 46-11 and B Twills further easier at Rs 119-12. Midway throught the session the next day, prices, especially in the hessian section, began to move up and by close of the day Hessian 40"×10 oz Ready was pushed upto Rs 47-14. B Twills Ready also improved in sympathy to Rs 120-12. With mills coming out as sellers at the higher levels the next day coupled with the fact that there had been no fresh foreign enquiry resulted in prices being marked down fractionally. Hessian 4"×10 oz Ready declined by six annas to Rs 47-8 while B Twills Ready remained unchanged at Rs 120-12.

The following table shows price trends during the week.

	Week's opening Rs. a.	Week's closing Rs. a.
Hessian:		
40"×10 oz. Ready ...	47 2	47 8
40"×10 oz. Jan./March ...	45 10	44 12
Sackings:		
B. Twills Ready ...	122 2	120 8
B. Twills Jan./Mar.	122 12	121 12
Hy. Cees Green ..	122 4	121 0
Cornsacks ..	124 1	122 8
Cubans ..	148 0	147 8
A. Twills ...	145 8	144 12
L. Twills ...	136 0	135 8
D. W. Flour ...	142 0	141 8
Sugar Bags ...	139 8	137 0

The raw jute market ruled steady with Assam Bottoms quoting at Rs 32 per maund. Toward close sellers were reserved. Business done during the week included Murshidabad District Tossa Bottoms at Rs 33, Bimli FAQ at Rs 28, Daisee Mesta Bottoms at Rs 28-8 and Jungli Mesta Bottoms at Rs 27-12; all per maund.

World of Tea

Tea Export Quota for 1956-57

THE Government of India have announced the export allotment of Tea, for the year 1956-57, at 443.3 million pounds. This represents 62 per cent of the crop basis for the year. Such a release is considered essential to check the undue rise in prices of tea quota which, after advancing sharply to 102 pies only recently, are presently hovering around 54 pies per pound.

The Government have so far released Export Quota to the extent of 50 per cent of the best crop basis. As 84 million pounds of tea during the current season was shipped under Special Licences, total permissible shipments come to about 430 million pounds only. This is substantially lower as compared to 450 million pounds shipped in 1954-55 and 466 million pounds in 1953-54.

Furthermore, such a release is not expected to cause any shortage of tea for internal consumption, as old season's teas were sold up to July this year. Poor demand for tea in auctions up to the end of August suggested that large stocks of old season's teas were still in the hands of dealers.

Despite all that has been said about the propaganda efforts of the Tea Board and its associated bodies in overseas markets, the offtake of Indian tea has not shown much progress. If at all there has been progress, it is mostly due to increased British buying. Within India, the Board has been allotting larger funds for propaganda, but there is no available data of increased consumption.

Meanwhile, no sales were held in Calcutta and Cochin markets during the week under review due to intervening holidays for Xmas. In Calcutta, the next Export and Internal Sales will be held on the 2nd and 3rd January 1957 respectively. In Cochin, the first tea sale of the New year will be held on January 3.

At the sale No. 15, held in Chittagong, offerings consisted of 17,417 packages of Leaf grades and 5,181 packages of Dusts. Buyers of Leaf grades were quiet although blenders and operators on export account were active. Good prices were paid for Tippy sorts and Fannings although these types were generally easier to buy than of late. Prices eased considerably toward the close of the sale.

In the Dust section, blenders purchased freely. Plain Sylhet Dust was quoted at Rs 1-13-6 per pound.

Also, 1,986 packages of Green teas were offered. Prices for the polished grades were irregular and sometimes As 8 per pound easier. Following rates were quoted:—OP Rs 2-4-0; Pekoe Rs 1-13-0; BOP Rs 2-3; BP Rs 2-0; BPS Rs 2-2-0; OF Rs 2-7-0 and PF Rs 2-2-0. The next sale will be held on January 2, 1957.

Meanwhile, the outturn of tea in Pakistan was lower at 6.33 million in November as compared with 7.83 million pounds in the corresponding month of last year. Total production, during the current year up to November, however, rose to 51.43 million pounds from 48.89 million pounds in the same period of last year.

In London, there will be a traditional week's break for the Christmas recess; and sales will reopen on December 31 when offerings will be heavier at some 45,314 packages. North Indian descriptions closed on a quieter note with teas valued over 6sh generally recording declines of 2d to 4d per pound. An easier tendency was discernible in other kinds. Even so, Plain Broken Pekoes were indicated unchanged at 5sh 6¾d per pound. Ceylon and South Indian offerings were, however, generally firm to dearer with high-grown Ceylonese teas sold at 1d to 3d per pound higher.

Stocks in the UK, as on the 14th December 1956, were 83.07 million pounds as compared to 75.55 million pounds in the previous week.

SOUTH EASTERN RAILWAY.

Sale of 90 Condemned Wagons.

The General Manager invites tenders for the sale of 90 condemned wagons stabled at Mathurakati Scrap Yard, South Eastern Railway, Khargpur. Tender No. 84/S/3/6 in this connection is obtainable from the Office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 on production of Cash Receipt for Rupees five only from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23 by local firms and on remittance of Rupees five only by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 by outside parties. The cost of Tender Forms is not refundable. The wagons may be inspected on any working day before the closing date of the tender. Tender will be received upto 11 hours on 22-1-1957 and opened in the Office of the Deputy General Manager at 12 hours on the same day.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

LAST week, I argued that the estimate of surplus from current revenues likely to be available for application to the Second Plan projects from taxes at 1955-56 rates should be increased to Rs 500 crores. This estimate, I said, should be almost automatically capable of realisation if only steps for plugging the administrative and legal loopholes are taken. I also suggested that if the Finance Minister's tentative estimates of evaded taxes were any indication, then the amount that ought to be available should be of a magnitude that will obviate the need for any extra taxation, or alternatively for any deficit financing. In other words, even the most cursory examination of the economic situation, without any particular probing of the assumptions made in the Plan, gives an indication of availability of funds to the tune of a thousand crores. And this sum is to be had without any effort specifically provided for in the Plan; that is to say, it is to be had by efforts which any Government, whether it was committed to planned development or not, would have felt itself obliged to make as a civilised Government. If such is the case, does it not stand to reason that, in those estimates in which the Plan enjoins us to make special efforts and particular sacrifices, we should be able to show much better results?

*

Take, for instance, the next target I am under commitment to consider this week: the yield from additional taxation. Human nature being what it is, it is very unlikely that any one would actually welcome a new tax. Even in the blessed days when income tax was unknown, people had complained about taxes. Sidney Smith wrote, in the early years of the nineteenth century, "The school boy whips his taxed top—the beardless youth manages his taxed horse with a taxed bridle on a taxed road; the dying Englishman, pouring his medicine, which has paid seven per cent, into a spoon that has paid fifteen per cent—flings himself back on a chintz bed which has paid twenty two per cent and expires in the arms of an apothecary who has paid a licence of a hundred pounds for the privilege of putting him to death." Such peevishness must sound odd to a generation that is called upon to pay literally a thousand such levies besides the income tax which is all the time threatening to take away all or nearly all that you earn.

*

But, then, no one seriously believes that human affairs can be conducted without taxes being levied and paid. Long acquaintance has made us fatalistically resigned to it in the spirit of Benjamin Franklin, who once said that, in this world, nothing can be said to be certain except death and taxes. So, though there is a concerted howl when new levies are announced, they are acquiesced in with greater or lesser readiness.

But this willingness to put up with taxes will be more readily forthcoming if there is realisation that the taxes are being collected for a purpose which the tax payer can approve of. And this at once brings up the question of the objectives of the Second Plan. These, which are the amelioration of the conditions of all of us by a massive co-operative effort, must meet the enthusiastic approval of every one in the country. Once this approval of the basic objectives of the Plan and the consequent readiness to make the necessary sacrifices are granted, the actual task of realising the additional Rs 700 crores becomes comparatively simple.

*

Let us look at our performance so far in the matter of raising funds from additional taxes. The achievement in this regard in the first year of the Plan should give us some indication of our ability to raise the total funds needed by the Plan. Considering that the real benefits of planned development and consequent prosperity will unfold themselves only in the second half of the Plan, it is reasonable to assume that the receipts from additional taxes will be much more in the later years than in the earlier ones. It must also be remembered that the effect of the heavy disbursements in the first two years will have seeped into the economy and be ready to yield results by the second half of the Plan period, which would therefore be a period capable of bearing greater taxation. So, if I can show that, even before the Plan has gathered momentum, our performance in the field of additional taxation has been impressive, it follows that our performance in the years to come will be even more striking.

*

Let us, therefore, look at the extra funds estimated for from additional taxes in 1956-57. The regular budget for the year, presented in February last by Sir Chintaman Deshmukh, contained proposals for additional taxes, mostly of an indirect kind, which were estimated to yield a sum of Rs 35 crores annually. These proposals did not, by common consent, impose any particular hardship; and the sum is being raised without any particular effort to look for unconventional taxes. It seemed as though the extra amount was raised off-hand; and those who had feared bizarre and outlandish imposts were completely and agreeably confounded by the very conventionality of the new imposts.

*

Next came the excise levy on cloth imposed in September last—the very first act of Mr T. T. Krishnamachari as Finance Minister. Though this levy was not imposed as a revenue measure, the other conditions which made its imposition inevitable are not likely to be absent in the years to come. It would, therefore, be quite safe to reckon with it in the estimate of revenue from additional taxes. The estimated revenue from this source was about Rs 25 crores. Thirdly, the more recent proposals of excise and import duties on a variety of commodities are estimated to yield a sum of Rs 6 crores annually. The revised capital gains tax and the increased taxes on dividends are expected to yield another Rs 10 crores a year. And lastly, the proposals to replace sales tax on cloth, tobacco and sugar by a surcharge on excise duties is estimated to yield an additional Rs 10 crores over and above the sales tax that would have been collected had not this change been effected.

*

Adding up these items, it will be seen that, in the first year of the Plan, an extra annual revenue of the order of Rs 86 crores has been provided for. This means a total of well over Rs 400 crores, more than half the estimated extra taxation needed in Indian Finance's revised plan of resources. I need hardly say that this implies that, in the very first year, we have broken the back of the problem, without any aid from the prosperity that the Plan itself is to generate. And what is even more remarkable is the fact that this extra revenue has been had without recourse to any unconventional mode of taxation. Even the capital gains tax, which many may consider somewhat unorthodox, was already there, and has merely been revived. In other words, even without the aid of any of the confiscatory taxes of various kinds, Government have been able to provide themselves with a substantial portion of the estimated target under this head. As a matter of fact, leftists have even complained that all the measures of taxation so far undertaken have been of a sort that will impose more burdens on the poor. Therefore, if the promised broadening of the tax system and the reorientation of fiscal and financial policy to correspond to the needs of the Plan take shape in the coming years, the raising of the extra revenue must be a comparatively simple matter.

*

There is one other thing I should like to stress in this connection: it is the fact that all the new levies I have indicated are those imposed by the Centre. It is necessary to remember that a definite obligation has been cast under the Plan on the States to raise additional taxation, and it is reasonable to expect that they would do so. So far, however, the States, speaking in general terms, have not done their best in this regard; but, once the elections are over, and the States get down to the tasks of the Second Plan, they must necessarily get to grips with the problems of raising extra rev-

OBEROI HOTELS
INDIA & PAKISTAN

This story begins in 1888...

The world still awaits the adventure of Wireless . . . it's the age of the horse-drawn carriage. And people who talk of flying aren't airmen as yet; they're poets.

Calcutta is India's capital, and at one of its busy wharves, there's a picturesque mailboat from England, self-conscious in its new power of Steam.

Look away for a moment to something else that is new. There! In those crates . . . the first few cakes of a new soap: *Sunlight*. The crates say: 'Made in England by Lever Brothers.'

Bobbing away on porters' heads, the cakes go off to some obscure bazaar of old Calcutta and from there . . . on to journey's end: the homes for which Levers have made the soap.

That's how it was one summer day of 1888. Lever Brothers (then, a three-year old British enterprise) thought the world of *Sunlight*. Soon, thousands of bazaars were stocking 'the tablet that foamed' — and families became converts for good.

Little by little, the motor car arrived (the model with the turkey-croak hooter); then the telephone began to jangle in Indian homes. And in those homes, time wasn't standing still either. People were asking for new and varied products to meet their changing needs. So, Levers — developing in step with them — produced for the home such things as *Lifebuoy* . . . *Vim* . . . and *Lux Toilet Soap*. This is becoming a story of familiar names, isn't it?

In 1922, Levers started making soaps in Calcutta — encouraged as they were by the increasing demand for their products. In 1934, a second factory went up in Bombay.

In 1926 came Dalda Vanaspati from Holland. And, with it, there started a revolution in India's nutrition — the use of a hardened vegetable oil for cooking. To manufacture *Dalda* in India, a new Lever Company was born in 1932: 'HVM' — the Hindustan Vanaspati Manufacturing Company Limited.

And still the Indian home called for newer and 'different' products. And so there came to India *Pears Soap*, *Erasmic* and *Gibbs* products, *Himalaya Bouquet* toiletries, *Rexona Soap* — familiar members of the Lever family. Marketing of these products led to the formation of yet another Lever Company in 1935: 'UTL' — United Traders Limited.

Now, you can't separate the tale of these products from the tale unfolding *within* Levers. The people in their factories and offices were changing, for one thing. Foreign experts were joined by the young men of India and today over four-fifths of Levers' executives are Indians.

Meanwhile, Levers were buying all the raw materials that India could offer. These purchases grew as manufacture expanded — till, in 1955, about 88 per cent of the oils and fats that Levers needed was supplied by India's fields and coconut groves.

An international partnership — that's what soon grew up in Levers. Foreign technical and marketing experience linked up with the talents and resources of India. Result? The Indian housewife today is supplied with products that are among the world's best.

Today, we are sixty-nine years from the crate of soap that, almost unnoticed, started Levers in India. Today, a new chapter in our story has opened with the association of Indian and foreign capital in Levers. Indian and British Directors work together on the Board, too. Here's a joint venture that serves the nation and advances with it.

Yes, the future arrives with each tick of the clock. And Levers face that future with a new name: 'HINDUSTAN LEVER LIMITED.' So the stories of HVM and UTL end, in a sense — because they've merged with 'Lever Brothers' to form Hindustan Lever.

But the Lever story goes on. For India's story goes on, and Levers have grown with India's needs and progress. As it has done for sixty-nine years, Hindustan Lever will continue to serve the Indian home.

HINDUSTAN LEVER SERVES THE HOME

Renovation for Central India

It has been known for some years now that two of the most important Indian industries are working with machinery that is largely old and obsolete; that, as a direct result, the labour force in particular units has been larger than necessary; and that they have, consequently, been having a rough time of it. Discussion waxed furious, not least on the floor of the Parliament, as to the need for the rehabilitation and modernisation of and rationalisation in these two industries. Since then, of course, many units have proceeded with programmes to such end, using their internal financial resources or obtaining the necessary help from the institutions set up for the purpose. In particular, I may point out here that the textile industry around Ahmedabad has in recent times shown itself keenly alive to the necessity of going ahead with replacement of the age-old plants by newer and up-to-date machinery. In this context, the sprouting up and expansion of the industries catering to the cotton textile industry have been of invaluable help.

But much, of course, remains to be done, especially if jute goods, on the one hand, are to continue the potent exchange earners they are and if, on the other, cotton textiles are to fulfil the role given to them of finding export markets for 1,000 million yards annually during the course of the Second Plan. I am afraid that the investor or share-holder has too often been lulled to a false sense of security by the apparently strong balance-sheet position revealed by a low book value for the fixed assets. Indeed, too low a book value is suggestive of declining efficiency in the offing, unless this is accompanied by substantial additions to block. How parlous the plight may be of a cotton textile unit, was indicated by Mr A. D. Shroff last week when he addressed the shareholders of the Central India Spinning Weaving and Manufacturing Company Limited.

Nearly eighty years ago, Central India came into existence; and, for those times, it was a large venture, with nearly 30,000 spindles and 450 looms. Since then, the company has expanded from time to time. It has, in Mr Shroff's words, "gradually grown into a huge complex spread over 5 different units"; and the number of spindles today is 115,188, the number of looms being 2,062.

Such piecemeal expansion may have been necessary in the past; but scarcely conduces to optimum efficiency in the present. An investigation conducted eight years ago pointed clearly to the need of the buildings for "considerable renovation." And, as for the machinery, "the major portion of the plant was old, out-dated and needed replacements". It was to have been expected that there was no standardisation in the make and specifications of the various machinery; and this, says the Central India Chairman, "retarded efficiency and increased the consumption of materials and stores."

Of the five mill units, one is already "substantially renovated." A second, which is a processing and finishing unit, needs only some further additions to plant and equipment. The other three stand in need to be condemned altogether, save for a spinning preparatory section in the No. 1 mill.

Mr Shroff has given the pleasant news to shareholders that the Directors have "decided to undertake immediately the complete renovation of mill Nos. 1 and 2". As such, the entire plant and equipment and buildings of the two mills have had to be scrapped. It would appear that the plant and equipment have already been disposed of; and the buildings have been demolished.

The scheme on hand is to cost Rs 1.70 crores. Central India cannot lay its hand upon resources of this nature from its reserves; nor does it intend to approach the shareholder. Instead, an application has been made for a loan of Rs 1.50 crores from the National Industrial Development Corporation Private Limited, a Government body. Mr Shroff stated that a deputation from the NIDC is already at Nagpur carrying out a factual survey of the technical and economic aspects of the mills in relation to the loan application. Mr Shroff has also listed the terms of the loan, which are worthy of study:

(a) Simple interest at 4½ per cent per annum.

(b) Repayment in 15 equal annual instalments, the first instalment being payable one year after the machinery has been installed and put into operation.

(c) No payment of dividend on ordinary shares or allocations to reserves out of profits until the annual instalments in repayment of the loan together with accrued interest have been fully provided for.

(d) Hypothecation to the Corporation of the new plant and machinery installed and the other fixed assets of the Company as guarantee for repayment.

(e) Likely appointment of a Director nominated by the Corporation on the Board of the Company.

The Central India Chairman concedes that, in the circumstances of the present condition of the money market, the Directors "feel that the above terms are reasonable and they hope to obtain the necessary loan to finance this scheme of renovation."

What, however, is important to the money market is the fact that the application is being made to the NIDC; and that this organisation's terms are reasonable. Secondly, the period of the loan is 15 years. Thirdly, it is with reference to this that we should appreciate the statement made by Mr T. T. Krishnamachari in Madras last week.

Thus, the NIDC has now entered the lists as an important organisation intended to proffer help to industry. It joins the ranks of the IFC and the various State Financial Corporations. The NIDC may be enabled to play a more prominent role, if some portion of the counterpart funds accruing from the sale of surplus commodities receivable from the US is placed at its disposal.

But there would continue to be a lacuna in the financial institutions serving industry. Mr Krishnamachari drew attention to the fact that medium finance (by which may be meant advances for three to five years) is not now available to industry. The Finance Minister would presently appear to be thinking in terms of another corporation or institution to fill the vacuum. There is no reason why, however, an attempt should not be made to have the NIDC perform the offices of a medium term financier.

pany's expansion programme is making satisfactory progress. These may probably be the reasons that rumours are now set afloat with regard to the possibility of the company announcing an interim dividend of 10 per cent on the expanded capital.

£ R $

Bombay Burmah Trading

The arbitrators, appointed to adjudicate the issue of compensation for extinguishing the rights attached to Founders' shares, have pronounced their award at 10,000 shares of Rs 125 each fully paid-up. This verdict is according to earlier expectations.

The most notable feature of this scheme appears to be, that the Promoters' shares will not be entitled to a preferential dividend for the year 1955-56. Hence, it is generally expected that the directors, when they decide about the dividend, will find it somewhat easier to step up the dividend which, for the year, may come to Rs 40 on the Old shares.

Well-informed circles express the hope that, while forwarding the scheme to the Government for sanction, the directors may also ask for permission for the issue of bonus shares in the proportion of one share for every two shares held, with the shares being split into Rs 25 paid-up.

World of Cotton

Futures Depressed: Spot Steady

SENTIMENT in the Cotton market remained depressed during the week under report. In narrow turnover, values fluctuated idly with occasional rallies meeting with poor follow-up support. There was a general reluctance on the part of investors to enter the market as they apprehended a further decline in prices. Expectations of a bumber crop, easy conditions in the domestic cloth market and financial stringency also compelled them not to augment their purchases. Above all, the disappointment was caused by the fact that the amendment of bye-law 55 would come into operation only in the next settlement. Also, the EICA's decision to maintain the status quo with regard to bye-law 61 pertaining to "invoicing back" caused disappointment.

The Board further decided to introduce standard boxes for Madhya Bharat, Madhya Pradesh, Moglai and Khandesh Jharilla. This will naturally further the cause of genuine hedge facilities which are few and far between when all diverse styles of cotton are lumped together under one or two hedges.

Meanwhile, activity in the futures section was conspicuously low and rates reached a fresh bottom for the season. ICC Jharilla March, after touching a low of Rs 624, improved to Rs 630-8, to recede again toward the close to Rs 628-8. Similarly, Vijay April touched a low of Rs 723-8, to finish better at Rs 729.

Steady conditions, however, continued to prevail in the Spot market where mills showed good interest in their purchases of Khandesh and Berarar Jharilla varieties. Spinners' demand was confined to 197-3, Berar and Khamgaon Jharilla.

In the export section, some business was reported done in Oomra Deshi.

In the foreign section, mills continued to take interest in American cotton, pending the Government's announcement ragarding their new policy. A small business was reported done in Egyptian Karnak for December delivery. The import policy for the January-June licensing period is eagerly awaited by the trade. The issue has assumed more than usual significance this season, because of the Government's policy to restrict imports.

Following rates were quoted:—Bengal Rs 680 to Rs 750; Oomra Rs 730 to Rs 760; Dholiera Rs 700 to Rs 725; Jharilla Rs 735 to Rs 770 and Vijay Rs 840 to Rs 845.

×

SUPPLY PROSPECTS:

Although arrivals of the new cotton crop are heavy in the Punjab, Khandesh and Vidharba, complaints about the quality are fast increasing. The consensus of trade opinion is, that the quality has slightly suffered on account of late rains.

In view of expected substantial arrivals of American cotton under the Indo-American Farm Products Agreement, opinion is gaining ground that the authorities may not, for the time being at least, permit imports of East African cotton.

Meanwhile, reports from Kampala suggested that, during the first two weeks of December, about 60,000 bales of all varieties of cotton came up for auction and were duly absorbed. It remains to be seen whether India, even if allowed, will be able to get substantial quantities from Kampala.

×

NEW YORK MARKET:

Price movements in the New York cotton market were confined to a narrow range. Dealings were virtually at a standstill as pre-holiday atmosphere prevailed. Operations were largely confined to small routine trade price-fixing orders in nearby March and May deliveries, which offset light hedging.

The Census Bureau report of domestic consumption in November of some 30,000 bales was above trade expectations, but had no influence. Middling spot was quoted around 34.55 cents per pound.

×

LIVERPOOL COTTON MARKET:

Business in the Liverpool cotton futures market was quiet, and prices ruled easier under some hedging and commission house selling. Hedging in the mixed contract was partly offset by trade buying in distants. On balance, the near position eased on liquidation due to the expected heavy arrivals of USA cotton over the holidays, while the latter months, after appreciating through a paucity of offtake, declined on increased hedge selling. Egptian Karnak contract January-February was quoted at 60d and Sudan contract, same delivery, at 61.30d.

×

CLOTH AND PIECEGOODS:

The Cloth and Piecegoods markets remained dull and buyers were conspicuous by their absence. While

Estimates Committee's Services

THREE of the latest reports of the Estimates Committee testify to the significant contribution this body has been making to the scrutiny of Central Government expenditure, to the detection of waste and irregularities and the scope for economy, to the refashioning of policies and to the revision of outlook on certain fundamental principles of administration. The thirty-fifth, thirty-sixth and thirty-seventh reports bear more than the usual interest, in view of the fact that they are concerned with the action taken by the Government on the recommendations of the Committee in its first three reports.

The Government of India are answerable to an Economic Unit, the Public Accounts Committee and the Auditor-General as also to Parliament. The administrative machinery itself contains financial checks and correctives at various points. The spending authorities, in particular, cannot take the reins into their own hands and have a jolly ride. Even under these circumstances, it is doubtful if all the salutary changes in administrative policy and details and the economies achieved during the last five years would have been possible, but for the relentless scrutiny of the Estimates Committee.

Sometimes, Cabinet or departmental thinking seem to anticipate the criticisms or the suggestions of this Committee. Once in a way, the Committee may have taken too fastidious a view of its task and recommended economies which did not compensate for the effort involved or did not yield any considerable net savings. Instances may also be discovered of recommendations smacking of discrimination against individuals who are victims of special circumstances. There may also be questions on which the Committee's suggestions proceed from insufficient knowledge of facts.

A recommendation following within the first category concerned the appointment of technical personnel and the range of and tests for selection. The Government had largely anticipated this recommendation. To the second belongs the suggestion that wherever residential telephones are installed, calls above a certain minimum should be charged extra and fifty per cent of the charge recovered from the officers concerned. The Communications Ministry pointed out how the extra labour involved in keeping accounts would hardly compensate for the paltry income which could be expected.

Again, the Committee took the view that no person should be appointed under the Central Government on salaries disproportionate to what they were drawing before in business or under State Governments. There is an element of inequity about this suggestion and it was met by the contention by the Ministry that the general scales fixed for the services which took into account the category of the candidate and the responsibility involved should be allowed for any officer, irrespective of his previous salary.

The point of view taken by the Committee with regard to the preference suggested for indigenous importers over foreign agencies in the import of tea chests was rejected as impractical by the Ministry for the very sound reason that the existing formula for quota allotment to actual users and indigenous importers was considered equitable for the interests concerned and that if the foreign agencies got a large share, it was just because the majority of actual users were non-Indians. One cites these instances not to belittle the work of the Committee but only to indicate that within an almost limitless range of facts and considerations, judgment is some times apt to be erroneous or superficial.

It needs hardly be said that the Estimates Committee has accepted as its motto, "where one officer will do two shall not grow". The axe falls either as one hefty stroke or small choppings here and there. Reporting in March 1955, the Committee saw considerable scope for economy in the "staff of the Commerce Ministry"; the staff included in the Secretariat for dealing with cases from attached and subordinate offices, a Superintendent and two assistants, the Director and Assistant Director of Exhibitions, along with their establishments and fifty per cent of class four servants were considered superfluous. Expenditure on tours was to be cut by fifty per cent. Scope was indicated for the amalgamation of important offices and reasons advanced for the immediate closure of whole establishments, as for example, the Enforcement Directorate of the Ministry of Home Affairs.

In a number of cases, the Ministries have attempted to comply but when they argued that the volume of work has been increasing, in certain section to as much as 6 to 8 times, the Committee is disabled from pressing any more. Occasionally, time rescues a ministry from problems created by the Committee, or at last cut their duration. When the latter wanted medical stores to be distributed in order of priority to displaced persons, defence forces, State hospitals and charitable institutions, the Ministry of Health reported that the Disposals Board was considering the question of changing the order of priority, subsequently accepted the recommendation and the problem itself disappeared when there were no more medical stores to dispose of.

It is in respect of reckless expenditure by this or that department that the Estimates Committee cannot secure results corresponding to the severity of its strictures or the volume of loss suspected. At the ministerial level, the attitude seems to be "let by-gones be by-gones"; but the Committee is not inclined to yield so easily. In all the reports the list of items on which it thinks its suggestions have not received sufficiently effective consideration, the ministry is chased further.

One of the most notable changes made on the initiative of the Estimates Committee is in respect of the system of the presentation of budget in Parliament. A special Sub-Committee was appointed for this purpose as per the suggestion of the Estimates Committee and a number of innovations have been introduced on the report of this Sub-Committee. The following form the first instalment of the reforms effected:

The demands are arranged by Ministries instead of running serially by account heads, each Ministry having a separate section.

The Explanatory Memorandum is amplified to give fuller explanations than before.

A list of new items of expenditure costing Rs 5 lakhs and over and included in the budget are added to the Explanatory Memorandum.

For major industrial or other projects for which provision is made in the budget, for either capital outlay or loans, a self-contained note on the progress of the project and giving background information is furnished.

For all individual projects costing Re one crore or over included in the budget, a short descriptive note on the project is given in the Explanatory Memorandum. A similar note is given whenever the project estimate is revised.

Of even greater public interest are the steps taken to improve the working of State projects. For a long time, the Government salt factories had been running at a loss. Even when the Estimates Committee was investigating the position, the Government were taking certain steps particularly in the direction of revising sale prices which resulted, in substantial net profit since 1949-50. After the Committee reported, the sale prices were further revised, obviating the possibility of any loss in the future. And it was also decided that the prices would be reviewed periodically in relation to the costs of production.

The Estimates Committee's renewed emphasis on the need to work every State factory on a commercial basis is also reflected in many subsequent decisions by the Government. Likewise, the Government took over the Vizagapatam shipyard and took several steps to ensure that the concern ran on as economic a basis as possible. It is of course in the nature of shipbuilding industry that some State assistance would invariably be found necessary. In planning the Machine Tool Factory, though the Committee's ideas could not be fully accommodated, its impact is clearly acknowledged and seen. The Government have also accepted recommendations to the effect that

The Onset of Election Campaign

THIS year the usual music season in Madras is somewhat distracted by the rumblings of the election campaign. At least in this part of India, musicians may not claim to have any leading role in politics though in future their reputation and income hitherto sustained, through the patronage of princes and zamindars may largely depend on the number of invitations they receive for paid participation in State functions. Even the Gods seem to be on the retreat, temple festivals tending to become less elaborate and less expensive. One was drawn to these reflections at the sight of Srimathi M. L. Vasantakumari, initiating with a prayer the proceedings of the public meeting, convened by the Chinglepet District Congress Committee this Monday. She rendered the prayer in exquisite musical style. The occasion also served to recall the 1935 elections, when Mr S. Satyamurthi enlisted the talents of Srimathi M. S. Subbalakshmi for his Congress election tour.

Mr Morarji Desai addressed this inaugural meeting of the election campaign of Chinglepet District Congress. Mr O. V. Alagesan also actively participated. The other celebrities were drawn from the Madras Cabinet.

The Congress Party in Madras, after the adjustment of territories on account of reorganisation is further strengthened and there is a self- assurance, often openly expressed and surely going unchallenged, that it has no formidable rival to fight with. Mr Kamaraj, the Chief Minister, is however, anxious to show a better record this time; he is fortunate for two reasons. The Travancore areas would stand solidly behind him. The mainstay of Communist strength, Malabar, has now become a good riddance. A walk-over would be a reasonable forecast.

Mr Morarji Desai and Mr C. Subramaniam, Minister for Finance, who too spoke on the occasion concentrated on the pernicious attitude taken up by the Dravida Munnetra Kazhakam. Mr Desai condemned the agitation carried on by this group and the methods used by them as anti-national disruptive, contributing to violence and hatred and militating against the rudimentary principles of human freedom. He had no doubt that in the hands of such a party, there would be no individual freedom left; the Congress permitted complete freedom for the expression of views, howsoever, inimical to national interest. It was only when it came to the point of actual breach of peace and the creation of disturbances that the Government would interfere. He wanted the people to judge whether the agitation aimed at dividing the North and the South was reasonable or it was going to destroy them.

Mr Desai also dwelt on the achievements of the Congress and pointed out how it was a unique political institution in the whole world, whose functions were not merely political but social and educational, touching the whole life of men; the Congress deserves the support of the electorate not merely because it was comparatively strong but by virtue of its own merits and achievements.

The Madras Chief Minister's references to the Opposition groups were more oblique. Laying stress on the fact that most of the parties were aiming at the establishment of socialism, Mr Kamaraj said that the Congress alone wanted to achieve it through a gradual change of heart in the people, and without generating hatred between one section and another. From the immediate political standpoint, the proceedings of the Muslim Convention of South India, held in another part of the City the same day might turn out to be of greater significance. To this convention, over five hundred delegates had come from Mysore, Andhra, Kerala and Madras States. Its representative character was enhanced by the fact that leaders of all shades of political opinion, Congress, League and the non-attached liberal, were present. Besides Dr Syed Mahmud, Minister in the Ministry of External Affairs, who presided, there were the Prince of Arcot, Sir Mohammed Usman, the Nawab of Chattari and Dr M. A. Latif.

The Conference naturally took into its sweep a broad range of problems, including the cultural and religious interests of the Muslims as a community, the Suez situation, the political status of Kashmir and the ubiquitous Afro-Asian freedom. The consensus of opinion in this conference, judging from the speeches, was that only a negligible fraction of the Muslim community in India wanted a separate political party and that the others could be indifferent to the attitude and activities of this section. Only one speaker dwelt at length on the grievances of the community. Dr Syed Mahmud wanted the Muslims of India to understand that separate electorates, fixed proportions and separate political organisations would, instead of providing a remedy for their grievances, would only make them a caste of untouchables. He implored them to feel as part and parcel of the great organism of India and to avoid the repetition of old mistake. He had no objection to their joining any party which appealed to them, though personally he would recommend the Congress which, in spite of "its omissions and commissions, was the best one from all points of view, with the traditions of Mahatma Gandhi and a matchless leader in Pandit Nehru." He dismissed the Hindi-Urdu controversy as artificial and Pakistan's attitude to India and Kashmir as unfortunate. Sir Mohammed Usman affirmed that Kashmir belonged to India, that Pakistan had no right to claim it and that Pakistan's talks of Jehad against Kashmir and India was all nonsense, because the Muslims both in Kashmir and India had the fullest liberty to practise their religion.

This Conference may represent another big step forward in the rapid transformation of the political bias, if not the actual affiliation, of the Indian Muslims.

★

SOVIET GOLD SALES

(Continued from page 1187)

to export some gold and other precious metals. Between October 1953 and February 1954 gold, silver and platinum to an estimated value of between £50 million and £60 million was exported. But after the eclipse of Malenkov, the more liberal attitude towards the long suffering Russian consumer was abandoned, and the hoarding of the gold output was resumed.

There is reason to believe that the latest resumption of the sale of Russian gold is connected with the recent events in Hungary and Poland. Hitherto the Kremlin ruthlessly exploited the satellite states for the purpose of earning foreign exchange for the Soviet Union. When some years ago the Soviet Government agreed to the export of large quantities of coarse grain to Britain, it was found that the maize that was delivered was not Russian but Rumanian. Likewise, the Soviet authorities forced Hungary to export large quantities of wheat. Moscow forced the unfortunate satellite countries to overexport their grain to such extent that there were from time to time acute shortages of this staple food in these countries. It was largely because of this exploitation that the Hungarian people, driven to despair, came to resist Soviet oppression.

The uprising of the Hungarians, and the brutal military operations carried out by their Russian oppressors, has made Hungary useless for the time being, for the purposes of earning foreign exchange for Russia. What is perhaps even more important, the Soviet government, having learnt its lesson, is likely to be more careful in the future in its relations to satellite states. Moscow had to realise that there is a limit to exploitation beyond which the victims come to feel that "they have nothing to lose but their chains." So it seems probable that the Soviet authorities will in future feel impelled to exercise a certain degree of moderation in exporting the goods of the satellite countries. Some of them, such as Poland, will achieve a certain degree of autonomy, which will make their exploitation by Russia more difficult.

Yet the Soviet Union will need more consumer goods. There is evidence of a growing discontent among Russian workers, and an increase in the supplies of consumer goods may have become a political necessity. The realisation by Russian workers that it is possible, after all, to resist Soviet tyranny will go a long way towards impelling the Soviet Government to provide more consumer goods. At the same time, the Kremlin does not want to neglect either industrialisation or arms expenditure. The only alternative to producing more consumer goods at home at the cost of producing less capital goods and arms is importing more consumer goods. To that end, it is essential to export more gold.

The rulers of the Kremlin want the gold, not for the purpose of providing the Soviet citizen with essential goods, but for the purpose of enhancing their own prestige and power. To them a large gold reserve means just another weapon in the pursuit of their imperial designs of world conquest. It is useful to have a large gold stock in order to be able to launch out economic offensive in uncommitted countries. It may even serve the purpose of engaging in operations on Stock Exchanges in foreign exchange markets and commodity market if in doing so they can cause trouble to democratic countries.

Evidently, first things must come first, however. An increase in the import of consumer goods has become an urgent necessity to such an extent as to make it expedient to weaken to some extent the economic cold war potential represented by the gold reserve. The misers of the Kremlin may hate parting with their gold but they part with it all the same, since the alternative is the risk of disturbances by consumers who have reached the limit of their endurance.

WORLD OF FINANCE

(Continued from page 1187)

loans now being negotiated, will have been made available to India.

We may make mention of two other consequences. On the one hand, the improvement in the balance of payment position may, if maintained, make it unnecessary to have immediate or early recourse to the IMF for an emergency supply of dollars. On the other hand, the reduction in the pace of loss of foreign exchange may also mean that the excess of imports over exports will not, as it had done in the last eight months, have a contractionist influence on money supply generally and on the deposits of the banking system in particular.

+

Bank Advances Maintain Their Advance

The returns of the Reserve Bank for the week ended December 21 reveal that, for the second time this month, the foreign exchange holdings have shown a rise.

With a decline of Rs 1.36 crores to Rs 1465.50 crores in Active Notes, and return of rupee coin from circulation for Rs 1.18 crores, the Reserve Bank's cash in the till has improved by Rs 2.54 crores. Rupee Securities and Foreign Securities are unchanged.

The deposits of the Central Government are marked up by Rs 3.87 crores to Rs 55.56 crores, while those of other Governments are lower by Rs 1.75 crores at Rs 9.45 crores. State Governments have, however, reduced their indebtedness to the Reserve Bank by Rs 0.68 crores.

Deposits of member banks have fallen by Rs 1.93 crores to Rs 52.33 crores, inspite of a higher level of borrowings from the Reserve Bank: the latter's Other Loans and Advances are higher by Rs 4.37 crores at Rs 33.81 crores.

Banks' borrowings against usance bills are placed nearly Rs 2 crores higher at Rs 49.49 crores against Rs 47.52 crores. The total of advances given by the Reserve Bank against usance bills shows a rise of Rs 12.52 crores and is placed at Rs 412.42 crores.

The investment portfolio is somewhat higher at Rs 61.36 crores against Rs 60.53 crores; and Balances Held Abroad, in the Banking Department, have improved by Rs 0.94 crores to Rs 86.57 crores. This aspect of the Reserve Bank returns has been discussed at greater length in another article in this section.

The return of the State Bank for December 21 discloses a further addition to deposits which, at Rs 239.03 crores, are at their highest level since April 6 this year. The rise during the week is one of Rs 1.77 crores, and the accretions during December, until the third week, have totalled Rs 4.13 crores. The increase in deposits has enabled a reduction of Rs 0.86 crores to Rs 6.53 crores in borrowings. Cash balances are largely unchanged. But there is a steep rise in advances to Rs 137.09 crores from Rs 134.00 crores; and the latest figure is the highest since the week ended June 15. Altogether, the rise in advances in the first three weeks of December has aggregated Rs 7.98 crores. It is interesting to note, in this context, that bills are substantially lower by Rs 5.46 crores at Rs 35.27 crores. Loans, cash credits and overdrafts are, however, even more steeply higher by Rs 8.55 crores at Rs 101.82 crores.

Desposits of member banks have, according to the return of Scheduled Banks for December 14, benefitted to the extent of Rs 6.88 crores and are placed at Rs 1115.37 crores. Since, in the relevant week, the deposits of the State Bank showed a rise of Rs 2.79 crores, the accretions to the deposits of other banks must have been Rs 4.09 crores. At the same time, however, member banks have had to increase their borrowings. Although the indebtedness to the State Bank was reduced by Rs 0.92 crores to Rs 9.90 crores, borrowings from the Reserve Bank went up by Rs 4.75 crores to Rs 62.94 crores.

The increase in resources has not to any considerable extent been utilised in an improvement in cash balances. On the contrary, the demand for funds was at an accelerated tempo. Advances mark a rise of Rs 5.69 crores to Rs 605.50 crores. Inland bills partly offset this with a decline of Rs 1.25 crores to Rs 117.97 crores. But foreign bills have gone up by Rs 0.77 crores. In the result, the total of advances has shown a rise of Rs 5.21 crores to a new high of Rs 777.20 crores.

+

The statement of the State Bank of India for the week ended December 21 reveals a rise of Rs 1.77 crores in deposits to Rs 239.03 crores. Borrowings from other banks are lower by Rs 0.86 crores at Rs 6.53 crores, while other liabilities, including inter-office adjustments, are higher by Rs 1.03 crores at Rs 9.30 crores.

On the assets side, cash balances have moved down from Rs 17.41 crores to Rs 16.46 crores and Investments from Rs 106.89 crores to Rs 106.70 crores. Advances have risen by Rs 3.09 crores to Rs 137.09 crores—"Loans, Cash Credits and overdrafts" accounting for a rise of as much as Rs 8.55 crores and 'Bills Discounted and Purchased' for a decline of Rs 5.46 crores.

According to the returns of the Scheduled Banks for the week ended December 14, total Demand Liabilities have sharply risen by Rs 8.86 crores to Rs 655.66 crores, while Time Liabilities have declined by Rs 1.98 crores to Rs 459.71 crores. Borrowings from the State Bank are lower by Rs 0.92 crores at Rs 9.90 crores, while those from the Reserve Bank are higher by Rs 4.75 crores at Rs 62.94 crores. Cash and balances with the Reserve Bank have slightly improved to Rs 87.06 crores from Rs 86.58 crores. Investments have declined by Rs 0.22 crores to Rs 365.33 crores. Advances are shown at Rs 605.50 crores against Rs 599.81 crores; Inland Bills at Rs 117.97 crores against Rs 119.22 crores and Foreign Bills at Rs 53.73 crores against Rs 52.96 crores. Money at call and short notice stands at Rs 14.15 crores against Rs 13.70 crores.

★

OLYMPUS

(Continued from page 1193)

the construction work on State projects should be entrusted to the CPWD or to some other agency, and that a central organisation working under the control of a single authority in overall charge of a State project should frame estimates and keep accounts of the progressing expenditure.

Having found that the Government had lost considerable sums of money through imprecise terms of contracts, cost-plus contracts and through insufficient knowledge of the parties contracted with, the Committee gave detailed suggestions covering all these matters. Though subsequent information on the working of some of the State projects does not reveal a completely satisfactory situation, it should be said to the credit of the Committee and the Government that the bulk of these suggestions have been accepted and their spirit adhered to in the matter of day-to-day administration. The cost-plus contract is now discouraged except where it is impossible to avoid them. Steps are being taken to see that original estimates do not become out-of-date. The employment of extra supervisory staff to watch the work of the Government agencies is discouraged. The progress of orders placed outside India is being watched by the Indian embassies concerned. It can be said without the least exaggeration that the improved tone of the financial working of the state projects is in a considerable measure attributable to the sound and detailed guidance provided by the Estimates Committee from time to time.

★

CLIVE STREET GOSSIP

(Continued from page 1189)

enue. The Plan provides that the States should realise a total of Rs 225 crores of additional taxation from measures like land revenue, agricultural income tax, betterment levy, irrigation rates, sales tax, motor vehicles taxes, etc. These levies are, as the Plan itself points out, of a sort that can be had by a "little extra effort along existing lines rather than by any far-reaching innovations in the sphere of State taxation." If, therefore, it is assumed that the States raise the extra taxation of Rs 225 crores, then it would appear that, on the basis of the current estimate of the Centre's additional tax receipts of Rs 400 crores, all that will require to be raised in the next four years would be an additional Rs 100 crores.

★

If such is the real situation, where is the need for all the blood-curdling predictions about the inevitability of more and more back-breaking taxation? Why this spine-chilling threat of all manner of new-fangled taxes? In fact, more than even the actual levies, it is this constant talk of extra taxes that is causing all kinds of uncertainties. If the substantial tax evasion that I discussed last week is dealt with firmly, and the technique of borrowing (which I shall discuss next week) is skilfully and imaginatively devised to direct funds toward Government loans, it should be possible to give substantial tax reliefs as incentives for such of those endeavours of the private sector as are oriented toward the central purposes of the Plan. Mr Krishnamachari has stated that the devising of the financial policy of the Government is conditioned solely by the need for realising the central objectives of the Plan, and the strategy definitely includes the provision of proper incentives to the private sector. The word incentive is being so flagrantly misused in the Stock Exchange circles that there is some danger of people thinking cynically that it is used synonymously with absence of taxes. But incentives have a definite place in a planned economy, and tax reliefs do constitute a form of incentives. There is all too ready an assumption that our situation is so desperate that there can be no question of reduction of any taxes, however seriously inhibiting of further effort of development such a tax may be. Of course, it is necessary not to be taken in by specious allegations that a particular financial measure is acting as a disincentive. But not all such claims are bogus. Therefore, in all this talk of extra taxes, the need for tax reliefs as inducement for furthering the central objectives of the Plan should not be allowed to be obscured. And, since the prospect for additional taxes is by no means dark, it should be possible to give these reliefs without serious jeopardy to the overall needs of the situation.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.
Calcutta, 20th December 1956.

TATA LOCOMOTIVE & ENGINEERING CO., LTD.

The following is the speech delivered by the Chairman, Mr. J. R. D. Tata at the Annual General Meeting of the Shareholders of the Company on Friday, the 28th December, 1956 :—

Ladies and Gentlemen,

It has been a matter of satisfaction to my colleagues and to me that after the long period which it has taken the Company to surmount the manifold problems which beset its development and the more recent uncertainties in respect of the prices for locomotives and boilers, we have been able to present to you this year a report and accounts which, I am sure, will have met with your approval.

I wish, at this stage, to thank the shareholders for their continued confidence and support notwithstanding the disappointingly long period they have had to wait before they could earn a return on their investment. While we live in uncertain and changing times, during which it pays to be cautious, I believe that the shareholders may henceforth view the future with some measure of confidence. One of the most encouraging elements in the situation, from the shareholders' point of view, is the fact that the Company has been able throughout to make full provision for depreciation so that there is no burden of arrears of depreciation to come in the way of a fair and steady return on the shareholders' investment. At the same time, it is necessary to be realistic in any assessment of dividend potentialities in the immediate future. For instance, in comparing, the financial results now before you with those of the previous years, and in basing on them any estimate of future earnings, shareholders should remember that the report and accounts for 1955-56 include the whole of the profits and some of the overheads of the Locomotive Division in respect of two years. They should also keep in view the fact that the Company faces a heavy programme of capital expenditure in the next few years and that, because of the nature of its business and operations, it will require an exceptionally large amount of working capital. Both these factors will necessitate conservation of resources.

The most important development since we met last year has been the final settlement of the disagreement which had arisen between the Railway Board and the Company on locomotive and boiler costs and prices to which I devoted a large part of my speech last year. As you were then informed, the matter was, by agreement between the Railway Board and the Company, referred to the Tariff Commission.

In view of the importance to us of this inquiry and the Commission's findings, I think you would wish me to amplify here the brief references made in the Directors' Report to the principal findings and recommendations of the Tariff Commission.

With the assistance of an expert adviser, the Commission made a thorough and detailed investigation of the operations of your Company's Locomotive Division. We are grateful to them for their impartial and constructive approach to the problems placed before them and for the sound and practical recommendations they have made. The inquiry has served a valuable purpose not merely in bringing about a settlement between the Railway Board and the Company in the matter of prices for locomotives and boilers but also in clarifying a number of points about which considerable misunderstanding had prevailed in the past in some quarters and in setting at rest, once and for all, doubts about the Company's progress and efficiency.

In these days, when Government has almost unlimited powers with which to enforce its will, it is gratifying and re-assuring to note that, in an industry in which Government is itself a competitor as well as the sole customer, it decided to refer a dispute about costs and prices to an impartial statutory inquiry and abided fully by the resulting recommendations even though they went, to some extent, against its views.

We have all along been anxious to serve Government and the country well in regard to the supply of locomotives to the Indian Railways and we deplored, no less than the Railway Board did, the causes, mostly beyond our control, which delayed the full fruition of the project and resulted in relatively high costs. This detailed inquiry has largely cleared the air between the Railway Board and ourselves and we look forward to a period of close and fruitful co-operation in the further development of the locomotive industry.

Coming specifically to the findings and recommendations of the Tariff Commission, the Commission have supported the view I expressed in my speech last year that there was no sound or fair basis for comparison between the cost of production at Tatanagar and the prices of imported locomotives. The Commission therefore examined Telco's operations and costs of manufacture with reference to those at Chittaranjan. On this footing, they have come to the conclusion that, by and large, and making proper allowance for all relevant factors, Telco's costs do not compare unfavourably. The inquiry has, however, revealed that labour efficiency in our Works is lower and labour costs are higher than they are at Chittaranjan. The Tariff Commission has therefore suggested that there is need to re-deploy excess labour and to reduce the level of incentives paid to some of the workers. We were aware of our shortcomings in this respect which were largely due to historical reasons, and we hope that our workers and the Union will co-operate with us in removing the causes for the unfavourable comparison which has been drawn between their productivity and that of their brother workers at Chittaranjan.

The report has fully established that the manufacture of locomotives and boilers has at no time suffered from the concurrent undertaking of other lines of production about which doubts had been expressed in the past. In fact, the inquiry has shown that such additional activities have been helpful in absorbing a substantial portion of factory overheads which otherwise would have been an additional burden on locomotive costs.

The Tariff Commission have recommended and Government have accepted certain prices for locomotives and boilers not only in respect of the previous two periods on which the Railway Board and the Company failed to reach agreement but also for the subsequent two years ending 31 March, 1958. These prices have been fixed after making allowance for a rise in output and productivity as well as for the cost-reducing advantages of long-run orders for locomotives to be placed on the Company. The prices, which are on a sliding scale, will secure to the Railway Board a progressive reduction in the cost of the locomotives purchased from us while enabling the Company to make a reasonable profit. Prices for deliveries after March 1958 will be fixed after another cost investigation at the appropriate time.

Before I leave the subject, I may say that, barring unforeseen circumstances or delays in the delivery of equipment and materials over which we have no control, we are confident of achieving the targets of production and costs set before us by the Tariff Commission. The expansion of the locomotive Division to a capacity of a hundred complete locomotives per year, to which a reference was made in last year's Report, is well under way and is now expected to be completed a few months ahead of schedule. It will play an important part in reducing costs.

The steel foundry, which will also reduce costs and end our dependence on imported steel castings, has made excellent progress during the last year and is expected to start production towards the middle of 1957. In fact, the melting furnaces have already started producing steel ingots. I regard the establishment of this steel foundry as an important landmark in the development of the Company's overall activities. Steel castings form an increasingly important proportion of heavy engineering products and the existence of a modern and highly equipped steel foundry in India, capable of turning out large and intricate castings of the highest quality, will render valuable service to the Indian heavy engineering industry.

India is today one of the few countries left in the world still dependent mainly on steam for its rail traction. In most parts of the world, steam locomotives have given way to diesel locomotives with either electric or hydraulic transmission. It seems inevitable that a similar change over will in due course take place in India, although the process may be spread over many years. With the versatility built into our plant and the human skills and experience we have developed over the years, our Company will be especially well fitted to play an important role in the "dieselisation" of the country's railroad system and I hope, when the time comes, we shall be given an opportunity to do so.

The Automobile Division has continued to make satisfactory progress. The output of Tata-Mercedes-Benz truck and bus chassis has shown a steady increase. The target rate of 6,000 units per year has been attained, and in fact exceeded since the close of the year under review. The demand for Tata-Mercedes-Benz vehicles continues to outstrip supply. In view of this and of the growing need for additional road transport under successive Five Year Plans, we are, at the instance of Government and in consultation with Messrs. Daimler-Benz, framing a scheme for increasing further the capacity of the Auto Division.

We are continuing, year by year, to install the most modern equipment and machinery, including highly specialised machine tools, as part of our phased programme of manufacture. A start has been made with the construction of the engine shop. As stated in the report, the capacity of the alloy iron foundry which is expected to come into operation early in 1958, has been substantially increased in view of the growing demand for the Company's trucks and our plans for further expansion. We have so far fully lived up to the promises we made to Government in respect of the content of indigenous manufacture in our five year phased programme, and I have no doubt we shall adhere to that programme in the future.

The gratifying progress the Automobile Division has made is in no small measure due to the continued assistance we are receiving from our partners, Messrs. Daimler-Benz, to whom I take this opportunity of expressing our thanks and appreciation. Our thanks are due also to the Government of India for the realistic and far-sighted policies they have adopted towards the automobile industry. The progress made by the industry in general and by our Automobile Division in particular provides, to my mind, a remarkable example of what can be achieved with the help of well conceived and consistently applied policies.

Government have rightly left this industry to free enterprise. They have set phased targets for indigenous production, controlled imports and granted both assistance and adequate freedom of action to individual manufacturers to exercise independent judgement and initiative in their respective fields while retaining a valuable element of competition within the industry. I earnestly hope Government will adhere in future to these policies which are best calculated to promote the rapid development of the industry, to conserve foreign exchange, to supply a vital transport need of the country and to protect the user from unduly high prices.

Now that the initial technical and staff problems concerned with the establishment of the automobile and locomotive industries have largely been solved with the assistance of our partners Messrs. Daimler-Benz and our technical consultants Messrs. Krauss-Maffei and Messrs. Henricot, we anticipate no serious technical difficulty in the further development of our activities. Our main problems in the coming years will lie in the procurement of adequate finance and in the development of technical and managerial personnel.

Between the existing programmes and the expansion schemes already launched and under contemplation, the Company will require, within the next five years considerable additional funds for capital expenditure and working capital. While a major portion of the requirements will be found from allocations to depreciation and other reserves and, in respect of working capital, from borrowings, some addition to the Company's share capital seems inevitable in due course. Proposals in this regard will be considered by your Directors during the coming year.

As regards the development of technical and managerial skills, the growth of our business and its value to the community will depend largely on the reputation we establish for our products over the years. This reputation will itself depend on the skill and integrity of the many individual engineers and craftsmen engaged in the manufacture of our products. The importance, not only to ourselves but to the industrial development of our country as a whole, of the creation of such men cannot be overemphasized. If lasting success is to be achieved in India's industrialisation, resources must be developed in men as well as in raw materials and equipment. No effort should therefore be spared in inculcating in our workers, engineers and industrial administrators the sense of responsibility, the integrity of purpose and the dedication to, and pride in, high standards of quality and precision which create the traditions and reputation of a country's industrial products throughout the world. This is one of the most important and difficult tasks facing any country attempting to force the pace of its industrialisation and we have, from the start, attached a great deal of importance to this task in our own organisation. We have achieved a fair measure of success and we shall continue our efforts.

The Company's relations with labour continues to be reasonably satisfactory. I have already referred to the Tariff Commission's finding that, in certain sections of the Locomotive Shops, there is an excess of labour and efficiency is low. As our workers have, by now, acquired the skills and experience required for their particular jobs, the need for additional men to maintain output no longer exists. Fortunately, our expansion in various directions provides opportunities for deploying excess labour where it exists. I hope that in their own interests as well as those of the country our workers will appreciate the importance of achieving an improvement in productivity.

An efficient and well led organisation requires amongst the many elements that make for contentment, adequate housing and town services. Although the provision of such housing and services is a particularly heavy burden on new and growing industries, it cannot be evaded and we have consistently provided, alongside our programme of Works development, a housing programme to keep pace with the requirements of our employees. We have already spent approximately Rupees two crores on our township. We shall need to add further to the township during the next five years.

In conclusion, it is my privilege once again to express my thanks and those of my colleagues to all members of our staff, from the General Manager downwards, for the year's excellent work. Their initiative and the hard work they have put in have been principally responsible for the Company's progress reflected in the Report and Accounts before you.

Note:

This is not a report of the Proceedings at the above Annual Meeting.

WORLD OF COTTON

(Continued from page 1192)

prices of superfine varieties were nominally maintained, medium qualities did not evoke any interest even at slightly lower prices. This was mainly due to the stringency in money conditions and the recall of funds by banks due to the year-end considerations.

Conditions on the export front were equally dull. The diminution in foreign demand for Indian cloth was considered a normal reaction to the heavy commitments already made in the preceding months. There were even rumours that mills would be obliged to curtail production in view of the unsatisfactory state of affairs prevailing now in cloth markets.

While the market reports are not encouraging, production of cloth has shown an increase in November. The figure for November has exceeded the October level of production by 12 million yards. Production, during the eleven months of this year, has amounted to as much as 4,813.3 million yards as compared with 4,641 million yards in the corresponding period of last year. Current indications are that, for the second time in succession, the target of 5,000 million yards, fixed by the Plannning Commission for the mill industry, will, this year, not only be reached, but also exceeded by about 200 million yards.

The improvement, noticed in the cloth production, has also extended to Yarn output. The November figure at 140 million pounds shows an increase of as much as 8 million pounds over the corresponding month of last year. Thus, the overall production for the 11-month period of this year is placed at 1,499.4 million pounds as compared with 1,484.0 million pounds in the corresponding period of last year.

In the Manchester Yarn and Cloth market, pre-holiday influences contributed to the general falling off in the turnover in all sections. Buyers showed little disposition to extend their purchases until after the turn of the year. The home market accounted for most of the relatively small turnover in household and apparel goods.

be taken. A clear distinction must be made between measures of a socialist nature which are necessitated by the conditions on hand and those which are undertaken on ideological grounds. There is also the difference between those which have to be socialist even in a mixed economy of a liberal kind and those in which a larger admixture of private enterprise may be considered in the future in the light of accumulated experience. But, as things are, both the Government and the majority of the people are prone to assume that, in the future, the trend will have to be more and more in the direction of socialism. There is still no warrant for that assumption either in the state of mind of the public or in the experience of the public sector in recent times or the requirements of our future economic development, not to speak of the requirements of individual welfare insofar as one can foresee them now.

In assessing the strength of the socialist trend, too little importance is given to those features of the present situation which assist that trend, or those features of emerging situations in the future which may work in the opposite direction. Both have a subjective as well as an objective aspect, though obviously there is now, as there is bound to be in the future, an inter-action between the two. If the public mind is biased in favour of socialism because of, say, the misdeeds of private enterprise and the indispensability of State action for providing of the foundation necessary for rapid future development, it is equally susceptible to change when there is an improvement in the standard of private enterprise or/and the performance of the public sector proves a sad disappointment. Even apart from this question of the impact of prevalent conditions on the mind of the people, there is the other question as to the extent of private enterprise that will be necessary to make the most of the basic development that will be achieved by the first few Five-Year Plans.

While it may be conceded that the pace of the Second Plan will be impossible without this reduction in the importance of the private sector and increase in the importance of the public sector, is it so certain that the same can be said at the end of five or ten years from now? Is it not possible that the power projects, the steel plants and the heavy industries now in progress will create more potentialities for developments than State enterprise can, by itself, utilise to the full? This question will remain even if we imagine such an improvement in the record of both the sectors in the next few years, as to leave no difference in the matter of mere managerial efficiency. For, in such conditions, it would not be merely a question of the quantum of production. Questions about qualitative difference in the kind of life which the rival forms of social organisation will make possible will clamour for an early and unambiguous reply. There will be in the country as a whole a significant socio-economic background of well-developed cottage industries the members of which will not take kindly to schemes of further centralisation of economic direction. The average man will have formed some vague ideas of economic welfare which the Government will find it hard to offend. All of which only goes to prove the importance of a theory of economic growth and a concept of welfare.

THE BENGAL FLOUR MILLS CO., LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 14th day of January, 1957, at 11-30 o'clock in the forenoon to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1(a) (As an Ordinary Resolution)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie & Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1(b) (As an Ordinary Resolution)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie & Company Limited be and are hereby reappointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1(c) (As an Ordinary Resolution)—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie & Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(a) and 1(b) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(b)."

2. (As a Special Resolution)—"That Articles 3, 4 and 5 of the Articles of Association of the Company be deleted and the following new Article 3 substituted therefor:

"Balmer Lawrie & Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. A. T. Montgomery Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 50,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000/- payable under (a) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000/- each and a final monthly instalment of Rs. 6,000/- payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 8th day of January One thousand nine hundred and thirty-seven and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of of the Company within the meaning of the Companies Act, 1956."

3. (As an Ordinary Resolution)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 3 of the Articles of Association of the Company, Balmer Lawrie & Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (As a Special Resolution)—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 3 of the Articles of Association of the Company Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion of the outgoings payable by Balmer Lawrie & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (As a Special Resolution)—"That Article 42 of the Articles of Association of the Company be deleted and the following new Article 42 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250/- for each meeting attended by him."

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

Calcutta,
21st December, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolutions and an explanatory statement are annexed to this Notice.

BRIDGE & ROOF COMPANY (INDIA) LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 14th day of January, 1957, at 11-50 o'clock in the forenoon to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1(a) (As an Ordinary Resolution)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie & Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1(b) (As an Ordinary Resolution)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie & Company Limited be and are hereby reappointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1(c) (As an Ordinary Resolution)—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie & Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(a) and 1(b) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(b)."

2. (As a Special Resolution)—"That Articles 106, 107, 108, 109, 110 and 111 of the Articles of Association of the Company be deleted and the following new Article 106 substituted therefor:

"Balmer Lawrie & Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. O. T. Jenkins, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 50,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000/- payable under (a) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000/- each and a final monthly instalment of Rs. 6,000/- payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 14th day of April One thousand nine hundred and twenty-five and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of of the Company within the meaning of the Companies Act, 1956."

3. (As an Ordinary Resolution)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the

sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (As a Special Resolution) —"That pursuant to Clause 12 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion of the outgoings payable by Balmer Lawrie & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (As a Special Resolution) —"That Article 85 of the Articles of Association of the Company be deleted and the following new Article 85 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250/- for each meetting attended by him."

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

Calcutta.
21st December, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolutions and an explanatory statement are annexed to this Notice.

THE INDIAN GALVANIZING CO. (1926) LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 14th day of January, 1957, at 12-10 o'clock in the afternoon to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1(a) (As an Ordinary Resolution)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie & Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1(b) (As an Ordinary Resolution)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie & Company Limited be and are hereby reappointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1(c) (As an Ordinary Resolution) —"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie & Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(a) and 1(b) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(b)."

2. (As a Special Resolution)—"That Articles 85, 86, 87, 88, 89, 90 and 91 of the Articles of Association of the Company be deleted and the following new Article 85 substituted therefor:

"Balmer Lawrie & Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. H. G. Sinclair, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 50,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000/- payable under (a) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000/- each and a final monthly instalment of Rs. 6,000/- payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 8th day of December One thousand nine hundred and twenty-six and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 196, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of of the Company within the meaning of the Companies Act, 1956."

3. (As an Ordinary Resolution)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 85 of the Articles of Association of the Company, Balmer Lawrie & Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (As a Special Resolution) —"That pursuant to Clause 12 of the said draft Agreement referred to in Article 85 of the Articles of Association of the Company Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion of the outgoings payable by Balmer Lawrie & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (As a Special Resolution) —"That Article 96 of the Articles of Association of the Company be deleted and the following new Article 96 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250/- for each meetting attended by him."

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

Calcutta,
21st December, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 14th day of January, 1957, at 12-30 o'clock in the after noon to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1(a) (As an Ordinary Resolution)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie & Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1(b) (As an Ordinary Resolution)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie & Company Limited be and are hereby reappointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1(c) (As an Ordinary Resolution)—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie & Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(a) and 1(b) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(b)."

2. (As a Special Resolution)—"That Articles 106, 107, 108, 109, 110 and 111 of the Articles of Association of the Company be deleted and the following new Article 106 substituted therefor:

"Balmer Lawrie & Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. H. G. Sinclair, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs 50,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 50,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000/- payable under (a) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000/- each and a final monthly instalment of Rs. 6,000/- payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 27th day of January One thousand nine hundred and twenty and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to

reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

3. (As an Ordinary Resolution)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited and any associate or associates of their (as defined in subsection (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered in to by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (As a Special Resolution)—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion of the outgoings payable by Balmer Lawrie & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (As a Special Resolution)—"That Article 85 of the Articles of Association of the Company be deleted and the following new Article 85 be substituted therefor: 'Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 150/- for each meeting attended by him."

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

Calcutta,
21st December, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolutions and an explanatory statement are annexed to this Notice.

Stock Exchanges

1956 ENDS ON A SUBDUED NOTE

Calcutta

STOCKS markets have wound up the year on a subdued note. The performance over the year was generally unimpressive as the markets had to cross various hurdles. Except for the peak levels touched during the second half of the year, the overall trend of prices remained downward.

It would be recalled that, for the first time since the prosperous year of 1946, investors in industrial shares were benefitted considerably in 1955 due to the Government's practical policy for the economic development of the country and the helpful attitude toward the private sector.

In contrast, markets in 1956 were thoroughly in a despondent mood with confidence generally lacking in the outlook, mainly due to the radical changes in the Government's fiscal and monetary policy.

With the result, professional operators were unable to form a constructive idea of the future trend of prices; and, having lost heavily at various stages, they were in no mood for further ordeals. Investors, on their part, found their portfolios gradually depreciated in value, which made them nervous about their holdings.

Anxiety is now felt as to what will be the actual state of affairs when the market reopens next year. One major uncertainty is the Securities Contracts (Regulation) Act which may come into force. As there is a possibility of the 'kerb' dealings being restricted substantially, price trends in the coming year will reflect the investment ideas more faithfully if speculative manipulations are restrained.

Majority of the operators feel that, from the speeches and indications given by the authorities, it is difficult to anticipate any news of beneficial effect to the market. It remains to be seen whether there will be at all a turn in the tide or whether conditions will continue worsening.

Meanwhile, the Calcutta Stock Exchange remained open for trading only on Thursday and Friday due to holidays on Monday to Wednesday for Xmas. The market, which was already gasping for breath, received once again a rude shock following the Governments proposal not to permit any more bonus issues by companies till the Budget. Values rolled down helplessly due to non-stop selling orders in 'kerb' dealings during the holidays.

But for the prospects of increased economic aid from the USA and the reports of the World Bank granting a further 20-million dollar loan to the Indian Iron & Steel Company for the expansion programme, the steady and sharp decline in prices would not have been halted at the close of the year.

Price movements were also influenced by the final settlement adjustments on Thursday. In this connection, it would be recalled that the interim clearing was arranged by the Committee of the Stock Exchange on the 18th December. Following were the final settlement rates:—Indian Irons Rs 29-0; TEXMACO Rs 20-3; Orient Paper Rs 32-1; National Jute Rs 19-10; Burrakur Coal Rs 21-7 and Indian Copper Rs 3-11.

Following were the closing rates of a few selected scrips:

Indian Finance

CZECH EXHIBITION SUPPLEMENT

TRADE PROSPECTS

CALCUTTA, DECEMBER 1, 1956

Iron Ore—Basis for Indo-Czech Trade

WHEN I learnt that Czechoslovakia intended to stage an industrial exhibition in Calcutta, my interest was immediately roused. For, this East European country belongs to that category of nations which are in the process of intensifying their steel production but which, at the same time, by no means possess adequate indigenous resources of their own. In particular since 1953, Indian Finance has been waging a lone war in the fight to bring recognition for Indian iron ore as an exchange earner. I may recall that, three years ago, we published a supplement in which we offered a complete scheme as to its details for intensifying the export drive in iron ore. Since then, naturally, I have been following closely all such developments as augur the possibility of new and larger markets for India's iron ore.

When, therefore, I heard that Czechoslovakia intended to display the industrial machines that it manufactures, I felt immediately impelled to study the prospects of Indo-Czech trade as they may, given good luck, statesmanship and initiative on both sides, evolve.

I found, for example, that the value of Indian exports to Czechoslovakia was placed at Rs 2.75 crores in 1953-54; and that, in the current financial year, the annual rate of exports more or less approximates this figure in the first three months. I find, too, that India's imports from Czechoslovakia are rising very sharply In 1955-56, the value of imports had more than doubled from Rs 1.25 crores to Rs 2.89 crores; and, in the first quarter of 1956-57, imports have already touched a figure of Rs 1.62 crores. I then looked into the exports of iron ore from this country to Czechoslovakia. The total shipments in the four years to March 1956 have just exceeded the one million ton mark. Exports of iron ore in the first quarter, at 80,240 tons, compare very hearteningly with the 1955-56 total of 186,527 tons. But this is by no means enough, especially if we are to secure more of our industrial machinery needs from Czechoslovakia.

As far as the desirability of utilising Czechoslovakian machinery is concerned, I understand that the quality of the products is of satisfyingly high calibre. I learn that Czechoslovakia can claim a pioneering role in the establishment of sugar refining plants all over the world. But the heavy machinery which we, and the rest of the world, choose to get from Czechoslovakia is not restricted to plant and equipment for sugar mills. On the contrary, some of the trade mark names, such as Skoda, are said to have an international reputation.

If, therefore, the quality of the machinery of Czechoslovakian origin is satisfactory, there is no reason why, provided there is sufficient inducement and advantage, we should not obtain an increasing proportion of our requirements from Czechoslovakia. But, as I said, a pre-requisite postulation is that there should, for India, be sufficient inducement and advantage.

What can this inducement be? and what the advantage that India can derive? The answer lies in two words: Iron Ore.

One of the real difficulties that India has to solve is the foreign exchange problem. Although, even in this regard, there are grounds for believing that we shall not find it impossibly difficult to put our hands on the foreign exchange necessary to fill the balance of payment deficit over the period of the Second Plan, an important source for foreign exchange earnings has, as was pointed out in Indian Finance two or three weeks ago, to be in iron ore. On that occasion, we suggested that export promotion schemes must be drawn up with a view to increasing our foreign exchange earnings to the extent of Rs 190 crores. We believe that this figure is not difficult of accomplishment, for the simple reason that an annual export of 5 million tons of iron ore could earn the equivalent in foreign exchange of Rs 30 crores a year. In other words, the bulk of the additional earnings of foreign exchange has to be found from exports of iron ore.

We make bold to suggest that Czechoslovakia is admirably fitted to receive our solicitous attention as a country which could be an important customer for India's iron ore. Exports of Indian iron ore to Czechoslovakia, in 1953-54, were as high as 494,650 tons. Thereafter, shipments have fallen considerably. We believe that there is prospect for Czechoslovakia annually to absorb an additional one million tons of Indian ore. Even on the basis of iron ore at $10 a ton, the earnings from the export of one million tons would work out to Rs 5 crores.

We fancy that Czechoslovakia will be interested in a regular supply of iron ore for this quantity. This is particularly so, since Czechoslovakia is consistently attempting to increase its productive capacity; the basic raw material for such expansion in industrial output is steel; and, ultimately, steel can be made only if iron ore is sufficiently available. It should, we feel, be possible to impress upon Czechoslovakia the possibilities of a substantial expansion in Indo-Czech trade. On the one hand, its exports are what we need for the implementation of the Second Plan. On the other hand, our exports are the basic raw material upon which Czechoslovakia can add further to its industrial capacity.

The Calcutta exhibition may thus be said to serve one important purpose. It will display, to the Indian industrialists, the array of plant and machinery which it is possible to secure from Czechoslovakia. I suggest that the second purpose, the export of iron ores to Czechoslovakia, must be fruitfully achieved by means of discussions, if necessary, at the level of Government. For Government's part, let us remember that they will have two very strong factors upon which to bargain. Government's first source of strength lies in the need that Czechoslovakia has for obtaining its requirements of iron ore; and the second source of power lies in the fact that India will be able to buy increasingly from Czechoslovakia only if Czechoslovakia's imports from India also rise correspondingly.

Acknowledgement is made of the help rendered by Mr J. Buda in the publication of this Supplement. Mr Buda has been in charge of the Czechoslovak Exhibitions staged in this country.

We have also been assisted by Mr C. L. Savara of Bombay, who has been energetically acting as liaison for the Czechoslovak Exhibition.

Extra copies of this Supplement may be obtained at Re 1 per copy.

12 Roller Sugar Cane Crushing Mill.

Sugar Refining Plants

CZECHOSLOVAKIA is one of the most important sugar exporting countries as also one of the most important exporters of sugar-refining equipment. Designing and equipping refineries both for the production of beet and cane sugar is a traditional job of the Czechoslovak machinery industry, which has won it a world reputation in this line as early as the last century.

To the end of the nineteenth century, the Czechoslovak machinery industry had attained a delivery record of more than a hundred fully equipped sugar refineries of varying capacity. To this day the industry has delivered to all parts of the world, complete equipment for more than five hundred refineries for the processing of both beet and cane sugar. This means that almost one sixth of all sugar refineries now extant has been either fully or almost fully designed and stocked with Czechoslovak equipment. The Skoda Works, the CKD Works and the First Brno Machinery Works were the initiators of this branch of industry in the lands of Bohemia and Moravia; and, at the same time, were foremost in fostering the development of the world sugar-refining industry.

While refineries, delivered to European countries, were designed for the manufacture of beet-sugar, cane sugar refineries were being designed and delivered to countries overseas. Primitive methods of extraction of the syrup juice by means of wooden rollers and its subsequent boiling in kettles over an open fire were gradually replaced by refineries with the most progressive equipment, the final product of which is white refined sugar in different forms.

Czechoslovakia has delivered sugar refining plants to the following countries: Afghanistan, the Argentine, Belgian Congo, Belgium, Bulgaria, Brazil, Burma, Canada, Chile, China, Egypt, France, Great Britain, Iran, India, Italy, Java, Latvia, Morocco, the Netherlands, Pakistan, Peru, Poland, Portugal, Rumania, Siam, Spain, Sweden, Syria, Turkey, the Union of Soviet Socialist Republics and Yugoslavia. As can be seen from the above list, deliveries have been effected even to countries which have an extensively developed industry of their own. In every instance, the owners of the refineries gladly testified to the quality of the Czechoslovak equipment and particularly stressed its progressive technical design.

Following the second World War, the Czechoslovak producers began again to seek their interrupted trade relations with the different world markets; and Czechoslovak industrial designers and engineers, who had at earlier times played such an important part in the development of this branch of industry, began again to devote their utmost energy to the further improvement of the methods and machinery extant. Their endeavours have met with signal success. At present, the types of sugar refining plant delivered by Czechoslovakia are among the world's best and testify anew to the high level of the Czechoslovak machinery industry in this line of production.

Recently, new modern sugar refineries have been set up in Eastern Europe, Syria, Iran, India, Finland and Uruguay and the construction of one large beet sugar refinery is under way in Northern China.

The sugar plant, erected by Czechoslovak engineers at Homsu in Syria and designed to process 600 metric tons of sugar beet per day, exceeds this capacity and yields daily 800 tons. Two sugar refineries, which have been delivered to Iran with a capacity of 700 tons of sugar beet per day, also exceed their scheduled output. A Czechoslovak equipped refinery has been also erected at Veramin in Iran. In Finland, there is a refinery with a daily capacity of 1,000 tons and another one of the same size has been erected by Czechoslovak engineers in India, where they delivered, moreover, the complete equipment of another refinery for cane sugar. All these refineries, just like the new sugar plants erected in Uruguay and several other places, perform to the utmost satisfaction of the managements and have a capacity in excess of that which has been guaranteed on delivery.

The utmost care and effort are devoted in Czechoslovakia to the further development of production methods in the sugar refining industry. A staff of expert technicians studies all questions of improvement of the existing types of machinery and production methods. New ideas are constantly being examined and developed by the Czechoslovak Institute for Scientific Research. These include not only improvements in the design of the mechanical equipment, but also more rational schemes of the production of sugar itself.

As can be seen from the above, present deliveries of sugar refining plant both for the production of beet and cane sugar comply, as has been the case in the past, with the most exacting requirements from the technical as well as the economic standpoint. The Czechoslovak foreign trade enterprise, TECHNOEXPORT, in Prague will be glad to supply all further information.

Modern Czechoslovak Sugar-refineries.

Leadership in Machinery Exports

THE Czechoslovak industry is known in the whole world to have a very high standard, producing the most varied good quality, first class and durable products. Czechoslovakia delivers to various countries in all the continents products of both light and heavy industry, especially Czechoslovak automobiles, motorcycles, bicycles, railway carriages, engines, suction excavators, river boats for the transport of people as well as goods, products of the food industry such as sugar, malt, Pilsner beer, products of the chemical industry as for instance tar colours, medicines, products made of ceramic, building machines, tractors, excavators, cranes, giant forges, turbines, presses and many others.

A great part of the Czechoslovak export consists of deliveries of complete factories, machinery equipment of whole establishments and the complete outfitting of industrial enterprises. Only a very mature industry with an experienced and efficient technical staff and labourers is able to realize orders of such kind and size.

In great demand for export are Czechoslovak sugar-factories, which the Czechoslovak factories supply complete, with all the machines as well as auxiliary equipment, which are installed by Czechoslovak technicians at their place of destination. Sugar factories for both cane and beet sugar are supplied. Until the end of the nineteenth century Czechoslovak factories equipped more than 100 complete sugar factories of various capacities. Up to the present the deliveries add up to more than 500 factories and factory equipments, including refineries, which are installed in all the parts of the world.

In Homs in Syria a sugar factory is working with a capacity of 800 tons a day. Two sugar factories in Iran, built with a capacity of 700 tons a day, exceed the guaranteed amount; in Veramin in Iran a sugar refinery is working with great success. In Finland a sugar factory is working with a capacity of 1,000 tons, the sugar factory in India has the same capacity. In the other half of the world, in Uruguay, Czechoslovakia equipped another sugar factory, also with a great capacity.

Another popular export article are distilleries and breweries. Syria has a Czechoslovak distillery; in San Nicolas in the Argentine, the greatest distillery in the world, was built with a daily capacity of 2,300 hectolitres of waterfree spirit. Completely equipped breweries were installed in Salisbury, in Port Elizabeth in New Lands in South Africa and in Paysanda in Uruguay. The last mentioned has a capacity of 10,000 hectolitres of beer a year. The machinery equipment was delivered to breweries in Gavle and Varberg and to malt-houses in Honsberg in Sweden.

Czechoslovakia outfitted many electric power plants in the whole world, both for steam and water. A number of hydro and steam power plants were delivered to Bulgaria, further ones to Poland, Hungary and Rumania, the last being a generating station with an output of 200 MW. The world famous Kaplan turbines are exported to Denmark, Holland, India, China and other countries.

In South Patagonia the installation of a giant coal arranger for the local coal mine is just being finished. In the village of Amiris in Egypt, near Cairo, an enormous pumping station was installed, serving to remove sewage from the municipal sewage mains and for irrigation purposes, the efficiency of which is 228,000 litres per minute.

The Czechoslovak machinery industry projects manufacturers deliver whole outfits of cement-works of every efficiency. The production programme contains compressors, pneumatic tools for mining, excavators, cable railways, diesel-engines, shaking troughs, elevators, grinders, mills, granulators, furnaces and machinery for quarries. During the last few years Czechoslovakia delivered cement-works to the Argentine, Syria, Sweden, Lebanon and Egypt. At the present a large cement-works is being built near Kabul in Afghanistan.

Czechoslovakia also belongs to the important suppliers of apparatuses of the chemical industry. A great number of apparatuses for the production of synthetic ammonia were delivered to the USSR and the People's Democracies. The nitrogen works in Koping in Sweden are working with machinery equipment from Czechoslovakia. The factory for Methyl-alcohol in Rio Terceto in the Argentine was completely equipped by the Czechoslovak industry.

The Czechoslovak factories supply complete outfits for works of the petroleum industry. These are especially drilling machines, boring towers, reservoirs, pumps, complete refineries of mineral oils, cisterns, pipes, fire extinguishing equipment, auxiliary motors, tractors and many other things, which are connected with the gaining of naphtha. Czechoslovakia also exports refrigerating chambers, ice-safes and freezing-machines. It can install factories of the food industry anywhere; especially famous are the modern Czechoslovak dairies.

Czechoslovak textile machines have a good name on foreign markets. The Czechoslovak factories, however, are able to deliver whole textile factories, equipped from the machine room, the most modern textile machines, to the last auxiliary aggregate. Such a factory, including the technological parts and auxiliary power station, was delivered to Turkey. Egypt, on the other hand, bought a complete shoe-factory.

The Czechoslovak machinery industry has gone through a number of decades of development of plywood machines. It can, therefore, export with success not only single machines for modernising already existing factories, but also complete factories equipped according to the most modern scientific facts.

The advanced and modern Czechoslovak industry, built for generations and led by able and experienced specialists, can supply the world market with good quality products, which can hold their place against even the strongest competition.

The Czechoslovak products are of very good quality, efficient, reliable and cheap. They, therefore, hold their place in the world, and reach the world markets.

Construction of New Cement-works.

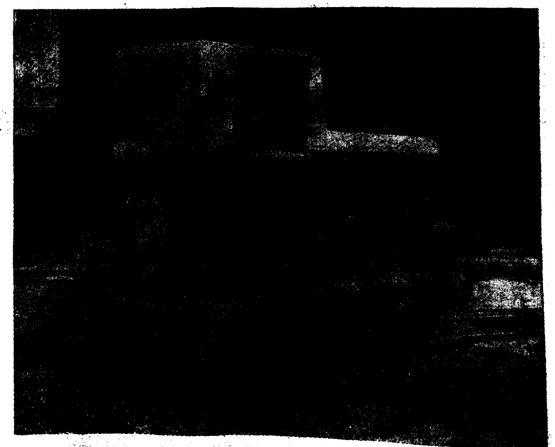
Machines for the Building Industry

THE rapid development of building in Czechoslovakia called forth a growing demand for efficient and reliable machines for the building industry. The result of the combined efforts of the Czechoslovak designers and building experts, is in the form of a great number of machines, meeting all requirements of modern building. The manufacture of machines covers not only the home market, but is also constantly on a larger scale directed toward export. The results given by these machines in the various parts of the world, and in all weather conditions, justify the statement that Czechoslovak building machines can hold their own even against the strongest international competition. Their characteristics are: good quality as well as beautiful finish, efficiency, reliability and safety in handling.

Czechoslovakia has besides been exporting, for a number of years, various other types of machinery, as also many types of building machines and transport machinery. Czechoslovakia supplies the foreign customer with small as well as heavy building machines, special machines for road-building, railways, air fields, and transport machinery of all kinds from diesel engines to small conveyors, small building as well as large harbour cranes and many other machines and machinery. Most of these machines are driven by the proved diesel motors of the trade-mark 'SKODA'; their trade-mark—the winged arrow—succesfully penetrated to all the world markets, because these diesel motors proved reliable and efficient.

In the following paragraphs, we will mention only some of the building machines and transport machinery which Strojexport delivers to the whole world on very short delivery terms.

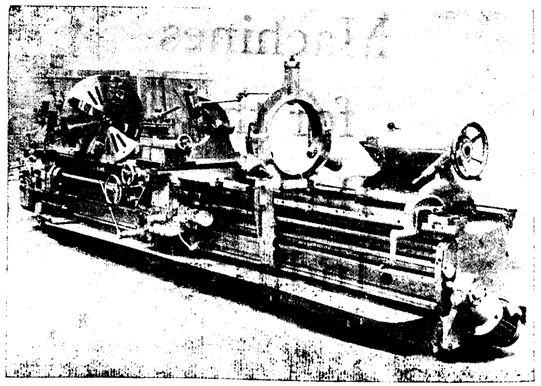
The following excavators serve larger earth moving work: type D500 with a shovel capacity of 0.5 m3, type Mb2 capacity 1 m3, type E25 capacity 2,5, m3. The first type is furnished either with a diesel or electric motor, the second type with a diesel and the third with an electric motor or steam engine type P23. Bucket dredgers type RK25 with a diesel or electric motor have also proved very reliable. For the production of gravel there are various crushers under the trade-mark 'SKODA': type V-3-2/320/200/ and V-9/2/1200/900. These crushers have great advantages; they are made of steel and all bearings are furnished with self-aligning roller bearings, which ensure a faultless and long lasting service. Strojexport further exports different kinds of granulators and gravel production can be suitably supplemented with a sorting screen of Czechoslovak production.



Small diesel engines of various types and widths serve for the transport of excavated or moved earth or gravel; they can also be supplied with tipping trailer trucks for field railways. For the transport of material on building sites. Strojexport offers various portable slat conveyors type 408, as well as portable conveyors type 404, 406, and travelling conveyors 400 and 405. It can also supply special conveyors, which are constructed according to given drawings, taking into consideration the special wishes of the customer. Very popular abroad are also the rope-ways and rope cranes for the transport of materials on larger building sites. Accumulator high-lift trucks type AV 1522, low-lift trucks AN 1522 and platform trucks AP 1522 are intended for the transport of smaller loads.

Strojexport also exports different kinds of light and heavy metal constructions, erection masts, masts for electric current wires, complicated bridge constructions, etc. Also, an important item of export are cranes of various types; with electric motors and a carrying capacity of 1,5 tons for warehouses, building cranes with a carrying capacity of 3 tons for the building of houses, truck-mounted cranes with a carrying capacity of 4 tons. On building sites and in erection halls, gantry cranes prove very useful. For lifting and transport of loads, electric pulley blocks are available which have a carrying capacity up to 5 tons. The pride of the Czechoslovak building industry are harbour cranes, manufactured with a carrying capacity up to 75 tons; many cranes of this type have already been exported to Sweden, the Argentine, Greece, Yugoslavia, France, Turkey, Roumania, Portugal, Uruguay and other countries. For lifting smaller loads, jacks are manufactured under the trade-mark "Brano"; they are relatively light (14 kg), but can lift loads up to the weight of 2.00 kg. For lifting heavy loads (bridges, carriages, ships, etc.) up to the weight of 200 tons and to the height of 3600 m, jacks of the trade-mark "Seguro" are being used. These jacks can also be used for pressing wheels, straightening shafts, etc. Very useful in warehouses which are damp and dusty, is the electric pulley block L-III-30, which moves loads up to the weight of 5 tons very quickly.

Already well known in the whole world are the Cezchoslovak "Skoda" road rollers. They are being produced in types NV4, NV7, and NV10 weighing 4 tons and with a ballast of 6,7,9, 10 and 12 tons. The larger of these types is furnished with a scarifier of old roads, electric starter, reflectors and a covered seat. Strojexport can further offer its customer abroad all kinds of building machinery: mobile concrete mixers with a gravity mixing system and with a tilting drum with a capacity of 65 to 125 litres; mobile mixers with an untilting drum type Rs 250 with a capacity of 250 litres; mixers J500 and K750 with a capacity of 500 or 750 litres, which are mobile and have a tilting drum, and counterflow mixers, specially produced for the manufacture of fine concretes (for prefabricates) with a capacity of 250 or 500 litres, mobile or fixed. All these mixers have either a diesel or elecric motor. From amongst the other building machinery which Strojexport can deliver mention may be made of immersible, alignable and surface vibrators, various vibratory machines, sets, etc. Immersible vibrators are e.g. type PV 500 with 7500 vibrations per minute; type IT1135 with 8400 vibr/min. (both types with an electric motor); vibrators with petrol motors PVB500 with two flexible shafts; special immersible vibrators D1135 for working great areas, vibrations of the group EVU65, 250 and 1000, group A335 to A4035, as well as type EV2, often used for prefabrication. From amongst the surface vibrators, Strojexport can deliver concrete surface smoothing machines VH300/600, VH300/1500, compressors Z500 and Z1000, small vibratory plates VD2, very efficient multi-period vibrators, which are constantly in greater demand and which ensure complete safety while handling type A541; immersible vibrators IT 941 with frequency changer, and their relative switchboards, vibrating tables VS-1 and VS-150, vibrating stools, hand rammers B-355 etc. With regard to the fact that in all branches of the building industry there is a constantly growing demand for vibrators, the Czecholovak designers and tecnnicians pay great attention to this type of building machine and supplement them constantly with new types.

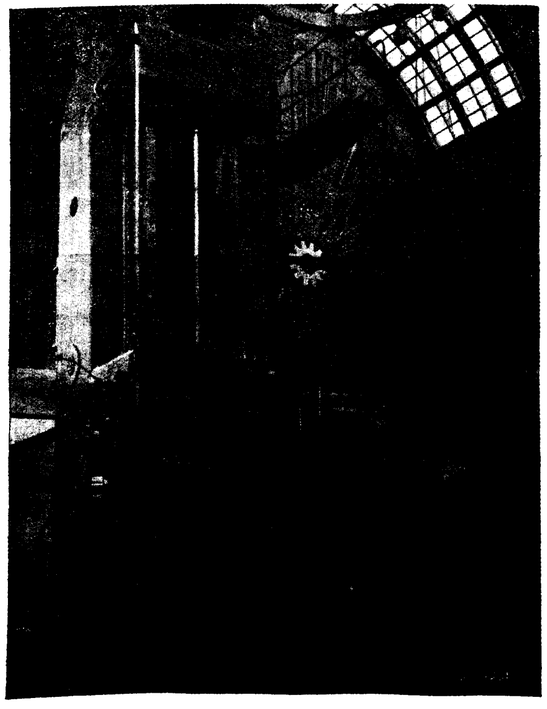


In the survey of building machinery which Strojexport supplies, we may mention mortar pumps type OB2 with an electric motor which, when joined to a compressor, works as a plastering machine. For strengthening dams, banks, damaged concrete structures, etc., Czechoslovak cement injectors type CI-1 are being used; this injector, which can also be used for building tunnels and for geological research, is supplied together with the compressor for electrical or diesel motors. Especially suitable for putting on layers of concrete is the cement gun type CD-151. For all kinds of building work, Strojexport also supplies compressors of all kinds and types, electric as well as diesel. On larger building sites, machine shears for cutting steel and fittings up to the diameter of 40 mm proved very useful. The emptying of trucks and other carriages, containing loose material, is done by the mechanical shovel MLJ2 with an electric motor, which empties a truck containing sand, coal groats grain etc. within 20 to 40 minutes.

This survey does not by any means give all the kinds and types of machinery, which Strojexport can supply. The Czechoslovak industry is working on new types, to serve customers in any part of the world by the end of the year 1956.

Industrial Diesel Locomotive.

Machine Tools for the Indian Market



Centre Lathe.

SINCE the time when the first machine tool was built in Czechoslovakia, the Czechoslovak machine tool industry has passed through many hectic years of development. On the foundation of small factories and work-shops, provided with rather primitive equipment and machinery plants of low producing capacity, mammoth enterprises have arisen. With its long years of existence, the Czechoslovak machine tool industry, equipped according to the latest technical achievements and with high output, manufactures every year thousands of first-class machine tools.

Czechoslovak trade-marks such as SKODA, CKD, TOS, PODHAJSKY, KAMENICEK and others are known the world over and have served for many years the cause of prosperity of mankind. Approximately 500 different types of up-to-date metal-working machines are manufactured at present by the Czechoslovak industry. And, in spite of their high technical perfection and modern design, these metal-working machines are characterized by a simplicity of operation which makes it possible to put at their controls less qualified workmen, an advantage of no mean order.

Even countries with a high standard of industrial development, such as Great Britain, USSR, Sweden, France, Germany, etc., to which Czechoslovakia has been exporting for a number of years, appreciate the excellent quality of these machines.

Horizontal Boring and Milling Machine Model HVF-200.

The Republic of India is a traditional market to which the Czechoslovak machine tool industry sells since some time ago its products, either as plant equipment for complete factories, or again as individual machines to complement the existing equipment. It is not intended to enumerate in this article all the many factories put up and equipped in the course of the years of Czechoslovakia's connections with India, by Czechoslovak works like SKODA, etc., nor will be listed the great number of factories and workshops where Czechoslovak metal-works machines are being used. Suffice it to mention that, in the workshops of the Indian Railways, for instance, hundreds of these machine tools are in operation.

Many Indian users have sent to STROJEXPORT, the Czechoslovak exporting corporation in Prague, written testimonials of their satisfaction, as, for instance:

The Principal, Government College of Technology, Lawley Road, Coimbatore.

Shri J. E. Vaz, B.E., A.M.I.E., General Superintendent, P.W. Workshop and Stores, Madras 1.

Sri K. Koman Nayar, B.E., Principal Karnataka Polytechnic, Mangalore 4.

Sri S. Subramaniam, B. E., Mechanical Engineer, Government Bus Service, Madras 2.

The Principal, Rayalaseema Polytechnic, Bellary.

C. D. Haliburn, Engineer Supervisor of The Government of India Ministry of Transport, Lighthouse Workshop, .G.T. Madras, 1. and many more.

Since the end of the Second World War, business connections between India and Czechoslovakia have grown very much stronger as compared with the time before the war. The curve of sales of Czechoslovak metal-working machines to India displays a continuous and steady upward trend. This is a most gratifying experience for Czechoslovakia as it gives conclusive proof that the workmanship of the machines is good and that industrialists of India, realizing this, buy them. During the last few years, two exhibitions of Czechoslovak metal-working machines were arranged in the Republic of India. Both aroused the liveliest interest not only of the public in general, but also—and this is much more important—of the expert circles of Indian industrialists.

Facts to Know About Trade with Czechoslovakia

First of all, it is necessary to make a general remark that Czechoslovakia is a country with an old trading tradition where the norms and arrangements of international trade have been well known and recognised. Specific points arising from the socialist order do not constitute any obstacle to smooth foreign trade nogotiations; on the contrary, they provide mutual relations with the most desired element of confidence.

Czechoslovak Foreign Trade is incorporated within the system of planned economy so that the tasks set by the economic plans are reflected in the growing demands for import and, on the other hand, for the constantly increasing export capacity. The incorporation of the Foreign Trade Corporations such as Strojexport, Skloexport, Centrotex, Koospol and others within the national planning structure, however, does not alter the fact that they are independent economic units with all organisational and legal effects. Each Foreign Trade Corporation possesses an explicit right to trade with a certain amount of more or less related kinds of products, both in export and in import. Though the delimitation takes into consideration the requirements of production or consumer sectors, the decisive factors in choosing the amount and nature of the goods concerned, however, are the trading-political purpose and the popularity of the goods on the international market. The organisation of these large corporations makes it posible for their trade parties to learn quickly the wide range of Czechoslovak products and to make sure, for example, what possibilities there are to complete a certain equipment, etc. The big volume of the import operations of these corporations equally permits remarkable advantages, as far as the trade and transport technical are concerned.

As regards their legal position, the Foreign Trade Corporations are independent lawful bodies acting on behalf of themselves and on their own account. They are independent economic organisations with a fixed amount of property at their own disposal. The state is not responsible for the obligations of the Foreign Trade Corporations and, on the contrary, the property of these corporations cannot be used for settling the debts of the state. The justification of this principle has been recognised in several cases by international law.

With regard to the loosely connected operations of the Foreign Trade Corporations with the planned development of the whole economy, the meaning of the term 'liberalisation' is alien to the Czechoslovak Foreign Trade, if we think of its practice in western countries trying to eliminate the quantitative restrictions which, however, says nothing about the volume of the liberalised trade. On the other hand, the growing capacity of the Czechoslovak market gives possibilities surpassing the advantages of liberalisation. The sale prospects and the guarantee that the Czechoslovak import will be constantly increasing—even in crises—are serious arguments. A number of states have, therefore, generalised the rules of liberalisation even with regard to the Czechoslovak goods having thus ensured an extension of their own exports.

The large capacity and the trading volume of the Foreign Trade Corporations permit them to spend considerable funds on extensive advertising campaigns of their goods by taking part in exhibitions and trade fairs which enable them to enter into direct negotiations with interested parties on the basis of their exhibited and demonstrated goods. In the case of exhibitions of several Foreign Trade Corporations or even of an exposition on a national scale, the chief organising body is the Czechoslovak Chamber of Commerce. The Foreign Trade Corporations establish and maintain relations with their customers through their specialised delegates and through setting-up a network of representatives in the purchasing countries.

The fact that Czechoslovak foreign trade is concentrated in the above mentioned enterprises constitutes a significant advantage, particularly in engineering branches where technical aid in the installing of equipment, in putting it into operation, in its maintenance, extension and deliveries of spare parts is becoming ever more important in export. The Foreign Trade Corporations are capable of ensuring complete technical aid, being backed by the traditional high level of the Czechoslovak techniques.

The economic capacity enables Czechoslovak enterprises to meet their customers' demands in solving their financial questions while credits are rendered at a very reasonable interest and under purely business terms. A sympathetic attitude is given in Czechoslovakia to proposals of transactions providing the settlement of delivered equipments by means of gradual deliveries of home products from the purchasing country. In the case of disputes, the Czechoslovak Foreign Trade Corporations prefer settlement by arbitration the advantages of which are professional attitude and speedy procedure. The Arbitration Court established by the Czechoslovak Chamber of Commerce in Prague has proved to be an impartial body strictly observing conventional autonomies, international arrangements and conventions. Czechoslovakia is also a member of the Geneva Conventions of 1923, which guarantee the possibility of carrying out the judgment in member states. No such case has yet occurred that a Czechoslovak firm would not obey the arbitration judgment or that dues should be exacted by means of execution.

All general information about the organisation, functions and way of dealing with the individual institutions of Czechoslovak Foreign Trade is supplied by the Czechoslovak Chamber of Commerce, which also acts as an intermediary between the foreign parties and the Czechoslovak enterprises. The Czechoslovak Chamber of Commerce also verifies trade, consular and custom invoices, issues verifications on the origin of goods as well as other certificates. Being authorised by Czechoslovak and foreign committees, it may also inspect the exported and imported goods.

In order to spread information on Czechoslovakia in general, and on foreign trade in particular, the Czechoslovak Chamber of Commerce issues a number of magazines in foreign languages:

Economic Bulletin (economic and trade-political events), Czechoslovak Foreign Trade (with prevailing trade trends), Glass Review, Czechoslovak Heavy Industry, Kovo-Export (light industry), Motor Review (means of communication).

CORPORATIONS FOR FOREIGN TRADE

The actual conduct of foreign trade is in the hands of corporations for foreign trade, numbering altogether 19, of which two are corporations for international transport and forwarding. Each corporation deals in a precisely defined section of commodities and exclusively with that. In view of the industrial potentiality of Czechoslovakia and the big volume of its foreign trade, the Czechoslovak corporations for foreign trade represent huge commercial enterprises that carry great weight in the markets of the world. They are enterprises well equipped from the angle of professional and technical capacity as well as appropriately specialized, and co-operate closely with the manufacturing undertakings.

The corporations for foreign trade are independent economic units, equipped with their own foundation capital. They are juristic persons and operate in their own names. The State undertakes no guarantee for the obligations of the corporations for foreign trade; while, on the other hand, the assets of the corporations cannot be touched in order to satisfy claims against the State.

The statutes of the corporations designate its name, the purpose of its trade, etc., and include provisions relating to representation of and signature for the corporation, and to the establishment of branch concerns. The statutes also define the organs of the corporation and the scope of their authority and

Important data concerning corporations for foreign trade recorded in the registers of the erprises kept at a court of law.

t the head of each corporation, re is a general manager who is ponsible for the operational ties and auxiliary formations. n Czechoslovakia the following porations are now functioning:

ALIMEX,
oreign Trade Corporation for he Import and Export of Ores, Metals and Solid Fuels, Prague II.

RROMET,
oreign Trade Corporation for the xport and Import of Metallurgical Products, Praha II.

ROJIMPORT,
oreign Trade Corporation for the mport of Machinery and Industrial Equipment, Praha I,

RO/EXPORT,
oreign Trade Corporation for the xport of Machinery and Industrial Equipment, Praha II.

CHNOEXPORT,
oreign Trade Corporation for the xport of Complete Industrial lant, Praha II.

OTOKOV,
oreign Trade Corporation for the port and Export of Vehicles and nt Engineering Products, Praha II.

VO,
oreign Trade Corporation for the mport and Export of Precision ngineering Products, Praha VII.

CHEMAPOL,
Foreign Trade Corporation for the Import and Export of Chemical Products and Raw Materials, Praha II.

CZECHOSLOVAK CERAMICS,
Foreign Trade Corporation for the Export and Import of Ceramic Ware, Praha II.

GLASSEXPORT,
Foreign Trade Corporation for the Export of Glass, Praha II.

JABLONEX,
Foreign Trade Corporation for the Export of Jablonec Articles, Jablonec nad Nisou, Gottwaldova 54.

LIGNA,
Foreign Trade Corporation for the Export and Import of Timber and Products of the Woodworking and Paper Industries, Praha II.

PRAGOEXPORT,
Foreign Trade Corporation for the Export and Import of Smallware and Outfitting Articles, Praha II.

CENTROTEX,
Foreign Trade Corporation for the Import and Export of Textile and Leather Goods, Praha VII.

KOOSPOL,
Foreign Trade Corporation for the Import and Export of Foodstuffs and Agricultural Products, Praha VII.

ARTIA,
Foreign Trade Corporation for the Import and Export of Cultural Commodities, Praha II.

FOREIGN TRADE TRENDS

Like all the decisive sectors of the Czechoslovak national economy, foreign trade, too, is nationalized. The purpose of a monopoly of foreign trade is to assist economic building up and the growth of the welfare of the country's population; to protect the domestic economy from the unfavourable effects of oscillations in the world market; and, at the same time, to extend peaceful economic co-operation and the exchange of commodities with other countries on sound bases advantageous to both sides.

By virtue of the volume of its import and export trade, Czechoslovakia ranks among the world's important purchasers and suppliers. A steadily increasing capacity to import is based:

—on the need to import raw materials for a highly developed heavy and light industry,

—on the need to import a wide range of consumer goods, food, and also manufactured goods to meet the ever-growing requirements of the population.

The preliminary conditions for ensuring these import requirements Czechoslovakia possesses in its export which is based,

—on a many-sided and at the same time highly specialised industrial and agricultural production,

—on the steady growth of the volume of export trade, and of the kinds and quality of goods exported.

Czechoslovak economy avails of tradition, of experience in production, of high productive capacity, and a planned surplus of goods in many branches for the purpose of ensuring by the way of foreign trade those raw materials and finished products which it lacks. For Czechoslovakia, foreign trade is a means that makes possible a more rapid upward trend.

At the beginning of the first Five-Year Plan (1949—1953), the value of Czechoslovak exports represented approximately one-fifth of the national income.

The successful expansion of all branches of the national economy in the course of the fulfilment of the Five-Year Plan was accompanied by a considerable growth in the foreign trade turnover, as is shown by the following indices, for which the year 1948 (= 100) is taken as basis:

	1948	1949	1952	1953	1954
Imports ...	100	105,4	128,5	129	136,9
Exports ...	100	107,1	116,1	131,9	133,5
Turnover ..	100	106,3	122,0	130,5	148,5

From the figures given above, it will be seen that the volume of Czechoslovak foreign trade from the year 1948 to 1953 increased approximately by one-half. Such an advance proves that the high rate of economic development did not follow any policy of self-sufficiency for its own sake, but manifested itself in increased import requirements both in productive investment material and raw materials and in consumer goods. Simultaneously, however, the all-round industrial expansion enabled the increased import needs to be covered by the export of commodities in which the world manifested an interest.

CZECHOSLOVAK EXPORT TRADE

To a larger or smaller extent, all the main industrial branches work for export, particularly, however, those like the engineering, iron and steel, textile, ceramics, glass, footwear, chemical, woodworking, paper and sugar industries. In the period between the two world wars more than 5% of the world export of industrial products (the USSR excluded) fell to Czechoslovakia, so that it ranked among the world's 10 greatest exporting countries. Post-war developments have only strengthened this position. The building up and reconstruction of Czechoslovak industry have at the same time produced important changes in the structure of export trade, in which machinery has acquired a great predominance over consumer goods, as is apparent from the following table:

Shares of machinery and consumer goods in Czechoslovakia's export in%

	1937	1948	1953
Total export ...	100	100	100
Machinery ...	6.4	22.9	40.0
Consumer goods (excluding food) ...	36.8	34.0	15.0
Textiles ..	25.0	16.2	6.8
Glass ..	6.6	6.3	3.1
Other goods ..	5.2	11.5	5.1

The share of machinery exports has increased more than sixfold compared with the year 1937, and by nearly one-half as against 1948. The share of exports of consumer goods, on the other hand, shows in the year 1953 a reduction of more than one-half.

In the last few years this trend has continued so that machinery is by far the biggest item of Czechoslovak export trade, even if the volume of export of other branches (expressed in absolute value) has likewise substantially increased. In addition to machinery, Czechoslovakia exports considerable quantities of iron and steel goods, tubes, etc., and in world trade ranks today, especially in certain sectors, among the most important suppliers of machinery and industrial equipment. At the same time the character of the export of engineering products has to a considerable degree changed. Increasing importance in this category of export is being attached to more intricate, improved and precise machines and equipment, accommodated to the conditions under which they are to work. In ever-increasing measure, Czechoslovak industry is taking on orders for supply of complete industrial plant and installations of the most varied kinds.

The scope of Czechoslovakia's export possibilities is increasing both as regards volume and many-sided character. A fourth of all sugar factories in the world have got the whole or a part of their plant and equipment from Czechoslovakia. Likewise, a larger number of flour mills, distilleries and breweries are operating with Czechoslovak plant and machinery, a considerable number of vessels are powered by Czechoslovak Diesel engines, and, in a whole range of ports, Czechoslovak cranes are at work. Zetor tractors and agricultural machines form a large part of the tractor park of the Argentine Republic, and are proving their worth in the fields of India. Skoda motor cars (of the 1200 model) and Jawa motor cycles give equally excellent service in maintaining communications in the West, as they do in negotiating the heavy going on field roads.

TRADE WITH INDIA

Trade and Payments Agreement of 17th November 1953 with lists for selection.

Czechoslovak Exports:

machinery for the bootmaking and rubber industries, metal working machinery, machine tools, textile machinery, hydraulic presses, tractors and agricultural machinery, motor-cycles, Diesel engines for seagoing vessels.

Czechoslovak Imports:

iron ore, linseed oil, tea, tobacco, arashide oil, shellac, mica, membranes, bristles, canned fruits, wine.

ITALY

Agreement of 2nd July 1947 on the exchange of commodities in compensation form, and exchange of Notes relating to the most-favoured nation terms.

Czechoslovak Exports:

undressed timber, sawn timber, benzole, naphthalene, artistic glassware and ceramics.

Czechoslovak Imports:

artificial silk, fruit, wine, engineering products.

LEBANON

Trade and Payments Agreement of 12th July 1952 with lists for selection, effective for 1 year, automatically prolonged.

DIESEL ENGINES

PERUSING the Czechoslovak export statistics since 1945, we find that India—with as many as 12,000 diesel engines—is the foremost buyer of Czechoslovak diesel engines bearing the trade-marks SKODA and SLAVIA.

Czechoslovakia started to export diesel engines to India only after the Second World War. It is true that the SKODA trade mark was known in India before the war, due to the efforts of a Czechoslovak sales agency, the SKODA of India. The fact remains, however, that the real impetus for diesel engine sales and the spreading of the network of sales agencies dates from the post-war years, after World War II. A set-back came in Northern India at the time of the partition of India. After the situation had settled, sales picked up again until 1952, when the import of small diesel engines up to 30 H.P. was forbidden altogether.

Since the import of engines up to 30 H.P. was prohibited, sales efforts are being now concentrated upon medium and heavy types —engines as well as diesel sets— and this trend, of course, is reflected in the choice of exhibits at the Calcutta Exhibition.

Diesel sets are being manufactured in Czechoslovakia with an output of 3.5 kVA upwards, to an output of 1,500 kVA. As we have already said, market conditions have basically changed, and the trend is mainly towards diesel sets. In business circles, a distinct reluctance is to be noticed to sell "mere" engines, and whole investment units—diesel sets—are sold in preference; and, in the matter of these sets, Czechoslovakia is able to supply medium, heavy and also the very heavy types currently, without difficulty, and all bearing the SKODA trade-mark. The sets are at present being produced for alternating current, three-phase, 50 cycles and for a voltage of 400|23|1|V.

Owing to the wide range of types available and to their versatile usefulness, engines and diesel sets, carrying the trade-mark SKODA, are in great demand in foreign markets for heavy duty service. SKODA engines are engines which, for many decades, have been sold abroad in thousands, and are used all over the world; they enjoy the fullest confidence of the owners for their reliable performance.

We do not doubt that the excellent reputation the SKODA engines have in India will find its echo and confirmation in the exhibited engines shown at the Calcutta Fair.

"DAKO" Railway Brakes

HAND in hand with the constantly increasing speed of trains, development proceeds in the field of railway brakes. The safety of hundreds of millions of passengers, as well as the safeguarding of enormous values either of goods transported or of rolling stock materials, depends on the condition of the wagon braking equipment. Efficient brakes are, it is true, required to stop a quickly going heavy train within a short distance for reasons of safety. But, the same requirement is imposed for the purpose of economisation and acceleration of transport. Moreover, a smooth braking performance, even at very slow speeds, is required when there is an increased danger of parting and shocks in the train unit, or reduction of the speed of very heavy trains often to as little as 6 km per hour with the consequent releasing of the brakes and acceleration. Especially in such a difficult case, some braking systems tend to bring the train to a complete standstill even though the engine driver had not braked up entirely. For operating reasons, it is sometimes necessary to bring even very heavy trains to a standstill in a given place within the accuracy of several decimetres only, e.g., when supplying the locomotive with water without unhitching it. Finally, the modern distributing valve must allow for highest speeds possible on tracks with rapid and long declining without endangering the safety of the transport. The new regulations of the International Railway Union impose still greater demands on the newly designed railway brakes for their being admitted for international use.

Among the very few modern distribution valves meeting these requirements is the Czechoslovak distributing valve "DAKO CV". It is designed for braking up both passenger and goods trains. All its components are very easy to manufacture and, unlike the other types, it has a rather limited number of them. That is the brake maintenance is not pretentious and its running costs are low. The single parts are mutually interchangeable. There are neither ground slides nor piston rings nor leather cuffs in the distributing valve but there are valves used without exception, having the packing face of hard rubber, the pistons with rubber diaphragms and rubber cuffs. Its further advantage lies in the small outward dimensions and the lightness in weight. Made of cast iron, it only weighs 26 kilograms.

The distributing valve "DAKO CV" guarantees a high propagation speed—as much as 282 metres per second—when braking up the trains. It is the highest speed ever attained when using any other type of distributing valve. Smallest possible passive resistances and thus an easy movability of the single components enable a very fine degree—like increasing and decreasing of the braking effect. The high propagation velocity is achieved especially by means of the quick initial air intake from the main piping into the accelerating chambers of the single distributing valves. A definite portion of this air leaks through the accelerating chamber into the atmosphere. In this manner, the proper development of the pressure in the brake cylinders is safeguarded even at the farthest end of long train units consisting of only a small number of brake-equipped wagons.

When releasing the brakes, the distributing valve "DAKO CV" enables in both positions, that for goods and the other for passenger trains, the use of longwinded filling drifts and in this way ensures a short unbraking time even on long trains. In the emergency state, all spaces filled with air at the running pressure are mutually interconnected, i.e., the main piping, the auxiliary and distributing air reservoirs, which cause the brake to be easily adopted to the changes of the running pressure. As soon as the brakes set in, the connection between the distributing valve air reservoir and the other spaces is cut off immediately.

The distributing valve essentially makes up for the pressure air losses from the main-piping, when the fraking cylinder may leak. The brake with the distributing valve "DAKO CV" is inexhaustible and guarantees a safe and reliable performance on all railway lines of both level country and mountainous.

In connection with a simple supplementary appliance, the distributing valve "DAKO CV" may be used on all vehicles where it is required that their highest attainable brake shoe pressure should be changed if needed. The changes of this brake shoe pressure can be achieved either by the change of the lever transmission in the brake railing or by the change of the air pressure in the braking cylinder. Should the pressure change be achieved by the air pressure change in the braking cylinder, the distributing valve "DAKO CV" is to be supplemented by an additional valve "DAKO D", either in the gradual automatic execution or in the two or three degree one which is adjustable. The use of the additional valve "DAKO D" does not affect in any way the proper function of the distributing valve "DAKO CV". The distributing valve "DAKO CV" adjusts the maximum pressure in the braking cylinder within the limit from 1.3 kg|cm2 to 3.9 kg|cm2. The ratio of the pressure in the braking cylinder to that in the piping remains in all braking phases unchanged. The valve is executed in such way as to be easily mounted between the auxiliary air reservoir and the standardised distributing valve "DAKO CV". The switching to different positions on the automatic execution of the additional valve is carried out by means of a lever system operated either from one axle-tree on vehicles that are loaded on their whole surfaces evenly (hopper cars, cisterns) or from several axles on other vehicles. In the latter case, the valve position is always achieved in dependence on the least loaded axle in order to prevent unwanted excessive braking from occurring.

The new improved distributing valve "DAKO CV" was tested by the International Railway Union and the Czechoslovak State Railways in July, 1956 in Southern Bohemia; and experts from France, Great Britain, German Federal Republic, Italy, Switzerland and Holland took part in these tests. The tests came out quite satisfactorily. Some results attained during these tests have never been achieved before by any other type of distributing valve.

The distributing valve "DAKO CV", which embodies the further development of a previous distributing valve "DAKO C" from 1954, and the additional valve "DAKO D" were for the first time exhibited in the railway exposition of STROJEXPORT during the Second Czechoslovak Engineering Exhibition at Brno in September, 1956. The sole exporter STROJEXPORT Praha will be able to supply all necessary information both of commercial and of technical character.

Derrick Crane

The Ceramic Industry

CERAMICS FOR THE MODERN BUILDING INDUSTRY.

Czechoslovakia is renowned for its wealth of ceramic raw materials of all kinds. Its clays are preferred by the world's leading manufacturers of ceramics and Czechoslovak China clay was chosen in 1924 as a world standard for quality. The Czechoslovak Ceramic Industry, using its own first-class raw materials and drawing upon the valuable experiences of many generations of craftsmen, has achieved such perfection that most of its products are unrivalled in the world.

Building ceramics, i.e., ceramic wall and floor tiles, are regarded as an indisputable necessity. They are made from clays and other raw materials which are transformed in kilns at 1200-1300 degrees centigrade into a new homogeneous material having completely new properties and usually a different colour, too.

Ceramic building materials are used with great advantage in the interior of buildings and flats. Wall tiles are found in entrances, halls, staircases, vestibules, etc. They are indispensable in kitchens, larders, bathrooms and lavatories. Ceramic tiles are also invaluable in hospitals, public baths, shops, food stores, workshops, storehouses, restaurants and coffee houses. *RAKO* and HOB wall tiles are supplied in various sizes, the most common of which is 150 × 150 × 6 mm. They are specially gauged, which guarantees exact dimensions and perfect rectangularity. This is achieved by a special process which is a Czechoslovak patent.

Ceramic floor tiles form yet another irreplaceable material for modern buildings. Their usual size is 100×100 mm, 150×150 mm. Floor tiles, as distinct from wall tiles, are unglazed to avoid accidents on slippery surfaces.

In bathrooms, public baths, swimming pools, dairies, slaughter-houses and all places where water is used during work, floor tiles with a specially roughened surface, either slotted or grooved, are used.

Sanitaryware is another branch of the Czechoslovak Ceramic Industry that has gained an excellent reputation abroad. Wash-basins with straight or round edges form an additional item of Czechoslovak Ceramics. Their tap-holes are situated either in the centre or in the corner. For fixing wash-basins to the wall, cast iron supporting brackets or hinges are used. Wash-basins of all shapes and sizes, used especially in industrial buildings, enrich the wide range of Czechoslovak sanitaryware.

The excellent quality and the long and famous tradition of the Czechoslovak ceramic industry are a guarantee of satisfactory service to builders and their customers all over the world.

PORCELAIN

The Czech porcelain industry has a tradition of more than two hundred years. It has achieved great fame, thanks to the rich deposits of excellent raw materials. The "SEDLEC VILDSTEJN" china clay has been universally recognized as the best and serves as a standard for all china clays.

These deposits were discovered in the 18th century in the beautiful corner of Western Bohemia, in the wooded valleys round the historical spa of Karlovy Vary (Carlsbad).

It was here that the first famous Czech potteries were founded. The skill and diligence of the craftsmen, their exquisite taste and originality have perfected production to a degree which made Karlovy Vary (Carlsbad) porcelain popular all over the world. The porcelain of

Pirkenhammer (Brezova)
Bohemia
Thun and
Erlag

form the pride of many a collector and connoisseur.

The Czechoslovak porcelain industry continues to improve and expand its production. The tasteful colour decorations, the skill with which producers meet the desires of the buyers from all parts of the world, the faultless whiteness and transparency of Czech porcelain, the perfect artistic shapes which combine beauty and usefulness are the renowned virtues of Czech china.

The products of the Czechoslovak porcelain industry range from simple household chinaware to luxury dinner, tea and coffee services, plain or painted, white or ivory, decorated with silver, gold or platinum, household and decorated earthenware, hotel china. Exquisite vases, artistic statuettes, gift objects and mementoes add to the variety of products of this industry.

ELECTRO-TECHNICAL PORCELAIN.

The Czechoslovak Ceramic Industry is steadily improving the quality of its electro-technical porcelain, which has earned recognition in all the markets where it has penetrated.

Electro-technical porcelain for low tension, which is used mainly for outdoor lines, has outstanding insulating properties and fully conforms to the ESC (Czechoslovak) and VDE (German) standards, or even to BSS if the customer so desires. This branch includes also installation porcelain, such as various light-fittings, tubes, rods, etc. A much higher standard is required for electro-technical porcelain for high tension, which is produced in all current types. Available in addition are insulators, used in the construction of overhead lines and transforming stations, that fully meet the requirements of insulation and correspond to the standards of ESC (Czechoslovak), VDE (German) or BSS, if the customer so desies. The works are equipped with most up-to-date machinery and the raw materials, like the finished articles, are tested in special technical laboratories and electrical testing rooms. Each article is subjected to routine tests by A/C and D/C current under tensions of up to 1,000.000 V. It must withstand a tensile load of up to 50.000 Kgs. and show no signs of penetration during the porosity tests. Thus, only first-class articles are supplied to the users.

In addition to the currently produced types, special electro-technical porcelain articles can be supplied according to the customer's samples or sketches.

Electro-technical porcelain for high and low tension is subjected to tests far in excess of the requirements for which it is intended. The Czechoslovak porcelain works have an old tradition in this branch of industry and can draw upon the rich experiences of generations of skilled workers. All these are a guarantee for the excellent quality and first-class finish of the article made from the world's best raw materials.

ASBESTOS-CEMENT PRODUCTS.

The modern building industry requires construction materials that fully meet the demands of the new epoch in building—mainly speed and economy. Owing to their simple production and the abundance and comparative cheapness of their constituent raw materials, asbestos-cement goods have gained an outstanding place among modern building materials.

Asbestos-cement goods are inexpensive, yet sturdy, durable and highly resilient. The asbestos fibres in the cement have a function similar to that which iron has in concrete. The mechanical strength of asbestos-cement goods increases with time. In addition, they have the following advantages: lightness, easy handling, speedy construction and low installation costs.

Asbestos-cement goods can be divided into two groups: the first comprises flat and corrugated sheets, and roofing shingles, the second group pipes and fittings. The articles belonging to the first group have found their use in many diverse fields. Corrugated sheets are an ideal material for roofs and side-walls of industrial buildings, storehouses, workshops, hangars, sheds, farm buildings, cold storage plants, etc. Roof shingles form one of the most economical roofing materials. Flat sheets are used for exterior and interior walls in factory-halls, garages, kitchens, bathrooms, as dividing partitions, wainscotting around ovens and fireplaces, as electrical switch-panels, as covering panels for kitchen tables, etc.

Asbestos-cement sheets are fire, rodent and rotproof, and weather resistant. They are good insulators against sound, heat and cold and are immune from electrolytic action. They are strong and durable, light and easy to apply and thus highly economical.

Asbestos-cement pipes comprise low pressure pipes such as soil pipes, drinking water mains, rain-water goods, flue pipes and sewer pipes. All these are supplied with a wide range of connections and fittings. Pressure pipes are used with advantage for conveying waters, gas, oil or corrosive liquids. Both types of pipes are characterised by the following advantages:

Lightness;

High flow capacity—as a result of smooth interior low thermal conductivity;

Immunity against stray electric currents;

Long lengths—which mean fewer joints;

Easy installation and trouble-free service.

Asbestos-cement goods are weather resistant. They are unaffected by sun, wind, rain, frost and thaw, and can be used with success in tropical or temperate, coastal as well as inland regions. They have proved themselves by giving excellent service in countless ways under the most varying conditions.

The Refractories Industry

In the middle of this year, a new huge works for the manufacture of magnesite and chrome-magnesite bricks began to operate in Czechoslovakia. This has led to a considerable increase in the production capacity of refractories which are essential for some industrial branches, especially for steel and cement works.

The reason for increasing the production capacity, already fairly large, is to be found in the trend of development in foundry processes in the production of steel parallel with the growing steel output.

By 1960, the production of steel in Czechoslovakia will have risen by 46% as compared with the present volume. The increased production capacity of basic refractories will enable Czechoslovakia to meet not only the growing demands of the home market but also to meet increased demands from abroad for this article.

Czechoslovakia possesses almost inexhaustible resources of natural magnesite suitable for the production and export of basic refractories. Geological research carried out during the last five years in Slovakia has led to the discovery of new deposits of magnesite the composition of which surpasses in many respects the quality of magnesite mined in hitherto operated quarries.

One of the newly discovered deposits at Podrecany yields a raw material which, after burning, shows the following average composition:

MgO	...	... 87%
Fe2 O_3	...	... 8%
SiO_2	...	... 2%
A12 O_3	...	... 1%
CaO	...	... 2%

As magnesium and iron oxide form together the basic ingredients of magnesite bricks, this composition corresponds to iron-free magnesite with a 95% MgO content. The Fe2O3 content is characteristic for all crystallic magnesites in Slovakia and plays an important role in the burnt products in the form of magnesium ferrite dicalcium ferrite and other compounds greatly influence the sintering process of magnesite and cannot be satisfactorily replaced by the synthetic admixture of iron oxide in magnesite poor in Fe2 O3 as for instance white amophous magnesite or magnesite made from sea-water.

Burnt magnesite is produced by the Slovak Magnesite Works in several kinds which can be dvided into 3 groups:

Granulated burnt Magnesit for brickmaking with a minimum MgO content of 85%. This product is predominantly consumed in works for the production of magnesite and chrome-magnesite bricks.

Dolomitic burnt Magnesite ("Rotafrit" brand) with 80-84% MgO content.

Both kinds are used mainly for ramming the bottom of open-hearth and electric furnaces and are preferred in many steelworks to burnt dolomite as the quality of the furnace bottom depends on the MgO content in it.

It is a well-known fact that each melting operation deprives the dolomitic bottom of a certain part of MgO which is soon destroyed. Frequent repairs to furnace bottoms result in lower output. A different situation arises when magnesite or Rotafrit bottoms are used.

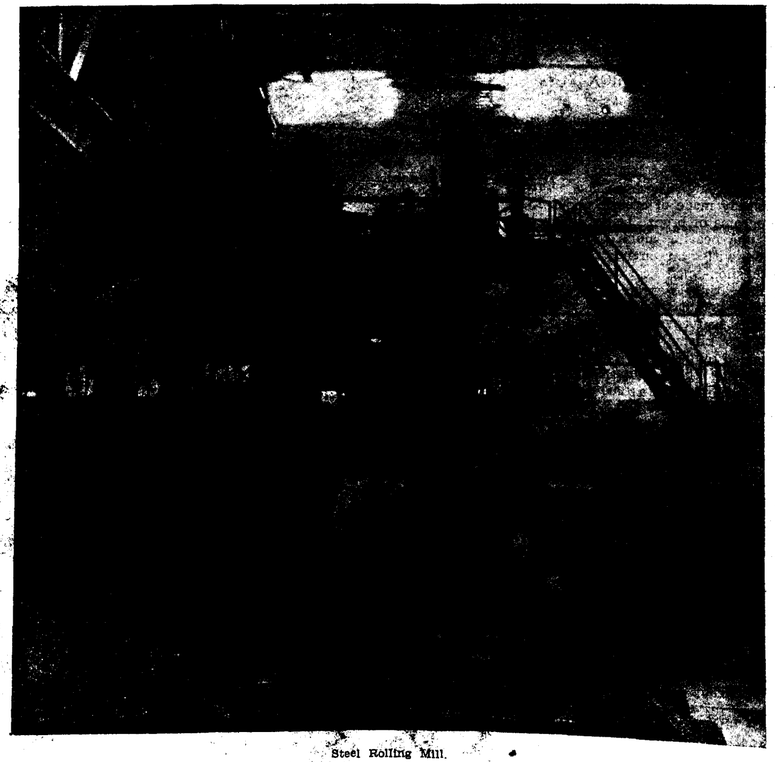
The high MgO content in these is a guarantee of longer durability. For this reason, many countries, including Czechoslovakia, although possessing dolomite deposits, prefer to use magnesite for steel furnaces, even if this is more expensive than burnt magnesite. One of the disadvantages of the latter is the rapid hydration caused by its high CaO content and resulting in the disintegration of grains into powder.

The raising of melting temperatures and shortening of melting periods prevailing at present in the steel industry, which lead to an increase in the productivity of furnaces, make ever increasing demands as regards the quality of refractories. The Czechoslovak refractory industry has created a number of high quality brands for different uses:

Lovinit III/NK—brand. This is chrome-magnesite brick, which is highly resistant to temperature changes and is suitable for the main arches and burner heads and other parts of open hearth furnace, exposed to great heat and to temperature changes.

Lovinit III—brand. This is another variety of the above mentioned kind and is suited for arches and side-walls of melting and reduction furnaces, convertor and hot metal furnaces, and certain parts of open-hearth furnaces.

Lovinit ID—brand. A special quality magnesite brick, resistant to temperature changes, suitable for charging door and canal arches, gas and air-ducts for open-hearth furnaces, crowns and walls (above the slag line) of electricars furnaces, and charging and discharge holes of pig iron mixers.



Lovinit IC. A chrome-magnesite brick with a low Cr2 O3 content, suitable for the firing zone of rotary and shaft kinds for cement, dolomite and lime.

For those parts of furnaces which are not exposed to considerable temperature changes, the magnesite brick, brand M, is used, e.g. for the walls and bottoms of open-hearth furnaces, the bottoms of melting, heating and forge furnaces, and for mixers of pig iron. For furnace parts exposed to specially strong effects of slag, very dense slag-resisting magnesite bricks are supplied.

Chromite bricks have proved themselves as a dividing layer between basic and silica bricks. For certain purposes, chemically bonded magnesite and chrome-magnesite bricks are widely employed either bare or steel-clad (brands: Fermag, Ferlow, Ferrot).

For metallurgical furnaces, working with silica arches under heavy operational strain, the Slovak Ceramic Works produce silica bricks of a special quality, known under the brand BB, which have a high melting point under a load of 28 lbs. per sq inch, namely 1670-1710 C (3038-3110 F). For glass and enamel works, the proven Steel-brand silica bricks, produced by the West Bohemian Ceramic Works at Horni Briza, are widely used. A special kind of this quality has been supplied over many decades for the erection of coke batteries; and gas producing ovens made from these silica bricks have lasted for as many as 25 years, are in no way exceptional.

(Continued on next page)

Steel Rolling Mill.

RADIO RECEIVERS WITHOUT VALVES:

THE experts employed at Czechoslovak Research Institutes have constructed a receiver which is a veritable dwarf among radio sets. It has a height of 11 centimeters, a length of 14 centimeters and its weight, including the battery, amounts to approximately half a kilogram. The outstanding feature of the receiver is that the valves have been replaced by transistors, that is, crystals of metal which are semi-conductive triodes. Heating, which represents a considerable part of the consumption of electric current in the case of electronic valves, has been eliminated in transistor receivers.

AUTOMATIC WEIGHERS:

Mr J. A. Vana, a Czechoslovak inventor, has succeeded in solving the problem of fully automatic and reliable registration in the case of tipping weighing machines, which promises to cause a revolutionary change from hitherto used methods. The machine works without any influence upon the weighing operation and, at the same time, registers the kind of goods weighed, the relay during which the process of weighing is carried out, the date, and other important data. The weight, given in kilograms, is recorded in two decimal points. Apart from current weighing, the automatic machine can be used for sacking, portioning and other complex operations involved with weighing, including taring.

SILON REPLACES BRONZE:

Following thorough tests under semi-working conditions, 60 locomotives in Czechoslovakia have been provided with silon casings housing the roller bearings of the driving gear. These casings were formerly made of bronze, about 15 kilograms of bronze being required for one bearing alone. In a test made with an engine equipped with silon-lined casings, all the gear-bearings were found to be in perfect condition after the locomotive had covered a distance of 127,000 kilometers. The results attained by using the Czechoslovak synthetic fibre—silon—for this purpose are twice as good as when using bronze.

FOR SPORTSMEN—BOATS MADE OF PAPER:

Mr J. Sedlacek, a Czechoslovak sportsman and inventor, has constructed a slalom kayak made of paper. The frame of the kayak is of soft wood. On the frame are pasted strips of paper coated with cello-lacquer. Fifteen layers of paper make a firm and flexible coating about four and a half millimeters thick. The kayak, which has proved good both on slalom tracks and in the rapids, weighs 12 kilograms.

POULTRY SKIN—A NEW NATURAL MATERIAL:

An interesting novelty on the autumn market in Czechoslovakia will be leather handbags, belts, purses, powder boxes, cases for fountain pens and other fancy articles made of the new natural material—poultry skin. This material is, in effect, the dressed skin of goose and turkey legs. Poultry skin combined with ordinary leather can also be used for the manufacture of smart handmade shoes. This new leather has a very attractive appearance not unlike that of alligator.

THE LARGEST CZECHOSLOVAK RIVER VESSEL:

Work on the construction of a new type of river steamer will commence this year at the Czechoslovak shipyards on the Danube. It is a passenger ship 96 meters long and 15 meters wide. The ship will have three decks, the topmost of which will be constructed of panels so that it may be dismantled with ease when sailing under the bridges across the Danube. It will accommodate from 315 to 419 passengers. Three propellers, driven by three engines of the Skoda type, will develop a minimum speed of 23 kilometers per hour.

A NEW UTILISATION OF GLASS

Many special kinds of pipes are made of glass in Czechoslovakia.

Czechoslovak Industrial Pot-pourri

These pipes give excellent service in mills and chemical plants, as well as in waterworks. A new type of glass tubes for the irrigation of gardens has now been produced and is undergoing tests. The advantage of these tubes is that they are resistant to corrosion, which is of great importance owing to the fact that they are laid in the sites of gardens and vegetable plantations. Apart from that, they afford a more abundant flow of water than metal tubes of the same diameter.

SHOES WITH VARIOUS COLOURED SOLES

The demand for high-quality Czechoslovak footwear throughout the world has a tradition of long standing. The shoes most in demand from foreign customers at present are shoes with microporous soles. The Czechoslovak footwear industry is now preparing the production of shoes with soles made of the durable PVC material (polyvinylchloride) which customers will be able to get in the most varied colours and shades according to their specific request.

THE MOST POWERFUL KAPLAN TURBINE IN THE WORLD

Czechoslovakia holds the world primacy in the production of powerful turbines of the Kaplan system. The power plant on the large dam at Slapy near Prague was furnished with a Kaplan turbine with a rated output of 63,000 kw at a fall of 56 meters, which was turned out by the C.K.D. Works at Blansko. It is the largest turbine of its kind in the world. The C.K.D. Works, the holders of this world primacy, have produced Kaplan turbines during the course of the last ten years with a total output of more than one million horse power, 45 per cent of which is abroad.

FROM CENTRAL EUROPE TO VLADIVOSTOK

The Czechoslovak Wire Mill at Bohumin has produced such a quantity of steel cables during the course of the last five years that if they were connected they would extend from the Eastern boundary of Czechoslovakia as far as the port of Vladivostok in the Far East. This year, more than 110 kilometers of cables for various purposes will be delivered by these works to Brazil.

PORTABLE POWER PLANT

A small portable power plant has been manufactured at the Krizik Development Works in Prague which can be carried on one's back. It has a capacity of 130 V and an output of 22 V A.C. and 6 A.D.C. for the charging of accumulators up to 20 V. Both currents cannot be generated at the same time, of course. The complete power plant is enclosed in a case and weighs 23 kilograms, including the carriers.

GIANT VENTILATORS:

The First Five-Year Plan Works, which are situated in the South Bohemian town of Milevsko, have completed work recently on a huge ventilator weighing five tons. it is destined for a textile mill in Turkey. The entire project was the work of Cezchoslovak technicians and the complete equipment was delivered by the Technoexport, Czechoslovak Foreign Trade Corporation. The ventilator delivered to Turkey, however, is by no means the largest turned out by the First Five-Year Plan Works. Ventilators weighing as much as 35 tons are manufactured at Milevsko for both domestic and foreign customers.

SPECIAL RAILS FOR INDIA:

Special rails with wide-flange profiles ordered by India are under production at the Cezchoslovak iron works at Trinec. The rails, the delivery of which has already commenced, are destined for Madras, Bombay and Calcutta.

THE FIRST INDONESIAN FACTORY FOR THE PRODUCTION OF TIRES:

The Technoexport, Czechoslovak Foreign Trade Corporation, has been charged with the delivery of complete machinery equipment for the production of tires in Indonesia. The assembly of the machines will be carried out by Czechoslovak experts who will likewise instruct Indonesian workers in the servicing of the machines.

GLASS FOR EMPERORS:

Following Pope Pius XI and Queen Elizabeth of England, orders for glass sets of genuine Bohemian crystal have now been placed with the Moser Glassworks in Czechoslovakia by the Emperor of Ethiopia, the Shah of Iran and the King of Yemen.

THE SECOND CZECHOSLOVAK FIVE-YEAR PLAN:

The Second Czechoslovak Five-Year Plan envisages an increase in gross industrial output by 50 per cent. This means a further large expansion of Czechoslovakia's industrial capacity which, compared with the pre-war years, was already doubled during the course of the First Five-Year Plan, the output of the engineering industry being almost four times higher than the pre-war production. In comparison with the year 1955, by the end of the Second Five-Year Plan the output of pig iron will have increased by 60 per cent, steel by 46 per cent, tractors 2.3 times, motor cycles 3.3 times, cotton fabrics by 29 per cent, woollen fabrics by 20 per cent and footwear 21 per cent. The increase in the output of means of production will have amounted to 57 per cent on the whole, and the increase in the production of consumer goods to 40 per cent.

(Continued from previous page)

Compared with a great number of similar products, Czechoslovak silica bricks for coke ovens show the lowest values as regards permeability. The firing of silica bricks for steel and glass furnaces is carried to the stage of incomplete transformation of quartzite into cristobalite order to achieve a lower porosity. This method can be applied only with amorphous quartzite used in the manufacture of Czechoslovak silica bricks.

In addition to magnesite and quartzite, Czechoslovakia possesses rich deposits of high quality fireclays and shales, which form the bass for the large output of Fireclay products.

Fireclay bricks are supplied for blast-Cowper-and metallurgical furnaces, for ingot casting, for steam boilers, cement works, for the glass, cermic, chemical and paper industrie, etc.

Al the products of the Czechoslovak Refractory Industry are exported by Czechoslovak Ceramics, Forign Trade Corporation, Prague, Czehoslovakia.

Printed by the Dorchester Printing Works 116, Lower Circular Road and published for Indian Financial Journals Private Ltd. and Edited by O. Swaminatha Rangaswami Jr. 116, Lower Circular Road, Calcutta. Bombay Publisher: P. R. Venkatesan, Navsari Chambers, Outram Road, Fort, Bombay.
