For the Investor

Disproportionate Publicity

Investment Gossip:

ONE

In the Gateway City, one of the veterans associated with the investment market made, in his capacity as President of the Native Share and Stock Brokers Association, the annual statement that investors have grown to look forward to and read with interest. Mr K. R. P. Shroff, the venerable doyen of Dalal Street, always makes his review at these annual meetings a comprehensive analysis of the economic conditions within the country which affected and moulded the investment trends and climate. His statement deserves a full scale analysis; and this, doubtless, is a chore that will be undertaken by the Gateway Gossipist.

For my part I am going to concern myself with one phrase that occurs in Mr Shroff's speech. In indicating the immediate cause of the down-swing in stock exchange prices at the beginning of this year, Mr Shroff cites one of the reasons as "the disproportionate publicity" that was accorded to the proposals canvassed in the National Development Council on taxation prospects of various kinds.

This disproportionate publicity is distortion. It is distortion in manner similar to the flash news on which the stock market operator of today so blithely frames his decision whether he is to bull or bear the market. Let us remember that disproportionate publicity is a lie, a false-hood. It may be the truth all right, as reported; but exaggeration itself is prevarication. In this view, for the sharp and sudden changes in the moods and attitudes of the stock exchanges, both the teleprinter service (for its flash news) and the press (in the exaggerated treatment or disproportionate publicity it accords to matters that really are of trivial importance) must share the blame.

Mr Shroff has ably analysed the reasons contributing to the landslide of early this year. I wonder whether he will be as successful if he were to try to discover the reasons for the current weakness on stock exchanges. Frankly, rarely have I seen such resistance by stock exchange operators to what I might call the instrinsic considerations; for, reckoned by these—by the state of the national economy or by industrial production or by the profits of Indian industry.—stock exchanges should be booming—not depressed.

Investment Gossip:

TWO

The MIDA test, as applied to mining companies, proves to disclose the veritable golden touch of Midas. True, there are only a choice handful whose results for the past and whose management hold pregnant promise of growth prospects for their shares even as bountiful dividends were being paid. But, at the same time, in a few other cases, although past performance is somewhat disappointing, with expansion now decided upon, the prospects are quite promising.

First, the companies which, if the MIDA test were applied to them, inevitably suggest that they must engage the serious consideration of the shareholder for investment.

Top of the list, of course, is Indian Copper. The latest dividend (for 1955) is a bumper 45 per cent including bonus; and the expansion completed between 1952 and 1954 added to the gross block by more than £333,000. What surprises me is that, following upon the release of its profit figure for 1955, Indian Copper should not have attracted an even greater interest from the investor.

On Dalal Street, although there has been some recession in its prices of late, a scrip that enjoys justified popularity and high esteem is Shivrajpur Syndicate. In 1954-55, the company maintained its dividend at 80 per cent; undistributed profits are more than eight times the ordinary capital. Additions to block add up to nearly Rs 15 lakhs in the last two years. Management? Killicks, of course.

Back to Calcutta: Orissa Minerals, managed by Birds. The last dividend was at 20 per cent per annum. Additions to block in the preceding 12 months are of the order of Rs 3½ lakhs. Undistributed profits—nearly 1¾ times the ordinary capital.

The Jeypore Mining Syndicate paid a dividend at the rate of 10 per cent for 1954-55. In common with other mining companies, the profit earning capacity of Jeypore Mining is undoubted.

In the allied field are Bisra Stone Lime and Sutna Stone & Lime. The former company, under the managing agency of Birds, paid a dividend at 17½ per cent per annum in the last half year. There has, however, been hardly any addition to block.

The Sutna Stone & Lime, whose secretary is Mr S. N. Beri, paid its dividend for the second half of 1955 at 12½ per cent per annum. Here, too, additions are insignificant.

A reader has taken me to task for not commenting in the last week's number upon the prospectus issued by Kesoram Cotton. "Don't you think", he asked me, "that the Kesoram issue is important enough to deserve special moment by you?"

I plead guilty to having omitted any mention of this issue. For, it is an important one, with the amount sought by subscription

Around India with Brooke Bond

The Arch of Triumph—Char Minar ...

In the city of Hyderabad stands the Char Minar or the Four Towers—a triumphal archway built in 1591. Erected to provide a fitting environment to royal pomp and pageantry, the Char Minar is a square building with four spreading archways, a and a 186 ft. high minar or turret at each corner. Though many other Islamic edifices were erected in the Deccan after the Char Minar, none attained its elegance, its strength, its dignity and its graceful architectural inventiveness.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop.

More people buy Brooke Bond Tea than any other brand, and over 55 million cups of Brooke Bond Tea are drunk everyday in India.

HIGHLIGHTS

Tensile steel is stronger than ordinary steel.

The extra element of strength is derived from the elasticity, as it were, of tensile steel.

So, too, with almost every other thing that we could think of. Elasticity is strength—obduracy is often, if not always, brittle.

Elasticity—or flexibility—is, therefore, an attribute that it would be well for the Second Plan to possess as to its targets and as to the priorities for implementation.

Of flexibility in planning, we have already had some evidence. In transport and in cotton textiles, importantly, during the recent past, the flexibility in Government's approach has been made manifest.

During the current week, still further evidence has been offered of flexibility in Government planning.

In the sector of agriculture, it is now known that the targets are not inelastic—but are capable of being revised upward, and substantially at that.

Two Leading Articles discuss the Mussoorie Conference and its significance to planning for the Second Plan.

being a substantial Rs 1 crore, in second preference shares, which are cumulative redeemable, carrying income-tax free interest of 5½ per cent. But I have an adequate reason as excuse.

This column is primarily intended to inform the investor with news, views and opinions which he cannot obtain elsewhere. I should have thought that the Kesoram issue is self-evident as one that should attract the investor's keen interest. As such, and also having regard to the fact that the subscription lists are to be kept open until the 21st of July, I thought there was no urgency in drawing attention to the Kesoram prospectus.

This week, however, I make good the omission—and draw attention to a preference issue which, both for the reason of its management and for the sound balance-sheet position of the company, is bound to evoke suitable attention from investors, and, especially, from institutional interests.

£ R$

Dividend Raised by Clive Row Investments

Balance-Sheet Reviews:

IT might be recalled that Clive Row Investment Holding Company was formed to invest monies in shares and debentures of companies, particularly those connected with business and industries in which the well-known managing agency firm, Andrew Yule & Company, Limited, are interested. The Investment portfolio was extensively rearranged in December, 1954. Since the shares of the company were made available to the general public in January, 1955, they have become widely spread and the shareholders of the company now number 970.

During the year ended 31st March 1956, there was a net increase of Rs 4,08,520 in the cost of the Investment portfolio, and the Investments of the company are now divided among the main industries of the country as follows, the relative position as at 31st March 1955 being shown in brakets:

Tea 22 per cent (24%)
Jute 24 per cent (23%)
Coal 17 per cent (18%)
Paper 6 per cent (6%)
Inland Shipping 5 p.c. (6%)
Miscellaneous 26 p.c. (23%)

The working of the company, during the year, has resulted in a rise of more than Rs 20 lakhs in net profit to Rs 31,92,061 from only Rs 11,38,837 for two half-years ended 31st March, 1955. The amount provided for Taxation has been raised from Rs 4.11 lakhs to Rs 10.70 lakhs. The dividend is raised to As 1-6-0 per share from As 9 (As 3 for half-year ended 30-9-54 and As 6 for half-year ended 31-3-55).

The tea company dividends taken into the Investment account indicate the unprecedented prosperity of the tea industry in 1954. The results of the 1955 season will show a drop in the company's income from these investments and will be more in line with the average results to be expected from this industry whose prosperity is to a great extent dependent on world markets. Prospects at present for 1956 are for a satisfactory season.

In the case of the jute industry, prospects cannot be considered encouraging. It is difficult to forecast whether the existing private sector in the Coal Industry will ultimately be nationalised or not. There are, however, good prospects during the next five years for most coal companies, provided the Railways are able to move the additional coal which will be raised under the Second Plan and the Government grant an increase in the prices for coal sufficient to cover the increases in costs resulting from the recent Award affecting the industry.

With the growth of literacy in the country, the demand for Paper is likely to increase.

It is hoped that the increase in industrial activity, which should result from the Plan, will benefit the Miscellaneous companies in which this company is interested.

Food: Flexibility in Targets

THE DISCUSSIONS at the Conference of Agricultural Ministers at Mussoorie last week, like those of the Central Advisory Council of Industries the week before, have thrown some light on the processes by which changes in the Second Plan will be made in the future. As in industry and transport, so in agriculture, there has been a vague feeling of inadequacy about the targets fixed in the Plan, a feeling which by stages becomes pronounced and then finds adequate expression in influential circles.

In this case, however, the roles are somewhat reversed, since it is the Planning Commission that asked for an increase of 10 million tons in total agricultural production, and it is those in charge of agriculture, namely, the Ministers at the Centre and in the States, that expressed doubts about its feasibility. Considering that the difference of opinion between the Commission and the Ministers was not so much on targets as on the extent of governmental outlay on agriculture, it is clear that, in regard to actual scope for increased production, the hopes of the Second Plan are far from extravagant.

Where the Planning Commission asked for 10 million tons increase in foodgrains production, the Ministers were inclined to promise as much as 16.5 million tons. It is, of course, difficult to be dogmatic about it, since, in all the experiences of recent years, there is no means of deciding the factors which contributed to the increase in food poduction.

There are, however, certain facts on which reasonable assumptions about the future can be made. The monsoons, which are as unpredictable as they are powerful, can only be borne in mind, not taken into account. Expansion of area under cultivation can be effected, if at all, only within limits. But the fact that the average yield per acre has risen markedly in areas under community project and national development schemes gives warrant for the assumption that, if more attention is given to wider areas, then, a very considerable increase of output can be attained without an increase in acreage.

Wider distribution of improved seeds, and dissemination of knowledge about the Japanese methods of cultivation will certainly bring higher targets within reach. And this is mainly a matter of Governmental outlay. The agricultural Ministers are quite justified in their insistence on larger outlays corresponding to the increases in targets of production.

The same optimism cannot be commanded in regard to the cash crops, since the position is more complicated. The basic fact still is the competition between food crops and cash crops for the same piece of land, a conflict which can be ended only when the country maximises the yield per acre and also limits need by checks on population growth. But, apart from this basic fact, increase in the production of non-food crops depends upon the alertness of farmers and the incentives that are provided for them to increase output. Cash crops are somewhat of a gamble; and the farmer would not run the risk unless it is made worth while for him. From the national point of view, in regard to crops like cotton, improvement in quality is more important than increase in quantity.

To imagine that output in the future depends only on ministerial decisions about targets is only to cling to an illusion. And the authorities, if they are keen about realising higher targets, should set more store by incentives than by governmental outlay. There is no definite ratio between Government expenditure and agricultural output. While income in outlay is necessary for the spread of knowledge and facilities for better cultivation, production hinges on prices.

It is unfortunate that the Planning Commission have chosen to put forward the suggestion of a 20 per cent cut in prices along with their demand for higher levels of output. A worse misjoinder, it is hard to imagine. Mr A. P. Jain, the Food Minister, has done well to protest against the proposed cut in prices which, he said, would change the basis of exchange between agriculture and industry to the disadvantage of the former. He has also stressed the obvious fact that a reduction in prices will not bear down uniformly on all the producers, but would ruin the producer on the marginal lands, and reduce output where an increase is asked for

It is interesting to note that here, as in most other matters in the past, the Commission have persisted in the error of mixing up the fight for higher output with the fight against inflation. The only way in which inflation can be overpowered is to raise production to about the same level as demand. Controls and other artificial measures have to be adopted perforce in conditions in which the authorities can do nothing either to reduce the additions to currency or to increase the capital equipment, raw material and labour necessary for increased production.

That controls in such conditions are only partially successful, is indeed a notorious fact. But, in the conditions of India today, the Government are by no means as helpless as in war-time about additions to currency or additions to production. And yet, habits of thought derived from utterly dissimilar times persist, and the plans for increased output are spoiled by suggestions for physical controls and price control.

An artificial reduction of agricultural prices is only a confession of helplessness against inflation, and not a blow struck at inflation. It is encouraging to find that the Ministers have pressed home these sound views.

Food: Mussoorie Conference

BUT for the well-advertised lack of rigidity for the targets or allocations of the Second Plan, the Departmental differences displayed in the Agriculture Ministers' Conference would have created an awkward public impression. As it is, the Plan is still in the penultimate stage, leaving ample scope for discussion, refining of ideas and revisions of targets, methods and schedules. The Conference showed that on many fundamental points, the Planning Commission and the Ministers in charge of implementing the various aspects of the Plan, continue to engage in exploring common ground and an agreed scheme of work. That on the subject of targets for agricultural production the Planning Commission and the Union Ministers concerned have not been able to see eye to eye was clear from the conflicting pronouncements made by the spokesmen of the two camps.

The Ministerial view is that within the present financial allocations under the Second Plan any substantial increase in targets would be unattainable. The Prime Minister has more than once declared himself in favour of a 40 per cent increase in agricultural production as against the 15 per cent envisaged in the Draft Plan. Other members of the Planning Commission have been taking a rather non-committal stand, though they too have given the impression that the targets fixed were too modest. On questions such as agricultural prices, comparative wages for agricultural labour, the export potentialities of cereals as against cash crops and to some extent even on the relative role of expansion in agricultural production, disagreement between the members of the Union Government and of the Planning Commission were discernible in the statements coming from them from time to time.

At the Conference these differences were presented in neat array. The Union Minister for Food and Agriculture has no doubt that within the existing allocation foodgrains production could not be stepped up to 40 per cent. The Working Group of the Conference recommended stepping up of the existing targets for the principal cash crops as well as for foodgrains but the Group firmly holds that these targets will be unattainable, unless additional resources are placed at the disposal of the Government. Though on this point, a lively exchange of words took place between the Union Minister for Planning and the Food and Agriculture Ministers with the Community Projects Administrator thrown on the side of the former, neither party seems to have been able to carry conviction to the other.

Mr Nanda maintained that an upward revision of targets was feasible within the present allocations and that in any case, an increase in the total expenditure of the Plan was out of the question. All that could be hoped for, according to him, was adjustments within the Plan's present financial framework. Thus, the Conference was disabled from taking a confident line as to how far production could be augmented, from levels stipulated in the Draft Plan. The result is not as bad as at first sight appears. There is at least the assurance that the targets envisaged will be realised, and with a clearer understanding of each other's difficulties, and efforts to meet them, the Planning authorities and the executive Departments may, through better co-ordination, be able to achieve considerably more. The Planning Minister has appealed for a three year programme to start with, on whose results the question of allocations may be reconsidered.

The Planning Commission's proposal for a 40 per cent increase in the targets of total agricultural production for the Second Plan period is reported to have been rejected outright by the Conference as thoroughly impracticable. Unfortunately, reports on the Conference proceedings are not detailed enough to see whether the Conference has linked this rejection with the present allocations or that it regarded a 40

per cent increase unreal under any set of conditions.

When the Planning Commission seem to think that an export of 2 to 3 million tons more of foodgrains would narrow the foreign exchange gap by Rs 400 crores, the situation implies a choice between boldly throwing more money into agricultural production and keeping content with what is possible with the contemplated expenditure and exploring resources for the full extent of the gap. Presented in this way, the problem certainly emphasises a bias in favour of further financial outlay on agricultural production, for the simple reason that it is going to be immediately more profitable.

In the alternative, what will happen is that the country will be forced to import as much as 6 million tons of foodgrains for which the Union Government have promptly made arrangements and the saving in foreign exchange will remain largely a dream. Even if food production were to be stepped up by an extra 6.5 million tons, the financial benefits arising out of the added increase will not wholly be capable of realisation during the Second Plan period. From the stand-point of food production, the significance of last week's Conference lies more in the psychological stimulus it imbibed for increases outside the Draft targets than for the formulation of any specific programme, though there were enough ideas on how output could be augmented.

The Union Food Minister is determined to put into the market adequate supplies of foodgrains, whether it be from domestic production or from imports. He believes that this is the best way to counteract inflationary tendencies. Inspired by the daring experiment in post-war de-control, he has even gone to the extent of asserting that food controls are an evil and 'we are in no good mood to undertake them easily'. Here again, the method suggested is in direct contrast to what the Planning Commission and the Union Finance Minister have expressed their preference for. For them physical controls are legitimate and logical in the context of the economy taking an inflationary turn. Mr Jain has not said that controls would not be imposed in any situation: he has only observed that they would not be easily resorted to. All the same, his antipathy to controls is unmistakable.

His attitude is rooted in other considerations too. Controls are bound up with certain ideas on price levels. The Food and Agriculture Ministers on whom devolve the task of wipping up production are naturally concerned that price policies should not turn out to be disincentives. And in their idea of a free market, sufficiently high price levels for agricultural produce are vital. It is interesting to see Mr Jain comparing the per capita income of the factory worker at Rs 967 with that of the agricultural worker at Rs 200 (for 1950-51). He further points out that while a 25 per cent increase in the national production is envisaged, the increase in the agricultural sector is only 18 per cent. There is a patent case for levelling up agricultural incomes in India but as Mr Jain himself admits, the disparity between agricultural and industrial incomes is more or less an universal phenomenon.

It is a sad paradox that in a country like India where a much larger percentage of the population derive their livelihood out of agriculture than in most of the other countries, agriculture remains one of the least remunerative occupations. This state of affairs is surely a matter for concern; the remedy lies as much in the improvement of agricultural techniques as in the diversion of the population to industry—a thesis which any sensible advocate of agricultural labour cannot help endorsing. From this standpoint, it behoves those in immediate charge of the development of agriculture in the country not to lay exaggerated emphasis on the aspirations and needs of their own charge.

Imports and Industry

THE latest revisions in import policy reflect the Government's anxiety to speed up industrialisation in all spheres without exposing the consumer too much to the hazards of a scarcity economy. That the requirements of the Second Plan should dominate the picture goes without saying. This is the reason why during the current year imports have been keeping to more than ordinarily high levels. The total value of imports in the first five months of the year is over Rs 320 crores, a level which has reappeared for the first time since 1952, when food imports accounted for a heavy slice of the total. The proportion of plant and machinery to total imports during the current year is not exactly known: it can however be presumed that it is substantial and growing. During these five months, licences of the value of well over Rs 100 crores have been issued for the import of capital goods and for about Rs 140 crores for the import of heavy electrical goods. Machinery imports during 1956 on Government account alone are expected to amount to Rs 120 crores in value. About half as much is expected to come in on private account. As industrial expansion under the Plan gathers momentum, the imports of plant and machinery both in the public and the private sector are likely to go up further. Rough estimates for 1957 put these at Rs 170 crores and Rs 80 crores.

The liberal admission of capital goods has already been incorporated as an integral feature in import policy and in this respect there is only a new emphasis. In the Red-Book for July-December, import of machinery, spare-parts and industrial raw materials has been further liberalised. Ball-bearings, small tools and garage-tools, cotton-yarn of sixty counts and above, umbrella ribs, certain types of dyes, emery grains and powder also figure among the increased quotas. Some of these items enter into the production of small scale industries.

At the same time, the Government have not been chary of admitting mistakes nor are they blind to long-range needs, even when these bear a superficial conflict with immediate requirements. There are a few consumer items in the liberalised list, such as electric cooking ranges. These items are being encouraged into the country with a view to stimulate the domestic demand, so that eventually domestic production might be stepped up to fill the market adequately.

Likewise, the door is thrown open, for certain specialities and novelties like pocket radios and auto attachments. While these items are welcome on the ground that public taste and demand must keep apace with the latest phase of progress in the world, it does not stand to reason why simultaneously what has become an indispensable necessity for large sections of the people like watches has been removed from the liberal licensing list. But, of course, in these matters no hard and fast rule can be applied and the deviations are not after all so inexcusable, especially when there is the assurance that the authorities will be keeping a vigilant eye on prices and will be ready to replenish the market whenever the consumer is threatened to get soaked.

In respect of a few items such as crockery, belonging to another category, present restrictions have been relaxed. Here, the protected industries have failed to play their part well and the Government have been obliged to remind them that they should establish a new standard of dependability. As the industries thus affected are not more than a handful, there should be general satisfaction that protected industries have on the whole given a good account of themselves.

The list carrying reduced quotas is impressive with as many as 73 items; among which figure woollen fabrics, sheet and plate glass, button, powdered and condensed milk and certain chemicals. In all these items, changes in policy have been carefully linked with progress in domestic production. The removal of 31 items from liberal licensing to the quota licensing list is intended only to limit foreign imports to the levels obtaining hitherto.

While from the consumer's standpoint, not all the changes may appear equally wholesome, the industrial producer will view them with undiluted satisfaction. The restrictions placed on the import of chemicals and engineering goods are a measure of the progress achieved by these two important industries in recent years. Their future progress is amply facilitated by the liberal admission of machinery, intermediates and raw materials.

Private business in trade should be heartened by the report that the State Trading Corporation would not be peeping into the sphere of quota items of imports, which will be left entirely in private hands. The Corporation has already taken heavy strides, with a number of major items like cement, caustic soda, soda ash, raw silk and gypsum. Other quasi-official bodies are also coming more and more into the picture. The Rubber Board is reported to be likely to take charge of raw rubber imports.

Judged by the major considerations governing policy, the latest revisions should be deemed to strike a fair balance. According to rough estimates, the extra strain on foreign exchange consequent on the liberalisation will not be more than Rs 10 crores which will be offset to the extent of Rs 5 crores as a result of the new restrictions imposed.

Memo on Coal Prices

ONE month and eight days after the Award on colliery wages was published by the Tribunal, Government have announced a revision in the selling prices of coal. The increase, as affecting and having regard to the collieries in the Bengal and Bihar areas, will be roughly Rs 3 per ton.

The Government contention is that action has been taken most expeditiously, because only 8 days have elapsed since it became known that no appeal was being preferred against the Award by the colliery owners. It is argued that the decision has, in view of the complex problem, been given in the very short time of 8 days.

It is understood that the current increase does not come up to the anticipations of colliery owners. It is these two points that we may discuss briefly.

In the first place, let us remember that Government have had not a period of a little over a week, but really the weeks since the publication of the Award, in which to study the problem of coal selling prices. It should, therefore, have been possible for Government, at the latest, to make known the revised prices on the day after the last date for the filing of an appeal.

Secondly, we would suggest that the present revised prices should be considered tentative. That is to say, if, at the current levels, the higher costs are more than covered by the increase offered, a lowering of prices should be decided upon, once the full impact of the Award on colliery costs is ascertained. On the other hand, if it is discovered, by the end of 6 months or so, that the price increase is insufficient to cover the collieries against the loss consequent to the higher wages decreed by the Award, then Government should suitably revise prices at the end of 6 months.

We suggest, therefore, that Government should clearly indicate that the revised prices are tentative—capable of being revised once again either way, as determined by actual experience of the industry under the conditions of the new Award.

Industrial Service Cadre

The Government of India have taken a belated decision to set up a special service for manning industrial undertakings in the public sector. Initially, it is proposed to create a pool of about two hundred officers through special recruitment by the Union Public Service Commission. These officers will be drawn from the present all-India and State services, the employees of State undertakings and those in the private sector.

The range of selection is unobjectionable, as it provides opportunities for suitable persons in and outside government service to have their chance. It is to be hoped that the Union Public Service Commission will be suitably enlarged for the purpose. For, emphasis has to be laid on the special character of the requirements for the new cadre. From what is gathered of Government's intentions, it would appear that the autonomous corporations will enjoy the freedom to deny themselves the use of officers available from the pool. It would not be surprising if drafts from the pool are mostly for the departmentally managed concerns. If on the other hand, the corporations' freedom of choice is curtailed it would be creating a new source of conflict.

Though in the commencing stage, the one-sided flow of talent and experience from one cadre of Government officers to another may run smoothly, in course of time, it is likely to lead to confusion and heart-burning. What is needed is a distinctly separate and independent cadre right from the original recruitment and on the base of special qualifications and training. We are sure that the Government's intention also is to create one such.

Editorial Notes

Chou En Lai's New Offer

Chou En Lai's invitation to the authorities in Formosa for friendly discussions intended to facilitate the peaceful re-union of the island with mainland, China has received wide international approval. In India the idea is promptly welcomed, and there is the hope that it will be the starting point for a settlement. In its tone and wording, the Chinese premier's statement marked a clear departure from his previous declarations on the subject. Probably with justification he has assumed that even military personnel in Formosa are not happy over the present state of affairs.

The offer is timed to coincide with the deliberations of the Commonwealth Prime Ministers, wherein the future diplomatic status of China figures as an anxious theme. Chiang Kai Shek will no doubt be far from enthusiastic in responding to his adversary's invitation. After all its purpose is nothing other than the annexation of the little rump of territory he still holds, however, courteously the process is described.

World opinion will have to take account of the fact that China's domestic politics has been considerably softened in recent months, the erstwhile opponent of the Peking regime securing the prospect of a less risky future, provided they chose to co-operate with the Government. Chiang Kai Shek's course will be largely determined by the US official view of the Chinese offer. If the latter were to be obstructive, it will be an uphill task to convince world opinion that such a view is correct and sound.

*

Urban Unemployment

A statistical sample survey of India's urban population conducted towards the end of 1953 has thrown fresh light on the extent and character of urban unemployment. The survey covered all the towns of India with a population of 50,000 and above, with the exception of the four cities of Calcutta, Bombay, Madras and Delhi. It has come to light through the survey that earners and earning dependents in the urban areas constituted only one third of the population.

More than 60 per cent of the persons belonged to households with a monthly expenditure of Rs 100 or less. Less than 6 per cent belonged to households having a monthly expenditure of over Rs 300. Both in the lowest expenditure group consisting of households spending up to Rs 50 per month, and the highest expenditure group with Rs 500 and above, each earner had only two dependents on an average. The number of dependents is doubled in the middle expenditure households, those between Rs 100 and Rs 300.

The incidence of unemployment is highest in the age groups of 17 and 18 to 21. Above this age, the proportion of unemployed gets gradually reduced. Among those above 57, the proportion is found to be only 2.03 per cent. These figures which should roughly indicate the position in the principal cities also provide a sure basis for the remedies. It is the lower middle class which suffers most, those belonging to the salaried groups, the petty shopkeepers etc., and fettered by comparatively rigid social traditions. The maximum incidence of unemployment among youngsters between 17 and 21 is perhaps explained by the fact that a large proportion of them are also unemployable, having nothing more than a secondary school leaving certificate, or an arts degree. For this section, a technical bias for education and sound practical guidance at the time of leaving school or college should turn out to be useful. As for the lower middle class, the problem goes deeper, and should call for a wider range of action.

*

The Polish Riot

The brief spell of violence in the West Polish City of Poznan involving thirty-eight deaths and injuries for nearly three hundred persons can reasonably be regarded as the expression of an incipient challenge to domestic economic policies which did not take full account of the needs of the working population. This is a statement which would apparently sound queer with reference to a Communist State.

The riots which took place demolished another myth, namely that under a Communist Government, uprisings against authority are impossible. The workers who participated, displayed a discipline and a strategy which could be possible only through prior organisation. The slogan 'we want bread' pointed to the predominantly economic motive behind the incidents.

All the same, the intrusion of political differences could not be ruled out. Full information on the genesis of the riots may never be secured as the Polish Government would naturally be reluctant to be too communicative and other sources may either not have the necessary information or be unwilling to prejudice international relations by disclosing more than what is diplomatically desirable.

It is quite possible that the retreat from Stalinism now preached by the Soviet High Command is not properly understood in all other countries even within the Communist fold. Ill-understood new policies can provoke sporadic disturbances of this kind. Even within Russia, stray incidents have occurred in recent months.

In Poland, chronic economic difficulties seem to have been reinforced by temporary political confusion. For both, the Government may have a prompt answer. The disturbance itself was not permitted to continue for more than a few hours.

Mineral Industry

Speaking at the All-India Mineral Industry Convention in Calcutta last week, Dr M. S. Krishnan, Joint Secretary, Ministry of Natural Resources and Scientific Research, has pointed out that the need for planning is nowhere more urgent than in the case of the mining industry. As our mineral resources come under the category of depleting resources, it is imperative that measures of conservation in mining in processing and in the use of minerals should be strictly enforced.

An equally important requisite is the provision of trained personnel for taking charge of the various industries whose raw materials are minerals.

Foreign Exchange: First Plan Actuals, Second Plan Prospects

AN appraisal of India's foreign exchange balance sheet as at the end of the First Plan, and covering the period of the First Plan, has been given in the latest number of the Reserve Bank of India Bulletin. This should serve to cheer and hearten the planners of today who, Jeremiah-like, foresee exchange gaps of large and over-bearing size in the second quinquennium. For, India's balance of payments in the period 1951-56 reveals that the forebodings as incorporated by the Planning Commission in their estimates on the First Plan have largely been belied. As against a current deficit anticipated over the First Plan period of Rs 667 crores to Rs 727 crores, the actuals, excluding official donations, are placed at no more than Rs 123.1 crores. Moreover, this current deficit has been more than offset by receipts under official donations and loans which, in the aggregate, were placed at Rs 196.5 crores in the five years.

With, however, other capital transactions accounting for an outgo of Rs 116.2 crores, and with errors and omissions shown at a minus of Rs 78.5 crores, the decline in reserves over the period has been Rs 121.3 crores. The following table makes the position clear:

	(Rupees Crores)
1. Current Deficit (excluding donations)	—123.1
2. Official Donations ..	+ 97.1
3. Official Loans	+ 99.4
Total of 1, 2 and 3 ..	+ 73.4
4. Other Capital Transactions	—116.2
5. Errors and Omissions ..	— 78.5
Change in Reserves (decline—increase+)	—121.3

This figure of Rs 121.3 crores compares with the drawing down of foreign exchange reserves by Rs 290 crores as estimated by the Planning Commission. The Planning Commission's figure was arrived at after taking credit for a substantially higher level of foreign aid.

In the meantime, the foreign exchange liabilities—representing such items as liabilities to the International Monetary Fund and the liabilities of authorised dealers —were also reduced from a level of Rs 129 crores at the end of 1950-51 to Rs 80.9 crores at the end of 1955-56. In the result, the decline in net reserves is the even smaller one of Rs 73.02 crores to Rs 761.7 crores.

Three reasons have been adduced for the large discrepancy (favourable) between the estimate of deficit by the Planning Commission and the actual figure. In the first place, with the sharply improved production of foodgrains during the last three years of the First Plan, imports of foodgrains were at a substantially lower level than the estimate of 3 million tons annually made by the Planning Commission. This factor resulted in a saving of Rs 300 crores in foreign exchange over the five years. Secondly, progress on some of the major projects, such as the increase in steel capacity, was not achieved to the extent anticipated; and imports of machinery, consequently, were actually at a lower level than anticipated by the Planning Commission. Finally, as the Bulletin has it, "the actual rate of investment turned out to be smaller than was visualised by the Commission, so that the expected impact on the balance of payments did not materialise."

All the three reasons thus given are negative in character in that imports were avoided, thereby enabling a saving in foreign exchange expenditure. It is quite possible that, at the end of the Second Plan, the three factors will similarly

Green Light for the New Loan

THE returns of the Reserve Bank for the week ended June 29 disclose unmistakable and substantial emergence of slack season forces. There has been contraction of paper currency to the extent of Rs 15 crores, and contraction in rupee coin circulation to the extent of Rs 1.35 crores. Currency has been contracted as to Rs 10 crores by transfer of foreign securities, and as to Rs 5 crores by transfer of rupee securities, from the Issue Department to the Banking Department. Active note circulation has gone down by Rs 12.20 crores to Rs 1474.67 crores. Rupee coin to the amount of Rs 1.35 crores returned from circulation, thereby raising the figure in the Issue Department to Rs 107.61 crores. As a result of these operations, notes held in the Banking Department have declined by Rs 1.42 crores to Rs 28.27 crores.

In the Banking Department, the Centre's balances have declined by Rs 5.74 crores to Rs 56.84 crores, while those of the States have risen by Rs 5.16 crores to Rs 13.17 crores.

A significant feature is the rise of Rs 2.61 crores to Rs 54.49 crores in Bank's balances, in spite of a reduction of Rs 1.94 crores to Rs 69.68 crores in Other Loans and Advances. Foreign balances, despite an accession of Rs 10 crores from the Issue Department, show a rise only Rs 2.70 crores to Rs 34.97 crores, thus testifying to a net loss of Rs 7.30 crores in foreign assets. Investments show a rise of Rs 7.04 crores to Rs 43.04 crores; and we are inclined to think that Rs 5 crores of this amount represents the transfer from the Issue Department, and about Rs 2 crores represents open market purchases, mostly of 1957 and 1958 loans.

The substantial changes in the Reserve Bank Statement under review denote accelerated flow of funds from the motussil to the banking system and accelerated flow of notes and coins from circulation to the currency reserve.

The establishment of these conditions on a firm basis may be said to furnish the green light for the announcement of the New Loan. This view is further strengthened by the Reserve Bank stopping the tap sales of all securities. Money rates, too, have shown a slight downward trend.

STOP PRESS

Well-Planned Loans

CONSIDERING the lengthened duration of the 1955-56 busy season, the Reserve Bank deserves to be congratulated on its alert preparedness which makes it possible for the Centre's New Loan to be issued and got out of the way by the third week of July. The Reserve Bank is also to be congratulated on its courage in keeping the Loan's target at Rs 150 crores, and on its sense of assurance that the target will be attained within a maximum of three days.

The Reserve Bank has, likewise, shown a sensitive appreciation of investor-preferences by placing on the market, simultaneously, a short-term loan, a medium-term loan, and a medium-long loan. In thus including three types of loans in this year's borrowing programme, the Reserve Bank has kept its plans a well-guarded secret. In the spate of conjecture which usually precedes the flotation of a loan, market circles shrewdly guessed, this year, that there would be a medium loan and a long loan. A six-year loan did not figure in any of the predictions.

The New Loan programme comprises:

(1) 3½ per cent bonds 1962 at an issue price of Rs 98 per cent repayable at par on July 16, 1962.

Recession in British Motor Trade

By PAUL EINZIG

IT has long been evident that all is not well in the British automobile industry. In common with the motor industries of other countries, it appears to have over-expanded. On the assumption that the demand would continue to increase indefinitely at the same rate as it has been increasing during the past two years or so, the motor works have expanded their plants. At the same time they have increased their capacity also by means of automation. And now they find it impossible to use their increased capacity to anything like its full extent, owing to the decline in demand. The dismissal of some 6,000 workers by the British Motor Corporation towards the end of June has drawn public attention to a state of affairs which has existed for some time, but whose significance was not realised adequately either by employers, or by employees and their Unions, or by politicians.

The motor industry is largely to blame for its gross miscalculation of its prospective markets. The inadequacy of the British road system to cope with the increased motor traffic, set a natural limit to the absorbing capacity of the domestic market. The Government's road building programme is too modest to make any appreciable difference in this respect for years to come. It is true, the legislation introduced recently, making the yearly official testing of old cars compulsory, is liable to cause a certain switching over of demand from second-hand cars to new cars. Even so, overcrowding of roads and parking difficulties are liable to discourage domestic demand.

Moreover, the manufacturers of cars ought to have paid more attention to what was happening abroad. Apart from the spectacular increase of the capacities of the American automobile industry, German and French rivals of British cars are also forging ahead. Owing to the ease with which it was possible to expand the domestic market during recent years, British manufacturers did not concentrate sufficiently on their overseas markets.

Another subject for criticism is the way in which the motor trade drained the inadequate industrial manpower to satisfy its exaggerated requirements. For years it was bidding up wages in order to attract labour for the purpose of expanding its output. The result was an all-

(Continued on page 11)

World *of* Business

A Policy for Oil

EVEN if, at some future date, atomic power replaces oil and electricity and coal, the commodity which industry will continue to make use of on a considerable scale, and without which it will not be able to function—though coal and electricity might be substituted—is oil. The power generated by electricity and from coal may as easily be obtained, and even at a less expensive cost, from the development of the atom for peaceful industrial uses. But, in order that the machine may run smoothly, the world has still to discover an efficient substitute for oil. For the present, however, in the view that atomic power will not be available in requisite quantity and at a reasonable cost until after two or three decades, in the process of Indian industrialisation, especial emphasis has been placed on the development of the three sources of power—electricity, coal and oil. As to the first two of these, India does not suffer any handicaps in increasing productive capacity. Not only are we in a position to place orders for thermal units to raise output of electricity; India's gigantic rivers offer an immense potentiality for the generation of hydro-electric power. Indian resources of coal, except in the metallurgical variety, are quite satisfactory. It is in respect of oil that, with little of exploration conducted in the past, India's indigenous output is pitifully small. Since a dependence on import for oil is undesirable, especially so at times when supplies might be endangered by war conditions, there has been urgent need for the delineation of a carefully thought out and correctly conceived Indian policy for oil.

As we said, very little of oil is being produced in India today. Moreover, the surveys that are necessary as a pre-requisite to drilling explorations have yet to be carried out, and the geological and geo-physical data are lacking. It is these questions, the intensification of survey and a more vigorous exploration, that should be engaging the serious attention of Government. It would appear, however, that Government have allowed themselves to be distracted from these tasks by questions of little significance.

Nevertheless, there is every evidence that a national oil policy is being evolved, national in the view that measures are sought to be taken which, within the next few years, may reduce Indian dependence on foreign oil. Already, the extent of Indian dependence is perceptibly smaller, with the enterprise taken on hand to arrange for the refining of oil to the requirements of indigenous demand. The oil refineries set up in the private sector by foreign interests have ensured that Indian imports of oil, saving some specialised extractions, will be in crude form only. The refineries set up by Messrs Burmah-Shell, Standard Vacuum and the one shortly to be commissioned by Caltex are, in the aggregate, capable of meeting almost the entire of Indian needs of refined oil. We understand that the three units can, with little difficulty and additional cost, increase their capacities. Thus, to the extent that India is to import crude oil only, some degree of independence has been achieved, while, at the same time, we have benefitted by a saving in terms of foreign exchange.

But the really important work that has to be done in the future will be survey of areas which might be productive of oil and of exploration and drilling thereafter. With the reservation of future development in oil to the public sector, as indicated in the revised Industrial Policy Statement, it would appear that Government would themselves assume the responsibility for oil exploration. But, undoubtedly, foreign collaboration and technical knowledge would be required by Government. Already, in this regard, assistance has been available from the UK, the USA, the USSR, Rumania and Canada. Surveys thus far carried out suggest that, particularly in Assam and the Bengal basin, there are distinct possibilities of striking oil. It remains a moot question, however, whether the fullest co-operation can be secured by Government for a State-owned, State-operated body for exploring oil. It may not be out of place to suggest that work could proceed more swiftly, and results achieved more expeditiously, if foreign participation in such projects is permitted and invited. By participation, we mean here a share in the profits accruing from the successful ventures—or, of course, the losses.

Instead of concentrating on such endeavours to discover reserves of oil in this country, Government are partly pre-occupied with charges of extortionate profits made by the refineries in this country. In this regard, we may point out that, in the first place, two of the refineries are yet to work to full capacity, while the third is yet to be commissioned. Obviously, no examination of this charge, which was made on the floor of the Parliament, can be taken on hand until the refineries are producing to capacity, and until the financial results of a whole year's working are available.

In the second place, the Indian refineries have to use imported crude as their raw material, and it is, consequently, the price of imported oil which will determine the rates at which the refined products can be sold within the country. Indeed, a formula exists—this was agreed to by the four distributing companies in 1946—by which Government periodically fix and revise the price of imported oil products on the basis of the dollar prices obtaining in the Gulf of Mexico ports.

The alternative sources to India, like the Persian Gulf and Indonesia, have levels of prices which are linked with the Gulf of Mexico ports prices. In consequence, the import price of crude for India has been at little variance from the dollar prices. Thus, whether the charge of unreasonable profits can be justified, is, in view of these facts, extremely doubtful.

At the same time, however, in the interests of Indian industrialisation, it is scarcely to be doubted that lower prices for oil and oil products are desirable. It is not impossible to entertain the hope that India may be able to obtain crude at a more advantageous price, thus enabling revision of the price at which products could be sold by the refineries. This hope stems from two factors.

Firstly, it has been reported that the Iranian Government may be willing, with a view to strengthening political ties and fostering the bonds of friendship with the country, to sell some small portion of its production to us at prices lower than those ruling at Gulf of Mexico ports.

Secondly, Russia would appear to have embarked upon a trade offensive which, in particular, seeks to help India in every way possible. Under the Indo-Russian trade agreement, there is scope for the export by Russia to India of oil. If Russia could spare or chooses to spare a quantity of crude roughly equivalent to Indian needs, and decides to make the supply available at specially advantageous prices, India will stand to benefit.

In this evolution of a national oil policy, the responsibility that rests on Mr K. K. Sahani, who has been appointed as adviser on oil in the Planning Commission, is quite heavy. If Mr Sahani can persuade the Planning Commission that due regard must be had as in the need for securing the fullest foreign co-operation, he will have ensured that the national oil policy is being evolved on correct lines.

*

Food Prices

For the second time within three months, there has occurred a normally inexplicable rise in prices of certain foodstuffs. These sporadic boomlets have come amidst a gradual and from the short range somewhat inperceptible general rise in prices, with the result that the layman is inclined to throw the blame on Government measures. Last time, when foodgrain prices suddenly rose in two or three States, the Government came forward promptly and started fair price shops. The way in which the open market prices tumbled down showed that there was clearly the manipulator's hand behind.

This time too, the speculator seems to be responsible, though he can to some extent take refuge under the circumstances of a mild general inflation. A Government spokesman has taken the private sector to task for activities which spring from anti-social motives.

The business community which has been foremost in raising the cry of inflation must feel a special sense of obligation in respect of keeping prices under control. The inevitable reaction to price increases, under whatever justification, will be demand for higher wages and the whole economy being caught up in a vicious circle.

It should be the aim of the Government to be wise before the event. Manoeuvred price increases should be reckoned with as part of the problem to face. The usual method of tackling the situation by dumping in emergency stocks is not sufficient because considerable mischief will have already been done before these stocks are available for the public. It must be possible for the authorities to anticipate private speculation in this sphere. More effective punitive measures might also turn out to be useful.

*

Vanaspati Consumption

Some of the facts presented in the May issue of the Indian Labour Gazette about conditions in the vanaspati industry should help to disabuse the public mind in India of whatever misgivings still linger on the effects of vanaspati consumption. In 1955, the total production of margarine in India was 5.2 lakhs cwts. This is not a small figure in comparison with that of the USSR, where the annual production for the year stood at 5.4 lakhs cwts. Production of butter and ghee for an earlier year stood at 8.2 lakhs cwts for India as against 7.5 lakhs cwts for the USSR.

Australia, Denmark, Sweden and Canada are among the foremost countries in point of per capita consumption of butter and ghee. In all these countries, the per capita consumption of margarine and vanaspati is also considerable. In Sweden and Denmark, it is higher than the consumption of butter and ghee. Against a per capita consumption of 18.5 lbs of butter and ghee in Denmark, that of margarine and vanaspati is 40.1 lbs: in Sweden it is 25.8 lbs; in Canada the corresponding figures are 20.9 lbs and 16.5 lbs. In Norway, the per capita consumption of margarine and vanaspati is as high as 51.6 lbs, in Netherlands 40.8 lbs. in West Germany 28.1 lbs and in the United States 18.4 lbs.

In India, the per capita consumption is 1.6 lbs as against 2.4 lbs of butter and ghee. The conclusion is inescapable that in countries with a high standard of butter consumption, there is no general antagonism to the consumption of margarine. Both the products are viewed in a complementary spirit.

World *of* Jute

Raw Jute: Second Plan Target is Unambitious

THE target for the production of raw jute by the end of the Second Plan has been stepped up from the originally planned rise of 25 per cent to one of 37½ per cent. In other words, while, in the Second Plan, the target of raw jute production for 1960-61 was fixed at five million bales, the output that we now aim to achieve by that year is to be 5.5 million bales. As against this production of raw jute the estimate of consumption by IJMA mills, working to full capacity, has been placed by the authors of the Second Plan at 7.2 million bales. Blandly, the Second Plan suggests that it is "proposed to provide 5 million bales from internal production and to import the balance".

My theme for this week is, therefore, going to be the lack of courage in planning in regard to raw jute and the suggestion that surely, we should be able to increase upon this target of production.

What time India was partitioned, the output of raw jute within the Indian Union was a scant 1.7 million bales. By the end of the First Plan period, with an interim marked by doubt and diffidence as to India's ability to multiply jute production two and three times, the Indian crop had risen to a level of 4 million bales. This does not include production of Mesta and Bimli, and moreover represents the official as distinct from the trade estimate of the Indian crop.

If Bimli and Mesta were taken into account, what we have actually been able to achieve in the eight years since independence is to treble our output of the raw material needed to manufacture gunnies.

Indeed, at the current level of production, the indigenous output of raw jute almost suffices to provide raw jute in sufficient quantity to meet the requirements of IJMA on the basis of 12½ per cent looms sealed and 42½-hour working.

But, in the meanwhile, with a higher level of world demand for jute goods and with the larger world availability of raw jute, it had become necessary for IJMA mills to revise the basis of working. In the first place, working hours have been increased to 48 per week; and, in the second place, all but 5 per cent of the looms were unsealed before, last week, it was decided to reseal 2½ per cent of the looms for the reason that stocks of jute goods were thought to be too high.

The higher pace of jute goods production has entailed substantial increase in raw jute consumption within the country. At the current working, the raw jute requirements of IJMA mills are in the vicinity of 6.6 million bales. If, against this, some 5 million bales of raw jute, Bimli and Mesta are provided from within the country, it seems that India's dependence on Pakistan for the raw material is of the order of 1.6 million bales.

It seems to me that the Indian jute mills industry will very likely be called upon to work to full capacity by the end of the Second Plan. This, of course, is an assumption, but I think it is a safe bet that the expansion in world demand for jute goods as evidenced in the last two, three years, will be projected into the future. By working to full capacity, and by the utilisation of 7.2 million bales of the raw material, the output of the manufacturing industry will be roughly 1,217,000 tons. In 1955-56, as near as can be, we can estimate jute goods production at 1,081,800 tons. In other words, over a period of the next five years, I suggest that we must envisage an increase in jute goods production of the order of 135,200 tons.

It is eminently reasonable that we make this assumption. For, with the upward revision in all foodgrain targets within the country, the trend toward increasing indigenous consumption of jute goods will be accelerated. If, over the Second Plan period, the output of foodgrains is to be stepped up by 16.5 million tons, we are surely justified in anticipating a substantial rise in internal consumption. In 1955-56, internal consumption has increased by over 50,000 tons as compared with the previous year. Surely, in the next 5 years, internal demand will rise by another 150,000 tons.

It will be seen that, on the basis of an increase of such size in internal consumption, no provision has been made for a higher level of world offtake of Indian jute goods.

In this regard, we must remember that, very likely, Russia will prove to be a customer of size and substance for India's jute goods. If, therefore, the current world demand for Indian jute goods is maintained, and if, besides, a new source of demand makes its appearance in the form of Russian purchases, the prospect may be even one wherein Indian jute goods production will fall short of demand.

It is, therefore, imperative that the minimum basis on which we plan raw jute production should be on the expectation of working to capacity by IJMA mills—that is to say, 7.5 million bales. It would be folly on our part to depend upon Pakistan for any proportion of our requirements.

Let us, therefore, proceed with planning on the basis of IJMA requirements of the raw material at 7.2 million bales. Including other requirements, the total quantity necessary may be around 7.5 million bales. Against this, the planned production is 5.5 million bales of raw jute and, roughly, one million bales of Bimli and Mesta. The shortfall, consquently is one million bales. Is it to be doubted that we should be capable of producing this extra quantity, this shortfall of a bare one million bales, when we have regard for the fact that, in the meanwhile, we would have increased production of raw jute from 1.7 million bales to 5.5 million bales?

No, I do not think it would be difficult. And I do think that it is essential for India to set its target at a total of 7.5 million bales of raw jute; it is vital that we seek to achieve self-sufficiency in raw jute by the end of the Second Plan.

Indeed, I see prospects for India being able to export raw jute. If business-like transactions enable India to purchase some of the better quality raw jute that Pakistan produces, we should then be in a position to offer to the world some quantity of the cheaper varieties that we should, by then, be growing in abundance. I do not have any doubt whatsoever that demand would be forthcoming for such Indian exports of raw jute.

In brief, I suggest higher target of self-sufficiency in raw jute; and I do not rule out the possibility that we may be able to export raw jute during the course of the Second Plan.

*

Prices in the Calcutta Jute Goods market last week steadily advanced on reports of enquiries from Argentina and Australia. The undertone at close was fully steady. Opening on an uninspiring note, the market steadied up after mid-week on reports that Australia had bought cornsacks for near shipments. In subsequent sessions sentiment further strengthened on confirmation of earlier reports of Australian business. About that time there were indications that Argentina was entering the market for Hessians. Though there were reports that the size of the offtake from that quarter would be quite small as compared to previous years, operators were inclined to view the development with optimism. Toward close mills taking advantage of the higher levels came out as sellers

GOVERNMENT OF INDIA

3½ PER CENT. BOND 1962. ISSUE PRICE Rs. 98 PER Rs. 100 (NOMINAL). REPAYABLE ON THE 16th OF JULY 1962

3½ PER CENT. NATIONAL PLAN BONDS — THIRD SERIES (3½ PER CENT. 1967). ISSUE PRICE Rs. 98-8 PER Rs. 100 (NOMINAL). REPAYABLE ON THE 16th OF JULY 1967

3½ PER CENT. LOAN 1974. ISSUE PRICE Rs. 98-8 PER Rs. 100 (NOMINAL). REPAYABLE ON THE 16th OF JULY 1974

Subscription to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 150 crores (approximately). Subscriptions may be in the form of (i) Cash/Cheque or (ii) Securities of the 3 per cent. Victory Loan 1957 which will be accepted at Rs 99-13 for every Rs 100 (Nominal) tendered for conversion. Interest will be paid on the 3 per cent. Victory Loan 1957 tendered for conversion upto the 15th of July 1956 inclusive.

Interest on the new bonds and loan will be payable half-yearly on the 16th January and the 16th of July.

Subscription lists will open on the 16th of July 1956 and close on the 18th of July 1956 or earlier without notice.

Applications for the bonds and loan will be received at :—

(1) Public Debt Offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore;
(2) Branches of the State Bank of India except in the States of Hyderabad and Mysore;
(3) Branches of the Hyderabad State Bank in Hyderabad State; and
(4) Branches of the Bank of Mysore Ltd., in Mysore State.

For full particulars apply to any of these offices or branches or treasuries.

World *of* Tea

Continued Demand for Most Types

FOR the third week in succession, there was a better general demand for all kinds of tea, the only exception being thin plain liquoring sorts. Buyers continued to show preference to quality.

In London auctions, good quality invoices were keenly sought after, and there was irregularity and easiness at the bottom for unattractive kinds. The quotation for Plain Broken Pekoe was nominally quoted 35½d a pound as compared with 36d a week ago.

In the UK, stocks amounted to about 121.30 million pounds on the 22nd June—slightly above the previous week's returns. Stocks a year ago stood at nearly 148.00 million pounds. The present quantity actually in the warehouse, viz., around 106.40 million pounds, cannot be regarded as adequate.

The general opinion seems to be that more tea will be held in stocks were it not for the credit squeeze which resulted in many buyers pruning their stocks to a level sufficient only to take care of their immediate requirements. Of course, it must not be forgotten that stocks at this time of the year would have in any case been declining, because of seasonal considerations.

Stocks, too, by the end of July, will probably be at their lowest. About that time too, North Indian new season's teas are about becoming available for sale in this country. It is hoped that, by then, the abundant supplies of poor stalky teas will have been largely disposed of and that India, Ceylon and Pakistan will embark on a course of prudent plucking which may well enable them to realise an economic price for their production.

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 25,400 packages for which there was a better general demand for all kinds except thin plain liquoring sorts. There was more demand for Low Medium teas which were firm and sometimes dearer; but the plain and thin descriptions were easier and most of the withdrawals were of this category.

Well-made and twisted Leaf grades were sold well; while the CTC teas, on offer, were keenly competed for, the very best realising high prices. Good liquoring teas from all districts were a strong feature and these were generally sold at dearer rates.

Darjeelings followed the trend of the previous sale and were irregular and generally easier except for a very few flavoury sorts which met with a good demand. There was good demand for Tippy sorts and these were sold well. Following were the rates quoted per pound:—Clean Black Pekoe Rs 1-12-0 to Rs 1-14-0; Plain Broken Pekoe Rs 1-7-6 to 1-8-6; Medium Assam Broken Pekoe Rs 2-4-0 to Rs 2-6-0 and Best CTC Assam BP Rs 3-8-0 to Rs 4-0-0.

In the Internal Sale, offerings amounted to 19,350 packages, comprising 12,000 chests of New Season's and 7,350 chests of Old Season's teas. Black Middle East types and useful lifuoring CTCs were keenly competed for and were generally dearer; but, for the remainder of the offerings, there was only a fair demand. Mediums were an irregular 2 annas easier, while poor liquoring kinds met with a weak enquiry and withdrawals were heavy. Residue descriptions received fair support but at generally easier rates. Darjeelings with any flavour were a strong feature. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-8; Medium Assam Grainy Dust Rs 1-12 to Re 1-13; and Best Assam CTC Dust Rs 3.

Offerings of other grades consisted of 249 chests of New Season's and 300 chests of Old Season's teas. There was a fair enquiry, but at generally lower rates.

In the Export Quota section, business was reported done at 33 pies per pound.

In the Sale No. "M" held in Cochin last week, a total of about 950,000 pounds were offered. The market opened to a fair demand which weakened considerably as the sale progressed. The better liquoring high-grown descriptions were well supported and sold at about firm rates. Mediums and Low Mediums, however, met with less enquiry and declined by As 2 to As 3 per pound; and withdrawals of these were fairly heavy. Milled-Dusts proved difficult of sale, while residual sorts were one to two annas per pound easier. Little interest was shown in Black Leaf Middle East types which registered a drop of As 2 to As 4 per pound. Export Sale No. 19 will be held on the 10th June, 1956.

According to the latest figures, South India produced a very large tea crop of 21.45 million pounds in May as compared to 17.21 million pounds in the corresponding month of last year. Also, shipments were well maintained at 5.97 million pounds in the same month as compared to 5.28 million pounds in the corresponding month of last year. The improvement in exports was offset, to some extent, by lower shipments to Indian Ports, from 1.06 million pounds in May 1955 to 328,906 pounds in the month under review.

Outturn of tea in Pakistan, during May 1956, was placed higher at 4.1 million pounds as compared to 2.9 million pounds in the corresponding month of last year. Total outturn, during the current year up to the end of May 1956, was also substantially higher at 7.7 million pounds as compared to 5.6 million pounds in the corresponding period of last year.

In London auction held this week, about 28,988 packages, including 12,528 packages of Northern India teas, were offered. A good general demand was in evidence with especially brisk bidding for coloury and Orance Fannings. All the best teas, except where quality showed a decline, were fully firm. Medium and Common kinds, particularly those with brown and stalky appearance, were often ½d to 1d per pound easier. Clean Common Broken Pekoe was nominally quoted at 2sh 10½d per pound.

*

RECESSION IN BRITISH MOTOR TRADE

(Continued from page 8)

round increase in wages, for employers who were less favourably placed than the motor works from the point of view of profit margin had to increase their wages in order to safeguard their dwindling man power. Even industries working at a loss such as British Railways had to consent to increases far beyond their means, in order to avoid being depleted of labour.

Having said all this, it must be admitted that to a very large extent the motor industry cannot be blamed for its present difficulties. The sudden contraction of its foreign markets through import cuts in Australia and elsewhere could not have been foreseen. Nor could businessmen reasonably be expected to foresee the degree of disinflationary measures that the Government would have to adopt in order to cope with the inflationary situation. In 1952 a much more modest degree of disinflation sufficed to correct the balance of payments.

Following on the dismissals, the British Motor Corporation has been subject to much sharp criticism, not only on the part of the Unions and their political supporters but even from Conservative side, for having dismissed the 6,000 men who have become redundant without any preliminary consultations and with a severance pay of a mere one week's wages. Much of this criticism is undoubtedly unfair. It would have been impracticable to warn the workers months ahead, because it did not appear unreasonable to hope that the situation would right itself before it became necessary to resort to such drastic measures. Nor would there have been much point in preliminary consultations. All that the Unions would have had to suggest is that, instead of dismissing the redundant men they should be "feather-bedded." Which in conditions of overfull-employment that still exists in Britain would be about the worst possible solution. After all, many branches of the engineering industry have to quote long delivery dates for lack of manpower. Railway transport is slowed down because there are not enough men. In the circumstances it would be clearly against the public interest to retain thousands of men in the motor industry where they are not needed, and to compel other industries to resort to further wages increases in order to induce these men to change their occupations.

The way in which the credit squeeze could contribute towards solving Britain's economic problem would be precisely through assisting in the reallocation of labour by forcing employers to dismiss their redundant workers. Under a non-stop expansion such as we have been witnessing in recent years, it is much too tempting for employers to retain workers they do not need any longer, for fear of being unable to secure additional labour if and when they should need it. The cost of such "hoarding" of labour could easily be added to the price of the manufactures while the going was good. As a result of the credit squeeze, the confidence of employers to be able to raise their prices has declined. They no longer dare to run up high costs of production, owing to the uncertainty of being able to pass them on to the consumer.

To some degree, the Government stands to gain from the uncertainty of employment prospects. There is an acute shortage of manpower in British Railways, in the Police, and in other Government departments or Government-controlled services. Recruiting to the armed service does not produce the desired result. All this is because the permanency of such jobs has not the same attraction amidst overfull employment as it had before the war. But now that conditions of employment have become less certain, jobs with lower pay but with the certainty of being permanent have become once more attractive, even if the pay offered is lower than in industry.

The extent of hardship caused by dismissals in existing conditions of employment has been grossly exaggerated. Provided that the men are prepared to change location and occupation, they could step from one job into another without an interval of unemployment. It is true, they would have to accept lower pay. But then there has not been any justification for the high pay they received from motor works during the boom years. It would of course be too much to expect them to see it this way. So industrial relations in Britain are likely to become embittered as a result of redundancy dismissals.

World Overseas

US Notes

REPORTS from the US Federal Reserve Board show department stores throughout the United States doing their best business ever for this time of year. Last week, sales exceeded those of the corresponding 1955 week by six per cent, with stores in every major city sharing in the increase. This was the seventh consecutive week in which Department Stores registered a sale gain over a year ago. For 1956, sales so far have been running four per cent ahead of the record 1955 rate.

These record sales go hand in hand with a continued and widely distributed increase in personal and family income. A survey by the US Federal Reserve Board, in co-operation with the University of Michigan, shows that American consumers in all income brackets shared in the $16,000 million increase recorded last year in total personal income. That income last year reached a record high of $303,200 million. All groups shared in the increase, except farm operators, unskilled and service workers, and persons under 25.

A report by the US Commerce Department, meanwhile, shows that family income in the United States, before payment of Federal income taxes, averaged 5,520 per unit in 1955. This was a rise of three per cent over 1954 and represented a new high in current dollars as well as in real purchasing power. The average family income, measured in terms of 1955 prices, has more than doubled in the past quarter of a century. The number of families, incidentally, has grown from 36 million in 1929 to 52 million in 1955.

Recent years have seen a significant upgrading of American family income According to US Commerce Department figures, 79 per cent of all US families had incomes below $5,000 a year in 1946, while 17 per cent made between $5,000 and $10,000 and only four per cent made more than $10,000. By the beginning of 1956, the number earning less than $5,000 a year had dropped 30 per cent of the total, while those in the $5,000 to $10,000 had risen to 44 per cent and those making more than $10,000 to 26 per cent of the total.

Aviation

Advantages of Turbo-prop

A marked advantage which the turbo-prop enjoys over the aircraft fitted with pure-jet engines is the ability to shorten its landing run by reverse-pitch-propeller braking. This is one of the most striking characteristics of the Britannia, the world's largest turbo-prop airliner. It gives the aircraft remarkable landing performance under even the most unfavourable conditions.

Using a wet runway, with no wind, and at maximum landing weight, the Britannia can fly over a 50 ft-high obstacle on the approach and come to rest only 1,200 yards farther on. This is in temperate zones. At a high, hot aerodrome like that of Johannesburg, where the landing run is inevitably longer, the comparable distance even in midsummer is about 1,500 yards.

But reverse pitch propellers are valuable not only in enabling the Britannia to use short runways; they are also a powerful safety factor, when the aircraft lands on snowfilmed or icebound surfaces. Propeller braking is entirely independent of adhesion between the tyres and the runway and is, therefore, unaffected by ice, which greatly reduces the efficiency of wheel brakes.

*

TRANSATLANTIC NAVIGATION AID.

Britannia and Canada are to co-operate in a year-long test, to be completed in 1957, which may result in a new air navigation system for aircraft operating in the North Atlantic area. The system is known as "Decca", and is an adaptation of the Decca navigator system now in use in Western Europe.

Two new long-distance radio stations will be erected on each side of the Atlantic. The Canadian stations will be at Comfort Bay and Torburn Lake, near Gander, Newfoundland; while the British stations will be at Prestwick, Scotland. The tests are being undertaken on the recommendation of the International Civil Aviation Organization, which for years has been searching for an accurate long-distance radio control. A number of international airlines will participate in the evaluation trials.

*

DRIFT METER.

British Overseas Airways Corporation (BOAC) has now arranged for all its Bristol Britannia aircraft to be fitted with a drift meter manufactured by a United Kingdom firm.

Specially designed for high-altitude, pressurized aircraft, this instrument which enables a navigator to check ground speed and drift with a high degree of accuracy, is read direct from scales. The meter can be used over an altitude range of up to 50,000 ft, and at speeds of up to 600 knots

Other operators who have specified the drift meter include Middle East Airlines (of the Lebanon), for the Viscount; Canadian Pacific Air Lines, for the DC-6B and the Britannia 300-LR; and Indian Airlines Corporation, for the Viscount.

*

AIR SURVEY.

The Air Survey Co., Ltd. has adopted the name of the parent company of which it has been an integral part for 27 years. It is now to be known as Fairey Air Surveys Ltd.

Formed in 1923 to carry out an aerial survey of the Irrawaddy delta in Burma, the company expanded, on the basis of its successful completion of this project, into an organization equipped for aerial survey work in any part of the world. In 1929, it became a subsidiary of the Fairey Aviation Co. After the war the Air Survey Co. continued to expand, and by 1948 it had subsidiary and associated companies in Canada (Aero Surveys Ltd. of Vancouver), India (Air Survey Company of India Ltd.), Pakistan (Air Survey Company of Pakistan Ltd.), and Southern Rhodesia (Air Survey Company of Rhodesia Ltd.)

Since then, the group has won air-survey contracts for irrigation schemes in Iraq, Pakistan, Siam, and Syria; for the general development of oversea territories in Central and East Africa and in the Caribbean area; and for hydro-electric schemes, town, aerodrome, and seaport planning throughout the world.

*

REGULAR BRITANNIA SERVICES IN TWO MONTHS' TIME.

WORLD'S LARGEST CIVIL AIRLINER.

The Bristol Britannia, the largest civil airliner in the world, is expected to go into regular passenger service in two months' time, said Mr. Harold Watkinson, British Minister of Transport and Civil Aviation, when speaking at the fifth conference of the Commonwealth Air Transport Council held recently in London.

Passenger traffic in the air was increasing at a rate which doubles itself every four or five years, said the Minister, and there was no sign of it flattening off. "The air links of the Commonwealth are going to be the very fabric of communications in the years to come," he added. "I look forward to the day, when it will be quite commonplace, in the years to come for any citizen of London to go for a holiday in the Rockies or New Zealand in much the same way as we cross the Channel to-day.

"Very soon now we are going to start the largest civil aircraft in commercial operation—the Britannia—on its passenger flights. For some time it will be the largest civil aircraft flying, and we hope to start it on its services in about two months' time."

Referring to Britain's part in jet airliner development, Mr. Watkinson, said that the UK still had more experience in flying this type of aircraft than any other country, and he thought the Comet 4 was going to be an aircraft of great versatility and very wide application. It had a great future in front of it.

It is expected that the London conference will continue for several days. The Commonwealth Air Transport Council was established in 1945, and its main purpose is to keep the development of air communications under review. This year's chief subjects are telecommunications and aircrew licences. For the first time, a representative of the Federation of Rhodesia and Nyasaland is present at the conference.

*

KLM NEWS.

For the 13th successive year the West Indies Division of KLM has received the safety Award of the Inter-American Safety Council Inc. This distinction was granted for the year 1955. During which the KLM aircraft stationed at Curacao flew an aggregate distance of 2,100,000 miles on the 7,400 mile local network (serving 24 cities) and performed a total of nearly 34 million passenger miles.

With effect from June 21, Budapest will be included in one of the existing KLM services from Amsterdam to the near east. This service will be operated via Frankfurt—Budapest—Istanbul and Cairo.

Sofia is also to be included in the KLM network, likewise in a service from Amsterdam to the near east, which will probably be routed via Duesseldorf—Sofia—Athens—Beirut and Damascus. This new service will be inaugurated on June 29. Both services will be operated once a week with DC-6 aircraft.

As a result of the above extension of the KLM network, the Dutch airline will now serve 117 cities in 74 countries.

The Rembrandt exhibition which is now being held in the Rijksmuseum at Amsterdam in commemoration of the 350th anniversary of the great master of the Dutch school, contains 100 Rembrandt paintings. Thirty-one of them were flown to the Netherlands by KLM aircraft. This is the first time that such a valuable art collection was carried by air. The value of the 31 Rembrandts transported by KLM last month is illustrated by the fact that quite a number of them were insured for about 100,000 sterling.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THE Manchester Guardian, that most indefatigable of political school-masters, has taken advantage of the meeting of the Commonwealth Prime Ministers in London to instruct its "class" on the elements of a subject that has puzzled many. In the best manner of the "progressive" sixth form master, it has asked one of its bright pupils, Mr K. M. Panikkar, to set the ball rolling. The rest of the class, except the incorrigible back benches, has taken the cue and the subject has been discussed from all angles. Mr Panikkar's two articles on the future of the Commonwealth has aroused a good deal of interest in parts of the Commonwealth. Finally, The Manchester Guardian has summed up the result of the discussion in an editorial which is suasively argued.

*

Mr Panikkar's articles, it goes without saying, are an able analysis of the bases of a political association that has, to many, an air of unreality about it. He has brought into sharp focus certain aspects of the relationship which are, either by design or accident, rather hazy. For instance, how much of the claims of uniqueness made on behalf of this association is really valid? How much of the "mystique" of the Commonwealth is real and how much make believe or worse? Is it a fact that the Commonwealth survives merely because it is shirking all the time its real tasks and primly avoids, by a convention, any question that is likely to embarrass anyone who is present? What are the practical steps to be taken to make the idea really effective as a force in international affairs? These are some of the questions that Mr Panikkar raises and answers.

*

Mr Panikkar makes the point that the evolution of the Commonwealth has at every stage been no accident but the result of conscious purpose. At every stage, the step was taken after "mature thought, careful planning and conscious decision". In other words, while the empire was acquired almost absent-mindedly, the Commonwealth was the result of conscious political acts. But, even here, like much else in British history, the formal decision was merely the recognition of a fact that was there.

*

The first glimmering of the notion emerged during the eighteenth century when the American colonies revolted. In a sense, the true father of the idea of the Commonwealth was Burke. The situation that confronted Burke was to repeat itself in later centuries, and when he spoke, he was speaking in a millieu which was unconsciously resisting the very idea of the Commonwealth. Burke was thus, not only the person who provided the most perfect raison d'etre of America's and (India's) political emancipation, but also the man who has given the most articulate expression to the quintessence of the idea of the Commonwealth. "My hold on the colonies is in the close affection which grows from common names, from kindred blood from similar privileges and equal protection. These are ties which though light as air are as strong as links of iron. Let the colonies always keep the idea of their civil rights associated with your government—they will cling and grapple with you and no force under heaven will be of power to tear them from their allegiance. But let it be once understood that your government is one thing and their privileges another; that these things may exist without any mutual relation; the cement is gone; the cohesion is loosened... if you have the wisdom to keep the sovereign authority of the country as the sanctuary of liberty, the sacred temple consecrated to our common faith, wherever the chosen race and sons of England worship freedom, they will turn their faces towards you ... Do not dream that your letters of office, and your instructions and your suspending clauses are the thing that held together the great contexture of the mysterious whole. ... It is the spirit of the English Constitution, which infused through the mighty mass pervades, feeds, invigorates, vivifies every part of the empire even down to the minutest member".

*

If you make allowances for the fact that Burke was having the American colonies in mind when he was speaking these words, and for the fact that he was speaking before and not after the colonies became independent, you will see how relevant these words are to the concept of the Commonwealth. Every member of the Commonwealth today is an ex-colony and the idea implies the progressive assimiliation of other colonies into this system. The coming into being of the United States is the result of ignoring this nexus and the continued membership of India is the perfect illustration of the truth of Burke's assertion. Secondly, as envisaged by Burke, the moment when the relationship between the colony and England is transformed into one that recognised the nexus between the colony's civil rights and Britain's "overlordship",—at that moment the colony ceases to be a dependency and becomes a member of the Commonwealth. Speaking post facto, the Balfour declaration of 1926 expresses the same idea as one envisaging "autonomous countries within the British Empire equal in status, in no way subordinate one to another in any respect of their domestic or foreign policy, though united by a common allegiance to the Crown and freely associated as a member of the British Commonwealth of nations". The allegiance to the crown, which has since been modified to accommodate Republics within the association, is really something of an expression a la mode meaning the same thing as Burke's "Spirit of the Constitution".

*

If this were all, then, again, it may be nothing more than the association of people whom history has thrown together. But the most important thing is the community of ideas which each member of the Commonwealth shares with the other, a like-mindedness, a common devotion to "the spirit of the Constitution", the idea of government by consent. In so far as the Commonwealth may be said to possess a "mystique", it must be traced to this faith in freedom, tolerance and humanity and the inviolability of the human spirit. Time was, before India and the other Asian and African countries became members of the Commonwealth, when other bonds like common European ancestry could have been said to have provided an alternative focus of cohesion. Even this assumption is of doubtful validity since this circumstance of common ancestry did not prevent the United States from seceding. Even among the present members, Canada would, in all probability, not have been in the Commonwealth body today, had it not been for the Durham report which recognised clearly the nexus indicated by Burke. In any case, the Commonwealth has literally changed its complexion in the twentieth century, when people belonging to other countries and

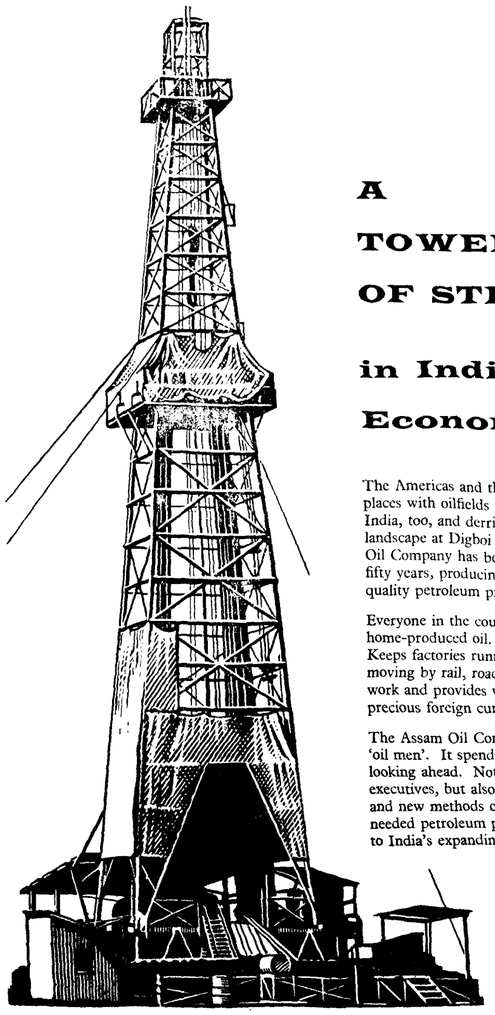
other races have elected to stay in its fold; and, in so far as this decision is unrelated to considerations of expediency, the source of loyalty must be the community of ideals.

*

As far as India is concerned, there can be little doubt that the "emotional" basis of the choice was conditioned by its devotion to the ideals of liberty and humanity. If the complete history of the Indo-British espisode in world history ever gets written properly,—which I doubt, in view of the multiplicity of the equipment necessary in its author—and the myriad manifestations in individual and national psyches of this historic encounter are assessed fully, we shall have impressive evidence to show how there was an inevitability about their relationships both before and after Independence. The direct instigator of the nationalist movement in India was the body of liberal and radical doctrine that most of the educated Indians learnt from Englishmen. Burke and Mill, Wordsworth and Shelley, not to mention contemporaneous anti-imperialists like Hobson, Brailsford, the Fabian Radicals like Laski, liberal humanists like Forster—these were the people who provided the Indian national movement with its best arguments. It is the fact that both countries treasured the same values that made possible the fact happily recalled by Mr Nehru last week that "even our conflicts were of a civilized nature" and no hatreds were nursed and no ill-will was fostered.

*

If it is conceded that a common faith in the political forms that are moulded by the principles of liberty, the inviolability of the common humanity in all of us is not only the sine qua non but the very raison d'etre of the Commonwealth, then one of the most crucial questions of immediate practical importance arises. By definition, there can be no Commonwealth members of which profess Fascism or Communism. But, in practice, do standards of behaviour of member nations conform to the requirements of such a proposition? What should be done in the event of a member continually and flagrantly doing violence to the principles that, by definition, form the very mystical basis of the relationship? Should the convention of not interfering in policies of member-nations be stretched to lengths that make nonsense of the very basis of the association.



*

Mr Panikkar raises these pertinent questions and answers them unequivocally. If the Commonwealth is not to reduce itself to a congregation of nations that history has thrown together, then, it must be prepared to do without the nations whose conduct is so consistently at variance with the ideals of the Commonwealth. By definition, the Commonwealth believes, in Burke's words, that there is but one law for all, namely, that law which governs all law, the law of our creator, the law of humanity, justice and equity—the law of nature, and of nations. The time has come, therefore, for indicating unequivocally that only such members as have reverence for the common humanity in all of us can with propriety be members of the Commonwealth. Only by giving some such positive content to the idea of the Commonwealth can its future as a unique association of free people be assured.

*

Once this is done, its multi-racial characteristic and its cutting across the continents will give the Commonwealth a unique authority in world counsels. It will be a powerful force in favour of peace, since its affiliations are not covertly to either of the power blocks. Already, in practice, within the Commonwealth, Britain and India in particular are acting on this premise. Looking further ahead, it may even make possible the emergence of a world where peoples of

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

Reversion to Original Purpose

THOSE who attended the 37th ordinary general meeting of the New India Assurance Company Limited made their way to the registered office with, I understand, the feeling that they would be listening to Mr A. D. Shroff, New India's Chairman, performing the obsequies for the fact that the New India had been dismembered of its life department. Many felt that they would be attending a wake; and these are the shareholders who are ignorant of the circumstances in which New India was born. It was this ignorance which led them to believe that the proceedings at the annual general meeting would be bleak and uncheering.

It is proper, then, that I should briefly relate New India's history, with particular reference to the specific purpose wrich underlined the decision to bring New India into being. Originally, the intention was that the House of Tatas was to set up a company to be styled as Tata Prudential Assurance. At that time, Mr B. J. Padshah was entrusted with the task of drawing up a scheme for such a company. The direction given was that due regard must be had for the position then obtaining in India's World of Insurance. There were not a few insurers, under Indian auspices, who were transacting life business. But, in the matter of general insurance, the field was conspicuous by the absence of any Indian enterprise. Originally, therefore, the proposed Tata Prudential Assurance was intended to fill this vacuum, and to embark upon general business. Later, of course, the decision was taken to name the company New India; and, thereafter, efforts were made to give New India, as the first Indian general insurance company, an auspicious and impressive start.

Because the primary purpose of New India was to be general business, the paid-up capital, at the beginning of the venture, was fixed at Rs 1¼ crores. Let us remember that the life insurance companies at the time scarcely ever possessed capital that ran into six figures—least of all eight. The nature of life insurance business is such that it generates its own funds, that the shareholders' capital is usually small, and that it soon ceases to have its risk-bearing or its capital providing character. If New India had a capital of Rs 1¼ crores, it was clear indication that the company was being equipped for general, and not life, insurance.

Further confirmation of the establishment of New India as general insurers was available in the personnel whose services were obtained in the early years. Men such as Mr R. J. Duff and Mr W. Millard were known for their eminence in general insurance, and it was such men who guided the destinies of New India for the first decade or so.

In fact, there came a stage when, during the first decade, gossip was provoked by New India's abstinence from life business. So much so, it began to be said that Sir Pheroz Sethna, who was influentially connected with the Sun Life of Canada, was using his office as New India director to prevent the company from embarking upon life business. Gossip of this variety and goads of such nature began to have effect. Fully a decade after it had been in existence, New India made a beginning in its life business. It is noteworthy that the commencement of life business was not accompanied by the fanfare and trumpeting that attended New India's establishment a decade earlier. Indeed, the beginning was a modest one, with the choice of Manager for life falling upon Mr Cardmaster, who had been Manager of Bombay Life. The management of New India, when it started life business, looked upon the new venture as a side attraction—the main attraction continuing to be general business. It, consequently, came as a surprise to the directors to find that life business was progressing so stridently as to overwhelm and overshadow the figures relating to general insurance. What the directors forgot was that the eight figure capital of New India re-assured and attracted life policy holders in such measure as to make inescapable a quick and substantial growth in the life department activities of the company.

Once the management discovered that what had been intended as a side attraction now occupied the centre of the stage, no effort was spared in drive and initiative, in effort and enterprise. Inevitably, then, the progress as recorded in the annual figures relating to the life department was sensational and spectacular. Soon, quite soon, New India's life business occupied an eminent place in the Indian life insurance stage. Came the time when the Rs 30 crores mark was near attainment for the life fund. At this stage, nationalisation.

Until Mr A. D. Shroff addressed the shareholders at the 37th annual meeting, it appeared to some shareholders that the company's most powerful wings had, by nationalisation, been clipped, that the prospects for the company were eclipsed. It is necessary for the shareholder to realise that nothing of the kind has happened. Let us remember that the strength and sustenance drawn by New India in the early stages of its career stemmed from general insurance business. New India, therefore, reverts to its original purpose, is once more the company which was formed with the aim, objective and design of filling a vacuum in Indian insurance—general insurance. The only difference is that, over the last 37 years, with New India having played an impressive role in general insurance, the company has been befitted to play a prominent part in this field of insurance activity that has been left to the private sector, and befitted as well to earn profits of increasing size with which to pay satisfying dividends to the shareholders. Indeed, the company's working for 1955 has already disclosed that New India's earnings in the general department enabled the maintenance of the dividend.

As for expansion, the comparative statement of business indicates that each department has had a much better year in 1955 than in the previous year. Premium income goes up by Rs 24 lakhs to Rs 2.74 crores in the fire department, and the underwriting fund has risen by Rs 13 lakhs to Rs 1.81 crores.

In the marine department, premium income rose by Rs 14 lakhs to Rs 1.15 crores, while the underwriting fund went up by a corresponding amount to Rs 1.56 crores.

In the miscellaneous department, the increase in premium income is one of Rs 23 lakhs to Rs 1.09 crores; and the underwriting fund has been added to by Rs 12 lakhs to Rs 74 lakhs.

The balance sheet discloses that, as against the capital of Rs 1.07 crores, over and above its specific funds that we have just referred to, the premium on shares, general and contingency reserves are placed at Rs 1.73 crores.

Over the year, the financial resources of New India have been strengthened by Rs 49.7 lakhs to Rs 6.89 crores. The dividend has been maintained, I repeat, and Mr Shroff has drawn attention to New India's decision—subject to Government's sanction—to capitalise the premium on shares account by issue of one free share of Rs 75 (Rs 15 paid-up) for every three held.

One point that needs to be settled is the disappearance of the life figures and its implication for shareholders. True, the shareholder's share of the valuation surplus will no longer figure as an item of profit which contributes to dividends. But, for this loss, compensation is to be paid—though Mr Shroff is not satisfied with the basis on which the formula for compensation has been worked out. But, from the balance sheet point of view, if the assets pertaining to life have disappeared, let us remember that liabilities of as large a size have also disappeared. New India has for some years been independent of the surplus arising from valuation of life business—if I remember right, almost the entire total of such surplus has, in effect, been transferred to reserve. The dividends can be met in ample measure by the interest earned and the profits accruing from general business. In these circumstances, the shareholder would be unjustified if he entertained the belief that New India emerges as an enervating company because of the divorce of the life business.

The shareholder need, therefore, be in no anxiety that his dividend has been endangered or that the profit earning capacity of his company has been adversely affected.

Progress of Cooperative Movement

Though the cooperative movement is in existence in India for more than five decades now, its importance to the economic development of the country has not been adequately realised till the All India Rural Credit Survey Committee drew pointed attention to the need for adopting cooperative methods of organisation in all aspects of community development. An integrated system of agricultural credit, and marketing has been drawn up by the Central and the State Governments for implementation during the Second Five Year Plan period. It is generally accepted that unless the small cultivator is given facilities to sell his produce at an equitable price, the central objective of the development plans of the Government will be defeated. In this view, it is of fundamental importance that the targets indicated in the Second Plan in regard to the provision of agricultural credit are attained.

It is, however, gratifying to note that the movement has made considerable progress in some of the bigger States. As compared with 1953-54, the past year witnessed, a big expansion. The statistical statements relating to the Co-operative Movement in India for the year 1954-55, an annual publication of the Agricultural Credit Department of the Reserve Bank of India, just released, as usual gives detailed statistics relating to different types of cooperative institution functioning in the Indian Union. A feature of this year's publication is that statistics pertaining to State as well as Central housing societies are shown separately for the first time.

The number of Cooperative Societies of all types rose from 1,98,598 in 1953-54 to 2,19,288 in 1954-55, representing an increase of 10.4 per cent as against a rise of 4.8 per cent during the years 1952-53 and 1953-54. It is to be noted, however, that the expansion is not evenly distributed among all the States. The Movement has, no doubt made good progress in some of the Part "A" States but it is practically undeveloped in some of the Part "C" States. For instance, an appreciable portion of the increase in the number of co-operative societies recorded last year is accounted for by Uttar Pradesh where the total number of Societies rose from 41,319 at the end of 1953-54 to 48,518 at the end of 1954-55.

Agricultural Credit Societies continued to hold a predominant position in the cooperative Movement. Constituting 66.5 per cent of the total number of primary societies and 78.8 per cent of the total number of agricultural societies. On the basis that an average Indian family consists of five members, it has been roughly estimated that 80.1 million or 21 per cent of the population has been brought into the Cooperative Movement at the end of 1954-55 as against 75.9 million 20.2 per cent of the population in 1953-54.

The position as on the 30th June 1955 reveals that the working capital of all types of societies has increased by Rs 38.73 crores to Rs 390.52 crores. There is thus an increase of 11 per cent over the previous year's figure. Deposits are higher at 38.2 per cent as against 37.5 per cent; owned funds are 31 per cent of the working capital, of 80.9 per cent of the total deposits. Outstandings in respect of loan from Government have increased from Rs 14.66 crores at the end of 1953-54 to Rs 20.16 crores as on the 30th June 1955. Loans outstanding from the Reserve Bank however, have declined from 9.00 crores to Rs 8.44 crores during 1954-55.

The amount of advances made recorded a rise of 6.9 per cent with the Part 'A' States occupying a prominent position. Among the Part 'A' States, Bombay stood first with 38.5 per cent of the total loans advanced to its credit.

In the sphere of short term credit, the Movement witnessed considerable progress. The number of Apex bank increased from 22 to 24 but that of Central Banks decreased from 499 to 485. There had been a sizeable increase in the number of primary agricultural Credit societies from 126,954 to 1,43,320. Membership showed al-round increase—36,294 from 32,883 in the case of Apex Banks, 2,72,000 from 2,47,905 in the case of Central Banks and 65,65,416 from 58,49,380 in the case of Primary Agricultural Credit Societies. Loans advanced were slightly lower at Rs 50.24 crores in the case of Apex banks.

But the other two categories were higher at Rs 65.07 crores and 28.61 crores respectively. Working capital were higher at Rs 47.63 crores, Rs 73.69 crores and Rs 62.93 crores respectively.

Of the total number of Agricultural Credit Societies, 83,182 were based on unlimited liability while the remaining were of the limited liability type. Loans repaid increased to Rs 28.61 crores as did Loans outstanding to Rs 48.53. Investments were higher at Rs 2.03 crores. Owned funds showed an increase that Rs 23.96 crores as did Deposits at Rs 5.44 crores. Other borrowings were also higher at Rs 33.52 crores.

Non-agricultural Credit Societies recorded steady progress, the number and membership increasing from Rs 8,389 and Rs 27,38,466 as on the 30th June 1954 to Rs 9,438 and Rs 28.47.944 as at the end of June 1955.

The long-term credit structure as represented by Central and primary Land Mortgage Banks also recorded an uneven development. Arrangements for long-term agricultural finance continued to be inadequate in several States. At the close of 1954-55 the number of Central Land Mortgage Banks remained unchanged at 9 as in the previous year. During the same period there were 292 primary land mortgage banks as against 291 at the close of the previous year.

Of the different types of cooperative societies, the workings of two resulted in losses. Agricultural non-credit societies were again working at a loss of Rs 19 66 lakhs with the non-agricultural non-credit societies also reporting a loss of Rs 89.53 lakhs. Significant improvement has been effected in the working of State and Central non-credit societies which have made a profit of 49.23 lakhs as against a loss of 2.39 recorded in the previous year. Of the others, only the Grain Banks have recorded a reduced profit. The total net profit of all types of cooperative societies, is thus higher at Rs 271.52 lakhs as compared with Rs 167.79 lakhs made during the previous year.

*

A Happy Solution

With the unanimous adoption by the Gujerat University Senate of Dr A. M. Trividi's resolution as amended by Mr Maganbhai Desai, a happy solution to a controversy that threatened to split the ranks of educationalists in this part of the country, has been achieved. Last week the Senate unanimously passed a resolution that "a student or teacher who feels that he cannot use Gujerati tolerably well as medium of examination or of instruction respectively, will be permitted to use English instead upto June 1961, in one or more subjects".

Vice-chancellor Mr H. V. Divatia, while congratulating the members on arriving at a compromise, made it clear that the resolution only gave some more time within which the teacher and the taught could get ready to use Gujerati as the medium of instruction.

Though the new decision has brought immense relief to faculties like engineering and medicine, the fact that it has been made clear that English will have to be replaced by Gujerati after 1961 has left some misgiving. For, elsewhere in the country, expert opinion favours the retention of English in these faculties for a much longer period and its partial retention for ever.

As matters stand at present here, the possibility of the Gujerat University extending the time-limit for the retention of English beyond 1961 seems remote. Moreover good progress has been made in the matter of finding Gujerati equivalents for scientific terms. It is to be hoped that in the next five years Gujerati text books of a high standard will be published so that students studying science subjects will not be handicapped for their lack of knowledge in the English language.

*

Lack of Facilities for Technical Education

While the language question is agitating the minds of educationalists in Ahmedabad, the Bombay Municipal Corporation is equally worried about another aspect of education. The Civic Body is deeply concerned about the great hardship experienced by students seeking admission to technical courses in colleges. A deputation will shortly meet the Chief Minister and the Education Minister to discuss the matter.

It is rather strange that despite a widespread realisation that the success of our plans depends in a large measure on our ability to provide technical personnel in adequate numbers, there is no corresponding urgency in the manner in which facilities are provided for technical education in the country.

It is generally believed that if the University authorities bestir themselves sufficiently, even existing facilities can be used to train a considerably larger number of students than is at present considered possible. As Mr Jehangir Daruvala has pointed out, the acute shortage of technicians can be relieved by working two shifts

World of Cotton

Floors and Ceilings for 1956-57

AS anticipated, the Government of India have made no change in the floor and ceiling prices of Cotton for the 1956-57 season. The price schedule will be issued in detail in due course, but the floor and ceiling rates for Jharilla Fine 25/32" contract will be Rs 495 and Rs 820 per candy and for Vijay Fine 27/32" contract Rs. 565 and Rs 970 per candy.

This announcement of floors and ceilings has enabled the EICA to start business in specific delivery contracts. The Forward Markets Commission has also decided not to insist on the regulation of delivery contracts in spite of their speculative nature. The concession is believed to have been granted in order to give an opportunity to the traders to behave well without formal restrictions. It is also believed that delivery contracts will have a limited scope in future as a result of two forward contracts running concurrently and providing heding facilities for almost all types of cotton.

×

FUTURES TRADING:

Cotton futures manifested a steadier tone, mainly on short-covering. Opening high on buying by speculative interests, Jharilla rates drifted lower on profit-taking. Incessant rains in most leading cotton tracts acted as a damper. At lower levels, however, selling abated and market showed signs of returning confidence. Excellent advices from oilseeds market were also a contributory factor.

Jharilla Fine 25/32" March delivery moved between Rs 660½ and Rs 670¼, to finish at the last level. Vijay Fine 27/32" April opened at Rs 816 and closed at Rs 821-8.

×

SPOT MARKET:

The spot market at Sewri ruled quiet. Activity was at a low ebb in view of heavy rains in the city. Turnover approximated 2,000 bales. Mills bought Jharilla, Vijay, Jaydhar, Lakshmi and Dhollera varieties, Sizeable quantity of new crop Vijay was reported to have been purchased by merchants

In the export section, there was demand for Bengal and Zoda varieties.

In the foreign section, mills were reluctant to buy cotton due to higher rates, The undertone was easy.

Following were the rates quoted:—

Bengal Rs 640 to Rs 700; Oomra Rs 740 to Rs 760; Dhollera Rs 750 to Rs 775; Jharilla Rs 795 to Rs 825; Vijay Broach Rs 970 to Rs 980; AR/BP/52 Rs 1650 to Rs 1660; ER Bushoga Rs 1534 to Rs 1540; Karnak Rs 2600 to Rs 2,750; Sudan Rs 2100 to Rs 2500 and American Good Middling 1-5/32" Rs 1340 to Rs 1350.

STATISTICS:

Following is the cotton consumption by mills for the period from 1st September to 30th April (in bales of 392 lbs):—

Varieties:	1955-56	1954-55
Indian ...	2,910,601	2,718,938
Pakistan ...	...	4,809
American ...	24,944	127,568
Egyptian ...	125,668	2 138,199
Sudan ...	81,399	23,547
East African	153,800	146,675
Others ...	4,862	2,324
Total ...	3,301.274	3,162,060

×

KARACHI COTTON MARKET:

Conditions continued to remain depressed as overseas enquiries and local mill demand were very slack. Operators were busy reducing their commitments.

The spot section presented a weak note, with the exception of Deshi varieties which recorded some improvement in prices on good buying support. Following were the rates quoted:—Sind Deshi Rs 103; Punjab Deshi Rs 97-8: 4F Roller Rs 82-14; 289F NT Roller Rs 85-2; 289F Punjab Roller Rs 90-14 and SG Rs 98-6.

×

NEW YORK COTTON MARKET:

Trading on the New York futures market was small, the market fluctuating moderately on fairly good trade and commission house buying in the near new crop positions with hedging at limits and local selling supplying most of the contracts.

With the huge task of handling the large quantities of CCC sales and the movement of the new crop, it is reported that the US Department of Agriculture are giving consideration to replacing the present competitive sales programme with a direct export subsidy. July was quoted at 34.57 cents and October at 32.70 cents.

^

LIVERPOOL COTTON MARKET:

Values on the Liverpool Cotton market eased slightly in the absence of support. The near position had further pressure from inter-month switchings: but hedge selling in late deliveries were mostly offset by trade buying. The Egyptian Contract closed idle, while the Sudan contract drifted lower under pressure from small commission house offers. Egyptian Karnak July-August was quoted at 56.30 cents and Sudan Cotton July-August at 48.90 cents.

×

CLOTH AND PIECEGOODS:

Conditions on the Piecegoods market continued to be dull as enquiries from upcountry centres were slack. But prices were well maintained in view of tight statistical position of supplies in the market. Many mills in Bombay and Ahmedabad are said to have put the prices for several lines, particularly for super-fine goods. The rise in prices is around 5 per cent in Ahmedabad, while that in Bombay is placed around only 3 per cent. Fine qualities are marked up by 2 per cent in Ahmedabad.

The rise in prices is not confined to the domestic front alone. Moderate appreciation has been registered in respect of certtain exportable items also. Sassoon sheetings and drills have gone up by 3 pies per square yard. Demand from East Africa and the UK is said to be encouraging at the moment. Prospects for further business being done with Burma are also stated to be fair.

Several mills are reported to have orders for delivery of goods upto September and hence they are now in a better bargaining position. The disposal of cloth does not now seem to be a problem at all with the mills.

GATEWAY MARKETS

Silver Reacts: Gold Featureless

LACK of speculative interest was reflected in a dull bullion market. The support was at a low ebb and the operators preferred sidelines at higher levels.

A quieter tendency developed in Silver at the outset and, despite interim efforts at feeble resistance, values continued to yield ground under persistent long liquidation. Rumours of Tibetan silver arrivals of about 250 bars in Calcutta mainly demoralised sentiment. Although the reports with regard to restrictions on the exports of Chinese silver dollar to India caused a slight recovery, values slowly lost most of the gained ground due to profit-taking. Arrivals were estimated around 30 bars, while off-take was .15 bars. Silver forward, after touching a low of Rs 171-5, recovered at the close to Rs 172-6. Spot rate closed around Rs 171-14—the highest touched being Rs 172-7.

It is learnt that Chinese authorities in Tibet have restricted the export of Chinese silver dollars to India. Indian merchants in Yatung and Gyantse, who used to purchase these dollars, have been directed not to do so, unless the sellers had permits issued by the authorities. This resulted in a slight increase in prices of Chinese dollars at Kalimpong. Nearly 80 lakh dollars have, so far, been imported into India since the withdrawal of restrictions on such imports by the Government of India about two months ago. Reason for this restriction on movement of Chinese dollars is not yet known.

Gold was featureless and values fluctuated within a small buying and selling orders. The turnover was negligible. Arrivals were estimated around 5,000 tolas, while the off-take was placed at 3,000 tolas. Gold forward moved between Rs 100-2 and Rs 100-5, while spot changed hands at Rs 101-2 to Rs 101-4. Soverign was placed at Rs 66-8 to Rs 66-12.

*

Oils & Oilseeds

Trading in the Oilseeds market was characterised by two-sided fluctuations.

Buoyant conditions were witnessed in Castor futures where values showed sizable gains on extensive covering by a leading bear operator. The demand was inspired by private indications of Brazilion crop damage with encouraging performance of the spot section accelerating the uptrend. The turnover was 20,000 candies. Castor September, after opening at Rs 134-4 and touching a high of Rs 138-12, finished at Rs 133-12. Ready was quoted around Rs 26-14.

Trading in Groundnuts was mainly influenced by the manipulations of the big operators and by the domestic factors in the absence of any fresh development. Groundnut February opened around Rs 134-10 and, after touching a high of Rs 135-8, finished at Rs 133-8. The rate for the ready position was quoted at Rs 33-4 and Groundnut Oil at Rs 17-7.

Business in Linseed was devoid of any special features and prices moved generally in sympathy with the trend in the futures section. The export prospects remained dull with the UK rate of Linseed Oil recording a fresh decline of £10 to £115 per ton. Linseed ready was quoted at Rs. 28-2; Linseed Oil at Rs 16-0 and Nigerseed ready at Rs 28-12.

*

Metals

Price movements in the Copper market were confined to a narrow range despite scarcity of stocks and expected demand. Rates moved between Rs 207-8 to Rs 212 per cwt. for electrolytic ingots.

Although demand for Zinc did not materialise as expected, rates for the metal were well maintained due to the fact that Bombay rates continued to be below Calcutta parity. Ready was quoted at Rs 64-8. Lead moved between Rs 80-8 and Rs 81-0. Bookings were reported to

Agriculture and the Plan

WHATEVER may be one's other complaints about the Plan, rigidity and reluctance to rethink and review the many assumptions made and targets prescribed cannot be one. The claims of flexibility made on behalf of the Government and the Planning Commission are legitimate. On the subject of cloth, for instance, the Government have modified the stand taken by the Planning Commission as recently as the publication of the Draft Plan. And now, even before the ink was dry, so to speak, on the agricultural targets published in the Plan, there have been suggestions for their drastic revision.

It would be foolish to deplore the revision as indicative of ticklieness, since the changes suggested are of vital importance to the very success of the Plan. As more data become available regarding the possible inflationary pressure on the economy in a set up of heavy deficit financing, it became inevitable that safeguards against it should be devised. The most important of these was naturally an abundance of agriculture produce, especially foodgrains.

The Planning Commission, therefore, sent round a note to all these responsible for the nation's agriculture suggesting that an increase by 40 per cent over the current agricultural production should be attempted in the Second Plan. This has set off a controversy which has helped to clarify the issues involved. At the three-day Conference of State Ministers of Agriculture held recently in Mussorie, the whole question was discussed thread-bare and certain tentative conclusions have been reached.

Opening the Conference, Mr Ajit Prasad Jain, the Union Minister for Food and Agriculture, conceded that the principle involved in the Planning Commission's suggestion regarding increased production was sound. But he doubted whether the increase contemplated by the Planning Commission could be achieved within the present allocations. Mr Nanda, who was present and took part in the discussion, made it clear that the State Ministers should merely consider the percentage of increase suggested as a desirable target and no sanctity need be attached to any particular percentage. There is some evidence that the Planning Commission, following the time-honoured ruse, had pitched the figure of contemplated increase deliberately high anticipating some opposition from the persons who are actually to do the job. In the event, a compromise has been reached: Mr Jain believes that, with some effort, the production of foodgrains could be stepped up by 16.5 million tons in 1960-61 over the 1955-56 actuals. The proposed increase is 6.5 million tons more than is mentioned in the Plan itself and works out at an increase of 25 per cent against 15 per cent proposed in the Plan. As regards cash crops, about whose potentiality in earning valuable foreign exchange there is no difference of opinion, the increases now proposed by Mr Jain are as follows: (a) Cotton: 37 per cent as against the Plan's target of 31 per cent; (b) Jute: 37.5 per cent against the Plan's target of 25 per cent: (c) Sugarcane: 31 per cent against the Plan's target of 22 per cent; (d) Oil seeds: 36.4 per cent against the Plan's target of 27 per cent.

These increases are to be achieved primarily by schemes already included, by readjustments of the schemes within the existing financial allocation and by taking up additional schemes. The last proposition appears to be more in the nature of a forlorn hope than any firmly assured expectation, for, Mr Nanda discouraged, in the course of the discussion that followed, any hopes of further allocation of funds.

As regards food production, faith is pinned on the acceleration of seed multiplier schemes and its expansion to all the National Extension Service Blocks in the first three years of the Plan, in the extension of minor irrigation schemes, and in the distribution of fertilizers and better use of farm yard manure.

As regards the other suggestion of the Planning Commission about the reduction of the level of price of agricultural produce by 20 per cent, Mr Jain expressed himself as totally opposed to the idea. Some measure of the almost insuperable difficulties in the way of development of a backward economy can be had from the ironic circumstance that, last year, we were all concerned about fall in agricultural prices and now the Planning Commission suggest their drastic downward revision. It is true that, in a country where 70 per cent of national expenditure is on food and clothes, the need for keeping down food prices to the lowest possible level is of utmost importance in a context when other forces in the economy release inflationary pressures. But it must be remembered that among the very poor are the agriculturists themselves, whom a fall in food prices would hit hard by a reduction in their earnings. Again, the distribution of the benefits likely to accrue in the very increased production may be uneven and reduction of prices will add further to the difficulties of the not so efficient farmer.

The other suggestion for providing against shortages and safeguarding against inflation is large scale imports of foodgrains in order to build up a buffer stock to regulate price by timely releases at fair prices. The Planning Commission have provided for import of six million tons over the Plan-period and Mr Jain gave details of steps taken by his Ministry to see that the programme of import was well under way. Agreement has been reached with Burma for the import of 2 million tons of rice over the next five years. Negotiations have already started between American officials and the Union Food Ministry for the import of wheat from America. It will be recalled that the Finance Minister indicated during the Budget discussion that such "wheat loans" can be had from America and that mutually acceptable arrangements can be arrived at so that India is able to import the grains without straining too much its foreign exchange resources. The Union Ministry of Agriculture proposes to build a buffer stock of a million tons of rice and a million tons of wheat and this will be done partly this year and partly in the next. Mr Jain expects that the elaborate apparatus of physical controls and rationing would not be necessary, but he is confident that, should occasion demand it, Government will be equal to it.

In the discussion that followed Mr Jain's speech, the need for increasing production was generally recognised: but State Food Ministers were generally inclined to take the view that the scope for increase was extremely limited without further allocation of funds. There is not much hope of this forthcoming in any significantly large measure, though marginal adjustments are considered possible. As regards agricultural prices, the working group of the Conference has suggested the setting up of an expert body to examine the whole question. Agricultural research also figured in the discussion and an Indo-American joint team suggested that there was need for more applied and experimental research as distinct from fundamental research.

North Indian Notes

Licences for Small-Scale Mines

The flexibility of the new Industrial policy Resolution has been demonstrated last week in a manner that should have given an agreeable surprise to private enterprise in this country. The general impression gained from the Resolution so far has been that mining of coal, lignite, manganese and chrome ores, iron ores, gypsum, sulphur and mining and processing of copper, zinc, lead, tin, molybdenum and wolfram listed in Schedule "A" come under the Public sector.

In a statement issued last Wednesday, Government have announced that private enterprise will be given a share in the reserved field also. Licences will now be granted to private parties for working small-scale mines.

The Central Government have informed the State Governments that they may forward applications for prospecting licence and mining lease under the Mineral Concession Rules 1949, in respect of areas which, in the opinion of the State Government, it would not be appropriate in the public interest to reserve for exploitation by the State. The discretion to decide the suitability or otherwise of allowing private enterprise to exploit a particular region for minerals now rests with the State Governments.

If after taking into consideration such factors as the location of the mineral occurrence, its extent and nature, a State government thinks that it is best worked as a small scale mine, it may forward application for mining leases from private parties to the Central Government. Such considerations may also be taken into account by the State Government in relation to the disposal of areas already held under lease at the end of the present lease period.

The Central Government have also clarified the position in regard to applications for mining leases from private parties who have already prospected the area under a prospecting licence in accordance with the Mineral Concession Rules 1949. They have informed the State Governments that the holders of prospecting licences are entitled to mining leases under the rules and consequently there is no need for any delay in the disposal of such applications.

*

Passenger Amenities

The special amenities provided for the long-distance passengers on railways often tend to work to the disadvantage of the more numerous class who travel shorter distances. Those boarding a train from intermediate stations do not usually enjoy the facility for reservation and have either to trespass into the reserved compartments or to crowd themselves into the few unreserved ones, frequently at considerable risk to life and limb. Inspite of the best attention and the most abject importunities of the railway staff, hot words and little skirmishes among fellow passengers are a frequent and deplorable experience.

If short distance travel on long distance trains cannot be rationed, the only alternative is to attach new compartments from every important intermediate station. Ordinarily, the majority of first class compartments in passenger trains go empty. Such compartments could be degraded and utilised for the long-distance express trains. The Government should also rationalise further the principle of reservation, as under the present system one who travels more than three-hundred miles from the starting point enjoys a facility denied to one who travels perhaps double the distance from any intermediate station. The decision to abolish the second class should also be reconsidered, as it is bound to lead to more unbearable overcrowding and congestion in the third class. For the middle class traveller, it will be a very hard blow.

*

Western Shipping Corpn.

Transport has come to be considered as the special preserve of Government in this country ever since Independence. First the Railways and more recently, the airlines have been nationalised. A number of State Governments have ventured into the field of road transport. Except in the case of railways, Government have been generally sustaining losses.

The Government have now entered the field of shipping in right earnest. A shipping company under the name of Western Shipping Corporation (Private) Limited has come into being. The new corporation is analogous to the various limited companies completely owned by Government and are now functioning in the public sector like the Sindri Fertilizers Limited. It is understood that the new Shipping Corporation will own a total of 12 ships which will ply on a number of routes. There are indications that the Union Government are desirous of establishing another shipping corporation in the course of the next five years.

A New Turn

The Union Minister's visit to the Naga frontier and the series of talks he has held with the men on the spot must augur a new turn in the unhappy situation in one of the country's most strategic border areas. Too much stress should not be laid on the fact that the Naga community has become divided. The Government are only further handicapped by this division, for they have to spend a great deal of energy in protecting the loyal sections and preventing defections therefrom. The hostiles seem to be powerfully armed and fiercely determined. In the last week the onslaughts on the civilian population around the regular arena of fight have been heavy.

One of the major changes under contemplation seems to be the complete transfer of civil power to the military and greater direct responsibility for the administration of the Naga Hill District by the Central Government. If this is to take place the hostile Naga leaders may interpret it as a friendly gesture. Their antipathy to the rest of the Assamese population may somewhat cool down, if the Centre were to step in with greater authority.

While the stage has not yet been reached for any relaxation in firmness in dealing with the active hostiles, a generous political offer can form the basis of an understanding, paving the way for a settlement. The Central Government have now acquired enough knowledge of the temperament and the aspirations of the hostile Naga leaders. Any offer which does not prejudice national territorial solidarity should be deemed worthwhile, if it is capable of ending the grievous episode.

*

Lok Sabha

The coming session of the Lok Sabha promises to be a lively one in so far as almost all the bills that are scheduled to be taken up for discussion and subsequent enactment of legislation, are of interest to a large section of the population.

It goes without saying that the two bills to give effect to States reorganisation will excite the maximum interest. There are other important bills such as those to strengthen control of the Reserve Bank over commercial banks, to give effect to the recommendations of the Taxation Enquiry Commission in regard to the levy of sales tax on interstate transactions and the State Financial Corporations (amendment) Bill. In all there are about 27 Government Bills. Of these except 9, all the other 18 are in various stages of consideration.

During the session which is scheduled to commence on July 16 and last upto September 7, time has to be found for concluding the debate on the Second Five Year Plan.

*

GATEWAY MARKETS

(Continued from page 17)

be so heavy that continuous influx of the metal made it difficult for the market to improve even to landed cost, especially when all the material was not in strong hands.

There is nothing new to report with regard to Tin, which was quoted around Rs 500 per cwt. for ready.

On the London Metal Exchange, the rate for Copper declined further in the absence of any improvement in demand. It was reported that the US producers were contemplating to reduce their selling price from 46 to 23 cents. The rate was quoted at £263½ per ton.

Lead prices recorded a net loss of another £3 per ton during the week, to quote £110½ for half-July delivery. Demand for the metal is reported to be moderate.

Spot Zinc fluctuated narrowly between £92 and £93 per ton. Demand is reported to be satisfactory.

Tin drifted lower to quote £732 per ton for spot and £737 for forward.

*

Yarn

Easy conditions continued to prevail in the yarn market. Prices showed a further fall as the off-take was limited.

Rayon yarns suffered further; and the fall would have been greater, but for rumours about a cut in imports of 150 and 120 bright deniers in the July/December period.

Absence of buyers coupled with heavy stocks with traders brought down prices of staple-fibre yarns. Following were the rates quoted:—120D August Rs 776; 150D Staple July Rs 644; 120 spot Japan Rs 3-11-0; 150 spot Japan Rs 4-2-0; 120 spot Italy Rs 3-12-0 and 150 spot Italy Rs 3-14-6.

The break in raw cotton, heavy rains in some areas and general reluctance on the part of weavers to buy, brought down a fall in the prices cotton yarn also. Counts like 80, 60 and 50 have suffered most.

The Government of India have decided to continue to allow for export limited quantities of cotton yarn during the licensing period July/December 1956. Exports will be allowed to all permissible destinations, excluding the Portuguese positions in India. The last date for effecting shipment against allotments will be six months from the date of allotment of the export quota.

Delhi Review

North Indian Markets

Slight Decline in Sugar Prices

SUGAR markets, which had been ruling very steady during the last few weeks, turned quiet during the week under review due to slackness in demand coupled with the release of 1.50 lakh tons of sugar by the Government for free sale.

Laxity in demand is attributed to the Government having arranged for a regular movement of sugar by special trains from factories in Northern India to destinations in the South from where mostly the demand was.

Following mill delivery rates were quoted (per maund) in the Hapur market:—Jaswant Rs 28-6; Simbhauli Rs 28-4; Mowana Rs 28-8; Daurala Rs 30 to Rs 30-12; Amroha Rs 28-2; Bijnore Rs 28-2; Mansoorpur Rs 29 to Rs 30 and Rampur Rs 31-8.

The production of sugar this year is expected to be over 18.5 lakh tons as against 15.90 lakh tons last season, representing an increase of 85 per cent over the pre-Plan average of 10 lakh tons. In this connection, the President of the Indian Sugar Mills Association has stated that, in the near future, the country will find itself in a position to export sugar and earn valuable foreign exchange.

As a result of the higher output, the price of the commodity has remained within reasonable limits. The President suggests that next year's output will increase further —because 9 new factories will start working—if the cane crop fulfils expectations. This year's carry-over, estimated at 5.50 lakh tons, should not be considered excessive in view of the rising consumption trends.

*

Gur

Ready Gur prices ruled quiet. Demand from the consuming centres was slack, while there was no enquiry from other outside buyers. Dry quality was quoted at Rs 10-8 per maund. Arrivals averaged 200 maunds daily, while stocks were estimated around 50,000 maunds.

In the Meerut market, prices showed a hardening tendency as the Eastern districts of Uttar Pradesh continued to be the principal buyers.

The all-India final estimate of sugarcane for 1955-56 puts the current year's area and production at 4,446,000 acres and 57,749,000 tons of cane against the partially-revised estimate of 3,994,000 acres and 56,923,000 tons for 1954-55. This shows an increase of 452,000 acres in area or 826,000 tons in production over last year. Expressed in terms of gur, the current year's production is placed at 5,859,000 tons against 5,760,000 tons for 1954-55.

*

Foodgrains

The downward trend in the prices of Foodgrains, noticed in the previous week, persisted during the week under review. In the Hapur market, Wheat recorded a further drop of As 6 per maund to Rs 13-10 for average quality; but farm quality was steady at Rs 15-4, thanks to good demand from Madras. Daily arrivals averaged 1,000 maunds and were mostly lifted by stockists.

Gram prices registered a modest decline due to increased arrivals from the Punjab which resulted in improving local stock position. Barley prices, however, appreciated slightly due to very poor stock position. Falling demand accounted for a fall in Jowar and Guwar prices.

Pulses exhibited a declining trend with Arhar recording a heavy fall due to increase in stock position and reported overall increase in arhar production in the country. It was quoted at Rs 11 against Rs 11-8 per maund. Daily arrivals averaged 200 maunds.

In the Delhi grains market, farm quality wheat improved by about As 12 per maund to Rs 16-12 on account of small arrivals. Basmati rice was slightly better due to good offtake, while Gram eased slightly. Jowar lost about Rs 1-8 per maund and Urad about As 8 per maund.

The Bombay grains market presented a listless appearance with prices moving within a narrow range. Supplies of Burma rice were available from the traders at Rs 147 per candy.

In the Wheat section, prices of most indigenous qualities ruled steady with the traders adopting a "wait and watch" attitude. Arrivals from upcountry centres were moderate; but these were not expected to affect materially the stock position which continued to be satisfactory. The volume of business in the forward section was small on account of limited demand from the flour mills which were stated to be making direct purchases at upcountry centres.

SOUTH INDIAN MARKETS

Rubber Production and Consumption

THE production of Rubber in India, during May, was higher at 1,983 tons as againt 1,826 tons in the previous month; but consumption is lower at 2,168 tons against 2,402 tons. Total consumption for the first five months of the year is, however, higher than in any previous corresponding period.

Stocks have improved further to 5,714 tons at the end of May from 5,276 tons at the end of April and 5,074 tons at the end of March. While stocks with estates and dealers have risen from 2,934 tons at the end of April to 3,369 tons in May, those with the manufacturers at 2,345 tons are practically unchanged.

Meanwhile, the mid-year meeting of the Rubber Board recommended to the Government a proposal for the extension of rubber area by 100,000 acres under a 10-year Rubber Plan. This recommendation is in addition to the Board's previous proposal for the re-plantation of 70,000 acres in a 10-year period which has been already accepted by the Central Government.

Export of rubber manufactures from India is steadily declining. According to trade statistics, the value of rubber manufactures exported from India was Rs 84 lakhs in the last fiscal year as compared with Rs 123 lakhs in 1954-55 and Rs 172 lakhs in 1953-54.

According to the Rubber Study Group, world production of rubber is estimated around 1,835,000 tons and consumption at 1,845,000 tons, thereby leaving a small gap of 10,000 tons. Synthetic production is expected to leave a surplus of 120,000 tons out of a production 1,250,000 tons this year. In presenting such a comfortable position regarding supply and demand, the Study Group is providing a steadying hand to natural rubber.

*

Pepper

Pepper markets ruled barely steady with price movements confined to narrow range. In the Alleppey market, sellers were quoting Rs 718-12 per candy with buyers at Rs 712-8. In the Kozhikode market, Wynaad quality was quoted at Rs 760 and Country variety at Rs 750.

Although there is continued lack of foreign demand, sellers are still trying to resist any fall in the price below Rs 700 in the hope of business during this month.

Though the underlying conditions of the world's pepper market seem to be healthy, prices may not show major improvement until seasonal pressure of Sarawak is ended.

In New York, the market ruled dull with traders generally sidelined, awaiting fresh developments. Malabar-Lampong spot was quoted at 29½ cents per pound.

*

Coffee

The Chairman of the Coffee Board has already made the estimate of the next season's Coffee crop at 33,000 tons. This larger crop allows for a bolder export programme during the current season.

As it is, the Board's Marketing Committee has recommended a further export of 3,700 tons, making a total for this season of 7,800 tons. While the export programme gives the trade an idea of the probable quantity of coffee available for shipment, nothing can be done for the present until the monsoon is over.

*

Groundnuts

Steady conditions prevailed in the Madras Groundnut market; and the volume of business continued to be small. Arrivals averaged 20 to 25 tons per day and these were taken up by small crushers. Due to inclement weather conditions, arrivals of "summer" crop continue to be small and an improvement can be expected only in bright weather. The rate for superior oil-quality seeds was quoted around Rs 164 per candy and for bold varieties at Rs 159 per candy.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 313 per candy. Buyers from the Circar Districts were operating in a small way, while bazar interests were buying only to meet their day-to-day requirements. Calcutta interests did not show any interest.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate and there was a good clearance. Prices advanced by about nine pies per pound. Sellers were found to be reluctant to part with their stocks at present in anticipation of higher prices. The UK also showed more interest, and there was a slight improvement in both enquiries and prices. There was also a better local demand which tended to excite the market.

(Continued on page 37)

Madras Review

The Peninsula

The Kundah Project

LAST Friday the Union Finance Minister laid the foundation stone of the Kundah Hydro Electric Project near Ootacamund. A distinguished gathering consisting predominantly of engineers was present on the occasion. The very complexion of this gathering was indicative of the technical prowess of the project and the wide range of engineering skill and talent which even in its preliminary stage the Project had drawn on. Sir Chintaman wondered how the engineers were habitually able to find suitable spots for putting up projects like this. He expressed astonishment at the resourcefulness displayed in doing this work. The engineers naturally took a more modest view of their performance.

Whatever be it, as Sir Chintaman observed, the occasion signified the slow advent of the age of engineers in India, usurping in part the age of the administrator. In the great process of material advancement in all spheres which is being witnessed in the country the engineers' task and responsibilities loom larger than those of any other profession. The Kundah project estimated to cost Rs 35.44 crores bids fair to be one of the greatest triumphs of Indian engineering skill, though Canadian consulting engineers are expected to supervise certain portions of the work and tender general assistance to the Madras Electricity Department which is in charge of the Project execution.

In this connection, one likes to draw attention to the special tribute which South Indian engineers and administrators have received from the Union Finance Minister. Looking to his experience of other schemes in which estimates were drawn and whose execution were undertaken by South Indians, Sir Chintaman was glad to compliment the high general tradition obtaining in these respects and he felt that it was only appropriate to admire them when far greater care was exercised in framing the estimates and in carrying them out. Even so, he reminded the authorities in charge of the project that the target of expenditure and the schedule should not be violated.

What the Kundah project means to Madras would be understood better in the larger prospective of India's place in the world as a consumer of electricity. Hitherto, it has been a very bad showing. The per capita consumption of electricity in India in 1950-51 was only 14 units; over the first Five Year Plan, it had risen to 25 units. It is hoped that in 1961 it will be 50 units. Norway has a per capita consumption of 5,743 units; Sweden 3,094 units; Switzerland 2,556 units; USA 2,500 units; Australia 1,492 units; the UK 1,259; West Germany 1,227 and Japan 579. This comparison only shows that till recently there has been criminal neglect of the none-too poor opportunities of hydro-electric development in most parts of India.

One can visualise the era of nuclear power or that of solar energy a few decades ahead. But for the time being, we will have to concentrate as much as possible on the development of water resources which according to expert estimates amount to a potential generating power of nearly 35 million kwts as against the 3.8 million kwts actually obtained by the end of the first Five Year Plan. In other words, the potential electric power available per head is about 230 Kwts. This is not too low a figure, considering the general standard of life and habits of the population. In respect of rural electrification and in the expansion of grid, Madras State stands ahead of all other States in India.

The Kundah Project will have a total capacity of 180,000 Kwts during the Second Plan Period. In its original form, the idea of this project was first conceived by Mr J. D. Meares, Chief Engineer for Hydro Electric Survey of India, in his preliminary Report on the water power resources of India, published in 1919. His first proposal was more modest than what is now accepted as feasible. A concession given to Tatas for developing power from the Kundah falls in the Nilgiris was withdrawn for the reason that they failed to utilise it. In the State-wide study of hydro-electric resources which the Madras Electricity Department undertook in 1947, the investigation of the Periyar and Kundah schemes were given top priority. The Periyar Hydro Electric scheme was taken up for construction in February 1955.

I may now mention some of the salient physical details connected with the scheme. The Kundah basin is situated to the South east of the Pykara basin in the Nilgiris. Two streams, the Avalanche and the Emerald, rising amidst the group of high peaks, Devabetta, Karikadu, Koulinbetta and Porthimund, all over 8000 feet in altitude, combined to form the Kundah river.

It is proposed to develop the catchment of the Kundah basin in four stages in three power stations. In the first stage it is proposed to build three dams (including the forebay dam) two power tunnels, two sets of penstocks and two power stations. Each of the two dams across the Avalanche and the Emerald rivers would be nearly 200 feet in height and the masonry in cement mortar. Their lengths at the top would be 1200 feet and 1060 feet respectively.

The forebay dam near Kundapalam would be 94 feet in height and 490 feet in length at the top. The tunnel Numbers one and two will be 14,000 and 12,000 feet long with net diameter of 10-0" and 10-9". These will be lined with cement concrete throughout.

The first power station would be located on the right bank of Kundah River and the second power station on the left bank of Pegumbuhalla stream about a mile and half above its confluence with the Kundah River.

In the second stage, which would closely follow the first, the flow from the 12.8 sq. miles of Upper Bhavani catchment would be diverted into the Avalanche reservoir by the construction of a dam and tunnel through the dividing ridge. A fourth generating set of 35 M.W. with an additional penstock would be added to power House No. 2. Thus at the end of the second stage the total installed capacity in the two power houses would be 180 M.W. The scheme as now sanctioned covered the first and second stages only.

The whole scheme is expected to cost about Rs 35.44 crores including transmission lines and is expected to yield a net return of four per cent from the tenth year of operation.

This project is also notable for and has acquired an international status through the contribution made by Canada under the Colombo Plan in terms of both men and money. The total Canadian assistance to this particular project, described by the Union Finance Minister as of a very massive kind, is equivalent to Rs 10 crores. To quote the latter, "Certainly it is a very massive assistance which is worthy of all praise and worthy of our gratitude. It is done with some goodwill towards us and with a genuine desire to help backward countries in the world to advance for the common good. Appropriately Mr Lester B. Pearson, Canadian Minister for External Affairs in a message for the occasion described the project as a notable contribution to the courageous programme of economic development which the people of India are now embarking upon in the Second Five Year Plan."

Incidentally, Sir Chinfaman utilised the occasion to clarify again his views on the propriety of India accepting foreign aid without strings. He pointed out that all the undeveloped countries were in real need for foreign assistance and there was no reason for rejecting such assistance when it was given voluntarily and with no strings attached.

The inauguration ceremony was preceded by a gentle shower. Those who habitually turn their thoughts to nature may be tempted to interpret the phenomenon as something more than an instalment of the usual Nilgiri rains. For them it should have appeared as a gentle reminder and an assurance from Nature that all man's great achievements owe a great deal to her cooperation and in this case the rain-fall on which the Kundah Project depends for its successful functioning would be unfailing.

THE EAST INDIAN COAL COMPANY, LIMITED.

(Incorporated in England with Limited Liability).

NOTICE is hereby given that an interim dividend in respect of the year ended 30th April, 1956 at the rate of annas twelve per share without any deduction for Indian Income-tax payable by the Company, has been declared payable by the Directors and will be paid to the Registered Shareholders as on 27th July, 1956.

The Share Transfer Books of the Company will be closed from the 14th to 27th July, 1956, both days inclusive.

By Order of the Board,
JARDINE HENDERSON,
LIMITED,
D. FORDWOOD,
Secretary.
Managing Agents and Secretaries.
4, Clive Row,
Calcutta, 2nd July, 1956.

N.B:—Payment of the above dividend will be made only to those members whose names are registered in the Books of the Company on the 27th July, 1956 or to their mandatees. No application for Warrants will be necessary. Claims on behalf of the holders of shares on blank transfer will not be entertained.

Madras Review

South Indian Notes

Troubled Tea

Those who are under the impression that the tea industry in India is having a prosperous time may be rudely shocked by the extremely pessimistic note struck by Mr M.W. Hoare, Chairman of the Nilgiri Planters' Association in his address to the Annual General Meeting of the Association held recently in Coonoore. Though it may be true to a certain extent that the special difficulties experienced by tea companies in the South have somewhat coloured Mr Hoare's analysis, it is to be admitted that his main conclusions are valid for the industry as a whole.

It can hardly be disputed that the fortunes of the Indian tea industry, like those of any other export industry, depend to a large extent on factors over which neither the Government of the country nor the producers have any control. The condition of the tea trade overseas has a overwhelming influence on the price of tea. It stands to reason, therefore, that in the present context of a buyer's market in tea, lower tea prices have become the order of the day.

With its selling price thus determined by extraneous forces, the tea industry has perforce to depend solely on its ability to supply tea to world markets at competitive rates.

Mr Hoare's argument is that so long as the Government in this country do not take into consideration the special position of the industry when imposing fresh burdens on it, its economic position is bound to deteriorate. According to him the "stage has already arrived when most estates must need to view with concern the ever narrowing margin between the cost of production and the net selling price."

The 1954 boom has been an accident and there is no knowing when similar prosperity will come to the industry. It is a safe prophesy that cost of production for the industry will steadily go up in coming years what with the ever increasing number of labour welfare legislation and taxation. Inflation, however much it is controlled, is sure to have its repercussion on the cost of production.

It is clear that the Indian tea industry can thrive only if one of the two following conditions are satisfied. Either the cost of production must be brought down or higher prices must be obtained. As pointed out earlier, the second factor is beyond the control of the industry and the Government. The only wayout is government assistance.

In the light of the facts given by Mr Hoare, it is to be hoped that Government will not find it difficult to lend a helping hand to an industry which is an important earner of foreign exchange.

✱

Andhra Cement

The installed and production capacity of the cement industry in India has been continuously rising over the past few years and there is hardly any unit which has not participated in the expanded activity. Annual rated capacity which was at 3,280,000 tons in 1950-51 increased to 4,440,000 tons in 1954-55. Actual production which stood at 2,692,000 tons in 1950-51 increased to 4,414,000 tons in 1954-55. The targets of annual rated capacity and actual production by the end of the First Five Year Plan are 5,306,000 tons and 4,800,000 tons respectively.

The Government seek to treble the production of Cement in the course of the next five years. The targets of installed and production capacity have been fixed at 16 and 13 million tons. The figures will give an idea as to the size of the expansion planned for the Indian cement industry. Since the entire industry is in the private sector, it follows that in order to achieve the target, each and every unit in the industry has to embark upon large expansion plans.

The Andhra Cement is in the happy position of being able to achieve a doubling of its production in the course of the next few months, thanks to the active steps that have already been taken by the Board of Directors to double the capacity of the company's plant. It is hoped that the expanded unit will be able to go into production before 31st December 1956. The shareholders have been told at the General body meeting of the company by Mr V. Ramakrishna, the Chairman, that the Board of Directors are endeavouring to complete the expansion with the resources available at the disposal of the company.

The recent decision of Government to introduce State trading in cement is welcomed by the company as it is designed mainly in the public interest. Mr Ramakrishna, however, has disclosed that if the price of cement is fixed on an ex-works basis as proposed, the company will be adversely affected as the present price has been fixed on an f.o.r. destination basis. The company has accordingly made representations to the Government that adequate compensatory relief should be granted to the company in fixing the f.o.r ex-works price.

Andhra Cement's subsidiary company "Andhra Cement Construction company (Private) Limited" is also doing very well. The company has secured the contract for the construction of a bridge across the Krishna at Nagarjunasagar Dam. Work is progressing according to schedule with regard to contracts already undertaken.

✱

A Valuable Aid

Those who complain that the New companies Act has considerably curtailed the freedom of enterprise may do well to read what Mr H. K. Srinivasan, Chairman of the Mysore Coffee Curing Works has to say on the matter. While drawing the attention of the shareholders to the fact that the Balance sheet has been prepared according to the provision of the new Act, he welcomes the central aim of the new provisions which he points out is "to associate shareholders, more intimately in the affairs of the company."

The emphasis on the rights and privileges of shareholders is a natural corollary to the changed outlook in the country. It is increasingly being realised that if the mixed economy is to work successfully, joint stock enterprise must serve the country's interests. Mr Srinivasan is confident that "so long as sincere attempts are made to adhere to the provisions, bearing in mind at all times the interest between the company and the shareholders, no difficulty will be encountered in adjusting to the new conditions." An informed and instructed body of shareholders is, at any time, an asset to joint stock enterprise. Mr Srinivasan sees ahead and finds in the new provisions a valuable aid for the private sector in this country to secure its proper place in public economy. It is to be hoped that company managements in this country will readily echo the sentiments expressed by Mr Srinivasan and extend their fullest cooperation to Government in building a prosperous New India.

✱

Forest Officers

In the Madras State only 14 per cent of the soil is under forest while the minimum requirement as prescribed by the Central Government is 33 per cent. Drawing attention to this extreme inadequacy, the State's Governor, Mr Sri Prakasa, in the course of his convocation address of the Southern Forest Rangers college in Coimbatore last week, pointed out that the percentage would be reduced further when reorganisation of States took place.

The Vanamahotsava is, therefore, of more than ordinary significance to this State. With the forest area less than half the minimum required, it may be easily imagined what incalculable harm is being done by the indiscriminate cutting down of trees in the forests. As Mr Sri Prakasa has pointed out, one of the main tasks of the forest officers would be to prevent this vandalism. Another instance of thoughtless dis-afforestation to which the Governor referred was the practice of cutting down of eucalyptus trees in the Nilgiris in order to utilize the land thus gained to grow potatoes. In the context of the extreme inadequacy of land under forest in the State, it is the duty of the Government to stop such unpatriotic practices forthwith.

There is every reason to believe that the State's deficiency in this regard can be made up to a great extent. Under the Second Five Year Plan, the Central Government have drawn up schemes for forestry in areas outside the reserved forests of the country. The schemes include planting of trees along road sides, canal banks and railways tracks; raising tree crops on village commons, waste lands and marginal sites; and introduction of protective vegetation in the form of live hedges, wind breaks or shelter belts etc. Madras State can take up these schemes in right earnest. There will be no dearth of trained men to undertake these tasks as the Central Government have already taken steps to expand the capacity of forest colleges.

✱

GATEWAY NOTES

(Continued from page 16)

in colleges and by relaxing the admission rules.

One can understand if it is maintained that Mr Daruvala's suggestions cannot be implemented immediately. No such objection can be raised against Mr Dahyabhai V. Patel's suggestion that the number of seats in the existing colleges be raised by at least 15 per cent. Actually the University authorities at Anand have been able to provide accommodation for an extra 35 students. The Government, however, have ordered that not more than 125 students be admitted.

Proposal to Capitalise Premium on Shares Account

✱

Mr. A. D. Shroff, the Chairman, Reviews Indian Economic Conditions

Addressing the Shareholders at the Annual General Meeting of the New India Assurance Co. Ltd., on 27th June, 1956, after the notice convening the meeting and Auditors' Report were read, the Chairman Mr. A. D Shroff observed that though forces of peace were considerably strengthened last year, somehow, "the Geneva Spirit lingers no longer; and we co-exist in a stalemate!"

In the economic field, this period was "highlighted by a continued quest for prosperity", which resulted in considerable increases in world production, employment and incomes. The stresses and strains which followed the economic expansion were dealt with by the flexible use of monetary weapons. Some countries, however, particularly the U. K. and some primary producing countries, failed to benefit significantly from the general ebullience. He pointed out that inspite of the tremendous hardships and problems faced by countries in Asia, and a moderate rate of progress achieved, Asia was seized with a dynamic urge to make up for the accumulated neglects of the past.

Turning to the Indian economic scene, Mr. Shroff observed that "the search for a socialist millennium, in official quarters, led to economic thinking which often appeared to lack clarity and vision." He acknowledged that there was some gratifying economic progress in the country; but in his opinion, the progress was hardly commensurate with the efforts made and our needs of today. He attributed the uneven progress in individual industries to the haphazard planning, and some of the success to the more favourable factors like favourable monsoons, etc. His conclusion was that if Government had devoted more attention and given high priority to the maximum utilisation of existing enterprises, and had actively helped the evolution of optimum units in them, the policy would have definitely paid rich dividends.

Referring to the Second Plan, Mr. Shroff stated that some important questions like credit-induced inflation and the possibility of achieving the physical targets have to be satisfactorily resolved. However, the most important question, in his opinion, was that of "preserving and safeguarding the fundamental human values" and the democratic way of life in the economic sphere. He made a constructive suggestion that the Government must develop techniques of effectively regulating and controlling both the Public and Private Sectors so that both of them could be harnessed to yield optimum results, and further, that sufficiently armed with effective machinery of regulation and control, Government must jettison all the doctrinaire and unrealistic approaches in their policies which are likely to handicap the effective mobilisation of national resources and effort. With such a control, it would not be necessary for Government to be obsessed with the ideas of transferring much of the economic activity to the Public Sector and squeeze the Private Sector out of existence. He further appealed to Government that in view of the all-embracing nature of the Second Plan, whose different facets are closely interwoven, it is most important that Government should, as far as possible, undertake calculated risks, even at some cost.

In this connection, he referred to the Government policy to relegate the existing well-organised consumer goods industries to the background and not to avail of the optimum production which these industries are capable of obtaining at the minimum cost and effort, just because the Government wanted to encourage the "nascent" cottage industries to increase employment opportunities. He entirely agreed that all efforts should be made to promote cottage industries and increase employment opportunities. However, he felt that proper timing and dovetailing of the production programmes of the organised and cottage sectors of the Industry are most essential.

Suggesting that the State Trading Corporation is "a most serious encroachment on free and private enterprise", Mr. Shroff pointed out that Government could render a more positive and effective service by providing better transport and warehousing facilities, etc.

Mr. Shroff dealt with the argument justifying nationalisation of Life Assurance. He said that although Insurance is basic to the economy and a form of social service, it is not necessarily best run by the State. It is the experience in the democratic part of the world that Joint-Stock and Mutual Companies effectively regulated and controlled are the best instrument for conducting this business. In his opinion, the well integrated Joint-Stock and Mutual Companies which had a creditable record during the recent years could have been harnessed to achieve a far better performance than what a Monopolistic Corporation aspires to do; albeit, it was most important for Government to regulate, rationalise and control the whole Industry.

Mr. Shroff referred to the alleged mal-practices in the Industry. In his opinion, the business must be run on the highest standards of management. Statutory control and regulaton of the Indian Life Assurance Business had been for the past few years much on the same lines as in the U.S.A. Most of the troubles in the Industry arose because the enforcement of the Insurance Law was most unimaginative, tardy and loose. He related how physical security of investment could have been most easily ensured. He also referred to the case of a Company, the knowledge of whose mismanagement was known to Government for a number of years.

In his opinion, the Department concerned hopelessly failed in establishing regulations and controls of the most elementary kind.

Referring to the concentration of economic power, Mr. Shroff pointed out that, concentration of power would be far greater in the case of a Monopolistic Corporation than in the case of a number of units operating independently.

In conclusion, Mr. Shroff felt that the best interests of this country cannot be served by Government in taking such a momentous step fraught with so many pitfalls and uncalculated risks, without taking the Industry into their confidence and consulting it to the fullest extent possible.

Commenting on the formula for determining compensation, Mr. Shroff said that the formula was so framed as to arrive at a compensation which was nearer to expropriation than what could be deemed fair compensation.

Reviewing the results of New India's operations during 1955, Mr. Shroff observed that the total premium income of the General Department was a little short of Rs. 5 crores. The underwriting profit, inclusive of interest, was Rs. 43.9 lacs as against Rs. 34.1 lacs in 1954. There was considerable improvement in the working of all the departments and the Fund at the end of the year stood at Rs. 6 crores 89 lacs as against Rs. 6 crores 39 lacs at the beginning of the year.

Concluding, Mr. Shroff hoped that the shareholders have welcomed the decision of the Directors to capitalise, subject to the sanction of the Government, Premium on Shares Account by issue of one bonus share per every three shares held.

Mr. P. N. Mehta, a shareholder urged that the malpractices in General Insurance should be curbed, or else General Insurance may also be nationalised. He asked why certain expenses of Management and outstanding premiums had gone up. He and Mr. Engineer referred to certain appointments of officers and stated that they were not satisfactory. Mr. Dhirajlal Maganlal, Mr. Bharucha, Mr. Davar and Mr. G. M. Shah were sorry that Government had nationalised Life Business which was becoming prosperous and felt that the proposed compensation was unfair. Mr. Guzdar, Mr. Engineer and Mr. Davar congratulated the Chairman on his Speech and asked several questions regarding the Company's operations. Mr. P. D. Shamdasani congratulated the Chairman on the excellent results and recommended increase in dividends. Mr. G. M. Shah suggested that the Chairman's Speech should be furnished in advance to the shareholders and desired that the Company should not take up Foreign Life Business. Mr. J. P. Khatri recommended that expenses of management should be reduced. Mr. Padamsee Morarjee made certain suggestions with regard to the presentation of accounts. Mr. Wadia raised certain points with regard to the old and new Companies Act and the Registers to be maintained thereunder and recommended that the Minutes of every Meeting should be fair. Several of the above speakers recommended that instead of issuing Bonus shares, the Company should increase the paid-up value of shares. With regard to the Compensation payable for Life Business, they reiterated that it was not fair. Some of the above shareholders, and Mr. Paymaster and Mr. R. S. Sethna desired a Committee of Directors and Shareholders should be appointed to go into the points raised by some shareholders. The remuneration of the managing Director was discussed by some shareholders.

The Chairman, Mr. A. D. Shroff answered all the querries in a satisfactory manner and stated that the matter of reducing uncalled liability on shares was being considered. He had no hesitation in saying that the Dividend of Rs. 2-8 would be maintained on increased Capital.

The Directors' Report and Accounts were adopted; Mr. B. C. Mehta, Mr. J. D. Choksi, Mr. Dinsha K. Daji, and Mr. B. K. Shah were elected Directors of the Company; Messrs. A. F. Ferguson & Co., and Messrs. S. B. Billimoria & Co., were appointed Auditors.

INDIAN INSURANCE COMPANIES' ASSOCIATION

General Insurance has Bright Future

Shri K. C. Desai's Optimism

"I visualise a bright future for our industry, since the scope for insurance companies to add to their premium income, by developing new lines of business as well as by improving further the lines in which they are already engaged, will be growing daily with the progressive implementation of the various schemes for the economic development of the Country", said Shri K. C. Desai, Chairman of the Indian Insurance Companies' Association, Bombay, presiding over its 28th annual general meeting.

Shri Desai, however, added that "the supreme need of the moment is a complete change of outlook on our part—a determination to put our house in order—so as to ensure an abiding place for our business in the private sector". He said that this effort should be supported by an unqualified and categorical statement from the Government that "this business is to remain within the private sector so that insurance companies, reassured about their future existence, can go ahead with their programmes of expansion and equip themselves better for their vital role in the coming crucial years".

CASE AGAINST STATE.

The year, continued Shri Desai, marked a milestone in the planned economic development of India and also saw far-reaching development in the direction of State ownership of which the amendment of the Constitution and the nationalisation of the Imperial Bank of India and life insurance business were proofs.

Shri Desai hoped that the hard school of experience would lead to a gradual reorientation of the Government's attitude towards the private sector and free enterprise would be allowed to make its proper contribution to the enrichment and diversification of the national economy. Shri Desai referred to the question of compensation and the advocacy of Shri A. D. Shroff before the Select Committee where he ably argued that the Government was offering only 35 per cent of the real value of the shareholders' interests.

Expressing satisfaction at the Government's decision not to nationalise General Insurance business. Shri Desai said that General Insurance is highly complex, demanding flexibility of management and adaptability to supply a tailor-made service with immense variations in insurance coverages to suit different types of risks. He sought renewed assurance from the Government that this business is to remain within the private sector.

FAIR PRACTICES

Referring to the problems posed by the nationalisation of Life Insurance business, Shri Desai said that in the process of adjustment, many companies might be forced to close down their branch organisations and may have, further, to lose the services of those who have worked for them efficiently well over a long period. Besides, there was also the fear of competition for business among insurance companies becoming stiffer. In this general scramble he asked insurance companies to guard against the temptation of adopting questionable methods to circumvent, the salutary provisions of the Act.

"With the increasing tempo of economic activity, there will soon be enough business to go round. But in the meantime, it is very essential that we take a long range view of things and concentrate our energies on effecting a radical rationalisation in the working of our business by eliminating all undesirable features that hamper our progress on the right lines", he added.

IMMEDIATE PROBLEMS

After announcing the formation of a reinsurance corporation which, with Shri T. K. Desai, as the first General Manager, would play a significant role in the development of the country's economy, Shri Desai pointed out that some of the provisions in the Companies Act would cause unnecessary hardships to insurance companies in their day-to-day work and increase their management expenses on account of the duplication involved. He urged the Government to exempt the companies from their operation so that the companies could continue to function efficiently, unhampered by needlessly irksome rules. He hoped that the State-associated insurance concerns would not enjoy an unfair advantage. Concluding, Sri Desai referred to the continued uncertainty regarding the taxation of profits arising from reinsurance contracts and hoped that the recommendation of the Taxation Enquiry Commission in this regard would be implemented.

Stock Exchanges

Slight Recovery from Low Levels

Watch-Dog Writes:

EQUITIES, in general, after drifting down considerably due to continuous bull unloading and persistent bear hammering, have recovered moderately at the close of the week, thanks to a revival of speculative interest. Turnover, however, continues to be restricted.

Although activity on the Calcutta Stock Exchange was again restricted, a slightly improved sentiment was noticeable during the week under report.

Equities on the Bombay Stock Exchange, after ruling initially quiet, gave a better performance toward the close.

The general pattern of trading on the Madras Stock Exchange showed the absence of any incentive for energetic trading.

Prices on the London Stock Exchange lacked a decided trend.

Wall Street closed firm with fairly well-distributed gains, ranging mainly to a dollar or more.

*

Calcutta

Calcutta, Thursday Evening.

TRADING on the local Stock Exchange remained dull and restricted during the major portion of last week, and further selling pressure caused prices to slump. In mid-week, however, some short-coming coupled with replacement buying imparted a slightly steadier tendency, although the improvement in prices was more marked in the Engineering and Miscellaneous sections. The market finished at slightly below the best levels for the week.

The Giltedged securities section continued to rule quiet. With most banks and insurance companies holding back and conserving their funds for the forthcoming New Loan, activity was at a standstill and prices showed a tendency to ease. 3 per cent Conversion Loan touched a high of Rs 77|8 and a low of Rs 76|15 to finish the week at Rs 77|4.

Bank shares ruled quiet in sympathy. Punjab National changed hands at Rs 57|0 to Rs 58|0; United Commercial at Rs 51|4 to Rs 51|8 and Hind at Rs 34|2 to Rs 34|4.

Jute shares continued to be neglected due to the feeling that the proposed measure to reseal 2½ per cent of the looms was inadequate to meet the difficulties of the industry. With the result, there were more sellers than buyers in evidence. National were on offer at as low as Rs 23|8, while Nuddea were marked lower at Rs 39|0. Khardah moved down to Rs 137|- from Rs 139; Orient to Rs 134 from Rs 135|8; Baranagore to Rs 133|8 from Rs 136 and Chitavalsah to Rs 14|6 from Rs 15|0.

Coal shares, after ruling quiet due the disappointment over the delay in the announcement of the coal price, steadied up a little toward the close in anticipation of a satisfactory increase. But the actual announcement, made on Thursday, had caused only a little effect on market sentiment as operators were anxious to study the full implications of the Government policy, before entering into fresh commitments. Burrakur improved to Rs 13|15 from a low of Rs 13|11; Rangeegunge to Rs 13|0 from 12|7 and Central India to Rs 7|9 from Rs 7|4. Talcher were a special feature and the scrip, after being taken upto Rs 3|12 from Rs 3|4 following the sanction of a larger increase in price for coalfields in the Talcher area, eased off at the close to Rs 3|8 on profit-taking. Bengal changed hands at Rs 536 to Rs 538|8.

Textiles ruled steady with Cawnpur having support upto Rs 8|15; Kesoram upto Rs 18|13 New Victoria upto Rs 2|11 from Rs 8|13; Rs 18|11 and Rs 2|9 respectively. Jayshree changed hands at Rs 7|4 to Rs 7|8.

In contrast to last week, Tea shares recorded only moderate turnover, mainly due to lack of fresh support. Operators were generally inclined to restrict commitments and await further developments in the tea situation. Amongst the few transactions recorded were Brooke Bond changing hands at Rs 23|15 to Rs 24|4; Bormah Jan at Rs 22|10 to Rs 22|14; Grob "B" at Rs 21|0 to Rs 21|6; Hantapara at Rs 212 to Rs

CLIVE STREET GOSSIP

(Continued from page 14)

different races will live in an amity born of a common "fealty to liberty".

*

I have no space here to discuss some of the concrete organisational suggestions that Mr Panikkar makes for giving form and content to the idea of the Commonwealth. He suggests the extension of organisational co-operation under the Colombo Plan and an intensive development of cultural and scientific contacts by exchange of professors and scholars and common programmes of resources. Under present conditions, he wisely suggests that foreign policy and defence should not be attempted to be co-ordinated because of the obvious suggestions of encroachment of national sovereignty (not to mention objections based on military bloc making) these ideas may give rise to. The soundness of his other suggestion about a Commonwealth "court" for dealings with "justiciable differences" between members is more open to doubt. There is, firstly, the difficulty, which he recognises, of defining "justiciable issues" in such cases. And, as for conciliation, every member of the Commonwealth is so anxious to discount the "supra-state" character of this association that no one will be willing to submit to the jurisdiction of such authority. Ultimately, the success of the Commonwealth will not depend upon its organisational proliferations but the permeation of its essential idea.

BALANCE-SHEET REVIEWS

(Continued from page 4)

has reported a decline in earnings for the half-year ended 30th November, 1955. The net profit, before Taxation and Depreciation, amounts to only Rs 1,24,556 against as much as Rs 2,16,644; and this was due to the rise in manufacturing expenses from 1.71 lakhs to Rs 2.15 lakhs and in "Salaries & Wages" from Rs 1.56 lakhs to Rs 1.83 lakhs. The directors have, after providing Rs 24,559 (Rs 23,363) for Depreciation and Rs 64,514 (Rs 81,732) for Taxation, reduced the dividend to 12½ from 22½ per cent.

Production of flour, during the half-year under review, was 224.621 maunds against 176.769 maunds in the previous half-year. The average cost of wheat was Rs 12-15-1 per maund as compared with Rs 14-0-10, while the average price realised for wheat products was Rs 15-3-10 per maund as compared with Rs 17-6-10.

Balanoor, Devon and Pullangode Results

The Balanoor Tea & Rubber Company and the Devon Tea & Produce Company, in the Managing agency of Young India Agencies (Private) Limited, and the Pullangode Rubber & Produce Company, in the managing agency of Aspinwall & Company, have presented their reports and accounts for the year ended 31-3-1956.

The Balanoor Tea & Rubber Company has reported a crop of 428,700 pounds of tea as against 421,344 pounds in the previous year; rubber crop at 42,069 pounds against 32,312 pounds and coffee crop at 2,882½ cwts against 783 cwts. Sales for the year amount to Rs 9.88 lakhs against Rs 10.94 lakhs, while the net profit before Taxation and Depreciation, amounts to Rs 4,71,352 against Rs 5,31,166. Although no provision has been made for Taxation, the Depreciation has been raised to Rs 33,125 from Rs 28,800 and General Reserve to Rs 2.00 lakhs from Rs 25,000. The dividend on the Ordinary shares is maintained at 25 per cent.

In the case of the Devon Tea & Produce Company, tea crop was 275,625 pounds as against 253,177 pounds and coffee crop 1,229½ cwts against 543 cwts. Sales are lower at Rs 5.99 lakhs against Rs 6.24 lakhs, while the net profit amounts to Rs 2,05,163 against Rs 3,02,482. In respect of allocations, the Depreciation amount has been raised to Rs 23,371 from Rs 15,086 and General Reserve to Rs 1.00 lakh from Rs 50,000. The dividend on the Ordinary shares is maintained at 25 per cent.

The Pullangode Rubber & Produce Company has reported a record crop of 628,000 pounds during the year under review as against 623,000 in 1954/55. Sales for the year are higher at Rs 9.14 lakhs as compared with Rs 8.34 lakhs, while the net profit amounts to Rs 3,49,566 against Rs 3,96,905. The directors have, after setting aside Rs 1.17 lakhs (Rs 1.2 lakhs) for Taxation; Rs 27,008 (Rs 23,489) for Depreciation and Rs 42,830 (Rs 42,500) for Rehabilitation Reserve, reduced the dividend by 2½ to 15 per cent.

SOUTH INDIAN MARKETS

(Continued from page 20)

Arrivals of Buff hides were fair, and there was a better clearance than last week. Prices, however, remained unchanged. Also, clearances of Cow Calf were good. There were still fairly large stocks of Buff Calf in the market, but clearances had been good.

In the Tanned Skins section, market quality Goat skins were As 3 to As 4 per pound easier, while common adulterated sheep skins were unchanged. Unadulterated and slightly adulterated skins were As 2 to As 3 above last week's levels.

In Raw Skins section, Bangalore goats were quoted Rs 15 to Rs 20 per 100 skins easier and sheep by Rs 10 to Rs 15 per 100 skins easier. In Bezwada, goat was quoted Rs 20 to Rs 25 easier and sheep by Rs 15 to Rs 20 higher.

*

(Continued from page 4)

Investment Notes:

According to the figures released by the Indian Iron & Steel Company, production of Pig Iron has declined to 148,306 tons during the quarter ended 30th June 1956 from 184,450 tons in the previous quarter; Steel Ingots to 117,710 tons from 141,846 tons; Semi-Finished Steel to 28,137 tons from 37,193 tons and Finished Steel to 64,472 tons from 82,667 tons. This sharp decline in production is mainly due to the fact that one blast furnace, which was blown up at about the beginning of the quarter under reference, was not in full commission. But for this, production would have been well maintained. This may probably be the reason that the share scrip is not affected and the rate is quoted upto Rs 36|3.

£ R$

Investment Briefs:

Buland Sugar has maintained the dividend at 10 per cent for the year ended 31.10.1955.

India Paper Pulp has maintained the dividend at 7 per cent for the half-year ended 31.3.1956.

WORLD OF FINANCE

(Continued from page 8)

make possible a saving in foreign exchange. Moreover, it also seems likely that the gap in our foreign exchange problem will be solved to a more appreciable extent than we can now hope for by an increase under the head of foreign aid. Lastly, it also seems possible that, given the continuance of the drive and energy displayed at improving Indian exports, earnings of exchange in this regard will contribute toward our foreign exchange, and help, to some extent, in covering the gap.

Mr Nehru, who customarily has the correct hunch, has begun to lay stress upon the importance to the Second Plan of foodgrains production. If it is recalled that, for the favourable showing of foreign exchange in the First Plan, a significant contribution was made by the increase in foodgrains production, then Mr Nehru will surely be proved right in his hunch that higher output in foodgrains during the Second Plan should have a value, in terms of foreign exchange, of Rs 450 crores.

+

The statement of the State Bank of India for the same week reveals a rise of Rs 2.41 crores in deposits to Rs 226.03 crores. Borrowings from other banks have declined by Rs 3.50 crores to Rs 13.00 crores, while other liabilities, including inter-office adjustments, are shown at Rs 4.22 crores against Rs 3.33 crores.

On the assets side, cash balances have risen from Rs 17.33 crores to Rs 19.98 crores. Investments are lower by Rs 0.30 crores at Rs 100.33 crores. Advances have declined by Rs 1.63 crores to Rs 134.26 crores—'Loans, Cash Credits and Overdrafts' accounting for a drop of Rs 2.06 crores and 'Bill Discounted and Purchased' for a rise of Rs 0.43 crores.

+

According to the returns of the Scheduled Banks for the week ended June 22, total demand liabilities have declined by Rs 0.67 crores to Rs 634.63 crores, while time liabilities have risen by Rs 2.90 crores to Rs 449.63 crores. Balances from both the State Bank and the Reserve Bank are lower by Rs 0.65 crores and Rs 2.04 crores at Rs 6.88 crores and Rs 56.33 crores respectively. Cash and Balances with the Reserve Bank have moved down by Rs 1.27 crores to Rs 85.64 crores, and Investments by Rs 0.78 crores to Rs 348.08 crores. Advances have declined by Rs 2.93 crores to Rs 609.26 crores and Inland Bills by Rs 1.83 crores to Rs 102.06 crores. Foreign Bills are higher at Rs 48.46 crores against Rs 47.92 crores. Money at call and short notice stands at Rs 10.93 crores against Rs 11.14 crores.

*

WELL-PLANNED LOANS

(Continued from page 8)

(2) **3½ per cent National Plan Bonds—Third Series 3½ per cent 1967 at an issue price of Rs 98-8 per cent and repayable at par on July 16, 1967.**

(3) **3¾ per cent loan 1974 at an issue price of Rs 98-8 per cent and repayable at par on July 16, 1974.**

The programme involves subscriptions by cash as well as subscriptions by conversion. The 3 per cent Victory Loan 1957 is eligible for conversion and will be accepted at Rs 99-13 for every Rs 100 (nominal) tendered for conversion.

The list opens on July 16 and will close as soon as it appears that approximately Rs 150 crores have been subscribed; but, in no case will the list be kept open beyond July 18.

Thus, the borrowing programme for the Second Plan has got off to an auspicious start. Three important features may in this regard be mentioned.

Firstly, the target of Rs 150 crores for the first year of the Second Plan suggests that ambitious and substantial subscriptions can be called for, in rising crescendo, in the next four years.

Secondly, borrowing policy is being evolved which seeks to appeal to every source of investment—banks will presumably prefer the short and medium loans, while insurance funds and provident funds will elect the medium-long loan.

Thirdly, borrowing is from confidence and strength, as evidenced by the short period for which the lists are to be kept open.

If ambition, confidence, strength and investor-preference are the characteristics of Government's borrowing programme for 1956-57, there is, we suggest, one more attribute that should form part of the Centre's borrowing policy. This attribute, which we have repeatedly stressed in these columns, is a pattern of giltedged yields. The pattern in this regard has largely been static, stagnant and even regressive. If Government take care to bring into existence, by shrewd open market operations as well as by the terms of New Loans in future years, a pattern of giltedged prices whereby the lowest yields will be offered as the maturity period is longer, we do not doubt that Government will be able to secure much larger subscriptions. But this applies to the future; and, for the present, it suffices to be heartened by the confident beginning to Government's Second Plan borrowing programme.

STOCK EXCHANGES

(Continued from page 24)

220 and Tezpore at Rs 27|14 to Rs 28|6.

Except Carew which were offered at Rs 9|11 and SKG which had support at Rs 13|2 to Rs 13|6, little or no interest was shown in other Sugar shares.

In general, Engineering shares, after being subjected to heavy selling pressure, recovered most of the lost ground toward the close following the emergence of bull support coupled with some replacement buying. The sharp decline in production of all categories of iron and steel at the Works of the Indian Iron & Steel Company during the quarter ended 30th June 1956 had no marked effect on the share scrip as the operators had the feeling that the decline in production was mainly due to the non-commission of one blast furnace which was blown up at about the beginning of the quarter under reference and that the loss would be made up during the rest of the year in view of the progress in the expansion plans. The scrip, opened at Rs 35|10 and, after touching a low of Rs 35|9 and a high of Rs 36|2, finished the week at Rs 35|15. In "kerb" trading on Thursday, the rate was quoted around Rs 36|0 with buyers at Rs 35|15|6.

Among other Engineering scrips, Jessop were a bright spot being lifted upto Rs 36|8 from Rs 34|6 due to renewed buying from interested quarters. TEXMACO touched a low of Rs 22|6 and a high of Rs 23|11, to finish at Rs 23|10. Braithwaite changed hands at Rs 28|0 to Rs 28|8; Marshalls at Rs 6|0 to Rs 6|5 and Richardson at Rs 26|3 to Rs 26|8.

The Miscellaneous section continued to provide a few bright spots on dividend and other considerations. Amongst these may be mentioned BBP which were keenly sought after upto Rs 4|6 from Rs 4|0 in anticipation of a higher dividend. BIC were taken upto Rs 11|8 from Rs 11|0 on renewed buying by Bombay operators. Indian Cable, after a long time, met with good investment buying upto Rs 36|6 from Rs 34|6.

Elsewhere, Karanpura Development recovered to Rs 22|7 from Rs 21|11, while Indian Copper were a narrow market around Rs 7|2. In the Paper section, India Pulp had buyers at Rs 25|5 to Rs 25|10 following the maintenance of the dividend, while Orient improved to Rs 39|8 from Rs 38|9 and Shree Gopal to Rs 18|13 from Rs 18|7. Titaghur moved narrowly between Rs 42|14 and Rs 43|2. Alkali Chemicals ruled very firm at Rs 22|10, while Indian Steamship changed hands at Rs 8|14 to Rs 9|1; Rohtas at Rs 23|8 to Rs 24|0; Osler at Rs 11|0 to Rs 12|0; Metal Box at Rs 28|7 to Rs 28|13; National Carbon at Rs 26|12 to Rs 27|4 and Dunlop Rubber at Rs 29|11 to Rs 30|0.

GOVERNMENT OF INDIA TREASURY BILLS

During the week ended the 29th June, 1956 Government of India Treasury Bills for Rs. 57,75,00,000/- were sold in favour of the Reserve Bank of India.

For the Investor

Creed of the Speculative Breed

***Investment Gossip*:**

INDIAN stock exchanges are today afire with bullish enthusiasm. Tata Ordinaries have been taken past the Rs 210 mark—the first time in the recent past when the yield has been lower than 5 per cent. Indian Irons, almost exactly a year from the time they touched Rs 40, have been taken up substantially to Rs 37-8. In Bombay, the rise in Tata ordinaries is matched by real firmness in textiles, engineering and miscellaneous sections. In Calcutta, steadiness in miscellaneous and improvement in jutes have accompanied the rise in Indian Irons. Till two weeks ago, with markets devoid of any prominent bull operator, momentum had been imparted to what I might call universal or unanimous bear position. The TISCO accounts and the Suez dispute coincided to bring about a revival of bullish interest and served, thereby, to induce nervousness in the bear operator.

There has been a good deal of covering operations, and prices have advanced less as a result of keen speculative purchases.

As far as I can see, however, this is merely the other side of the speculative extreme. Moderation has never been a virtue to which the speculator could confess. To accentuate the positive, exaggerate the negative: These are, in brief, the creed of the speculative breed. It suits the fraternity, at this time, to accentuate the positive.

But this does not mean that we have the emergence of what I may call the investor's market. By rights, as a matter of fact, the market should have drifted lower on account of three good reasons: firstly, the Stock Exchange Bill has been passed by the Lok Sabha; secondly the Centre's New Loan elicited subscriptions totalling nearly Rs 160 crores; and, thirdly, the demand that State loans will make may aggregate another Rs 70 crores.

But it is a phase, it is a game, when the accentuation of the positive is the proper thing to do. What I wish for, however, is the establishment of a virtuous investment climate—an investor's market which responds slowly but surely to every news that favourably affects the prospects before the investor. While, in Bombay, conditions are not inimical to the emergence of such an investor's market, it pains me that the Calcutta Stock Exchange should continue to harbour provisions in its rules and regulations that place a premium on speculative activity, and, in particular, on speculative activity of the bear variety.

Of course, I refer here to Calcutta's notorious satta system. Badla as a word in market parlance barely survives on Lyons Range. For the greater part of each year in the past five years, it is satta which has ruled supreme. A system that not only condones, but actually encourages, blank sales is surely an unhealthy provision for a stock exchange to include in its rules and regulations. I have not gone into the exact statistics—but I fancy that the Calcutta satta system will, by ensuring that roughly Rs 3 per Indian Iron share is paid out for every 12 months to the bear operator, have entailed an avoidance of loss to the bear species in spite of over-all improvement in prices.

With the Stock Exchange Bill shortly to become law, it is imperative that Government should consider, as one of their first tasks, the eradication of the Calcutta's debilitating satta. Profitably, the Bombay Stock Exchange's rules and regulations may be studied for the purpose. If Calcutta is to have forward trading in shares, let it be as fair and as equitable as the forward trading in Bombay. I say, end the Satta.

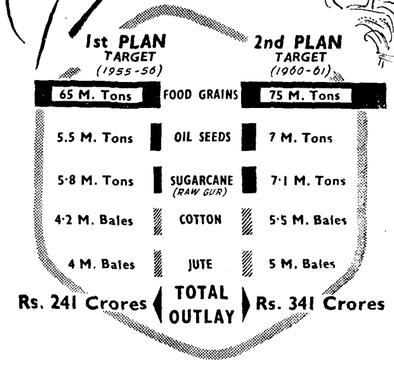
***Investment Notes*:**

THE Vazil Sultan Tobacco Company, Hyderabad, is offering for public subscription 22,745-7 per cent taxable Cumulative Preference shares of Rs 100 each at par, payable in full on application. The subcription list will open on August 23 and close on August 27 or earlier or later as the directors may decide. The company's working is reported to very satisfactory and it has been paying a regular dividend of 10 per cent on the Ordinary stock for the past four years.

Mody Spinning and Weaving Company has proposed to issue 3,85,000 Ordinary shares of Rs 10 each to the existing shareholders at the rate of one share for every two shares held. The new rayon and silk plant of the concern has already started production and the goods produced have become very popular.



Gwalior Rayons have spurted to Rs 18-12 from Rs 17-6. The company has announced a maiden dividend of As 8 per share for the year ended 31.3.1956. With the completion of the expansion programme, the production is expected to be doubled from its present capacity. The outlook for the shares are bright indeed.

National Rayons have continued to attract buyers at steadily rising levels, being presently quoted around Rs 276. There are reports about sharp increase in profits for the first half of the year as well as plans for further expansion.

Tata Locomotives have firmed up to Rs 174-12 from Rs 168-8. Long-term prospects for this com-

HIGHLIGHTS

The tempo of political activity connected with the American election this year has now entered its briskest paee.

Well within this month, the nominations by the two major parties will have been made.

Indeed, by the time this issue of Indian Finance reaches readers, it is to be anticipated that the Democratic convention will have nominated Mr Adlai Stevenson as the party's candidate.

While it is more or less certain that Mr Stevenson will be the Democrat's candidate, confusion holds sway as far as concerns the Republican party.

Firstly, it is by no means certain that Mr Nixon will be chosen as the running mate for Mr Eisenhower.

Secondly, it is as uncertain whether Mr Eisenhower may not decide, between now and the time of the elections, to withdraw as a candidate.

Never in American election history has the health issue assumed such dominant importance.

To such effect, the pre-nomination campaigns of the two parties have been emphasising the state of health of the possible candidates.

In the Republican party's case, added to the uncertainty of Mr Eisenhower's health is the reluctance of many quarters to nominate Mr Nixon to an office which might conceivably make him the next President.

In this week's Gossip, Eavesdropper assesses American politics with the accent on the Republican party.

pany are considered to be very bright although the dividend outlook for the year ended 31.3.1956 is looked upon with some doubts.

Bombay Burmahs are lifted up to Rs 761-4 from Rs 732-8. An informal meeting of the shareholders is likely to be convened on the 21st August before the shareholders' representatives meet the management of the company on the 22nd August for further decision regarding the compensation for Promoters' shares.

Cool filtered water

Andrew Yule Tea Group Results

Balance-Sheet Reviews:

THE considerable reduction in the prices obtained at the auctions and the rise in the cost of bonus paid to labourers are fully reflected in the working results of the tea companies for 1955.

The Choonabhutti Tea Company and the New Dooars Tea Company have reported substantial declines in profits. The former company has recommended only a dividend of Rs 20 per share and the latter Rs 25 per share as against as much as Rs 90 and Rs 110 respectively paid in the previous year.

£R$

Choonabhutti

Although the crop outturn, in the case of the Choonabhutti Tea Company, is higher at 13,536 maunds as against 13,361 maunds, the average price realised per pound is substantially lower at Rs 1-15-11 against Rs 3-1-4 in the previous year. The net profit, before providing for Taxation and Depreciation, amounts to only Rs 4,48,545 against as much as Rs 18,12,850. With the result, the amount set aside for Depreciation been reduced to Rs 50,047 from Rs 53,229; Taxation to Rs 1.77 lakhs from Rs 5.75 lakhs and General Reserve to Rs 1.50 lakhs from Rs 5.00 lakhs.

Estimates for the current season have been framed for a crop of 14,500 maunds. It is reported that, at the commencement of the present season, crop was lost owing to part of the garden suffering hail damage. However, the area affected has since been recovered to a large extent and it is hoped that the estimated crop will be secured.

The company's application to the Controller of Capital Issues for permission to capitalise a sum of Rs 3 lakhs out of General Reserve was granted at the end of November 1955. With the result, the Issued and Subscribed capital has been increased by the addition of 3,000 new Ordinary shares of Rs 100 each, issued to the shareholders in the ratio of one new Ordinary for every two shares held by them on the 28th December, 1955.

£R$

New Dooars

In the case of the New Dooars Tea Company, the average price realised is substantially lower at Rs 1-15-5 as against Rs 3-1-3 per pound although the crop outturn is higher at 20,444 maunds against 19,405 maunds. The net profit, before providing for Depreciation and Taxation, has amounted to only Rs 7,54,512 as against as much as Rs 26,95,062 in the previous year. Except the Depreciation amount which is raised to Rs 71,249 from Rs 58,778, Taxation has been reduced to Rs 2.98 lakhs from Rs 8.48 lakhs and General Reserve to Rs 1.00 lakh from Rs 8.00 lakhs.

Estimates for the current season have been framed for a crop of 20,000 maunds.

The directors have, in their report, stated that the application to the Controller of Capital Issues for permission to capitalise a sum of Rs 6 lakhs out of General Reserve remains still pending with the Government.

£R$

Jaybirpara

Jaybirpara (Dooars) Tea Company has reported a crop of 5,780 maunds as against 6,080 maunds in the previous year, while the average price realised is lower at Rs 1-12-6 per pound against Rs 3-6-3. The accounts for the year show a loss, before provinding for Depreciation of Rs 36,892 (Rs 38,943), of Rs 1,76,315 as against a net profit of Rs 7,56,434. Naturally, the dividend is passed over as against Rs 6-8-0 per share paid in 1954. Estimates for the current year have been framed for a crop of 7,000 maunds.

£R$

Mim Tea

In the case of Mim Tea Company, the crop is lower at 2,068 maunds as against 2,276 maunds, while the average price realised is only Rs 3-2-6 per pound as against as much as Rs 3-14-4 obtained in 1954. The net profit, before providing for Taxation and Depreciation, amounts to Rs 75,085 against Rs 2,21,755. The directors have, after providing Rs 9,816 (Rs 11,390) for Depreciation; Rs 17,000 (Rs 66,000) for Taxation and Rs 40,000 (Rs 60,000) for General Reserve, reduced the dividend to Rs 15 from Rs 40 per share. Estimates for the current year have been framed for a crop of 2,300 maunds.

£R$

Britannia Biscuit Maintains Dividend

Thanks to an increase in sales from Rs 1.29 crores to Rs 1.34 crores, the Britannia Biscuit Company has reported a net profit of as much as Rs 17,69,590 for the year ended 31st March 1956 as against only Rs 15,78,166 in the previous year. The profit would have been still higher, but for increased tax charges and operating costs. For, the amount paid as taxation constituted an increase of about 100 per cent over the 1954/55 figure. This heavier incidence of taxation for the year under review is due to the cessation of depreciation allowances on the initial phase of the company's building and expansion programme.

The directors have, after setting apart Rs 5.09 lakhs (Rs 5.32 lakhs) for Depreciation; Rs 4.52 lakhs (Rs 2.20 lakhs) for Taxation; Rs 1.87 lakhs (Rs 1.81 lakhs) for General Reserve and Rs 2.00 lakhs (Rs 1.50 lakhs) for Taxation Contingency Reserve, maintained the dividend on the Ordinary shares at 10 per cent.

The policy of the directors to accelerate the plant replacement and modernisation programme has enabled the company to expand production during the year; and now, they have commenced to insall the very latest type of manufacturing and packaging machinery to secure a generous share of the business available.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

All Contents of this Issue Copyright 1956 by INDIAN FINANCE

satisfactory working results for the year ended 31st December, 1955. The production for the year compares favourably with that of the previous year. Production is shown at 195,000 tons as against 196,910 tons and despatch at 195,374 tons against 200,227 tons. Sales of Cement are shown at Rs 1.25 crores against Rs 1.26 crores and those of Lime at Rs 46,414 against Rs 36,099.

The net profit, before setting aside for Taxation and Depreciation, is only slightly lower at Rs 11,54,429 against Rs 11,87,289. With the exception of General Reserve which is raised from Rs 50,000 to Rs 1.00 lakh, all other allocations have been reduced:—Depreciation from Rs 4.12 lakhs to Rs 3.66 lakhs; Taxation from Rs 3.18 lakhs to Rs 2.35 lakhs and Reserve for Rehabilitation of Plant and Machinery from Rs 50,000 to Rs 25,000. The dividend is, however, raised by 1 per cent to 6 per cent.

According to the directors' report, the retention price for the company's production has been notified as Rs 50-4 per ton, exclusive of Excise Duty and Cost of packing, which is the same return f.o.r. Works as at present. The renovation of plant and machinery was carried out during the year. The erection of Kiln No. 4, being standby for the old Kiln No. 1 still in production, was completed toward the end of the year, and the trial runs were satisfactory.

£R$

Imperial Tobacco

It might be recalled that this company was converted into a public limited company on October 27, 1954 and subsquently 10 lakhs Ordinary shares of Rs 10 each were offered by a shareholder for sale to the public at Rs 10-8 per share, which offer was over-subscribed.

According to a short report released by the company, the net profit for the year ended 31st March 1956 has shown a rise to Rs 1.87 crores from Rs 1.69 crores in the previous year. Except Capital Reserve which has been reduced to Rs 50,009 from Rs 3.68 lakhs, General Reserve has been raised to Rs 30.00 lakhs from Rs 20.00 lakhs and Fixed Assets and Stock Replacement Reserve to Rs 35.00 lakhs from Rs 25 lakhs. The dividend on the Ordinary shares is, however, maintained at 8 per cent. The directors have also recommended an interim dividend of 2 per cent for the current year, payable on or after the 25th September, 1956.

£R$

Searsole Coal Company

Despite an increase in raisings from 49,150 tons to 51,408 tons; in despatches from 48,556 tons to 48,379 tons and in sales from Rs 7.15 lakhs to Rs 7.26 lakhs, the Searsole Coal Company has reported a slight decline in earnings for the year ended 31st January, 1956. The net profit, before setting aside for Taxation and Depreciation, amounts to Rs 1,04,134 as against Rs 1,44,042 in the previous year. The allocation to Depreciation has been reduced from Rs 38,886 to Rs 16,125, but Taxation has been raised from Rs 55,312 to Rs 60,500. The dividend is halved to 15 per cent.

£R$

Investment Briefs:

Orissa Cement has raised the dividend from As 12 to Rs 1-4-0 per share for 1955.

New Samanbagh Tea has recommend a dividend of 25 per cent for 1955 as against nil in 1954.

Rajgarh Tea has reduced the dividend from Rs 7-8 to Rs 2-8 per share for 1955.

Murphulani Tea has reduced the dividend from Rs 4-8 to Rs 1-4 on Ordinary and from Rs 5-0 to Rs 1-12 on Preferred Ordinary shares, for 1955.

In Thackerjey Mooljee textile group, Hindoostan Spinning has raised the dividend from Rs 300 to Rs 325 per share for the year ended 31.3.1956, while India Manufacturing and Western India have maintained the dividends at Rs 300 per share each.

Brunton Engineering, Madras, has passed over the dividend for 1955.

Madras Safe Deposit has maintained the dividend at 4-1/16 per cent for the year ended 30.6.1956.

Kalasa Tea has reduced the dividend from 15 to 10 per cent for the year ended 31.3.1956.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

AFTER nine years of political freedom, the Indian Union can look back with a sense of profound achievement and look forward with great hopes. The country has quite a large number of hefty problems to face. Their existence should not cause alarm or engender a spirit of escapism. Too soft a life in childhood enfeebles a person when he grows up. In this respect, nations are not different from individuals. It is not the absence of difficulties which has to be wished for, but a national tradition of meeting every difficulty successfully.

It is in this sense that the period since August 15, 1947 provides inspiration and strength to the people of this country. To few dependent countries has political freedom come as a gracious and benevolent gift. The Indian Union could achieve freedom without much bloodshed; but the fearful orgy of popular violence accompanying its advent has left marks which are not easily effaced. The ceaseless trek of refugees from East Pakistan is a grim and inescapable reminder of a calamity whose evil consequences continue to defy statesmanship.

Otherwise, the record is replete with great and successful endeavours. Even the challenge of Kashmir, another extremely baffling issue, is being ably met. The integration of Princely India, nearly completed within the space of two years, is an achievement without parallel. Within four years of gaining Independence, the Union Government could conceive of a comprehensive and detailed Plan of national development. Its successful execution has given the momentum and provided the foundation for the vastly more ambitious Second Plan.

Another great experiment, the reorganisation of the States has been carried to its penultimate stage. The few sporadic outbursts of violence accompanying this change will have to be seen in correct perspective. What is involved is nothing less than the untrained sentiments and passions of multitudes of people all over India. The reorganisation is going through with the minimum of disturbance. As an administrative task it has not scared the Government of India.

The wisdom of concentrating so many changes, each epoch-making in itself, into so short a period is, perhaps, questionable. A mass of social legislation is also being pushed through. In spite of misgivings aroused, there needs be no doubt that all these efforts would be carried to a successful conclusion. The Government's faith rests on the appreciation of an universal urge for improvement and the readiness of the people to understand national problems and co-operate in working out solutions. The First Plan demonstrated how valuable public co-operation could be in the realm of material development. Whatever apprehensions prevail over the shortcomings or deficiencies of the Second Plan, the reassuring character of the public attitude is more than sufficient atonement.

During last year, India's relations with foreign countries reached a lively stage. The visits of a few of the world's crucial men, representing the East and the West and the hazy middle, highlighted Pandit Nehru's policy of dynamic neutralism. These visits have raised India's international prestige further. When Pandit Nehru toured Europe a few weeks ago, he was hailed as one of the greatest and politically most influential personalities of the day. He himself might not be sufficiently pleased with what he and those alike him could do for the settlement of the most outstanding international problems. In his speech on the anniversary day of Independence, he is obliged to point to the ghastly potentialities of the Suez Canal situation. The world is still far from being peaceful in its attitude and active policies.

But that is no cause for disappointment. The international achievement of Pandit Nehru and his philosophy has to be assessed not with reference to how events have been shaping recently, but with reference to how they would have shaped in the absence of the restraining and moderating influence, which he has been supplying as a matter of course whenever passions whirled up to a crisis. The powers involved have acquired a spontaneous compulsion to halt, hesitate and calculate calmly all pros and cons before taking any positive step.

In the last two years, there were a number of occasions in which an international conflagration became a distinct possibility. The unhappy situation obtaining in the Middle East is the latest instance in point. It is universally acknowledged that Pandit Nehru is among the most powerful factors combining to keep the situation under control. By any token, this is no mean contribution to man's welfare. In this great work, the Prime Minister of India seeks the backing from his own people. Recently, he has had occasions to castigate groups here and there for violating the high principles of peace and non-violence with which he is trying to subdue dangerous international attitudes. The President of the Indian Union has also indicated how all sections of the people in India could get over the illusory differences, which are permitted to spoil mutual cordiality. The most-needed work in the domestic field is emotional integration. There is no use being blind to the fact that we do not have it in full measure. In striving toward complete emotional unity in India, the cause of international peace will also be automatically served.

The people of the Indian Union cannot afford to forget that political freedom was won at the price of national unity. When the geographical integrity of India was broken, a heavy blow was struck at the sense of national unity too. Residual India could not automatically take the place of the old country as an object of patriotic veneration by all the people. For large sections, it symbolised defeat and frustration. Filling up the void became a deferred task, whose implications became pronounced only at the time of States' reorganisation. The handicaps of a federal, multilingual state came to the fore, reinforced by the cross currents of rival political ideologies.

National unity, in these conditions, has to be recreated as a vital, living force, enriched by a common tradition and embellished by common achievements. Dr Rajendra Prasad's appeal for mutual understanding and tolerance has, therefore, to be responded to, in deep earnestness, by the intelligentsia, who, after all, provide the stimulus for mass urges and aspirations. No democracy can succeed without an inherent layer of tolerance in the individual's attitude. Where it does not exist, it has to be sedulously fostered and nourished. Otherwise, all the professions of the nation's attachment to individual dignity and worth will turn out to be hollow. It is good that the leaders are aware of a big job calling.

The Indian Capital Market

An Indian Finance Special Study

Assessment of Present Conditions

THE recent developments in the Indian Capital market have been such that it has become necessary to take stock of the present situation and determine to what extent it is possible to depend on the various sources of finance—external and internal—in order to ensure a definite rate of development in the industrial sector. Till now, the progress attained in the private industrial sector particularly has come about in a fortuitous manner and, except for the somewhat "loose" planning in 1951/56, the promotion of the new and old industries took place under peculiar circumstances. It might be argued, however, that the policy of discriminating protection and, in more recent years, the support given by Government-owned institutions and Government departments has been greatly beneficial. But it is necessary to remember that the progress achieved in the inter-war period and in the post-independence period has come about mainly through the enterprise of a selected number of business houses and the booms in stock exchanges in 1936/37 and 1944/46. After the hectic activity in 1919/21 and the failures in the mid and late 'twenties, the first big beginnings were made in the early 'thirties. The sugar industry was established in the course of four years; and it is not clear, even today, how exactly the resources were found. During the depression period, the manufacturers of machinery were anxious to sell their goods and liberal facilities were provided. Even so, it was necessary to find as much as Rs 25 crores in a four-year period which, as indicated, was located without much difficulty. This is perhaps the reason why a good number of the existing sugar factories are "privately-owned" as in the case of the vanaspathi industry.

Developments in 1936/37

But the developments in 1936/37 provided an opportunity, for the first time in two and a half decades, to have a real extension of interest in the affairs of the joint-stock companies with the entry of the average investor in large numbers into the stock market.

An Indian Finance Special Study

Either because of the policy of reflation or the beneficial effects of the measures of discriminating protection, there was a revival in stock market activity. The amalgamation of the Indian Iron and Steel Company Limited and the Bengal Iron and Steel Company Limited and the formation of the Steel Corporation of Bengal, the floatation of Orient Paper Mills. Alkali and Chemical Corporation Limited and Tata Chemicals—to mention only the more prominent among the new issues—all these efforts were successful. The broadening of the basis of the industrial structure and the feeling that the stature of the established industries should be increased brought into existence numerous companies which are at the present day occupying an important place in the industrial economy of the country. While the impetus gained during the stock exchange boom of 1936/37 and during the war years was immensely helpful in stepping up indigenous production, the unprecedented activity in the new capital market in 1944/46 enabled the collection of large sums in the shape of risk capital, particularly for the promotion of new industries, to such effect that many gaps in the industrial structure could be filled.

The Hectic Years

The large sums raised during these hectic years, along with the accumulated reserves during World War II, thus greatly facilitated the impressive progress recorded since 1948. There is no doubt that the growth in the stature of the established companies and the formation of new units have been helpful in broadening the basis of the industrial structure and in bringing about an increase in production in such a way that inflationary pressures in the latter half of 1951/56 were fully absorbed and it was not necessary to incur avoidable expenditure in foreign exchange.

While estimates regarding expenditure on development and rehabilitation in the private industrial sector in 1951-56 vary, there is general agreement that the respective industries would have experienced a serious shortfall in the required resources but for the availability of earlier reserves and the unused capital raised in 1944/46. The estimates regarding profits ploughed back in the First Plan were not fully realised; and, with the higher prices for raw materials and stocks in the earlier years, working capital requirements also became very much larger and it was necessary to have recourse to bank finance to a greater extent than before. The apprehensions on account of a further increase in working capital, however, did not fully materialise as prices declined later.

The question now relates manly to the further developments that will take place in both the public and private sectors in 1956/61 and the ways and means by which the required finance could be found. Obviously, it would be difficult to have any clear ideas if no attempts were made to estimate the requirements of the various industries and determine how such of those industries as are advantageously placed could secure finance from internal sources and raise additional capital from the existing shareholders. From the progress recorded by the steel, cement, textile, sugar, chemical and other industries in recent years, it might be said that the established companies would be able to secure their requirements without much difficulty, especially as the statutory corporations might provide the marginal requirements in the shape of loans. The public sector, for its part, has access to its resources; and, with deficit financing, foreign aid and foreign loans, the problem, if any, would relate to the actual implementation of the various projects. More recently, the Industrial Credit and Investment Corporation has sponsored a fairly large number of new issues; and, with the direct loans by the Industrial Finance Corporation and the under-writing arrangements by the ICIC, the badly needed expansion in particular directions has been achieved. The rehabilitation programme of the jute and cotton industries can be expected to be taken care of, to a large extent, by the National Development Corporation.

Trends in the Recent Past

The issue of equity capital and preference capital by established companies has naturally been the feature of the capital market in the past few months while, in 1953 and 1954, the raising of debentures and preference capital by the oil refineries accounted for a sizable sum. But the large-scale investment in particular directions and preoccupation of the leading industrial houses with the implementation of the various expansion schemes have led to a state of "saturation" in the capital market recently, and stock market activity has not been as brisk as it should be.

The following questions have, thus, been posed: Would 't be possible for the required investment to be found in 1956/61 without brisk activity in the stock market? Would it be correct to assume, having regard to the recent sharp increase in consumption of particular commodities, that the required increase in production will be brought about without large-scale new floatations and without a constant change in the ownership of shareholdings?

There is no doubt that the progress recorded in the past few years has been noteworthy and that the established units in the cement, paper, steel and chemical industries have grown considerably in stature. Also, the various engineering units and the entirely new industries like rayon have grown rapidly and acquired a prominent place in the economy of the country. But such new development as has taken place in the post-independence period has, as already emphasised, its origin in the boom of 1944/46 and it cannot be dogmatically asserted that new capital has been found in the same way as in those boom days (even taking into consideration the help received from the Government departments and Government-owned institutions) and that further progress can be ensured entirely by the established companies. While it must be admitted that the giants in the various industries are doing a magnificent job, if speedier progress is to be attained and wasteful foreign exchange expenditure is to be avoided, there should be further effort not only by the bigger units but also by the units newly promoted under entirely different auspices. In the paper, chemical, cement, engineering, rayon and other industries, there is scope for new entrants. Indeed, the target for the cement industry of 10 million tons, which was at first regarded as an optimistic estimate for 1960/61, is now considered to be grossly inadequate. The established companies cannot perhaps do very much more. There is need for more companies under new auspices. It may be remembered that, in 1944/46, new floatations included India Cement, Digvijay Cement, Orissa Cement and others.

Need for Issue Houses

It may be that the State Governments also enter the field while the more progressive Governments like Bombay are keen on encouraging business houses which have had a distinguished record. It is too much, however, to expect in the present circumstances that the established houses could take up more work upon themselves. There must be new talent forthcoming and it would probably be more easily forthcoming if the stock market was more buoyant; if it was clear that, without much effort paying propositions could be easily started; and if the marginal requirements were provided by the Government-owned institutions or the Government departments themselves directly as in the case of shipping. But the base has to be built first and it should not always be necessary for the guaranteeing arrangements to be put through by the Industrial Credit and Investment Corporation. There are no specialised institutions in the private sector; and it has happened that large sums have been collected only through periodical booms. The stage has certainly been reached where it has become necessary to think in terms of promoting issue and investment houses as recommended by the Shroff Committee. But it needs also to be pointed out that a boom in the stock market has become overdue: nearly ten years have passed by since the debacle took place before the "direct action" day in August 1946. But, once such a boom takes place it should be possible to ensure a steady improvement in market values over a period as has been the experience in the USA, the UK and elsewhere in recent years.

While investment support from outside quarters has not been in evidence to the extent required, there is also evidence to suggest that savings exist in particular directions as borne out by the phenomenal subscriptions for such popular offers like Imperial Tobacco, National Carbon and Metal Box ordinary shares—to mention only a few instances. It has also been possible for large parcels of shares of companies which have gone into the stage of production to be placed in the market. It is not as well known as it should be that large parcels of Gwalior Rayon, Jaypur Udyog, Sirpur Paper, Sirsilk, Voltas, Tractors India and others have been quietly absorbed. It may be that there was selling of jute and coal shares or such other counters as yield a relatively lower return in order to invest in the new shares. But, on balance, there has been more investment. If there is a substantial appreciation in the value of existing holdings there would be a greater disposition to take fresh risks. In that event, it would be possible to ensure large subscriptions for new issues.

Future Prospects : Bright

Only the stock exchanges will be able to provide the badly needed additional capital for increasing the capacity of the existing and new industries and at the same time bring about a dispersal in the shareholdings of companies which will result in an increase in the body of investors and reduce the precarious dependence on the new sources of finance.

When future prospects are admittedly bright and there is no problem of marketing a higher level of production, it should have been normally expected that the general climate in the capital market would be encouraging, quite apart from the fact that the usual support is not available from the insurance companies and the managing agency houses also are somewhat 'overextended.' Government policies have obviously not been helpful. Apart from the reason that the policy in regard to the fixation of prices for steel, cement and other items has not been quite enlightened, the attitude of Government in regard to the distribution of dividends in the case of companies which have taken loans from the Government, the IFC or other allied agencies has been most discouraging. Indian Iron is a classic instance in point. Even in respect of loans from the IFC to companies which have large distributable profits the rule lays down that unless the loans have been repaid there cannot be any increase in the dividends declared. Reasonable safeguards are necessary. But not safeguards which will discourage the investment of savings. If only a 12½ or 15 per cent dividend had been paid by Indian Iron the amount additionally paid as dividends could

(Continued on page 324)

Editorial Notes

A Disquieting Trend

In his recent address at the Bombay Rotary Club, Mr M. R. Masani expressed the warning that if the authority of the State in India were to be extended in the present manner, there might, in due course, be little left of individual freedom or social justice. Nearly three decades ago when Britain scarcely dreamt of the measures of nationalisation taking place since the Second World War, Lord Hewart felt similarly perturbed over the growth of the delegated power of the Civil Service, which he described as the New Despotism.

Terms such as democracy, individual freedom and social justice can have no meaning where there is no freely articulate and effective challenge to the ruling party and worse still, where there is only one party and this party identifies itself with the State. Mr Masani's gentle reminder that power alone can restrain power cannot be misunderstood by a people cradled in the traditions and practices of British democracy. Internationally too, the same principle holds good, though of late it has been strained to such a monstrous extreme by the Big Powers, that very little of its pristine validity remains unobscured by the fiendish use to which it is now being put.

Mr Masani is quite justifiably disturbed over the gradual encroachments of the State on many unexpected spheres, life insurance, the export of iron ore, the distribution of cement and, what is far more disheartening, the government seeking to draw inspiration from the Chinese agricultural cooperatives which are nothing but Russian collective forms.

Normally these are trends which a full-fledged socialist party would endeavour to promote. The Congress is still firmly wedded to the democratic form of Government and freedom of thought and expression. The Constitution also guarantees all the ingredients of a freely voted parliamentary democracy. If under such circumstances the State is found willy nilly drifting in a totalitarian direction, then either the professions of the party are insincere or some incoherent element is making its powerful presence felt in the affairs of the nation.

The first inference would be uncharitable. Perhaps the road to a welfare state especially in an under-developed and overpopulated country is not quite safe for democratic virtues. A planned economy aiming at an egalitarian social structure may seek a price repugnant to the uncompromising lover of individual freedom. And, if the average citizen either by purposeful consent or by indifference approves the widening of powers of the State, it reflects a desperate position. Deliberate approval can only mean that the majority of the people see some good resulting thereby. If it is sheer apathy, it indicates a great responsibility for those who realise the danger. Why is it that this responsibility does not evoke much organised and disciplined action? The answer, to be adequate, must look for some of the inherent perplexities of the nationai situation.

*

P.S.P. and The Elections

The few temporary political wedlocks between the Indian Socialists and the Communists have ended in angry divorce. The Communists may not regret a past relationship of this kind. The Socialists have on every occasion felt sorrowful and penitent. At the last All-India session of the PSP at Gaya, the delegates resolved that they will no longer have any truck with the Indian Communists.

The recent statement and reported negotiations of Mr Jayprakash Narain should therefore appear somewhat baffling. Mr Jayprakash is now inclined to favour the PSP and the CPI pulling their lots together in the forthcoming general elections. The Congress President apparently tried to restrain the Socialist leader and possibly to reawaken his old sympathies. The attempt persumably did not go far enough. At Calcutta there was a leaders' meeting where the PSP's attitude to electoral alliances was sought to be clarified.

In the present look of things, a PSP-Communist partnership in opposition to the Congress cannot be ruled out at all, in spite of the forbidding historical background. Why Mr Jayprakash should take the initiative in what is surely the most important aspect of socialist policy is obscure, especially, when he has been keeping somewhat aloof from the more active side of party politics. Possibly Jayprakash is trying to stage a come back. The PSP is likely to get strengthened, if he is again at the helm of affairs.

It would be too ambitious to envisage Jayprakash as the leader of a common front of the Socialists and the Communists. There is yet another possible explanation. Dissatisfied with the Congress, Jayprakash may be trying to pull his weight in the direction of making the Communist party itself more national and constructive in character. The international context is friendly to such an effort; but again a merely one-sided initiative will not bear much fruit.

As for the PSP, which is a house notoriously divided against itself, a careful choice has to be made between an all-India policy for electoral alliances and adjustments at the State level. A preference for the second will have the dual merit of not militating against the national tradition and at the same time of capitalising to the fullest extent the advantages afforded by local circumstances.

*

Russo-Jap Peace Treaty

Whatever hopes were entertained of Mr Shigemitsu, the Japanese Foreign Minister, concluding a peace treaty with the Soviet Union broadly on the terms offered by Russia have been dashed, temporarily at least. Negotiations between the Japanese and the Soviet Foreign Ministers were dragging on for some time. At a certain stage it was thought that Japan would give up a good part of its claims and agree to a settlement which would end once and for all the formal state of war between the two countries and secure the release of Japanese prisoners. The Tokyo cabinet has wisely avoided any outright rejection. On the other hand the Foreign Minister was advised to suspend negotiations. That nothing was done in pique by either party is a matter for relief. Mr Shigemitsu's visit to London for the Suez Conference should enable him to sound his international friends further on the negotiations with Soviet Russia.

Already the Japanese claim has been toned down by the abandonment of Kuneshiri and Iturup islands. What disturbs Japan is the prospect of giving up permanently fairly large teritorial claims in the event of the acceptance of the boundary now proposed by Soviet Russia. Even on the most favourable terms Japan will be a shrunken entity. Historically, larger Japan has very brittle foundations. Vast chunks of territory on the mainland and several well-known islands such as the Sakhilin and the Kurile isles have changed hands after wars.

If, however, economic considerations held decisive, Japan's congested and growing population justifies the most liberal attitude on the part of Russia in respect of the transfer of territory. Even from the point of view of permanent peace in the East, it would be unwise to perpetuate a status under which one of the world's most virile population feels bottled up within a comparatively narrow range of territory. Hence-forward, the mainland powers will have very little to fear from the militarily humbled Japan.

*

Export Targets

Under the revised scheme of the Second Plan targets, export levels at the end of the Plan have also under gone a few revisions. Necessarily tentative in character, the new targets are expected to provide the marginal sluice for production in the various spheres and to

Clientele for State Loans

WITH regard to the State Loans, the details of which were received in this office as we were going to press last week, and a brief comment on which appeared as a stop press item, the general pessimism apparent in most of the comments is in sharp contrast to the subdued optimism expressed in our forecast of the loans. The pessimism evinced by most of the commentators is based on the reasoning that the Rs 65 crores to Rs 70 crores, which the State loans put together call on the market to provide, would cause a serious drain on an already depleted money market. Our optimism, on the other hand, stems from the conviction that the 4 per cent State loans have established a special and growing clientele of their own; and that the snowballing funds in the hands of the latter will spell success for State loans with targets stepped up from year to year. The logic behind the market's assessment and our own appraisal is each sound in its own way. It is all the more necessary to find a reconciliation and to prove that the importance of the special clientele for the State loans will also have the effect of moderating the strain on the money market. It is significant that an interval of three weeks has been deliberately provided between the announcement of the loans and the opening of the lists. It is obvious that this interregnum is to be put to the best use by the State Governments for launching their drives, executing intensive and widespread campaigns and generally tapping sources which are to be considered outside the money market proper. In this regard, the changes in the methods and procedures for State loans in recent years are highly instructive. In the early years, the modus operandi was to fix up underwriting arrangements for each of the State loans and only thereafter to make the issues public. If the response was, in any of the cases, inadequate, the underwriters had to take up the unsubscribed portions of the loans. This system was satisfactory so far as it went and so long as it lasted. But the underwriters for projects of this kind are few and far between in this country; and the problem became more complicated as the size of the State loans expanded vastly. Moreover, some of the State Governments began to feel that they stood in no need of the artificial prop of underwriting. At this stage, an experiment was tried of withholding State loans from the market and of issuing a combined Central loan, from the proceeds of which the States secured their shares on a previously agreed basis. This scheme was also abandoned; and State Governments have, for some years, been approaching the market directly. This is the present position.

As we have remarked earlier, some of the State Governments have developed the confidence that they could make a success of their loans by their own initiative and through their own efforts designed to appeal to parochial pride and to mobilise far-flung and hitherto unutilised sources.

How much this initiative means and in what directions these efforts must be made, was triumphantly and successfully indicated by the campaign initiated by Mr C. Rajagopalachari in Madras three years ago. The Southern State established various records in this connection. Firstly, subscriptions from the money market centre as such were small compared to the subscriptions from the mofussil areas. Secondly, the number of small and modest applications was gratifying evidence that hitherto untapped resources could be brought in by a campaign suitably planned and executed. Thirdly, municipalities, district boards, local boards, temple trusts and other trusts of various descriptions, small and medium co-operative banks,—all these provided significant meaning to the adage that drop by drop maketh the ocean.

It will not be in accord with facts if it is claimed that this pattern of investments in State loans is true of every State. But it is undoubted that Rajaji's initiative in setting the pace and in evolving the plan are being copied wherever conditions are favourable for a drive of this kind. Varying degrees of success have been attained; and it is clear that, apart from provident fund institutions with their sizeably expanding accounts, the non-monetary sector is playing an increasingly important role as a feeder of States loans. With the disbursements of the Second Plan conspicuously adding to the levels of income in all parts of India, and with the co-operative movement spreading out in strident style, sources outside the organised money market may be expected to emerge as a significant mainstay of State loans. Even as it is, the money market will in no case experience the drain and strain to the full extent of the subscriptions flowing toward the State loans. On the available present information, it is not possible to apportion the shares between the contributions from the monetary sector and those from the non-monetary sector. But it is true, in broad terms, that the strain in the money market will be considerably less than now feared.

With the slack season gotten into full stride, the return of funds from the mofussil may be expected to make up for such moneys as are diverted to the State loans from the money market sources. The returns of the Reserve Bank for the last two weeks show clearly how the depletion caused by the cash subscriptions to the Centre's New Loan has already been made good in large part. The real import of the Reserve Bank returns is the welcome evidence of abundant resiliency in current money market conditions. While the national economy is characterised by a rising tempo of productive activity and while, for this reason, money is in good demand, it is nonetheless true that there is no hold-up of production, agricultural or industrial, at any stage; and this means that finance is being quickly released from stocks. The turnover is brisk; and money circulation is resilient. From this point of view, the slack season may be expected to show itself in its true colours from the end of September.

There is also an obligation on the Reserve Bank authorities to foster, promote and accentuate the slack season attributes. It is perfectly within their power to do so. As we have suggested in this column on more than one occasion, the slack season rate for advances to Scheduled Banks against usance bills should be fully one per cent lower than in the busy season. There is every reason to preserve the traditional personality of the slack season. A 3½ per cent call rate is totally inconsistent with such a personality. We would like to see call money rate round about 1½ per cent in the autumn months.

+

THE Reserve Bank returns for August 10 reflect, on the one hand, the peculiar changes in the State Bank's statement and, on the other, the expanding forces of slack season conditions. Also, it indicates that there has been some carry-over, into the week ending August 10, of the demand for money occasioned by month-early disbursements. Active notes are Rs 4.63 crores higher at Rs 1451.78 crores; and Reserve Bank's cash in the till has declined by Rs 4.34 crores to Rs 25.95 crores. Rupee Coin, however, shows the contrary trend, return from circulation having raised the figure under this head by Rs 0.30 crores to Rs 112.42 crores. The self-adjusting character of expansion in active notes and contraction of notes held in the Banking Department has obviated the need for adjustments against Foreign or Rupee Securities.

The fall of Rs 7.01 crores to Rs 54.04 crores in the Central Government's deposits is also suggestive of the extension of the demand of month-early disbursements; and banks' figures, in the Reserve Bank statement, would seem to confirm the trend. Although Bank's deposits are higher by Rs 3.14 crores at Rs 51.04 crores, this rise has been

Sterling Under Pressure

By PAUL EINZIG

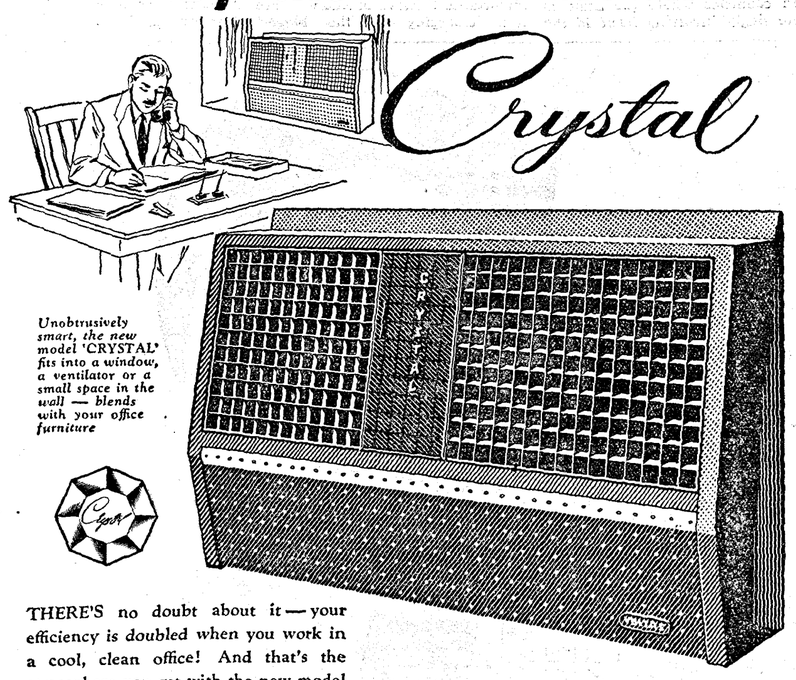
EVER since the beginning of the Suez crisis, sterling has been distinctly weak. Although at the time of writing it is still slightly above its lower limit of $2.78, this may be due to official support. So far the extent of this support is believed to have been moderate, incomparably smaller than the support needed in August 1955 when Mr Butler's ill-advised reticence on the Government's intentions about the flexibility of sterling let loose a flight from the pound. This time Mr Butler's successor made it quite clear that the Government is opposed to changing the parity of status of sterling. Some Conservative enthusiasts of exchange flexibility, headed by Lord Hinchingbrooke, intended to attack the Government's attitude in a debate planned for August 2, the day on which Parliament rose for summer recess. Since, however, they were informed that the Economic Secretary to the Treasury, Sir Edward Boyle, who was to answer the debate, would emphatically reject their demand for an early flexibility as a prelude to convertibility, the debate was cancelled. Possibly those concerned may have also felt that, in view of the Suez crisis, it would be inopportune to press for convertibility or flexibility.

Pressure on sterling is not due directly to the material efforts of the Suez crisis. The extent to which military and other measures have so far affected the balance of payments or the domestic economic situation is quite negligible, and is not likely to become appreciable among the factors affecting sterling, unless there should be a "shooting war" or a large-scale mobilisation.

But the crisis has already produced a noteworthy psychological effect. Even though speculative pressure on sterling is not excessive, there is a great deal of commercial buying of dollars in advance of seasonal requirements which usually begin to make themselves felt towards the end of August. To the extent to which the weakness of sterling is due to this factor, it need not cause any concern, because sooner or later the dollars would be bought in any case, so that the psychological effect of the crisis merely puts forward the autumn demand.

It must be expected, however, that an aggravation of the crisis, in addition to its material effect on the balance of payments and on the inflationary position, would affect sterling by causing withdrawals of foreign balances from London and would accentuate speculative pressure. From this point of view the high interest rates prevailing in London may become source of weakness, because they have attracted foreign funds which are now liable to be withdrawn. It is a shortsighted policy to try to bolster up a currency with the aid of high interest rates. The funds attracted by such means are liable to be withdrawn at a most awkward moment. Even if in the meantime they prevent a loss of gold, the counterpart of the gold retained is a corresponding increase in foreign sight liabilities, so that the reserve postion is not strengthened.

It was a mistake to relax exchange control by authorising London banks to deal directly with foreign non-banking buyers or sellers of foreign exchanges. This measure, and other measures of a similar character adopted in recent years, facilitates speculating against sterling, even if the inability of London banks to grant credit to overseas borrowers does constitute a handicap.



In any case, the main source of potential pressure is not a speculative pressure in the pre-war sense but a deferment of payments for British goods and a postponement of purchases of British goods in anticipation of a devaluation. From this point of view it is well to bear in mind, however, that during the past six months the British gold reserve has strengthened considerably, and it will be further reinforced by the dollar proceeds of the Trinidad Oil deal which may reach the Treasury in the not too distant future. Had the Suez crisis occurred twelve months ago, it might have produced a fatal result from the point of view of the stability of sterling. The reserve position is now stronger, however, and an accentuation of the credit squeeze could easily offset any inflationary effect of the military measures that may become necessary.

What is even more important, should an emergency arise, the Government would not hesitate to reinforce its disinflationary measures by means of physical controls. Indeed, since Mr Macmillan is not at all prejudiced against physical controls, an aggravation of the crisis provide him with an opportunity to override dogmatic resistance to them by some of his colleagues in the Cabinet. A return of petrol rationing would go a long way towards correcting the adverse balance of payments. Building licensing, steel allocation, and various import controls would be reintroduced if necessary. This would become politically possible without any loss of face, for any triumphant Socialist claim that "after all, Tory freedom does not work" could be countered by the perfectly valid argument that the Suez crisis has created a new situation that justifies a reappraisal of economic policies.

Even if the crisis should lead to a marked deterioration of the balance of payments, the Government would maintain sterling at its present level. It is now generally admitted that a reduction of the value of sterling at the beginning of World War II was a grave mistake. That mistake will not be repeated. Obviously amidst conditions created by a shooting War a depreciation of sterling would not increase the volume of exports, because the exportable surplus would decline. A depreciation of sterling would only reduce the foreign exchange proceeds of the exports. It is true, it would discourage imports, but the same end could be achieved by import restrictions. There is every reason for assuming that the Government will do everything to avoid a depreciation.

World of Business

Role of Managers

An enterprise may owe its existence to the pioneering spirit of an entrepreneur but its successful working depends invariably on the calibre of its managers. Conversely, mismanagement is the primary cause of a large proportion of business failures.

The importance of good managers to undertakings in all climes and at all times, therefore, cannot be gainsaid. Whatever may be the kind of economy in a country, a lot depends on whoever is entrusted with the coordination of the work of the several departments in each unit of industry.

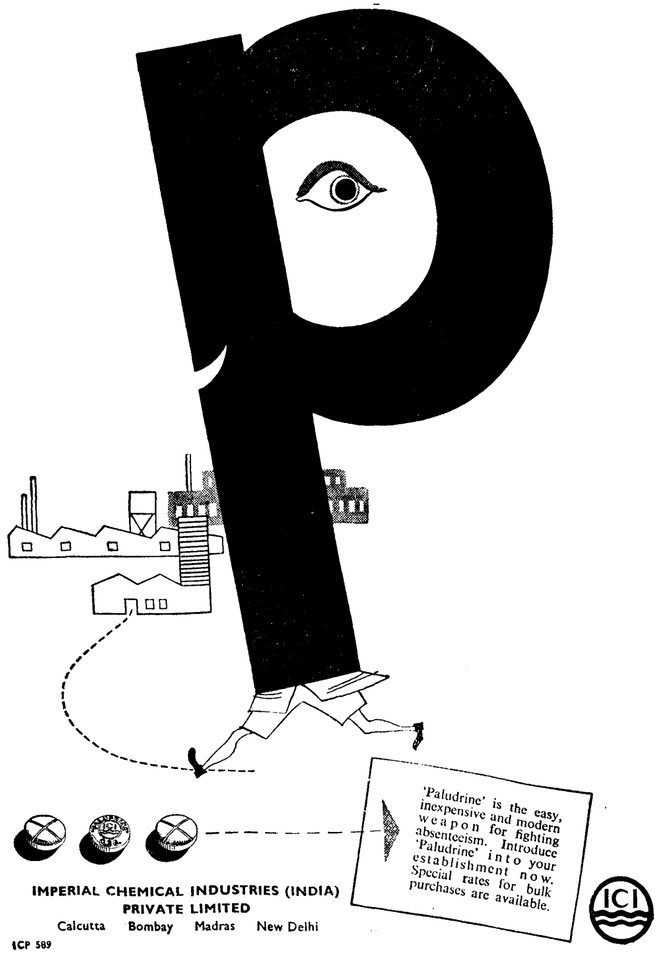
In countries where the State is increasingly involving itself in the direct working of industries, the private entrepreneur may be eliminated altogether in course of time. But the need for managers will never disappear. On the contrary, the demand for managerial personnel is bound to increase with the increasing tempo of industrialisation.

In India the question of entrusting the management of enterprises to competent persons is of special significance at the present juncture. For, mismanagement will have serious repercussions on the pace of progress in the country. The matter is also of particular importance to Government who are now emerging as the biggest owners of industries. In short, one will not be far wrong if one says that the success of State ventures depends largely on the persons who are entrusted with their management.

The role of managers in business is well brought in a speech delivered in London recently by Lord Heyworth, chairman of Unilever Limited, at the annual general meeting of the company.

Unilever, which is operating several hundred companies in more than forty different countries, including the USA, UK and Holland, is keenly alive to the need for creating an efficient body of managers. The vital role of managers in Unilever may be seen clearly from the fact that out of a total labour force of about 270,000 managers number 22,600 or 8 per cent. In highly developed countries like the UK and Holland the proportion is appreciably higher than the average at 11 while in the USA it is as high as 15 per cent. The company's experience in this regard is that "the higher the degree of mechanization and the more sophisticated the environment, the higher will be the ratio of managers required."

Lord Heyworth brings out the importance of managers in the following words. "Important to the shareholders, because without good managers neither this nor any business could thrive. Important to the employees, for without good skippers you cannot have a happy ship. And important to the community we serve, because without good managers we shall not achieve the increased productivity upon which the improvement of standard of living depends".



Though Lord Heyworth deals with the topic on the basis of Unilever's experience, the manner in which the company is tackling their management problems may be studied with profit by all those who have something to do with the running of enterprises big and small, whether they are private-owned or State-owned.

The only test which Unilever applies to determine a man's suitability to enter managerial ranks is that of merit. "There is no question of demanding a particular social or educational background". The company provides ample scope for men with the right qualities to climb up from the lowest levels. Care is taken to avoid any emphasis on privileged categories of manager-trainees. The fundamental principle that is adopted for training managers is "training should be tailored to measure, nor ready-made off the peg". In other words, training for all categories of managers, starts on the job.

Lord Heyworth, however, makes it clear that the quality of the management will inevitably be reflected in the working results of the business. That is to say, without good managers, it is practically impossible to carry on a business profitably. Speaking about the needs of his company in this regard, he says:

> "As the business expands we shall need more managers and the pattern which is unfolding is one in which the proportion of managers in relation to the whole will continue to rise, and this at a time when the competition to secure the services of managers is everywhere increasing. Therefore we can never let up. We must not expect the universities, schools and the technical colleges to provide the answer unaided. We must continually examine our methods of recruitment and selection. We must take every opportunity to bring on an upgrade of our own people from the lower levels. We must all of us understand the importance of training."

Being on the threshold of an industrial revolution we in India can derive considerable profit from Unilever's experience in dealing with one of the most important problems of industrial organisation.

World of Jute

A Retrograde Step

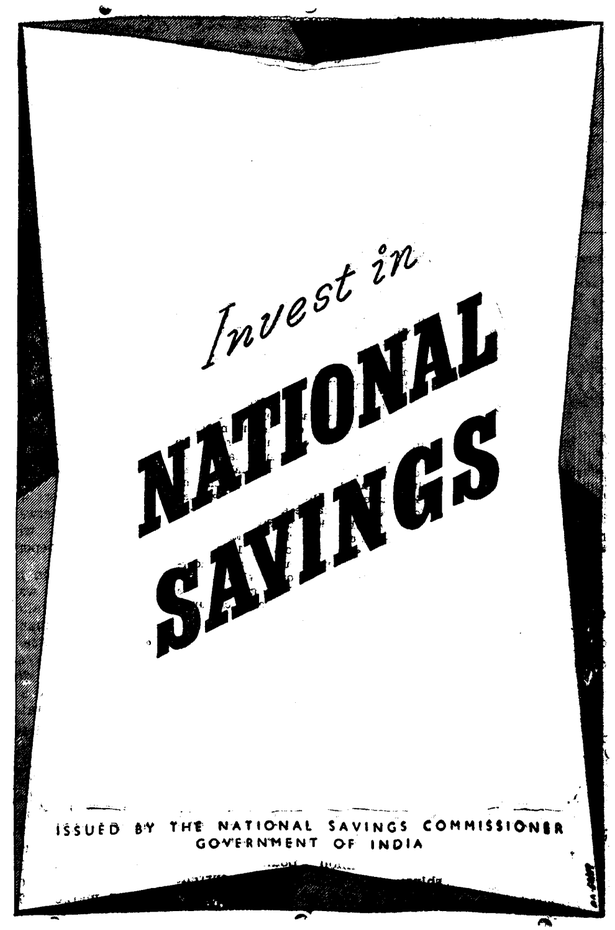
SO be it. The IJMA has announced that, from the middle of next month, a fresh batch of 5 per cent of the looms is to be resealed. When this measure becomes effective, we shall have reverted to the position that obtained eight months ago, when the industry was working on the basis of 48-hour weeks with 12½ per cent looms sealed. It is, to me, a matter that causes some regret that what is surely a retrograde step should have been taken. I am not convinced by the reasons adduced to justify the present measure; nor am I convinced that the measure will provide the solution that is sought.

I need hardly say that the jute goods markets have reacted promptly with a revival of speculative zeal and energy. Jute goods markets reflect the re-interest of speculative elements; and hessian 10 oz have managed to touch the level of Rs 40 once again.

Let us study the disease that allegedly affects the Indian jute goods industry and the remedy that it is now claimed will eradicate that disease. The fact is, during the first half of this calendar year, jute goods production has consistently been of a size in excess of current despatches. In the result, each successive month has witnessed an accretion to jute goods stocks. Indeed, July-end stocks of jute goods at 135,800 tons compare with the figure of 64,200 tons at the beginning of the year. I admit that the rise in stocks has been substantial. But, alarming? No.

As I indicated in an earlier article in this column, the restriction on production is expected to be beneficial in two ways. On the one hand, it is argued that the re-sealing of the looms will, to that extxent, reduce the demand for and the requirements of raw jute of the Indian goods industry. Since, in the last jute year or two, raw jute availability has been little better than barely sufficient to meet the industry's needs, the experience has been that raw jute markets have been fully firm. There was no corresponding firmness, for a number of quite different reasons, in the jute goods industry. Thus, it has happened that jute goods prices had gently been receding, while raw jute prices were unchanged. Consequently, the margin of profit available to the industry has been considerably eaten into, if not altogether eaten, away. In the first place, therefore, the hope has been nurtured that, as consequence of the re-sealing of looms, with the demand for raw jute lessening, prices of the raw material will go down somewhat; and this decline, logically, was expected to restore the margin as between the price of raw jute and the price of jute goods.

On the other hand, the cut in production is intended to act as a corrective to the tendency of increasing stocks of jute goods. It is reasoned that the over-production of the earlier part of the year made it possible for speculative elements to exaggerate the significance thereof. That is to say, the bear speculator was provided with a ready-made opportunity to accentuate the trend of declining prices that was to be expected in the wake of increasing stocks. Presumably, a cut in production will restore equilibrium as between production and demand. Presumably, therefore, the cut in production will eliminate propensities calculated to favour and further the cause of the bear speculator. Thus, in the second place, the re-sealing of the looms is to help arrest the down trend in jute goods prices.



All of which is admirable logic —so far as it goes; and, so far as it goes, the logic is of value only over a short range view. Taking a slightly longer range view, it seems to me that there are a number of conclusions which can safely be drawn and which suggest that, to some extent, the re-sealing of looms, far from achieving its purpose, is self-defeating; that, secondly, we shall soon have to face the other extreme of sparse stocks; and that, finally, the Indian jute goods industry may find it necessary, in the not too distant future ,to recommence the rigmarole of unsealing looms once again.

Firstly, I anticipate a squeeze in hessians around the end of September. At the same time, with October a short working month, I expect that sacking stocks will also show a sizeable decline.

Secondly, this will mean that hessians prices will be under the sway and influence of the speculative forces by the end of September. It seems to me not unlikely that hessians 10 oz should be subjected to continuing squeeze. The higher prices will provoke consumer resistance at just the time when we cannot afford it as, traditionally, the second half of a calendar year witnesses a concentration of American purchases of hessian. At such a time, instead of stable prices, faced as the American consumer would be by a deplorable speculative rise, it is not at all unlikely that, in the net result, US purchases in 1956 will be lower than the norm.

Thirdly. and consequently, the cut in production will, quite in contrast to the anticipation that

(Continued on page 324)

World of Tea

Outturn on the Increase

ACCORDING to the figures released this week, the outturn of the North-East Indian Tea is again large in July, at 80.6 million pounds as compared with 79.6 million pounds in the corresponding month of last year, showing an increase of 9.78 million pounds. Total crop, during the current year up to the end of July, is estimated at 205.64 million pounds as against 194.93 million pounds in the corresponding period of last year. The crop at the end of July 1956 is 10.71 million pounds ahead of last year and as much as 13.63 million pounds larger than the average for the last three years.

The following table shows crop figures of the major producing countries (figures in million pounds):—

Countries:	Period	1956	1955
N-E India	Apl.-June	205.6	134.9
South India	Jan.-June	64.7	68.0
Pakistan ..	Apl.-June	13.2	11.1
Ceylon ..	Jan.-June	203.2	207.1
Indonesia ..	Jan.-May	39.6	43.3

The International Tea Agreement, which expired over fifteen months ago remains unsigned to this date. It is most important that India's immediate need for regulation of production combined with improvement in quality is taken in hand, if the many estates which are handicapped by nature and can only produce Common teas, are not to suffer gave financial losses as will force them to close down. There is also a great need to check the rising spiral of production costs and taxation demands, especially in the cases of Dooars and Cachar estates.

In this connection, the monthly report, issued by Messrs J. Thomas & Company, states:

"It is difficult to foresee how tea will be affected by the Suez Canal crisis. If normal movement of tea is possible, no change in the present market is visualised. If, however, it should become necessary to deviate from the normal shipping route, it is almost certain that the market for "spot" teas in London would show a very appreciable advance. Although teas in Calcutta and Colombo will not obviously benefit to the same extent as 'spot' teas in London, these distribution centres must also participate in a further strengthening of the market, unless there is a complete stoppage of the shipping programme—a possibility which is most remote. In the meantime, demad for clean Black Dusts, suitable for exports to Egypt, may temporarily disappear".

"The future trend of the Calcutta market will largely depend upon the crops to be made in North India during the next two months. No major improvement in the price of Common and Low Medium teas is anticipated unless there is an unexpected and marked reversal in the crop figures of India and Ceylon. It is possible, however, with the seasonal decline in quality, that market in the months of August and September, may show a reduction in the present disparity between the price of quality and non-quality teas. Best liquoring teas are likely to register a considerable decline with the seasonal drop in quality now due; and this fall may enable the world buyers to pay more for their Common and Low Medium price reducers. Teas of medium quality from Assam are likely to sell readily for the next two months, and Fannings grades will probably appreciate in value".

"The quantity of Export Quota Rights, to be released by the Government will largely depend upon North Indian crop figures; but there is no reason to believe that the total release for 1956-57 will be any smaller than during the previous season with the Government of India's increasing need for foreign exchange at the commencement of the Second Five-Year Plan. If the internal market continues to lend the same support in 1956 as it did in 1955, there should be a considerable surplus of Export Rights at the end of the season and the general price of Quota may remain at a much lower level than in 1955".

Contrary to the trend in the past few months, tea shipments from North-East India, during July 1956, are lower than those in the corresponding month of last year. While shipments to the UK have fallen from 14.21 million pounds in July 1955 to 13.67 million pounds last month, those to Canada and USA have shown a slight improvement to 1.04 million pounds and 9.15 million pounds respectively. The offtake by Egypt is well maintained at 1.31 million pounds. Total shipments, during the current year up to the end of July, are, however, at 201.33 million pounds as compared with 126.5 million pounds in the corresponding period of last year.

In the Export Sale held in Calcutta this week, offerings amounted to 50,000 packages for which there was a good demand; but buyers showed keen discrimination for quality. CTC Assams showed a slight decline in quality and prices were up to As 4 per pound lower. Orthodox manufacture Assams with quality liquors were well supported and were fully firm, while Dooars and clean plain Brokens were up to As 2 per pound dearer.

A particularly strong feature of the sale were clean Black Fannings, which were generally As 2 to As 4 per pound dearer and sometimes more. Stylish Whole Leaf grades were one to two annas per pound easier, while the more ordinary kinds were slightly easier. Darjeelings once again received good support, but there was less demand for Tippy sorts. Following rates were quoted per pound:—Clean Black Pekoe Rs 1-15; Plain BP Rs 1-10; Medium Assam BP Rs 2-6 to Rs 2-8 and Best CTC Assam BP Rs 4 to Rs 4-8.

Offerings in the Internal Sale consisted of 15,105 packages of Dusts for which there was a strong and active demand at generally dearer rates. Middle East types were a very strong feature of the sale and advanced by As 4 to As 8 per pound. CTC Assams were well supported, especially the Leafy types, which were dearer. The remaining teas in this category, however, were easier.

Medium Assams with useful liquors were As 2 to As 4 annas easier, while the poorer liquoring Mediums were fully firm. Clean Cachars and Dooars were one to two annas dearer, and there was a keen enquiry for residue teas which were sold at dearer rates. Following rates were quoted:—Medium Dooars Dust Rs 1-10 to Rs 1-10-6; Medium Assam Grainy Dust Rs 1-12 to Rs 1-13; Medium Assam CTC Dust Rs 3-8 to Rs 3-10.

Offerings of Leaf grades consisted of 889 chests for which there was a fair demand. The few clean teas, on offer, were sold at slightly dearer rates; but there was a poor demand for the Green teas available.

In the Export Quota section, the rates moved between 22 and 24 ples per pound at which levels some business was reported done.

In the Cochin market, a total of 686,000 pounds was offered in Sale No 23. The quality of Nilgiri teas showed little change, but a further improvement was evident in most offerings from other districts. A good general demand prevailed throughout the sale, but at somewhat irregular rates.

There was not such a wide selection of Nilgiri teas on offer; but best liquoring Brokens again met with a strong demand at firm to dearer rates, while their Fannings were a very strong feature. Good Medium Brokens again ruled easier, but their Fannings were generally firm. Improved Medium and Low Medium Brokens came to a slightly dearer market, while similar Fannings were sold well at irregularly dearer rates. Low-grown descriptions were about steady.

Black Leaf Brokens were firm, while Fannings, suitable for the Middle East, met with better demand at often dear rates. Whole Leaf grades were sold at enhanced rates. Following rates were quoted:—Plain BP Rs 1-4-6; Low Medium BOP Rs 1-6-6 to Rs 1-7-6; Medium BOP Rs 1-8-6 to Rs 1-9-6; Good BOP Rs 2-0-0 and Well-made OP Rs 2-6-0 (nominal).

In the Chittagong market, offerings were 3,769 packages of Dusts and 10,815 packages of Leaf grades. There was a seasonal improvement in the quality of the Leaf offerings. With the result, bidding became brisker as the sale progressed and prices gradually improved to close one to two annas per pound higher. There was good enquiry for the better BPS grades, while Tippy lots continued to be well supported. OP was quoted at Rs 1-14-6 to Rs 1-15; Pekoe Rs 1-10 (nominal); BOP Rs 1-11; BP Rs 1-5; BPS Rs

US Notes

Small business in the United States often receives financial help from two typically American organisations.

Both of these financial institutions, the development credit corporation and the community industrial foundation, arose out of the American economic ferment as spontaneous creations of civic-minded citizens. These people foresaw the need for such financial corporations, on behalf of the state on the one hand, and of the local community on the other. Neither organisations, in its origin, was government inspired. Both are non-profit organisations.

The state-wide institutions known as development credit corporations were first established in the six New England States during the war period, but have now spread to other states.

The specific function of these corporations is to pool loan funds advanced to them by financial institutions and to grant intermediate and long-term loans to small businesses which are considered good risks but which have been unable to obtain money from other sources.

A basic principle of the state development corporations is that they do not compete with commercial banking institutions, but rather supplement the latter's activities. From the point of view of the small businessman who is a prospective borrower, an important feature of credit corporations is that, unlike most commercial lending institutions, they do not always require collateral security in the form of some kind of capital.

Also, the fact that the credit corporation will provide financing to new and expanding small businesses tends to make venture capital available to these enterprises from other sources as well. Frequently, a loan applicant who is assured of financial aid by a credit corporation finds that banking facilities and other lending sources are then willing to supply part of his requirements.

Although the various state credit corporations made it clear to prospective investors that the corporations would use any profits for operating purposes—especially as a reserve to cover losses—the corporations' stock found a ready market. Apparently, investors purchased the stock with a view to the overall prosperity of the state, which would be of indirect benefit to all the citizens, rather than to the idea of making a direct personal profit.

The Federal Government Agency, the Small Business Administration, cooperates with both state-wide and local development corporations and makes loans in participation with them.

The second of these remarkable financial institutions is the community industrial foundation. These local industrial foundations have been in existence in various parts of the country for many years. They cooperate rather than compete with the state development credit corporations.

A community industrial foundation is an organisation of civic-minded persons—businessmen, bankers, lawyers, and others—who are interested in solving the economic-industrial problems of their community. Foundations have proved effective in dealing both with an immediate crisis growing out of the closing or removal of a plant or mill which provided employment for many persons in a community, or a need for long-range industrial development and growth of a community, especially in regard to increased industrial diversification.

The average foundation is a non-profit organisation, with the stockholders benefiting indirectly through increased business activity in the community due to the expansion of payrolls. Most foundations do not have paid staffs, relying instead on services contributed by staff members of the local Chamber of Commerce or by officers of the foundation.

Since small business is an integral factor in the US economy, these two financial institutions, in furthering the growth and expansion of industry on a state-wide and local level, have at the same time furthered the growth and expansion of small business.

*

Italy

Presenting in the Italian Chamber of Deputies his Ministry's budget estimates for the financial year 1956-1957, the Minister of Industry and Trade, Signor Cortese, gave a comprehensive picture of the various aspects of Italy's industrial production, pointing out that the general index of Italy's industrial production in 1955 doubled the pre-war figure (1938).

The upward trend of Italian production, according to Minister Cortese, rose steadily during 1955. Compared to 1954, the mining industries showed an increase in production of 31.5 per cent, the building industry rose by 18.2 per cent, and manufacturing industries generally by 8.2 per cent, while metallurgical production increased by 27.4 per cent, and steel production by 28 per cent (recording 15,400,000 tons). In the first quarter of 1956, too, an 18 per cent increase was recorded in steel production, over the figure for the first quarter of 1955. While due tribute should be paid to the enterprising spirit of both private and State concerns, the benefit accruing from Italy's membership of the European Coal-and-Steel Community requires to be taken into account.

As regards power production, Minister Cortese said the Government would not allow electric companies to raise their tariffs beyond the limit permitted by the post-war regulations, restricting, in accordance with a progressive scale, rises over the pre-war level. This is designed to protect the interests of the consuming public.

He urged industrialists and others in the richer and more progressive areas in Northern Italy to realize that it is in their own, as well as in the interest of the nation at large, to invest courageously in industrial production in the Southern areas. He hoped that investments from countries abroad would also flow in, to hasten the process of rehabilitation of the depressed areas. As to State-controlled industrial concerns, both the IRI group (industrial) and the ENI group (oil) are framing extensive programmes of activities to be developed in the initial four-year period of implementation of the Vanoni Scheme.

EDITORIAL NOTES

(Continued from page 317)

meet a due proportion of the country's foreign exchange requirements.

Lately, there have been a few disappointing trends in India's export trade. The record for cotton textiles and jute maunfactures in particular has been far from satisfactory. For the first, the increasing competition from Japan and the United Kingdom has become powerful factors in the international market; for the second, competition from Pakistan is assuming fairly formidable proportions. The recent proposal for the fixing of minimum prices for jute goods is a gloomy signal. If Pakistan's industrial progress is to be carried according to schedule, in another five years, its output will approach fifty per cent of that of the Indian Union. There is undoubtedly scope for the expansion of the World's market for packaging goods. But substitutes are also gaining ground. For both cotton and jute industries, the attainment of the scheduled export targets would be dependent on the Indian Union keeping abreast of its rivals, both in quality and in economy in production.

WORLD OF FINANCE

(Continued from page 318)

accompanied, and perhaps enabled, by a sharp increase of Rs 8.48 crores to Rs 63.85 crores in Other Loans and Advances. State Governments' deposits have risen by Rs 3.52 crores to Rs 9.38 crores; and there has been further loss of foreign exchange, as reflected in the decline of Rs 4.77 crores to Rs 32.02 crores in Foreign Balances.

+

The statement of the State Bank for August 10, however, reveals that the rise in the Reserve Bank's Other Loans and Advances is wholly due to State Bank's borrowings from the Reserve Bank; also, there is some evidence to suggest that the State Bank's increased borrowings stemmed, not from the need to meet the routine demand, but from the necessity of providing for expenditure of an exceptional nature. Other Liabilities of the State Bank rose from Rs 5.62 crores in the week ending July 27 to Rs 10.20 crores in the following week; in the latest returns, there is once more a drop to Rs 5.71 crores. The inference is that there was a payment through the State Bank in the week ended August 3; but the Bank did not make payment in that week, and therefore showed the item under Other Liabilities; in the latest week, in order to make the payment, it has been found necessary to raise borrowings from the Reserve Bank. While a moiety of the increased borrowings accounts for the decline in Other Liabilities, the balance has partly been utilised to restore cash balances to the more comfortable level of Rs 17.42 crores from Rs 14.43 crores.

It follows, therefore, that the rise in Banks' deposits discerned in the Reserve Bank statement is symptomatic of the slack season accretions to member banks' resources, the rise in Other Loans and Advances notwithstanding. The returns of Scheduled Banks for August 3 bear the impress of the slack season inspite of the fact that the statement relates to a week when month-early disbursements would have made their demand. Not only is the decline in Demand Liabilities the relatively small one of Rs 3.60 crores to Rs 636.08 crores; this is to some extent offset by a rise of Rs 1.11 crores to Rs 458.08 crores in Time Liabilities. Again, while borrowings from the State Bank are higher by Rs 1.20 crores at Rs 6.95 crores, those from the central banking institution are sharply lower by Rs 10.71 crores at Rs 36.56 crores. Finally, while cash and balances with banks have been drawn down by Rs 2.78 crores, this is largely offset by a rise of Rs 1.78 crores in money at call and short notice. Of slack season significance is the fact that Advances are marked lower by Rs 1.16 crores at Rs 596.47 crores.

Confirmation is available in the banks statements of the practice of scheduled banks to show investments in New Loan in the relative portfolio only after the receipt of either the scrips or the stock certificates. It would appear that State Bank subscriptions to the Central loans were of the order of Rs 6 crores, and that the scrips in this regard were received only in the week ending August 3. In the statement for July 20, it is to be noted that other assets showed a sizable rise to Rs 9.81 crores; and this portfolio presumably included the temporary receipt given by the Reserve Bank. In its returns for August 3, the State Bank has duly shown an increase of Rs 5.60 crores in its holding of giltedged while, at the same time, disclosing a fall of like magnitude in Other Assets.

+

Similarly, the statement of Scheduled Banks for July 20 did not disclose or hint at the extent of subscriptions to the New Loan from this source. On the contrary, each successive week has witnessed some accretions to the investment portfolio. In the returns for August 3, there is to be discerned a substantial rise of just under Rs 8 crores. Since July 13, the rise in scheduled banks' investments has aggregated Rs 15.36 crores.

✱

WORLD OF JUTE

(Continued from page 321)

the measure will enable current producion be absorbed by current demand, actually result in hessian despatches for 1956 being placed at a lower level.

Fourthly, I anticipate growing stocks of jute goods, once again, from, say, January.

Fifthly, as for sackings, it is in this sphere that the rise in stocks has been most prominent. However, I anticipate despatches in 1956 to be satisfactory by virtue of the expanding Indian consumption. Sacking prices should be steady, in sympathy with hessian prices. But speculative interest would be centred round hessians in the next six months—and not sackings.

Sixthly, while some decline in raw jute goods prices is inevitable, I am not at all sure that the advantage thereagainst will accrue in full to the jute goods industry. Indeed, I am almost certain that the foreign customer will insist on a moiety of the saving being passed on to him. In the result, prices of jute goods in January|March are likely to be as weak and as uncertain as those in the quarter we have just left behind.

Seventhly, it would be the wrong time for the jute goods markets to be weak. For, it is the state of the jute goods market in February|April which influences the decision of the jute cultivator. A weak jute goods market means weak raw jute prices. Far from satisfactory prices for raw jute will mean a substantially reduced crop being sowed.

I have, quite deliberately, painted the future as dark as it may conceivably be. I shall be happy to be proved wrong.

But it is not altogether impossible that a stroke of good fortune lies just ahead of the Indian jute goods industry. The bellicose Suez situation improves the prospects for the jute goods: if the Suez stalemate continues and if, moreover, Russia is finally to emerge as a substantial customer for Indian jute goods, weakness in jute goods markets will have been averted. In that contingency, since demand for jute goods would outstrip production, the IJMA would undoubtedly have to make fresh decisions about unsealing looms.

All in all, I am afraid the resealing of looms is a measure that, emphatically, I do not welcome.

(Continued from page 316)

have been got back in the shape of higher premiums on new shares which are proposed to be issued while, from 1958, the company's capacity for earning would increase considerably.

Government Policy of Investment Climate

While the managing agents were confident of the company's ability to discharge its obligations and felt that the investors should be rewarded for their patience with a better dividend, the Government thought it necessary to peg the dividend at 10 per cent before all the loans were worked out. There is no doubt that there is an increase in the break up value behind the ordinary shares. It may be that the break up value on the basis of replacement costs is considerably high even now. But high break up values are not really helpful if earnings are not such that satisfactory dividends could be paid and reasonable returns secured. With the pursuance of imaginative policies in regard to the distribution of dividends and fixation of selling prices and the grant of concessions which will encourage investment in ordinary shares, the general investment climate could be stimulated. The present 'vacuum' will not then be allowed to do much damage.

With not much outside support forthcoming and the prominent jobbers tired, the Calcutta stock market particularly has been languishing for some time past. The older investors are fully extended while the new investors are feeling shy. No agency has stepped in to fill the breach caused by the nationalisation of life offices. It is of the utmost importance, therefore, that the changed conditions in the Indian capital market are carefully studied and ways and means are devised in such a way that the new opportunities afforded for greater participation by the middle class yield satisfying results.

It is a matter for serious consideration whether the Company Law Administration should not take a direct initiative in bringing into being an issue house with proper personnel and resources and under confidence-inspiring auspices. Much has been done in this direction in the last few years in West Germany; and it will be of great value for the Company Law Administration to make a close study of these developments and to draw from it lessons suitable for the present conditions in India.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THE conventions of the two principal political parties in the US will be taking place in the next fortnight: the Democrats are meeting in Chicago from the 13th and the Republicans will foregather a week later, both with the single purpose of making up their final minds about their respective presidential candidates. These conventions, of crucial importance to American politics, have assumed an even greater significance this year, because of Mr Eisenhower's illness during the last one year. Never perhaps in the history of elections in America has so much depended on the health of one man. The exact state of Mr Eisenhower's health has become almost the only American preoccupation since his heart attack last autumn. It was not only a political preoccupation, though, of course, it was principally that. There was much that was genuinely touching about the concern of the entire nation for the health of its president, for, as perhaps the most popular President in American history, Mr Eisenhower was the object of far more spontaneous human solicitude than any other politician would have been. It reminded one of the waves of anxious concern that used to sweep the entire country where Mahatma Gandhi undertook from time to time his fasts.

✱

But, in politics, especially of an election year, the state of a man's health is to be assessed in political and even electioneering terms. None need feel squeamish about such a discussion so long as one genuinely tries to avoid any conscious manipulation of evidence regarding it. Indeed, it is in a sense a painful duty that everyone directly concerned with the choice of Mr Eisenhower as President has to perform. But there are many who feel that the issue has assumed political overtones not strictly related to Mr Eisenhower's ability to discharge his duties in the next four years. One of the more disturbing offshoots of the country-wide discussion of the President's health has been the suggestion that medical opinion has been politically inspired. There are, apparently, significant differences of of opinion among doctors on how serious was the President's heart attack and his more recent ileities. The ethics of professional conduct in such admittedly trying situations has also been a matter for controversy. Dr David Rustein of the Harvard Medical School raises this question in the August issue of the Atlantic Monthly. He doubts the accuracy of the statement of the President's medical attendants after his recovery from the heart attack that he 'should be able to carry on an active life successfully for another five to ten years'. Discussing three recent studies of the prognoses of similar cases, he concludes that the statement was at variance with the data from these studies. Likewise over the ilcities, Dr Rustein implies that the President's predisposition to this illness was knowingly kept from the public. A month before the attack, his physicians are stated to have announced, at the end of routine examination that the President has shown a 'normally functioning digestive tract'. And yet, within twelve hours of the complaint of acute pain in the abdomen, the physicians diagnosed ileities. Dr Rustein doubts whether such prompt and categorical diagnosis could have been made without previous knowledge of the existence of this disease. There is also difference of opinion about how disabling ileitis is.

✱

All these controversies would normally have been strictly medical and, if they had strayed into common ken, would have merely occasioned further cynicism about the medical profession. (Incidentally, the amount of knowledgeable nonsense about heart attack and intestinal disorders that has been put abroad by glossy magazines since the President was stricken with these illnesses is, in the opinion of a doctor friend of mine appalling. He confesses to an almost irresistible desire to choke the next patient of his that starts off hopefully to discuss coronary thrombosis with him.) But, in the American political context, these things raise important questions of professional propriety. We need not attribute any unworthy political motivation to the doctors who said that the President was good enough for another ten years. But they did make it difficult for Mr Eisenhower to refuse to stand for a second time in the face of this categorical medical opinion. It is not easy to draw the line between a merely professional opinion and a political opinion especially when inferences of a political nature are clearly indicated from the professional opinion. One sympathises again with the expert who is badgered by newspapermen, who do not respect his right to keep his professional secrets about his patients, however exalted. Even so, it seems to me that both the question and the answer (given by Dr Heaton after the operation for ileitis) were improper. The doctor should have declined to answer the question whether he thought that the President should refuse to run again. His answer, in my view, ought to have been that it was for the President to decide whether to run or not. Since, earlier, he had given strictly medical grounds for optimism, there was no scope for misunderstanding the expert attitude to Mr Eisenhower's immediate future. Therefore, there was no need for Dr Heaton to have said that he certainly did not think that the President should refuse to run. Though it is difficult to decide precisely in these matters, that was where Dr Heaton, who was being questioned as a medical man, exceeded his brief.

✱

The more overtly political use that the President's illness is being put to is even more questionable. In the inter-party encounters, where no quarter is asked or given, all is fair. If Democrats are elaborately fussy and concerned about the President's health, both for his own and the country's sake, the Republicans are no less busy digging deep into the medical past of the Democratic hopefuls. In the past four years, we are told, Mr Adlai Stevenson had had stones in the bladder removed twice and had suffered from bronchial pnuemonia. Mr Averel Harriman had had an operation, too, which is considered by New York's GOP, State Chairman Morhouse as no less serious than the President's operation. How touching that there should be such concern about the illnesses of our foes!

+

Mr Eisenhower himself has tried throughout the period to act with exemplary conscientiousness and patriotism. The problem must have been of obsessive proportions, for, throughout the illnesses, he has been obliged to make crucial decisions about his and his country's future. But he has tried to avoid seeming either to assume responsibility too lightly or to shirk responsibility without adequate justification. As recently as the 8th of this month, he told a press conference in Washington that he would have another complete physical examination before the election on the 6th of November and, 'if that showed him to be unfit to serve a second term, he would go before the people and tell them.' This shows the fastidious honesty of the President, but it makes the tasks of the party managers very difficult. Since Mr Eisenhower did not indicate when this medical examination is to be and if it were to be after the nomination, the party bosses will have their anxieties with them, even after the convention. Their only consolation will be that the Democrats cannot, by the same token, relax.

✱

There is some evidence that the Republicans are really worried about the President's ability to carry on for the next four years. One section

would, in an attempt to deceive itself and others, make it appear that the President is in the pink of health. These would arrange strenuous diplomatic and political tasks for the President like the journey he made to Panama just to show that the President can stand it. If photographs are any indication, he is not standing the strain well; the pictures of the Panama Conference show him tired and haggard. There is none of the cheerful bounce that earned him the soubriquet "the man on the move" in these pictures.

*

The other section is more realistic, but yet does not think of a substitute presidential candidate. This is understandable, for, it is not too much of a bet that no other Republican nominee for the presidentship is likely to win the election. So, this section of the party would win the election with Mr Eisenhower; but, should something happen to him during his tenure, would like to have a vice-president more acceptable than Mr Nixon. Mr Harold Stassen, who is either the mouthpiece or the rallying point of this section of the party, has come out clearly against Mr Nixon for the vice-presidential nomination. There has been a slight contretemps in his effort in this behalf, for, Massachusetts Governor Herter, whom Mr Stassen suggested as candidate for vice-presidency, has expressed himself in favour of Mr Nixon as vice-president. But there is growing evidence of two things: one is that there is an increasingly widespread feeling that the Eisenhower-Nixon combination is likely to lose more votes for Eisenhower than any other combination. Secondly, the fact that Mr Stassen has come out in the open against Mr Nixon at this late hour is indicative of the feeling that there is less optimism about Mr Eisenhower's health than before. In other words, the Eisenhower-Nixon combination had to be taken for granted by a large number of people only because they had, despite all the controversies about the President's health, assumed that the President was good enough for another four years.

*

Admittedly, the vice-presidency has assumed unprecedented importance this year, because of the real possibility of the vice-president becoming a president within the next four years. Even if that did not happen, the President's health may make it necessary to delegate a great deal of his work to the vice-president. Mr Nixon's unpopularity is not wholly due to his propensity —something he shares with Mr Dulles—to generalisations about things that are best left alone. Even those in the Republican party, who like a tough line with the neutrals, do not trust him and would any day prefer a man like Mr Knowland. The Republican Governor of his own state is not in Mr Nixon's favour. Liberal Republicans, like Mr Stassen, are afraid of the course of American relations with the rest of world should Mr Nixon be in charge of them in the next few years. The Americans for Democratic Action, a liberal organisation, has issued a statement, urging that 'the Republicans would be taking a dark and dangerous gamble with the nation's future' if they renominated Mr Nixon for the vice-presidency. The President, for his part, has expressed himself as happy. Thus, the picture of the Republican party's pre-election activities is far from clear except for the fact that the Republicans are confident of winning the election with Mr Eisenhower as the candidate. On details, there is a lot of confusion which may clear in the course of this fortnight. But, on the question whether Mr Eisenhower will run at all, uncertainty will continue almost until the date of election. American presidential elections, which used to occasion a lot of good humoured and harmless punting in the past, are likely to prove more tantalising this year than ever before.

Bombay Review

The Paradox of Productivity

SOMEWHERE, the other day,—I forget exactly where—I chanced upon an anecdote which related to the consideration by some Wall Street bankers of the proposal, in the first decade of this century, to set up what has now become the world's largest corporation—General Motors. It appears that one of the bankers, in scrutinising the blueprints that had been submitted in order that a loan might be obtained, came across a large plot of ground which seemed to be part of the proposed company's lands—but lands which were being left free. The banker questioned the wisdom of having so much land without any building upon it, and enquired the purpose for which the land was proposed to be acquired.The answer was, that the empty plot of land was to serve as parking place for the cars in which the workers employed in the factory would come to their job! The banker threw out the blueprints and the budding executive who was to set up General Motors. I was forcefully reminded of this anecdote when I was leafing through the smartly got up brochure on the Second Tata Management Conference, which was held earlier this year. Reports of this conference have, of course, appeared long since in the press. There are, however, certain niceties in the remarks made on productivity which, it seems to me, have largely escaped attention. Productivity, as Mr S. Moolgaokar remarked in his words of welcome, is a much misunderstood and misapplied word. Since the tempo of increase in the nation's standard of living is going to depend as much on productivity as on industrialisation, I think it is important that we should take careful cognisance of many of the statements which, I repeat, did not receive the wide publicity they deserve.

First, Mr Moolgaokar sets the ball roling; and he gives us a definition of productivity in the following terms:

"Productivity is now a common word but the majority of those who use it give it a very narrow meaning. When it is said that an industry or a plant must increase its productivity. the conclusion drawn is usually that the people in such a unit must work harder. It is true that if they did work harder, productivity would probably increase. But the greatest and the most lasting increase in productivity is not dependent on increasing effort only. In fact, the required effort is often reduced considerably. The real increase in productivity is due almost entirely to the efforts of management in all its broad aspects."

It is then Mr J. R. D. Tata's turn to give us a discourse on productivity. Readers will remember that the TISCO Chairman drew particular attention to productivity in his address to the shareholders of the company two years ago. His contention, at that time, was that America could not be a country with sixty million jobs offering unless it put into practice a system intended to reap the full benefits from productivity. Mr Tata, on the more recent occasion, put it this way:

"I think the one clear lesson that the experience of industrial Europe and America teaches us is that the higher the productivity in a country is raised by the maximum use of power and machines per man employed, the larger the number of jobs created."

The argument that maximum employment in terms of human beings best suits society in a country like India is logically rebutted. This, says Mr Tata, is a fallacy—because purchasing power is not thereby created.

"To create purchasing power you must be ready to pass on to labour a considerable part of the increase in savings that you make from increased productivity through the lowering of the cost per unit or ton."

There are those who think that productivity is merely a cloak with which to shroud higher profits for industry—that is, management. But Mr Tata quotes Mr Fred Crawford as stating that the ultimate purpose of a high degree of productivity is that industry should be enabled to pay higher wages, because costs are being reduced, and so create fresh purchasing power. It is here, again while Mr Tata quotes Mr Crawford, that I was reminded of the General Motors anecdote, This is the relevant quotation from Mr Tata's address:

"As Fred Crawford said, a country has arrived industrially only when the workers of an industry are able to buy the products that they make."

What is the connection between purchase of products by workers, productivity and standard of living? Mr Tata says that the ability of a worker, of a sweeper or an elevator operator, to buy a motor car is derived from high wages and high wages themselves stem from high productivity. Over the long term, Mr Tata remarks,

"It is perfectly clear that it is only through high productivity that we can reach a high standard of living and create the purchasing power which is going to enable, at first a small number of people and progressively a larger number of people to buy the products they make and to create employment in other industries and for other people."

Mr Tata goes on to explain the inter-connection between industrialisation, purchasing power and productivity:

"So, a high standard of life is possible only through a high degree of industrialisation. A high degree of industrialisation is possible only if we create high purchasing power. High purchasing power is created only by higher incomes and wages, and these can be economic and viable only if we get high production."

All these are not professions which Mr Tata does not himself put into practice. TISCO and therefore the workers in TISCO, are to benefit from the improvement in productivity presently being sought.

"At Jamshedpur, we are going to doubt the output by 1958. We are going to do it with the same number of men. We have a great opportunity of doing it by scrapping old plants and machines and installing new ones. We have made it clear to labour that our intention is to pass on to the labour a good part of the savings that will be made in the labour cost."

Why is productivity, the word, being misunderstood? Its significance appears to be paradoxical, although it is a fundamental truth; and this possibly accounts for the misinterpretaions that have been placed upon the meaning of productivity. Summing up, Mr Tata ends on the paradox:

"I believe firmly and I think you will come to believe that the less people you will employ on any particular job, the more jobs you are going to create."

There is real need in this country for the significance of productivity to the national economy to be correctly and fully realised. To this end, the brochure brought out by Tatas should be greatly helpful.

Gateway Notes

Progress in Capital Goods Industries

The progress and development of our economy would depend to a large extent upon the progress of the capital goods industries. This fact has become so ingrafted in the minds of the industrialists, the Government and the public at large, that it does not require elaboration in the context of India's economy. It, however, does well to have this fact restated now and then by the industrialists and by the Government.

India's position until very recently in respect of the so called ancillary industries was not particularly happy. This sector remained either completely or partially undeveloped, with the consequence that India had to depend almost entirely upon imports from abroad for the requirements of its machinery, equipments and tools. This not only involved the diversion of the urgently required foreign exchange resources to the import of machinery and equipments, but had created a serious unbalance in our economy. This fact had been brought home to the industrialists and the Government during the last war, when insuperable difficulties were faced by the industries in importing machineries and equipments. All along, the erstwhile Government had looked upon the development of these industries within our country as anathema and did their best to hamper their development. Only during the last war, forced by the logic of circumstances, the Government at last partially withdrew their hostility towards the development of these industries; and it was, therefore, during this period that the foundation of the large-scale industries may be said to have been laid.

It was, however, left to the Government of Independent India to promote the cause of the rapid growth of these industries. Many heavy industries have made significant progress during the First Five-Year Plan.

If everything goes well, and if we achieve the targets of the Second Plan, we shall have achieved self-sufficiency or near self-sufficiency in textile and cement manufacturing machineries and in our requirements of road rollers. At the end of the Second Plan. India would produce about Rs 10 crores to Rs 15 crores worth of textile machinery, Rs 10 crores worth of cement machinery, and about 200 to 400 road rollers a year. Besides, machineries sufficient to meet the requirements of about 8 to 12 sugar mills and machine tools valued at about Rs 7 crores a year will also be produced during the Second Plan period. All in all, India aims to achieve self-sufficiency of 60 to 70 per cent in respect of its requirements of heavy machinery and equipments by the end of the Second Plan. Not only that, if the rate of the present pace of progress were maintained, then this target could be achieved, so the Government hope, even at the expiry of the 3 years after the commencement of the plan.

The Government have an ambitious plan for the manufacture of heavy forgings, grey castings and steel castings. The plans, if implemented, would result in the production of 7.000 tons of forgings, 12.000 tons of grey castings and 14,000 tons of steel castings annually.

All this is good. But the industry is also faced with some acute problems, which, if it is to succeed in its attempts during the next plan, must be properly dealt with by the Government. Particularly, the private sector of this industry is faced with such difficulties. Thus, the Bombay branch of the engineering industry, for instance, is faced with a serious fuel difficulty. It is hard to get the necessary coke from the far-off regions of Bengal and Bihar, while it is yet more difficult to use oil for this purpose as its prices are high. If this problem is to be solved, the Government must induce the oil producers to reduce the cost of their products. Similarly, difficulty is now encountered by the producers in getting adequate supplies of steel, the principal raw material of their industries. Difficultly with labour constituted a no mean handicap for the private industries to forge ahead with their plans of development; at present, the shortage of raw material caused industries to lay off labour, but they were compelled to pay conpensatation. It was the failure of the Government to provide the industries with adequate raw material requirements that forced this situation. The industries were thus, helpless in the face of the Government remaining inactive in the matter of solution of their problems.

GATEWAY MARKETS

Bullion Forges Ahead

THE improved tone in the major commodity markets, better spot demand and speculative buying imparted a firmer tendency to bullion values. Even the reports of increased arrivals of silver and unauthorised stocks of gold did not affect sentiment. Although some of the traders were reluctant to enter into business, there was a persistent enquiry from bull quarters in both the metals. The uncertain political situation with regard to the Suez Canal issue, no doubt, continued to give stimulus to the market.

The week's trading was dominated by a noteworthy advance in Gold with the uptrend necessitating imposition of special margins against bulls. An inflow of 1,000 tolas faced an outflow of 3,000 tolas. Forward Gold, after opening at Rs 103|10, advanced sharply to Rs 104|9 on short-covering at the close. The spot was quoted around Rs 105|0. The National Bank of India was reported to have sold 2,000 tolas of Kolar gold around Rs 103|10.

Meanwhile, world gold production, excluding that in the USSR, is estimated to have risen to 27.15 million fine ounces in 1955 from 25.85 million fine ounces in the previous year. Output in the USSR is generally believed to be more than 10 million fine ounces. Output in India has, however, fallen from 241,000 fine ounces to 212,000 fine ounces during the year under review.

While Silver attempted to show further progress, reflected by cheerful advices from upcountry, some of the gains were lost under realising by a prominent bull. Forward silver opened steady around Rs 172|14 and, after advancing to Rs 173|10, finished at Rs 173|9. Spot was quoted around Rs 173|5. Arrivals and offtake were estimated around 15 and 30 bars respectively.

*

Oils & Oilseeds

The Oils and Oilseeds market presented a firm front with Castors on the lead. Scarcity of contracts and the strength of the spot section owing to keen demand accelerated the upward trend.

Castorseed futures touched a new high level in their recent uptrend at Rs 152|12. The upward trend was prompted, mainly by the responsive attitude of the US where castor oil hardened by one cent per pound to 15.25 cents. American buyers were now inclined to buy in the light of the Suez Canal developments.

Meanwhile, operators were found to be rather cautious in following the rise in prices. Castor September opened at Rs 145|4 to finish the week higher at Rs 152|12, while May delivery recorded a rise to Rs 134 from Rs 126|8. Castor ready was quoted higher at Rs 29|10 and Castor Oil, commercial, was quoted around Rs 16|8.

Although Groundnuts moved irregularly, they showed some gains on balance, mainly in sympathy with castorseeds. Groundnut February changed hands at Rs 137|4 to Rs 141|10. Conditions in the ready section continued to be healthy, thanks to the increased offtake by vanaspati manufacturers and crushers. Groundnut ready bold was taken upto Rs 34|12; Coromandel upto Rs 36|0 and Groundnut Oil upto Rs 18|14.

Trading in Linseed futures was relatively dull with the rates moving within a narrow range, May delivery being quoted around Rs 28|8. Linseed ready was quoted at Rs 31|10 and Linseed Oil at Rs 18|2.

*

Yarn

The Art Silk Yarn market displayed a firmer tendency with prices moving up by an anna or two per pound. particularly in respect of 100 and 120 bright cones and hanks of Italian origin. The firmness is to be attributed more to the Suez Canal developments than to any pronounced improvement in the offtake. Rayon 120 deniers bright cone also rose by As 1½ to Rs 3|12|9 per pound.

Import licences to actual users of art silk yarn for the second half of the year are expected to be issued in the next few days. There are indications that the overall ceiling on this account will be slightly lower than in the preceding licensing period.

*

Metals

Uncertain political situation and a good demand in the ready section imparted a firmer tendency to Metal prices. Copper ready was quoted around Rs 232 per cwt; Zinc at Rs 69|8; Lead at Rs 83|0 and Tin at Rs 130.

In the London market, Copper spot is quoted lower at £304 with sellers at £305 per ton. This compares with £317 quoted a week ago.

Lead first half-August delivery was quoted at £117 with sellers at £117½ per ton.

Zinc first half-August delivery was quoted at £95½ with sellers at £96 per ton. The undertone of the market remains firm.

Bombay Review

World *of* Cotton

Supply Prospects

REPORTS about the new indigenous crop are not very happy. Cloudy weather with rainfall of varying intensity continues to prevail in most areas. Rains have prevented weeding operations and in some places leaves of young plants are turning yellow due to excessive moisture. A damage to the crop is feared in some parts of Gujerat and Hyderabad as weather still continues to be cloudy. All the areas in Madhya Bharat, Saurashtra and Madhya Pradesh are in need of clear sunny weather.

Meanwhile. the President of the Cotton Buyers' Association has stated that the total supply of cotton, both Indian and foreign, in the new season, can be placed at 78.00 lakh bales. This will be more or less equal to the overall supplies available in the present season, notwithstanding the reduced crop, increased consumption and larger export offtake.

The 1955|56 season had commenced on a cheerful note with an estimated carry-over of Indian cotton of 24.33 lakh bales and of foreign cotton of 2.48 lakh bales as against 17.74 lakh bales of Indian cotton and 2.58 lakh bales of foreign cotton in the previous season. Referring to the consumption of foreign cotton by Indian mills, the President says that this is not expected greatly to exceed last year's figure of 6.50 lakh bales. The quantity licensed for import till the end of July exceeded 8.50 lakh bales. The overall mill consumption of both Indian and foreign cotton may thus safely be placed at 50.50 lakh bales which compares with 48.50 lakh bales in the previous season.

The export quota announcement has come at a time when crop prospects for the new season are considered around 43.50 lakh bales as against original expectations of 52.00 lakh bales and also at a time when indigenous crop's quality is expected to deteriorate. The release of 20,000 bales of Bengal Deshi for export is well within the market expectations. It is estimated that as much as 91,000 bales of cotton still remains unutilised and as such the revalidation for shipment of half the quantity remaining unshipped against export licences, issued during 1955/56, will amount to 45,000 bales. Another welcome feature is the lifting of the ban imposed on imports of sterling area cotton.

Egyptian cotton plays an important role in the cotton economy of a number of countries in the world and as such all the major consuming countries have a vital stake in the possible consequence of the unfortunate rift that is developing between Egypt on the one side and her cotton clients on the other. In view of the retaliatory steps of the UK, Egypt has made it clear that she will not be in a position to export cotton, which means, the rest of the world will be offered more of this cotton. Indications are that, though the "iron curtain" countries are already consuming substantial quantities of Egyptian cotton, they might step up their purchases in future. This also applies to India inasmuch as this country has developed good relations with Egypt and has been topping the list of Egyptian cotton consumers till recenly. But, if India is to take advantage of the surplus Egyptian cotton, an amendment will be necessary to present arrangement; and the trade circles wonder whether it will be done.

×

SPOT COTTON

In the Spot market at Sewri, both the current crop and the new crop delivery contracts were well sustained and the undertone was uniformly firm. Mills showed keen interest in purchasing Jharilla, Vijay, Surti and Dhollera varieties, although most of them were inclined to await details of the damage to the crop.

Inquiries for foreign cottons also increased. Stocks of AR Uganda, particularly BP|52, were in continuous demand at advancing prices. The sudden interest shown by the UK in Uganda and Sudan cotton growths, consequent on the loss of Egyptian market, caused some concern to the import trade. Prices of East African varieties shot up by about Rs 50 per candy. American stocks, however, remained unchanged for want of buyers.

Following rates were quoted:—Bengal Deshi Rs 660 to Rs 710; Oomra Rs 800 to Rs 820; Dhollera Rs 800 to Rs 825; Jharilla Rs 810 to Rs 840; Vijay Rs 970 to Rs 985; AR|BP|52 Rs 1,550 to Rs 1,660; Bhushoga Rs 1,530 to 5,135; Karnak Rs 2,700 to Rs 2,800 and Sudan Rs 2,200 to Rs 2,600.

×

FUTURES MARKET

Adverse weather reports and the announcement of new export quota helped to strengthen the bullish sentiment in the futures section, although the best levels could not be sustained till the close due to some profit-taking. Jharilla March opened steady at Rs 692 and, after advancing to Rs 695|8, finished at Rs 692|12. Vijay April opened at Rs 823 and, after improving to Rs 826 on short-covering, finished the week at Rs 825|8.

×

KARACHI MARKET

The futures market in Karachi ruled quite strong, the chief factor being good overseas demand. The demand was induced by fears that purchases of Egyptian cotton would be adversely affected owing to payments difficulties following the nationalisation of the Suez Canal Company. The Spot section also depicted a firm trend with the exception of Deshi styles, which lacked support.

×

NEW YORK MARKET

Price movements in the New York market were rather irregular in moderately active trading. The publication of the first USA official crop estimate at 13,552,000 bales was more or less in line with general trade expectations and had very little immediate effect on the market. Traders were awaiting further developments. Spot was quoted at 34.25 cents per pound.

×

LIVERPOOL MARKET

Business in the Liverpool cotton market was moderate. The Suez Canal crisis caused some apprehension on the effect it would have on cotton supplies, which normally arrive at European Ports via the Canal. The demand for long-stapled ready cotton centred mainly on Sudan styles, while only retail sales were concluded in American style growths. Small American buying provided occasional support and the market closed steady. The Egyptian contract remained inactive with no attempts made to inaugurate new business. Trading in Sudans continued slow. Oct|November delivery was quoted 25.00 cents.

×

CLOTH AND PIECEGOODS

Conditions in the Bombay market remained steady, demand being more pronounced in respect of coarse and medium varieties. The supply position continues to be tight with the stocks both with the mills and the trade being inadequate. Most mills are fully booked up to October and some even up to November.

Foreign enquiries have, on the other hand, not been encouraging. Only scattered demand is reported. Shippers are, therefore, anxiously awaiting the import programme of the Government of Burma.

Delhi Review

Olympus

A Pettifogging Administration

DR Paul H. Appleby, the American export on public administration whose report on the working of the Government of India was widely commented upon in 1953, has produced another report on the same subject. This document, which was placed last week on the tables of both the Houses of Parliament, contains a tersely worded series of criticism about the way in which enterprises of great pith and moment are emptied, by an unimaginative administrative system, of their immense power for good. Dr Appleby pulls no punches and spares no feelings. The entire report breathes a sense of urgency and impatience that we would fain see animate some of our own leisurely tinkerings with the subject. As repeatedly pointed out in the pages of this journal, there is far too much pre-occupation in the country with the ideological and doctrinnaire implications of the Plan and too little with its administrative tasks. It has been emphasised again and again that, if the Plan founders, it would be in all probability on the rocks of administrative and organisational inadequacies. It is, therefore, necessary that the requisite changes in the structure of administration are made without any delay. Dr Paul Appleby's report, which will presumably be acted upon in real earnest this time, gives some important and useful pointers on the subject.

It is Dr Appleby's considered view that "nowhere else have so many systematic barriers been erected to prevent the accomplishment of that which has been determined should be done". He says, again, "There is no lack of idealism or great vision in India or its government but far too much of the dynamism and imagination characterising the setting of objective is smothered in proceedings dominated by small thinking." There is too much "negative concern for precedents and rupee-pinching" and there are too many reviews which are done too often in a "useless and frustrating fashion". Dr Appleby considers that both the Government and the people of India have great achievements to their credit in recent years, but he is emphatically of the view that these have been done in spite of the system. "By working key personnel very excessive hours, by giving special attention to a very disproportionate number of transactions, by stubborn persistence of programmatic officials in the face of frustration, great results have been achieved. There is early limit, however, to what may be done in this fashion. It puts too much reliance on a very small number of individuals, whereas for a much greater achievement, reliance must be on a greatly improved organisational performance of a systematic character." In other words, we have been having an old bullock cart of an administration and if it has been kept going at all, it was because the man driving it has been both exceptionally gifted and perservering. But we have never heard of a man, however gifted, who succeeded in globe trotting in a bullock cart. And globe-trotting is precisely what our tasks of the Second Plan are relative to the tasks of the administration before independence.

This historical aspect of the matter is forcefully brought out by Dr Appleby: "Near the heart of the problem is a failure to realise and understand that the Government of India—Centre, State, Municipal, and Rural—will and must grow rapidly in size and that this growth compels changes in procedures of a sort directly related to the size of the Government. As tasks become more numerous and difficult, the simple structural changes that make their handling possible is a widening and deepening hierarchy-the establishment of new subordinate levels to which more tasks, old and new, may be delegated".

That, indeed, is the crux of the matter. Thinking on administrative and organisational problems has not kept pace with the tasks, which, for one reason or another, Government have taken on. These reasons being compulsive and inescapable from either the political or social points of view, the tasks were taken on without too close a consideration of administrative feasibility: and ,even if such considerations did weigh, they were brushed aside on the quite legitimate ground that administration is the servant and not the master. It should carry out and not circumscribe socially desirable ends. But the new tasks can be performed by the administration only if it makes the necessary organisational adaptations. And this task of reorienting itself to these new efforts has not proceeded apace wih the result that, far too often, achievement is thwarted by administrative inadequacy at important moments.

The traditional tasks of Governments, until the notion of a welfare state became respectable, were, firstly, those relating to law and order; secondly, to the collection of revenue; and, thirdly, to the providing of such minimum public works necessary for keeping things going. Confining ourselves to the two latter tasks for the moment, the general attitude of the Government of India was one of excessive concern about accountability of the funds entrusted to them. Historically, the absence of a Parliament and notions of White man's burden might have had something to do with the somewhat excessive anxiety about proper checks on expenses. The series of sanctions and reviews of sanctions, which Dr Appleby finds so archaic and frustrating, flowed from some such financial scrupulosity about public funds. Likewise, the exaggerated importance attached to audit, about which Dr Appleby is so scathing, proceeded from a desire to keep everything open and above board. But it did encourage a diffusion of responsibility, which did not matter in the good old days, but which seriously hampers work these days when we are in a mortal hurry to get on with the job.

Dr Appleby is withering about this system "under which everybody is responsible for everything before anything is done." Such sterile perfectionism was considered a sign of an impartial and conscientious administration. Whatever its merits in the old days, there can be little doubt that it ill accords with our new tasks in which to be picewise would be rupee-foolish.

Another important point made by Dr Appleby explodes the hoary myth that has been persistently propagated in this country. It is the exclusive responsibility of a lazy bureaucracy for the present state of affairs. Every now and then, we hear indignant Parliamentarians holding forth on the dilatoriness of the bureaucracy and the coils of red tape that strangle proposals they have voted for. Dr Appleby has come out with the clearest possible finding that the Parliament is really to blame. "The existing procedure is not simply a habit of bureaucracy, is not a product of the ICS or of the Finance Ministry or of the Civil Service generally. Responsibility for this procedure is shared by almost everybody—not least by Parliament". He lists six grounds on which to indict the Parliament and these are: (i) Parliament's excessive pre-occupation with the trivialities of official misdemeanour found in audit reports; (ii) its vague fear that its responsibilities are not being preserved; (iii) its prejudice against the judgment of businessman; (iv) its inclination to make too ready concessions to some of the "self-interested demands of small but influential business interests"; (v) its endorsement of the formerly "narrow" approach of the Public Service Commissions and (vi) its opposition to the delegation of powers the "need of which is the worst shortcoming of the Indian administration".

Not all these charges are valid in all their implications. It is obvious that Dr Appleby is not sufficiently informed about the background of the distrust of the businessman's judgment. And he is not quite fair to the Service Commissions. It is clear that he has no notion of the social and economic implications until recent years of a Government job in this country, the complicated and tortuous roads to them, and the complexities introduced in recruitment to Public Service by officially-backed communal and regional considerations. If things are not far worse, we owe it to the Public Service Commissions.

But with the more substantial grievances against the Parliament that he lists, many in the country will readily agree. Parliament's obsession with trivialities of official extravagance is pathological. As in all such cases, this pre-occupation is indignantly rationalised as a scrupulous watchfulness about public funds, whereas in most cases it is nothing of the sort. Even more damaging to the morale of the services has been Parliament's persistent desire to concern itself with the details of administration. This tendency, particularly noticeable in its attitude toward public corporations, has been responsible for the difficulties over finding and keeping suitable men for these corporations. Dr Appleby's prescription for reversing this negative and trivial attitude of Parliament toward administration is admirably simple: "Look for things to praise instead of things to blame".

Dr Appleby's report contains very many important suggestions on detail which I have no space to discuss here in detail. They are for the most part eminently sensible and should be speedily adapted if we are not to find the tasks of the Second Plan too much for us.

Delhi Review

North Indian Notes

Programmes of Industrial Development in 1956—61

Statistical data relating to 51 organised industries together with programmes for their expansion during the period of the Second Five-Year Plan are contained in 'Programmes of Industrial Development 1956-61' just published by the Planning Commission. Certain data in this volume are slighly at variance with the statistics given in Chapter XIX of the Report on the Second Five-Year Plan. The deviations are due to changes which have been made in the light of more up-to-date information which has become available very recently. In the case of a few industries revisions of the figures of capacity and production levels in 1955-56 has been necessitated as more recent data have been received. In the case of the jute industry particularly the detailed programme embodied in this volume envisages a production target of 1.2 million tons of jute manufactures by 1960-61 as against 1.1 million tons proposed in the Report.

As for progress in the First Plan, the main objective, fuller utilisation of capacity already in existence, has been achieved. For, idle capacity now existing is mainly out-moded capacity which could not be brought into use without extensive replacement and modernisation. In other words, the effective idle capacity currently available in major national industries like cotton and jute textiles, cement, sugar and paper is negligible.

Other significant developments are the achievement of appreciable diversification of production and some progress made in increasing the size of existing industries through expansions. New products manufactured for the first time are: staple fibre and cellulose acetate filament; calcium carbide, hydrogen peroxide, rare earth compounds, titanium dioxide, rayon grade caustic soda and ammonium chloride; benzene hexachloride, penicillin, DDT.; isonicotinyl hydrazide, sulphur black and azo dyes; newsprint; carding engines; automatic looms; steel wire ropes, jute spinning frames, deep well turbine pumps, layer-built batteries, aluminium rods for A.C.S.R conductors and motors and transformers of higher ratings.

In marked contrast to the First Plan, the Second Plan lays emphasis on the expansion of capital and producer goods industries so that the foundations of further industrial progress may be firmly laid. It is however clear from the list of industrial projects in the public sector and also from the terms of the Industrial Policy Resolution that a very wide field of industry, including the whole range of consumer goods industries is left to be developed by the initiative and enterprise of the private sector.

Referring to the criticism that consumer goods industries have been unduly neglected, it is pointed out that there is no doubt that the existing capacity in the organised sector, supplemented by what the decentralised sector may be reasonably expected to produce, will be adequate to meet all foreseeable demands. It is, however, admitted that most of the targets especially in the sphere of consumer goods industries are liable to change as the plan progresses.

*

Foodgrain Prices

Of the five reasons given by Mr A. P. Jain, Union Minister for Food and Agriculture, for the rise in foodgrain prices, only one appears to be beyond the control of Government. Speculative activities of the trade, hoarding of stocks by traders and producers, inflationary tendencies caused by deficit financing and the pressure of rice supplies in the border areas of West Bengal, Assam and Tripura consequent on the failure of rice crop in East Pakistan which are said to have contributed toward bringing about the present difficult situation could well have been either foreseen or effectively controlled.

It is, however, gratifying to note that Government have at long last realised the seriousness of the position and have taken positive steps to effect quick improvement. A total ban on the exports of rice and other foodgrains has been imposed along with stoppage of Government purchase of foodgrains in the internal markets. Restrictions imposed on scheduled banks on advances by them against stocks of rice and paddy are also expected to help check the rising tendency of foodgrains prices.

Though Mr Jain seems to be confident that the measures so far taken by Government coupled with the fact that Government have fairly big stocks of rice and wheat, will bring down price levels it is to be admitted that the situation does not admit any complacency.

NORTH INDIAN MARKETS

Sugar Markets Depressed

SUGAR markets in all centres are ruling slightly depressed in the absence of keen buying enquiry due to rainy season, and loading restrictions have hampered despatches to the consuming areas. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Jaswant Rs 28-9; Simbhauli Rs 28-11; Mowana Rs 29; Daurala Rs 29 to Rs 30; Amroha Rs 28-2; Bijnore Rs 28-3; Mansoorpur Rs 28-4 to Rs 30 and Rampur Rs 31.

Total production for the season ended July 15, 1956 is higher than estimated earlier and is put at 18.53 lakh tons as against the 15.83 lakh tons in the corresponding period of last season. The aggregate quantity of sugar despatched during the same period was 11.78 lakh tons as against 7.73 lakh tons. The offtake, during the season, was as much as 10.94 lakh tons as compared to only 710,000 tons in the previous season. Stocks of sugar with the mills, as on July 15, 1956, were 10.82 lakh tons as against 8.48 lakh tons on the corresponding date of last year. The Government are worried about the price of cane supplied to the mills when compared to gur manufacture and working out some scheme by which this disparity in prices is removed.

Increased production in the country and the prospects of progressive improvement have been at the basis of the idea of forward trading in the sweet commodity. With the Forward Markets Commission expected to submit its report shortly to the Government on the advisability of permitting futures trading in sugar under a system of quota releases, trade circles have naturally begun to press the claims of their respective centres for recognition for the purpose.

To begin with, permission for restricting trade in sugar futures is expected to be given to Kanpur on an experimental basis, on the results of which more centres are to be considered for the purpose. In this connection, it is reported that the proposed Rajdhani Grain and Jaggery Exchange, which is to be formed by the merger of the three Exchanges—the Punjab Exchange, the Uttar Bharat Exchange and the Vishnu Exchange—intends to seek permission for futures trading in sugar.

Gur

The Gur market at Hapur ruled quietly steady and the offtake, during last week, was 15 wagons, mostly by Gujerat. The stock of dry quality gur was small. With the result, the rate was quoted higher at Rs 12-6 per maund, while Kotha quality was quoted around Rs 10-14.

Stocks at Hapur were estimated around 25,000 maunds. The stock position in the South is reported to be good.

The standing cane crop is now reported to be suffering for want of rains in East Uttar Pradesh, and the rainfall in West Uttar Pradesh is also deficient as far as cane crop is concerned.

*

Foodgrains

Prices of Foodgrains have continued to show a rising tendency. In the Hapur market, Wheat has recorded a further gain, to be quoted at Rs 15-2 for dara quality and Rs 16-6 per maund for farm quality. Daily arrivals in the rural areas were small at an average of 100 maunds, while imported wheat brought from Delhi was sold at Rs 15-4 per maund. Prices in the Eastern Uttar Pradesh made a strident advance on reports of drought conditions and in sympathy with higher advices from the Punjab and PEPSU.

Pulses have also recorded a hardening tendency in prices. Peas dara quality improved to Rs 11-8 and the white quality to Rs 12-12 maund. Arhar prices have registered an advance of As 6 per maund on higher Bombay advices.

In the Delhi grains market, conditions remained steadier. Arrivals of wheat were better, but demand was lacking, farm quality quoting Rs 17-4 and dara quality Rs 15-4. Rice showed a rise of about Rs 2 per maund due to increased buying activity and smaller arrivals. Bajra moved up slightly, while Moong ruled quiet in the absence of buyers.

In the Bombay grains market, prices of both Wheat and Rice have continued to soar despite the steady and liberal releases made by the Government. The price of Burma rice has moved up from Rs 150-152 to Rs 160 per candy, while imported wheat has held firm at Rs 129 for the white quality and Rs 156 for the golden variety as compared to Rs 126 and Rs 144 respectively quoted in the previous week. The sustained strength in both the commodities has been attributed to the steady flow of stocks from Bombay to upcountry centres where prices are comparatively higher. The State Government appear reluctant to place an official ban on exports from Bombay as that will amount to a major change in their present policy.

Madras Review

The Peninsula

Reorganisation, Plan Projects

THE address of the Governor, Mr Sri Prakasa, at the joint session of the Madras legislature inevitably covered all the subjects which were uppermost in the minds of the legislators. The reorganisation or the State occupied a good part or the speech. Much of what he said in this respect was more or less in the nature of an official reaffirmation of commitments and policies. One is tempted to draw a general contrast between the sentiments expressed in the Central legislature in favour of bilingual states when the new Bombay Formula was accepted.

At that time two members from the south moved amendments to the States' Reorganisation Bill demanding the immediate formation of Dakshina Pradesh. In the Madras Legislature the setting was entirely different. The Govenor who spoke on behalf of the Ministry pointed out how the state under the reorganisation scheme, would have a more or less liguistis homgeneity. As an immediate consequence, the Government were considering a change in the language of the administration from English to Tamil. He indicated the Government's intention to adopt Tamil, as the state language at an early date.

In the debate on the Govenors address the members welcomed the prospect of a such a change. But a few of them thought it necessary that the change should not be precipitated and that in the parallel development of the Tamil language the authority should unhesitatingly try to incorporate as many words and idioms from foreign languages as were in national vogue.

While the Governor extended the assurance that every thing possible would be done to make the reorganisation smooth and easy and particularly to safeguard the interest of the public servants affected by the change, many felt that so important a change as partition of the State should be conducted with the help and advice at least of an advisor Committee including non-officials. Differences of opinion on the future of some of the disputed border areas were also voiced though in the speeches concerned there was scarcely any trace of fear and fervour seen in similar places met elsewhere. It was refreshing to listen to one of the members representing South Canara telling the House that he and his colleagues from the district would be acting as ambassadors of the TamilNad in the new Mysore State. The same member appealed to the people to proceed with reorganisation in an atmosphere of mutual confidence and trust and to eschew feelings or mutual suspicion. Significantly more than one member from Malabar expressed the hope that a bigger southern State would come into existence sooner or later as the formation of such a state would undoubtedly be in the larger interest of the country.

One of them thought that it was not too late for the leaders of Tamil Nad, Kerala and Karnataka to agree to come together. But everyone knew the attitude of Madras Cabinet and expressions in favour of Dhakshina Pradesh were pious wishes.

Having taken linguistic division in the South as an accomplished fact, the members could concentrate their interest on matters of economic importance. The Governor said that the Fair Rent bill, as reported by the joint Select Committee would, come up for enactment in the current session. Alongside, there would also be legislation to extend protection of eviction of tenants contained in the General Act of 1955 and the Special Act of transfer in 1952. The decision of the Madras Government to levy a single point sales tax on eight selected commodities from April 1, 1957 was formally announced by the Governor, who said that the list might be expanded in the light of experience.

The economic development envisaged under the Second Plan was referred to in some detail with a preface dealing with the measures organised by the Government for relief in the districts affected by the November cyclone. In these districts a sum of 3 crores has been distributed as loans to the affected people. Damaged irrigation works are being quickly repaired and the total expenditure under this head is estimated to be roughly Rs 1½ crores. About 5 thousand pucca houses would be constructed for the use of the Harijans and of the poor people who had lost their dwellings. The housing scheme is expected to cost Rs 40 lakhs, a portion of which would be met by the Cyclone Relief Fund. The Governor was glad to mention that water supply for crops in the State was satisfactory and consequently a good agricultural year was ahead. One of the beneficial effects would be to keep food prices comparatively low.

Referring to the Second Plan schemes Mr Sri Prakasa touched on the following points. The current year's budget provided for an outlay of Rs 37 crores on new development schemes. District Plans were ready for Coimbatore, Chengulpet, Ramnadpuram, Nilgiris, Selam and Malabar. For other districts the Plan would soon be completed. In the sphere of Agriculture about 400 State seed-farms would be started during the Plan period out of which 50 would be in operation at the end of the current year. The administrative machinery for the distribution of amonium sulphate and other chemical manures may be strengthened. A sum of Rs 20 lakhs is provided for loans to ryots working on filter point wells which incidentally are becoming increasingly popular. Repair of minor irrigation programmes will absorb about Rs 1 crore during the year. Soil conservation measures are being taken to reclaim corroded lands. Panchayat forest are being regenerated. The Community Development scheme will immediately be extended to over 23 new blocs and within the plan period the entire State will be covered. Intensive methods of cultivation for increasing land yield are receiving emphasis. Local development works costing about Rs 1½ crores during the current year are being undertaken in areas not covered by the National Extension Services.

On the industrial side, investigations on the Neiveli Project have proved completely successful. The one great difficulty imagined was the inroad of underground waters into the mines. It has now been revealed that this could be kept out while working the raw lignite available at the pit-head at a cost of Rs 7 to Rs 8 per ton. The whole project including a thermal station, a fertiliser factory and a briquetting plant, is estimated to cost Rs 60 crores during the Second Plan period. The project would bring in its train a number of miscellaneous industries in the neighbourhood.

Considerable work has been done on the development of small-scale industries, particularly on the four Industrial Estates to be located at Guindy, Virudhunagar, Erode, and Palghat. Some of the units at Perambur and Palghat have already commenced production. The handmade match factory at Perambur would quickly put its wares in the market. The training centre in Madras for the manufacture of scientific instruments has completed its programme of expansion.

Likewise, the Ceramic Servicing Centre at Cannanore, the engineering workshops at Rajapalayam and Vellore, the mobile blacksmithy and carpentry units at Kozhikode and Tirunelveli and the lock industry at Dindigul are in varying degrees of progress. Preliminary work on land acquisition, preparation of detailed estimates for building, scrutiny of tenders etc are in progress in respect of the several new schemes sanctioned in the Budget.

Madras Review

South Indian Notes

Exaggerated Fears

The need for a reappraisal of targets for consumer goods in the Second Plan somewhat on the lines of the new cloth policy, if inflationary tendencies are to be checked effectively, has been emphasised by Mr T. S. Rajam, President of the Madura-Ramnad Chamber of Commerce, in his address at the First quarterly meeting of the Chamber. Speaking about the economic situation in the country in general, he points out that nationalisation of insurance, the reservation of a large number of industries for the Public Sector and the squeezing out of private business by the State by unfair competition do not augur well for a rapid industrialisation.

The reform that Government want could have been achieved without recourse to nationalisation. On the one hand, it is not yet proved that given the necessary facilities, private sector cannot deliver the goods. On the other, it is a proven fact that State ventures invariably result in reduced production. Inspite of the poor record of the State as managers of industrial enterprises, the Second Plan has laid the emphasis on the expansion of the public Sector. Instead of being satisfied with laying down a general plan to which all economic activities should conform, it has been decided to give the State extensive powers to control and utilise the very instruments of production.

Mr. Rajam has pointed out that in another important respect also the plan has failed to be realistic. The expansion of transport envisaged is not commensurate with the increase in production planned. It is strange that such an obvious point has escaped notice.

It is but natural to expect the President of a regional association of businessmen to refer to local problems as well. Mr Rajam has expressed deep disappointment at the apparent lack of concern for the industrial development of the Madras State. He complains that as far as this State is concerned the Second Plan is as good as non-existent. In support of his argument, he points out that the per capita investment in Madras is only Rs 19 whereas in West Bengal and Bombay, it is as high as Rs 130.

While many will support Mr Rajam's view on Nationalisation, State Trading and the role of the Private Sector, it is to be admitted that some of his criticisms are hardly tenable. His wholesale condemnation of the new industrial policy is not in keeping with the opinion held by the large majority of businessmen elsewhere in the country. His contention that the Public Sector is incapable of undertaking big tasks is not corroborated by facts. There are already many shining examples of successful units under the public sector, such as the Chittaranjan Locomotive Works, the Sindhri Fertilizer Factory, the Perambur Integral Coach Factory, Hindustan Anti-biotics, the Indian Telephone Industries, to mention only a few. It cannot be denied that Government as owners of industrial units have gained valuable experience in the past five years, which will stand them in good stead in their tasks ahead.

It is also equally difficult to accept his charge that Government are indifferent to the just claim of Madras for more industries. Mr Rajam's reference to the comparative per capita investments is misleading. It is common knowledge that industrialisation of a region depends in a large measure on certain prerequisites over which none except Nature has any control. Referring to this complaint, Mr T. T. Krishnamachari, Union Minister for Commerce and Industries said in a recent speech that there were little possibilities for location of heavy industries in the south as coal and iron ore were not available there.

*

Co-operative Banks in Madras

There has been an appreciable expansion of the Credit movement in the Madras State during 1955-1956. Lendings by the Central Banks during the year to agricultural societies amounted to over Rs 7 crores as compared with Rs 5½ crores during the previous year. Land Mortgage Banks' lendings were higher by about Rs 20 lakhs at Rs 57.70 lakhs as against Rs 37.55 lakhs in 1954-55. That is to say, the cooperatives had met approximately 11.4 per cent of the credit needs of the cultivators.

Speaking at the Golden Jubilee celebrations of the Salem Cooperative Urban Bank in Salem Mr A. B. Shetty, Minister for Health, revealed that the State Government had planned to meet 30 per cent of the Credit needs of the rural population through the co-operatives in the course of the next five years.

It may be recalled that the State Government have already ensured the successful working of their programme of cooperative development drawn up on the lines of the recommendation of the Rural Credit Survey Committee, by introducing early this year a pilot scheme of integrated credit and marketing in six districts. The results have been very encouraging and now all districts of the State have been brought under the programme.

Outlining future plans in regard to expansion of rural credit Mr Shetty disclosed, that the State Government had under consideration a scheme of full finance in certain selected areas. Side by side with measures to supply the credit needs of the rural population, steps would be taken to intensify marketing activities by providing managerial staff for the cooperative societies and financial assistance for the construction of godowns. Mr Shetty hoped that with the necessary legislation amending certain sections of the Cooperative Societies' Act, the integrated credit and marketing scheme would be able to make sizable progress in the State.

SOUTH INDIAN MARKETS

Firmer Tendency in Pepper Prices

PEPPER markets continued to display a firmer tendency following the developments of the Suez crisis. New York dealers, who were until now selective buyers, turned out to be prominent buyers. Thus, sentiment in the market, which remained dull for the past few months, became bright.

Another factor, which gave sustained strength to the market, was the news of insufficient rains in the whole of the growing areas and the consequent adverse effect on the "spikes" which, it was felt, would result in a shorter crop. A section of the trade believed that, if sufficient rain was not forthcoming in the next month or two, the crop might show a short fall by about 25 to 30 per cent. In the Alleppey market, rate was quoted higher at Rs 800 per candy. In the Kozhikode market, Wynaad qulity was quoted around Rs 840 and the Country variety at Rs 825 to Rs 860 per candy.

In the New York market, pepper prices softened initially, reflecting lower prices and increased offerings from origins. Later, the market steadied up at the decline on improved dealer grinder demand. Malabar spot and "awaiting release" was quoted at 36 cents per pound and Lampong spot at 36 cents.

In the London market, While Sarawak was quoted at 30 cents per pound and black Sarawak at 21½ cents.

It is too early to form any correct opinion at this stage about the size of the crop. Trader circles, however, expect that prices may go up still further if the Suez Canal situation worsens. On the other hand, if some settlement is arrived at, prices are likely to react rather sharply as everywhere, it is felt, overbought position seems to have been created.

*

Cashew

Cashew is one of the very few commodities showing a remarkable rise not only in the value realised, but also in the quantity exported. Trading in this commodity, last week, was highlighed by the price advance to 56 cents per pound. This was partly attributed to buying by Russia up to 900 tons. The earning of foreign exchange from cashew has risen nearly by ten times since the war and the quantity exported by about three times.

The Cashew and Pepper Export Promotion Council, Cochin, has decided to enforce quality control, both for the export of cashew kernels and pepper and the import of raw cashewnuts. A scheme to introduce factual inspection certificate for all exports of cashew kernel and pepper is already under preparation by the Council. The Council is of the view that the long standing ills of the indus-

On Ordinary Shares @ Rs. 1/8/- per Share without any deduction for Income Tax paid by the Company.

By Order of the Board,
BIRD & Co. (PRIVATE) LIMITED,
Managing Agents.
Chartered Bank Buildings,
Calcutta: 6th August, 1956.

BASANTI COTTON MILLS LIMITED

NOTICE is hereby given that the Twenty-third Annual General Meeting of the above named Company will be held at the Registered office 24, Netaji Subhas Road, (Top Floor), Calcutta on the 28th day of September, 1956 at 10-30 A.M. for the following purposes:—

(1) To consider and adopt the Directors' Report.

(2) To consider and adopt the statement of Accounts and Balance sheet for the year ended 31st December, 1955.

(3) To sanction to the declaration of Dividends on Preference and Ordinary Shares.

(4) To elect Directors.

The Right Hon'ble Lord Sinha of Raipur, one of the retiring Directors, has already completed 69th year; as it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following resolution will be proposed as ordinary resolution under Section 261 of the Companies Act 1956, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"Resolved that the Right Hon'ble Lord Sinha of Raipur who has already completed 69th year be and is hereby re-elected a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Mr. Ramendra Nath Sircar is an associate of the Managing Agents and is retiring by rotation and also under Section 261 of the Companies Act 1956. Since it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following special resolution will be proposed, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"Resolved that Mr. R. N. Sircar an associate of the Managing Agents under the Companies Act 1956 be and is hereby re-elected a Director of the Company."

Mr. S. K. Mitter is an associate of the Managing Agents and is retiring by rotation and also under Section 261 of the Companies Act 1956. Since it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following special resolution will be proposed, a special notice of which has been received by the Company and is also given to the shareholders.

"Resolved that Mr. S. K. Mitter an associate of the Managing Agents under the Companies Act 1956 be and is hereby re-elected a Director of the Company."

Mr. P. K. Mitter an associate of the Managing Agents although is not due to retire by rotation is retiring under Section 261 of the Companies Act 1956, and is seeking re-election. Since it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following special resolution will be proposed, a special notice of which has been received by the Company and is also hereby given to the Shareholders.

"Resolved that Mr. P. K. Mitter an associate of the Managing Agents under the Companies Act 1956 be and is hereby re-elected a Director of the Company."

Mr. N. Beed a Director of the Company is retiring by rotation and being eligible he offers himself to be re-elected a Director of the Company.

(5) To appoint Auditors and to fix their remuneration.

(6) As special business to consider and if thought fit to pass with or without modification the following resolutions which will be proposed as ordinary resolution.

(a) Resolved that the consent of this Company be and it is hereby accorded to the Board of Directors borrowing monies in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose and that such borrowing shall be exclusive of the temporary loans obtained or to be obtained by the Company from the Company's Bankers in the ordinary course of business. Resolved further that the Company doth hereby ratify and confirm, all borrowings by the Directors after 2nd April, 1956, which are in excess of the aggregate of the paid up capital and free reserves of the Company.

(b) Resolved that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the company or the welfare of its employees, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year may exceed Rs. 25,000/- or 5% of the Company's average net profits, as determined in accordance with the provisions of the Companies Act 1956, during the three financial years immediately preceding whichever is greater.

(7) To transact any other business that may be brought forward.

The Share Transfer Books of the Company will be closed from 28th August, 1956 to 28th September, 1956 both days inclusive.

By Order of the Board,
THE CALCUTTA AGENCY
PRIVATE LTD.,
Managing Agents.

24, Netaji Subhas Road,
Calcutta,
The 10th August, 1956.

N.B.—Payment of any dividend if declared will be paid to those shareholders whose names stand registered in the books of the Company on 28th September, 1956 or to their Mandatees.

Explanatory statement in regard to special business to be transacted in the meeting.

Board's borrowing powers have been restricted under Section 293 (1) (d) of the Companies Act 1956. To provide the Board with suitable authority consent of the Company in general meeting is required for which suitable resolution No. 6 (a) has been proposed.

The Company has to make contribution from time to time to deserving parties. Board's powers of such contribution have been restricted under Section 293 (1) (e) of the Companies Act 1956. To authorise the Board with suitable authority to make such contribution the above resolution No. 6 (b) has been proposed.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

WORLD OF TEA

(Continued from page 322)

1-7; OF Rs 1-14 (nominal) and PF Rs 1-10.

There was a useful demand for Dusts, particularly for the leafier varieties. Clean Black Dusts were fully firm, while the popular non-wither sorts were frequently sold As 2 to As 3 per pound dearer Commonest and powdery types, however, met with less enquiry and were frequently sold below brokers' valuation. Plain Sylhet Dust was quoted at Rs 1-7 per pound. Sale No 5 will be held on August 22.

In the auction held at London this week, offerings were 16,372 packages which included 6,925 packages of Northern India teas. New Season's teas were sold readily at dearer rates, while there was less demand for Old Season's teas and buyers were only interested in those showing any colour. With the result, many lots had to be withdrawn. Clean Common Broken Pekoe was nominally quoted at 3sh 2d per pound.

Two leading UK blenders have announced that they are to market a brand of tea that will retail at 36d per pound. It is understood that the new brand will be on sale from this week. Marketing of tea, which retails at 36d per pound, means that the British public will be able to buy the blend at a price cheaper than any time since the outbreak of World War II. It will be interesting to see the extent of public response to the new brand.

ORISSA CEMENT LIMITED
RAJGANGPUR

NOTICE IS HEREBY GIVEN THAT THE SIXTH ANNUAL GENERAL MEETING OF THE MEMBERS OF THE COMPANY will be held at the REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR on Saturday, the 29th September, 1956 at 11-45 A.M. to transact the following business:—

1. To receive and adopt the Audited Statement of Accounts for the year ended 31st December, 1955.
2. To receive and adopt the Directors Report, approve appropriation, and declare dividend, which if declared will be payable on or after 1st October, 1956, to those shareholders whose names appear in the Register of Members on 29th September, 1956.
3. To elect Directors in place of the retiring Directors Shri Jaidayal Dalmia, Shri Mohanlal Goenka and Shri Nihar Chandra Roy, who are eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., the retiring Auditors, are eligible for re-appointment.
5. To consider the cancellation of 10,000 unsubscribed Preference Shares out of the 50,000 issued Preference Shares.

   (Explanatory Note: Considering the present money market conditions, it is difficult to get subscribed 4½% cumulative Preference shares. Therefore, the Directors propose that 10,000 unsubscribed Preference shares out of 50,000 issued shares be cancelled).
6. Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 3rd September to 29th September 1956 both days inclusive.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the meeting.

By Order of the Board of Directors,
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES PRIVATE LIMITED,
J. Dalmia.
DIRECTOR
Managing Agents.

Rajgangpur,
Dated: 30th July, 1956.

NEW INDIA INVESTMENT CORPORATION LTD.

Notice is hereby given that the nineteenth ordinary General Meeting of the share-holders of New India Investment Corpn. Ltd. will be held at the registered office of the Company at 9, Brabourne Road, Calcutta, at 4-0 P.M. on Monday the 24th September, 1956, to transact the following business:—

(1) To receive and adopt the Directors' Report and audited Profit & Loss account and Balance sheet for the year ended 31.12.55.

(2) To declare dividends recommended by the Directors.

(3) To appoint a Director in place of Rai Bahadur Moongtu Lal Tapuriah, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act.

"Resolved that pursuant to provisions of Section 281 of the Companies Act, 1956, Rai Bahadur Moongtu Lall Tapuriah who has attained the age of 69 years and who retires by rotation be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for —Directors prescribed under Section 280 of the said Act shall not apply to him."

(4) To appoint and/or approve the appointment pursuant to Section 261 of the Companies Act, 1956, of Mr. K. P. Goenka, who was appointed a Director at the Ordinary General Meeting of the share-holders held on 28th June '55 and if thought fit to pass the following resolution as a special resolution in respect of which a special notice as required by Section 261 of the said Act, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act, is annexed hereto.

"Resolved that Mr. K. P. Goenka who is a partner in the firm of Messrs. Ramdutt Ramkissendass and is retiring under Section 261 of the Companies Act, 1956 and where as it is desirable that his valuable advices may be available to the Company, he be and is hereby re-elected as a Director of the Company."

(5) To appoint Auditors and fix their remuneration.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries.

Calcutta,
14.8.56.

Notes:

(a) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(b) The transfer books of the Company will remain closed from 15th to 24th September 1956, both daye inclusive.

(c) If the dividends on shares as recommended by the Directors are passed at the meeting, the payments will be made to those shareholders whose names are on the Company's Register on the 24th September, '56. The payments will be made on and after 1st October, 1956.

ANNEXURE TO THE NOTICE.

Explanatory statement as required by Section 173 of the Companies Act, 1956.

To
The Share-holders,
New India Investment Corpn. Ltd.

Dear Sirs,

In conformity with the Companies Act, 1956, which came into force on the 1st April, 1956, the following explanatory statements as required by Section 173 of the aforesaid Act, set out all material facts relating to the special business mentioned in notice dated 14th August, 1956.

In respect of item No. 3 of the notice of the Annual General meeting it is notified that Rai Bahadur Moongtu Lal Tapuriah who retires by rotation and is eligible for re-appointment has attained the age of 69 years—hence he cannot be appointed as a Director of the Company—except by a special resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 & 281 of the Companies Act, 1956. The Company has received such a special notice from a member notifying his intention to move the resolution as set out in the said item. Rai Bahadur Moongtu Lal Tapuriah has been a Director of the Company since its very inception and it is most desirable that the Company should continue to avail of his experienced guidance.

In respect of item No.4 of the Annual General meeting a special notice has been received from a member of the company as required by Section 261 proposing that the appointment of Mr. K. P. Goenka as Director be made and/or approved in accordance with the Provisions of the said Section.

Mr. K. P. Goenka has been a Director of the Company since 1943 and has been actively connected with the business of the Company and it is most desirable that the Company should continue to avail of his valuable advices by re-electing him as a Director on the Board of the Company.

By Order of the Board
RAMDUTT RAMKISSENDASS,
Secretaries.

KUMARDHUBI FIRECLAY & SILICA WORKS LIMITED

NOTICE is hereby given that the fiftieth Annual General Meeting of the KUMARDHUBI FIRECLAY & SILICA WORKS, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 28th September, 1956, at 11.00 A.M. for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 31st December, 1955, declaring the Dividends recommended by the Directors, electing a Director and appointing Auditors.

The Share Registers of the Company will be closed from the 11th to the 28th September, 1956, both days included.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED
Managing Agents.

Chartered Bank Buildings,
Calcutta: 6th August, 1956.

NOTE—

1. A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.
2. The Dividends, if sanctioned, will be paid on or after 8th October, 1956, to those Shareholders so entitled whose names appear in the Company's books on the 28th September, 1956, or to their mandatees. No application for Dividend Warrants will be necessary.

SOUTH INDIAN MARKETS

(Continued from page 333)

try can be solved only by growing more cashew trees on the Malabar coast on a plantation basis.

✱

Coffee

The Government of India have, it is reported, sanctioned the development plan drawn up by the Coffee Board for increasing the production of coffee in India by intensive and extensive cultivation. The plan sets forth the following types of aid to planters:—monetary aid; supply of approved seed for planting; establishment of depots at certain centres for supply of fertilizers and plant protection chemicals; organisation of co-operative pulping and spraying units and technical assistance and advice by the Research Department of the Board.

A loan for intensive cultivation will be given to estates in the 5 to 50 acre group. Loan for opening new areas will be given at the rate of Rs 1,000 per acre for Arabica and Rs 750 per acre for Robusta, spread over 5 years. The extension of the area is, however, subject to certain specified limitations based on the existing holding. Estates between 50 and 100 acres will receive assistance by way of accelerated Pool payments.

✱

Groundnut

The Groundnut market in Madras continued to rule steady due to better buying support. Arrivals averaged 20 to 30 tons per day and these were taken by local crushers. The rate was quoted at Rs 165 per candy for superior oil-quality seeds.

Arrivals in the various market centres in the South Arcot district were reported to be good with prices showing an improvement due to keen and competitive buying from the millers of nearby areas. Small business in the new crop red variety was reported in Pollachi, and arrivals are expected from the end of the month.

In the Groundnut Oil section, the rate improved to Rs 320 per candy due to fairly good buying by Calcutta interests. Reports are current that the State Trading Corporation is likely to buy groundnut oil for Russia and a few other Communist countries shortly.

✱

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides showed some improvement and there were good clearances. Prices advanced by about As 3 per pound on account of the activities of one or two shippers. It was also reported that some tanners were holding back stocks in their tanneries in anticipation of higher prices following the improved demand from the UK. Business was confirmed in 5|5½ lbs at 49d; in 8|8½ lbs at 40d and in 10|12 lbs at 37d.

Stocks of Buff hides were fair and there was no change in prices. Arrivals of Cow Calf were less last week and prices ruled firm. There was no change in Buff Calf, both arrivals and clearances being good.

In Tanned Skins section, market quality Goat skins were about As 2 to As 3 per pound easier, while adulterated Sheep skins showed no change.

Stock Exchanges

BUOYANCY PERSISTS

Watch-Dog Writes:

STOCK markets have continued to exhibit a cheerful sentiment. Thanks to speculative issues encountering fresh support, the firmer tendency in prices, that was noticed last week, is more pronounced during the week's trading. Although operators are generally inclined to book profits at higher levels, prices are still attempting to rally on renewed buying and short-covering.

The Calcutta Stock Exchange continued to show a cheerful trend on sustained professional support and prices moved up further despite profit-taking.

Business on the Bombay Stock Exchange was brisk and interesting features developed as a result of continued selective interest.

Trading on the Madras Stock Exchange remained active with Coffee and Rubber shares showing a mild buoyancy.

The London Stock Exchange gave a better performance following the recovery on Wall Street, good company news and a more hopeful view of the Suez Canal situation.

Wall Street closed barely steady.

*

Calcutta

CALCUTTA, Friday Evening.

THANKS to firmer Bombay advices, the local Stock Exchange continued to display a cheerful sentiment last week. Apart from the optimism which followed the developments relating to the nationalisation of the Suez Canal Company, the firmness in the Jute section—the backbone of the whole market—imparted fresh strength to bulls who continued to be more active in their dealings. The publication of encouraging results by certain important companies and the cheerful advices from the piecegoods markets, also tended to accelerate the pace of advance. Although some profit-taking was noticed at higher levels, it was fully absorbed. The only weak spot was the Tea section, where the turnover continued to be restricted and prices developed an easier tendency on lack of support. The market finished at slightly below the best levels for the week.

Business in the Giltedged section, continued to be restricted and prices developed a sagging tendency in the absence of buying interest. This was mainly due to the result of heavy drain of institutional funds in new issues. 3 per cent 1986 Conversion Loan opened at Rs 75-3 and, after touching a low of Rs 74-15, finished at Rs 75.

Jute shares remained firm with selected scrips scoring further gains over last levels. Apart from hopes that enquiry for jute goods might broaden for stock-piling purchases, the IJMA's decision to reseal another five per cent looms encouraged operators to push up prices. Higher levels could not, however, be sustained till the close due to some profit-taking. Howrah touched a high of Rs 22-14; National Rs 26-5 and Birlas Rs 18-14, to finish the week at Rs 22-12 Rs 25-14 and Rs 18-9 respectively. Anglo-India were enquired upto Rs 176 from Rs 172; Barnagore upto Rs 142 from Rs 139; Kelvin upto Rs 225 from Rs 223 and Union upto Rs 156 from Rs 153.

Coal shares were neglected as operators were generally inclined to await the full effect of the recent award on the working results of various collieries. Burrakur, after improving to Rs 14-4 from Rs 13-13, finished steady at Rs 13-14. South Karanpura met with some enquiry upto Rs 9-9 from Rs 9, while Central India moved narrowly between Rs 7-5 and Rs 7-7 and Raneegunge between Rs 12-14 and Rs 13-2. Karanpura Collieries were quoted around Rs 113-8.

Once again, Tea shares recorded only a restricted turnover on lack of enquiry. Apart from the disappointing dividend announcements made by some more companies, fears entertained in some quarters with regard to the prospects for tea exports to the Middle Eastern countries made operators to be cautious in their dealings. The only redeeming feature of the week's trading was the improvement in the scrips of those gardens producing quality teas. Brooke Bond changed hands at Rs 22-7 to Rs 22-11; Bishnauth at Rs 24 to Rs 24-6; Dhelakhat at Rs 22-3 to Rs 22-14; Hasimara at Rs 32-2 to Rs 33; Hantapara at Rs 196 to Rs 197-2; Jutlibari at Rs 25 to Rs 25-4; Tellapara at Rs 169 to Rs 172 and Sapoi Old at Rs 32 to Rs 32-4.

Under the influence of firmer Bombay advices and on prospects of increased offtake of cloth in view of the approaching Pujah festival, Textile scrips remained firm. Kesoram were at one time taken upto Rs 20 from Rs 19-3, to finish at Rs 19-11. Bowreah were enquired upto Rs 173 from Rs 171, while Cawnpore were well maintained at Rs 9. Elgins moved between Rs 28-6 and Rs 28-9.

Following easier advices from the commodity market, only limited interest was shown in the Sugar section, where the only bright spot were SKG, which improved to Rs 13-3 from a low of Rs 12-15. Ramnugger lost Rs 1¼ at Rs 2 -8, while Belsund met with some business upto Rs 12-4 from Rs 11-14; Carew hovered narrowly around Rs 8-14 and New Victoria between Rs 2-12 and Rs 2-14.

In the Engineering section, price movements were rather irregular due to alternate buying and selling. Indian Irons opened at Rs 36-15 and, after touching a high of Rs 37-9, eased off at the close to Rs 37-6. TEXMACO touched a high of Rs 24 from Rs 23-12, to finish lower at Rs 23-9. Jessop changed hands at Rs 34-12 to Rs 35; Kumardhubi at Rs 9-13 xd.; Braithwaite at Rs 29 to Rs 29-4 and Marshalls at Rs 6-1 to Rs 6-4. Britannia Old were marked back to Rs 18-6 from a high of Rs 18-12, while new shares were nearly maintained around Rs 16.

Miscellaneous issues ruled generally steady. Renewed speculative activity caused Orient Paper to advance further to Rs 40-14 from Rs 40-10 to recede again toward the close to Rs 40-6 on profit-taking. Titaghur were quoted around Rs 41-8, while Shree Gopal had buyers at Rs 18-6 to Rs 18-9 and India Pulp at Rs 25-2 to Rs 25-4.

In Minings, Indian Copper firmed up to Rs 7 from Rs 6-13, to finish the week at Rs 6-15.

In Oils, BBP and IBP were narrow markets around Rs 4-6 and Rs 41-4 respectively.

Elsewhere, Alkli Chemicals hardened to Rs 21-11 from Rs 21-8. Angelo Brothers were in good demand upto Rs 24-10 following higher advices from the shellac market. Rohtas were pushed upto Rs 23-10 from Rs 22-12 to finish at Rs 23-2 on profit-taking. BIC were at one time offered at as low as Rs 10-8 against Rs 10-13, to finish steady at Rs 10-13. India Steamship hovered narrowly around Rs 9-4 with Metal Box well maitained at Rs 29-15. National Carbon continued to to receive support upto Rs 29-6 from Rs 29 in anticipation of an interim dividend.

*

Bombay

Bombay, August 16.

CHEERFUL conditions were obtained on the Bombay Stock Exchange last week when prices rallied on a wide front on keen speculative buying and nervous short-covering. Reports of damage to crops in various parts of the country and rising commodity prices provided a fresh impetus to speculative activity. Encouraging corporate news and hopes of still better outlook for industries during the year were also factors contributing to the sustained strength of the market. Although values receded slightly due to profit-taking, prices attempted to rally on renewed buying and short-covering.

TEXTILES: Prices in this section continued to harden on renewed speculative buying, being influenced by the reports that the details of procedure about the Indo-Burma cloth deal would be out very shortly. The continued firmness in cloth prices in the internal market and the expectation of further demand with the approach of the Pujah festival, also contributed to a steady rise in prices despite profit-taking.

Bombay Dyeing, after opening at Rs 681-14, receded at time to Rs 678-2, advanced again to Rs 696-14, finishing the week at Rs 691-4. Kohinoors were taken up to Rs 393 from Rs 387 and Svadeshi up to Rs 271-0 from Rs 264-8. Central India touched a high of Rs 163 from Rs 158-8; Century Rs 609-8

(Continued on page 345)

THE DEHRI ROHTAS LIGHT RAILWAY CO., LTD.

NOTICE

IS hereby given that the Annual General Meeting of the Shareholders of the Company will be held on Friday, 21st September, 1956 at 11-30 A.M. at the Registered Office of the Company at Dalmianagar to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1956.
2. To declare dividend of Rs. 1-4 per share.
3. To elect Directors to fill up the vacancies caused by the retirement of Shri Harkishore Kejriwal and Shri A. K. Jain under Article 84 of the Articles of Association of the Company. The retiring Directors, being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Lovelock & Lewes, retiring Auditors, being eligible offer themselves for re-appointment.
5. To transact the following as an item of special business, special notice of which is hereby given, to consider and if thought fit to pass with or without modification the following resolutions, which will be proposed as Special Resolutions:

"Resolved that the Articles of Association of the Company be altered in the manner following:

(a) For Article 32 the following shall be substituted, namely:

"32. The Company shall have a first and paramount lien upon all the shares (not being fully paid up shares) registered in the name of each member (whether solely or Jointly with others)for all moneys called or payable at a fixed time in respect of such shares, and such lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the Company's lien (if any) on such shares."

(b) For Article 33 the following shall be substituted, namely:

"33. For the purpose of enforcing such lien the Directors may sell the shares subject thereto in such manner as they think fit, but no sale shall be made until notice in writing of the intention to sell shall have been given to such indebted member or to his executors or administrators and default shall have been made by him or them in the payment of moneys called or payable at a fixed time in respect of such shares for 30 days after such notice."

Explanatory Note: The shareholders are informed that the Company has been enlisted on the official list of quotations of the Bombay Stock Exchange. It has, however, been required by the said Exchange that Articles 32 & 33 of the Articles of Association of the Company with regard to lien on shares be amended in the manner as set out in the proposed resolutions (a) & (b) above".

The share Transfer Books of the Company will remain closed from 6th September, 1956 to 14th September, 1956, both days inclusive.

By Order of the Board,
for SAHU JAIN LIMITED,
A. K. JAIN.
Managing Director,
Managing Agents.

Calcutta,
1st August 1956.

Payment of dividend when declared will be made only to those members whose names are registered in the books of the Company on the 5th September, 1956 or to their mandatees.

N.B. A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

STOCK EXCHANGES

(Continued from page 336)

from Rs 593-8 and Simplex Rs 217 from Rs 214-8, to finish at Rs 163; Rs 607-8 and Rs 215 respectively. Apollo were nearly maintained at Rs 3-3-9, while Indu Ordinary turned ex-dividend at Rs 14-7. Poddar were enquired upto Rs 194-6 from Rs 188-12, to finish at Rs 190-0.

HYDRO-ELECTRICS:— Electric issues somewhat lagged behind due to lack of interest. Andhra Valley eased off to Rs 1,237-8 from Rs 1,240 and Ahmedabad to Rs 99-6 from Rs 99-12. Tata Power and Tata Hydro remained unchanged at Rs 1,310 and Rs 129 respectively.

STEELS:—Busy conditions were witnessed in the Steel section. Although there was a good deal of profit-taking, it was fully absorbed due to renewed bull support. Tata Ordinary opened at Rs 208-4 and, after receding to Rs 207-12, firmed up again to Rs 211 at the close.

BANKS & INSURANCE:—BANK shares showed only small changes. Central changed hands at Rs 55-0 to Rs 55-4; Bank of Baroda at Rs 104-12 to Rs 105-0; United Commercial at Rs 58-8 to Rs 59-0; Punjab National at Rs 60-8 to Rs 61-0 and Bank of India at Rs 171-8 to Rs 172-0.

In the Insurance section, Oriental were a steady feature at Rs 3,820, while New India lost As 4 at Rs 49-4.

MISCELLANEOUS:—Prices in this section showed a mixed trend. Sugar shares ruled steadier with Belapur having support upto Rs 254 and Phalton upto Rs 164-8. Bhopal declined fractionally to Rs 17-12 from Rs 18-0.

Cement shares attracted little fresh support. ACC were taken upto Rs 202 from Rs 195 on reports that the company would be floating a new concern in collaboration with Babcock & Wilcox. Digvijay were marked higher at Rs 205-8 against Rs 200, while Ashok were unchanged at Rs 12-4.

Shipping shares were generally quiet. The only exception was Scindia, which were marked upto Rs 19-6-6 from Rs 18-13-6. Great Eastern were done at Rs 19-6, while Bharat were on offer at Rs 73-0.

In the Engineering group, Tata Locomotive were lifted upto Rs 174-12 from Rs 168-8 on long-term bright prospects. Premier Construction were wanted upto Rs 211-12 from 204-8, while Alcock turned a shade quieter at Rs 355 against Rs 361-4.

Elsewhere, National Rayons forged ahead to Rs 276 from Rs 269 on reports of excellent working and the anticipation of increased profits for the year, to finish at Rs 274-8. There are rumours that the company may offer fresh capital for expansion plan. Although price movements in Bombay Burmah were rather irregular, the scrip continued to rule firm and had buyers upto Rs 761-4 from a low of Rs 732-8 on expectation of fair compensation for Promoter's shares. Tata Oils turned ex-dividend at Rs 57-8, while Tata Chemicals ruled steadier at Rs 20-8. Shivrajpur Syndicate were neglected around Rs 91-0. WIMCO were quoted steady at Rs 185-10.

WORLD ECONOMIC SURVEY 1955

A comprehensive and analytical study of the world economy; International Trade and Payments, Primary and Industrial Production both in private enterprise and centrally planned economies are fully surveyed against the background of developments since World War II, and the more recent economic trends during 1955. The prospects for 1956 are also discussed.

A unique feature of the first post-war decade 1945-1955, probably the first such history attempted on a world-wide scale.

For the Investor

The Suez Situation

Investment Gossip:

Lady Constance asked for "War, war; no peace." She could not be happy or content, such was her disposition then, unless a war was waged to satisfy her desires and ambitions.

To the stock exchange operator, war is no less desirable. But mention the word; and you have the makings of a boomlet in share prices.

The speculator and his wiles are best served by catastrophe and conflagration.

And so it has proved to be these last few weeks. Each day has brought its mutters of unrest and anxiety over the Suez Canal dispute. Each such matter has contributed to a strengthening of stock exchange prices.

On Lyons Range, jute shares are faring better, not merely because of the IJMA decision to re-seal 5 per cent of the looms, but also because of the argument that war would increase the demand for jute goods.

So, too, with coal. In fact, it is the Suez situation which is overshadowing all other considerations in the trends on Indian stock exchanges. I wonder whether, in this light, the Indian stock exchange operator does not share in the dislike of the American for Mr Krishna Menon. For, Mr Menon might be considered too successful in his efforts at waging peace!

Be that as it may, I think the Suez dispute has indirectly raised share values to that level which should normally have been attained as a consequence of the strength of the Indian economy. Thus, it is possible that, even if the Suez conflict is resolved, a break in share values will be avoided.

In Bombay, the textile section is in full strength; Bombay Burmah and National Rayon have an attraction of their own; and Tata Ordinaries are as popular with the investor as they are with operator.

Locally, jute and coals are enjoying more prominence than has been their lot in the past few months. Engineering scrips are holding well. Indian Irons have finally been accorded a revival of speculative interest.

In the circumstances of the Indian economy, I fancy that stock exchanges will benefit steadily and substantially from the war that is being waged within the country—the war against poverty, the war for raising the standard of living.

£R$

Investment Notes:

IT is understood that the New Central Jute Mills will be shortly embarking on a new venture for the manufacture of Soda Ash and Ammonium Chloride. The factory will be located in Uttar Pradesh; and the company is reported to have secured financial assistance from the State to the tune of Rs 1.45 crores.

Indian Aluminiums, after touching a high of Rs 25|0, are presently quoted around Rs 24|5. This drop in price is mainly due to reports of a strike at the company's factory in South India. It looks as if the shares will move up again. For, the price of the metal threatens to go up in view of an increase in the Canadian domestic and export prices.

Shipping and Automobile shares have, of late, been meeting with increased investment interest. This is mainly due to an expected change for the better in the Government's transport policy.

For instance, India Steamships are well maintained around Rs 9|4 on hopes that coal freight will be increased.

Hindusthan Motors have improved to Rs 10|8 on prospects of road development being pushed forward and the demand for vehicles being boosted.

Premier Automobiles are ruling firm at Rs 104. There are expectations that the company will be in a position to declare some dividend this year despite the fact that a large amount will be provided for Depreciation.

It is understood that negotiations for the launching of the new project by Associated Cements Companies Limited in collaboration with Vickers, and Babcock and Wilcox have reached a sufficiently advanced stage. A new private company will be formed for this purpose in another three months. The project is expected to include the manufacture of gear-cutting and water-tube boilers.

The meeting between the representatives of the shareholders of the Bombay Burmah Trading Corporation and the management of the company, scheduled to be held this week, has been postponed. The various points, raised by the shareholders in regard to the capital reconstruction, are still under the consideration of the company.

Excellent Results of Indian Copper

Balance-Sheet Reviews:

THANKS to the consistent rise in the world price of copper, the maintenance of a high production standard and satisfactory despatches, the results achieved by the Indian Copper Corporation Limited, during the year ended 31st December 1955, have constituted a record in the annals of the Corporation. The production of refined copper at 7,281 long tons is a record. Despatches were good and operating costs were satisfactory, although slightly higher than the previous year.

In spite of the high price of copper, the demand for the metal was good and prices increased accordingly. The demand for brass sheets, however, remained steady with less spectacular rise in price. The average selling prices of the company's products during the year as compared to the previous year were as follows (rates per ton):

		1955	1954
		£	£
Copper Ingots	...	309	233
Rolled Brass	...	245	230
Yellow Metal	Circles	266	241
Rolled Copper	...	357	288

HIGHLIGHTS

Post mortem are normally carried out under instructions from the police to ascertain whether or no the deceased died a natural death.

It has a specialised meaning as well. The term is now part of bridge jargon and relates to the analysis of the deal after it has been played. Usually, post mortems of the latter variety are cordial—the participants being players themselves.

In such cases, lessons are learnt to be put to use when the same situation is later faced.

Sometimes, however, a breed known as the kibitzer horns in on the post mortems.

The kibitzer is he who sits watching while the deal is being played; he possesses knowledge that will be beyond the ken of the declarer; and his post mortem is sometimes destructive.

Hind-sight criticism of this nature serves merely to whip up a lot of resentment: it accomplishes nothing valuable.

In presenting his second report on the Indian administrative system, Dr Appleby has pointedly referred to the kibitzer in the Indian economy.

The kibitzer in this case is the office of Audit. Too often, remarks Dr Appleby, the hind-sight opinions so expressed sap the administrator's desire to display initiative.

Eavesdropper puts it in another way. He quotes the Tamil proverb which has it that the audit of last year's accounts is a chore undertaken only by the idle and the hungry.

Choose either definition: you will find discussion on them in this week's Clive Street Gossip.

The export of Kyanite continued to be unrestricted, which permitted larger despatches amounting to 19,234 tons as compared to only 12,012 tons in the previous year. The demand in world markets was satisfactory and the export price was maintained at about £20 per ton, f.o.b. Calcutta.

Turning now to the Profit and Loss Account, the item "Net Proceeds of Sales and Adjustment of Stocks" is shown higher at £2.74 million as against £2.05 million in the previous year, while sales of Kyanite have risen to £236,231 from £165,628.

The net profit, before providing for Taxation and Depreciation, amounts to as much as £1,474,804 as against only £778,382 in the previous year. Thanks to increased profits, the amount set aside for Depreciation has been raised to £175,000 from £100,000; Taxation to £683,046 from £264,395 and General Reserve to £200,000 from £150,000. Even after these increased allocations, the directors have found it possible to raise the total dividend to 45 per cent (including a Bonus of 25 per cent) from 25 per cent paid in the previous year.

In order that the Issued Capital of the company might be brought into line with the capital employed in the business, an application for the capitalisation of a portion of the Reserves of the company was submitted to the Government of India and Her Majesty's Treasury, United Kingdom. An issue of one unit of stock for each two units held has since been sanctioned.

The civil suit brought by the Bihar Government against the Corporation was completed in early February 1956 and judgment delivered was in favour of the Corporation.

The directors have, in their report, stated that, with the rapid decline in the world price of copper, the results for the current year, although so far satisfactory, are unlikely to approach those for 1955.

£ R$

Dividend Raised by Orissa Cement

The Orissa Cement Company has produced satisfactory working-results for the year ended 31st December 1955. Production has been well maintained. The completion of the extension of the Cement Works has been slightly delayed due to not getting the kiln shells ordered in India in pursuance of the policy of the Government of India, which ultimately had to be ordered in Europe and are received very recently. The extension plant is expected to go into production by the end of this year.

Although sales have shown a sharp decline to Rs 1.28 crores from Rs 1.35 crores, the net profit for the year, before providing for Depreciation and Taxation, is only slightly lower at Rs 55,03,335 as against Rs 56,13,635 in the previous year. Apart from setting aside a sum of Rs 15.50 lakhs for Taxation, the Depreciation amount has been reduced to Rs 9.78 lakhs from Rs 21.04 lakhs. The dividend on the Ordinary shares is, however, raised to Rs 1-4-0 from As 12 per share.

According to the directors' report, the company has undertaken to put up a modern refractory plant in collaboration with some German experts, which will have a capacity of annual production of 80,000 tons to cater to the growing needs of the country in general and the steel plants in particular.

The company is also sponsoring jointly with Dalmia Cement (Bharat) Limited by subscribing to the capital of Dalmia Iron & Steel Limited to establish a cast iron and steel foundry in Calcutta to manufacture special heat-resisting and wear-resisting parts of the cement machineries.

To finance all these schemes, the company is taking a secured loan of Rs 1 crore from the IFC and has also decided to offer for subscription the balance issued and unsubscribed Ordinary capital, thus increasing its Ordinary subscribed and paid-up capital to Rs 1 crore, which will be offered in the first instance to the shareholders. The directors have further proposed that, out of the 50,000 issued Preference shares, the 10,000 shares, which remain unsubscribed, be cancelled.

£ R$

Kumardhubi Engineering Maintains Dividend

The working results of the Kumardhubi Engineering Works Limited, for the year ended 30th November 1955, are satisfactory. The company's order book continued to be well-filled during the year under review and there was a marked increase in enquiries and orders from about the middle of 1955, when the

Geonkhalli: The Only Answer

IT was some 20 years ago that, in this journal, attention was forcefully and emphatically drawn to the amazing potential wealth that India possessed in its resources of iron ore. On that occasion, two decades ago, Eavesdropper wrote an article that assessed the American economy, especially in relation to its output of steel. It was remarked that the Mesabi range, from which iron ore was being drawn to produce steel, was very swiftly being depleted. In this context, a comparison was made with conditions in India. America was a country with an astounding level of steel production and swiftly diminishing reserves of iron ore. On the other hand, India's steel production was negligible, but its reserves of iron ore were almost limitless. Eavesdropper foresaw that America would need increasingly to turn to and utilise other sources for a regular supply of iron ore. It struck him, then, that India was most advantageously placed to supply this important raw material.

Since then, however, much has happened in the World of Steel. Not forgetting the world war that raged in the interim, the most important development has been the opening up of substantial territories in South America, which were found to contain considerable reserves of iron ore. On the other hand, however, the most important producer of steel in the Asian region, Japan, has, in the meanwhile, lost what was once its regular source of iron ore. We refer here to the inability of Japan today to secure its iron ore from Manchuria. If, therefore, America as a possible market for India's iron ore has been pushed into the background by the availability of raw material from South America, this loss of potential market has been offset by the more urgent need of Japan—and of some of the East European countries as well—to secure raw material with which to feed their steel mills.

True to our tradition of possessing a pioneering oulook on iron ore, Indian Finance brought out a special Supplement three years ago, in which was detailed a scheme for its intensive export. Much later, some six months ago, we drew attention to a fresh and promising project to utilise the iron ore at Sukinda for export purposes. In all this discussion of iron ore exports, there are, clearly, two important considerations to be studied. One relates to the foreign exchange value, as it were, of iron ore exports. The other has regard to what may be ancillary, but is nevertheless of fundamental importance, the transport and port facilities that have to be created in this regard. Elsewhere in this issue, in the World of Finance section, that aspect relating to foreign exchange has been studied. We feel called upon to analyse, at this juncture, the aspect relating to transport and port facilities.

It causes us some concern that there has been vagueness and vacillation in all heretofore discussion on iron ore exports and the routes by which these should be shipped. Lately, there was advanced a plan for the shipment of iron ores to Japan through Vizagapatam Port. As far as we can gather, this particular project continues to be considered by the two Governments concerned—India and Japan. Another project, which envisages the shipment of ores from Paradip Port in Orissa, is still in the unofficial discussion stages. The third, which is both ambitious and the most important of all, has received the approval of the World Bank Mission which recently visited India—but, as far as we know, official consideration of a satellite port at Geonkhalli is still to reach its intensive stage. We should like, if we may, to consider the relative merits of Vizagapatam, Paradip and Geonkhalli as ports befitted for iron ore exports.

We shall first take up Vizagapatam, because it is in respect of this port that there has, so far, been the greatest amount of official discussion. We may say at the outset that the suggestion of utilising Vizagapatam as the port of export of iron ore does not at all appeal to us. Our belief in this regard that the Vizagapatam scheme should be dropped is backed up by official and expert opinion on the matter. From the point of view of the railway, there are two factors which make Vizagapatam less, inviting as the port of shipment. In the first place, the ores are to be carried from the Bihar-Orissa iron ore belt; and the distance involved is 525 miles—a distance that is substantially more than if the ores were to be shipped from Paradip or Geonkhalli. Even if, as proposed, the Sambalpur-Titiaghar line is constructed, the distance gained is no more than a reduction of 75 miles. In the second place, more than half of the journey has to be undertaken on an unfavourable up-grade; this involves a larger quantity of coal and hauling power for the ores to be transported to Vizagapatam. In the third place, expert opinion on the tonnage handling potential of Vizagapatam Port has asserted that the scope for expansion is limited; and even such expansion as might be possible would serve merely to take care of the additional traffic likely to arise from the development of Vizagapatam's hinterland; in other words, even expansion of port capacity may not make available any substantial leeway for handling iron ores. Thus, distance, up-grade and port capacity are all considerations which make Vizagapatam less attractive as a port to be selected for large-scale exports of iron ore.

As far as concerns Paradip, it is in many ways a more worth-while proposition than Vizagapatam. Firstly, construction of new lines may involve less than 100 miles of track. Secondly, the deltaic region offers the advantage of a level train track. But there are some obvious disadvantages as well to the Paradip scheme. On the one hand, the Orissa hinterland will not be able to offer any substantial commodities for export; and, on the other hand, nor is it possible to envisage Paradip as a port at which imports could be offloaded. Paradip, therefore, could only be a port of limited utilisation—almost exclusively an outlet for Sukinda iron ore.

We turn, finally, to Geonkhalli. The advantages in this respect have been detailed so often in the columns of this journal that, it would seem, we can no more than repeat them. There is, however, a new batch of important considerations which offer compelling proof that the decision to set up a port at Geonkhalli cannot burke postponement. Briefly, we should like to indicate the old as well as the fresh considerations. Firstly, a mechanical port at Geonkhalli would benefit by the fact that its administration could be entrusted to an authority which possesses the experience of running the largest port in India. Secondly, with mechanical loading, the turn-round of ships could be accomplished much more swiftly. Thirdly, the distance from the iron ore belt to Geonkhalli is favourably small. Fourthly, the terrain is level. Fifthly, the construction of new railway track is hardly 25 miles. Sixthly, Geonkhalli could develop into a coal bunkering station; and this fact would be favourably received by the shippers utilising Calcutta port but who presently are unable to load to full capacity, because of the inadequacy of draft; in this context, ships would be able to take all their coal at Geonkhalli and thus avoid calling at Vizagapatam for this purpose. Finally, there is the fact that Geonkhalli could be equipped as a two-way port; if Paradip and Vizagapatam are not quite eminently fitted as offloading centres for cargo, it cannot be disputed that good use could be made of Geonkhalli for receiving cargo. Indeed, it is Calcutta's hinterland which is earmarked for industrial expansion on the most ambitious scale in the next decade. As such, cargo destined for Calcutta and its hinterland is bound to increase enormously over the years. It is known that Calcutta port, as presently equipped, will be hard put to it to handle this increased traffic. It is learnt that the Minister, whose portfolio includes port facilities, is himself somewhat diffident about port capacity at Calcutta. It would be folly to be complacent about the Calcutta port situation: there is real danger that there may be an uncomfortable and inconvenient cargo congestion. We think it suffices to list the considerations that we have given to make an impregnable case for the early establishment of a mechanical port at Geonkhalli. We may add that the World Bank Mission, which had categorically expressed the view that capital expenditure on the development of transport would be inadvisable, made an exception in the case of Geonkhalli—and has suggested, in fact, that there is vital need for a mechanical port as a satellite to Calcutta port.

The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

The Suez Situation

Eavesdropper Writes :

The stale-mate continues. If, as an Indian, I had held high hopes of successful conciliatory efforts by Mr Krishna Menon, I am afraid that I have been somewhat disappointed. For his part, Mr Menon did his best: the Indian plan, conceived and presented deliberately in vague terms is to be side-lined, with prominence attaching to the Dulles plan. Where I went wrong was in believing that the nations foregathering in London would welcome mediation: the species of 'mediation' they would seem to have in mind was preconceived, not to say biased. It is fortunate that, ultimately sane counsel has prevailed, and that, according to reports, the Indian plan is also to be communicated to Egypt.

Is the next step Egypt's? Perhaps, in the form of a conference to negotiate on the basis of the Indian plan? This would be eminently desirable, as the present situation is far from conducive to peace. On the one hand, Western strategy may lie in starving Egypt of the technical personnel to run the Canal. In retaliation for the abstinence from work of British and French pilots, it is learnt that Egypt, on the other hand, has announced that ships of these two countries may have a delayed passage through the canal. Quite, if I may say so, disquieting.

Validity of Concepts Underlying Expenditure Tax

*

Problems of Practical Administration

IN his recent report on the Indian Taxation system, Professor Nicholas Kaldor has suggested the introduction of several forms of direct taxation, one of which is what he calls the "expenditure tax". His suggestion is that this form of taxation should partially replace the existing Income Tax so far as personal taxation is concerned. The professor's report, we have been assured, is under the active consideration of the Government. We can presume, therefore, that the proposal for the expenditure tax is also being carefully examined in all its bearings. We do not know what the Government's decision finally will be but it would be surprising if it went in favour of an early implementation of this particular proposal.

Caution and Reluctance

There are several obvious reasons why any Government can be expected to be extremely cautious and even reluctant to introduce, in the basis of personal taxation, such a change as the expenditure tax implies. For one thing, such a tax has not been tried out in any country. There is, therefore, no material or fund of experience available which might be referred to or drawn upon for solving the innumerable day-to-day problems which are bound to arise in the actual administration of the tax. For another, economists are far from agreed about the validity of some of the economic concepts underlying the principle of the expenditure tax.

Even assuming that the "expenses" basis of personal taxation satisfies to a greater degree the canons of public finance than the "income" basis and there are demonstratable other advantages, the element of conjecture entering into the theoretical calculations is still forbiddingly large. Moreover, there may be justifiable doubts as to how far the existing administrative machinery will be able to adjust itself and enforce a new and admittedly complicated tax statute.

Keynes; "Practically" Impossible

In fact, the main objection to the tax voiced by experts appears to be on the ground of its impracticability. No less an authority than Professor Keynes stated, while giving evidence before the Colwyn Committee on National Debt and Taxation, that, while the tax is "perhaps theoretically sound it is pratically impossible". These and a multitude of other factors-predictable as well as imponderable- will have to be carefully examined and thoughtfully weighed before a decision can be taken. Unfortunately, the body of informed opinion about the nature and characteristics of the expenditure tax is not large. It could hardly be otherwise, confined as the study and discussion of it has so far necessarily been to a few economists and tax commissions. Discussion of Professor Kaldor's suggestion by economists, tax experts and students of public finance in our country should, therefore, be indeed welcome.

The idea of the expenditure tax is that "expenditure" and not "income" should be the basis of personal taxation. It is not what a person earns, but what he spends, which should supply the measure on the basis of which he is asked to pay his tax. Its protagonists claim that such a change in the basis of taxation will not only result in the incidence of the tax being more equitable than at present, but that it will also mean that the tax structure will reflect more faithfully the maxim of "ability to pay" which, after all, is the underlying principle to be aimed at in all levy of personal taxation. The tax, it is also usually claimed, will be a more efficient instrument for effective direction of economic policy and will provide a more powerful engine (to use a well worn phrase) of social change.

It is outside the scope of this article to examine the validity of such claims or to discuss the theoretical assumptions behind the tax. It is proposed here merely to indicate very broadly some of the practical questions and problems which are likely to arise in the practical administration of the tax.

An Enthusiast Answers

To begin with, how are the tax payers to be compelled to keep elaborate records of their spending? People are negligent about and resent being lectured upon the necessity of keeping proper accounts of their income. How much more would the resentment be, if they are asked to declare in their tax returns details of their spending? Even assuming that ways are found to persuade or compel the tax payer to render proper accounts of his expenditure before the taxing authorities, how are we to check and verify the accuracy of such details? So far as the first objection is concerned, Professor Irving Fisher—an ardent enthusiast—answers that it is not necessary to ask from the tax payers details and comprehensive records of their expenses. He argues that, since a person's annual expenses can be effectively measured by the difference between what he had (in terms of money) at the beginning of the year and what he is left with at the end of the year, all that is necessary is to require of the assessee a statement of the cash and bank balances at the two terminal points of time, besides those details which he is already furnishing at present. He goes further and claims that it might even simplify the existing annual "returns" of income, since it will be possible to eliminate a number of details which are required at present for the purpose of classification of different "sources" of income. This is, however, doubtful, if for no other reason than for the fact that an expenditure tax cannot, as we shall see presently, operate in isolation and has to be supplemented with a separate tax on annual wealth and a gifts tax, to administer which a fairly comprehensive "return" will be necessary.

The 6 Heads of Information

Working out the principle underlying Fisher's suggestion, Professor Kaldor in his book "An Expenditure Tax" gives a broad outline of what an expenditure tax "return" is likely to look like. There are to be six major heads under which the necessary information is to be furnished by the tax payer. The first is the total of the cash and bank balance as at the beginning of the year. The second is the total of receipts, during the year, of money (and money's worth) of all kinds including business drawings, gifts, casual receipts, borrowings, receipt of repayment of loans given earlier and sale proceeds of investments. The third is the total of advances of money on loan, repayment of previous borrowings and purchase of investments. The fourth is the amount of cash and cash balance as at the end of the year. The fifth is for details of exempted items of expenditure and the sixth is for details of adjustments

An Indian Finance Special Study

for spread-over facilities of certain specified items of expenditure. If, from the total of the amounts returned under the first and second heads are deducted the amounts in the third and the fourth, the resultant figure would be gross expenditure; from which, after deducting the amounts under the fifth head and making adjustments for benefits of spread-over (as from details given under the last head), the net figure representing chargeable expenditure is arrived at. In other words, from the total amount of money from all possible sources at the tax payer's disposal, the total amount of money spent for investments and in non-personal ways is deducted and a comparison and a few adjustments are made to find out the amount to be taxed.

Assuming that information on the above lines is truthfully and promptly given, there will still be innumerable questions, answers to which will have to be found before a tax reform measure of this nature can be successfully carried through.

Involuntary Expenses—Exempted?

Firstly, there is the question of the "exempted" items of expenditure. If demands of equity are to be met, all types of involuntary expenses will have to be granted statutory exemption. But, in practice, it would be difficult to know where to draw the line. Medical expenses, birth and funeral expenses, payment of fines and penalties imposed by courts are doubtless instances of involuntary expenditure. But, in our country, where social compulsion can be varied and strong, expenses in connection with weddings, sacred thread ceremonies, annual pujas, etc., are not entirely voluntary in nature. An impressive list can easily be drawn up of involuntary items of spending; but, clearly, the range of exemption will have to be restricted, and it will be no easy task to draw up finally an agreed schedule. One suggestion is to allow a lump sum deduction. Another is to follow the principle according to which expenses which are contingent on happenings which could not be insured against are only to be allowed. But the first suggestion is inequitous and the second is unreal in a country where the insurance habit is far from universal.

Secondly, are necessary expenses of food, shelter and education to be included in the category of 'voluntary' expenses? If not, how are we to arrive at an equitable measure of necessary expenses as between person and person? Clearly, the fact of differing standards of life as between one individual and another will have to be accepted and the scale of exemption modified accordingly.

The Difficulties of "Spread-over"

The next important question concerns the treatment of expenditure for acquiring durable commodities such as land, houses, jewellery, objects of art, etc. On the one hand, it is obviously not possible to tax the whole of such expenditure in the year in which it is made. On the other, it cannot be altogether left out of the computation of chargeability. In the face of such opposite considerations, a judicious compromise allowing for a spread-over of a reasonable number of years will appear to be the only way out. Even then, however, the spread-over allowance can at best be limited to only certain categories of goods and services. The reason is that costly objects which are exceptionally lasting and the benefits from which endure for a great number of years, the spread-over adjust-

Editorial Notes

Food Imports

The Lok Sabha's approval of a supplementary demand by the Union Government for Rs 80.48 crores for the import of foodgrains is likely to aggravate the general concern over the current food-situation. In the UP and Bihar, there have occurred extensive flood damage. In South India and West Bengal, food prices are still ruling high; though Government spokesmen have been frequently giving the assurance of unrelenting official vigilance and buffer stocks are reported to be available in plenty, the obstinacy of high prices and the threat of poorer crops in more than one State combine to continue anxiety.

Till last week, the Union Ministers at least were reluctant to admit the impact of the inflationary tendencies of deficit financing on the price level. Other reasons were emphasised. Now for the first time the Union Food Minister accepts that these tendencies have also contributed to the rise in prices. If the authorities were really fumbling for the causes, then the latter admission is a useful step forward. Because it enables them to seek the proper remedy. A ban on total export of foodgrains is already decided on. The Government have stopped purchases from the domestic market and, let us hope, the reserve stocks will be supplied more liberally and promptly to dealers.

The supplementary budget of nearly Rs 80.5 crores for the import of foodgrains will presumably be outside the present commitments including the rice deal from Burma. Meanwhile, the proposed Indo-US agreement for the purchase of American farm surpluses to the value of Rs 175 crores to be spread over three years would add further to India's stock of wheat. Eighty per cent of the sale price of the US surpluses, wherein cotton and wheat are expected to be the dominant ingredients, would be spent in India in the form of a free gift.

In other words, of the average of Rs 55 crores worth of US farm surpluses coming to India annually, the Government will not have to spend out of their own pocket more than Rs 11 crores. The annual value of the additional food import will thus run to well over Rs 100 crores. The food situation should surely yield to the inflow of so large a quantity. The Indo-US deal possibly could not form part of the foreign assistance which India expects for the Second Plan expenditure.

*

Treacherous Maps

The presence of a few hundreds of Peking troops in the border areas of Burma seems to have given the Rangoon Government more anxiety than possibly they themselves care to admit. Last week, the ex-Premier of Burma, Mr U Nu, who even now wields decisive influence as President of the ruling party, referred to the existence of stooges and traitors among the Burmese, 'burrowing into the vitals of our institutions and weakening the very foundation of our country'. Mr U Nu regards the hydrogen bomb as the only factor which is keeping peace in the world today, but painfully concedes that surreptitious methods for the conquest of one country by another are being employed against which even the hydrogen bomb is no answer.

Reports of the ex-Premier of Burma approaching Pandit Nehru for assistance for getting Peking withdraw its troops from Burmese territory have been officially denied in India. This is of course a matter in which direct intervention by a third party would be utterly embarrassing to everyone concerned, which, however, does not mean that India can be indifferent to the state of relations between Burma and China. The Chinese contention seems to be that the troops have occupied areas which are not clearly demarcated and therefore their presence does not amount to violation of foreign territory, let alone agression. Burma thinks differently.

The Burmese Government cannot dream of ejecting the Chinese troops forcibly if Peking is keen on keeping them there. The status quo is bound to be irksome to Burma. The only course open is to expedite negotiations for a peaceful withdrawal and to see through an unambiguous demarcation of borders that genuine misunderstandings do not arise. India's land-frontier too has loose patches where the map is either not sufficiently reliable or has not gained full acceptance by the neighbouring States.

China particularly has to be supplied with up-to-date maps of the common border so that neither party will mistake the other's territory for its own. Out-dated and incomplete maps should not be permitted to become a menace to Panchshila. Russia could settle the problem of border-maps through adjustments invariably favourable to itself, China may show greater consideration for the weaker neighbours.

*

Sad Sidelights

Whatever might be the eventual political destiny of Bombay,—after the Ahmedabad tribulations we doubt if the curtain has yet been rung on the last stage—some of the sidelights thrown in the process of reorganisation are disturbing. When a separate City State was announced, the Congress party itself started facing disruption. Last month, one of the most respected members of the Union Cabinet charged the Prime Minister with undemocratic and dictatorial conduct towards his cabinet colleagues.

Last week, in the streets of Ahmedabad, a popular Opposition M.P. was mobbed and had to be hurriedly rescued from a fiercely excited crowd. Later on, his party colleagues organised a private curfew and the Chief Minister of Bombay who hitherto was acknowledged as one of the most popular leader from Gujarat could not secure even a handful of listeners for a proposed public address. Therefore he felt impelled to go on a fast. A Communist member of Parliament preaching against the new bilingual State was taken into police custody for fomenting violence. The Congress President himself had to face indignities at the hands of a mob in his own home province.

These incidents, though explicable as largely the outcome of unusual public excitement, provide a sad commentary on the general condition of the body politic and the traditions which are being evolved in a young democracy. Take for instance, the lot of Mr Morarji Desai. He was till yesterday, the hero and the darling of Gujarat. But was he leading the people of Gujarat at all? If so, what has happened to his influence and powers of persuasion, overnight? Why is he unable to convince the average Gujarati that what the Congress, the Parliament and he himself consider good for the Province is really so? Why should he get desperate of the democratic method of consultation, discussion and vote and take recourse to a fast with a swan song as it were for himself and his province?

What is the sanction of the authority for the Parliament if decisions taken by it with a huge majority are so openly flouted and challenged? What is the limit to which a member of Parliament can carry his right to criticise Parliamentary decisions outside Parliament? When two federal units have chosen to differ on an issue and the possibility of mutual agreement is ruled out, which authority in the country is to intervene effectively? Wherein lies the remedy when the authority vested in a body by the Constitution comes up against a sectional mass opposition? Perhaps, the Bombay issue itself will be solved without a permanent answer being found to these far-reaching questions. But sooner or later these have to be taken in earnest, analysed to the bone and answers sought in all sincerity; failure to do so may well imperil the future of parliamentary government, even before it has its roots firm in the soil.

Iron Ore's Role in Foreign Exchange Earnings

The money market has been viewing with some apprehension the steady and substantial decline in India's holdings of foreign exchange. As at 30th December 1955, the total of foreign securities in the Issue Department and balances held abroad in the Banking Department, as disclosed in the Reserve Bank of India's statement, was Rs 735.18 crores. During the first quarter, it would appear that, although the balance of trade might have been unfavourable, the surplus on invisible account more than offset the drain on foreign exchange reserves. As at the end of March, the combined foreign exchange holdings of the Reserve Bank were shown to be Rs 746.14 crores. It is in the first quarter of 1956-57 that there has been a marked deterioration, to such effect that the combined holdings declined, by the end of June 1956, to Rs 681.52 crores. In the six weeks since then, the loss of foreign exchange has been at as swift a tempo, the holdings of the Reserve Bank as at 10th August being placed at Rs 648.70 crores.

It is quite clear, of course, that the unfavourable turn in India's trade balances has stemmed from the accelerated pace of capital imports. Moreover, it is in the recent past—the period of time just before the First Plan drew to its close—that the decision was taken by Government to take recourse to imports, not only in respect, inevitably, of plant and machinery, but also with regard to quantities of steel and cement. Imports on such scale had perforce to reflect unfavourably on the trade balance.

It would now appear that there has been, besides, a genuine expansion in commercial activity which is, partly, responsible for the drawing down of exchange reserves. According to figures released early this week by the Import Trade Control offices in New Delhi, import licences issued in the first half of 1956 were for an aggregate value of Rs 517 crores. In the corresponding period of 1955, licences issued were for a total of Rs 304 crores; and, in the latter half of 1955, the figure advanced to Rs 344 crores. It will be seen that the aggregate value for licences issued in January/June 1956, is almost exactly 50 per cent higher than in the preceding half year. An increase of this size can almost be described as untoward; and it explains the substantial depletion of foreign exchange balances since the beginning of this year.

It is also to be noted that the number of licences issued has risen by a slightly more substantial margin. Licences issued in the latter half of 1955 were roughly 14,000 more than in January/June 1955. In the latest half-year, the number of licences issued has marked a further rise of 15,500 to 133,506.

The press communique makes it clear that the increase in the value of licences was due almost entirely to higher imports of capital goods for steel plants, rayon yarn plants and railway requirements, in addition to purchases by the Director-General of Stores and Disposals.

While there is no difficulty in discovering the reasons for the depletion of exchange reserves, it would be unfortunate if no active steps were taken to raise exchange earnings. For, the Second Plan will undoubtedly impose a steadily increasing import bill. Nor is it possible to envisage any economy in the foreign exchange expenditure: on the one hand, capital goods imports are indispensable to the implementation of the Second Plan and, on the other, recourse may be necessary to the utilisation of imports as a means of offsetting inflationary tendencies that it is possible to anticipate in the wake of deficit financing of the order of Rs 1,200 crores. But all this merely serves to emphasise the need for more vigorous and ambitious planning of an export drive. The setting up of export promotion councils for a number of commodities is, obviously, a step that has been taken in the correct direction. It is also possible to welcome, in this light, the recent revision of Government policy on cotton textiles which now enables an increase in the production capacity of the mills sector with a view to providing for a larger quantity of mill-made cloth for export purposes. But we fear that all these measures are not nearly sufficient as to make for such improvement in exchange earnings as to restore equilibrium, at a higher level of trade, in our balance of payments position.

In this context, we know that discussions are proceeding on the mining of iron ore at Sukinda for export to Japan. The scheme also envisages the construction of a port at Paradip in Orissa specifically to handle the exports of iron ore. The quantity that has been talked of is 3 million tons to 4 million tons per annum. The scheme is not quite new to the readers of this journal; for, we may justifiably claim that prominent attention to iron ore as a source of exchange earnings was first made, and then repeatedly urged, in these columns.

As such, we do not think any apology is due for a reversion to this subject. It may be recalled that, some years ago, we brought out a special supplement to highlight and to accentuate India's vast resources of iron ore. In the supplement, we presented a scheme, complete as to details, not only in respect of iron ore exports as such, but also with regard to the additional transport facilities which would have to be created. In similar manner, more recently, we focussed attention on Sukinda iron ore and Paradip port. While it is a matter for gratification to us that, although belatedly, some progress is now being recorded in the Orissa scheme, we feel it is our duty to reiterate, as often as is necessary and as forcefully as we can, our belief that planning for exports of iron ore must be bold and ambitious. A figure of 3 million tons per annum seems to us to be precarious. We believe, and therefore we urge, that the target for exports of iron ore must be tripled to something like 12 million tons per annum. In every way, we repeat, iron ore exports will benefit the Indian economy. Firstly, there is the fact that there is an omnipresent demand for the quality of iron ore that India so richly possesses and that we can so easily spare. Secondly, the capital cost in this behalf will constitute a bill in terms of foreign exchange that India will not be called upon to foot immediately. On the contrary, it is known that potential customers for our iron ore are willing and eager to provide on credit foreign exchange or its equivalent, the capital machinery required; and these costs would be set off, over a period of time, against a moiety of the payment that would be made to us for iron ore. Thirdly, and this is a factor not of trifling importance, a satellite port to Calcutta so brought into existence at Geonkhalli will serve besides to relieve port congestion.

There seems to be what we can only describe as a foolhardy confidence in the ability of Calcutta Port to handle all the important traffic which will have to pass through this City. We should like to point out that this mistaken confidence may prove to be no more than wishful thinking. Both the important purposes of relieving port congestion and of increasing India's foreign exchange earnings will be served beneficially and substantially by ambitious and immediate planning for exports of India's rich iron ore.

+

IBRD in 1955-56

The financial statement of the International Bank for Reconstruction and Development for the year ended June 30, 1956, shows a net income of $29.2 million as against $24.7 million in the previous year. The gross income amounted to $63.9 million, compared with $58.5 million in the preceding year. The Bank's interest earnings on loan amounted to $50.1 million and commission on loan to $14.7 million. Altogether, the Bank granted 26 new loans for $396.1 million to 20 countries during the year, bringing the total commitment of loan upto June 30, 1956 to $2,720.1 million. Of this, $48.4 million due during the year had been realised from the borrowers, while some countries paid their loans in advance, thus bringing the total realisation during the year to $250 million.

The total expenses of the bank amounted to $34.7 million, of which $26.5 million constituted interest paid on the bank's bonds and $700,000 paid for bond issuance and other financial expenses. Altogether, the bank issued $22 million worth of bonds during the year. The total bonds outstanding on June 30 amounted to $850.1 million.

The bank's total reserve as at the end of June, 1956 amounted to $227.7 million, of which supplemental Reserve constituted $150.7 million and the special Reserve $77 million.

During the year Afganistan and Korea became two new members of the Bank, raising the total membership to 58 countries, with a total subscribed capital of $9,050.5 million.

+

Currency Contraction

The full sway of slack season forces and the continuing trend of depletion in foreign exchange holdings are prominently revealed in the Reserve Bank statement for the week ended August 17. Notes in circulation are lower by Rs 6.25 crores at Rs 1445.44 crores. Notes held in the Banking Department have declined by Rs 2.31 crores to Rs 23.65 crores. Contraction of currency has been effected by the transfer of Rs 10 crores from Foreign Securities in the Issue Department to Foreign Balances in the Banking Department. Compelling evidence of slack season conditions is offered by the high return from circulation of Rs 1.35 crores in Rupee Coin.

It is to be noted that contraction of currency had to be effeced against Foreign Securities for two reasons. In the first place, 'reverse ad hocs' could not be had recourse to, because the Centre's balances are barely above the traditional 'minimum' of Rs 50 crores. In the second place, as we shall presently see, trends in the foreign exchange transactions of the Reserve Bank presumably necessitated the bolstering of Foreign Balances in the Banking Department.

More evidence is available of slack season conditions in the returns relating to the Banking Department. Member banks have been able to raise their deposits by Rs 2.40 crores to Rs 53.44 crores. Moreover, Other Loans and Advances of the Reserve Bank have shrunk by Rs 3.06 crores to Rs 60.79 crores—an index of the reduction of indebtedness of Scheduled Banks. It is to be inferred from the statement of the State Bank for the same week, that a reduction in the borrowings of the State Bank is responsible for the decline in the Other Loans and Advances of the Reserve Bank.

Finally, it is disquieting to note the loss of foreign assets to the extent of Rs 7.63 crores during the week. For, Balances Held Abroad are shown only Rs 2.37 crores higher at Rs 34.39 crores, although the transfer from the Issue Department is Rs 10 crores. In this context, the

Britain is Becoming Statistics-Conscious

By PAUL EINZIG

IT seems that official circles in Britain are becoming at long last conscious of the important part statistical information plays—or should play—in the determination of economic policies. Until now the extent to which the Government and most business firms have been able to base their decisions on statistical information has been negligible. It is true, there has been in this respect gradual improvement during the past quarter of a century or so. Generally speaking, however, British people are not nearly as statistically minded as Americans, Germans and many other nationals.

Not until shortly before the war did the Bank of England begin to collect statistics relevant to its policies. Until the late 'twenties it did not even possess annual statistics showing the totals of its gold inflow and outflow. When the writer of this article was engaged in preparing his book 'International Gold Movements' he had to compile his figures out of the Bank of England's weekly gold figures. The feeling that very often ignorance is bliss became reinforced by the experience of 1931 when the disclosure in the Macmillan Report of the fact that Britain's external short-term liabilities greatly exceeded her gold and foreign exchange reserves and other liquid external assets, was largely responsible for the panic that lead to the suspension of the gold standard.

As for British businessmen most of them have always been profoundly suspicious of statistics and have preferred to rely upon their primitive instinct unadulterated by any knowledge of economics. Even today some of the leading firms pride themselves of not employing statisticians or economic adviser, though in this respect the situation is changing gradually.

Under the Labour Government the Government's economic statistical service made considerable progress, because of the requirements of Socialist economic planning. Even so, the extent to which planning between 1945 and 1951 played a real part in the development of economic trend in Britain was negligible. Such progress as was made in national income accounting was largely due to the efforts of Sir Stafford Cripps during his period of Chancellorship between 1947 and 1950. As a result of the association of economic statistics with Socialist planning, there was a reaction against statistics after the change of Government in 1951. During the last five years progress in statistical services has been very slow. Foremost among the recent achievements in this sphere was the recent introduction of instalment credit statistics based on sample surveys.

During recent years there has been a growing volume of criticism about the inadequacy of British official statistics. Economists, politicians and financial journalists frequently point out the incomparable superiority of American statistics. To take only one instance, British annual national income statistics contain an item 'Physical Increase of Stocks and Work in Progress'. It includes three different elements. (1) The stocks of raw materials and semiproducts; (2) goods in process of production; (3) the inventories of finished products. In American statisics these three items aree separated, and monthly figures are available. In Britain the three items are lumped together in one item which is published once a year. Any change in this composite item may mean an accumulation of raw material stocks in anticipation of high prices; or an expansion in the volume of production; or an accumulation of unsold and unsaleable manufactures, etc. The Government has no guidance from the figure as to the action that it is called for. In any cases an annual figure is bound to be out of date.

British economic statistics in general are rendered useless by the length of the time lags. By the time the annual census of production and of distribution is published its material is out of date by between one year and four years. Obviously neither Government departments nor business firms can base any decisions on such hopelessly out of the date materials. When some months ago Mr

Problems of Cycle Industry

The Indian cycle industry is one of the few industries that have made rapid strides after Independence. The production of cycles which was only 49,000 in 1949 increased to 5,10,000 cycles in 1955. At present there are about 12 units engaged in the manufacture and assembly of cycles and their rated capacity is estimated at 8.5 lakhs.

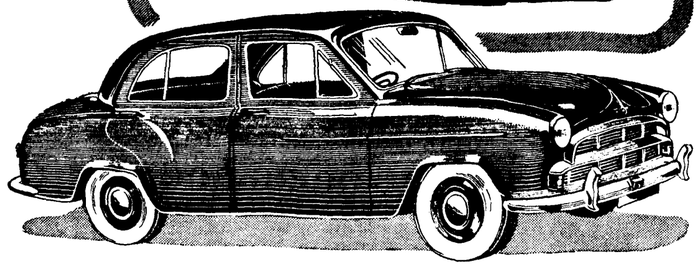
It is expected that in coming years the demand for bicycles will go up appreciably as a result of an increase in the standards of living. Hence the internal demand is estimated to rise from 6.8 lakhs cycles now to about 11 lakhs at the end of the Second Plan. As an export of 1.5 lakhs is also envisaged, the total requirement of cycles is expected to rise to 12.5 lakhs.

Though the industry has been greatly helped in its rapid growth by Government's policy of protection, it is by no means free from worries. Speaking at the Annual General meeting of the Cycle Manufacturers' Association, Calcutta, Mr L. N. Birla, president, observed that the period of protection to the Indian cycle industry should be sufficiently long. The recent dumping of cycles and cycle chains from Japan at very low prices should have convinced Authority of the need for giving protection to the indigenous industry from imported cycles for some more time to come.

Another development that had worked out to the detriment of the infant industry in the country was the licensing policy of Government which allowed new units to use 75 per cent of the imported parts for their cycles. The concession had adversely affected all manufacturers who were endeavouring to reduce their dependence on imported parts to the minimum. It is to be hoped that Government will have no difficulty in acceding to Mr Birla's request that new units should be asked to set up the manufacture of cycles and parts within a specified date. Yet another problem which had to be tackled was the bringing about of coordination between producers of cycles and the manufacturers of components and accessories. Mr Birla was in favour of developing manufacture of cycle parts on a small scale basis provided the economy of cycle manufacture was not jeopardised. The Tariff Commission had themselves expressed the opinion that it would not be prudent to lay down in a precise manner the relative sphere of operation of cycle manufacture and the ancillary units.

It would appear that the bicycle industry in the small-scale sector has come to stay. There are about 460 small-scale units which have made considerable progress during the past five years. Though the workmanship and finish of the products of these units have shown improvement, they continue to suffer from lack of standardisation, technical know-how, correct equipment and finance. The Development Council for the Bicycle Industry has made a number of suggestions to improve the production of the small-scale units.

In view of the emplyment potential of these units, Government have raised the target of production of of this section of the industry to 2.5 lakhs cycles per annum by 1960-61. It is however, not quite clear how Government propose to help them to compete with the organised sector.



A way out of the difficulty has been shown by Mr Birla. Pointing out that if every cycle part was to be produced by the ancillary units in a small scale, it would naturally add to the cost of production of cycles, he observed that complicated cycle parts which could be produced economically by the cycle manufacturers in large scale should not be attempted on a small scale. That would not affect the position of the small units because there would still be much scope for the cycle industry to obtain their requirements of a number of other parts and equipments from ancillary producers. The tendency to encourage the manufacture of complete cycles by the small units might prove injurious to the industry as a whole. It would be quite possible for the small units to develop lines which were complementary to large-scale manufacturers without at the same time depriving the ancillary units from manufacturing items which they could legitimately supply to cycle industry.

World of Jute

Encouraging Signs

THE Financial Times of London has brought out an admirable supplement on India; the major facets of the Indian economy have each been subjected to a careful scrutiny which has enabled a series of comprehensive articles. I am, of course, particularly interested in what the Financial Times had to say on the jute goods industry. The heading, to my mind, is a trifle misleading, since we do not export raw jute at all—our "major export industry" is jute goods. But, saving this minor detail, I find myself largely in agreement with the views expressed in the article; and I did not come across any mis-statements of facts.

Beginning with a brief historical sketch of the Indian jute goods industry, the article proceeds swiftly to the recent past and the present position of jute goods in the Indian economy. The disruption caused by partition; the difficulties arising from the non-devaluation of the Pakistani rupee in 1949; the Indian Government's decision to raise the export duties to a very high level; the assistance this last factor provided to the development of Continental jute manufacturers; the gains recorded at this time of substitute packaging material; and the growing recourse to bulk handling methods—all these are briefly alluded to.

Reference has been made to the efforts taken to increase the size of the Indian jute crop, but it is remarked that the recovery has been slow. In presenting figures since 1948, which disclose, for example, that production of jute goods in 1955 at 1,027,000 tons compares with the output of 1,048,000 tons in 1948, the article comes to the conclusion that, although considerable progress has been achieved since 1950, the industry has not made any net gains as such. According to the Financial Times, "the progress made represents no more than a recovery of some of the ground previously lost, and it is evident that the Indian jute industry has failed to keep pace with the general expansion in the world economy during recent years."

Another set of two tables reveals the value of jute goods to the Indian economy. Jute goods as a ratio of total Indian exports are shown to be at 21.7 per cent in 1955 as against 23.0 per cent in 1950. Jute goods as a ratio of Indian exports to the US are even more striking at 36.3 per cent in 1955 as against 34.3 per cent in 1950.

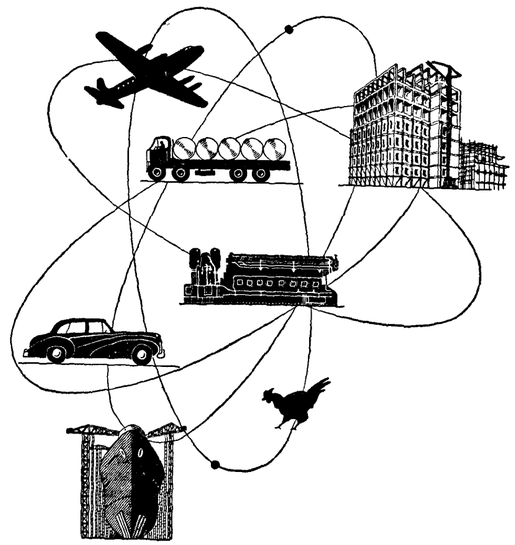
A point made is that, with the change-over to bulk handling in 1950-51, "there is no doubt that the jute industry has lost the bulk of the sugar trade and the Australian wheat trade and that these are permanent losses". I admit that to hope to recover trade lost to bulk handling methods, is to cry for the moon. But, in the light of this statement, I feel that the other contention of the Financial Times, that the progress "represents no more than a recovery of some of the ground previously lost", needs to be modified. For, if production and exports have both attained to levels in 1955 which are in striking distance of the 1948 figures in spite of the loss of markets to bulk handling methods, we can surely take this to mean that fresh markets have, in fact, been discovered for jute goods. It is either that, or that the Indian jute goods industry has won back customers who ephemerally switched to Continental mills. I am disposed to think that world production of jute goods has increased, and stands in 1955 at a higher level than in 1948. For, if Continental mills are presently manufacturing at a much lower rate of production, this is offset by the emergence of Japan and Pakistan as important entities among purveyors of jute goods. In the meanwhile, of course, Indian production has risen smartly. I think, in this view, it is possible to suggest that it is unfair to charge the Indian jute goods industry with having "failed to keep pace with the general expansion in the world economy during these years."

Not that I am entirely happy about the prospects before the industry. Not that, for that matter, I am anywhere near fully in disagreement with the views advanced in the Financial Times. True, there are a few encouraging signs. The industry is in the process of modernisation—and this may be expected to enable the reduction in the production costs which alone will ensure that Indian mills can sell at competitive prices.

Secondly, it is also heartening that the Indian jute crop has shown itself capable of improvement, both as to quality and as to quantity.

Thirdly, it is a gain for the Indian jute iudustry that, with the removal of the export duty, it is able to compete more successfully not only "with paper and other rival materials", but also virtually to price "the European jute industries out of India's export markets."

Other encouraging factors are the increasing trend in American burlap consumption; the possibility of Russia turning out to be a potential customer of considerable size; and the "most welcome rise in the consumption of jute goods in India itself."



Indeed, it is to this last factor that I attach the greatest importance. Readers will remember the view I have expressed in this column: an expansion in internal consumption will more than take care of an increase in production of the Indian jute goods industry. Briefly put, this means that the Indian jute goods industry will not be able to cope with or handle an expansion in overseas demand. It is enough if the Indian jute goods industry rests content with the markets it today possesses, accompanied by a substantial improvement in the internal offtake.

World of Tea

Lower Rates: Heavy Withdrawals

QUITE in contrast to last few weeks, prices obtained in this week's auction, held in Calcutta, were lower and withdrawals were heavy, reflecting a cautious attitude adopted by buyers in the absence of any definite ideas about the possible course of the Suez Canal controversy. Some in the trade claim that the statistical position of Indian tea is fairly healthy. It is, however, pointed out that this factor is immaterial in assessing the short-term outlook since the developments in the Suez Canal will have a decisive influence on the tea market in the immediate future.

There is now a strong feeling that tea propaganda should be intensified, both in producing and consuming countries, in view of the increasing competition from other beverages and the steady rise in production. Tea is fighting hard against the inroads of coffee, cocoa, etc., even in its traditional markets, the United Kingdom, where tea propaganda has been neglected to a very large extent with the withdrawal of India from the International Tea Market Expansion Board. Promotional activities in India are, therefore, likely to be intensified.

Again, according to tea trading circles, while exports of Indian tea to some countries in the Middle Eastern region are gradually increasing, Indian tea is failing to hold its due share in others. The Goodwill Mission from India, which visited the Middle Eastern countries, had indicated in its report, submitted to the Government of India, the large scope to increase India's exports of tea to countries in this region and had also clearly shown as to why Indian tea was not getting proper market in this area. It is now learnt that the Indian Tea Board is seriously considering progressive measures of propaganda for Indian tea in the Middle Eastern countries.

Meanwhile, the Ceylon Government are still hesitant to sign the International Tea Agreement. One of the reasons for this stalemate is, that the International Tea Agreement does not include the East African tea producing countries. It is stated that the non-inclusion of East African interests will enable these countries to go ahead with plans for the expansion of their tea acreage and output without any restraint. This will adversely affect Ceylon's Medium and Low-grown teas, which are already facing stiff competition in London.

Another reason is that Indonesia, which will be one of the counteracting parties, has applied for a very high quota. Ceylon feels that the Indonesian quota is far in excess of her capacity to fulfil. For these reasons and because of the general feeling among producing countries that there is likely to be an excess of tea in the world in the years ahead, Ceylon feels that plans to restrict output under the proposed terms of the International Tea Agreement will unfairly penalise Ceylon.

*

In the Export Sale held in Calcutta this week, offerings consisted of 52,000 packages for which there was a fair demand. Quality showed a decline and withdrawals were heavier than they had been for the last few weeks. CTC Assams generally declined by about As 4 per pound, while orthodox manufacture Assams were easier.

Medium Assams and Dooars Brokens were fairly well supported, but were one to two annas per pound lower. Fannings grades of this description were, however, firm; and those of clean black appearance were often several annas dearer.

Stylish Whole Leaf grades were sold well at dearer rates; but the more ordinary kinds shared in the general decline. The weakest feature of the sale were Darjeeling teas which were at times selling at Re 1 per pound below previous rates. Following rates were quoted per pound:—Clean Black Pekoe Rs 1-15-0; Plain Broken Pekoe Rs 1-9-0; Medium Assam Broken Pekoe Rs 2-4-0 to Rs 2-6-0 and Best CTC Assam BP Rs 3-12-0 to Rs 4-2-0.

In the Internal Sale, offerings consisted of 16,180 packages of Dusts for which there was a strong demand. The strongest feature of the sale were the black Middle East types; and these were generally dearer. Clean Cachar, Dooars and Medium Assams were one to two annas per pound dearer and sometimes more.

Non-wither Dooars were a strong feature and were As 2 to As 3 per pound dearer. Grainy CTC Assams were again sold well; but the remaining CTC offerings were generally As 2 to As 4 per pound easier and, at the close of the sale, were a full As 4 per pound down on last rates. Following rates were quoted: Medium Dooars Dust Rs 1-11 to Rs 1-12; Medium Assam Grainy Dust Rs 1-15 to Rs 2; Medium Assam CTC Dust Rs 2-10 to Rs 2-14 and Best CTC Assam Dust Rs 3-6 to Rs 3-8.

Offerings of Leaf grades consisted of 1,066 packages for which there was a fair demand, but prices were irregularly easier. Once again, there was little enquiry for the Green teas on offer.

In the Export Quota section, the rate at one time touched a high of 30 pies per pound, to finish the week at 27 pies at which level some business was reported done.

According to latest reports, Pakistan has again produced a large tea crop of 7.3 million pounds in July as compared to 6.7 million pounds in the corresponding month of last year. Total outturn, up to the end of July 1956, was also higher at 20.5 million pounds as against 17.8 million pounds in the corresponding period of last year.

In London auctions, offerings were 23,480 packages, including 13,500 packages of Northern India teas. There was a good general demand for quality teas. Best liquoring sorts and good Mediums were the strongest features. Thin liquoring, Low Mediums and Commons were easier. Average price realised for the Northern India teas was about 3sh 10½d per pound. Plain Broken Pekoe was quoted at 2sh 8d—the Calcutta equivalent price being about Rs 1-1-6 per pound.

Tea stocks in London, as on the 10th August 1956, were 112.15 million pounds as compared to 111.14 million pounds in the previous week and 115.13 million pounds a year ago. Landed between 4th and 10th August 1956 were 9.27 million pounds, while deliveries during the same period were 8.26 million pounds.

The average price realised at the auction, during the week ended August 17, was 47.77d per pound as against 48.29d quoted in the previous week and 51.96d a year ago. The average price for African tea was 34.84d per pound as against 33.39d in the previous week and 43.15d last year.

Whatever the occasion, when the call is for whisky, Mackinlay's is a natural preference. This fine whisky is one of Scotland's oldest proprietary brands.

Sole Importers : PHIPSON & COMPANY LTD.

WORLD OF JUTE

(Continued from previous page)

Active conditions prevailed in the jute goods market last week with prices recording sizeable improvement toward close. Throughout the period a fair amount of covering business had been passing though mills were not keen sellers at prevailing levels. Reports of Central Government's purchase of sackings also helped sentiment.

40" x 10 oz Hessian ready which opened the week at Rs 39-13 steadily advanced to be finally placed at Rs 41 while B Twills ready gained nearly three points to be done at one time upto Rs 109-12.

The following table shows price trends during the week:

	Opening	Closing
	Rs a	Rs a
Hessian 40" x 10 oz. ..	39 13	41 6
B. Twills ..	106 13	109 5
Cornsacks ..	107 8	110 4
A Twills ..	130 0	133 12
L. Twills ..	120 0	124 0

After a quiet opening, the raw jute market steadied up in sympathy with the goods section. Toward close, fair mill business was reported done in Indian Northern Bottoms and Assam Bottoms at Rs 28 per maund for one month shipment and at Rs 29 per maund for ready Bills of leading. Quotations: (Bottoms Basis) Indian Northern ?Rs 29; Assam Rs 29.

World Overseas

Britain

In July, Britain's trade gap—the excess of imports over exports—narrowed.

Excess of imports was £44,300,000—£6,500,000 less then the monthly average in the first half of 1956 and nearly £28,000,000 less than the monthly rate for 1955 as a whole.

Announcing this last week, the Board of Trade said that the value of United Kingdom exports recorded in July was £266,300,000, according to provisional figures. This was almost the same as the monthly average for the first half of 1956, and 10 per cent above the average rate for 1955. The period covered in the July figures this year contained 25 working days.

Imports in July amounted to £320,300,000—three per cent less than monthly average for the first half of 1956 and one per cent below the average for 1955.

Re-exports, at £9,800,000, were about one-quarter less than the average level for the first half.

British exports to North America in July were valued at £35,600,000. They included a further instalment of £2,500,000 of silver bullion repayments to the United States, bringing the total of such repayments over the last four months to more than £9,000,000.

Excluding this special item, exports to North America in July were marginally above the monthly average rate of export in the first half-year, and nearly 23 per cent above the monthly rate in 1955.

Exports to the USA in July were £20,500,000. Excluding silver bullion repayments, they were slightly higher than the monthly rate in the first half-year, and 18 per cent. above the monthly rate in 1955.

Exports to Canada in July amounted to £15,200,000. Although lower than in recent months, the July figure was equal to the monthly average in the first half-year, and 29 per cent above the 1955 monthly rate.

*

A new medium-range version of the Bristol Britannia airliner, to seat 133 passengers and to be known as the 320 Series, in now being offered to the world's airline operators.

Announcing this, the Bristol Aeroplane Company says that the aircraft has a guaranteed cruising speed of 400 miles an hour and is "substantially more economic to operate than any competitive airliner over sector distances ranging from 200 up to 2,600 statute miles. Over these ranges it can carry a maximum payload of 28,000 lb including up to 133 passengers, together with reserves and allowances for fuel",

The medium-range Britannia is a direct development of the Series 310 long-range Britannia, and embodies the experience gained in more than 5,000 hours of development flight-testing with earlier versions of the aircraft. Its Proteus-755 engines have behind them more than 40,000 hours of running.

Bristol can guarantee delivery to operators early in 1958.

A feature of the plane is its short take-off and landing run. It can operate from any existing first-class runway.

The Britannia 100, fifteen of which have been ordered by British Overseas Airways Corporation (BOAC), is making a tour of the U.S.A. Before leaving London, Mr Peter Masefield, Bristol's managing director who is accompanying the plane, said a large number of American airlines were interested in the aircraft. "We are completely happy now about the Britannia. We have an aeroplane which is in advance of anything operating to-day", he added.

Japan

Since May 16, banks, insurance companies, and other financial institutions in Japan have been permitted to subscribe directly for government short-term bonds, the Bank of Japan taking up the unsubscribed portion. Previously, when such bonds were issued they were accepted entirely by the Bank of Japan, which later sold them to city banks, with a view to reducing excess liquidity.

The aim of the new procedure is the gradual development of full-

(Continued on page 367)

In India, at the present time, there are not enough healing hands . . . not enough trained doctors and nurses to bring skilled medical care to all who need it, especially to those who live in the villages. But in the Second Five Year Plan, the sum allotted for the improvement of rural medical and health care is twice that in the 1951/56 Plan. By 1961 it is proposed to establish over 3,000 'health units' in community project, national extension and other areas. Hospital accommodation will increase by about 26% and there will be 30,000 more hospital beds available throughout the country.

The healing hands are coming...

Burmah-Shell supply larvicidal oils and residual sprays in increasing quantities for the national malaria and filaria control programmes. BURMAH-SHELL...

IN INDIA'S LIFE AND PART OF IT

World *of* Insurance

Mr B. K. Setalvad's Address

NO address this year can be complete without a reference to nationalisation of life insurance business in India, and the adhress of the Chairman of the Tariff Committee, Mr B. K. Setalvad, is no exception. A common feature of the many addresses, beginning from private individuals to Chairmen of Companies and Associations, is an expression of regret for nationalisation of life insurance despite all the arguments that have been put forward by Sir C. D. Deshmukh and other exponents of Government. Mr Setalvad thought there were simpler ways of safeguarding the interest of the policyholders. "If, however, as seems likely", continued Mr Setalvad, "the desire was to harness insurance funds to the Plan effort, it was a simple matter to legislate for the entire life funds except loans to policyholders to be invested in Government securities." He was little beside the point when he imported "allegations of inefficiency, wastage, chicanery in the implementation of the Plan programme" and in the remark that "the life insurance funds will not go very far toward helping the progress of the Second Plan."

In a vast experiment of this kind, for social and economic reasons, Government have undoubtedly taken risks that are, it is to be hoped, well calculated. It is only fair that criticism should be reserved till results are known. Government deserve all support for a venture of this kind. A wild prognosis not helpful.

Mr A. D. Shroff, Chairman of the New India Insurance Company, in his address at the recent annual general meeting of the shareholders was more trenchant in his observations. He felt that risks were "uncalculated" and that the Government should have taken the industry into their confidence and "consulting it to the fullest extent possible". He obviously ignored that such consultation would have been fraught with many undesirable consequences and no doubt he knew them. The ugly disclosure of misuse of funds by some companies is not without significance. Neither Mr Shroff nor anybody else can guarantee that the pace of misuse by many devious means would not have been accelerated. Mr Shroff admitted, however, that "insurance is basic to the economy and a form of social service which should be run by the State." His objection is that it is not necessarily best run by the State. On that, only posterity can pronounce an opinion. It is too early to categorise.

The Chairman of the Tariff Committee in his address hinted at a further reduction of fire rates. He disclosed that the next revision in fire tariff rates, designed to bring about a loss ratio of not less than 37 per cent, is due in 1958. He has in view collation of experience and disclosed that it has been decided to install Hollerith machines for the collection of fire statistics. The next reduction will, therefore, not be on an "ad hoc" basis as in 1954, but purely on the basis of statistical material. He echoed the minds of insurers when, in this context, he opined on the shortcomings of Section 40C, relating to limitations of expenses. He concluded by saying that depletion of premium income by proposed reduction in rates will render untenable the position of many general insurers. This can only be combated by insurers with "rebating reduced drastically or completely stopped".

He deprecated "the consideration being given by the Madras Government to taking over of Third Party insurance as a State venture." There is considerable force in the view that the position of general insurers should not be made more untenable by State encroachments of this kind. Government have decided to leave general insurance in the private sector. They will consider taking over general insurance only on the issue of malpractices. In this view, the trading field of general insurers should not be limited by encroachments of this kind. It should be realised that attenuated scope for sustenance for general insurers will only lead to further malpractices resulting from scramble for business from what little is available. This vicious circle will only spell the doom of companies.

Besides the above, every zonal office will have an actuary, Development Officer, Account Officer, Secretary and a host of other officers attached to it. Every division in a zone will have a divisional manager with a complement of several assistant divisional managers and a number of other officers. There will be also a number branches in a division. Calcutta alone, for instance, in the Calcutta division will have, it is understood, ten branch offices.

Reinsurance Corporation

Mr T. K. Desai, Deputy General Manager of the New India Insurance Company Limited, has been selected to be the first General Manager of the proposed Reinsurance Corporation. The Board is composed of Mr G. D. Birla, Sir B. P. Singh Roy, Mr A. D. Shroff, Mr K. C. Thapar, Mr Tulsichand Kilachand, Mr Krishnaraj M. D. Thakersey, Dr N. N. Law, Raja Sir M. A. Muthiah Chethar, Mr B. K. Shah and Mr B. S. Setalvad with two other nominees of foreign insurers operating in the country.

A Board composed of such personalities is bound to inspire confidence both in India and outside. The Corporation, however, has not yet commenced functioning. A large number of formalities under the current Company Law require to be completed. The Corporation will commence with a paid-up capital of Rs 50 lakhs, to which both foreign and Indian insurers operating in the country will enter subscription in accordance with an agreed scheme of participation. The share of foreign insurers will not exceed 20 per cent.

It is a matter of gratification that insurers in the country, despite such wide differences, could ultimately agree thus resulting in the integration of the Corporation in the private sector. At one time, Government actively broached the idea of the Corporation as a wing of the Government. For them, it was not difficult to find the funds and as a corporation of this nature is likely to make steady profits, it would have yielded good revenue. The concession to the private sector to float it as a private company marks the attitude of the Government toward private initiative and also emphasises the mixed character of Indian economy.

The Reinsurance Corporation has been designed to act as a correctives to adverse balances in inflow and outflow of insurance following findings of the "gains and drains Committee". The Corporation is thus a national institution and, as a matter of assistance, every insurance company will automatically reinsure a specific percentage of its business with the Corporation. That will give the Corporation a good start.

The Corporation should have commenced functioning earlier, but due to various differences amongst promoters, meaning insurers in the country, it could not complete formalities. It is now intended to commence trading from 1st January 1957 by which time, it is expected, the machinery of the Corporation will be effective.

Malpractices in General Insurance

Overseas General Insurers Association, Calcutta, Indian Insurance Companies Association, Bombay, and Indian Insurance Companies Association, Calcutta, have each submitted a memorandum to the Executive Committee, General Insurance Council, on the issue of malpractices and their views on eradication thereof. The wide range of recommendations is both instructive and illuminating. They are symptomatic of the wide nature of ills in trading in general insurance.

Central India

The Tenth Annual General Meeting of the Central India Insurance Co. Ltd, Indore, was held recently at the Company's Head Office at Indore. The results of business at the financial working during 1955-56 show a significant improvement over those of the previous year. The gross premiums earned in Fire and Miscellaneous insurances during 1955-56 amounted to Rs 4,39,695 and Rs 2,64,893, respectively, as against Rs 3,68,024 and Rs 1,76,298 in 1954-55 and Rs 2,67,859 and Rs 1,33,165 in 1953-54. The net premium as against this amounted to Rs 3,31,378 and Rs 3,14,630, Rs 2,64,563 and Rs 1,72,652 and Rs 1,33,424 and Rs 1,25,453, during the same periods. The results of the working during 1955-56 similarly recorded an improvement in the net underwriting profits of the two departments, the Fire and the Miscellaneous. This amounted to Rs 53,257 in 1955-56 as against Rs 41,406 in 1954-55 and Rs 16,527 in 1953-54. This consistent improvement in the business of the company had enabled the Directors to declare a maiden dividend of As 8 per share in 1955-56, after two years of waiting by the shareholders.

The company's reserve fund for unexpired risks has also been raised considerably. In 1955-56, this amounted to Rs 2,58, 400, in 1954-55 to Rs 1,74,890 and in 1953-54 to Rs 1,03,551. The claims ratio to the net premiums, though deteriorating somewhat in comparison with last year's, has also maintained its progressive improvement in comparison with that of the year before last. In terms of percentage, this amounted to 28.4 in 1955-56, 23.1 in 1954-55 and to 32.914 in 1953-54. However, the expenses on management have been maintained and the company is pursuing a suitable policy in respect of its recruitment of agents and field workers for the underwriting of insurance business, and this, it is hoped, will help considerably to reduce the ratio of its expenses of management to business secured.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

MY first reaction to the reported responses to Dr Paul Appleby's views on the organisational deficiencies of the present Indian administration was the cynical one of the value of a reputation as an expert. This is no reflection on the excellence of Dr Appleby's lively report: on the contrary, as I shall show presently, I am in substantial agreement with much of what he says and am delighted with his terse cogency. But the fact remains that many of his criticisms have been in the air for a long time now without anyone in authority paying them the compliment of taking particular note. For instance, to the best of my recollection, not until Dr Appleby dealt his deliberately provocative blows at the superstitious awe in which Audit is held by a section of the Indian public and Parliament, did its high priest feel called upon to defend his cult against such dangerous heresies. Now, however, he has come out with an attempt to indicate the value of his calling, which may reassure the faithful. But, in thus feeling put on the defensive and obliged to justify his vocation for the first time, the priest has lost some of the "magic" associated with his "tribal role". A great deal of the hocus-pocus is shed in the process, and the real consolations of the faith (which are more considerable than Dr Appleby allows) have been made manifest. The permanent consequence of this clash of faiths may well be a more discriminating piety. While this is a consummation devoutly to be wished, one cannot escape the rather depressing feeling that it needed the authoritative debunking of an expert to bring it about.

My second reaction was the heartening one at the evidence of a more lively awareness among the public of the importance of the questions discussed by Dr Appleby. The correspondence columns of the daily press show a variety of views on the best way of making it possible for the administrative machinery to meet the challenges of the tasks of the Second Plan. Dr Appleby's frankly critical appraisal of the adequacy of the present machinery to carry out the tasks that are set for it in the next five years has made many realise for the first time that the problem has assumed the dimensions of a crisis. If such an awareness was not more insistently there before, it is not for lack of being told so. Over and over again in these columns, the point was made that the most strenuous thinking in connection with the Plan will have to be about organisational problems. Over a period of years, sympathetic observers from abroad have made the same point. Professor Balough of Oxford, and more recently Professor Galbraith of Harvard, went on record as holding roughly the views expressed in the words of the latter: "It is in the field of administration and organisation and not economics where the most interesting problems will be encountered and where the most serious dangers would be met." The problem has two aspects: one that concerns the finding and training of personnel for the difficult and in many ways unprecedented tasks of the next few years. The second, which Dr Appleby discusses at length in his report, is related to the adaptation of the machinery to its new tasks. If one were to apply a contemporaneous analogy, the organisational situation is not unlike that of a transition from a technology based on conventional power resources to one based on atomic power. You have not only to obtain and train a sufficient number of persons in nuclear technique but also modernise the plants and machinery already in use.

*

It is the growing organisational complexity of the tasks that await us that makes the need for reform so urgent. Dr Appleby puts it thus: "Near the heart of the problem is the failure to realise and understand that the Government of India—Centre, State, Municipal and Rural—will and must grow greatly and rapidly in size, and this growth compels changes in procedures of a sort directly related to the size of the Government."

*

What is the sort of change that ought to meet the situation? Dr Appleby's answer is quite simple: "As tasks become more numerous and difficult, the simple structural change that makes their handling possible is a widening and deepening of hierarchy—the establishment of new subordinate levels to which more tasks, old and new, may be delegated." Put in this way, the problem seems admirably simple; but, in practice, the most serious and frustrating impediment to achievement has been the unwillingness of various repositories of power to part with a portion of it. This is true at all levels. Parliament, of which Dr Appleby has a good many harsh things to say, does not wish to exercise in moderation its unquestioned powers to examine closely the action of the executive. The cabinet and some individual ministers are, for various reasons, too greatly preoccupied with the details of the administration. The chief executive heads, secretaries and joint secretaries have an appalling amount of routine duties to perform, and such disability is not always found irksome. For, many of these routine preoccupations concern activities that carry a considerable amount of "patronage", like promotions, with them and it is not every one who is disposed to consider such tasks as unwelcome distractions from one's more serious business. Further down, devolution of responsibility is almost nonexistent. A junior official, for instance, cannot even buy a doormat without asking somebody's leave.

*

If this is the situation in the vertical line of administration, the relationships between individual ministries are even more frustrating. Anyone who has some acquaintance with the folk-lore of Government service which incidentally, is as rich in nuances of human relationships as any comparable sociological data—knows of the perpetual feud between spending departments and the Finance Ministry. The normal attitude of an official, however exalted, belonging to any of the former toward the latter is a curious mixture of desperation and obsequiouness. By the same token, many a smug superintendent of the Finance or the Home Ministry must have told you, some time or the other, how he cocked a snook at the Joint Secretary of some ministry or other by strangling some proposal of his. All this is fairly entertaining in the more leisurely days when all that was at stake was the Chaprasi's buttons: but when crores of rupees are being spent in vital national enterprises, such vexatious obstruction is anachronistic absurdity.

*

The gravamen of Dr Appleby's complaint in this regard is that, "granted prior agreement in principle on the kind and dimension of programme to be undertaken and the amount of money to be made available for the purpose, specific decisions incident to effectuation of the purpose are reviewed by too many persons in too many organs of the government in too detailed, too repetitive and too negative terms." The present rules, to take a simple example, require that the spending department (which itself, it must be remembered, is miles away from the man actually doing the spending) must obtain the sanction of the Finance Ministry for each individual item of expenditure as it arises, even though that expenditure might be within the total sanction voted by the Parliament. Nor can it reallocate the sums allotted to it in a different manner from what was orginally budgeted for. There can be little doubt that these procedures cause much avoidable delay since, every time a request for reallocation is made, there is further scrutiny of the adequacy of the reason for the change. Apart from the fact that this causes delay, the more fundamental objection voiced by Dr Appleby is that "the programmatic agency has superior judgment" than the Finance Ministry about the wisdom of departing from the original intention formulated in the budget. So long as the overall sanction is not exceeded and so long as the agreed results are achieved, the question whether they could not have thought of this or that earlier is merely academic.

*

I agree that, in many of these findings, sound on balance, Dr Appleby does not seem to be aware of the background to the present practice.

(The Reputable Provision Merchants)
Lindsay Street, Calcutta-16
Phone : 23-3394

For instance, though he mentions "protective budgeting" by the spending departments in anticipation of automatic pruning by the Finance Ministry, he does not seem to realise the real extent of it. It is a vicious circle which has to be broken and I agree that it must, in the present context, be broken not by making the control greater and consequently execution irresponsible, but by making execution more responsible by giving a wider discretion. Another reason that makes many people in the country rather unwilling to give a wide discretion to the spending departments is some real instances of mismanagement and misdirection of substantial funds. These are not merely cases where hindsight makes us wiser than the man on the spot at the moment of decision. But, after making all the allowances for such risks, the magnitude of the tasks before us makes it imperative that the actual executor of any particular job of work must have the widest discretion within the framework of well-defined overall financial competence, on the one hand, and guaranteed targets of achievements, on the other.

*

One concrete step to bring about this very desirable change is the proposal to appoint a financial expert for each department who would perform for that department all the functions that the Finance Minister was performing so far. This substitution of a rather benevolent and participating watch-dog for the more ferocious on-looking blood-hound of the Finance and Audit Departments will meet all the normal requirements of prudence in the husbanding of funds without the delay involved in inter-departmental review at all stages.

*

Another important aspect of the delegation of responsibility and devolution of power that Dr Appleby suggests concerns the relationship that ought to subsist between the executive and the legislature. This is a subject that has bedevilled many a political scientist and, in the course of centuries, its discussion has assumed emotional overtones alien to liberal debate. Psychologically, any one of us who is reasonably weak—l'homme moyen sensuel—to whom authority in the abstract is not at once hateful and compulsive of obedience. This distrust and awe of authority is part of the human predicament whose wider implications I have no space to discuss here. In some devious way, the Parliament's distrust of the executive is the expression of the "people's" general attitude to the executive. Historically and, therefore, less speculatively, the "civil servant" was distrusted as the "king's flunkey" and some of the original abomination of the parliament persisted even after the king became powerless and the civil servant a bureaucrat. In India, we had the further complication of nearly half a century's habit of finding in the executive organ of the government a most acceptable scape-goat for all our ills. And, though the President the other day at Madras paid the former British Government a handsome tribute for the gift of a trained civil service, such characteristic generosity and thoughtfulness is not common.

*

But, when all allowances have been made for the need for the greatest alertness in combating bureaucratic power—the most despotic because the most anonymous—especially in a context of its tending to become a managerial oligarchy, the fact remains that it is no sense giving a man a job of work to do and not give him the necessary power to do it. Even more damaging than the lack of

Bombay Review

To Restore Gujarat Its "Soul"

THE public response in Gujarat to Parliament's decision on the future of the Bombay State has come as a shocking surprise. The industrial and commercial-minded Gujarati is seldom tempted to seek redress for any kind of grievance through creating street situations. On the question of Bombay, public opinion in Gujarat was supposed to have been getting more and more in favour of a bilingual set-up in which the Bombay City could be retained as a common possession.

The SRC recommendation was acceptable to Gujarat though even then the Maharashtrians would have secured an inevitable majority in the legislature. In the new Bilingual State, the Maharashtrian majority would be greater, as Vidarba has also been thrown in. That perhaps makes a substantial difference to the emotional reaction of the politically-minded section in Gujarat to the new decision. But by itself, the fear justified or otherwise, of the large non-Gujarati majority would not have impelled any leader in Gujarat to call for strikes or hartals, let alone incite violence, in protest against a decision by the sovereign body in the State.

It is significant that there was sincere revulsion in Ahmedabad against the demonstrations in Bombay initiated by the Samyukta Maharashtra group. Of course, no one at that time thought that it was going to be Gujarat's turn to be the aggrieved party in the matter of re-organisation. But the feeling of resentment over violence was there and the fact that the community had great stakes in Bombay was also partly responsible for this feeling. One could believe that at that time, any arrangement under which Bombay could retained as common property would be nearly universally acceptable to Gujarat.

But there was another unfortunate development in the meanwhile. Maharashtrian militancy began to arouse new misgivings about the future and when a decision was taken under which Gujarat's place in the State will be smaller than even under the SRC scheme, these misgivings got sharper. There is also the imperceptible impact of the unholy examples of violence in many other places.

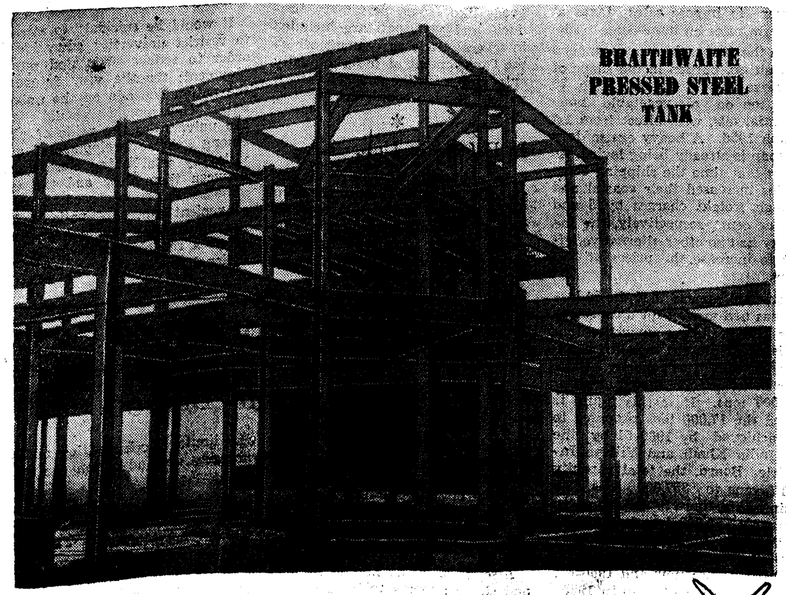
In this rough assessment of the background, one should not omit another circumstance. The propaganda in favour of Maha-Gujarat continued unabated all these months. And it was possible for the sponsors of Maha Gujarat to believe that this dream could be fulfilled along with Bombay being retained as an independent State. The new prescription imposed by Parliament was therefore all the more disagreeable to this section.

On the top of all this, the Opposition Parties, discomfitted as much over the decision for a Bilingual State as over the break-up of the ad hoc, though uneasy, partnership with a Congress Wing in Maharashtra, exultingly grasped the opportunity for mischief-making in Gujarat. There was wide-spread disappointment and fear. There was some excitement and the readiness to respond to a call for protest.

From the Congress side the leaders were not quite prepared to convey the message of the new decision enthusiastically and forcefully to all the elements in Gujarat's political life. In this situation, the Opposition leaders found an alluring opportunity to rouse up an agitated and confused people and give them a direction so tragically unlike what they have been traditionally accustomed to receive. The result was seen in the last week's outbursts and in "the private curfew" which drove Mr Morarji Desai into the momentous decision for a fast.

The above analysis is endorsed by the following paragraph from the Gujarat Provincial Congress Committee's official Resolution on the subject of bilingual Bombay, adopted at a meeting conducted after the police firing. Since several months, the people of Gujarat believed that a separate State of Gujarat will be formed and the public mind was developing in that direction. Therefore, when there was sudden change in the situation and a decision to form a bilingual State was taken, the people of Gujarat to a certain extent experienced a shock and it became somewhat difficult for them to bring themselves in harmony with the situation created by the new decision.

In the same Resolution, the Committee recalls why in its memorable Mehamadabad session, it could not accept the bilingual State then proposed and now it has always acted with discipline and has carried out to the best of its ability the decision of the Congress Working Committee.



The Committee has now categorically and unreservedly accepted Parliament's decision; but the presentation of the recent political background cannot be lost sight of.

On August 19, the day on which Mr Morarji Desai intended to address a public meeting at Ahmadabad, the city presented the peace of a grave-yard. The principal initiative came from "a Citizen's Committee" which asked the people to observe self-imposed curfew to protest against the decision on the bigger bilingual Bombay State and against the police firing on demonstrators in Ahmedabad and other places. Some mills were working in the morning but they were also soon closed. In a few mills, the workers went to work but the managements are reported to have asked them to keep idle. The mill-owners themselves closed down a few mills. Others were made to close by stonethrowing and few people dared to violate this non-official curfew.

The Bombay Chief Minister was himself surprised to see this state of affairs. He confessed that he could never imagine how such things could happen in Ahmedabad.

The same day, addressing a public meeting under the auspices

Gateway Notes

Prospects of Soap Industry

The year 1955 has been a fairly satisfactory period for the Indian Soap Industry. Though the problem of idle capacity continues to dog its steps, there is some consolation in the fact that during the calendar year 1955, production of soap in the organised sector has risen from 88,000 tons to nearly 1,00,000 tons after four years of stagnation. A notable feature is that the aggregate production at 2,20,000 tons is in excess of the First Five Year Plan target by 20,000 tons.

Thanks to the withdrawal by Government of the exemption from the excise duty enjoyed by soap factories using no power or process steam, the organised industry has one handicap less to contend with. In common with other industries, the soap industry also hopes to derive considerable relief from the difficulties and confusion arising from varying sales tax laws in different States, consequent on the passing by the Lok Sabha of the Sixth Amendment to the Constitution, under which the Central Government have been given the power to impose sales taxes at uniform rates on inter-State trade

On the debit side, there has been a fresh tax burden in the shape of an exise duty at the rate of Rs 70 per ton on all vegetable non-essential oils, with effect from 1st March 1956. A heavy excise duty on soap is already being levied. As about that time the shipping companies increased their coastal and foreign freight charges by 5 and 10 per cent respectively, the industry had no other alternative left but to increase the prices of all soaps.

It would appear that the industry has had to wait for a considerable time yet to get anywhere near utilising its present installed capacity in full. The capacity of the soap industry is estimated at about 340,000 tons. If to this figure is added the 17,000 tons proposed to be achieved by 1960-61 by the All India Khadi and Village Industries Board, the total capacity will come to 357,000 tons. As against this, there is the estimated demand of 30,000 tons by 1960-61 on the basis of an increase of 7½ oz in the per capita consumption of soap between now and 1960-61. The consumption of soap in 1955-56 is assumed to be about 200,000 tons. It may be noted that the idle capacity of the industry is of the order of 140,000 or 40,000 tons more than the increase envisaged in consumption in the course of the next five years.

Owing to the high cost of production of Indian soaps, the prospects of exports also do not seem to be good. The Planning Commission observe: "The subject was discussed with the representatives of the industry who were of the opinion that exports could perhaps be stepped up if the duties on imported raw materials were refunded on the exported product. The matter was subsequently examined in the Ministry of Commerce and Industry and it was found that there would be considerable administrative difficulty in determining whether imported or indigenous raw materials, for example, caustic soda and coconut oil, had been used in the manufacture of exported soap".

Speaking at the annual general meeting of the Tata Oil Mills Company, Limited, Mr J. R. D. Tata, chairman, has, however, indicated that the prospects for marketing Indian toilet soap and hydrogenated oils in foreign markets are promising. In this connection he has pointed out that "rapid progress can be made if consumer goods like soap, perfumery products and vanaspati are included in several trade agreements which the Government of India annually enter into with the governments of various foreign countries."

*

In Defence of Universities

An unhappy off-shoot of the large-scale unemployment in the country is the emergence of a tendency to look down upon University education. The increasing tempo of industrial activity with its large demand for unskilled labour has thrown into bold relief the problem of unemployment among the educated. Since the Universities are turning out quite a sizable number of graduates every year, it is taken for granted that they are to blame for this unsatisfactory state of affairs. The surprising thing about all this is that such a view finds support even in circles who wield considerable influence over Government.

Addressing the Convocation of the Bombay University early this week, Mr Hare Krushna Mahtab, Governor, declared that Government rather than the universities were to blame for the overcrowding in colleges. The fact that for almost all Government jobs a university degree was stipulated as the minimum qualification was responsible for the craze for college education.

The remedy though simple enough could be applied only by Government. A welcome change in the trend would ensue once qualifying tests other than university examinations were prescribed. Such a move was all the more urgent because Government were emerging as the biggest employer.

It would be suicidal to attempt to restrict university education in order to reduce educated unemployment; for the very future of the nation depends on the universities. Government should give the universities the pride of place among their developmental activities by establishing close liaison between themselves and the universities. Far from viewed as an inconvenient aspect of national life, the universities should be regarded as a reliable guide in shaping national policies.

GATEWAY MARKETS

Flare-up in Bullion

BULLION rates flared up further last week on renewed speculative manipulations. The uncertain political outlook and a consequent upward trend in the prices prevailing in New York and London also aided sentiment.

Also, investment buying in gold and silver appears to have started about a month earlier this year. Usually, the busy season starts after September 15 and lasts till "Diwali". This year, however, a majority of investors appears to be keen on enlarging their commitments in right earnest in view of the limited stock position and increasing demand from the "jari" industry.

Sentiment was cheerful in the Gold section though the sizeable advance was limited later on by obvious readiness to take profits. Gold Shravan started at Rs 104-2 and, after touching a high of Rs 104-2-6 and a low of Rs 103-12, finished, at Rs 103-14-6. Gold Bhadon commenced at Rs 103-15-6 and, after touching a high of Rs 104-2-6, receded at one time to Rs 103-11 on liquidation, to finish better at Rs 103-14-6. Gold spot was quoted around Rs 103-14-6—the highest level touched being Rs 104-3-6. Arrivals amounted to 2,000 tolas as against an offtake of 3,000 tolas. Unrefined metal receipts totalled 3,300 tolas. Sovereign was quoted firm at Rs 67-4.

Higher offtake kept the Silver section very firm. The demand was substantial from Calcutta and Surat. Moreover, arrivals of Tibetan coins during the past three months had been easily absorbed. Arrivals in Bombay amounted to only five bars; but the offtake was heavy at 35 bars. Local offtake amounted to as much as 15 bars, while the rest went to Surat. Unrefined metal receipts totalled 19 bars.

Silver Shravan delivery opened at Rs 172-4 and, after touching a high of Rs 172-12, receded at one time to Rs 171-14 following depressed sales from Delhi, to finish better at Rs 172-6. Silver Bhadon started at Rs 172-11 and went up to Rs 173-3; but there was a decline to Rs 172-5, finally closing at Rs 172-14. Silver spot was quoted at Rs 172-10—the highest touched being Rs 172-15.

*

Oils & Oilseeds

Trading in the Oilseeds market was highlighted by a sharp decline in Castor futures after the marked early firmness. With improved offtake in the ready section and reported deals at higher levels with the USA, there was a regular scramble for contracts. Castor September delivery, commenced at Rs 146-2 and, after touching a low of Rs 144-14, improved toward the close to Rs 146-4. May delivery commenced at Rs 131-0, declined to Rs 129-12, improved again to Rs 131-8, finishing at Rs 131. In the ready section, Madras quality was quoted around Rs 29-8.

The Groundnut section continued to rule firm. The Punjab interests were on the forefront and other upcountry dealers were also bullishly inclined on fears that the crop in Hyderabad and Khandesh might suffer in the absence of a much-needed bright spell. Groundnut February delivery shot up at one time to Rs 143-4 from Rs 137-10, to finish the week at Rs 141-12. The ready section ruled rather quiet with the Bold quality quoting around Rs 36-0 and Coromandel at Rs 37-0.

The market for Linseed ruled steadier, ready being quoted at Rs 31-12 to Rs 32-0.

In the Oils section, Groundnut ready ex-mill delivery was quoted at Rs 59-8; Nigerseed at Rs 17-14 and Kardiseed at Rs 18-12.

World *of* Cotton

Buoyancy in Futures

THE Bombay Cotton market remained closed on Monday and Tuesday and, during the period the market remained open, conditions in the futures section remained quiet cheerful and prices forged ahead due to bear-covering and professional support, induced by unfavourable crop developments due to the heavy rains.

In general, the outlook for cotton appears to have undergone a radical change in the past few days, particularly after the recent heavy rains in many cotton areas. An easy trend, witnessed till July 25, has completely disappeared and the futures market has not only recovered its previous losses, but gained substantial points on apprehensions that the supply position will continue to be tight in the 1956-57 season.

The rise in prices is also attributed to rumours with regard to a reduction or abolition of the present export duty of Rs 50 per bale. There are also rumours that the Government may release a fresh export quota by way of revalidating the remaining half of the unutilised export licences issued in the current season. The cumulative effect of all the above factors has led to a spurt in the prices of both the contracts. Jharilia March delivery, after touching a new high of Rs 703-8 from Rs 692-12, finished the week at Rs 702-8. Similarly, Vijay April delivery touched a new high of Rs 833-8 from Rs 825-8, to finish at Rs 832-0.

The buoyancy in futures was also reflected in the Spot section where prices of all varieties advanced as a result of buying by mills. The textile mills, producing fine cloth, were keen buyers of cotton even by raising "on" allowances. Traders feared that the cotton of the new season might also be subjected to wide disparity between ready and forward rates despite the precautions taken by the Forward Markets Commission. Following rates were quoted:—Zoda Rs 600; Bengal Rs 700; Rajasthan Rs 750; Vijay Rs 725; Khandesh Rs 775; Berar Rs 780 Mugiai Rs 471 'on'; Manavadar Rs 707 and Pachora Rs 785.

In the export section, the enthusiasm, witnessed after the announcement of new quotas, partly receded since export prospects were not considered to be very bright for the time being. Due to the cheapness of Pakistan cotton, the overseas markets were found to be more interested in that cotton rather than in the Indian cotton. Japan has not got the requisite sterling, while European countries are not inclined to buy Indian cotton at the current level of prices.

CROP OUTLOOK

Fears about the delay in the marketing season and inferior quality of the new crop have been entertained by the trade. Excessive rains, it is reported, are not likely to tell adversely on the total output, which has been placed around 50 lakh bales. The quality may, however, suffer in a number of areas. Since the indigenous crop is barely sufficient to meet the mill demand, imports to the tune of about 10 lakh bales are badly needed for the 1956-57 season.

×

EGYPTIAN COTTON

As an offshoot of the Suez Canal dispute, has come the question of mode of payment for purchases of Egyptian cotton by Sterling Area countries including India. So far, no official indication has come from the Government of India Private reports received in some of the leading cotton houses have, however, stated that the Egyptian Control Authorities now require that, for cotton shipped to England or any Sterling area country including India, settlement must be effected in either Swiss Francs or Belgian Francs or Deutsche Marks or Portuguese Escudos. It is, therefore, inferred that the same regulations will apply in regard to shipments to India also, in so far as the 60 per cent portion, which until recently could have been settled in sterling. In the circumstances, trade circles are naturally worried and expect some clarification from New Delhi.

As against this background, the latest acreage figures received from Egypt assume some significance (figures in Feddans):—

	1956-57	1955-56
Karnak ..	607,862	786,328
Mencufi ..	156,696	53,177
Giza 47 ..	1,302	1,169
Giza 30 ..	333,212	326,698
Dandara ..	16,084	3,749
Ashmouni ..	536,966	644,234
Others ..	755	342
Total ..	1,652,877	1,815,697

×

KARACHI COTTON MARKET

Despite the release of 20,000 bales of Bengal Deshi for export from India and the Government of India's announcement revalidating licences for half the quantity of cotton remaining unshipped, the Karachi cotton market ruled steadier. This was mainly due to good demand on export account, which suddenly cropped up as there were fears that purchases of the Egyptian cotton would be affected due to the payment difficulties.

Operators are expecting that the demand for cotton will be considerably increased in the coming weeks as several cotton consuming countries may divert their attention to purchases of Pakistan cotton. But Pakistan is not in a position to offer much cotton, the quantity bought in from the last crop being less than 100,000 bales. Sind Deshi was quoted at Rs 99; Punjab Deshi at Rs 91; 4F at Rs 78-4; 289F Punjab Roller at Rs 83-8 and SG at Rs 90-4.

×

NEW YORK COTTON MARKET

Trading in the New York cotton market was fairly active. The failure of any large-scale headging unusual at this time of the year, reflected the current buying movement assisted by better export sales and unfavourable crop news. Spot was quoted at 34.25 cents per pound.

The Crop Reporting Board of the USA Department of Agriculture has estimated that the 1956 crop will produce 13,552,000 bales of 500 pounds each, the final figure for 1955 crop being 14,721,000 bales. The next crop report of the current season will be issued on the 10th September, 1956.

×

LIVERPOOL COTTON MARKET

Although prices in the Liverpool cotton market eased slightly on commission house selling and modest hedging early in the week, they improved toward the close on trade buying and mill price-fixing which found offerings limited. The market closed steady for both the contracts. The Suden contract which eased early in the week, was found to attract buyers at the close.

×

CLOTH AND PIECEGOODS

There was a better demand for cotton piecegoods during last week. Prices of Grey goods staged a modest advance due to a comparatively larger offtake, while those of other qualities were more or less unchanged.

According to provisional figures available, production by mills during July last is placed higher at 478 million yards as compared to 447 million yards in June and 446 million yards in the corresponding month of last year. Production of Yarn has also improved from 137 million pounds in June to 145 million pounds in July.

Conditions on the export front were not satisfactory. There were only scattered enquiries from abroad. This was attributed to higher prices being quoted by mills as also to the fact that the regular buying season had not yet commenced.

*

WORLD OVERSEAS

(Continued from page 361)

fledged open market operations, by promoting direct marketing and interbank dealings in government short-terms bonds. This signifies a step forward from the previous practice of conducting operations between the central bank and commercial banks. Accompanying the change, the interest rate on government short-term bonds was reduced from 5.48 per cent to 5.29 per cent.

*

The Japanese Government has announced to the foreign exchange banks concerned the complete abolition of the Letter of Underaking and Authorization (LUA) System, effective from August 16. As of December 20, 1955, LUA documents for foreign exchange transactions exceeding six months had been terminatd in view of the gradually rising credit standing overseas of Japanese banks, which accompanied the favourable turn in the country's international reserves (see this News Survey. Vol. VIII, p. 201). The latest action signifies a further step toward normalizing Japan's foreign exchange transactions.

Although the reaction of foreign banks is not yet clear, it is expected that they may require deposits for establishing Letters of Credit, may decrease the credit line already extended to Japanese banks, and may require Japanese banks to increase to 10-20 per cent their foreign exchange deposits for Letters of Credit and usance bills.

*

The Japanese Ministry of International Trade and Industry has decided on a rationalization program for the coal mining industry, to be put into pratice during the current fiscal year, April 1956-March 1957. Under the program, annual production will be raised to 46.3 million tons, from the 43.0 million tons scheduled for the fiscal year 1955-56. Output per miner is to be increased to an average of 14.5 tons per month, compared with the 1955-1956 average of 13.2 tons. For general improvement of the industry, about 16.1 billion yen will be spent. Ten new shafts will be developed, in addition to the 26 shafts now in process.

*

The Ministry of International Trade and Industry of the Japanese Government has fixed the target for iron and steel exports in the current fiscal year (April 1956 March 1957) at 1.8 million tons, valued at US$323 million. This target is 105,000 tons less in volume, and $49.4 million more in value, than exports in fiscal 1955-56. The decline in volume results from an estimated drop of some 600,000 tons in shipments to Argentina; the higher value is due mainly to an increase in exports of high priced products.

Delhi Review

Olympus

Export Credit Insurance

ONE of the larger question-marks about the assumptions of the Second Plan is its estimates regarding our foreign trade. These are of crucial importance not only because of their relevance to the estimates of the overall resources of the Plan, but also because of the narrower problem of our ability to find the money in kind for the various capital goods we desire to import for the massive plans of industrial expansion under the plan. Moreover, there are the incidental imponderables like the consequences of a possible inflationary pressure which might necessitate the import of consumer goods cutting deeply into the import of capital goods for development purposes. Even without providing fully for this contingency, the gap in foreign exchange resources is of abysmal proportions and credit for considerable amount of foreign aid and for a modest drawing from reserves already built has been taken into account, in the framing of the estimates. The need for maximising the exports and cutting to the bone of inessential exports cannot, in the circumstances, be over-estimated. The export promotion council that met in May last emphasised once again this rather obvious truism and exhorted that steps should be taken to explore every possible avenue of further exports.

Judged by the figures of export earnings for the current year, it does not appear that such exhortations have gone home. The provisional figures of exports for the first quarter of 1956-57 show a decline of Rs 24 crores from the figures for January-March 1956. It is true there has also been some decline in the figures for imports, for the corresponding period, but that is a mere Rs 3.76 crores. In any case, a decline in import is not necessarily a matter for gratification in the present state of our development programme. The only consolation is that export earings for the year 1955-56 were rather exceptional, having touched the record figure of Rs 591.31 crores. Even the Plan provides for only Rs 573 crores of exports earnings for the year 1956-57. But then, since the Plan provides also for a considerable uncovered gap in foreign exchange resources, the consolation can only be of a rather illusory kind.

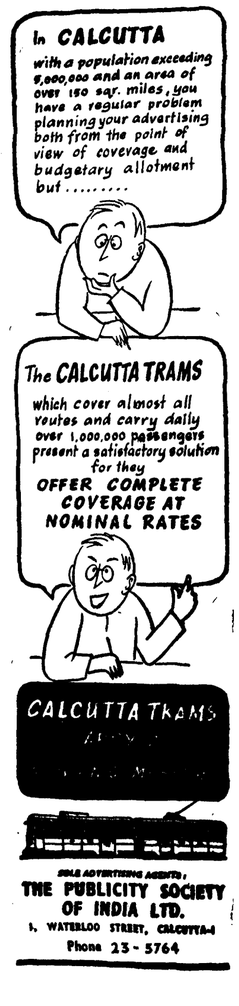
It is not disputed that, in the next few years, our chief sources of foreign exchange will be our traditional exports of cotton and jute textiles, tea, a variety of raw materials and ores and increasing quantities of semi-manufactures and light engineering consumer goods to comparatively undeveloped regions. While the traditional exporters will have to maximise their efforts to increase their earnings abroad by a planned and concerted effort at combating rivals in existing markets and capturing and retaining new markets, there is considerable scope for a variety of "minor" producers who should be encouraged to conquer fresh worlds abroad for their products. The need for diversifying our export pattern has been emphasised often enough, but practical steps in this direction have not been taken in any planned way.

One such step has been suggested by the report of an expert committee appointed in January this year by the Ministry of Commerce and Industry, to examine the possibility of a scheme of Export Credit Guarantees. The report has been submitted to the Government recently and is under examination. Details of the scheme prepared by the committee were released to the public here last week.

One of the well-known reasons for the comparative lack of interest in the export of new commodities has been the unwillingness on the part of many to take the risk of possible loss in a pioneering venture. Another difficulty has been the inelasticity of credit facilities for comparatively "smaller" businessmen. To obviate the first difficulty to some extent, the expert committee has recommended the immediate formation of an Export Risks Insurance Corporation with a capital of Rs 5 crores, wholly owned by the State.

This capital of Rs 5 crores is expected to enable the corporation to carry, at any time, a risk up to Rs 50 crores. The guarantee given by the corporation will extend principally to Indian exporters, but it will also be available to persons belonging to foreign countries regarding goods or services rendered from India.

This corporation is to be managed by a Board of Directors consisting of seven members including a whole time chairman or managing director. It is to be assisted by an advisory council of not more than 21 persons from the export trade, banks engaged in financing exports, export promotion councils and commodities boards. Two of the directors of the corporation will be elected by this council. The council will advise the corporation regarding the insurance needs of the export trade, the changes in such trade pattern and the steps to be taken to provide for the new conditions.



The risks covered by the insurance are both commercial and political and these include any cause not being within the control of the exporter or of the buyer which arises from events occurring outside India. The commercial risks cover a wide variety of contingencies and liberal provisions regarding the duration of the risk have been suggested. Risks on consignment of goods, on goods sent for exhibition at fairs abroad and for monies due for services rendered or goods sold are all provided. The risks both before and after shipment are covered for varying periods depending upon the nature of the commodities. The risks recommended to be covered are up to 80 or 85 per cent of the value of the invoice price depending upon whether the risk covered is a commercial one or a political one. For promotional policies, it has been recommended that 50 per cent of the unrecouped expenses should be insured.

The majority recommendation is that this scheme should be worked on a voluntary basis to begin with. (One member wanted it to be compulsory from the beginning). If, however, after the facilities provided by the corporation have been available for a reasonable time and there is demand from any particular trade that the scheme should be extended to the whole of the export business of that trade, the demand should be considered favourably. The advantage of covering the entire trade in this fashion is, of course, the possibility of reducing the premium rates—a reduction of 15 to 25 per cent in the rates being considered feasible by the committee.

For the fixation of premium rates, a variety of factors has been recommended to be taken into consideration. These include the types of risks and their causes, the markets to which the goods are exported, the types of goods, the period for which the risks is covered, past experience of exporters and expenses of managements. The committee has recommended that, for this purpose, countries should be classified into six groups and commodities into three. The scheme is to be worked on a no-profit-no-loss basis: this is perhaps not a very good suggestion, since some initial book-keeping loss in this venture may well be worth while, if exports are increased as a result of somewhat lower premium rates.

So far about the insurance aspect of the new corporation's functions. It has also been recommended that steps should be taken to make export finance and credit easily available to small and medium-sized firms who cannot find finance easily from the open market. The principal recommendation in this regard is that, in the case of contracts of national importance, guarantees to bank with no recourse to buyer should be issued, provided the exporter has been approved for the purpose. A second suggestion is that banks should, as agents of

Delhi Review

Upward Trend in Mineral Production

The fact that the value of minerals produced in 1955 is 18 per cent higher than in 1951 indicates that measures taken during the First Five Year Plan period to step up production, among other things, have borne ample fruit. The plan made a seven-fold recommendation in the case of coal while with regard to other minerals, it had suggested detailed investigations with a view to a proper assessment of the quality and quantity of the more important deposits of iron ore, manganese ore, chromite, copper ore. bauxite, gypsum and pyrities, investigations on the beneficiations of low grade ore particularly manganese ore, and chromite and enforcement of systematic methods of mining.

With the emphasis placed on industrial development in the Second Five Year Plan, increasing attention is naturally being bestowed on a programme of intensified mineral development. The target of 6 million tons for steel ingots presupposes large-scale increases in the output of iron ore, coal, limestone and delomite and refractory materials.

The plan accordingly has estimated the demand for coal at 60 million tons per annum and has drawn up several schemes for the investigation and exploitation of copper, manganese, chromite, gypsum, lead, zinc and tin and other minerals and non-metallic minerals deposits.

It has been decided by Govt. that of the additional production of 22 million tons of coal envisaged by 1960-61, 12 million tons should come from collieries in the public sector, either already existing or to be newly opened and that the balance should be raised by the private sector from their existing workings and immediately contiguous areas. The expansion of production by the establishment of new collieries will be undertaken wholly in the public sector. Of the 12 million tons to be produced in the public sector, 2 million tons will come from existing workings—500,000 tons from existing collieries, principally Bokaro and 1.5 million tons from Singareni—and 4 million tons are proposed to be obtained by the development of the Korba coalfields.

During 1955, production of minerals increased to the value of Rs 87.3 crores from 83.4 crores in 1954. Production of iron ore reached a new peak of 4.64 million tons valued at Rs 3.24 crores which was 10 per cent higher than in 1954 and 27 per cent higher than in 1951. The Second Plan envisages a three-fold increase in the production of iron ore to 12.5 million tons in 1960-61. Allowing for a domestic consumption of 10.5 million tons, it is expected that by the last year of the plan exports will increase to 2 million tons from the present level of about 1 million tons.

Coal production was higher in 1955 by 3.6 per cent at 38.23 million tons valued at Rs 56.03 crores. Output of mica was nearly 27 per cent higher than in 1954 but was still 32 per cent below the 1951 level. Manganese also showed an upward trend being of the order of 1.57 million tons valued at Rs 10.82 crores. Output of gold was considerably lower at 210,880 oz valued at Rs 3.30 crores compared with 239,162 oz valued at Rs 5.62 crores while silver also dropped from 17,199 ozs valued at Rs 70,800 in 1954 to 15,425 ozs valued at Rs 60,768 in 1955.

The average daily employment in mines also increased to 590,745 in 1955 from 568,254 in 1954.

*

Double Check on Films

The news that Government are considering the question of setting up a National Film Board which will have a Production Bureau and a Film Finance Corporation, will be welcomed by all those who wish to see our film industry reach a high level. While the film corporation will help in the production of good films by rendering financial assistance, the bureau will examine scripts before films are produced.

With the Film Censor Board exercising control over exhibition of films and the proposed bureau scrutinising scripts before production of films, it may be expected that considerable improvement will be effected in eschewing historical inaccuracies and religious distortions from our films. The problem of improving quality, however, will have to be tackled by the industry itself.

Mr N. M. Lingam who sponsored a resolution seeking to amend Article 19 (2) of the Constitution so as to enable Government to effectively control and regulate the production and exhibition of films, wondered why the film industry should have been left free when Government were excercising strict control over the Radio and the Press.

Stating Government's film policy, Dr B. V. Keskar, Minister for Information and Broadcasting, made it clear that though Government were not keen on controlling or regulating the industry, they were alive to the need for some checks on such a means of mass communication, entertainment and education. He pointed out that the Film Censor Board had already done yeomen service by effecting considerable improvement in the standard of films in the country. It was, however, to be admitted that real film reform which was a constructive process could be carried out only with the fullest co-operation of the film producers.

NORTH INDIAN MARKETS

Firmer Tendency in Shellac Prices

THE Shellac market in Calcutta continues to rule firm, Pure TN variety quoting around Rs 135 per maund as against only Rs 130/8 quoted in the previous week. Although turnover remains small, foreign buyers continue to show interest in taking their normal requirements. Enquiries from the USA are also good.

Market circles believe that the present trend of prices will be maintained until the marketing of the Siamese and Katki crops commences at the end of next month. Also, stock-holders in the upcountry centres are taking a bullish view and, with the result, arrivals into Calcutta are much lower than is usual at this time of the year.

Stocks of shellac, in Calcutta, are estimated around 30,000 maunds. The trade seems to think that the Bysakhi crop must have been around 800,000 maunds or about 200,000 maunds larger than last year's crop.

In the London market, shellac for December delivery is quoted around 306sh per cwt with sellers at 310sh. February delivery is quoted at 297sh 6d and April delivery at 292sh with sellers at six pence per cwt more.

*

Sugar

The Sugar market at Hapur continued to rule quiet as the demand was small due to rainy season. Mill delivery prices moved within a narrow range. Following rates were quoted (per maund):—Jaswant Rs 28-9; Simbhauli Rs 28-11; Mowana Rs 28-8 to Rs 29-8; Daurala Rs 29 to Rs 30; Amroha Rs 28-2; Bijnore Rs 28-2; Mansoorpur Rs 29 to Rs 30-2 and Rampur Rs 31.

The Khandsari market remained depressed in the absence of any buying enquiry with the rates moving between Rs 23 and Rs 27 per maund, according to quality.

Meanwhile, there are reports that the sugar factories in the Bombay State will have, in all likelihood, to pay higher prices for the cane they will be buying from growers during the next crushing season. The State Government are understood to have suggested that higher prices should be paid to the growers in view of the wide margin of profit to the industry.

In the Deccan, the sugar factories, run by joint stock companies, have their own estates; but they are unable to acquire fresh lands on lease under the Tenancy Act in order to augment the supply of cane for the increased capacity. The State Government are also reported to have turned down their request for locating co-operative sugar factories in areas at less than 20 miles away from the existing factories in order to assure them of an adequate supply.

*

Gur

The Gur market at Hapur continued to rule firm with the rate for dry quality advancing further from Rs 13-0 to Rs 13-4 per maund in view of low stocks. Kotha quality was quoted around Rs 11-0 per maund and stocks of this quality were estimated around 24,000 maunds.

Last week's offtake was mostly to Gujerat. The rains, during the week, have benefitted the standing cane crop.

*

Foodgrains

Foodgrains markets continued to rule steadier. The Union Government are proposing to open large number of fair price shops for selling Rice and Wheat with a view to checking the rise in prices. Steps have also been taken by other State Governments like West Bengal, the Punjab, Assam and Madhya Bharat.

In the Hapur market, Wheat prices ruled at Rs 15-4 per maund for the average quality and Rs 16-4 for farm quality. Daily arrivals were small due to rains. Prices of Rice ruled quietly steady, and advices from Madras and other markets in the South still recorded a firm front.

Arrivals of new "Khariff" crops have not yet begun and as such pressure of consumers' demand is still concentrated on "Rabi" Coarse cereals. Gram prices advanced further on firmer Punjab and Madras advices, although fresh arrivals from the Punjab have resulted in swelling local stock. Barley and Bajra continued to find support from consumers as the market is faced with good demand and poor stocks.

Madras Review

The Peninsula

The Mysore Manoeuvres

Mr MORARJI Desai is reported to have said that he was the first casualty in Bombay's reorganisation. One hopes that he was only referring to his office of the Chief Minister and that his fast will end in a manner which will be not only pleasant to his friends and admirers all over India but bearing fruitful repercussions on the politics of that afflicted State. As Chief Minister of Mysore, Mr Hanumanthayya, has become another first casualty, this time in the process of the reorganisation of Mysore.

People at a distance may wonder why a regime which has been fairly successful should be thrown out at a time when serious problems are awaiting the Government. Since the Second Plan as also the administrative changes consequent on reorganisation would form a tall order on the energies and capacity of any Ministry, there was even greater reason, from a purely objective standpoint, to have kept the Hanumanthayya Cabinet in tact, with the ungrudging support of all the elements in the Congress Party. That this has not happened betrays the mischievous tendencies which have come to spoil the springs of political life in Mysore. Anyone who has intimate knowledge of the background of Mr Hanumanthayya's exit will be tempted to use unvarnished language in describing certain evnts..

For some years politics in this State has been obtrusively caste-ridden. To speak of caste in Mysore would be a gross understatement. It is a matter of sub-castes and even groups within the sub-castes. Election results could invariably be predicted, if one knew the sub-caste to which each candidate belonged. Even nominations of party candidates let alone the appointments to the Ministry, are very often made primarily with reference to this criterion.

For this reason, Mr Hanumanthyya's political destiny could also have been predicted by shrewd observers even from the time when he started supporting the United Karnatak move. He himself knew that he was courting unpopularity. Even now a large section of Mysorians have not reconciled themselves emotionally to the territorial enlargement of the State through the addition of South Canara on the one side and the Canarese speaking districts from Hyderabad and Bombay on the other.

This enlargement is expected to result in an overhaul of the balance of power which now prevails between the more important sub-castes. Mr Hanumanthyya's anxiety to welcome the new districts was even given the colour of a surreptitious bid for a more stable kind of majority support. Anyway, his advocacy of United Karnataka is the main cause of his down-fall. His warm preference for a Dakshin Pradesh and his appeal to the neighbouring States to join Mysore to form a large multilingual unit damaged his influence further. To those already irritated by the Ex-Chief Minister's enthusiasm for a Karnataka State, his love for Dakshin Pradesh look like lancing a sore.

The real causes behind last week's show-down were sought to be obscured by certain superficial charges against him as head of the Government. For instance, it was said that he wasted a great deal of money in building the Assembly Hall. Surprisingly enough, there were also tributes from others to his magnificent vision in having conceived such a structure and implemented the idea in record time.

One does not like to figure as an advocate for Mr Hanumanthayya or for any group in Mysore. The possibilty of administrative blunders cannot be discounted with reference to any leader. What has to be recognised is that in the present case, the mistakes and blunders have never been such as could be utilised to dethrone the incumbent of the highest office in the State. It was the combination of political circumstances, which by the way is a courteous translation for group intrigue which could explain the event.

The Congress High Command has handled the situation rather satisfactorily, though they could have given Mr Hanumanthayya fuller opportunities for explaining his position and vindicating his record. Possibly, certain things have taken place which have not become public property yet.

The formalities of the change of regime started with the summoning of a meeting of the Mysore Congress Party by Mr Hanumanthayya himself, on a directive from the Central Congress Parliamentary Board. The Board was acting in response to the move of fifty-seven members of the Mysore Assembly to pass a no-confidence motion in the Chief Minister. At the Party meeting, all but one of the members were present, a circumstance which shows how deeply the personal factor had come to agitate the public mind. The whips on either side should have been very active.

Thanks to the sweetness and charm of Mr K. P. M. Nair, General Secretary of the all-India Congress Committee, who presided over this meeting, there was hardly any sign of excitement trying to get articulate. The cold formality of the meeting was also in part due to the fact that every step was pre-ordained and regulated and no one had doubt as to what would be the outcome.

The acceptance of Mr Hanumanthayya's resignation was a matter of course. From the side of the party, it was unanimous. Subsequently, Mr Kadidal Manjappa and Mr Hanumanthayya proposed as candidates for the election of a leader. Counting the ballots after the secret voting, Mr Nair announced that Mr Manjappa was elected leader of the party by a very subsantial majority.

Mr Manjappa, an agreeable-looking middle-aged Congressman with a prominent record as a fighter for freedom and as a member of the Mysore legislature, who became automatically the Chief Minister-designate, has now announced his Cabinet. He himself has been the Minister for Revenue and Public Works in the previous Ministry. At a Press Conference after his election as leader, he acknowledged his ex-leader's affection for him during all the four and a half years the two were together. He was also outspoken about the existence of two groups in the Congress Party within the State and with pardonable pride he told the pressmen that he had been trying to be friendly with both and therefore could hope for all-round co-operation.

Knowing the potentialities for fresh adjustments which reorganisation would bring in its train, one should not hesitate to record the apprehension that the last word has not yet been said on ministry formation in Mysore. It is significant that when asked whether he would stand for leadership in the legislature after the new elections, Mr Hanumanthayya said that it would all depend on the conditions obtaining at the time. What he obviously wanted to convey was that he had no intention of giving up the fight, if he found the prospect of more substantial political support in the newly constituted legislature. This means that the personal and group rivalries which led to the recent crisis will secure a new lease of life and find perhaps aggravated expression under the coming set-up.

*

BRITAIN IS BECOMING STATISTICS-CONSCIOUS

(Continued from page 357)

Arthur Burns paid a visit to London he made British Government officials turn green with envy when he told them that Government departments in the United States know the volume of automobile production in a matter of days.

Shortly before the Budget Sir Robert Boothby led an all-Party Delegation to the Treasury to urge the Chancellor to undertake a drastic improvement of statistical services. Mr Macmillan promised to do so and repeated his promise in his Budget Speech. The first instalment of the proposed improvements was announced in August. More frequent and more detailed figures will be secured on industrial production. The existing collection of data concerning fixed investment and stocks in the distributive and services trades will be made compulsory. On the part of a Conservative Chancellor of the Exchequer this is a bold step because, in the view of Conservative businessmen, statistics flavour of Socialism, and compulsion of any kind is distasteful. Steps are being taken to secure detailed information on new building contracts.

Firms in Britain announce their profits annually. The Government intends to invite a number of firms voluntary to provide quarterly estimates of profits.

Other improvements are expected to be introduced when Sir Roger Makins will be in charge of the economic and financial sections of the Treasury. One of the reasons for his appointment was that in his capacity of British Ambassador in Washington he had an opportunity of studying American statistical methods and the use made of statistical material for the shaping of American economic policies. As the brother-in-law of Sir Roger Makins occupies a high post in the economic service of the United States Administration he was particularly well placed to study American methods during the years he was at the Washington Embassy. It is hoped that his appointment will mark a turning point in the official British attitude towards economic statistics. So that British economic policies will cease to be a matter of more or less blind guess work.—(Copyright).

the Government, provide financial help for the purchase of Indian exports on extended payments. One cannot help feeling that these facilities are somewhat grudgingly offered. It is true that the principal object of the corporation is to provide insurance, and not credit facilities, and that the Government should not in these matters bite off more than they can chew. Even so, it would be worth while to examine whether the proposed corporation cannot usefully extend its credit facilities to bona fide aspirants for a share of India's expanding export markets.

Madras Review

South Indian Notes

Andhra's Second Five-Year Plan

Nearly half of the total outlay of Rs 118.96 crores is under Irrigation and Power in Andhra's Second Five Year Plan. As a consequence, the outlay on the first year programme also discloses a similar pattern. Out of Rs 18.70 crores allotted for the first year, Irrigation and Power alone absorbs Rs 11.54 crores.

Though in the National Plan the emphasis is on development of basic and heavy industries, in the Andhra Plan, Industries get an allotment of only about Rs 9½ crores. The programme of industrial development for the State during the next five years comprises only a few schemes which are mostly in the nature of extension of existing enterprises such as the Andhra Paper Mills, the Ceramic Factory at Gudur the Straw Board Mills at Tirupati and the cooperative Spinning mills at Guntakal. Six cooperative sugar factories and a new cooperative spinning mill are the new enterprises for which provision has been made in the plan.

As for resources for the implementation of the plan, it is found that they will total no more than Rs 39 crores leaving a big gap of Rs 80 crores to be filled up by Central assistance, additional revenues, and from the proceeds of sales of securities held in reserve.

Compared to the first five year plan, the State's Second Plan is considerably bigger in size as the outlay now is nearly double the previous figure which was only Rs 64.32 crores.

The allotments under various heads in the Second Plan are as follows:

Agriculture and Community Development—Rs 26.40 crores; Irrigation and Power—Rs 54.10 crores; Industries—Rs 9.50 crores; Transport—Rs 5.46 crores; Social services—Rs 22.05 crores and Miscellaneous—Rs 1.45 crores; Total—Rs 118.96 crores.

This total outlay does not include the outlay on schemes which are to be provided for from the sum allotted to the various Central Ministries. It is expected that the following sums under the various heads given below will be made available in this regard: Flood control schemes Rs 12.79 crores; inland water transport Rs 75 lakhs; minor ports Rs 28.10 lakhs and urban water supply and drainage Rs 3.33 crores.

*

Opposition to power-looms

There is genuine apprehension in the handloom industry that the new textile policy will bring about large-scale displacement of handloom weavers. The Special Committee constituted by the South India Sehguntha Mahajana Sangam has submitted a memorandum to State Government, in which it has drawn pointed attention to the fact that wherever power-looms have been established in the past, handlooms have been totally wiped out. It is maintained that it is quite within the capacity of the existing 22 lakh handlooms to produce the entire additional requirement of 1700 million yards on the basis of 6 yards per day per loom for 300 working days in a year.

Speaking in the Madras Assembly on the new textile policy, Mr P. Ramamurti, leader of the Opposition, was critical of the Government's decision to introduce 35,000 power-looms on the expectation that there would be an increase in exports. The entire programme would be upset in the event of the anticipated improvement in exports not fructifying. The excess cloth produced would inevitably find its way into the domestic market to the detriment of the handlooms. He contended that the estimated requirement of 8,400 million yards during the Second Five Year Plan period could be easily met from existing capacity in the country. Calculations might go wrong with disastrous consequences again to the handloom weavers if the demand did not increase to 18½ yards of cloth per head as assumed by Government.

*

Integral Coach Factory

The Perambur Integral Coach Factory has made rapid strides in the short span of its existence. It has already exceeded the production target for the first year. It is confidently expected that it will achieve the target of 350 coaches per annum one year ahead of schedule. Considerable progress has also been made in the indigenous manufacture of parts of railway coaches. Out of the 1,169 component parts of a coach body shell, 1,120 items are either manufactured in the factory itself or purchased in the country. The remaining 49 finished components are now being imported and it is proposed to develop the indigenous capacity to manufacture 47 of these components, thus leaving only two items to be still imported.

Addressing the officers and workmen on the occasion of his recent visit to the factory, President Rajendra Prasad stressed the need for building many more such factories quickly and cheaply with foreign collaboration. At the present juncture it was inevitable that we should get help from outside. Though the objective should be that the projects should be run by our own people, "we should not be so very parochial as to reject help and assistance which we can get mainly from outside and which we cannot do without." Mr K. Sadogopan, Chief Administrative Officer of the Factory, pointed out that the tremendous progress had been made possible because of the successful collaboration of the Swiss and Indian workers and the missionary zeal of the workers at all levels.

SOUTH INDIAN MARKETS

Futures Trading in Coconut Oil

IT is learnt that the Forward Markets Commission has decided to allow transferable delivery transactions in Coconut Oil at Cochin also, along with Alleppey under the Alleppey Oil Millers' and Merchants' Association, Alleppey. This follows a meeting between the representatives of the Cochin Oil Merchants' Association, Mattancherry, and the Commission at Bombay last week.

At present, forward trading in coconut oil is banned in all States in India except in Travancore-Cochin under special exemption till the recognisable Alleppey Association, suggested by the Commission for the purpose, was granted the licence by the Government.

Once the recognised Association —the Alleppey Oil Millers' and Merchants' Association, Alleppey— begins to function under a licence from Government, futures contracts in coconut oil will be prohibited throughout the country except under the recognised associations in Alleppey and Cochin.

Meanwhile, the Alleppey Coconut Oil market ruled moderately active during last week when sentiment remained bullish, mostly influenced by the persistence of shortage of floating stocks and notable drop in copra inflow. Spot businesss was reported done upto Rs 420 per candy with buyers at this level. In the Kozhikode market, prices advanced further by Rs 5 to Rs 480 per candy of 700 lbs.

*

Groundnuts

The Madras Ground market continued to rule steady mith prices showing a sharp rise over last levels. Arrivals averaged 25 to 30 tons per candy, while stockists were inclined to hold back stocks iu anticipation of still higher prices. Small crushers took up small quantities. The rate for superior oil-quality seeds improved to Rs 175 from Rs 165 per candy, while the bold variety was quoted higher at Rs 170 per candy.

The markets in the South Arcot district centres continued to rule strong, where the rate was quoted at as high as Rs 185 candy. The Pollachi market also ruled firm.

In the Groundnut Oil section, the rate for the ready position improved by more than Rs 10 to Rs 337 per candy. Calcutta interests were buying steadily for nearby positions, while other buyers were inclined to pay increased prices in view of the high prices prevailing for mustard oil.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were slightly restricted last week as tanners were holding back supplies in anticipation of a further advance in prices. With the result, prices of all weights ruled firm, while clearances were brisk.

Arrivals of Buff hides were fair with a normal clearance at steady prices. Arrivals of Cow Calf and Buff Calf were also normal. Prices for these ruled steady with satisfactory clearances.

In the export section, trading with London was reported to be restricted as operators in the UK were found to be rather reserved due to prevailing high prices. Ordinary bazar quality light weights were quoted at 53d; 43d for 8/8½ lbs and 40d for 10/12 lbs averages.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were fair, and there was a steady clearance at firm prices.

In the export section, there was very little change to report. Advices received from London show that the total quantity of skins to be offered, at the auction to be held during the last week of the month, will be as follows:—105,000 Goat skins and 485,000 Sheep skins.

The markets for Raw Hides in all centres ruled strong and prices

Stock Exchanges

INITIAL LOSSES WIPED OUT

Watch-Dog Writes:

DESPITE a quiet initial spell, equities have maintained a firm tone during the week under review. Although the anxiety over the Suez Canal issue continues unabated and operators are inclined to follow the rise rather cautiously, general sentiment continues to remain cheerful. For, investors are now showing growing awareness of the prospects of capital appreciation in a rapidly expanding economy.

THE NEW MANBHOOM COAL COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the New Manbhoom Coal Company Limited will be held at the office of the Managing Agents No. 14, Old Court House Street, Calcutta on Tuesday the 11th day of September, 1956 at 4-30 P.M. to consider and, if thought fit, to pass the following resolution, namely—

"That the Board of Directors of the Company may appoint an Alternate Director to act for a Director during the latter's absence for a period of not less than three months from the State in which meetings are normally held."

Note 1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Note 2. In connection with the business to be conducted at the meeting, please see the undernoted Explanatory Statement.

OCTAVIUS STEEL & CO. LTD
Managing Agents.

Calcutta, 17th August, 1956.

EXPLANATORY STATEMENT:

Under Section 313 of the Companies Act, 1956 a Company's Board of Directors if so authorised by its Articles or by a resolution passed by the Company in General Meeting, may appoint an Alternate Director to act for a Director who is absent from the State where the Board Meetings are usually held. As the Company's Articles of Association do not contain a provision conforming with Section 313, it is desirable to have a resolution passed as provided for in that Section. The Managing Agents and the Directors of the Company, other than as such and as Shareholders, have no interest in the business represented by the above resolution.

Calcutta

Calcutta, Thursday Evening.

EXCEPT for a slight setback due to profit-taking in the initial stages of the week, conditions on the local Stock Exchange continued to remain quite cheerful, thanks to a marked recovery in the speculative issues. A healthy feature of the week's trading was the fall in speculative business and the expansion in investment demand. There was a general feeling that, with the States Reorganisation issue settled, the Government would give full attention to the Second Five-Year Plan. The upward trend of company earnings, firmer advices from Bombay and Ahmedabad and hopes for a successful outcome of the London Conference were also factors that induced operators to be more active in their dealings. With the result, all profit-taking operations were easily absorbed. The market finished the week on a firm note.

Listless conditions prevailed in the Giltedged market. Prices tended to sag further, due rather to absence of support than selling pressure. With the new State Loans opening on September 3, potential investors had little incentive to support the market. 3 per cent 1986 Conversion Loan, after touching a low of Rs 74|12 from Rs 75|1, finished better at Rs 75. 3 per cent 1963|65 changed hands at Rs 94|10 and 3 per cent 1970|75 at Rs 90|1.

Bank shares ruled quiet in sympathy with the giltedged section. Hindusthan Commercial changed hands at Rs 13|7 to Rs 14|6 and Hind at Rs 38|4.

The most outstanding feature of the week's trading was a broadening of demand for jute shares at enhanced levels. There was a feeling that the recent decision by the IJMA to reseal another five Although sentiment on the Calcutta Stock Exchange was slightly disturbed in the initial part of the week, prices firmed up toward the close due to the emergence of speculative support.

Selective scrips encountered fairly good activity on the Bombay Stock Exchange, thanks to firmer Ahmedabad advices.

Prices on the Madras Stock Exchange were generally upward due to continued investment enquiries, especially in Planting issues.

Renewed hopes of a satisfactory outcome of the London Conference was mainly responsible for a firmer tendency in prices on the London Stock Exchange.

Trading on Wall Street was rather cautious in view of the anxiety to await developments in the domestic and international political situations.

*

per cent looms would improve the financial condition of the industry and that the disparity between the prices of the raw material and manufactured goods would diminish. Howrah and National touched new higher levels of Rs 24|4 and Rs 26|14 from Rs 22|8 and Rs 25|13 respectively. Ganges were taken upto Rs 74|0 from Rs 68|0; Megna upto Rs 93|8 from Rs 84|8; Nuddea upto Rs 42|12 from Rs 41|8; Anglo-India upto Rs 180 from Rs 178; Champdany upto Rs 167 from Rs 161; India upto Rs 150 from Rs 138 and Lansdowne upto Rs 115 from Rs 104|8.

Coal shares moved up slightly in sympathy. Burrakur, after touching a new high of Rs 15|1 from Rs 13|14 on official confirmation regarding the amalgamation with the Standard Coal, finished the week at Rs 14|14 on profit-taking. East Indian improved to Rs 31|14 from Rs 31|6, while Equitable changed hands at Rs 30|2 to Rs 30|4. South Karanpura were quoted a share easier at Rs 9|6 against Rs 9|9.

Textile scrips continued to rule steadier on hopes of increased offtake of cloth during the ensuing Pujah festival. Operators were, however, reluctant to extend commitments due to a feeling that a period of high cotton prices might substantially affect the profit margin of the mills. The only bright spot were Kesoram which forged ahead to Rs 19|9 from Rs 19|4. Elgins had some support upto Rs 28/8 from Rs 28/4, while New Victoria hovered narrowly around Rs 2|13. Bowreah were quoted at Rs 171 against Rs 173.

BANK PROFITS

NATIONAL BANK OF INDIA, LIMITED.

The Directors have declared an interim dividend for the year 1956 of 7½ per cent less income-tax at 8sh. 6d. in the £ payable on 20th September, 1956.

VALIDITY OF CONCEPTS UNDERLYING EXPENDITURE TAX

(Continued from page 354)

ments, if allowed, will result in complications which are best avoided to ensure simplicity and smoothness of operation. This is one of the reasons why the expenditure tax will have to be supplemented with another form of direct taxation, namely, the annual tax on wealth.

The question of treatment of gifts, bequests, creation of trusts and endowments for charitable or for selfish purposes also promises to be a thorny one. If charities are to be exempted items—as they will necessarily have to be in a country which is democratic in its outlook and purpose—the temptation of resorting to 'arranged" and exchangeable' charities as a method of evasion might be considerable. To prevent such methods being adopted and also for other reasons, yet another form of direct taxation—the gifts tax will have to be introduced along with the expenditure tax.

Administrative Adequacy

Finally, there is the question of the adequacy of the administrative machinery. Professor Kaldor, in his report, mentions the figure of Rs 200 crores as being the amount of income-tax evasion in India. Whether or not this alarming figure approximates the truth, everybody is more or less agreed that the amount of revenue the Government are losing annually by their inability to catch the tax-dodger is substantial. It will probably be unfair to blame the departments concerned for this state of affairs. But it is undeniable that the administrative machinery is showing signs of stress. What is more, the pressure on it is likely to grow as we enter *into* a period of ambitiously planned economic development. It is unreal to expect a striking improvement in the efficiency and capacity for adjustment of the administrative set-up all of a sudden. Nor can we expect an overnight transformation in the habits and practices of those who deliberately cheat the Government of their own choosing. The expenditure tax, if it is to be introduced immediately and if it is to be completely successful, might require both the near-miracles to happen.

WORLD OF FINANCE

(Continued from page 356)

latest returns of the Reserve Bank may be taken to suggest urgently the need for imperative measures to arrest the alarming trend of diminishing reserves of foreign exchange; and this is a subject that has been studied in the lead article of this section.

As already pointed out, the returns of the State Bank for August 17 disclose that the Bank has been able to reduce its indebtedness to the Reserve Bank by Rs 3.50 crores to Rs 8.50 crores. In the case of this statement, also, the most striking attribute is evidence of slack season conditions.

Deposits have risen by Rs 1.78 crores to Rs 224.61 crores. Cash balances are higher by Rs 0.75 crores at Rs 18.17 crores. The Investment portfolio shows little change. Advances are sizeably reduced by Rs 1.89 crores to Rs 125.25 crores. Thus, increase in deposits, reduction in indebtedness, higher cash balances and a lower volume of advances all significantly point to slack season conditions.

The statement of the Scheduled Banks for the week-ended August 10 offers confirmation of the view, advanced in these columns last week, that the changes in the figures of member banks in the Reserve Bank's statement were due largely to transactions connected with the State Bank. Secondly, the latest return of the Scheduled Banks offers further proof of slack season conditions.

Demand liabilities have been marked up by Rs 1.78 crores to Rs 637.85 crores. Time liabilities have shown a rise of Rs 1.59 crores to Rs 459.67 crores. It is to be presumed that Scheduled Banks felt the demand of month early disbursements in the week under review as well. For this reason, it is to be anticipated that the statement of Scheduled Banks for August 17 will reveal a more substantial increase in deposits. Cash and balances with banks are Rs 0.50 crores lower at Rs 95.26 crores. But there is a substantial increase of Rs 2.07 crores to Rs 19.36 crores in money at call and short notice. Finally, advances are also lower by Rs 1.30 crores at Rs 595.17 crores. The sharp rise in borrowings from the Reserve Bank by Rs 8.02 crores to Rs 44.58 crores, is, as already indicated, wholly accounted for by State Bank borrowings.

+

The statement of the State Bank of India for the week ended August 17 reveals a rise of Rs 1.78 crores in deposits to Rs 224.61 crores. Borrowings from other banks have declined by Rs 3.50 crores to Rs 8.50 crores, while other liabilities, including inter-office adjustments, are shown at Rs 5.85 crores against Rs 5.71 crores.

On the assets side, cash balances are higher by Rs 0.75 crores at Rs 18.17 crores. Investments are slightly lower at Rs 106.19 crores against Rs 106.29 crores. Advances have declined by Rs 1.89 crores to Rs 125.25 crores—'Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 0.68 crores and 'Bills Discounted and Purchased' for a decline of Rs 2.56 crores.

+

According to the returns of the Scheduled Banks for the week ended August 10, both Demand and Time Liabilities have risen by Rs 1.77 crores and Rs 1.59 crores to Rs 637.85 crores and Rs 459.67 crores respectively. Borrowings from the State Bank are higher by Rs 0.20 crores at Rs 7.15 crores and those from the Reserve Bank by as much as Rs 8.02 crores at Rs 44.58 crores. Cash and balances with the Reserve Bank are lower by Rs 0.81 crores at Rs 84.76 crores, while Investments are higher by Rs 0.13 crores at Rs 361.48 crores. 'Advances in India' are shown at Rs 595.17 crores against Rs 596.47 crores; Inland Bills at Rs 97.42 crores against Rs 96.35 crores and Foreign Bills at Rs 46.57 crores against Rs 46.26 crores. Money at call and short notice has risen by Rs 2.06 crores to Rs 19.36 crores.

✱

NORTH INDIAN MARKETS

(Continued from page 369)

Pulses continued to harden on good demand from the South, although despatches were small due to loading restrictions. Demand from Assam was also keen. Peas dara quality was quoted at Rs 12-0 and white variety at Rs 13-8 per maund.

The Delhi grains market displayed a firm sentiment. Wheat prices improved by about As 12 per maund due to better buying by local dealers. Rice for dara quality hardened by about Re 1 per maund due to small arrivals against better buying. Barley steadied up modestly in sympathy with wheat.

The Bombay grains market presented a firm front. Prices of foreign wheat, released by the Government to the trade, registered a sharp advance with white quality finding buyers at Rs 140 per candy as against Rs 130 in the previous week.

The recent upward trend in Burma Rice also gathered fresh momentum during the week with the prices rising from Rs 160 to Rs 172 per candy. Some centres in Gujerat and the Deccan showed a steady interest in Burma rice due to its comparative cheapness.

In the Coarse grains section, prices of Jowar and Bajra continued to show a bullish undertone. Jowar of the Sholapur quality hardened by Rs 7 to Rs 175 per candy on account of smaller arrivals and sustained demand. Uttar Pradesh quality was quoted at Rs 148 to Rs 160 per candy, according to quality.

GATEWAY MARKETS

(Continued from page 366)

Yarn

Price movements in the Yarn market continued to be irregular. While Art Silk and staple-fibre yarns were steady, Cotton yarns showed a slight improvement. The offtake, in general, was limited.

Art Silk Yarn 120 dull cones August delivery improved to Rs 785 on fears of reduced arrivals of imported yarn from the Continental countries, to finish the week at Rs 780. The Government decision to effect a cut in the import during the second half of the year has disappointed weaving mills. The Silk and Art Silk Mills' Association, Bombay is said to have obtained import licences on behalf of its members to the value of Rs 2.36 crores. The licences have, so far, been issued only to 228 members of the Association and the claims of the rest of the members are reported to be pending.

In the staple-fibre yarn section, varieties like 2/40s and 2/60s were placed higher by half an anna per pound at Rs 3-4-6 to Rs 3-8-6 and at Rs 4-8 to Rs 4-12 respectively. In view of sufficient supplies, 20s registered only a modest improvement.

Reports from the South Indian markets indicated an upward trend in Cotton yarn prices. Imported yarn of 80s and above moved up by about As 2 per pound on account of paucity of supplies. 40s, however, staged a modest retreat for want of support.

✱

Metals

The Metal market ruled a share quieter this week due to easier advices from London. Offtake was slow, as buyers were cautious hoping for a further recession in prices. Copper scrap was quoted at Rs 205 per cwt; Wire Bars at Rs 225 aud ICC copper at Rs 220. Ready Zinc was quoted around Rs 66-8; Lead at Rs 82-8 and Tin at Rs 520.

On the Loudon Metal Exchange, Copper suffered a sharp setback to £296½ per ton from £313 quoted in the previous week. This was mainly due to lack of demand, easier supply position and better atmosphere in the international political situation.

In the absence of any demand, Lead developed an easier tendency and the spot rate came down to £115½ per ton for second half August delivery. It is expected that prices are likely to remain around the present level in view of continued buying by the US Government for stock-piling purposes.

Zinc second half-August delivery was quoted lower at £94¾ per ton due to poor demand and offering of Russian Zinc in London and on the Continent.

Tin was quoted lower at £766 per ton following chances of an early settlement on the threatened strike in Malaya. The mine-owners do not seem to take the general strike by the workers seriously.

SOUTH INDIAN MARKETS

(Continued from page 371)

in Calcutta showed a further advance over last levels.

The markets for Raw Skins ruled steady.

✱

Pepper

After last week's sharp rise, Pepper prices have developed a slightly reactionary tendency following the hopeful development in the Suez Canal crisis. New York buyers have also withdrawn after buying some parcels at 33 cents per pound. This created much apprehension in the camp of growers.

In the Kozhikode market, there was a heavy rush for buying early in the week at whatever rate quoted by sellers. Toward the close, however, buyers began to dictate their own terms and quoted Rs 25 less per candy than the rates quoted by sellers. Wynaad quality was quoted around Rs 850 per candy and the Country variety at Rs 825. In the Alleppey market, Palai and Thekkan qualities were indicated at Rs 812-8 and Rs 800 per candy respectively.

So far, growers were able to sell about 700 tons at an advanced limit; but they have once again marked down their prices. Such a soft attitude on their part is interpreted in certain quarters to mean that the balance of the Old crop with growers must be sufficiently large.

The weak point in the whole picture at present is Lampong where harvesting season will soon be entering a peak period. Also, the Indonesian Government, in order to give a fillip to exports, is reported to have decided to give bonus of 5 to 20 per cent of the foreign exchange thus earned to the exporters. If Suez crisis eases, it is feared that the market may go down in view of the present over-bought position in the supplying markets.

✱

CLIVE STREET GOSSIP

(Continued from page 364)

power is the fear of having his minor breaches of technicalities subjected to the most self-righteous scrutiny so that even such power as is given is not exercised on the well-worn ruse of passing the buck.

The truth is that, with the change in the functions of the Government in a developing economy, in which a substantial share in productive enterprises is reserved for themselves by Government, a functional approach to the tasks before us is inevitable. It is this pragmatic approach and the sense of urgency that informs Dr Appleby's report that make it not only an extremely useful document but a heart-warming and stimulating battle cry for action. We often talk with lazy superiority of the American's tendency to invest efficiency with mystical attributes. But it is all too easy a sneer, especially with a job as colossal as the one we have on hand. When Dr Appleby suggests that there must be "a programme expediter or plan expediter, to serve as umpire, trouble-shooter, bottle-neck breaker, procedure reformer and structural adviser", it is easy enough to quip archly, who is to to expedite the expediter? But, in sober fact, Dr Appleby reveals a greater sense of urgency about our tasks and a greater awareness of inadequacies. Likewise, his insistence on "more government by Joint Secretaries, more government by Deputy Secretaries and more government by under-secretaries" may make many a cynical eye-brow rise, but that would not indicate our desire to get on with the job.

✱

One final observation: One or two comments I heard on the

FOR THE INVESTOR

(Continued from page 352)

intentions of the Government of India's Second Five-Year Plan began to emerge. Unfortunately, the shortage of steel supply and of transport continued to limit production and, in particular, difficulty in supply of Foundry scrap reached serious proportions during the latter part of the year.

Sales for the year have declined to Rs 103.43 lakhs from Rs 129.86 lakhs in the previous year, while the net profit, before providing for Taxation and Depreciation, amounts to only Rs 8,83,181 as against as much as Rs 11,84,708. The directors have, after setting apart Rs 2.61 lakhs (Rs 2.16 lakhs) for Depreciation; Rs 2.01 lakhs (Rs 2.85 lakhs) for Taxation; Rs 25,000 (nil) for General Reserve; Rs 67,500 (Rs 72,500) for Taxation Contingency Reserve and Rs 24,500 (Rs 56,700) for Development Rebate Reserve, maintained the dividend on the Ordinary shares at As 8 per share.

The directors have, in their report, stated that they are now considering proposals for expanding the Structural Shop and the Foundry.

£ R$

Investment Briefs:

India Paper Pulp has maintained the dividend at 7 per cent for the half-year ended 31.3.1956.

Benares Electric has maintained the dividend at 6¼ per cent for the half-year ended 31.12.1955.

Dehri Rohtas Light Railway has raised the dividend from Re 1 to Rs 1|4|0 per share for the year ended 31.3.1956.

Basmatia Tea has reduced the dividend from Rs 8 to Rs 1|8|0 per share for 1955.

Hoolungooree Tea has reduced the dividend from Rs 55|0 to Rs 7|8 per share for 1955.

Kyang Tea has reduced the dividend from 7½ to 5 per cent for 1955.

FACTS, Madras, have once again passed over the dividend for 1955.

✱

GATEWAY GOSSIP

(Continued from page 365)

of the Kutch Congress Committee at Bhuj, Pandit Jawaharlal Nehru said that the Communist, Praja-socialist and Hindu Mahasabha leaders, who had reached Ahmedabad as soon as trouble started and that they were interested only in creating trouble. He deplored the attitude of the youth of Gujarat and the creation of a situation in which a Lok Sabha decision received such scant respect. The Prime Minister feelingfully implored the people to practise tolerance and mutual respect when India was advocating peaceful co-existence in international relations.

The same day a number of Congress leaders in Gujarat spoke at a meeting of the Gujarat Pradesh Congress Committee. Mr Morarji Desai explained how a large bilingual Bombay State alone would be financially viable and how it could be an exemplary political unit. He recalled his statement in the Bombay legislature that "the vivisection of the greater State of Bombay would be a tragic incident of my life". All these appeals from far and near went wholly unheeded.

In the midst of the utterly irresponsible events in Ahmedabad he was driven to the conclusion that Gujarat had temporarily lost its real self and he felt it his duty to try to restore it. "I do not believe in fast. But I see today that Gujarat is ruining itself. It is better that I die before that."

The city and the nation are now in a state of anxious suspense

report seemed to imply that it advocated a scrapping of all kinds of procedures and systems. Such absurd misunderstanding could have arisen only because nothing beyond the headlines featuring the report has been read. Nothing could be farther from Dr Appleby's intentions and expressed views both in this and his earlier report. Dr Appleby is, it is worth recalling, an expert on public administration and not on public anarchy. It is elementary that progress is quickest only when it is orderly. What Dr Appleby asks for is more system and not less, more creative thinking on methods and organisation and not less. He does not share the vulgar error about red tape. In his first report, in fact, there was a memorable defence of it. But Dr Appleby says that orderly progress does not necessarily mean slow progress. He says that the accent must be on the future, not on the past, and one must chart tomorrow's tasks and not mourn yesterday's blunders. It is only the idle and the hungry, in the words of the cruel Tamil proverb, that audit last year's accounts. Those who find Dr Appleby's comments on the Audit Department too harsh may do well to ponder over the sardonic wisdom of this saw.

STOCK EXCHANGES

(Continued from page 372)

Teas shared the general trend of *the market and most of the scrips* recorded substantial gains over last levels. There was, however, an inclination to book profits at higher levels on apprehension of a poor business in the current season. Basmatia changed hands at Rs 37|6 to Rs 37|12; Brooke Bond at Rs 21|4 to Rs 22|0; Hantapara at Rs 194 to *Rs 198; Huldibari at Rs* 32|8 to Rs 32|12; New Dooars at Rs 298 to Rs 304; Teliapara at Rs 201 to Rs 219 and Tezpore at Rs 23|2 to Rs 23|6.

Except Belsund which came in for some enquiry upto Rs 12|6 from Rs 12|0, little or no interest was shown in other Sugar shares due *to lower advices from the commo*dity market. Carew remained dull around Rs 9|0, while SKG moved narrowly between Rs 13|0 and Rs 13|4.

Under the lead of Indian Irons, Engineering scrips ruled generally firm despite settlement considerations in mid-week. The main inspiration was provided by the fact that "Satta" charges at this week's settlement had been much lower than in recent settlements. Indian Irons opened at Rs 37|2 and, after *touching a high* of Rs 37|13, finished the week at Rs 37|12. After market hours on Thursday, there were, *however*, sellers at Rs 37|6, to quote later better at Rs 37|9|0 with sellers at Rs 37|9|6.

Among other Engineering scrips, TEXMACO scored As 5 at Rs 23|10, while Richardson *changed* hands at Rs 24|12 to Rs 25|0; Jessop at Rs 34|7 to Rs 34|12 and Braithwaite at Rs 29|3 to Rs 29|8. Kumardhubi and Marshalls remained almost unchanged at Rs 9|13 and Rs 6|4 respectively. Indian Standard Wagon were a special feature and the scrip forged ahead to Rs 201 from Rs 196 on rumours *of* the possibility of a further bonus issue.

Miscellaneous issues met with selective support. Despite the publication of excellent working results, Indian Copper remained dull at Rs 6|14, mainly due to lower advices from the metal market. Orissa Cement continued to have buyers at rates varying from Rs 16|4 to Rs 16|10 following the increased dividend for 1955.

Paper shares were a firm feature with Orient forging ahead to Rs *40|10 from Rs 40|3 and Indian Pulp* to Rs 25|8 from Rs 25|0. Bengal, however, lost another Rs 5 at Rs 110.

Elsewhere, Alkali Chemicals were sought after upto Rs 22|2 from Rs 21|11; Indian Aluminium upto Rs 24|7 from Rs 24|3; NICCO upto Rs 26|0 from Rs 25|12; Dunlop Rubber *upto Rs 29|12 from* Rs 29|8; National Carbon upto Rs 29|5 from Rs 29|0 and Rohtas upto Rs 22|12 from Rs 22|7. BIC were rather quiet at Rs 10|12. India Steamship changed hands at Rs 9|3 to Rs 9|6; Indian Cable at Rs 33|0 to Rs 33|8; Sone Valley at Rs 8|12 to Rs 8|14 and Angelo Brothers at Rs 24|0 to Rs 24|4. Karanpura Development were quoted around Rs 21|8 and Jardine Henderson around par.

*

Bombay

DURING the short week under review, the bullish *sentiment*, noted in the previous week, gathered further momentum on the Bombay Stock Exchange. There were various factors to strengthen the bullish enthusiasm. Mainly amongst *these* were, the firmer advices from Ahmedabad, the happy ending to the controversy over the various proposals under the States Reorganisation Scheme, the possibility "of inflation gathering momentum, the upward trend of company earnings and dividend announcements and the encouraging business outlook in the years to come. Although profit-taking was noticed at higher levels, it was easily absorbed. The undertone at the close remained fully steady.

Textiles:—*Favours* were fairly widespread in this section with several scrips touching new high levels. Bombay Dyeing provided a *firm feature and* the rate advanced to Rs 701-14 from Rs 685-12. Central India met with some enquiry upto Rs 168 from Rs 166-8. *Svadeshi received* a good deal of speculative attention from professional circles, rising to Rs 275-8 from Rs 272. Simplex moved between Rs 213 and Rs 214-8; Kohinoor between Rs 390-8 and Rs 395 and Century between Rs 604-8 and Rs 607-8. Finlay were pushed upto Rs 385 from Rs *373-8 on reports of* scarcity of stocks. Poddar Mills were in request upto Rs 192-8 on better prospects following the move to *instal additional spindles* as well as some automatic looms. Apollo hovered narrowly around Rs 3-3-6.

Hydro-Electrice:—Shares in this section showed gains with Andhra Valley recovering to Rs 1,248-12 from Rs 1,237-8 and Tata Power to Rs 1,328-12 from Rs 1,312-8. Tata Hydro were, however, unchanged at Rs 128 with Ahmedabad quoting Rs 99-1 and Bombay Suburban at Rs 111-4.

Steels:—Although price movements in this section were *comparatively restricted*, the undertone remained firm as operators were inclined to take a constructive view. Tata Steel Ordinary, after opening at Rs 211-12, firmed up to Rs 213-4 *at the close*. The shares will be listed exdividend on August 31. As the dividend payment time approaches near, some buying by way *of* bargain hunting has developed.

Miscellaneous:—In this section, ACC were in good demand and crossed the Rs 200-mark to quote upto Rs 203-4 on reports of formation of another subsidiary company for the manufacture of engineering products. Trading in new shares of this company commenced at a premium of Rs 62. Digvijay were unchanged at Rs 204-8 and Ashok at Rs 12-4.

Sugar shares ruled better with Phalton *enquired upto Rs 167 from* Rs 164 and Belapur upto Rs 254-8 from Rs 253-8. Bhopal were quoted at Rs 17-12 and Walchandnagar at Rs 273-12.

Shipping shares *returned* to favour on hopes that the Suez Canal crisis might be resolved in the very *near future*. *Scindia* closed higher at Rs 19-4, while Great Eastern improved slightly to Rs 19-13. Bharat were, *however, dull* at Rs 73.

Automobile shares were a steady feature with Hindusthan having buyers upto Rs 10-6. Premier scored nearly *Rs 6 at Rs 209-8* on reports of excellent working.

In the Engineering section, activity was *mainly* concentrated on Premier Construction, which firmed up to Rs 209-8 from Rs 208-12. Tata Locomotive were almost unchanged at Rs 175-8.

Elsewhere, Bombay Burmah, after being marked down to Rs 762-8 from a high of Rs 767-8 on reports of the postponement of the meeting to discuss Founders' shares, *recovered* at the close to Rs 771-4. National Rayon hoisted a new peak of Rs 270-4 from Rs 268 on renewed support. Tata Chemicals moved narrowly between Rs 20-11-6 and Rs 20-13, while Tata Oil were maintained at Rs 57; WIMCO at Rs 185 and Shivrajpur Syndicate at Rs 91-0.

For the Investor

Fair Play

Investment Gossip :

A sticky week of trading drew to its close on a much firmer note. Rumour has it that the powers that be are discussing the Indian Iron dividend for 1955-56.

Far be it from me to conjecture on the trend of these talks. But I owe it to the shareholder to reiterate my views on the subject.

Especially is this so, in the light of the letter that was addressed by the management to the Government in respect of the 1954-55 dividend, and in view of the Government's reply thereto.

As I see it, the issue at stake is simple: When the shareholder in almost every other industry is waxing prosperous, why should the investor in Indian Iron alone be restricted by Government from a more equitable share in profits?

We know that management, mindful of the shareholder's interest, supports the case for a higher dividend.

We know that management, cognisant of the need to create the climate in which its rights issue (enforcedly at a premium, as insisted upon by Government), will be keen, for that reason, to declare a higher distribution for 1955-56.

It is up to Government to see that fair play is meted out to the shareholder, up to Government to approve an increase in the dividend.

£R$

East India Hotels

Investment Special :

A new issue is in the news. A prospectus has been published by the East India Hotels Limited inviting subscriptions from the public for Rs 80 lakhs worth of shares. The authorised capital is Rs 1 crore; but capital already issued is roughly Rs 10 lakhs, and, from the new issue, Rai Bahadur M. S. Oberoi and friends are to take up another Rs 10 lakhs worth; this Rs 20 lakhs represents Ordinary shares.

Available for public subscription is Rs 30 lakhs of 6 per cent tax-free Cumulative Preference shares and Rs 50 lakhs of Ordinary shares.

The lists are to open on the 24th of September; the scheduled closing date is the 8th October; but the Directors reserve the right to close the lists earlier, but not before the 3rd of October.

Investors will note that the distinguished directorate represents all four important cities—Bombay, New Delhi, Madras and Calcutta.

What are the considerations that the investor must bear in mind, when he assesses the prospects before East India Hotels? He would, perhaps, be advised to remember that

Firstly, New Delhi has a particular famine in hotel accommodation;

Secondly, the expansion in demand for rooms is likely to be more intense in New Delhi than in other cities;

Thirdly, the inflow of tourists to India shows signs of a substantial rise;

Fourthly, the hotel at Srinagar has obivous tourist attraction; and

Fifthly, the two hotels "will have the backing of the Oberoi Hotel Chain having an international reputation."

Other relevant information for shareholders may be summarised as under:

The proceeds of the issue, together with a loan of Rs 25 lakhs or thereabouts, will suffice to construct the luxury hotel in New Delhi and to equip it fully and to purchase the *hotel in Srinagar.*

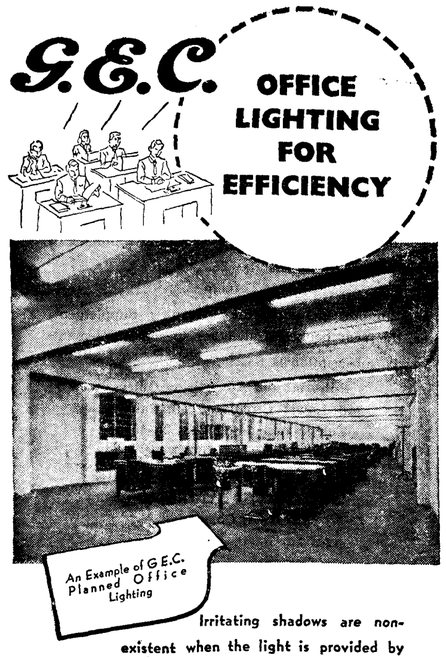
Figures relating to Hotel Imperial, New Delhi, have been given to serve as a yardstick; and these show that the profit margin is around 30 per cent.

Estimated gross profits of the company, as given in the Prospectus, are shown to be Rs 33.37 lakhs in the first year after the completion of the project.

After providing just under Rs 14 lakhs for depreciation, the sum available for distribution among shareholders is expected to be Rs 19½ lakhs.

The Prospectus suggests that, after providing for taxation and depreciation, the surplus could be used as to Rs 2½ lakhs for a sinking fund, as to Rs 4 lakhs for Reserve Fund, and as to the payment of the preference dividend and 15 per cent to the Ordinary shareholders.

Attention is drawn, in the Prospectus, to the fact that the profit computation has been made without taking into account any earnings on wines.



A final word For the Investor: the Directors have thought of the novel idea of extending special facilities to shareholders. All subscribers would receive an Oberoi Gold Card on request, which entitles the holder thereof to a 10 per cent discount on room charges at New Delhi, Srinagar and any other hotels that the East India Hotels may construct. Moreover, this facility is also to be made available in respect of the Oberoi Chain of hotels.

HIGHLIGHTS

There was this mendicant. A certain housewife never to him said No.

Religiously, each day she doled out alms to him.

The same mendicant. The grand old lady, in her mansion, never so much as gave him a grain of rice.

Almost equally religious was she.

But the mendicant had no complaint to make of the grand old lady.

And then it came to pass that the housewife was in sore tribulations. Reluctantly, because she had none to spare, she could not give him his daily bread.

For the which the mendicant would not forgive her, but did rain curses upon her.

Of the grand old lady, still ungenerous, he yet made no complaint.

That is how, says Eavesdropper, an old Tamil proverb runs. He was reminded of it when he studied Indian reaction to foreign aid.

The free world is puzzled, because of India's enthusiastic gratitude for Russian aid.

It is bothered, because of India's relative reticence over US aid.

There is no need for puzzlement, says Eavesdropper in this week's Gossip.

The acclamation of Russian aid may be because it is unusual; the lesser to-do about US aid is because it is taken for granted.

In any case. Eavesdropper concludes, it is time we shed this reticence (or reluctance?) to show our gratitude for a generous gesture.

Bird-Heilgers Jute Group Results

Balance-Sheet Reviews :

THE serious situation that faced the jute industry, during the half-year ended 31st March 1956, is fully reflected in the working results of the jute mills in Bird-Heilgers group. The cost of raw jute was completely out of line with the prices obtainable for finished goods. The situation was aggravated by the increasing production in Pakistan whose mills were in a strong competitive position due to cheaper raw materials and lower wages. Production was also increasing in other countries, mainly in the Middle East and Asia, whose policy was to produce as far as possible their own requirements.

Out of the nine mills in the group, five mills have passed over the Ordinary dividends, while other companies have been able to declare dividends only after transfer from various Reserves. But, it is satisfactory to note that, in the whole group, Northbrook is the only company which has done better, thanks to operation of broad looms in the manufacture of tufted carpets—a new technique which has been developed in the USA. The company has raised the dividend from As 12 to As 1-8 per share. Kinnison has been able to maintain the dividend due to the payment of Rs 8·05 lakhs received in final settlement of the company's claim for lost loom-hours in the requisitioning case. Following tables show the sales made, profits earned and dividends recommended as compared to the previous half-year:—

£ R$

Champdany Jute

The Champdany Jute Company has reduced the dividend from Rs 6 to Rs 2 per share for the half-year ended 31st March, 1956. Sales have declined from Rs 170.22 lakhs to Rs 162.57 lakhs, while the net profit, before providing for Depreciation of Rs 4.36 lakhs (Rs 5.75 lakhs), amounts to Rs 2,55,780 as against Rs 1,83,481 in the previous half-year. With the completion of the modernisation programme at the mills last year, the directors have considered that the balance of Rs 14.85 lakhs, under the Rehabilitation Reserve which had been built up in the past, need no longer be retained in cash. They have, therefore, transferred a sum of Rs 12.93 lakhs from this account to General Reserve.

£ R$

Howrah and Reliance Results

The Howrah Mills Company has reported a decline in sales from Rs 2.09 crores to Rs 1.63 crores, while the net profit, before providing for Depreciation, amounts to Rs 2,01,509 as against a loss of Rs 96,741 in the previous half-year. A sum of Rs 3.00 lakhs (Rs 4.25 lakhs) has been provided for Depreciation. The directors have, after transferring a sum of Rs 4.00 lakhs from Reserves, been able to maintain the Ordinary dividend at **As 4 per** share. It may be added that, in the previous half year, the directors had to transfer as much as Rs 8.00 lakhs from various Reserves in order to recommend the dividend.

In the case of the Reliance Jute Mills Company, sales are substantially lower at Rs 97.75 lakhs as against Rs 1.13 crores, while the accounts show a loss of as much as Rs 6.63 lakhs against a loss of only Rs 4.03 lakhs in the previous half-year. The dividend is again passed over.

Reserve Bank's Profit

THE rise in the profit of the Reserve Bank for the year ending June 1956 is something phenomenal; but it is an occurrence that seems largely to have been overlooked by the money market, possibly because attention has usually been rivetted on the "maintenance" of the net profit payable to the Central Government.

Higher profits were enabled by two important factors. The Report of the Central Board of Directors of the Reserve Bank of India states in this context: "The increase is accounted for partly by the higher rate of discount earned on Sterling Treasury bills and partly by the discount earned on ad hoc Treasury bills created during the year for replenishing Central Government's cash balances with the Reserve Bank."

The gross income rose, in consequence, to Rs 41.45 crores; this compares with the gross income of Rs 25.01 crores in 1954-55. Expenses claimed Rs 5.45 crores as against Rs 5.01 crores in the previous year. Net income was, thus, Rs 36 crores against Rs 20 crores. But, in the current year, certain provisions, aggregating Rs 16 crores, have been made from profits.

The Report deals with the provisions in the following words: "Out of the Bank's income this year, a sum of Rs 15 crores was transferred to the National Agricultural Credit (Long-term Operations) Fund and Rs 1 crore to the National Agricultural Credit (Stabilisation) Fund in terms of Sections 46A and 46B of the Reserve Bank of India Act, 1934 (II of 1934)."

In the result, the net profit is ostensibly no more than maintained at Rs 20 crores. But this figure is only the apparent net profit. The real profit has increased, we repeat, to Rs 36 crores; what is unchanged, and maintained at Rs 20 crores, is the surplus profit payable to Government.

Readers of this journal will remember our oft-repeated contention, some three years ago, that Reserve Bank profits would be steadily rising. At this stage, however, we venture to suggest that the net profit for 1956-57 may not disclose the same rising trend. For, while it is true that, on the one hand, discount earned on Treasury Bills will, consequent to sustained deficit financing, show further improvement, we must remember that, on the other hand, the Reserve Bank's holdings of Foreign Securities are this year, steadily on the wane. The tempo of deficit financing reaches its briskest in the last quarter of a financial year; and the discount earned, for the whole of 1956-57, on Treasury Bills may be on an amount not exceeding Rs 150 crores, although the increase over the year in ad hocs outstanding may be much greater. The increased earning in this behalf may be more than offset by a decline in the earning on Foreign Securities. The loss of foreign exchange has been nearly Rs 90 crores in less than 6 months of 1956-57. Finally, discount earned on ad hocs is less than 3 per cent; earnings lost by a decline of Rs 100 crores in Foreign Securities amount to Rs 5¼ crores.

For these reasons, somewhat lower earnings are not unlikely unless there is an increase in the Bank of England rate or the Bank rate in India.

Vigilance: Price of Freedom from Want

THE Finance Minister's speech in the Rajya Sabha's debate on the Plan should infuse general confidence in the country that an open mind and synoptic understanding of all the factors and forces involved, and not a narrow dogmatism or obsession with particular objectives, will be brought to bear on the working of the Plan. The danger that would now appear to have been warded off is neither unreal nor remote. It is true that no more has been done than that the Plan's minor contradictions and conflicts and the broader issues connected with its financing have been, so to say, shelved, not solved, by the acceptance of the idea of flexible planning on a year-to-year basis. All these may yield some kind of dialectical advantage to the spokesmen of the Government when they are called upon to defend the Plan against attacks from experts or opposition members. But the number and complexity of practical issues which the Finance Minister will have to solve from quarter to quarter will be continually on the increase.

The fact that Mr T. T. Krishnamachari's first act in his new office is to raise excise duties on cotton cloth, an important necessity of life for the masses, is eloquent of the uncomfortable predicament in which he may often find himself. Likewise, the fiscal and economic significance of the levy shows how many different considerations have to be borne in mind, while embarking on a measure of this kind. The addition to revenue, important as it is, is perhaps the least important. The higher excises are to be valued more for the attempt to inhibit consumption in a period in which supplies of goods may not be equal to the steady increase in demand under pfessure of large investment and deficit-financing. Another interesting aspect is the attempt to skim off the excessive profits of the mills followed by the decision of the industry and the trade not to pass on the burden of the new levy to the consumer. It is not alone the higher excise duties on cotton cloth, but also the agreement with the US that illustrates the connected character of problems, in the latter case, the links between adequacy of supplies of essential goods, maintenance of prices and economy of foreign exchange resources. Before the first half of the first year of the Plan is over, the problem of inflationary rise in prices and shortage of foodstuffs and cotton cloth have hove into view, while at the same time there has been nothing to suggest that the scale of the Plan must necessarily be cut down. From all of which it is clear that there is nothing in the Plan which makes it intrinsically easy or difficult or impossible of accomplishment, but that it poses an almost unique problem of keeping diverse forces and factors under control and in unison, adjusting one or more at a time to the conditions and requirements of the other, so that the Plan as a whole goes forward toward its fulfillment.

It is this unique feature that Mr Krishnamachari brought to the fore in his speech at the Rajya Sabha. It is characteristic of the spirit in which he approaches his task that he met the charge of insufficiency of resources with the bland statement that the additional requirements of foreign exchange will be about Rs 1,200 crores and not Rs 800 crores as originally thought. Nothing is lost by this admission, since it is no longer a question of starting from the very beginning with cut and dried estimates under every head and watching the progress of affairs in accordance with a specific schedule. Inability to point precisely to certain sources of revenue for getting all the funds needed for the Plan is no proof that the resources cannot be obtained or that the Plan is too ambitious and must be cut down. It is enough that the potentialities for development within the five year period or thereabouts are there and that, if they can be developed, they can also be made to yield the resources necessary for their development. This view, implicit in all the provisions of the Plan, is most arresting in the case of deficit-financing. But the view is, broadly speaking, sound; and the soundness depends only on the skill with which some parts of the Plan are speeded up, while others are made dependent on such speeding up. Mr Krishnamachari brought out this aspect clearly when he said that he would endeavour to get additional resources from the new steel plants even during the course of the Five-Year Plan. He also pointed out that difficulties in regard to financing are present not in internal financing but in regard to foreign exchange. Here, the gravity of the problem is sought to be reduced by concluding all new trade agreements in such a manner that addition will be made, not to foreign exchange requirements, but to the volume of foreign trade and the availability of essential imports. Even in regard to foreign aid, it may be possible to give it a new orientation as has been done in the case of the purchases of wheat and cotton from the USA.

As regards internal financing, new taxation and anti-inflationary measures following deficit-financing are the two heads under which some difficult problems have to be considered. Mr Krishnamachari is doubtless aware of the dilemmas in which he will find himself when he proceeds to adjudge and make use of Dr Kaldor's recommendations. The preliminary studies and training of requisite men are already being carried out. But ultimately, the problem of adding to the burden of the poor in order to get sufficient resources and rationalising, if not tightening, the burden on the rich in order to stimulate private enterprise will have to be faced. But, meantime, indirect taxation in order to inhibit consumption will be obviously justified. From the point of view of holding together the fabric of the Second Plan, the maintenance of a fair level of prices, on the one hand, and of a fair volume of supplies of goods, on the other, is indeed the most important consideration. The Government can claim that they have at their disposal a number of measures with which this task can be accomplished. To reduce it to the familiar term of the usual fight against inflation, namely, credit restriction or physical controls, is wrong. Even in the field of the production programme, it has lost the simplicity of the targets of the First Plan since allocations between mills and handlooms or powerlooms and handlooms have to be varied from time

to time. Planning has tended to become a series of frequent adjustments made with constant care for the facts of the position. The vigilance involved is the price of freedom from want. That Mr Krishnamachari's first speech as Finance Minister shows awareness of the need for such vigilance is the best assurance that we can have that, with all its apparently insuperable difficulties, the Second Plan will be successfully worked.

Talking Points in Coal

APART from the strike in an important group of collieries, there have been two important developments as affecting the future of the Indian coal mining industry, and with particular reference to prospective role that the private sector would play during the period of the Second Plan. The first of these relates to the reported consideration by Government of uniform prices for coal on the lines of the policy guiding sales of steel and cement. The second concerns the progress that has been made in the direction of integration within the industry by the amalgamation of units of uneconomic size. Comment on all these three development is desirable, the more so since two of them are unfortunate in their implications for the future of the industry.

The strike in the Raniganj area was not totally unexpected. Trouble had been brewing for some time; knowledgeable circles were aware that a crisis of this nature might affect coal production. At the same time, however, the threatened crisis was not accorded exaggerated publicity, because the hope was entertained that the strike might be averted. The reasons on which the hope subsisted for warning off the crisis were not empty. Ostensibly, the decision to strike was taken because some of the colliery workers (or their unions) were not satisfied with the wage increases that have been awarded by the recently published report of the Tribunal. If this is true, that is to say, if the cause of the strike is dissatisfaction with the terms of the Award, the attitude of the labour union leaders responsible for the decision is to be deplored. For, in announcing the Award, Government indicated that, unless an appeal was preferrred thereagainst—whether by management or by labour—within one month of the publication of the Award, Government would presume the decisions contained therein to be acceptable and, consequently, the Award would be enforceable *retrospectively*.

The general knowledge had, at the time of the publication of the Award, been that, if any appeal was to be lodged, it would be by management. For, the finances of the colliery industry, and the selling prices of coal then in force, clearly were such as to make it difficult for the industry to bear the extra burden imposed by the Award. Subsequently, of course, Government announced an interim increase in the selling prices of coal; and it was implicitly recognised by authority that the higher costs involved by the Award could not be met by the industry unless the selling prices were raised. There had, however, been hardly any speculation on the satisfaction or otherwise of labour with the increases awarded by the Tribunal. It is not intended here to comment on this particular question of the adequacy or not of the wage increases. What we should like to draw attention to is the fact that there has been a work stoppage. Can the coal industry afford to have such a stoppage of work, which affects production of a commodity highly important to the implementation of the Second Plan? We may add, incidentally, the belief held in certain quarters that dissatisfaction with the Award is merely the ostensible reason for the strike. There are some who contend that the real cause of the strike is inter and intra union strife for control of offices in the hierarchy of the union.

As far as the colliery industry is concerned, it has proved, by deciding against an appeal when the Award was published, that it is not averse to paying higher wages to the workers; all that it asked was that, because its financial condition prevented it from bearing the additional burden, Government should raise selling prices. We wonder if Government should not take a sterner view of inter-union warfare; especially so, since Government themselves will be a considerable employer in the coal industry, when the plans for development of coal production in the public sector are implemented.

The second talking point on coal is the fantastic idea of uniform prices for coal. The line of argument possibly is that, since uniform prices are feasible in the case of cement and steel, there is no reason why such a policy should not also be extended to coal. The analogy is far from rightly conceived. In the case of steel and cement, the price of freight is but a fraction of the cost of the material itself. In the case of coal, freight is sometimes equivalent to the cost of coal itself. We cannot conceive of equalisation of prices in a context where freight is a preponderant factor in the price of the material.

It may be that the consideration of uniform prices stems from an unexceptionable desire, on Government's part, to encourage and facilitate regional development. Already, the new price policy in respect of steel and cement has benefitted entrepreneurial endeavour on the West coast and in the South. But there is a limit to the additional burden that can be imposed on the existing consumers in the industrially developed area of the East. Secondly, while regional development is a worthy objective, we cannot afford, for that reason, to be oblivious of the national interest. For, a direct consequence of uniform prices for coal will be to give an impetus to foundry fabrication in other parts of India. Will it profit the country if quantities of steel and coal are transported across the breadth of the country, merely so that regional development may be more equitable? Quite to the contrary, it would be futile and monstrous dissipation of wagon capacity, at a time when there is an over-riding apprehension that transport will be the bottle-neck to the successful implementation of the Second Plan.

We urge, with all the emphasis at our command, that all notions of uniform prices for coal must be peremptorily discarded.

The brighter side to the World of Coal is the progress of thought on amalgamation of collieries. We gather that Government are convinced of the necessity to proceed with the integration of the industry in such manner. The minimum size of a colliery would be around a monthly production level of 10,000 tons, with a reserve extending to fifty years' working. Marginal units, whose output could be raised to 10,000 tons, would not need to integrate with other collieries for fulfilling the minimum production. Amalgamation would be assisted by a three-man commission, with a Judge for Chairman and an accountant and engineer as members. Rulings by the Commission as to amalgamation of units would be binding. The process of amalgamation is, in the first instance, to be sought to be effected voluntarily or in conjunction with the Commission. If, by the end of 1958, no substantial advance is recorded toward integration, Government may, in the second instance, proceed to enforce amalgamation. This, in brief, is the current position.

The so called managing agents-managed collieries are scarcely affected. It is the other myriad collieries, largely proprietorial in character, which would need to proceed with amalgamation. We may recall, in this context, that, for the large number of small collieries that exists today, we have to thank the fragmentation that took place during the Second War, when a break up of collieries enabled the securing of a larger number of wagons. Such units are under mush-room ownership; but they account for less than one quarter of the Bengal-Bihar production. It would appear that they may oppose integration with all the resolution that they are capable of. But this is scarcely in the national interest; and, indeed, it may affect the future of the private sector in coal. We may suggest, in passing, that it would be unfair to blame the industry if, in the event, amalgamation is slow: the fault would lie with the small proprietors, not with the organised industry.

Production Plans

THE period of the First Plan was characterised by the conservative approach and the cautious assessment as to the resources that would be available for implementing the projects and attaining the targets in the first quinquennium of India's planned endeavour. Such caution was, in the circumstances, welcome, because the over-riding uncertainty was as to the ability to discover resources of sufficient size. It thus happened that Sir Chintaman Deshmukh's proneness, perhaps deliberately, to under-estimate revenue and exaggerate expenditure stood the country in good stead. The position, however, is changed as far as concerns the Second Plan. A conservative attitude contains in it the germs of the danger that it will foster a defeatist mentality. What is necessary is not so much a buoyant optimism, but a serene confidence in the ability of this country to discover, in sufficient quantity, the various resources that will serve as the component parts for the implementation of the Second Plan. Indeed, Mr Nehru has recently described the Second Plan as an act of faith. It is, therefore, much that we have to be grateful for that the key Ministries in New Delhi are displaying such confidence and faith in ample measure.

Mr T. T. Krishnamachari has set the pace by his unequivocal remark that India will not be hard put to it to raise the internal resources in behalf of the Second Plan. The Finance Minister sees it clear in his mind that the improvement in revenue collections made possible by the influences of an expansionist economy is likely to be of such size as to under-write the success of endeavours to raise the internal resources. In this regard, it is also to be remarked that the borrowing programmes of the Central Government and of the State Governments, in the first year of the Second Plan, have been so triumphant as to raise a sum of money that exceeds the average annual target. Since the expansionist economy can, moreover, be relied upon to increase the scope for borrowings, even as the tempo of development and the pace of deficit financing rise in their intensity, confidence, again, is the hallmark of a vital aspect of resources—public borrowings. Last week, it was the turn of Mr K. C. Reddy, Minister for Production, to make a public asseveration of the confidence of his Ministry to achieve the targets set in respect of heavy industry. In an admirably comprehensive review, Mr Reddy has detailed both the targets and the schedules of progress appertaining to specific tasks under his responsibility.

Two Government-owned companies have been registered to deal with heavy electrical equipment and with the production of coal in the public sector. As to the latter, the plans call for an increase of output in the public sector by

(Continued on page 588)

Finance for Public Sector

In his speech at Bangalore, Mr S. N. Haji has made a new suggestion toward building up greater harmony between the public and the private sectors in India. He wants that all State industrial enterprises should function as public limited companies and that, barring the defence and strategic industries, all of them should open their shares for public subscription to the extent of 49 per cent, these shares to be quoted in the stock exchanges. In making this suggestion, the AIMO Chairman shrewdly seeks to set up a new common standard in judging the comparative performance of industrial units in the two sectors.

The results, however, may not turn out to be far from agreeable, from the point of view of private industry. The State, if it chooses can effectively utilise its vantage position to bolster up the market price of its industrial shares and attract an unduly large measure of speculative investment. Though there is a guarantee of non-discriminatory treatment as between private and public industries, subtle temptations for preferences might often become irresistible, especially when they lead to better prestige and a show of more efficient performance. Even otherwise, it is debatable how far the invasion of the speculative element into the field of public industry would be desirable.

The performance of public industries has to be submitted at the bar of the Parliamentary criticism or administrative scrutiny. The introduction of an extraneous criterion which is not devoid of unwholesome aspects does not therefore appear to have an overwhelming case. It is safe to leave the techniques of judgment mutually exclusive.

Editorial Notes

But, by far the most effective argument against such a course rests on the prospect of funds otherwise available for private industry being inexorably drawn away from it. It is rather strange that a prominent spokesman of the private sector should advocate a step, which implies such a consequence. As for finance for the public sector, it must be possible to secure it exclusively through State loans at a fixed rate of interest.

*

Pakistan and Its Premier

Nine years ago, soon after Pakistan came into being, Mr H. S. Suhrawardy found himself without an occupation, without a follower and, seemingly, without any sort of political future. It is wholly characteristic of him that, in such a situation, he first made up his mind to become someday the Prime Minister of the new State, and then quietly left the country for a long rest cure abroad. His ambition and his superb sense of timing in political warfare make him the politician sans pareil in Pakistan that he is.

Yet, now that he has achieved what he had set out to do, he will require all his harsh brilliance in positional party manoeuvring, if he is to retain his position of power for any length of time. Dr Khan Sahib's Republican party, it is to be remembered, is still the largest single party in the legislature and, although Dr Khan Sahib pledged himself to "support unconditionally" the new Prime Minister, his earlier hostility toward the Awami League is too recent for many of his colleagues and followers easily to forget. How long the Republican party—now apparently an open harbour of refuge for the members of the fast disintegrating Muslim League—will be content to remain the junior partners in a coalition is a question which is likely to test Mr Suhrawardy's nimble deftness in political waltzing to the utmost.

And therein lies the dilemma to which more than one Prime Minister in Pakistan, not knowing the answer had consequently to quit. It is the dilemma of the person who finds that, to save the roof from falling over his head, he has to dig a deeper foundation and the moment he tries to dig, the roof starts showing a bigger crack.

For the nine years that the Muslim League has been in power, Mr Suhrawardy, more than any one else, represented in person the opposition in the two dominant rivalries in Pakistan's political life—the rivalries between the "service" and the "politician" and between the "east" and the 'west'. His coming to power signifies that, for the time being at least, the "service" will have to relinquish some part of the political power it had gathered to itself and that East Pakistan will be better able to hold its own against what it has long complained of as Centralist domination by the West.

The new Prime Minister has certainly no illusions—he is nothing if not a determined realist—either about charming away the tangled political undergrowth in Pakistan or about the immense difficult terrain that lies ahead of him. Not the least of the difficulties is the growing unpopularity within the country of its foreign policy, the gradual veering of which toward a helpless dependence on the Anglo-American block was somewhat pathetically demonstrated by Pakistan's stand in the Suez conference.

It is significant that Mr Suhrawardy, in his broadcast to the nation on assuming power, gave pride of place to foreign affairs. He spoke of his anxiety to be on friendly terms with all nations and "chiefly with our neighbourly countries". He can be sure that his anxiety is shared, perhaps to a greater degree, by India; and, if he only will, the things that have queered the pitch of friendly relations between the two countries can soon become things of the past.

More than, however, by his conduct of foreign affairs, Mr Suhrawardy will charter out his future by the way he goes about solving the problems of food, administration and political instability. He is, of course, very much conscious of this and was frank enough to mention in his broadcast that conditions in East Pakistan "bordered well on famine" and that corruption in the administration was felt to be rampant. "We must have a clean administration and clean politics," he said. If, under his stewardship, Pakistan somehow manages to have both within a reasonably short time, Mr Suhrawardy will not only have earned the gratitude of his countrymen but will have proved himself to be a much abler man than the popular idea of him makes him out to be.

*

Are They Too Many?

When Dr Visweswarayya expresses dissatisfaction over the importation of foreign technical experts into India, the criticism cannot be dismissed as in any way motivated by political or sectional antipathies to the Government. He must be speaking with a full knowledge of facts. Nor is he alone in making the charge that there are too many foreign experts in India.

Opposition spokesmen allege that some countries have entrusted secret political assignments to the experts they have sent. Visweswarayya is apparently not concerned with such risks. His assessment is based on the demand and the supply of experts in different fields. He does not seem to have explained in which particular department of activity the unwanted experts have come in. This is an indispensable detail for examining the charge. There are experts advising on the community projects and a number of other non-industrial activities. There are also experts, more numerous, working on the several new industrial projects, which have recently come up.

Persumably, Visweswarayya thinks of the latter. Though the Government are making every effort to enlarge facilities for higher technical education and to utilise opportunities for training in foreign countries, there is a gap in the supply of technical personnel, especially at the top-levels which the foreign experts inevitably fill. The veteran all-rounder cannot be unaware of this temporary difficulty. He could not, therefore, have meant that every foreign expert in India was a superfluity. Probably, he thinks that there are many more men than are necessary.

When a competent and well meaning expert like Dr Visweswarayya chooses to level a charge against them, the Government must accept the obligation to meet

Tell-tale Changes

FURTHER inferences can be made about the current year's State Loans; and these are to be discovered in the three statutory bank statements. It needs, however, to be remarked that the inferences can be as to trends only, and not to actual sets of figures. The inability to suggest specific figures arises from the fact that the relevant bank statements also bear the impress of month-early disbursements as well as of slack season conditions. Since, in some cases, loan subscriptions, month-early disbursements and slack season conditions are as opposing forces having a bearing on the same sets of figures, we have to be careful not to rush to headlong conclusions. The inferences as they were available in the returns of the Reserve Bank and of the State Bank for the week-ended September 7 were analysed in this column last week. The third of the bank statements for September 7 is now available, and it has to be read in conjunction with the returns of the Reserve Bank and of the State Bank for that week.

We may first summarise the changes that have taken place in the statement of Scheduled Banks for September 7. These are six in number, and are as follows:

(1) There is a sharp fall of Rs 17.64 crores in Deposits to Rs 1,098.42 crores.

(2) Borrowings from the State Bank have risen by Rs 5.45 crores to Rs 12.70 crores; those from the Reserve Bank steeply by Rs 21.26 crores to Rs 52.25 crores.

(3) Cash balances, including money at call, are substantially lower by Rs 11.75 crores at Rs 111.66 crores.

(4) Investments are higher by Rs 4.96 crores at Rs 366.38 crores.

(5) Advances have gone up sharply by Rs 29.02 crores to Rs 616.72 crores—the highest level of Advances since the busy season peak of Rs 617.07 crores in the week ended May 11.

(6) Bills discounted are, however, lower; Inland Bills have dropped by Rs 6.43 crores to Rs 95.15 crores; and this is fractionally offset by a rise of Rs 0.71 crores to Rs 46.58 crores in Foreign Bills.

The first five of the changes that have been noted have their immediate relevance in respect of State Loan subscriptions. On the other hand, all six changes, except the fourth, may also be interpreted in terms of month-early disbursements.

Vindicated

The statement of the Reserve Bank for the week ended July 20 related to the week in which subscriptions were received for the Centre's New Loan. An analysis of that statement in Indian Finance of July 28 offered a hypothesis as to the Reserve Bank's role as a contributory factor to the success of the New Loan. The hypothesis seemed to point convincingly to the cancellation of ad hoc Treasury Bills, during that week, of the order of Rs 40 crores—although the decline in Rupee Securities in the Issue Department was only Rs 10 crores. An extract from this column in the issue of July 28 reads as follows:

"In consequence, Investments in the Banking Department would have risen by Rs 50 crores to Rs 87.31 crores. At the same time, the Central Government's deposits would have increased by the total amount of cash subscriptions—Rs 77 crores—to Rs 129 crores. Since Government policy on ad hocs is entirely flexible, it would appear that the decision was taken to cancel Rs 40 crores of ad hoc Treasury Bills for the reason that there was no need for the Government's level of deposits to be as high as Rs 129 crores."

Some evidence of the thesis that cancellation of ad hocs was for Rs 40 crores is offered in the August issue of the Reserve Bank of India Bulletin. Table 21 in this publication contains figures relating to Government Treasury Bills. The last column in this table gives the total amount of Treasury Bills outstanding. This figure is found to have declined from Rs 654.88 crores as at the week ended July 13 to Rs 616.11 crores as at July 20.

Finally, the sixth change has to be studied as an index of slack season conditions; and, impliedly, the impress of slack season conditions must also have been felt in two or three of the other changes.

In our analysis of the statement, it is not possible to attribute the reasons for a decline or an increase under individual heads specifically to any of the three factors responsible for the changes—that is, State Loan subscriptions, slack season conditions and month-early disbursements. Our study has to be more or less simultaneous, taking together all three factors at once. Thus, the sharp decline in Deposits may be due partly to the increased demand for money occasioned by month-early disbursements. On the other hand, slack season accretions to Deposits should have somewhat offset the decline in Deposits normally to be expected in the first week of the month. In the result, we may suggest that the decline in Deposits mostly reflects the withdrawal of monies for purposes of subscriptions to the State Loans.

While the banking system thus found its resources reduced, we have secondly to note that the demand for accommodation rose substantially. Advances rose by more than Rs 29 crores to a level just short of the busy season peak. Month-early disbursements may be said to account for some part of the expansion in Advances. But, undoubtedly, a moiety of the rise represents accommodation to constituents in respect of State Loans. In this context, we will revert to the subject of Advances when we study the Scheduled Bank statement in conjunction with the return of the State Bank for the corresponding week.

The decline in Deposits and the increase in Advances indubitably necessitated the securing of apposite aid from the Central Banking Institution and from the State Bank. Borrowings from the State Bank rose sizeably by Rs 5.45 crores: indebtedness to the Reserve Bank rose sharply by Rs 21.26 crores.

Again, both month-early disbursements and State Loan subscription needs have together caused a reduction of Rs 11.75 crores in the Cash Balances of member banks. The extent of subscriptions of member banks to the State Loans, as so far incorporated in the investment portfolio, is indicated by the rise of Rs 5 crores in giltedged held by member banks.

Finally, Inland Bills purchased and discounted are lower by Rs 6.43 crores; and this may be attributed to a slack season teapering off.

We may now study the Advances of Scheduled Banks and their implications as affected by certain facts to be gleaned from the statement of the State Bank for September 7. The return of the State Bank for that week discloses a sharp rise of Rs 12.19 crores in Loans, Cash Credits and Overdrafts. Thus, it is fair to conclude that the Advances of member banks, excluding the State Bank, amount to Rs 29.02 crores minus Rs 12.19 crores— roughly Rs 17 crores. Secondly, of the increase in the State Bank Advances of Rs 12.19 crores, Rs 5.45 crores represents the increase in the indebtedness to the State Bank of member banks, as evidenced in the rise, in the Scheduled Bank statement, of borrowings from the State Bank. It would appear, then, that transactions between the State Bank and member banks account for an increase in Advances of Rs 5.45 crores. Other than inter-bank Advances would be for the balance of roughly Rs 23½ crores. Of this, a moiety may be said to represent the formal expansion in Advances in the first week of the month; and the other moiety would have regard to accommodation for State Loan subscriptions. Two inferences that are to be drawn are, thus, that, firstly, the expansion in the Advances of the State Bank to constituents, whether against month-early demand or for subscription toward State Loans, was a little over Rs 6½ crores in the week ended September 7; and that, secondly, the extent of Advances of member banks, excluding the State Bank, for the same two reasons, should have been around Rs 17 crores.

The fact that Cash Balances of the State Bank rose by Rs 2.30 crores in the week ended September 7 discloses that the running down of balances of other member banks exceeded Rs 15 crores.

Finally, since the Investment portfolio of the State Bank showed no material change in the week ended September 7, the increase in the investments in the Scheduled Bank statement attests to State Loan purchases of the other member banks. In this regard, we may mention that the investment portfolio of Scheduled Banks is likely to show further increases in the next two or three weeks, although the size of the increase is likely to be modest.

We may now pass on to a study of the State Bank statement for September 14 and the inferences it offers of State Loan subscriptions. As anticipated in the last week's issue, the State Bank found it necessary to raise borrowings from the Reserve Bank; borrowings are shown at Rs 6.50 crores against nil in the previous week. Advances show no material change. Investments in Government Securities have moved up by Rs 1.11 crores to Rs 95.85 crores. Also, as anticipated in this column last week, Other Liabilities are reduced. This head is marked down by Rs 5.27 crores at Rs 16.87 crores. Obviously, the item "Other Liabilities" included subscriptions to the State Loans which were pending transfer to the Reserve Bank as well as over-subscriptions which could either be paid to the Reserve Bank or kept in behalf of the Reserve Bank for return to the unsuccessful subscribers. The decline of Rs 5.27 crores in Other Liabilities, as against the rise of Rs 15.20 crores under this head in the previous week, suggests that not all the transactions in this regard have been adjusted. It would appear that some payment has been made by the State Bank in this connection; and this may account for the decline of Rs 1.13 crores in Cash Balances. For, in the second week of the month, there should normally have been an increase in the Cash Balances of the State Bank.

We move, finally, to a study of the returns of the Reserve Bank of India for the week ended September 14. There are nine important changes which have to be noted: and these are as follows:

(1) Notes in Circulation are marked lower by Rs 7.73 crores at Rs 1432.45 crores.

SOUTH EASTERN RAILWAY TENDERS

The General Manager, Garden Reach, Calcutta-23 invites tender No. GM12/56/2468B (56) for supply of 593 cwt. of Nut Hex Head M.S. Forged Black 1", 1" & 1" dia. to BSS 916-46. Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta-23 on remittance of Rs 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach by local firms. Closing date 5-10-56 at 12 Noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S 22

(2) Rupee Coin has returned from circulation for an amount of Rs 1.05 crores.

(3) In the result, the Reserve Bank's cash in the till has improved by Rs 8.79 crores to Rs 25.04 crores.

(4) Rupee Securities and Foreign Securities are unchanged.

(5) Investments are slightly higher by Rs 0.38 crores at Rs 52.19 crores.

(6) Inspite of a status quo in Rupee Securities, the Centre's Deposits show the considerable rise of Rs 14.55 crores to Rs 73.41 crores.

(7) Deposits of State Governments show a further rise of Rs 2.81 crores to Rs 19.54 crores; and their borrowings are lower by Rs 0.25 crores at Rs 5.07 crores.

(8) Banks' deposits have dropped by Rs 2.44 crores to Rs 53.72 crores; and the Other Loans and Advances of the Reserve Bank have again risen by Rs 2.22 crores to Rs 76.73 crores.

(9) Other Deposits in the Banking Department stand reduced by Rs 3.62 crores at Rs 14.39 crores.

The decline in active Notes, the rise in Rupee Coin and the more comfortable position of the Reserve Bank as to its cash in the till are all entirely expected in the second week of a slack season month. But the Centre's Deposits have risen sharply by Rs 14.55 crores to Rs 73.41 crores. Again, as against the net aggregate loan receipts, to be retained by the States, of the order of Rs 60 crores, the accretions to the Deposits of State Governments fall far below this level of Rs 60 crores. In the week ended September 7, the favourable turn in the balances of the State Governments worked out to slightly more than Rs 16½ crores, the bulk of this comprising an actual increase in the State Governments' Deposits, and a portion of it representing a decline in the indebtedness to the Reserve Bank of State Governments. In the week ended September 14, the favourable turn in the balances of State Governments is hardly Rs 3 crores. Deposits of State Governments have risen by Rs 2.81 crores; borrowings from the Reserve Bank are reduced by Rs 0.25 crores. In other words, in the two statements of the Reserve Bank which cover the period of the State Loan subscriptions, the figures appertaining to the balances of the State Governments showed an improvement of roughly Rs 20 crores, and no more. It is inconceivable that Rs 40 crores remain to be credited to the account of the State Governments, that such payment is pending either by the Reserve Bank to the State Governments concerned or by other banks (who were authorised to accept loan subscriptions) to the Reserve Bank. The unlikelihood of such a sum of Rs 40 crores outstanding, together with the sharp rise in the Centre's Deposits without apparent benefit of created money, suggests the next inference we can make. This relates to the possibility that a not inconsiderable portion of the receipts of State Governments has been promptly invested in ad hoc Treasury Bills. That is to say, during the past two weeks, and especially in the week ended September 14, there would appear to have been sales of ad hoc Treasury Bills to State Governments. The proceeds from such sales would have been credited to the Centre's balances; and this would account for the rise in the Centre's Deposits.

There are three more points worth mention in the Reserve Bank returns. In the first place, banks continue to feel the pinch that originated in transactions relating to State Loan subscriptions. This is attested to by the decline in the balances of member banks with the Reserve Bank and by the increase in the Other Loans and Advances of the Reserve Bank.

Secondly, Other Deposits in the Banking Department have fallen by Rs 3.62 crores; in the previous week, they had risen by Rs 5.74 crores. This suggests that receipts which had been kept in suspense by the Reserve Bank, possibly on account of State Loan subscriptions, have largely been completed in the week under review.

Finally, our foreign balances continue to be steady. It may be recalled that, for the first time in many months, the decline in the Foreign Securities held in the two departments was, last week, a modest one of Rs 0.66 crores. In the latest week, the decline is, once again, of small size at a shade under Rs 1 crore.

+

The statement of the State Bank of India for the week ended September 14 reveals a drop of Rs 3.12 crores in deposits at Rs 228.21 crores. Borrowings from other banks are shown at Rs 6.50 crores as against nil in the previous week, while other liabilities, including inter-office adjustments, have declined by Rs 5.27 crores to Rs 16.87 crores.

On the assets side, cash balances are slightly lower at Rs 18.75 crores against Rs 19.82 crores, while Investments are higher at Rs 107.41 crores against Rs 106.29 crores. Advances have moved down by Rs 0.72 crores to Rs 133.21 crores—"Loans Cash Credits and Overdrafts" accounting for a small rise of Rs 0.05 crores and "Bills Discounted and Purchased" for a drop of Rs 0.74 crores.

+

According to the returns of the Scheduled Banks for the week ended September 7, both demand and time liabilities have shown declines—former by as much as Rs 15.36 crores to Rs 639.38 crores and the latter by only Rs 2.28 crores to Rs 499.04 crores. Borrowings from the State Bank are higher by Rs 5.45 crores at Rs 12.70 crores and those from the Reserve Bank by Rs 19.26 crores to Rs 52.25 crores. Cash and balances with the Reserve Bank have moved down by Rs 0.50 crores to Rs 88.75 crores. Investments have risen by Rs 4.96 crores and Advances by Rs 29.02 crores to Rs 366.38 crores and Rs 616.72 crores respectively. Inland Bills are shown at Rs 95.15 crores against Rs 101.58 crores and Foreign Bills at Rs 46.58 crores against Rs 45.87 crores.

Political Trade Unionism in Britain

By PAUL EINZIG

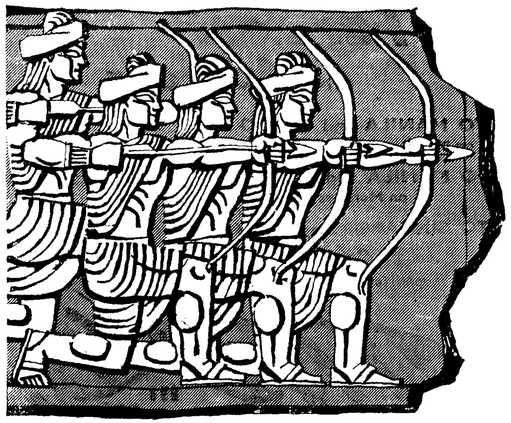
The recent accentuation of the political character of British trade unionism foreshadows endless economic, social and political trouble for Britain. The resolutions passed at the recent Annual Conference of the Trade Union Congress and the speeches made by some of the leading trade unionists amounted to nothing less than a declaration of war against the Conservative Government. For all practical purposes the British trade union movement has become an integral part of the Socialist Party and has gone into militant opposition to the Government at present in office. The grave significance of this change is gradually being realised in Britain. It has come to be regarded in business circles as the worst of the many evils Britain has to contend with.

It makes very little difference in the United States to the attitude of the trade unions in matters of wages claims whether the Administration is Republican or Democrat. In a number of Continental countries there are separate trade unions for supporters of various political parties and their political tendencies cancel each other out, more or less. There are Communist and non-Communist trade unions, Socialist and non-Socialist trade unions, christian or catholic trade unions, with large membership in each trade. Even that system though far from satisfactory compares very favourably with the new British system under which the whole might of trade unions will in future be used for making difficulties for any non-Socialist Government and therefore to the nation.

It is, of course, arguable that the difference made by the decision of the Trade Union Congress to bring wages restraint to an end is more theoretical than practical. Throughout the post-War period the general rule was that trade unions made full use of their strong bargaining power to secure the maximum of wages increases and other onerous changes in working conditions. Their demands were pressed ruthlessly to the utmost limit of possibility to the full extent to which it was possible to achieve the acceptance of the demands without a prolonged major strike. Nevertheless there were borderline cases, especially under the Labour Government in which the unions were willing to accept somewhat less than the maximum they would have been in a position to achieve with the aid of strike or threats of strikes for the sake of mitigating the inflationery trend.

With trade unionism in undisguised opposition, the political argument will work in the sense of reinforcing and exaggerating wages demands instead of restraining them. It is difficult to estimate even approximately how much difference this will make to the actual level of wages. What can be said with certainty is that it will make all the difference to the spirit in which wages demands will be negotiated. Even in the past trade union officials were fond of throwing their weight about when negotiating with employers. It is always difficult to resist the temptation of obviously enjoying the use of recently acquired power. "Trade Union rudeness" has become a byword in industrial relations. Even so, it was possible to argue with trade union officials on grounds of considerations of public interest. There is reason to fear that in the future such arguments will be brushed aside.

To argument put forward by Government or employers that heavy wages demands are inflationary the stock answer of the trade unions will be that inflation could and should be checked not by restraining wages demands but by reverting to physical controls and by drastically cutting down defence expenditure. Socialists and trade unionists are entirely unimpressed by the argument supported by the overwhelming majority of economists that physical controls would not suppress inflation but would merely disguise them by creating artificial situations of disequilibrium. They refuse to admit that such artificial positions cannot be carried with impunity beyond a certain point. From this point of view it was a pity that in 1951 the Socialist Government was replaced by a conservative Government because if the Socialists had remained in power for a few more years they would have had to face the full consequences of their economic policies. Their education would have been costly to the nation but in the long run it would have been worth while to pay the price. As things are, it will take another prolonged Socialist rule in Britain to expose the basic fallacy of Socialist economics.



During the first few years the next Labour Government will be in a position to claim that its difficulties were inherited from the Conservative regime. It will take at least ten years of continuous Socialist rule to make British opinion fully realise that artificial situations of economic disequilibrium bolstered up by physical controls are untenable in the long run.

Trade unionist pressure in favour of disarmament is very ill timed in view of its coincidence with the Suez crisis. The lessons of that crisis clearly show that Britain could ill afford to reduce her strength in conventional armaments. It is true disarmament would tend to be disinflationary. In practice, however, it would only mean that their would be more room for excessive wages demands which could then be conceded without immediate penalty in the form of an aggravation of the balance of payments position through the inflation of purchasing power. The penalty would be paid, nevertheless through the effect of higher wages on the competitive capacity of British exporters. This means that if £100 million saved on defence

(Continued on page 563)

Surprise at Thermopylae

When Xerxes, the mighty Persian emperor, invaded Greece in 480 B.C. he had with him a company of Indian archers. These Indian archers used a new weapon—a steel-tipped arrow which had been brought all the way from India. History records that the Greek army was surprised by the superior arms of Xerxes and was defeated in the battle of Thermopylae.

Today, once again, steel is very much to the fore in the nation's thinking, but with a different intent. The country's steel-making capacity is being rapidly enlarged, not for purposes of war, but for peace and development.

TATA STEEL SERVES THE NATION

TN 1042

World of Business

The Sales Tax

The Federation of the Indian Chambers has brought out a brochure, reviewing problems of sales tax and suggesting certain steps considered necessary for the achievement of sufficient coordination between the different fiscal authorities and for putting the trade and consumer on a more agreeable position.

It is stressing the obvious to say that the Amendment to Article 286 of the Constitution is a half-hearted attempt to meet the somewhat chaotic conditions which had arisen consequent on a number of court judgments on State levies. This Amendment vested in the Centre the power to regulate the levy of sales tax on inter-State transactions and to that extent the recommendations of the Taxation Enquiry Commission were accepted. In relation to the complete thesis which the Commission put forward for changes in the administration of sales tax, this Amendment does not proceed far enough.

The purpose of the Federation brochure is to establish that the Centre must take more powers by way of both directly curtailing the jurisdiction of the States and extending its authority further in the matter of co-ordination of State policies. The Taxation Commission has not omitted to examine this point in detail. The Commission was also in favour of a considerable extension of Central authority.

The Federation, however, is not satisfied with the limits to which the Commission are prepared to go in this respect. The brochure describes the Commission's approach as one "dictated mostly by expediency and not from the long-term view of fitting in the system of sales tax into the larger picture of national economic and fiscal policies".

While the Commission recommended the inclusion of sales tax on inter-State sales in the Union list, vesting Parliament with authority to formulate principles to determine the transactions in the course of inter-State trade and the setting up of an Inter-State Council for purposes of streamlining the administration, the Federation argues for a complete ban on sales tax on inter-State transactions between registered dealers and on transactions in the course of export outside or import into the country, the vesting of Parliament with power to regulate tax on important raw materials and on articles essential for the life of the community and the Central Government assuming specific powers for purposes of coordination.

While the Federation's suggestions are undoubtedly beneficial from the standpoint of an impeccable, fully-co-ordinated system, they run up against an inescapable practical difficulty, the opposition of the States. The Parliamentary debate on the Sixth Amendment Bill must be an eye-opener to anyone ranged on the side of further centralisation of power. If the desired measure of co-ordination in respect of sales tax has not been found possible, through mutual negotiation among the States or through Central persuasion, it only goes to prove that the States have special needs and difficulties which cannot admit of any rubber-stamp remedy.

Expediency, though disagreeable from a certain point of view, is an inevitable consideration particularly in the delicate field of federal relations. The Taxation Enquiry Commission could not be accused of any political bias when they ruled out centralisation of sales tax on the ground that it was inconsistent with the preservation of a certain amount of elasticity necessary to enable State Governments "to adapt and model their taxes in its application to the widely differing conditions of the different States."

It would be wiser to agitate for changes on which the Commission and the Federation are agreed. Even here, much remains to be done. It would be a valuable gain, if Parliament manages to secure powers for the regulation of taxation on commodities of importance in inter State trade and commerce.

Oil Exports

At a luncheon meeting held at the Calcutta Club on 14th September, 1956, Rai Bahadur G. V. Swaika, President of the Bengal Oil Mills Association, appraised Sri S. N. Bilgrami, Chief Controller of Imports and Exports, of the crisis through which the oil mill Industry is passing, and emphasised how if this crisis is not quickly resolved, it will lead to idle plants and unemployment.

In the course of his speech, Mr Swaika drew attention to various circumstances contributing to the present state of affairs. The linseed oil industry is not able to maintain production because of a dwindling market, which in turn is the result of the higher price of the Indian product. The kapok oil, salad oil and mohua oil industries are also similarly placed.

The remedial action sought from the Government is the removal of the export duties on all these products. The problem faced by the mustard oil industry is different, being one of rising prices in the internal market brought about by a shortage of mustard oil seed. Against this, Sri Swaika suggests the import of mustard seed. He feels that there is also the necessity for reservation of crushers' export quota for vegetable oils and oil cakes, so that the Bengal Oil Mills can plan their production programme and maintain continuity without any unemployment of labour.

Revisions of export duties in accordance with the requirements of export trade form part of accepted policy. Between the import of mustard seed and mustard oil, the two alternatives before the country, the first has a much stronger case, at least for the reason that there is unutilised domestic capacity.

World of Tea

General Outlook

THE opinion is now gaining ground that an oversupply of Tea seems likely during the current season. Production in the major exporting countries has already been running about 6 millioen pounds ahead of last year. It is at this point that the figures of the North Indian crop begin to assume importance. Production, during the current season, until the end of August, totals 305.34 million pounds as against 282.47 million pounds, showing an increase of 22.75 million pounds over the corresponding period of 1955. The following figures show the world crop to the end of July (in million pounds):—

	1956	1955
North East India	205.6	194.9
South India ...	72.7	75.8
Pakistan ...	20.5	17.8
Ceylon ...	228.4	227.1
Indonesia* ...	46.1	51.4

*Up to the end of June only.

As the largest producing unit, the weight of the North-Indian crop is the deciding factor in world supply, and it is on the crops made here that the buying policies are largely formulated. There are even suggestions in some quarters that restrictions should be imposed on the size of the crop during the remainder of the year. One proposal is, that gardens should stop production at the end of November, while others urge that this should should be supplemented by asking each garden to destroy 2 per cent of its output so as to ensure that a large portion of the residue types do not come on to the markets.

Anxiety is the more when price trends at the auctions have been irregular. Best quality teas are being sold well, while the Common and inferior grades have been fetching unremunerative prices. If the crop figures continue to show increases, then the future of Common tea is, indeed, bleak. Medium teas may receive a fair demand from the outmarkets. By and large, the present market pattern is most likely to be retained and wide-price concertina is to be expected as a permanent and lasting feature of this season's working.

In the Export Sale held in Calcutta this week, offerings were as much as 55,500 packages. There was only a fair demand at the start of the sale, but this strengthened as the sale progressed both export and internal buyers operating freely. There was more demand for Medium Brokens and these were sometimes dearer, while Medium Fannings were sold well and were fully firm, especially if they were black and had useful liquors.

The best CTC Assams, on offer, were rather irregular and at times easier, while the poorer fibrous sorts were a very strong feature and were generally several annas dearer. Assam BOPs and OFs of orthodox manufacture were selling at dearer rates, especially those with any quality.

Low Medium Brokens met with more support and were about an anna per pound dearer, while Commons were firm. The Commonest sorts were one to two annas per pound dearer. There was more demand for stylish BPSs which were fully As 2 per pound dearer, but stylish Whole Leaf grades were As 2 per pound easier. The poorer Whole Leaf grades were generally sold at dearer rates.

There was good support for Darjeeling teas, but these were As 2 to As 4 per pound below last rates. Following rates were quoted:—Clean Black Pekoe Rs 1-13 to Rs 1-14; Plain Broken Pekoe Rs 1-9 to Rs 1-9-6; Medium Assam Broken Pekoe Rs 1-14 to Rs 2 and Best CTC Assam Broken Pekoe Rs 3 to Rs 3-4.

The offerings in the Internal Sale consisted of 15,926 chests of Dusts for which there was a strong and general demand. Clean Black Leaf types, suitable for the Middle East, were sold well and were generally fully firm. The best CTC Assams were well supported and were generally dearer, but the poorer and more fibrous CTC kinds were often easier. Commons and Mediums were one to two annas dearer and sometimes more, while residue descriptions were a very strong feature and generally sold several annas above valuations.

There was more interest in Darjeeling teas than in recent weeks and dearer prices were realised, particularly for those with flavour. Following rates were quoted:—Medium Dooars Dust Rs 1-14 to Rs 1-14-6; Medium Assam Grainy Dust Rs 2-1 to Rs 2-2; Medium Assam CTC Dust Rs 2-10 and Best Assam CTC Dust Rs 3-4 to Rs 3-8.

The offerings of Leaf grades consisted of 989 packages for which there was a good demand at prices which were firm to slightly dearer. The Green Teas, on offer, met with a fairly good enquiry.

In the Export Quota Section, the rate was marked upto 24 pies per

World *of* Jute

Outlook for Hessian

IT may be now be proclaimed without the fear of being contradicted that August has been a very good month for the Indian jute goods industry. All the relevant figures pertaining to the condition of the industry and trade during the month are now available. Together, they make encouraging reading. First, we were told that stocks had declined sharply from the previous month's level. The industry heaved a sigh of relief and the nightmare of the first seven months of the year was forgotten. The production figures which followed brought further confirmation of the brightening prospects. The next set of figures released by the IJMA—those pertaining to jute goods despatches during August—showed that total exports including internal consumption of all classes of goods were substantially higher at 105,632 tons as compared with July's 84,197 tons. There has been a sizable increase in the exports of hessian to 44,243 tons from 31,028 tons in July, while sackings had also improved from 34,636 tons to 44,448 tons. Internal consumption of hessian had risen to 1,633 tons from 1,349 tons. Total hessian exports including internal consumption have risen to 45,876 tons from 33,277 tons and sackings to 54,029 tons from 44,599 tons. Internal consumption of sackings has, however, declined to 9,581 from 9,963.

Yet another important factor which influences jute goods markets, monthly US burlap consumption, has also turned out to be extremely favourable to market sentiment. It was disclosed on Monday that US consumption of burlap in August amounted to 83.3 million yards, as against only 61 million yards in July. This is the highest in the past three years.

It is to be presumed that the decision to reseal 2½ per cent of looms, the full effect of which was felt in August, has helped improve the statistical position. The IJMA's subsequent decision to reseal another 5 per cent of the looms has come into effect from Monday, bringing the percentage of idle looms again to 12½. It may safely be presumed, therefore, that the statistical position at the end of the current month will be further in favour of the industry and trade. The trend of shipments during the current month, coupled with the persistent reports of enquiries from Argentina and Australia, indicate that jute goods markets will continue to be bouyant.

By far, the most powerful factor in the present situation in the market is the expectation that American purchases will show a steady increase in the coming months. Referring to burlap prices in US, the Journal of Commerce, New York, recently observed: "Should world demand improve, especially from Russia and Argentina, as currently anticipated, and should India's rescaling of a portion of her jute looms prove effective in offsetting rising stocks, firmer burlap prices will be in the books."

The paper went on to point out that the outlook for burlap is fairly optimistic what with the anticipated additional purchase of heavy goods by Russia and the expectation that Argentina will be back in the market for its full requirements by next year. It is also to be noted that the use of burlap is growing and will continue to grow in Africa, Australia, South America the Far East and Europe, especially in areas where bulk handling is impracticable.

So far as the US is concerned, the journal anticipated that with the improved demand for bagging during the harvest months, additional purchase of burlap would be made.

From the foregoing, it would appear that the recent steep rise in prices in the Calcutta Jute Goods Market is justified by market conditions abroad. But the Indian industry and trade must remember that one of the prerequisites to continued popularity of Indian jute goods abroad is an equitable and stable price level.

Speaking at the annual general meeting of Gunny Trades Association, Calcutta, in the last week of July, the Chairman, Mr Vishwanath More had drawn pointed attention to the incalculable harm caused by unbridled speculation to the interests of the industry. Referring to instability of prices, he said: "A number of delegations that visited foreign countries in the recent past have been of the unanimous view that nothing irritates the consumers so much as the wide fluctuations in the prices. With the present day method of scientific costing wide variations in the prices of the packaging material are direct encouragement to the substitutes."

The Indian jute goods industry, it may be remembered, is by no means having a smooth time. There is the constant threat from substitute packaging materials; and, in recent years, particularly after the advent of Pakistan, it is encountering intense competition. Another obstacle in its way is the increasing trend in erstwhile consuming countries to produce jute goods themselves. These factors are beyond the control of the industry as well as the Government of India. But it has been a common phenomenon in the Calcutta Jute goods market that much of the harm has been wrought by unbridled speculation. It is idle to claim that even against this factor the trade is powerless. The remedy lies, as Mr More had said, in thinking and acting collectively in the interest of the trade and industry as a whole.

Now that prospects for burlap appear to be getting brighter, it is imperative that the trade and industry should do everything in their power to see that the market does not get into the grips of unsocial elements.

The sizable increase in US consumption of burlap coupled with reports of enquiries from Argentina and Australia helped prices in the jute goods market maintain a firm trend last week. Toward close, however, prices especially in the sacking section declined sharply due to selling pressure from bulles.

After opening steady, hessian ready at one time in the week was done upto Rs 44 with B-Twills Ready moving in sympathy to Rs 114-8.

World *of* Insurance

Marine Insurance in India

IN common with the trends in the various marine markets overseas, marine insurance in India continues to be a source of concern and anxiety. The materials for this concern are to be found in the accounts of leading underwriters. If 1955 accounts can be taken as symptomatic of the general trend, they present unsavoury features calling for a close appraisal and probe into the mechanics of marine accounts. Thus, New India Assurance Company, the leading underwriters in India having an international stature, shows an unwriting loss of Rs 8 lakhs as against Rs 14 lakhs in 1954, although claims account for 75.6 per cent of the total outgo in 1955—an increase by about 1.33 per cent over 1354. The reduction in underwriting loss from Rs 14 lakhs to Rs 8 lakhs is attributable to lower expenses of management—a satisfactory feature of the accounts. The Ruby General Insurance Company, reputed to be the second largest company in India, shows an underwriting loss of about Rs 1,57,000 although reserves against unexpired risks are only 45 per cent of the premium income of the year as against the world trend of 100 per cent. Claims account for about 63 per cent of the total outgo. Concord of India Insurance Company Limited, another leading company in India, has shown in 1955 accounts an underwriting loss of about Rs 1,16,000, claims accounting for 77.6 per cent of the total outgo. The accounts of Indian Trade and General Insurance Company Limited also reveal an underwriting loss of Rs 1,10,400 claims accounting for 67.1 per cent of the outgo as against 60.1 per cent in 1954.

These are symptomatic, and the trend may undermine confidence in the marine market in India if such unsatisfactory marine accounts continue to be presented. Marine insurers in this country, as elsewhere, are exercising their minds in devising ways and means in retrieving marine insurance from the depths to which, it seems, it is relentlessly drifting.

Addressing the 154th Annual General Meeting Mr H. F. Thorburn, Chairman of the Liverpool Underwriters' Association, outlined the symptoms well when he said that, "in the cargo field this state of affairs has brought in its wake a steady fall in rates to a level which, in many cases, is substantially below that ruling before the war, when moral standards were higher, when cargo was handled with greater care and efficiency and when overseas transit was not exposed to the serious congestion and delay which prevail today".

"Moreover", he went on to say, "this is not the whole story; the contraction in rates has been accompanied by a progressive widening in the scope of cover. The result is that in some instances today the protection afforded by underwriters is no longer restricted to the fortuitous loss, but is, for all practical purposes, equivalent to a warranty that the goods will be delivered at final destination sound both in quality and quantity—a benevolence which goes beyond the bounds of common sense and indeed beyond the reasonable needs of trading interests".

What Mr Thorburn said in Liverpool is substantially true in India today. The continuous process of making concessions to the demands of the insureds, coupled with many other factors in transit over which underwriters have hardly any control, have the effect of pushing marine accounts slowly and inexorably into the wilderness.

The first casualty in the process of asphyxia of marine insurance is no doubt the rates. Barring a very few categories of inland voyages, marine rates are determined by experience, cost and pressure of competition. It is impossible to devise a correct marine tariff, without international agreements, for most voyages outside the boundaries of a country. Nevertheless, constituents of premium computation are well-known. Computation of premium is dependent upon an adequate collation of statistics. These elementaries are well in the calculation of underwriters. And, yet, they succumb to temptations with a view to swelling premium income or in servicing existing accounts, paying sizeable premiums when the insureds continue to make impossible demands. No doubt, tact requires a judicious compromise, but it is the insureds who almost invariably come out unscathed, the insurers losing the rounds who concede points with the hope of making a doubtful profit. Here, insurance is reduced to a gamble, for, the underwriters begin to assume liabilities not calculated. Uncalculated liability is the death warrant for an underwriter. He then ceases to be an insurer and becomes a gambler.

Then gambling vice has penetrated deep into marine writings in this country and to an extent elsewhere. Judicious rejection is as important as judicious selection in insurance business. Unless, therefore, underwriters learn to cry a halt to the never ending process of making concessions, it will be most difficult to arrest marine insurance from drifting to fathomless depths.

A concerned endeavour to retrieve marine insurance from its unsavoury position commenced with the welcome innovation of limiting extended cover to a period of 60 days and in the resolution on trade losses. The latter is now in the process of being an international agreement and, if fully implemented, will help in removing one of the killing elements in marine insurance. It is elementary knowledge that insurance covers a risk, not a certainty. The normal trade losses which are inevitable and bound to occur are not within the purview of insurance. And yet, such is the competition in business, that insurers began to cover trade losses. It is a good sign that, even with the race for premium income, such elementaries are now not easily overlooked.

Transit is a co-operative effort. Its success is dependent on the co-operation of carriers, clearing agents, warehousing men, and labourers in the docks. In each case, service has deteriorated, particularly in ports and docks due to paucity of clearing implements and the inevitable labour trouble. If computation of premium were to take account of the many lacunae in clearing arrangements, it must inevitably be higher than what it was in pre-war years. It is, therefore, obvious that the remedy lies in devising a premium structure which takes into account all these pitfalls. The endeavour is largely thwarted in India by the statutory requirement of a controversial expense provision which links up permissible expenses to direct premium income. That has inevitably forced the companies to engage in a frantic search for direct accounts. The result has been a scramble for what little is available, resulting in the granting of very wide covers at a rate utterly inadequate to cover the attendant risks.

When the "all risks" clause was devised, it was hoped that the limit had been set, and that no underwriter would vary the excellent meaning attached to it and, therefore, that there would be no endeavour to name the many risks habitually required by customers. The requirements of international trade based on letters of credit, however, call for such a wide variation to the terms of "All risks" that it requires great wit on the part of underwriters to conform to the letters of credit and, at the same time, to play for safety. If only the requirements were limited to fortuitous risks, there would have been some justification. The requirements, often, delve into the domain of trade losses—and inherent vice against which, as stated earlier, an international convention is now in the offing.

The scope of Indian Marine Tariff, in such a deteriorating situation, requires to be widened. Since the institution of "All risk clause" is now in vogue and is almost universally required, its tariffing within the scope of voyages in Indian Marine Tariff calls for close examination. Likewise, international collaboration in many items of India's exports, particularly in the category of inelastic exports, may be examined with care. Marine markets overseas are likely to collaborate and, on the assumption that overseas markets are equally anxious to improve the tone of markets, tariffing of specified items of exports and imports may be examined. Admittedly, international agreements of this type are difficult and indeed call for examination of many facets of international trade. Perhaps, healthy conventions can be made to grow by gentleman's agreements. Positive steps of this character are necessary if drift of marine insurance to wilderness has to be arrested. Mere wishful thinking will be of no avail.

*

GENERAL INSURANCE COUNCIL

Executive Committee Meeting

The meeting of the Executive Committee General Insurance Council held in Bombay last month was of more than ordinary significance; for, this meeting was specially to consider proposals emanating from the Government of India in the matter of alleged shortcomings in the general insurance business. Following receipt of suggestions from insurance bodies in the direction of improving the tone of general insurance trading, Government of India have formulated their own plans, which formed the subject matter of discussion. One of the main recommendations of the Government relates to inspection of the books of the companies by the Department of Insurance, or Government-appointed panel of auditors. There should be no conflict with the normal company auditors, for, the enquiry of the Government will be directed to certain specified channels, such as investigation into large claims, large outstandings, etc.

A suggestion has, however, been mooted that it will be less expensive if the Government would direct the normal company auditors to supply them with all the information they require independently to the Government. Another proposal of the Government is the institution of a "solvency test" of the companies. Briefly, assets should exceed liabilities (excluding capital) by Rs 5 lakhs or ten per cent of the net premium income whichever is higher. It is the view that outstanding premiums and agents' balances should be excluded from the scope of assets. After Government have satisfied themselves by their own investigations, they have in view the instituting of a schedule of approved insurers somewhat akin to scheduled banks in the country. This will necessarily exclude some companies who, with the stigma attached to them, will hardly have scope to survive. That will result in those companies either going out of existence, or they will have to amalgamate or enter into working alliance with bigger and approved units.

Grave concern is felt all over India over outstanding premiums. It is the view of the Government that premiums must be paid in advance. In cases where premium is not immediately determinable, a deposit premium of not less than fifty per cent must be immediately payable to be followed by the balance in three months' time. If premium is not paid within the specified three months, the policy will be cancelled.

World Overseas

US Notes

A joint release this week by the US Department of Commerce and the US Securities and *Exchange* Commission shows that American businessmen are planning to spend *the record sum of* $35,300 million on a new plant and *equipment this* year—some 23 per cent above the 1955 total and one per cent above *estimates made* earlier in 1955. Virtually, every industry will be investing more this year than last, including textiles, paper, steel, mining, *automobiles*, railroads and electric utilities.

Substantial rise in projected spending for the remainder of this year has boosted the estimated US total for 1956 to an all-time high. Capital outlays in the fourth quarter now are put at an annual rate of $38,000 million, about $1,700 *million* more than the estimated rate in *the third* quarter of 1956, and some $6,500 million more than the rate of actual spending in the last three months of 1955. Business investment in plant and equipment has been moving upward throughout 1956.

An obstacle to projected expansion and modernization programmes may be the problem of getting enough steel to carry *them out. US* Government economists note that this summer's steel strike, during *which some* 85 per cent of the nation's steel production was shut down for five weeks, is causing some shortages, particularly in steel types needed for booming industrial construction. Then, too, there is the matter of heavy demand for steel from such consumer industries as automobiles and appliances, to say nothing of the vast new federal-state highway programme.

Adequate financing is another problem the American businessmen face in meeting their long-range expansion and modernization goals. Addressing a business meeting in New York this week, Keith Funston, President of the New York Stock Exchange, *pointed out* that, in the next 10 years American corporations will have to triple the rate of new stock financing to satisfy the de*mand for goods and services. Equa*lity financing for new plant and equipment in the decade ahead, he said, will amount to $60,000 million. The Stock *Exchange head based* his statement on the following forecasts: By 1965, the United States will have a population of 190 million, compared with today's 168 million; a labour force of 79 million, compared with today's 67 million; a gross national product total output of goods and service of $525,000 million, compared with today's $410,000.

*

Germany

The German economy and the *German Federal Government* are at present much concerned about the possibility that the rate at which prices are rising may increase substantially. *This* manifest tendency is being nurtured by a highly favourable foreign trade balance sheet and by the fact that the *Federal Government*, as far as their cash policy is concerned, are in the act of switching over from a situation marked by abundance to a deficit policy. *Some measure of* consolation may be obtained from surveying other countries which, to a large extent, are also plagued by price increases. It is necessary to resign oneself to the fact that, for the time being, international business seems to have slackened. On the West German home markets, the margin between supply and demand has narrowed down. The Federal Republic is one of the few industrial countries which so far have been able to avoid an overexpansion of domestic demand and the corresponding price increases entailed thereby. Moreover, the Federal Republic's export trade has increased substantially.

A number of scientific research institutes in West Germany have made a comprehensive analysis of this situation. From their investigations, special mention should be made of the fact that, in contrast to the lessening of tensions on the goods markets, the disproportion between development of wages and salaries on the one hand and labor productivity on the other hand (the growth in real value of the gross national product per employed worker) has increased. However, the corresponding price increases have not yet taken full effect.

While the rate of growth of productivity declined in the past few months, the relevant rate of average wages per man-hour increased in the West German industries. In the first quarter of this year, the latter amounted to no less than 12 per cent as against 7 per cent in the second half year of 1955. Price increases occurred in all instances where the growth of productivity was markedly small but where nevertheless wage increases had been enforced similar to those enforced in the industrial areas. In agriculture, trade and frequently also in commerce, the wage increases were passed off on to the consumers to a wider extent than this was done in industry. All in all, the price increases lessened somewhat in the second quarter. At the same time, however, as a result of lower prices for individual raw materials on the world market, they shifted from the basic and investment goods industries to the consumer goods markets.

Export prices have also risen together with the domestic price levels. During the months from January to May of this year, the average export prices were 4 per cent higher than the corresponding price level in the preceding year. For all that, Germany still numbered among the countries with the greatest increase of exports. As a driving power for the expansion of the entire economy, the export trade gained in importance as against investments. Exports were considerably higher than imports, so that the export surplus increased at a faster rate. Not the least important factor reflected by this development is the increased capacity of West German industry to deliver goods abroad.

According to a formulation by the research institute, the economic policy in West Germany is faced with the following basic tasks: To safeguard a continuous optimum growth, measures are required to remove the dangers of further price increases without jeopardizing full employment. In the present situation, it could not be expected that a dynamic equilibrium meeting these demands could develop automatically. In spite of some views held to the contrary, experts believe that it is possible to maintain stable prices and, at the same time, guarantee a strong continuous growth. Above all, they deny the truth of the thesis that full employment could only be maintained if prices continue to rise slightly, that is to say, by abandoning the principle of a stable currency.

According to the comprehensive investigations conducted by the research institutes in question, Germany needs, from a purely economic viewpoint, a wage policy by which the wage increases are adjusted to the average rate of growth of productivity. Even if full employment furnishes the workers with a special reason for increasing their share in the gross national product, this policy should not—in view of the present situation and of a credit policy directed toward maintaining the stability of the currency be stretched beyond a point where the willingness of the enterprisers for investments is impaired to such an extent that the continuous optimum growth is prevented, and corresponding losses are incurred. The analyzers in question hold that the main task of West Germany's economic policy continues to be the maintenance of price levels in spite of the difficulties caused by the tremendously increased demand resulting from rearmament and the social reform scheme. Quite obviously, the responsibility for this task cannot be placed solely on the shoulders of the Government.

*

Sweden

Sweden's industrial production during the first half of the current year was about 2 per cent larger than in the corresponding period of 1955, according to the Federation of Swedish Industries. The index figure for June was 240 (1935 = 100), as compared with 244 in May and 236 in June last year.

The output of capital goods was 4 per cent larger in January-June 1956 than during the first six months of last year, while the production of consumer goods showed an advance of 1 per cent. Iron-ore mining was 12 per cent larger, while the output of the steel and other metal works was up 8 per cent. Employment in the engineering industry increased by 3 per cent.

The timber industry, as a consequence of the slackening demand abroad and the tightened-up credit squeeze on the home market which particularly affected the smaller mills, showed a decline of ten per cent. The pulp industry, on the other hand, increased its output by 5 per cent, while that of the paper industry went up by 2 per cent, authough most of the increase for both branches referred to the first quarter. Output in the food industry rose by 1 per cent. The leather and shoe industry registered a practically unchanged production.

Figures for the textile industry are only preliminary. They indicate, however, a continued rise in output of about the same scope as in the first quarter, i.e. 3 per cent.

The geographical distribution of Sweden's foreign trade in January-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

TO anyone who finds my preoccupation with the pathology of certain aspects of Indo-American relations somewhat obsessive, my answer is that my anxiety stems from the most unexceptionable of motives. I am keen that these two nations which, whatever their faults, are indubitably democratic at heart, should eliminate in their relations all avoidable sources of misunderstanding. There are, as no honest student of affairs can fail to notice, important differences in the attitude of the two countries to world problems. On the other hand, there are certain questions on which there is a basic identity of views between them, and these are questions, which alone matter in the ultimate analysis. And, lastly, there are areas in which only prejudice and a certain uncharacteristic lack of generosity make the meeting of minds and hearts difficult. In my view, it is this area, rank with needs of mutual distrust and lack of charity, that needs clearing. My endeavour has always been to try, to the best of my ability, to take on myself these elementary duties of a gardener.

*

If it will give any satisfaction to my American friends, I am going to examine this time, not American, but Indian lapses in this regard. Over a period of years, American help to India in a variety of projects has been of great, and in some cases, decisive importance. But, with rare exceptions, public acknowledgment of this help has been both grudging and niggardly. The puzzling part of this state of affairs is that we are not, as a people, either ungenerous or undemonstrative: Indeed in the view of some, not necessarily foreigners, our demonstration of enthusiasm for the Russian offers of help has been quite exhibitionistic. What is it that makes it difficult for us to say: "Thank you" to the Americans with greater spontaneity? Behind this inability to express simple gratitude lurk inhibitions that need to be appreciated.

*

The immediate provocation for these reflections is the rather correct and decorously grateful reception given by the Indian public to the news of the conclusion of agreement with the US for the supply to India of surplus commodities. It was one of the most important things that has happened from the point of view of the success of the Second Plan and, as I shall detail presently, will relieve us of a great deal of embarrassment over foreign exchange difficulties and possible inflationary pressures within the country. And yet there was nothing, on this occasion, of the frenzied mutual back-slapping over the agreement with the Russians for the erection of the steel plant. I am not thinking, in saying this, of the officials who were directly concerned with the deal: for they knew exactly what immense benefit this agreement has conferred on India; and to the best of my information, they have expressed their gratification over th's deal in suitable terms. I shall also leave out the larger general public—the kind the Communists irritatingly refer to as the 'masses'—for they probably do not understand what it is all about. But what of the press and the so-called intelligentsia, the class that is supposed to evaluate events? True, most papers gave the details of the agreement on the front page and some commented editorially on it. But where have the caps, that were thrown up wildly when Russia promised a steel mill, suddenly disappeared to?

*

In every sense, this agreement is as important, if not more, than the agreement with the Soviet Union for the erection of the steel mill. The fact that this helps the US to solve some of its difficulties over commodity surpluses does not take away anything from the vital difference it is going to make to our economy. For the commodities—wheat, cotton, rice, tobacco and dairy products—which are going to provide vital buffer stock against the inflationary pressure of the Second Plan, we shall pay in rupees. This ensures two things at once, a significant saving in scarce foreign exchange resources, and a massive weapon against inflation. Secondly, the payments received will be spent by the US in India and in ways that will benefit the Indian economy. 65 per cent of the price is to be given as a loan to India with the rider that about 55 million dollars out of it should be spent promoting private enterprise. 15 per cent or 54 million dollars will be a direct grant; 20 per cent will be needed toward US Government cost (including an embasy building in Delhi, which is sure to put more money in Indian pockets). Because of the long-term credit facilities,—estimated at the equivalent of 234 million dollars—more rupees are put in the hands of the Government by sale of these commodities.

Altogether this agreement, which nearly took a year to conclude and which owes a great deal to the tenacious and wily idealism of the former Ambassador, Mr Sherman Cooper, is a major contribution to India's economy and development plans. That this was not recognised as such in more than a half-hearted way by the Indian public at large is a matter for regret.

*

Then again, consider the American record of aid to date. Over a period of nine years since independence America has lent or given through official and non-official agencies over a billion dollars. Large figures like these have a way of numbing comprehension, and part at least of the common man's inability to appreciate the extent of the help proceeds from the difficulty of visualising such large sums. But a little effort should make it possible to realise something of the scale in which America, despite its constant quarrels with us on a hundred other things, is helping us. Comparable benefits from the Soviet Union are not likely to be forthcoming in the near future.

*

Why is it, then, that we are exaggeratingly grateful (comparatively speaking, of course, since I have no desire to appear insensible of the Soviet Union's help) to Russia, and apparently not even adequately warm in our expression of thanks to America? One reason is obvious. Owing to a variety of reasons, the Russian leaders have to ask nobody's leave to give us what they want to. The American administration, on the other hand, has to ask literally hundreds if not thousands, before it can vote a penny. Every time the question of foreign aid comes up, there is a lot of pushing of proposals backwards and forwards from the Senate and House of Representatives, on the one hand, and the President, on the other. Besides these, there are the views of Party leaders to be considered. And, as for the public at large, there are quite a few who feel legitimately, if somewhat shortsightedly, that there is no reason why they should pay higher taxes so that India and to some extent their own farmers might benefit. At least one State Governor, if I remember right, is refusing to pay his income-tax because he feels it is being given away to foreigners. It speaks volumes of the idealism of the American Administration that, despite its likely misgivings about the Indian attitude to certain things it considers important, it wheedles out of an extremely unwilling Senate and House of Representatives these enormous sums of money.

*

But Indian sentiment gets, quite disproportionately, I must say, upset about the wrangles that precede the aid. This sentiment is tantamount to the feeling that Indians are reduced to the position of a supplicant, whose worthiness is being debated too obviously in their presence. An understanding of the democratic processes ought to make us a little more charitable in these matters, since we do not give anything away in substance.

*

The second obvious reason is that the Russians take good care that they accompany their gesture of economic help by appropriate political attitudes. Thus, the absence of any kind of direct political quarrels with the Russians and their timely expression of sympathy with some of our controversial international attitudes make for readier sympathy with their professions of disinterested anxiety for our development. On the other hand, we have, with America, one or two points of differences of a kind that directly affect us. America's active promotion of and participation in the Seato and the giving of arms aid to Pakistan are the more irksome of these. No one seriously believes in this country that America wants the arms it supplies to be used against India, but a great many believe that the US is extremely naive in thinking that Pakistan is arming itself because of its fear of Russia. Moreover, the fatal weakness of some responsible Americans for laying down the law for others—a weakness, I may say in passing, they share with many

Indians makes things far worse than they need be. Mr Dulles' wholly gratuitous involvement over the Goa issue and that at a time when the Russians were ostentatiously expressing their oneness with us—is an instance in point. It is difficult to make much headway against prejudice created by such ineptitude. It is true that it is unreasonable to allow this extraneous consideration to confuse the issue of economic aid. But it is precisely an irrationality of this sort that is difficult to combat.

*

There are two other less obvious, but none the less important, considerations I would urge in this context, which may go some way to extenuate the grievousness of the situation. One of them concerns itself with popular psychology in India. When all is said and done, Indian plans for development will have to be worked out principally by Indian effort and resources. It is true that, situated as we are, we cannot but depend a great deal on foreign help. But it would hardly make for self-reliance if the impression is given to the general public that all we have to do is to sit back and ask for gifts and they will be forthcoming in a sufficient measure. This sense of fighting with your back against the wall, which alone would ensure, even with sympathetic foreign help, the success of the Plan, can hardly be developed if we speak too often and too obviously of the ease with which foreign help can be had. It is true that such a proposition argues a similar reticence over Russian help also. To this, my answer is that the Russians have, even in India, a ready-made microphone in the Communist party that will amplify even the merest whisper of gratitude. They have a ready made organisation that will put the frills on and present even a comparatively plain girl as the most ravishing of beauties.

*

Secondly, even if it were true, the Economist of London once complained that Asia uses different standards for measuring American and Russian conduct. I should imagine that it is not wholly a matter for gloom. Mr Lester Pearson also expressed himself once as intrigued by the fact that Asian reaction to Russian offers of economic aid was incomparably more enthusiastic than it was to actual Western help several-fold that offered by Russia. There are historical reasons for these differences: one of these is the ease with which a hungry continent is willing to adopt the mystique of Communism and, therefore, to accept Russia as a God-father. This is so even when one is clear-sighted enough to see the horrors of totalitarianism: and, if more people do not automatically become fellow travellers, it is because of other historical accidents, like the schooling in liberal democratic values, as happened in India. But, in so far as the erection of two standards implies an automatic expectation of aid from the West, and the lack of any such hope from the Soviet Union, the expression of delight at the Russian gift is an indirect tribute to the West. This looks very much like a piece of sophistry, but it is really not so. There is a Tamil proverb which speaks of a mendicant who had a rather paradoxical grouse. His complaint was that he could understand the grand lady who never gave him anything at any time sending him away empty-handed:

(Continued on page 589)

People the world over have certain basic things in common. For instance the need for food. A good harvest is reason for rejoicing everywhere.

As in agriculture, so in many fields of human endeavour, a good harvest is the result of joint effort. In India today, man and machine are harnessed to produce bountiful harvests in every field.

A constant supply of our petroleum products to such endeavours is fundamental to progress.

STANVAC — *the name that stands for progress.*

SOUTH EASTERN RLY. TENDERS

The Controller of Stores, Garden Reach, Calcutta—23 invites the following tenders:

(1) Tender No. CS14/56/516 CS(56) for supply of:

(a) Carriage Roofing 2-ply 3'-0" wide =4,500 Rft.

(b) Underlay 3'-0" wide=4,500 Rft.

(c) Compound carriage roofing for *hot application*=37½ cwt.

(d) Nails for fixing (a) and (b) flat Head ¾"=30 lbs.

(e) Compound carriage flooring red with crystals=30 tons.

(f) Screws Sheredised superior rust resisting CSK. Hd. 1½" No. 10. =16g Gross.

(2) Tender No. CS15/56/517 CS(56) for supply of 320 Nos. Sheet plywood 3-ply 8'-0"×4'-0"×3/16" thick synthetic-resinbonded moisture-proof to ISI Specns. 303—1951 Grade MPPI.

(3) Tender No. CS16/56/518 CS(56) for supply of:

(a) Pan Lavatory stainless steel highly polished to IRS Drg. C1880=156 Nos.

(b) Bowls wash hand stainless steel highly polished to IRS Drg. CA1874=208 Nos.

Tender forms are obtainable from his office (IB Section) on remittance of Rs. 2/- per copy per tender (not refundable) by Money Order to him direct in case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date of all tenders is 28-9-56 at 12 Noon.

Bombay Review

Technical Education

"THE success of the 2nd, 3rd or 4th Plan depends on the trained manpower you have...If you do not start this (technical) training now you will not have the 3rd or the 4th Five-Year Plan . . Unless we thought ahead and unless we had a clear, comprehensive and integrated picture of our manpower requirements, national development was not possible." Thus, the Prime Minister while inaugurating the recent State Education Ministers' Conference in New Delhi.

"I find that most people have no idea of what industrialisation implies. We discuss the financial aspect of it and vaguely think of factories and the like growing up. But the most vital part of the industrialisation is the training of manpower. We want vast numbers of scientists, technologists, engineers, etc. We also want to create a background out of which these people grow. This problem of trained manpower is our major problem today. ...It is not enough to train some engineers or agricultural specialists in a few colleges. We have to think in terms of hundreds and thousands and perhaps even millions later on. In the United States, in the Soviet Union and even in China they are thinking in such large terms and actually training scientists and technicians in vast numbers. Our whole future progress depends on this process of industrialisation and the use of higher techniques. . . . We have thus today to organise training for the people required for the Second and Third Five-Year Plans. We cannot delay this or else our planning and industrial progress will be automatically held up". Thus, once again, the Prime Minister in a letter to Mr Ramdhari Singh Dinkar, M.P., published last week.

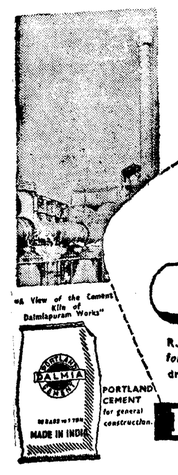
The grave urgency in the tone of these warnings by Mr Nehru should draw attention, if nothing else will, to an aspect of our national effort about which we have all been guilty of neglect and worse. The plain fact is that there are just not enough engineers, scientists and technologists to permit of an acceleration in the rate of our programme for industrialisation. What is worse, the number and scope of the agencies producing the technical manpower — engineering colleges, technological institutes, polytechnics, etc—are pitifully small. What is even worse, the atmosphere which alone can create a fertile field from where the technologists we need will grow is totally absent.

If all this sounds exaggerated, here is what the author of a profoundly thought-provoking article in a recent issue of a British Journal says while surveying Great Britain's present position and problems in the field of technical education. "We are in fact in the middle of one of those crises that are hardest of all to cope with. This is an invisible crisis: nothing dramatic is going to happen for years. . . . Then we shall wake up and find, like Venetians in the 17th century, that all that makes our living has slipped away. The whole scientific industrial world is going through a change for which we have not yet found a name: to emerge from this change successfully will require many things, but above all scientists in numbers which neither we, nor even the US have begun to train". And this, about a country which had a hundred years start over all others in industrialisation and in the development of scientific and technological habits of mind. It can only be imagined where we stand in regard to the pool of technical personnel in comparison to Great Britain or USA.

The fallacious idea that, since India has a large population, ("teeming millions" is the favourite expression) we need not worry about manpower, is partly responsible for the public unconcern about the necessity of building up a sufficiently large body of technically trained manpower. The public's generally apathetic attitude, therefore, is partly excusable. What is less excusable is that even our planners appear not to have been conscious of this vital problem in the early stages. So much so that Mr Nehru, in the course of his reply to the 5-day debate on the Second Plan in the Lok Sabha, remarked, with his usual forthrightness, that a serious omission had been made in regard to training of technical personnel in the First Plan.

It is not that occasional surveys had not been made earlier for an assessment of our needs or for suggesting ways of improvement and expansion of technical education. The Sarkar Committee appointed in 1945 reported on the development of higher technical studies. Later, the Scientific Manpower Committee and other committees appointed by the All-India Council for Technical Education tackled particular aspects of the problem. What is regrettable is that, except for the Sarkar Committe's recommendation for the establishment of four regional institutes of higher technical studies, the major recommendations of these various committees have, more or less, been ignored.

The latest report, which is by far the most comprehensive survey so far of manpower requirements in the engineering and allied fields, is the one submitted by the Engineering Personnel Committee, set up by the Planning Commission with representatives of the interested Ministries. The Committee's report covers the entire field of technical education and is an invaluable compilation of detailed data.



For the sake of convenience, technical education in our country can be very broadly classified into three categories, the Institutes, the Colleges and the Schools.

The Kharagpur Institute of Technology, which is the only one of the four proposed similar institutes set up so far, and which has been declared an institution of national importance in the Indian Institute of Technology (Kharagpur) Bill 1956—passed by both the Houses in the Monsoon Session —is the most important centre for higher training in technology in the country now. The intake of students, which has been increased from 300 to 407 this year, is still, however, far below the original idea of having 3,000 students on the roll at a time. Fortunately, it is rapidly expanding and the Engineering Personnel Committee has recommended eight new post-graduate courses in addition to the fifteen existing ones. The US Technical Co-operation Mission, which has a generous record of contribution to the Indo-American programme of technical assistance, has also agreed to finance to the extent of Rs 6.89 lakhs a scheme of increased facilities in foundry engineering.

The next one of the Kharagpur type of institutes to be established is the Western Higher Technological Institute in Bombay, which is expected to start functioning next year. A large proportion of the financial and technical assistance for it will be provided from the USSR contribution to the UN programme of Technical assistance. UNESCO will provide Rs 52.8 lakhs worth of equipment. Provision has also been made for 15 Russian experts to work in the Institute and for four Indians to have training in the USSR.

Similar institutes for the Northern region and the Southern region are proposed to be set up in the second half of the current Plan.

Gateway Notes

Futures Trading

SINCE their inception in 1953, the Forward Markets Commissoin have gone some way in eliminating wide price fluctuations in commodity markets. In their second annual report just published they however point out that so long as illegal futures trading is not completely eliminated, the full benefit of regulated futures trading under the auspices of the recognised associations will not be felt.

The two most prominent instances of illegal futures trading are option business and misuse of non-transferable specific delivery contracts for speculative purposes. It is recognised by the Commission that the first step in the enforcement of the ban on option business should come from the recognised associations who ordinarily have adequate powers under the disciplinary bye-laws for the purpose. As regards such violation by persons who are not members of recognised associations, the Commission say that action by the Commission and the State and Central Governments is called for.

As a result of a circular letter addressed by the Commission in September 1955 to all the associations in India concerned with forward trading, explaining the essential ingredients of non-transferable specific delivery contracts and calling upon them to reconsider the nature of the contracts traded in under their auspices so as to ensure that the contracts traded in as non-transferable specific delivery contracts confirmed to the requirements of the law, illegal trading in the guise of non-transferable contracts was checked to a certain extent.

In addition to the steps already taken to stop or minimise the unhealthy activities above referred to, the Commission propose to set up an Inspectorate which will detect illegal futures trading and assist the State Governments concerned in prosecuting the offenders. It is, however, pointed out that with the opening of futures trading in several commodities under the auspices of recognised associations, the incentive to misuse contracts will diminish considerably.

During the year, the Commission invited applications in respect of 20 commodities from Associations desirous of being recognised for conducting forward trading. The Commission received in all 287 applications from 129 associations. The Commission completed its inquiries in respect of nine commodities viz., groundnut, groundnut oil, linseed, linseed oil, castorseed, caster oil, cottonseed, turmeric and coconut oil during the year and submitted its reports to the Central Government.

*

Labour Relations

A welcome feature of labour relations in recent years is the increasing desire shown both by employers and employees to settle their problems by mutual discussions. As a result of a general feeling among the parties concerned that the official machinery for settlement of disputes lacked the requisite psychological basis for bringing about mutual understanding between labour and management, the Joint Consultative Board came into existence. The Board is a non-official bipartite organisation, consisting of the Employer's Federation of India, the All India Organisation of industrial Employees and INTUC and the Hind Mazdoor Sabha. So far the Board has been functioning as an advisory body on the national level assisting Government in formulating labour legislation.

Encouraged by the results achieved in the past two years the Board has now launched out into a wider field, and early this year it selected some five industries—cotton textiles, sugar, cement, plantations and steel for setting up bodies in their organisations similar to the Joint Consultative Board. The first such Board the Joint Consultative Board for the cotton textile industry was inaugurated in Bombay early this week.

On the question of wage policy, the Board has directed its constituent units to prepare detailed reports on the matter with particular reference to wage problems in specific industries. The Board will take up the consideration of the question on receipt of the reports. An important step taken by the Board at the meeting is the appointment of a sub-committee to finalise the draft of a pamphlet outlining the aims and objects of the Board. The pamphlet also lists the obligations of the employers and the employees to each other and their joint obligation to the community.

GATEWAY MARKETS

Metals Display Firmness

THE stalemate over an agreed solution to the Suez Canal dispute, rising price trends in overseas markets on rumours of stock-pile purchases and the gathering momentum of industrial activity within the country—all these factors have contributed to the firmer tendency in Metal prices.

There was a good demand for Copper electrolytic wire bars and there was no difficulty for importers to dispose of new arrivals, which were stated to be greater than earlier anticipations. Ready copper went up by Rs 12 to Rs 227 per cwt within the space of a fortnight.

Ready Zinc was quoted at Rs 68-8 per cwt on reports of lower stocks in the face of increased demand. Being probably cheaper of all the metals, Zinc has a better chance to improve.

The market for Lead, however, remained depressed due to the imports of Australian lead and the anxiety on the part of weak holders to dispose of their stocks even at a loss. Ready was quoted at Rs 84-0 per cwt.

Following the worsening of the Suez situation and strong Singapore advices, ready Tin advanced to Rs 134 per cwt from Rs 131-4.

On the London Metal Exchange, spot Copper recorded a net gain of £9 per ton as compared to the previous week. Labour troubles are reported to have taken a serious turn in Rhodesian mines and a state of emergency has been declared in the copper belt. This drastic action has brought mining operations in Rhodesia to a standstill.

Spot Lead recorded a rise to £118½ per ton. This rise was mainly due to the Suez Canal situation and the improvement in demand.

Zinc followed the same trend as Lead and the spot price was quoted at £37½ per ton.

Spot Tin registered a rise from £775 to £828 per ton, to quote finally at £820. This rise was attributed to the worsening of the political situation and shortage of ready stock.

*

Gold & Silver

The bullion market showed divergent trends in slow and featureless dealings. Traders kept sideliness and waited for incentives.

Inflow and outflow of Gold amounted to 1,000 and 3,000 tolas respectively while unrefined metal receipts were 3,000 tolas. Mysore tenders were 2,000 tolas. Gold Bhadon after improving at one time to Rs 103-6-6 from Rs 103-2 closed at Rs 103-1. Gold Asauj, however, improved to Rs 103-3 from a low of Rs 102-14-6. Ready hovered narrowly around Rs 103-6. Sovereign was quoted steady at Rs 67-4.

Trading in Silver remained subdued on small but persistent offerings from Calcutta. The turnover was small and undertone remained quiet. Arrivals and offtake were evenly balanced at 40 bars. Silver Bhadon, after opening easy at Rs 172-8 and improving to Rs 172-9, declined at the close to Rs 171-15. Silver Asauj delivery started at Rs 173-4, and after improving to Rs 173-6, finished the week at Rs 172-12. Ready moved narrowly between Rs 172-5 and Rs 172-11, to finish at the former level.

*

Oils & Oilseeds

The markets for Oils and Oilseeds remained depressed despite efforts at rally on short-covering. Increase in freight charges by shipping lines induced persistent liquidation.

Trading in Castor futures was characterised by two-sided fluctuations. Castor September delivery, after moving up to Rs 145, was placed at Rs 143-8 at the close. May delivery finished at the lowest level of Rs 126—the highest touched being Rs 128. The turnover was 5,000 candies.

Reports of favourable rains in growing areas and lower advices from the spot section demoralised sentiment in the Groundnuts section where February delivery finished lower at Rs 133-2—the highest level touched being Rs 134-14. Madras quality ready delivery was quoted at Rs 28-4 to Rs 28-8, while Groundnut Oil ready was quoted at Rs 19. The majority of operators expect the output to amount to 24 to 25 lakh tons of groundnut kernel against the earlier forecasts of 26 to 28 lakh tons.

Trading in Linseed was devoid of any special feature with prices hovering within a narrow range. Ready was quoted at Rs 30-8 and Linseed Oil at Rs 16-2.

Khardi seed was quoted at Rs 18-4 and Nigerseed at Rs 28-4.

*

Yarn

The Yarn market continued to rule weak with prices showing a further drop from last week's levels. There was a tendency among buyers to wait and watch the situation for some time.

The fall was heavier in Art Silk Yarn, while Staple-fibre yarn showed an easy trend on reports of heavy accumulation of stocks with the traders.

The Cotton Yarn market showed a mixed trend. Thanks to an improved offtake of finer counts, 60s and 80s tended to look up by about As 8 per bundle. The market for 40s, however, ruled easy due to lack of sufficient offtake.

Bombay Review

World of Cotton

Brisk Buying by Mills

AFTER earlier quietness, prices in the Bombay Cotton market made a moderate advance toward the closing stages of the week on renewed buying. During the early part of the week, operators remained on sidelines and did not enter into any notable business in view of uncertain political situation on Suez Canal issue. But, the recent emphasis on increased cotton production with a view to keeping pace with the increased consumption of cloth generated fresh demand for the commodity. Mills were active buyers in the belief that cotton prices might flare up if the Suez crisis deteriorated. They were, therefore, seriously engaged in replenishing their stocks.

Speculation is rife about the new cotton export policy in view of the Government's anxiety to hold the price level. Apprehensions are entertained that cotton exports will be discouraged in order to ensure an adequate supply of raw material at a reasonable cost to the cotton mills and thereby prevent any further rise in cloth prices. Reliable sources, however, discount such a possibility, but suggest that the export announcement will be made on a piecemeal basis. Nothing can be said till the correct crop estimate is available by October 15. Besides, much depends on the Government's intention to give further encouragement to textile production in the country.

Meanwhile, it is expected that ad hoc quotas will be given for export of those varieties which are not at present freely licensed. The export quota for the last season was 4 lakh bales exclusive of minor growths; but this year's exportable surplus may be reduced in the event of Government deciding to encourage higher mill output.

×

FUTURES MARKET

Both the Futures and Spot cotton markets remained closed on Monday due to death of a member. They remained closed also on Tuesday on account of a sectional holiday. During the period the markets remained open, prices in the futures section advanced on favourable advices from the spot market and increased buying by prominent speculators on rumours that the authorities would soon announce their cloth policy, which would be favourable to the industry. Jharilla March, after touching a low of Rs 691-8 and a high of Rs 694-12, finished the week at Rs 691. Similarly, Vijay April delivery, after advancing to Rs 824-8 from Rs 821, finished steady at the last quoted level. The turnover was estimated around 15,000 bales.

Futures trading in cotton is likely to start in Madhya Bharat by "Dusserah". The Association, named the Central India Cotton Association, will function through two rings, one at Indore and the other at Ujjain. All the preliminary arrangements for the commencement of trading are expected to be over by the end of this month.

×

SPOT MARKET

Conditions in the Spot section remained buoyant as mills turned their attention to the New Crop. Turnover approximated 2,500 bales. New Crop 320F and 197/3, both of Khandesh and Madhya Pradesh, attracted principal attention, for November/December delivery. Vijay, Surti and 197/3 were bought in large quantities, while shippers were reported to have purchased a fair quantity of Bengal Deshi and new crop CP Deshi for December delivery.

Following were the rates quoted: Khandeshi superior Rs 800; Porbunder Rs 800; Amravati Rs 770; Botad Kalyan Rs 800; Zoda Rs 650; Moglai Rs 745; Vijay Rs 970; Surat Rs 1,065; Berar Jharilla Rs 840 and Hubli Jayadhar Rs 850.

×

STATISTICS

Exports by rail from 1st to 13th September 1956 were 13,975 bales. Estimated mill consumption in Bombay, during the same period, were 43,550 bales as compared to 52,500 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 13th September 1956, were 477,227 bales as compared to 881,601 bales in the corresponding period of last year.

×

KARACHI COTTON MARKET

Although the Karachi cotton market was initially affected by the Government of India's decision to permit export of Assams and Comillas, this effect was more than counterbalanced by the fair enquiry in new Deshi crop, which was believed to be on China account. Another bullish factor was fear of damage to the crop by the recent floods in Sind and other low-lying areas. Sind Deshi was quoted at Rs 96-0; Punjab Deshi at Rs 83-0; 4F Punjab Roller at Rs 78-6; LSS Punjab Roller at Rs 78-2 and 289F at 78-6; NTRG at Rs 78-2 and 289F Roller at Rs 82-2.

×

NEW YORK COTTON MARKET

The tone of the New York cotton market was easy in early dealings as liquidation and hedging found trade demand limited. Toward the close of the week, the market advanced, paced by persistent spot house buying in some of the current crop positions. The selling in part was credited to profit-taking by commission houses. The current sentiment is dominated by a producer-holding movement, lower crop prospects and reports that five million areas might go into the Soil Bank reserve next year. October delivery was quoted at 33.77 cents per pound.

×

LIVERPOOL COTTON MARKET

Early dealings in the Liverpool Cotton market were mostly concerned with inter-contract switchings; but values eased later under further hedging pressure, particularly in near months. In the Egyptian contract, bidding by a local spot house, which continued to the daily maximum, failed to attract sellers. The Sudan contract advanced sharply on trade buying which absorbed hedge selling. Egyptian Karnak November/December delivery was quoted at 57.50 cents per pound and Sudan Contract September/October delivery at 49.85 cents.

×

CLOTH AND PIECEGOODS

The domestic trade in Piecegoods was in a state of suspense following the steep rise in the scale of excise duty. The fair prices of cloth, announced by the Government for the Eastern Zone, were considered to be generally lower than the current market rates. It was stated that, in some cases, the official rates were lower by as much as 25 per cent. Dealers therefore, pointed out that it would be difficult for them to effect sales at the price announced by the Government as their own purchase rates were considerably higher. Further, restrictions on bank advances for cloth would also affect the trading conditions.

A group of mills in Ahmedabad has agreed to shoulder the burden of increased excise duty, while the mills in Bombay have decided to bear 50 per cent of it on condition that the trade has not yet agreed to this arrangement on the ground that its margin of profit is insufficient to bear the burden. Consequently, the market is in a state of flux without smooth trading being possible.

On the export front, there have been fair enquiries from destinations, such as Sudan, Aden and Hongkong. Shippers state that there has been a change for the better and, before long, foreign demand for cloth is likely to improve further.

*

WORLD OF TEA

(Continued from page 555)

pound from 20 pies quoted in the previous week, to quote finally at 23 pies.

In the Cochin market, offerings were 550,000 pounds. Best Liquoring Nilgiri descriptions were well supported and sold at fully firm to dearer rates. Good Medlums were keenly sought after at irregularly dearer levels, while Wynaad and Travancore teas generally registered advances of As 2 to As 3 per pound Milled and Residual kinds met with more interest and were also As 2 to As 3 per pound dearer. Black Leaf Grainy descriptions, suitable for the Middle East, were the strongest feature of the sale and were irregularly dearer.

In London auction held this week, offerings were 25,949 packages, including 17,376 packages of Northern India teas. The demand continued to be strong and active for the best quality teas, and these were sold upto 1sh per pound above brokers' valuation. Good Medium kinds were also in strong demand and prices showed advances of 2d to 3d per pound. Clean Common kinds were sold well and often realised 1d to 2d above last week's rates. The weakest feature of the sale were the poorest types and thin liquoring teas for which there was very little demand. Clean Common Broken pekoe was quoted at 3sh 2d per pound.

Tea stocks in London, as on 7th September 1956, were 111.80 million pounds as compared to 115.29 million pounds in the previous week. The total amount to be landed on the same date was 9.90 million pounds. Deliveries during the week were 10.56 million pounds and landings in the same period were 7.08 million pounds.

Total afloat, on the 7th September 1956, were 41.78 million pounds, including 31.22 million pounds from Calcutta; 2.90 million pounds from Chittagong; 1.53 million pounds from Cochin and 6.13 million pounds from Colombo.

*

POLITICAL TRADE UNIONISM IN BRITAIN

(Continued from page 554)

expenditure is spent on additional wages increases the degree of inflation would remain the same but the cost of production of British manufactures would increase to a larger degree than it would have increased if the £100 million had been spent on defence. Taking a long view this would lead to an additional deterioration of the balance of payments.

In order to counteract the accentuated wages demands resulting from political trade unionism, the Government will have no choice but to reinforce its disinflationary drive. The trial of strength between the conflicting forces is likely to come to a head within the next twelve months.

Olympus

Dr Appleby Annoys Parliament

THERE was more evidence of a ruffled amour propre than of a genuine understanding of the problems of administration posed by Dr Paul Appleby in the discussion of his report in both Houses of Parliament last week. What was particularly hurtful to self-esteem was the fact that Mr Nehru seemed to agree with the substance of the criticism. Mr Mahanty from Orissa said so in so many words: "What pained me most is that there is a sort of kindred spirit between the Prime Minister and Dr Appleby. While Dr Appleby said that one of the most negative achivements in the country's development was the result of Parliament's interference, the Prime Minister presenting the Second Five-Year Plan had attributed the shortfall in the target of the First Five-Year Plan to too much interference by Parliament." Mr Nehru promptly repudiated any such suggestion on his part and said that such a view was indeed foreign to his thought. Though Mr Mahanty offered to produce chapter and verse, it seems unlikely that Mr Nehru could have couched his attitude precisely in such a fashion. But there is hardly any doubt that, with much of the spirit of Dr Appleby's criticism, Mr Nehru was in agreeement.

That Mr Nehru attached considerable importance to the report was evident not only from his detailed discussion of its contents in both the Houses—a chore that should normally have been that of either the Finance or Home Minister—but also from one or two minor revelations he made during the debate. In the first place, the report was intended to be something of "secret document" meant only for the eyes of the Government. Mr Nehru found it, in his own words, "So thought provoking" that he decided to share the report with Parliament and even find the time for debating it in a rather hard pressed session. Detailed consideration of the report by the various Ministries at the Centre and the State Governments has not yet taken place, but Mr Nehru preferred to have the views of Parliament on it. He had come, he said modestly, to listen rather than to say anything at this stage. In the event, however, he had a good many more useful things to say than most others, who could not get over the fact that a foreign expert has been rather critical of their mode of discharging their responsibilities.

Mr Nehru put the matter in perspective. He said here was a purely technical proplem in which he had sought the advice of a technical expert. His view was that, if you want to do things you are planning to, you must introduce certain important changes in the ways you have been doing things, since the things you now want to do are radically different from the things you have been all along doing. This is a view shared by the Government of India and presumably by others. "The Government of India were not interested in having any particular administrative frame work but they are interested in getting the job done as quickly and as rapidly as possible. They were interested in going ahead with the Five-Year Plan speedily.....".

Mr Nehru pointed out that, on the question of the adequacy of the present administrative system to cope with the problems of the immediate future, both Russian and American experts agreed that the present system of too many checks and counter-checks sapped administrative initiative and delayed action. This identity of views between two sets of people who are notorious for divergent views on most problem has an important lesson, namely, that where there is a job of work to be done, ideology becomes irrelevant and it is the most efficient mode of doing it that should be attempted.

Mr Nehru twitted Communist members on their simulated anger at what they called "government by bureaucracy". He pointed out that, under socialism, we have more and more bureaucracy and not less; criticism of "government by bureaucracy" is, therefore, particularly ill-becoming of admirers of Russia.

For those who were very superior about Dr Appleby's inadequacy for his tasks, since he was an American and our administration was a British legacy, Mr Nehru had an equally conclusive answer. He said it is not the nationality of the administrative system that mattered today but the century to which it belonged. Britain, too, has the same administrative problems as we have, since the functions of the Government there as a Welfare State have increased in this century. Britain also was adapting for its new purposes an administration which was in many ways like ours. Mr Nehru referred to criticism of the Civil Service in Britain that he read recently. He was presumably referring to the outspoken article in the New Statesman by the Oxford Economist Balogh, in which he criticised severely what he called "Government by dilettantes", namely, civil servants of the old type with a mere general background of expensive education and success at competitive examinations. It is debatable whether a man with a wide general background and a keen intelligence would make a better general administrator than a man who is something of a specialist in a particular line. Dr Balogh assumes the latter would be the better man since the tasks are becoming specialised these days. While it is true that there are very many jobs that cannot be discharged by a mere intelligent amateur today, I am not so sure that we shall all be better off under a government by experts. But, be that as it may, it is clear that the problem of reorienting the administration to the tasks of this century is not peculiarly Indian.

But what is peculiar is the difference in the starting points. This problem was again cogently dealt with by Mr Nehru. He said many of the Western countries have had their industrialisation long before democracy started properly functioning there. On the other hand, Russia put through a staggering pace of industrialisation in a generation and a half—but by employing methods that would hardly be called democratic. We in our country have, for good and sufficient reasons, decided not to follow the Russian example. That leaves us in a rather unenviable position of having to obtain quick results by methods which cannot normally produce them. But such a predicament is an opportunity and a challenge, not only to the administration, but to the Parliament and the people. In other words, Parliament, too, must in the interests of getting things done quickly delegate some of its powers, and confine itself to really important questions of policy.

There is one important reason why Parliament should not concern itself with the details of administration. And that is its ability, in consequence of such self-denials, to concentrate on its real tasks. It is a question of making the best use of one's time and talents. We all know that there is a vast accumulation of arrears of legislative business. Very many bills, the preparation of which had cost a great deal of time and money, will now have to be abandoned as the general elections are approaching and these things will have to be done over again. If more time is spent on the essential business of law making, we should be having more desirable and urgent reforms given a legal shape and put on the Statute Book. The cost of the denial of the advantages that are likely to accrue from such laws is something that legislators trying to save a penny here and a penny there have never really assessed.

Regarding the Public Services Commission, Mr Nehru made the suggestion that it must constitute itself in a number of boards dealing with special types of recruitment with specially co-opted experts who will help them choose the right type of candidates. Mr Nehru rightly pointed out that the coming years will see such a transformation of the functions of the Government that we shall be having far more engineers and technical men in Government than general administrators. For the recruitment of such men, it is necessary to have, besides virtues of impartiality, the technical acumen to test the candidate's ability to deal with unprecedented technical problems in his line. This could be done, not merely by including technical experts, but by devising novel methods of testing the candidate's qualification for his task.

On the question of audit, again, Mr Nehru argued with great cogency: Readers of this journal may remember that, discussing the Plan-Frame last year, the suggestion was made that there must be one organisation that should draw up programmes and priorities and another that should evaluate achievements and examine failures. Mr Nehru has made the same suggestion by saying that what we need is not so much financial audit as achievement audit. This is to put relative importance of things in the proper way. By all means let us have audit, but what is it that we should audit? In the context of disbursements of thousands of crores of rupees and in the context of vital changes in the national economy, the more important thing to measure is the change effected and not the money spent. It may be said that financial audit comes to the same thing since such audit is of spending on a particular project estimated to cost a particular sum of money. But there is an essential difference in that, in financial audit, you are thinking of the money and in the last resort (though not always) you will be satisfied even if the thing planned is not done, so long as the money is not "wasted". In achievement audit, on the other hand, you will look at the concrete changes effected and blame will normally attach (though not always) to the executor for not having completed a planned task, even though he may plausibly defend himself by saying that he might, in that case have incurred more expenditure than originally planned. In other words, the accent is on results and not on penny-pinching.

In so far as this audit concerns itself with results, it stands to reason that the best auditor would be the technical man. To that extent, the financial auditor who merely concerns himself with the technicalities of orthodox spending has only a minor role to perform. It is to be emphasised that it is nobody's case that we could afford to do away with the office of the Auditor-General or his organisation. It is only that his function should not be considered so overridingly important as to make actual achievement

Standard Weights & Measures Bill

THE Standard Weights and Measures Bill, which is now to be reported upon by a joint committee of the two Houses of Parliament, will, let us hope, be the last in the long list of steps taken or contemplated during the last 80 years to replace the confusing farrago of weights and measures followed in different parts of India. As early as 1867, the then Government of India had set up a special committee to report on the adoption of a uniform system of weights and measures. Since then, many Acts have been passed (the principal ones being in 1871, 1889 and 1939) but none implemented.

On April 22, 1955, the present Parliament accepted in principle—mainly on the basis of the study and recommendation of the Indian Standards Institution—the adoption of the Metric system of weights and measures. The present Bill proposes giving effect to that resolution.

The Bill, when passed into law, will introduce a new series of weights and measures on 1-1-1958 in accordance with the draft Indian Standard prepared by the Commercial Weights and Measures Sectional Committee of the Indian Standards Institution. The draft standard for weights contemplates the new series to be in multiples of 5, 3, 2 and 1 and the denominations to range from 50 kilograms to 100 grams for cast iron weights and from 20 kilorgams to one gram for the 3 different types of brass weights.

There is little chance of anyone disagreeing in principle about the need for a unified system of weights and measures replacing the diverse local systems followed at present. If we ignore the conscientious objectors, who reject anything "foreign" including the metric system, the main points of the critics of the Bill appear to centre round the questions of the time to be allowed for the change-over and of nomenclature.

The difficulties of introducing a new series of weights and meaures are obviously substantial and the need for gradualness in the change-over is evident. Mr Nityananda Kanungo, the Minister for Consumer Industries, while speaking in the Lok Sabha on the motion to refer the Bill to the joint committee, indicated that the Government are fully conscious of the need. The change-over, he said, was expected to take 10 to 15 years. Some members in the House were of the opinion that this was too short a period, to whom Mr Kanungo rightly pointed out that, as we became more industrialised, not only did the need become the greater for a standardised and scientific system of weights and measures, but the difficulties of changing over also became progressively greater as well. In the UK various commissions and the Board of Trade have recommended the adoption of the Metric system in place of the existing foot-pound one; but, on account of the large amount of industrial equipment and machinery that would be affected by the change, the Government found it difficult to implement the recommendations. It is, therefore, extremely important for the change-over to be completed before India became fairly advanced industrially.

On the question of nomenclature, most criticisms appear to be based on considerations other than those of logic. The Government have shown commendable good sense in accepting the recommendation of the Standing Metric Committee and deciding on the adoption of international nomenclature. An altogether new set of easily pronounced names, rather than Hindi derivatives coined from some of those in use, will certainly be better for the purpose of speedy unification. Secondly, there is the overwhelming advantage of international usage. The decision of the Government on both these points will, it is hoped, have the widest support from Industry and Trade in our country.

*

Stores Purchase Policy

In the Second Plan, Small-scale industries have been assigned a vital role. It is, however, realised that unless these industries are helped to overcome the many handicaps which stem from their very composition, they will not be in a position to achieve the tasks given to them. It is to be expected that Government will do their utmost to help these industries establish themselves on a firm footing.

Apart from direct assistance in the shape of loans to purchase machinery, supply of electric energy at cheap rates in rural areas, and technical assistance etc, there is an effective indirect way which can go a long way in stimulating the growth of the small industries.

Already Government purchase quite a good deal of stores every year. Their requirements are bound to grow in volume with the rapid extension of the sphere of activity of the public sector. It is gratifying to note, therefore, that Government have now decided to purchase atleast a part of their requirements from the small scale industries. The fact that representatives from the small scale industries corporation and the All India Khadi and village Industries Board have been nominated to the newly formed Central Purchase Advisory Council indicates the importance attached to the development of these industries by Government.

Inaugurating the first meeting of the Council, Sardar Swaran Singh, Union Minister for Works, Housing and Supply and Commerce and Consumer Industries, pointed out that the policy of the Central Purchase organisation would be so designed as to make the organisation a really effective and efficient instrument of Government for purchase of all Government requirements and to encourage indigenous manufacture of stores purchased in substantial quantities by Government. It is to be pointed out, however, that in the implementation of this policy, the industrial and trading community has an important role to play. In this connection Sardar Swaran Singh said that the working of Central Purchase organisation would be greatly facilitated by the proper compliance of delivery dates and quality of stores.

The Minister also drew pointed attention to the need for the fullest support to small-scale industries from the large-scale industries.

NORTH INDIAN MARKETS

Recovery in Foodgrains Prices

DESPITE various measures taken by the Government to check the rising trend of prices, the Foodgrains market, after an early fall, registered a steady trend on adverse weather reports. In the Hapur market, Wheat average quality advanced to Rs 15-0 from Rs 14-12 and farm quality to Rs 16-4 from Rs 16-0 per maund. Daily arrivals from the producing centres were small at an average of 100 maunds.

The market for Rice, however, ruled quiet with the rates for Basmati moving between Rs 23 and Rs 30 per maund, according to quality. It is reported that harvesting of paddy crops is now in full swing.

Coarse grains prices developed a hardening tendency due to the absence of rains and continued adverse weather reports. With heavy stock position, Gram prices registered further fractional gains in line with prices ruling in the futures section. Despite an increase in daily arrivals of the new crop, Maize advanced to Rs 12-2 from Rs 11-14 per maund. Barley and Bejhar moved up slightly in sympathy, while prices of other cereals, including Jowar, Bajra and Guwar, registered slight gains on reported damage to the standing crops on continued strong winds.

Also, prices of Pulses improved on continued bull support, influenced by adverse weather reports. Peas dara quality was quoted at Rs 11-12 and White quality at Rs 13-0 per maund. Arhar was quoted at Rs 12-8 with good offtake during the past week.

In the Delhi grains market, a quietly steady trend was noticed. Buyers were lacking in foreign wheat. The direction of the Reserve Bank to all Scheduled Banks to restrict fresh advances against wheat and other foodgrains had no effect on the market so far. Gram rates improved due to continued good demand. The demand for Barley was good, the rate recording a gain of about Rs 1 per maund. Rice, however, showed a loss of about Re 1 per maund, thanks to better stocks. There was a good demand for Bajra, while a steadier tendency was noticed in Maize.

A moderate improvement in the prices of foreign Wheat and Rice was the main feature of trading in the Bombay grains market. Prices of imported wheat staged a moderate rally to Rs 130 per candy, mainly attributed to the belief that supplies in the wholesale market might be adversely affected following the decision of the authorities to suspend sales. Indigenous qualities moved up by Rs 4 per candy.

The rate for Burma rice moved up by R 8 to Rs 158 per candy, being aided by a fairly active demand. The trend in indigenous qualities was, however, bearish with prices recording a drop of about Rs 7 per candy.

The Coarse grains section revealed an easy tendency with Jowar and Bajra receding by about Rs 5 per candy. This was mainly due to the eagerness of traders to dispose of their stocks before further deterioration in quality. The Pulses section presented a mixed appearance.

*

Sugar

The Sugar market at Hapur continued to rule dull with prices developing an easier tendency following an easy supply position. Following mill-delivery rates (per maund) were quoted:—Jaswant Rs 28-6; Simbhauli Rs 28-12; Mowana Rs 28-6 to Rs 29-4; Daurala Rs 29-4 to Rs 30-0; Amroha Rs 28-0, Bijnore Rs 27-15; Mansoorpur Rs 28-4 to Rs 29-6 and Rampur Rs 31-0.

With only about five weeks to go in for the new season, preliminary

The Peninsula

Reform of Local Bodies

THE administrator who ventures into reform of local bodies will no longer be groping for expert guidance. The Local Finance Enquiry Committee and the Taxation Enquiry Commission have almost exhausted what could be said on the scope and methods of raising new revenue. In Madras, two Committees appointed by the Government have reported on the reorganisation of municipalities and District Boards.

When the second meeting of the Central Council of Local Self-Government began last Saturday at Raj Bhavan at *Ootacamund*, the delegates could easily lay their hands on a wide range of problems which have recently been discussed on an expert level from various angles. Further discussions proceeding in the Conference are expected to throw more light on many of them. And when the proposed White Paper on the reorganisation of local boards in Madras is placed before the State Legislature, the present draft may contain a few suitable alterations.

Rajkumari Amrit Kaur, Union Minister for Health, in her presidential address, took the State Governments to task for not replying to the questionnaire sent to them after the first meeting of the Council. She pleaded for the early implementation of the recommendations of the Officers' Committee. For the future, she emphasised the need for properly trained personnel and adequate finance. For the Village Panchayats particularly, the necessity for a training programme for the staff has already become pressing. The importunities to the Planning Commission for the purpose have so far gone unresponded.

This theme of financial assistance by the Centre was taken up with great zeal by State Ministers in the subsequent discussion. They unanimously held the view that the Planning Commissions' allotment for programmes drawn up by local boards, particularly for water supply, drainage and sanitation, was utterly inadequate.

Rajkumari Amrit Kaur devoted a considerable part of her address to the question of improving slum conditions. This is a field in which responsibilities must be shared by other agencies though the principal initiative should rest with the local boards.

Two new prospects which impressed her particularly were the co-ordination between the Community Projects Administration and the Local Self-Government and Health Department in the States. She has no doubt that the work of the Community Projects and the village panchayats should be coordinated to the maximum extent possible. Unfortunately the basic information for building up this coordination has not been supplied by the State Governments.

The periodical review undertaken by the Madras Government of the activities of the Madras Corporation and the guidance extended to the Corporation by indicating what should and should not be done in different spheres appealed to the Union Minister as a helpful procedure. She hoped that this procedure would be copied by other States.

From the point of view of developments of special interest to the State, Mr Ramaswami Padayachi's speech is more important. Mr Padayachi, welcoming the States Ministers and other delegates, gave a preview of some of the salient features of the White Paper on Local Self-Government which the Government have prepared to be placed before the legislature in its ensuing session.

There is keen public interest in Madras on the future of the District Boards, an interest not unmixed with concern in certain sections. The Minister for Local Administration disclosed that among the tentative conclusions reached on the recommendations of the two Committees and embodied in the White Paper, one was that District Boards should not be abolished, until Panchayats proved their adequacy for performing all the functions now being performed by the District Boards.

According to the Minister, though present circumstances warranted the broad conclusion that District Boards should confine their jurisdiction to the non-Panchayat areas till there was complete coverage of the State by Panchayats, even this curtailment should await the Panchayats proving their full worth. The Union Minister, referring to this subject, quoted the Executive Committee's view that an intermediary between the Panchayats and the State Governments was necessary; but the Committee did not commit itself to a choice and it was only considered whether the intermediary should be established at the State level or at a lower level.

The Committee on the reorganisation of municipal administration has recommended the abolition of the post of Municipal Commissioner and the vesting of his duties in an elected, non-official chairman. The Government of Madras, however, seem to take a different view. In the light of the fact that the office of Commissioner has been supplying a long felt need in the municipal administration, the State Government, Mr Padayachi announced, were not willing to abolish the post altogether. They have, however, decided to add to the powers of the chairman, so that his prestige and authority could be enhanced.

There was a proposal to institute a high-level committee to examine the future set-up of local bodies in the State. This proposal has now been given up. Instead of the proposed council, a legislature committee is contemplated. The Minister hoped that the help and advice of the All-India Council would always be available to the Government of Madras in their task of overhauling local bodies in accordance with the requirements of the times.

The curtailment of the area under the District Boards will have repercussions on the political life of the State. The District Boards are a useful second line for the absorption of political rivalries and local factiousness. Their retention will be a valuable safety valve; the panchayats provide scope only for smaller fry.

Before concluding, one should also make mention of the appeal of the Union Health Minister that more women should be elected to the local bodies. She held up the example of the Vavveru Panchayat Board in Andhra, where the entire Board consisted of women members. This appeal may well be the inspiration and starting point for a new ascendency in the public life of this State!

Madras Review

South Indian Notes

Bright Future for Small Industries

Two main considerations have wielded overwhelming influence over the Planning Commission while framing their Second Five Year Plan. The nation's ambition for a rapid industrialisation of the country has been responsible for the high priority given in the plan for development of heavy industries. The urgent need for increasing employment opportunities has found expression in the emphasis on the development of rural and cottage industries.

The small-scale industries will also come to occupy an increasingly important position in the country's economy in view of the anticipated large increase in the demand for consumer goods.

The All India Small Scale Industries Board is rendering assistance in diverse ways to help small industries establish themselves on a firm footing. During the past two years, the Board has done signal service in improving technique of production, business management and marketing. Technical assistance is provided, through the Development commissioner and his organisation, the Regional Small Service Institute and the small Industries Corporation, and financial assistance is given through the State Government for schemes connected with the development of small scale industries.

Inaugurating the seventh meeting of the Board in Hyderabad on Monday, Mr Vinayakrao Koratkar, Minister for Finance and Commerce and Industry, Hyderabad said that the future programme of the Board included the starting of a number of mobile workshops, intensification of schemes relating to hire-purchase of machinery and setting up of corporations for marketing facilities to small units and setting up of small industrial estates.

Mr Koratkar, however, had pointed out that full benefits of the various schemes of assistance to small industries would not reach the proper quarters so long as certain defects were not remedied. The movement of sanctioned funds from the Centre to the State Governments should be greatly accelerated. The State departments of industries should be strengthened both on the administrative and technical sides in order to cope with the increased work. Steps should be taken to introduce standardisation and quality control as well as for adequate publicity for the products of the small industries.

*

Cooperative Housing

Cooperative housing societies have made commendable headway in Madras. There are now 175 housing societies of all types with 16.421 members and a paid-up capital upto June 1955 of Rs 110.20 lakhs. The societies have so far assisted in the construction of 6,152 houses. Besides housing societies, there are four co-operative house mortagage banks with a membership of 6,684 and a share capital of Rs 9.40 lakhs.

It would appear that much greater progress could have been recorded by these societies had it not been for the insistence on an initial payment. According to the president of the Madras State Cooperative Union, there is still need for liberalising the conditions of Government finance with respect to the maximum limit, interest and instalment.

Inaugurating the second Madras State Cooperative Housing Societies Conference, Mr A B. Shetty, Minister for Health and Cooperation, pointed out that in view of the rapid growth of the urban population the Planning Commission had recognised the urgent need for a national housing programme and accordingly had increased the provision to Rs 120 crores under the Second Plan as against Rs 38.5 crores allotted in the First Plan.

Referring to the steps taken by the Madras State to relieve the housing shortage, Mr Shetty said the question of constituting a State House Finance Corporation would be receiving early attention of the Government. A proposal to grant loans from State funds to industrial workers to cover part of the stipulated 25 per cent contribution to be made by them was also under consideration. Yet another proposal that was receiving the attention of Government was the organisation of Central House Mortgage Bank at the State level for the purpose of raising money by floating debentures backed up by Government guarantee and utilising the money for financing the primary house mortgage banks.

While it cannot be denied that cooperative housing societies in the State are doing signal service to the community, it is to be noted, nevertheless, that the utility of these societies as at present constituted, can never be considerable for the simple reason that they are of little use to persons in the low-income group. It is evident that the sluggish progress of the low income group housing is largely due to the difficulties felt by members of societies in making the initial payment of their share capital. In this connection the suggestion of Mr A. Palaniappa Mudaliar, Registrar of Cooperative Societies, that loans might be given to those in the low income groups for the purchase of sites in the first instance and the provision of suitable assistance to build houses on the sites after recovery of the initial loans deserves the attention of both the housing societies and the Government.

SOUTH INDIAN MARKETS

Pepper Prospects

PEPPER prices, though lower than last year, have been maintained at fairly steady levels during the current season, thanks to the emergence of East European countries as larger buyers and shorter crops produced by Java and Sarawak. It is generally believed that the crop may not be as small as was anticipated earlier although reports from North Malabar are still conflicting. As a matter of fact, crop estimates of pepper are always a guess work and one guess is as good as another.

Meanwhile, exports, during August, are estimated around 1,500 tons, raising the total for the first eight months to over 14,000 tons, which is higher than in any of the previous five years. In this connection, it may not be out of place to mention that exports from India had never reached 20,000 tons, at least for the last few years. The highest was when about 17,000 tons were exported in 1947.

The present supply is considered sufficient, if not more, to cover world consumption. The future of the market, therefore depends on the Suez situation. In the Kozhikode market, Wynaad quality was quoted at Rs 825 and the Country variety at Rs 815 per candy. The New York market ruled steady despite higher offerings from primary markets. Concern over the Suez situation was the dominant influence. Malabar spot was quoted at 35 cents per pound. In the London market, White Sarawak was quoted at 293d per pound. In the Singapore market, Black Sarawak was quoted at 85 dollars per pound. In the Jakarta market, Black Lampong was quoted at 650 rupiahs per 100 kilos.

*

Rubber

Foreign markets for Raw Rubber have been experiencing hectic fluctuations in recent weeks following the Suez Canal crisis. Prices at Singapore, which had shot up by over Rs 50 to Rs 165 per 100 pounds, have now declined to Rs 145. In view of this uncertain price trend, rubber goods manufacturers are compelled to postpone their import programme for some time.

A further import of about 2,000 tons of raw rubber is likely to be allowed during the current half-year with a view to meeting the gap between indigenous production and consumption. Imports allowed this year have, so far, amounted to 8,000 tons.

*

Coffee

According to latest reports, the American market, which holds the key to the world Coffee prices, has been consuming at a rate higher than recorded in any of the previous four years. The US Department of Agriculture estimates world exportable production of coffee, during the 1956-57 season, at 38½ million bags. The boom years in coffee are believed to have strongly influenced large-scale planting in many countries. The result of it will be felt in the coming years.

At the auction held recently at Bangalore, a total quantity of 1,750 tons was sold by the Coffee Board from the 1955-56 crop for export. The following were the range of prices and the average prices (per cwt) realised for the different grades:—Plantation "A" Rs 350-2 to Rs 396; Plantation "B" Rs 342-2 to Rs 363-11 and Plantation Triage Rs 289 to Rs 328.

*

Groundnut

The Madras Groundnut market exhibited a steadier tendency during the past week. Arrivals were negligible. With the advance of the season, "summer" crop arrivals, in the Southern districts, have shown a appreciable decline; but Pollachi is making up this shortfall. Crushers at Coimbatore, Madura, Ramanathapuram and Trichinopoly districts, are reported to be taking up the stocks coming in the Pollachi market. Superior oil-quality seed was quoted at Rs 172 per candy, while the bold variety hovered around Rs 168 per candy.

In the Groundnut Oil section, the rate for ready was quoted at Rs 328 per candy as against Rs 323 in the previous week. Calcutta interests are taking up small quantities, while big crushers remain reserved.

New crop groundnut pods have begun to arrive in the regulated market at Davangere. This year's harvest is reported to have been delayed by over four weeks in view of heavy rains. A good spell of bright sunshine, during the past few weeks, has however, encouraged the prospects of large arrivals in about two weeks.

Meanwhile, forward trading in groundnut and groundnut oil has been inaugurated at Adoni after a period of 13 years. After Rajkot,

DIVIDEND, CAPITAL AND VOTING RIGHTS

The following is a summary of the rights, privileges and restrictions attached to the Preference and Ordinary Shares of the Company and of the limitations upon borrowings and the creation of further shares.

Dividends:

The profits which the Company may determine to distribute in respect of any financial year or any other period shall be applied, first, in paying the holders of the Preference Shares a fixed cumulative preferential dividend at the rate of 6% per annum (free of Income Tax) on the capital for the time being paid up thereon and the balance of the said profits shall be distributed amongst the holders of the Ordinary Shares in proportion to the amounts paid up on the Ordinary Shares held by them respectively.

Capital:

The assets available for distribution to members whether on a liquidation or not shall be applied, first in repaying the share-holders of the Preference Shares the amounts paid up on such Preference Shares together with a sum equal to any arrears or deficiency of the fixed dividend thereon whether declared or not, upto the commencement of the winding up. The Preference Shares do not confer on the holders any further right to participate in the assets or profits of the Company. The balance of the assets shall be distributed amongst the holders of the Ordinary Shares in proportion to the amount paid up on the Ordinary Shares held by them respectively.

Voting:

The Preference Shares entitle the holders to receive notices of any General Meeting, but do not entitle them to vote thereat unless

(1) the dividend on the Preference Shares or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting, or

(2) the business of the meeting includes the consideration of a resolution which directly affects the rights attached to the Preference Shares. (A resolution for winding up the Company or for the repayment or reduction of its share capital will be deemed directly to affect the rights attached to the Preference Shares.)

On a show of hands every member entitled to vote who (being an individual) is present in person, or by proxy, or (being a corporation)

is present by a representative, or by proxy shall have one vote. On a poll, the voting rights in respect of the Ordinary and Preference Shares will be as specified in Section 87 of the Companies Act, 1956. No member will be entitled to be present or vote either personally or by proxy at any meeting in respect of the shares registered in his name on which any calls or other sums presently payable have not been paid or in regard to which the Company has exercised any right or lien.

Variation of Rights:

The special rights attached to any class of shares may be varied or abrogated with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of a special resolution passed at a separate meeting of the holders of the shares of the class but not otherwise.

Restrictions on Transfer of shares:

There are no restrictions on the transfer of fully paid shares, but the Directors may decline to register any transfer of partly paid shares to a person of whom they do not approve and may also refuse to register any transfer of shares on which the Company has a lien.

Borrowings:

Subject to the restriction imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge its undertaking, property and uncalled capital or any part thereof and to issue debentures and other securities.

PROSPECTUS

Objects:

The East India Hotels Limited was incorporated on the 26th May, 1949, for the object set out in the Memorandum of Association generally and in particular to run the business of Hotels and Restaurants and their allied trades.

The Hotel Project at New Delhi:

The hotel project at New Delhi will include public rooms, such as Lounge, Grill Room, Dining Room, Banquet Room, Conference Room, Swimming Pool, Shops, Restaurants, Night-clubs, etc. The hotel will be fully air-conditioned and centrally heated and will be built and equipped on the most modern western lines. There will be ancillary establishments such as bakery, confectionery, laundry, ice and mineral water factories, etc. This hotel will be a small town in itself, and is expected to have 200 rooms with 375 beds and will be one of the best anywhere. Apart from this, the project will provide employment to a large number of persons. It is thought that the project itself will contribute a relatively fair percentage to the country's earnings of foreign exchange. A plot of land well situated on Mathura Road, in New Delhi has been allotted to the Company by the Government of India. This land has been acquired for the construction of this modern 9 storied hotel building with a height of 109 feet. The terms of the contract will be found under the headline "Contract relating to properties" of the Prospectus.

Oberoi Palace Hotel, Srinagar:

The plans include the purchase from Hotels (1938) Private Ltd., of the immovable and movable assets comprised in Oberoi Palace Hotel at Srinagar, Kashmir. Negotiations for the purpose have been completed with the Vendor Company. The Vendor Company has agreed to permit the Company to use the name "OBEROI PALACE HOTEL" in connection with the latter's hotel at Srinagar, without charging anything for the same. The Oberoi Palace Hotel started functioning from the middle of June 1955 and has been accepted as one of the finest resort hotels in the world. Important persons in the international travel market and eminent personalities such as Marshal Bulganin and Mr. Nikolai Khrushchev of the Soviet Union, who, recently stayed at this hotel have spoken highly of it. The Oberoi Palace Hotel is housed in the former Palace of Maharaja Hari Singh, and is situated on the Dal Lake and is spread over 50 acres of land with accommodation for 150 beds. It is luxuriously furnished and has a commanding view of the Lake and mountains. It is today fulfilling the needs of a first class hotel in Kashmir. Its initial success is indicative of how areas develop with improved facilities. During the period since its inception, the hotel has been full most of the time. Rai Bahadur Oberoi has secured a ten years' lease with two options of renewal for ten years each to operate the Oberoi Palace Hotel in the former Palace which has been altered, renovated, and improved for the purpose of operating as a hotel. The following is the summary of the capital expenditure incurred in this respect:

Furniture, Fittings, Cutlery, Crockery, Linen etc.	...	...	Rs. 6,22,563	12 9
Machinery & Boilers etc.	...	...	Rs. 42,927	6 6
Electric Installation.	...	...	Rs. 85,377	11 3
Sanitary Installation	...	...	Rs. 2,81,823	13 0
New Wing Construction	...	...	Rs. 4,73,962	2 9
Expenses for lease of Palace and Orchard		...	Rs. 4,000	0 0

Auditors Certificate:

This is to certify that the above assets appear in the books of Hotels (1938) Private Ltd. at values noted against each item.

PROSPECTS

Scope for more Hotels:

There is a growing need for hotels in both New Delhi and Srinagar. The present hotel accommodation in these two cities is quite inadequate to serve the increasing number of tourists and visitors. The existing hotels are consistently full and invariably there is difficulty in securing accommodation.

This is particularly so in New Delhi which is now ranked as one of the great political capitals of the world. This shortage of accommodation in the city, for instance, was acutely felt during the rush connected with the Indian Industries Fair in December last. The present accommodation in hotels in Delhi is 900 rooms. In the opinion of the Ministry of Transport, Tourist Division, Government of India, another 1,100 rooms are required. With the completion of our new hotel and another which is in the process of construction in New Delhi, only 50% of this demand will be met. Therefore, there is scope for 500 more rooms to meet the total demand.

In the coming years the strain on hotel accommodation, especially both at Delhi and Srinagar, is likely to grow worse. On account of developments which are taking place, in the political, economic and cultural spheres, the number of visitors, travellers and tourists from abroad is expected to increase considerably.

Political Missions:

Politically, India's stature among the nations of the world has grown immensely. In Asia, India has come to occupy a dominant position. Nations of both the East and the West are looking to Delhi for giving a lead to establish world peace. Consequently, the country is being frequently visited by distinguished statesmen of the world. Visits of foreign Ambassadors and representatives of U.N. bodies, such as the Economic Co-operation for Asia and Far East, the World Health Organisation, the International Monetary Fund, the International Bank for Reconstruction and Development and the International Labour Organisation, to India and its Capital have been on the increase year after year. It is also well known that last year, a large number of distinguished state guests travelled through India, including Marshal Tito, the King of Saudi Arabia, the King and Queen of Nepal, the heads of the U.S.S.R. Government, the Shah and Queen of Iran, Mr. John Foster Dulles, The U.S. Secretary of State, and Lord and Lady Mountbatten.

Trade Missions:

Economically India has made large strides. Her agriculture, industry, trade, banking and insurance have recorded notable progress. The country is just on the threshold of launching further large development schemes under the Second Five-Year Plan. This has attracted foreign businessmen, financiers, technicians, trade missions, etc., to visit the country for establishing business contacts and securing orders for their home products. The visits particularly of trade delegations in recent years to India have resulted in creating an atmosphere which augurs well for laying the foundations for expansion of not only trade with outside countries but also tourism. In this expansion, the hotel industry has scope for playing an important role in future. Locally, too, the growth of industry has led to the establishment of innumerable sales organisations, whose representatives have become a lucrative source of rich clientele for first class hotels.

Cultural Missions:

Exchange of cultural missions, visits of foreign scientists and educationists and the number of tourists have all grown. Not only have these exerted pressure on hotel accommodation in important business centres, but have increased the number of banquets, luncheons, dinners, receptions, etc. to be catered for by hotels. Luxury hotels, properly furnished and fully equipped to satisfy even the most fastidious and discriminating guests who attend these functions are few and far between in the country, and this offers wide scope for entry into this field as proposed by the East India Hotels Limited.

Foreign Market:

The enormous expansion in airline traffic during the past decade also clearly indicates that the people of the world have become travel conscious. Thus, in 1945, the world airlines carried 9.3 million passengers over 375 million miles. By 1955, the figure increased to 69 million passengers and 1,407 million miles respectively. A major contributory factor to this expansion in tourism has been the enormous rise in family incomes especially in America. In the U.S. alone there are 14 million families with income sufficient to finance a round-the-world tour once during their adult life. This is mainly responsible for the growth in the number of U.S.

tourists to different parts of the world, as stated below:—

TURKEY	In 1951, Turkey Customs recorded 370 North Americans as entering the country. By 1955, this number increased to 13,000.
EGYPT	In 1951, the records indicated 3,700 North Americans as entering the country. By 1955, this number had increased to 23,000.
JAPAN	In 1951, 700 North Americans visited Japan. In 1954, the number was 44,300.
AUSTRIA	61,800 North Americans visited Austria in 1951. By 1955, the number had increased to 1,19,000.
ITALY	In 1952, 3,94,000 North Americans visited Italy, and in 1953 the figure was 5,54,000.

Statistics relating to earnings of foreign exchange from tourist traffic by these countries are not available. An idea as to such potentialities of tourism may, however, be had from the earnings of Japan. In 1952, dollar receipts from tourism in that country amounted to $8.2 million. This figure rose to $33.00 million in 1953 and 39 million in 1954.

Pleasure and business travel has become one of the world's largest businesses and also one of the most lucrative. The satisfying of the basic needs, interests, and desires of tourists provides the key to unlock the barriers impounding tourist traffic and increase foreign exchange earnings.

International airlines from the U.K. and U.S.A. have placed orders for a big number of jet airliners for delivery in 1958. Each of these aircraft will be capable of, it is stated, carrying annually the same number of Trans-Atlantic passengers as the S. S. QUEEN MARY. This provides an indication as to the prospects of expansion of tourism in future. India, too, is sure to benefit by this expansion in the volume of international traffic. It is expected that there will be an increase of 200 per cent in such traffic in Delhi by 1960. The hotel industry in Delhi will have to equip itself for meeting this demand by increasing the hotel accommodation to a corresponding extent.

Government's Interest in Tourism:

The Government of India has recognised the importance of making tourists' comfortable. It has initiated several measures in this direction. It has sought to encourage establishment of upto-date hotels and has striven to make travel comfortable by improving air and rail transport facilities and freeing the travellers from vexatious restrictions and cumbersome formalities. The Government has opened a number of tourist centres both in India and abroad for assisting travellers.

The Kashmir Government, too, is taking keen interest in encouraging tourism as it has proved an important source of earning foreign exchange. According to the Director of The Tourist Department of the State, 55,000 tourists visited Kashmir in 1955. During the current year 1,00,000 tourists are expected. The State Government is making adequate accommodation and transport arrangements for tourists. Ropeways are being built to link Tanmarg and Gulmarg. At Srinagar, a tourist centre, one of the biggest in the world, will soon be opened. The State Government proposes to open Yacht clubs in various places in co-operation with foreign clubs, and arrangements are being made to revive winter sports on the pre-1947 scale. The State Government has ear-marked Rs. 105 lacs in the Second Five-Year Plan for providing facilities to tourists.

In short, the growing volume of tourism, the shortage of hotel accommodation, the dearth of Luxurious hotels, and the Government's desire to extend assistance to the hotel industry, today offer a large scope for new ventures and it is to fit into this situation that The East India Hotels Ltd. has been formed.

Promoters:

The promoter of the Company is Rai Bahadur M. S. Oberoi. He is not receiving any profit or remuneration for his services as such. Rai Bahadur Oberoi has paid on behalf of the Company a sum of Rs 7,77,000/- to meet certain payments in advance to the Government, Building Contractor and Architects. He will be entitled to be reimbursed these amounts by the Company and to be indemnified by the Company against all liabilities in respect of contracts entered into on behalf of the Company.

Backing of Oberoi Group:

The two hotels will have the backing of the Oberoi Hotel chain having an international reputation and contacts, particularly with the travel agents in Europe and U.S.A. It is very difficult for a single hotel to attain success on its own efforts, whereas a combine, with all the advantages of group management, will bring success and security to the investors. The East India Hotels Ltd., will have the full benefit of this international combine. The management of the two hotels of The East India Hotels Ltd., will be entrusted to the Managing Agents subject to the provisions of the Companies Act, 1956. The Managing Agents will not charge any remuneration for the first year of its operation.

11. **Faletti's Hotel, Lahore.**
12. **Flashman's Hotel, Rawalpindi.**
13. **Den's Hotel, Peshwar.**
14. **Cecil Hotel, Murree.**

Comprising the largest chain of 14 luxurious hotels in the East, the Oberoi Group has, by offering every facility for convenience and comfort, come to be recognised as the home for international travellers. It is known for its personalised service, cordial hospitality and friendliness throughout the globe. And Mr. Oberoi as the Chief Executive of the Management of these hotels brings with him to the East India Hotels Ltd., a rich and varied experience acquired over a period of years. Under his supervision and management, the promotion of this Company should prove to be a successful venture from the very inception of its operation. It will also have the benefit of experience of some of the staff now under the employ of Mr. Oberoi to look after the interest of the Company in the initial stages. In order to keep in line with the policy of Indianisation, there is also a scheme under consideration to send young people for training to Hotel Schools abroad, so that the Company may have experienced and trained personnel on its staff.

Co-operation of Inter Continental Hotels Corporation (U.S.A.):

Inter Continental Hotels Corporation, which is a wholly owned subsidiary Company of Pan American World Airways, was formed some years ago at the instance of the American Government, particularly to provide technical assistance in connection with planning, construction, financing and operation of new hotels abroad. Pursuant to the policy of U.S. Government of furthering the economic development of friendly foreign nations, The International Co-operation Administration had commissioned Pan American World Airways to conduct technical assistance programmes with several countries.

Pan American World Airways is the only Airline at present operating a complete round-the-world service. India and particularly New Delhi are a high light of a round-the-world trip. Pan American makes 5 round-the-world flights each week in each direction serving 84 countries and providing 80% of the total requirements of American Tourists in this respect. It has established modern first class hotels in many parts of the world to meet the comfort and requirements of its passengers.

Pan American World Airways will be operating new jet aircraft on their round-the-world services from 1958. Other Airline Companies will also be operating similar aircraft. Each of these aircraft has a carrying capacity of 120 passengers, which is a 100% increase on the carrying capacity of the existing aircraft. A preliminary survey indicates that a 200% increase in tourist traffic may be anticipated as compared to 1955. Pan American World Airways is anxious to obtain first class hotel accommodation in India operated to American standards. This Company will be in a position to provide such accommodation for the use of Airline passengers and their crews.

The promoters are at present negotiating with Inter Continental Hotels Corporation with the object of securing its patronage for the hotels under the management of Oberoi Hotels (I) Private Ltd. in New Delhi and also with the object of getting the benefit of their latest technical know-how. These arrangements will materially assist the new Company by ensuring a regular flow of visitors to the hotels. The arrangements will also provide for training of Indian operational personnel in the U.S.A. and the Inter Continental Hotels will loan their technical staff if required during the initial period of operation. The Company may be provided with facilities to use their tele-type system of reservation throughout the 400 offices of Pan American World Airways.

Special Privileges for Subscribers:

Every subscriber to Preference and Ordinary Shares will be issued with the OBEROI GOLD CARD on request. The holders of the Gold Card will be entitled to all the amenities and particularly to a discount of 10% on room charges at the Company's hotels at New Delhi, Srinagar, and at other places where hotels may be built or acquired in the future. Moreover, the holder of an OBEROI GOLD CARD will be entitled to the same discount, i.e. 10% on room charges at all the other hotels in the Oberoi Group throughout India & Pakistan. Besides the discount of 10% on room charges, and other facilities and amenities, GOLD CARD holders will be assured of receiving exceptional personal service and attention at the Company's hotels and all the other hotels in the Oberoi Group in India and Pakistan. This unique service will indeed give the holder of a GOLD CARD a proprietory interest when staying at any of these hotels. A GOLD CARD will be valid for 5 years from the date of issue. In the case of Companies, they will be required to nominate one person who will be entitled to the use and privileges of the GOLD CARD. In the case of the individuals or others holding shares in the joint names, only the first named holder will be

THE EAST INDIA HOTELS LIMITED Prospectus (Contd.)

entitled to the use of the privileges of the GOLD CARD.

PROCEEDS OF ISSUE

The entire project in Delhi and Kashmir will cost Rs 1,25,00,000|- when fully developed with all ancillary establishments. The immediate requirements are Rs. 1,00,00,000|- but it must be emphasised that within this outlay the project is a completely finished entity and will in no way be handicapped in its operation without the ancillaries which will be added at a later stage but which will undoubtedly enhance the efficiency and earnings of the project. This total capitalisation cost will be provided as under:

(A) By Share Capital	
30,000 6% tax free Cumulative Preference Shares of Rs 100|- each	30,00,000
7,00,000 Ordinary Shares of Rs 10|- each	70,00,000
	1,00,00,000

(B) It is proposed to raise Rs 25 lacs or there abouts by the issue of debentures or by borrowing from the Company's Bankers or other sources on the security of its assets as may be decided by the Directors of the Company. The Directors expect that such a loan can be obtained at a rate not exceeding 6% per annum depending on the market conditions. The present intention is to raise the loan at a later date when the project is completed or nearing completion and is operating at nearly full capacity, so that its earnings are sufficient not only to ensure payment of interest on the amount borrowed but also to set apart a sum of Rs 2½ lacs per annum towards the repayment of the loan

(C) The working capital which is estimated at about Rs 4,40,000|- will be provided partly from the profit of the Company in running the hotel at Srinagar and partly lent by the Managing Agents free of interest.

The proceeds of the funds are proposed to be expended in the following manner:

(a) CONSTRUCTION OF HOTEL IN NEW DELHI		
Land and Building ...	Rs.	54,81,210 0 0
Electrical & Sanitary Installations, Lifts, Air Conditioning (estimated)	Rs.	33,00,000 0 0
Furniture, Crockery, Cutlery, Glassware, Carpets, Kitchen Utensils, Linen, Cooking Ranges, Laundry Plant, etc. (estimated)	Rs.	19,68,790 0 0
(b) Assets of OBEROI PALACE HOTEL, SRINAGAR	Rs.	15,10,655 0 0
(c) Expenses to this issue	Rs.	3,00,000 0 0
Working Capital (estimated)	Rs.	4,39,345 0 0
	Rs.	1,30,00,000 0 0

ESTIMATES OF PROFITS

A general idea of profits which a representative unit in the hotel industry can earn can be had from the results of working of the Hotel Imperial, New Delhi, of the Oberoi Hotel Group. An abstract of income and expenditure of this hotel for the years 1952-53, 1953-54, 1954-55 and 1955-56 is given in the table below. The figures are taken from the books maintained by Associated Hotels of India Ltd., which owns the hotel.

HOTEL IMPERIAL, NEW DELHI

Total Number of Beds : 150
Average Occupancy: 92%.

(Rupees in lacs)

	1952-53	1953-54	1954-55	1955-56
INCOME:				
Board & Lodging etc.	21.17.	21.85	24.03	26.53
Rental & Miscellaneous Receipts etc. ...	1.94	1.79	2.68	3.09
Sale of Liquor ...	6.11	6.06	6.55	7.33
	29.22	29.70	33.26	36.95
EXPENSES				
Food, Establishment, Rent, Taxes Insurance & Miscellaneous ...	20.28	20.34	23.23	20.27
	8.94	9.36	10.03	16.68

Profit:

It will be seen from the above table that the percentage of expenses to income was 69.3 in 1952-53, 68.4 in 1953-54, 69.8 in 1954-55 and 54.8 in 1955-56 leaving thereof a profit margin of about 30% in the 3 years, 1952-53, 1953-54, and 1954-55 and about 45% in 1955-56.

The proposed New Delhi hotel will contain 200 rooms with 375 beds. The average number of residents is estimated at 230 per day in the year.

In the Oberoi Palace Hotel, Srinagar, there are 90 rooms with a provision of 150 beds. The average number of residents work out to 80 per day for a period of 8½ months.

The estimated profits calculated on the basis on the average occupancy in both the hotels are shown in the proforma income and expenditure statement below, for the first year after the completion of the project.

	Rupees in lacs		
	New Delhi Hotel	*Palace Hotel Srinagar*	*Total*
Total Accommodation	375 Beds	150 Beds	
Average Occupancy	60%	55%	
INCOME			
Board & Lodging	41.00	5.75	46.75
Food sale, Rental, Laundry & Miscellaneous Receipts	13.10	.85	13.95
Sale of Liquor ...		1.00	1.00
	54.10	7.60	61.70
EXPENDITURE			
Food, Establishments, Rents, Taxes, Insurance & Miscellaneous	22.48	5.85	28.33
GROSS PROFIT	31.62	1.75	33.37

If the loan of Rs 25 lacs is raised by the Company, the position of Profit & Loss will be as follows:—

Gross Profit			33.37
Less Appropriations:			
Overhead Expenses of Head Office ...		.61	
Interest on Loan		1.50	
Depreciation		5.00	7.11
			26.26
Less Tax payable @ 43% of the assessable profits ...		5.56	
Tax on Dividend in excess of 6% ...		1.06	6.62
Net Profit			19.64
Sinking Fund for Loan			2.50
			17.14
Preference Share Dividend at 6% ...		1.80	
Ordinary Share Dividend at 15% ...		10.50	12.30
			4.84
Reserve Fund			4.00
Carried over ...			.84

It will be seen from the above statement that the Company can expect to earn an income of Rs. 61.70 lacs in the first year after the completion of the project, as against the expenditure of Rs 28.33 lacs, leaving a gross profit of Rs. 33.37 lacs. Of the latter, a sum of Rs. 13.73 lacs is appropriated for interest on loan, depreciation, taxation, at the present rate, and overheads. The estimated net profit available for distribution to shareholders would be Rs. 19.64 lacs.

Preference Dividend Cover:

On the basis of an estimated net profit of Rs. 19.64 lacs, the dividend on the 6% cumulative taxfree Preference Shares will be covered over 7¼ times by earnings.

After deducting from the estimated net profit of Rs. 19.64 lacs, the sum required for payment of dividend on Preference Share capital, the balance of profit represents a return of 25.5 per cent on the amount of the issued Ordinary Share capital. After providing a reserve of Rs. 4 lacs and a sinking fund of Rs 2,50,000|- every year, the Company according to above Profit & Loss Accounts, will be in a position to *declare a dividend of 15% Free of Tax to the Ordinary Share holders.*

The above estimate for the first year is made @ 60% average occupancy and taking into account the depreciation relief for the first five years. In course of the next five years, the average occupancy is expected to rise to 80 to 90% which means an increase in the income by nearly 40 to 50%. The consequent increase in earnings will more than compensate the Company for the higher incidence of tax from the sixth year, owing to the discontinuance of the development rebate thus enabling it to maintain, or perhaps even raise the dividend.

Wine Profits:

The above profit, it may be noted, does not include profits on liquor sales in the New Delhi hotel in view of the possibility of enforcement of prohibition there. Even if prohibition is introduced, the Company is likely to continue its sales of liquor to residents, permit holders and foreigners. If this additional income is taken into account, the earnings would be higher and will enable the Company to pay still higher dividends.

THE EAST INDIA HOTELS LIMITED—Prospectus (Contd.)

STATUTORY & GENERAL INFORMATION

MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present issue on which the Directors will proceed to allot is Rs 30,00,000|-.

1. Purchase price of Property Rs. 11,78,000|- Paid 6,17,000 ...	Rs.	5,61,000	
2. Preliminary Expenses	Rs.	20,000	
3. The repayment of any money borrowed by the Company in respect of the forgoing matters	Rs.	7,77,000	
4. Working Capital ...	Rs.	4,40,000	
5. Any other expenditure stating nature and purpose thereof and the estimated amount in each case (To complete 100 rooms furnished & equipped) ..	Rs.	27,02,000	Rs. 45,00,000
Less working capital to be met out of Company's fund and advance from Managing Agents ...	Rs.	5,00,000	
Shares alredy allotted ...	Rs.	10,00,000	Rs. 15,00,000
			Rs. 30,00,000

Contracts Relating to Property:

1. The Government has allotted to the Company a plot of land measuring 6.32 acres in New Delhi for the construction of a new hotel building on international standards. The plot is situated near the Delhi-Mathura Road and Wellesley Road crossing in the North East corner adjoining the Golf Club. The terms and conditions under which this plot of land is being leased to the Company are specified by the Land & Development Officer, New Delhi in his letter No. O-L dated 17th December, 1955, addressed to the Company. The lease will be completed in due course. This includes the following:—

(a) The Company is required to pay for the land as under:—

(i) For the area measuring about 5.46 acres at Rs. 2,00,000|- per acre which comes to Rs. 10,92,000|- plus Rs. 27,300|- as annual ground rent at 2½ per cent of the premium.

(ii) For the area measuring about 0.86 acres at Rs. 1,00,000|- per acre which comes to Rs. 86,000|- plus Rs. 2,150|- as annual ground rent at 2½ per cent of the premium.

(b) Only one-third of the area measuring 5.46 acres will be built over and the remaining area shall be left for gardens, roads, car parks, etc. An area of about 0.86 acres will be converted into a lake and adjoining garden.

The construction of the building has already been taken in hand. A part of the building is intended to be completed by October and the entire project by mid 1957.

2. Agreement for sale dated the 31st August 1956, and made between Hotels (1938) Private Ltd., of the first part and Rai Bahadur M. S. Oberoi of the second part and the Company of the third part.

This agreement provides for the purchase by the Company from Hotels (1938) Private Ltd., of the assets comprised in the latter's hotel at Srinagar at a price of Rs. 15,10,654-14-3 which will be paid and satisfied by the Company by the issue and allotment of Rs. 15 lacs in its 1,50,000 Ordinary Shares of Rs. 10|- each at par credited as fully paid up and the balance i.e. Rs. 10,654-14-3 will be payable in cash. The sale is subject to the consent of Yuvaraj Karan Singh the landlord to the assignment of the properties, comprised in two leases, dated 17th June 1954, and the 12th November 1954 in favour of the Company. As these leases stand in the name of Rai Bhadur M. S. Oberoi, he has been made a party to the Agreement. Rai Bahadur M. S. Oberoi and Mr. T. R. Oberoi who are the Directors of the Company are also Directors of the Vendor Company.

Expenses to this Issue:

The estimated amount of the Preliminary Expenses including brokerage and commission is Rs. 3,00,000|-.

Directors Qualification and Remuneration:

The qualification of a Director shall be the holding in his own name or jointly with any other person of shares in the Company of the nominal value of Rs. 5,000|-. Each Director will be paid out of the Company's funds by way of remuneration a fee of Rs. 64|- for attending each Board Meeting. The Directors will be entitled to be paid their reasonable travelling, hotel and incidental expenses of attending to and returning from the meetings of the Board or Committees of the Board and otherwise in the execution of their duties as Directors. All other remunerations, if any, will be determined in accordance with the Company's Articles and the Company's Act. A Director who performs extra service or goes or resides away from Calcutta for any purpose of the Company may subject to Sections 198, 309, and 310 of the Act be paid such extra remuneration as the Board of Directors may determine. The Managing Agents can subject to section 255 of the Act appoint two ex-officio Directors where the number of Directors exceeds 5 and one ex-officio Director where the number does not exceed 5.

Managing Directors:

The Board may subject to Section 316 and 317 of the Act appoint one or more Managing Directors of the Company. Such Managing Director will subject to Section 255 of the Act not be liable to retire by Rotation but will cease to be a Managing Director if he ceases to be a Director. He will subject to Sections 309, 310 and 311 of the Act receive such remuneration as the Company may determine in general meeting. The Company will not appoint Managing Directors as long as it has Managing Agents.

Managing Agents:

Oberoi Hotels (I) Private Ltd., are the Managing Agents of the Company by virtue of the Agreement dated 26th May, 1949. They receive by way of remuneration for their services a commission of 10% on the net profits and are entitled to be reimbursed all expenses incurred on behalf of the Company. Such remuneration is subject to the provisions of the Companies Act. The subscribed capital of the Managing Agents is Rupees Four Thousand divided into Four Hundred Ordinary Shares of Rs 10|- each.

Interest of Directors:

Sir U. N. Sen and Mr. M. L. Khaitan are Directors of Associated Hotels of India Ltd., of which Hotels (1938) Private Ltd., (the Vendor in respect of assets comprised in its hotel at Srinagar) is a subsidiary. Rai Bahadur M. S. Oberoi is a Director of Oberoi Hotel (India) Private Ltd., the Managing Agents of the Company and of Associated Hotels of India Ltd., and Hotels (1938) Private Ltd., Mr. T. R. Oberoi is a Director of Oberoi Hotels (India) Private Ltd., Associated Hotels of India Ltd., and Hotels (1938) Private Ltd.

Consent:

The consent in writing of the Auditors, Bankers, Brokers and Legal Advisers to the Company to act in their respective capacities have been obtained. The Auditors, Messrs. G. Basu & Co., have given and have not withdrawn their consent to the inclusion of their report and certificate in this Prospectus in the context in which they appear.

The foregoing written consents and copies of the contracts mentioned below have been attached to the copy of the Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration.

Contracts:

The following contracts (apart from contracts entered into in the ordinary course of business) have been entered into by or on behalf of the Company and are or may be material.

(a) Agreement for the same dated the 31st August 1956 and appearing under the heading "Contracts relating to Property" of this Prospectus.

(b) Letter dated 17th December 1955, from the Land & Development Officer, New Delhi, setting out terms and conditions of the Lease of the land in New Delhi.

(c) Correspondence with Messrs Uttam Singh Duggal & Co., Ltd., Delhi, Building Contractors, for the construction of the hotel building.

(d) Correspondence between Rai Bahadur M. S. Oberoi and the Inter Continental Hotels Corporation.

(e) Managing Agency Agreement dated the 26th May, 1949 between East India Hotels Ltd., and Oberoi Hotels (India) Private Ltd., regarding the Managing Agency terms, remuneration, etc.

Brokers:

Brokerage at the rate of anna 4 per Ordinary share of Rs. 10|- each and Re 1|- per Preference Share of Rs. 100|- each will be paid to recognised brokers on allotments made in respect of applications bearing their stamps.

Messrs. Merwanjee Bomanjee Dalal and Messrs. Harbans Singh Mehta & Co., are the Managing Brokers to this issue and will be in addition entitled to a commission of 1 anna per Ordinary Share and 8 annas per Preference Share on all shares subscribed by the public.

THE EAST INDIA HOTELS—Prospectus (Contd)

Auditors Report:

We have examined the Accounts of East India Hotels Ltd., for the five years ended 31st March, 1956, and in accordance with the provisions of clause 24 of Part II of Schedule II of the Companies Act, 1956, we report as follows:

The Profit & Loss Account of the Company for these years were set out hereunder and have been arrived at after charging all expenses.

M/s. East India Hotels Ltd.

Year ended 31st March:	1952	1953	1954	1955	1956
Income	Nil	Nil	Nil	Nil	Nil
Expenses ...	8,092	256	270	270	6,191
Loss ...	8,092	256	270	270	6,191

We further report that no dividends have been paid in respect of any of the five years ended upto 31st March, 1956. The nett assets of the Company as at 31st March, 1956, as disclosed by the audited Balance Sheet as at that date were as follows:—

Current Assets		
Advance to Contractor	Rs.	1,932
Current Account with Mg. Agents	Rs.	7,798
Balance with Bank	Rs.	139
	Rs.	9,869

	Rs.	22,994
Less Current Liabilities and Provisions		
Sundry Creditors	Rs.	1,665
Net Assets on 31st March, 1956	Rs.	21,329

Net assets of Rs. 21,329/- shown above are represented by:—

Share Capital of 100,756 Ordinary Shares of Rs. 10/- each, 5/8/- per share called up ...	Rs.	50,378
Calls received in Advance ...	Rs.	4,750
	Rs.	55,128
Less Debit Balance in Profit & Loss a/c. ...	Rs.	33,799
	Rs.	21,329

G. BASU & COMPANY
Auditors.

Inspection

Copies of Memorandum and Articles of the Company, the consent order of the Central Government, the Auditors Report and Certificate and the Contract and correspondence referred to above and copies of the balance sheets and Profit & Loss Accounts on which the Auditors' Report is based may be inspected at the Registered Office of the Company on any working day during business hours until the subscription list is closed.

Dated the 14th September, 1956.

Signed by the following Directors:—

Mr. M. L. Khaitan
Mr. Ramniwas Ramnarain Ruia
Mr. Muraji Vaidya
Sir Dhiren Mitra, Kt.
Sir Usha Nath Sen
Rai Bahadur M. S. Oberoi
Mr. T. R. Oberoi

Dated the 14th September, 1956.

GATEWAY GOSSIP

(Continued from page 561)

Institutes of the Kharagpur type are meant to provide training facilities in Specialised subjects and for students aspiring to have technological training of a high order. For the main body of engineers and technologists, we have, of course, to depend on the existing engineering and technical training colleges offering degree courses. The Engineering Personnel Committee's recommendation is for the establishment of 18 new engineering colleges with a total intake of 1,765 students a year.

As for the vast array of junior technicians we shall require—the draughtsman, the junior supervisor, the chargehand—we shall continue to have to depend on what are called "schools", some offering diplomas, some mere certificates.

How far, against the background of our growing needs, does all this go, and what, assuming that the numbers turned out from these centres are not sufficient, is the shortfall? It is difficult to be precise about the second question, but the answer to the first must regretfully be—not very far.

It has to be remembered that a large number of graduates, after they have a few years' practical training, will have to be induced to become teachers, the shortage in which branch is even more acute than in industry. This means that the industries which are going to grow up cannot reckon their needs on the figures of pass-outs from the different centres for some considerable time. In any case, the number of engineering students obtaining degrees from the different universities annually hardly reach the four figure mark now. The following figures give the number of similar students in some of the Western countries in 1951:

Great Britain	...	2,800
West Germany	...	4,450
France	...	2,988
Italy	...	2,200
USA	...	22,500
USSR	...	60,000

It is true that such comparison of figures can be misleading. But at least it gives a rough idea of the leeway we will have to make up. It is also perhaps correct to say that, with our present resources, we can hardly take in more students without seriously jeopardising standards. Obviously, any lowering of standards must be guarded against. It is not, however, so much the present outturn of trained technicians as the prospect in the future which should be our chief concern now.

To assure that prospect, many things will have to be done, many educational reforms effected. An immediate necessity is to see that opportunities of training are made easily available to persons who show aptitude or talent, wherever they are. Unfortunately, the Engineering Personnel Committee's particular recommendation to have the new engineering colleges clustered round the industrial regions (8 in the east, 5 in the west, 4 in the north and 1 in the south) does not appear to take heed of the necessity. There is no reason, so far as is known, to assume that people from particular regions show better aptitudes for higher engineering studies. If that is so, it would be regrettable if potential talent went waste on account of a lack of even distribution in the training centres in the country.

More than, however, the increase in the number of training centres and a better distribution in their location, the prime necessity is to bring about a change in outlook. We must somehow remove the general lack of appreciation of the need for creating that background of scientific attitudes, of which Mr Nehru has spoken so often.

★

WORLD OF INSURANCE

(Continued from page 557)

Government wish to give a statutory character to these recommendations and, in that process, they are consulting insurance interests. The Executive Committee, at its meeting in Bombay, however, could not formulate views; and, it is understood it has taken time to study the full implications and consequences of Government's proposals.

General Insurance in India is having a bad and strenuous time. Its scope in the private sector has been largely limited by active trading in general insurance which the Government have commenced through the three companies, ownership of which has vested in the Government of India from nationalisation of life companies. It is also understood that Government and semi-government insurances shared by all Indian companies, through the machinery of Indian Insurance Companies' Association Pool, will henceforward be the exclusive preserve of the three State-owned companies. That will foster very unequal competition in the country. The vast machinery of the Government of India, with its expressed bias for State trading in many departments of economic life, and the many projects in which the Government are actively interested, leaves attenuated scope to private industries to flourish. That, again, means for general insurers in the private sector a limited field. This alone, in the context of expense regulations, constitutes for insurers a ceaseless worry. Further statutory enactments in the shape proposed by Government, though well-intentioned, will cause insurers in the country considerable embarrassment. Freedom in trading will be limited in such a manner that the companies will long to have a breath of fresh air.

All the measures are, however, intended to improve the tone so that general insurance can remain in the private sector. If, even with the proposed remedial measures, general insurance is given to exploring devious means with a view to defeating the statutory regulations, Government will hardly have any recourse other than taking the trade on themselves. Their commitment to examination of nationalisation of general insurance on the issue of malpractices remains. The proposed measures are thus intended to give the companies one more chance.

★

WORLD OVERSEAS

(Continued from page 558)

June this year shows that Western Germany remains the country's leading trade partner and supplier, while Great Britain retains her position as the foremost export market for Swedish goods. Trade with these two countries accounts for nearly one-third of Sweden's aggregate exports and imports.

The import surplus in the first half of the current year amounted to Kr 957,000,000 ($185,800,000) as compared with Kr 985,000,000 in the same period of 1955. In trade with the sterling countries the export surplus of Kr 67,000,000 in January—June 1955 decreased to Kr 13,000,000, while the deficit vis-a-vis other EPU countries declined from Kr 582,000,000 to Kr 509,000,000.

In trade with the dollar area the deficit rose from Kr 415,000,000 to Kr 463,000,000, a fact largely attributable to increased oil imports from Venezuela, while the deficit *vis-a-vis the United States declined* from Kr 333,000,000 to Kr 321,000,000. Trade with non-dollar South American countries, which was of about the same scope as in 1955, resulted in a deficit of Kr 13,000,000 as against Kr 32,000,000 last year. The deficit vis--a-vis East European countries rose from Kr 52,000,000 to Kr 83,000,000.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD.

Notice is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday the 15th day of October, 1956, at 12-10 p.m. to consider, and if thought fit, to pass the following Resolutions, and Resolution No. 1 will be proposed as a Special Resolution:—

Resolution No. 1 (As a Special Resolution).

That the Articles of Association of the Company be altered in manner following:—

(1) Articles 53 and 54 shall be deleted and the following New Article 53 substituted therefor:

"In addition to any other meetings, general meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Board of Directors. Such general meetings shall be styled "Annual General Meetings" and shall be specified as such in the Notices convening these meetings. All other meetings of the Company shall be styled Extraordinary General Meetings".

(2) Article 63 shall be deleted and the following New Article 63 substituted therefor:

"The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Board of Directors and of the Auditors, to appoint Directors in place of those retiring by rotation, to appoint Auditors and determine the manner in which they shall be remunerated, and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business".

(3) Articles 126, 127 and 128 shall be deleted and the following New Article 126 substituted therefor:

"At every Annual General Meeting the Board of Directors shall lay before the Company a Profit and Loss Account made up to the 31st December in the preceding year and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company, but save as aforesaid, the Board of Directors shall not be bound to disclose greater details of the result or extent of the trading and transactions of the Company than they may deem expedient."

(4) Article 129 shall be deleted and the following New Article 129 substituted therefor:

"Once at least in every year the Accounts of the Company shall be examined and the correctness of the Balance Sheet and Profit and Loss Account ascertained by one or more Auditor or Auditors."

(5) Article 130 shall be deleted and the following New Article 130 substituted therefor:

"The Company at each Annual General Meeting shall appoint an Auditor or Auditors to hold office until the next Annual General Meeting and their appointment, remuneration, rights and duties shall be regulated by Sections 224 to 227 of the Companies Act, 1956."

Resolution No. 2 (As an Ordinary Resolution)

"That pursuant to and for the purposes of compliance with the provisions contained in Section 293(1)(d) of the Companies Act, 1956, this meeting hereby consents, such consent to be effective as on and from the 1st April, 1956, to the Board of Directors of the Company borrowing monies for the purposes of the Company notwithstanding that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose."

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
D. MANSON,
Secretary.
Managing Agents.

Calcutta, 17th September, 1956.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

BRIDGE & ROOF CO. (INDIA) LIMITED.

Notice is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday the 15th day of October, 1956, at 12 noon, to consider, and if thought fit, to pass the following Resolutions, and Resolution No. 1 will be proposed as a Special Resolution:—

Resolution No. 1 (As a Special Resolution).

That the Articles of Association of the Company be altered in manner following:—

(1) Articles 53 and 54 shall be deleted and the following New Article 53 substituted therefor:

"In addition to any other meetings, general meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Board of Directors. Such general meetings shall be styled "Annual General Meetings" and shall be specified as such in the Notices convening these meetings. All other meetings of the Company shall be styled Extraordinary General Meetings".

(2) Article 63 shall be deleted and the following New Article 63 substituted therefor:

"The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Board of Directors and of the Auditors, to appoint Directors in place of those retiring by rotation, to appoint Auditors and determine the manner in which they shall be remunerated, and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business".

(3) Articles 126, 127 and 128 shall be deleted and the following New Article 126 substituted therefor:

(4) Article 129 shall be deleted and the following New Article 129 substituted therefor:

"Once at least in every year the Accounts of the Company shall be examined and the correctness of the Balance Sheet and Profit and Loss Account ascertained by one or more Auditor or Auditors."

(5) Article 130 shall be deleted and the following New Article 130 substituted therefor:

"The Company at each Annual General Meeting shall appoint an Auditor or Auditors to hold office until the next Annual General Meeting and their appointment, remuneration, rights and duties shall be regulated by Sections 224 to 227 of the Companies Act, 1956."

Resolution No. 2 (As an Ordinary Resolution)

"That pursuant to and for the purposes of compliance with the provisions contained in Section 293(1)(d) of the Companies Act, 1956, this meeting hereby consents, such consent to be effective as on and from the 1st April, 1956, to the Board of Directors of the Company borrowing monies for the purposes of the Company notwithstanding that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose."

By Order of the Board.
BALMER LAWRIE & CO. LTD.,
D. MANSON,
Secretary,
Managing Agents.

Calcutta, 17th September, 1956.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

THE HATTIKHIRA TEA COMPANY, LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday, the 9th day of October, 1956 at 3-15 p.m., for the following purposes:—

1. To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.
2. To declare a dividend.
3. To elect Directors in place of the retiring Directors.
4. To elect Auditors for the ensuing year, and to fix their remuneration.

And as special business—

5. To consider and if thought fit to pass the following resolution, namely—

"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected".

The Share Transfer Book of the Company will be closed from 1st October, 1956 to 9th October, 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.
A. H. GALLOWAY
Managing Director,
Managing Agents.

Calcutta, 14th September, 1956.

Note: A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

EDITORIAL NOTES

(Continued from page 551)

it in a proper spirit. In this case, they can do so by publishing details of the various posts now filled by foreign experts and of the attempts made to replace them by Indians. Fragmentary pieces of information are available from time to time. Together, these will present a picture with reference to which a proper judgment could be made.

A few days ago Mr P. S. Kumaraswami Raja pointed out that the number of engineers in the DVC are too many for the work on hand. A DVC spokesman promptly challenged the statement. The functioning of public industrial corporations will not be helped by minute public scrutiny of every detail. All the same, it is necessary to let the public know enough facts to sustain the impression of economic working and careful avoidance of waste in men and money.

✱

Settlement Without War

In the first round of the tussle over the Suez crisis, Col. Nasser has emerged triumphant, acquiring a reputation for sound diplomatic tactics. Those who predicted a starvation of traffic in the Canal, consequent on the withdrawal of British and French pilots, have eaten the humble pie. With the help of Egyptian and Soviet pilots, traffic has been maintained, though at an appreciably lower level. Likewise, critics who expected that Nasser would victimise the employees of the international company are also disappointed. On the whole, the Egyptian Premier has been playing a deft game.

This compactness and grit are inevitably missing on the opposite side. Whatever be the feeling of the British Prime Minister or the Conservative Party on the methods to be pursued against Egypt, the Labour Party has made it clear that it will not approve any recourse to force except with UN sanction. Sir Anthony Eden was forced to accommodate this view and the world will heave a sigh of relief that war under any pretext or any eventuality is now virtually out of the picture.

The Canal Users' Conference composed of the same membership as the previous Conference minus the three dissentients, can therefore approach its task under a more limited setting. Whatever be its proposals, if they do not concede the fundamentals of the Egyptian stand, their fate is easily predictable. In fact, Mr Dulles' reported insistence that the assignment of pilots to ships passing through the Canal and the management of traffic in general should not be left to the sole authority of Egypt seems to have already impaired unity in the Conference ranks. Most of the Continental countries participating in the Conference are known to look askance at these proposals.

It is certain that the Conference will devote equal attention to the possibility of applying economic pressure on Egypt by diverting traffic off the Canal and the international consequences thereof. Britain's economic interests in countries who have made no secret of their sympathy with the Egyptian cause argue for extremely cautious steps. With the American elections closing in, Mr Dulles also may feel compelled to discover or support a formula which will avoid drastic steps from either side. In these circumstances, Mr Krishna Menon's proposal may evoke new interest.

✱

SOUTH INDIAN MARKETS

(Continued from page 567)

this is the second centre in the country where forward trading in both groundnut and groundnut oil will be conducted under the Forward Contracts (Regulation) Act.

✱

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were as usual and clearances were good. Prices advanced by about one anna per pound. Inquiries from the UK improved. 10-12 lbs and 8-8½ lbs being more in demand. Buyers were, however, resisting the higher prices which were being asked by Madras holders.

Arrivals of Buff hides were fair with good clearances, and prices advanced by about 3 to 6 ples. In Cow Calf, arrivals continued to be of a poor selection and some lots were cleared at lower prices. Arrivals of Buff Calf were fair and only a small quantity was cleared from the market without any change in prices.

In Tanned Skins section, market quality Goat skins were quoted As 2 easier, while market quality Sheep skins remained unchanged.

In the export section, trading was on a limited scale and there was a moderate clearance at unchanged prices to As 2 per pound lower.

OLYMPUS

(Continued from page 564)

impossible by fear of what he may have to say on how it was done. There is, of course, the more serious difficulty of sanction from the Finance Ministry every time something is to be done. Recent letters in the correspondence columns of the daily press have revealed some glaring instances of how technical men are thwarted by financial officials who simply don't have the technical knowledge to evaluate the need for the expense. This is the most frustrating kind of check. It is the desire to remove such obstacles to achievements that has made Mr Appleby suggest, and Mr Nehru to agree to, extensive delegation of power to the men on the spot.

NEW CENTRAL JUTE MILLS COMPANY, LIMITED.

OCTAVIUS STEEL & CO. LTD.
Managing Agents.

Calcutta, 15th September, 1956.

Stock Exchanges

RESTRICTED ACTIVITY: SELECTIVE SUPPORT

Watch-Dog Writes:

FOR the third week in succession, stock markets are ruling quiet and price movements have been irregular. The general feeling is still shaky and operators are inclined to lighten commitments in view of the observations made, from time to time, by the Finance Minister and the international political situation, which is still in a fluid state. The only redeeming feature of the week's trading is the renewed support lent to selected scrips on the feeling that the overall conditions continue to be promising with better opportunity for various domestic industries.

Activity on the Calcutta Stock Exchange was mostly confined to selected Engineering and Miscellaneous section, which provided a few bright spots, thanks to interested buying.

In the absence of any incentive, dealings were thin and slow on the Bombay Stock Exchange where selected scrips encountered speculative support.

On the Madras Stock Exchange, selective buying was noticed in Textiles and Plantings.

The London Stock Exchange gave a satisfactory performance although business was small and selective.

Prices on Wall Street developed a firmer tendency, being aided by some good corporate news to offset the effects of the continued uncertainty about the Suez Canal issue.

Calcutta

Calcutta, Friday Evening.

CONDITIONS on the local Stock Exchange, during the week under review, remained generally steady, although activity was mainly confined to the Engineering and Miscellaneous sections. Apart from the proximity of the long spell of Pujah holidays, operators were generally inclined to lighten their commitments, reflecting nervousness over the increase in excise duty, fears of an indirect credit squeeze and reports of special measures evolved by the Government to check inflationary tendencies. The reports of the strike in the Raneegunge coalfields and the grave international political situation were also contributory factors. It was, however, satisfactory to note that operators showed buying interest in selected scrips in view of the promising outlook for various domestic industries. The undertone, at the close, remained steady.

Conditions in the Giltedged market continued listless with more sellers than buyers in evidence. Except for 3 per cent 1986 Conversion Loan, which met with some support upto Rs 75-8 from Rs 75, other Loans succumbed to the general malaise 3 per cent 1955-1856 changed hands at Rs 94-9.

Bank shares ruled steadier with United Commercial changing hands at Rs 56-8 to 57; Hind at Rs 38-14 to Rs 39 and Punjab National at Rs 67.

Judging from the encouraging reports from the jute goods market, activity in the Jute section was limited and only a few selected scrips came in for some buying at improved levels. This was mainly due to the reluctance on the part of operators to extend commitments following the further release of disappointing results by some more important companies. Howrah were at one time taken upto Rs 24-12 x.d. and National upto Rs 26, to ease off at the close to Rs 24-9 and Rs 26-11 respectively on profit-taking. Nuddea, after touching a low of Rs 39 following the passing over of the dividend, finished better at Rs 40. Among higher-priced scrips, India changed hands at Rs 144-8 to Rs 146 and Anglo-India at Rs 191 to Rs 193. Union turned x-dividend at Rs 162 with Lawrence moving between Rs 112 and Rs 115.

The news of the strike in the Raneegunge coalfields and the fear that the working results would be adversely affected by the Tribunal's Award during the current half-year, did not affect sentiment in the Coal section where prices of selected scrips forged ahead under the speculative buying of Burrakur. It was particularly encouraging to note that Raneegunge were enquired upto Rs 13-5 from Rs 12-13. Renewed buying from interested quarters pushed up Burrakur at one time to Rs 16-1 from Rs 15-8, to finish the week at Rs 16 East Indian were marked upto Rs 33-4 from Rs 32-5, while Equitable were a steady feature at Rs 30-6. Borrea changed hands at Rs 24-9 to Rs 24-12 with Bengal losing seven points at Rs 323.

Textile scrips, after showing some weakness early in the week, steadied up towards the close following the Finance Minister's statement about the expansion of cloth output by mills. Kesoram recovered to Rs 18-10 from a low of Rs 17-9 and Cawnpore to Rs 9-2 from Rs 8-14. Dunbar were maintained at Rs 270 with New Victoria moving narrowly between Rs 2-9 and Rs 2-11.

Tea shares continued to be a neglected counter as operators were generally disinclined to make fresh commitments following the obscure outlook for the industry, especially for Common and Low Medium teas produced by most of the companies. Also, there was a feeling that even better quality teas might not fetch the same premium as in the previous season. Fears were also expressed with regard to exports in the case of any deterioration in the Suez situation. Amongst the few transactions recorded were, Betjan changing hands at Rs 54-14 to Rs 56-6; Brooke Bond at Rs 20-2 to Rs 20-9; Dhelakhat at Rs 20-10 to Rs 20-13; Hansqua at Rs 23-8 to Rs 24; Patrakola at Rs 198-8 to Rs 203 and Banarhat at Rs 310 to Rs 311-8.

Thanks to better advices from the commodity market, Sugar shares turned steadier with Balrampore having support upto Rs 7-10; Belsund upto Rs 12-4; Cawnpore upto Rs 20-4 from Rs 19-15 and SKG upto Rs 12-15 from Rs 12-10. Ramnugger Cane, after touching a high of Rs 27-14 from Rs 27-11, receded at the close to Rs 27-8 on profit-taking.

Except for Indian Irons and TEXMACO which were subjected to alternate bouts of buying and selling, other Engineering shares ruled generally firm. The three bright spots were Jessop, Richardson and I. S. Wagon which touched new higher levels for the week. Renewed buying from interested quarters pushed up Jessop to Rs 37-12 from Rs 35-14 and Richardson upto Rs 27-11 from Rs 25-9. I. S. Wagon scored another 22 points at Rs 225 on expectation of another bonus issue. Indian Irons opened at Rs 35-11 and, after touching a high of Rs 35-13, receded to Rs 35-3 due to settlement considerations. Toward the close, however, the rate firmed up to Rs 35-15 on rumours of increase in retention price. After hours on Friday, the rate was, at one time, marked up to Rs 36-5-6.

The Miscellaneous section provided many bright features. Notable amongst these were National Carbon which met with keen demand upto Rs 30 from Rs 29-4 from investors. Alkali Chemicals firmed up further to Rs 23-8 from Rs 22-14, while Indian Copper hardened to Rs 7-1 from Rs 6-14 on stronger advices from the metal markets. India Steamship nominated very firm at Rs 10-9, pending the announcement of the final dividend. Indian Aluminium continued to receive good support upto Rs 20-8 from Rs 19-13 following the announcement of a favourable right issue.

Among Paper shares, India Pulp had buyers at Rs 25-2 to Rs 25-8, while Orient moved irregularly between Rs 39-8 and Rs 39-15 to finish at Rs 39-15. Titaghur met with some profit-taking, to ease off to Rs 39-14 from Rs 40-4.

Elsewhere, BBP were a narrow market around Rs 3-14. BIC were pushed upto Rs 11-9 from Rs 10-10 and Osler upto Rs 12-1 from Rs 10-12, thanks to interested buying. Martin-Burn changed hands at Rs 24-12 to Rs 25; Metal Box at Rs 29-2 to Rs 29-8; Sone Valley at Rs 3-15 to Rs 3-2 and Dunlop Rubber at Rs 29-8 to Rs 29-12.

✱

Bombay

Bombay, September 20.

THE Bombay Stock Exchange, after showing some weakness early in the week, recovered most of the lost ground toward the close. But, business was restricted and price movements were generally irregular due to approach of settlement. The improvement in sentiment that was noticed toward the closing stages of the week, was mainly due to the Finance Minister's statement about expansion of cloth output by mills. Even so, buying was discriminatory without any tendency to pay fancy prices.

TEXTILES:—Shares in this section were initially subjected to heavy selling pressure and even the reports of the decision by the Bombay and Ahmedabad Millowners to bear the additional excise duties themselves without passing them on to the consumer, did not serve to improve matters. Thanks to the Minister's statement with regard to the expansion of cloth output, prices staged a rally on professional support toward

(Continued on page 589)

THE PATHEMARA TEA CO., LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday, the 23rd day of October, 1956, at 2.50 p.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.

(2) To elect a Director in place of the retiring Director.

(3) To elect Auditors for the ensuing year, and to fix their remuneration.

And as special business:—

(4) To consider and if thought fit to pass the following resolution, namely:—

"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected".

The Share Transfer Book of the Company will be closed from 18th October, 1956 to 23rd October, 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 21st September, 1956.

Note: A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

With reference to the resolution relating to inspection of Books, Registers and other documents referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

(Continued from page 550)

12 million tons over the period of the Second Plan. Prospecting in Korba is to be intensified. Soviet experts are to visit this country for helping in the development of this coalfield. Orders have been placed in Japan for a coal washing plant to be set up in the Bokaro area. Two more coal washeries are under consideration. The green signal has been accorded to the lignite project at Neiveli. The multi-purpose targets in this regard, at a cost of Rs 68 crores, call for mining of lignite commencing early in 1960, production of fertilizers around six months later, a simultaneous generation of power, and production of briquettes to follow thereafter. Three new fertilizer factories, including the unit to be attached to the lignite project, are to be set up within the next five years. One of them will, in addition, and as a by-product, produce heavy water an important raw material for the use of the Atomic Energy Department. Expansion in Sindri is proceeding satisfactorily. The output of lathes at the Hindusthan Machine Tools Company will go up sharply, with the decision taken to work it on three-shift basis. The detailed report in respect of the heavy electrical factory is expected toward the end of this year. The capacity of Hindushan Shipyard is being increased. And Mr Reddy is supremely confident that all these plans would be fulfilled.

On another important aspect of Second Plan resources, the Minister for Production has indicated that Government are alive to the prospective lack of and urgent need for increasing the administrative strength. The Ministry of Production has suggested the institution of a cadre of six categories for the administrative personnel of State enterprises. Initial recruitment to the industrial management cadre would be around 200.

If the Second Plan is to be an act of faith, Mr K. C. Reddy has, for his part, reiterated his confidence in the ability of his Ministry to deliver the goods.

FOR THE INVESTOR

(Continued from page 547)

one; Tengpani one for one; Lackatoorah one for two; Gairkhata one for two and Jutlibari one for five. These companies will not, however, pay dividends, if any, for the year 1955 on the proposed increased capital.

The Dunlop Rubber Co. (India) Ltd., has announced important extensions to their manufacturing facilities in India. The existing factory at Sahaganj near Calcutta is being expanded to give increased output of truck and bus tyres, cycle tyres, cycle rims, general rubber goods and Dunlopillo. An entirely new plant is to be established in South India, probably near Madras where sites are at present being surveyed. It is planned to manufacture truck, bus and cycle tyres there, principally for the needs of the South Indian market. The factory is expected to be in operation in about 2 years' time. Shares are presently quoted around Rs 29½.

Shipping shares are a firm feature. In Calcutta, India Steamships have now buyers up to Rs 10-6 on expection of a final dividend of As 8 per share. In Bombay, Great Easterns have rallied smartly from Rs 19-14 to Rs 20-4 on the reports of a right issue at par. Scindia Steams have continued to have good support up to Rs 19-2-6 on optimism over the working results for the year ended 30.6.1956.

Metal Corporation of India has decided to convert the Deferred shares of Re 1 each into Ordinary shares of Rs 10 each in the proportion of one fully paid-up Ordinary for every five fully paid-up Deferred shares. The Deferred shareholders have the right to half of the surplus profits which remain after paying the Preference dividend and the dividend of 6 per cent on the Ordinary shares. The conversion proposal is made with a view to facilitate development programme.

In Bombay, Larsen and Toubro Limited has decided to raise the capital by Rs 5 lakhs by offering one share at par for every eight shares held, to the Ordinary shareholders. With the present issue, the total paid-up capital will be Rs 60 lakhs. As the company has been doing exceedingly well, the dividend is expected to be maintained on the increased capital. Shares are presently quoted around Rs 19-4.

The Indian Rayon Corporation, it is learnt, will shortly enter the capital market for finance to erect a rayon plant at Verawal, Saurashtra. The issue will be for Rs 2.5 crores. Of this, the promoters will take up 50 per cent and the balance will be offered to the public.

In Madras, Vanguard Fire and General Insurance Company has decided to stop the carrying on of the business of insurers and to carry on, hereafter, the business of moneylending as a loan company. In this connection a meeting is convened on the 15th October, 1956.

India Sugars and Refineries have made a call of Rs 2-8 per share on 3,20,000 partly-paid shares, payable on or before the 15th October, 1956.

The Directors of the Indian Aluminium Company have decided upon a rights issue of new Ordinary Shares in the Company. 4,11,000 new Ordinary Shares of Rs 10 each are to be issued at a premium of Rs 2-8, i.e. at Rs 12-8 per share to the holders of existing Ordinary Shares. In order to permit increased Indian participation in the new issue, the Canadian shareholder, Aluminium Limited, which holds approximately 87 per cent of the existing Ordinary Shares, has renounced its right to subscribe for shares in excess of 50 per cent of the new issue, and has agreed to limit its subscription to 2,05,500 shares only. The remaining 2,05,500 shares are being offered to the other Ordinary shareholders in the proportion of one new share for one existing share held.

£R$

Investment Briefs:

Oxy-Chloride Flooring Products have raised the dividend from Rs 4-8 to Rs 7-8 per share for the year ended 31.3.1956.

General Papers, Madras, have maintained the dividend at 6¼ per cent for the year ended 31.3.1956.

Panchura Estates have reduced the dividend from 40 to 30 per cent for the year ended 30.6.1956.

Kurchermala Plantations have reduced the dividend from 7½ to 6 per cent for the year ended 31.3.1956.

✱

NORTH INDIAN MARKETS

(Continued from page 565)

arrangements for crushing have started in Uttar Pradesh, Bihar and the Deccan. The latest reports from all over West Uttar Pradesh show that the standing cane crops have been adversely affected by the absence of rains.

✱

Gur

Although the market for Gur continued to rule quiet, prices remained unchanged at last levels. Stocks of old quality declined to 20,000 maunds. Demand from the main consuming areas of Gujerat was slack due to good stock position in the market of the South. Small quantity of New gur arrived in the Hapur market which was lifted upto Rs 12-0 per maund.

Gur production has already commenced in the South and arrivals are daily increasing.

✱

Shellac

Steadier conditions were noticed in the Calcutta Shellac market, Pure TN shellac quoting Rs 125; Pure Buttonlac Rs 133 and Bysakhy Seedlac at Rs 107-8 per maund.

Shipments, during Semptember until the 13th, were 11,947 packages, comprising shellacc 8,109 packages; Seedlac 2,780 packages; Buttlonlac 209 packages and other varieties. 849 packages.

BALANCE-SHEET REVIEWS

(Continued from page 548)

Rameshwara Jute

The Rameshwara Jute Mills have presented their reports and accounts for the year ended 31-3-1956. Sales for the year are shown higher at Rs 89.67 lakhs as against Rs 44.60 lakhs, while the net profit amounts to Rs 2,97,770 against Rs 98,057 in the previous year. Despite the increased profit, the directors have not been able to recommend any dividend due to adjustment of the debit balance. The debit balance of Rs 12-16 lakhs brought forward from the previous year is now reduced to 9.18 lakhs, which is now carried forward to the next year.

£R$

Disappointing Tea Results

Nine more Tea Companies have presented their reports and accounts for 1955. In common with other tea companies, these have reduced their dividends substantially from the 1954 level.

The Hattikhira Tea Company has reported a crop of 20,455 maunds against 21,999 maunds, while the average price realised is Rs 1-8-1 against Rs 2-3-0 per pound. The net profit, before Taxation and Depreciation, amounts to only Rs 2,78,059 as against as much as Rs 15,47,796 in the previous year. The Depreciation amount has been reduced from Rs 1.25 lakhs to Rs 1.11 lakhs and Taxation from Rs 5.00 lakhs to Rs 85,000. No provisions have been made either for General Reserve or other Reserves. The dividend is reduced from 40 to 7½ per cent.

Similarly, the Teesta Valley Tea Company has reported a crop of 4,631 maunds against 5,512 maunds, while the average price realised is lower at Rs 2-10-0 against Rs 3-12-0 per pound. The net profit is reduced to Rs 1,47,846 from Rs 5,81,752. The directors have, after allocating Rs 35,225 (Rs 41,601) to Depreciation Rs 38,755 (Rs 1.78 lakhs) to Taxation; Rs 13,534 (nil) to Replacement Reserve and Rs 10,000 (Rs 1.00 lakh) to Renewals & Additions Reserve, reduced the dividend from 40 to 15 per cent for the year.

The Malhati Tea Company has shown a crop of 13,581 maunds against only 12,473 maunds in the previous year; but the average export sale price realised is lower at Rs 2-0-1 against Rs 3-4-7 per pound and internal average price realised at Rs 1-14-10 against Rs 2-5-7. Net profit, before Taxation and Depreciation, amounts to only Rs 5,51,151 against as much as Rs 13,92,489. Apart from maintaining the Capital Reserve at Rs 50,000, the Depreciation amount has been reduced to Rs 81,898 from Rs 82,765; Taxation to Rs 1.58 lakhs from Rs 4.35 lakhs and General Reserve to Rs 1.00 lakh from Rs 1.50 lakhs. The dividend is halved to Rs 2 per share.

The Eastern Cachar Tea Company has reported a loss, after providing for Depreciation of Rs 10,070 (Rs 8,830), of Rs 31,808 as against a net profit of Rs 2,37,032 in the previous year. The crop outturn is nearly maintained at 4,893 maunds, while the average price realised is lower at Rs 1-12-6 against Rs 2-6-6 per pound. The debit balance carried forward to next year is Rs 1.09 lakhs.

Of the remaining five companies, Belgachi is the only company to announce a cent per cent dividend as against 40 per cent paid in 1954. Nagaisuree has reduced the dividend from 40 to 7½ per cent; Rungleee Rungliot from 50 to 20 per cent and Rungamattee from 35 to 20 per cent. Poobong has passed over the dividend as against 15 per cent paid in the previous year. The crop outturn average price realised and the net profits earned are given below in a tabular form:—

£R$

Bathgate & Company

Thanks to the increased quota of import licences for raw materials like essential oils, aromatic chemicals, etc., the Bathgate & Company Limited has reported an increase in turnover from Rs 15.91 lakhs to Rs 17.15 lakhs for the year ended 31st December, 1955.

After providing for all expenses, depreciation and taxes, the accounts show a profit of Rs 2.19 lakhs. A sum of Rs 26,706 has been provided for Taxation for the year 1949; Rs 30,000 against Bad and Doubtful Debts and Rs 50,000 against extra assessment of Sales Tax for the years 1950, 1951 and 1952 not provided for. There is a credit balance of Rs 1.15 lakhs, which is yet to be adjusted against the debit balance of last year. That is, there is still a debit balance of Rs 20.65 lakhs to be carried forward to next year's accounts.

According to the directors' report, the management has received the High Court's confirmatory order in connection with the reconstruction of capital, and is arranging for applying to the Industrial Finance Corporation and the State Finance Corporation for adequate funds for expansion and improvement of company's business.

£R$

Hall & Anderson

This company has reported satisfactory progress in the working of the mills in Bombay during the year ended 31st March, 1956. There has been further additions and renovations in the plant and machinery and building, especially in the spinning, dyeing and bleaching departments to the extent of Rs 10.89 lakhs, which has resulted in an all-round improvement in the efficiency of the mills.

The accounts for the year show a profit of Rs 29.54 lakhs from which payment and provision of bonus for the preceding years 1953 and 1954 have absorbed Rs 4.53 lakhs, leaving a balance of Rs 25.00 lakhs. After adjusting this amount with the debit balance of Rs 51.12 lakhs brought forward from 1955, there is still a debit balance of Rs 26.12 lakhs to be carried forward to next year.

According to the directors' report, the Depreciation on fixed assets at Calcutta and Bombay cannot be provided due to previous losses. The company has become a subsidiary concern of Shree Niwas Cotton Mills Limited, Bombay, in the month of June, 1956.

✱

CLIVE STREET GOSSIP

(Continued from page 560)

but he could not for the life of him see what the hell was the matter with that wretched female, who gave him something every day, that she should show him the door today. If many people take American aid for granted, it is because it was there to be taken for granted.

✱

But when all is said and done, the fact remains that there is considerable hypocrisy in a measure that involves such double standards. While it is quite true that none with any knowledge of these matters underestimates the importance of the kind of help that America is rendering India, it is time that we were a little less reticent in expressing our recognition of it.

EAVESDROPPER.

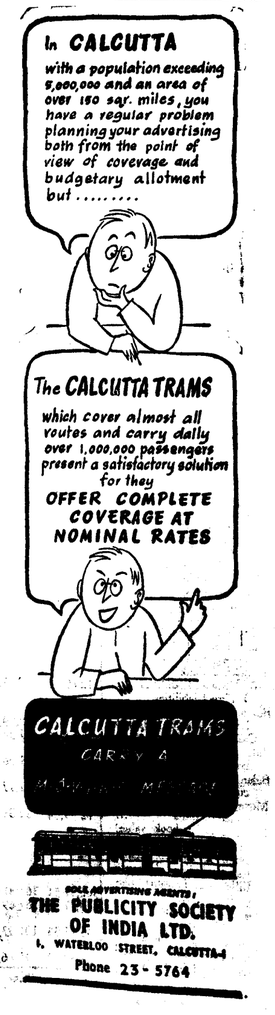
Steel: Although prices in this section slumped badly in the early stages of the week due to selling pressure, they staged a moderate recovery toward the close. Tata Ordinaries opened at Rs 196 and, after touching a high of Rs 197-4 and a low of Rs 195-0, finished at the last quoted level.

Miscellaneous: Fluctuations were wide in this section. Cement shares were, for the most part, ruled steady. ACC opened at Rs 203 and, after improving to Rs 204-8, finished at Rs 202-4. Digvijay changed hands at Rs 193-8 to Rs 200-12.

Sugar shares showed moderate gains over the week. Belapur were supported upto Rs 247-8, while Phalton improved to Rs 163 from the opening level of Rs 161.



Shipping shares were a firm feature. Scindia, after being marked upto Rs 19-6 from Rs 19-3-6, on expectation of encouraging working results for the year ended 30-6-1956, eased off at the close to Rs 19-2-6.

Great Eastern moved narrowly between Rs 20-0 and Rs 20-3.

In the Automobile group, Hindusthan were a shade cheaper at Rs 9-14 against Rs 10-1, while Premier continued to be in demand upto Rs 108-0 from Rs 107-0.

Of the Engineering shares, Premier Construction opened firm at Rs 218 and, after touching a low of Rs 216-8, finished better at Rs 217. Tata Locomotives firmed upto Rs 173 from a low of Rs 169-12.

Elsewhere, Tata Chemicals provided a bright spot on hopes of a maiden dividend, being quoted around Rs 20-4. National Rayon met with some influential support upto Rs 266-8 from Rs 264-0, to finish at Rs 265-12. Bombay Burmah fluctuated violently on alternate bouts of buying and selling between Rs 745 and Rs 743-12, to close finally at Rs 745-10. Walchandnagar Industries changed hands at Rs 270 and Rs 273-8; Shivrajpur at Rs 85-8 to Rs 87-8 and Tata Oil at Rs 55-8 to Rs 56-0. WIMCO were a steady feature at Rs 181-4.

ALEX. IZAT,
General Manager

AB. 2

Equipped with the confidence, resources and experience gained from 59 years of pioneering achievement, Godrej present for the first time a Typewriter made in India, at a very remarkably low price.

The all-Indian Typewriter embodies the latest advances in typewriter engineering to ensure ease of operation and efficient performance.

Of the 1,800 components only 4 items: the types, key tops, rubber platen and one spring are imported, costing a negligible Rs. 30. All other parts are manufactured from the very best materials available.

The Godrej Typewriter will, in due course, be available in Hindi also.

Standard Brief Size
Rs. 630
Service after Sales Guaranteed

Godrej the finest value in Typewriters

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

For the Investor

Not a Long Wait

Investment Gossip:

ATTENTION will necessarily be focussed, in the next few weeks, on the Indian Iron dividend. On Lyons Range, conjecture will be very much the order of the day. And fluctuations may, for that reason, follow alternate trends according as the then current rumour is of bullish or bearish import.

We will do well to remember that a dividend decision takes much more time and involves much greater rigmarole than in days bygone. Briefly, the procedure may be on the following lines.

Firstly, the accounts for 1955-56 would have to be made ready.

Secondly, the Directors must be satisfied that the profits are of a size to allow of such and such a rate of dividend, after making allocation for profits to be ploughed back.

Thirdly, the rate of dividend thus suggested would have to be intimated to Government.

Next, Government must consider whether the distribution suggested is, from all points of view, justified and justifiable.

Fifthly, authority's decision would be conveyed to the Company.

Thereafter, the directors would meet to recommend the dividend, all accounts being ready.

Finally, the market will know what the dividend is.

I do not propose, after the present occasion, to record in this column the trend of dividend rumours except to the extent that they may have influenced the tone and sentiment of stock exchange activity. But, for the last time in respect of the 1955-56 dividend, let me present the investor's case for a higher dividend.

All the constituents or beneficiaries connected with the Indian Iron and Steel Company Limited have had the good fortune of a steadily improving lot—all, that is, save one.

Government, labour or management; the consumer for whose sake and in whose behalf we have the system of retention prices; not to speak of steel "fabricators"—all have benefitted.

He whose name is missing from the list is the investor; his patience surely deserves to be rewarded. The management is aware of this, and in fact suggested an increased dividend for 1954-55—but Government said no.

Does authority honestly believe that the investor is none other than a big-time capitalist? On the other hand, are not Government aware that investors are largely derived from the middle class?

If the Government really have a solicitude for the common man —and I don't think it wrong to list the investor under this category—their decision on the Indian Iron dividend for 1955-56 cannot, and must not, be unfavourable.

The investor does not have a long wait.

£R$

Investment Notes:

Rumours are current that there may be a modest increase in steel retention prices for the TISCO to meet the company's claim for higher costs. These have given ground for assumption that similar treatment will be meted out of the Indian Iron & Steel Company. Meanwhile, the dividend in respect of the latter company is expected to be announced during the course of next week.

It is learnt that Rallis India Limited has obtained the sanction from the Government of India for the manufacture of Electric Tools. An agreement has been reached between this company and Wolf Electric Tools Limited, London. The preliminary work on this project is reported to have already commenced.

The Chairman of the three Thackersey group of mills—Hindoostan, Western India and Indian Manufacturing—have informed the shareholders that their demand for the issue of bonus shares will be favourably considered in the current year.

Tata Chemicals are ruling firm around Rs 20-4. It is evident that the company has earned substantially higher profits for the year ended 30-6-1956. Market circles are expecting a maidan dividend of As 8 to As 10 per share.

Premier Automobiles are quoting around Rs 105. It is understood that negotiations are under way for floating a Preference or Debenture issue to the tune of Rs 2 crores. An announcement, in this respect, is expected to be made shortly.

Group Study of Birla Scrips

Investment Special:

I HAVE been able to prepare, for this week, a Group Study on Birla scrips. The study is not all comprehensive; that is to say, it does not seek to analyse the balance-sheet position of all the companies in the group. I have attempted largely to restrict myself to the companies which are more active on the Stock Exchanges; and I have set about the task by dividing each analysis into two sections. The first of these concerns the general history and the manufacturing activities; the second presents a concise review of the company's finances.

There are, chiefly, eleven companies comprising what might be termed the active Birla group. These may be classified as under:

Engineering: Hindustan Motors and TEXMACO.

Sugar: Upper Ganges (the largest of the three managed by Cotton Agents).

Paper: Orient Paper Mills.

Jute: Birla Jute Manufacturing.

Tea: The Jay Shree Tea Gardens.

Cotton Textiles (Including Rayons): Century Spinning, Jay-Shree Textiles, Sutlej Cotton, Kesoram Cotton and Gwalior Rayon.

The managing agents of all these companies, with the exception of Upper Ganges, are Birla Brothers Private Limited. The Managing Agents of Upper Ganges are, paradoxically, The Cotton Agents Limited. I propose to study the companies in the order in which they have earlier been classified.

£R$

Hindustan Motors

First, then, Hindustan Motors. With the new issue of Rs 5 crores worth of convertible redeemable preference shares, Hindustan Motors is, judged by the paid up capital, the third largest of the public limited companies in the country. A dividend has yet to be paid; the balance-sheet as at the end of March 1955 discloses but a small carry forward. But the prospects before Hindustan Motors are undoubted. Indeed, it is to be suggested that, indirectly, it is in the national interest for the Motor industry to achieve large dimensions in the country. For, the American experience has been that the nation's prosperity has had a direct relationship with the fortunes of the motor industry. Fortunately, for a number of reasons that are set out below, it would appear that there is little need to be diffident about the future in store for Hindustan Motors.

According to the Directors' Report for 1954-55, the sales of Hindustan Landmaster cars have shown a steady improvement. It is known that the trend of higher sales has been accentuated and accelerated since then. The directors have expressed the hope that, with the implementation of the Second Five-Year Plan, sales will further improve.

Evidently, the directors have not been idle since then. They recently informed their shareholders that, in view of the expanding activities of the company and to meet the increased demand for vehicles anticipated in the next Five-Year Plan as also to ensure manufacture of a larger number of parts and components of vehicles of various types and to make the factory increasingly self-sufficient as well as to diversify manufacturing activities of the company, they have decided to raise the capital of the company by issue of five lakh cumulative convertible redeemable preference shares of Rs 100 each forming part of the issued capital of the Company with right to convert them into ordinary shares.

The preference shares were issued for cash at par. The holders of the preference shares are given the option to convert the preference shares into ordinary shares after 1st July 1961 and not later than 30th June 1966 if they remain unredeemed at the time. The preference shares are redeemable at par at any time after June 1963 at the option of the company by giving three calendar months' notice.

Let us now examine the prospects of the company in coming years. Hindustan Motors is the premier automobile manufacturing concern in the country; and, according to the latest reports available, all the Aluminium, Meehanite and malleable castings required for the Hindustan Landmaster cars are being made locally over and above the Grey Iron castings and Forgings previously made. Tooling for body panels is well in progress and it is hoped that the manufacture of Body and its components will be taken in hand shortly. It is expected that the company will be able to manufacture a larger number of components of Hindustan Landmaster cars by 1957.

I understand that, over and above the manufacture of automo-

HIGHLIGHTS

The case of the missing millions; but Erle Stanley Gardner did not write the detective story.

What is involved is nearly Rs 40 crores. Not a small sum, by any means.

The Rs 40 crores belong to the State Governments, and represent two-thirds or so of the proceeds from this year's State Loans.

Little trace can be found. The redeeming feature is that, as in all detective stories, Strategic Clues lurk in Shadowy Corners.

The clues exist in returns of the Reserve Bank, of the State Bank of India and of Scheduled Banks.

The clues are discovered for the reader in the World of Finance section. And, on the basis of the circumstantial evidence, a solution is offered as to the missing Rs 40 crores.

biles. Hindustan Motors have secured licence for the fabrication of steel to the tune of 75,000 tons per year. Work in this connection is expected to commence shortly. The building of machinery for the heavy chemical and cement industries is mentioned in this connection. I also learn that Hindustan Motors will be having a sizeable share in the fabrication of plant and machinery at the Iron and Steel works to be put up by Government at Durgapur.

Considering the important tasks assigned to the company in the industrial development of the nation by Government, there is every reason to expect Authority to announce a favourable decision on prices of cars manufactured by the company, which has already approached the Government in this regard.

The company's balance-sheet as at the end of 1954-55 does not, at first glance, appear impressive. Trading results, however, offer a shrewd hint of what the shareholder may in the future expect. Sales rose sharply from Rs 2.99 crores to Rs 7.09 crores. The net profit is, for the first time since the inception of the company, at a substantial figure: Rs 35.64 lakhs. As a ratio of sales, the net profit works out to a satisfactory 5 per cent. But back-log of depreciation to be provided is of considerable size, inspite of the allocation from 1954-55 profits of Rs 34 lakhs. According to the Directors' Report, depreciation still to be provided is of the order of Rs 1½ crores.

It would be foolhardy to be complacent about the state of the depreciation portfolio. At the same time, however, it would be equally wrong to be overly depressed with sales improving, and good prospects, and with the added possibility of an upward revision being permitted by Government in the selling prices, the back-log could be provided with less difficulty than now anticipated.

As against the capital of Rs 4.96 crores, the gross block is placed at Rs 3.56 crores. Additions to block since the end of 1952-53 are in the environs of Rs 72 lakhs. Liquid Assets are shown at Rs 4.83 crores. Sundry liabilities are at Rs 2.46 crores. The Depreciation Fund (shown on the liabilities side of the ledger) is at Rs 94.52 lakhs; but there is, we may remember, a back-log of Rs 1.50 crores under this head.

How, then, is it that the ordinary shares in Hindustan Motors have held remarkably steady near the par mark? The answer lies, I think, in the assured knowledge that a rise in the demand for cars is inevitable; in consequence, of course, sales would increase, profits would mount, and the maiden ordinary dividend may earlier be declared than anticipated.

TEXMACO

Issued and Paid up Capital (as at 31st December 1954) Rs 1,00,00,000 made up of 10,000 5½ per cent (Free of tax:) cumulative Preference shares of Rs 100 each fully paid up in cash, 30,000 5½% (subject to tax) Redeemable Preference shares of Rs 100 each fully paid up in cash, Redeemable at the option of the company at 3 months' notice and 6,00,000 Ordinary shares of Rs 10 each fully paid up in cash. On August 8, 1955 the company raised the authorised capital (from Rs 1,50,00,000) to Rs 4,00,000 by creation of 14,00,000 New Ordinary shares of Rs 10 each and 1,10,000 New Preference shares of Rs 100 each. On 27th October 1955 the Company issued Rights shares to existing shareholders at par in the proportion of three new Ordinary shares for every two shares held. These new shares are not entitled to any dividend for the year ended 31st December 1955.

Some fifty years ago, the Indian Engineering industry could boast of only a few repair shops. Thanks to the emergence of TISCO, IISCO, SCOB and Bhadravati, the industry slowly assumed recognisable proportions. Even so, very little progress could be recorded till ten, twelve years ago.

World War II was a turning point in the fortunes of the industry. The Government of the day were in desperate need of engineering stores of many descriptions and they wanted them urgently. To meet the demand, existing units were fully utilised while many new ones sprang up with the result, that, after the war, the industry emerged considerably expanded and developed. With the achievement of Independence, a national industrial policy opened up vistas undreamt of till a few years previously.

TEXMACO made its debut in the Indian industrial arena with the limited purpose of manufacturing cotton spinning and weaving plants. Its name itself indicates the self imposed limitation.

World War II, which began in the latter half of the year, completely upset the programme and it was only in 1948 that the company was able to revert to its original purpose of producing on a mass scale cotton spinning frames and carding engines. Now, the company is manufacturing a complete range of cotton textile machinery.

By 1949, the company had gained enough experience to extend its activities to other fields. Plans were drawn up for the manufacture of Boilers and Heavy Engineering items; and, from 1951 onward, the new division was in commission, manufacturing diverse engineering stores and equipments such as various types of boilers, railway wagons and a variety of railway engineering stores, hydraulic dam equipments, conveyor plants, overhead cranes and pressure vessels and other plant for chemical, paper, sugar and cement factories.

1954-55 witnessed further significant progress in the company's ever-expanding activities. A steel foundry came into existence to make steel castings to Indian Railway standard and other specifications. Successful negotiations were concluded for reputed foreign technical collaboration and necessary planning thereto to establish manufacture of the latest type of jute textile machinery.

It may be recalled that the Planning Commission have repeatedly observed that, in regard to most of the engineering industries; foreign technical assistance is required. TEXMACO realised this as early as 1949; for, from that year onward upto the present day, several agreements for foreign technical collaboration have been concluded by the company. For Cotton textile machinery, it has arrangements with Howa Machinery Limited, Japan; Indian Casablancas High Draft Company Limited; SKF Cannstatt, Germany. For Jute textile machinery, it is associated with Fairbairn Lawson Combe Barbour Limited, UK. For the Boiler and heavy Engineering division, it collaborates with Babcock & Wilcox, UK, Hubner & Mayer, Australia and F. Green & Son, UK and with VOEST, Austria.

Though the original object was to manufacture textile machinery (as the name of the company indicates) there is reason to believe that the management had ambitious plans up their sleeves from the beginning. The location of the Belgharia works indicates this. For, from the very outset, provisions seem to have been made for expansion. And, today, TEXMACO has four separate factories round about its original site. Textile Machinery (Cotton Division); Textile Machinery (Jute division); Boiler and Heavy Engineering Division and Steel Foundry division.

An idea as to the present activities and future expansion plans may be gleaned from the following:

Ring spinning frame: now working to full capacity (600 per annum). There is every reason to believe that installed capacity will be increased to meet the additional demand under the Second Plan.

Cotton Carding Engine: Production has already started on carding engines. Plans for expansion upto 3,600 cards per annum are under way. The company proposes to take up production of other items of spinning machinery after carding engines production is stabilised.

Jute Spinning Frames: The first 10 frames are shortly expected to be on the market.

Wagons: Present capacity—8 Wagons per day. An order for 4,300 wagons from the Railway Board is under execution. It is to be expected that, with the declared policy of Government to obtain their requirements of wagons from indigenous sources, this section will undergo further expansion.

Further expansion is in various stages of execution in regard to industrial boilers, locomotive boilers, hydraulic dam equipment and pressure vessels and other structural work.

The recent performance of TEXMACO on Lyons Range has been coloured and affected by the decision of the management not to increase the dividend payment. I fancy, however, that investor interest will soon quicken, because the results of 1956 must inevitably be better than in 1955; and the 1955 accounts themselves are remarkably good.

Sales rose by Rs 93 lakhs to Rs 2.34 crores—more than 2½ times the 1953 figure. The net profit has more than doubled to Rs 50.76 lakhs in 1955 as against Rs 24.45 lakhs in the previous year. Expressed as a ratio of sales, the net profit has improved to 21.71 per cent from 17.18 per cent. The provision for taxation is Rs 11 lakhs. Depreciation receives Rs 5 lakhs more at Rs 20 lakhs. The reserve fund gets a transfer of Rs 7.24 lakhs. There is a provision of Rs 5 lakhs for Other Funds. The ordinary dividend is maintained at 10 per cent.

The following table sets out the earning per ordinary share (before taxation and depreciation, but after the preferential dividend):

	1953.	1954.	1955.
Profit after Preference Dividend	17,20,953	22,24,777	48,99,497
Number of Ordinary Shares ..	6,00,000	6,00,000	6,00,000
Profit per Ordinary Share ..	2.87	3.71	8.17

Assuredly, an impressive table. The same table is recast below, but after depreciation and taxation as well, in addition to the preference dividend. In other words, it is the net earning per share.

	1953.	1954.	1955.
Net Profit ..	4,70,953	7,17,936	17,99,497
Number of Ordinary Shares ..	6,00,000	6,00,000	6,00,000
Net Profit per Ordinary Share ..	0.78	1.19	3.00

It will be seen that the improvement in the net profit per share is even more remarkable than the rise in the "gross" profit per share. The former, in 1955, was nearly 4 times the 1953 figure; the ratio, in the latter case, is less than 3 times.

As against the ordinary capital of Rs 60 lakhs, reserve and other funds are placed at Rs 16.25 lakhs. The gross block, at Rs 1.99 crores, is nearly 3.33 times the ordinary capital. Depreciation, at Rs 90.12 lakhs, is better than 45 per cent of the gross block. In the last two years, additions to block have totalled Rs 54 lakhs. Liquid Assets are shown at Rs 2.13 crores, and sundry liabilities at Rs 1.32 crores.

£R$

Upper Ganges Sugar

CAPITAL: Authorised: Rs 1,00,00,000 in 1,50,000 Ordinary shares of Rs 10 each; 3,50,000 shares of Rs 10 each; 15,000 Preference shares of Rs 100 each; 35,000 shares of Rs 100 each. Issued and Paid-up: Rs 35,00,000 in 80,000 Ordinary shares of Rs 10 each, fully paid; 12,000 5 per cent (Tax free) Cumulative Preference shares of Rs 100 each, fully paid; 15,000—5 per cent (Taxable) Cumulative Preference shares of Rs 100 each, fully paid (All issued for cash). The Tax free Cumulative Preference shares may be redeemed by the Company at its option by giving three calendar months' notice. The Taxable Cumulative Preference shares may be redeemed by the Company at a premium of 2 per cent at its option after 31st December 1952 by giving three months' notice.

In 1946, the Issued and Paid-up Capital was increased from Rs 20,00,000 to Rs 35,00,000 by the issue of 15,000 5 per cent (taxable) Cumulative Preference shares of Rs 100 each at par to the existing shareholders in the proportion of four new preference shares for every twenty-five Preference or Ordinary shares held.

The Upper Ganges Sugar Mills Limited has been in existence for less than a quarter of a century. Its history has not been anything sensational; but it quickly got into the stride of a good volume of sales, a satisfactory margin of profit and a heartening dividend for the shareholder. The company's accounting year ends in June. Accounts for the last three years disclose that sales have been showing a declining trend. From a level of Rs 2.83 crores in 1952-53, they have fallen successively to Rs 2.46 crores and Rs 1.86 crores. The vagaries of the length of a crushing season and other such factors are notorious in their impact upon the working results of sugar mills.

It has thus happened that the net profit of Upper Ganges, placed at Rs 16.64 lakhs in 1953, smartly doubled itself to Rs 33.33 lakhs in the next year, but is once again back at the old level in 1954-55 at Rs 16.75 lakhs. In the result, the provision for taxation has been halved to Rs 5.75 lakhs; depreciation gets half a lakh less at Rs 6.50 lakhs; and the transfer to reserve fund has been reduced from Rs 2.50 lakhs to Rs 1 lakh. While there was an allocation of Rs 8.50 lakhs to other funds in 1953-54, there is no such transfer in the latest year.

The ordinary dividend has been maintained at 25 per cent; the level of dividend has been unchanged for the last 3 years.

The balance sheet shows an ordinary capital of Rs 8 lakhs. Against this, there is a reserve fund of Rs 13 lakhs, other funds totalling Rs 8.92 lakhs and an investment account of Rs 5.21 lakhs. Thus, it would appear that there are good prospects of a bonus issue by the Company.

The gross block has shown an increase of over Rs 18 lakhs in the last two years, and, at the end of June 1955, was placed at Rs 96.42 lakhs. The net block has a value of Rs 38.92 lakhs. Cash balances exceed the ordinary capital at Rs 8.07 lakhs. Liquid assets are worth Rs 1.54 crores against the sundry liabilities of Rs 1.35 crores.

£R$

Orient Paper

The Orient Paper Mills Limited is a company with emphasis on expansion—for evidence, the following excerpts from the Company's Directors' reports:

For the half year ended 30th September 1954: The Company has placed orders for two new paper machines to manufacture paper of lighter substances, as also for ancillary pulp and paper equipment. A new Boiler and Turbine have also been ordered. The installation of this new machinery will result in increasing the production capacity of the mills by about 50 per cent.

The company has also placed an order for an Electric Bleaching Plant capable of manufacturing 8 tons of chlorine and 9 tons of Caustic soda per day. The expansion and modernisation programme of the company is proceeding satisfactorily

For the half-year ended March 1955: Since the close of the half-year under report, erection of Lime Sludge Reburning Plant has been completed and it is expected to go into operation shortly. Part consignments of machinery for extension have arrived and the erection is progressing satisfactorily. Steps are being taken to order further machinery to increase the overall efficiency of the plant.

For the half-year ended September 1955: Since the last report, the Lime Sludge Re-burning Plant and the Coating Plant have been commissioned. Erection of a new boiler and Black Liquor Evaporation Plant are nearing completion. Other erection and modernisation work is also progressing satisfactorily.

The mills are now producing 100 tons per day and it is expected that the rate of production will be increased to 150 tons per day by the end of the year and to 200 tons per day by June 1957. It is learnt that the company's expansion plans envisage a production of 300 tons ultimately. It is further stated that Brajrajnagar will admit no further expansion.

Meanwhile, the directors are exploring the possibilities of opening another mill with an initial capacity of 100 tons per day in some other suitable place. It is understood that Vindhya Pradesh is being considered in this connection.

The latest available accounts of Orient Paper are for the half year ended September 1955. These disclose a decline of Rs 6 lakhs to Rs 1.60 crores in sales. But the net profit is better by Rs 2.78 lakhs at Rs 60.43 lakhs. The preference dividend absorbs Rs 2.64 lakhs against Rs 1.77 lakhs. The following table discloses the earning per ordinary share, after payment of preference dividend, but before providing for taxation and depreciation:

	Half-year to 30-9-1954	Half-year to 31-3-1955	Half-year to 30-9-1955
Profit after Preference Dividend	47,25,027	55,92,413	57,78,775
Number of Ordinary Shares	14,68,250	14,68,250	14,68,250
Earning per Ordinary Share	3.22	3.81	3.94

The net earning per ordinary share, that is, the earning after preference dividend and taxation, is shown in the table below:

	Half-year to 30-9-1954	Half-year to 31-3-1955	Half-year to 30-9-1955
Net Profit (Before Depreciation)	29,25,027	29,92,413	37,78,775
Number of Ordinary Shares	14,68,250	14,68,250	14,68,250
Earning (Net) per Ordinary Share	1.99	2.04	2.57

The ratio of net profit (before taxation and depreciation) to sales is as under:

	Half-year to 30-9-1954	Half-year to 31-3-1955	Half-year to 30-9-1955
Sales in Rupees	1,63,51,478	1,65,89,807	1,59,89,445
Profit in Rupees	49,01,714	57,69,100	60,42,702
Ratio of Profit to Sales % age	30.2	34.8	37.8

For the rest: the provision for tax has been reduced by Rs 6 lakhs to Rs 20 lakhs; the allocation for depreciation is maintained at Rs 6 lakhs; the transfer to Other Funds is higher by Rs 5.37 likhs over the corresponding period ordinary dividend has been increased to a rate of 12½ per cent per annum from 10 per cent per annum.

As against the Ordinary capital of Rs 1.47 crores, there is a Capital Reserve of Rs 1.01 crores and Other Funds totalling Rs 1.09 crores. The gross block of Rs 4.27 crores marks an increase of Rs 36 lakhs over the corresponding period of the previous year; and depreciation so far provided is Rs 1.03 crores. Expansion is indicated by an amount of Rs 49.43 lakhs shown as Advance for Machinery. Liquid Assets total Rs 4.12 crores, nearly half a crore higher than in the balance-sheet as at the end of March 1955. Sundry liabilities are slightly below the Rs 2 crore mark.

A comparative study made recently of the working of some of the larger units in the paper industry has shown that Orient Paper has surpassed all others in the matter of profitable current working and planned future progress. It has been calculated that, during the nine half-years ending September 1954, Orient Paper has earned a profit of Rs 482 lakhs—a figure not attained by any of the major companies in the category. During the period, transfers to reserves have totalled Rs 155 lakhs. With a yearly capacity (upto half-year ended 1954) of 30,000 tons, the company's working has resulted in earning a very high profit of Rs 390 per ton of paper produced.

*

A Summary

The review of the two engineering companies and the sugar and paper companies has, I think, brought out one point very clearly. I am not here referring to the rates of dividend or the size of net profits. On the other hand, the chief interest For the Investor in the Birla scrips must lie in their being imbued with more than an ordinary element of growth propensity.

Take, for example, Hindustan Motors. The output of cars will undoubtedly rise with an increase in sales. Moreover, I repeat that the company has been and is equipping itself for diversified activities. It proposes to have a finger in many more of the engineering pies which, during the Second Plan, will come into existence.

Similarly, of course, TEXMACO. If, originally, the manufacture of textile machinery was the avowed object of the company, it has now branched out to many other fields. Besides textile machinery, other products include jute machinery, boilers, and railway wagons—to mention the more prominent. Consequently, I think it is high time that the management set about considering seriously a proposal to rename the company. For, TEXMACO has out-grown its name. Much more properly, it could be today called the Capital Machinery Company Limited, or CAMACO for short. The idea should, I fancy, equally appeal to the investor.

(NOTE: This Group Study of Birla Active Scrips will be concluded in next week's Indian Finance)

Macneill-Barry Group — Coal and Jute Results

Balance-Sheet Reviews:

THE four Coal companies, in Macneill-Barry group, have presented their reports and accounts for the half-year ended 31st December, 1955. Of these, the working results of Equitable and Hurriladih are satisfactory, having maintained the dividends at 7½ and 12½ per cent respectively. The remaining two companies have again passed over the dividends.

In the case of the Dhemo Main Collieries, it is reported that underground conditions at the colliery continue to be very difficult; and the reduction in raisings is reflected in the company's results for the period under review.

The Hurriladih Coal Company has reported that the working of 16 Seam at the colliery is now expected to be completed before the end of 1956 and it is intended to proceed with the development of 15A Seam in replacement of 16 Seam.

CORRECTION

In our issue dated 15th September 1956, on Page 516, under heading "TEXMACO RESULTS", first paragraph last line should read "as against Re 1 paid in 1954" instead "as against As 12 per share paid in 1954". The error is regretted.

Thanks to the taking over of the position of Charanpur Colliery and the properties of Apcar Collieries Limited (in voluntary liquidation), the Equitable Coal Company has shown an increase in raisings, while an improvement in wagon supplies has effected a reduction in the stocks at the collieries.

In spite of improved despatches, the West Jamuria Coal Company continues to operate uneconomically although the working results at Ackhalpur Colliery continues to be satisfactory.

The directors of all these four companies have, in their reports, stated that the Award of the All-India Industrial Tribunal (Colliery Disputes) is effective from the 26th May and has granted substantial increases in wages. Production costs have increased sharply, but controlled selling prices in West Bengal and Bihar have been increased from the 5th July by only Rs 3 per ton. This state of affairs will have an adverse effect on the company's trading results.

Following tables show other particulars in respect of these companies:—

RAISINGS (In Tons)

Companies.	Half-Year ended 31-12-1955	Half-Year ended 30-6-1955

West Jamuria ..	—1,58,055	—66,470

In common with other companies, the three jute mills—Ganges Manufacturing, Gourepore and Nuddea—in the same group have produced disappointing results for the half-year ended 31st March, 1956.

The Ganges Manufacturing Company has reported a sharp decline in gunny sales from Rs 1.55 crores to Rs 1.40 crores, while sales of yarn are shown at Rs 97,694. The accounts, before providing a sum of Rs 2·08 lakhs (Rs 3.00 lakhs) for Depreciation, show a loss for the half-year at Rs 1,43,384 as against a loss of Rs 54 292 in the previous half-year. Naturally, the dividend is again passed over.

In the case of the Gourepore Company, sales of gunnies are shown lower at Rs 1.22 crores against Rs 1.34 crores, while those of yarn are higher at Rs 2.51 lakhs against Rs 2.09 lakhs. The net pro-

War Risk Insurance Rules

THE Institute of London Underwriters enhanced the seaborne War Strike Riot and Civil Commotion risks rates for traffic passing through the Suez Canal to 4 annas per cent from 3/80th per cent for sailings from the 14th September 1956. This was again altered to mean 4 annas per cent additional to previous rate of 3/80th per cent for sailings from the 18th. For Egypt and for traffic transhipping at Egypt, the rate was a little higher. The net effect of all these changes is that an additional premium, calculated at 4 annas per cent, has to be charged to rates existing prior to 14th September for War and SRCC risks.

It has been an age-old convention, for the Commonwealth at least, to be guided by London in such matters. London was and still remains the hub of the marine market. When the Commonwealth was an Empire, there was no scope for political difference. The emergence of India, Pakistan, etc., as sovereign nations has vested these countries with a positive role in world affairs. These countries, therefore, are competent to devise their own rates by their own Associations. If they do not do so, it is because of tradition and because the character of risk remains essentially the same despite differences in political outlook.

How far the Institute has been influenced by a Western political bias in devising the rate has been questioned. The Institute, as a body of underwriters, should normally be guided by no extraneous considerations. Whether, therefore, the risk, actual or potential, called for an enhancement and, if so, to what extent is a matter on which there may be difference of opinion.

The use of the canal by shipping interests in the last few days has been influenced both by political considerations, and considerations of hazards, actual and potential. It is possible, from the assessment of attitudes of shipping companies, to evaluate to a certain extent whether risks or political bias is acting as a deterrent to use of the canal.

Japanese shipping firms saw little reason, from the business point of view, for joining the Suez Canal Users Association proposed by Britain, France and the USA. Both the Nippon Yusen Kaisha and Mitsui shipping lines said that they were fairly satisfied with the present progress of Japanese ships through the Canal.

Two Indian companies—Scindias and India Steamship—are reported to be of the view that, so far as Indian shipping companies were concerned, there was no question of avoiding the Canal and adopting the Cape route.

P&O, which appeared to pioneer officially routing of traffic via the Cape, is now understood to be examining the maintenance of the schedule of traffic through the Canal. It has already rerouted the schedules of two steamers via the Suez.

To a war-sick and weary world, any prospect of armed conflict is alarming. The allergy to war now manifest in all peoples of the globe is, by itself, a deterrent to conflict. A sense of economic realism is now over-whelming the poorly-arranged war of nerves.

The Institute of London Underwriters, it appears, could not get over the political climate of its own country and, unwarily perhaps, identified itself with the war of nerves. Its directive of an enhancement in the rate on traffic through Suez by 4 annas per cent was, therefore, more political than as arising from an assessment of risks.

The enhancement is almost 9 times the rate prevailing before the 14th. The rate, therefore, has the effect of discouraging traffic through Suez.

If this line of analysis has any bearing, the Institute loses its international character and becomes identified with British diplomacy. Whether it has been so throughout is not pertinent here. What is really at issue is its moral competence to legislate. That force is at once lost if, in the build up of rates, local political considerations get the better of risk bearing issues.

The war potential on Suez never loomed large. No party can afford a war.

The Indian Tariff Committee and the subordinate committees are not legally bound by the Institute's dictums though, by norms of prudence the Committees should give most serious consideration to London's directives. They can, technically speaking, devise their own War and SRCC rates, taking into account the risks involved and nothing else. If they did not do so now or before, it was because they felt that divergence on such matters is not conducive to their best interests. Nevertheless, the responsibility in the matter of guiding Indian insurance in the matter of rates has been vested by law in the Tariff Committee. Whether it has examined the current issues with all care can only be answered by the Tariff Committee itself.

A misleading report was published in a Calcutta newspaper. According to the report, General Insurance Companies operating from India had put up the war risk insurance rate from 3/8 per cent to 1¼ per cent in respect of vessels passing through the Canal. In disclosing this, a spokesman of the Indian Insurance Companies Association is reported to have stated that this step was taken under advice from the Institute of Underwriters in London.

The report, in the first place, is incorrect; for, the rate has gone up by 4 annas per cent over existing rates. It is nowhere nearing 3/8 per cent or 1¼ per cent. The Indian Insurance Companies Association is not a body to fix rates. That is entirely the purview of the Tariff Committee.

By implication, the report is gravely unjust to Indian insurance. The alleged risks do not call for such an enhancement; and, to implicate Indian insurance in putting up rates to such a figure clothes Indian insurance with motives other than those of its own trade. It is surprising that, on such a grave issue, no contradiction has been forthcoming from insurance bodies.

It seems apparent that, in the matter of war risks, if not for anything else, the Indian Tariff Committee hardly ever takes the initiative and seems to be content to endorse the rates of the Institute of London. Whilst this may be the easiest course, the new status of India in World affairs invests the Tariff Committee and subordinate Committees with some responsibility; and the haste with which they toed the line of the Institute can, in certain circumstances, be gravely misunderstood and may certainly be questioned.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

Nuclear Tests

THE news, reported last week, that dangerously high radio-activity due to atomic weapon tests has been detected among growing crops and pastures in South West Germany should be yet another warning of the consequences of continuing nuclear test explosions. Genetists and pathologists have, of course, warned us many times before and continue to do so now. Dr C. H. Waddington, Professor of Animal Genetics at Edinburgh University, writing in a recent issue of "The Nation", has reminded his readers that the danger from increased radio-active fall-outs is not confined to the present population only, but that it extends to "our remote descendents." The evidence is, he says, "that all penetrating radiation (that is, radiation from fall-outs of nuclear explosions) however small in quantity, will cause some change in the hereditary particles or genes, and these changes will almost always be harmful." Moreover, the fall-out is not the only source of danger. Dr Pierre Dorolle, the French Deputy Director of the World Health Organisation, addressing the Assembly of the World Federation of United Nations Association early this month, spoke in emphatic language about the equally dangerous source of radio-activity—the atomic waste, or the burnt out radio-active material which has to be disposed of somehow. Even those scientists like Dr D. J. Durworth, who do not rate the present danger as high and who deplore alarmist reports, will agree that, if the atomic test explosions continue indefinitely, they can hardly fail to reduce progressively the margin of safety.

Meanwhile, the tests by the three nations owning the Bomb go on. The American two-months-long tests at Eniwetok had hardly concluded when President Eisenhower announced (the 13th announcement by the USA concerning Soviet nuclear explosions) on August 26, that the USSR had exploded, in Siberia, atomic weapons on the 20th and 24th of August. Mr Lewis L. Strauss, the US Atomic Energy Commission Chairman, said in a later statement that the third explosion of the series was set off on September 3.

The British series of tests at the Maralinga rocket ranges in the Central Australian desert are going on at the present moment.

The question of the continuance of these tests of nuclear weapons should—if one is interested in the survival of life in this planet—have priority amongst the unsolved problems in international discussions. Unfortunately, neither of the two powers which mainly conduct the tests is willing to discuss proposals for discontinuing the tests except on its own terms.

President Eisenhower has restated America's demand to treat the question of atomic weapons —and of the test explosions—only as part of the bigger problem of general disarmament. The Soviet Government (probably in reply to President Eisenhower) in a statement published through Tass reiterate their proposal for banning atomic weapons altogether "independently of the reaching of agreement on other disarmament problems"—a proposition unacceptable to America.

It is becoming increasingly clear that, even in the face of all the warnings of observed scientific reports, the Great Powers are not prepared to give up the policy of using the nuclear tests as instruments of diplomatic bargaining.

The implications of such a policy are obviously very serious and a way has to be found for getting out of the dread impasse. It is difficult to see how else this can be done in the present situation except by an acceptance by the powers concerned of Mr Nehru's proposal, made as early as 1954, to observe a standstill agreement in the matter of test explosions of nuclear weapons. The alternative may well be the possibility—no longer imaginary— of a slow and agonising annihilation of the human race.

Editorial Notes

The Prime Minister in Saudi Arabia

The Prime Minister's visit to Saudi Arabia coincided with the dissolution of the war clouds in the Middle East. His reception as a prophet of peace by the friendly Arab State has therefore turned out to be much more than a courtesy. The warmth of feeling witnessed during his sojourn in Saudi Arabia must have explored the mischievous myth, even now sedulously pursued in Pakistan that the Government of India and the Prime Minister are anti-muslim. Though in certain moments of crisis, public opinion in a distant country can have little impact on the passions and moods of people it is wholesome that, the Middle East peoples no less than their Governments, imbibe correct ideas on the attitude of the Government of India to minority communities. The Prime Minister's experience is not disappointing. It is not at all surprising that he has been welcomed also in the capacity of being the leader of a country 'where thousands of Muslims live'.

Expectations that Mr Nehru would lend his personal weight to the exploration of a fair settlement on the Suez Canal question have also not gone in vain. In a remarkably clear and shrewd appraisal, he has endeavoured to show how the two parties have already agreed on fundamentals and have chosen to continue to fight on issues comparatively trivial. Others might have gained the same impression but no one gave expression to it in so emphatic a manner. It has to be presumed that he will do much more by way of active efforts to reconcile interests over the Suez than is likely to come to light immediately. Both as a good-will visit and as contributing to the solution of a confusing international problem, the Prime Minister's visit to the Middle East at this time can claim a high score.

*

Insufficiently Practical

Mr V. V. Giri has put forward a novel idea for the solution of educated unemployment. There are now about four lakhs of educated persons seeking jobs. For them Mr Giri recommends two acres of land and an Ambar Charka each. The underlying assumption that industrial and administrative jobs cannot be found in sufficient numbers is unassailable. But, from this point, difficulties start.

The educated unemployed can be grouped into one general category for statistical purposes. They represent wide variations in attainments, talents and aspirations. It would be a big social waste, if every one of them, irrespective of these differences, is put in the same environment, though it may serve for a dignified variant for the dole. If, however, the plot and the charka were only to be a stop-gap, the case for the proposal is stronger.

But even then, there may be a much larger number of more deserving persons, who can be allotted these bare minima of a subsistence economy. There are several lakhs of agricultural labourers who will gladly avail of this opportunity, provided the two acres is sufficiently fertile and carry other required facilities.

It is pertinent to recall the issue raised at the recent Planning Commission Group Seminar on Educated Unemployment held at Trivandrum, as to how far it would be enduring and wise to try to tackle the problem without reference to the wider one of general unemployment. Above all, the educated youngsters must voluntarily accept the proposal which is very doubtful, as long as there are no new restraints on individual freedom.

*

Lessons from China

The impressions of the Agricultural Delegation which recently visited China and Japan have been coming out in driblets. Mr P. N. Thapar first issued a statement. Now the delegation leader has expressed himself. Mr M. V. Krishnappa speaks highly of the use of night-soil for manure, the elimination of animal pests in China and the important contribution fisheries gave to Japan's national income.

The use of night-soil, consciously or otherwise, is widespread in India. Where a new initiative is called for is in the direction of fighting hostile prejudice and of putting the use of night-soil on a systematic basis. His discovery that with an average of 2½ acres of land, the Japanese agriculturist is making an excellent job of his calling also does not come as a surprise. There are thousands of families all over India who tend their small plots with an earnestness and affection of almost resembling that of a parent to the progeny. Fragmentation is not always the evil it is supposed to be and the smaller the plot the greater the attention it often receives at the hands of an industrious cultivator.

On one point Mr Krishnappa's foreign impressions seem to have aroused undue enthusiasm. He wants to destroy all the enemies of crops among which insects, rats and stray cattle are clubbed together. While statisticians have calculated an annual wastage of over 2 million tons of foodgrains through the predatory inroads of insects and rats, it is by no means easy to eliminate them. A complete overhaul of rural house-building which may take several decades to achieve, is a pre-requisite of this arduous fight. The methods of storing also should change. The destruction of stray cattle may well come up against formidable social opposition. The animals can be imprisoned rather than awarded capital punishment!

*

Set for Isolation?

The decision of the PSP National Executive reaffirming the policy accepted at Gaya in the matter of electoral alliances does not come as a surprise. Mr Jayaprakash Narain, who kept aloof from the Gaya deliberations and made himself inaccessible for counsel at that time, has lately been trying to liberalise the Party's attitude to other Opposition groups for the purpose of the next elections. His persuasions have not gone altogether in vain. The Executive has recommended permission to State Executives in special cases to arrive at electoral arrangements with other Opposition parties.

This concession leaves the ground clear for a fresh and full debate on the issue at the forthcoming Calcutta Conference. That the Party Executive is still wobbling could be discerned from the rider added to the draft resolution for the conference, which says that even in exceptional instances it would not countenance campaigning between parties whose fundamentals are at variance.

Mr Asoka Mehta, presumably the principal architect of this resolution, has clarified this rider further by the categorical denial of the intention to have anything to do with the Communist Party. He describes Mr Jayaprakash Narain's advice as a disservice to the cause of parliamentary democracy.

Incidentally, several PSP leaders are known to take the view that the recent happenings in Russia do not provide any dependable clue to a change of policies or principles. The canvassing of this view at the Bombay meeting must have been part of the attempt to discredit whatever pro-communist feelings lingered among the rank and file. If, as the resolution says, the party were to use the general elections more as an opportunity for the political education of the country than for gaining votes, the Communist Party which is not now unenthusiastic of a common alignment, may become colder. Perhaps, even an adhoc alliance with ideological propaganda on the front, can be ruled out as nearly impossible.

In one respect, Mr Mehta has given the correct lead, to concentrate on constituencies where the party had wide support. But that would mean, especially when the Hindu Mahasabha and the Jan Sangh are in favour of any kind of alliance, the PSP will more or less be isolated. Except in West Bengal and Malabar, the party can scarcely think of any considerable group, with which it can fight shoulder to shoulder, without swallowing its present ideas. How far these would undergo revision at Calcutta cannot be predicted.

Deficit Financing in Reverse

THE slack season continues to find resounding testimony in the bank figures relating to money supply; and, in no less a measure, the other indices point to the continued strain experienced by the banking system as a whole. The cause of the first phenomenon is now generally admitted to be the contractionist influence of the steep loss of foreign exchange; the reason for the second perhaps lies in the over-extended position of scheduled banks in the wake of finance sought and obtained for State Loan subscriptions.

The return of money from circulation has, even for the third week of a slack season month, been of prodigious size. Notes in Circulation have, according to the statement of the Reserve Bank for September 21, declined sharply by Rs 14.74 crores to Rs 1417.71 crores. Rupee Coin returning from circulation was more than seasonably high at Rs 1.72 crores. The Reserve Bank was embarrassed by the plethora of cash in the till. There has, consequently, been contraction of currency against Rupee Securities, the figure under this head showing a fall of Rs 9.94 crores to Rs 693.72 crores. In the result, Notes Held are higher by Rs 6.52 crores.

Advances of the State Bank, in the week ended September 21, are lower by Rs 1.53 crores at Rs 131.67 crores.

Thirdly, Advances of Scheduled Banks are reduced by Rs 6.66 crores to Rs 751.79 crores in the week ended September 14; this decline comprises a fall of Rs 4.21 crores in Advances, of Rs 2.28 crores in Inland Bills Purchased and Discounted and of Rs 0.17 crores in Foreign Bills Purchased and Discounted. Moreover, Deposits of member banks, excluding the State Bank, have improved more substantially than suggested by the rise, in the statement, of Rs 1.29 crores. For, in the relevant week, Deposits of the State Bank fell by Rs 3.12 crores. The extent of the increase of the Deposits of member banks other than the State Bank is, therefore, Rs 4.41 crores.

But the banking system as such continues to be hard-pressed. In spite of the fact that it was the third week of a slack season month, Banks' Deposits with the Reserve Bank have declined by Rs 1.17 crores to Rs 52.55 crores; besides, the Other Loans and Advances of the Reserve Bank have mounted steeply by Rs 13.96 crores to Rs 90.69 crores. The return of the State Bank for the relevant week, however, vouchsafes the information that it is this bank which is mostly responsible for both these changes. Cash balances of the State Bank in India are lower by Rs 1.22 crores; and Borrowings are sharply higher by Rs 9.50 crores at Rs 16.00 crores. As far as the changes in this regard in the return of Scheduled Banks are concerned, the figures for September 21 will not be available till next week; and those for September 14 need not, in this context, be examined.

There is good reason to believe that the bulk of the transactions connected with the State Loans have been completed. We may profitably speculate on the various changes under diverse heads in the three bank statements; their implications, we may guess at by inferences.

Firstly, in the course of the last three weeks, the Other Loans and Advances of the Reserve Bank have risen by Rs 38.53 crores. The net increase in Borrowings from the Reserve Bank of member banks excluding the State Bank amounted to Rs 24.76 crores in the week ended September 7. Moreover, member banks were compelled to raise their indebtedness to the State Bank by Rs 5.45 crores in the same week. Lastly, the State Bank has found it necessary to increase its Borrowings, for reasons to be explained later, to Rs 16 crores as at September 21. As we have pointed out on an earlier occasion, the expansion in Borrowings of member banks may have been derived partly from the need of Scheduled Banks to meet the demands of month-early disbursements. But the Borrowings of the State Bank may be said almost directly to be connected with State loan financing. The total accommodation sought by member banks, excluding the State Bank, is, thus, of the order of Rs 30 crores—that is, the sum of increase in indebtedness to the State Bank and to the Reserve Bank. We may say that, broadly speaking, this figure represents, in proportion that it is difficult tc guess at, the aggregate of extra accommodation needed by banks to meet month-early payments and applications for financing State loans. We may suggest that month-early disbursements are unlikely to have occasioned the need for member banks to increase their borrowings beyond Rs 10 crores. Thus, broadly speaking, Borrowings of member banks for State loan purposes may be presumed to be around Rs 20 crores; and those of the State Bank at Rs 16 crores. The first inference, therefore, is that the Reserve Bank has been called upon quite heftily to assist in financing State loan subscriptions, the extent of advances in this regard from the Central Banking Institution likely to represent some 50 per cent of the total subscriptions to State loans.

Secondly, the payments held in abeyance by the State Bank and the receipts in suspense of the Reserve Bank have both been dealt with. The item under Other Deposits in the Reserve Bank statement showed a smart rise from Rs 12.27 crores to Rs 18.01 crores in the week ended September 7. In the latest returns of the Reserve Bank, for September 21, Other Deposits have fallen once again to Rs 13.81 crores. It may, therefore, be inferred that receipts by the Reserve Bank, which were pending payment to State Governments, have now been duly credited; and that receipts in respect of over-subscriptions have also been duly returned. In the second place, in this context, the return of the State Bank for September 7 showed a steep rise in Other Liabilities from Rs 6.94 crores to Rs 22.14 crores. We pointed out, at that time, that this possibly represented what may be termed the district subscriptions to State loans. A moiety of the transactions in this regard were made in the week ended September 14, as attested by the decline under this head to Rs 16.87 crores. The latest return of the State Bank, for September 21, reveals that pending transactions have been completed, since Other Liabilities are sharply reduced to Rs 5.82 crores. Incidentally, it is to be noted that the rise in the borrowings of the State Bank can be roughly equated to the decline in Other Liabilities. That is to say, in order to make payment of receipts credited under Other Liabilities, the State Bank was compelled to raise borrowings from the Reserve Bank for an equivalent sum. This, as we remarked earlier, is, thus, the reason for the sharp rise in Borrowings of the State Bank. The second inference is, we repeat, that pending transactions have been completed both by the Reserve Bank and by the State Bank.

Thirdly, it is possible to gauge the extent of loans and advances made by Scheduled Banks to their constituents for subscriptions to State loans. Advances of Scheduled Banks rose from Rs 587.70 crores to Rs 616.72 crores in the week ended September 7. From this, however, we have to deduct Rs 5.45 crores being the advances of the State Bank to the other member banks. This works out to Rs 23½ crores. In this regard, also, it is possible to say that a moiety represents an expansion in advances due to month-early disbursements. But the third inference is that Advances by Scheduled Banks to constituents for State loan purposes may be of the order of Rs 15 crores. The fourth inference is also available at the same time, and that is, that the accommodation needed by member banks for their own State loans subscriptions may have been around Rs 5 crores. For, this represents the net increase in borrowings of member banks minus the likely size of increase in their advances for the two purposes of month-early disbursements and State loan subscriptions.

Fourthly, and the inference is quite clear, the size of subscriptions of member banks to State loans has been, in round figures, Rs 10 crores. The investment portfolio in the Scheduled Bank statement has been marked up by this amount over the last two weeks.

Fifthly, payment would seem to have been made of all amounts due to State Governments by the Reserve Bank. These payments can be measured directly under two heads and inferentially against a third head. Deposits of State Governments with the Reserve Bank have risen from Rs 2.91 crores on August 31 to Rs 23.95 crores as at the week ended September 21. This rise of Rs 21 crores roughly represents direct payments to State Governments. It is possible that payment has been for a slightly larger amount, but that some portion of the accretions in the week ended September 7 were run down by month-early disbursements of State Governments. In the second place, the indebtedness of State Governments to the Reserve Bank has fallen from Rs 8.06 crores on August 31 to Rs 2.84 crores on September 21. Thus, this decline of Rs 5 crores in the indebtedness of State Governments is the extent to which payment to State Governments has also been made. The sixth inference is, therefore, that the direct impact of State loan subscriptions has been to improve the State Governments' position vis-a-vis the Reserve Bank by an amount of Rs 26 crores.

Finally, in the context of State loans, we have to take note of the possible re-investment by State Governments in ad hoc Treasury Bills. In the statement of the Reserve Bank for September 14, it was observed that there was a rise of Rs 15 crores in the Deposits of the Central Government. Since, ostensibly, there was no deficit financing, the apparent reason for the rise in the Centre's balances may merely seem to be an improvement in net revenue. It was, however, suggested last week that the increase in the Deposits of the Central Government was more likely as a result of purchase by State Governments of ad hoc Treasury Bills, the proceeds being credited to the account of the Centre. Broadly speaking, the seventh inference is that investment by State Governments in Treasury Bills in the week ended September 14 may have been for a sum around Rs 15 crores.

The latest statement of the Reserve Bank, for September 21, is more immediately revealing of

(Continued on page 629)

The Futility of Economic Sanctions

By PAUL EINZIG

AT the time of writing the policy of the Western Governments concerned with the Suez Canal situation is still in the melting pot. There appear to be, however, unmistakable indications that the decision which will eventually emerge from it will be one in favour of economic sanctions. Some moves in that direction have already been made in the form of blocking Egyptian assets. In their effect if not in their intention the diversion of traffic from the Suez Canal also constitutes an economic sanction. It was undertaken partly to avoid sending ships to an area that might well become the scene of hostilities and partly on the assumption that after the withdrawal of foreign pilots the Egyptian authorities would not be able to manage the Canal traffic. The incidental effect of a fall in Canal traffic would be that instead of making a profit Colonel Nasser's Government would operate the nationalised Canal at a financial loss.

If we were justified in assuming that it would be possible to force Colonel Nasser, with the aid of economic sanctions, to adopt a more reasonable attitude, there would be everything to be said in favour of Suez sanctions. Those who expect economic sanctions to produce their desired effect appear to be, however, guilty of unwarranted optimism. The lesson of the sanctions, adopted against Mussolini after the Italian invasion of Abysinia seems to have been lost on them. Yet it should make it quite clear that a nation inspired by aggressive nationalism is prepared to put up with a considerable amount of inconvenience and hardship inflicted on it by economic sanctions. There are other instances besides that of the League of Nations economic sanctions against Italy in 1935 which confirm this conclusion.

The Egyptian nation is now inspired by the same kind of aggressive nationalism that characterised Mussolini's Italy in the 'thirties. This means that even if economic sanctions inflicted grave hardships on Egypt, the vocal section of the people would be willing to put up with them for the sake of upholding the nationalisation of the Suez Canal. It seems, however that the extent of the hardships that economic sanctions can conceivably inflict on Egypt is grossly overrated.

Those in favour of economic sanctions are fond of saying that the Egyptian Government is "on the verge of bankruptcy" and that losses resulting from the running of the Canal at a deficit might easily bring about its bankruptcy. They never define precisely what they mean by "bankruptcy" If they mean that the Egyptian Government would suspend the service of its debt, the main sufferers would be not the Egyptian people but foreign holders of Egyptian Bonds. Such a step might even be taken by Colonel Nasser deliberately as a counter-sanction. If they mean that the Egyptian balance of payments would become hopelessly unbalanced, that would only result in a curtailment of imports from the Western countries. That step too is liable to be taken as part of Colonel Nasser's counter-sanctions. Its result would be that orders would be diverted from Western countries to the Soviet Union and to satellite States.

By diverting shipping from the Canal for the sake of bringing economic pressure to bear on Colonel Nasser, the Western countries would be cutting off their nose to spite their face. For each million pounds of Canal dues lost by Egypt, Britain and the other maritime powers concerned stand to lose many millions of pounds as a result of the additional cost of transport, the delays involved, and the effects of a possible scarcity of oil in Western Europe during the transitional period. It would be necessary to build additional tankers and the capital expenditure involved might well exceed the capital value of the Suez Canal itself. The need for increasing the import of dollar oil would result in another period of dollar scarcity. Britain and other European countries would have to resort to further corrective measures to offset the effect on their balance of payments.

Over and above all the Soviet Government is well in a position to indemnify Egypt for any disadvantages resulting from economic sanctions. The amounts involved may be large for Egypt but they are insignificant for Soviet Russia. Moscow could easily loan or grant an amount equivalent to the losses arising from a diversion of traffic from the Suez Canal. If the Western countries reduce their purchases of Middle East oil the Soviet Union and the satellite countries might easily step into the breach and transport their additional oil purchases through the Suez Canal. The Soviet Union and Czechoslovakia could easily buy up the Egyptian cotton crop if the Western countries should place an embargo on its import.

In the light of the above considerations it seems more than probable that any attempt to force Colonel Nasser by means of economic sanctions to change his policy would be doomed to end in a complete fiasco. It would strengthen Colonel Nasser's prestige in the Arab world and it would increase Soviet influence in the Middle East.

It may be a matter of opinion whether in existing circumstances the use of force in defence of the legitimate interests of the Canal using countries would be justified. What is important is that we should not deceive ourselves into believing that economic sanctions would provide a practical alternative. There is no hope whatever for the Western countries to achieve the desired end by means of economic sanctions. Indeed, there is reason to believe that many of those who profess to favour economic sanctions only want to adopt them as a means for gaining time. It may take many months before the futility of economic sanctions will come to be fully

NEARLY TWENTY YEARS AGO, the development of the aluminium industry in India was initiated with the help of Canadian technical and financial resources. Today this vital industry has entered a new phase of growth with Indian Aluminium Company's decision to install a new 10,000 ton smelter at Hirakud. This smelter will be India's largest and will more than double the country's production of aluminium.

As in the past, the Canadian associates of Indian Aluminium Company will contribute their know-how and experience in this new phase of growth. They will share, too, in the costs of the project, to finance a part of which the Company proposes to issue new capital.

International Exchange Restrictions

The Seventh Annual Report in Exchange Restrictions published by the International Monetary Fund, testifies to the greater progress in the removal of exchange restrictions in 1955 as compared to 1954 and an increasing preference for fiscal and monetary steps as against exchange restrictions to deal with balance of payments difficulties. The trend toward increase in the transferability of currencies has gained further momentum.

The facilities for the international use of transferable sterling and partly transferable Deutschemark have been continued. The range of transferability of the EPU currencies to non-EPU countries has been further extended. Sterling area countries have been allowed to accept payment for exports to countries in the transferable account area in any other specified currency. What is described as the dollar area has gained in territorial extent, in the dealings of Belgium, Luxumberg, France, Germany and Netherlands.

In Argentina, the payment system was reformed by dividing the exchange transactions between two exchange markets, the official and the free, securing transferability of currencies for the transactions passing through the free market. Brazil started the new experiment called the 'Hague Club arrangement' by which Brazilian earnings from the transactions with Belgium, Luxumberg, Germany, Netherlands and the UK are pooled and the currency of these countries made interchangeable in British hands.

The appreciable improvement in the world payments position and in the availability of dollar and non-dollar currencies widened the scope for the transfer and conversion of currencies, leading in its train to further reductions in discriminatory practices.

About 15 countries either further moved with import liberalisation or increased their free lists of dollar imports. It goes without saying that bilaterism in international payments was favoured in a smaller measure; though the total number of bilateral agreements showed little change, the terms were broadened. Multiple currency practices were simplified in many countries, though an increase in multiple rates took place in a few.

Against the number of countries which liberalised controls, those who put new restrictions or intensified old ones were in a negligible minority. To the latter group belongs Australia, where restrictions on both dollar and non-dollar exports were intensified, Mexico, where additions were made to the list of items subject to import licensing; Saudi Arabia, which passed a decree forbidding the export of capital and requiring the repatriation of capital from foreign countries; and Turkey, where the exchange control system was further tightened.

The overwhelming majority of countries fall within the group representing liberalisation. Austria liberalised imports from OEEC countries further and certain imports from the US and Canada were freed from quantitative restrictions, Belgium and Luxumberg widened the scope further for the transferability of accounts held by non-residents, and the choice of methods of payment open to their own residents for transactions wih other countries. The free market for capital and certain current transactions was extended to all non-dollar currencies.

Burma guaranteed foreign investment against nationalisation for an agreed period and the foreign investors were permitted to remit current earnings and dividends along with facilities for repatriation of investments. Ceylon liberalised imports from the dollar area and opened the facility for payment in any specified currency for exports to a transferable account country. Denmark opened a free list of imports originating in the dollar area. Chile went much further. In April 1956 import licensing was completely abolished and the list of goods were permitted without any limitation. The multiple exchange-rate structure was replaced by a free fluctuating market in all commodity transactions. In Finland, a new import procedure provided for licenses

World of Jute

Competivity

The enthusiasm engendered by the Suez Canal crisis in the jute trade and industry has now practically disappeared. It was anticipated that any warlike preparation by world powers will inevitably and considerably increase the demand for jute goods at least for stockpiling purposes. Subsequent developments have shown that no power or combination of powers is prepared to go to war in a hurry. The trend today is more markedly toward settlement by negotiation than by armed conflict.

It would appear, however, that the Suez crisis has brought some indirect benefit to our jute goods industry and trade. The announcement by some English shipping companies of an increase in freight rates by 15 per cent, in view of their decision to divert their ships round the Cape of Good Hope, has adversely affected the Dundee Jute Industry. For an industry which is already handicapped by the delay in shipments of raw jute from Pakistan threats of a further delay, and increased freight will have a crippling effect. What applies to the Dundee Industry applies equally to the continental industry as well.

Any increase in freight will no doubt have some adverse effect on the Indian Industry also. But our mills will not have to worry either about the delay in getting their requirements of the raw material to the same extent as the continental mills or about an increase in its price due to rise in freight rates.

It may be recalled that, thanks to the refusal of Pakistan to reduce minimum export prices, on the one hand, and the total abolition of export duty by the Indian Government, on the other, Indian jute goods were able to underquote continental mills who, about this time last year, appeared to be in an unshakable position in world markets. From August 1955, however, continental mills have been continuously losing ground vis-a-vis Indian mills.

An indication as to the grave problems facing the continental mills may be had from the following report on the Jute Industry in West Germany, made available by the Indian Central Jute Committee:

"Fully restored to its prewar capacity in response to good export demand, the West German jute industry is at present burdened with excess production.

"While the output of the industry has remained stationary over the last three years and the consumption of jute has averaged between 85,000 and 90,000 tons, exports of jute goods have dropped from about 30 per cent of production in 1952 to 9 per cent in 1955. A further decline in exports, following on strong Indian competition, has been recorded in the first quarter of the current year."

"As the export outlets are gone, manufacturers have now to depend almost entirely on the home market for the sale of their output with he result that internal competition has increased. Prices have declined drastically and, in some instances, do not cover even the cost of production."

"Competition from the imported Indian goods, which amount to about 10 per cent of the domestic production as compared to only 1½ per cent in 1953, has been intensified by the recent lowering of tariff rates in West Germany."

With the possibility of increased freights looming large on the horizon, it is to be expected that the competivity of continental mills will be further reduced.

The news that one of the main reasons why burlap consumption in August has recorded a sizable increase over that of July is the marked switching over from paper bags to burlap, is, therefore, of considerable significance to Indian trade. The time seems to be particularly propitious for India to drive home the advantages wherever jute goods are in demand. Success in this regard can be India's only when our jute goods markets at home move in an orderly manner without giving room to speculative elements to make the market places their happy hunting ground.

Dull but steady conditions prevailed in the Jute goods market last week. During the earlier sessions, however, sentiment was bullish due to heavy covering by shippers. Toward close prices moved within a narrow range in the absence of foreign enquiries. In marked contrast to the previous week, very little was heard about the anticipated business from Australia and Argentina. A contributory factor to the quiet undertone had been the speculative selling pressure in raw jute Fatka. As higher prices for goods was due to a large extent to the firmness of raw jute, the reactionary trend in the fibre market had a depressing effect on the goods section as well.

Hessian 40" x 10 oz Ready which opened the week rather quiet at Rs 43-2 was at one time done upto Rs 43-10 but again fell back to close quiet at Rs 43. The reactionary trend was well pronounced in the sackings section where B Twills Ready opened at Rs 113 moved up to Rs 113-8 to be pushed back sharply to Rs 112-6 by close.

The following table shows price trends during the week.

	Week's Opening	Week's High	Week's Closing

World of Tea

General Rise in Exports

TEA exports from North-East India, South India and Indonesia have been generally higher as compared to the previous year. In the case of North-East India, exports to the UK, Canada, USA, Continent, USSR and Egypt have been good, although the Irish Republic—an important outlet of Indian tea—has imported less tea from India.

In the case of South Indian tea, exports to the UK have registered a sharp increase, while those to Canada and USA have slightly improved.

Shipments from Indonesia are substantially higher although shipments to Britain and Malaya have registered a sharp decline. Australia, which took only a small quantity of about 208,000 pounds, has lifted as much as 6.08 million pounds. The following tables show the exports made from North-East India, South India and Indonesia (figures in pounds):

Exports from North-East India:

Destination:	1-1-1956 to 31-8-1956	1-1-1955 to 31-8-1955
Britain ..	173,011,805	105,281,734
Australia ..	1,554,680	2,743,226
Canada ..	8,849,857	6,563,144
U.S.A. ..	12,706,129	8,586,539
Irish Republic	6,240,084	9,932,640
Continent ..	6,715,247	2,704,231
Egypt ..	9,623,338	6,484,883
All Other Places	21,972,949	17,476,296
Total ..	240,67,089	159,772,693

Exports from South India:

	1-1-1956 to 30-6-1956	1-1-1955 to 30-6-1955
Britain ..	25,720,163	21,980,046
Australia ..	2,677,794	172,827
Canada ..	4126,636	3,159,301
U.S.A. ..	4,209,596	3,537,550
Egypt ..	2,145,604	'889,120
All Other Places	1,528,293	1,386,875
Total ..	40,407,996	31,125,719

Exports from Indonesia:

	1-1-1956 to 30-6-1956	1-1-1955 to 30-6-1955
Britain ..	6,048,361	3,868,330
Holland ..	15,082,289	10,727,930
Australia ..	6,083,191	207,878
Canada ..	19,136	34,122
U.S.A. ..	2,710,387	2,252,323
Egypt ..	793,837	467,936
All Other Places	6,013,625	9,876,999
Total ..	36,750,826	27,435,518

Meanwhile, in the Export Sale held in Calcutta this week, offerings were as much as 57,000 packages as against only 55,500 packages offered in the previous week. There was a very strong and general demand, both export and internal buyers competing strongly. Medium and Low Medium Assams were sold well and were generally one to two annas per pound dearer, buyers following quality closely.

Fannings were again a very strong feature and were dearer, especially the black types which were often as much as As 4 per pound above last rates. Commons and Commonest sorts were in good demand, being half to one anna dearer. There was much more demand for CTC Assams which were As 8 to As 10 per pound dearer, while orthodox BOPs and OFs were considerably dearer, depending on quality.

Darjeeling met with a fair demand, but were generally As 2 per pound easier, while Leaf grades were about firm on last rates. Following rates were quoted per pound:—Clean Black Pekoe Rs 1-13-0; Plain BP Rs 1-9-6 to Rs 1-10-0; Medium Assam BP Rs 2-0-0 and Best CTC Assam BP Rs 3-8-0 to Rs 3-10-0.

In the Internal Sale, offerings consisted of 16,372 chests of Dusts for which there was a very strong and general demand. The strongest feature of the sale was clean black types, suitable for the Middle East. These were generally As 2 to As 3 per pound dearer, while the few best CTC Assams, on offer, were sold well. The remaining CTCs, however, were rather irregular, but generally declined by As 2 to As 3. Mediums with quality and better Commons advanced by one to two annas and sometimes more. Following rates were quoted per pound:—Medium Dooars Dust Rs 2-1-0; Medium Assam Grainy Dust Rs 2-2-0 to Rs 2-3-0; Medium Assam CTC Dust Rs 2-8-0 and Best Assam CTC Dust Rs 3-4-0 to Rs 3-8-0.

The offerings of leaf grades consisted of 887 packages for which there was a good demand at prices which were generally fully firm to dearer.

In the Export Quota section, the rates moved beween 22 and 24 pies, to finish the week at 23 pies per pound.

In the Cochin market, offerings were 1,423,902 pounds. The quality of most teas, on offer, showed a further shight improvement. There was a good demand from the outset at very irregular rates, but the market quoted As 2 to As 3 per pound dearer with the exception of Best Liquoring descriptions which were a very strong feature.

Best Liquoring Nilgiri Brokens registered advances of from As 4 to As 8 per pound, while their Fannings often appreciated to an even greater extent. The Lower Nilgiris also came to a much dearer market, buyers following quality closely. Good Medium Brokens were As 2 to As 4 per pound dearer, but their Fannings met with very keen competition at considerably enhanced levels. All Medium and Low Medium Brokens and Fannings generally ruled As 2 to As 3 dearer, while low-grown descriptions were sold at one to two annas above last rates.

Black Leaf Brokens were in strong demand and sold at an advance of one to two annas per pound while Fannings, suitable for Egypt, met with keen competition at irregular rates. Whole Leaf grades were firm to dearer with the exception of Nilgiri descriptions which came to a very strong market. Following rates were quoted:—Plain BP Rs 1-8-6; Low Medium BOP Rs 1-14-0 to Rs 1-15-0; Medium BOP Rs 2-1-0 to Rs 2-3-0; Good BOP Rs 3-0-0 (nominaly and well-made OP Rs 2-12-0.

In the auction held at Amsterdam, offerings comprised 3,057 packages of Java tea and 2,655 packages of Sumatra tea. The bulk of the offerings was bought by Dutch tea-packers, stocking up against possible diversion of shipping around Cape of Good Hope. Prices varied from 182 to 309 cents per half kilo. Next auction will be held on October 11 when offerings will comprise some 4,000 packages.

In London auctions, 33,423 packages were catalogued for sale; but only 18,768 packages were offered for sale this week. There was again a very active demand for all descriptions. Good quality teas and coloury Mediums were considerably dearer. Low descriptions showed advances of 2d to 4d per pound. Plain Fannings were paid at 3sh 7d per pound.

Tea stocks in London, as on the 14th September 1956, were 109.13 million pounds as compared to 111.80 million pounds in the previous week and 103.49 million pounds a year ago. Landed between 8th and 14th September 1956 were 7.86 million pounds, while deliveries during the same period were 10.54 million pounds.

World Overseas

US Notes

UNITED States trade with the rest of the world continues at a record pace. The Department of Commerce now estimates US imports during July at $1,050 million, an increase of 2 per cent over June, 19 per cent over July last year, and 11 per cent over the 1955 monthly average. For the first seven months of the year, US imports came to $7,390 million, a gain of 16 per cent over the same period of 1955.

Exports also have been soaring from July this year. They have averaged $1,535 million a month, a gain of more than 18 per cent over the 1955 monthly average.

US Trade Missions touring other countries—such as those lately in Sweden and Syria—have sent home reports to the effect that there is a wide-spread interest abroad in further increasing trade with the United States. The US Government also have been active on fronts other than International Trade Fairs to stimulate US trade with the rest of the world.

A plan of stepped-up assistance in financing exports of agricultural commodities on a short-term basis was announced last week by the US Export-Import Bank of Washington. The Bank now is prepared to accept applications from overseas buyers who desire credits for obtaining US agricultural reserves if such credit is not available from usual commercial sources. Loans for this purpose will be extended for periods ranging from six months to one year, and longer terms may be authorised when warranted by special circumstances. The financing is available for 15 commodities, including cheese, corn, rice, cotton, tobacco, vegetable oils and wheat.

On the investment side, the US International Co-operation Administration (ICA) announced recently the issuance of the first investment guarantee contracts to cover US investments in Latin America. The contracts will finance the organisation of two firms in Guatemala which will guarantee the investments against loss in case of expropriation and insure the convertibility into dollars of receipts and repayments from the investments. The Guatemala project will provide for the influx not of private US capital, but also of technical and managerial skills. At the same time ICA was announcing its first investment guarantees covering a business venture in Thailand. These will cover an equity investment to finance a tapioca milling company to be formed by an Indian firm in association with an American company. The ICA now offers guarantees for the protection of new private American investments in some 30 countries which have concluded appropriate agreements with the United States. To qualify for this type of insurance, an investment project must be approved by the foreign Government as well as the US Government, and must aid in the economic development or trade of the host country.

An interesting sidelight on the benefits of such private investment comes from an article by Professor John H. Dunning published in the District Bank Review of London. Through American investments in British industry, Mr Dunning says Britain has access to more than one-quarter of the $1,600 million spent on research each year by American industry. The post-war development of British industry, he notes, "owes more to research originated in American trade in this country." This is not meant to be derogatory to Britain's many industrial achievements.

"Insist for your containers on "BHARAT". They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 "BHARAT BARRELS" price is Rs. 25-8 ex-factory. If you do not get BHARAT BARRELS, Write to Box No. 247, BOMBAY."

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THE handling of the Suez Canal crisis has not redounded to the credit of any of the nations that have been drawn into or have been affected by the imbroglio. The starting point of the crisis is, of course, not the nationalisation itself. For, the effectual provocation for the nationalisation had been offered a week earlier when the West "reluctantly" felt compelled to withdraw the aid that had been promised for the financing of the Aswan High Dam. For America's part, the decision to back down on its offer of aid may have been nothing more than another of Mr John Foster Dulles's calculated risks, another of the risks that backfired and boomeranged on the West. As far as Britain was concerned, I am afraid that it has been more or less a hapless victim. To all intents and purposes, America's withdrawal of its aid offer also in effect meant that British aid would be unavailing. Thus, the UK Government announcement in this regard was a mere formality, just a post-script. Then followed the dramatic declaration by Colonel Nasser that the Egyptian Government had nationalised the Suez Canal. While the legal aspect of the expropriation does not seem to be in doubt, there are many, including friends of Egypt, who wish that the take-over had been conducted with less melodramatics. As it is, that which could have been concluded by negotiation and consultation is now a matter which has aroused bitter and even bellicose sentiment in some parts of the world.

✱

The Suez Conference to consider the modus operandi for conducting discussions with Egypt was unfortunately foredoomed to failure in that its suggestions could not but evoke an unpreparedness on Egypt's part to negotiate on the basis at that conference evolved and suggested. Only four nations disagreed with the majority proposals; and the decision was taken to convey a resume of the proteedings at the conference, and especially representing the majority view-point, by means of a 5-man Mission headed by Mr Robert Menzies of Australia. This Mission was equally doomed to be unsuccessful. The rigid tenet that international control alone would be acceptable to the West made it unavoidable that Colonel Nasser could not entertain the proposals so put forward because, as he felt, these would constitute an infringement of Egypt's sovereignty. In the background, less publicised than had been anticipated, Mr Krishna Menon was formulating an Indian plan for solving the Suez Canal crisis. For reasons which we can never be quite sure of, the West, however, was satisfied that Colonel Nasser would not be able to refuse to consider the Western proposals. The Indian plan at that time apparently died a still-born death.

✱

When it became known that the Menzies mission had failed, the bellicosity in Britain and in France reached new heights. Sir Anthony Eden was provoked to utter strong warnings. I fancy that proddings from Conservative back-benchers, who were already bemoaning the break-up of the Empire, were responsible for the sabre-rattling attitude of the British Prime Minister. A similar show of strength in France was inevitable, if only that the French Government repeatedly requires such bolstering in order to elongate the life of the series of governments which have governed France in the recent past. But, side by side with the aggressive marshalling of forces (for purposes of defence), a new phase was started in the Suez crisis. Partly, this new phase was a continuation of the economic squeeze that began with the freezing of Egypt's sterling balances. In the result, however, the sentiment thus given expression to could only be compared with a Cyrano who might cut off his nose to spite his face. For, I cannot for the life of me imagine that serious thought was being given to the diversion of ships, and particularly the tanker fleet, round the Cape to avoid the Canal. The extent of the embarrassment to Egypt by such diversion would have been far less than the monetary cost of such action to Britain and France. Secondly, the diversion was scarcely practicable. The higher freight charges would have told upon British exports; and the turn-round of ships would have been so affected as further to diminish the volume of British exports. Moreover, the present size of the British tanker fleet could by no means enable oil being routed round the Cape. In this context, however, there were mutterings that the US would be prepared to de-mothball tankers that had been utilised during the Second World War. But, even then, the higher cost of freight was inescapable. There has been much talk of diversion but little action. Some of the foreign lines that had earlier announced that they would be avoiding the Canal have now made a volte face.

✱

This is not to say that the shipping lines intended deliberately to avoid the Canal for the primary purpose of disconcerting Egypt. On the contrary, I must make it clear that it was possible for them sincerely to entertain the apprehension that, with the withdrawal of the foreign pilots working for the Suez Company, the remnant of the pilot strength would be unable to handle the Suez traffic. Here, again, efforts to convince the world of Egypt's inability on its own to manage the Canal have gone awry. It would appear that the work of pilot of the Suez Canal is neither as arduous nor as difficult a task as it was made out to be. The Canal has continued in satisfactory operation, the withdrawal of the foreign pilots notwithstanding.

✱

At such a juncture, Mr Dulles fathered the idea of a Canal User's Association. Perhaps, the US Secretary of State's proposal in this regard had not been finalised and was still in its vague form. But Sir Anthony Eden tried to give substance to the idea, in announcing a fresh conference of the 18 nations which, at the first conference, had subscribed to the majority proposals. This second conference turned out to be an even greater failure than the first. The Asian countries which attended it were unable to extend their support to a set of proposals that avowedly sought to brow-beat Egypt. What is more, Mr Dulles in Washington quite categorically was urging that that a resort to force had to be avoided. There was, consequently, considerable watering-down of the notion of the Canal Users Association by the time the second conference had ended. Once again, a stale-mate subsisted; and the question has since been referred to the UN Security Council by Britain and France, on the one hand, and by Egypt, on the other.

✱

Why have we been having recurrent impasses in the dispute? Why is it that every attempt at finding a basis for negotiation has ended in dismal failure? The answers lie, it seems to me, in the fact that the West's approach has been anything but conciliatory. What the West has stubbornly refused to recognise is the fait accompli of nationalisation. Instead, it seeks to set back the clock, and to denationalise the Canal. It was perhaps possible for the Tory Government thus to reverse a process instituted within Britain under the aegis of a Labour Government; it is quite another to succeed in achieving the status quo ante when it concerns another country. The UK attitude has thus far been directed to the dethronement of Colonel Nasser, as if such a coup would have had the desired effect. Unfortunately, threat and intimidation have been ineffective. The Economist of London thus analyses the futility of British policy:

"....The original mistaken decision personally to bring down Nasser—debellare superbum—has dictated the subsequent course of events. If support for the users' association is not now secured from a great majority of maritime nations—and, still more, if it is not most firmly sustained by America—then Britain faces a severe diplomatic defeat. Even if it avoids this, economic measures by a users' front, including the boycott, would not necessarily bring Egypt to its knees; in any case,

the attempt to do so is bound to be expensive—and, meanwhile, the traffic is still obstinately moving through the canal. All this seems a heavy risk to run for the sake of dethroning a Middle East dictator who, if a Hitler, is much littler; and who might more easily, and more realistically, have been brought to reason by firmness backed by negotiation, instead of being confronted from the start by firmness backed by ultimatum alone."

It is fortunate that the Security Council is now to consider the matter. But it is doubtful if the Council can help in the resolution of the crisis. For, the USSR is almost certain to use its veto in the contingency that the Council attempts to pass sanctions against Egypt. In such a background, the recent statement of Mr Menzies in the Australian Parliament has been anything but helpful. To assert that, if the Council does not authorise such sanctions, it will be the responsibility of the individual countries to intensify the economic pressure, is surely once more indicative of the "ultimatum alone" policy that is now known to be futile. Nor will Mr Menzies have contributed to a lessening of tension, so that negotiations could be conducted in a better atmosphere.

*

The West's mistake has, quite clearly, been to adopt what Walter Lipmann describes as "very nearly an inflexible position." Besides, "the Western position has been weakened by...threats and backdowns." Mr Lippmann concludes his article in this wise:

"The rights of the users will be only as good as their power and influence, which includes their ability to obtain the support of other nations. For that reason we are, I believe, missing the bus in not getting the Soviet Union and India explicitly and firmly aligned behind a new treaty which defines the rights of the users."

*

If, as seems possible, the Security Council can be of little help, the prospect may be an indefinite continuance of crisis conditions. But, obviously, a long drawn-out impasse has to be avoided because, so long as a solution is not forthcoming, we shall have with us the threat of a war that might be touched off by the exaggeration of a minor incident. India's mediatory efforts would seem to be called for. And such efforts already appear to be afoot. Mr Krishna Menon's discussions with Colonel Nasser, and his confabulations with Sir Anthony Eden and Mr Selwyn Lloyd, of the last two weeks are surely intended to reconcile the attitudes and approaches of the two parties. Force, clearly, is ruled out. A negotiated settlement is the only answer. In this recognition, I think it is not too much to hope that Indian diplomatic efforts will find the via media acceptable to Egypt and to the users of the canal; such a consummation is, at any rate, devoutly to be wished for.

EAVESDROPPER.

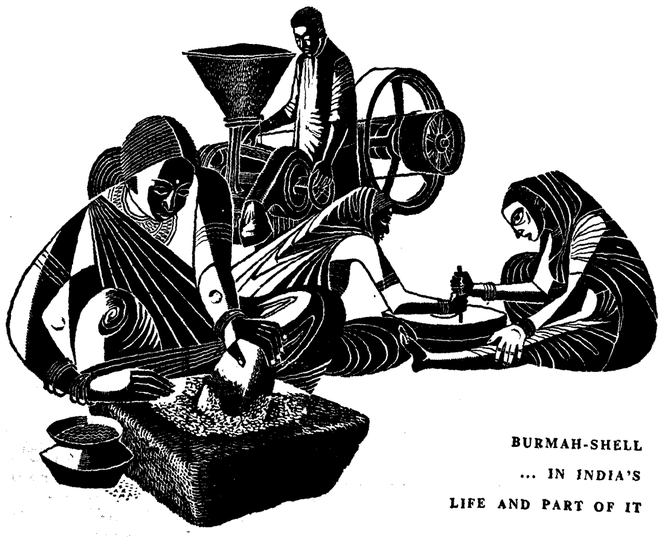
WORLD OF BUSINESS

(Continued from page 603)

to be granted automatically to a long list of raw materials, foodstuffs and mechanical equipment. Importers were given freedom in selecting the country of purchase and the volume and the timing of imports.



Both France and Germany proceeded further in the direction of liberalising OEEC imports. India extended the sphere of liberal imports and relaxed the restrictions on essential imports from the dollar area, at the same time, increasing the quotas for selected industrial and consumer goods. In the Middle East, Iraq abolished import licensing requirements for fifty-two items. Jordan effected a substantial modification of exchange and trade control measures, legalised a free exchange market for transactions in Arab League currencies. Lebanon removed licenses for a number of imports.

Thailand and Pakistan were foremost in the liberalisation of trade restrictions. Thailand abolished import licensing for all commodities, barring a small group. Pakistan abolished importing licenses on the basis of currency areas, and legalised free world purchases for all items on the import list for the first half of 1955, with the exception of items entered into bilateral agreements.

The Power to do work

Energy means the power to do work, and India needs all the energy she can get if the targets of the Second Five Year Plan are to be fulfilled. The proportion of commercial energy—that is to say, coal, electricity and oil—to the whole energy system is still extremely low in India. Nevertheless, it is beginning to have its impact on traditional methods and ways of life, even in remote rural areas.

The contribution made by oil in the commercial energy pattern in India has increased by 100% since 1948. Oil is the most flexible source of energy available... it is, in fact, 'packaged power' in an easily handled form. It is our job to maintain and extend a distribution organization which will ensure that energy from oil flows to all parts of the country cheaply, efficiently and in sufficient quantities.

Bombay Review

Toward Stimulating Exports

THE recent increases in the excise duty on cloth afforded Parliament and the public an opportunity to review the problems of textile production in a realistic spirit. From the Parliamentary debate, some useful by-products emerged. The Finance Minister could tell his party-men frankly and forcefully how they could not throttle mill-production and at the same time keep the country adequately supplied with cloth. While he was anxious that the consumer should in no way suffer, he could not let go the occasion without reminding those ideologically poised against the mill industry, that they were doing a wrong thing and the consequences of their attitude and preference could no longer be a matter for social indifference. It is fortunate that the debate enabled a general realisation that immediately there is need for an enthusiastic and completely unrestrained programme of production in many spheres, particularly in cloth.

The Prime Minister also felt impelled to dwell on this subject, when he was speaking in Parliament subsequently on the Second Five Year Plan. He explained that the Ambar Charka and the handloom industry had to play an important part in textile production but the scope given to these should not be misconstrued as implying any restraint on mill production. He pointed out quite emphatically that India could not afford to lag behind when the entire world outside was keen on progressing with the most efficient and up-to-date techniques.

Thus, from the Government side, there is already a salutary change of opinion on the issue of the place of the mill industry and the demands to be made on it, especially in relation to complementary sources of production.

Delivering his presidential address at the half-yearly General Meeting of the All India Exporters' Association, Mr Purshotamdas R. Ashar referred to this background. With evident satisfaction, he recalled the Prime Minister's statement in Parliament and gladly endorsed its view point. While welcoming the new turn in policy, Mr Ashar felt that many things more had to be done to revitalise India's cotton textile exports.

Just now, the position is not at all comforting, and viewed in the light of the foreign exchange requirements of the Second Plan the recent deterioration in the level of textile exports should be a matter of special concern. In 1954, 810 million yards valued at Rs 66.9 crores was exported. In 1955, the exports dropped to 693 million yards earning Rs 67.43 crores. For the current year, a further slowing down has been noticeable. In the first six months, the exports did not go beyond 342 million yards, a disappointing performance against the planned target of 1,000 million yards per annum.

Mr Ashar does not subscribe to the view that higher excise duties would lead to any considerable increase in textile exports. As long as there is a gap between consumption and production and the purchasing power of the masses tends to stimulate consumption further, the impact of excise duties on exports having a competitive domestic demand is not likely to be much. The problem has to be tackled through other methods.

The President of the All-India Exporters' Association suggests the following steps: Under the new textile policy announced last June, about 150 million yards of cloth is being kept as a reserve over and above the immediate allotment between the three textile sectors. It is the intention of the Government to distribute this quantity between the three sectors, as occasion demands. The entire quota should now be allotted to the mills. Alongside, Mr Ashar also pleads for a proper demarcation between the spheres of mill and handloom production.

Secondly, the Government have permitted the installation of new looms. The actual increase in output through the addition of new looms will take nearly two years. Meanwhile more mills could be permitted to start third-shift working on the condition that the resulting extra production should be reserved for exports.

A quick and all-round increase in production is the only answer, whether it be a question of putting ampler supplies in the domestic market or one of increasing imports. For some time, the present conflict between the two demands is bound to be sustained. Mr Ashar complains that there is a diversion of cloth for home consumption. Actually, the figures do not tell a complete story in this respect. The comparatively high level of domestic prices and the high profits consequent on it is largely responsible for coaxing away potential exports into the domestic market. But in the present state of the economy, this has become inevitable. The per capita consumption of cloth has increased from 11.7 million yards in 1951 to 15.9 million yards in 1955. On the basis of the figure of 3710 million yards, representing the net available domestic supply for the first seven months of this year, per capita consumption rises to about 16.8 million yards. The consumption level is not likely to stagnate even at this figure, unless prices go further up, a contingency which the Government are keen on avoiding. In other words, the saturation point for domestic demand can be much higher and the whole question of textile production has to be tackled with reference to the need for retaining the export target and for satisfying a domestic demand which is likely to be on a rising curve, possibly for some years.

The reservation of any specific quota for exports may therefore become difficult, though some thing on the lines of a proportionate allotment out of future increases will not be unworkable or unfair. That export promotion, particularly in cloth, calls for special treatment is obvious. One of the principal reasons for the recent setback lies in the uncompetitive price levels. If there is to be a free and unrestrained impact of the internal price level on exports, the latter is not likely to move up, except sluggishly.

Mr Ashar, reviewing the export situation in general, has referred to the advent of the State Trading Corporation and the deleterious effect of the activities of the Corporation on private trade.

This has become a familiar thesis in the pleadings of the private sector and one is afraid, the familiarity has also blunted its edge to some extent.

In this case, however, what Mr Ashar wants is only that the range of the State Trading Corporation must be specified, ending the state of suspense and uncertainty to which the private trade has been driven to through unexpected extension of the Corporation's activities. This is a legitimate demand. While there is a broad demarcation in the manufacturing sphere, a similar understanding between the private sector in commerce and the State Trading Corporation is desirable.

YOUR COLLECTION PROBLEM SOLVED?

Yes, with a copy of the BANKING ALMANAC (1956-57 Edition just published). You would have the names and addresses of all banks at every place in India at your finger tips.

Also contains complete particulars about Banks in India; the leading International Banks of the whole world and a mine full of other valuable information for businessmen.

An INDISPENSABLE Book of Reference for Bankers, Manufacturers, Traders, Planters, Importers and Exporters and in fact for every one dealing with Banks.

Import Policy

When the import policy for July-December 1956 period was announced, it was generally believed that in the context of the increasing requirements of capital machinery under the Second Five Year Plan, the revisions effected would strike a fair balance between the urgent need to speed up industrialisation on the one hand and consumer demand on the other.

In view of the limited foreign exchange resources of the country, it has been recognised on all hands that imports other than capital plant and machinery have perforce to be subjected to close scrutiny before they are permitted. Private business has also expressed its agreement with the standpoint of Government that wherever indigenous production has shown positive indications of increased production of quality goods at reasonably fair prices, imports should be steadily curtailed.

But when Government has sought to extend the principle to items, the production of which has been expected to commence within the country or production of which has been anticipated to attain an increase, calculations seem to have gone wrong.

Speaking at the Six Monthly General Meeting of the All India Importers' Association, Mr Shantilal M. Shah, President, has pointed out that restriction placed on imports of certain items on anticipated production by indigenous industries have had serious repercussions on the development of industries. It has been found that there is a grave shortage in such essential items as ball bearings, electric motors and trasformers. Shortage invariably results in high prices which in their turn restrict consumption. The ultimate outcome is serious financial loss and the closing down of industries producing these items.

The difficulties experienced by industries due to the too restrictive policy adopted by Government seem to be widespread. Mr Shah recalls the remarks made in this connection by Mr K. G. Milne, Chairman of the Bombay Suburban Electric Supply Limited. Mr Milne has explained how indigenous manufacturers themselves have been responsible for retarding the progress of an essential enterprise such as the Bombay Suburban. It is common knowledge that power development should take rapid strides in the country if the industrial development is to proceed according to plan. But Government's import policy has put serious obstacles in the way. On the one hand indigenous manufacturers are unable to meet the demand and on the other Government do not allow consumers to get their urgent requirements through imports.

It would appear that there is urgent need for a revision of Government's import policy in regard to certain important items in the light of difficulties experienced by some essential industries in the country.

*

State Enterprises

Serious charges were levelled against the administrations of State Enterprises by Mr C. H. Bhabha while speaking at the Rotary Club last week. Coming from a former Union Commerce Minister, the remarks cannot be brushed aside as mere propaganda. In drawing attention to the irregularities, Mr Bhabha has not minced words. He characterises the State enterprises as "happy hunting ground for politicians and refuge for relations of powers that be."

The gravamen of Mr Bhabha's charges is that between the politicians who loudly proclaim that they are leading the nation toward a socialistic society and a bureaucracy which is safely entrenched behind state enterprises, the real interests of the people are sorely neglected.

Private enterprise has become to be looked down with suspicion and despite the fact that the Constitution grants the right to own property, this fundamental privilege is sought to be deprived in diverse ways. It would appear that the numerous regulations and rules under the new Company Act and similar Acts are applicable only to private business. State enterprises are exempted from many of the provisions under the laws of the land with the result that the officials have become the virtual dictators of these enterprises.

Though it may be true that irregularities, some rather grave, exist in the working of state enterprises, there does not seem to be any justification for condemning them wholesale. Mr Bhabha's contention that private sector has been relegated to the background also does not seem to find support among the majority of businessmen in the country.

GATEWAY MARKETS

Mixed Trend in Oils and Oilseeds Prices

THE markets for Oils and Oilseeds gave a mixed performance during the past week. The abolition of the export duty of Rs 250 per ton on Linseed Oil was greeted with enthusiasm by market circles and prices, in ready and futures sections, were pushed up to the week's highest levels. While Groundnuts showed considerable resistance after the recent setback, Castorseeds continued to remain depressed following reports of favourable weather.

For reasons stated above, the Linseed section, both for ready and forward, ruled strong as the abolition of the export duty removed the wide disparity in the price of Linseed Oil at home and abroad. Linseed May delivery shot up at one time to Rs 27-12 from Rs 26-8, to finish the week slightly lower at Rs 26-12 as buyers preferred to book their profits, pending a clear idea of the export prospects. Linseed ready, after touching Rs 31-8, finished at Rs 31. There was good business in Linseed Oil upto Rs 16¾.

Activity in Castor futures was of a routine nature with the majority of operators inclined to square up their position in the maturing contract. With only a few days left for the termination of the current contract, bull operators made a fresh bid to turn the scales in their favour and they were considerably helped by the comparatively heavy position obtaining in the market. Castor September delivery, therefore, moved irregulary between Rs 143-8 and Rs 146-8, to finish at the last quoted level. Castor May delivery opened at Rs 125-14 and, after touching a low of Rs 123-4, advanced to Rs 126-14, to finish the week at Rs 125-4. Ready was quoted at Rs 29 and Castor Oil, commercial quality, at Rs 15-6.

Reports of favourable weather from the principal producing countries mainly depressed sentiment in the Groundnut section. Operators, however, held tight to near positions in view of the shortage of ready goods resulting from comparatively small arrivals. Traders were generally cautious in their attitude to distant positions on fears that the arrivals of the new crop might lead to a temporary fall in prices. Groundnut February delivery opened at Rs 131-13 and finished lower at Rs 130-12. In the ready section, the rate eased to Rs 34-8. Groundnut Oil, however, ruled firm at Rs 18-12, thanks to buying by vanaspati interests.

Gold & Silver

In quiet and featureless trading, prices in the bullion amrket fluctuated aimlessly on small buying and selling orders. Values were hardly tested in almost negligible turnover in both the Gold and Silver sections.

Gold remained steady after being done lower earlier on offerings by spot merchants as the receipts of unrefined metals at the refineries were higher. Arrivals amounted to 1,000 tolas as against an offtake of 2,000 tolas. Unrefined metal receipts amounted to 4,500 tolas. Gold Asauj moved between Rs 102-15 and Rs 103-2, to finish at Rs 103-1. Spot hovered narrowly around Rs 103, while Sovereign was quoted steady at Rs 67.

There was an impressive offtake in the Silver section. Arrivals amounted to 19 bars as against an offtake of 22 bars. Unrefined metal receipts amounted to 18 bars. Silver Asauj moved between Rs 173-2 and Rs 173-11, to finish at Rs 173-10. Ready, after touching a low of Rs 172-10, finished better at Rs 173-10.

*

Yarn

Conditions in the Yarn market continued to remain dull with prices developing an easier tendency in the absence of buying enquiries. Daily turnover was limited.

In the futures section, 120 D/S October delivery fluctuated irregularly between Rs 776 and Rs 784, to finish at Rs 777. December was placed at a premium of Rs 14 at Rs Rs 791. 120D Japan was quoted at Rs 3-12-6, 150D Japan at Rs 4-2, 120D Italy at Rs 3-13-6 and 150D Italy at Rs 3-15.

Trading in the ready section was featureless. The offtake in Staple-Fibre yarn was extremely poor due to reports of heavy stocks in the consuming areas, particularly in the Punjab and Uttar Pradesh.

Art Silk Yarn showed a minor improvement in the case of 120D first quality National Rayon Cone Yarns.

The easy trend in raw cotton kept the Cotton Yarn section irregular, and prices of all varieties declined by about 5 per cent due to heavy stocks and limited demand. In the South, however, fine and super-fine varieties showed an improvement.

*

Metals

The Metal market, after showing initial firmness, turned a shade quieter toward the close due to profit-taking in the absence of any fresh demand. Copper ready was quoted at Rs 217-8 per cwt against Rs 220 quoted in the previous week.

World *of* Cotton

Bombay Review

Demand Continues

THE demand for Cotton, both indigenous and foreign varieties, continues to be in evidence, thanks to the report that the Government of India have permitted mills to raise their output of cloth. Leading mills, though fully covered till November-end, appear to be eager buyers for all ready stocks available in upcountry markets, particularly for Khandesh and Madhya Pradesh 197-3, 320F, 216F and Vijay. Their interest in New Crop positions has also considerably increased. Also, the demand for foreign growths is keen and something like 10,000 bales were reported to have changed hands last week. Besides, the offer of US cotton at Rs 1,300 per candy has prompted some mills to make commitments for November/December shipments, subject to the sanction of import licences.

The firm trend in the market is also aided by the developments in the Suez situation. If the expansion of the mill industry is allowed, the consumption of cotton is expected to show a new high in the current seaseon, at around 55 lakh bales. The new crop has already started moving in the Punjab and some parts of Rajasthan, while the marketing season is expected to start in Madhya Pradesh after about three weeks. Judged by the early arrivals of the new crop, both grade and staple varieties are reported to have been satisfactory.

Again, the world supply of cotton is also expected to be one of the largest on record, due to the heavy carry-over in the United States. The acreage planted to cotton outside the United States, in the year ended on July 31, amounted to 46 million—some 3,500,000 acres higher than in 1954/55. In this connection, the International Cotton Advisory Committee has stated that "it is tempting to assume that there can be some improvement in the average yield during the current season.

×

FUTURES TRADING

Trading in the Futures section remained rather subdued following the Government's order prohibiting mills from hoarding textile production. There was, therefore, general liquidation and the undertone remained quiet at the close. Turnover was 15,000 bales. ICC Jharilla March opened around Rs 690 and, after, improving to Rs 691, finished the week at Rs 690. ICC Vijay April opened at Rs 818 and, after touching a high of Rs 819 and a low of Rs 816, finished at Rs 817.

The Central India Cotton Association, Indore, has been granted recognition to conduct forward trading in cotton and cotton seed by the Government. The Association will provide facilities for cotton and cotton seed produced in Madhya Pradesh, Madhya Bharat and the adjacent districts of Rajasthan. Trading will be conducted through two rings, one at Indore and the other at Ujjain and in cotton seed through the ring at Ujjain. The desirability of continuing trading through two rings will be reviewed by the Forward Markets Commission at the end of one year in the light of such data as might then become available.

×

SPOT MARKET

The spot section continued to rule steady as mills continued buying Jharilla, Vijay and Dholera varieties.

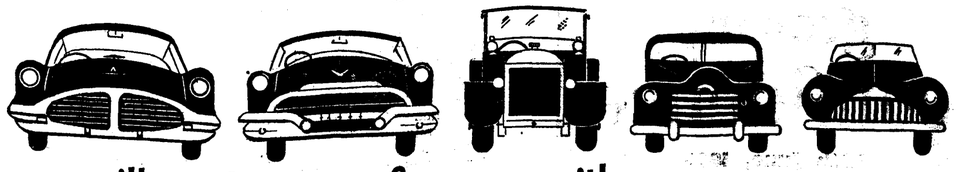
In the export section, some business was reported done in Bengal and Dhollera varieties. The Government announcement with regard to revalidation of shipments for half the quantity, remaining unshipped against export licences for Indian cotton issued during the previous season, failed to enthuse shippers. Among foreign growths, good business was reported done in Sudan, Pima and Egyptian varieties.

Following rates were quoted:—Bengal Rse 700 to Rs 740; Oomra Rs 800 to Rs 820; Dhollera Rs 800 to Rs 825; Jharilla Rs 800 to Rs 840; Vijay Rs 960 to Rs 970; AR/BP/52 Rs 1,700 to Rs 1,725 and ER/Bushoga Rs 1,200 to Rs 1,265.

×

COTTON STATISTICS

Exports by rail from 1st to 20th September 1956 were 21,500 bales. Estimated mill consumption in Bombay, during the same period, was 67,000 bales as compared to 77,000 bales in the corresponding period of the previous year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 20th September 1956, was 453,669 bales as compared to 846,278 bales on the corresponding date of last year.



×

KARACHI COTTON MARKET

Trading in the Karachi cotton market was featureless. Poor offtake and fears of American competition were the main depressing factors. There was also the fear of the possibility of increased competition from Indian Assams and Comillas, the permission for the export of which was announced by the Government of India recently. The announcement of revalidating unutilised export licences also imparted weakness. Prices, as a result, drifted to lower levels. Sind Deshi was quoted at Rs 96; Punjab Deshi at Rs 88; 4F Roller at Rs 77-12; Punjab Roller at Rs 78-4, NT Roller at Rs 78-4, 289F Punjab Roller at Rs 82-4 and SG at Rs 86-4.

Queering the Pitch

WHEN King Ibn Saud of Saudi Arabia visited India last winter, he was greatly impressed by the almost religious solicitude for the rights of minorities in this country. So much so, before he left India he urged the 35 million Muslims, who are citizens, to look upon Mr Nehru as their great protector and to be loyal to him. Notwithstanding the general confidence of the Muslims in India, I am afraid that strenuous efforts continue to be made by our neighbour country to discredit the so-called Hindu communalism of India. The anxiety to belittle India is, of course, not a new phenomenon in Indo-Pakistan relations. But the exents of the past few weeks, not excluding Mr Nehru's courtesy visit to Saudi Arabia aned the enthusiastic reception accorded to him, show signs of a palpable intensification of attempts to besmirch India as a secular State.

The Pakistan Press, or at any rate a section of it, has been ranting about genocide in this country. The apparent and immediate provocation was the belated discovery that an American book, re-printed in India, is less than fair to the Islamic religion. This was utilised by the enervated and enfeebled Muslim League—for the first time outside of power since the inception of Pakistan—to launch a pernicious smear campaign directed against India. Mr Nehru's effigy was burnt. Processions were taken out. The Indian High Commissioner's office witnessed demonstrations outside it. But, apparently, it suited the Muslim League to remember to forget that the book was published first in America.

Such tactics, of course, will not greatly trouble Indian sentiment. As Brutus reproved Cassius, there is no terror for us in such threats, because India is armed so strong in honesty that they pass by us as the idle wind, which we respect not. Indeed, Muslims in India have made it a point emphatically to decry the wild charges instituted by the Muslim League in Pakistan.

It would appear that jealousy has also been the reason for the latest outburst against India. At Riyadh and Dahran, Mr Nehru was welcomed as the messenger or prophet of peace. This, presumably, has infuriated Pakistan sensibilities. For, although it is the bridge between the Baghdad Pact and Seato, Pakistan's prestige in and its claims to the status of influencing the Islamic World are both at a very low ebb. The alignment with the West has prevented Pakistan policy being in sympathy with Arab policy; and Arab policy, with the taking over of the Suez Canal by Egypt, has become more nationalistic. In this background, it has happened that India has been much more a staunch friend to the Arab world than has been Pakistan. The success of Mr Nehru's visit is thus sought to be minimised or offset by a smear campaign.

In the meanwhile, we have the queer position wherein it is Pakistan which is seeking assurance from India as to the treatment of minorities. It has been reported that the newly incumbent Prime Minister, Mr H. S. Suhrawardy, is in communication with Mr Nehru on this question. It would have been more apposite if assurances were instead being sought by India. For, not only is the repatriation to India of the Hindus in Pakistan steady and sizable, we moreover have a continuing influx of Pakistani nationals into this country. The charge by the Muslim League is that there is genocide in this country: it is strange that Pakisani nationals should be choosing to come here in such large numbers.

These are not, as I say, matters that should unduly cause us concern. But what, however, we have to take note of is the possibility that a smear campaign can queer India's goods name, especially since a section of the foreign press is frankly inimical to India. For example, I may mention that the Sunday Express had a tirade of an article when Mr Nehru attended the Commonwealth Conference of Prime Ministers. The scurrilousness of the article can easily be imagined; I do not propose to sully this despatch with a quotation from it.

There are other attempts to assert that India is really the land of the Hindus. A book published by Ishtiaq Husain Qureshi, entitled "The Pakistan Way of Life", presents a case, seemingly backed by historical facts, to indicate that, in a hundred years, the Muslim Community in India will have ceased to exist. Mr L. F. Rushbrook Williams has reviewed the book in The Spectator: and his is a just appraisal. In assessing what he calls Hindu nationalism today, Mr Williams recognises that "Mr Nehru sincerely supports the ideal of the religiously neutral State"; and he adds:

> "If Mr Nehru succeeds in converting the masses of his countrymen to his own way of thinking, Dr Qureshi's fear will prove groundless; and even the founding fathers of Pakistan may be convicted before the bar of history of basing their political calculations upon suspicions which later proved unjustified."

At the same time, however, Mr Williams notes that "Hindulism, both as a religion and as a way of life, seems to be drawing new vitality from political freedom." Thus, although there are many Muslims who occupy high positions, "it is a matter of observation that in dress, language, architecture, art, science and ideas, it is the Hindus who set the pace".

Mr Williams points out that it is untrue to say that the Muslims of India are a "repressed minority". But he thinks that the Muslims are happiest when they are "either at the centres of Government or abroad". And his conclusion is this:

> "In both situations, distinctions of religion vanish in the prevailing atmosphere of fervent patriotism and shared responsibilities, and the precepts of the Indian constitution are fully implemented—and vindicated. Even so, in spite of the noble ideal of the religiously neutral State, it is on the bond of the revived Hindu tradition that India must for some time, at least, rely in her efforts to control the forces of provincialism, which have been newly loosed, as well as sharply differentiated from each other and from the larger whole to which all belong, by the proposals to reorganise state boundaries on a cultural and linguistic basis. Had Dr Qureshi this in mind?"

Mr Williams honestly asks: Was this what Dr Qureshi had in mind? We can answer the question—No.

GATEWAY MARKETS

(Continued from page 608)

In sympathy, Zinc moved down to Rs 66-8 from Rs 67-4. There was nothing new to report with regard to Lead, which hovered narrowly around Rs 84-0. Tin remained almost unchanged at Rs 132 per cwt.

On the London Metal Exchange, Copper ready was marked back to £298½ per ton following the news of the end of the strike at Rhodesia and quiet demand both in the USA and Europe. The future outlook for the metal remains uncertain in view of the international situation.

In the absence of demand, Lead prices depicted an easier trend, spot being quoted around £117½ for second-half September delivery.

Price movements in Zinc were confined to a narrow range between £95½ and £97 per ton. Demand for the metal is reported to be quiet.

Tin prices have, on balance, lost about £20 per ton due to the fact that the Egyptian Government has been able to maintain normal traffic through the Suez Canal contrary to the expectations of Continental traders.

North Indian Notes

Problems of Lac Industry

The silver Jubilee celebrations of the Indian Lac Cess Committee have served to focus public attention on the problems confronting one of our principal export commodities.

Gone are the days when Indian lac reigned supreme in world markets. Thailand now produces enough lac to export and in recent years competition from this direction has considerably increased. Yet another serious setback to Indian lac is the emergence of synthetic materials which have the backing from powerful foreign financial groups.

Being a commodity which is meant mostly for export—about 95 per cent of the lac produced is exported—the future of the Indian lac industry depends on the demand abroad for the commodity. It is essential, therefore, that its price is competitive. A natural corollary to competivity is a high rate of production.

Mr M. S. Randhawa, president, Indian Lac Cess Committee, has formulated a five-point programme of development for the industry-stabilisation of prices, increased production, improvement in marketing and credit facilities, organisation of foreign markets and research. In conclusion, he expresses the hope that provided timely and coordinated action is taken by the various interests concerned, Indian lac will not be ousted by other materials.

It is pointed out that the Indian lac trade suffers in competition because of the following reasons:

(1) Increase in production in Thailand, (2) decline in import of lac from Thailand to India and the establishment of direct export trade in lac by Thailand with the USA, (3) uncertain prices of lac (4) lack of proper standards, (5) competition from synthetic products and (6) small consumption in India.

Apart from its export aspect, Government have a special responsibility in the matter because cultivators of lac in all major lac producing states are predominantly Adivasis.

It is said that normal trading in lac can be obtained by stepping up production and accordingly it has been decided by Government to increase production of lac to 15.5 lakh maunds per annum by the end of the Second Plan. Present production is approximately 11 lakh maunds.

While it is true that as at present placed the future of Indian lac lies in maintaining exports, it must be realised at the same time that permanent dependence on foreign demand will not be conducive to continued prosperity of the industry. Mr R. R Diwakar, Governor of Bihar, in his inaugural address has rightly emphasised the need for exploring ways and means of utilising large quantities of the commodity internally. "It should also be seen in how many ways we can process it here (within the country) and thus expand the field of industry and the potential uses of this commodity".

*

Mica Export

Referring to the foreign exchange resources for the plan, the Planning Commission have drawn attention to the fact that there are very many uncertainties in the situation. While almost all the important export commodities are subject to wide fluctuations in demand, the food position in the country is still so much dependent on the weather that even a partial failure of the monsoon in certain areas may necessitate import of foodgrains on a substantial scale as has happened this year.

Though it is realised that it is only after industrialisation has proceeded some way that increased production at home will be reflected in larger export earnings, there are already indications that some of the new industries have developed to such an extent in recent years that they have surplus production for export. It is, therefore, imperative while every effort is made to develop existing as well as new markets for the country's major exports, increasing attention be bestowed on the promotion of exports of new items.

In view of the urgent need for augmenting our foreign exchange earnings, six export promotion councils have been established to maintain and develop export markets. They are those for cotton textiles, silk rayon fabrics, plastics, engineering goods, cashew and pepper, and tobacco.

The latest to be added to this list is Mica. The Mica Export Promotion Council has been formed with the support of the Government of India, to promote the export of mica and mica manufactures from India. Already India supplies about 80 per cent of the world's requirements of good quality mica. Over 90 per cent of mica used in the manufacture of micanit, made from mica of inferior quality, is also supplied by India. The United States takes nearly 60 to 70 per cent of the total mica exports from India; the second biggest importer of Indian mica is the United Kingdom. Among other countries who buy Indian mica are Germany, Italy, Sweden, Australia, France, Canada and Japan. The exports of mica in 1955-56 were valued at Rs 8.37 crores as against Rs 6.59 crores in 1954-55.

The Council will try to maintain and increase the exports of mica (blocks, splittings, ground scrap of waste), mica manufactures and by-products of the mica industry. For this purpose, it will undertake market studies in foreign countries, send out trade missions, appoint representatives, agents or correspondents to foreign markets, collect and disseminate among exporters statistical and other information regarding export trade in mica. It will also try to maintain standards of quality and packing in respect of mica exports.

The Mica Export Promotion Council will consist of the Joint Chief Controller of Imports and Exports, Calcutta, (Chairman) representatives of the Union Ministry of Natural Resources and Scientific Research and the State Governments of Bihar, Rajasthan and Andhra as well as representatives of the trade from these three States.

NORTH INDIAN MARKETS

Rise in Sugar Production

ACCORDING to the latest figures, the production of indigenous Sugar and despatches from factories in the country amounted to 18.57 lakh tons and 15.25 lakh tons up to 15th September 1956 in the current season as against 15.87 lakh tons and 10.27 lakh tons respectively in the corresponding period of the previous season. The steady rise in consumption and decline in stocks will be clear from the following comparative figures (in lakh tons):—

	Period ending 15-9-1956	Period ending 31-8-1956
Production ..	18.57	18.57
Despatches ..	15.25	14.45
Stocks on ..	7.46	8.20

Meanwhile, the Government of India have laid down broad principles governing the issue of licences for setting up new sugar factories or for the substantial expansion of existing factories. Existing factories having a daily crushing capacity of less than 1,000 tons of sugarcane will be allowed to expand up to 1,000 tons. Factories, in which the mill and boiling sections are not balanced at present, will be allowed to have balancing equipment to achieve a daily crushing capacity up to 2,000 tons. Co-operative factories will be allowed to be established in areas where sugarcane, sufficient for a factory of 800 to 1,000 tons capacity, is grown; and the promoters have collected a substantial amount by way of share capial.

Sugar prices have naturally been drifting to lower levels in view of the easy supply position. The season is expected to start earlier this year due to better cane supply position.

Following mill-delivery rates (per maund) were quoted in the Hapur market:—Jaswant Rs 28-4; Simbhauli Rs 28-10; Mowana Rs 28-8 to Rs 29-4; Daurala Rs 29-8 to Rs 30-0; Amroha Rs 27-14; Bijnor Rs 27-14; Mansoorpur Rs 28-4 to Rs 29-8; and Rampur Rs 31-0.

The sugar market in Meerut remains inactive and prices of all grades have softened further. The undertone remains subdued. Traders, however, anticipate a good demand in a few week's time. Bold grain is quoted at Rs 30-12; Medium at Rs 29-8 and Small grain at Rs 28-2, all per pound.

*

Gur

In the Hapur market, arrivals of New Gur have begun in small quantity, at an average of 40 maunds daily. Rates are quoted at Rs 12 to 14 per maund, according to quality.

Old gur stock is still put at about 20,000 maunds for which outside demand is slack. Regular season will start after about a month when arrivals will increase.

*

Foodgrains

Foodgrains markets continue to rule steady with prices developing a hardening tendency. In the Hapur market, Wheat average quality is quoted at Rs 15-4 and farm quality at Rs 16-8 per maund as against Rs 14-12 and Rs 16-2 respectively quoted in the previous week. Daily arrivals from the producing centres are on a small scale, averaging 100 maunds, and part of the local demand is being met by fair-price shops. With the increase in difference in Wheat prices of the local and imported qualities, offtake has increased considerably. There is also good outside demand, but stockists are reluctant to part with their stocks in the hope of better prices.

Rice prices, however, ruled quiet on expectation of early arrivals of the new crop. Basmati was quoted at Rs 23 to Rs 30 per maund, according to quality.

Barring Maize, prices of Coarse grains ruled quietly steady. Gram is transacted at Rs 12-0 to Rs 12-8 per maund, while Barley has improved to Rs 12 due to poor stock position. Increased arrivals of the new crop have accounted for a fractional fall in the price of Maize to Rs 11-12 per maund.

Heavy offtake, mostly in the form of Pulses to the Madras side, has

Students and the Second Plan

THE Regional Conference of Planning Forums held at Trivandrum represents a social prospect of rare significance. Conferences of this kind open the way for contacts between the Government and particular sections of the community, designed to promote specific purposes, with clear and compact understanding of their nature, their social consequences, the methods to be pursued and of the functions of the particular section concerned. At Trivandrum, the Forum consisted of spokesmen of the Government and about 80 delegates of teachers and students representing the different universities in South India.

The role of teachers and students in the implementation of the Second Five Year Plan was explained at the conference. Emphasizing the democratic character of planning in India the speakers, who included the Rajpramukh of Travancore-Cochin, Mr G. L. Nanda, Union Minister for Planning and Mr S. N. Mishra, Union Deputy Minister for Planning, asked the students and teachers to get plan-conscious and to carry the message of the Plan to the villager, since ultimately the success of the Plan depended on the willing co-operation and enthusiasm of the people. It was pointed out that the students could contribute materially to the Plan by organising social service activities on the basis of voluntary labour, meant to benefit the country-side.

The idea of tapping the energy and enthusiasm of the students in the execution of the Second Plan is excellent and the particular role allotted to them has been well conceived. One of the pre-requisites for the success of the Plan is the fore-knowledge of the changes that are likely to come in the wake of the execution of the projects as well as a readiness to accept the changes. This requires that the minds of the people have to be prepared to receive the impact of the Plan. The Second Plan envisages vast changes, the repercussions of which will be felt in almost every village.

No doubt, the Community Development Projects and the National Extension Services already in operation as part of the First Five Year Plan have familiarised the villagers with ideas of economic planning. But vast areas are still outside their scope and are awaiting inclusion. In such a context, it is but proper that the people of these villages should be made aware of the great changes that are knocking at their door and persuaded to extend their co-operation, so as to ensure the full success of the projects which have been conclarify understaning but stimulate ceived and put into execution in their interest and welfare.

Mr Gulzarilal Nanda, presiding over the Conference brought to bear on his address a thoroughly work-a-day approach. The student community, harassed by conflicting pulls in various ways, highly needs the advice given by Mr Nanda. Though he was having the Plan in his mind as a special term of reference, the directions he gave to the students as to how they should start discussing it are applicable to all fields of activity, particularly in education.

Two points were emphasised; one was that in dealing with various questions like regional planning, regional disparities and social justice, the students should keep in their minds the ultimate purpose and the higher call. It is possible to regard this piece of advice as routine sermonising by a highly placed individual. In this case, however, it is not so. In South India, young minds are being assailed by a confusing medley of misgivings and doubts on contemporary political and economic issues. And these work considerable emotional havoc, on the background of the torturing uncertainties of their individual future. Here, there have been phases of discontent, legitimate and otherwise, against the insufficient solicitude shown by the Centre in the matter of industrial development.

The national, all-India point of view cannot be too deeply stressed, in this situation. Unless this kind of view is clearly and sincerely understood, the illusions of regional neglect can well thwart the well-intentioned policies and programmes deriving their main inspiration from the Union Government. It is in this respect that Mr Nanda's advice has come in a most timely, and let one hope, effective manner.

For the rest, Mr Nanda went straight to brass tacks; without dwelling on convenient platitudes, he explained to the students precisely what they should do in relation to the Plan. While from the Government side, he suggested that literature should be prepared to suit different levels in the student community, he appealed to the students that every one of them above a certain age should familiarise himself with the broad features of the Plan. Discussions among them should proceed on the basis of some selective approach and must be conducted intensively, with an adequate knowledge of the appropriate materials in relation to each theme.

Such discussions would not only clarify understanding but stimulate the practical bent of the students taking part. The Planning Minister also demanded that they should keep an alert eye on the changing conditions in the country and the world, so that the ingredients of the Plan could also be suitably adjusted.

Mr S. N. Mishra, Union Deputy Planning Minister, added another intimate touch by telling them how the Plan was going to be an important instrument for the solution of unemployment, of which Travancore-Cochin happened to be one of the worst sufferers. Mr Mishra assigned to the student community a specific task which by any token was well within their reach. He suggested that if every

THE BENGAL FLOUR MILLS CO., LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Tuesday the 23rd day of October, 1956, at 12 noon to consider, and if thought fit, to pass the following Resolution, which will be proposed as a Special Resolution, namely:—

That the Articles of Association of the Company be altered in manner following:—

(1) Articles 55, 56 and 57 shall be deleted and the following New Article 55 substituted therefor:

"In addition to any other meetings, general meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Board of Directors. Such general meetings shall be styled "Annual General Meetings" and shall be specified as such in the notices convening these meetings. All other meetings of the Company shall be styled Extraordinary General Meetings."

(2) Article 63 shall be deleted and the following New Article 63 substituted therefor:

"The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet, and the Reports of the Board of Directors and of the Auditors, to appoint Directors in place of those retiring by rotation, to appoint Auditors and determine the manner in which they shall be remunerated, and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business."

(3) Articles 86 and 87 shall be deleted and the following New Article 86 substituted therefor:

'At every Annual General Meeting the Board of Directors shall lay before the Company a Profit and Loss Account made up to the 31st December in the preceding year and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company, but save as aforesaid, the Board of Directors shall not be bound to disclose greater details of the result or extent of the trading and transactions of the Company than they may deem expedient."

(4) Articles 88, 89 and 90 shall be deleted and the following New Articles 88 and 89 substituted therefor:

"88. Once at least in every year the Accounts of the Company shall be examined and the correctness of the Balance Sheet and Profit and Loss Account ascertained by one or more Auditor or Auditors."

"89. The Company at each Annual General Meeting shall appoint an Auditor or Auditors to hold office until the next Annual General Meeting and their appointment, remuneration, rights and duties shall be regulated by Sections 224 to 227 the Companies Act, 1956."

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

Calcutta,
24th September, 1956.

Madras Review

South Indian Notes

Development of Fisheries

For some inexplicable reason the fishing industry in India has not attracted the attention of our entrepreneurs despite the great strides it has made in other maritime countries where it has made significant contribution to their economies. It is true that during the postwar years a number of privately operated fishing companies came into existence with their fishing fleet made up of ex-naval motor fishing vessels purchased from Disposals. But the companies could not function profitably with the result that today there is no private company operating in the deep sea fishing trade.

The failure of the enterprises is to be attributed to the haphazard and abrupt manner in which the companies were started. Encouraged by the high prices prevailing at the time for fish in the country, the companies started operations without paying heed to the suitability of the vessels, the fishing gear, etc. for the conditions obtaining in India.

In recent years, especially from the beginning of the First Five Year Plan period, the great commercial opportunities of the industry have been fully recognised. The First Plan provided Rs 413.6 lakhs for the State fishing schemes and Rs 100 lakhs for the Central schemes. Financial assistance to the extent of Rs 166.5 lakhs was provided to the State Governments during the last ten years for implementing fishery schemes under the Grow More Food campaign.

The progress in this regard in the past five years has been greatly accelerated by generous assistance from foreign assistance programmes. FAO has been providing technical assistance for the development of India fisheries. The Government of the United States of America under their Technical Co-operation Programme has also been giving substantial assistance by providing equipment and technical personnel. Under the Indo Norwegian Project Co-operative programme, a fishing Community Development Project has been established in Travancore-Cochin and is functioning successfully in improving the economic health and sanitary conditions of the fishermen community in the project area by introducing motorised fishing, providing ice and marketing facilities and also improving supplies of drinking water and facilities for medical relief.

Presiding over the All-India Fisheries Conference in Madras last week, Dr Punjab Rao Deshmukh Union Minister for Agriculture emphasised the need for improving the fishing industry atleast for its potentialities as a rich source of food. As against a minimum estimated requirement of 40.5 lakhs tons of fish, production amounted to only 11 lakhs tons. Apart from production from the sea, there was also great scope in the country for the development of inland fisheries. Though the Central Government were ready to render all possible help by providing technical and financial assistance, according to Dr Deshmukh, ultimate responsibility for building up the fishing industry rested with the State Governments.

While it is gratifying to find that Government are now taking active steps to improve the fishing industry, it is somewhat disquieting to note that the various factors that go to make deep sea fishing a commercial success have yet to be given the attention they deserve.

It is a wellknown fact that of the total catch in a trawl only 44 per cent is of good quality fish. The remaining 36 per cent will have little demand. It will be clear, therefore, that unless proper provision is made for subsidiary industries which can absorb the poor quality fish, the financial side of the industry will not be very encouraging.

*

Management Technique

With the rapid expansion of the public sector in the country, management of enterprises has also assumed national significance. For, it is a well-known fact that the successful working of a venture depends to a large extent on the calibre of its management personnel.

In the ultimate analysis, each and every enterprise, whether it be private owned or State-managed, is run by one individual, the manager, though important decisions may be given by the board of directors or ministers, as the case may be. Unless, therefore, the person in charge on the spot is in touch with the latest development in the field of management techniques, the efficiency of the entire enterprise will suffer.

It is gratifying to know that the importance of management education has now been widely recognised in this country. An institute styled the Madras Institute of Management has been formed in Madras. The Institute will spread knowledge of better management techniques through exchange of information among the members and also through discussions, demonstration and plant visits. It will also organise lectures and training for improving managerial and supervisory skills, and conduct research in specific fields in management.

Inaugurating the institute Mr J. M. Srinagesh, General Manager Hindustan Aircraft, pointed out that improvement in management techniques was essential in the context of the Second Five Year Plan as better management would pay rich dividends in the shape of higher productivity. In this connection he also emphasised that if managements of enterprises were able to impress on labour that higher productivity did not necessarily mean a reduction in the number of men employed, significant progress toward achievement of the targets under the Second Plan might be said to have been made.

It is to be hoped that many more institutes such as the one in Madras will be formed in important industrial and business centres of the country so as to bring within each reach of management personnel latest developments in the sphere of management techniques.

MACHINERY MANUFACTURERS CORPORATION LIMITED

NOTICE

THE TENTH ORDINARY GENERAL MEETING OF MACHINERY MANUFACTURERS CORPORATION LIMITED will be held on Friday, 19th October, 1956, at 4.00 P.M., at the Registered Office of the Company, Gateway Building, Apollo Bunder, Fort, Bombay, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Profit & Loss Account and Balance Sheet for the period ended 31st March, 1956.
2. To declare a Dividend.
3. To elect Directors in place of Mr. M. M. Parekh, Mr. Jal H. Mehta, and Mr. M. A. Chidambaram, who retire from the Board under Article 114 of the Articles of Association of the Company, but are eligible for re-election.
4. To pass an Ordinary Resolution waiving the age limit prescribed under section 280 of the Companies Act, 1956, in respect of Sir Sobha Singh.
5. To pass the Ordinary and Special Resolutions, details of which, with an Explanatory Statement as required under section 173 of the Companies Act, 1956, have been posted to the shareholders.
6. To appoint Auditors for the current year and to fix their remuneration.

For and on behalf of
the Directors,
MACHINERY MANUFACTURERS CORPORATION LIMITED,
K. C. MAHINDRA
Chairman.

Bombay,
10th August, 1956.

NOTE: (i) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(ii) The Transfer Books of the Company will be closed from 1st October, 1956 to 19th October 1956, both days inclusive.

(iii) Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 19th October, 1956. No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

TO ALL SHAREHOLDERS OF MACHINERY MANUFACTURERS CORPORATION LIMITED AND IN PARTICULARS TO:

Mrs. Maryam Akhund, Bai Bachubai Sorabji Anklesaria, Messrs. British Cotton Growers Association Ltd., Mrs. Tehmina Hormasji Dalal, Mr. C. De Sousa, Mr. Nadarshaw M. Dinshaw, Mr. R. C. Fernandes, Hon'ble Mr. Gulam Mohamed, Mr Tikamdas Wadhumal, Mr. Sorabji Harmosji Shahookar, (Dr.) (Miss) Shaik Amna, Mr. Zaka Rahmatulla, Mr. Barkatullah Khan, Mr. William Dick Brown, Mr. Andrew Dollar Gillespie, Mr. Donald Gladding, Major Alastair Cameron, Mr. Mirza Ahmed Ispahani, Sir William Roberts, Major General Shura Shum Sher Jung Bahadur Rana, Mr. Nootan Deb Pant. Mr. Mahendra Prasad, Sardar Soma Prasad Upadhya, Senior Comdg. General Baber Shum Shere, Mr. Pitamber Prasad Pantha, Messrs. John Inglis Company Limited, Rokia Sultan, Sogra Sultan, Khatijo Begum, Robaba Khanum, Mr. John Lees, Mr. William Lindsay, Mrs. Stella Byrne, Mr. G. B. Gilby, Mono Shum Shere Jung Bahadur Rana, Major General Nara Shum Shere Jung Bahadur Rana, Mian Aziz Ahmed Khan Bhatti, Rani Jagdamba Kumari Debi, Padma Narsingha Rana, Mohamed Khalil Serage, Bahadur Shum Shere Jung, Maj. General Krishna Shum Shere Jung Bahadur Rana, H. H. Maharani Gamvir Kumari, Bibudhandra Prasad and Mr. Keshava Ram Bhandary.

South Indian Markets

Prospects for Coffee Exports

COFFEE exports from India, which recorded a sharp decline from 203,424 cwts in 1954-55 to 55.605 cwts in 1955-56, are expected to show an improvement in the current fiscal year. For, during the quarter ended 30th June 1956 alone, India exported as much as 51,584 cwts against only 39,532 cwts in the corresponding period of 1955.

Exports to the UK rose from 1,559 cwts in the quarter ended June 1956 to 4,574 cwts in the corresponding period of the current year and to the Netherlands from 4,729 cwts to 10.641 cwts in the same period.

Meanwhile, there is speculation in the world coffee market on the 1956-57 crop. The exportable crop for 1955-56 is estimated at 38 million bags, which is not expected to cause any shortage anywhere although there has been some stringency for quality coffee.

In this connection, the report released with regard to the Brazilian stock and crop position will be interesting. According to one estimate, Brazil's 1955-56 exportable crop was 25.3 million bags, excluding stocks held on Government account. Of this total, nearly 17 million bags were reported to have been exported and, after internal consumption, a stock of 11.3 million bags was being carried forward, inclusive of 37 million bags on Government account.

Following were the results of the coffee auctions held last week at Palayamkottai and Bellary (price per cwt):—

Variety.	Palayamkottai. Rs.	Bellary. Rs.
Plantation PB	229-8 to 240-0	229-12 to 232-4
Plantation "A"	212-8 to 225-0	214-8 to 224-11
Plantation "B"	210-3 to 215-2	209-0 to 216-0
Arabica Cherry	196-0	....
Robusta Cherry PB	165-3 to 173-0	161-8 to 164-4
Robusta Flats	161-0 to 169-8	157-2 to 160-0
Arabica PB	....	202-0
Arabica Flat	....	189-12 to 193-1

Pepper

Pepper markets, after ruling steady early in the week, turned a shade quieter at the close on the withdrawal of buyers following the news of an increase of 15 per cent in the freight rate to Europe. It was also felt that there were chances of similar increase in the freight to USA also. In the Kozhikode market, Wynaad quality was quoted slightly lower at Rs 800 and Country variety at Rs 785 per candy.

It is reported that competition from Sarawak pepper in Europe is very keen and the prices for Malabar black are dearer by about Rs 20 per cwt. There is a general feeling that, unless the prices of Indian pepper are slashed down in line with Sarawak, Indian exports to Europe may not improve appreciably.

The condition of the Indian crop is reported to be satisfactory, except in South Kanara district where the yield is expected to be below normal. According to the first forecast, the area under pepper, upto August 25, 1956, in the districts of Malabar, South Kanara and the 'Nilgiris, is estimated at 123,650 acres (105,000 acres in Malabar, 18,500 acres in South Kanara and 150 acres in the Nilgiris) as against 120,000 acres (102,360 acres in Malabar, 17,490 acres in South Kanara and 150 acres in the Nilgiri district) estimated for the corresponding period of last year.

In the New York market there was demand from the local dealer-grinder in the face of a tightness of orgin offers. In the London market, White Sarawak was quoted at 29d per pound. Trading remained slow, but seller's quotations were mostly steady reflecting origin.

*

Groundnuts

The Madras Groundnut market ruled quietly steady during the past week. Arrivals were small and averaged about 20 to 25 tons per candy. Although the summer crop arrivals from the Southern districts were pratically nil, arrivals from Pollachi helped to maintain supplies locally. Power-driven rotary crushing interests were the main buyers. Superior oil-quality seed was quoted at Rs 172 and the bold variety at Rs 167. Arrivals of the peanut variety are expected toward the end of October.

In the Groundnut Oil section, the rate for the ready position was quoted at around Rs 320 per candy. Calcutta interests continued to buy small quantities. Buyers were generally interested in ready and September deliveries.

The first forecast report of groundnut crop in Andhra State estimates the areas, sown up to the end of last July, at 476,000 acres as compared to 419,000 acres estimated for the corresponding period of the previous year. The total area under groundnut crop in the Punjab is estimated at 99,000 aces as against 100,000 acres and 97,000 acres respectively estimated in the corresponding and the final forecast of last year.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were as usual and there was a steady clearance with prices ruling unchanged for all weights. The markets for Buff, Buff Calf and Cow calf ruled unchanged.

In the export section, trading was patchy although there were more enquiries than in the previous week. The main interest was centred around 8-8½ lbs and 10-12 lbs runs. The best standards were reported to have been sold at 39½d; 37½d and 34½ for 8-8½ lbs runs, fourths and fifths respectively. It was, however, noted that there was a general reluctance on the part of Madras sellers to accept any further reduction in prices.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were as usual. There was a moderate clearance at unchanged prices. In the export section, some business was reported done in fifths and inferior fifth light weight goats at slightly reduced prices. There was no change in sheep skins and enquiries were reported for prime class 6-6½ lbs runs upto 24sh.

In this connection, the Director of Animal Husbandry has stated that the indutry is lagging behind to the detriment of India's economy and it is essential that it should be developed and brought in line with the leather industries of other countries.

India annually produces hides and skins valued at Rs 40 crores and if these are tanned and converted into finished leather, it is estimated that the production of various kinds of goods worth about Rs 80 crores will be possible annually. Attempts should, therefore, be made to produce leather of the best possible quality, because a great bulk of the Indian leather has to be exported to foreign markets.

Ginger

According to the first forecast issued officially, the area under Ginger, upto August 25, 1956, in the districts of Madura, Malabar, South Kanara and the Nilgiris, is estimated at 13,700 acres as compared to 13,030 acres estimated for the corresponding period of the previous year, showing an increase of 5.1 per cent.

THE INDIAN IRON AND STEEL, CO., LTD.

NOTICE is hereby given that the Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ended 30th September, 1956.

The Preference Share Registers will be closed from the 5th to the 10th October, 1956, both days inclusive. Payment will be made on or after the 1st November, 1956, to those Preference Shareholders whose names are on the Company's Register on the 10th October, 1956, or in accordance with their instructions.

By Order of the Board,
Martin Burn Ltd.,
F. G. Liversedge,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta,
27th September, 1956.

THE TELOIJAN TEA COMPANY, LIMITED

NOTICE is hereby given that the 35th Annual General Meeting of the Shareholders of The Teloijan Tea Company, Limited, will be held at McLeod House, No. 3 Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 25th October, 1956, at 3-50 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December 1956, and to fix their remuneration

The Share Transfer Books of the Company will be closed from 10th October 1956 to 25th October 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. Doig.
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
22nd September, 1956.

NOTE: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 2nd November, 1956, only to those members, whose names are registered in the Books of the Company on the 25th October, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

NORTH INDIAN MARKETS

(Continued from page 611)

accounted for a hardening trend in Pulses prices. Peas dara quality quoting Rs 11-12 and white variety Rs 13-0 pere maund.

A quietly steady trend prevails in the Delhi grains market. Wheat for dara has lost about As 8 to Rs 15-8 per maund on lack of buyers. Stockists have now turned sellers in view of the increase in number of fair-price shops. Gram rules quiet, because of decreased buying activity. The market for Rice remains, however, steady. Owing to better demand, Bajra rates have registered mild gains, while Maize rates have slided down due to the approach of harvest.

In the Bombay grains market, sharp two-sided fluctuations in prices are noticed in Wheat. The marked rise in the prices of indigenous wheat, which followed the imposition of a ban on exports from and imports into the City early in the week, has proved short-lived. Prices of ready Punjab Pissi quality have dropped by Rs 8 to Rs10 per candy to the original level of Rs 155 to Rs 165 per candy, according to quality. Prices of other Indian qualities have also tended to move back to the level prevailing before the imposition of the ban on movement.

Prices of Burma rice have recorded a modest improvement due to better demand from retailers.

SUNGMA TEA COMPANY, LIMITED

NOTICE is hereby given that the 75th Annual General Meeting of the Shareholders of Sungma Tea Company, Limited, will be held at McLeod House, No. 3 Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 25th October, 1956, at 4-10 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To appoint a Director in place of Mr. P. Banyard who retires by rotation and who, being eligible, offers himself for re-appointment.
3. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As special business:

4. To consider, and if thought fit, to pass the following resolution which will be proposed as a special resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr G. T. Routledge be and is hereby appointed a Director of the Company."

Special Notice dated 13th September 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, the proposed candidate for a Directorship, is a Director of Amluckie Tea Co. Ltd., a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company and he is therefore an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

5. To consider and, if thought fit, to pass the following Resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 10th October, 1956 to 25th October, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. Doig.
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
22nd September, 1956.

NOTE: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution being Item No. 4 of the above Notice, it is stated that Mr. G. T. Routledge is an associate of the Managing Agents within the meaning of the Companies Act, 1956, and therefore he can only be appointed a Director by a Special Resolution of which Special Notice has been given under the provisions of Section 261 of the Act.
2. The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1)(d) of the Companies Act, 1956.

THE NEW ASSAM VALLEY TEA COMPANY, LIMITED

NOTICE.

Notice is hereby given that an Annual general meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 30th October, 1956, at 10.30 A.M. for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To re-appoint by a resolution which will be proposed as a special resolution a Director who retires by rotation.

Special notice to propose the undernoted resolution as a special resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company in which it is stated that Mr H. Mackay, Tallack is the Managing Director of the Managing Agents' Company and as such an associate of the Managing Agents within the meaning of the Act and a person who can only be appointed or re-appointed a Director of the Company by Special Resolution in conformity with Section 261 of the Act.

To consider, and, if thought fit, to pass, with or without modification, the following resolution:—

(As a Special Resolution). "RESOLVED in conformity with Section 261 of the Companies Act, 1956, that Mr. H. Mackay Tallack be and is hereby re-appointed a Director of the Company liable to retirement by rotation".

4. To appoint Auditors and fix their remuneration.
5. As Special Business:

To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—

"RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the Ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose".

The Share Transfer Books of the Company will be closed from 23rd to 30th October, 1956, both days inclusive.

By Order of the Board,
MACNEIL & BARRY LTD.,
A H. FORSTER.
Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta—1,
21st September, 1956.

Note. A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Item No. 5. By the provisions of Section 293(1)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up Capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April, 1956.

THE BORMAH JAN TEA CO. (1936) LTD.

NOTICE is hereby given that the 21st Annual General Meeting of the Shareholders of The Bormah Jan Tea Company (1936) Ltd., will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 25th October, 1956, at 3-40 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

5. To consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr G. T. Routledge be and is hereby appointed a Director of the Company."

Special Notice dated 13th September 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, the proposed candidate for a Directorship, is a Director of Amluckie Tea Co. Ltd., a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company and he is therefore an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

6. To consider and, if thought fit, to pass the following Resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 10th October 1956 to 25th October 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. Doig.
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
22nd September, 1956.

NOTE: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividends, if declared, will be made on or after 2nd November, 1956, only to those members whose names are registered in the Books of the Company on the 25th October, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution being Item No. 5 of the above Notice, it is stated that Mr. G. T. Routledge is an associate of the Managing Agents within the meaning of the Companies Act, 1956, and therefore he can only be appointed a Director by a Special Resolution of which Special Notice has been given under the provisions of Section 261 of the Act.
2. The Resolution being Item No. 6 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1)(d) of the Companies Act, 1956.

BAGHMARI TEA COMPANY, LIMITED

NOTICE is hereby given that the 38th Annual General Meeting of the Shareholders of Baghmari Tea Company, Limited, will be held at McLeod House, No. 3 Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 25th October, 1956, at 4 P.M. for the following purposes:

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

5. To consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in confirmity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr G. T. Routledge be and is hereby appointed a Director of the Company."

Special Notice dated 6th September 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, the proposed candidate for a Directorship, is a Director of Amluckie Tea Co. Ltd., a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company and he is therefore an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

6. To consider and, if thought fit, to pass the following Resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 10th October 1956 to 25th October 1956, both days inclusive.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution being Item No. 5 of the above Notice, it is stated that Mr. G. T. Routledge is an associate of the Managing Agents within the meaning of the Companies Act, 1956, and therefore he can only be appointed a Director by a Special Resolution of which Special Notice has been given under the provisions of Section 261 of the Act.
2. The Resolution being Item No. 6 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1)(d) of the Companies Act, 1956.

THE INDIAN STANDARD WAGON COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting (being the thirty-seventh Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta at 11 a.m. on Friday the 2nd, November, 1956, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1956 and the Directors' and Auditors' Reports thereon.
2. To declare Dividends. The dividends if declared, will be paid to the shareholders whose names appear in the Company's books on the 2nd November, 1956 or to their mandatees.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that Special Notice as defined in Section 190 of the Companies Act, 1956 has been received by the Company under Section 281 of the Act, to move the following resolution at the Meeting:—

"That Sir P. P. Ginwala who has attained the age of 81 years be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956 shall not apply to him."

4. To appoint Auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following resolutions which will be proposed as special resolutions.

(A) "That sub-clause 3(17) of the Memorandum of Association of the Company be deleted and substituted by the following two sub-clauses:

"(17a) To subscribe contribute or guarantee money for any national, charitable, benevolent, political, public, general or useful object or fund or for any exhibition".

"(17b) To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance".

(B) "That Article 151 (17) of the Company's Articles of Association be deleted and substituted by the two following sub-clauses:—

"(17a) Subject to the provisions of Section 293(1)(e) of the Companies Act 1956 to establish maintain support and contribute or subscribe to any national, charitable, benevolent, political, public, general or useful object or fund and any institution, society or club, which may be for the benefit of the Company or may be connected with any town or place where the Company carries on business."

"(17b) To give pensions, gratuities, allowances, bonuses, profit sharing bonuses or benefits or other charitable aids payments or monies to or for the benefit of persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the wives, children, dependents or connections of such person or persons as may appear to the Director just and proper whether any such person his widow children or dependents or connections have or have not a legal claim upon the Company".

The Share Registers and the Transfer Books of the Company will be closed from the 23rd October, 1956 to the 2nd November, 1956, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. Liversedge,
Managing Agents.
Managing Director,

Calcutta,
28th September, 1956.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

ITEM No. 3.

Sir P. P. Ginwala who retires by rotation and is otherwise eligible for reappointment, has attained the age of 81 years and Section 280 of the Companies Act provides that he cannot be reappointed a Director of the Company except by a resolution of which special notice has been given in accordance with Section 281 of the Act. The Company has received such a special notice from a Member notifying his intention to move the resolution set out in the Notice. Sir P. P. Ginwala joined the Board of Directors of this Company in 1944 and has rendered valuable assistance to the Board as a technical expert. It is in the interest of the Company that the Board should continue to receive the benefit of his long experience and able guidance.

ITEM No. 5.

Clauses 3(17) of the Memorandum and Articles of Association at present reads as follows:—

"To establish and support, or aid in the establishment and support of, associations, institutions, funds, trusts and conveniences calculated to benefit employees or ex-employees of the Company, or its predecessors in business, or the dependents or connections of such persons, and to grant pensions and allowances, and to make payments towards insurance, and to subscribe or guarantee money for charitable or benevolent objects or for any exhibition, or for any public, general or useful object."

This sub-clause deals with two different classes of objects to which the Company may contribute funds, the first relating to associations and funds for benefit of employees and their relatives and the second relating to charitable and public objects. These being two distinct objects it is desirable that they should be set out separately and it is accordingly proposed that the first object should be repeated without enlargement of its scope as a new separate sub-clause 17(b). As regards the second object the existing clause in so far as it relates to subscriptions to public objects is stated in a form too restricted to suit modern conditions. The industrial policy of the Government of the day is of vital importance to most industries and particularly to your Company, the principal buyers of whose products is the Government. It is common ground that industrial policies are influenced by political parties who form the government of the day. It is therefore in the interest of the Company to be able to contribute to the funds of political parties which in the Company's opinion will serve the interest of industries in general and of your Company in particular.

Shareholders might be interested to know that under section 293(1(e) of the Companies Act 1956 the right of a Company to contribute to funds not directly relating to its business or the welfare of its employees is clearly recognised and it is provided therein that the contributions made by the Board of Directors of a Company in such case shall not exceed 5 per cent of its average nett profits or Rs. 25,000 whichever is the higher.

In the existing clause in the Memorandum it is not quite clear whether the Company could contribute to a political fund and it is desirable that a specific provision in the Memorandum to contribute to such political objects and purposes should be included. It is therefore proposed that the second object above referred to should be set out separately in more explicit terms as a new sub-clause 17(a).

The existing Article 151(17 of the Company's Articles of Association sets out the power of the Board of Directors to carry out the object contained in clause 3(17) of the Company's Memorandum of Association. It is proposed to delete this sub-clause and substitute therefor clauses as detailed in the notice conforming to the proposed alterations in the Memorandum of Association.

The Directors and Managing Agents of the Company have no interest in the business represented by the foregoing resolutions other than in their capacity as shareholders.

THE PENINSULA

(Continued from page 612)

boy and girl reading in the university or college contributed Rs 5 per head, it would secure about Rs 2 crores extra revenue.

The small savings movement was thus shown a new opening. Students and housewives would undoubtedly be the most effective agents on this behalf, provided their enthusiasm could be kindled and sustained. If the initiative comes from within, the results can be spectacular.

The Conference recommended the constitution of Planning Forum Executives in all the States. These Executives are to consist of the Chief Minister or a Minister nominated by him, the Departmental Heads, Vice-Chancellors and representatives of students and teachers in the Universities. The Chairman of the Central Executive would be in charge of the co-ordination or work of the State Planning Forums and in the formation of the Forum Executives. Each Planning Forum would be obliged to maintain a list of its active workers and to report on its work twice a year to the Planning Commission.

*

THE FUTILITY OF ECONOMIC SANCTIONS

(Continued from page 602)

realised and meanwhile the chances of using force would gradually recede. It would be as well to be realistic and to come to the conclusion that economic sanctions are inadequate today rather than in six months time. Once we take account of the realities of the situation we stand a better chance of arriving at a practical solution.

Stock Exchanges

A BETTER PERFORMANCE

Watch-Dog Writes:

ALTHOUGH dealings are still tempered with caution, stock markets have given a comparatively better performance during the week. There is no ostensible cause for the sizable recovery in prices except for the fact that offerings have now dried up, while "shorts" are obliged to cover their sales.

Apart from the view that Suez situation is a little better and that our development programmes will thus make a steady headway, hopes of a higher distribution by the Indian Iron & Steel Company have caused a good deal of speculative activity in the markets. Also, reports about the TISCO getting higher retention prices have given ground for assumption that similar treatment will be meted out for Indian Iron & Steel Company. Thus, sentiment has turned better and prices in all sections have registered gains due to replacement buying.

Thanks to higher Bombay advices, the week's session on the Calcutta Stock Exchange witnessed a distinct broadening of enquiry, resulting in a sizable recovery in prices.

A better sentiment prevailed on Bombay Stock Exchange where selected scrips made sizable headway.

Trading on the Madras Stock Exchange showed a mixed pattern.

It was a week of unsettled conditions on the London Stock Exchange where sentiment was over-shadowed by the absence of any sign of a settlement of the Suez question.

Wall Street showed a fairly widespread distribution of losses ranging to one dollar or more.

*

Calcutta

CALCUTTA, FRIDAY EVENING.

THE local stock market was somewhat in a better frame of mind during the past week when prices registered a sizable headway from the recent low levels. Attention was mostly confined to the Engineering and Miscellaneous sections. Turnover was, however, restricted as operators were generally inclined to lighten their commitments in view of the forthcoming Pujah holidays.

Although industrial news were not unfavourable, the developments in the international situation, measures taken by the Government on the textile front, the threat of an intensified credit squeeze and other anti-inflationary measures, made professional operators cautious in their dealings. It was, however, satisfactory to note that support was not lacking in the market, thanks to hopes for a higher distribution by the Indian Iron & Steel Company and the investment enquiry for prominent equities.

In the Giltedged section, the volume of business continued to be restricted although there was some enquiry in certain directions. State Loans continued to rule quiet. 3% 1986 Conversion Loan opened steady at Rs 75-4 and, after touching a low of Rs 74-12, closed better at Rs 75-1-6.

Bank shares, in sympathy, ruled quiet with price movements confined to a narrow range. United Commercial changed hands at Rs 56-8 to Rs 57-0 and Hind at Rs 38-12 to Rs 38-14.

Although there was limited enquiry in the Jute section, selected scrips recovered some of the lost ground on firmer advices from the jute goods market following the reports of encouraging shipments, especially of Hessians, during the current month. Amongst these may be mentioned Bally which were taken upto Rs 210 from Rs 196; Champdany upto Rs 162 from Rs 159; Ganges upto Rs 68 from Rs 66 and Union upto Rs 162 from Rs 160. Howrah scored three annas at Rs 24-12 with National hovering narrowly around Rs 25-8 and Birlas around Rs 18-0.

The news of the continued strike and the disturbed situation in the Raneegunge coalfields had a depressing effect on the Coal section where the only bright spot was Burrakur, which met with some speculative buying upto Rs 16-0. East Indian changed hands at Rs 33-2 to Rs 33-4; Raneegunge at Rs 13-2 to Rs 13-4 and Bengal at Rs 508 to Rs 511. Amalgamated were, however, a steady feature at Rs 23-4.

Textile scrips were generally neglected following the measures taken by the Government on the textile front. The only relieving feature was, that a few selected scrips managed to emerge with minor losses on balance. Elgins touched at one time a low of Rs 27-8 and Kesoram Rs 17-13, to finish better at Rs 27-11 and Rs 18 respectively. New Victoria were, however, maintained at Rs 2-11, while Dunbar were marked back to Rs 274 from Rs 279.

The slight improvement in prices, that was noticed in the Tea section last week, was carried a stage further during the week under review due to renewed buying support at the recent low levels. Factors, that influenced the sudden change in sentiment, were the improvement in auction prices, the Government decision to curtail output and reports of increased Russian purchases. Hopes, that exports might not be affected following the improvement in the Suez situation, were also a contributory factor. Brooke Bond recovered to Rs 21-8 from Rs 20-9; Hasimara to Rs 32-14 from Rs 32-2; Dufflaghur to Rs 36-10 from Rs 36-2; Hantapara to Rs 212-0 from Rs 197-8; Patrakola to Rs 218 from Rs 202 and Grob "B" to Rs 18-14 from Rs 18-7.

Little or no interest was shown in the Sugar section. Belsund moved narrowly between Rs 12-0 and Rs 12-2; Carew between Rs 8-12 and Rs 8-15 and SKG between Rs 12-12 and Rs 12-15.

In the week's dealings, the pride of place went to the Engineering section where there was a good deal of speculative activity in Indian Irons on rumours that the company was keen to make a higher distribution for 1955-56 in order to pave the way for the success of the forthcoming right issue at a premium, insisted by the Government. The scrip opened

THE NEW MONKHOOSHI TEA COMPANY, LIMITED

NOTICE.

Notice is hereby given that an Annual general meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 30th October, 1956, at 10.45 A.M. for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To re-appoint by a resolution which will be proposed as a special resolution a Director who retires by rotation.

Special notice to propose the undernoted resolution as a special resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company in which it is stated that Mr. H. Mackay, Tallack is the Managing Director of the Managing Agents' Company and as such an associate of the Managing Agents within the meaning of the Act and a person who can only be appointed or re-appointed a Director of the Company by Special Resolution in conformity with Section 261 of the Act.

To consider, and, if thought fit, to pass, with or without modification, the following resolution:—

(As a Special Resolution). "RESOLVED in conformity with Section 261 of the Companies Act, 1956, that Mr. H. Mackay Tallack be and is hereby re-appointed a Director of the Company liable to retirement by rotation".

4. To appoint Auditors and fix their remuneration.
5. As Special Business:
   To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—

"RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the Ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose".

The Share Transfer Books of the Company will be closed from 23rd to 30th October, 1956, both days inclusive.

By Order of the Board,
MACNEIL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta—1,
21st September, 1956.

Note. A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Item No. 5. By the provisions of Section 293(1)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up Capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April, 1956.

WORLD OF FINANCE

(Continued from page 601)

likely purchases by State Governments. It has already been noted that there was contraction of currency against Rupee Securities for Rs 10 crores. What is more interesting is the fact that investments in the Banking Department are also marked lower by Rs 10 crores. Since, at the same time, the Centre's Deposits are lower by Rs 6 crores only, we may conjecture that the decline of Rs 10 crores in each of the two departments is a sign of sales to State Governments. Perhaps, the decline in the Banking Department is indicative of sales of marketable securities to State Governments; and, perhaps, the decline in the Issue Department reveals cancellation of ad hocs by the Centre—thus accounting for the decline in the Centre's Deposits. But the sales relating to the Banking Department would have benefitted not the Central Government but the Reserve Bank. Nevertheless, a broad inference, the eighth such, may be that re-investment of the proceeds of the State loan subscriptions by State Governments has been of the order of Rs 15 crores in the week ended September 14 and Rs 10 crores in the week ended September 21.

We may now summarise the position. The net improvement in balance of State Governments is Rs 26 crores. Investment by State Governments in marketable securities and ad hoc Treasury Bills may be around Rs 25 crores. The balance unaccounted for is in the environs of Rs 10 crores; possibly the explanation lies in a moiety being the depletion in State Governments' balances consequent to month-early disbursements, and a moiety representing payments by State Governments to the Centre.

*

The statement of the State Bank of India for the week ended September 21 reveals a drop of Rs 0.85 crores in deposits at Rs 227.36 crores. Borrowings from other banks have shown a further rise of Rs 9.50 crores to Rs 16.00 crores, while other liabilities, including inter-office adjustments, have declined by as much as Rs 11.05 crores to Rs 5.82 crores.

On the assets side, cash balances are lower by Rs 1.60 crores at Rs 17.15 crores, while Investments are slightly higher at Rs 107.47 crores against 107.41 crores. Advances have declined by Rs 1.54 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 1.23 crores and "Bills Discounted and Purchased" for Rs 0.25 crores.

*

According to the returns of the Scheduled Banks for the week ended September 15, demand liabilities are lower by Rs 0.24 crores at Rs 639.14 crores, while time liabilities are higher by Rs 1.53 crores at Rs 460.57 crores. Borrowings from the State Bank have declined by Rs 0.10 crores to Rs 12.60 crores, but those from the Reserve Bank have risen by Rs 1.80 crores to Rs 54.05 crores. Cash and balances with the Reserve Bank are lower by Rs 0.38 crores at Rs 88.37 crores. Investments have improved by Rs 4.76 crores to Rs 371.14 crores. Advances in India are shown at Rs 612.51 crores against Rs 616.72 crores; Inland Bills at Rs 92.87 crores against Rs 95.15 crores and Foreign Bills at Rs 46.41 crores against Rs 46.58 crores. Money at call and short notice stands at Rs 14.45 crores against Rs 12.60 crores.

*

STOCK EXCHANGES

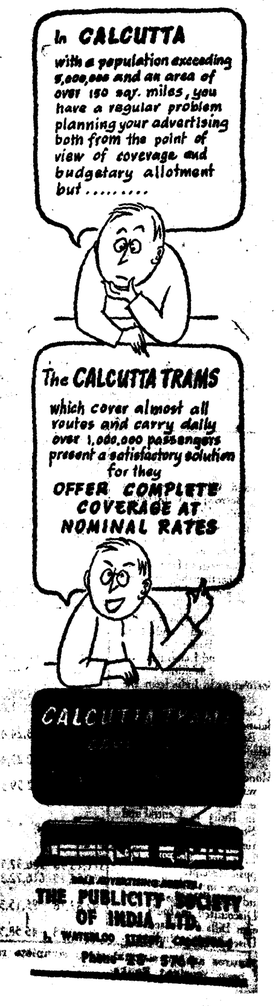
(Continued from page 618)

steady at Rs 35-15 and, after touching a low of Rs 35-14, firmed up to Rs 36-4, to finish the week at Rs 36-2. After market hours on Friday, there were buyers at Rs 36-1-6, with sellers at Rs36-2-0. The dividend announcement is expected to be made on Monday.

Among other Engineering scrips, renewed buying from interested quarters pushed Jessop further upto Rs 38-3 from Rs 37-2. Richardson, after receding to Rs 27-6 from recent high of Rs 27-10, recovered again at the close to Rs 27-12. Burn & Company remained firm at Rs 380 with Braithwaite a shade cheaper at Rs 29-9 against Rs 30-0 and Britannia (new) at Rs 15-8 against Rs 16-0.

The Miscellaneous section provided many bright features following the emergence of investment demand. Notable amongst these were Indian Copper which hardened further to Rs 7-3 from Rs 7-0 following the approach of the date for the bonus issue, Sone Valley jumped to Rs 9-12 from Rs 9-1 on renewed buying by interested parties. India Steamship scored another five annas at Rs 10-12 in expectation of a higher final dividend. National Carbon forged ahead to Rs 30-0 from Rs 29-10 on good investment buying. Dunlop Rubber, after remaining dull at Rs 29-1 during the past few weeks, met with good demand upto Rs 30-2 following the reports of the company's expansion programme in South India.

Elsewhere, price movements in Orient Paper were rather erratic due to speculative activity and the scrip moved between Rs 39-7 and Rs 39-15, to finish the week at Rs 39-8. Titaghur, after touching a new low of Rs 39-6 from Rs 39-15, finished better at Rs 39-11. India Pulp eased off to Rs 25-2 from Rs 25-8 and Shree Gopal to Rs 17-12 from Rs 18-0. BBP continued to be a narrow market around Rs 3-14. Indian Cable lost nearly a point at Rs 35-1 on lack of support. Martin Burn changed hands at Rs 24-14 to Rs 25-2, Metal Box at Rs 24-8 to Rs 29-4, Angelo Brothers at Rs 23 to Rs 23-5 and Barrier at Rs 42 to Rs 43. BIC, F. & C. Osler and Ronlas were all nearly [illegible] tained at Rs 17-7, Rs 12 [illegible] 22-10 respectively.



In Brief

The Tata group of Hydro-Electric companies have maintained their dividends for the year ended 30-6.56—Andhra Valley Rs 75 per share, Tata Power Rs 75 and Tata Hydro Rs 7-8.

Aluminium Industries have maintained the dividend at 12½ per cent for the year ended 31-3-1956.

Baranagore Jute has passed over the Ordinary dividend for the year ended 31-3-1956 as against 15 per cent in the previous year.

It is understood that sanction to issue further capital to the tune of Rs 85 lakhs has been granted to Shree Digvijay Cement Company Limited. The additional funds will be utilised for financing the company's second extension plant and expansion of other facilities required for that purpose. When the expansions are completed, the company's installed capacity will be 4,30,000 tons per annum.

FOR THE INVESTOR

(Continued from page 598)

fit, before providing for Taxation and Depreciation, amounts to only Rs 1,72,487 as against as much as Rs 5,71,588 in the previous half-year. The amount provided for Depreciation has been raised from Rs 1.50 lakhs to Rs 1.65 lakhs. The dividend on the Ordinary shares has been reduced from Rs 7-8 to Rs 2-8 per share after making a transfer of Rs 1.00 lakh from Reserves.

Gunny sales are nearly maintained at Rs 1.07 crores in the case of the Nuddea Mills Company, although the accounts show a loss of Rs 2,75,273 as against a net profit of Rs 1,39,772 in the previous half-year. The dividend is passed over as against As 8 per share paid in the previous half-year. The direcors have, after transferring a sum of Rs 4.50 lakhs from General Reserve, made the debit balance of Rs 4.33 lakhs into a credit balance of Rs 17,000, to be carried forward to the next half-year.

£R$

Tezpore Tea

The necessity to provide for the labour bonus for more years than one and the incidence of tax on the profits are fully reflected in the working results of this company for the year 1955. Although crop outturn is higher at 32,034 maunds against 29,539 maunds, the average price realised is only Rs 1-13-3 against Rs 2-6-8 per pound. The net profit, before providing for Depreciation and Taxation, amounts to only Rs 7,51,216 as against as much as Rs 22,45,847 in the previous year. The directors have, after setting apart Rs 1.99 lakhs (Rs 1.39 lakhs) for Depreciation and Rs 3.90 lakhs (Rs 8.77 lakhs) for Taxation, reduced the dividend to 15 per cent from 50 per cent in 1954. No provision is made for General Reserve. Estates for 1956 provided for a crop of 28,000 maunds.

£R$

Orissa Minerals

A slight decline in earnings has been reported by the Orissa Minerals Development Company Limited for the half-year ended 31st December, 1955. Although the market for the company's products continued to improve and the prices at which the various grades could be sold were satisfactory, full advantage could not be taken by the company due to the shortage of wagon.

Raisings and despatches of Iron Ore continued to be slow due to labour trouble at the mines; but the Steel Works' order is maintained at 40,000 tons per month in the company's books during the period under review. Raisings of Manganese Ore fell from 38,720 tons to 29,146 tons; but sales recorded an increase from 16,959 tons to 22,107 tons and were only restricted by the shortage of Wagons. The same was the case in Manganese Dioxide. While raisings fell still further to 800 tons from 1,068 tons, sales increased to 1,711 tons from 1,547 tons in the previous half-year.

The net profit, before Taxation and Depreciation, amounts to Rs 5,13,245 as against Rs 6,43,773 in the previous half-year. The directors have, after providing Rs 88,323 (Rs 89,344) for Depreciation; Rs 1.00 lakh (Rs 1.50 lakhs) for Taxation; Rs 44,600 (Rs 50,760) for Tax Contingency Reserve and Rs 66,540 (Rs 1.40 lakhs) for Other Funds, maintained the dividend at 10 per cent.

The directors have, in their report, stated that the formation of the State Trading Corporation into the normal trading fields of the so-called Private Sector is bound to have a deleterious effect on the company's future.

£R$

Bisra Stone Lime

A marked increased in sales from Rs 33.21 lakhs to Rs 36.71 lakhs has enabled the Bisra Stone Lime Company to show a substantial rise in earnings for the half-year ended 30th September, 1955. The company would have shown a further rise in earnings, but for the irregular wagon supply position.

Sales of Limestone have increased to 419,797 tons from 402,222 tons; Dolomite to 18,502 tons from 13,978 tons and Lime to 564,899 tons from 464,419 tons. The net profit, before setting aside for Taxation and Depreciation, amounts to as much as Rs 8,19,684 as against only Rs 3,94,520 in the previous half-year. The Depreciation amount has been reduced to Rs 41,405 from Rs 49,175 and Tax Contingency Reserve to Rs 16,000 from Rs 20,000. The sum set aside for Taxation is, however, raised to Rs 3.82 lakhs from Rs 1.30 lakhs; Mechanisation Reserve to Rs 1.75 lakhs from Rs 75,000 and Other Funds to Rs 1.02 lakhs from Rs 53,506. The dividend is maintained at As 14 per share.

£R$

Publicity Society of India

Thanks to an increase in income from advertisements, the Publicity Society of India Limited has reported a net profit, before providing for Depreciation and Taxation, of Rs 1,70,524 for the year ended 31st March, 1955 as against only Rs 1,42,867 in the previous year. The amount set apart for Depreciation has been reduced to Rs 15,000 from Rs 27,000 and Taxation to Rs 75,000 from Rs 80,000. The dividend is, however, maintained at Re 1 per share.

WORLD OF COTTON

(Continued from page 609)

NEW YORK COTTON MARKET

The Futures section ruled generally firm and all deliveries advanced to new highs for the week in sympathy with the strength of near-by October where increased short covering disclosed a scarcity of offerings. Sales were approximately 80,000 bales. Spot was quoted at 33.95 cents. There was foreign selling in March, May and July; but on a much smaller scale than earlier in the week.

×

LIVERPOOL COTTON MARKET

Trading in the Liverpool cotton market was more active with a fair volume of mill fixation offsetting long liquidation in near-by position and American hedging in distants and hedging of outsiders in the mixed contract. Inter-month and inter-contract switchings were also more active and the close was steady. Egyptian Karnak November/December delivery was quoted at 58.00 and Sudan contract September/October delivery at 49.25 cents.

×

CLOTH & PIECEGOODS

Trading in the Cotton Piecegoods market was quite subdued, and cloth business was negligible on account of the uncertainty prevailing over the issue of the enhanced excise duty on cloth. It is, however, reported that a majority of wholesale dealers have already taken delivery of goods against their previous contracts with the mills, while some parties have not taken delivery under the plea that their margin of profit is not sufficient to absorb any part of the new excise duty.

The three major textile mills of Delhi are said to have agreed to bear 50 per cent of the increase in bear 50 per cent of the increase in the excise duty on cloth, provided the trade agrees to do likewise. This arrangement is identical to the one agreed to by the Bombay mills. It, therefore, seems clear that the increase in the excise duty will, at least in part, be passed on to the consumer despite the Finance Minister's optimistic expectations to the contrary.

As it is, there is a short supply in the internal market and the performance on the export front has been equally unimpressive. Export figures for the first eight months of the current year at 482.81 million yards compared unfavourably with 573.13 million yards in 1955 and 619.2 million yards in 1945. At this rate, the targetted export of 1,000 million yards cannot be achieved unless there is sufficient additional production.

For the Investor

Chance for Glory

Investment Gossip:

THE prospects are not bright for immediate benefit accruing to shareholders from the increased prosperity of the Indian Iron and Steel Company Limited. Government clarification indicates, not very convincingly, that large loan outstandings and higher dividends are incompatible.

The policy implications of the Government decision, it is not proper for me to discuss here. I shall restrict myself to constructive thoughts on whether or no, even at this late stage, some suitable consolation can be offered to the shareholders.

In this light, let us consider the forthcoming rights issue.

The shareholders include Dalhousie Holdings: whose portfolio has an investment of 880,000 shares in Indian Iron. These represent the SCOB shares lodged with Dalhousie Holdings on the amalgamation of IISCO and SCOB.

In the IISCO balance-sheet, the asset in this regard is shown under suspense. For, a company shall not own its own shares: and the IISCO shares allotted in exchange for the SCOB shares previously held by IISCO are in the safe-keeping of Dalhousie Holdings.

It is doubtful whether Dalhousie Holdings can choose to exercise its right in respect of any forthcoming issue. The finance involved will exceed Rs 1 crore.

Dalhousie Holdings could then do one of two things. Firstly, it could sell its letters of renunciation; and what these will quote at, we cannot now say. The proceeds could presumably be credited to the IISCO Investment Realisation Account.

Secondly, it could renounce its rights, and instead make it possible for the other shareholders to subscribe to an extra 880,000 shares.

Let us see the financial cost involved to IISCO.

Once the rights issue is made, an ex-rights quotation will be available. On the basis of the current market price of Rs 35 and on the basis that the premium issue is at Rs 13-8, the ex-rights quotation should be around Rs 25 per share.

The IISCO shares with Dalhousie Holdings would, consequently, be worth Rs 10 each less; or Rs 88 lakhs is the amount of profit that IISCO would be deprived of.

At the same time, however, the sale of 880,000 IISCO shares over a short period of time for delivery would, if such sale were to take place, adversely affect the share quotation. Thus, as against the "paper" loss of Rs 88 lakhs consequent to ex-rights quotations, we have the possibility that the sale of the shares prior to the rights issue may cause a sizeable drop in the price of the IISCO share.

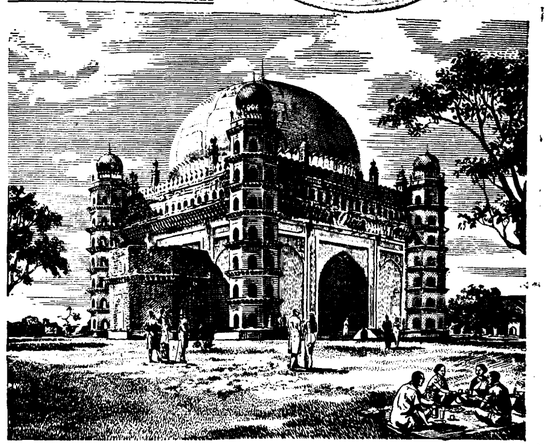
Let us remember, moreover, that the surplus arising from the sale of IISCO shares held by Dalhousie Holdings, over the book value in the Indian Iron balance-sheet, will be subject to tax. If, consequently, the letters of renunciation are sold, the proceeds thereof are also likely to attract tax.

Owing to the Puja holidays, there will be no ssue of INDIAN FINANCE on 13th October, 1956. The next issue will be published on 20th October, 1956.

—Manager

On the other hand, if Dalhousie Holdings should decide that it does not intend to subscribe to the new issue; and if, moreover, it is not attracted by the profit that may accrue on sale of letters of renunciation, the general body of shareholders may stand to benefit after all, the Government refusal to approve an increase in dividend notwithstanding.

For, the position would be that 51.8 lakhs shares would be offered for subscription from holders of 43.0 lakhs shares. Roughly speaking, this would mean that holders of every four ordinary shares would have a right to subscribe to five new shares.



If the holders of all 43 lakhs of shares exercised the right to subscribe on a five-for-four basis, subscriptions would total 125 per cent of 43 lakhs shares, or 53.75 lakhs shares. This would exceed the offer of 51.8 lakhs shares by 1.95 lakhs shares. Perhaps, this additional 1.95 lakhs shares could be made available from shares held by Dalhousie Holdings.

Financially, this is how the investor would be benefitted: His present four shares are worth, at Rs 35 each, Rs 140. To this, we may add his rights purchase of 5 shares at Rs 13-8 each, or Rs 67-8. His nine shares are, thus, "bought" for Rs 207-8. The market value would, at around Rs 25 each, be Rs 225. His profit would therefore work out to Rs 17-8 on an original holding of 4 shares.

I have, in trying to offer a constructive suggestion, oversimplified some of the issues involved. For the Investor, it would be a very fine recompense for the non-raising of the dividend. But the practical difficulties will have to be examined carefully; and, once again, it may be New Delhi which will have the final say in the matter. It is, however, for the Managing Agents to examine how they could take the initiative in this direction.

One thing is certain: Martin Burns will cover themselves with glory if they could see their way to take such an initiative.

Around India with Brooke Bond

The world's largest dome—The Gol Gumbaz

Many visitors to Karnataka turn their steps to Bijapur, an age-old city containing many fine specimens of Muslim architecture. Of these, the most celebrated is the Gol Gumbaz or the Round Dome—the mausoleum of a 16th Century ruler of Bijapur. Architecturally, the Gol Gumbaz is remarkable for its combination of massiveness and delicacy. What, however, makes the Gol Gumbaz unique is its size. About 144 ft. in diameter and 200 ft. high, the Gol Gumbaz is the largest dome in existence. It is also a perfect whispering gallery . . . a matter of added interest to the visitor.

Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Brooke Bond Tea
FRESH and GOOD

HIGHLIGHTS

Many a mickle maketh a muckle. Authority recognises this proverb to be sage.

Drop by drop maketh the ocean. Authority holds this saw to be wise.

Penny wise, pound foolish. Authority has decreed that the adage be expunged.

We hate to say it, but Government's decision on the IISCO dividend for 1955-56 betrays a disregard for the third proverb we have listed.

The argument can, surely, never be that a saving of Rs 13 lakhs in dividends can mightily contribute toward the repayment of loans aggregating Rs 30 crores!

The Leading Article analyses the Government decision and its implications. One conclusion is that, definitely, the pegging of the dividend will hurt the investment climate.

Watch-dog is nothing if not politic: abjuring politics, he has contented himself with constructive thinking on how, even at the eleventh hour, the investor may profit.

His suggestion has, if nothing else, the merit of novelty. The scheme envisages a profit of Rs 17-8 for every four shares held by the investor.

Solicitude For the Investor may be said, in his case, to have been the necessity that mothered his invention.

Investment Notes:

The Jayshree Tea Gardens have decided to issue 29,285 Preference shares of Rs 100 each to the existing shareholders in the ratio of one share for every twenty shares held, redeemable at par on the 31st December, 1968. A sum of Rs 25 is payable with the application and an instalment of Rs 25 on allotment. The balance of Rs 50 will be payable after 30th June, 1957, for which a prior notice of one month will be given to the shareholders.

Imperial Tobaccos are now quoting around Rs 15-12. The company is making good progress in the matter of sales. In the light of the results for the first five months' trading of the current year, the directors have recommended an interim dividend of 2 per cent.

The Great Eastern Shipping Company has obtained the sanction from the Controller of Capital Issues for the issue of fresh capital to the extent of Rs 60 lakhs in the ratio of one for one at par. The value of the share is Rs 10, of which Rs 5 will be called up early in 1957 and the balance early in 1958. Meanwhile, the company has raised the dividend from Re 1 to Rs 1-8 per share for the year ended 30-6-1956.

Khatau Mills have maintained the dividend at Rs 10 per share for the year ended 30-6-1956. The company has already made an application to the board of referees under Section 23A. sub-section 4, of the Indian Income-Tax Act in respect of the distribution for the financial year ending June, 1954. The decision of the board is still awaited. The company may have to pay an additional dividend in the event of the decision not being in its favour.

South Madras Electric Supply Corporation has announced that the 4½ per cent 1957-61 Debentures, relating to the Pudukottai licence, will be repaid on the 15th December, 1956. Interest will cease to accrue after this date.

Balanoor Tea and Devon Tea companies have convened a meeting on the 27th October to consider the issue of bonus shares.

Investment Briefs:

Port Shipping Company has maintained the dividend at As 12 per share for the half-year ended 30th June, 1956.

Hooghly Docking & Engineering Company has maintained the dividend at 12½ per cent for 1955.

Anand Electric, Bombay, has raised the dividend from Rs 5 to Rs 5½ per share for the year ended 31st March, 1956.

India Cements, Madras, have announced a final dividend of 4½ per cent, both on the Ordinary and Deferred shares, making a total of 8½ per cent for the year ended 31st March, 1956 as against 7½ per cent in the previous year.

Indian Trade & General Insurance has raised the dividend from Rs 1½ to Rs 2 per share on the Rs 40 called-up shares, for 1955.

Group Study of Birla Scrips—II

Investment Special:

Birla Jute

Birla Jute, like the other companies analysed in this Group study, is expansion-minded. A subsidiary company—India Linoleums Limited—has been in existence for some time now. It has since taken up the manufacture of Calcium Carbide as part of its activities. This is an entirely new industry for India and there is ample scope for its development. The factory commenced production from November, 1954. With the increased demand for carbide in the country and with restrictions on imports, the directors have expressed the hope, in their latest report to the shareholders, that the carbide factory will soon begin to make satisfactory profit. I gather that the factory is already producing 10 tons per day and that the directors' hope of a satisfactory profit will be amply fulfilled.

Enquiries have brought to light further details regarding the expanding activities of the company. It would appear that the company's plans for launching out in different fields of industrial activity have already taken concrete shape. I understand that arrangements have been completed for putting up a cement factory with an installed capacity of 750 tons per day. Orders for plants have been placed with a well known West German firm; and it is learnt that the factory will be ready to go into production from the middle of 1958. It scarcely needs saying that the cement department will earn good profits, what with the scarcity of this commodity and the expected higher demand during the Second Plan.

Another department that is being opened is Rayon. The company has programmed to set up a rayon spinning mill with 15,000 spindles by the middle of 1957. In view of the good demand for rayon in the country, it goes without saying that the working of this new department will bring in a good return to the company.

It is evident that the company has already entered or is on the point of entering into new fields the products of which have a ready market. The directors' shrewd business sense has been demonstrated by the resounding success of their carbide department. The two new products, cement and rayon yarn, for the manufacture of which plans have reached an advanced stage, will have no difficulty in finding a market. It is common knowledge that cement is being consumed faster than it is produced in the country. Rayon fibre is already in great demand and its consumption is bound to increase. The rayon department, therefore, need have no worries about disposing of its output at a profitable price.

The accounts of Birla Jute for the year ended March 1955 disclose a sharp improvement of Rs 55 lakhs in sales to Rs 3.37 crores. The net profit is better by Rs 1¼ lakhs at Rs 32.04 lakhs. The provision for taxation is halved to Rs 5 lakhs. Depreciation receives Rs 1.75 lakhs more at Rs 7.75 lakhs. The transfer to Reserve is raised sharply from Rs 84,000 to Rs 5,00,000. Other Funds get Rs 2 lakhs against Rs 3 lakhs. The ordinary dividend is maintained at 10 per cent; but is to be satisfied by the distribution of shares in Soorah Jute.

The following table reveals the profit per share, after providing for the preference dividend, but before tax and depreciation:

	1953-54	1954-55
Profit after Preference Dividend ..	29,19,968	30,73,473
Number of Ordinary Shares ...	912,600	912,600
Earning per Ordinary Share ..	3.20	3.37

The net earning per ordinary share, that is, after taxation and preference dividend, is shown below:

	1953-54	1954-55
Net Profit ...	19,19,968	25,73,473
Number of Ordinary Shares ...	912,600	912,600
Net earning per Ordinary Share ...	2.10	2.82

As against the ordinary capital of Rs 91.26 lakhs, there is a capital reserve of Rs 1.45 crores, a Reserve Fund of Rs 45 lakhs and Other Funds totalling Rs 25.77 lakhs.

The gross block has a value of Rs 3.32 crores and is shown at a net of Rs 1.95 crores. Liquid assets are at Rs 1.97 crores, and compare with sundry liabilities of Rs 57.76 lakhs.

£ R$

Jayshree Tea

(Capital: Authorised — Rs 1,50,00,000 in 75,000 shares of Rs 100 each and 7,50,000 Shares of Rs 10 each. Issued—Rs 59,52,300 in 4,00,000 Ordinary Shares of Rs 10 each 1,95,230 Ordinary Shares of Rs 10 each issued as Bonus Shares by Capitalisation out of Reserve Fund pursuant to Special Resolution passed in Extraordinary General Meeting on 29th March, 1954. Subscribed & Paid up — Rs 58,56,900 in 3,90,460 Ordinary Shares of Rs 10 each fully paid up in cash and 1,95,230 Ordinary Shares of Rs 10 each fully paid up for consideration other than cash.)

Sales of Jayshree Tea improved by over Rs 32 lakhs to Rs 1.30 crores in 1954. The net profit was better by 2½ times at Rs 43.48 lakhs. Tax received Rs 16.50 lakhs against Rs 3 lakhs. The provision for depreciation was raised from Rs 2.84 lakhs to Rs 5.89 lakhs. The transfer to the Reserve Fund was increased from Rs 10 lakhs to Rs 15.52 lakhs. The dividend paid is at 10 per cent on the increased capital since, in 1953, a bonus issue in the ratio of one for two was made in lieu of dividend.

The ordinary capital is Rs 58.57 lakhs, against which there is a Reserve Fund of Rs 30 lakhs. The gross block has shown a rise of over Rs 21 lakhs in the last two years, and the figure of Rs 81.08 lakhs compares with the net block of Rs 57 lakhs. Liquid assets are at Rs 78.33 lakhs against sundry liabilities of Rs 46.21 lakhs.

£ R$

The Gwalior Rayon Silk Manufacturing

Capital: Authorised, Issued and Subscribed: 25,00,000 Ordinary Shares of Rs 10 each—Rs 2,50,00,000; 1,50,000 6 per cent Redeemable Preference shares of Rs 100/- each —Rs 1,50,00,000—Total Rs 4,00,00,000.

The company is engaged in the manufacture of rayon and artificial silk fibres and staple viscose fibre. There are two divisions (1) the staple fibre division at Birlagram, Nagda (W. Rly) and (2) the Rayon weaving division at Birlanagar, Gwalior.

The production capacity of the staple fibre factory is being steadily increased since it commenced production in August 1953 with an installed capacity of 6¼ tons per day. As the machinery is of the latest type, the staple fibre has been eagerly absorbed by the Indian textile industry. By December 1954 the capacity of the factory was more than doubled. At the same time, the directors placed orders for additional machinery and equipment further to increase capacity to 30 tons per day. The expansion programme has progressed according to schedule and today the capacity is esimated at 21 tons per day. It is expected that the production capacity will soon increase to 42 tons per day. In view of the growing popularity of the staple fibre produced by the company coupled with the higher anticipated demand from the textile industry, the company has embarked upon a fresh phase of expansion after the completion of which its production capacity will be 60 tons per day. This, it is said, will be reached by the end of 1957.

The popularity of the Gwalior fibre can be gauged from the fact that the company's staple fibre production till December 1956 has already been fully sold and bookings are now in progress for the production of the first three months of 1957. The heavy demand for rayon in the country has encouraged the company to embark upon further expansions to the factory. It is expected that, when the latest phase is complete, the company will be in a position to supply the entire requirements of the country in staple fibre.

The company, it is understood, has changed its accounting period from December to March. The Directors propose to declare a dividend of eight annas in respect of the year ended March 31, 1956. This will be the maiden dividend of the company.

It is to be expected, that, when the Balance sheet for the year ended March 31, 1956 is published, it will reflect the full effect of the expansion plans that have been undertaken by the company in the past two, three years.

(Continued on page 638)

Bonus Issue by Indian Standard Wagon

Balance-Sheet Reviews:

IT would be recalled that the Indian Standard Wagon had applied, toward the end of 1933, to the Controller of Capital Issues for permission to capitalise Reserves to the extent of Rs 9.74 lakhs and to make an issue to the Ordinary shareholders of one bonus share for each existing share then held.

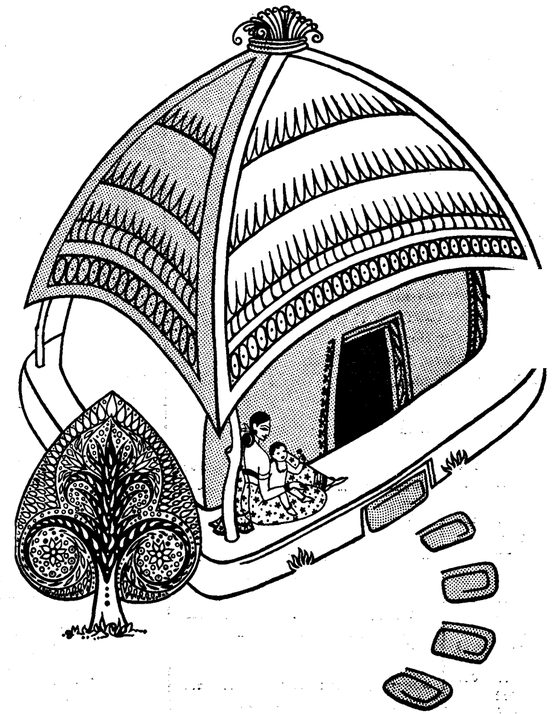
The company still holds an enormous reserve and, as at the end of 31st March 1956, Reserves are shown at as much as Rs 47.34 lakhs as against an issued capital of only Rs 39.85 lakhs. In order to bring the issued capital more into line with the actual employed,the directors have, therefore, decided to recommend again the issue of bonus shares in the proportion of one new Ordinary share for each Ordinary share already issued. Accordingly, application is being made to the Controller of Capital Issues for permission to capitalise Reserve to the extent of Rs 19.49 lakhs.

Sales for the year under review are shown higher at Rs 4.49 lakhs as against Rs 3.32 lakhs in the previous year. The net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 42,89,761 as against only Rs 34,62,649 in the previous year. Apart from setting aside a sum of Rs 1.62 lakhs for Development Rebate Reserve and Rs 5.00 lakhs for Labour Housing Scheme, the Depreciation amount has been raised to Rs 1.83 lakhs from Rs 1.04 lakhs; Taxation to Rs 17.80 lakhs from Rs 14.00 lakhs and Taxation Contingency Reserve to Rs 80,000 from Rs 25,000. Plant Replacement Reserve is, however, reduced to Rs 7.75 lakhs from Rs 12.00 lakhs, while General Reserve is maintained at Rs 1.00 lakh. The directors have, in addition to the maintenance of the dividend at 25 per cent, recommended a bonus of 5 per cent on the Ordinary shares.

The gross block at Rs 90.21 lakhs is depreciated by as much as Rs 59.74 lakhs to show a net block value of only Rs 30.47 lakhs. Work-in-Progress is shown at Rs 2.88 crores against Rs 2.76 crores. Investments are maintained at Rs 12.51 lakhs.

According to the Directors' report, the Works continues to be fully booked and the outlook for the current year is favourable.

£ R$



Barnagore Jute

The difficult conditions generally experienced by the jute industry, during the year ended 31st March 1956, are fully reflected in the working results of the Barnagore Jute Factory Company. Trading conditions remained extremely difficult, and not the least of the problems encountered was the extreme shortage of suitable raw material during the months of July, August and September, caused by heavy flooding. During this period, the free movement of the purchased supplies was impeded and consequently the mills' jute stocks fell to dangerously low levels. Such replacement of supplies, as could be effected from the very limited local sources, were generally of inferior quality. As a result, the productive efficiency of the mills was seriously affected.

The accounts for the year, before providing for Depreciation and Taxation, show a loss of £27,230 as against a net profit of £53,375 in the previous year. A sum of £44,824 (£22,242) has been provided for Depreciation and £750 (£8,875) for Taxation. The dividend on the Ordinary shares has been passed over as against 15 per cent. The debit balance carried forward to next year is £13,696.

More Tea Results

Four tea companies in McLeod group—Baghmari, Bormah Jan, Sungma and Teloijan—have presented their reports and accounts for the year 1955. In common with other tea companies, all the companies have shown declines in profits. Baghmari has reduced the dividend to 10 per cent from 35 per cent paid in 1954; Bormah Jan to 20 per cent from 35 per cent and Teloijan to 25 per cent from 50 per cent. Sungma has passed over the dividend as

A roof over our heads—a place to rest, to shelter our families from the heat of the sun, from cold winds and driving rain—that is what we all need. Like food, a home is a basic necessity common to peoples of all countries.

A happy home, cherished by everyone, is founded on the common aims and efforts of all members of the family. In India today, a new outlook is born in the family—an outlook devoted to progress. Rapid industrialization is bringing about more employment, a higher standard of living, and more and better homes.

A constant supply of our petroleum products to fast developing industries is vital to this progress.

Machinery Manufacturers Corporation

This Corporation maintained a steady, all-round progress during the year ended 31st March, 1956. Out of the orders received for 704 Cards, there was cancellation for 82 Cards, being influenced, to a certain extent, by import policy revisions. Sonai Works manufactured a total of 550 Cards as against 421 in the previous year. The number of Cards despatched also increased from 512 in 1954-55 to 556 in 1955-56. Further orders for 251 Cards have been received currently from April to the end of July, 1956.

The acute scarcity of pig iron, which arose toward the end of 1955, added to the difficulties in obtaining the castings. The normal stock of castings maintained at the Works became, therefore, very low and production schedules were completely disrupted. It is hoped that the Sonai Works will soon reach again the targetted production.

With liberalisation in import policy in respect of Carding Engines since May 1955, some 1,500 Cards, it is understood, have been allowed to be imported. Bulk of these orders have been placed with Japanese manufacturers, primarily because of the more attractive prices quoted by them. Two sets of Cotton Combing machinery, manufactured by the Corporation's associates in USA, have been installed; and orders are in hand for further three sets.

Thanks to an increase in sales from Rs 55.29 lakhs to Rs 65.03 lakhs, the net profit for the year, before providing for Depreciation, is higher at Rs 10,62,402 as against Rs 9,14,900 in the previous year. The amount set apart for Depreciation for the year 1952-53 and for the period from 1st April 1953 to 30th September 1953 is shown at Rs 9.28 lakhs as against Rs 7.13 lakhs. The directors have, after paying the arrears of dividends on the Special Cumulative 4½ per cent Freference shares and 4 per cent Cumulative Preference shares up to 31st March 1953, carried over a balance of Rs 68,562 to next year.

£ R$

Jaipur Udyog Cement

Despite a decline in sales from Rs 1.55 crores to Rs 1.43 crores, the Jaipur Udyog Limited has reported a slight increase in net profit, before providing for Depreciation, to Rs 45,45,731 for the year ended 31st March 1956 as against Rs 45,11,346 in the previous year. Apart from setting aside a sum of Rs 4.00 lakhs for General Reserve, the Depreciation amount has been reduced to Rs 20.22 lakhs from Rs 20.39 lakhs. The dividend on the Ordinary shares is, however, raised to Rs 1-4-0 from As 12 per share.

✱

(Continued from page 636)

As per the balance sheet for year ended December 1954, Sales amount to Rs 1,10,16,311 with net profit placed at Rs 12,45,057 before providing for taxation and depreciation. A sum of Rs 2,25,000 has been transferred to Contingency Reserve. The carry forward is Rs 5,49,049 as against the debit balance of Rs 4,71,008 in the previous year.

As on 31st December 1954, the balance sheet shows a paid up capital of Rs 2,54,30,000 in 1,50,000—6 per cent Redeemable Cumulative Preference shares of Rs 100 each and 10,43,000 Ordinary shares of Rs 10 each fully paid up.

Block is Rs 3,24,74,558 with stores valued at Rs 6,82,908 and stocks at Rs 94,80,429. The balance sheet total is Rs 4,50,16,031 with Liquid Assets amounting to Rs 1,25,41,473.

Dividends: Need for Clear Thinking

Indian Finance
Established 1928
October 6, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

GOVERNMENT have decided that, in view of the loans outstanding and the further accommodation which the company will need to seek from the World Bank, an increase in the ordinary dividend payable by The Indian Iron and Steel Company Limited for 1955-56 cannot be approved.

Furthermore, New Delhi has been unable to concur in the suggestion that the premium on the proposed rights issue should be reduced.

Stock Exchanges have welcomed neither Government decision as in the best interests of shareholders: and there is particular resentment at the so-called "high" premium of 35 per cent that would be levied on the rights issue.

In our view, authority's insistence on a premium is unexceptionable. When we remember that a previous issue by Indian Iron was at the substantially higher premium of Rs 15 per share, serious objection cannot be taken to a premium of Rs 3-8 per share. But, to the extent that Government have reserved the right to have the final say in the Indian Iron dividend, it is only Government themselves who can prove that a premium issue is justified.

Unfortunately, the other Government action, the pegging of the dividend, discloses a lamentable obduracy and a deplorable lack of understanding of the ramifications involved in their decision.

The Government argument is that, with large-sized loans outstanding, all possible internal resources have to be marshalled; and the dividend, therefore. should not be raised.

The loans outstanding are, it must be conceded, large: including the World Bank Loan and the special advances from Government, they are of the order of Rs 30 crores. But an increase in the dividend by 4 annas per share would involve less than Rs 13 lakhs. When the one is in terms of crores, do the lakhs matter so much?

The Second Plan requires, as Mr T. T. Krishnamachari recently stressed, the gearing of economic policy to the proposition that the flow of capital for industrial enterprises is encouraged. The freezing of the dividend does exactly the opposite: it makes the investment climate more bleak.

Have Government the right to jeopardise the flow of new capital—all for Rs 13 lakhs?

The Government argument may be that, on principle, a company should not be allowed to raise the dividend when its borrowings outstanding are sizeable. But every company in the process of development has to rely, for a substantial portion of its finance, on loan capital. Have Government the right to discriminate in the case of Indian Iron?

On principle, is it right that management, labour and Government should all three participate in the increasing prosperity of the company, but that the shareholder alone (whose company it is) should suffer no increase in his dividend?

We are afraid that the Government clarification of their policy as regards the dividends that may be declared by Indian Iron and Tata Iron will have its repercussions on the new capital market. If, as a result, development in the private sector is impeded by the reluctance of capital, the blame cannot be laid to the lack of enterprise in the private sector.

At the same time, however, we feel that stock exchanges are attaching an exaggerated importance to the dividend. It is proper that we should always bear in mind the fact that the Indian Iron share is a superlatively growth stock. The sooner that loan capital is repaid, the sooner it will be that the shareholder's company will be unencumbered. Moreover, authority has, for its part, contributed to the ability of the company to make repayment of its borrowings. The special element in the retention price directly benefits the company, and therefore the shareholder.

The investor will be disappointed: he had a right to expect to share in the company's increased prosperity. But his consolation will be that the excellent profits being earned will reduce the time taken to pay off loan capital.

The stock exchanges are disappointed: their anticipation of a higher dividend has been belied. But their consolation must be that Indian Iron is the growth stock par excellence.

In the event, we fear that Government will be disappointed: unless their dividend policy is more realistically cognisant of the need to offer inducement to the new capital market, the investment climate during the Second Plan will not be such as to ensure a steady flow of funds to new enterprises of development and expansion.

A Policy for Oil Production

EXACTLY three months ago we had pleaded in an article in this journal for a national Policy for Oil which should aim at reducing Indian dependence on the import of oil from foreign countries. Almost immediately afterwards, the Suez crisis broke upon an astonished and frightened world, and sent the nations frantically drawing up charts and lists of reserves, output, consumption and the like concerning oil. The crisis threw into sharp relief India's extremely uncomfortable position as regards this vital mineral, which literally makes the wheels of the world go round, and underlined heavily thereby the need for evolving quickly the policy we had written about.

It would be superfluous, and even tiresome, to catalogue what oil means to trade, to industry, to commerce and indeed to the whole fabric of modern life. Oil is the source of more than one-third of the total energy produced and consumed in the mechanised world of today. It is inconceivable to think of any modern nation which will not require more and more oil and yet grow—at least for the next three decades, before which time atomic energy is not likely to throw a serious challenge to oil as the provider of one of the main sources of energy to mankind. The enormous increase in the importance of oil can be judged from the fact that, today, the USA alone is consuming more oil than the entire world did 14 years ago. It can be easily imagined how greatly India will have to depend on this source of power and energy in its gigantic programme of industrialisation.

At the time when, with the partition of the country, the Attock oil fields ceased to be in India, our only source of crude oil was from the Digboi wells in Assam. The nearby Nahorkatiya wells, from which the first flow came out in November 1954, have augmented this source; but, even then, India produces only about 8 per cent of its crude oil requirements. At the present rate of consumption of all mineral oils, India requires about 5 million tons a year against which the present production from the Assam wells is only about 400,000 tons. For 92 per cent of the country's requirement of crude oil, we depend on imports. Our requirement, moreover, is bound to grow rapidly along with the expanding economy and industrialisation of the country. How large it will be by 1961, it is difficult to say precisely, but, it is estimated that, provided the programme in the Second Plan works out more or less to schedule, it will not be less than 7 million tons. Thus, unless production of crude oil increases substantially, India's dependence on foreign countries for this vitally important raw material will be almost total in the near future.

Fortunately, the outlook is not as gloomy as the figures might suggest. Geologists believe that oil pools and traps are likely to abound in wide regions in the Brahmaputra Valley, the Gangetic basin, the Punjab plains, the Rajputana deserts and places in Kutch and Cambay. The recent discovery of the Nahorkatiya area, where the percentage of wells striking oil was quite exceptionally high, has, legitimately, been a cause of great encouragement and hope. So much so that Mr W. D. Metre, senior Geologist of the Assam Oil Company, speaking at the annual meeting of the Geological Mining and Metallurgical Society of India, said that, with the proved and provable reserves in the Nahorkatiya area, it was now possible to plan a production of nearly 2½ million tons of oil a year, besides 45 million cubic feet of natural gas per day which is equivalent to .6 million tons of fuel oil per annum.

Now, this is a most important pronouncement made by an acknowledged expert in the subject who is unlikely to exaggerate. It means that India is now in a position to plan to produce, on the strength of oil discovered in one particular area, 50 per cent of our present needs—a percentage which could not even be thought of a few years ago. It is true that the rate of consumption of petroleum products is expected to show a steep rise in the near future. It is also true that the Nahorkatiya discovery was made in a region which had earlier been proved to be rich in oil and where geological and geo-physical investigations have been carried out to a far greater degree than in any other region in India. But, at the same time, there are grounds for hoping that, with the quickened oil consciousness in the country, exploration in other areas will be pursued more vigorously than has been done so far.

Exploration for fresh oil has been reserved to the public sector, and Government have decided after great initial hesitation,—which is quite understandable—to search for oil by their own efforts. Exploration work, it is reported, is at the moment being carried on

(Continued on page 661)

And Then There Were . . .

The number of countries that make substantial use of the Suez Canal is well beyond 40. But, when Britain issued invitations to the first Suez Conference, only 23 could have attended it, and one—Egypt—chose not to. The deliberations at this 22-nation conference were unable to produce any constructive solution or negotiable set of proposals. Inevitably in the wake of the failure of the Menzies Mission to Cairo, a second conference was called. And then there were 18, because the four nations which, at the first conference, had not voted in favour of the majority proposals, were not invited for the second. The trend of discussions at the second Suez Conference, preceded as it was by an apparent firmness to bring the Canal Users Association into existence, also ended up as a failure. But, nevertheless, it was decided to go ahead with the formation of the association. Invitations were sent to all 18 of the nations; but, then, there were only 15—the desire to commit themselves to the Association was lukewarm, if not altogether missing, in the case of the Asian countries. Japan was not at all confident that the Association could serve a useful purpose. Pakistan, with the unenviable reputation already of having proved itself traitorous to the Middle East cause, understandably decided to send "an observer". The Lebanon, as behoved an Arab State, was sitting on the fence.

There is a poem about 10 little nigger boys; at the end of it there was none. One wonders whether this is not true of the countries that are subscribing today to the idea of the Canal Users Association. For, although the Association may come into existence, it is greatly to be doubted whether there will be a single country which will be able to use the Canal in terms of the decisions arrived at the Conferences in London. But, we may also remark that, unless a solution is forthcoming for the Suez dispute, ultimately it may be found that of users of the Canal there was finally none.

Bottlenecks in coal transport

As against the contradictory assertions of the railways and the coal industry, consumers of coal are flabbergasted as to whom to blame for the inordinate delay and the consequent loss to their business. While the railways maintain that a much larger number of wagons has been allotted to the industry in recent months than during the previous years, the coal industry equally strongly declares that the number of wagons allotted to it to cope with the requirements of the consumers has always fallen short of its requirements.

The statement that, every day, 900 to 1000 wagons, or one fourth of the total number of wagons allotted to the industry, are kept unutilised in the coalfields of Bengal and Bihar, however, appears to lend support to the railways' contention. A closer examination of the problem will reveal that, while it is beyond doubt that more wagons are being made available to the industry than during the previous years, the position remains unaltered as far as the industry is concerned due to various restrictions imposed by the railways on movements of wagons. Out of an allotment of more than 5,200 wagons, only 1,550 wagons or so are allowed to be moved beyond Moghalsarai. Since the demand for coal below Moghalsarai and on down-country stations is limited, a large number of wagons inevitably remains unutilised every day.

It would appear that matters would have considerably improved had it not been for the more or less complete absence of co-ordination between the railways and the Coal Administration. While the railways seem to be satisfied that they have done their part of the job by allotting more wagons, the Coal Administration seems to believe that it is none of its business to worry about bottlenecks in coal transport.

It is surprising that, in a vital matter like the movement of coal, Authority has not deemed it necessary to interest itself, especially when there appears to be something seriously wrong somewhere. The man in the street may well ask why the Coal Administration, which is in close touch with the situation, has not taken up the matter with the railways with a view to bringing about a better co-ordination of movements. The question remains unanswered. It is high time that Authority took active steps to ensure that every wagon that is allotted to the coal industry is fully utilised.

*

Resurgent Bevan

The British Labour Party has just concluded its annual conference at Blackpool. There were two significant developments at the conference. The first of these was the triumphant regaining of power by Mr Aneurin Bevan, who was relegated completely into the back ground last year, when the Labour Party showed its clear-cut preference for Mr Hugh Gaitskell to succeed Earl Attlee as the Labour Party leader. Mr Bevan has now captured the key post of Treasurer. The second development is the confidence expressed at the Conference in the ability of the Labour Party to win the next general elections. If, in America, Mr John Foster Dulles's brink of war theory may conceivably affect the vote for the Republican Party in the imminent general elections in that country, it would appear that, similarly, in Britain, the Conservative Party's apparent readiness to use force in the Suez issue is considered a factor that will spell success for the Labour Party at the polls. A Labour success in a recent bye-election may not, in this regard, be as conclusive a proof of support for the party in power being withdrawn as may be the success of the Democrats in the Maine elections. It is nevertheless likely that the Suez conflict will have measurably improved Labour's chances at the next elections. As far as the resurgence of Mr Bevan is concerned one wonders whether it does not reflect the same anti-war mentality within the party. For, Mr Gaitskell had aligned himself with Sir Anthony Eden in the denunciation of Nasser's nationalisation of the Suez Canal. It may be too much to conjecture that Mr Bevan's success is a rebuff to Mr Gaitskell. But it is not to be doubted that, in Britain not only does there seem to be a swing from the right to the left, but also a swing within the Labour Party further to the left.

*

Re-union

After six years of separation the Akali Dal has again joined the Indian National Congress with whom it had collaborated during the most crucial periods of national struggle to throw off the foreign yoke. The fact that the Dal has chosen Mahatma Gandhi's Birthday for announcing its important decision is indicative of the deep respect the Dal has for the Father of the Nation. Coming as it does at this juncture, this reunion is of great significance.

The Congress Party has ample reason to feel happy at the comeback of the Dal into its fold now because this will strengthen it considerably in the Punjab and PEPSU. With the general elections not far off, this is a great gain. The relevant resolution says that the "Dal should concentrate on and confine itself to the religious, educational, cultural, social and economic betterment of the Sikhs; and (2) in regard to political activities members and supporters of the Akali Dal will be advised to join the Indian National Congress." It has however been made clear that the Dal reserves the right to raise its voice against any infringement in regard to rights and liberties of Sikhs.

In deciding to join the Congress, the Dal has been impelled by the larger interest of the country; patriotism has prevailed over sectional interest. The Akali Dal's reunion has demonstrated the wisdom of the national organisation in steadfastly upholding the principles of a Secular State.

Further Depletion in Foreign Exchange

WHILE it could have been anticipated that the progressive course of the slack season would be faithfully recorded in the returns of the Reserve Bank for the week ended September 28, it is an unwelcome surprise to find that steep declines in foreign exchange holdings are once again being experienced. Until the middle of the month, September appeared to witness the reversal of the trend of continuing loss of foreign exchange; for, in the first two weeks, the fall was less than Rs 2 crores as compared with the weekly average, over the period from the beginning of April to the end of August, of roughly Rs 6 crores. In the week ended September 21, however, Balances Held Abroad in the Banking Department registered a decline of Rs 6.74 crores to Rs 26.40 crores. In the contingency that the following week would see further depletion, it was inescapable that a transfer would be necessitated from Foreign Securities in the Issue Department to Balances Held Abroad in the Banking Department. The total of foreign exchange holdings of the Reserve Bank has sharply gone down by nearly Rs 8 crores in the week ended September 28; and there was, consequently, need to bolster the relevant portfolio in the Banking Department by a transfer from the Issue Department.

But the fourth week of September has connotations that are unmistakeably slack season: Notes in Circulation are lower by Rs 8.48 crores at Rs 1,409.23 crores; Rupee Coin is placed Rs 1.27 crores higher at Rs 120.07 crores, thus indicating the extent of return from currency of rupee coin; in the result, the Reserve Bank's cash in the till is higher by Rs 9.81 crores at Rs 41.31 crores.

As we have already noted, the low level of Balances Held Abroad made it mandatory for a transfer from Foreign Securities, the figure under this latter head in the Issue Department being placed Rs 10 crores lower at Rs 586.74 crores. This transfer has been offset by another transaction involving Investments in the Banking Department, and Rupee Securities in the Issue Department. Rupee Securities are marked higher by Rs 10 crores at Rs 703.72 crores; and Investments are reduced by the amount at Rs 32.34 crores.

It is pertinent to inquire into the reason for the Reserve Bank's decision to maintain its cash at a high level when it should have been possible, consequent to the transfer of foreign securities from the Issue Department to the Banking Department, to contract currency for Rs 10 crores. Possibly, the imminence of month early disbursements, the demands of puja expenditure and the forthcoming banking holidays are in the the aggregate expected to need and to effect a substantial expansion in active notes. This may have influenced the Reserve Bank largely to maintain the status quo in the total of notes issued.

The rise of just under Rs 4 crores in the deposits of the Central Government and the fall of a little more, at Rs 4.90 crores to Rs 19.06 crores, in the deposits of States Governments both suggest the possibility of inter-governmental adjustments. For the first time in a month, deposits of member banks show a rise instead of a fall, although the increase is a nominal one of Rs 0.09 crores to Rs 52.64 crores; it is possible to infer that the strain on the banking system caused by the State Loans is in the process of relaxing. The one other important change is the marking down of Other Loans and Advances by Rs 3.88 crores at Rs 86.81 crores; this decline is due, as can be seen from the return of the State Bank for the same week, to a reduction in the indebtedness of the State Bank to the Reserve Bank.

Slack season accretions have added to the State Bank's deposits by Rs 4.79 crores to Rs 232.15 crores. This has enabled borrowings to be reduced by Rs 5.50 crores to Rs 10.50 crores. Cash balances are slightly better. Advances are Rs 1.29 crores lower. Investments show a rise of Rs 0.79 crores to Rs 96.65 crores. The increase in this portfolio since August 31 gives an indication of possible subscriptions by the State Bank to State Loans: this works out to Rs 1.92 crores.

The return of Scheduled Banks for September 21 is puzzling in the extreme. For, there is an untoward drop of Rs 6.77 crores in deposits to Rs 1,092.94 crores. It is quite unusual for a sizeable decline to be recorded in deposits in the third week of a slack season month, especially since the week under review could not have produced any "specialised" demand. In the week ended September 7, both month early disbursements and State Loan subscriptions caused a drop of Rs 7.64 crores in deposits. In the following week, deposits actually rose by Rs 1.29 crores. The only possible explanation is that, in the relevant week, the loss of foreign exchange was caused by transactions on private account, and therefore was reflected in a decline in deposits.

Borrowings from the Reserve Bank have risen sharply by Rs 13.61 crores; the reader will remember that the State Bank's indebtedness to the Reserve Bank rose, in the relevant week, by Rs 9.50 crores. Investments mark a further rise of Rs 2.34 crores; and the increase since August 31 is Rs 12.06 crores—a rough measure of Scheduled Banks' subscriptions to State Loans. Advances are lower by Rs 2.25 crores at Rs 610.26 crores; but both Inland and Foreign Bills Purchased and Discounted have risen, so that the aggregate of advances has, in fact, showed a small rise of Rs 0.18 crores to Rs 751.97 crores.

+

The statement of the State Bank of India for the week ended September 28 reveals a rise of Rs 4.79 crores in deposits to Rs 232.15 crores. Borrowings from other banks have declined by Rs 5.50 crores to Rs 10.50 crores, while other liabilities, including inter-office adjustments, are shown at Rs 6.36 crores against Rs 5.82 crores.

On the assets side, cash balances are higher by Rs 0.62 crores at Rs 17.77 crores and Investments by Rs 0.63 at Rs 100.10 crores. Advances show a reduction of Rs 1.29 crores "Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 0.19 crores and "Bills Discounted and Purchased" for a drop of Rs 1.47 crores.

+

According to the returns of the Scheduled Banks for the week ended September 21, demand liabilities have declined sharply to Rs 631.89 crores from Rs 639.14 crores in the previous week, while time liabilities are slightly lower at Rs 461.05 crores against Rs 461.57 crores. Borrowings from the State Bank have moved down by Rs 0.62 crores to Rs 11.98 crores, while those from the Reserve Bank have shown a sharp rise of Rs 7.61 crores to Rs 67.66 crores. Cash and balance with the Reserve Bank are lower by Rs 3.09 crores at Rs 85.28 crores. Investments have improved by Rs 2.34 crores to Rs 373.48 crores. Advances in India are shown at Rs 610.26 crores against Rs 612.51 crores; Inland Bills at Rs 95.75 crores against Rs 92.87 crores and Foreign Bills at Rs 45.46 crores against Rs 46.41 crores. Money at call and short notice stands at Rs 11.92 crores against Rs 14.45 crores.

Is the Post-War Boom Over?

By PAUL EINZIG

THE rising trend of production in Britain, that has been proceeding almost without interruption since the end of the War, has come more or less to a halt. Although consumption continues to increase, the additional demand is met largely out of inventories. The Stock Exchange has its ups and downs and shows no inclination to resume its upward trend. In the circumstances it is not surprising that a large and increasing number of people have begun to wonder

SIXTYONE YEARS STRONG IN SERVICE

R. L. Tuli - Offtg. General Manager

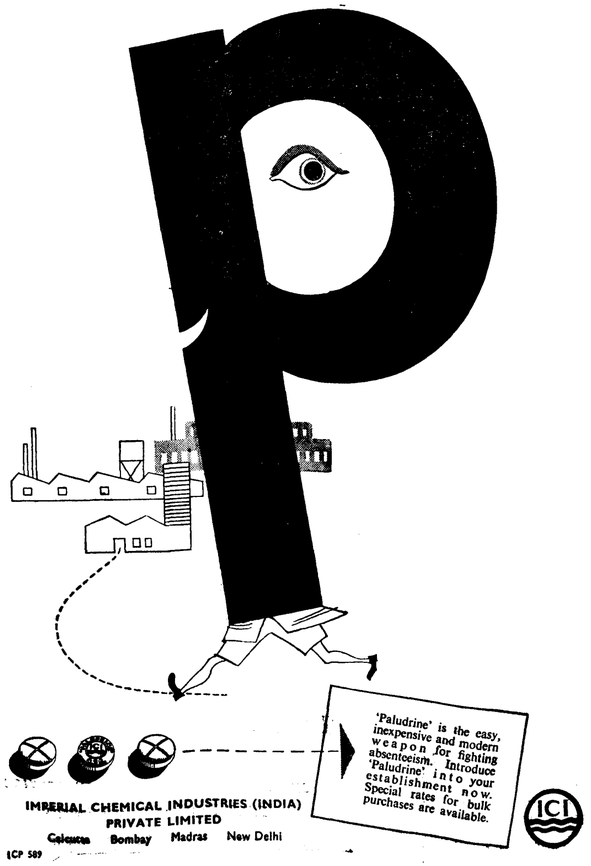
whether we have seen the last of the post-War boom.

The problem is by no means exclusively British. We encounter the same doubts and fears in the United States and other countries. Many of those who are inclined to believe that the post-War boom has come to an end argue on the following lines:—The basis of the boom was the acute shortage of capital goods and consumer goods caused by the wastage during the six years of War. The extraordinary requirements arising from that shortage have now been fully met. The wear and tear and physical destruction of industrial equipment has been more than made good. The houses destroyed by air bombing have been rebuilt. The retail stores are once more full of consumer goods in larger quantity and wider variety than before the War. The stage has been reached from which the task of industry will be confined once more to satisfying current requirements instead of having also to make good deficiencies arising from the War.

There is a revival of the arguments based on the conventional pre-War conception of business cycles. There is also a great deal of more or less inarticulate fear that "things have been going up for so long that they are bound to come down sooner or later." Needless to say if such views should come to be held widely enough they are liable to produce rating a wave of pessimism among their own justification by gene-producers and consumers . Apart from this phsychological danger, however, there is nothing in the material situation which would justify pessimism.

Investment expenditure in Britain continues unabated. Judging by the figures compiled by the Government from information volunteered by industrial firms capital expenditure by industry will be almost as large during next year as it is during the present year. Admittedly the number of new projects embarked upon is smaller so that when the projects which have been initiated are completed there may be a setback in capital expenditure. In the meantime, however, it may become possible for the Government to remove or relax its disinflationary measures. This would make it possible to initiate more capital projects and it would improve the prospect sufficiently to encourage industrial firms to embark on these projects for expansion.

In such circumstances the setback in capital expenditure would be purely temporary. In any case, should this setback be sufficiently pronounced to cause a substantial decline in business activity, the Government would undoubtedly take steps to counteract it by speeding up the execution of its own capital investment projects and those of the nationalised industries. All these projects had to be curtailed in 1955-56 in order to lighten the overload on the economy. It would be very easy to reverse that policy.



As for consumer demand, it depends largely on the trend of wages. Should the rising trend continue it would ensure a continued buying pressure by consumers. The danger is not that this pressure might peter out but that it will remain excessive so that the Government will have to reinforce its disinflationary measures. In the absence of excessive wages demands the Government would be able to relax its disinflationary drive. This means that buying pressure is likely to increase either through wages inflation or through a relaxation of measures taken against wages inflation.

What is a real danger is the possibility of having to adopt drastic disinflationary measures. Owing to Britain's precarious balance of payments position the Government might feel impelled to take very drastic steps to curtail domestic consumption and to break the wages spiral. It seems, however, that Mr Macmillan does not believe in embarking on such a course regardless of cost. In a recent speech he sharply criticised the extremists of the hard money school who are clamouring for heroic measures in the form of a bank rate of 10 or 15 per cent. The Chancellor rejected their advice because he is not prepared to pay the price for the results that could be obtained in such a way.

In the absence of too drastic measures, consumer demand is likely to continue to expand, even though not to the same extent as in recent years. As soon as industrial firms realise that their fears of a substantial decline of consumption were unduly pessimistic, they will resume their projects aiming at an expansion of their capacity. In any event, a slight slackening of the pressure of consumer demand would provide an opportunity for re-equipment in order to adopt the latest automatic devices.

Our post-war economy contains too many built-in inflationary elements to justify fears of a lasting setback in demand. In individual industries, such as the motor industry, such a setback is of course, possible. Taking the economy as a whole, the trend is bound to be expansionary, even though excessive wages demands and balance of payments difficulties may force the Government to call a halt from time to time. Those who are thinking in terms of pre-War experience should realise that the Welfare State, the policy of full employment and the more equal distribution of national income are post-War developments. Between them they have created a new situation in which the rules inferred from pre-War experience do not apply without considerable modifications.

—(Copyright)

World of Jute

Way—Out

WE have witnessed intense activity on the part of Government some time ago, to improve the financial position of our jute mills which are confronted with an ever-widening gap between cost of production and selling price. After a month or so of strenuous endeavour to find a solution, Government handed the problem back to the industry. The industry could not find a better solution than a curtailment in production. Beyond giving a golden opportunity to the unscrupulous speculators to carry on their nefarious designs the production-cut does not seem to have brought about any other result.

It is rather strange that the way-out that is just in front has escaped the attention of Authority. The one and the only solution is cent per cent raw jute self-sufficiency. We have it on very high authority that "it is feasible to grow all the jute that the industry requires from the existing acreage if the cultivators adopt improved methods and appliances."

Ever since partition became a reality, this journal has been advocating 100 per cent raw jute self-sufficiency. We had realised at the very outset that it would be suicidal to depend for the raw material to keep going one of our important foreign exchange earning industry, on a country with whom we have parted company under not very happy circumstances.

The untenability of the position of having a large manufacturing industry without having the necessary raw material within the country had been realised by Authority as well. Production of raw jute in India made rapid strides in the post-partition years and the happy position of near-self-sufficiency was reached quickly enough.

Presumably encouraged by the hope of establishing closer ties with Pakistan, the drive toward raw jute self-sufficiency seems to have lost some of its original momentum. The fact that there is need for improving quality has also been responsible for slow-pedalling the movement for 100 per cent self-sufficiency.

With Pakistan taking strenuous steps to establish her own jute industry, her jute policy has come to be attuned more and more to purely selfish ends. The folly of slackening our efforts toward reaching complete raw jute self-sufficiency is now increasingly being realised in the country.

Spokesmen of every organisation in the country which has something to do with the jute trade and industry are now agreed that 100 per cent raw jute self-sufficiency will remove most of the disabilities from which our jute goods industry is now suffering.

Mr D. S. Kothari, President of the Jute Brokers Association said in Calcutta last week that "the only permanent solution is a large scale increase in home-grown jute." He pointed out that though the last season's crop was the largest of the last four years. India had to rely on Pakistan for a large proportion of her requirements of raw jute.

"The average monthly consumption of raw jute during the four months,—March to June 1956—was about 5,54,000 bales. The total consumption between July 1955 and June 1956 was 63,40,000 bales, which is the highest for the past four years. Out of this, Pakistan supplied about 13,08,000 bales, which goes to show that inspite of our best efforts to increase indigenous production of jute, India has to rely still on foreign supplies. I need hardly state that the fluctuations in the price structure of jute is due more to the policy adopted by the Pakistan Government. This state of affairs, in my opinion, is highly detrimental to the jute trade in general."

From the foregoing it will be clear that there is no second opinion in the country regarding raw jute self-sufficiency. In view of the crippling effect that our dependence on raw jute imports from Pakistan is having on our jute industry, it is to be hoped that the emphasis will be laid equally on quality as well as quantity in the programme for jute production in the next five years.

*

Jute goods market opened the week on a weak undertone as overseas buyers evinced little interest in the proceedings. The trend of shipments so far, especially in sackings, seems to be also very disappointing. In the continued absence of fresh foreign enquiry, bears were active in the Fatka depressing prices. The fact that sellers were offering freely in the raw jute section also contributed to the down-trend.

As against last week's closing of Rs 43, Hessian Ready reacted to be done at Rs 42-10 on Thursday this week. B. Twills Ready also closed quiet at Rs 112-8.

The following table shows price trends during the week:

	Last Week's Closing Rs. a.	This Week's Closing Rs. a.

World of Tea

Crop Regulation Scheme

ACCORDING to the decision made by the Calcutta Tea Regulation Committee, the Tea crop for 1956 in North-East India will be curtailed substantially. The Committee, which comprises the Tea Producing Associations of North India, has taken this decision to regulate the crop against excssive supply. The members of the producing associations will be advised in due course about the date from which they will cease plucking. The Committee has also agreed to destroy all residual and waste teas of a quality unfit for sale in the auctions.

In fact, the possibility of tea gardens being asked to stock production from the end of November and destroy two per cent of the output is freely mentioned in tea circles. Thus, the proposed cut in production is expected to be more or less on the lines of the voluntary restriction scheme successfully adopted in 1954. But the attitude of the planters in South India to such a voluntary regulation of crop as a method to adjust production to demands continues to be unfavourable; but they have already decided upon finer plucking instead of restricting the production.

The crop in Ceylon, during August, was affected by adverse weather. Outturn totalled 23.4 million pounds as against 32 million pounds in the corresponding month of last year. As a result of this marked shortfall, total outturn during the year up to the end of August 1956 was 251.7 million pounds as compared to 259 million pounds in the corresponding period of last year.

The Pakistan Tea Board has considered the Sub-Committee's report envisaging an increase in the present annual tea production from 54 to 75 million pounds yearly in the ten-year period. The Board has agreed that the target will be achieved only if the industry gets fertilizers, etc. The Board has also decided to recommend the report to the Provincial Government which has a jurisdiction over an extension of tea cultivation.

The trade interests in Calcutta seem to have already got the scent about the coming tea crop regulation and that is why they have been lending full support to the tea auctions held during the past two weeks. There has been an impressive recovery in the prices obtained both at the export and internal auctions. The demand from internal operators has been more pronounced; and a part of this demand emanated out of the feeling that they should stock for the coming holidays when sales will not be held for two weeks continuously.

It seems that one of the major factors responsible for the recovery in foreign demand is the fear that the export duty might rise at the end of September under the slab system. Buyers were naturally keen to have their teas moved soon just in case this happened. Moreover, prices in London auctions have been rising steadily; and it appears that the Suez situation have been exerting a considerable influence on the sentiment of buyers. The Common teas, which were till recently very much neglected, are now fetching prices allowing a premium over those prevailing in Calcutta.

With the implementation of the regulation scheme, it is reasonable to assume that the [illegible] in tea prices will be maintained in the coming weeks. On the other hand, the slow pace of release of Export Quotas by the Government has added to the forces accounting for the upswing in values of different types of teas. With the release of a second interim release of 10 per cent, the total release made so far comes to 50 per cent of the crop basis. The picture of the industry, as can be made out of the present price trends, is a pointer to its better prospects during the remaining part of the current season. Meanwhile, there is no change in the existing rate of duty at As 6 per pound; and the Government of India have fixed the price of tea, for the purpose of determining the export duty, at Rs 1-13-3 per pound as against Re 1-1-3 in force from September 1, 1956.

In the Dacca tea sale in Calcutta this week, offerings consisted of 47,400 packages for which there was a very strong and general demand and all descriptions, with the exception of medium CTC and poor Darjeelings, were sold. Whole Leaf grades and clean black Fannings were the strongest features of the sale and were fully As 4 per pound dearer and sometimes more. Consumptions and Low Mediums were also in very strong demand [illegible]

World Overseas

US Notes

WHETHER one takes a long or a short-term view of the American economy, the picture that emerges is highly favourable. On the short-term side, the Department of Commerce, after surveying the first seven months of this year, points out that production and purchases of all consumer goods other than automobiles outstripped the high January-July 1955 rate. What is more, the Department notes that retail sales continued to rise in August and early September.

But it is when one takes a long-term look at the American economy that the full measure of its remarkable development emerges in a detailed analysis of domestic trade trends between 1929 and 1954. The US Department of Commerce concludes that both personal income and retail sales in the United States more than trebled during the last 25 years, and in terms of constant dollars, retail sales amounted in 1954 to more than double their 1929 volume. A substantial portion but by no means all of the gain was due to population growth. Sales per capita, after adjustment for price changes, were 50 per cent higher in 1954 than in 1929. It is a significant part of the economic development that these divergencies are narrowing.

During the quarter-century, states with the lowest 1929 income and sales made relatively greater advances in both categories than those originally at the upper end of the scale. Thus, while the northeastern and Pacific Coast states have throughout that period registered the highest per capita sales in the United States and the southern states the lowest, the south has substantially increased its percentage share of the total national sales volume. This is a reflection of the substantial economic development of the south.

The Commerce Department study also reveals that the number of retail stores in the United States increased during the period by 200 per cent over the 1929 total of 1.5 million. At the same time, the average volume of sales from each store, again after adjustment for price changes, nearly doubled —indicating a growth in the average size of retail establishments.

The trade toward long-term growth in the American economic system is demonstrated also in the field of life insurance. With Americans earning more money over the years, they have been putting larger amounts of savings into life and other types of insurance as a kind of a private social security. Today, according to the Institute of Life Insurance, there are 1,144 life insurance companies in the United States—an increase of 81 in the past year, and of 700 in the past 16 years. Since 1940, the total value of all life insurance policies in force in the United States has increased 240 per cent. Paralleling regional trends in the national economic development the Younger, Western and Southern insurance companies have shown the greatest rate of gain. Life insurance concerns in the south and west now number 864, more than three times their number in 1940. Other companies have managed to do well, too. Sixteen of the life insurance concerns in the United States are more than 100 years old, and 55 have passed the 1,000 million dollar mark of life insurance in force.

Britain

STEEL production in Britain last year, at 19,790,000 ingot tons, was the highest attained in the history of the UK steel industry, states the Iron and Steel Board annual published in London.

Production and consumption of steel each expanded in the past year by about 1,250,000 tons. This was almost double the average yearly increase in the post-war period.

This is a noteworthy achievement of the UK steel industry, and illustrates the benefits now being derived from the large and increasing volume of expenditure by iron and steel producers on development scheme since the war, it is pointed out in London. The industry's first post-war development plan was completed in 1952, and since then there has been a steady annual increase in output, culminating in last year's record figure.

Although production and consumption of steel in the UK have increased at closely parallel rates in recent years, this has not (owing to fluctuations in stock-building and in imports) prevented exports from rising. Thus there was an increase in direct exports in 1955 to 3,350,000 tons (compared with 2,900,000 tons in 1954). This, it is pointed out, was a significant increase, and reflects the UK's efforts to maintain its export markets and to fulfil obligations to traditional customers, especially within the Commonwealth.

The prospects for the current year are of a further increase to an estimated output of 21,300,000 tons. Future prospects should, it is felt in London, be enhanced by the fact that last year 45 development schemes, estimated to cost £67,500,000 received the Iron and Steel Board's approval representing a substantial increase over similar approved expenditure for 1954.

On September 24, the British Indian Steam Navigation Co. was 100 years old, and celebrations to mark the occasion were held in London and oversea ports where the parent company and its associate companies have offices. Celebrations were also held abroad all the line's ships, in harbour or at sea.

In Glasgow on September 24, 1856, William Mackinnon registered the Calcutta & Burmah Steam Navigation Co., forerunner of the British India (BI) line and of many associate enterprises in India and Africa. In 1852 Mackinnon started the first mail service to Zanzibar from Aden to connect with his main-route ships. He also played a great part in the Imperial British East Africa Co., which laid the foundations of British administration in Kenya and Uganda.

Under the guiding genius of Sir William Mackinnon, the company introduced the steamship to the coastal traffic of India, Burma, the Persian Gulf, and East and South Africa. It greatly assisted the development of trade between India and Australia, and its ships, extending their service to the Far East and also to Britain and the Continent have for many years provided a network of regular services over the huge area of seaways between Britain, Japan, Africa and New Zealand.

To celebrate its centenary year, BI has produced a fascinating history of the company, whose fleet—originally consisting of two small-screw vessels—had by 1922 grown to 158 ships, then the largest merchant fleet in the world. Today the fleet totalls 61 ships with four more on order.

*

France

With 50 million tons in 1955, France was the third largest producer in the world of iron ore. In 1955 French production represented 66 per cent of the entire production of the countries in the ECSC.

For the whole of the year 1955, French production of iron ore increased by 14·76 per cent in comparison with 1954. This expansion has continued since the beginning of 1956; production has totalled 26.7 million tons for the first six months. It was 24.9 million tons during the corresponding period in 1955.

In 1955, factories in France and the Saar consumed more than 38 million tons of French ore, which was 24 per cent more than in 1954. This corresponds to the expansion of the iron and steel industry which is going on in France, which has brought the production of steel from 10.6 million tons in 1954 up to 12.5 million tons in 1955.

Exports totalled 13.3 million tons, which was 2 million tons more than in 1954; and which provided the French economy with foreign exchange amounting to the equivalent of 20 milliard francs, inclusive of transport costs.

In 1938, French iron mines produced 33 million tons of ore with 30,000 workers. In 1954, 25,495 workers produced 43 million tons.

In 1955, the number of workers fell to 25,109 while the production rose to 50,000 tons.

The Technical Service of the Trade Union Chamber of Iron Mines and the Mangers' Technical Commissions carried out studies on how to increase production and the efficiency of the workers despite the reduced working force. These studies were rounded off with the sending of visiting engineers to the United States and with the consultation of American experts who visited mines in the eastern part of France.

These eastern iron mines from which 93 per cent of French ore comes, in 1955 invested 5,230 million francs (housing not included).

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—*As You Like It.*

IT may be my addled fancy but I cannot escape the gnawing, misgiving that, barely eight years after his martyrdom, Gandhiji is a fading memory to many of his countrymen. In saying this, I am not so much thinking of his "teachings", his specific remedies for India's manifold ills: these are arguable matters on which Gandhiji would have been the first to concede the right to differ and the further right to discard his solutions should they not commend themselves to you. But what I am thinking of is the more grievous deprivation, the apparent disappearance from the Indian scene of his "presence", the beneficence of his unseen influence which did an enormous difference in the quality of the lives of those that had the good fortune to be his contemporaries. We do, of course, have official and formal acts of piety on his birthdays and other occasions of national commemoration: the day begins on such days at Rajghat—a place that has, with a certain ironical appropriateness, displaced Sewagram from national memory—and suitable homage is paid to the Father of the Nation in language that is both sonorous and soporific. But the terse certitude of Gandhian guidance on things big and small, which used to reach everyone of us with a paradoxical intimacy from the page of the daily papers, has inevitably ceased after his death. Even the intangible pressure of his personality, that persisted for a while after his death, appears to have all but disappeared. The tidal wave of remorse and anguish that followed his assassination has spent itself and the shallow stream of everyday life has resumed its even tenor once again.

*

I shall naturally be told that all this is nothing worse than the attribute of mortality: already, a generation is growing to which Gandhiji is but a name: to others, too, the present has a tyrannical immediacy. But, when all the excuses have been made, it will remain true that a little introspection will bring back something of that light that never was on land or sea. A deliberate effort now and then to assess the difference Gandhiji has made to their lives would be far more valuable than a ritualistic genuflection. Even if you are that impossible individual who was his contemporary and was entirely untouched by him, meditation on one of the most complex beings of all times would be a worth while intellectual excercise.

*

Exactly how complicated a human being he was, was recently borne in on me by the accident of my happening upon a beautifully produced anthology** of writings by and on Gandhiji. Though designed principally for American readers, the book is nevertheless absorbing reading even for those of us who have read these selections elsewhere. The arrangement is chronological and gives some idea of the development of not only some of Gandhiji's basic ideas but also of his personality. The greater part of the book is in Gandhiji's own words and an account of almost all the decisive moments of Gandhiji's life are there, often in his own words. Of the extracts in the book, those from the autobiography are perhaps the most absorbing: read after many many years, they came to me with the same vivid shock of a first reading. In attempting to analyse this impact, I at first was tempted to think that it was the style, with its utter lack of artifice and almost complete literalness, that was responsible for the compelling power of these pages, but such a conclusion would be an error—and not even a fashionable error at that. Nor is it due entirely to the alert and unsparing exploration of all the corners of his personality, including some that in his own estimation were of the dingiest kind. In other words, it is not the rather morbid interest that attaches to all autobiographies, more especially of the Fransiscan self-flagellating "mea-culpa" kind, that makes us read the pages with absorption. I think it is the spectacle of an extremely audacious and original spirit consciously ordering its life in the image of its own vision of man's function in this world that makes these pages live for us. Take, for instance, the famous episode of Gandhiji's pushing his wife out of the house because she would not serve cheerfully a Christian because of his "untouchable" antecedents and his remorse on her remonstrance: it is a little masterpiece of narrative art: direct and vivid and taut with all the emotion of the situation, barely held in check by the words used. Its human interest is undeniable. What gives it its significance is its being an incident of what Gandhiji calls h's "Experiments with Truth". It is not "truth" in the abstract sense of the term, for, an experiment with truth in that sense seems to me a meaningless expression. What Gandhiji surely means is an ordering of personal life by a process of trial and error on the basis of certain "true" or permanent values of life.

*

These Gandhiji had formulated for himself even in those early years at South Africa in terms that were somewhat rigid. He explained them week after week in his paper, "Indian Opinion", and finally published them in the form of a book entitled "Hind Swaraj" in 1909. This is a book that has been somewhat neglected in the years after Gandhiji took India by storm in the twenties, but is nonetheless of crucial importance for understanding his personality. Many of the views expressed here are, as not unusual in a comparatively youthful production, in the most uncompromising terms. But the book contains all the germinal ideas of Gandhian philosphy. He was, to be sure, to evolve the strategies and techniques of the practical applications of these principles later. But the broad contours of Gandhian thought, the principles of Satyagraha, the notions on the social and economic relationship, the hatred of the exploitational nexus between man and man, and the multiplicity of ills in the wake of capital-heavy machine-centred modes of production are clearly visible already.

*

Reading selections from these and other writings of Gandhiji, one is struck again and again by what can only be called his fastidious conscience. I am not quite happy with the adjective I have just employed, for it suggests a certain fussy priggishness, quite alien to Gandhiji's personality. In fact, one of the most attractive things about him was the lightness with which he carried his high-mindedness, which fact, of course, merely confirms its complete genuineness. His concern for right action was so unostentatious, his humanity was so unaffected and his conviction of the certitude of what he had to say was so instinctively fortified that there was no trace of pompousness or insincerity in anything that he said. That was one of the most engaging things about him.

*

But the squeamishness involved in the adjective I have applied is very real. It may not be wholly fanciful to see in some of his more extreme notions on sex—there is an interesting conversation between Gandhiji and Margaret Sanger on the subject in this book—a certain exaggerated queasiness. In the famous "brick" he dropped at the inauguration of the Banaras University, one again sees his revulsion from the vulgarity of bejewelled royalty not only in the midst of the larger poverty of the country but also at a seat of learning. The same sensitiveness is to be seen in his scrupulous fairness to his opponents, which incidentally was a shrewd weapon to use against a nation that prided itself on its sportsmanship. It is to be seen in a hundred small things, in the thoughtfulness over small details, in the scrupulosity over money and so on. But the really important forms of this fastidiousness were political and social. It was the normal squalidness of slavery, and the spiritual degradation involved in the misery produced by the excesses of the capitalist system, that made him the determined enemy of both.

*

Gandhiji was not a humanist in the sense in which the term is usually understood, but it was his concern with the soul of man and its inviolability, born of an essentially religious view of the world, that made him an instinctive democrat. Gandhiji's political life, in other words, had the starting point in his belief in the human soul and its personal salvation. That is the clue to his much misunderstood dictum about religion and politics

being inseparable. He saw that his personal salvation was bound up with the salvation of India and had to be worked out as part of the working out of India's salvation. This way of looking at the problem was not "a manner of speaking" or a "figure of speech" for him. He has repeatedly stated that, in his way of reckoning these things, his is a task about which he is in no hurry since he is prepared to give several incarnations for the purpose.

*

To the actual tasks of working out the salvation of India, he brought to bear an amazing practicality that captured the imagination of millions. One of the most absorbing aspects of his life is the resourcefulness and cunning in the devising of these techniques to a variety of situations. I have not often heard the word genius applied to Gandhiji; but, in the inventiveness and virtuousity that Gandhiji showed in the practical application of his basic principles to personal and communal life, there was the same bizarre and yet unerring inevitability that characterised all expressions of a genuinely unique spirit.

Some instinctive sympathy with the collective mind made him hit *on devices that made the masses* respond to them equally instinctively. Who but a genius could have hit upon, as rallying points of collective emotion utterly and inevitably right, symbols as the "Wheel" or Salt? I have written at some length in these columns in the past about the Charka: and Salt? There is practically no limit to the levels on wh'ch the symbolism will act. For instance, no Christian reading about the Salt Satyagraha can fail to be bothered by the mnemonic irrelevance of "Ye are the salt of the earth"; and, once this passage *from the New Testament starts* nagging you, you cannot escape the question: who, in the present case, is the salt of the earth—men like Gandhiji or those that find themselves arrayed against him? If you are the upholder of the British order in India, the transition to the notion that, even if you were once the salt of the earth, the salt hath lost its flavour, is inescapable. No Christian can fail to capitulate to Gandhiji after this stage is reached. The whole modus has a certain "diabolism" be-

SOUTH EASTERN RLY. TENDERS.

The Controller of Stores, South Eastern Railway invites the following tenders:

(1) Tender No. GM-16/56/K14/I(B) — for supply of (a) 2 Nos. Diesel Engine Driven Portable Centrifugal Pump 25,000 GPH at a total head of 90' ft., (b) 2 Nos. Diesel Engine Driven Portable Centrifugal Pump 15,000 GPH at a total head of 100' ft. and (c) 4 Nos. Diesel Engine Driven Portable Centrifugal Pump 10,000 GPH at a total head of 100' ft. Earnest Money required is Rs. 920/-. The opening date of the tender is 22-10-1956 at 12 noon.

(2) Tender No. GM-17/56 K14/I(B)— for supply of (a) 1 No. Portable 20 K.W.A.C. Generator and (b) 4 Nos. Portable 3 K.W.A.C. Generator. Earnest *money required* is Rs. 1,000/-. The opening date of the tender is 22-10-1956 at 12 noon.

(3) Tender No. GM-18-56/K14/I(B)— for supply of 6 Nos. Portable Diesel Engine Driven Air Compressor capacity 210 Cft. per minute at 100 lb. pressure. Earnest Money required is Rs. 1,000/-. The opening date of the tender is 23-10-1956 at 12 noon.

(4) Tender No. GM-19/56/K14/I(B) for supply of (a) 16 Nos. Pneumatic Dry Rock Drills, (b) 6 Nos. Pneumatic Grinders and (c) 10,000 Rft. Pneumatic Hose Pipe 3/4" bore. Earnest Money required is Rs. 1,000/-. The opening date of the tender is 23-10-1956 at 12 noon.

(5) Tender No. GM-20/56/K14/I(B)— for supply of (a) 1 No. Diesel Engine Driven Winch capacity 10 tons and (b) 2 Nos. Diesel Engine Driven Winch capacity 5 tons. Earnest money required is Rs. 1,000/-. The opening date of the tender is 24-10-1956 at 12 noon.

(6) Tender No. GM-21/56/K14/I(B)— for supply of 6 Nos. Diesel Engine Driven Portable Concerte Mixer 10/7 Cu. ft. capacity. Earnest Money required is Rs. 1,000/-. The opening date of the tender is 24-10-1956 at 12 noon.

Tender No. CS-17/56/K14/I(B)—for supply of 8 Nos. Petrol Engine Driven Internal Concrete Vibrator. Earnest Money required is Rs. 460/-. The opening date of tender is 25-10-1956 at 12 noon

(8) Tender No. CS-18/56/K14/I(B)— for supply of 1 set Diesel Engine Driven Portable Welding Set. Earnest Money required is Rs. 460/-. The opening date of tender is 25-10-1956 at 12 noon.

Tender forms can be obtained from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 (I.B. Section) on remittance of the cost to him direct by Money Order or on production of the Cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23.

The cost of tender form for items (1) to (6) above is Rs. 5/- each and for item (7) and (8) is Rs. 2/- each. This amount is not refundable.

Firms not on this Railway's approved list of Contractors must give their Banker's reference and enclose a valid Income-tax *Clearance Certificate* with the tenders.

Gateway Gossip

Bombay Review

Prelude to Fascism?

MR NERHU'S somewhat portentous description of the persistent heckling by a handful of people at the meeting addressed by him at the Gujerat University Campus is somewhat alarmist. After all, things far worse had happened in Ahmedabad in the very recent past and the bad manners of a handful of urchins need to be put in a proper perspective. But this is not the same thing as saying that political and patriotic vigilance of the sort that Mr Nehru advocated at a meeting of the Congress workers in Ahmedabad is not called for. There can be little doubt that something is seriously wrong with the Congress in Gujerat, that it should have so completely lost its influence with the people. And, when one realises that all this is happening in Ahmedabad, one finds oneself sorely puzzled. Was not Ahmedabad *the one place in India* in which the influence of Gandhiji was deepest and most abiding? Was it not the one place in India in which the record of labour-capitalist relations was the most enviable? And what has happened to the people who speak the same language as Sardar Patel did that they should so far forget themselves as to attempt to destroy the magnificent edifice of Indian Unity he so painfully built? In a sense, it is the fact that all these disturbing events are taking place in Ahmedabad, rather than elsewhere, that make heart-searching among all of us so urgent.

It is a fact that the extreme maladroitness with which the reorganisation question was handled by the Government has been responsible for a great deal of the trouble that followed the announcement of Bilingual Bombay State. The suddenness with which the decision descended upon the people took them completely by surprise; and an incredible number of vested interests found themselves thwarted at the last moment. These had not much difficulty in manipulating the very genuine popular indignation at the decision along modes of protest that were violent and anti-social. The smouldering resentment has still not been pacified despite Mr *Morarji Desai's fast. Somehow*, this act of expiation seemed to lack the electric quality of similar penances by Gandhiji. The healing power too, of Gandhiji's influence, which would have succeeded in assuaging the really anguished, seems to have been absent in this case. So, when Mr Nehru came along to address the students, he found that they did not extend to him the elementary courtesy of letting him speak. As Mr Nehru said, this is something of a novel experience for him; but he is robust enough to take it in his stride. But, behind the indiscipline lurk dangers that need to be examined.

Mr Nehru dealt with them at some length in his speech. As I said, his reading of Fascist tendencies in the intolerance implied in their shouting slogans, was, at least for the immediate purposes of devising practical action, somewhat exaggerated. But his fears regarding the delicate nature of the nation's health, which can so easily be upset at the slightest whiff of political unreason, were well grounded. Just how dangerous the malaise is was shown not only by the disturbance following the reorganisation proposals, but also by the more recent trouble over a passage in an obscure book about Mahomet. No one with any sense of India's past can harbour the least possible complacency in the face of such dangers to our unity. It did appear for a while after Gandhiji's assassination that our chief source of weakness from the point of national unity had at last been removed; but it now seems that such comfort has been illusory. And, with the unleashing of massive forces of linguistic chauvinism in the last two years, all the old fears of the possibility of our going to pieces have revived. We have, it is true, learned books in which the unity of India was expatiated on at great length. But our history has countless instances in which this basic community of ideas on ultimate things has not prevented us from being a house divided against itself. It is often said of France that it is *not a nation but a civilization.* The same may be said of India, too. But we have, like France, national ambitions and it is quite unthinkable that we can allow ourselves to disintegrate into Maha Gujerats and Samyukta Maharashtras and Dravidasthans and so on. If we do not set about consolidating the national sense we have achieved so far, the danger of such tendencies overtaking us cannot be honestly ruled out. It is true, that under the present leadership, this contingency is somewhat remote, but nations cannot depend upon the accidents of individual influence. That is why the tendency, especially among students, to chauvinism of this sort is so disturbing.

That the national unity of India is in grave jeopardy is only one of the reasons for Mr Nehru's misgivings about the future. The fact that students have been in charge of these disturbances is very disquieting. I am not thinking of the problem from the point of view of indiscipline, which is grave enough. I am not also at the moment bothered about the impropriety of students masquerading as political leaders. What I am bothered about is the complete absence these goings on imply of a passion for political reasoning. I shall doubtless be told that I am a fossilised political liberal whose old fashioned conception of politics as a matter of decorous debate has been swept away as anachronistic nonsense. If that indeed were the case, then, heaven help all of us. If students

The Transport Problem

Despite the fact that it has been recognised on all hands that unless adequate transport facilities are provided, the progress of the Second Plan will be retarded, Authority seems to believe that, what with the large allocation of funds for transport under the Second Plan and the clarification of Government's position regarding goods transport by road, whatever problem that may arise will solve itself.

It must be noted, however, that the Planning Commission themselves have declared that considering the heavy demands that will be made on the country's means of transport, larger sources than those allocated under the plan for transport, could be utilised for the sector with profit to the national economy. It is now widely realised that the amount allotted will not be enough to bring about development of transport to the requisite extent. If the plan is to progress according to schedule, therefore, it is imperative that suitable measures are initiated even now for increasing transport facilities over and above those planned.

One way of doing this is to increase the allocations. But it is common knowledge that an increase in the outlay will be impracticable. The alternative is to devise ways and means of rendering assistance to private enterprise to develop Road transport.

But it is surprising to find that road transport has not made much headway in the country as during the last quarter of 1954 the total number of motor vehicles on the road has been estimated to be 353,000. Pointing out that the number must be considered very small having regard to the size of the country, its road mileage and population, the Planning Commission record a number of causes cited as contributing to the inadequate demand of Road transport.

The fear of nationalisation, high levels of taxation on motor transport, restrictions placed on interstate services and on long haulages under the Code of Principles and Practice, and the policy followed in some states of granting permits for only short periods instead of for three to five years as required by law, might have been operating to some extent is conceded. The Commission have further pointed out that the fact that the majority of private operators are small individual owners without resources to extend their operation on good and businesslike lines may also be noted in this connection.

Speaking at the Annual General Meeting of the Indian Roads and Transport Development Association, Mr E. A. Nadirshah, President, estimated that the transport problem would be four times as acute in the next four years as during the First Plan. Had it not been for the short-sighted road transport policy of Government, the position would not have become so bad. It was time the powers that be recognised the fact that road transport could fill the gap between supply and demand in regard to the country's mounting transport needs.

In a recent representation to the Government of India the IRTDA has stated that the transport difficulties can be solved to a great extent by rendering long distance road traffic free from restrictions. Action is also urged in the following directions (1) raising the permissible laden weights of motor vehicles to 26,880 lbs., (2) encouragement of the use of multiple unit goods vehicles (3) loan to operators at cheap rates of interest (4) the grant of a development rebate and (5) a reduction in overall incidence of taxation on motor transport.

With the very success of the plan depending on the smooth functioning of transport, it is to be hoped that Government will not allow doctrinnaire considerations to cloud their judgment in regard to expansion of Road transport. It stands to reason that they should not hesitate to render adequate financial help to small operators, whom, according to the Planning Commission, are presently handicapped for want of funds. Government are already following a liberal policy in regard to the granting of loans to shipping companies. It should not be difficult for them to show the same consideration to operators of road transport as well especially when the funds required in this regard will not be of such large proportions as in the case of shipping.

*

Bombay State Co-operative Bank

Addressing the shareholders of The Bombay State Co-operative Bank Limited at the Annual General Meeting of the Bank recently, Mr R. G. Saraiya, Chairman, emphasised the need for assigning an integral place to the co-operative system of organisation in the Community Development and National Extension Programmes and in the policies of State Governments, if the Co-operative Movement is to make rapid progress. So long as the programmes depended on external assistance, the tendency would be to stop all activity as soon as such outside help was withdrawn. Mr Saraiya thought that it was necessary that the co-operative structure was accepted as an integral part of the programmes in order to ensure continued enthusiasm being shown to developmental activities in the rural areas.

In this regard it was important that State Government, when they prepared detailed programmes for the Second Five-Year Plan should assign an important role for village co-operatives in the implementation of schemes under the Community Development and National Extension Programmes.

Stressing the need for ensuring that the ideals of the Co-operative Movement were not lost sight of at any level, Mr Saraiya pointed out that it was essential for the rapid progress of the Movement that State partnership was active and real. As one of the two changes in ideology of the Movement was the acceptance of State partnership, it should be borne in mind that partnership implied an equitable share in the risks involved. The State Governments should realise that their duty was not to serve as merely money lenders but that their partnership implied "a partnership in loss as well as profits, responsibilities as well as rights."

The progress of the Co-operative Movement also depended on the ready availability of arrangements for efficient supervision. Mr Saraiya was of the opinion that the problem had to be seriously considered before embarking upon a programme of accelerated development of the co-operative institutions.

A significant development during the year ended June 1956 in the working of the Bombay State Co-operative Bank is the arrangement concluded for providing the working capital for two co-operative sugar factories. The Government of Bombay have accepted a liberal policy of promoting and assisting the formation of co-operative sugar factories. In all fourteen such factories are expected to be set up in areas where sugar cane is intensively cultivated. Of these, eight factories are expected to start production by January next year.

Despite the reduction in the area of operation of the Bank consequent on the transfer of the business to District Central Financing Agencies in pursuance of the policy adopted by the Board of Directors to gradually extend the area of operation of such agencies, the short-term agricultural loans increased by Rs 12.04 lakhs.

GATEWAY MARKETS

Oilseeds Recover After Initial Weakness

WEAKNESS in the ready seeds section, lower advices from the forward markets and speculative selling pressure from Gujerat and Saurashtra operators—all these factors imparted a weaker tendency to the Oilseeds market in the initial stages of the week under review. Toward the close, however, resistance was offered and values regained major part of the losses due to short-covering.

Tenders issued against the Castor September delivery, during last week, were heavy at 19,300 candies as against the general expectations of 25,000 candies. It was pointed out that the larger offerings were prompted, partly by the strength in the expiring contract a few days ago when the prices had crossed the Rs 150 level for a short period. This trend was encouraged by the widening spread between the current position and the May 1957 delivery. In addition to the discouraging heavy offerings, the tendency to stage a squeeze had also been curbed by the recent change made in the procedure relating to the issue of tenders.

Castor May delivery, after touching a high of Rs 120-8 and a low of Rs 118-0, finished the week at Rs 120-4. Castor ready was done at Rs 26-4 and Castor Oil, commercial quality, at Rs 14-12.

In the Groundnut section, prices showed further easiness from last levels following the better outlook for the new crop in view of the recent rains in the growing areas. Traders believed that the current wet spell would prove beneficial to the standing crop in Saurashtra, Gujerat, Hyderabad and Madras. It was, however, admitted that much would depend on weather conditions in the next few days since continued heavy rains might harm the plants instead of helping them.

Meanwhile, business in the new crop has already reflected the feeling of optimism regarding the output as revealed by the sizable

(Continued on page 652)

World of Cotton

Selling Pressure in Futures

THE steady rise in prices, noticed in the Cotton market during last week, was only short-lived. Reports of dry spell all over the cotton region and rumours that banks would not advance more than 50 per cent of the value of cotton unnerved operators in the market. There was persistent general liquidation on a rather unreceptive market. With mills reluctant to support, values sagged under extensive selling prompted by higher crop ideas. Continued weakness of the spot section was another unsettling factor.

The behaviour of the market was generally intriguing. While the futures section showed an easy trend on expectations of a bumper crop, ready prices for new crop did not move down much in sympathy. Consequently, the difference between the two markets widened up. It was, therefore, felt that such an unusual position, if continued for another few months, might create difficulties in the normal working of the market and the link between the two sections might be completely served. It was pointed out that the futures market had been purposely kept down, lest the Government would step into the market like last season. Although the introduction of margin system and a bearish hedge contract yielded satisfactory results, there was practically no check on the ready section.

Sentiment in the futures section was, therefore, demoralised during the week under review when nervous bulls started realising from the start of the session. Jharilla March, which was marked upto Rs 683-0, was pushed down to as low as Rs Rs 673-8, at the close. Vijay April delivery sagged to Rs 797 from Rs 810 on bull liquidation, to finish the week better at Rs 798-8. The turnover was 20,000 bales.

Trading in the Spot section was restricted. In view of the consistent decline in prices in the forward section and reported news of good weather, sentiment slowly turned quiet. In the absence of buyers, prices of popular varieties declined by about Rs 15 to Rs 20 per candy.

In the export section, the only attraction was Bengal Deshi while demand for other varieties was practically nil. The foreign section reported moderate activity. Following rates were quoted:—Karanja Rs 765; Zoda Rs 525; Hubli Jaydhar Rs 850; Berar (new) Rs 785 and Bengal Rs 658.

Trade circles are anxiously awaiting the final picture that will emerge for financing purchases of Egyptian cotton as the new crop will begin to move from this month. The significance of cotton exports to Egypt and Egyptian cotton to countries like India can be measured by the fact that Egypt exported as much as 895,200 bales (720 lbs each) during the 1955/56 season as against only 754,000 bales in the previous season. India took about 102,000 bales as against 87,800 bales.

×

CROP ESTIMATE

The first all-India estimate of cotton for 1956/57 puts the current year's area at 14,602,000 acres as against the adjusted first estimate of 13,175,000 acres for 1955/56. This shows an increase of 10.8 per cent in area during the current year as compared to last year. The overall increase in area, during the current year, has been shared by almost all the cotton-growing States and is marked in Saurashtra, Bombay, Madhya Bharat, Hyderabad, the Punjab, Rajasthan and Madhya Pradesh. The increase has, however, been offset to a small extent by decreases reported by Bhopal, Bihar, Andhra and Tripura.

Among the different varieties of cotton, the increase in area has occurred mostly in Americans, Dholleras, Jharilla (including Virnar), Bengals and Southerns. A considerable decrease in acreage has been reported in Oomras. Following are the details (figures in thousand acres):—

	1956-57	1955-56
Long Staple ..	4,520	3,954
Medium Staple	6,855	5,919
Short Staple ..	3,227	3,302
Total ..	14,602	13,175

×

STATISTICS

Exports by rail from 1st to 27th September 1956 were 29,228 bales. Estimated mill consumption in Bombay, during the same period, was 94,090 bales as compared to 101,500 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 27th September 1956, was 429,243 bales as compared to 821,774 bales on the corresponding date of last year.

×

KARACHI COTTON MARKET

Prices in the Karachi cotton market ruled steadier on reports that untimely rains in Sind had caused some damage to the standing crop. Sind Deshi was quoted at Rs 96-0; Punjab Deshi at Rs 88-0; 4F Roller at Rs 78-4; Sind Saw Gin at Rs 79-4; 289 Punjab Roller at Rs 82-12 and 289F Punjab Saw Gin at Rs 86-12.

×

NEW YORK COTTON MARKET

In the New York cotton market, futures advanced early in the week on fairly good trade buying in current crops associated with increased activity in the cotton goods market, but demand was quickly satisfied. Toward the close, however, a reactionary tendency resulted from scattered selling and liquidation plus some New Orleans selling with offerings, passibly partly prompted by private crop forecast. Near October continued to meet offerings from a leading spot firm at the 34 cent-level. Trade houses, however, offered support on the decline. Spot was quoted at 34.50 cents per pound.

×

LIVERPOOL COTTON MARKET

Trading in the Liverpool cotton market remained quiet. Some scattered hedging in the mixed contract was offset by inter-contract switchings. Later, a steady undertone was maintained on trade support. The Egyptian contract was quiet but steady, while the Sudan contract was quiet. Egyptian contract November/December was quoted at 58.30 cents and Sudan contract November-December delivery at 49.70 cents.

×

CLOTH AND PIECEGOODS

Conditions in the Cloth and Piecegoods markets remained slack and prices were reported to have dropped by about 5 per cent due to lack of demand from upcountry centres. Dealers felt that the demand would revive only after a solution to the excise duty problem was found.

The crux of the problem is, who should bear the burden of the enhanced levy. Any question of passing the burden on to the consumer is ruled out as the Government are anxious that the prices of cloth should not move up. The cloth trade is agitating that it is not able to bear any part of the new burden as its margin of profit is very meagre. It is, therefore, wondered whether any new basis for the computation of the excise duty will be evolved with a view to meeting the present situation.

The representatives of the Bombay and Ahmedabad millowners have, therefore, decided to call for further data on the implications of the additional excise duty and the prohibitory order on stocks before finally deciding the future course of action. It is expected that the meeting will be resumed after an expert study. Meanwhile, three of the major mills in Uttar Pradesh will, it is feared, be forced to close down operations in the immediate future as a result of the control on stocks.

Olympus

The IFC'S Achievements and Prospects

OVER the week end was released here the eighth annual report of the Industrial Financial Corporation. And, at a press conference held in this connection, Mr K. R. K. Menon, Chairman of the Corporation, crossed the 't's and dotted the 'i's in the report. The report itself contains much interesting information of the actual help rendered by the IFC to private enterprise during the year ended June 1956. It also gives some idea of the trends in industrial finance of the recent past and the near future. As any student of the affairs of this corporation knows, it has had its ups and downs and it came in for severe public criticism some two years ago, as a result of which the Industrial Finance Corporation Act was amended in September, 1955. The Corporation's record of achievement in the last year, however, shows that it has found its feet and that, in the course of the next few years, may well develop into one of the most important sources of industrial credit for the Private Sector.

In his address to the general meeting of the corporation, Mr Menon voiced the same hope and stated that, in view of the corporation's achievement in the last year, and in view of the vast programme of industrial expansion planned in the next five years, he was going to approach the Government for substantial increase in the allotment of Rs 15 crores to the corporation under the Second Plan. Since, owing to a variety of factors, the sources of finance for private industry are drying up, and this corporation is admittedly to function as Government's principal channel of help to private industry, an increase in its funds is by no means an unreasonable re-disposition of available resources.

That such funds as are given to the corporation will be utilised with prudence and foresight is beyond doubt in the light of its performance last year. For, consider the figures: The aggregate amount of loan sanctioned during last year was over Rs 15 crores, an increase of over 100 per cent than that of the preceding year. Increasing consciousness of this institution among the public is reflected by the increasing number of applicants for loans during the year: as against 46 applicants asking for loans aggregating Rs 11.27 crores in the previous year, there were 86 applicants for a total of Rs 27.70 crores in 1955-56. The record in the matter of realisation of loans and interest has also been fairly satisfactory. Out of a total amount of Rs 2.24 crores due as repayments of principal during the year, Rs 1.68 crores were received. The amount of default is nearly Rs 49 lakhs and is due principally from six companies. Realisation of these amounts either by sale of assets of the companies or by leasing them out has been taken on hand. Of the total interest of Rs 2.81 crores charged since the inception of the corporation, all but Rs 17.72 lakhs have been realised. The defaulters include the Sodepur Glass Works Limited which has since been taken over by an Indian Company under the name of Indo-Asahi Glass company and which will once again go into production with Japanese cooperation.

Another bit of interesting information that emerges from the report is that the major beneficiaries of the facilities offered by the corporation are the sugar and textile industries. They account for just over half the number of applicants, the remainder belonging to a variety of industries like engineering, chemicals, cement and paper. Another interesting bit of information that is revealed by the report is that, of the loans sought by the sugar industry, the greater portion came from cooperative sugar factories located in Bombay, Mysore, Assam and the Punjab. This is a development that the Government are gratified about since they are anxious to develop co-operative enterprise on a large scale in the country.

Finance from this corporation, as is well known, is available both for starting new enterprises and for renovation and rehabilitation of old establishments. During the eight years of its existence, 115 applications from new undertakings (i.e., enterprises that went into production after August 1947) were sanctioned, making available to them a total of Rs 25.70 crores. During the same period loans amounting to Rs 17.50 crores to 93 applicants for renovation and modernisation were sanctioned.

One serious organisational deficiency of this corporation needs to be pointed out. It is the delay in disbursement of sanctioned loans and the enormity of the difference between the amount sanctioned and the amount actually disbursed. The IFC has sanctioned loans totalling Rs 43.21 crores. But, of this, only Rs 16.73 crores—that is to say, about 40 per cent—have been disbursed. This is a defect that can and should be rectified. One can understand delay in sanction since the credentials and credit-worthiness of a particular applicant need to be examined closely and carefully. But, once this has been done, the formalities should be put through with the least possible delay. Certain measures mentioned by Mr Menon will go some way in eliminating this defect. For example, he mentioned the appointment by the corporation of full-time legal officers of its own, who will draft the necessary documents. I think besides this very useful reform, there should be undertaken the preparation of standardised forms and documents which will save a lot of time in dealing with individual cases.

Much of the achievement of the corporation during last year is to be attributed to certain changes in its set-up effected by amendments, mentioned earlier, in September 1955 to the original Industrial Finance Corporation Act. It may be recalled that among the most important amendments was the appointment of full-time paid chairman in the place of the part-time honorary one. It is beyond doubt that the affairs of an important institution like this cannot be successfully directed as an off-time assignment and as a labour of love. Therefore, in entrusting its affairs to an experienced civil servant, the Government have taken what many would consider the most elementary step in ensuring its smooth working.

Other amendments to the Act effected in September 1955 gave the corporation much-needed room for manoeuvre in the matter of realisation of dues. For instance, the corporation is now empowered not merely to sell the property mortgaged to it, but also to lease it, so that, after reimbursing itself its dues from the lease amount, the corporation can return the property in tact to the borrower. The virtue of this arrangement is that it allows for a certain flexibility in the promotion of infant industry: It also emphasises its character as a rather unusual kind of lender, one that is not so anxious about his pound of flesh as to let the borrowing enterprise die in the process of his obtaining it.

At the press conference, Mr Menon gave the gratifying news that a large majority of the concerns to which the corporation had given loans had done well during the year. Some measure of this prosperity of, and the confidence of the corporation in, these concerns can be gauged from the fact that the corporation willingly let them distribute dividends over the normal maximum of six per cent. Mr Menon also indicated that, since the purpose of the corporation was to give long term and medium term loans, there was no poaching on the preserves of the commercial Banks. He, however, stated that there was no immediate likelihood of the reduction of the rate of interest charged by the corporation, which was already lower than that charged by banks. He also added that the corporation had no present intention of going to the open market for increasing its resources, since its main purpose was to channelise existing resources of the government. He suggested that it would be better for State Governments to use exclusively the machinery of State Financial Corporations for any loan they wish to give to private enterprise. He gave the rather disturbing news that some State Governments are advancing loans directly to some industrial concerns at half the rate of interest charged by the corporation and on much more doubtful securities. Such a State of affairs is indicative not only of wasteful duplication of machinery and resources, but, what is worse, of cross purposes between official agencies. The effectiveness of the State Financial corporations as agencies of credit will be nullified, if hopes of loans from other agencies of Government on more favourable and less onerous terms than offered by the corporations are allowed to be entertained. Such suicidal lack of co-ordination needs to be looked into and set right immediately.

North Indian Notes

Heavy Chemical Industry

One of the four principal objectives of the Second Plan is rapid industrialisation with particular emphasis on the development of basic and heavy industries. This means that a substantial increase in the production of iron and steel, non-ferrous metals, coal, cement, heavy chemicals and other materials of basic importance has to be achieved during the next five years.

Among the basic industries, heavy chemicals is to be given a high priority for the simple reason that some of its products are essential raw materials for many of the large-scale as well as small-scale industries. For instance, the steel plants will require considerable quantities of sulphuric acid for the recovery of by-product ammonia from coke oven gases in the form of ammonium sulphate. The production of a large number of consumer goods also depends on a rapid development of basic chemicals. It will be no exaggeration to say, therefore, that the pace of industrialisation will be directly proportionate to the development of the heavy chemical industry.

Till some fifteen years ago, India's heavy chemical industry was confined to the production of sulphuric acid and some products therefrom. World War II and the First Five Year Plan have given a great fillip to the industry and production of various chemicals have recorded sizable increase. For instance, production of sulphuric acid which stood at 60,000 tons in 1946 increased to 165,000 tons in 1955; Ammonium Sulphate from 22,450 tons to 393,095 tons; Superphosphate from 4,500 tons to 74,165 tons; caustic soda from 2900 tons to 34,253 tons; Soda Ash from 12,000 tons to 77,272 tons; and Liquid Chlorine from 2,900 tons to 11,577 tons.

Under the Second Plan, targets for the various products have been stepped up considerably. Production of Ammonium Sulphate is to be increased to 1,865,000 tons by 1961 that of Superphosphate to 720,000 tons, Sulphuric Acid to 5 to 6 lakh tons, Liquid Chlorine to 250,000 tons. Soda Ash to 300,000 tons. Caustic Soda to 200,000 tons, Liquid Chlorine to 250,000 tons. Bleaching powder to 15,000 tons, Bichromates to 6,000 tons, Sodium Bicarbonate to 8000 tons Potasium Chlorate to 3,800 tons, Calcium Carbide to 30,000 tons, Alum and Alum Sulphate to 50,000 tons, Copper Sulphate to 3000 tons and Ammonium Chloride to 5,000 tons.

Speaking at the Eleventh meeting of the Development Council for Heavy Chemicals in New Delhi last week, Mr Manubhai Shah, Union Minister for Heavy Industries, while expressing satisfaction at the significant progress made in the past few years in the manufacture of heavy chemicals, however, emphasised the need for a gradual reduction in the prices of basic chemicals. The fact that machinery and equipment for the manufacture of heavy chemicals had been included in the programme for machine building and heavy engineering may help considerably in expanding the existing industries as well as in setting up new industries.

The outlook for the heavy chemical industry could not but be bright because high targets had been set for industries using heavy chemicals, such as, aluminium, paper rayon, drugs and pharmaceuticals, soap, vanaspati etc. By implication, it followed that a rapid development of the heavy chemical industry was an essential prerequisite to the success of the plan.

*

Import Policy:

The main principles governing Government's import policy are noticeable prominently in their recent review of certain Open General Licences whose period of validity ended on September 30, 1956. The requirements of the Second Five-Year Plan and the desirability of saving foreign exchange on the import of items which are being produced in the country, have been kept in view. The inclusion of items which are not produced in the country to the OGLs clearly indicates that the need for sustaining the programme of industrialisation is not ignored.

Open General Licences Nos. 39 and 40 have been replaced with effect from October 1, 1956, by Open General Licences bearing Nos. 44 and 45 valid upto the end of June, 1957.

The import of commodities mentioned in OGL No. 41 will hereafter be governed by the general policy for the import of these items announced in the current import trade policy for the licensing period July-December, 1956.

The period of validity of the Open General Licence No. 43 for imports from Pakistan has already been extended upto the end of October, 1956.

The more important articles which have been transferred from the general OGL to the licensing list are raw hemp, certain types of electric generators and generating sets, paper insulated power cables, wax, wood and timber, electro-medical apparatus and certain types of surgical instruments, apparatus and appliances.

In the case of the soft currency area also, some items have been transferred from the OGL to the licensing list. These include ship chains, raw sisal fibre etc., certain types of machines worked by manual or animal labour, dates, cutch, certain items of chemicals, pulses, certain types of office machines, and lithographic materials and components and dairy and poultry farming appliances.

The items which have been transferred to quota control have been allotted adequate quotas and the basic period has been extended to include 1955-56. In addition, some of these items have been included in the export promotion scheme and provision has also been made for A.U. licences to be granted to the extent necessary.

The items which have been added to the O.G.L.s include oxygen breathing apparatus, supplied air respirators (hose masks) and mechanical filter respirators required as protective equipment for factory workers.

NORTH INDIAN MARKETS

Decline in Foodgrains Prices

THANKS to increased arrivals of the "Khariff" crop and reports of favourable rains in some of the needy areas, easy conditions prevailed in the foodgrains markets during last week. Most of the markets in Uttar Pradesh and the Punjab reported price declines due to the improved supply position following the brisk movement of grains by special trains.

At Hapur, Wheat average quality lost about As 6 to Rs 14-14 per maund, while farm quality was transacted at Rs 16. Local arrivals from the producing centres went up to an average of 200 maunds daily as stockists seemed to be anxious to liquidate their stocks, while offtake from the fair-price shops was fairly large.

With increased arrivals of the new Maize crop from the producing centres and also from nearby districts, prices of Coarse grains declined, Maize being quoted at Rs 11-8; Barley at Rs 11-0; Bajra at Rs 11-12 and Jowar at Rs 13-0, all per maund.

Pulses recorded a downward trend in line with the prices of other cereals. Grams was marked down by As 6 per maund to Rs 11-12 for Deshi quality and Rs 12-2 for the Punjab quality. Peas and Arhar prices also eased due to poor outside demand and improved stocks. Prices of other pulses drifted to lower levels in sympathy.

In the Delhi grains market, prices displayed an easier trend, Rice prices having declined by Re 1 to Rs 2 per maund and Moong and Urad by about a rupee per maund. Wheat and Barley prices also fell likewise. Current prices in Delhi still compare favourably with those prevailing in upcountry centres.

There is a general feeling that the present downward trend in prices is likely to continue in view of the satisfactory movement of the indigenous crop and prospects of early arrivals of US wheat under the recent $360 million commodity agreement. The first shipment of 370,000 bushels of Pacific North-West white wheat is reported to have left Portland, Oregon, last week-end. This cargo is the first of twelve such shipments to be made to India.

In contrast, the Bombay grains market presented a steadier appearance with the prices of Wheat and Rice recording a modest improvement on better demand from retailers. Prices of indigenous qualities tended to move up with the Pissi variety from the Punjab gaining about Rs 5 per candy at Rs 155 to Rs 170 per candy. The improvement was attributed mainly to the broadened retailer interest arising from the belief that the ban on imports might creat a shortage of good varieties of Indian wheat. American wheat was placed at Rs 125 per candy as against the issue price of Rs 126.

In the Rice section, Burma variety, after recording a sharp advance to Rs 168 early in the week, reacted toward the close to Rs 163 per candy. Indigenous qualities also revealed a better trend with the prices rising by Rs 2 to Rs 5 per candy on account of smaller arrivals. Traders in general, are not confident of a major rise in prices in view of the scheduled arrivals of the new crop in the market.

In contrast to the recent tendency in the Coarse grains section, prices of Bajra recorded a sizable rise with some lots of the Uttar Pradesh quality finding buyers upto Rs 175 per candy. This improvement in prices was mainly attributed to the reduced inflow of the grain from producing centres. Prices of Jowar also developed a hardening tendency due to higher upcountry advices and relatively small arrivals.

*

Sugar

According to the first estimate made for 1956-57, the area under sugarcane this year is estimated at 4.1 million acres. This is 14 per cent above last year's all-India

Madras Review

The Peninsula

Reorganisation of Local Bodies

IN a White Paper issued recently, the Government of Madras have set forth the main lines for the reform of the local administration in the State. The scheme for the regeneration of the local bodies in the State, which is to commence in 1957-58 and end in 1961-62 envisages a planned programme of transference of the functions and powers from District Boards to Panchayats so that at the end of the period, the functions of the District Boards will be limited to the maintenance of high schools, dispensaries and non-major district roads. Side by side with this diminution of the powers of the District Boards, the White Paper outlines a planned programme of reforms and development of village Panchayats so that when the programme is completed, there will be a Panchayat for every village. Panchayats of contiguous villages would be brought together in a Panchayat Union, and statutory Joint Committees would be set up.

It has been suggested that the reform of Panchayats should be integrated to the National Extension Service Programme as well as with the Elementary Education Scheme which is yet to be framed. The financial requirements of the Panchayat will be met from two funds known as the Panchayat Union (General) Fund and Panchayat Union (Education) Fund; and the administration of these funds will be by the Panchayat Joint Committee. If it goes on the Statute Book, this reform of local administration in the State will revolutionise the village life. The elementary needs of the villagers will come under their direct supervision control and management instead of a remote authority of a District Board, and this will make the ventillation of grievances in regard to matters of local concern and the remedial action to be taken on them easier and speedier.

The proposed integration of the reform and development of village panchayat with community Development Projects is a wise move and is in tune with the idea of village planning which has been initiated since the publication of the Second Five Year Plan. The object of village planning is to attune the general plan to the special needs and conditions of villages, and to mobilize the enthusiasm of the rural people in effecting rural development works and programmes. But village planning pre-supposes a body which can truly represent the interest of each and every village. No other body seems to be better fitted for initiating developmental works of a local and rural character than the village panchayat.

Thus the village panchayats combining the functions of village administration and village planning will be the engines of rural development in the State. But how far it discharges these vital functions adequately will depend on its being able to command sufficient revenue as also trained personnel. Any gap in these two matters will be enough to turn the new experiment into a failure. In this connection it is to be noted that the revenue of the Panchayats at present existing in the country is in a chaotic state and consequently the Planning Commission in the Second Five Year Plan made the suggestion that the State Governments may make grants to village panchayats in two parts, a basic proportion of 15 to 20 per cent of the land revenue, with an additional grant extending upto 15 per cent of the land revenue on condition that the Panchayat raises an equal additional amount by taxation or voluntary contributions.

Last but not the least, the composition of the village panchayat should also be such that it truly represents the various sections constituting the village. The principle of elections should be supplemented by the principle of cooption, besides provision being made for the representation of the weaker sections. The White Paper issued by the Madras Government ensures this by providing for proportional representation and by restoring the system of electing the president by the members of the Panchayat.

The question of the continuance of the District Boards after the completion of the transitional period has been left to be settled at the end of the period

*

GATEWAY MARKETS

(Continued from page 648)

discount quoted for fresh supplies from Bagalkot and Khandesh. Groundnut February delivery made a disappointing start at Rs 128-2 and closed at the same level—the highest and the lowest levels being Rs 128-6 and Rs 127-0 respectively. Ready bold variety was quoted at Rs 33-0 and Groundnut Oil ready at Rs 18-2.

Prices in the Linseed section moved in sympathy with castor seed and groundnuts. Linseed May delivery, after touching a high of Rs 26-2 and a low of Rs 25-14, finished at Rs 26-0. Linseed ready was cheaper by As 10 at Rs 31-2, while Linseed Oil ready was quoted at Rs 15-14. Kardiseed and Nigerseed were quoted at Rs 17-4 and Rs 27-4 respectively.

*

Gold & Silver

Dull trading characterised the Gold section of the bullion market although a slight upward trend in prices was noticed toward the close of the weeek, partly in sympathy with the rise in silver and partly owing to a slightly better spot demand.

After more than a week of dull trading, Silver futures firmed up and the improvement in prices was attributed mainly to fresh bull support induced by the encouraging performance of the spot section which turned out an average daily offtake of nearly 30 bars. Arrivals amounted to 40 bars, while unrefined metal receipts totalled 27 bars. Silver Asauj opened lower at Rs 173-8 and, after touching a new low of Rs 173-5, recovered to Rs 173-15 on some replacement buying, to finish the week at Rs 173-13. Ready moved between Rs 172-13 and Rs 173-7 to finish at Rs 173-5.

The position regarding imports of silver coins from Tibet has been fluid since the reports of a ban on exports have been followed by a statement that exports will be allowed against Tibet's purchase of essential goods. It is admitted, however, that, even if exports of coins are allowed on this basis, the actual receipt in India will be only a fraction of what it used to be until recently.

The Gold section opened on a quiet note and receded further in the absence of support reflecting slow spot demand and the easiness of other markets. Gold Asauj opened at Rs 103 and, after touching a high of Rs 103-2 and, a low of Rs 102-13½, finished the week at Rs 102-14. Gold ready moved between Rs 102-9-6 and Rs 102-13, to finish at Rs 102-10-0. Sovereign ruled stady at Rs 67-0.

*

Yarn

The Yarn market continued to rule weak with prices developing an easier tendency following the credit squeeze, the directive limiting mill and trade stocks of cloth and overall financial stringency. It is, however, reported that the statistical position is not alarming, but the selling pressure has increased, mainly due to limited turnover in all upcountry markets and the demand for higher margin from certain banks.

Prices in the futures section suffered a sharp setback, staple-fibre yarn (40×2) October delivery losing about Rs 20 to Rs 636 per case. Snia Rayon yarn 120 dull cones October delivery declined from Rs 795 to Rs 769 per case.

The possibility of enhanced rates of imported Art Silk Yarn has now receded in view of improved political atmosphere, while heavy accumulation of stocks of staple-fibre yarn is reported in the South. Ready varieties lost about one anna per pound.

*

Metals

Prices in the Copper section, after showing an easier tendency early in the week, steadied up towards the close on the emergence of support. Ready was quoted at Rs 211 per cwt. Zinc was quoted at Rs 65-0 per cwt. Demand for this metal is picking up as ready metal is locally quoted more or less at par with the Calcutta rate. There is noting new to report with regard to Lead, which flucuatuated narrowly around Rs 83-0 per cwt. Following a decline in Singapore, Tin receded at one time to Rs 130, to react again toward the close to Rs 131-8. Demand for the metal is satisfactory as well as at upcountry centre.

On the London Metal Exchange, Copper prices continued to move due to poor demand in the USA as well on the Continent and the absence of any major political development on the Suez Canal issue. Ready was quoted at £291½ as against £298 in the previous week.

In the absence of any brisk demand and relaxation in the political situation, Lead prices fell down slightly to £117 per ton for half-October delivery.

Spot Zinc declined to £ 95½ from £97 per ton. Tin spot was quoted at £782 per ton as against £785, mainly due to the maintenance of normal movement of consignments of tin to European Ports from Malaya.

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that an Interim Dividend at the rate of 2¾% per annum, less Indian Income-tax thereon, will be paid to the Registered holders as on the 22nd October, 1956, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1957.

The Share Transfer Books of the Preference Shares will be closed from the 15th to the 22nd October, 1956, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

Madras Review

South Indian Notes

Madras Fair Rent Bill

Though Mr M. A. Manickavelu, Minister for Revenue, has asserted that the State Government has taken care to look at the question of land reform from the point of view of both the tenant and the landowner, the Madras Cultivating Tenants (Payment of Fair Rent) Bill 1956, which has come into force from 1st October, seems to be far from being an equitable measure. In the wet cultivation areas the Bill will have crippling effect on the thousands of small owners. Apart from drastically reducing the rent payable to them —from 60 per cent so far it has been now reduced to 40 per cent —the new measure, for all practical purposes, will place the owner at the mercy of the tenant. For instance, hereafter the owner can manure his lands only with the consent of the tenant.

It is true that any measure that seeks to raise the standard of living of our landless tenants is to be welcomed. It is at the same time understood that Government will ensure that no section of the population is discriminated against in the bargain. Judged from this criterion, the Madras Fair Rent Bill is just the opposite of what its name conveys. Moreover, the tone of the speeches made by the Revenue Minister who piloted the bill was not becoming of a representative of the great national organisation. The superior air he had affected and his reference to "cause and effect" while speaking about the landlords, make one wonder whether reforms cannot be put on the statute book without ministers making derogatory remarks about people who are not present to defend themselves.

The Revenue Minister somehow seems to have got the impression that he is propounding a new theory. Evidently carried away by his own eloquence, he has forgotten that everyone in the country, including the landlords, fully realise that far-reaching land reforms are bound to come sooner or later. But living in a democratic country they have been encouraged to hope that they will have fair play without being looked down upon as trespassers or usurpers. The tone of the Madras Revenue Minister's speech falsified such a hope. The Congress Government in Madras now has laid itself open to the charge that in the certainty of getting the majority of votes in its favour, it has displayed unholy hurry in passing a measure which does gross injustice to thousands of small landowners in the State.

Savings Scheme:

The role of private savings in the context of the current developmental activities of the nation is indeed of special importance in that small savings make even the smallest contributor a direct participant in the task of transforming the economy as well as serve as an effective instrument in controlling inflation.

In the Second Plan, the target for collections under small savings has been placed at Rs 500 crores or Rs 100 crores a year on an average. In the last few years the small savings scheme has made steady progress. From Rs 33 crores in 1950-51, savings have increased to Rs 65 crores in 1955-56 with the result that contrary to earlier expectations, the target of Rs 225 crores for the First Plan has now been over-reached.

It is, however, pointed out that the small savings drive will have to be intensified by starting a countrywide campaign reaching down to every family. The Planning Commission have suggested in this connection that a close examination be made of the strata reached so far by the small savings movement both in urban and in rural areas and a concerted effort undertaken by State Governments and by non-official agencies to carry the message of the plan all over the country and to bring into the small savings movement all areas and classes that have so far not been covered.

Presiding over the All India Regional National Savings Officers' Conference in Bangalore, Mr A. C. Guha, Union Minister for Revenue and Defence Expenditure, expressed the hope that the target of Rs 500 crores for small savings under the Second Plan would also be over-reached.

After pointing out that the percentage of domestic savings in India was very low compared to Western countries, Mr Guha revealed that at the end of the First Plan the signs were encouraging in this regard. Under the Second Plan the percentage would be further increased to 10.

In view of the series of five year plans still to come, the role of small savings will gain in importance because of the several good features of the scheme.

In the first place, the scheme will help mop up surplus purchasing power and thus control inflationary tendencies. Secondly it will reduce reliance on foreign assistance. Its most important aspect, however, is that it alone affords the opportunity to everyone in the country, however small may be his contribution, to derive the satisfaction of having directly participated in the fulfilment of the plan. It is gratifying to note, therefore, that active steps are being taken to transform the scheme into a really national movement.

SOUTH INDIAN MARKETS

Rubber Output and Stocks

ACCORDING to the figures released by the Rubber Board, production and consumption of Rubber for August last were 1,750 tons and 2,307 tons respectively, those for the previous month being 1,730 tons and 2,307 tons respectively. Consumption of imported rubber, during the month, was 642 tons.

Stocks with the estates and dealers and stocks with the manufacturers, as on August 30, 1956, amounted to 9,457 tons, including 517 tons of imported rubber. A total quantity of 501 tons of rubber of all grades was imported during August. This was short of the previous month's imports by 346 tons. There was no export of rubber during the month.

The rubber industry now appears to be worried about the supplies of the raw materials as the deficit in requirements is expected to increase gradually in the next few years. In this connection, the latest Indian Rubber bulletin points out that, unless there is price advantage by importing rubber, most manufacturers prefer to buy local rubber; because they can thus escape the cumbersome procedure involved in importing and they can also work on a small inventory needing less finance.

It is also pointed that many manufacturers get their local supplies on credit ranging over a period of two to three months or even more. These manufacturers, therefore, cover their entire requirements from indigenous stocks and forego the import quota. Under the circumstances, others find it impossible to buy their full share of indigenous rubber nor can they make this up by imports since imports are restricted by the quota system. The result is perpetual shortage and non-stop scramble for indigenous rubber. With ready buyers for their rubber, estates and dealers are inclined to pay less attention to quality and packing.

As for the very small manufacturers, who cannot handle imports, the bulletin suggests that either the Rubber Board should import on their behalf or allow to buy their full requirements locally and release their import quotas in favour of other manufacturers.

It is generally expected that the total production of rubber, during the current year, will be higher than in 1955 unless labour unrest reappears during the remaining few dry months when production is unusually the highest.

Meanwhile, the British Government has authorised the import of 80,000 tons of synthetic rubber in 1957 compared with an import programme of 70,000 tons for this year. This import programme follows the policy described by the Minister of State, in the House of Commons, last year, of allowing British manufacturers a free choice of materials as far as the balance of payments permits.

*

Coffee

Regional offices for the implementation of the Coffee Development Plan, sanctioned by the Government of India, has started functioning from October 1, at Chikmagalur, Mercara, Batlagundu, Coimbatore and Kozhikode. Under the plan, monetary assistance, through loan and accelerated Pool payments, will be extended to planters. Loan aid, which will be for the purpose of intensive cultivation and limited opening out of new areas, will be granted only to registered coffee-growers.

The quantity of coffee, held in stock as on the first of each month for the last few months, indicates a high lecel of stock retention. For instance, the opening stock in August was 19,547 tons, while disposals were 3,553 tons, including the quantity also sold for export. The total amount allowed for export comes to 8,100 ons, almost all of which has already been offered for sale. The remaining stock, therefore, must meet the requirements of the internal market for the remaining four months and the minimum carry-over for the next season.

*

Groundnuts

The Groundnut market, in Madras, ruled quiet with prices showing an easier tendency in the absence of any buying support. Arrivals averaged 25 to 30 tons per day, while small crushers were taking up this quantoty to meet their immediate requirements. With the expected arrivals of the new

(Continued on page 655)

THE IMPERIAL TOBACCO CO. OF INDIA LTD.

Speech by the Chairman, Mr. G. H. J. Clarke, at the Forty-Fifth Annual General Meeting of the Company on the 27th September, 1956.

Ladies and Gentlemen:

I have pleasure in welcoming you to this the Forty-Fifth Annual General Meeting of the Company.

The meeting was originally convened for the 14th September, 1956 and I wish to express the Board's regrets that the accidental omission of the hour of the meeting in the original Notice made deferment advisable in the interests of the shareholders. An explanatory statement has been sent to you.

With your approval we shall take the Notice convening this Meeting, the Report of the Directors and the Accounts which have been circulated, as read and the Assistant Secretary will now read the Auditors' Report.

Since the last Annual General Meeting, Mr. E. H. Hare has resigned from the Board after serving your Company for over 30 years, latterly as the Chairman of the Board.

Mr. W. E. Nicholson, who had served, mainly in the tobacco growing areas of Southern India, for over 33 years, resigned from the Board early this year.

We wish them both much happiness in well-earned retirement.

Following Mr. Hare's resignation, I was elected Chairman in December 1955.

In April of this year, Mr. C. N. Kirkus, Mr. N. Shiva Rao and Mr. E. G. Willis were appointed to the Board.

These three gentlemen bring to their new duties and increased responsibilities an extensive experience and expert knowledge of your Company's business in its various aspects and they will, I know, make a substantial contribution to the progress of your Company.

The Accounts in your possession give a comprehensive picture of the financial results of the Company's trading during the year under review and I believe you will regard these results as most satisfactory.

In the tobacco industry, as in many others, the volume of sales is a decisive factor in contributing to a company's financial prosperity and I am pleased to report that the increase in sales volume, to which Mr. Hare referred in his speech last year, was fully maintained throughout the whole of the year now under review.

That increase has called for further investment in both fixed and current assets as reflected in the Balance Sheet, although in the case of fixed assets some element of the increased investment was occasioned by higher costs of new machinery.

Having regard to the fact that the bulk of the Company's investments are short-dated, that item on the Balance Sheet read with the cash position indicates a satisfactory degree of liquidity.

Consequent upon the introduction, under the Finance Act, 1956, of a tax on distributed profits, provision has had to be made in the Accounts now presented for the tax liability in respect of the profits distributed by way of dividend out of the profits for the year to 31st March, 1955 as well as in respect of the two interim dividends for the year under review, all of which were distributed during the year to 31st March, 1956. The additional tax burden arising from these distributions amounts to Rs. 13,26,500 and is included in the charge for Income and Super Tax in the Profit & Loss Account, a charge which in total approximates very closely to the amount left available for disposal by the Board out of the results of the year's trading.

The appropriations made by the Board and their recommendation as to the Final Dividend are set forth in the Report of the Directors on page 4 of the Report and Accounts, and at this stage I need only say that these appropriations continue to reflect the application of the Board's financial policy to which Mr. Hare referred in some detail in his speech last year. The final dividend of 4%, if approved, will now be payable on 28th September, 1956.

There are already evident to us all signs of a mild inflationary tendency in the country's economy and whilst we welcome the broad aims of the Second Five-Year Plan, with its promise of a better standard of living for all in this land, it behoves us to have clearly in mind the implications that the execution of the Plan carries in the way of possible inflationary pressure at some points in the economy. It will therefore continue to be the policy of your Board to ensure that the Company's Reserves are maintained at a level adequate to safeguard the real capital position.

I have referred earlier in my speech to the increased volume of sales during the year under review and to the benefit derived therefrom by the Company.

The revenues of the Central Government have also benefited directly through the medium of increased collections of Tobacco and Cigarette Excise Duties on that greater volume of sales.

It has always been the contention of the tobacco industry and of your Company in particular that frequent increases in the rates of taxation of tobacco products were bound to have an adverse effect on consumer demand. That point of view has been supported in the past when sudden, too frequent increases in Tobacco and Cigarette Excise Duties have severely inhibited the natural growth of sales in following years, with consequent adverse effect on the overall yield from such taxation to the revenues of the Central Government.

In the year under review, the benefit accruing to the Central Government from increased collections of the duties has arisen, as I have said, directly from the increased volume of sales and gives support to the further contention of the industry that a satisfactory measure of increase in tax collections will arise naturally from an expanding volume of sales.

There can be no question of challenging the right of a Government to tax tobacco and its products, but I do wish to support, most strongly, the point made by Mr. Hare in his speech last year that, in fairness to the consumer and in order to avoid any permanent damage to a sound revenue-producing source, Government should consult with the tobacco industry as to the best method of applying the incidence of this type of taxation. Failure to do so not only harms the tobacco industry, as well as those it employs and those it serves, but also defeats the intention of Government.

During the year under review, the States have continued to levy Sales Taxes on tobacco products at varying, though high, rates and it is greatly to be regretted that tobacco and tobacco products, already subject to high duties imposed by the Centre, have not yet been totally exempted from sales and local taxation.

A high proportion of your Company's sales is made in the form of a single cigarette for a single coin and there can be no question but that a multiplicity of State and local taxation rates, on top of the Central duties, seriously hampers the growth of our industry and greatly restricts the yield from taxation to the Central Government.

An example of a type of State taxation damaging to the tobacco industry as a whole and to the economy of this country is to be found in the Andhra Act of 1955 amending the Madras General Sales Tax and the Madras Tobacco (Taxation of Sales and Registration) Acts as applied to the State of Andhra. The 1955 Act imposed a tax at the rate of 7½ pies in the rupee on first purchases of certain varieties of raw tobacco. Not only does this impose an additional and heavy burden on cigarette manufacturers in this country but, at a time when competition in overseas markets is unusually keen, it places Indian grown tobaccos at a price disadvantage in these markets and may therefore seriously affect this country's valuable export trade in that commodity. The Government of Andhra State promised to review the operation of this tax; and it was greatly hoped that the tax would be removed in the overall interest. Such hopes however have been considerably dimmed by the passing of a further Act imposing a tax on country varieties of tobacco, formerly excluded; but however logical it may be to extend the application of the tax to all varieties of tobacco, the tax remains damaging to the industry as a whole and to the economy of this country.

I have intentionally laid considerable emphasis on this subject of taxation of tobacco products because, whilst of vital interest to your Company, the effects of its application and incidence are of equal interest to the Central Government.

The first five months of the current trading year again record an increase in sales volume but I would remind you of the following factors which are likely to affect our costs and so offset the financial benefits of that increased volume.

The effects of rising raw material costs have yet to be fully reflected in our production costs; in particular, we had to pay higher prices for leaf tobacco in Southern India this year and grade outturns are likely to be disappointing.

Furthermore, the mounting costs of wages and of the provision of amenities for our workers have an inflationary effect on production costs and unless these increased wages and amenities are matched by increased production on the part of those receiving them, the Company's prosperity, and theirs, must suffer.

Relations between the Management and the workers have been very good throughout the year. Nevertheless, your Company, no doubt in common with other manufacturers, has suffered an occasional loss in production through the ill-advised tactics adopted by small groups of workers, often without the support of their recognised labour union.

In an industry so highly mechanized as ours, we have always set great store by the maintenance of a high standard of working conditions, of good relations with labour and the provisions of adequate amenities; all of which further the aims and objectives of the Second Five-Year Plan; but we are entitled to expect that *all* workers will reciprocate by giving of their best to increase production.

I must say that there is increasing and encouraging evidence that both workers and their representatives are beginning to share our conviction that such differences as may arise from time to time between factory managements and workers are more readily capable of settlement by direct negotiation rather than by the adoption of tactics which not only adversely affect overall output but also the earnings of the individual worker.

THE IMPERIAL TOBACCO CO. OF INDIA LTD., CHAIRMAN'S SPEECH—Contd.

Whilst, therefore, I am hopeful that rising costs of production will not offset the benefits of expanding sales, I would be failing in my duty to you if I did not warn you of the significance of the upward trend in costs. Your Directors have felt justified, however, in the light of the results of the first five months' trading of the current year, in declaring an Interim Dividend of 2%, free of income tax.

I now beg formally to move the adoption of the Report and Accounts for the year ended 31st March, 1956 including the payment on the 28th September next of a Final Dividend of 4%, free of income tax, on the issued Ordinary Shares of the Company.

I shall now ask a member to second the Resolution and when that has been done, if anyone has any question to put or comment to make on the Accounts, it will be a convenient time to do so.

SOUTH INDIAN MARKETS

(Continued from page 653)

crop from North Arcot district in about three weeks, big buyers were not willing to operate in the market. Moreover, reports from Pollachi indicate that the market there continued to be easy with no eager buying. Markets in the South Arcot district centres are also reported to be ruling weak. The rate for superior oil-quality seeds was quoted at Rs 163 per candy as against Rs 168 quoted in the previous week and the bold variety around Rs 161 against Rs 165.

In the Groundnut Oil section, the rate for the ready position declined to Rs 299 per candy from Rs 318. Sellers were found to be anxious for business in order to minimise losses in anticipation of further fall in prices. This apprehension was mainly based on the fact that there were no buyers for delivery beyond mid-October.

It is learnt that the Madras Oil and Seeds Association has represented to the Government of India that an export quota should be given for the period November-January in view of the expected bumber crop, falling prices and very little internal buying.

★

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow Hides were fair and there was moderate clearance with prices quoting six pies per pound lower in all weights. Arrivals of Buff hides were fair and there was good clearance at unchanged prices. Arrivals of Buff Calf and Cow calf were, however, moderate, while clearances were rather irregular.

In the export section, trading continued to be difficult and there was practically no enquiry from buyers. Light weights were conspicuous by lack of enquiry and the market for these ruled nominal on the basis of 46d. Inferiors 10-12 lbs were nominally quoted at 27d, while 7-7½ lbs were on offer at 28d.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were fair and there was moderate clearance. Prices were generally unchanged to a shade easier.

In the export section, there was a further setback in the prices of premium quality light weights. Common quality Goat skins were quiet though some business was reported done with America at lower prices. In the Sheep skins section, prime classes were without enquiry with sellers asking anything up to 26sh.

The market for Raw Hides ruled fairly steady. Raw Skins markets were unchanged.

At the forthcoming auction, to be held in London in the middle of this month, a total quantity of 850,000 goat skins and 350,000 sheep skins will be offered for sale. Taking into account the carry-over of the last sale, reports state that the quantities are not large.

THE METHONI TEA COMPANY LIMITED

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14 Old Court House Street, Calcutta on Wednesday, the 31st day of October, 1956, at 3.30 P.M. for the following purposes:—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.

(2) To declare a dividend.

(3) To elect a Director in place of the retiring Director. In this connection, Special Notice is hereby given of the intention to move the Special Resolution at the meeting that is to say—

"That Mr T. D. Crabb who retires by rotation be and is hereby re-appointed a Director of the Company".

(4) To elect Auditors for the ensuing year, and to fix their remuneration.

And as special business:—

(5) To consider and if thought fit to pass the following resolution, namely:—

"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected".

The Share Transfer Book of the Company will be closed from 24th October, 1956, to 31st October, 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta,
1st October, 1956.

NOTE:

(i) In connection with the business to be transacted under item 3 and item 5 of this Notice, please see annexed Explanatory Statement.

(ii) A member of the Company entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

Item 3.

In the Special Notice given by the Company to the shareholders, under item 3 of the annexed notice for Annual General Meeting, intimation has been given of intention to move a Special Resolution for the re-appointment to the Board of Directors of Mr. T. D. Crabb. Special Notice of such intention has also been given to the Company. Under the provisions of Section 261 (1) (f) of the Companies Act, 1956, Mr. Crabb, who is an officer of the Managing Agents of the Company can be appointed to the Board only by Special Resolution. Since he will retire in rotation at the meeting, his re-appointment for compliance with those provisions, will have to be by Special Resolution.

Item 5.

With reference to the resolution relating to inspection of Books Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956, provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the act.

WORLD OF TEA

(Continued from page 643)

As 2-to As 4 dearer, while teas of orthodox manufacture with any quality were keenly competed for at As 2 to As 6 above last rates. The very best CTC teas were well supported.

Medium kinds were the weakest feature of the sale and were As 3 to As 4 lower. Tippy teas were well supported and flavoury Darjeelings were in fair demand, but the inferior sorts were slightly easier. Following rates were quoted per pound:—Clean Black Pekoe, Rs 2; Plain B. P., Rs 1-12 to 1-12-6; Medium Assam B. P. Rs 2-2 to 2-3 and Best CTC Assam B. P., Rs 3-6.

In the Export Quota section, rate moved up from 30 to 33 pies per pound at which level some business was reported done.

In the Cochin market, a total of just under 500,000 pounds were offered in Sale No. "S". There was a good demand at irregular, but generally firm to dearer rates. Best Liquoring Nilgiri teas came to a strong market, selling at rates which were firm. Good Mediums were keenly competed for and advanced by As 2 to As 3 per pound. Travancore teas were fully firm at last levels. Wynaad descriptions met with less enquiry and were irregular, tending easier. Milled and Residual Dusts were well supported at around last rates. Black Leaf Middle East descriptions were again the strongest feature of the sale and were irregularly dearer.

In London auctions, offerings this week were 20,287 packages, including 12,684 packages of Northern India teas and 4,355 packages of Pakistan teas. The market opened decidedly easier and there was considerable irregularity. Quality was not up to the standard of previous offerings and prices for all kinds showed a smart decline. The market, however, made a great recovery toward the close of the sale when good liquoring teas were inclined to be dearer. Common and Low Medium teas, which also made a lower start, fully recovered and finished about steady at last week's prices. Clean Broken Pekoe was quoted at 3sh 6d. per pound.

Stocks in London and Provincial Warehouses, on the 21st September 1956, were 105.61 million pounds as compared to 109.13 million pounds in the previous week. The total amount to be landed on the same date was 10.08 million pounds.

Deliveries, during the week ended 21st September 1956, were 11.08 million pounds, while landings were 7.56 million pounds. The total afloat, on the same date, was 43.48 million pounds, including 29.09 million pounds from Calcutta; 1.85 million pounds from Chitta.gong; 3.19 million pounds from Cochin and 9.35 million pounds from Colombo.

SULEKHA WORKS LIMITED

RAPIDLY INCREASING DEMAND FOR COMPANY'S PRODUCTS

SECOND FACTORY TO BE SET UP IN SODEPUR

The following is the Director's Report submitted to the Shareholders along with the Balance Sheet:—

Ladies & Gentlemen.

We submit herewith the Balance Sheet of the Company as at 31st December, 1955, and the Trading and the Profit & Loss Accounts for the year ended on that date, together with the Auditors' Report for your kind consideration and adoption.

We are glad to mention in this connection that, not unlike the previous years, the year under review has been a period of steady progress as will be revealed from the following figures of sale:

Year		Sale
1951	.. Rs.	3,96,708
1952	.. Rs.	4,30,968
1953	.. Rs.	7,75,095
1954	.. Rs.	10,37,357
1955	.. Rs.	15,35,533

In the current year we expect to complete a sale of more than Rs. 20 lacs.

The profits made during these periods are given below with the dividend declared in each year:

Year		Profit	Dividend
1951	Rs.	25,367	5%
1952	Rs.	54,533	6%
1953	Rs.	75,893	7%
1954	Rs.	86,035	7%
1955	Rs	1,14,439 (recommended)	8%

Although the above figures of sale and profit definitely show the prospect of the Company, a glance at the schedule of assets attached herewith will give a clear idea of its present position. Besides other fixed assets as shown therein, the Company is now in possession of land and buildings worth Rs. 1,77,317 which alone goes to show the soundness and stability of this growing concern.

It should be stated however, that, owing to many limitations, mainly lack of space and resources and consequent lagging in production, the sale could not be pushed further and even the demand could not be fully met. For these reasons, we did not fully explore the distant and foreign markets and for the same reasons we did not spend so much on publicity in this year. The difficulties in transport of goods had also been partly responsible for our inability to meet the demand. This curtailment of expenditure on publicity is but a temporary measure since with the new arrangements for increase in production and removal of other difficulties now in the way, we shall have to lay greater stress on propaganda in order to cover larger sphere of exploration. This is all the more important to remove the prejudice still prevalent amongst a certain section of people against indigenous products.

It should not be ignored also that the reputation Sulekha has so far earned is mainly due to the unique quality in the field of ink industry. Sulekha is the pioneer in introducing solvent in fountain-pen ink in India, and with this and subsequent improvement it has practically brought about a revolution in the ink-world. The adherence to quality and its strict control are equally responsible for the growing popularity of our other products also. But Science is always progressive and the standard of quality achieved today may fall short of the desirable standard of tomorrow. Our research department and the Management are fully alive to this fact, and in order to keep pace with the advancement of Science, our research workers have been kept busy and provided with all sorts of facilities.

To remove the want of space that had so long been a handicap to our onward march, we were for sometime past on the look out for a suitable site anywhere within the suburbs of Calcutta, as the expansion of the present factory was out of question owing to its being surrounded by refugee colony. We are glad to inform you that we have been successful in procuring at Sodepur a plot of land comprising nearly 16 bighas with pucca buildings thereon at a very moderate price of Rs 97,000/- only and we expect to start a second factory on this plot at an estimated cost of Rs. 10 lacs. The expense will be met partly by raising money by releasing further shares in the market and partly by Government loan, already prayed for. You will be pleased to know that already shares amounting to about Rs. 1 lac have been sold in the current year. In the mean time, arrangement is being made for obtaining Government sanction for increasing the amount of issued capital.

With the starting of the second factory on the spacious land, recently acquired, it will be easy on our part not only to meet the rapidly increasing demand for our existing products, but also to embark on new ventures in the stationery line in which we have already specialised.

Before proceeding further, we like to request the shareholders to realise the implications of the revised Companies Act enforced from April, 1956. The complications that have arisen out of this new Act will impose upon the industrialists many encumbrances that cannot be belittled. Yet we should welcome the spirit of the law on the whole, as it is a definite advancement towards building up a socialistic pattern of society to which the nation is pledged.

On this perspective, we have already made some progress with the little resources at our disposal. A review of the Accounts will show that we have almost doubled the expenses for the welfare of the staff and workers. With the formation of Sulekha Sanskritik Samsad and the consequent increase in the cultural activities of the employees, the expenses under this head have been further increased in the current year. This association, of which each and every employee is a member, is now working as the central organisation to guide and supervise the activities of different sections, viz. sports, library, puja-celebrations, dramatic performances, etc.

The Company has also recognised Sulekha Co-operative Multipurpose Society Ltd. which came into being only a few months ago and which, since its birth, has been catering to the daily needs and requirements of the employees by running, under their own management, co-operative stores and canteens. The Society also contemplates to acquire land for opening a colony for the employees in the near future.

The formation of Sulekha Sanskritik Samsad and Sulekha Co-operative Multipurpose Society Ltd. has ushered in a new life amongst our working staff and has been effective not only in bringing a message of hope and happiness to them but also in creating a good relationship between employees and employees as well as between the employees and the Management, who have promised to extend all possible help to these organisations.

We very sincerely feel that such an environment is the backbone of an industry like ours, and as a matter of fact, the interests of both the employees and the employers are better served by such mutual co-operation than by coercive exaction from either side.

On our part we fully assert that we are aware of the growing difficulties that the employees have been facing from day to day owing to the present struggle for existence and we shall leave no stone unturned to ameliorate their sufferings to such an extent as lies within our power. The Management have already shown the genuineness of their intentions by granting them various privileges, viz. free tiffin, provident fund, medical aid, annual bonus, etc.

We are however aware that what we have been able to do so far has only enabled us to reach the threshold and much remains to be done to contribute our quota towards the creation of a happy, prosperous and peaceful nation.

The credit for what we have achieved so far goes to our workers, employees and representatives who have always extended their willing, unstinted and ungrudging co-operation to the Management in all matters. Our sincere and grateful thanks are also due to the innumerable patrons, well-wishers, dealers and establishments, at home and abroad, but for whose active sympathy and support our venture would not have met with such success.

It is also gratifying to note that our National Government in their Second Five-Year Plan has laid greater stress on the development of indigenous industrial concerns. This is really very encouraging and we take this opportunity of expressing our deep gratitude to the Government of India for taking such a realistic view.

It has already been stated that the Company has earned a nett Profit of Rs. 1,14,439-7-9 in the year under review. Adding thereto the last year's balance of Rs. 11,797-13-7, the amount at our disposal comes up to Rs. 1,26,237-5-4. As detailed in the Appropriation Account appended to the Balance Sheet, we have set apart a sum of Rs. 51,546-10-0 as a provision for taxation and Rs. 55,000-0-0, as Reserves. Out of the balance, we recommend for this year a dividend @ 8% free of income tax.

NORTH INDIAN MARKETS

(Continued from page 651)

figure of 4.06 million. For West Uttar Pradesh, the percentage works out even higher—22 per cent over last year's figure.

In order to prevent hardship to the cultivators, it is understood that the Government of India are considering a proposal to evolve a formula which will enable factories to start early crushing, that is, toward the end of this month instead of the middle of November as is normal.

Meanwhile, prices in sugar markets have been drifting to lower levels on better supply position. Following mill-delivery rates are quoted (per maund) in the Hapur market:—Jaswant Rs 28-2; Simbhauli Rs 28-8; Mowana Rs 28 to Rs 29; Daurala Rs 28-8 to Rs 29-8; Amroha Rs 27-12; Bijnore Rs 27-12; Mansoorpur Rs 28-0 to Rs 29-4 and Rampur Rs 30-8.

Sentiment in the Khandsari market continued to remain dull and depressed. Rates moved between Rs 23 and Rs 26 per maund, according to quality.

*

Gur

In the Hapur market, new Gur arrivals were small, at an average of 75 maunds a day; but old quality arrivals were high at 200 maunds daily. Stocks of old gur were estimated around 20,000 maunds. New quality was transacted at Rs 11 to Rs 13-8 per maund, while Old wet quality was quoted at Rs 9 to Rs 11 per maund, according to quality.

Stock Exchanges

RECESSION IN VALUES

Watch-Dog Writes:

IN contrast to last week, equities have generally experienced a widespread recession in values during the week under review due to bull liquidation. Two main reasons for this reactionary trend are, of course, the Government's refusal to permit an increase in the Indian Iron dividend and the decision to reduce the ex-factory prices of cement in respect of several companies. Although better advices from the Bombay cloth market and the impressive production at the IISCO Works have caused a slight recovery in prices at the close, the volume of business transacted is still small, reflecting the operators' reluctance to extend commitments in view of the somewhat obscure outlook.

Prices on the Calcutta Stock Exchange developed a reactionary trend following a sharp setback in Indian Irons. Teas were the only exception to the general trend.

The entire list on the Bombay Stock Exchange finished the week with widespread moderate losses, although a few Textile scrips managed to emerge with modest gains on balance.

Prices on the Madras Stock Exchange generally showed a downward tendency in the absence of any incentive.

The London Stock Exchange, however, had one of the best weeks for some time, more interest being shown in first class investment stocks.

Wall Street closed firm with a broad front of gains ranging to $2 or more.

*

Calcutta

DURING the short week under review, trading on the local Stock Exchange was rather subdued and prices suffered a sharp setback from last week's high levels due to bull liquidation. Apart from clearing adjustments on Monday, the news that the Government of India were not allowing the Indian Iron & Steel Company to raise its dividend beyond Re 1 per share for 1955-56 and their decision to reduce the ex-factory prices of cement, adversely affected sentiment in the market where operators were generally inclined to book their profits. The only exception to the general trend of the market were Tea shares which met with renewed buying support. Thanks to the news of an increase in the production of all categories at the IISCO's Works, prices staged a minor recovery at the close. Turnover, however, continued to be small due to the reluctance on the part of operators to extend commitments in view of the forthcoming Pujah holidays.

Following are the production figures released by the Indian Iron & Steel Company for the quarter ended 30th September, 1956 as compared to the previous quarter (in tons):—

Categories.		Qr. ended 30-9-1955	Qr. ended 30-6-1956
Pig Iron	...	174,447	148,306
Steel Ingots	...	133,325	117,710
Semi-finished Steel		28,387	28,137
Finished Steel	...	85,206	64,472

Business in the Giltedged section was at a low ebb. With the monetary conditions exceptionally tight, institutional investors showed little interest and prices, as a result, tended to ease, 3 per cent 1986 Conversion opened at Rs 75 and, after improving to Rs 75-4, eased off at the close to Rs 74-14. Fluctuations in dated-Loans were minor.

In sympathy, Bank shares ruled quiet with United Commercial and Punjab National ruling unchanged at Rs 57. Bank of Bikaner met with some enquiry at Rs 21 and Hindusthan Mercantile at Rs 14.

Renewed enquiry for Jute shares, that had been noticed during the past few weeks following the announcement of a further sealing of looms, appeared to have now fizzled out. Business last week was restricted due to the weaker trend of the jute goods market. The only bright spot in the whole section was Bally, which continued to meet with buying

BHATKAWA TEA COMPANY, LIMITED.

NOTICE is hereby given that the 56th Annual General Meeting of the Shareholders of Bhatkawa Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 8th November, 1956, at 4-20 P.M., for the following purposes:—

Secretary.

63, Netaji Subhas Road,
Calcutta-1.
4th October, 1956.

RANICHERRA TEA COMPANY, LIMITED

NOTICE is hereby given that the 48th Annual General Meeting of the Shareholders of Ranicherra Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 8th November, 1956, at 4 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors
2. To declare a Dividend.
3. To appoint a Director in place of Mr. J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

5. To consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—
"That Mr. G. T. Routledge be and is hereby appointed a Director of the Company."

Special Notice dated 21st September, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, the proposed candidate for a directorship, is a Director of Amluckie Tea Co., Ltd., a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company and he is, therefore, an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

The Share Transfer Books of the Company will be closed from 25th October 1956 to 8th November, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 4th October, 1956.

NOTE: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 15th November, 1956, only to those members whose names are registered in the Books of the Company on the 8th November, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

In the Special Notice given to the Company of the resolution being Item No. 5 of the above Notice, it is stated that Mr. G. T. Routledge is an associate of the Managing Agents within the meaning of the Companies Act, 1956, and therefore he can only be appointed a Director by a Special Resolution of which Special Notice has been given under the provisions of Section 261 of the Act.

support from interested quarters. The scrip, after being taken upto Rs 213, receded at one time to Rs 201 on profit taking, to finish better at Rs 207. Barnagore lost two points at Rs 140, while Kamarhatty were maintained at Rs 141. Howrah were, however, offered at Rs 23-12 against Rs 24 quoted in the previous week and Birlas at Rs 17-13 against Rs 18. National moved narrowly between Rs 25-3 and Rs 25-8, to finish at Rs 25-5.

The news of the continued strike and the slightly disturbed situation in the Raneegunge coalfields adversely affected sentiment in the Coal section where the only bright feature was Burrakur which met with sustained speculative support upto Rs 16. Amalgamated shed As 4 at Rs 23 with Central India moving narrowly between Rs 7-5 and Rs 7-7 and Bharat between Rs 7-6 and Rs 7-8.

Textile scrips ruled generally quiet with price movements confined to a narrow range. Kesoram and New Victoria hovered idly around Rs 18 and Rs 2-10 respectively. Jayshree were, however, marked upto Rs 6-14 from Rs 6-2 on some special support. Sree Radheysham were quoted around Rs 1-1.

Tea shares continued to be an active counter with selected scrips forging ahead from last levels on renewed buying although profit-taking erased some of the gains at the close. Bagmari were taken upto Rs 24-8 from Rs 23-6; Betjan upto Rs 57 from Rs 56-8; Bishnauth Old upto Rs 25-4 from Rs 23; new shares upto Rs 23-4 from Rs 22-4; Dhelakhat upto Rs 23-10 from Rs 23; Grob "A" upto Rs 35-8 from Rs 35; Hasimara upto Rs 33-14 from Rs 32-14; Hantapara upto Rs 228 from Rs 213 and Tezpore upto Rs 24-2 from Rs 23. Patrakola changed hands at Rs 218 to Rs 220 and Hattikhira at Rs 18-8 to Rs 18-11.

The sudden change in sentiment in the Tea section was mainly due to certain favourable developments. It was felt that decision of the Tea Regulation Committee to curtail output would improve the quality of the crop during the current season and prevent an excessive supply of the residual and waste teas into the market. The prices ruling at the Mincing Lane were also developing a firmer tendency in view of the increase in demand for replenishing stocks. Internal buyers also showed keen demand to stock-pile in view of the suspension of auctions for the next two weeks. There was also a feeling that the Suez situation was a little better and exports might not be affected. Reports of purchases by Russia were another factor.

Little or no interest was shown in the Sugar section due to quieter advices from the commodity market. Ramnugger came in for some enquiry upto Rs 27-13 from Rs 27-8, while SKG shed two annas at Rs 12-10.

The all-round rise in the prices of Engineering shares, that was noticed last week, was only short-lived and prices suffered a setback due to general selling pressure. When it was known that the Indian Iron dividend for 1955-56 was just maintained, there was heavy bull liquidation in the share scrip which, in turn, affected other scrips too. Indian Irons opened at Rs 36-2 and, after receding to Rs 34-12, finished the week better at Rs 34-13. In sympathy, Jessop were marked down at one time to Rs 37-3 from Rs 38-4 and TEXMACO to Rs 23-3 from Rs

(Continued on page 661)

THE MIRZAPUR ELECTRIC SUPPLY CO., LTD.

A dividend at the rate of 8 annas per share for the year ended 31st December, 1955 without any deduction for income-tax paid by the Company has been declared payable to the shareholders.

OCTAVIUS STEEL & CO. LTD.
A. H. GALLOWAY
Managing Director.
Managing Agents.

Calcutta, 28th September, 1956.

HASTINGS MILL LIMITED

NOTICE.

The Annual Ordinary General Meeting of the Company will be held at the Registered Office, at 14, Netaji Subhas Road, Calcutta, on Monday, the 29th October, 1956, at 3-30 P.M. for the following purposes:—

(1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1956.

(2) To declare dividends.

(3) To elect Directors.

(4) To appoint Auditors for the current year.

(5) As special business, to consider and if thought fit, to pass with or without modifications, the following resolution which will be proposed as ordinary resolution.

"RESOLVED that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the Company or to the welfare of its employees, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year may exceed Rs. 25,000/- or 5% of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater".

(6) To transact any other business of the Company.

The Share Transfer Books of the Company will remain closed from 16th October, 1956, to 29th October, 1956, both days inclusive.

By Order of the Board,
Per Pro. BANGUR BROS. LTD.,
Sd/-B. D. BANGUR,
Managing Agents.

CALCUTTA, 24th Sept. 1956.

N.B. (i) A Member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) EXPLANATORY STATEMENT IN REGARD TO SPECIAL BUSINESS TO BE TRANSACTED AT THE MEETING.

The Board of Directors have to give contributions from time to time to various institutions including charitable and other funds not directly related to the business of the Company or to the welfare of its employees and which is at times in excess of the limits as laid down in Section 293(i)(e) of the Companies Act, 1956. A resolution has, therefore, been proposed to authorise the Directors to contribute to such funds in excess of the above limits.

MARGARET'S HOPE TEA COMPANY, LTD.

NOTICE is hereby given that the 56th Annual General Meeting of the Shareholders of Margaret's Hope Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 8th November, 1956, at 4-10 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.

2. To appoint a Director in place of Mr G. T. Routledge, the retiring Director.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 21st September 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is a Director of Amluckie Tea Co. Ltd., and Tyroon Tea Co. Ltd., subsidiaries of McLeod & Co. Ltd., the Managing Agents to the Companies and he is therefore an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

3. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

4. To consider and, if thought fit, to pass the following resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 25th October 1956 to 8th November, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 4th October, 1956.

NOTE: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

EXPLANATORY STATEMENT

The Resolution being Item No. 4 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1)(d) of the Companies Act, 1956.

A POLICY FOR OIL PRODUCTION

(Continued from page 639)

by the Government in Jaiselmar, Rajputana and Cambay, and structural drilling (for finding out detailed structures of the rocks) has been started in the Jwalamukhi area.

It is impossible to say when these and other efforts of exploration will begin to show results. For, *it will not do to minimise the* difficulties.

Oil exploration is one of the most hazardous of ventures. It involves risking staggering sums of money and requires a large army of highly trained technical personnel, a vast organization, experience and years of hard work: and, at the end of it all, there is no knowing whether oil will be there. Geologists and geo-physicists, with all the aid of specialised knowledge and modern techniques, cannot assert whether oil will be found at any particular spot. The result is that oil exploration takes on a speculative character not to be encountered in any other industrial undertaking of comparable dimensions, Millions, in terms of money, and years, in terms of preparation and effort, may have to be spent and then—a common enough experience—not a drop of oil may be found.

The Standard Vacuum Oil Company, which under the Indo-Stanvac Oil Project Agreement has been granted the right to explore and, if possible, to produce oil in an area of 10,000 square miles in West Bengal, in a review, published earlier this week, of its work in connection with the Project, lays great stress on the difficulty of interpreting the geological data which have been so laboriously collected since 1951, when it made the first aerial magneto-metric survey of the Gangetic basin. The company proposes starting trial drilling operations soon, but no promise of easy and early success in locating oil is held out.

Not the least of the difficulties which the Government are likely to encounter in their efforts to find oil, is the lack of trained and experienced technical personnel. In fact, the shortage in this field is more acute than in other fields. The number of experienced geologists, geo-physicists, mining engineers and others with the requisite technological knowledge is very small. Expansion of the teaching facilities takes time and it takes more time for the young to gain experience. It will be quite beyond our capacity to train up technicians and scientists in sufficient numbers in the next 10 or 15 years.

It is because of these and other difficulties and the hazardous nature of oil exploration that, on an earlier occasion, we had suggested that, in this field, Government might associate foreign companies or governments with their own efforts for obtaining quicker results. It is fortunate that foreign countries, in which *there is a fund of goodwill for India, are anxious to help.* The UK, the USSR, the USA, Rumania and Canada have already made offers of assistance—assistance in conducting the actual exploration work and assistance in expanding training facilities. The Government will be only doing their duty, if such offers are fully made use of on the most advantageous terms.

India has already made great progress in the matter of refining crude oil. The three new refineries with the old one in Assam and the one proposed to be set up soon will be able, when working at full capacity, to meet the needs of the country almost entirely. If, therefore, we are able to produce even 70 per cent of our crude oil *requirements in the* near future, the benefit of saving in foreign exchange alone will be enormous, quite apart from the other obvious advantages. There is no reason why we should not be able to do this or even aim at attaining complete self-sufficiency, provided the Government allow no other consideration than that of obtaining results at the shortest possible time to direct the Government's policy for oil.

Mr K. D. Malaviya, the Union Minister for Natural resources and Scientific Research, has set up a high level Oil and Natural Gas Commission whose report will be an important factor in the evolution of this policy. It is to be hoped that there will not be any undue delay in the completion of the Commission's work. Nothing should stand in the way of *steps taken or designed to* reduce India's dependence on foreign countries for oil.

CLIVE STREET GOSSIP

(Continued from page 646)

sides which the so-called psychological warfare that we hear about appears to be the merest hocus pocus of village superstition.

*

It was not merely the Britishers he treated in this way. His own countrymen found their resistances crumbling before his determined onslaughts on their cherished citadels of intellectual and other vested interests. Sanatanists, militant communalists, intellectuals, capitalists were all set upon by him: not even the poor were spared. He was a living reproach to their bigotry, selfishness, intellectual sloth and lack of social responsibility. You had to yield to the massive pressure of the wily idealism. There were probably few among his contemporaries in whose armour of self-interest and self-love he did not make deep dents some time or other. *And, on the* thoughtful and the conscientious, his effect was permanent. One has only to consider one's own intellectual and spiritual odyssey, such as it has been, to realise the enormous difference Gandhiji has made to one's lives. Whether, to the generations that are now growing up, his message will have the same impact, is more than I can say. It may well be, as Einstein said in a moving tribute, "Generations to come will scarcely believe that such a one as this ever in flesh and blood walked upon this earth". But, to those of us who had the incredible luck of being his contemporaries and compatriots, his gifts were of the rarest kind. Many of them have become so much a part of our being that we are quite unconscious that these were acquired characteristics. For this reason, as also for the reason that the present is too much with us, we tend to forget what was in the most of our lives the most decisive influence .That is why an occasional research in the Gandhian modifications (if not mutations) of our intellcutual and spiritual life is so necessary. It is not so much a ritual act of formal piety, but an exercise in self knowledge.

EAVESDROPPER.

STOCK EXCHANGES

(Continued from page 658)

23-8, to finish better at Rs 37-4 and Rs 23-6 respectively. Indian Standard Wagon remained, however, firm at Rs 228 following the company's decision to make a bonus issue as well as the recommendation of a higher dividend for last year. Braithwaite lost half *a point at Rs* 29-6, while Indian Galvanizing scored one point at Rs 23-10.

Miscellaneous issues moved in sympathy with the general trend of the market. Indian Copper changed hands on the ex-rights basis from Thursday at Rs 4-12 to Rs 4-14. There were small buyers for NICCO upto Rs 26-1, while Aluminium Corporation changed hands at Rs 12-2 to Rs 12-5; Indian Aluminium at Rs 19-8 to Rs 19-14; Dunlop Rubber at Rs 29-9 to Rs 29-12; Martin Burns at Rs 24-10 to Rs 24-14 and National Carbon at Rs 29-14 to Rs 30-4. Rohtas turned quiet at Rs 22-4 against Rs 22-13 on lack of support. India Steamship, after easing off to Rs 10-6 from Rs 10-12 on rumours of a final dividend of only As 8, finished better at Rs 10-8. In the Paper section, India Pulp were nearly maintained at Rs 25, while Orient, after touching a new low of Rs 39 from Rs 39-9, finished better at Rs 39-4. Titaghur were nominally quoted around Rs 39-12 and Shree Gopal at Rs 17-13.

GATEWAY GOSSIP

(Continued from page 647)

in universities have lost their faith in reason, and their intellectual passion is so utterly sterile as not to respond to the beauty of ideas, whether political or moral, there is really no hope for a country.

The time has come, I think, when we should try strenuously to set our house in order. A measure of achievement in the last eight years in the economic and political field and a certain tendency to bask in international approval have made us less vigilant than we ought to be about basic national weaknesses. The coming months will, therefore, have to be dedicatedly employed, despite the elections, to the task of national consolidation in a political sense. The people, whose basic political sanity is undoubted, will have to be told of the dangers that lurk ahead and their cooperation obtained. It is a vital national task that cannot be postponed.

Price Trends during August, 1956	708

Irregular Trend in September

The month started on a quiet note, stock market sentiment having been adversely affected by the increase in the excise duty on cloth. The Bombay Stock Exchange remained closed on account of a Jain holiday.

It was announced in Cairo that President Nasser would receive the five-nation Suez Canal Committee led by Mr Menzies on September 3.

2 & 3

The Lok Sabha passed the cloth Duty Bill which empowered Government to raise the excise duty on cloth.

The Menzies Committee met President Nasser to explain to him the 18 nation proposals for the Suez Canal.

Textile shares were depressed in Bombay on unabated selling pressure consequent on the enhancement of excise duty on cloth. Bombay Dyeing reacted from Rs 664-6 to Rs 653-12. In the Steel section, Tata ordinary after having been pushed down to Rs 199-8 ex-dividend closed slightly better at Rs 200-4. In the Calcutta market conditions continued to be quiet in the absence of fresh interest with Indian Irons quoting at Rs 36-8.

4

The Government of India announced that a ceiling of 160,000,000 lbs of tea had been fixed out of the 1956-57 North India crop for export for the purpose of auction.

While the Bombay Stock Exchange exhibited signs of reviving interest with selected scrips meeting with buying support at the lower levels, the Calcutta market continued to lose ground. Tata Iron was done at Rs 199-12 while Bombay Dyeing was further marked down to Rs 653-12. Indian Irons was almost unchanged at Rs 36-6.

5

A trade agreement between the Government of India and Burma was signed in New Delhi. The principal features of the agreement are that the imports and exports of commodities from and into either country will be subject to import, export and foreign exchange regulations in force from time to time in the two countries. The agreement will remain in force for 5 years.

Narrow price movements characterised trading in the Calcutta Stock exchange with the volume of business passing at a low ebb. Indian Irons after opening steady at Rs 36-7 closed almost unchanged at Rs 36-6. The Bombay Stock Exchange remained closed on account of a Jain holiday.

6

Twelve of the Fifteen State Loans, subscription lists for which opened on September 3, were closed on being fully subscribed, The subscribed loans were: West Bengal, Andhra, Bombay, Madhya Bharat, Madras, Mysore, Punjab, Rajasthan, Saurashtra, Travancore-Cochin, Uttar Pradesh and Madhya Pradesh. The remaining State loans remaining open were Bihar, Hyderabad and Orissa.

After a Cabinet meeting earlier in the day, Sir Anthony Eden announced that Parliament would be recalled next Wednesday to discuss the Suez Canal problem.

While the Bombay market again remained closed, very little interest was evinced either by operators or investors in the day's trading in the Calcutta Stock Exchange which as a consequence ruled easy with prices marked down alround, Indian Irons opened quietly steady at Rs 36-3 and after declining to Rs 36 closed slightly better at Rs 36-2.

7

The Rajya Sabha unanimously approved the Second Plan's objectives and priorities. Earlier, in his speech Mr Nehru made it clear that a 30 to 40 per cent increase in food production would have to be achieved without any increase in the allocation under Agriculture. Mr T. T. Krishnamachari was fully confident that the nation would be able to raise the internal resources required though he expected that the gap in the foreign exchange poistion to increase from Rs 800 crores to Rs 1,200 crores.

Jute goods stocks with mills at the end of August showed a sizable decline of 15,800 tons at 122,100 tons. The news imparted some steadiness to jute shares in the Calcutta Stock Exchange. Elsewhere conditions remained generally dull. Indian Irons opened easier at Rs 35-14 and closed better at Rs 36-1. In Dalal Street, Tata Iron declined further to Rs 197-12 from the previous closing of Rs 199-12 with Bombay Dyeing reacting to Rs 648-12 from Rs 653-12.

8

Mr T. T. Krishnamachari issued a warning to the textile industry that if the proposed duties on cloth led to a rise in prices, further duties would be levied; if the rise persisted even then, the Government, might impose price control.

The validity of the Indo-Austrian trade agreement was extended upto June 1957.

9 & 10

Consequent on the failure of the Menzies mission, Egypt appealed to the U. N. and all Governments for a peaceful solution of the Suez dispute by the creation of a negotiating body representing all Canal users also different views on the issue.

The stock exchanges in the country showed no sign of improvement as the principal section in Dalal Street was subjected to heavy selling pressure in view of the uncertainties created by the Finance Minister's warning to the textile industry. In Bombay, Bombay Dyeing declined sharply to Rs 639-6 with Tata Iron also reacting in sympathy to Rs 196-8. Prices developed a sagging tendency in Calcutta under lower advices from Dalal Street. Indian Irons after opening easier at Rs 35-14 receded further to close at Rs 35-10.

11

Both Britain and France considered that the rejection of the 18 nation plan by President Nasser of Egypt had created a very grave situation.

There were indications that the stock exchanges were slowly getting out of their fear complexes brought about by the increase in excise duty on cloth and the possibility of stringent monetary measures to curb inflation. In Dalal Street selected scrips were beginning to get support at the lower levels. In Calcutta also prices showed a rallying tendency. Indian Irons opened at Rs 35-2 and closed better at Rs 35-4.

12

The British Prime Minister announced that Britain, France and the USA were setting up a Users' association which would undertake responsibility for traffic through the Suez Canal.

It was announced that the subscribtions to the 15 State Loans the lists of which were closed on the 10th, exceeded by over Rs 10 crores the aggregate of Rs 64 crores. The total amount subscribed to the loans was placed at Rs 74,06,17,900.

Moderate gains continued to be recorded both in Calcutta and Bombay stock exchanges. While in Dalal Street prices rallied on professional support and short-covering, Royal Exchange brightened up on revival of interest in jute and engineering shares. Tata Iron recovered to Rs 196-8 from Rs 195 with Bombay Dyeing gaining couple of points to be finally placed at Rs 637-8. Indian Irons after opening at Rs 35-7 closed at Rs 35-10 after being higher at Rs 35-12.

13

While the British Foreign Secretary was telling the House of Commons that plans were being pushed ahead to set up a canal users' organisation, Mr Nehru told the Lok Sabha that the new proposals concerning the Canal would render peaceful settlement of the dispute more difficult of realisation.

The Stock Exchanges maintained their recent gains though price movements were narrow. Indian Irons moved narrowly around Rs 35-9 while in Bombay, Tata Iron was subdued at Rs 195-8 with Bombay Dyeing no better at Rs 635.

14

In England, Prime Minister Eden promised that barring emergency the UN would be consulted before force was employed against Egypt.

Mr Nehru convened a conference of other Colombo Powers to meet the next day with a view to have closer consultation on the Suez situation.

In Bombay selected buying pushed up prices with the spotlight directed on Tata Iron which as a consequence steadied upto Rs 196-8. Indian Irons after opening at Rs 35-9 closed better at Rs 35-11.

15 & 16

Despite the walkout from their jobs by 93 foreign pilots and 400 foreign officials of the Suez Canal

(Continued on page 707)
