The high prices prevailing in Pakistan are not only curtailing business with India, but also causing concern in other foreign countries purchasing the fibre from East Bengal. Mr. Anwar Ali, Secretary of the Jute Department of the Provincial Government, who recently returned from a tour of Europe and Great Britain, told a meeting of the Jute Advisory Committee held in Narayanganj last week that foreign buyers expressed concern at the high prices. Speaking at the same meeting, the Jute Minister, Mr. Abdur Rahman Khan, said that his Government would be alert in keeping the price at par with the market trends. That this alertness is not leading anywhere is clearly indicated by the concern expressed by foreign buyers at the prevailing high prices in Pakistan. These prices are unrealistic, and are causing a shrinkage of business while giving "indirect" protection to Indian jute goods in foreign countries. The world jute conference which is scheduled to be held in Narayanganj on 25th November and which is being convened by the Pakistani Jute Association would, it was expected here, throw further light as to the concern of foreign buyers on high prices. Representatives of most countries purchasing jute from Pakistan are expected to attend the conference.

On Wednesday last, rates moved within narrow limits, as the *fatka* market was closed. Ready B. twills were priced at Rs. 118.50 with the 40" x 10 oz. hessian being quoted at Rs. 42.75. On the next day, 40"×10 oz. hessian continued to be quoted steady at Rs. 42.75 following support from overseas buyers. On the other hand, ready B. twills sagged by 25 nP to Rs. 118.25. Speculators became active at this stage, and their support, coupled with covering business, pushed up prices for both the principal constructions. The rise in 40"×10 oz. hessian to Rs. 42.90 and B. twills to Rs. 118.50 followed on Friday. On Saturday, the trend reversed, as, contrary to expectations of speculative elements, substantial business did not follow. With the result, B. twills were pushed down to Rs. 117.70 and hessian 40"×10 oz. to Rs. 42.70. Yesterday, prices were marked up. B. twills were steady at Rs. 118.25, 40"×10 oz. hessian at Rs. 43 and the eight oz. at Rs. 35.

Raw jute prices were steady. Some business was done with mills. Sellers who had forward commitments for this time and who asked for extension of delivery time were few. Outstation markets were fully steady. Arrivals in Cossipore continued to be below for this time of the season. Agencies in buying centres reported firm conditions. The latest quotations for the 1957-58 crop, October-November delivery are:

WHEAT DECLINES SLIGHTLY

(From Our Own Correspondent)

HAPUR, 28*th October*

The food situation in the country is reported to have deteriorated due to severe drought conditions in the four States, one adjoining the other namely, east U.P., Bihar, Orissa and Madhya Pradesh. An increase in the import of food programme to meet the increased liabilities has become unavoidable. The proposed additional imports, besides the scheduled imports of nearly 1.5 million tons during the current agricultural year, have been tentatively estimated at 2 million tons. The stocks with the Centre and State Governments and trade aggregate 1 million tons and the total requirements are worked out to 4.5 million tons.

The major crisis is in Bihar where the State is faced with the *kharif* crop loss of 40 to 50 per cent. The U.P. State, where rice crop has suffered very much, has requested the Centre to convert this State into a separate rice zone. The Union Food Ministry has assured increased help to these areas. The U.P. Government's requirements for eastern districts till the arrivals of the next *rabi* crop are about 110,000 tons and the Centre has undertaken to meet the demand. Bihar would require about 325,000 tons, besides 50,000 tons of wheat per month allotted from the Centre. The *kharif* surplus in Madhya Pradesh and Orissa may be wiped out by the drought and the two States are likely to need Central help. West Bengal's needs will also be fully met by the Centre.

While wheat prices of average quality recorded modest fall during the week, due to increased arrivals in the market, mostly of stocks supplied by the Government for seed purposes, farm quality wheat prices continued steady. The prevailing prices are: Rs. 16 per maund for average quality and Rs. 17.25 for farm quality. The week's offtake from the stocks was negligible and the local wheat stock remains unchanged at 29 *khaties*, the corresponding figure last year being 72 *khaties*. At this time last year, wheat stocks here aggregated as much as 119 *khaties* and average wheat was quoted at Rs. 12-10 per maund. Rice prices eased slightly during the week, following the increased arrivals of new crop in the market. The prevailing prices are: *Basmati* Rs. 27 to Rs. 29.25, *sela* mainpuri Rs. 23.75 and coarse quality Rs. 18.75 per maund.

Gram prices ruled steady during the week, due to falling stocks in the face of good demand. Local stocks, at 55 *khaties* are mostly owned by the State Government. The corresponding figure last year with the trade was 116 *khaties* when gram was quoted at Rs. 12.37 per maund. Barley and *bejhar* prices eased slightly, due to rains during the week which will enable increased sowings of these grains. Despite increased arrivals in the market, maize prices registered some gains during the week, due to good demand from Bihar side. Last week-end prices (per maund) were: Gram Rs. 11.37 to Rs. 11.75, barley Rs. 10.50, *bejhar* Rs. 10.25, maize Rs. 12, *jowar* Rs. 9 to Rs. 10, *guwar* Rs. 12.12

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.
†Only 7 per cent. out of the 10 per cent. dividend is cumulative.
††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.
†††These shares can be redeemed at Rs. 105 at any time by special resolution.
¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.
§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.
‖Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T=Taxable. C=Cumulative. R=Redeemable. T.F.=Tax-free.
R.O.=Redeemable at option. N.R.=Non-Redeemable. P.=Participating.

(f) Participating preference shares (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956 (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months notice. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum.(Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year

M—Managed by the Board of Directors. ‡ Less income-tax (x) Clive Mills have paid dividend at As. 10½ on bonus shares for the year, 1955. * Including bonus. (k, Investments.
(l, Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend Rs. 17-8 of includes an interim ddivlend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 807*)

field, the scheme has been extended to the field of long-term borrowings also. Thus, since the beginning of 1957, all new loans issued in Finland have been protected against inflation by having their values linked with a foreign currency or some other index.

This has paved the way for creating two types of currency in Finland. One is the mark note issued by the Bank of Finland and used for all transactions for which no other arrangement is feasible. The other is the index-mark, the use of which in long-term financing arrangements of all kinds is becoming more and more popular. Supporting this system, the Governor of the Bank of Finland says, in his Bank's monthly bulletin:

"It is impossible to justify on moral or economic grounds a system that results in a continued transfer of wealth from creditors to debtors. The bad treatment that is being meted out to creditors by the failure of Governments to control inflationary processes cannot fail to have a depressing effect on their desire to save and thereby tend to retard economic development. And there can be no doubt that the outcome of *entrepreneurs* finding that they can expect to repay their commitments in less valuable money than they borrowed must be a distortion of capital development activity and of the spirit of enterprise."

It may be argued that the linking of deposits and loans to cost of living and other indices would amount to perpetuation of inflationary pressure, in the same way as the process of linking wages with the cost of living is said to do. The Governor of the Bank of Finland, however, dismisses this argument by saying that the two processes are entirely different and cannot be compared. The index-linking of deposits and loans is similar, according to him, to mobile interest rates which automatically rise in inflationary conditions and fall in times of deflation. Britain and many other countries have not accepted this system of index-linking, as, in their opinion, it is more important to fight inflation than to make an attempt to cure the evils of inflation. But the Bank of Finland Governor points out that the index clause may remain inoperative if Governments are successful in maintaining the value of money. If, on the other hand, the struggle against inflation is not successful, it limits, he argues, some of its more harmful effects.

FREE TRADE AREA IN EUROPE

(*Concluded from page 812*)

Even inside the Common Market, there is not to be free trade in agricultural commodities, but a "managed market" in which member-countries retain a good deal of freedom to do as they please with domestic agriculture. There is plenty of scope for reconciling the managed market with Britain's obligations to domestic agriculture and her Commonwealth partners, all of whom are anxious to see free trade work—provided their interests are protected.

But the negotiations are yet to begin, and they will—as the President of the British Board of Trade, Mr. Peter Thorneycroft, had said—be "neither quick nor easy." The real value of Mr. Maudling's initiative lay not so much in the agreement to negotiate on agriculture—important as this concession was as evidence that Britain was willing to make sacrifices for the sake of closer association with Europe—as in the recognition that a Common Market without a larger European association would weaken and divide Europe.

As a result of this recognition, the free trade area is no longer regarded as a purely British proposal; the determination of the Council of O.E.E.C. to establish a free trade area in association with the Common Market is now, for the first time, on record. A start has been made, as Mr. Thorneycroft has said, in creating a market as big as Russia and as rich and free as the United States.

It is now realised clearly that the problems at issue are not purely technical, but raise far-reaching political considerations. The establishment of a negotiating committee at ministerial level—which Mr. Maudling has warned to be ready to meet next month—suggests that negotiation on these problems can now begin in earnest, and with some prospect of success.

BANKING

(*Concluded from page 814*)

cent. Investments, held almost wholly in Government securities, declined by Rs. 19 lakhs to Rs. 1.71 crores.

In Ceylon, the three offices among themselves continued to hold about one-tenth of the total bank deposits in the Island. Their deposits, which also constituted almost all their total liabilities, improved from Rs. 7.92 crores to Rs. 9.38 crores, demand deposits rising from Rs. 6.45 crores to Rs. 7.43 crores and time deposits from Rs. 1.47 crores to Rs. 1.96 crores. Advances, at Rs. 1.70 crores, represented a fraction of the deposit liabilities, being no more than 18.1 per cent., though the ratio rose from 15.1 per cent. at the end of 1955. About two-thirds of the advances were in the form of bills purchased and discounted.

There was an expansion in business of Indian banks in Malaya which was partly aided by the increase in the number of offices. While there was no expansion in Indo-Malaya trade in 1956, Indian banks were able to extend more credit, their total outstanding advances at the end of the year showing a rise from Rs. 6.23 crores to Rs. 10.21 crores. As in the previous year, the share of bills purchased and discounted in total advances was much higher. The bills portfolio rose from Rs. 4.52 crores to Rs. 6.33 crores and other loans and advances from Rs. 1.71 crores to Rs. 3.38 crores. With a relatively small rise in deposits, as will be shown below, the credit ratio jumped up from 97.1 per cent. to a high of Rs. 138.5 per cent. Investments were unchanged at a low of Rs. 69 lakhs. Cash balances improved from Rs. 99 lakhs to Rs. 1.36 crores. As against an increase of Rs. 4 crores in advances, the rise in deposits was of the order of Rs. 95 lakhs to Rs. 7.37 crores. In order to make good this shortfall, as also to meet the organisational and other expenses for opening new offices, the Indian banks had to draw a large sum from their head offices, as witness the increase of Rs. 3 crores (to Rs. 4.4 crores) under "branch adjustments."

The deposits of branches in British East Africa rose by Rs. 52 lakhs to Rs. 2.62 crores. Branch adjustments, which formed the principal item on the liabilities side, showed no change, despite the opening of another office in this country, in contrast to the rise of Rs. 2 crores in 1955 under this item. The small growth in deposit resources was utilised to increase the advances from Rs. 4.80 crores to Rs. 5.23 crores.

In Hongkong, the two Indian offices expanded their deposits from Rs. 79 lakhs to Rs. 1.12 crores. Total advances, at Rs. 2.23 crores (as against Rs. 1.30 crores) were nearly 200 per cent. of the deposits. The bulk of the advances was in the form of bills purchased and discounted. Branch adjustments increased from Rs. 82 lakhs to Rs. 1.30 crores.

ENGINEERING

(*Concluded from page 824*)

should take urgent steps to meet the requirements of the Jagjit Engineering Works for additional electric power. (7) The Railway Administration should try to meet the requirements of the machine screw industry for wagons for the movement of its raw materials and finished products.

An examination of the fair ex-works prices of machine screws produced by the domestic industry and the c.i.f. prices of the imported product has led the Commission to the conclusion that a duty of 140.7 per cent. *ad valorem* or 52 naye Paise is required to place the domestic product on equal footing with similar imported product. The current rate of duty is 50 per cent. *ad valorem* or 60 naye Paise, whichever is higher. The industry is, however, now in a comfortable position inasmuch as imports of machine screws are severely restricted on balance of payment considerations. "That by itself," the Commission says, "cannot be considered as a valid reason to withdraw protection from the industry." In the first place, though the domestic industry could meet about 75 per cent. of the domestic demand for machine screws, it has still to undertake the manufacture of precision screws and other specialised types of screws. Secondly, with the expansion and diversification of engineering industries, the machine screw industry will also have to expand and diversify its production and undertake additional investment. Thirdly, competition from imported foreign screws will reappear as soon as import restrictions are relaxed. Fourthly, any protection granted to the industry is not likely to place an undue burden on consumers as there is sufficient competition between the various units in the industry to compel the manufacturers to keep the prices at a reasonable level and also to maintain quality. After careful consideration of these factors, the Commission has recommended—and, as stated at the outset, the Government has accepted—that protection to the industry should be continued for a further period of two years, that is, till 31st December 1959, at the existing rates of protective duty.

MINING OF ORES

The Government of India has suggested to State Governments to grant mining leases to private parties for isolated patches of ore reserves of minerals in Schedule A of the Industrial Policy Resolution, 1956, particularly iron ore and manganese ore. This step, it is stated, has been taken in view of the extreme urgency of increasing India's foreign exchange earnings. The minerals included in Schedule A of the Resolution are: coal and lignite, mineral oils, iron ore, manganese ore, chrome ore, gypsum, sulphur, gold, diamond, copper, lead, zinc, tin, molybdenum and wolfram.

Under the Industrial Policy Resolution, Schedule A contains the list of industries, "the future development of which will be the exclusive responsibility of the State." The Resolution, however, affirms that the division of industries into separate categories does not imply that they are being placed in "water-tight" compartments. When this policy was announced, it was pointed out to the Government that a situation might arise in which neither the State would undertake development on its own nor let the private sector undertake it. Apparently, the new directive in respect of mining of mineral ores, with its emphasis on private exploitation of the ores, signifies that it has not been possible for the Central and the State Governments to undertake extensive mining operations. Be that as it may, it is to be hoped that the State Governments will expedite the issue of licences for prospecting mineral ores and they will also give wider publicity to the new directive so that intending prospectors may come forward with schemes for prospecting and exploitation of new mines.

COMMERCE AND INDUSTRY

(*Concluded from page 828*)

the Board of Trade is what it can do to try to encourage and help British manufacturers to sell goods abroad. The P.E.P. study points out that official policy in Britain starts from the belief that the object of taking part in a trade fair is to sell goods and that selling is the job of individual firms. The main question that the Board and the exhibitors should ask themselves, according to the study, is whether a fair is likely to result, directly or indirectly, in enough extra sales sufficient to justify the cost.

There is a body of opinion in British industrial circles that the maintenance of commercial prestige is a matter for the Government and should be left to it. But how far can or should the Government act unless industry is prepared to back it up? The P.E.P. points out that, even as regards the staging of shows abroad for commercial prestige purposes, there is little point in the Government going ahead in markets in which industry is unlikely to follow with detailed sales promotion. It is, therefore, suggested that some sort of joint body should be formed for Government and industry to deal with the question of British pavilions at those trade fairs which are organised on the national pavilion pattern and it should have adequate finance for the purpose. Such an organisation may also play a useful part in arranging national displays at general trade fairs.

In shaping future policy, according to the P.E.P., the major consideration is export trade. British trade fairs have, in the past, aimed mainly at the home market. In the event of the creation of a Free Trade Area there will be more direct competition between British and European goods even in the British market. Therefore, every opportunity for showing the worth of the British goods needs to be fully exploited. The study says that if British goods compare well with its European counterparts, then it will be a good thing to establish their superior worth to the home buyer and consumer. Where British goods do not come up to the standard of European goods, it is desirable to discover the reasons and improve them. One of the ways of doing this would be by having more foreign exhibits at fairs in Britain. In other words, more emphasis should be put on the international side of British trade fairs. This has the additional advantage that in British fairs British-produced goods will not be swamped by those of foreign competitors. Apart from all these, there is the question of the tourist trade and the need for closer international link which would be well served by more confident efforts to make Britain an international trade fair centre. The study also emphasises the need for developing the ancillary requirements.

Certain useful lessons could be drawn from the foregoing account. Even Britain, which has a long and creditable record in the field, is growing more and more conscious of the importance of fairs and exhibitions as effective instruments of trade promotion in a world of keen competition. By comparison, India is a novice in the organisation of and participation in such ventures. There is urgent need for vigorous and positive action in the field, especially because India's export items such as textiles and engineering goods are facing stiff competition in foreign markets from highly advanced industrial nations. The Government and the various trade associations and chambers of commerce should devote more attention to international publicity for India's export goods than they have done in the past.

PROBLEM OF SUGAR EXPORTS—II

SOME aspects of the problem of promoting exports of sugar were discussed in these columns last week. Since then, the report of the Export Promotion Committee has been published. We carefully went through the report to see what the Committee has stated on this topical subject, but we are no wiser, because only a passing reference has been made to it. The perfunctory manner in which the Committee has referred to sugar as an export commodity shows that it did not attach much importance to it as a foreign exchange earner. Sugar has been included by the Committee in the list of miscellaneous exportable goods and no more than 100 words have been devoted to it. The Committee has "strongly recommended that 400,000 tons be allowed for export." It does not feel that "the export of this quantity will lead to any great scarcity in the country, especially as the high excise duty levied in terms of the budget for 1957-58 is curbing domestic consumption to some extent." Proceeding, it concludes: "Since we cannot depend upon international prices keeping steady at the present high levels, it is necessary that we export whatever we can this year itself." In arriving at this conclusion, the Committee has evidently proceeded on the assumption that the scope for India developing a sustained export trade is next to nothing. The economics of the Indian sugar industry is such as to warrant this conclusion. As was mentioned here last week, the industry, taken as a whole, cannot compete effectively in world markets, except when prices rule at abnormally high levels. It is not, therefore, surprising that the Committee has treated the subject in a cavalier fashion. It has said nothing on such issues as whether sugar exports should be on a monopoly basis, whether they should be made feasible through any special assistance and, if so, in what form and under what conditions. It is to these issues that we propose to address ourselves here.

Before doing so, we would like to revert to the subject of the quantity of sugar that could be safely exported in the new season. The Export Promotion Committee's suggestion that 400,000 tons could be so allowed is open to question. There is a school of thought which contends that there is no real surplus of white sugar and that the current stocks of 470,000 tons have been brought by Government restrictions on internal sales and heavy taxation on consumption. These measures are, according to this school, interfering with the healthy growth of sugar industry and sugar consumption. They are also impeding the most profitable utilisation of sugarcane. Since the basic support for sugar industry is its domestic market, nothing should be done which is likely to weaken it even remotely. This contention is sound and there is a lot that could be said in favour of it. In fact, in order to strengthen it, one can even import the argument that, as sugar is an agricultural product and as agriculture in India is even today a big gamble on the monsoon, prudence demands that a sizable stockpile of sugar should always be retained to cover unforeseen contingencies and that, if allowance is made for this factor, there will not be much sugar left for export. But, as the country is desperately in need of foreign exchange, as there are no complaints of shortage of sugar from any part of the country, as domestic prices of sugar have been steadily going down in the past two months even though the current season sugar will be available for marketing only about six weeks hence, and as there are good prospects of production in the 1957-58 season being 100,000 tons higher than in the preceding season, a balance must be struck between the domestic needs of sugar and those of foreign exchange. It is in pursuance of all these considerations that we took the view last week that exports to the tune of 200,000 tons could be permitted.

World market conditions today and the prospects for short-term are such that even the export of 200,000 tons will mean substantial loss of revenue to the Central and State Governments as well as to manufacturers who sell for export. It may be noted here that, at current world price, export of sugar will fetch only Rs. 20 per maund, f.o.b., as against Rs. 27 per maund considered as the fair minimum ex-mill price, exclusive of excise duty and cane cess. The Centre's loss of excise duty alone comes to Rs. 4.50 crores. Besides this amount, the Centre will also lose a certain sum by way of income and corporation taxes, as the manufacturers who export will make little or no profit. The States will lose a little over Rs. 1 crore by way of cane cess, without the refund of which there can be no export of sugar; they will also lose about Rs. 1.25 crore by way of sales tax. Any plan for export of sugar should be such as not to add further to these losses. The suggestion of the Indian Sugar Mills Association that the factories should be allowed to recover the loss to the industry on exports by raising the prices for the domestic consumer by Rs. 2 to Rs. 2-8 per maund is neither desirable nor feasible. In the first place, as was pointed out by us last week, the consumer is already paying a heavy price for sugar. It will be a crime to ask him to pay more. Secondly, even if this contention is brushed aside, there is no certainty that the consumer can be made to pay this additional price, as the internal trade is not strictly controlled. The only way this can be done is to introduce complete control over distribution and prices, right from the producer's to the consumer's end. None wants this sort of physical control, not even the Government.

The I.S.M.A.'s suggestion implies the perpetuation of exports of sugar through a monopoly body. If there is to be monopoly in sugar exports, why not leave the task to the State Trading Corporation? Why should the I.S.M.A., a non-trading body, try to create another corporation? But, apart from the solid grounds of principle on which monopoly trade in any form is objectionable, practical considerations rule out monopolistic methods for building up a sustained export trade in sugar. As international trade in sugar is highly competitive, monopoly cannot succeed except at heavy sacrifices for domestic consumers and taxpayers and also probably with the co-operation of private merchants in foreign countries. It is reprehensible even to think that indigenous private enterprise should be shut out from the export trade in sugar, while allowing its foreign confrere to participate in such trade.

The system of a single monopolistic organisation of the type contemplated by the I.S.M.A. has many disadvantages. It would mean more controls for the sugar industry as a whole. It would require each unit to sell a portion of its production to the Central Organisation at a sacrificial price. Such a sacrifice will not bring adequate satisfaction to all the factories, except to the extent that exports will reduce the burden of supplies on the internal market and thereby help them sell in the domestic market at prices higher than would have been possible had there been no export at all. But this is not much of a gain to efficient sugar manufacturers whose production has always enjoyed a ready market. It is common knowledge that not all factories in India maintain a consistently high quality in their production and packing. The experience of sugar exports in the past season through the adoption of the monopoly system has not been quite happy. There have been many complaints from the importing countries, not all of which could be attributed to the malignancy of India's competitors. If India still succeeded in exporting a little over 150,000 tons of sugar in the past season, it was because of temporary scarcity of supplies in some of the importing countries caused by the Suez crisis.

A better method of establishing a sustained export trade in sugar would be to give the necessary freedom to those manufacturers who are prepared to try and find export markets. There must be quite a number of factories in this country, especially those having their own sugarcane farms with a high yield of sugar per acre, which can compete effectively in world markets, provided they are given certain incentives. They could, for instance, be (a) exempted from cane cess and (b) given the privilege to import plant and machinery required for modernisation or expansion. Similar incentives which do not cost the country heavily in terms of revenue but which will be effective enough to engender enthusiasm among manufacturers to develop export markets could also be provided. An assurance may also be given by the authorities that the export trade in sugar will not be nationalised and that the State Trading Corporation will be kept out of it. It may be that the sum total of these incentives will not be adequate to offset in full the loss of profit that can be had by selling sugar in the internal market. We, however, presume that most of these efficient manufacturers would rather prefer to incur this loss than be compelled to pay a fixed amount, related to their production, to cover the loss that will be incurred by the monopoly exporter envisaged by the I.S.M.A. They can regard this loss as an investment for developing an external market for their product. With a plan for expanding the production of sugar to 2.25 million tons on hand and with possibilities of further expansion, it would, perhaps, be for their future benefit, as well as that of the industry as a whole, if some of the manufacturers were to try their skill and efficiency in building up overseas markets. Any concessions that are shown to such units by the Government need not evoke the envy of the other units in the industry, because they too will indirectly benefit by it through a reduced supply within the country.

The monopoly system of exports, it may be added, does not permit direct contacts between the domestic manufacturers and/or their exporters, on the one hand, and the importers in the foreign countries, on the other. Such personal contacts are necessary for building up regular export outlets through advertisements, market research, and honest and fair dealings. It is

needless to add that exports through private trade of a commodity subject to the rigours of a buyers' market can succeed only if the quality of the product is high, packing is attractive and the service is excellent. This in turn will ensure the fair name of the country and encourage efficiency in production, packing, storage and transport. All these qualities will not be adequately developed inside the country, if the overseas trade in sugar is sought to be developed through a central organisation such as the I.S.M.A. or its nominee.

Some may argue that exports through competitive private channels may not lead to the attainment of the target that is to be decided upon. But, even through the monopoly system of exports and despite the highly favourable conditions that prevailed, the target of 200,000 tons was not hit in the last season. Nevertheless, it is suggested by some of the sugar merchants and manufacturers that, in order to make sure that the industry's actual performance on the export front does not fall very much short of the target, the Government could allocate an export quota to each sugar mill, say, 10 per cent. of its production, and make such quotas transferable to other mills which are prepared to sell for export. The release order for sale in internal markets, according to them, could be related to export performance, so that each will endeavour to discharge its export obligations either directly or indirectly. They also suggest that the Government should assist the industry in developing exports by simplifying the rules relating to refund of excise duty, cane cess and sales tax and by providing prompt transport facilities and the right type of warehouses in ports where sugar can be kept in storage pending availability of shipping. All these are questions of detail which deserve to be carefully examined by the authorities in consultation with the trade and industry.

EXPORT PROMOTION

THE task of financing through current export proceeds the programmes in the second Plan which imply heavy capital goods imports is now proving more difficult than was once imagined. The balance of payments deficit has turned out to be larger than was feared. And the Government's action in further reducing the statutory minimum of foreign exchange backing to Indian currency is a palliative rather than a permanent remedy. There is no simple cure-all for the foreign exchange *malaise* which, in point of the publicity given to it and its familiarity to the man in the street, is next only to the second Plan itself. The country's energies must be diverted to the promotion of exports. Never before did the slogan "export or perish" carry a greater sense of urgency to India than now.

There are, of course, limitations to what can be achieved through export promotion. It is true that India's share is a mere 3.69 per cent. of the world trade, estimated at $95,000 million. This may suggest the immense scope there is for increasing Indian participation in world trade. But then, other countries are no less anxious to export than India. Secondly, an economy, which is in the process of being fitted to an expansionary role, cannot possibly make such spectacular progress in exports as to eliminate all deficits in foreign exchange which it needs for its very expansion. Thirdly, the inflationary implications of too generous a diversion to exports of limited supplies from current consumption cannot be altogether overlooked in an economy already sorely perplexed by rising prices. But, within these limitations, much could and should be done to promote exports. And this is precisely the theme to which the Export Promotion Committee, the report of which was released this week, addressed itself. The Committee must be complimented on making a good job of its work. The report is a comprehensive, clear and eminently constructive document, in which the arguments have been neatly marshalled. It is true that many of the suggestions it has made are not new. Even so, they needed saying and recording for guidance and for the formulation of official policies. Another service it has rendered is that, for the first time, the significance of the European common market plan to India has been examined at some length. Little light had been thrown on this subject whether in official or non-official discussions, so that the Committee's observations are valuable and sound fresh.

It is clearly unnecessary to overstate the case for urgent attention to exports. In 1956-57, India's exports, valued at Rs. 603 crores, fell short of imports by Rs. 237 crores; the deficit in the previous year was Rs. 96 crores, created by the excess of imports over exports valued at Rs. 609 crores. Realising the importance of promoting exports, the Government has taken a series of constructive measures to which, as our readers are aware, a comprehensive reference was made in an article by the Union Minister for Industry, Mr. Manubhai Shah, published in our issue dated 26th October 1957. Helpful as these measures have been, what is needed now is—to use the phrase of the Export Promotion Committee—an "export climate." There must be a nation-wide "export consciousness," a certain willingness to take risks, and above all, a concerted drive for the promotion of exports. In this connection, the Committee has listed six essential prerequisites of an "active and well-articulated" foreign trade policy aimed at maximising exports:

> (1) A sustained increase in production in all sectors—agricultural, industrial mining, etc., (2) maintenance of prices at competitive levels; (3) acceptance of the principle that exports should be encouraged even at some sacrifice in respect of domestic consumption; (4) encouragement of direct trade between India and those of its foreign customers who used to deal with it through intermediaries; (5) the exploration of new markets for our staple export commodities and of markets for products new to our export trade; and (6) research into new uses for our traditional exports and adaptation of internal programmes thereto.

The Committee considers that India's exports will have to be stepped up substantially to Rs. 700 to Rs. 750 crores a year. This level is, of course, not beyond the reach of this country, provided sustained efforts are made and domestic production is increased. In any case, it is better to keep it as an immediate target and work for achieving it. The fact that our net reserves of foreign exchange have been cut to the bone—they now stand at Rs. 327.78 crores, as against Rs. 568.93 crores a year ago and Rs. 712.39 crores two years ago and that, after borrowing about Rs. 96 crores from the I.M.F. early this year—should induce the country to make an all-out effort at maximising exports. "On account of the rapid depletion of the foreign exchange reserves which is likely to continue," the Committee says, "we have even had to dip into the reserves meant exclusively as cover for our foreign currency." These words, uttered in August when the report was signed, have proved to be no exaggeration in the light of later events. It may be unnecessary to take too pessimistic a view of the situation, in that the depletion of foreign exchange is balanced, to a large extent, by solid assets in the shape of steel works, heavy industry, transport equipment, multipurpose projects, etc. Even so, India cannot afford to live beyond its foreign exchange means for long without serious breakdown in its economic health. This is particularly so, because the additions to the productive assets have not yet led to any marked increase in the country's productive assets.

A notable feature of the Committee's recommendations is its emphasis on agricultural production. In our enthusiasm for diversifying the pattern of export trade, we cannot possibly lose sight of our traditional or staple lines of export. And, by and large, these consist of agricultural commodities and manufactured articles which have an agricultural base. Increased agricultural production is thus vital to our exports just as it is necessary in the interests of cutting down imports of such articles as foodgrains. The Committee rightly says: "We wish strongly to emphasise this point and would say that, without increasing agricultural production (food items and commercial crops), export promotion will not be possible." It is to be hoped that the authorities will take note of this warning. There should be no mistake about it. India's agriculture still holds the key to its progress, whether in the sphere of export promotion or in that of industrial expansion. Effort for effort, it will pay better export dividends to concentrate on India's known and recognised lines of export rather than to spend excessive time and attention on exports of new products. This is not said in disparagement of the efforts that are being made at increasing exports of such new products as engineering goods. Only, there should be no relaxation of promotional effort in respect of the traditional items.

Obviously, any sustained drive for exports resolves itself into a problem of keeping a close watch on quality and production costs. So far as quality is concerned, the Indian Standards Institution is doing commendable work in laying down standards to which producers will do well to conform. But there is a wide range of goods for which standards cannot be easily laid down, much less enforced. Exporters have a national duty to evolve and maintain acceptable standards for such goods. The other consideration, namely, production costs, raises a number of intricate issues, including industrial productivity and taxation. There are two important elements in productivity—the productivity of machines as such and the man-hour output. The Committee notes the emphasis that has been laid in the second Plan on decentralised industries, but recognises that, in the absence of modern methods of production, it would be difficult for our industries to compete in the international market. Accordingly, it suggests that, "purely for purposes of export, the most modern methods of production should be allowed even in our present lines of production and that home requirements be met from existing factories using existing equipment and existing production techniques." This is an approach of what might be called "making the best of both worlds"—the small-scale and the large-scale worlds. It is the familiar approach which is being tried in the textile industry which has been permitted to install automatic equipment for production of cloth for export. This is commendable as far as it goes. But it does not go far enough. There are serious difficulties in extending this approach to all industries and even to the textile industry. The fact is that the dichotomy of productive processes—the cottage unit for the home sector and the modern large-scale unit for the export sector—cannot work in a world in which other countries use modern equipment for both home and export markets. Secondly, modern equipment is costly and its installation implies the existence of a large market. An export market may often be too small to permit the installation of this equipment. Thirdly, export market is subject to fluctuations, so that no manufacturer will risk large sums of money on modern equipment which he is allowed to use for production of goods meant only for export. On the other hand, if he is allowed to use such equipment for production for the home market also, he will get a strong base on which he can build an export market. These considerations suggest that India cannot hope to gain for itself a large and prosperous export trade, if, in an atomic age, its industries are compelled to use equipment of the pre-Industrial Revolution era.

The Committee has made a number of useful suggestions in relation to fiscal and transport needs of India's export industries. It rightly insists that export duties should be "fairly stable over given periods of time." It recommends that, in addition to the manufacturer, the exporter also should be eligible for the refund of excise duty paid on goods which are subsequently exported. It also suggests the grant of *ad hoc* income-tax relief to exporters. Pleading for a modification of income-tax regulations which, in certain circumstances, treat exporting firms as agents of their foreign buyers and levy income-tax on the presumed profits of those buyers, the Committee observes that "an interpretation with a bias in favour of exporters should, unless there is proof to the contrary, be put upon export transactions in which what in the view of the income-tax authorities less than normal profits are made." As regards transport, it is gratifying to note that the Committee has recommended not only a system of concessional railway freights for goods meant for export but also the modification of the taxation and licensing policies of the States in relation to road transport and adoption of a dynamic shipping policy.

Having ruled out devaluation of the currency which it pertinently regards as a "cure worse than the disease," the Committee has examined the nature and scope of special incentives for export. It has rightly rejected the system of "currency retention" scheme whereby an exporter is allowed to keep a part of the foreign exchange he earns. After all, this is a desperate remedy, often liable to be misused. It will also lead to some loss of overseas confidence in the exporting country's currency. But the Committee has advocated a limited use of a system of preferential treatment of exporters in the matter of grant of import licences. Thus, it suggests that an exporter may be given an entitlement for imports to the extent of 5 per cent. of the increase in exports over his average performance. The adoption of this system implies the creation of a special exporter-importer class. Perhaps, the Government will do well to try this system, purely as an experimental measure, taking care to see that the import entitlement is used by the exporter purely for purposes of expanding his export trade or for importing goods for use by the export industry.

BELAPUR CO. TO PAY HIGHERDIVIDEND

TWO NEW CAPITAL ISSUES—TREND OF METALS

THURSDAY, 5 P.M.

EXCEPTING for an increase in the dividend of Belapur Company from Rs. 16 to Rs. 18 per share of Rs. 50 each, there have been no outstanding developments of any direct interest to the share markets this week. The Belapur dividend for 1956-57 must have come as a pleasant surprise to the market. With the steep increase in the tax on bonus issues—the capitalisation of reserves by the Company early in 1956 is subject to this enhanced tax—with a heavy rate of penal tax on dividends at over 18 per cent., and with an increase in the income and corporation taxes payable by companies, it was not expected by market circles that the Company would raise the dividend. Indeed, the market was wondering whether even the 1955-56 rate of 32 per cent. (Rs. 16 per share) would be maintained. The doubt existed not only because of higher taxation in the last budget but also because, early in 1956, the Company had issued bonus shares in the ratio of one for every two shares by capitalising Rs. 23.50 lakhs from the general reserves. It is true that last year the Company had maintained the dividend at 16 per cent. on the increased capital, but the bonus shares ranked for this dividend for only six months.

MARKET GOSSIP

While the Company's profit figures for 1956-57 are not available at the time of writing, we learn that the Directors' decision to recommend a sumptuous dividend of 36 per cent. on the increased capital for the whole year is based on a substantial rise in the Company's profit. It is also learnt that only a small portion of the increased profit has been utilised to reward the shareholders, as practically the whole of that increase has been absorbed by the heavy incidence of taxation. Really speaking, the Exchequer is collecting from the Company very much more than the shareholders. It would not be surprising if the Company's accounts for 1956-57 were to show the Exchequer's share in its earnings at well over Rs. 50 lakhs.

The Union Finance Minister, therefore, need not raise his eyebrows when he hears of the Belapur Directors' decision to pay a dividend of 36 per cent. In any case, that decision has not led to an inflation in the share market. Over the week, the market value of Belapur shares shows a rise of Rs. 14-8, of which about Rs. 6 had taken place before the Directors' decision was known to the market. This appreciation in value is not much. For, even after this spurt, the shares at Rs. 249.50 are well below what they were a year ago when the dividend was only Rs. 16 per share. At the current market value, the shares give a yield of 7.7 per cent., which is quite large for a well-managed company with a sound financial position. The only reason why a blue chip like Belapurs stands at this low level is the general lack of confidence among investors in the future. Investors, for instance, wonder whether the Company would be able to repeat this high dividend in future and if so for how many years. Sugar prices have been steadily going down in recent months, a large output of sugar is expected in the 1957-58 season, and, if the Government were to compel the sugar industry to export a part of its production at lower prices in the 1957-58 season, there might be a shrinkage in profits. Then, there are serious misgivings about the trend of interest rates, the cost of industrial production and the world economic climate. Will the Bank rate in India go up in the coming months? Will not the cost of production rise further? Will there be a widespread business recession all over the world? Will not high earnings of sugar companies attract the envy of the Bombay Government? It is these questions that are troubling the investors today.

* * * *

The latest entrant into the list of foreign enterprises with Indian participation in their capital structure is likely to be Philips. "Philips" is a household name in this country where it is almost taken as a synonym for incandescent lamps or radios. But Philips are more than mere manufacturers of lamps and radios, for their industrial activity embraces a wide range of apparently unrelated products—electronic tubes and diamond dies, corrugated cardboard and X-ray apparatus, TV transmitters and vitamin preparations. In the course of more than 60 years of their existence, Philips—or to give the Company its incredibly long Dutch name, N. V. Philips Gloeilampenfabrieken and its subsidiaries—have branched out to many parts of the world. Their connection with India extends over a period of more than quarter of a century, during which the Indian subsidiary has built up a manufacturing unit near Calcutta and a country-wide sales organisation. The Directors have decided to expand the Company's production facilities by extending the available factory space in Calcutta and to acquire a large new plot in Loni, near Poona, where metal-ware components, hitherto completely imported from abroad, will be manufactured from early 1958. Clearly, the implementation of the industrial programmes in the second Five-year Plan will create an increasingly larger demand for the Company's goods, including lamps, radios and electrical and other equipment.

It is learned that the Company will shortly issue 500,000 shares of Rs. 10 each, which will be offered to the public at Rs. 12.50 per share. It would appear that the Company was formerly confident of being able to declare a dividend of 10 per cent., but due to import restrictions, the dividend may turn out to be somewhat lower, about 9 per cent. But, as the Company's production plans materialise in the next 12 or more months, it should be in a position to earn larger and larger profits. It is said that the Company's profit in 1955 was Rs. 11 lakhs, in 1956 Rs. 22.8 lakhs and in the first half of the current year Rs. 11.75 lakhs. On the basis of an anticipated 9 per cent. dividend, the return to shareholders on the basis of an issue price of Rs. 12.50 per share will work out to 7.2 per cent. free of tax. There is no doubt that the Company's new issue will meet with a ready response from investors.

* * * *

As the development and expansion of motor transport are gaining greater momentum, new as well as replacement demand for automobile tyres and tubes and other motor accessories manufactured from rubber is certain to grow apace. Considering that industrial development is taking place fairly rapidly, the demand for such industrial accessories as transmission and conveyor belts will also increase. Indigenous manufacturers of industrial rubber goods can, therefore, look forward with confidence to continuing and expanding demand for their products. The National Rubber Manufacturers Ltd., Calcutta, seems, therefore, well advised to plan an ambitious programme of development and expansion of its production. The principal products of the Company are cycle tyres, automobile rubber parts, transmission and conveyor beltings, V-belts, and fan belts, rubber hoses, vacuum brake hoses, etc. The expansion programme contemplated at present includes increase in production of cycle tyres by 200,000 per month and cycle tubes by 100,000 per month, stepping up output of V-belts and fan belts from 30,000 per month to 80,000 per month and installation of another plant for the production of transmission belting by 262,000 ft. per month, etc. The Company is having the advantage of technical collaboration of Messrs. Goodyear Tyre and Rubber Company of India (Private) Ltd. which provides the necessary technical advice and know-how.

In order to finance these projects, the Company has sponsored a new capital issue of the total value of Rs. 52 lakhs, divided into 10,000 6 per cent. (free of income-tax) cumulative preference shares of Rs. 100 each and 420,000 ordinary shares of Rs. 10 each. Both classes of shares will be issued at par. The Company has already received firm requests from the Directors and their friends, business associates, dealers, distributors, employees, etc., for 5,000 preference shares and 210,000 ordinary shares. The remaining 5,000 cumulative preference shares and 210,000 ordinary shares are offered at par for public subscription. Fifty per cent. of the value of each share is payable on application and the balance in two calls. The subscription list will remain open from the 22nd to 30th inst. unless closed earlier or later at the direction of the Directors but not before the 26th inst. The new ordinary shares, now being issued, will participate in the total dividend for 1957, at present expected to be 10 per cent. (offering a net return of 10 per cent.), to the extent of the paid-up value of the shares at the time of application and the new preference shares will participate in the dividend from the date of allotment. It may be noted, in this connection, that the Company paid an ordinary dividend at the rate of 20 per cent. per annum for the year ended 31st December 1956 and the average rate of ordinary dividend during the six years ended that date was 16 per cent. The Company was incorporated in Bengal as a private limited company in 1946 and was only recently converted into a public limited company. It has a good record of steady progress and has, since its inception, progressively expanded the volume of production and the range of its products. It is one of the largest mechanical rubber goods manufacturing units in India, having an annual output valued at Rs. 1.4 crore which is expected to go up to Rs. 3 crores on completion of the expansion programmes referred to at the outset.

* * * *

Closely following last week's issue of Bombay Municipal loans aggregating Rs. 2 crores, which were oversubscribed on the day of issue itself, the Bombay State Financial Corporation approached the capital market this week with a bond-issue amounting to Rs. 1 crore. The list opened today and was to have been kept open till the 21st inst., but was closed within two hours as it was fully taken up. The bonds were issued at Rs. 98.50 per cent., as against Rs. 98.75 per cent. at which the Municipal Corporation debentures were offered. They carry a higher rate of interest, namely, 4½ per cent., as compared with 4¼ per cent. offered by the Municipality. The bonds are repayable in 1967, that is, two years earlier than the Municipal debentures. The payment of interest and repayment of principal are guaranteed by the Bombay State Government. The terms of the Financial Corporation's issue were thus more attractive than those of the Municipal Corporation, the yield on it being as much as 4.69 per cent. at the issue price. The State Financial Corporation has the option to purchase back bonds of the face value of Rs. 5 lakhs every year. The bonds are eligible for advance by the Reserve Bank of India and as such must have made a strong appeal to banks.

It is understood that the Industrial Finance Corporation of India also will shortly issue bonds carrying the guarantee of the Government of India.

* * * *

Among the world commodity markets, the non-ferrous metal market has been the most depressed for some time now. Barring nickel and aluminium, all the other metals have suffered a sharp recession in prices. The current quotation for cash copper on the London Metal Exchange, for instance, is lower by as much as 35.5 per cent. as compared with that a year before; the fall will be even more perceptible if the price of £437 per ton prevailing early in March 1956 is taken into account. Similarly, the price of zinc is lower by 30.3 per cent., of lead by 27.3 per cent., of cash tin by 16.6 per cent. and of antimony by 9.5 per cent. Nickel prices, however, have gone up by 15.6 per cent., while aluminium remains unchanged. An idea of the price trend of different metals dealt on the London Metal Exchange in the past year is indicated below:

(In £'s per ton)

	1st November, 1957	A month ago	Three months ago	A year ago
Tin (cash)	730½	739½	744½	875½
Copper (cash)	190½	192½	213½	296½
Lead	85½	89½	91½	117½
Zinc	68½	71½	72½	99½
Antimony	190	210	210	210
Aluminium	197	197	197	197
Nickel	600	600	600	519

Tin has recorded a persistently steep fall in prices, notwithstanding the purchase of 3,916 tons (up to the end of June last) on cash and forward contracts by the International Tin Agreement's buffer stock. In fact, the present quotation of £730 per ton is the floor price at which the buffer stock is pledged to defend the price by buying tin so long as it has cash. The fall must be attributed to the continued surfeit of world supplies. The current year's tin surplus is now estimated by the Council at 12,500 tons, that is, 6,500 tons more than what had been forecast early this year. The increase in surplus is surprising, considering reports of downward trend in world tin output outside the U.S.S.R. and rise in overall consumption. But these two factors have more than been neutralised by the continued high flow of Russian exports and less promising outlook for consumption of tin, as of other metals. Despite the large surplus of tin available, the Agreement's buffer stock is reported to be buying less in recent months, although the resources at its command are sufficient to buy nearly 9,000 tons more at the floor price of £730 per ton. It may be noted here that, under the Tin Agreement, if the purchases of the buffer stock come to reach 10,000 tons, the Council's Chairman will have to be informed and the question of imposing restrictions on exports by member-countries will come up for discussion before the Council. Since no mention was made about this at the recent meeting of the Council held at London, it is evident that the buffer stock has bought much less since the beginning of July, though the market has been in greater need of support.

The zinc market which was ruling quietly steady for nearly three months has since turned again weak, following the British Board of Trade's announcement of another sale of 8,881 tons during the three months beginning from December next. This is the second stage in the sale of 27,000 tons announced in August 1957 and begun in September. Since that date, about 3,000 tons have been sold monthly. Of the quantity of 8,881 tons now offered, 3,200 tons will be sold on open competitive tender and the balance to the original suppliers or their agents.

Lead, too, has suffered a severe jolt in prices. A few weeks ago, it was thought that the declining trend in prices had abated and that the market was tending to be stable. But the British Board of Trade came out a month back with the announcement that it would sell on the market the last 20,000 tons of lead held in stockpile. Selling pressure ensued as a consequence and the price dropped to £84 15s. per ton, the lowest for the past 3½ years. There has, of course, been a slight recovery since then on the report that the actual sale would not have been made before December next when the previous scheme at the rate of 3,000 tons a month will be completed.

The weakness of the world copper market which persisted until recently has abated somewhat, of late. In fact, there has been a distinct recovery, the London rate for cash copper on the 1st inst. being £190¾, as against £180¼ on 22nd October last—the lowest level since free dealings were resumed on the Exchange in August 1953. The recovery has been aided principally by large-scale buying by the U.S. where the customs smelters are reported to be "making their best sales for several weeks and the major producers in the U.S. also claim some improvement in demand." The reason for the sudden upswing in American buying is not known. To some extent, it may be attributed to the fact that the cutbacks in output effected by some of the leading copper mines of the world, particularly the Rhodesian Section Trust, will soon begin to have their effect on the statistical position of the metal. The Chairman of Anconda, the big U.S. and Chilean producer and fabricator, stated only the other day that the high-cost output of copper in the U.S. remained indispensable, because substantially more copper had been used in the past 12 months than had been produced. This statement has imparted great strength to the copper market. At the same time, there are reports that the big mining houses of Rhodesia are operating at undiminished rate, that drilling and underground development in several mines is proceeding and that the Rhokana Corporation has taken up seriously the reopening of the old Bwana M'Kubwa copper mine in Northern Rhodesia.

The world aluminium market presents a rather curious trend. Although the growth in

(Continued on page 895)

SHARES CLOSE STEADY

SUPPORT, HOWEVER, LUKEWARM

(From Our Own Correspondents)

BOMBAY, *7th November*

THE share market was rather erratic and undecided during the week under review. After opening firm, equities experienced sizable profit-taking and lost a big part of the earlier gains. They, however, staged good rally today in almost all sections, with the result that the ground that was lost between Monday and yesterday was substantially regained in steels and miscellaneous counters. The turnover, however, was small on all days of the week.

The earlier steadiness was a continuation of the trend that began last week in the belief that the Government's policy towards the private sector will change for the better as a result of the Finance Minister's tour of the Western countries in search of financial assistance. Later, there was heavy selling pressure in textiles, following what sounded like authentic reports that the much-expected relief in the excise duties on cloth would not materialise in the near future. Other counters, too, were affected in sympathy. But, as the Calcutta share market continued to rule steady to firm and with the operators there taking a more cheerful view of the future, some recovery set in today. Bears hurried to cover their sales, while bulls began to show some enterprise. Textile shares, however, failed to recover and finished on a subdued note. Reports from Calcutta and Madras claim that two or three big operators have been buying steels and engineering scrips. As these operators have been successful in their speculative activities in the recent past, their renewed entry into the ring as bulls, albeit on a relatively small-scale, is causing dismay among the bears. Investment buying, however, is greatly limited and the general sentiment is hesitant.

Anyway, the closing rates in the list show a sprinking of gains today, in refreshing contrast to the all-round losses witnessed during midweek.

The star feature of the week appeared in the sugar section, where Belapurs ruled distinctly firm and noted a handsome gain of Rs. 14.50. This was the result of the decision of the Company's Directors to pay a dividend of Rs. 18 per share for 1956-57, as against Rs. 16 per share for 1955-56. This increase was hardly expected. In contrast to this scrip, Tata Chemicals came in for fresh selling by the bears, on rumours that the drought in Gujarat and Saurashtra had badly affected the fresh water supply required by the Company's works and that it might have to suspend its operations after a few months. This report does not seem to be entirely unfounded, though there may be an element of exaggeration in it. The position will, perhaps, be clarified by the Company's Chairman in his speech at the annual general meeting due on the 15th inst.

Tata Ordinaries opened the week firm at Rs. 165, as against Rs. 164.25 last week-end, and advanced on good buying support to Rs. 166.25 the same day. They, however, declined in the subsequent sessions, the rate at one time yesterday being Rs. 162.25. At lower levels, there were enquiries and the shares recovered today to Rs. 165 before finishing at Rs. 164.25. Over the week, there was thus no change in price. Indian Irons improved from Rs. 18.64 on Thursday last week to Rs. 18.92 on Friday and Monday and, after receding to Rs. 18.32 yesterday, recovered to Rs. 18.84 today.

Textile shares encountered selling and values of most of the scrips moved down. Bombay Dyeings declined by Re. 1.10 to Rs. 50.80. Centurys shed 50 nP to Rs. 392. Central Indias climbed down by Rs. 6 to Rs. 87. New Greats dropped Rs. 3 to Rs. 215. Finlays, Swadeshis and Indores fell by Rs. 2 each to Rs. 264, Rs. 172 and Rs. 125, respectively. Standards changed hands a rupee lower at Rs. 384. Tata Mills shed 50 nP to Rs. 39.75. Kohinoors were dull at Rs. 261.50. Simplex, however, evoked some enquiry and rose by 50 nP to Rs. 159.50. Gokaks were also favoured 25 nP higher at Rs. 166.

Sugar shares met with good buying support. Belapurs provided the brightest spot, the quotation jumping up by Rs. 14.50 to Rs. 249.50. The chief inspiring factor was the increase in dividend to Rs. 18 for the year ended 31st September 1957, as against Rs. 16 for the previous year. Walchandnagars spurted by Rs. 7.50 to Rs. 262 on hopes of a similar rise in dividend. Phaltans rallied Rs. 4.50 to Rs. 141. Changdeos strengthened by Re. 1.25 to Rs. 28.25.

Among electricity shares, Andhra Electrics hardened by Rs. 5 to Rs. 1,130. Bombay Suburbans put on Re. 1.50 to Rs. 106. Tata Powers were fully maintained at Rs. 1,137.50, while Hydros lost 25 nP to Rs. 114.25. Ahmedabad Electrics shed 10 nP to Rs. 95.80.

In the banking section, Punjab Nationals advanced by Rs. 5.50 to Rs. 66. Denas gathered a rupee to Rs. 42. United Commercials rose by 50 nP to Rs. 57. Barodas were maintained at Rs. 100.50, as also Bank of Indias at Rs. 131. Central Banks, however, lost a rupee to Rs. 50.40. Among insurance shares, New Indias declined by Re. 1.50 to Rs. 47.50.

Cement shares lacked support. A.C.Cs receded by 75 nP to Rs. 151.75. Digvijays slipped down by a rupee to Rs. 129.50. Dalmia Cements lost 12 nP to Rs. 10. Orissa Cements shed 4 nP to Rs. 12.64.

In the engineering and mining group, Alcocks came in for selling and fell by Rs. 6.25 to Rs. 228.75. Tata Locomotives declined by Re. 1.50 to Rs. 132. Premier Constructions softened by a rupee to Rs. 154. Shivrajpurs shed 50 nP to Rs. 81.50. Indian Coppers lost 4 nP to Rs. 2.98. Among shipping companies, Great Easterns decreased by 44 nP to Rs. 21.28, while Scindias were unchanged at Rs. 16.88.

Among other miscellaneous industrials, National Rayons moved down from Rs. 210.25 to Rs. 208 and Poly Chems from Rs. 53.25 to Rs. 51. Premier Automobiles declined by Re. 1.50 to Rs. 87.50. B.I.Cs declined by 14 nP to Rs. 4.72. Hindustan Motors lost 4 nP to Rs. 6.28. Larsen and Toubros receded by 54 nP to Rs. 13.04. Killick Industries, however, were lifted up by Rs. 8 to Rs. 163.50. Bombay Burmahs were also well fancied and moved up by Rs. 4 at Rs. 551. B.B. Petrols were fully steady at Rs. 1.84.

* * * *

Calcutta Stock Exchange

CALCUTTA, *6th November*

Sound expectations of a better deal for the private sector at the hands of New Delhi and the attractive low levels which equities touched in the dull trading of recent weeks were the factors which conspired to make this week's trading on the Calcutta Stock Exchange a cheerful affair. The New Delhi Ordinance permitting the Reserve Bank further to lower the reserves in foreign securities no doubt represented the Government's attempts to save the Plan, but market circles thought that there were bright chances of India securing aid from Bonn and Washington. Also, private investment by American industrialists, it was thought, was likely to show a marked increase, following the recent efforts of the Birla mission in the United States. The statement made here by Mr. J. D. Hitch, President of Dorr-Oliver Incorporated, wherein he took an optimistic view of the favourable climate for foreign capital investment in India, was also noted.

The expected assistance from foreign countries, if it were to materialise, would naturally lead to more industrial activity. Taking this view, long-term investors took advantage of the low levels of the more popular counters and lent support to the market during the week. In such a context, a marked increase in the number of transactions was not a surprise. Engineering shares made some headway and jutes continued to derive strength from the better statistical position of goods. Coals were paid more attention on the strong possibility of an upward revision in the output target for the private sector. Lower levels attracted buying interest on yield consideration. A fair amount of activity was recorded in the miscellaneous industrials section and hopes of better dividends pushed up prices of a few counters.

Jutes were the cynosure of all eyes in the market for a time but began to react on profit-taking. Champdanies were as high as Rs. 150, as against the opening of Rs. 115, but gave way subsequently to Rs. 136. Indias closed steady at Rs. 124, after having risen to Rs. 126 from Rs. 120. Nationals were put through at Rs. 20.05 before reacting to Rs. 19.85. Budge Budges were as high as Rs. 85, as against Rs. 68.50 previously. At Rs. 36, Nuddeas added Rs. 2.50. Unions climbed up from Rs. 121 to Rs. 140. Ganges advanced to Rs. 64 from Rs. 57. Deltas to Rs. 127 from Rs. 123 and Barnagores to Rs. 95 from Rs. 90.50. Howrahs gained to Rs. 17.37 from Rs. 16.75 before receding to Rs. 16.50. At Rs. 12.44, Nellimarlas were fractionally higher.

Among coals, while Burrakurs were unchanged at Rs. 22, Bengals receded from Rs. 241 to Rs. 228. Earlier, Equitables were fractionally better at Rs. 23.81, subsequently crossing at Rs. 23.25. From Rs. 51.87, Khatras Jherriahs eased to Rs. 49.25. Central Indias, however, were in better form at Rs. 6.25.

Engineerings were steady. Indian Irons opened at Rs. 18.54 and rose to Rs. 18.95 on Monday. Subsequently, profit-taking reduced the gain to Rs. 18.68. Texmacos were fractionally better at Rs. 17.52. The rise in Richardson and Cruddas to Rs. 9.62 was temporary, as the rate soon returned to the opening level of Rs. 9.06. Indian Galvanisings were unchanged at Rs. 16.44.

Following better trend in auctions, teas recorded gains. Buying interest raised Bishnauths from Rs. 19.12 to Rs. 19.56 and Hattikhiras from Rs. 9.06 to Rs. 10.62. Bormahjans advanced from Rs. 16.87 to Rs. 18.50. At Rs. 27.25, Rydaks were slightly higher. Patrakolas were lifted to Rs. 147 from Rs. 142 and Dimakusis to Rs. 19.87 from Rs. 19.75. Birparas were unchanged at Rs. 136.

On good dividend hopes, National Insulated Cables were better at Rs. 24.25. India Steamships continued to demand buying interest and were fully steady at Rs. 11.62. Indian Coppers were better at Rs. 3.02 before losing to Rs. 2.98. National Carbons at Rs. 23.62 registered a small improvement, as did Indo-Burma Petroleums to Rs. 25.50. Dunlop Rubbers were earlier quoted at Rs. 20.19 and gave way to Rs. 20.12. Indian Wood Products were pushed up to Rs. 41.50 from Rs. 40.87.

Madras Stock Exchange

MADRAS, *5th November*

Easy conditions prevailed on the Madras Stock Exchange during the week under review. Although there were reports that the Union Finance Minister might modify the compulsory deposit scheme and give relief in dividend tax, operators viewed them with great scepticism. The unfavourable factors such as the deteriorating foreign exchange situation and the recent statement of the Union Minister for Industries that there was at present no possibility of a cut in excise duty on cloth dampened the enthusiasm of operators. Several shares came in for selling and, buyers being scarce, values staged a retreat.

Among tea shares in the planting section, Balanoors dropped Re. 1.12 to Rs. 16. Chembras shed 7 nP to Rs. 3. Devasholas eased by 15 nP to Rs. 19.10. Peermades and Parksides receded by 25 nP each to Rs. 22 and Rs. 14.50, respectively. Haileyburias declined by 10 nP to Rs. 15.90. Periakaramalais lost 20 nP to Rs. 7 and United Nilgiris 12 nP to Rs. 16. Among coffee shares, Consolidated Coffees were marked down by 55 nP to Rs. 24.55. Kumergodes shed 5 nP to Rs. 6. Mysore Coffees lost 6 nP to Rs. 3. Sheveroys were a naya paisa lower at Rs. 2.04. Among rubber shares, Cochin Malabars decreased by 6 nP to Rs. 4.44. Highlands climbed down by 50 nP to Rs. 11.50. Rajagiris receded by 15 nP to Rs. 15.60. T.R. & Ts eased by 5 nP to Rs. 6.95. Thirumbadis softened by 2 nP to Re. 1.56.

In the textile section, Ranga Vilas dropped Rs. 2 to Rs. 71. Coimbatore Spinnings and Rayalaseemas declined by Re. 1.50 each, the former to Rs. 74.50 and the latter to Rs. 124. Maduras were quoted 35 nP lower at Rs. 37.75. Kotharis and Travancore Rayons receded by 15 nP each to Rs. 11.10 and Rs. 10.85, respectively.

Among miscellaneous shares, Rallis declined by 50 nP to Rs. 27.50. Andhra Cements receded by 30 nP to Rs. 11.50, Travancore Cements by 15 nP to Rs. 7.40 and Dalmia Cements by 5 nP to Rs. 9.95. Mysore Chemical and Fertilisers and Mettur Chemicals lost 15 nP each to Rs. 7.15 and Rs. 9.40, respectively. Ashok Leylands and Indian Aluminiums eased by 6 nP each, the former to Rs. 4.60 and the latter to Rs. 12.81. Spencers, however, improved by 50 nP to Rs. 16.10.

Sugar shares proved an exception to the general trend, in that they evoked some support, though buying was of a selective nature. E.I.Ds advanced by 60 nP to Rs. 28. Travancores were done 30 nP better at Rs. 10.80. Deccans gathered 7/ nP to Rs. 8.35. Kirlampudis, however, encountered heavy selling and fell by Rs. 5 to Rs. 35.

INDUSTRIAL INVESTMENT TRUST

At an extraordinary general meeting of the Industrial Investment Trust Ltd. held on 29th October 1957, the shareholders of the Company passed two special resolutions and one ordinary resolution. One of the special resolutions sought the shareholders' approval of the Company's new Articles of Association, as several changes had to be made in the old Articles under the Companies Act 1956. The other special resolution permitted (as provided under section 375 of the Companies Act 1956) the Secretaries and Treasurers of the Company (Messrs. Premchand Roychand and Sons) to engage, on their own account, in any business which is or may be of the same nature as and directly competes or may compete with the business carried on by the Company. The ordinary resolution sought the shareholders' approval of the variations and alterations in the terms of the agreement between the Company and its Secretaries and Treasurers, fixing the latter's remuneration at 7½ per cent. of the net annual profit to be computed as laid down in sections 349 and 350 of the Companies Act, as against 5 per cent. of the net profit plus Rs. 6,000 per annum as office allowance fixed under the old agreement. The Central Government's sanction has also been obtained for this change.

IMPORT POLICY FOR STEEL

In view of the restricted availability of foreign exchange, the Government of India has decided that, for the licensing period, October 1957—March 1958, licences for the import of steel will be issued for certain special categories only. Licences to importers who import for sale will be issued on the basis of their past imports. Certain actual users will be granted licences on the basis of their minimum requirements.

The categories of steel which will be licensed to those who have imported the categories during at least two of the three years ending March 1955, 1956 and 1957, are: tin plate secondaries, steel wire, box strapping, industrial and rerollable scrap and tool, alloy and special steel. The categories of steel which will be licensed to actual users who import for their own use and have imported before as actual users are: prime and secondary tin plates, terne plate, steel wire, skelp, wheels, tyres and axles, forgings and tool, alloy and special steel.

The eighth railway zone, to be created by splitting the existing North Eastern Railway will be known as the North-East Frontier Railway (N.F.R., for short), with its headquarters at Pandu. The remaining portion of the North Eastern Railway will continue to be known by its present name with headquarters, as at present, at Gorakhpur.

NEWS IN BRIEF

A QUOTA of 200,000 lbs. of Madras Mysore silk waste for export upto the end of February 1958 has been released.

The Government of India has decided to remove the export duty of Rs. 50 per ton leviable on deoiled groundnutmeal with immediate effect.

The tariff protection granted to the oil pressure lamp industry is to be discontinued when the present period of protection expires on 31st December 1957.

The Madras Government is considering the question of nationalisation of certain bus routes in the suburbs of the city of Madras, in which the State Transport is also operating.

The new Rs. 7-lakh thermal power station of Saugor was pressed into commission on the 2nd instant. It will generate 2,500 kw. of electricity to meet the present power requirements of the town.

The Government of India has fixed the price of tea, for the purpose of determining the export duty, at Rs. 3.30 per lb., as against Rs. 3.48 per lb. in force from 1st October 1957. There is no change in the existing rate of duty of 38 naye paise per lb.

The Tariff Commission's recommendation for the continuance of protection to the sheet glass industry for a period of three years after 31st December 1957 at the present rate of protective duty, namely, 10 per cent. *ad valorem*, has been accepted by the Government.

A nine-mile long broad-gauge railway line, constructed at an estimated cost of Rs. 26 lakhs, between Bhadrachalam Road station and Rudrampur (newly developed mining area of Kothagudem collieries) was declared open at Kothagudem on 30th October 1957.

Egypt has contracted to buy 2,000 tons of Indian tea for immediate delivery. Negotiations for the purchase of finer quality of Indian tea for which there is a smaller demand in Egypt are in progress between the Egyptian Government and the Indian *Charge d'Affaires*. Further tenders for Indian tea have been invited by the Egyptian Government for submission by 13th November. Egypt purchased 1,800 tons of Indian tea two months ago.

Nippon's iron and steel industry of Japan is planning to send a large-scale mining mission to India shortly. The group will explore six iron mines in the States of Orissa, Mysore and Madhya Pradesh. Initial technical survey will be followed by another mission headed by the President of the Fuji Iron and Steel Company. This group will negotiate an agreement with New Delhi providing for Japanese financial and technical assistance in development of Indian mining properties.

Seven financial and economic commentators from the United States arrived in New Delhi this week on a six-week tour of India. They will see for themselves the conditions in which India's plans have been framed, its efforts and achievements. The team will begin its tour after preliminary discussions in New Delhi. Among the places it is expected to visit are Bhakra, Sindri, Bokaro, Maithon, Chittaranjan, Jamshedpur, Calcutta, Rourkela, Hirakud, Madras, Neivelli, Bangalore, Trivandrum, Bombay, Aurangabad and Jaipur. They will also hold discussions with representatives of commercial and business organisations.

Employment Exchanges secured 18,052 placements during August 1957, as compared with 19,394 in the previous month. A comparatively large decrease in placements was recorded in Madras, Delhi, Uttar Pradesh and Punjab, while Rajasthan and Kerala reported an increase. Of the total placements, 5,296 were under the Central Government, 6,697 under State Governments, 3,247 under quasi-Government establishments and local bodies and the remaining 2,812 under other employers. At the end of August, 828,653 applicants were on the live register of employment exchanges. This was about 13,000 more than the figure at the close of the previous month.

The Government of India has, for the first time, applied the amended provisions of the Essential Commodities Act in respect of wheat, in order to arrest the upward tendency of wheat prices which has of late been noticed in U.P. and the Punjab. The Government has now powers to require any stockists in these two States to sell his stocks at the average price of the past three months, and not the market price prevailing on the day of sale. These powers are already exercised by Government with respect to rice in the States of Andhra Pradesh, Assam, Bihar, Bombay, Madhya Pradesh, Madras, Mysore, Orissa, Punjab, Rajasthan, Uttar Pradesh and West Bengal, and the Union Territories of Delhi, Himachal Pradesh and Tripura.

A technical team is expected to begin shortly a detailed study in India of the utilisation of asphalt, which is a multipurpose petroleum product of great importance to the country's development plans. The study, organised by Standard-Vacuum Oil Company, will cover manufacture, distribution, marketing, and uses of asphalt in India. Asphalt, also known, as bitumen, is presently of great value to India's development activities, for its wide application in paving, roofing, building highways, preventing soil erosion, and in manufacturing paint, rubber filler and battery seals. The asphalt study team will hold discussions with Central and State Government officials, municipal authorities and road engineers.

A British mission to advise India on the site and layout of a new shipyard and the equipment which will be required to establish it and provide estimates of the capital cost of the shipyard has arrived in New Delhi. After spending two days in the Capital, the mission will go on a fortnight's tour, visiting those sites on which it was not possible for the advance party to collect adequate data on its earlier visit. Sites in Calcutta, Cochin, Karwar, Kandla and Trombay will be visited (the last because the State Government has proposed a new site). The mission also intends to pay a short visit to the shipyard at Visakhapatnam and to look over the Marine Research Station at Poona. It is led by Mr. James Lenaghan, Director of Fairfield Shipbuilding and Engineering Company, Ltd. and of Lithgows Limited. After its return to the United Kingdom, the mission will consider all the information which has been made available by the Centre and the State Governments and, on the basis of this, will report its recommendations to the Government of India.

* * * *

From Abroad

The West German Economics Ministry has authorised the import of 50.4 million marks worth of unprocessed silver from the dollar area.

The Swiss Government has approved the draft of a new customs tariff and has decided to begin negotiations with other countries on this basis. The tariff is again based on the weight duties system.

A Russian TU-104 jet airliner has made the first flight from Moscow to Pyongyang, North Korea, carrying mail and 26 passengers. It did the journey in under 10 hours, as compared with the eight days taken by rail.

A draft of the Sino-Japanese trade agreement, which is in keeping with the current need of the development of trade between the two countries, was submitted by China at a Peking meeting of Chinese and Japanese trade officials.

The Government of Pakistan has entered into a three-year agreement with the Government of Burma and a two-year agreement with Thailand for import of 100,000 tons of rice from each country.

Russia has started to build a power station which will tap the energy of Siberian volcanoes. The power station will use the energy of hot volcanic springs in the area of Lake Kurilskoye, in the Amchatka, a vast peninsula between the Bering and Okhotsk Seas.

America's first nuclear-powered merchant ship, a 21,000-ton cargo passenger vessel, which is due for completion in 1960, will be called the N.S. (nuclear ship) *Savannah*. The Congress has allocated $39 million (about Rs. 18.5 crores) for construction of this new ship.

The firm of Renault, the famous manufacturers of automobiles in France, has planned to construct an assembly plant for its Dauphine and 4 CV models in the Philippines next year. The plant, which will be built with Philippine capital, will assemble cars for the local market.

Russia purchased about 100,000 lbs. of tea at the auctions from Ceylon through a firm of Ceylon brokers on the 29th ultimo. It is expected that the purchases made on the 30th ultimo will bring the total Russian purchases during the week to about Rs. 4 million (£300,000). This is the first Russian entry to the Ceylon tea auctions in the post-war period.

An average of about 4 per cent. increase in French steel prices is likely as a result of the full devaluation of the franc. Cast iron will probably go up by about 10 per cent. Until the size of the increase in coal and coke prices is known, the exact increases are not likely to be decided. Coke imports from the European Coal and Steel Pool Countries will cost 20 per cent. more and it is, therefore, possible that a similar price increase will have to be applied to indigenous coal.

The Bank for Netherlands Municipalities opened subscription lists on 18th October 1957 for a national loan of Fls. 100 million or as much more as is subscribed. The proceeds of the loan will be used for financing housing and related projects in the current year. The currency of the loan is 25 years, the issue price 100 per cent. and the interest 6 per cent. No redemption will be made in the first five years and no early partial redemption will be possible in the first ten years. An amount of Fls. 394 million was subscribed.

Nearly 30,000 jute labourers of Narayanganj in Pakistan struck work on the 4th inst., demanding, among other things, abolition of the contractor system, increased wages, recognition of their association and medical facilities. The strike call was given by the Narayanganj Labour Association. The President of the Association said he expected that another 30,000 workers would join the strike. The Government had asked the employers to send their representatives to discuss the issue but there was no response.

Canada's powerful atomic energy reactor, known as NRU, went into operation on the 3rd inst. The reactor, which is expected to produce significant quantities of plutonium, has begun operations six years after construction started. The NRU scheme consists of two reactors, housed in a 12-storey building with three huge basements, and cost 57 million dollars (£20 million) NRU is a triple-purpose reactor, in that it will be used (1) for research and experiments in the development of electricity-producing nuclear power stations, (2) production of plutonium and (3) manufacturing a wide variety of radioactive isotopes used in medicine, industry and agriculture.

A 670 per cent. increase in air cargo movements in the United States by 1965 is forecast in a study carried out by Stanley H. Brewer, Professor of Transportation, at the University of Washington. It is predicted in the study of U.S. domestic air cargo that domestic movements of air freight and express will be approximately 1,100 million short ton-miles for the United States in 1961, and that by 1965 this tonnage will be about 2,700 million short ton-miles. Air freight and express movements in the United States in 1956 approximately amounted to 400 million short ton-miles. A ton-mile is produced by moving one ton of freight over one mile.

Union Bank of India Limited.
(ESTD: 1919)
HEAD OFFICE: FORT, BOMBAY 1.
A BRANCH OF OUR BANK
(which is fully equipped with a SAFE DEPOSIT VAULT)
will be opened at
NETAJI SUBASH ROAD, MULUND
on
11th NOVEMBER, 1957.
F. K. F. NARIMAN,
General Manager.

PERSONAL

MR. Alberto Mercier, the Argentine Agriculture Minister, has been unanimously elected Chairman of the F.A.O. conference session.

Mr. Chandulal Trivedi, who took over as member of the Planning Commission on the 28th ultimo, will be in charge of Irrigation and Power.

Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, left Bombay for Rome on the 2nd instant to attend the meeting of the F.A.O. He is expected to be back in India on the 10th instant.

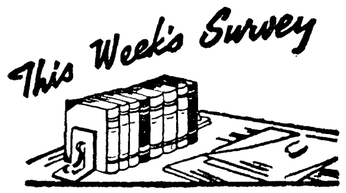
Mr. S. K. Jain, an Indian national, has been appointed Executive Assistant to the Director-General of the I.L.O., Mr. David A. Morse. Mr. Jain joined the I.L.O. in 1946.

Dr. Norman W. McLeod, a renowned asphalt technologist in Canada, arrived in Bombay on Saturday last to make a detailed study about the utilisation of asphalt for the Standard-Vacuum Oil Company.

Mr. Nils Lysoe, Norway's Minister of Fisheries, is expected in India on 22nd November on a three-week visit. He will study fishery conditions in Kerala, where Norwegian aid to the Indian programme is operating.

Mr. Leslie Gamage, Chief Adviser to the Ministry of Transport and Civil Aviation, United Kingdom, has been elected Chairman and Managing Director of the General Electric Company, vice Sir Harry Railing.

Mr. Vishnu Sahay, Secretary, Union Ministry of Labour and Employment, has temporarily relinquished charge of his post to attend full time to his new duties as Secretary for Kashmir Affairs in the Home Ministry. Mr. P. M. Menon, at present Joint Secretary in the Ministry of Labour and Employment, will officiate as Secretary during the former's absence.



INDIA AND COMMON MARKET

THE setting up of a special committee to consider the implications of the European Common Market, announced by the G.A.T.T. Ministerial Conference at the end of the three-day session at Geneva on Wednesday last week, though rather belated, must nevertheless be welcomed. It was many months ago—in March last, to be precise—that the six countries of Western Europe, namely, Belgium, France, West Germany, Italy, Luxemburg, and the Netherlands, signed what is known as the Treaty of Rome, envisaging the establishment of the Common Market, with which are to be incorporated the dependent territories of the six countries. Since the move was mooted, serious apprehensions have been expressed by many countries, more especially the underdeveloped countries of Asia, that the proposed Market would adversely affect the balance in world trade and interfere with the fulfilment of the G.A.T.T. objective of establishing a free and multilateral system of trade and payments. With a view to considering the implications of the Common Market to the world trade, the G.A.T.T. specially convened the aforesaid Ministerial Conference at Geneva. The Conference provided an opportunity to the member-countries to give expression to their views which culminated, as stated at the outset, in the setting up of a special committee consisting of all the 37 members of the G.A.T.T. The terms of reference of the Committee are broadbased, as the following extract from the *communique* issued at the end of the Conference will reveal.

"To examine, in the light of the provisions of the G.A.T.T., the relevant provisions of the Treaty of Rome and the problems likely to arise in their practical application; such an examination will include, *inter alia*, the arrangements provided for in the Treaty with respect to tariffs, the use of quantitative restrictions, trade in agricultural products and the association of overseas countries and territories with the European Common market;

"to recommend, in the light of the conclusions which result from the examination provided for above, such action as may be appropriate and desirable, including a determination of the means for establishing effective and continuing co-operation between the contracting parties and the European Economic Community; and

"to report to the contracting parties and make such recommendations as may be appropriate with respect to the continuation of the work of the Committee."

The Special Committee held its first meeting at Geneva on the 4th inst., and began a general discussion of the proposed Common Market. It elected Mr. L. Dana Wilgress of Canada as its Chairman. All the meetings are held in secret. The Committee is understood to have constituted a working party to undertake a more detailed examination of the question before passing on to the problem of quantitative import restrictions which the six Common Market nations intend to introduce.

At the Geneva Ministerial Conference of G.A.T.T., many countries were unanimous in their view that the establishment of the European Common Market with the association of overseas territories would lead to a new preferential regime in conflict with the provisions of the G.A.T.T. Sir David Eccles, President of the British Board of Trade, who was the most emphatic of the speakers, declared that Britain could not welcome any plan which sought to achieve the development and industrialisation of the overseas territories of Common Market countries at the expense of the trade of other underdeveloped countries through arrangements not falling within the scope of the G.A.T.T. provisions. He minced no words when he said: "Expansions in trade deliberately sought by Governments between any pair or group of countries should not be at the expense of other members of G.A.T.T. and all should hold firmly to the principle of getting rich together. The members gathered here have a right to ask whether this basic philosophy also animates the Common Market."

Echoing these words, Mr. T. Swaminathan, Minister for Economics at the Indian High Commissioner's Office in London, clearly indicated how India shared the apprehensions about the Common Market. He observed:

"From such study as we have been able to make so far, we are unable to persuade ourselves that the association of overseas territories in the manner proposed is compatible with the existing provisions of the General (G.A.T.T.) Agreement. Here we are in full agreement with Sir David Eccles (President of the British Board of Trade) when he pointed out that the association of overseas territories would amount to the creation of a new area of preference. The basic point about a customs union is that it is a partnership of similar economies and not a tie-up between a market and its customer. If, however, the association of the overseas territories under the Rome Treaty is inescapable, we would urge that the sooner we decide clearly and positively to apply the procedures of Article 25 the better it would be for all of us."

Mr. Swaminathan sought to explain that India had only three main lines of exports—cotton textiles, jute manufactures and tea—and, in respect of each of these, it had to face not only an inelastic demand abroad but also other impediments such as protectionist policies even in countries which were highly developed and the levy for fiscal reasons of duties which inhibited consumption and reduced India's exports.

The repercussions of the European Common Market on India's foreign trade will, indeed, be severe. As this journal has ere now pointed out, when the Market begins to operate, the competition which now exists among the six countries to secure supplies of raw materials and other goods will be done away with. In other words, what this may mean is that, in the determination of the prices of India's exports to these countries, the competitive element will be less strong than now at the consumer end. Similarly, these countries will be in a stronger position to dictate the prices and terms of sales of machinery and equipment purchased from them by India. In effect, there will be a West European Continental cartel.

How exactly the export trade of India will be affected by the creation of the European Common Market has been described by the Export Promotion Committee in its report submitted to the Government of India. The Committee's analysis shows that, out of the total annual exports from India, the Common Market countries together account for about 8 to 9 per cent., the value of goods and commodities supplied to these countries during the financial year 1955-56 being Rs. 55.3 crores and, in the nine months ended December 1956, Rs. 32.9 crores. According to present indications, the final external tariff of the Common Market will be the arithmetical average of the different tariffs now maintained by Belgium, France, W. Germany, Italy, Luxemburg and the Netherlands. Wherever the final common tariff is higher than the tariff at present prevailing in that member of the Market to which India exports most of a certain commodity, further exports of that commodity are likely to suffer. By way of illustration, the Committee has listed a few commodities the exports of which will be adversely affected.

Jute goods: The proposed common tariff is about 26 per cent. which is considerably higher than the present rate of 19 per cent. in the Benelux countries. During 1955-56, India exported Rs. 169 lakhs worth of jute goods to the Common Market, and the Benelux countries accounted for as much as Rs. 123 lakhs.

Tobacco: The proposed common tariff is 30 per cent. which is higher than the rate now prevailing in the Benelux countries. These latter countries took, in 1955-56, no less than 82 per cent. of the total Indian exports to the Common Market.

Cotton waste: Imports of cotton waste are at present duty-free, except in Italy (comparatively a small purchaser) where they bear a duty of 80 per cent. The common tariff proposed is 2 per cent. India exported Rs. 222 lakhs worth of cotton waste to the Common Market in 1955-56.

Cashew kernels: These will ultimately have a common tariff of 7.5 per cent. Out of the total exports worth Rs. 22 lakhs to the Common Market in 1955-56, the share of Benelux countries was Rs. 18 lakhs at the present tariff of 5 per cent.

The second effect of the formation of the European Common Market on India, according to the Export Promotion Committee, will arise from the free movement of goods among the six countries. Among the items which will be worst affected, it is said, are jute manufactures and coir products. The member-countries are already manufacturing these products and they will be able, in large measure, to meet the requirements of other member-countries and, to that extent, India's exports will suffer. The inclusion of colonies in the Common Market scheme will also adversely affect exports from India of groundnut oil to the six countries and of cotton textiles and a variety of other products to the Colonial territories. Further, to the extent that the special investment fund of $580 million that will go exclusively to finance development projects in the overseas territories of Common Market countries over the five-year period, there will be a corresponding reduction in the availability of investment funds to India.

It will be evident from the above survey that the creation of the European Common Market with overseas territories incorporated will adversely affect India's export trade and development. Surely, the Government of India should endeavour to obtain, as the Export Promotion Committee has rightly urged, such concessions and safeguards as will ensure that the export trade is not materially affected not only with the Common Market countries but also with the members of the projected European Free Trade Area, including the U.K.

A WARNING TO THE WEST

To those who are jubilant over the latest triumph of man over nature, symbolised by the projection of the giant *Sputnik* into outer space, the question, whether this journey into outer space was an escape from the human problems of this planet, posed by Dr. B. R. Sen, Director-General of the F.A.O., might appear, at first sight, cynical. But, on closer scrutiny, it would be clear that the query, posed by Dr. Sen in the course of his address to the ninth biennial general conference of the F.A.O. held at Rome last week, was obviously meant as a warning against the deflection of the focus of world attention from the most pressing problem of the large majority of the peoples of the world, namely, poverty. For, as Dr. Sen said, the technical revolution of our time has not as yet been fully matched by results in terms of economic and social advancement and the majority of the people in the world knows little relief from poverty. In spite of steady expansion of world agricultural production, he added, "the distance to be traversed before we are within sight of satisfactory levels of nutrition for the mass of the people in the less developed regions of the world is still so great that the advance gained so far is almost negligible." Mr. Sen said that "once we recognise the fact that poverty still remains the number one problem in the world today, we must also conclude that higher income through measures directed at rapid and balanced development must be the main cure."

But the poorer nations striving to improve their standards have to encounter many problems. They are faced with shortage of development capital and, at the same time, the prices they receive for their agricultural products are tending to decline. The process of economic growth could not be placed on sound foundations, unless there was also some fair assurance of stability. Insecurity of returns, according to Dr. Sen, continues to be one of the main problems confronting some of the underdeveloped countries which rely, in large measure, on the export receipts of a few primary products. Therefore, the recent downward trend of the prices of export products of underdeveloped countries cannot but be viewed with serious concern. Many countries attempting to develop themselves, Dr. Sen reminded the delegates to the F.A.O. Conference, are fearful that their development plans would be wrecked by the instability of the world market for the products they had for sale. He, therefore, called for a new code of international ethics in economic affairs which would safeguard the interests of producer-groups in underdeveloped countries and thereby that of the countries themselves. He rightly pointed out that the so-called agricultural surplus problems of countries like the U.S.A. and Canada, were the reverse of the inadequate purchasing power of millions of needy people in other parts of the world. While commending countries which come forward to use surplus foodstuffs in giving aid to underdeveloped countries, Dr. Sen stressed the point that such arrangements should be so planned as to be an unqualified blessing to the contracting parties and that no harm should result to the producer-groups in recipient countries.

Reference may also be made, in this connection, to the concern voiced by a group of British economists over the recent fall in prices of primary products which are the chief export commodities of poorer nations. In a letter to a London paper, these economists reminded the West that such a trend in international prices was pregnant with grave political and economic dangers to Western democracies. They pointed out that world prices of many primary products had come down to the levels ruling before the Korean war and observed: "A comparatively small fall in commodity prices is equivalent in its effects to a cut of billions of dollars in aid." Pinpointing the political dangers of such a development, the British economists warned: "The Western powers must not be surprised, if, in the circumstances, underdeveloped countries turn more and more to Russia as a potential trading partner." It is to be hoped that his warning will not go unheeded by the developed nations of the West.

ANOTHER PLANTATION AGREEMENT

A five-year voluntary agreement between the United Planters' Association of South India and its constituent Associations in Madras and Kerala, and the Estate Staff Union of South India, was signed in Madras last week, bringing to an end the long-outstanding disputes between the management and the estate staff (other than plantation labour) over salaries and other terms of service of the latter. It will be recalled that a dispute arose on the terms and conditions of service of the estates staff prior to 1950 and the same was referred for adjudication to a Special Tribunal in 1952. The Tribunal gave its award in October 1956, against which the U.P.A.S.I. filed an appeal in the Supreme Court. The appeal is still pending. In the meantime, negotiations were conducted for bringing about an out-of-court settlement. The agreement signed last week was the result of these negotiations.

The agreement covers the estate staff in Madras and Kerala, while an agreement in respect of Mysore is yet to be arrived at. It is noteworthy that the latest agreement is the third of a series of five-year voluntary agreements arrived at so far this year in South India. The two earlier agreements—the one signed in February last and the other in May—however, covered only the estate labour in Madras State and Mysore and Coorg, respectively, though some of the units were not parties to the Madras agreement signed in February. Nevertheless, the three agreements are the result of voluntary negotiations and are, therefore, to be welcomed. They serve to show what can be achieved through mutual negotiations, without the onerous and irksome procedure of settling disputes through courts of law.

The latest agreement has retrospective effect from 24th October 1956 and provides for a complete revision of basic salaries and groupings. It ensures long-term scales and an increase of 20 per cent. or Rs. 20, whichever is higher, to all staff as on 23rd October 1956. The scale-ranges have also been widened. Certain categories of employees have been excluded from the provisions of this agreement, but these will continue to draw their basic salaries as on 23rd October 1956 *plus* Rs. 15 or 15 per cent. of the said basic salaries whichever is higher.

For the purpose of the fixation of scales of pay, the estates have been classified into three, namely, small, medium and large. The revised scales of basic pay are:

Small Estates—
Junior grade: Rs. 40-3-70-4-90.
Senior grade: Rs. 90-5-120-EB-6-150.

Medium Estates—
Junior grade: Rs. 40/50-3-56-4-80-EB-5-115. (A probationer will start on Rs. 40.)
Senior grade: Rs. 90-6-120-EB-7-148-EB-8-180-10-200.

Large Estates—
Junior grade: Rs. 40/50-3-56-4-80-EB-5-120-EB-6-150.
Senior grade: A—Rs. 90-6-120-EB-7-148-EB-8-180. B—Rs. 150-10-250.
Selection grade: I—Rs. 250-12½-350. II—Rs. 300-15-420.

On the adoption of the revised rates, the benefit of purchase of food and/or fuel through the employer at concessional rates will be terminated. Wherever such benefit is in existence, it will be replaced only for those at present in receipt of the benefit by a compensatory allowance pegged at the value it represents in terms of cash at the date of the agreement. Employees engaged after the date of the agreement will not be entitled either to this compensatory allowance or to food and fuel at concession rates. Any existing concession other than the above, where granted, will continue.

The agreement provides for the continuance of dearness allowance at the existing U.P.A.S.I. rates. The employers have agreed to pay gratuity to the staff on retirement, or to their heirs on the death of the member, after five years of continuous service at the rate of half a month's salary for every completed year of service, subject to a maximum of 15 months' basic salary drawn at the time of retirement or death. The age of superannuation has been fixed at 55. In exceptional circumstances, the management may extend the age by two years to 57. The management and staff have agreed to increase their respective contributions to the State Provident Fund in respect of staff who are in the State scheme to 8½ per cent. of the basic wage and dearness allowance from 1st December 1957. The agreement will not adversely affect any existing terms and conditions, except otherwise expressly provided. It has also been agreed that recruitment hereafter will be of candidates of not less than S.S.L.C. (passed) or the holders of appropriate technical qualifications.

As a result of the settlement, the managements have rescinded the withdrawal of recognition of the Estate Staffs' Union of South India and the representatives of the Staff Union have accepted the terms in complete supersession of the award of the Special Tribunal for Plantations, Coimbatore. The parties have agreed to file this memorandum of agreement before the Supreme Court with a prayer for an order on the pending appeal before the Court.

DEMOGRAPHIC TRAINING CENTRE

In the context of the growing awareness of the importance of population studies, the establishment of the Demographic Training and Research Centre at Chembur, Bombay, which was formally inaugurated by Dr. John Matthai, last Tuesday, in the absence of Mr. D. P. Karmarkar, Union Minister for Health, who was to have declared it open, will be widely welcomed. The Centre is expected to promote studies in socio-economic planning in the countries of the E.C.A.F.E. regoin. The decision to establish such a centre was the result of the realisation on the part of its sponsors that any scheme of economic and social development must take into account the population trends in the region. Moreover, as Dr. Matthai rightly pointed out, the population question is of great significance and particular relevance to the two major problems confronting India today, namely, food and employment. Most of the countries of the region, as is well known, are engaged in the planned development of their economies. Programmes of social and economic development should take note of the requirements of food, education, housing, raw materials, tools and machinery, transportation, etc. In determining these needs, demographic data could be of great assistance. Factors affecting the size of the population such as fertility, mortality, migration, whether internal or external, etc., deserve to be studied scientifically, with a view to forecasting future trends.

The Centre was actually established about a year ago by the Government of India, in asscciation with the Sir Dorabji Tata Trust. The United Nations had agreed to give it the status of a regional international institution for Asia and the Far East and also to participate in the scheme on that basis by providing technical assistance. The aim of the training programme at the Centre is to build up, over a period of years, a nucleus of persons in each country of the region having sufficient knowledge of demography to plan and carry out such population studies as the Government and the universities may wish to sponsor and, in turn, to train other persons in the field. It is also designed to collect information on population questions which are of interest to various Governments of the region in connection with their development plans. The Centre will, in due course, undertake special studies at the request of Governments, the United Nations or its specialised agencies and provide consultative service to Governments.

The programme, as at present envisaged, provides for one year of intensive training in the principles and techniques of demography and certain related fields. This would be followed by more specialised training for a period of one year or less. Co-operating with this Centre in the promotion of demographic training and research are such institutions as the Department of Economics and Sociology of the University of Bombay, the Tata Institute of Social Sciences, Bombay, and the Indian Cancer Research Centre, Bombay.

The U.N. provides, by way of technical assistance, the services of long-term advisers and

TERMS OF DEFERRED PAYMENT SCHEME MADE STIFFER

EXPORT PROMOTION AND COMPANY TAXATION

From Our Special Correspondent

NEW DELHI, *5th November*

DELHI LETTER

MR. Manubhai Shah, Union Minister for Industry, has just given an authoritative exposition of trends and policies in the matter of India's foreign trade. At the outset, he points out that the value of India's imports of consumer goods has come down from Rs. 256 crores in 1952-53 to Rs. 149 crores in 1956-57 and the value of imports of producer goods and of capital goods has gone up from Rs. 313 crores and Rs. 102 crores, respectively, in the former year to Rs. 438 crores and Rs. 253 crores, respectively, in the latter. On the other hand, the value of India's exports has increased only slightly from Rs. 577 crores in 1952-53 to Rs. 603 crores in 1956-57, although finished industrial goods have come to account for about 42 per cent. of the value of all exports as compared to 30 per cent. in 1938-39. The adverse balance of trade in 1956-57 has thus been of the order of Rs. 237 crores.

These figures of foreign trade are, of course, already known to the public. Mr. Shah's review, however, is more noteworthy where it deals with the effects of the Government's five-pronged drive to correct the imbalance in India's foreign trade. Referring to the first of the fivefold measures, namely, the reduction of imports to the unavoidable minimum, the Minister claims that "the net result of these import restrictions would naturally be to give a phenomenal impetus to the growth of indigenous production and this is observed and realised over a wide range of items, particularly engineering goods, chemicals, pharmaceuticals, consumer goods, producer goods and medium and heavy machinery." It is pointed out, in this connection, that the increase in the rate of industrial production in the current year is 11 to 12 per cent., as against the 8 to 9 per cent. over the last five years.

Another Measure

Adverting to another measure, namely, the deferred payment scheme for the import of machinery and equipment and, in some cases, of components and expensive raw materials, Mr. Shah says:

"This scheme is by now fully well known and deferred payment schemes extending over five to seven years have been in operation since the beginning of the year and have yielded very fruitful and happy results. Upto the end of August, we have approved 137 deferred payments schemes to the total value of Rs. 59.27 crores which include cash payment of Rs. 16.95 crores, foreign capital investment of Rs. 5.94 crores and deferred payments of the value of Rs. 36.98 crores. These deferred payment schemes cover 27 of sugar projects, 19 of iron and steel-based industries, 14 of engineering industries, 14 projects of chemicals and pharmaceuticals, 10 of textiles, 10 of heavy electrical plants, 8 of cement, 7 of paper and 5 of automobile plants. Over and above these, a large number of applications for deferred payment schemes are pending with the Government and are under active consideration. On the whole, the response to the deferred payment schemes from foreign suppliers has been encouraging as a result of the efforts made by our industrialists and Government and the good and friendly response of foreign countries."

It is thus clear that the original pessimism here on the score of the deferred payments scheme early this year has given place to some reasonable optimism.

Incidentally, this encouraging response from foreign countries in the matter of deferred payments appears to have emboldened the Commerce and Industry Ministry to stiffen the terms and conditions of the scheme in recent weeks in the probable belief that such stiffening may not adversely affect its continued acceptability to foreign exporters. The revised policy, according to Mr. Manubhai Shah, is to issue import licences for capital goods and equipment for new industries or for a substantial expansion of the existing ones only where the first payment is to be made after 1st April 1961. This is applicable equally to the public and private sectors. The new scheme would involve deferred payments in three to five instalments after the first payment in 1961-62. Relaxation of payment conditions would, however, be made in cases of spare parts, maintenance equipments and industrial schemes having possibilities of earning foreign exchange. Whether this revised scheme will turn out to be less attractive to foreign exporters remains to be seen.

Export Promotion

Mr. Manubhai Shah has also dealt exhaustively with the export promotion activities of the Government. In this account, the Minister refers to the fiscal measures for overcoming "the inherent disadvantages which the Indian manufactured products suffer from in foreign markets." He continues:

"For instance, arrangements are under way to provide for refund of import duties collected on the imported components of the manufactured products, sought to be exported to foreign countries. Rules for the payment of these refunds have been finalised in respect of 13 commodities, namely, rayon cloth, cotton piecegoods, hosiery, handloom fabrics, art silk fabrics, silk brocades, *saris*, scarves, copper dusting preparation, cough syrups, dyestuffs, leather goods, and pipe and carbon papers. The procedure for the refund of excise duties has also been simplified in respect of some items."

That these fiscal measures are obviously not sufficient can be inferred from the relevant recommendations made in the report, just published, of the Export Promotion Committee. These recommendations are that export duties should be kept at low levels and not be changed too often; that export goods be completely exempted from excise duties and sales tax; that a measure of relief from income-tax be granted to exporters for better export performance; and that drawback of customs duties be granted at flat rates to exporters using imported raw materials, semi-processed goods or components.

These recommendations of the Export Promotion Committee and the present fiscal incentives given by the Government for export promotion are based on the belief that indirect taxes like export, import and excise duties and sales tax alone have to be manipulated to achieve the desired results in the sphere of foreign trade. It is strange, in the words of a Swedish economist, that the effects of other kinds of tax policy on foreign trade have been almost completely ignored by students of taxation. For example, company taxation in India is so burdensome—much more so than in many other countries—that probably some part of the tax burden has to be shifted elsewhere through higher prices, because it cannot be shifted to the wage earners through lower wage rates. Where money costs of some export commodities rise in India but do not rise in other competing countries, it would be next to impossible for this country to shift even a small part of the tax burden to the foreign buyers through higher prices. In such a situation, export industries will begin to languish, especially when the domestic market cannot wholly absorb their products. Export promotion should, therefore, logically involve concessions in company taxation in respect of at least those industries which are marked out for earning foreign exchange on a significant scale. This aspect, however, has been ignored by the Export Promotion Committee.

Fiscal Incentives

Still the fact remains that fiscal incentives alone cannot make this country's export products fully competitive in foreign markets when the cost structure of many an Indian industry is basically higher than in other competing countries. It is also in this context that the proposed movement for higher industrial productivity in the country acquires particular significance. If and when the productivity or the average production per worker goes up in Indian industry, it will get reflected in lower unit costs and thus promote exports in a basically sound and stable manner. This aspect has also received emphasis in Mr. Manubhai Shah's address to the Productivity Seminar which has just finalised the programme for launching the National Productivity Movement in pursuance of the recommendations of the Indian Productivity Delegation to Japan. The expectation of some trade union representatives that incentives such as a basic increase in wages would have to be given here and now to create enthusiasm in workers for higher productivity is, however, not a happy augury. That an increase in wages will automatically result from the productivity drive which, by simplifying the necessary motions in order to reduce the energy expended by the worker per piece produced, can enable him to produce more with the same or even less expenditure of energy in a work-day, appears to have been ignored by these trade union spokesmen. It is of the very essence of the productivity drive that it will not drive workers to greater speed-up or increase their work-loads. But misconceptions on these counts cannot be easily removed in a country like India where the trade union movement is divided by the power considerations of different political parties.

A preliminary survey for a major soil conservation project, involving contour bunding of 200,000 acres of cultivation land, has been started at Ahmednagar by the Soil Conservation Department of Bombay. It is learnt that the completion of the bunding works will cost about Rs. 80 lakhs. The cost of actual bunding operations will be recovered from agriculturists at the rate of Rs. 40 per acre in 15 annual equated instalments.

India, the United States, the Soviet Union and China have about one half of the world's population, according to the U.S. Commerce Department. One-sixth of the world's population lives in Britain, Japan, Indonesia, West Germany, Brazil and Pakistan. Each of these countries has 50 million and more population. Estimates of the total population of China are 582.60 million. The second country with the largest population is India, with 388.80 million. Estimates for the Soviet Union are 205.99 million for next January and 209.55 million for a year later. The total population in the United States is expected to be 172.72 million by January 1958 and rise to 175.64 million by 1959.

SHORTAGE OF CAPITAL

A WORLD-WIDE PHENOMENON

From Our Own Correspondent

LONDON, *26th October*

LONDON LETTER

FIGURES recently published by the British Treasury show that, even before the 7 per cent. Bank rate was introduced, the trend of capital investment in this country was downwards. In the first quarter of this year, the total volume of capital investment was 5 per cent. higher than in the first quarter of 1956, but in the second quarter, it was only 3 per cent. higher than in the corresponding period of last year. Moreover, the figures show that the present decline is only a continuation of one which was already operating a year ago. Thus even prior to the Government's penal Bank rate policy relatively less capital was becoming available although the decline was more marked in the private sector—especially in new house building—than in the public sector; in the latter capital expenditure in transport and communication was higher this year than a year ago. The high Bank rate is clearly going to intensify the present movement but, in particular, it will attack the public sector and reduce investment in the basic industries. It is significant that the latest reports of the London Clearing Banks show that advances have fallen by £23 million over their level of last month.

New capital issues over £10,000 are subject to the scrutiny of the Capital Investment Committee and that Committee is now not only keeping a check on all proposals which cannot be shown to be essential, but is cutting down the volume of money to be raised even by the essential projects. This is in line with the instructions which they were given by the Chancellor of the Exchequer to be particularly critical towards applications for large amounts. Only defence, nuclear power and exports appear to be escaping the restrictive net.

One consequence of this tight attitude on the sums to be raised will undoubtedly be to put back many projects in their entirety. In other words, some commercial firms, if they cannot carry through the whole of a project, will decide to defer it *in toto* and this result, of course, is exactly what the Chancellor wants to achieve. The wisdom of the broad application of this policy, which must include a maintenance of the high borrowing rates, can, of course, be questioned, when it is appreciated that it is even hitting the steel industry and plans for the installation of additional plate production, a commodity which has been in short supply ever since the war. One proposal for a new mill with a capacity of 10,000 tons a week and corresponding steel making capacity, is now in question.

Apart from the domestic scene, there is the effect of high money rates on development inside the sterling area. Only New Zealand shares with the United Kingdom a bank rate of 7 per cent., rates in the other Commonwealth countries being 4½ per cent. or less. But can this anomalous situation continue? Is it not likely to cause a drain of liquid funds from the Commonwealth countries to London? The increase in deposits of the "Big Five" of £87 million over the past month is certainly in part a reflection of the flow of overseas money back to this country. If this outflow affects the Commonwealth substantially, then they may either have to put restrictions on the outflow of capital or raise their rates to follow. India is naturally much affected by the shortage of capital and reports reaching London of the Indian Finance Minister's visit to Western Germany indicate that he has been doing his best to raise funds there without which the Five-year Plan might need to be revised.

It is difficult to see where the world in general can look for relief from this increasingly tight capital position. The World Bank has been lending record sums and has been looking to the U.S.A. for additional funds to meet all the claims being put upon it. With credit in the U.S.A. being made increasingly tight and the present state of the Wall Street market, it is useless to look for much relief from there. Nothing of this is meant to suggest anything in the nature of a crisis. What is clear, however, is that capital expenditure throughout the world is being made increasingly more difficult and, until recession worries the British Treasury and the American Federal Reserve into a reversal of present policies, these trends are likely to continue.—*All Rights Reserved.*

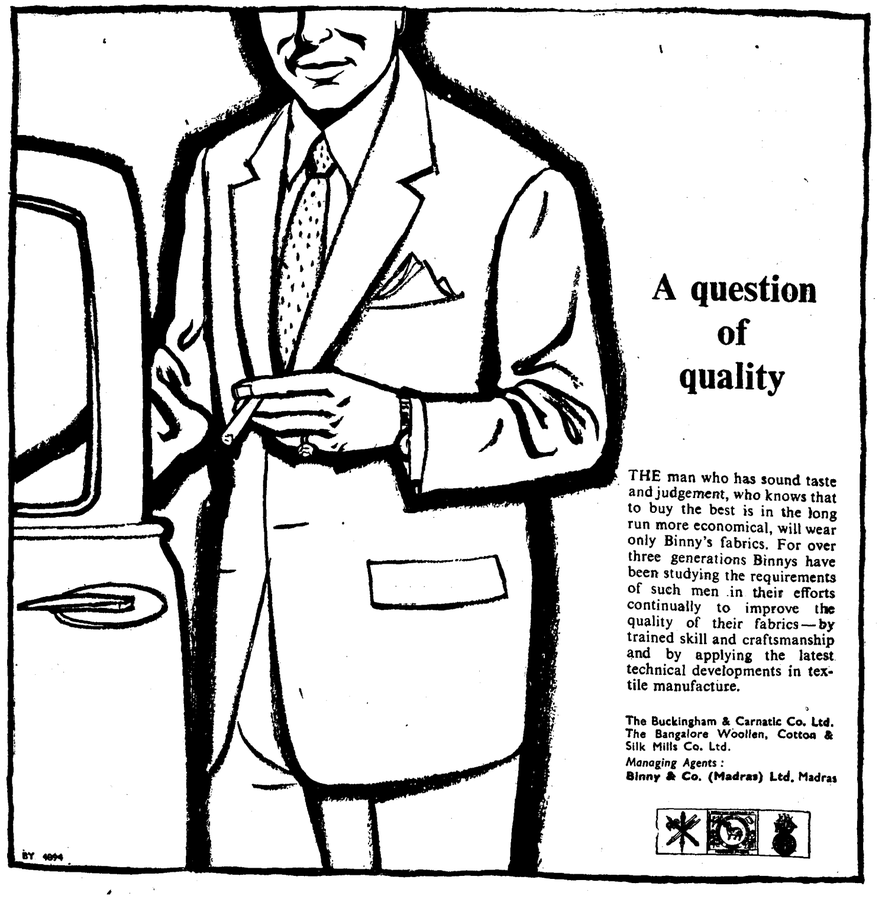
Negotiations between the U.K. Treasury and Iraq's Minister of Finance are reported to have resulted in Iraq obtaining an additional £10 million worth of gold bullion to serve as cover for the Iraqi currency. This new quantity of gold will be purchased from the Bank of England and deposited in the vaults of the Central Bank of Iraq. The Iraqi Central Bank maintains at present £5 million of gold bullion, and an equivalent value in scarce currency, as part cover of the national currency. By this new arrangement, the combined value of gold and scarce currency will be raised to £20 million or about 40 per cent. of the total.

SURVEY

(*Concluded from page* 855)

short-term consultants on different aspects of demography, in addition to various types of equipment such as calculating machines, technical literature and reference material for library. It will also grant fellowships, tenable at the Centre, for nationals of the countries other than India. The population Council of New York has made a grant to the U.N., for the years 1957 and 1958 which would cover the cost of approximately half the technical assistance promised by the U.N.

The keen interest taken by the Government of India in the Centre is evident from the fact that it will make available to it an aggregate sum of Rs. 13 lakhs over a period of five years. Realising the vital importance of demographic studies, the Planning Commission has made an allocation of Rs. 30 lakhs for such studies in the second Plan. Three more demographic centres are proposed to be established, two in North and one in South India. In view of the regional disparities in the country, the establishment of more than one centre in the country will certainly promote specialised studies of demographic problems.



A question of quality

THE man who has sound taste and judgement, who knows that to buy the best is in the long run more economical, will wear only Binny's fabrics. For over three generations Binnys have been studying the requirements of such men in their efforts continually to improve the quality of their fabrics—by trained skill and craftsmanship and by applying the latest technical developments in textile manufacture.

CURRENCY RESERVE MINIMUM CUT AGAIN

PRESIDENT PROMULGATES ORDINANCE

THE President of India has issued an ordinance (on 31st October 1957) to amend the provisions in the Reserve Bank of India Act relating to the minimum currency reserve. The Ordinance empowers the Reserve Bank of India to reduce the minimum currency reserve held in foreign securities from the present statutory limit of Rs. 400 crores. The law hitherto in force prescribed separate lower limits for the reserve to be held in foreign securities and that in gold. The latest Ordinance, however, prescribes an overall minimum reserve of Rs. 200 crores to be held under both, of which the holdings of gold coins and bullion are not to be less than Rs. 115 crores.

The Ordinance represents the second amendment after Independence of the provisions relating to currency reserve laid down by the Reserve Bank of India Act—the previous one was made last year by a legislative enactment. It will be recalled that the Government of India amended in July 1956 sections 33(2) and (4) and 37. Section 33(2) of the original Act had laid down:

"Of the total amount of the assets, not less than two-fifths shall consist of gold coin, gold bullion or sterling securities:

"Provided that the amount of gold coin and gold bullion shall not at any time be less than Rs. 40 crores in value."

The currency reserve ratio of 40 per cent., it was felt, would seriously limit the Reserve Bank's capacity to expand the currency during the second Plan period to meet the growing requirements of a developing economy. It was estimated that at least Rs. 1,200 crores would have to be found by way of expansion of currency (or deficit financing) and that the sterling assets would be brought down by Rs. 200 crores to meet balance of payments deficit. Under the then existing provisions, the additional amount of currency that could be issued was only Rs. 189 crores and an expansion of this order in currency was found to be far from adequate to meet the requirements of an economy in which the national income was estimated to increase by 25 per cent. in five years. Even an increase in currency of this order would, it was felt, not be possible with an adverse balance of payments. Accordingly, section 33(2) was amended as follows:

"Of the total amount of the assets, the amount of gold coin or gold bullion and the amount of foreign securities shall not at any time be less than Rs. 115 crores and Rs. 400 crores, respectively in value."

Rigid Ratio Abolished

By this amendment, the rigidity of a fixed ratio was removed and a statutory minimum reserve of gold and foreign securities in absolute terms was fixed.

Along with the amendment of section 33(2), sub-section (4) of the section, which lays down the rates at which the gold, rupee coin and securities are to be valued for the purpose of this section, was also amended, so as to revalue the gold holdings from 8.47512 grains of fine gold per rupee to 2.88 grains per rupee, that is, the I.M.F.'s value for gold. In other words, the price of gold was stepped up from Rs. 21-3-10 per tola to Rs. 62-8 per tola, raising the total value of gold holdings (7.1 million ounces) from Rs. 40.02 crores to Rs. 117.76 crores. Simultaneously, with the revaluation of gold, the minimum limit for the holding of gold by the Reserve Bank was also raised from Rs. 40 crores to Rs. 115 crores, in addition to the minimum holding in foreign securities (not sterling securities alone as provided in the Original Act) of Rs. 400 crores as stated above.

Section 37 of the original Act had conferred powers on the Reserve Bank to hold currency reserves less than that prescribed by section 33(2) temporarily with the previous permission of the Central Government, but it had to pay a tax of not less than 6 per cent. on the shortfall in reserves. This section was also amended last year, so that the currency reserve requirements in respect of foreign securities could be suspended temporarily without payment of any tax to the Government. The amended section 37 reads as follows:

"37. Notwithstanding anything contained in the foregoing provisions, the Bank may, with the previous sanction of the Central Government, for periods not exceeding six months in the first instance, which may, with the like sanction, be extended from time to time by periods not exceeding three months at a time, hold as assets foreign securities of less amount in value than that required by sub-section (2) of section 33:

"Provided that the amount of foreign securities so held shall not at any time be less than three hundred crores of rupees in value."

In other words, the section 37, as amended, gave powers to the Reserve Bank to reduce its foreign security holdings, under special circumstances, to a minimum of Rs. 300 crores, while the gold holdings could not under any circumstances be reduced to less than Rs. 115 crores, thus keeping a total minimum reserve of Rs. 415 crores.

The effect of last week's ordinance is that section 33(2) stands amended as follows:

"The aggregate value of the gold coin, gold bullion and foreign securities held as assets and the aggregate value of the gold coin and gold bullion so held shall not at any time be less than Rs. 200 crores and Rs. 115 crores, respectively."

Emergency Provision

This means that the Reserve Bank can reduce the total minimum reserve in gold and foreign securities to Rs. 200 crores, of which gold bullion alone should be not less than Rs. 115 crores. In other words, the foreign securities can be brought down from the present minimum of Rs. 400 crores to Rs. 85 crores. Since, however, at present, the gold and bullion holdings of the Reserve Bank aggregate about Rs. 118 crores, so the foreign securities can, in effect, be brought down to Rs. 82 crores. In fact, if the share of gold coin and bullion in the currency reserves can be raised further, foreign security holdings can be brought down correspondingly under section 33 as now amended. Indeed, for temporary periods the Reserve Bank need not keep any foreign securities at all, if the Government gives the necessary permission. This is possible under section 37 (as amended last year) which is being retained as it is, except the proviso that "the amount of foreign securities so held shall not at any time be less than three hundred crores of rupees in value." It must, however, be presumed that the authorities will make use of this provision only in a dire emergency.

The latest reduction of the statutory limit of currency reserve was not unexpected, in view of the rapid decline in sterling balances since the last revision of the currency reserve, as the following table shows:

As on	*Foreign assets* (In crores of Rs.)
30th March 1956	746.13
27th April 1956	725.65
1st June 1956	705.34
29th June 1956	681.52
3rd August 1956	653.46
31st August 1956	631.61
28th September 1956	615.06
2nd November 1956	568.93
30th November 1956	536 53
28th December 1956	529.91
1st February 1957	510.60
1st March 1957	515.40
29th March 1957	526.83
26th April 1957	504.91
31st May 1957	455.07
28th June 1957	453.54
2nd August 1957	401.84
30th August 1957	379.86
27th September 1957	352.51
25th October 1957	327.10

Heavy Fall in Sterling Balances

Over the year, the foreign assets have dwindled by Rs. 241.83 crores. This excludes Rs. 95.5 crores borrowed from the I.M.F. and spent during the period. If this factor is taken into account, the total amount of foreign exchange resources expended during the year is of the order of Rs. 337.33 crores. Another sum of Rs. 245 crores can be drawn before the minimum of Rs. 82 crores is reached.

The resort to ordinance in order to reduce the statutory minimum reserves was made, because it was feared that, at the current rate of withdrawal of Rs. 8 crores per week, the lowest permissible limit of Rs. 300 crores would be reached before the two Houses of Parliament were due to meet. On the basis of the current rate of withdrawals, the additional foreign securities that would be available for expenditure as a result of the Ordinance would last till the end of May 1958. After this period, the Reserve Bank will have to resort to the emergency provision, under which it can reduce its holdings of foreign securities even below Rs. 85 crores. It is to be hoped that such a contingency will not arise.

No Adverse Effect on Rupee

Addressing a Press conference just after the promulgation of the Ordinance, Mr. H. M. Patel, Principal Secretary, Union Ministry of Finance said that the Ordinance would have no adverse effect either on the strength of the rupee or on India's credit abroad. The strength of the rupee, he added, was based on factors other than the reserves held by the Reserve Bank and these remained unaltered. He pointed out that many countries in the world did not have any currency reserve at all. Asserting that the present legal requirement about minimum currency reserve—a legacy of the past—was rather high, Mr. Patel said that the Ordinance only brought it in conformity with the country's practical needs. The minimum reserve for the entire sterling area, he went on, was equivalent to the area's payment requirements for six to eight weeks. Even after the latest reduction, India's minimum would suffice for three months' payment, whereas the previous reserve was equivalent to eight months' requirements.

On the basis of India's existing foreign exchange resources, known firm commitments of assistance from abroad and present firm commitments of payments to be made for imports, Mr. Patel expected the "hump" of the foreign exchange difficulty to be reached during the period April 1958 to March 1959. In this period, India would have to pay by way of foreign exchange twice that in the current financial year. After March 1959, however, the foreign exchange payments, according to him, would be substantially reduced. In making the calculations of firm commitments of assistance from abroad Mr. Patel did not take into account the possible assistance from the World Bank, the U.S. Development Funds and West Germany.

CREEPING INFLATION—A MENACE TO THE FREE WORLD

NEED FOR CONCERTED ACTION

[The Austrian Federal Minister of Finance points out here new methods for concerted action for the Governments of the free world, in order to tackle the world-wide problem of inflation. This is a speech delivered by him before the United States-Austrian Chamber of Commerce, Inc., New York, on 18th September 1957.—ED.]

THE political and economic discussions over the past year have been dominated by one subject: the fight against inflation. This is all the more remarkable since a superficial glance at the economic and financial situation of almost all countries of the free world does not reveal any fundamental structural disequilibrium. Indeed, there is hardly any country where we would find the type of high-power inflation which was characteristic for the periods following World War I and World War II. But most countries have over the past few years experienced a creeping inflation which has slowly but inevitably led to serious disturbances in international financial relations. The situation is by no means dramatic (as, for instance, at the beginning of the Marshall Plan or in 1949, when an abrupt devaluation was the only means of checking the loss of foreign exchange reserves of some of the most important trading countries). It is my conviction, however, that the creeping inflation, if sustained over a period of several years, constitutes just as big a menace for economic prosperity, and that we should therefore take vigorous action for preserving monetary and financial stability.

Cost-inflation

Various theorems have been advanced about the origin of inflation which is prevailing right now. In particular, the theorem of cost-inflation has been opposed to the classical case of inflation, where an excessive supply of money is chasing an inadequate supply of goods. Wages, which increase faster than productivity, are supposed to be the principal culprit for this cost-inflation, but Government is also accused of contributing to the price rise by imposing and levying new and high taxes. I do not want to belittle this explanation, but I feel that it must be put in its right place within the general framework of a country's monetary and financial policy. There is no doubt that a country which pursues a restrictive credit and fiscal policy will not be affected by cost increases in the same way as a country where credits are liberally extended and where the budget is in deficit. In other words—cost-inflation, in order to exercise a marked effect, must be substantiated by a corresponding increase in the supply of money. This means that a strict monetary policy can also negate, to a large extent, the consequences of this type of inflation.

Full Employment

The problem which we are facing today is being complicated by the basic commitment for full employment, which almost all Governments of the free world have adopted since the end of the war. For political, as well as economic reasons, no Government can allow unemployment to rise over a certain maximum, which may differ between the various countries, but is fairly well known to each Government concerned. This commitment may render it rather difficult or even impossible to fully utilise the classical methods of monetary and fiscal policy. While being difficult, the problem is, however, by no means insoluble. I am in full agreement with President Eisenhower's remarks that business and labour must show a statesmanlike behaviour in order to avoid inflation.

It is of essential importance that we all fight against a certain growing mentality implying that modern capitalism, modern labour and modern government have a built-in tendency toward inflation. We must hold down the money supply to prevent further price advances but we must also try to maintain a high level of employment. I may state that, over the past few years, Austria has succeeded in combining this double objective. We have maintained a high degree of financial stability without impeding the growth of our economy. Through the maintenance of a balanced budget and a cautious monetary policy, as well as through voluntary efforts by business and labour to keep advances in prices and wages within certain limits, Austria has been able to keep price rises within 1½ per cent. per year, and thus to have the lowest rate of price increase among all European countries. The Austrian Schilling has become one of the strongest European currencies—its valuation on the free exchange markets of Zurich or New York corresponds exactly to its official parity, a fact which only few countries can boast of.

While applying the classical orthodox means of monetary and fiscal policy (changes in the discount rate, institution of reserve requirements and credit ceilings, balancing of the budget), we have also resorted to additional measures which may sound less familiar to our foreign friends. I refer in particular to the establishment of a Price-Wage-Commission, consisting of representatives of the Government, the Chambers of Commerce, Labour and Agriculture, and the Federation of Trade Unions. This Commission, working on an entirely voluntary basis, periodically reviews price and wage developments in an effort to determine to what extent readjustments are justified in the context of stability. The Commission may make specific proposals such as, for example, to hold down wages in economic branches where productivity does not increase, or to exercise a downward pressure on prices by encouraging imports through an increase in liberalisation or a diminution of tariff duties.

Imported Inflation

As a small country for which foreign trade represents a high percentage of the national income, Austria is necessarily greatly affected by economic developments in other countries of the free world. "Imported inflation" has become a serious problem for many countries, which, through internal measures, have so far succeeded in maintaining financial stability, but which may nevertheless be infected by the lax policies pursued in other countries. I think, therefore, that it is of the utmost importance to pursue and expand international co-operation in the field of financial and monetary policy. I do not mean to say that this would have to go as far as to integrate completely monetary and budget policies of all countries which have important trading relationships with each other, but I feel that it is absolutely essential to arrive at a minimum of harmonisation.

International economic co-operation has been very successful in such organisations as the O.E.E.C. and the European Payments Union, where it contributed, on the one hand, to a strong expansion of intra-European trade, and, on the other hand, helped to solve the European dollar problem. On a world-wide basis, the International Monetary Fund has been of great value in stabilising exchange rates, the G.A.T.T. has helped freeing the flow of international trade from discriminatory impediments, and the World Bank has made a most valuable contribution to international investment. I feel that, either within the framework of existing international institutions or through a new body, monetary and fiscal policies could be co-ordinated. Previous work in this field, such as, for instance, the report by a committee of independent experts appointed by the O.E.E.C. for studying financial stability, have pointed the way. This co-ordination of fiscal and monetary policies would not have to enter into the details of each country's domestic affairs, but it would show whether a Government, in a given situation, should, in its own interest, as well as in the interest of its partner countries, pursue an expansive, restrictive, or neutral policy. Such recommendations would have to be flexible and would have to be adjusted in accordance with changes in the economic situation.

I think the basic principles underlying my suggestions are clear. If there is a disequilibrium in the external payments position of a country, three types of remedies can be resorted to: a devaluation or revaluation of the exchange rate, a variation in the degree of trade and payments restrictions, or a change of direction in the internal monetary and financial policies. The efforts of all countries of the free world since the end of the war have been directed at avoiding as far as possible resort to the first two types of remedies, and at employing them only in the case of deep-seated structural disequilibria. Stability of exchange rates and liberalisation of trade and payments are the cornerstone of the international agreements of today. This means that changes in internal monetary and fiscal policies remain the only way of normally dealing with balance of payments disequilibria.

I trust that a co-ordination of internal policies among the principal countries would be of the greatest value for further developing multilateral free trade and for maintaining prosperity. A meeting of those responsible for carrying out their countries' monetary and financial policies should be held in order to initiate such co-ordination. The time is ripe for concerted action.

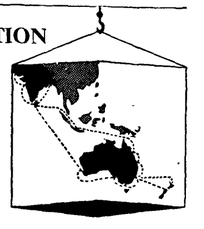
STERLING AREA'S GOLD AND DOLLAR RESERVES

The sterling areas gold and dollar reserves rose by $243 million during October and stood at $2,093 million at the end of the month, the British Treasury announced on the 4th inst. The figures show that the Government's strict economy aimed at defending sterling and halting a big drain on the reserves has been successful so far. During October Britain drew into its reserves $250 million from its credits with the Export-Import Bank. But it also had to pay out $133 million to the European Payments Union to settle September debts. Deducting those factors, the figures show that the gold and dollar reserves had a real gain of $126 million during October.

On top of this, the Treasury announced, there was a profit during the month of £9 million with the European Payments Union. This will be settled in November in gold and dollars. The Government made its big economy moves towards the end of September when the gold and dollar reserves were draining rapidly away because of foreign speculation against the pound. August showed a fall of $225 million, and September was even worse with a decrease of $292 million. But since the Government showed its determination to combat inflation, the value of the pound has strengthened on foreign exchanges. This meant that during October Britain no longer needed to fritter away its gold and dollars by buying up the pound to save it from falling too low.

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI



Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1 000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

COTTON TEXTILES—A VALUABLE FOREIGN EXCHANGE EARNER

EXPORT PROMOTION COMMITTEE'S SUGGESTIONS

COTTON textiles figure prominently in the report of the Export Promotion Committee (Chairman: Mr. V. L. D'Souza). This is only as it should be, because cotton textiles constitute one of the staple earners of foreign exchange for the country, the average annual value of exports being Rs. 65-70 crores, which represents nearly 12 per cent. of the aggregate exports of Indian merchandise. Cotton textiles belong to the category of goods in which there is normally a fairly large surplus available for export and, being an organised industry of major importance, Indian cotton textiles can, as the Committee has rightly pointed out, play an important role in any programme of expansion of Indian exports.

At the very outset, the Export Promotion Committee has drawn special attention to the sharp setback suffered by the export trade in textiles, especially in recent years, thanks to increasing competition, rising domestic consumption and a decline in the world market for cotton textiles. It, therefore, urges "much greater efforts" in order to attain the annual export target of 1,000 million yards of piecegoods fixed in the second Five-year Plan. It emphasises here the well-worn but pertinent point that, as in other export commodities, price and quality are important determinants of the volume of cotton textile exports.

Cost Inflation

Any impartial review of the trends in the Indian textile economy will reveal that the mill sector is suffering from cost inflation due largely to the inefficiency of machinery and equipment. Since a considerable part of the equipment is old and outmoded, Indian textiles have naturally had a tendency to lose ground in the highly competitive export market. The force of this statement has been fully appreciated by the Committee, as witness its remark that "there is no doubt that, unless our industry also benefits from the use of the latest machines and techniques, our cotton cloth will have to struggle hard to maintain the markets it now has, let alone increasing exports."

In this connection, the Committee alludes to the stringent conditions attached to licences issued to mills for the installation of 18,000 automatic looms for the production for export of an additional 350 million yards of cloth every year and urges the Government to relax, as far as possible, these conditions, with a view to making the scheme more attractive to mills, without, at the same time, jeopardising the objective of export promotion. It goes a step further and says: "A sufficient number of automatic looms to permit the production for export purposes all the 1,000 million yards of cotton cloth a year should be installed by the industry by way of replacement of the existing plain looms." This is, indeed, a very sound suggestion which merits the due consideration of the Government. Equally sound is the other suggestion of the Committee that it would help considerably, if, as an incentive for more exports, the mills are allowed to import modern machinery and equipment up to a certain percentage of the value of goods that may be exported by them in excess of their normal exports, say, about 50 to 75 per cent.

Needs all Assistance

Although the D'Souza Committee realises that the wholesale modernisation and rationalisation of all cotton textile looms raise many issues of national policy, it nevertheless stresses, and rightly so, the fundamental fact that, faced as the country is with an acute foreign exchange situation, the export sector of the industry has to be given *all* the assistance it needs. It observes:

"It has further to be realised that about 90 per cent. of our exports of cotton cloth are of the coarse and medium varieties. The fine and superfine categories, on account of their price, earn more foreign exchange for every yard exported, but it is precisely in this field that competition is most severe. Apart from our costs of production, another reason why it is hard for us to compete in fine and superfine varieties is that we have to import most of our requirements of long staple cotton. Nevertheless, if Japan which grows no cotton at all is able to import cotton and also sell at competitive prices, there does not seem to be any reason why we should not also be able to do so. Even in the field of coarse and medium varieties, more foreign exchange could be earned, if we increasingly process, that is, dye, print, etc., the cloth within the country."

Considering that the aim is to export as much cloth as possible, the Export Promotion Committee has done well to call upon the Government not to impose restrictions, such as those once imposed on exports of mineral khaki cloth, on any variety or varieties. It has done well also to ask the Government to allow stockists of cloth to enter the export trade. If this is done, the stockists may make a beginning with the export of fine and superfine categories of piecegoods. In order to enable them to export, it is suggested that a refund of excise duty already paid on cloth held in stock must be allowed. Another notable recommendation made by the Committee is that there are certain well established processing factories which will be able to export processed cloth in much larger quantities than at present, if they are permitted the facility of being treated on the same basis as textile mills in the matter of cloth clearance. This means that the processing factories should be accorded the facility of clearing cloth from textile mills without payment of excise duty which will be paid by the former in case the cloth is sold in India and not exported. The adoption of such a step will help to meet the foreign demand in small orders for processed and printed varieties which the mill industry does not accept at present.

The Committee has also urged removal of control on the manufacture by mills of certain varieties for purposes of export. This is certainly a realistic suggestion which can as well be extended to cover all the varieties of cloth subjected to production and export control as a measure of protection to the handloom industry. As the Committee itself understands, the other exporting countries like Japan are taking advantage of such a restrictive policy by capturing foreign markets, which were at one time supplied by India. In view of this, as also of the fact that handloom cloth is not being allowed to be imported in certain countries—for example, *lungis* in Burma and Indonesia—a ban or restriction on mills does not help the handloom industry in any way; on the other hand, the potential markets for Indian textiles are lost.

Ready-made Garments

With regard to exports of ready-made cotton garments, the D'Souza Committee considers that there is considerable scope for augmenting these exports. It states that the increasing tendency the world over is to make and sell ready-made garments. India, too, has made a small beginning with the manufacture of such garments. The annual installed capacity of this industry in terms of production value is put at Rs. 7 crores, while the value of actual production is Rs. 4 crores. Apart from cut and style, the buyer of garments attaches much importance to the attractiveness of accessories like labels and buttons. The Committee has accordingly recommended that the ready-made cotton garments manufacturers be allowed to import their requirements of these accessories for use in garments they export. It has further recommended that they be allowed refund of excise duty on the cloth-content of garments they export on an *ad hoc* flat rate basis.

Handloom Cloth

The Export Promotion Committee has also assessed the export possibilities in respect of handloom cloth. As readers are aware, the exports of handloom cloth have all along been at a low level, the average annual shipments in the past few years being not more than 60 million yards. Even in countries which were once the traditional buyers of Indian handloom cloth such as Burma, Ceylon, Indonesia, Malaya, Aden and Africa, exports are gradually losing ground. The Committee attributes this setback to the fact that these countries have themselves started encouraging handloom production. Even so, it must be emphasised that the low level of exports has been due in large measure to some of the basic weaknesses in the structure of handloom trade. The Committee has done well to spotlight them. "Because production is carried on by a large number of small producers scattered over the country," it observes, "standardised quality production is difficult; so is conducting export transactions on scientific and modern lines." It is surprising that the Committee has not made any mention of the even more important point, namely, that, unless the methods of production are improved through the introduction of powerlooms in the handloom sector, there is absolutely no chance of this sector supplying quality goods at an economic price. The Committee is, however, right when it says that adequate propaganda for Indian products and continued market research in export markets are necessary to maintain exports of handloom cloth.

The Committee has suggested the setting up of a central organisation for handloom exports composed of co-operative institutions, master-weavers, traders, dealers and exporters of handloom cloth. The central organisation can run sample show-rooms in the major export markets and book orders there on the basis of samples kept in the show-rooms. The show-room staff, in addition to undertaking publicity for our handloom designs, can obtain suggestions in regard to design, colours, yarn, etc., from large buyers and consumers and pass them on to the central organisation in India for enabling it to have the desired qualities woven in various parts of the country. Counterpart show-rooms containing all the samples should be maintained in the two major export cities of handlooms, namely, Bombay and Madras. The central organisation should arrange for supervision right from the production stage until shipment. If the exports of quality handloom cloth are organised in this manner, it should not be impossible to achieve exports worth Rs. 30 to 35 crores a year.

At the same time, the Committee feels that the long-term outlook for handloom exports lies in the improvement of quality and standards. In its opinion, there is scope for research into the possible ways of enhancing the quality of fabrics. The research should be in the field of improved designs, production of specialised yarns and mixed yarns for use of handloom industry, and establishment of an experimental station for finishing handloom cloth. Incidentally, the Committee refers to the grant of a rebate on cloth exported only to co-operatives. According to it, while the rebate may be an incentive to traders to form co-operative societies, apparently, it has not succeeded in bringing into its fold all the private exporters of cloth. The Committee, therefore, wants the Government to grant a similar rebate to individual exporters also, if necessary at a slightly lower rate than that granted to the co-operative sector.

Cotton Yarn

As regards cotton yarn exports, the D'Souza Committee fixes the target at 100,000 bales a year. The Committee commends for the favourable consideration of the Government the plea for distributing yarn export quotas among exporters, instead of mills. Such a step, it is said, will enable shippers to buy cotton yarn of the quality required for export and at competitive prices. Besides, the exporters can advise the mills on the qualities that can be sold abroad. In addition to the adjustment of the present export licensing policy thus, the Committee has urged the Government to allow the mills to install additional spindles if they undertake to export the entire additional output of yarn. While the Committee's emphasis on expansion of spinning capacity is to be welcomed, there is no justification for the condition it has attached. Considering the changing pattern of world trade in cotton yarn, as, indeed, in respect of any other commodity, it will be too much to expect the mills to give beforehand an unqualified undertaking to export the entire additional yarn output.

The foregoing account will reveal that there is nothing new or novel in the Export Promotion Committee's references to the question of promoting exports of cotton textiles. All that the Committee has done is to commend for the Government's acceptance several of the suggestions put forward by cotton textile interests ere now. This in itself is no insignificant service, for which both the millowners and the exporters must be thankful to the Committee.

UPWARD TREND IN WORLD TEXTILE TRADE

MILLOWNERS TO OPPOSE FREE TRADE AREA PLAN

From A Special Correspondent

MANCHESTER, 29*th October*

MANCHESTER LETTER

INTERNATIONAL trade in cotton goods in the first half of 1957 increased by about 12 per cent., as compared with the same period a year previously. Lancashire, however, can claim no share in this expansion, as shipments remained completely static at last year's level. The improvement in trade in goods of man-made fibres was in the region of 9 per cent. greater than in 1956, but, again, the United Kingdom is lagging behind her competitors.

The following table indicates the trend of exports of cotton goods and fabrics in the man-made fibres range in the first six months of this year and last:

(In million yards)

	1957			1956		
	Cotton	Rayon	Total	Cotton	Rayon	Total
U.K. ..	237.2	58.0	295.2	237.0	64.0	301.0
U.S. ..	245.0	90.0	335.0*	270.6	115.2	385.8
Japan ..	695.3	580.4	1,275.7	622.6	525.3	1,147.9
India ..	448.0	..	448.0	370.5	1.1	371.6
Holland ..	126.0	24.5	150.5	128.4	23.0	151.4
France ..	169.8	70.8	240.6	161.6	61.6	213.2
Germany ..	94.8	94.2	188.6*	112.5	105.2	217.7
Italy ..	41.3	50.8	92.1*	48.8	58.3	107.1
Belgium ..	64.8	20.6	85.4†	108.4	30.7	139.1
Hong Kong.	76.7	11.9	88.6*	62.8	31.5	94.3

* Five months. † Three months.

Whereas no progress has been made by local mills in securing a larger share in export business, there seems to be no stopping the Japanese or Indians. France, too, has gained ground and her combined exports are, in fact, a little more than 50,000,000 yards below the British total this year.

Although it is not possible to give detailed statistics of exports from many other countries outside the "top ten," it is known that gains are being made in areas where manufacturing has only lately been started. As these regions, which were formerly substantial importers of textiles, continue to join the battle for overseas trade, several European textile industries including Lancashire, will find progress even more difficult to achieve. The outlook from this aspect can only become less gloomy by a marked rise in the general level of world consumption of textiles.

Once again in the overseas trade returns, the emphasis is on imports rather than on exports of cotton goods. September seems to have the distinction of being a disappointing month and, from Lancashire's viewpoint, there was no encouragement in the figures issued by the Board of trade. A year ago, the totals of cloth exports were lower than in any month since June 1955, when the dock strike intervened. On this occasion, the volume of exports only just exceeded the totals of 12 months ago, being 33,196,000 square yards. With the exception of the two months already mentioned, the value of cotton yarns and manufactured goods exported in September this year was the lowest since 1947. Shipments of piecegoods for the nine months remained extremely close to last year's figures, being 346,743,000 square yards, as against 348,490,000 square yards.

In the spinning branch, however, some progress is being made, the export totals for three-quarters of the year being 29,210,325 lbs., as against 26,146,935 lbs. This improvement in yarn export trade is even more pronounced in those made from rayon and synthetic fibre, whose shipments so far amount to 35,246,000 lbs., as against 26,169,000 lbs.

While outward-bound cargoes of cotton goods remain in the doldrums, there is no sign of any curtailment of imports. Last month, the gap in overseas trade narrowed again, being less than 2,000,000 square yards in the cotton cloth section. Arrivals from abroad amounted to 31,283,000 square yards. To the end of September, imports of cotton grey cloth were 279,552,000 square yards and finished goods 31,743,000 square yards. The corresponding 1956 totals were 206,439,000 square yards and 27,511,000 square yards. It will be very surprising if imports over the full year do not exceed 400,000,000 yards by a fair margin.

India has so far supplied just over half the grey cloth requirements of British textile finishers and merchants. Imports of 143,498,000 square yards compared with 103,050,000 square yards at the same stage last year and are already well in excess of total arrivals of Indian cloth for the whole of 1956, which amounted to 128,052,000 square yards. Equally, Japan, by shipping 41,833,000 square yards of cloth to this country in nine months, has already exceeded its 12-month total last year of 32,129,000 square yards. Hong Kong has sent 49,776,000 square yards, as against 55,857,000 square yards in the whole of last year.

Europe Plan Opposed

Textile millowners should join in making representations to oppose the European free trade area plan, according to Major J. A. Barber-Lomax, Chairman of the Barber Textile Corporation Ltd., the Bolton spinning and weaving group, in his annual statement. "The Plan," he declared, "will leave the home market wide open to imported goods." We are convinced that, if European yarn and cloth and made-up garments, produced under conditions of wage rates, taxation and social services widely different from those of our Welfare State, were to enter our home market duty-free and without restriction in addition to imports from the East, our industry would be seriously affected.

"The free trade area plan was one of two political developments which threatened the stability of the textile industry," said Major Barber-Lomax. "The other was the legislation dealing with restrictive practices. The arrangements in the spinning trade which have been in force since the war providing for minimum prices for yarns to give stability to the trade and to avoid cut-throat competition are now under investigation," he continued. "These minimum prices are on a most reasonable basis and do not in practice provide adequately for replacement costs on buildings and machinery. A serious situation for both shareholders and employees in the trade would result if these arrangements were upset."

Russian Trade Threat

Warning of a Soviet trade drive to follow the launching of the Soviet earth statellite was given in Manchester by Mr. Roger French, Chairman of Thomas French and Sons, narrow fabric manufacturers. He told the annual meeting: "The Russians have recently given spectacular evidence of their achievements as a result of concentrated research. I believe that, instead of spending so much time and money on measures to protect ourselves against the possibility of their war-like ambitions, we might prepare more against their commercial penetration."

If similar research efforts were directed to industrial matters, he continued, the Russians could probably soon surpass the United States. "We must realise that schemes like European customs unions, free trade areas, common markets and the rest may well provoke them into some kind of protective retaliation."

Mill's Future

Fresh reorganisation proposals have been submitted to stockholders of Bolton Textile Mill Co., Ltd., Farnworth, by the Board. Instead of the original plan to repay 2*s.* 6*d.* per 10*s.* stock unit, repayment of 3*s.* 3*d.* per unit, but no dividend for the year ending in May 1958 was recommended. The Company, originally incorporated in 1893 with an issued capital of £125,000, now possesses two spinning mills, a doubling mill and two condenser mills.

"As regards the future," said Mr. Herbert J. Liver, the Chairman, "the indications are that the cotton trade in this country will continue to contract and your Directors feel that this Company will not be exempt from the general tendency. Providing suitable conditions exist, their policy will be to re-equip gradually one of the large spinning mills and to concentrate as far as possible the other activities of the Company from the outlying units in the other spinning mill. If it becomes apparent that the Company cannot trade profitably, the Directors will not hesitate to recommend ceasing to trade and distributing the assets."—*All Rights Reserved.*

TEXTILE INDUSTRIES FAIR

A Textile Industries Fair, sponsored with the active assistance of the Government of India, will be held in Bombay from 7th December next to 6th January 1958. The object of the Fair, it is said, is to stimulate wider public interest in the growth of the national premier industry comprising cotton, silk, rayon and jute manufactures, to enable producers to assess the progress made in the production of textile machinery, and to demonstrate the extent to which the country has achieved the goal of self-sufficiency in regard to the various requirements of the industry. Full opportunity will be taken by both Indian and foreign manufacturers of textile machinery to display their wide and varied products at the forthcoming Fair. These products include bobbins, shuttles, cotton healds, steel reeds, wire healds, cotton ropes, banding and tape pickers, starches, picking bands, roller skins and buffers, and spinning and weaving spare parts.

STEADY IMPROVEMENT IN QUALITY OF INDIAN COTTON

COTTON COMMITTEE'S ANNUAL REPORT

HAVING been established in 1921, the Indian Central Cotton Committee, which is the oldest commodity committee in India, has, during the thirty-six years of its existence, provided a common meeting ground for all sections of the cotton industry—the producers, the dealers and the consumers of cotton, besides doing valuable work in the sphere of cotton improvement. The Committee has steadily placed before itself the view that in adopting measures for dealing with cotton problems, the interests of the cotton growers must be treated as being of paramount importance.

The latest Annual Report of the Committee, which refers to 1955-56, is of more than ordinary interest because that year marked the end of the first Five-year Plan. Acreage and production figures for the year are an index of the success of the Plan in respect of cotton. A glance at the figures shows that although the acreage target was exceeded, production fell short of the target by about 230,000 bales. The target of area and production fixed for achievement at the end of the Plan period were 18 million acres and 4.23 million bales of 392 lbs. respectively and during the year 1955-56 acreage and production rose from 14.5 million acres and 2.9 million bales in 1950-51 to 20.2 million acres and four million bales respectively. The average of the trade estimates of crop during the year was 4.8 million bales. Thus, although the target in respect of output was not reached, improvement in production was substantial, by about 35 per cent. The increase in area by 1.5 million acres in 1955-56 over that in 1954-55 was attributed partly to favourable climatic conditions and partly to higher prices of cotton at the time of sowing.

Not only has there been an increase in aggregate production, the quality has also been steadily improving, as is evident from the following table:

Area and Production (staple lengthwise)

	Long staple (7/8" and above)	Medium staple (below 7/8" and above 11/16")	Short staple (11/16" and below)
Area (1,000 acres)			
1950-51	3,416 (23)	7,563 (52)	3,577 (25)
1951-52	4,839 (30)	7,071 (44)	4,288 (26)
1952-53	4,521 (29)	7,448 (47)	3,724 (24)
1953-54	5,945 (34)	7,690 (44)	3,837 (22)
1954-55	6,080 (33)	8,683 (47)	3,920 (20)
1955-56	6,965 (35)	9,313 (46)	3,952 (19)
Production (1,000 bales)			
1950-51	684 (23)	1,448 (49)	839 (28)
1951-52	918 (29)	1,224 (39)	992 (32)
1952-53	965 (29)	1,395 (41)	831 (27)
1953-54	1,442 (36)	1,651 (42)	872 (22)
1954-55	1,529 (36)	1,998 (45)	790 (19)
1955-56	1,577 (39)	1,781 (44)	662 (17)

Note.—Figures in brackets refer to percentage to total.

As compared with 1950-51, production of long- and medium-staple cotton increased by 131 and 23 per cent. respectively while that of short-staple varieties dropped by 21 per cent.

As regards yield, although there has been a steady improvement during the five-year period, in 1955-56, there was a sharp setback on account of unfavourable weather condition. Thus, the harvested yield was as low as 90 lbs. per acre, as compared with 112 lbs. in 1954-55, 104 lbs. in 1953-54, 92 lbs. in 1952-53 and 91 lbs. in 1951-52. This underlines the fact that despite the many attempts made by the Committee and the Departments of Agriculture of the State Governments cotton output continues to be determined by the climatic conditions. Vigorous efforts should therefore be made to make the cultivators all over India manure-conscious, so that the fall in yield in certain tracts due to adverse weather might be offset at least to some extent by the improvement in others. The question of increasing the yield per acre has always been engaging the attention of the Committee and the measures recommended by them are distribution of improved varieties of seed, application of manure, extension of irrigation facilities, adoption of improved culture practices such as line-sowing, proper spacing between lines and plants, intercropping, control of insect pests and diseases, etc. Propaganda for popularising these measures is being carried out under the cotton extension schemes financed by the Government of India. In the context of the upward trend in mill consumption and the crucial importance of higher exports, steps in this direction need to be intensified. Advantage should also be taken of the new irrigation projects to grow more cotton, without detriment to food production.

Crop Forecast

Improvement of the official crop forecast, so as to make it approximate to the actuals, has also been engaging the attention of the Committee. For locating the sources of errors in the forecasts and to suggest remedial measures, official forecasts are compared with the data of actual utilisation of the crop. During the year under report, the all-India official estimates of cotton (both State-wise and variety-wise) for the 1953-54 season were compared with the estimates of the actual crop arrived at on the basis of figures of cotton consumed by mills, cotton pressed, exported, held in stock, etc. The actual crop has been estimated at 4.57 million bales during the year, as compared with the final official estimate of 3.93 million bales (revised to 3.96 million bales). Thus the official estimate was found to be an underestimate by 14 per cent. of the actuals.

With a view to having an objective assessment of the production of cotton, crop-estimating surveys, based on random sampling method, have been recommended for adoption. The technique employed under the survey is to determine the average yield of *kapas* per acre by actual pickings in a certain number of plots randomly selected for the purpose and calculating the yield per acre for the tract. The data thus collected for a number of years can be utilised for purposes of preparing the final official estimates of the crop and the periodical revision of district standard outturns. These surveys are at present in operation in the States of Madhya Pradesh and Bombay as an annual routine and in Rajasthan in the initial stages.

The Committee had approved of a scheme for estimating the cost of production of cotton and its rotation crops in the major cotton growing tracts in India, at an estimated cost of Rs. 12 lakhs spread over a period of three years, to be shared equally by the Indian Central Cotton Committee, the Indian Council of Agricultural Research and the Indian Central Oilseeds Committee. The co-ordinated scheme was proposed to cover four regions, namely, Punjab and PEPSU, Gujerat and Saurashtra, *rabi* cotton tract of Karnatak and Western tract.

Research

The Committee had realised early enough that there could be no progress in crop improvement work except through research and the latter has, therefore, been the main plank of its work. The Committee has been financing a large number of research schemes for the evolution of improved cotton strains which combined not only higher standards of quality but also gave better yield. In this programme, the Committee's Technological Laboratory at Matunga, Bombay, has played a very important role. During the year under report also, the Laboratory continued to render valuable service to cotton breeders in their efforts to evolve new varieties of cotton by providing facilities for proper assessment of the spinning properties of such varieties. The cotton trade and the textile industry also took advantage of the Testing House of the Laboratory.

In addition to the technological research carried out at the laboratory, agricultural research, fundamental as well as applied, was also carried out. Agricultural research of a fundamental nature was largely conducted at the Institute of Plant Industry, Indore, and research on inter-specific hybridisation at Surat. Applied research is essentially concerned with the evolution of improved varieties for the different tracts as also the cultivation methods. As such, it has to be conducted in the respective tracts. A few of the schemes, work on which was in progress during the year, include cotton breeding in Khandesh, improvement of Wagad cotton at Viramgam and Bavla in North Gujerat, improvement of Dharwar-American cotton, improvement of Kumpta cotton in Bombay-Karnatak, etc., and manurial experiments on cultivators' fields in Bombay State.

Notices

THE COORLA SPINNING & WEAVING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE EIGHTY-FIFTH Ordinary General Meeting of the Company will be held at the Registered Office at Readymoney Mansion, Vir Nariman Road, Fort, Bombay, on Friday the 20th day of December 1957, at 4-30 p.m. (S.T.), to transact the following business:—

1. To consider and adopt the Audited Profit and Loss Account and Balance Sheet and the Reports of the Directors and Auditors for the year ended 31st March, 1957.
2. To declare a dividend and a bonus.
3. To approve the appointment of Sir Cowasjee Jehangir, Baronet, as an Ex-Officio Director of the Company on behalf of Cowasjee Jehangir & Co. Private Ltd., the Managing Agents of the Company, inasmuch as he has completed the age of 78 years, and for that purpose to consider, and if thought fit, to pass the following Resolution of which special notice has been given to the Company and is hereby given pursuant to Section 281 of the Companies Act, 1956, viz.:

   "RESOLVED that the appointment of Sir Cowasjee Jehangir, Baronet, as Ex-Officio Director of the Company on behalf of Cowasjee Jehangir & Co. Private Ltd., the Managing Agents of the Company, be and the same is hereby approved and it is hereby declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."
4. To elect a Director in place of Lady Hirabai Cowasjee Jehangir who retires by rotation but being eligible offers herself for re-election and for that purpose to consider, and if thought fit, to pass the following Resolution as a Special Resolution of which special notice has been given to the Company and is hereby given pursuant to Section 261 of the Companies Act, 1956, inasmuch as the Managing Agents of the Company are authorised by the Managing Agency Agreement between them and the Company to appoint a Director on the Board of the Company and Lady Hirabai Cowasjee Jehangir is a member and Director of the Managing Agents' Company and is liable to retirement by rotation, viz:

   "RESOLVED that Lady Hirabai Cowasjee Jehangir be and she is hereby re-elected a Director of the Company."
5. To elect a Director in place of Mr. Hirji C. Jehangir who retires by rotation but being eligible offers himself for re-election, and for that purpose to consider, and, if thought fit, to pass the following Resolution as a Special Resolution of which special notice has been given to the Company and is hereby given pursuant to Section 261 of the Companies Act, 1956, inasmuch as the Managing Agents of the Company are authorised by the Managing Agency Agreement between them and the Company to appoint a Director on the Board of the Company and Mr. Hirji C. Jehangir is a member and Director of the Managing Agents' Company and is liable to retirement by rotation, viz:

   "RESOLVED that Mr. Hirji C. Jehangir be and he is hereby re-elected a Director of the Company."
6. To appoint Auditors for the current year and to fix their remuneration.

An explanatory statement in respect of the above items of business is herewith annexed.

PLEASE NOTE THAT A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THAT THE PROXY NEED NOT BE A MEMBER.

By Order of the Board of Directors,
COWASJEE JEHANGIR & Co. PRIVATE LTD.,
Managing Agents,
COWASJEE JEHANGIR,
Chairman.

BOMBAY, *6th November* 1957.

The Transfer Books of the Company will remain closed from the 7th day of December 1957 to the 21st day of December 1957. If the dividend and bonus as recommended by the Directors are passed at the meeting, payments thereof will be made to those shareholders whose names are on the Company's Register on the 6th day of December 1957 and the payments will be made on and after the 23rd day of December 1957.

Annexure to the Notice:—

EXPLANATORY STATEMENT

To

THE SHAREHOLDERS OF
THE COORLA SPINNING & WEAVING COMPANY, LIMITED.

Dear Sir/Madam,

The Special Resolution set out in item No. 3 of the accompanying Notice is required under Section 281 of the Companies Act, 1956, as Sir Cowasjee Jehangir, Baronet, has completed the age of 78 years. Under the new Managing Agency Agreement which has been executed during this year for the appointment of Cowasjee Jehangir & Co. Private Ltd. as the Managing Agents of the Company, they are entitled to appoint an ex-officio Director on their behalf on the Board of your Company, and have accordingly appointed Sir Cowasjee Jehangir, Baronet, as an ex-officio Director of the Company on their behalf. He has been a Director of your Company for many years past and has rendered valuable services to the Company. The Directors commend to you the approval of his appointment as ex-officio Director.

The Special Resolutions set out in items 4 and 5 in the accompanying Notice are required under Section 261 of the Companies Act, 1956, and the reasons for passing the same are specified in the Notice. The Directors mentioned in the Resolutions have been on the Board for many years past and it is desirable to continue their appointment as Directors of the Company.

By Order of the Board of Directors,
COWASJEE JEHANGIR & Co. PRIVATE LTD.,
Managing Agents,
COWASJEE JEHANGIR,
Chairman.

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

AN EXTRAORDINARY GENERAL MEETING of THE TATA IRON AND STEEL COMPANY, LIMITED, will be held on Thursday, the 5th December 1957, at 4-30 p.m. (S.T.), at the Registered Office, Bombay House, 24, Bruce Street, Fort, Bombay, to transact the following business:—

1. To consider and, if thought fit, to pass the following resolution as required by Section 293 of the Companies Act, 1956:—

"RESOLVED that effective from the date of this meeting, viz., the 5th day of December 1957, Resolution No. XI, passed at the Annual General Meeting of the Company held on the 30th August, 1956, shall be and is hereby superseded and in its place the following Resolution shall be substituted:—

RESOLVED as follows:—

(A) Pursuant to sub-clause (1) (d) of Section 293 of the Companies Act, 1956, and Article 161(1) of the Articles of Association and all other enabling provisions (if any) the Company hereby consents to the borrowing by the Directors for and on behalf of the Company from the International Bank for Reconstruction and Development (hereinafter called the Bank) of all sums of money mentioned and provided in the Loan Agreement dated the 26th day of June 1956 and made between the Bank and the Company and in a further Loan Agreement to be made between the same parties and providing for an additional loan or additional loans to the Company by the Bank towards financing the Project described in Schedule 2 of the said Loan Agreement dated the 26th day of June 1956 (as may be modified and enlarged by the proposed further Loan Agreement) and upon such terms and conditions as are or may be in the said Agreement contained—subject to such modifications (if any) in the Project or in such terms and conditions as may be from time to time agreed upon between the Bank and the Directors for and on behalf of the Company—notwithstanding that as a result of such borrowings the moneys thereby borrowed together with the moneys already borrowed by the Company (apart from temporary loans, if any, obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose.

(B) Pursuant to the said Section and Article and other enabling provisions (if any) the Company hereby consents to the borrowing from time to time by the Directors for and on behalf of the Company from any party or parties whomsoever (including the Bank) of such sums of money additional to the loans under the aforesaid Loan Agreements mentioned in (A) as in the opinion of the Directors shall be required for financing the execution and completion of the Project described in Schedule 2 of the said Loan Agreement dated the 26th day of June 1956 as may be modified and enlarged by the proposed further Loan Agreement and any further modifications and additions thereto notwithstanding that as a result of such borrowings the aggregate amount of such borrowings together with the moneys already borrowed by the Company (apart from temporary loans, if any, obtained from the Company's Bankers in the ordinary course of business) and the moneys borrowed or to be hereafter borrowed by the Company in terms of Resolution (A) aforesaid will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose.

(C) Pursuant to the said Section and Article and other enabling provisions (if any) the Company hereby specifically consents in addition to the borrowings consented to under (A) and (B) aforesaid to the Directors borrowing from time to time for any of the purposes of the business of the Company any sum or sums of money (apart from temporary loans, if any, obtained from the Company's Bankers in the ordinary course of business) for an aggregate amount upto the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

2. To consent, pursuant to Section 314 of the Companies Act, 1956, to Mr. D. F. D. Lam, who is a relative of Mr. S. S. Khambata, whom the Board of Directors of the Company propose to appoint as a Director in place of the late Mr. Dinsha K. Daji, under Section 262 of the Companies Act, 1956, holding and continuing to hold an office or place of profit under the Company as an employee and, if thought fit, to pass the following Resolution as a Special Resolution:—

"RESOLVED that the Company consents to Mr. D. F. D. Lam, who is a relative of Mr. S. S. Khambata, a proposed Director of the Company, holding and continuing to hold an office or place of profit under the Company as an employee."

Notes:—(*a*) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items (1) and (2) set out above are annexed hereto.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE IN RESPECT OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

BOMBAY, *5th November* 1957.

RECOVERING MAXIMUM SUGAR FROM CANE

RESEARCH AND DEVELOPMENT WORK NEEDS FURTHER INTENSIFICATION

THE Development Council for Sugar Industry is reported to have drawn up a list of priorities for research in and investigation of problems relating to the sugar industry. It has been decided that the National Sugar Institute, Kanpur, should give priority to problems pertaining to improvement in milling efficiency of crushing plants, corrosion of machinery by cane juice, maintenance of the quality of carbonation sugar, and instrumentation in factories. Besides these, the Institute is to be asked to study problems relating to clarification of cane juice, use of vacuum filter, scale formation, extraction of more sugar from molasses, and causes of high fuel consumption in mills. It has further been decided that the Institute must also take up, in collaboration with the other research institutes, long-range problems of the sugar industry such as utilisation of by-products and purification of cane juice by 'Ion'-exchange process.

The aforesaid move of the Development Council for Sugar Industry to invest the National Sugar Institute with more responsibilities in the direction of undertaking research must be welcomed. It is true that the Institute can feel legitimately proud of its record of research and developmental work on sugar. But there is still vast scope for such work. In view of the importance of the sugar industry to the Indian economy, as also of immense potentialities for research in this industry, the research and developmental work must, indeed, be intensified. This aspect was very effectively brought out by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in the course of his inaugural speech read at the twenty-fifth annual convention of the Sugar Technologists Association of India held at Kanpur last week. The sugar technologists, Mr. Jain declared, should, while intensifying their efforts to cultivate sugarcane of higher sucrose-content, simultaneously endeavour to recover the maximum sugar from the cane. This, he added, could be done by further improving the technical efficiency of the sugar factories and by augmenting the capacity of sugar producing plants, so that cane was crushed at its optimum period of maturity and there was no need unduly to prolong the crushing season. In this connection, he observed:

"All those concerned with the sugar industry should make an all-out effort and put in their best to improve the yields of sugar per acre which will benefit the grower and the industry and help the country produce sugar at competitive costs and build up a regular export trade. . . . During the past three months, there has been a considerable decline in world prices and sugar can now be exported only at a loss. We have to build a regular export trade in sugar in the interest of our national economy and to earn the much needed foreign exchange. The sugar technologists must, therefore, make all efforts to reduce the losses by bringing down production costs through improvement in quality of cane and more efficient working."

The foregoing extract from Mr. Jain's speech will show how vital is the role assigned to the sugar technologists in the development of sugar industry. Even so, the fact remains that the Governments, Central and State, also should take effective measures designed to raise the efficiency of sugar manufacture. Viewed thus, it is, indeed, gratifying that the Government of India, on the recommendation of the Development Council, has sanctioned a scheme of extension service to the sugar industry for improving the overall efficiency of the sugar factories. It is intended that a scheme of experts equipped with necessary instruments will be visiting the sugar factories, which are willing to participate in the scheme by paying the prescribed fees, and will carry out a complete survey of their working and then suggest measures for improvements where necessary. This task has been entrusted to the National Sugar Institute. Not all the factories will need the services of the proposed team of experts, for there are quite a good number of sugar mills in the country the efficiency of which will compare favourably with the best in the world. But there is doubtless a large number of mills, including the newly established co-operatives, which stand to gain by the arrangement now decided upon. Further, the labour of these experts will give the country some idea of the defects in the vast majority of sugar mills and the ways in which they can be rectified.

In the course of his speech, Mr. Jain alluded to the record production of sugar in the past season (1956-57) which, he said, had been heartening. He revealed that an additional capacity of about 250,000 tons was expected to go into production in the current season (1957-58) and, consequently, one could anticipate "a further sizable increase in production which may take us very near to the target of 2,250,000 tons fixed under the second Five-year Plan." While such a trend is notable, there is no cause for complacency in the matter. Stressing this point, Mr. Jain remarked that the increase in sugar production during the past two years was largely on account of the undue prolongation of the crushing season. Surely, this is not a happy position. As Mr. Jain rightly pointed out, during summer, there is a fall in the sugar-content of cane and, consequently, loss in recovery. The processing of such cane becomes difficult in both the mills and the boiler houses.

Expansion of Industry

The Union Food and Agriculture Minister made a special reference to the progress in the implementation of the scheme for the expansion of sugar industry. The review reveals that the licensing of the entire target of additional capacity of one million tons was completed about a year ago. Machinery has been arranged for 39 units out of the 55 new factories licensed. In the case of expansion of existing units also, many factories have arranged for a part of the machinery required for the purpose. There has, however, been a setback in this respect due to deterioration in the foreign exchange holdings of the country, with the result that the grant of import licences for sugar machinery has almost been suspended. Efforts are, of course, being made to find foreign exchange for the machinery which has to be essentially imported. Nevertheless, Mr. Jain urged the use of more and more of indigenous machinery and equipment in the sugar industry which would enable the manufacturers to make the necessary improvement. He said: "There still exists a strong bias in favour of imported machinery in the minds of most of the industrialists and technologists in our country. While it may be true that some of the indigenously fabricated machinery is still not as good as foreign-made equipment, it is important for national development that preference is given to home-made machinery."

Raising Per-acre Yield

Proceeding, Mr. Ajit Prasad Jain laid great stress on the need for raising the per-acre yield of sugarcane with rich sucrose-content. Readers are aware that one important feature of the development programme for the sugar industry drawn up under the second Plan is that the production target of 78 million tons of sugarcane should be achieved more or less entirely by augmenting yields of cane per acre rather than by bringing more area under cultivation. A provision of as much as Rs. 10 crores is made for financing the various schemes of development. These include expansion of irrigation facilities, increased and judicious use of fertilisers, establishment of seed nurseries for spreading cultivation of only approved varieties of cane, and control of pests and diseases. Mr. Jain claimed that considerable progress was being made in all these directions. Touching on the very important subject of improving quality of sugarcane, he stated that a scheme had been devised to group small growers and test their cane on a collective basis. It will be recalled that this scheme was tried in nine sugar mills during the 1956-57 season. The experience of the working of the scheme has shown that it can be successfully operated, particularly in factories which have large sugarcane yards where the cane growers can assemble together before weighment of their cane or they can unload their cane in tippler wagons earmarked for the purpose.

The need for stepping up the yield of sugarcane quantitatively and qualitatively was stressed by Mr. T. C. Puri, I.C.S., Joint Secretary, Union Ministry of Food and Agriculture, in his presidential address (read out in his absence) to the third Biennial Conference of Sugarcane Research and Development Workers in India held at the Pusa Sugarcane Research Institute recently. Mr. Puri reminded the delegates to the conference of the fact that, as compared with other progressive countries, India had still to go a long way towards the improvement in the yield of cane; more important still was the question of sugar recovery. Incidentally, he revealed that, on the basis of recommendations made by experts, campaigns had been organised for the eradication of pests in selected areas in the Punjab and Bihar. Two epidemic zones for these diseases had been taken up and plans were also being finalised for another campaign to eradicate red rot from certain areas in Bihar, Uttar Pradesh and the Punjab.

Linking Cane Price to Quality

The question of effecting qualitative improvement in sugarcane figured prominently in the speech of Mr. Desraj Narang, President of the Sugar Technologists Association of India. If the country is to compete successfully with other countries of the world, the cost of sugar production, Mr. Narang rightly observed, must be drastically reduced and the only way to do so was to improve the quality of cane. He commended the "bold" move of the Central Government to start the scheme of payment of cane price on quality basis as an experimental measure. "There is," to quote him, "no doubt that this scheme is of fundamental importance to the sugar industry and the sooner this system on quality basis comes into vogue the better will it be for our country."

It may be recalled here that, at the meeting of the Development Council for Sugar Industry held at New Delhi on 30th July last, there was general agreement on the point that it was worthwhile to continue the experiments relating to payment for cane on the basis of quality in order to overcome the difficulties experienced and make the system perfect. The Council recommended the continuance of the scheme during the next four years, so as to coterminate with the second Five-year Plan in sugar factories—four in the North and two in the South; the statement made in these columns some three months ago (*vide Commerce* dated 10th August 1957) that the Council did not take any final decision on the question and merely referred it to the Indian Sugar Mills Association for examination later turned out to be incorrect. The aforesaid recommmendation is under the consideration of the Union Government.

Another subject which figured prominently in Mr. Narang's speech related to the disposal of molasses. As he aptly stated, the sugar factories in the Bombay State are particularly in a difficult situation. They do not know how to clear off the molasses tanks even by spending from their pockets. They may, of course, burn it away and use it as fuel, but that is only a palliative, not an economic remedy. It is time that the Development Council for Sugar Industry reviewed the position and discovered ways and means for the profitable utilisation of this valuable waste product of the industry.

SUGARCANE PRICES

In the present context of the downward trend in world sugar prices, the chances of India building up an export market in sugar are tending to become more and more bleak. Utmost emphasis is, therefore, laid on the need for enhancing the competitive capacity of Indian sugar in world markets. A section of the sugar industry believes that this can be achieved, to a great extent, by a reduction in the price of sugarcane. In the course of a communication addressed to us, Mr. C. Hardprasad, General Manager of the Managing Agents of the India Sugars and Refineries Ltd., Madras, for instance, makes the following observations:

"It must have been brought to your notice that increasing consumer resistance is being felt in the sale of sugar produced this season. The rather large increase in the excise duty was mainly effected in order to promote exports of sugar. For various reasons, the export of sugar is well-nigh impossible and the only effect the duty has actually had is to restrict inland consumption. The production of sugar last season more than covers the usual inland demand and, with a back-log of sugar from the last season, represents more sugar than can normally be consumed in the country. To discourage the sale of sugar in this context by large increase in the excise duty does not seem in the best interests of the factories, the cane growers or of the country.

"If we are unable to export sugar, one at least of the reasons is the high cost of the raw material. With the exception of Japan, Indian sugarcane is the highest priced raw material for cane sugar in the world. If you add to it the fact that the sucrose content is lower than in, say, Cuba or the Philippines, the high cost of the raw material is painfully evident. It has been estimated that the cost of production of sugarcane in the Deccan is 14 annas per maund or less while the minimum price fixed is Re. 1-7 per maund. One wonders if any other agricultural commodity pays as much to the cultivator as sugarcane does. The anomaly is greater when one notes that the sugarcane grower who makes *jaggery* (and is not fortunate

(*Continued on page 885*)

BURMA'S COAL DEPOSITS

BRITISH FIRM ASKED TO EXPEDITE SURVEY

BURMA is essentially an agricultural country and is known for its rice and teak, which hold a commanding position in the world market. In fact, these two produces play a vital part in the economy of that country. It has, however, rich mineral resources, too, namely, petroleum, silver, lead, tin and tungsten. The Namtu Mines, near Lashio, are said to be the largest silver and lead mines in the world and Mogok produces most of the world's rubies. Burma is also known to have iron ore and coal, which can form the basis of an industrial structure. The exploitation of these two important natural resources has not, however, made any notable progress.

So far as the country's solid full requirements are concerned, it is solely dependent on India for supply of coal and coke. In 1956, exports of coal to Burma from India aggregated 250,981 tons, as against 199,432 tons in 1955. It may be noted here that exports of coal to Burma had successively gone up from 126,592 tons in 1950 to 263,339 tons in 1954, but this suffered a sharp setback to 199,432 tons in 1954. A part of this decline was, however, made good in 1956, as the aforesaid figures will show.

In order to exploit the coal resources of the country and to reduce the drain on its foreign exchange reserves, the Burmese Government has, in recent years, taken various steps to promote development of mining. As a first step, it set up the Mineral Resources Development Corporation. The most important project undertaken by this Corporation was the exploitation of the coalfields at Kalewa along the Chindwin river. The initial survey of the Kalewa area, including diamond and core-drilling work, was done between April 1953 and June 1954 by an American firm under the T.C.A. aid programme.

For the second part of the work, namely, the sinking of a prospect shaft, Burmese personnel trained by a U.S. firm were employed. The first results of this venture were obtained early in January 1956, when the first consignment of coal dust, representing an output of 50 tons per day, was despatched from Kalewa to Rangoon. It is estimated that Kalewa can produce enough coal to cover Burma's needs for the next 20 years. The target of production for this mine is fixed at 300,000 tons per annum. If this target is reached, Burma can do away with Indian coal. But the task is not an easy one, as several technical difficulties remain to be overcome.

A British firm is now engaged on a four-year survey (ending March 1960) of the Kalewa coal project. The firm has also been asked to draw up a scheme for the working of the whole project, to sketch, in effect, a mining town, complete with industrial installations and workers' housing. The Burmese Ministry of Mines has requested the firm to expedite and complete its work a year ahead of schedule and submit its report by the end of the next financial year.

Several varieties of coal, ranging from mesozoic to tertiary are known to exist in Burma. So far as quantity is concerned, tertiary coals are the most important and these are largely of a lignite type. The important known areas are Lashio, Mansang, Namma, Palaung, Kalewa Shwebo, and Theindaw-Kawmapyin. Of these, Kalewa area is being exploited now. Owing to the high percentage of volatile constituents and moisture, the calorific value of the coals in these areas is usually low. They also disintegrate into small fragments on exposure to air. On account of these defects, attempts made in the past to exploit these deposits had not been successful. The determined efforts of the Government to exploit the deposits in Kalewa have, however, resulted in the discovery of new seams which are reported to contain a better (sib-bituminous) grade of coal than existed in the old seam. The coal-dust mined at Kalewa was found suitable by the Rangoon Electricity Board for its boilers while the railways found it necessary to mix it with Indian coal or to convert it into briquettes before feeding it into engines. Suitable methods for briquetting were subsequently investigated. A team of coal technologists from U.S.S.R. came to Burma recently on an assignment by the U.N.T.A.A. for advising the Ministry of Mines on the utilisation of indigenous coals, particularly in regard to the feasibility of using pulverised and briquetted soft coals for stationery and locomotive boiler firing, and to suggest other means of promoting the fullest and most economic utilisation of Kalewa coals.

The market for Kalewa coal depends to a large extent on its characteristics which are being ascertained by tests and on the development of industries and hydro-electric power, which forms part of the country's industrial development programme. It remains to be seen whether the cost of briquetting Kalewa coal would prove an economic proposition and whether Burma would be able to do away with imported coals in the near future.

COAL MINES REGULATIONS REVISED

Despite the vast progress in the field of fuel and power resources, coal still continues to be the main source of fuel and power for the large majority of the world population, but coal mining has not for that matter been made free from hazards. It is still one of the most dangerous occupations in the world. Every effort is, therefore, being made in coal mining countries to reduce the annual toll of lives in the large number of accidents that occur in the coal mines. In India, too, safety measures have been in force since 1923, when coal mines regulations were first brought into force.

Nevertheless, the three serious accidents that took place successively in 1954, 1955 and 1956 have served to focus attention on the need for tightening up the safety measures. The two courts of enquiry appointed to enquire into the accidents in 1954 and 1955 recommended the appointment of a high power commission on the lines of the U.K. Royal Commission on Safety in Coal Mines of 1935, but the Government of India did not see the necessity for such a Commission. It has, however, taken steps to revise the Indian Coal Mines Regulations and make them more comprehensive.

The new regulations, which have come into force from 24th October 1957, supersede the Indian Coal Mines Regulations, 1926, and the Coal Mines (Temporary) Regulations, 1955. The revised regulations provide for more effective measures to prevent, as also to deal with dangers from inflammable and noxious gases, dust, flooding and outbreak of fire or spontaneous heating. Provision has also been made for adequate safeguard for persons working underground and for periodical examination of shafts, inclines and outlets to the surface. The responsibilities and duties of different categories of staff engaged in coal mines have been clearly defined to ensure that various safety measures are strictly followed.

In framing the regulations, the Government of India has taken advantage of the experience gained in the working of the 1926 regulations, the I.L.O. Model Code of Safety Regulations for Coal Mines and the recommendations of the courts of inquiries which inquired into major accidents in mines in India. The State Governments, the Mining Boards and organisations of employers and workers were also consulted.

A new coke oven battery was put on gas at the Tata Steel Works in Jamshedpur on 29th October 1957. This battery, of twenty-six 20-ton ovens, will convert coal into coke to feed the blast furnaces at the rate of 700 tons per day. Built by Didier International, a West German firm, this battery forms part of Tata Steel's expansion project designed to raise steel capacity to two million tons by the middle of 1958.

FACTS BEHIND FIGURES

Astride India's rivers are rising mighty dams to bring power and plenty to the nation. With the completion of the major Plan projects, 171 million acre feet of India's river water will be harnessed. The new river valley schemes will release 2,000,000 KW power and irrigate 16 million acres. The total expenditure on irrigation, power and flood control during the next five years will be Rs. 913 crores, a 38% increase over the First Plan. These great development schemes constitute one of the most important aspects of the nation's efforts to achieve economic self-sufficiency. Texmaco, pioneer in many fields of engineering, working in technical collaboration with Voest of Linz, Austria, has constructed a wide range of hydraulic dam equipment for Rupar, Hirakud and other projects.

WORLD PLANTATION PRODUCTS

F.A.O. EXPECTS AN INCREASE IN TEA CROP

THE year 1956-57 witnessed a further expansion in world agricultural production and trade. The preliminary figures of actual output for the year exceeded not only the earlier forward estimate but also the actual production during 1955-56 by 3 per cent. The expansion in agricultural production during 1956-57 was only a continuation of the trend noted in previous years. Over the last few years, the pace of increase is of the order of about 3 per cent. per annum, which is more than one per cent. faster than the growth of world population. The tendency for prices to move against farmers continued during the year under review also. The increase in production during 1956-57 was fairly evenly distributed among the different regions of the world, except in Oceania, where the output suffered a decline.

A commodity-wise analysis of production shows that the trend was not uniform in all cases. So far as the three main plantation products—coffee, tea and rubber—are concerned, while coffee and rubber output suffered a setback, tea production was maintained at the previous year's level. The price of coffee was higher, while that of tea was generally steady. Rubber price was somewhat irregularly lower.

In a survey of the various agricultural commodities during 1956-57 and the outlook for them, in its well-known annual publication entitled *The State of Food and Agriculture*, the F.A.O. makes a brief reference to each of the three plantation products. The latest annual survey has been prepared on the basis of information available to the F.A.O. up to 30th June 1957 and the assessment of the outlook for these commodities is based on this information. Subsequent developments in the last few months have only substantiated the F.A.O.'s assessment.

Coffee

The world production of coffee in 1956-57 is estimated at about 2.65 million tons, a fall of 5.7 per cent. from the previous year's record output of 2.81 million tons. Nevertheless, the 1956-57 output is slightly higher than the earlier estimate of 2.63 million tons based on the official production targets of individual countries, and much higher than the average of 2.26 million tons for 1948-52. A fall in world output in 1956-57 was generally expected, ever since Brazil's new producing areas were damaged by frost in 1955. Besides, another contributory factor for this drop was the lower output in the main French and British African territories. The decline in these regions was, to some extent, made good by the modest rise in Asian production and larger crops of mild coffees in Central America. The output in Latin America dropped from 2.25 million tons to 2.07 million tons, while that in Africa rose from 400,000 tons to 410,000 tons.

The demand for coffee was stronger in the principal world markets resulting in an expansion of world trade in this beverage from 2.03 million tons in 1955 to 2.25 million tons in 1956, or an increase of over 10 per cent. The U.S. accounted for an import of 1.33 million tons, representing an increase of 8 per cent. over the year, though it was below the record level of import touched in 1949. A large part of the increase in import is presumed to have been consumed. The *per capita* consumption in the U.S. during 1956 was 17 per cent. higher than in the pre-war years, but it was still below the peak level touched in 1947-49. Imports into Europe, at about 750,000 to 760,000 tons, also showed an increase of 15 per cent. above 1955, though a part of the increase, according to the F.A.O., is likely to have gone into stocks at the time of the Suez crisis.

Expansion of Trade

The expansion in coffee trade, following the rise in demand, enabled the producing countries to dispose of a part of their carry-over stocks. Exports from Latin American countries during 1956 aggregated 1.75 million tons, having gone up from 1.56 million tons in 1955, and those from African territories rose from 400,000 tons to 450,000 tons. Exports from Brazil alone amounted to more than a million tons and were the highest since 1949. "If, as seems likely," the F.A.O. says, "exports continue at the same rate during the remainder of the crop year, carry-over stocks will have run very low. The Government-held Brazilian stocks of about 220,000 tons (reported to include inferior quality coffees) will not enter regular market channels, according to official declarations, unless a shortage of coffee develops."

The decline in available supplies, coupled with the pressure of demand, kept coffee prices steady at a comparatively high level. The price of the Brazilian standard quality Santos 4 rose slightly during the year, the average price for the year, at 58.1 cents per lb., being 2 per cent. higher than that in 1955. There was an exceptionally wide gap between the price of Santos 4 and of better quality milds during the major part of 1956, but it narrowed down steadily after October, as larger supplies of mild coffees came forward. Various price support measures and the efforts of the Governments of the Central American and some other Latin American countries to support mild coffee prices contributed to the strength of the market.

Outlook for Coffee

Referring to the outlook for coffee, the F.A.O. observes:

"Until the end of the summer, when the 1957 Brazilian crop will be available on world markets, no fundamental change is likely in the present rather balanced demand and supply situation and prices can be expected to remain firm. If, however, the Brazilian crop turns out as large as some forecasts indicate, a decline in prices might follow. Consumption in overseas markets is likely to continue the upward trend, but, in both producing and importing countries the expansion in consumption which has been affected by prices during the last few years, will probably be comparatively gradual."

The latest trade estimate of world coffee crop for 1957-58, it may be noted, places the output at 3.03 million tons, as against 2.65 million tons in 1956-57, the major part of the expansion being accounted for by Brazil. During the past few months, coffee prices have taken a downward trend, except for Brazilian coffee, due to the pressure of supplies. The steady trend of Brazilian coffee is due to the support of the Government, but it remains to be seen how far this Government will be able to take the burden of increased supplies, especially as its balance of payments position is not quite comfortable and its foreign exchange reserves need to be augmented.

Tea

Despite the closure of the plucking season in North India earlier than usual, on apprehensions of a surplus of production over consumption, the 1956 crop of Indian tea turned out to be as large as in the previous year. The production in Pakistan, Japan and Africa was larger but that was offset, to some extent, by a slightly lower output in Ceylon, on account of drought and frost. On the whole, world production of tea is estimated to exceed slightly the output of 675,000 tons.

Demand from export markets was strong and domestic consumption in producing countries was also on the high side. Exports from India, mainly to the U.K., showed an increase of 42 per cent., but the export unit value of Indian tea was about 20 per cent. lower. Exports from Indonesia, Pakistan and Africa were also larger, which more than made good the fall in exports from Ceylon, Japan and Taiwan. Total world exports from producing countries aggregated about 510,000 tons, or almost 20 per cent. more than in 1955. Imports into the U.K., the Dominions and the Netherlands were higher, while U.S. imports recorded a fall for the second year in succession. Domestic consumption in India was estimated at 96,000 tons, an increase of 18,000 tons over that in 1955. The consumption in Pakistan absorbed about 60 per cent. of the country's total output and the increase in internal demand in Japan accounted for a decline in exports from that country.

Referring to the trend of tea prices during 1956, the F.A.O. points out that it was generally steady, but the gap between the common and quality teas widened, at times very considerably. In the first half of the year, the larger Indian crop, together with the heavy carry forward stocks, tended to depress prices at the Calcutta auctions, but the Suez crisis brought about a rise in price, particularly at the London auctions. The delay in shipments, the decline in stocks and heavy buying even at the retail level, pushed up the London prices in the last quarter of 1956 by 37 per cent. over those in the preceding nine months. The earlier months of 1957, however, witnessed the restoration of more normal shipping conditions and arrivals were heavy, causing a recession in prices in London from January to March. In the subsequent few months, the price differential between London and Far East auctions almost disappeared.

The outlook does not seem to be promising and, as the leading producer of tea in the world, India will be the worst affected by the lean prospects. In this connection, the F.A.O. observes:

"Selective buying may result in a weaker trend for all but high quality teas, until consumers' stocks have been worked off. Later in the year, however, markets for the new crops will be strengthened by the absence of large carry-over stocks in producing countries. It is as yet too early to give an estimate of the 1957 crop, but the long-term trend points upward. In view of rising production costs in the Far Eastern countries and steadily growing competition from lower priced African tea, the problems of raising yields and improving quality become more pressing."

The latest figures of tea crop suggest that, despite the fall in production of North India and Pakistan, the 1957 world crop might turn out to be larger than the 1956 output, unless production in the last quarter of 1957 in Ceylon turns out to be less than expected. A new factor that has to be taken into account is Russian buying of tea. The magnitude of this factor, however, cannot be gauged at the time of writing.

Rubber

Production of natural rubber during 1956 recorded a slight decline to 1.87 million tons from the peak level of 1.94 million tons touched in 1955, while synthetic rubber output increased by about 10 per cent. Consequent on the decline in prices during the earlier months of the year, the small holders in Indonesia and Malaya tapped less, but in the larger Malayan estates, in which replanting with higher yielding materials had been in operation for long, and in the estates in Ceylon and other South-East Asian countries, production was either well maintained or increased.

There was a shrinkage in world consumption of natural and synthetic rubber during the year, in contrast to the marked expansion in the previous years, mainly as a result of a recession in the U.S., which consumes about 50 per cent. of the world total. The total world consumption for the year, at about 3 million tons, was, however, 25 per cent. more than that five years ago, the expansion during this period being somewhat less marked in natural than in synthetic rubber. Notwithstanding the increasing use of synthetic rubber, the consumption of natural rubber during 1956 was ahead of production. At the end of the year, the stocks in producing countries were slightly larger, but this was more than offset by a reduction in floating stocks and stocks in consuming countries, so that the total stocks were lower. It may be noted, in this connection, that, despite this fall, the overall stocks at the end of 1956 were slightly larger than five years before, but, consequent on the marked expansion in consumption during these years, they represented only 5½ months' consumption, as against 6¾ months' consumption five years before.

The price of natural rubber recorded a decline during the first half of 1956 from the Korean boom peak touched early in the year, on account of the somewhat less favourable short-term outlook for consumption. Thereafter, the uncertainty about supply and the rising trend in freight rates as a result of the Suez crisis, caused an erratic trend in price. An irregular rise was recorded in the second half of 1956, but this was followed by a recession in the early months of 1957.

Prospects for Rubber

The long-term outlook for natural rubber appears to be favourable, with the prospect of an increase in the requirements of road and air transport and newer uses of the commodity in roads, furniture, etc. The widely varying volume of automobile production, however, affects the more immediate outlook. "Recovery in the U.S. and the U.K. production from the 1956 recession now appears to be in prospect," the F.A.O. survey goes on to point out, and adds, "if consumption in other regions and other uses is maintained, the total requirements in 1957-58 may show a sizable advance." It must at the same time be noted that the new synthetic rubber production capacity is scheduled to grow rapidly in the U.S. during 1957 and forge ahead in the U.K. and other countries. This might arrest a rise in the price of natural rubber and lead to some change in the direction of exports. In other words, this means that producers of natural rubber will have to be less dependent on those countries which had been the main consumers of their product all along and find new export markets.

a pilfer-proof package

for every product!

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

MAGNITUDE OF HOUSING PROBLEM

SHORTAGE GAINING MOMENTUM

THE problem of providing houses for India's teeming millions has proved to be as intractable as ever. Since constructional activity has woefully lagged behind the rising demand for accommodation, the shortages in housing, in both urban and rural areas, have been acute to a degree. The situation demands that a dynamic housing policy should be implemented with speed and vigour, if the housing shortages are not to grow worse than they are now. In this connection, it is gratifying to note from the deliberations of the State Housing Ministers' Conference, held last week in Mysore, that the Central and State Governments are fully alive to the gravity of the problem, though financial and other considerations prevent them from undertaking a bolder housing programme.

The Union Minister for Works, Housing and Supply, Mr. K. C. Reddy, in the course of his address at the Conference, gave a comprehensive review of the housing situation in the country and the Central and State Governments' efforts at relieving shortages in housing. Referring to the "gigantic task" which the authors of the first Five-year Plan had to face on the housing front, Mr. Reddy stated that they knew that the urban population in the country had increased by 10.4 million between 1931 and 1941 and by 18.1 million between 1941 and 1951. During these decades, the number of occupied houses in urban areas had increased by only 1.8 million and 1.7 million, respectively. In 1951, on the eve of the first Five-year Plan, the total urban population was 61.9 million, the number of occupied houses 10.3 million and the number of households 12.8 million. On the basis that each household should be provided with a separate house, the shortage of urban housing in 1951 was about 2.5 million dwellings.

Two Important Schemes

Two important housing schemes, initiated by the Union Government in the first Five-year Plan, are the subsidised industrial housing scheme in September 1952, and the low-income group housing scheme in November 1954. During the period of the first Plan, about 43,831 houses came up for the industrial workers and the number rose to 63,452 by the end of August this year. Out of Rs. 25.33 crores sanctioned so far, it is revealed that Rs. 23.27 crores will be taken up by the State Government, Rs. 1.68 crore by the industrial employers and Rs. 38 lakhs by the co-operatives of industrial workers. Under the low-income group housing scheme, which envisages the grant of loans only, as against both loans and subsidy under the subsidised industrial housing scheme, the total allocation made to the States during the first Plan was Rs. 21.53 crores, though the sum actually drawn was only Rs. 11.10 crores. The number of houses built in the first Plan period was 3,940 only, but the number rose to 13,512 by the end of August 1957, with 13,168 houses under various stages of construction. From the inception of the scheme, a sum of Rs. 18.41 crores has been disbursed to the State Governments.

Besides the two schemes mentioned above, the Government has launched two other programmes for housing, though they strictly belong to the period of the second Five-year Plan. The plantation labour housing scheme was introduced in April 1956, in order to give loan assistance to planters and the State Governments for the construction of houses for plantation labour. A sum of Rs. 2 crores has been provided in the second Plan for the construction of about 11,000 houses. The other scheme is the slum-clearance scheme which came into operation in May 1956, for which a sum of Rs. 20 crores (inclusive of the State's share of Rs. 5 crores) has been earmarked in the second Plan; out of the Central Government's share, a sum of Rs. 11.14 crores has already been allotted to the States. Under this scheme, the Government has undertaken to provide subsidy to the tune of 25 per cent. of the cost of an approved slum-clearance project and a long-term loan to cover 50 per cent. of the cost. It is estimated that the scheme will be able to provide about 110,000 developed plots or tenements for the slum-dwellers.

In addition to these schemes, the various Ministries of the Central Government, such as Railways and Defence, have their own housing programmes. Some State Governments have also taken in hand housing construction for their employees. There is, of course, construction of houses in the private sector. Taking all this activity together, the public authorities are estimated to have built 742,000 houses or tenements during the first Plan period and the private sector has added 600,000 residential units, thus bringing the total to 1.3 million houses during the period of the Plan.

During the period of the second Five-year Plan, the addition to urban houses is estimated at 306,000. These are to be constructed from the allotment of Rs. 105 crores for Government-aided urban housing. In addition, it is hoped that the Central and State Governments will build about 769,000 houses for their own employees and for workers in coal and mica mines and in plantations. The private sector is expected to add 800,000 urban houses. Thus, the second Plan envisages an addition of 1.9 million units to urban housing, as against 1.3 million units added during the first Plan.

Not Large

Emphasising that the development contemplated in the second Plan was not sufficiently large in order to meet the housing situation, Mr. Reddy said:

"I have already mentioned that the shortage of housing in 1951 was about 2.5 million. For the decade 1951-61, when the rise in urban population is expected to be about 20.6 million, the number of houses required in urban areas—after taking into account the shortfall of 2.5 million houses in 1951, the new requirements, the demolition of old houses and the replacement of the over-aged—is estimated to be about 8.9 million houses. During this decade, we will, however, have got only 3.2 million houses—1.3 million in the first Plan and 1.9 million in the second Plan. Thus, the shortage in 1961 will be about 5.7 million houses or at least twice as much as it was in 1951. Apart from quantity, the quality of our housing is far from satisfactory. A national sample survey made recently in 53 towns and the four cities of Madras, Delhi, Calcutta and Bombay revealed that nearly one-fourth of the houses had plinths, walls and roofs of mud. About 44 per cent. of the houses had only one room, 28 per cent. two rooms, 12 per cent. three rooms and 16 per cent. four and more. In Madras, it was estimated, in 1947, that 30,000 out of the 90,000 houses in the old city were just slum-dwellings. In Bombay City, about 20,000 are over 60 years old and, in Calcutta, approximately one-fourth of the population lives in slum *bastees* occupying about one-eighth of the city's living space. In Kanpur City, more than 60 per cent. of the population lives in *katcha* houses in the slum areas and, in Delhi and Ahmedabad, more than 20 per cent. of the population are slum-dwellers."

If the problem of urban housing is thus difficult, the problem of rural housing is much more so. As Mr. Reddy pointed out, the situation in villages "in all conscience, is no better than what it is in urban areas; in fact, it is far worse." It is estimated that there are 558,089 villages, the total number of houses in the villages being 54 million for a population of 295 million. About 50 million of rural houses, it is computed, need to be rebuilt or substantially improved. It is also necessary to provide wider streets, satisfactory drainage arrangements and other amenities. All this, as Mr. Reddy said, will involve an "expenditure running into several thousand crores of rupees." He added: "To be staggered by this figure and to do nothing about it would be a counsel of despair." The Government's approach to the problem consists in enlisting the services of the local people. Such an approach is necessitated by the low levels of income of the people in the rural areas. Thus, it is estimated that 28 per cent. of the rural households have a monthly income ranging between Re. 1 to Rs. 50, 34 per cent. between Rs. 51 and Rs. 100 and only 18 per cent. have incomes between Rs. 101 and Rs. 150.

The Government's rural housing programme, according to Mr. Reddy, is based on the principle of aided self-help. Under this programme, every village household is required to contribute at least 50 per cent. of the cost from its own resources in the shape of local building materials and/or the manual labour of the members of the household. Each household will be aided with long-term loan-financing at a reasonable rate of interest, the amount of loan not exceeding 50 per cent. of the cost of construction (excluding land) subject to a maximum of Rs. 1,500 per house. The reconstruction of each selected village will be spread over approximately 10 years and, as the number of villages will rise progressively from 500 in 1957-58 to 5,000 in 1960-61, the liability for loan-financing during the second Plan period is estimated at Rs. 10 crores. A certain measure of subsidy will also be made available by the Central Government to the very backward and poor sections of the village community which are not in a position to repay the loans for house-building purposes and which are eligible for this aid under the Plan. The programme will mainly be confined to villages in suitable Community Development and Extension Service Blocks. This is because a certain amount of consciousness for a better standard of living and for increasing agricultural production has already been roused among the inhabitants and some administrative machinery with knowledge of local conditions also exists in these blocks. Moreover, the all-round economic development in the villages selected in these blocks will enable the beneficiaries to maintain the houses and repay the loans without undue hardship.

Suitable Sites

After reviewing the progress of the implementation of the Government-sponsored housing schemes, the Conference suggested a number of measures calculated to further accelerate the progress of the schemes. Thus, it was suggested that the State Governments should acquire suitable sites and develop them either for constructing houses themselves or for selling the developed sites to employees' co-operatives on a no-profit-no-loss basis. They should also pass enabling legislation for purchases of land for housing purposes at reasonable prices and liberalise the terms of disbursement of financial assistance to co-operatives of industrial workers.

The resolution on the village housing projects scheme stated that there was no justification to discriminate between agricultural labour in rural areas or the slum dweller in the urban areas in the matter of financial aid for housing and urged that the Centre should give 25 per cent. of the cost of the construction or improvement of the house as a subsidy and another 25 per cent. as loan to the poor and deserving classes, including agricultural labour. Other points made out by the resolution were: (1) the allotment of Rs. 10 crores for village housing projects should be increased; (2) State Governments should provide land at reasonable rates to persons receiving the subsidy for building houses and (3) the Centre and the States should share in the proportion of 75 to 25 the cost involved in setting up the machinery for the implementation of the programme and the training of technical staff for the execution of the housing projects.

The Conference expressed the view that, in the matter of sanctioning schemes submitted by States, the Central Government should lay down broad principles to be followed in the formulation of such schemes and then leave it to the State Governments to sanction individual schemes within the framework of broad policy and principles laid down by the Centre. In order to ensure satisfactory progress of housing programmes, the Conference thought that it was necessary to have a separate housing department in each State with adequate technical and other personnel for the co-ordination and implementation of the various housing schemes. The Conference also recommended the setting up of housing corporations or housing boards in all the States in order to channelise into housing the funds drawn from the private sector as well as banks, investment companies and other financial institutions. It requested the Centre to pass legislation necessary for the establishment of such corporations or boards.

The deliberations of the Conference are valuable for the reason that they serve to spotlight the magnitude of the housing problem and to indicate some of the lines on which the Central and State Governments should function in order to relieve housing shortages. Nevertheless, it must be admitted that the Conference did not tackle what is perhaps the crux of the housing problem, the scarcity of building materials and the paucity of skilled labour. There is also the

(*Continued on page 895*)

NEW PRODUCTS AND PROCESSES

New Ceramic

A NEW ceramic material that will withstand exceptionally high temperatures and pressures, which has been developed for atomic energy work, may soon be available for industrial use. The material which is called cerium sulphide is said by the scientists responsible for developing it, to be able to withstand temperatures of up to 4,500 degrees Fahrenheit. It is also so resistant to corrosion that it can withstand the corrosive action of even the most corrosive of materials such as plutonium. Indeed, it has already been used for the manufacture of containers for holding this atomic fuel. Cerium sulphide is a metal-like ceramic. Since it can be formed and fabricated, it is claimed, without exceptional difficulty, it is expected that it will find a number of uses in the chemical industry where either very corrosive materials have to be handled, or where containers capable of withstanding exceptionally high temperatures are required.

Novel Microscope

Beams of ultrasonic waves will be used to see and examine specimens of materials in a new type of microscope which is being developed in the U.K. Although the new microscope is still under development, it seems likely that it will open up a number of new fields of microscope technology. The use of ultrasonic waves instead of either beams of light (as used in the conventional optical microscope), or beams of electron atomic particles (as used in the electron microscope) should enable objects, such as flaws, which are hidden deep inside pieces of metal, concrete, or wood, to be examined with an exactitude hitherto impossible. Construction of a prototype of the new microscope is already in hand and the machine should be in operation within the next two years.

New Hymatic Hot Air Valve

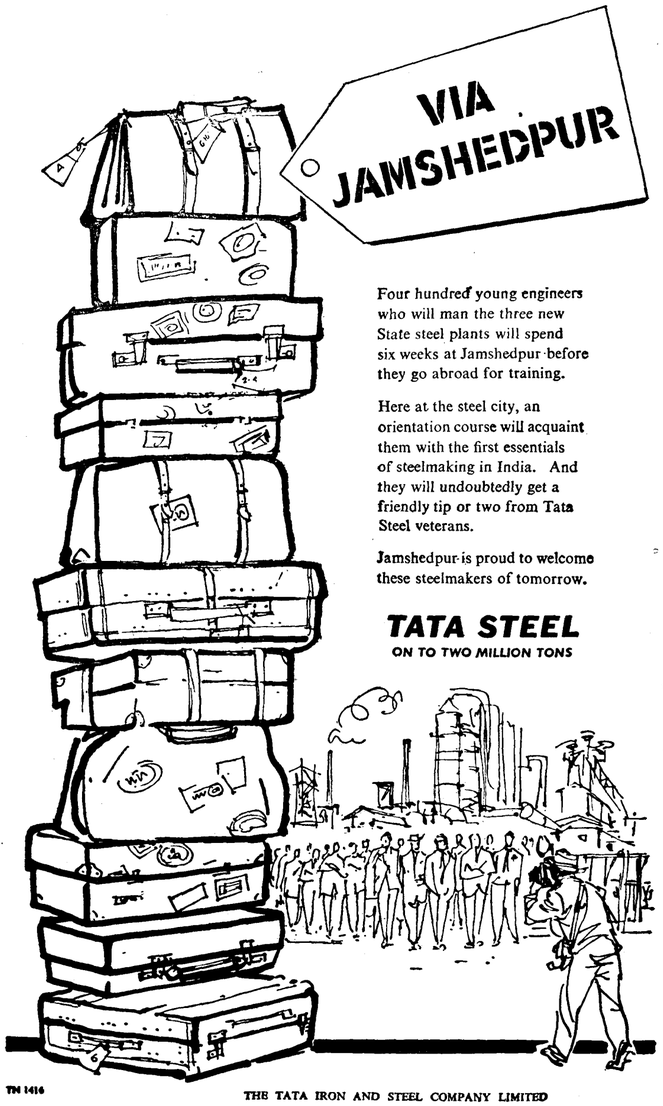
To the wide range of valves for aircraft pneumatic systems produced by the Hymatic Engineering Company, Ltd., of Worcestershire, England, is now added type MD. 32, which has been specially developed for the production of Britain's Comet IV airliner. It is a hot air electro-pneumatic stop valve with a thermal range from minus 40°C. ambient to plus 365°C. The valve can be kept continuously energised at the highest temperatures. When the solenoid is energised, air from the upstream side of the valve is allowed to pass through a pilot valve on to the rear piston of a larger area than the valve poppet, thus opening the valve. It is closed by shutting off the flow of upstream air to the piston. Residual air bleeds past the piston clearance to the spring chamber, which is vented to atmosphere. The MD. 32 is normally used for pressures up to 150 lbs. per sq. in. In addition, it can be used as a flow controlling orifice in its own position. When functioning in this manner it has a pressure drop of 7 lbs. per sq. in. at 5 lbs. per minute flow. Applications for the MD. 32 on the Comet Four jet airliner include control of compressor-bled air for wing de-icing and emergency fuel jettisoning. The specification of this new valve also makes it suitable for use to control all types of hot air pneumatic systems, including the remote control and selection of air supplies to pneumatic emergency systems, for airborne guided weapons, and in boundary layer control of flows over aerofoils.

Heavy-weight Roller Bearings

At the European Machine Tool Exhibition, held recently in Hanover, Germany, bearings for a wide variety of applications were shown by British Timken Ltd., of Northamptonshire, one of the world's leading manufacturers and exporters of tapered roller bearings. The majority of the exhibits comprised bearings for work and cutter spindles, including grinding spindles which are usually met by bearings from the precision ranges. There were, however, also bearings from the standard ranges suitable for pumps, controls, drives and gear shafts. Two features of these bearings are of special interest. First, they use the entire length of the rolling element to sustain load. And additionally, roller bearings by this firm are made from case-hardened nickel alloy steel. When these bearings are used in pairs, the fact that the rollers are set at an angle means that the loads can be carried in all directions. Some of these bearings used in machine tool construction are machined to tolerances as fine as 0.00075".

Powerful Air Conditioner

A new aircraft air conditioning system that reduces the temperature of air 1,000°F. in less than one second is now in production at the Hamilton Standard division of the United Aircraft Corporation in the U.S. It incorporates more than 120 operating components and many new concepts in aircraft air conditioning. Designed to meet the heat problems created by planes flying at supersonic speeds, the system receives large quantities of hot compressed air from the engines, and cools it by the use of heat exchangers and air cycle refrigeration units. It then redistributes the cold air to cool the crew, the plane's electronic equipment and tyres. In addition, the new system defrosts the windshield, clears it of rain by the use of air jets, and maintains air pressure inside the cabin regardless of the plane's altitude. Engineers have calculated that the system equals an ice-making plant with a capacity of 160 tons of ice a day.



Four hundred young engineers who will man the three new State steel plants will spend six weeks at Jamshedpur before they go abroad for training.

Here at the steel city, an orientation course will acquaint them with the first essentials of steelmaking in India. And they will undoubtedly get a friendly tip or two from Tata Steel veterans.

Jamshedpur is proud to welcome these steelmakers of tomorrow.

BRITISH LABOUR PARTY'S PENSION PLAN

LIFE OFFICES SAY IT IS INEQUITABLE, INFLATIONARY AND COSTLY

WITH a population aging more rapidly than that of any other country in the world, the British nation is naturally getting more and more superannuation-conscious. For, out of an electorate of some 36 million, half are over 47; over seven million of these 18 million are already beyond statutory pension age and the remaining 11 million are, on an average, within ten years of pension age. The capacity of this section of the voting population to influence the electoral destiny of the national political parties is such that pension schemes have become a virtual trump card in the hustlings. Manipulation of the statutory pension rates on the eve of the general election has become one of the favourite vote-catching instruments of both the Conservative and Labour parties. Having in view the next general election and quite in keeping with its avowed objective of a socialist welfare State, the British Labour Party put forth, in May last, a plan for a national pension scheme in an important policy document entitled *National Superannuation*. The scheme, widely advertised by the Party as providing "retirement on half-pay for all," was presented to the Labour Party Conference at Brighton last month and was approved. The future Labour Government is not committed either to precise figures for contributions and benefits or to the financial implications of the considerable number of the detailed problems discussed in the document. Although the scheme is not claimed to be the last word on the subject but is regarded as only a blue print submitted for public scrutiny and criticism, it is expected to be an important show-piece of the Party's election manifesto. As was only to be expected, the scheme aroused much controversy and discussion in Britain. Such competent bodies as the British Life Offices' Association, as well as a number of leading economists and Members of Parliament have examined the various implications of the scheme pointing out its defects and merits.

The Existing Scheme

In order to bring out the distinctive features of the proposed pension plan, a reference may be made to the prevailing scheme. The present National Insurance retirement pensions scheme is based on the principles laid down in the Beveridge Report which were endorsed by the War-time National Government supported by all the political parties and embodied in the National Insurance Act, 1946. The essential principle of this scheme is the provision of a uniform basic pension on ceasing work at the normal pension age (65 for males and 60 for females). The amount of this basic pension is not automatically dependent on the cost of living, but there have been three upward adjustments since 1948, when the 1946 Act came into full force. The pension at present is £3 5s. per week for married couples and £2 per week for single persons. If retirement from work is deferred beyond the normal pension age, the basic pension is increased by an amount dependent upon the period of deferment and the amount of additional contributions paid.

Under the Labour Party National Superannuation scheme, employees will contribute a fixed percentage of income into a fund and on retirement will draw a pension related to previous income. Total contributions should be equivalent to 10 per cent. of earnings, with the employers paying 5 per cent., workers 3 per cent. and the Government the remaining 2 per cent. The existing National Insurance scheme will continue and will be gradually absorbed into the Superannuation scheme. The scheme is compulsory in the sense that every worker, who is not covered by an approved private pension plan, will have to join it. Workers who are already covered by private pension schemes are permitted to opt out of the scheme. But they will continue to pay the present flat rate contribution and will draw a flat rate benefit, on retirement, of £3 a week. Others will draw, over and above the £3, a differential payment based on contributions.

Benefits

Assuming the scheme operated from the year 1960, the benefits, accruing to pensioners reaching 65 years of age, in 1965 and later years are indicated by the following table:

Average weekly earnings	Pension per week in £					
	1965		1970		1980	2000
(£)	Single person	Married man*	Single person	Married man*	Man or woman	Man or woman
60 ..	5–10	6–15	8–0	9–5	13–0	14–8†
24 ..	4–0	5–5	5–0	6–5	7–0	9–0
18 ..	3–15	5–0	4–10	5–15	6–0	7–10
12 ..	3–10	4–15	4–0	5–5	5–0	6–0
9 ..	3–7	4–12	3–15	5–0	4–10	5–5
6 ..	3–5	4–10†	3–10	4–10†	4–0	4–10†

* Including wife's minimum allowance.
† Subject to 75 per cent. maximum.
‡ Subject to maximum pension of £750 per annum.

Thus, a single person, whose average weekly earnings were £12 and who attained the age of 65 in 1965, would receive a pension of £3 10s. (a couple of £4 15s.). Those reaching the age of 65 in later years would qualify for higher pensions, and it will not be until the year 2,000 that the average worker will be able to retire on pension equivalent to half his average earnings.

Safeguard Against Inflation

There would be a ceiling on both contributions and benefits. Contributions would be levied only on earnings upto four times the national average earnings. At present, this would be something over £2,000. Accordingly, anyone having an annual income of over £2,000 will not have to pay a contribution on the excess of this income. Although payments and benefits are to be roughly on a proportional basis, the scheme, as is evident from the table, will have a bias in favour of the lowest income groups. Thus, the maximum pension will be £15 a week or £750 a year and the minimum will be £3 a week. Pensions will be payable at 65 and over. The level of pensions will be adjusted each year according to changes in a special pensions cost of living index to be prepared. In order to ensure that pensions maintain their share of an expanding national income, when a person reaches 65, his previous contributions throughout the whole of his working life will be reassessed on the basis of the increase in national income during this time.

As regards the financial implications, it is calculated that the fund will accumulate a surplus for investment of about £385 million in its first year and that, on the basis of constant prices and constant national income, it will still have a surplus of about £280 million in 1980. Thereafter, the position will become progressively less sound, as payments build up to their full level. But if, as seems reasonable to assume, there is an increase in the national income the fund should still be solvent, it is claimed, by the year 2030, for, while the cost of pensions increases with prices, contributions also will increase with earnings. Thus, it is contended, the income of the fund will increase at a rate higher than the expenditure. Funds accruing to the scheme will be controlled by Government-appointed trustees with power to invest in equities. Nevertheless, the financial implication of such a scheme to the Exchequer is fully realised by the National Executive of the Labour Party. It observes: "It should be frankly stated that, in 20 years' time, the Exchequer's liability may well present a problem, unless employers and employees are so convinced of the advantages of national superannuation that they are prepared to finance it by increased contributions." It is also contended that the proposed scheme is more solvent than the present National Insurance Fund, because the latter, according to the Executive, is headed for bankruptcy anyway, the estimated deficit by 1980 on it being roughly estimated at £424 million.

Private Pension Schemes

The authors of the Labour Party's plan state that the existing private occupational pension schemes might continue as alternatives, provided they comply with the following conditions:

(1) Contributions and benefits should not compare unfavourably with those in the national scheme. Excessive tax-free lump sums would not be approved.

(2) All pension rights in the scheme should be vested in the members. Arrangements should be made for full transferability of pension rights (including the value of employers' contributions) either through the payment of the transfer value of the accrued rights, or the provisions of "cold storage" pensions.

(3) Individual members should be free to "contract into" the national scheme, taking their full accrued rights with them.

(4) It would be illegal for an employer to make membership of the scheme a condition of employment for those who prefer to be members of the National Superannuation scheme.

(5) All private occupational pension schemes should be funded and an actuarial report should be published regularly.

(6) In cases of dispute, there should be facilities for appeal to an independent tribunal.

It may be noted, in this connection, that about one-third of the U.K.'s 24 million working population is covered by private pension schemes.

Life Offices' View

The British Life Offices' Association and the Associated Scottish Life Offices have made an exhaustive examination of the financial and other implications of the scheme and their observations and conclusions have been published in a booklet entitled the *Pensions Problem*. The booklet outlines the general principle that should be followed in evolving any pension scheme and examines the Labour Party's proposals in the light of these principles. The Association hold the view that the scheme is unsound in principle, inequitous in practice, inflationary in effect and too costly to work. It is clearly stated at the outset that every pension has to be paid for by somebody, at some time and in some defined way. The difference between private and State schemes arises from their differing arrangements for meeting the costs. Contributions to private schemes are paid in advance and accumulated in an investment fund, whilst pension payments in State schemes, when they become due, are made largely out of current contributions and taxation at the time. The main point of difference is that, in a State scheme, the people are not required to make an insurance contribution properly related to benefits. It is, in fact, imposing a charge which is a form of redistribution of income.

The Associations, however, do not deny the essential function of State retirement pensions. "Where there is a pressing social need among the elderly," they observe, "the State and only the State can act." In that event, it follows, that the State must raise the necessary money but a normal "payment-in-advance" as in the private insurance system would be impossible. It is necessary, therefore, that there should be redistribution of income. But then, the Associations' aver, the contributions should be bluntly called a tax—a 'social security tax' or a pensions tax and should not be confused with an insurance contribution.

Benefits Should be Uniform

The Associations contend that the State should not do more than ensure that the basic requirement of the elderly are met through taxation and that it would be unfair to extend the system of taxation adopted for this purpose in order to provide some people with a substantially higher standard of living after retirement.

It is pointed out that it has been an accepted principle in Britain that the level of State benefits, whether for retirement or for unemployment or ill-health, should be the same for all. According to the aforesaid Associations, "the conception of the basic requirements implies that State pension benefits should be uniform or nearly so. If it should be felt that circumstances call for some departure from the principle of uniformity, then the departure should be of a very limited character." According to them, the provision of pensions beyond the level of basic requirements should be left to voluntary arrangements under private schemes, soundly financed and flexible in nature.

Heavy Cost

In reviewing the proposals put forward by the Labour Party, the Associations show that the costs of this scheme would be very high—higher, indeed, than estimated. They say that the effect of the proposed charges on the individual is not generally understood. "Most people would say that they would be willing to pay 3 per cent. of their earnings to obtain the benefit of such a pension scheme, but, in fact, they would have to pay something over 10 per cent. of their earnings, because that is what it would amount to as an average over the whole population. The wage-earner would not only

SCOPE FOR NUCLEAR ENERGY IN FREE WORLD

WIDE USE OF THIS POWER MAY TAKE PLACE IN INDIA ONLY BEYOND 1975-80

[An interesting examination of the potential growth of nuclear energy production in the free world, as well as of its likely limitations in the next 25 years or so, is contained in a report entitled Productive Uses of Nuclear Energy, *published by the National Planning Association (at Washington, D.C.), a non-profit making privately sponsored economic research organisation in the U.S. The nuclear energy needs of the underdeveloped countries are examined in a special chapter, in which there is a reference to the position and prospects for this new power in India. The N.P.A.'s study is, therefore, of considerable value to this country.—Ed.]*

A NEW report by the U.S. National Planning Association foresees the possible establishment in the free world by 1980 of nuclear power capacity within the range 197.5 million kw. to 430.5 million kw. By 1965, it foresees nuclear power capacity of between 11 million kw. and 24.5 million kw. These figures compare with total conventional power capacity in 1955 of about 287 million kw., and imply that, by 1980, the contribution of nuclear plants to electric generating capacity might lie somewhere between one-fifth and two-fifths of the then total. The wide range of the forecasts, however, indicates how high a degree of uncertainty still pervades this field.

The fundamental assumptions—adopted as working hypotheses—on which these predictions are based relate to the prospective costs of nuclear power. It is assumed that in general, reliable, competitive, large nuclear power plants will be in operation by 1965 able to generate electricity at a cost of 11 mills per kw.h. (at 50 per cent. load factor in privately financed plants). By 1975-80, costs of 5 to 6 mills per kw.h. are assumed. When this stage had been reached, atomic energy would be competitive in all but a few places in the free world with power from coal or oil. (For comparison, the cost of electricity from nuclear power stations now being built in the U.K. is expected, on the basis of interest rates, etc., applicable there, to be equivalent to about 11 to 12 mills per kw.h. at 50 per cent. load factor.) Coupled with these assumptions on costs, it is assumed also that the free world's total energy consumption will increase at an average compound rate of 3 to 3½ per cent. annually, thus doubling requirements by 1975-80, while electricity consumption will almost quadruple.

United States

In the United States, it is anticipated that, by 1965, nuclear energy—electric power or industrial process heat—will become competitive with conventional energy sources only in the higher cost regions, such as New England, the Upper Mississippi Valley and Florida. Thereafter, it will become competitive, it is believed, in a progressively wider area. It will do this, however, largely through reductions in its own costs, and not as a result of increases in the delivered costs of conventional fuels. These latter would increase, even in the absence of competitive nuclear energy, by only about 15 to 20 per cent. up to 1980, according to the report, though natural gas prices might rise more. However, if restrictions on U.S. oil imports were to be continued or if Middle East oil became unavailable, it is implied that a bigger rise in conventional fuel prices might occur, and that, in this case, nuclear energy would exercise a restraining influence.

Considerations of this nature apart, it is expected that, for some decades, the United States will continue to be predominantly a consumer of oil and natural gas. By 1980, it is predicted that the U.S. real Gross National Product will increase by 130 per cent. over 1955, that U.S. total energy consumption will at least double, and that U.S. electricity consumption will be trebled or quadrupled. Of total energy consumed in 1980, nuclear sources are expected to supply about 9 per cent., while oil at twice its 1955 volume would account for 41.5 per cent., and natural gas 23 per cent. representing a rise of more than two-thirds in volume. The losses of potential markets to nuclear energy by coal and oil are expected by 1980 to be equivalent to only about 15 per cent. and 7 per cent., respectively, of the then much higher rates of coal and oil sales.

Interestingly, the N.P.A. report emphasises the fact that, besides nuclear power, other applications of nuclear energy, namely, in process heat, ship propulsion and radiation, may become economically important in many countries. With regard to low temperature process heat (a few hundred degrees), its economic feasibility appears as promising in the near future as nuclear power production. Low temperature heat would be competitive in several U.S. industrial applications at a cost of 50 to 60 cents per million B.T.U., which is about double present average U.S. costs in this field. Given large-scale operations which would permit the use of an economic size reactor, nuclear process heat would be useful, for example, in pulp and paper mills and in petroleum refineries. Indeed, in Norway, a steam-producing reactor is already under construction for pulp and paper production. High temperature process heat (1,500° F. or more), as required in glass, cement or iron and steel manufacture, is not yet, however, technically feasible.

U.S. Energy Consumption, 1955 and 1980

	1955			1980		
	Tons, barrels, etc.	1015 B.T.U.	% of total	Tons, barrels, etc.	1015 B.T.U.	% of total
Coal and lignite (mil. tons)	446	11.7	28.7	735	19.2	23.7
Petroleum products (bil. bbl.)	2.8	16.3	41.1	5.8	33.6	41.5
Natural gas (trillion c. f.)	10.1	10.9	26.7	17.4	18.7	23.1
Hydro (bil. kw.h.)	118	1.4	3.4	271	2.4	3.0
Nuclear energy (1015 B.T.U.)	..	..	..	..	7.0	8.7
Total	..	40.3	100.0	..	80.9	100.0

Pursuing this line of thinking, the report estimates that, by 1980, about two-thirds of the energy contributed to U.S. civilian energy consumption by nuclear sources will be in the form of electricity, almost one-quarter will be industrial process and furnace heat and the remainder will be used for ship propulsion and for railways. U.S. nuclear power capacity is conservatively estimated to reach 61.5 million kw. by 1980. Today, 18 power reactors, with a combined capacity of 1,153,000 kw. are either planned, building or completed in the U.S.A. These will entail between them capital expenditures estimated at $487 million, including Government outlays of $149 million, but excluding Government expenditures on research and development. A very rapid expansion in the present rate of construction will be necessary, however, according to the report, if even its own conservative estimates of nuclear power development are to be achieved.

In the free world outside the U.S.A., the N.P.A. report expects that factors such as capital formation, foreign exchange availability and the pace of industrial development will probably be of greater importance than fuel costs in determining economic growth. Thus, while the rate of increase in nuclear energy consumption will deped, as in the U.S.A., on reductions in its costs, where and how fast it grows will depend also in large part on these various other factors. One field in which advantages might be expected from the use of nuclear energy is in the saving of foreign exchange costs for imports of conventional fuels. This could be so, however, only where the importing country is able to produce much of the material and equipment required for nuclear power plants, or where nuclear fuels were much lower in cost than conventional fuels, or could be produced domestically. The possibility of foreign exchange savings would be enhanced when breeder reactors become established, thereby greatly reducing the new supplies of nuclear fuels regularly required. In all this the U.K. enjoys the advantage of an early start. In other countries in Western Europe, according to the report, the foreign exchange requirements for nuclear fuel and equipment would at present be about the same as for imports of oil.

Underdeveloped Countries

Nuclear energy might prove attractive in some cases as a means of reducing capital expenditures on energy supply. But nuclear plant is at present very high in capital cost and savings appear likely only in the long-term in some underdeveloped countries where special conditions prevail. (Certainly, as compared with oil imports where the bulk of capital outlays generally represents no burden on domestic capital resources, nuclear energy can only impose much higher capital costs.) In Western Europe, it is estimated that if account is taken of all types of investment required—including that in transport, mining, processing, etc.—the aggregate capital costs of conventional thermal power would be matched by the aggregate capital costs of nuclear power (excluding investment in a gaseous diffusion plant) only if the capital cost of the nuclear plant itself were as low as $180 per kw. But the figure for U.K. reactors of the Calder Hall type is about twice this.

A long-term possibility of capital savings is foreseen, however, in India, Brazil and other countries with large undeveloped hydro-power resources. By the time that the development of the higher cost or more remote hydro sites in these countries is approached, the aggregate direct and indirect capital costs of suitably located nuclear power plants may have become less than the corresponding costs of hydro plant plus long-distance transmission lines. Furthermore, a smaller and lower capital cost nuclear plant may be more appropriate to the size of electricity demand than a hydro project which would need to be large to be economic. However, despite the possibility of capital savings on transport or transmission facilities by the use of small nuclear plants in such cases, the studies made by the N.P.A. do not indicate a large requirement for small nuclear power units. There are comparatively few truly remote regions where the costs of transporting conventional fuels may be called prohibitive, and it is the heavily populated interior regions, as in India, which represent a greater potential need for competitive nuclear power.

Japan

The views of the N.P.A. report on the possible advantages of nuclear power in certain circumstances are based on special studies of six different countries, which it summarises. In Japan, for example, the possibility of savings in foreign exchange is seen as a major incentive in the long term for the development of nuclear power. It is believed that nuclear power would probably be competitive in Japan with oil-fired power stations—assuming the imported cost of oil were $3 per barrel, i.e., a lower cost than now ruling—if the nuclear plants could operate at a cost of 10 mills per kw.h. But even at this competitive cost, the foreign exchange cost of nuclear power would for many years be substantially higher than that of oil-based power. The oil-fired plants would involve foreign exchange costs of only up to four mills per kw.h. out of the total assumed cost of 10 mills, whereas practically the whole of nuclear plant and fuel would have to be imported. If, however, during the next 20 or 30 years Japan could develop the ability herself to produce all the nuclear equipment required, a significant foreign exchange saving could be achieved. (This, how-

The Story of Oil—3

Buried power

'Rock Oil' is the literal translation of the Latin words 'petra' and 'oleum' which make up the name petroleum. Trapped underground in the cells and fissures of porous rock, petroleum is a raw mineral consisting of liquid crude oil and natural gas. These are usually found together, and between them they are a major source of power for the world today and the basis of thousands of commodities useful to mankind.

Petroleum is a mixture of substances called hydrocarbons. These are chemical compounds made up of the elements carbon and hydrogen (the former heavy, the latter light in weight). Hydrocarbons vary widely in nature and behaviour according to the different proportions of these two elements they contain. Most are liquids at ordinary temperatures, but some are gases and others solids like bitumen.

Despite popular belief, this petroleum does not collect in large underground pools. If it did, exploration and discovery would be comparatively easy. Instead it lies, usually with a quantity of salt water, in layers of solid looking porous rocks closed in by walls or caps of non-porous rocks which prevent it escaping. There are three main types of oil-trap — the 'anticline', an arch-shaped upward fold in the earth's rock layers; the 'fault', or fracture in the earth's crust whereby a non-porous layer has slipped to cut off a porous layer; and the 'stratigraphic' trap, where because of changes in the type of rock a porous layer becomes sealed off by non-porous rocks.

Thus, when geologists begin their search for oil, they start with the knowledge that certain types of rock formation are more likely to yield oil than others.

The drawing at the top shows the inside shape of an *anticline*. Compression has buckled up the earth's crust, squeezed it into these folds.
The other illustration is of a *fault*, a dislocation in rocks. Two sections of the earth have been forced in different directions until they cracked, slipped out of position, and upset the alignment of all the rock strata involved.
The black section indicates oil-bearing rock.

VALUE OF FOREIGN-TRADE ZONES

FINDINGS OF U.S. COMMERCE DEPARTMENT'S STUDY

THE four Foreign-Trade Zones in the United States are making an important contribution to the flow of international trade. So much progress has been made by these zones in recent years that other American ports and cities have manifested interest in the establishment of similar zones in their own environs. The law authorising American Foreign-Trade Zones was passed by Congress in 1934 and the first zone was established at New York in 1936. Since then, others have followed at New Orleans (1947), San Francisco (1948), and Seattle (1949). A fifth Foreign-Trade Zone was established in Los Angeles in 1949, but ceased operations in January 1956.

There are about 130 free-trade zones of the world. They differ considerably in their functions, facilities, and administrative requirements. Basically, a free-trade zone is a segregated area where goods may be unloaded and stored without being subject to customs formalities. They may be classified as follows: free-trade areas, such as the free-trade ports of Hong Kong and Gibraltar and the Arica area of Chile; free-trade zones covering a restricted area, such as Copenhagen and Bremen, and *entrepots* or transit zones, such as Genoa (for Switzerland) and Buenos Aires and Rosario (for Bolivia and Paraguay). The four U.S. Foreign-Trade Zones belong to the second category of free-trade zones covering a restricted area.

Basic Purpose

In a recent report, *Free-Trade Zones of the World*, the U.S. Department of Commerce points out that the basic purpose of a free-trade zone is to ease importing and re-exporting goods of foreign origin either in their original condition or with permitted changes in form and substance.

In the 80 years since the inauguration of the modern type of free-trade zone, the Report continues, the free-trade zone has been most useful in facilitating transhipment trade in those places where such a trade would naturally exist. This is particularly true, it explains, in Western Europe and in some of the colonial British free-trade ports which have strategic commercial locations.

However, much of the free-trade zone development which has taken place since the end of World War I, the Report says, has served more as an aid for importers. Importers it is pointed out, have benefited in regard to financing when reduced insurance costs were coupled with a delay in paying customs duties. Such zones also have afforded the opportunity to make allowances for shrinkage, evaporation, damage to merchandise, etc., before customs were paid.

Not Much Use to Underdeveloped Areas

At the same time, the Commerce Department report warns that, "in a number of instances, expectations that a free-trade zone would bring industry and business to an underdeveloped area have not been fulfilled." The report continues: "This serves to emphasise the contention that a free-trade zone will not create much commerce where there is not a natural and existing basis for it. ... Free-trade zones cannot create trade; they can only facilitate and amplify the forces which bring it about."

The hazards of establishing a foreign-trade zone were recognised by the United States Congress when it enacted the Foreign-Trade Zones Act in 1934. The Act requires, for example, that, before the regulatory body, the Foreign-Trade Zones Board, can grant a charter for a proposed zone, an economic survey must demonstrate to the satisfaction of the Board that the anticipated commerce, benefits, and returns, both direct and indirect, will justify its establishment. Among other requirements, the applicant also must offer proof of ability to adequately finance and conduct the undertaking.

To further the success of the U.S. Foreign-Trade Zones, Congress adopted in 1950 the so-called Boggs Amendment which reduced administrative regulations and permitted exhibition and manufacturing in the zones. As a result, the American Foreign-Trade Zones are today among the most liberal in the world.

As now administered and operated, the four U.S. Foreign-Trade Zones are docks, warehouses, and facilities geographically set apart in port areas where customs laws imposing duties, taxes, quotas and certain other restrictions and requirements, such as posting bonds, are not applied. They are enclosed and policed areas and are operated as a public utility by a public or private corporation.

Foreign and domestic merchandise of every description, except such as prohibited by law, may be brought there and may be stored, sold, exhibited, broken up, repacked, assembled, distributed, sorted, graded, cleaned, mixed with foreign or domestic merchandise, or otherwise manipulated, or be manufactured and be exported, destroyed, or sent into customs territory of the United States in the original package or otherwise. As all U.S. zones are operated by law as public utilities, all rates and charges are fair and reasonable, and all users of the zones receive uniform treatment under like conditions.

Importers Gain Benefit

Foreign producers and American importers gain a number of benefits from the fact that customs duties are held in abeyance while goods are in the zones. For example, by ordering his purchases consigned to a Foreign-Trade Zone, the importer has absolute freedom to inspect his goods before customs entry commitments are made. If he wishes, he may recondition, repack, process or re-export his shipment (or parts thereof) without customs entry or obligation. Duties and taxes may be fixed on the goods while stored in the zone, affording protection against any impending increase in duty or tax obligation.

If the importer destroys damaged goods, he avoids any customs liability on them. Products shipped in bulk may be reprocessed and packed, permitting savings of duties on moisture, dirt or culls. Where evaporation, leakage or breakage has occurred in shipment of liquids, the remainder may be regauged and savings obtained, as no taxes are due on the part lost or broken. Others savings may be made in ocean freight, and sometimes in customs duties, by having unassembled furniture, machinery, or other articles shipped to the zone and reassembled there.

Since foreign merchandise may be stored in the zones for an unlimited time, imports may be held there until sold. The goods then go through customs to the dealer and consumer, enabling the importer to defer paying duties until the goods leave the zone. Commodities not affected by long storage may be held for an indefinite period to await favourable price levels. Commodities which require aging also benefit from this storage, since there is no fixed time when the owner must enter them into customs territory, re-export them, or destroy them.

Zone facilities also may be used to exhibit foreign merchandise such as automobiles and antiques without bond. An individual showroom may be established, or several exhibitors may join in a more or less permanent display on a wider basis. The exhibitor is not confined solely to display or sale for later delivery. Since he may store and process merchandise within the Foreign-Trade Zones, he may sell from stock in wholesale quantities, quoting firm delivered prices through advance determination of duties and taxes.

Domestic manufacturers may locate their plants or operations within a zone to be relieved of customs duty refunds (drawback) and bond procedures and costs on foreign materials used in goods which are to be exported.

Value to Exporters

Foreign exporters can use the zones as low-cost distribution centres for the United States and other Western Hemisphere countries. In the zones, their stocks remain accessible without duty, tax and bond. Warehouse receipts may be used for bank loans and assignments. Reasonable merchandise insurance rates are based on value exclusive of duty or internal revenue imposts. Transportation, forwarding, customs brokerage and labour services are always at hand.

U.S. FOREIGN-TRADE ZONE STATISTICS

Movement of Merchandise In and Out of Zones
1956 Fiscal Year

	Received	*Forwarded*
	$	$
New York	26,073,631	25,712,766
New Orleans	17,403,578	17,820,785
San Francisco	8,502,229	9,610,855
Seattle	961,723	812,872
Total ...	$52,941,161	$53,957,278

During 1956 fiscal year, the five leading countries of origin with which the zones did business, in order of value of the commodities received, were:

New York: Netherlands, $6,908,230; Switzerland, $4,166,289; Brazil, $3,653,051; Japan, $3,296,637; German Federal Republic, $2,135,734.

New Orleans: German Federal Republic, $3,076,759; Japan, $2,905,915; Mexico, $1,797,411; Argentina, $1,265,084; India, $866,468.

San Francisco: German Federal Republic, $3,321,055; Japan, $851,095; Canada, $708,296; United Kingdom, $625,875; New Guinea, $463,961.

Seattle: Japan, $717,832; United States, $78,504; Canada, $50,316; England, $47,202; and Scotland, $23,777.

During the 1956 fiscal year, the five leading commodities of foreign origin passing through the zones, by value were:

New York: Watches and watch movements, $4,261,823; ore, $1,807,962; cocoa beans, $1,797,975; Brazil nuts, $1,670,548; diamonds, $1,535,235.

New Orleans: Hardwood lumber, $3,437,203, bicycles, $2,670,281; casein, $1,320,972; cotton, $1,218,850; hardware, $1,119,501.

San Francisco: Automobiles, $3,288,154; whisky, $812,841; coffee, $349,120; plywood, $325,088; cotton manufactures, $190,530.

Seattle: Canned salmon, $466,442; canned king crabmeat $147,000, porcelain and earthenware, $60,482; canned minced sea clams, $31,150; frozen tuna fillets, $30,200.

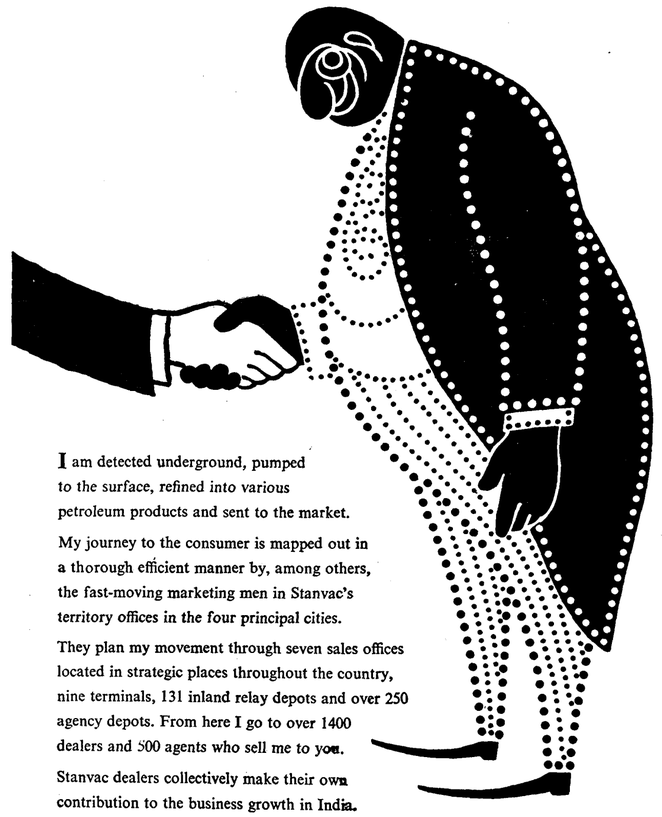
"I look forward to meeting you"

— *Adipocere* (Pronounced 'adi-po-saire')



I am detected underground, pumped to the surface, refined into various petroleum products and sent to the market.

My journey to the consumer is mapped out in a thorough efficient manner by, among others, the fast-moving marketing men in Stanvac's territory offices in the four principal cities.

They plan my movement through seven sales offices located in strategic places throughout the country, nine terminals, 131 inland relay depots and over 250 agency depots. From here I go to over 1400 dealers and 500 agents who sell me to you.

Stanvac dealers collectively make their own contribution to the business growth in India.

I will tell you more about them later.

NATIONAL PRODUCTIVITY MOVEMENT

CENTRAL COUNCIL TO START WORK NEXT YEAR

ECONOMIC development in the industrially advanced countries of the West has shown that improvement in living standards is closely related to the rise in productivity. It should be obvious to any student of economics that, when production per unit goes up without unduly adding to the cost, the total wealth increases, which, in turn, enables the people to live in greater comfort than before. Fully realising this fundamental point, active and vigorous steps have been taken by both the Governments and the industries in the Western world to step up agricultural and industrial productivity. Even Japan which was comparatively backward in this respect has laid considerable stress on increasing productivity in the past few years. Evidence of this is provided by the fact that, over the past nine years, labour productivity in Japan has gone up by 328 per cent., real wages by 298 per cent., and standard of living (consumption level) by 87 per cent.

Emulating the example of Japan and other countries, the Government of India also has assigned a vital role to the increase in productivity through streamlining of operations and motivating of the personnel working in industry, in order to produce at lower cost more goods of better quality. The Government deputed a special delegation, with Dr. Vikram A. Sarabhai as leader, to Japan towards the close of last year. After its return to India, the delegation submitted—in March 1957—a comprehensive report in which it urged the launching of an effective national movement for increased productivity. The first major step in the implementation of this recommendation was taken at the two-day seminar, held at New Delhi last week-end under the auspices of the Union Ministry of Commerce and Industry, at which the principles and programme for a national productivity movement designed to increase production and improve the standard of living of the people were approved. It is gratifying that, at this seminar, the representatives of employers, trade union organisations, and other technical bodies assured their *full* co-operation in giving effect to the programme.

Programme

The programme chalked out by the seminar envisages the establishment of a National Productivity Council (N.P.C.), local councils and, if and when necessary, productivity committees for different industries. The N.P.C.—this is expected to start functioning by 1st January next—will be entrusted with functions such as rousing of productivity consciousness through various means, undertaking of surveys, and provisions of services and experts in the execution of projects for raising productivity. The Council will consist of 50 to 60 members, including those representing Government, employers' and workers' organisations, small industry, technicians and consultants, as well as nominees of local councils. The members will be nominated by the Central Government in the first instance for three years, but it has been assured that the Council will be a completely autonomous body, a welcome feature indeed. This Council provide a model constitution for local councils to be formed all over the country.

The productivity movement, the programme lays down, should cover all fields of economic activity, public services and administration, although the N.P.C. will initially apply itself only to the field of industry, including communications and transport. Small-scale and cottage industries in both public and private sectors will also be within the field to be tackled immediately.

The statement of principles for the productivity movement as approved at the New Delhi seminar says that, for increasing the national wealth and *per capita* income, it is necessary to create among labour, management and the general public attitudes receptive to the idea of productivity, thus ensuring a favourable climate of opinion which will facilitate the introduction and application of modern techniques—social and technical—for raising productivity. The objectives of the drive should be (*a*) to increase production and improve quality by better techniques which aim at efficient and proper utilisation of the available resources of men, machines, materials, power and capital; (*b*) to improve working conditions and welfare of the labour; and (*c*) to distribute equitably the benefits of productivity among capital, labour and consumers, leading to the renewal and expansion of equipment, raising of living standards, and reduction in prices.

While the principles and programmes for a national productivity movement enunciated at the seminar are laudable, the success of the movement ultimately rests on the co-operation of labour. The two misconceptions in the mind of labour are that the productivity drive will increase work-loads, intensify their burden or drive them to greater speed-up and that it will lead to redundancy of labour and add to unemployment. These misconceptions must be removed. Mr. Manubhai Shah, Union Minister for Industry, lucidly emphasised this aspect when he inaugurated the seminar. Mr. Shah showed how, in actual practice, for labour, the productivity drive resulted in simplifying the necessary motions in order to reduce the energy expended by the worker per piece produced. Elucidating this point, he observed:

"The work study, the time and motion studies, and similar other techniques involved in productivity, which lead to more efficient performance of the work, result in less fatigue by effecting saving in time and movements. By reducing the amount of energy, expended by the worker per unit of production, more can be produced by him or her with the same or even less expenditure of energy with consequent benefit to the worker in the form of additional wages.

"The experience of other countries belies this fear (of redundancy of labour). With careful guidance and vigilance, higher productivity everywhere has gone hand in hand with higher levels of employment. Reduction in the manufacture costs by increase of productivity enables products to be sold more cheaply, which leads to expansion of sales, demand for more products, and consequent greater employment. With increase of productivity, more capital becomes available for investment in new plants and products, thereby enabling expansion of employment. The improvement in the standard of living increases the demand for services and for recreational and educational facilities. The increase in productivity thus generates expansion and establishment of additional factories, creation of demand for additional services and requirements, and consequent creation of additional jobs and the expansion of employment. This is what we in India, on the basis of experience of the other countries, can envisage to be the eventual result of the productivity drive."

No Exaggeration

There is no exaggeration whatever in the aforesaid observations of Mr. Shah and the New Delhi seminar has done well to make it perfectly clear that the national productivity movement does not seek the intensification of labour's burden through increased work-loads and speed-up. The statement of principles evolved even urges the Government, the employers and the labour to take specific measures to obviate the possibility of unemployment arising from any transitional redundancy that may be caused by the introduction of more efficient methods. The measures suggested include deployment, suspension or reduction of new recruitment to facilitate absorption of surplus workers and training facilities to increase the mobility of labour where necessary. The statement has also stressed the importance of the fullest co-operation between management and labour. It says: "In order to carry through the programme effectively, it is necessary to create a climate for increased productivity through encouragement of joint consultation and promotion of mutual understanding between management and labour in each industry and in each individual enterprise."

The field of efforts that lies in aiming at the increase of productivity is, indeed, vast. In industries, for instance, the tools of productivity required to be utilised as was indicated by Mr. Manubhai Shah, are the following:

Scientific management techniques and practices, including training of all levels of management;

work, time and motion study for scientifically determining better and quicker ways of doing the job and streamlining the operations;

human relations, including modern concepts of industrial relations;

wage and bonus incentives, collective bargaining, management-workers' consultation, workers' education, and labour welfare;

simplification, standardisation and specialisation;

control techniques, including production and planning control, cost control, inspection and quality control, and process planning and stock control;

determining improvements in plant layout, working conditions, and materials handling; and

selection and training of the personnel, including the operatives, as well as the various levels of management.

The utilisation of all these tools in industries, indeed in every other field of economic activity, will go a long way towards expanding the country's economy. Surely, in the present competitive world economy, India cannot, as Mr. Manubhai Shah pertinently remarked, afford to lag behind in techniques and processes "which reflect on the measure of our productivity." It is needless to emphasise that the domestic and export markets for the various goods and commodities can be expanded only if the prices and quality of goods stand up effectively in competition against those of other countries.

TRADE WITH WEST GERMANY

West Germany is one of the countries with which India has been continuously having a large trade deficit. The deficit is tending to become larger and larger. During the first quarter of 1957, for instance, the adverse balance of trade with West Germany was at an annual rate of over Rs. 72 crores, as against Rs. 67.64 crores in 1956 and Rs. 38.33 crores in 1955. The deficit is bound to widen still in the coming years, what with the need for enlarged imports to meet the requirements of the Plan. West Germany may, of course, give aid—Governmental and private—but, even so, the fact remains that the real solution to the adverse balance of trade with it lies in augmenting exports which have remained more or less constant in the past few years. Viewed thus, the Government of India did well, indeed, to sponsor a delegation led by Mr. Bharat Ram and consisting of representatives of the various exporting interests, to West Germany at the invitation of that country. The delegation was in Germany from 31st August to 2nd October 1957 and, on its return to India, submitted its report to the Government.

In its report, the Bharat Ram delegation has investigated the several causes impeding the free flow of goods from India to Germany. Of these, special mention is made of three: First, the trade and the public in Germany are generally unaware of the type of goods India can offer, due to lack of proper contacts. Secondly, India has no effective and continuous means of studying the market conditions and opportunities in West Germany. Thirdly, India has not been able to take full advantage of fairs and exhibitions which are the important means of entering into a market. Urging the removal of these handicaps, the delegation points out that the cultivation of the market needs a great deal of effort and enterprise, as well as sustained effort at various levels in India—Government, industry and trade. It has accordingly recommended the formation of a Trade Promotion Organisation in Germany by the different Indian organisations interested in the export of special commodities. Such an organisation, it is opined, will provide a useful channel and offer representative samples in respect of the principal items of exports, provide necessary commercial intelligence, promote business and help build up a network of agencies for Indian products.

The survey of the German markets made by the delegation reveals prospects for some improvement in exports of items like manganese and iron ores, handicrafts, tea, coffee, tobacco, leather, cashewnuts and black pepper. As regards textiles, while the scope for pushing exports of hand-made silk and cotton fabrics appears to be considerable, the market for mill-made piecegoods needs to be developed specially by way of producing fabrics of better quality and in the required specifications. Mill production in some lines is said to be not competitive with piecegoods supplied by some other countries. The delegation has drawn attention to the need for improving quality and finish, especially in medium and superfine varieties.

During its stay in Germany, the delegation studied the organisation of German trade fairs and exhibitions, working of chambers of commerce, and export facilities offered at the free ports and bonded warehouses, as also the methods of export promotion, commercial intelligence organisations, etc.

We shall be glad to assist you in solving any of your Labour problems and Industrial Disputes through our well-known Industrial Relations Consultants and highly experienced Legal Advisors.

We offer FREE ADVICE AND CONSULTATION at our Chambers on all Labour and Industrial matters. Please write, ring 72571 or contact the Director at Nagpada Neighbourhood House, Byculla, Bombay-8.

Calicloth
quality fabrics of the calico mills ahmedabad

In the beginning, in 1880, the Calico Mills consisted of a small textile printing plant. Today, it produces 114 miles of cloth per day.

Organdie Sarees with Flock-Printed Palav, Voiles, Prints, Lawns, Shirtings and Poplins labelled 'Sanforized', Dhoties, Handkerchiefs, Towels, Mosquito Netting, Blankets, Sewing Thread.

MACHINERY CORPORATION'S EARNINGS LOWER

PROGRESS, HOWEVER, MAINTAINED

DESPITE higher sale proceeds and a general improvement in production activities, the earnings of the Machinery Manufacturers Corporation Ltd. (Managing Agents: Messrs. Mahindra and Mahindra Ltd., Bombay) for the year ended 31st March 1957 show a decline. This is obviously due to higher manufacturing costs and other expenses. The gross profit for the year under review at Rs. 8.80 lakhs represents a drop of Rs. 1.62 lakhs from Rs. 10.42 lakhs for the previous year. It is also lower than Rs. 9.15 lakhs for 1954-55. After providing Rs. 40,145 for Managing Agents' commission which had been waived by the latter in the previous years, and setting aside Rs. 5.96 lakhs, representing depreciation for the period from 1st October 1953 to 31st March 1954 and also for the years 1954-55 and 1955-56, as against Rs. 9.28 lakhs (for the year 1952-53 and for the period from 1st April to 30th September 1953) the net profit stands slightly higher at Rs. 2.44 lakhs, as compared with Rs. 1.14 lakhs for 1955-56. The Directors have recommended payment of arrears of dividends on special cumulative 4½ per cent. preference shares and 4 per cent. cumulative preference shares upto 31st March 1954. The balance of Rs. 1.08 lakhs has been carried forward to the balance-sheet, in order to reduce the previous year's losses aggregating Rs. 24.26 lakhs.

The following comparative table brings forth some of the features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sales	68.06	65.16	55.29	26.11
Other income	2.49	2.31	1.62	2.28
Closing stock of finished goods, work-in-progress, etc.	20.05	14.39	14.19	10.81
Raw materials and finished parts consumed	30.69	25.62	24.84	11.02
Expenses	36.73	31.63	26.30	18.94

Adjustment of items in respect of previous years	0.34	0.21	..	..
Provision for doubtful debts	0.02	..	..	..
Dividends—				
4% cum. and 4½% special cum. preference	1.68	0.66	1.37	..
Carry forward	1.08	0.69	0.65	1.25

During the year under review, the Company's sales which had improved from Rs. 55.29 lakhs in 1954-55 to Rs. 65.16 lakhs in 1955-56, rose further, albeit by a smaller pace, to Rs. 68.06 lakhs. At the same time, cost of raw materials and finished parts consumed increased from Rs. 25.62 lakhs to Rs. 30.69 lakhs and expenses from Rs. 31.63 lakhs to Rs. 36.73 lakhs.

The Directors' report states that progress was well maintained in the various spheres of the Corporation's activities during the year. The Sonai Works manufactured a total of 565 cards, as against 550 in the previous year. The number of carding engines despatched during the year was, however, lower at 545, as against 556 last year. The Directors say that the output would have been higher still but for the fact that the Company's manufacturing operations had to rely on outside sub-contractors for the supply of castings. The factory's output was again restricted by a prolonged strike at one of the Company's principal sub-contractors for the supply of castings. This was followed, towards the end of December 1956, by a dwindling in the supply of pig iron. The overall effect was that the Corporation could not reach the 75-card target fixed for January 1957, though additional personnel and plant facilities were ready to be put into commission. The Company's foundry has been producing an average of 70 tons of grey iron castings per month and the factory has been able to build adequate stocks of high components.

Alluding to the Company's programme of expansion and other activities during the year, the Directors, in their latest report, state as follows:

"During the year, the Corporation was asked by the Government to expand its capacity for the manufacture of carding engines, as well as to consider the manufacture of certain other items of textile machinery, not produced in the country. After a study of the various factors involved, the Directors presented a detailed scheme of expansion, of which the first phase was the completion of the foundry expansion, in order that the works become self-sufficient in the matter of light as well as heavy castings. The second phase of the programme is to expand production of carding engines to 100 units per month. The third phase involves heavier financing for extension of manufacturing activities to other spinning mill equipments. A search for finance to implement the completion of the foundry and expansion of production of carding engines was made during the year and the Industrial Finance Corporation of India was approached. Sanction for a loan of Rs. 9 lakhs has just been received. Investigations are proceeding to explore other sources of financial assistance.

"The Company's order book position reveals that confirmed orders for 662 cards were registered during the year, while there were cancellations of 48 cards. Uncertainty regarding the licensing policy affected the bookings towards the end of the year, and this has continued upto July 1957, as during the four-month period from the end of the last financial year, there were registered orders for 154 cards only or a monthly average of 38 cards. The impact of foreign exchange shortages in the country and the inability of the mill clients to secure acceptable scheme of deferred payments for allied equipment for which there is no indigenous production, coupled with the growing financial strains on the textile mills, are major factors responsible for the drop in our orders. Restrictions on booking of consignments interfered with regular despatches of the Company's products. During the year, the Company also sold one set of combing equipment and four combers manufactured by Whitin Machine Works."

The Directors have proposed that the unissued share capital of the Company made up of 100,000 B ordinary shares of Rs. 10 each be consolidated and divided into 10,000 ordinary shares of Rs. 100 each, to rank *pari passu* with the existing 80,000 A ordinary shares of Rs. 100 each which, hereafter, will be called ordinary shares and not A ordinary shares. This means that all the authorised ordinary capital of Rs. 90 lakhs will be in one class of equity.

The paid-up capital of the Company as at 31st March 1957 stands at Rs. 80.74 lakhs. Of this sum, ordinary capital accounts for Rs. 39,91,600, the rest (Rs. 38,95,500) being cumulative preference. The reserves are very low indeed. Even the Rs. 14.42 lakhs credited to capital reserve account represents the net accretion to the value of fixed assets on revaluation, after adjustment of normal depreciation till 31st March 1956. Secured loans from bank and the Industrial Finance Corporation of India by hypothecation of raw materials, etc., and by the mortgage of the fixed assets of the Company amount to Rs. 58.68 lakhs. Other current liabilities amount to Rs. 29.22 lakhs. The current assets aggregate Rs. 65.97 lakhs. The gross block of the value of Rs. 129.22 lakhs stands written down at Rs. 92.84 lakhs. Fictitious assets—preliminary expenses, commission and brokerage on the issue of shares, etc., amount to Rs. 1.08 lakhs. Besides, there is an accumulated loss of Rs. 24.26 lakhs. There are arrears of preference dividend for the three years ended 31st March 1957 amounting to Rs. 5.04 lakhs.

(*Concluded from next column*)

Company has also erected 38 cards, one slubbing frame, two Simplex frames and two drawing sets. One scutcher is under erection and the whole erection work will be over within a period of two months. Apart from this, the Company had ordered two Japanese doubling frames and one yarn conditioning plant, which have already arrived. One doubling winder to feed the doubling frames is also expected shortly. One more cone winder was purchased during the year, which has been erected and put into commission from March 1957.

The Company's paid-up capital of Rs. 11.99 lakhs is all in ordinary shares of Rs. 100 each and is supplemented by reserves and surplus aggregating Rs. 5.73 lakhs. The current liabilities amount to Rs. 28.88 lakhs, of which secured loans account for Rs. 13.42 lakhs and provision for taxation Rs. 5.48 lakhs. The current assets aggregate Rs. 25.86 lakhs and fall short of the current liabilities and provision for taxation by a margin of Rs. 3.02 lakhs. The gross block of the value of Rs. 39.87 lakhs stands depreciated at Rs. 20.75 lakhs.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 217 *cum-div.* and on an *ex-div.* basis, offer a yield of 6.1 per cent. per annum.

ASHER TEXTILES FARE BETTER

BUT DIVIDEND LOWER

IT is gratifying to note that, when many units in the textile industry in the country are nowadays reporting adverse financial results, due to the imposition of additional excise duty on cloth and/or other extraneous causes, Asher Textiles Ltd. (Managing Agents: Messrs. Setna & Co., Tirupur, South India) has shown a steady improvement in its turnover as well as earnings. That, however, does not mean that the Company is immune to the many disabilities from which many of its confreres suffer. It only reflects the Company's sound and efficient management. Thus, sale proceeds, which had gone up from Rs. 50.63 lakhs in 1954-55 to Rs. 58.73 lakhs in 1955-56, advanced further to Rs. 68.12 lakhs in the year ended 30th June 1957. Similarly, the gross profit for the year under review at Rs. 8.43 lakhs is higher by about a lakh of rupees as compared with Rs. 7.47 lakhs for 1955-56 and Rs. 3.24 lakhs better than the Rs. 5.19 lakhs earned in 1954-55. The Directors have raised the provision for depreciation from Rs. 1.99 lakhs for 1955-56 to Rs. 3.59 lakhs. Of the latter amount, Rs. 1.04 lakhs represents normal depreciation, the balance being additional depreciation. The provision for taxation amounts to Rs. 2.40 lakhs, as against Rs. 2.36 lakhs for the previous year and is inclusive of a sum of Rs. 15,000 for wealth tax.

In view of the above higher allocations, the net profit at Rs. 1.69 lakhs is lower than that at Rs. 2.60 lakhs for 1955-56 and Rs. 3.45 lakhs for 1954-55. In fact, the net profit for 1956-57 is the lowest for the three-year period under discussion. This has not only meant no transfers to the reserves but has even affected the dividend to shareholders. Thus, no amount has been transferred to the reserves out of the year's profit, while a sum of Rs. 70,000 was credited to general reserve last year. This allocation two years ago was even higher at Rs. 1.90 lakhs, made up of Rs. 1.40 lakhs to general reserve and another Rs. 50,000 to reserve for contingencies. The dividend has been lowered to 12½ per cent. from 15 per cent. for the previous year, to which level it had been stepped up in that year from the same rate, namely, 12½ per cent. for 1954-55.

The following comparative table will provide some idea of the Company's progress during the preceding three years:

(In lakhs of rupees)

	For the year ended 30th June		
	1957	1956	1955
Sale proceeds	68.12	58.73	50.63
Other income	0.38	0.30	0.18

„ Dividends	1.80	1.80	1.50
	(12½%)	(15%)	(12½%)
Carry forward	0.16	0.04	0.02

The Company's proceeds from sales during the year grew, as already reported, from Rs. 50.63 lakhs and Rs. 58.73 lakhs, respectively, for 1954-55 and 1955-56 to Rs. 68.12 lakhs. The cost of raw materials consumed also increased from Rs. 38 lakhs to Rs. 44.11 lakhs; other expenses, too, rose from Rs. 13.69 lakhs to Rs. 16.69 lakhs. The Directors say that the Company's working during the year under review would have been better still, were it not for the high cost of production, occasioned by higher wages to workers and the levy of a 20 per cent. surcharge by the State Government on electricity consumption. The accounts show that salaries, wages and bonus have risen from Rs. 7.84 lakhs to Rs. 9.95 lakhs and electric energy and fuel from Rs. 78,076 to Rs. 1.06 lakhs.

The Company's mill is situated at Tirupur, near Coimbatore. It has been taking measures to expand its capacity. Thus, it erected 4,800 new spindles during the year, of which 2,400 are running, while the balance has not yet been put into commission for want of energy. The Electricity Department has, however, already sanctioned extra power for running the entire complement of spindles during the night shift but, as the working of the night shift is unremunerative, the management have applied to the Government for permission to transfer the extra power from night shift to day shift. The

BURN AND COMPANY'S GROSS PROFIT UP BY RS. 31 LAKHS

GOVERNMENT GETS ENTIRE BENEFIT—DIVIDEND ONLY MAINTAINED—RESERVES RECEIVE LESS

THE year ended 30th April 1957 adds yet one more year of noteworthy performance to the achievements of Messrs. Burn & Co., Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta). There is an overall improvement in the results for the year under review, due to better all-round working. Both turnover and gross profit have staged a sizable increase over those in the previous year, which was a year of great achievement for the Company, when the gross as well as net profit nearly doubled themselves. The year's performance, as compared with that last year, may not be striking; indeed it is not. But the mere fact that, with every year passing, the Company is able to maintain its steady onward march is itself sufficient proof of the *entrepreneurial* skill and efficiency of the management. No wonder that the confidence of investors in this Company's shares is fully justified.

While all this sounds rosy from a larger perspective, viewed from the shareholders' angle, the Company's net results of working during 1956-57 are not very encouraging, because the greatest beneficiary has been the Government. Almost the entire increase in gross profit has been neutralised by the heavy incidence of taxation. The net profit is actually lower. The shareholders get only the same dividend as last year, 20 per cent. per annum. Even the amounts credited to reserves are a shade smaller than those set aside a year ago. At this rate, we wonder what incentive will be left for Company managements to work harder and expand their activity.

The Company's gross profit at Rs. 151.91 lakhs for 1956-57 has advanced by a further Rs. 30.94 lakhs from Rs. 120.97 lakhs for the previous year which, again, was an improvement of 145.49 per cent. over Rs. 61.88 lakhs for 1954-55. The upward curve in the profits has thus been fully maintained. The gross profit for the year under review is, in all probability, a fresh record in the history of the Company. Out of this gross profit, taxation takes up Rs. 70.65 lakhs, as against only Rs. 40 lakhs. The provision for depreciation is slightly higher at Rs. 13.34 lakhs, as against Rs. 12.34 lakhs. In view of the heavy inroads made by taxation, the net profit at Rs. 53.79 lakhs is down by Rs. 1.30 lakhs as compared with that for 1955-56.

Appropriation Policy

The conservative policy of the Directors in the matter of appropriation of profits is, indeed, praiseworthy. It displays a note of optimism and a breadth of vision which has at its root the larger interests of the country. Out of the net profit of Rs. 53.79 lakhs, the Directors have ploughed back no less than Rs. 35.21 lakhs (Rs. 36.31 lakhs in 1955-56), that is, approximately five-eighths of the profit. The fall in the total allocations to reserves is almost equal to that in the net profit. Thus, if the Company could not conserve more, it is the result of the unrealistic taxation policy pursued by the Government. The dividend, as stated earlier, has, however, only been maintained at 20 per cent., to which level it had been stepped up in the previous year from 15 per cent. for 1954-55.

The strengthening of the reserves has been done under various heads, such as taxation contingency reserve Rs. 9.68 lakhs (Rs. 2.67 lakhs in the previous year), development rebate reserve Rs. 1.03 lakhs (Rs. 5.14 lakhs), reserve for works reconstruction and expansion Rs. 10.50 lakhs (Rs. 10.50 lakhs), reserve for Salem project *nil* (Rs. 18 lakhs) and reserve for Niwar project Rs. 14 lakhs (*nil*). It will be noted that well over one-fourth of the amount transferred to the reserves is towards the future tax liability. As readers are aware, the income-tax special depreciation allowance has the effect of deferring to later years, part of the tax that otherwise would be currently payable.

The sum of Rs. 9.68 lakhs that has been set apart from the profits of the year under review represents the net amount of tax payment so deferred. Thus, if the real burden of taxation is to be ascertained, one must take into account this deferred liability also.

It will be seen from the table below that, although the turnover for the year under review increased, the pace of improvement was not so phenomenal as in the previous year. There are probably two reasons for this. First, in 1955-56, there was a heavy inflation in the prices of steel and other items of cost; a similar increase was not there in 1956-57. The fact that the gross profit in the year under review was better, presumably indicates that the actual turnover was distinctly higher. Secondly, the Company's Howrah works were subjected to a labour strike of six weeks' duration, resulting in a heavy loss of man-hours.

The salient features of the Company's working results for the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 30th April			
	1957	1956	1955	1954
Sale proceeds	8,49.81	8,32.01	6,32.07	5,76.59

Carry forward	1.10	1.13	0.96	1.09

* Approximate only.
† On the increased capital of Rs. 84 lakhs, doubled by the capitalisation of Rs. 42 lakhs in March, 1954.

The Company's distribution of revenue for the year shows that materials take up 49 per cent., administration 1.5 per cent., depreciation and repairs 4 per cent., working expenses 7.7 per cent., employees 21.5 per cent., taxation 11.7 per cent., reserves 2.7 per cent. and dividends 1.9 per cent.

Expansion Programme

As regards the Company's plans for expansion, the negotiations with the Magnesite Syndicate Ltd. of the United Kingdom for the purchase of their interests in India, referred to in the previous year's report, do not appear to have made much headway, in view of certain restrictions imposed by the Government of Madras. The Directors are, however, hopeful of reaching a settlement. In addition to the above, they have now a new scheme for the manufacture of silica brick. Referring to these activities, they observe in their latest report thus:

"Last year the Directors reported the conclusion of negotiations for the purchase of the interests in India of the Magnesite Syndicate Ltd. of the United Kingdom. The agreement the Company entered into with the vendors was subject to conditions. The key condition was that the mining leases held by the vendors should be transferred into the name of this Company. This is possible only with Government consent, which has so far been refused. As is well known, the Government of Madras are desirous of themselves carrying on all operations in the mining of minerals within the Madras Province. The Directors have not abandoned hope of effecting the considerable savings in the manufacture of magnesite that were outlined in their last report, but it is possible that there may be some modification of the original plan and further consideration on this basis is now proceeding.

"With the large expansion of the steel industry in India, the opportunities for increase in manufacture of refractories are obvious. For some time, the Company has been engaged in the preliminary surveys connected with developing a new works site in Madhya Pradesh for the manufacture of silica brick. Land with rail, road, water and raw materials advantages has been secured at Niwar, approximately 40 miles from Jabalpur, and the Directors propose proceeding with this venture as finance and conditions permit."

The financial position of the Company, as disclosed by its latest balance-sheet, is impressive. It has a paid-up capital of Rs. 112 lakhs, made up of Rs. 28 lakhs in cumulative preference shares and Rs. 84 lakhs in ordinary shares of Rs. 100 each. Of this ordinary capital, as much as Rs. 72 lakhs represents the amount capitalised from reserves in the past. Even after this capitalisation, the reserves and surplus aggregate Rs. 167.27 lakhs, having increased from Rs. 132.09 lakhs in the previous year. Of these reserves, the general reserve accounts for Rs. 17 lakhs, reserve for works reconstruction and expansion for Rs. 77.75 lakhs, taxation contingency reserve for Rs. 32.85 lakhs, development rebate reserve for Rs. 6.17 lakhs, reserve for Salem project for Rs. 18 lakhs and reserve for Niwar project for Rs. 14 lakhs. The gross block of the value of Rs. 411.60 lakhs has been written down to a book value of Rs. 176.37 lakhs. This is inclusive of Rs. 23.82 lakhs expended on incompleted work. Of the net block, freehold land takes up Rs. 12.06 lakhs, buildings Rs. 65.62 lakhs, machinery Rs. 94.91 lakhs, furniture Rs. 1.89 lakhs and livestock and vehicles Rs. 1.89 lakhs. The investments in Government securities and shares of other companies, together with interest accrued thereon, amount to Rs. 32.31 lakhs. In all, the current assets, including cash and bank balances, aggregate Rs. 817.44 lakhs and cover the current liabilities of Rs. 714.54 lakhs (including Rs. 113.69 lakhs as provision for taxation) by a considerable margin.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 325 *cum-div.* On an *ex-div.* basis and on the basis of the dividend for the year under review, the yield on them works out to 6.55 per cent. per annum.

Points From The Chair

Wage Rise

"IT is quite inevitable that increases in spending power of this size are bound to be frustrated by rising prices. There simply cannot be the extra stuff to buy. We are today suffering from an internally generated price rise. . . . I do not mean by this that wages should not rise at all. I believe that they should rise and clearly must rise in an expanding economy. Perhaps they should rise a little faster than the more cautious spirits would deem to be wise. But when they rise out of all relation to production, when we seek to take out far more than we put in, then we are inflicting an injury upon ourselves. What is the sense in having surplus money to buy stuff that isn't there, and pushing up our costs in consequence? During the past year we have been upset more than I ever remember by causes outside our control. However, matters now seem to have settled down for a spell, and, as I indicated above, we are running at capacity again and looking round for means to increase our production. I only hope that we shall be left alone to get on with our job, because unless the country remains competitive, when we can all earn a good living, we shall suffer a total economic breakdown. In order to remain competitive, we need adequate incentives both for men and to promote capital savings. Today we live in an era where incentives for the top men, those who create the wealth in which we all share, are inadequate, yet the penalties for failure are as stern as ever they were."

J. E. V. JOBSON,
Qualcast Limited (Derby)

Consumption of Softwood

"Although the consumption of softwood in this country remained at a satisfactory level, the Trade was affected by the Scandinavian countries having more timber available than was required. On the other hand, the Pacific Coast of Canada and America were non-competitive, due to the very high freight rates then ruling, although a large part of the goods that usually come from that area were obtainable from the Government reserve stocks. The availability of these goods caused uncertainty throughout the year, although it must be said that the Government disposed of them with the least disruption to the trade. Pacific Coast timbers, due to the fall in freights, have now become competitive with the rest of the world. On the other hand, the Government stock has been considerably reduced, consumption during the present year is greater than was originally expected, and there is now no surplus of Scandinavian wood."

MONTAGUE L. MEYER,
Montague L. Meyer Ltd. (London)

Financing of Development

"One consequence of inflation has, undoubtedly, been that most companies have been able to plough back profits on a much greater scale than would have been possible with stable prices and keener competition. With a high bank rate and a credit squeeze, few companies will be able to finance development on bank credit for very long and, in any case, this practice, which has grown up in recent years, is a wrong use of bank credit. We must expect in future that for development more and more companies will have to turn again to the market or to the financial institutions for new capital. National savings through life assurance offices are large and most of these offices now invest a considerable proportion of their funds in industrial equities. Over and above this, a much greater volume of personal savings will need to be made available to industry. The ending of the inflationary period should, however, make for the rapid restoration of traditional habits of personal thrift. Continuously rising prices have encouraged everyone to spend up to their incomes, and even beyond, and money which might otherwise have come directly to productive industry for new investments has been diverted to loans for private expenditure on consumer goods."

SIR GREVILLE S. MACINNESS,
Roneo Limited (London)

RESULTS OF MYSORE TOBACCO BETTER

GANGES ROPE EARNS HIGHER PROFIT

Mysore Tobacco Co., Ltd.

THE directors of the above Company (Chairman: Mr. M. Malleshayya, Bangalore) submit the audited accounts of the Company for the twentieth year ending 31st March 1957.

The profit and loss account shows a net profit of Rs. 3,24,041 (Rs. 2,63,598) after making provision for depreciation and taxation for both income-tax and wealth-tax. Setting aside a sum of Rs. 15,000 (*nil*) towards gratuity fund for the benefit of the employees of the Company, the amount available for further appropriation including the carry forward of Rs. 44,513 (Rs. 20,915) from last year, is Rs. 3,53,554 (Rs. 2,84,513) and the directors recommend the following appropriations to be made out of the same.

To declare a dividend of 15 (15) per cent. or at the rate of Re. 1.50 (Re. 1.50) per share of Rs. 10 absorbing Rs. 1,50,000 (Rs. 1,50,000), to transfer to reserve fund Rs. 80,000 (Rs. 40,000), to dividend equalisation fund Rs. 80,000 (Rs. 50,000) and to carry forward Rs. 43,554 (Rs. 44,513).

Although the production of cured leaf from the Company's barns declined, sales realisations were maintained at a higher level by the production of quality leaf yielding higher returns to the Company. The reduction in quantity was due, among other reasons, to the appearance of "Ash Disease." The directors are taking necessary precautions to control this disease by obtaining advice from specialists in India and abroad. It is gratifying to report that a Tobacco Research Station has been established at Hunsur in Mysore District under the auspices of the Indian Central Tobacco Committee, Madras. It is hoped that the results of the research conducted here will help the tobacco growers and curers in the State in improving quality and quantity in the coming years.

As usual, the Company has been extending all possible assistance to the private curers to facilitate the production and sale of their cured tobacco. The quantity of tobacco acquired from the private curers during the year under report was 17,77,273 pounds as against 7,71,362 pounds during the previous year.

The area of tobacco plantation directly under the Company's control during 1956-57 was 3,350 (3,140) acres and the quantity of leaf cured in the Company's barns amounted to 14,54,804 (21,09,058) pounds. The total sales realisation on tobacco during the year amounted to Rs. 36,26,305 (Rs. 31,26,707).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Ganges Rope Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1957.

The profit for the year after charging depreciation of Rs. 92,884 (Rs. 83,344) amounts to Rs. 3,37,376 (Rs. 1,04,514). Adding to this the surplus on claim for assets destroyed by fire Rs. 65,536 (*nil*) and the balance brought forward from the previous account of Rs. 6,722 (Rs. 52,823) there is a total of Rs. 4,09,634 (Rs. 1,85,162 including Rs. 4,825 being surplus on sale of assets, Rs. 2,000 provision for doubtful debts no longer required and Rs. 21,000 being excess provision for taxation written back). From this amount is to be deducted provision for taxation of Rs. 2,00,000 (Rs. 6,000) leaving an available balance for distribution of Rs. 2,09,634 (Rs. 1,79,162). This amount the directors recommend should be disposed of as under:

By payment of a dividend at Rs. 12.50 (Rs. 11.50) per share, absorbing Rs. 1,75,000 (Rs. 1,61,000) leaving to be carried forward to next account Rs. 34,634 (Rs. 6,722 after providing Rs. 5,000 for doubtful debts and Rs. 6,440 for directors' commission).

The general level of production showed a satisfactory increase and the sales were also maintained at a high level throughout the year, despite considerable competition in the internal and external markets.

During the year under review, the Government of India imposed restrictions on the imports of the essential raw materials, viz., *Manila* and *Sisal* fibres. Representations have been made to the Government with a view to relax these restrictions and it is hoped that the directors' efforts in this direction will be successful and thereby assist the Company in retaining its external markets.

Accounts in brief are as under:—

Loobah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

A crop of 3,836 maunds of tea was manufactured and disposed of for sale in Calcutta for export 1,677 (2,756) maunds and for sale in Calcutta for internal consumption 2,159 (1,859) maunds.

The average price per lb. realised was Re. 1-9-5 as compared with Re. 1-4-9 per lb. obtained for the previous season's crop of 4,615 maunds. The shortage of crop was mainly attributable to hail damage in March, 1956, followed by an early closing of the plucking season as recommended by the I.T.A. The Company's export quota for season 1956 was 2,912 maunds.

The revenue account shows a loss of Rs. 2,862 (Rs. 44,688) and after adding to this pension to retired employee Rs. 2,700 (Rs. 2,700), managing agents' remuneration Rs. 19,723 (*nil*), depreciation Rs. 25,109 (Rs. 17,804) and Chittagong expenditure Rs. 41 (Rs. 560) there is a total debit of Rs. 50,435 (Rs. 67,752 including Rs. 2,000 for gratuity). After deducting dividend on investments (net) Rs. 248 (Rs. 248), interest received Rs. 13,994 (Rs. 13,907), profit on sale of lorry Rs. 1,500 (*nil*), profit on sale of machinery Rs. 1,530 (*nil*) and proportion of managing agents' remuneration voluntarily surrendered Rs. 10,000 (*nil*) there is a net loss for the year of Rs. 23,163 (Rs. 53,597). After adding to this the adjusted debit balance of Rs. 33,324 (Rs. 20,133) brought forward from the previous year, there is a debit balance of Rs. 56,487 (Rs. 33,324 including Rs. 400 being adjustments) on profit and loss account, which is carried forward. In view of the unfavourable results the managing agents have voluntarily surrendered Rs. 10,000 out of their remuneration.

Sale of Loobacherra.—Application made to the Pakistan Exchange Control Authorities for permission to remit the sale proceeds of Loobacherra to India has not met with any success. Efforts continue to be made to obtain such permission.

Estimates for season 1957 provide for a crop of 4,200 maunds at a total outlay of Rs. 5,52,387 which excludes an estimated capital expenditure of Rs. 3,958.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,63,690	Block ...	5,78,192
Reserves ...	57,590	Stock-in-trade	2,37,335
Liabilities ...	7,33,421	Stores and supplies ...	51,640
		Debts, deposits and advances ...	3,18,392
		Investments	2,710
		Cash ...	1,09,845
		Profit and loss account ...	56,487
Rs.	13,55,101	Rs.	13,55,101

New Monkhooshi Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The profit for the year as per revenue account is Rs. 5,70,408 (Rs. 5,70,201). Adding thereto the balance brought forward from last account of Rs. 1,67,900 (Rs. 1,48,031), the balance on previous seasons' adjustment account Rs. 13,763 (Rs. 34,786), income from non-trading investments (net) Rs. 1,25,852 (Rs. 1,49,779), interest on bank deposits and current account Rs. 19,085 (Rs. 17,443), profit on sale of machinery Rs. 396 (Rs. 3,556), share transfer fees Rs. 172 (Rs. 173), miscellaneous receipts Rs. 376 (Rs. 1,822), sale of timber Rs. 480 (Rs. 14,108), transfer from provision for contingencies Rs. 50,000 (*nil*) and excess provision for taxation in previous years written back Rs. 40,000 (Rs. 30,000). The following amounts were deducted: Provision for taxation Rs. 2,81,000 (Rs. 3,08,000), bonus to labour for 1955 Rs. 50,966 (Rs. 91,060 for 1953 and 1954), bonus to clerical staff, etc., for 1955 Rs. 3,997 (*nil*), provision for bonus Rs. 55,800 (Rs. 50,000), forfeited dividends paid Rs. 514 (Rs. 399) and transfer to general reserve Rs. 1,50,000 (*nil*). Thus there is available for distribution a sum of Rs. 4,46,155 (Rs. 5,27,900). It is recommended that this amount be disposed of by payment of a dividend at 40 (40) per cent. per annum for the year 1956 on the increased share capital amounting to Rs. 9,00,000 Rs. 3,60,000 (Rs. 3,60,000) leaving to be carried forward Rs. 86,155 (Rs. 1,67,900).

Issue of bonus shares.—The issue of bonus shares, resolved upon in general meeting held on 23rd April, 1957, is not included in the balance sheet as at 31st December, 1956. The dividend to be declared, however, will be payable on the increased issued capital and the distribution recommended is therefore equivalent to 60 per cent. dividend on the issued capital as at 31st December, 1956.

Outturn and sales.—A crop of 7,22,410 lbs. was produced and an average gross price of Rs. 2.83 nP per lb. was realised. The area under cultivation remains at 465 acres.

Estimates for season 1947.—For the current season a crop of 7,00,000 lbs. is estimated.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	7,11,959
Reserves ...	14,00,000	Stock of tea	10,03,456

Profit and loss account ...	86,155	Investments	5,35,315
		Cash ...	10,21,883
Rs.	36,13,672	Rs.	36,13,672

Bokakhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

A crop of 4,450 (4,665) maunds was manufactured and has been disposed of for sale in Calcutta for export 4,110 (4,237) maunds and for sale in Calcutta for internal consumption 340 (418) maunds. The average price per lb. realised was Rs. 2-8-1 as compared with Rs. 2-2-0 per lb. obtained for the previous season's crop of 4,655 maunds. The Company's export quota for season 1956 was 2,946 maunds.

The revenue account shows a profit of Rs. 1,19,491 (Rs. 1,15,532) and after deducting from this gratuity Rs. 5,550 (*nil*), pension Rs. 2,045 (*nil*). staff commission and bonus Rs. 7,168 (Rs. 9,770), managing agents' remuneration Rs. 12,368 (Rs. 20,426), manager's planting commission Rs. 1,823 (*nil*), depreciation Rs. 24,570 (Rs. 17,938), rice cut compensation, 1952-54 Rs. 14,856 (*nil*), short provision of labour bonus, 1953-54 and 1955 Rs. 3,568 (*nil*), there is a balance of Rs. 42,543 (Rs. 67,398). After adding to this profit on sale of machinery Rs. 300 (*nil*) and forfeited dividends written off Rs. 600 (*nil*) there is a net profit for the year of Rs. 43,443 (Rs. 67,398). After adding to this the adjusted credit balance of Rs. 25,488 (Rs. 58,712) brought forward from the previous year, there is a credit balance of Rs. 68,931 (credit of Rs. 1,26,110) on profit and loss account. The directors recommend that this balance be disposed of as follows:—

To pay a dividend of 5 (*nil*) per cent. for season 1956 without any deduction for income-tax payable by the Company Rs. 30,000 (*nil*) and to carry forward Rs. 38,931 (Rs. 25,488 after placing Rs. 11,033 for staff commission and bonus and Rs. 85,391 for labour bonus and sundry adjustments).

Estimates for season 1957 provide for a crop of 5,000 maunds at a total outlay of Rs. 7,73,308 which excludes an estimated capital expenditure of Rs. 37,200.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	8,96,474

New Assam Valley Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The profit as per revenue account is Rs. 5,92,507 (Rs. 4,31,387). To this amount is added the balance brought forward from last account of Rs. 63,024 (Rs. 1,08,564), balance on previous season's adjustment account Rs. 2,988 (Rs. 34,560), income from non-trading investments (net) Rs. 6,594 (Rs. 832), interest on bank deposits and current account Rs. 11,342 (Rs. 7,640), profit on sale of machinery Rs. 659 (Rs. 4,941), share transfer fees Rs. 6 (Rs. 22), miscellaneous receipts Rs. 733 (Rs. 28), sale of timber Rs. 58,925 (Rs. 1,47,076), amount transferred from provision for contingencies Rs. 52,900 (*nil*) and excess provision for taxation in previous years written back Rs. 38,000 (Rs. 20,000). The following amounts are to be deducted: Provision for taxation Rs. 2,68,000 (Rs. 2,72,000), bonus to labour for 1955 Rs. 55,322 (Rs. 98,307 for 1953 and 1954), bonus to clerical staff, etc., for 1955 Rs. 3,997 (*nil*), provision for bonus Rs. 55,800 (Rs. 50,000), forfeited dividends paid Rs. 514 (Rs. 399) and transfer to general reserve Rs. 1,50,000 (*nil*). Thus there is available for distribution a sum of Rs. 2,38,747 (Rs. 3,33,024). It is recommended that this amount be disposed of by payment of a dividend at 30 (40) per cent. per annum for the year 1956 Rs. 2,02,500 (Rs. 2,70,000) leaving to be carried forward Rs. 36,247 (Rs. 63,024).

Outturn and sales.—A crop of 7,22,660 (6,43,349) lbs. was produced and realised an average gross price of Rs. 2.82 (Rs. 2.66) nP per lb. The area under cultivation remains at 533 acres. *Estimates for season* 1957.—A crop of 7,00,000 lbs. is estimated for the current season.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,75,000	Block ...	6,12,753

Atal Tea Co. (1943), Ltd.

The directors of the above Company (Managing Agents: Messrs. Goenka & Co., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The profit and loss account shows a profit of Rs. 67,538 (Rs. 3,507), after providing a sum of Rs. 66,062 (Rs. 39,000) for depreciation, which when added by previous year's profit balance of Rs. 970 (Rs. 23,413), amounts to Rs. 68,509 (Rs. 26,920). Out of this available profit a sum of Rs. 24,000 (Rs. 1,200) has been set aside for taxation and Rs. 44,509 (Rs. 25,720) remains for disposal which the directors propose to distribute as under:—

To dividend on preference shares (free of tax) Rs. 13,500 (Rs. 13,500), to dividend on ordinary shares (free of tax) at 50 (25) nP per share Rs. 22,500 (Rs. 11,250) and balance of profit to be carried over to the next year Rs. 8,509 (Rs. 970).

As anticipated, the outturn of crop at the garden was higher at 5,206 maunds which could be achieved more except for crop regulation scheme enforced during the year, as against 4,844 maunds of previous year. The Company's teas also of the season fetched an average price of Re. 1-11-9 per lb. as compared to Re. 1-6-9½ per lb. of the previous year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,50,000	Block ...	10,77,787

Bradbury Mills, Ltd.

The directors of the above Company (Agents: Messrs. Ramnarain Sons Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st March 1957.

The result of the year's working shows a profit of Rs. 4,94,654 (Rs. 16,00,483) after providing Rs. 3,54,949 (Rs. 3,00,000) for depreciation. To this result has to be added a sum of Rs. 91,711 (Rs. 94,478) brought forward from last year's account, making a total of Rs. 5,86,365 (Rs. 16,94,961) which the directors have appropriated as under:—

To payment of a proposed dividend at Rs. 3-8 (Rs. 3-8 per share of Rs. 50 each, free of income-tax on 7 per cent. preference shares for the year ended 31st March, 1957 absorbing Rs. 1,03,250 (Rs. 1,03,250), to payment of proposed dividend at Rs. 15 (Rs. 20) per share of Rs. 50 of each, free income-tax on ordinary shares for the year ended 31st March, 1957 absorbing Rs. 3,00,000 (Rs. 4,00,000), and to set apart to employees' gratuity reserve Rs. 1,20,000 (*nil*) leaving a balance to be carried forward to next year's account Rs. 63,115 (Rs. 91,711 after placing Rs. 4,00,000 to machinery rehabilitation fund and Rs. 7,00,000 to reserve for taxation).

Although prices and deliveries were fairly satisfactory during the earlier months of the year under review, the position deteriorated as a consequence of an increase in excise duty on cloth which took effect from 1st September, 1956.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,85,000	Block ...	21,81,233

Mysore Spun Silk Mills, Ltd.

The directors of the above Company (Chairman: Mr. K. Thipperudriah, Channapatna) submitted the audited accounts of the Company for the year ended 31st March 1957.

During the year under review, the market conditions improved, with prices for raw materials being favourable. There was good foreign demand for silk noils the main bye-product of the mills.

The working of the year has resulted in a net profit of Rs. 3,30,565 (Rs. 42,197). The directors have appropriated this amount as follows:—

To off-set the balance of loss as per last balance sheet Rs. 1,50,653 (Rs. 1,92,850), to provide for arrears of depreciation as follows: For 1953-54 (in full) Rs. 1,28,087 and for 1954-55 and 1955-56 (in full on buildings, pipe-line and water-supply, motor lorry and car, furniture and fixtures and filature grainage only) Rs. 47,859 (*nil*), leaving a balance to be carried forward to next account of Rs. 3,966 (*nil*). Arrears of depreciation yet to be provided on plant and machinery for 1954-55 and 1955-56 amount to Rs. 1,64,615.

Owing to improvement in market conditions during the year, the mills discontinued the working arrangements of processing raw materials for others from September 1956 and started working on its own account. With a view to augment the resources of the Company, the directors have decided to install a complete staple fibre spinning plant of 5,000 spindles. Necessary action is being taken in this regard.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	27,78,403	Rs.	27,78,403

Bareilly Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the fifteen months ended 31st March 1957.

It has been necessary to close the accounts on 31st March 1957 instead of 31st December 1956 in order to conform with the provisions of Rule 26 of the Indian Electricity Rules 1956, which make it obligatory for all Electricity Undertakings to close their accounts on 31st March each year. It is proposed that the Company's accounts will accordingly be made up annually in future.

Satisfactory progress continues to be maintained as indicated in the following schedule:—

Year Ended	*Units Sold*	*Revenue* Rs.
31st December 1953 ...	7,593,375	14,78,184
31st December 1954 ...	8,372,646	15,55,000
31st December 1955 ...	9,503,786	17,74,998
31st March 1957 ... (fifteen months)	13,482,476	24,20,037

After providing for all charges and placing Rs. 27,985 to statutory contingencies reserve, Rs. 38,623 to reserve for redemption of debentures and Rs. 1,90,000 to general reserve, there remains a balance of Rs. 1,17,368 including Rs. 19,748 brought forward from the half-year ended 31st December 1955. From this is deducted a sum of Rs. 40,000 in respect of dividends paid for the half-year ended 30th June, 1956, leaving a balance of Rs. 77,368 available for distribution and this the directors recommend be disposed of as follows:—

To payment of a dividend at the rate of 10 per cent. per annum free of income-tax for the nine months ended 31st March, 1957 absorbing Rs. 60,000 and leaving to be carried forward to next year Rs. 17,368.

North-West Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts show a profit, after charging all expenses, of Rs. 1,04,941 (Rs. 81,076). The balance brought forward from last year was Rs. 15,950 (Rs. 13,249) making a total available for appropriation of Rs. 1,20,891 (Rs. 94,325). The directors have transferred to general reserve Rs. 62,500 (Rs. 37,500). An interim dividend at the rate of 7½ (*nil*) per cent. was paid on 26th March 1957 which absorbed Rs. 20,437.50 (*nil*). The directors now recommend that a final dividend at the rate of 7½ (15) per cent. be paid absorbing Rs. 20,437.50 (Rs. 40,875) leaving a balance to be carried forward of Rs. 17,516 (Rs. 15,950).

Raising for the year were 1,40,833 tons compared with 1,32,612 tons in the previous year whilst despatches totalled 1,46,680 tons as against 1,35,275 tons. A long-term scheme is under preparation to install a stowing plant for working No. 10 seam.

Accounts in brief are as under:—

MONEY UNCHANGED

(From Our Own Correspondent)

BOMBAY, *6th November*

e short-term money market showed no signs gency during the week under review, des- withdrawal of funds for subscription to the cent. 1969 Bombay Municipal Corporation ggregating Rs. 2 crores. The loans, which for subscription on the 1st inst., were by the end of the day on being oversub- This shows that the supply of funds with nad been considerably augmented, with no onding expansion in the demand for bank This is also indicated by the rise of 8 crores in deposits of banks during the nded 25th October 1957, while advances in- during the week by Rs. 15.30 crores only. ently, banks have been able to augment posits with the Reserve Bank, as also to re- eir borrowings from the latter.

the inter-bank call money section, banks ee lenders at 2 per cent., but borrowers arce. Nevertheless, banks were unwilling their surplus cash at lower rates. Indeed, ere still reported to be keen borrowers of oney at call and short-term deposits. Con- ly, the interest rates for these remained ouse money at call was bid at 4⅛ to 4⅜ per en for small sums of Rs. 25,000, 4¼ per cent. ered. Deposits for one to two months were p at 4¼ per cent. and those for three to six at 4¼ to 4⅜ per cent. Some banks were re- to have offered even 4½ per cent. for large

contraction of Rs. 15.75 crores in notes in ion is disclosed by the Reserve Bank of statement for the week ended 1st Novem- 7. Notes held in the Banking Department by Rs. 16.34 crores. There has been no in foreign securities, while a small rise of lakhs is noted in balances held abroad (in aking Department). Deposits of the Central nent have gone up by Rs. 1.27 crores, while of other Governments have declined by crores. Deposits of banks are higher by Rs. 4.79 crores in loans and advances other Governments, of which advances to Sche- banks against usance bills account for crores. Investments have declined by no n Rs. 11.08 crores.

Scheduled banks' statement for the week 5th October 1957 show a rise of Rs. 27.73 n demand deposits and of Rs. 9.85 crores in posits. Inter-bank borrowings are also up 7 lakhs, while borrowings from the Reserve ave been reduced by Rs. 1.41 crores. Ad- have gone up by Rs. 10.56 crores and bills ed and discounted by Rs. 4.13 crores. In- ts have been raised by Rs. 8.99 crores and lances by Rs. 5.43 crores. Money at call rt notice is also higher by Rs. 1.34 crores.

Gilt-edged market was dull during the vith enquiries confined to a few counters volume of business at a low ebb. The price ns were few and far between, but the ne remained steady. 3 per cent. 1986 Con- Loan attracted sellers and was marked 10 nP to Rs. 71.3 per cent. 1970-75 was on shed 5 nP to Rs. 86.05. 3 per cent. 1966-68 vers at Rs. 91.10, but there was no change itions. 3 per cent. 1964 held its ground at 5 and 1963-65 at Rs. 93.30. 3 per cent. was in request at Rs. 98.55. 3½ per cent. sellers at Rs. 99.60 and 1964 at Rs. 97.55, 65 was in demand at Rs. 97.30. 3¾ per 67 gained 5 nP to Rs. 99.50, while 4 per 72 was unchanged at Rs. 100. State loans so extremely dull. In fact, some of them wer levels. 4 per cent. 1967 West Bengal cked down by 25 nP to Rs. 98.75 and 1968 to Rs. 98.50. Madras 1968, however, gain- to Rs. 96.50, M.P. 1968 and Bihar 1968 ch to Rs. 96.15. Punjab 1968 fell by 75 nP and Orissa 1968 by 20 nP to Rs. 96.05.

rupee displayed some weakness in terms ollar during the earlier part of the week, nance with the setback in sterling abroad. overy in sterling from Monday this week, brought about an improvement in rupee hus, banks' selling rate of ready dollars, ing from Rs. 478 to Rs. 478.75 declined to per $100. Similarly, their buying rate rose 474.75 to Rs. 475.50, before reacting to 75 per $100. In London, spot sterling was down from $2.79-15/16-2.80-1/16 to 16-2.79-9/16, but firmed up to $2.80-2.80¼. nonths' forward fell from $2.77⅞-2.77⅞ to 77½, before gaining to $2.77-3/16-2.77-11/16. able sterling gained over the week from 6.35 to 278.30-278.45 cents.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, *4th November*

e has been no improvement in linseed locally and the undertone remains firm, urther all-round rise in prices. Des- from centres having been withheld, ushers are unable to procure sufficient s for their daily requirements and a few n obliged temporarily to close down, parti- owing to the disparity between the prices and oil. The oil section is dull. Although ave advanced slightly in sympathy, the s very poor.

latest available quotation for Ready- er is Rs. 23 per maund.

SILVER QUIET, GOLD STEADY

(From Our Own Correspondent)

BOMBAY, *6th November*

The two sections of the bullion market displayed divergent trends during the week under review. While silver was somewhat quiet, gold remained fully steady, though the rise in price over the week in the yellow metal was only fractional. The main deterrent factors in silver were the fear of heavy inflow of Tibetan coins and reports of large despatches of silver from Calcutta to other centres. Bears seized the opportunity to depress the market, while bulls kept away from it. The supremacy of the bears is reflected in the gradual widening of the carry forward charges in their favour from As. 14 to Re. 1-1 today.

The good demand in the ready section *vis-a-vis* the arrivals and reports of large-scale confiscation of smuggled gold in many coastal ports gave strength to gold. Any sharp rise in price was, however, checked by the weakness of silver.

Silver for forward delivery (November settlement) receded from Rs. 182-12 to Rs. 181-11. The December settlement gave way from Rs. 183-11 to Rs. 182-11.

Ready silver dropped from Rs. 182-12 to to Rs. 181-11, the discount before the December settlement being Re. 1, despite the shrinkage in floating stocks from 700 to 600 bars. The daily average arrivals were 25 bars, while the offtake was no more than 15 bars per day.

Forward gold (November settlement) hardened from Rs. 107-11 to Rs. 108-2 before receding slightly to Rs. 107-13. The December settlement moved up from Rs. 107-13 to Rs. 108-7, but closed a shade lower at Rs. 108-2.

Ready gold was unchanged over the week at Rs. 108-3, after touching a high of Rs. 108-11. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,500 tolas per day.

In New York, silver was unchanged at 90⅝c., while London price was marked down by ¼d. yesterday, the spot metal to 78¼d. and the forward to 78¼d. Gold gained initially from 249s. 7¾d. to 250s. 2d., but gave way latter to 249s. 9½d. following the recovery in sterling.

The following comparative table shows at a glance the trend of the market during the week under review:

		6-11-57	Highest	Lowest	30-10-57

METALS DECLINE FURTHER

(From Our Own Correspondent)

CALCUTTA, *5th November*

In the absence of buying support, prices of base metals continued to decline during the week under review. Reports from foreign markets revealed a quiet trend. Local stock position was comfortable. Reports of easing of the political tension in the Middle East and the strong possibility of the U.S. releasing considerable quantities of stockpile metals alarmed stockists, who thought that prices were bound to come down further. They were, therefore, very anxious to lessen inventories, but consumers would not buy anything more than meagre quantities. Electrolytic copper opened at Rs. 154 and closed lower at Rs. 151. A portion of the Government enquiry for 700 tons of fire-refined copper was covered. Electrolytic zinc eased to Rs. 61 from Rs. 62. Demand was dull, with supplies being sufficient to meet requirements for some time. According to an overseas report, in the U.S. the prime western quality was being bought by steel mills and the high grade zinc by the automobile industry. Tin eased to Rs. 520 from Rs. 522, and lead to Rs. 64 from Rs. 65 with little business taking place.

CLEARANCE IN HIDES LIMITED

(From Our Own Correspondent)

MADRAS, *4th November*

Arrivals of cow hides were of the usual volume, but clearances are limited, due to poor U.K. response to shippers' offers. Though there was keen demand for better grades and superior marks in light weights, the volume of trading was small. Shipment business was small in F.A.Q. types also, as importers' ideas of prices were lower than shippers. Arrivals of buff calf and buff hides were small and found ready buyers.

In the tanned skins section, there was no change to report, and the markets were a shade quiet.

Shipments during October were: 4,049 bales cow hides, 276 cow calf, 73 buffs, 148 buff calfs, 1,257 goat and 812 sheep to the U.K. ports; 4 cow, 8 cow calf, 529 goat and 190 sheep to the Continent; 5 cow calf, 90 buffs, 15 buff calf and 98 goat to the U.S.A.; 175 sheep to Japan.

COTTON FUTURES WEAK

(From Our Own Correspondent)

BOMBAY, *6th November*

Although on the opening day of the week the cotton futures market ruled fully steady, in subsequent sessions it depicted an easy trend. The earlier firmness was due to the renewed support extended by mill interests on hopes of an export quota and a reduction in excise duty on cloth. But later the market sharply reacted to the categorical reply reported to have been given by Mr. Manubhai Shah, Union Minister for Industries, and Mr. Nityanand Kanungo, Minister for Commerce, to a deputation of the Madhya Pradesh Textile Millowners' Association, that the Government would not modify its present pattern of excise duty on cotton piece-goods. As soon as the official attitude became clear, the erstwhile buyers began to sell. There was heavy liquidation of long position with the result that prices suffered a sharp break. The downward trend was accelerated by larger arrivals of new crop in upcountry markets. But the setback in prices might have been more marked but for the presence of an encouraging factor. This was the expectation entertained in trade quarters that an export quota would be announced before long. This belief gained further strength when it became known that the Export Promotion Committee, in its report submitted to the Government, had recommended that at least 100,000 bales of Bengal *Deshi*, in addition to other varieties, should be permitted for export every year. The short-covering induced by this factor was responsible for a limited recovery.

I.C.C. Maglai Jarilla (March 1958) opened the week at Rs. 713, as against the previous close of Rs. 712.50, and after improving to Rs. 718, it finished the day lower at Rs. 713.50. Thereafter, it started on its downward course, on heavy bull liquidation, reaching a low of Rs. 695.50 yesterday. It again improved to Rs. 702.25 at close. Commencing today's session fractionally higher at Rs. 703, the contract moved in a narrow groove on either side in slow dealings and closed at Rs. 702.50. The net loss over the week was Rs. 10.00.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	6-11-57	*High*	*Low*	30-10-57
I.C.C. Moglai Jarilla (March 1958) ...	702.50	718	695.50	712.50

Although arrivals in upcountry markets were steadily increasing mill inquiries have not widened. This was attributed to rumours that many mills were contemplating curtailment of working hours by cutting one shift. Spot values also eased on news that reduction in excise duty was unlikely. Delivery contracts were also week. Demand was noted for new crop Khandesh, Berar, Co. 2, etc.

In the export section, shippers' interest was noted in certain exportable styles. This was based on rumours of a possible reduction in export duty on Bengals and the grant of an export quota for ¾" cotton. A sizable volume of shipment business was reported in Ganganagar Bengal at prices ranging from Rs. 730 to Rs. 740. Interest was also noted in Oomras.

Despite the recent fall in prices, overseas demand for Bengals has not revived to the desired extent and shipment business continues to be at a low ebb. This is mainly attributed to the competition from Pakistani growths and lower sterling allocation for cotton purchases by Japan, the principal buyer. Out of the 50,000 bales of Bengal cotton permitted for export, not more than 10,000 bales would appear to have been sold so far. Of this, Japan accounted for 8,000 bales, France and the U.S. together 1,000 bales and the rest by others. Export circles feel that a reduction in the present export duty of Rs. 100 per bale on such cotton would give the much-needed fillip to exports.

In the foreign section, following the reduction in Sudan reserve prices, demand for Sudanese cotton widened. A sizable volume of business was put through in new crop East African for March-April shipment, subject to the availability of licence. It is understood that the validity of import licences for lower varieties of East African cotton has been extended till the end of December 1957. This would enable India to buy some quantity of new crop Jinja. There is still a quantity of more than 25,000 bales which remains to be picked up out of the allocation of 50,000 bales announced on 20th July. Whether this balance quantity will be absorbed or not within the new shipping deadline fixed will largely depend on the availability of Indian Co. 2 variety which compares pricewise favourably with Mwanda and Jinja.

It is reported that the ceiling of 10,000 bales fixed for the import of Egyptian cotton has been reached and that no further application for licence will be entertained. It is also learnt that the Government of India has requested the U.S. Government to extend the contracting period for cotton import under P.L. 665, which expired on 31st October.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

New Crops: Bengal *Deshi* 710; Berar Jarilla 785; Khandesh 810; Oomra *Deshi* 760; Vijay 895; Hubli Laxmi 895; Jayadhar 785. *Delivery Contracts*: Khandesh 197/3 797; Berar 787; Vijay 898; 320F 875; 216F 892; Bengal 642; Mathia 672.

The Karachi cotton futures market ruled easy during the week under review. Despite reports that France had permitted imports of 10,000 tons of cotton from the sterling area, including Pakistan, the market failed to improve. This was mainly due to the poor ready demand. Overseas inquiries also did not show any revival. Towards the close of the week, values tended to look up. N.T.R.G. January, which had closed at Rs. 77-3 last week, declined to Rs. 75-11-6 on the 2nd inst. It again improved

slightly to close the week at Rs. 76-7. The net loss over the week was As. 12. The March position, after having declined from Rs. 78-10 last week-end, to Rs. 77-10-6 on the 2nd inst., closed higher at Rs. 78-5. The contract shed, over the week, As. 5. The spot section also ruled quiet and values of most varieties climbed down. Punjab *Deshi* which was quoted at Rs. 78 last week-end, dropped to Rs. 76-4. The following are the latest available quotations—in Pakistan rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 76; S.G. 81; Punjab Roller 77-8; S.G. 81-8; N.T. Saw Gin 89-1.

In spite of increasing crop movement and the resultant hedge pressure, the Alexandria cotton futures market ruled slightly firm during the week. The main influencing factor would appear to have been the expectation of renewed demand from India following the Government of India's decision to permit import of 10,000 bales of Egyptian cotton. The reduction in the Sudanese reserve price was, however, a bearish factor. It was feared that competition from Sudan would become keener as a consequence. Exports during the season till 23rd October aggregated to 19,529 bales, comprising 5,300 bales Karnak, 5,773 bales Menoufi, 3,804 bales Giza 30, 3,629 bales Ashmouni, 963 bales Giza 31 and 60 bales others. This compares with 44,488 bales exported during the corresponding period of the previous season. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: November 84.40 (84.10); January 83.20 (82.90). *Ashmouni*: December 68.10 (68.00); February 68.25 (67.90).

The Gezira Cotton Board has announced reduction in the auction reserve prices of certain grades of Sakel and Lambert cotton by one Sudanese pound per 100 lbs. with effect from the 5th inst. At a time when Russia is offering to buy Sudanese cotton, this action is reported to be an incentive for traditional customers, particularly Britain and France, to step up purchases of Sudan cotton. This is the third reduction this year, the last being in August.

Cheerful conditions prevailed in the Liverpool market. Firm New York advices and better ready demand were responsible for the improvement in the quotations of both American and American type contracts. The improvement would have been more marked but for the uncertainty caused by the revival of rumours regarding probable shifts in U.S. cotton policy. The higher crop forecast in U.S. by the *Journal of Commerce* was another bearish factor. Inter-month differences were reduced by trade buying in near deliveries and a moderate volume of hedge selling in distants. Following the reduction in reserve prices of the Sudan Gezira Board, Liverpool Sudan contracts staged a marked retreat. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December-January 25.80; March-April 28.50; May-June 25.91; July-August 25.90. *American cotton mixed growth contract*: December-January 26.57; March-April 26.57; May-June 26.62; July-August 26.60. *Sudan*: November-December 35.65; January-February 36.10; May-June 36.15.

Barring occasional setbacks due to profit-taking at bulges, New York cotton futures ruled firm during the week. Traders were inclined to discount some private crop forecasts which placed the probable outturn higher than the October official estimate. Reports of improving weather also did not exercise any bearish influence on the market. This was mainly due to the speculative support extended to the market by Commission Houses and New Orleans interests. This would appear to have been mainly influenced by the lateness of the crop.

It is reported that American Egyptians have also been declared as surplus and are thus now eligible for export under U.S. Aid Programmes to foreign countries which provide for sale of agricultural surpluses against payment in local currencies. However, presently, U.S. extra long-staple cotton is not priced competitively, as compared with comparable foreign growths. The extra long-staple acreage allotment for the next season is 83,286 acres and the marketing quota 79,022 bales. As compared with the figures for this season, the acreage allotment is down by 6,071 acres and the marketing quota up by 2,457 bales, reflecting the increased yield figures.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	5-11-57	29-10-57	22-1057
Spot	35.35	35.35	35.10
December	35.14	35.04	34.67
March	35.17	35.18	34.83
May	35.25	35.17	34.86

YARNS EASY

(From Our Own Correspondent)

BOMBAY, *6th November*

The yarn market depicted a distinctly easy trend during the week under review. The bulls who had at one time tried their best to hold long to squeeze the October delivery in both rayon and staple fibre yarns were later not inclined to take delivery of 120 dull cones against their purchases for this delivery. But bears who had been compelled earlier to cover at ridiculously high prices came out hammering the market, with the result that prices of forward rayon and staple fibre yarns tumbled down. In sympathy and thanks to limited offtake in important consuming markets like Calcutta and Bhagalpur, spot prices also suffered a setback. Cotton yarns lacked support, despite the release of a further export quota of 50,000 bales of cotton yarn. For overseas enquiries continued to be slack on account of stiff competition from Pakistan and Japan. There were, besides, reports of heavy accumulations of stocks with spinners and traders. A leading spinning unit was reported to have reduced the price of yarn of various counts for November delivery by 50 nP to Re. 1 per bundle. Demand for yarn from handlooms and powerlooms, too, was poor. Nor were advices from the cotton market encouraging.

Yarn traders have welcomed the Export Promotion Committee's recommendations to the Government that the export quotas be distributed among exporters instead of mills. It notes that the Committee has fixed an export target at 100,000 bales a year.

Snia rayon yarn (120 dull cones) December delivery slumped by Rs. 7 to Rs. 812. Spot 150 Japan receded by 11 nP to Rs. 4.20. 120 Italy was dull at Rs. 4.50, as also 120 Japan at Rs. 4.20. 150 Italy, however, improved by 6 nP to Rs. 4.25. Among indigenous yarns, National Rayons 150 bright cones first grade retreated by 6 nP to Rs. 3.41. 120 bright cones first grade declined by 18 nP to Rs. 3.87.

Staple fibre yarn (40×2) December delivery dropped Rs. 8 to Rs. 542. Spot (40×2) Centurys lost 2 nP to Rs. 3. Kohinoors and New Greats were unchanged at Rs. 3-12 and Rs. 3, respectively. Foreign yarns were neglected, Paramounts at Rs. 5.31 and Fujis at Rs. 5.28.

In the cotton yarn section, ten counts Podars receded by 6 nP to Rs. 14.25. Moderns were dull at Rs. 14.75. Twenty counts Moderns shed 17 nP to Rs. 17.70. Gokaks declined by 13 nP to Rs. 17.62. Among thirty counts, Indus were on offer at Rs. 21.31. Forty counts Gokaks were quoted 25 nP lower at Rs. 25.50. Moderns came down by 20 nP to Rs. 25.50. Minaxis lost 13 nP to Rs. 24.94. Sixty counts Raghuvamshis receded by 37 nP to Rs. 52.50. Finlays changed hands at Rs. 60, same as last week. Moderns, on the other hand, gathered 25 nP to Rs. 60.25. Among eighty counts, Mahendras came down by Re. 1.75 to Rs. 68.25. Moderns softened by 50 nP to Rs. 73.50. Finlays were neglected at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	6-11-1957	30-10-1957
	Rs.	Rs.
Ar. silk yarn **(per case of 200 lbs.)—**		
120 dull Cones Snia October	—	806.00
December	812.00	819.00
120 Japan (per lb.)	4.20	4.20
150 Japan (per lb.)	4.20	4.31
120 Italy (per lb.)	4.50	4.50
150 Italy (per lb.)	4.25	4.19
Staple fibre yarn **(per case of 200 lbs.)—**		
40×2 October	—	578.00
40×2 December	542.00	550.00
40×2 New Great (per lb.)	3.00	3.00
40×2 Century (per lb.)	3.00	3.02
40×2 City (per lb.)	3.08	3.06
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.25	14.31
20s Gokak	17.62	17.75
30s Indu	21.31	21.31
40s Minaxi	24.94	25.07
60s Raghuvamshi	52.50	52.87
80s Modern	73.50	74.00

OILSEEDS MOVE UP FURTHER

(From Our Own Correspondent)

BOMBAY, *6th November*

The firm trend noted in the oilseeds market last week continued unabated during the week under review. The abolition of the export duties on nigerseed oil, kardiseed oil, groundnut oilcake and de-oiled groundnut meal gave rise to expectation of a downward revision in export duty on castor oil. There were also hopes of a more favourable export policy in regard to oils, following the recommendations of the Export Promotion Committee, although the Government's statement that it would accord to items like groundnut oil the same primacy of consideration to domestic requirements as heretofore was noted by traders. Castorseeds ruled particularly firm, thanks to improved prospects of export business in oil and expectation that no margins would be imposed in this section. Linseed evoked persistent short-covering and bull support induced by hopes of better prices for Indian linseed oil in export markets. These hopes were based partly on ideas of lower linseed crop in the U.S. and partly on the closure of Canadian ports in a few days' time which would enlarge the demand for Indian linseed oil in the U.K. and the Continent. Groundnuts, too, were strong, despite frequent rumours of the Forward Markets Commission imposing either a ceiling on prices or a penal margin on bulls. In sympathy with the general trend, cottonseeds maintained a firm trend.

The Forward Markets Commission, it is reported, is viewing with apprehension the present upward trend in oilseeds prices. The Commission met the President and Vice-President of the Bombay Oilseeds and Oils Exchange yesterday. It discussed the crop and market trends and clearly indicated that the Commission would not hesitate to take such action as the situation might warrant. Some officers of the Commission are understood to have had separate talks with some of the leading oilseeds traders today. Details of these talks are, however, not known.

Under the impetus of renewed bull support and persistent short-covering, groundnut February 1958 delivery climbed up from Rs. 160.37 last week-end to Rs. 164.87. Ready Khandesh spurted by a rupee to Rs. 35.50. Coromandel hardened by 37 nP to Rs. 34.87. Bold F.A.Q. gathered 12 nP to Rs. 33.62. Groundnut oil *ex*-mill improved by 38 nP to Rs. 20 and railway receipt by 50 nP to Rs. 19.87.

In the castorseeds section, May 1958 delivery which stood at Rs. 154.25 at the close of last week firmed up to Rs. 157 on Thursday. It rose further to Rs. 157.50 on Monday. After receding to Rs. 156.75 yesterday on profit-taking, it recovered to Rs. 157.75. The net advance over the week was Rs. 3.50. Ready castorseed Kanpur quality forged ahead by Rs. 3.50 to Rs. 32. Madras improved from Rs. 33.62 to Rs. 34 before closing at Rs. 33.50. Castor oil B.S.S. spurted by Re. 1.50 to Rs. 20.87. Commercial put on Re. 1.37 to Rs. 19.62.

Linseed May 1958 delivery picked up Re. 1.19 to Rs. 31.81. Bold ready strengthened by Re. 1.18 to Rs. 30.87. October-November registered a rise of Re. 1.30 to Rs. 31.24. Linseed oil ready was higher at Rs. 16, as against Rs. 15.69.

Cottonseed February delivery advanced from Rs. 105.50 to Rs. 108 on Saturday and, after declining to Rs. 107 yesterday, firmed up again to Rs. 107.75 today. The net gain over the week was Rs. 2.25.

Over the week, kardiseed bold ready gained 50 nP to Rs. 21. Nigerseed Madras was done today at Rs. 28, as against Rs. 27.87 last week-end.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	6-11-1957	30-10-1957	22-10-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	164.87	160.37	156.37
Bold ready (per cwt.) ..	35.62	33.50	31.75
Coromandel	34.87	34.50	32.62
Khandesh quality ..	35.50	34.50	32.62
Linseed—			
May 1958	31.81	30.62	30.12
Bold ready (per cwt.) ..	30.87	29.69	29.25
October-November ..	31.24	29.94	29.37
Castorseed—			
May 1958	157.75	154.25	152.50
Madras (per cwt.) ..	33.50	33.62	33.00
Cottonseed—			
February 1958	107.75	105.50	102.50
Groundnut oil—			
Ex-mill ready (per quarter) ..	20.00	19.37	19.25
Castor oil—			
Commercial (per quarter) ..	19.62	18.87	18.00
Linseed oil—			
Ready	16.00	15.56	15.37

SUGAR QUIET

(From Our Own Correspondents)

BOMBAY, *6th November*

Quiet conditions prevailed in the sugar market during the week under review. Demand for sugar was very slack, as consumer offtake was at a low ebb. The sugar factories in the Bombay-Deccan were reported to be keen sellers. Traders were expecting the normal monthly release early next week.

Sugar prices, however, remained unchanged practically throughout the week. Small grain was quoted at Rs. 99 per bag, including sales tax, medium grain at Rs. 100-103 and large grain at Rs. 104-109.

Arrivals of sugar into the market during the week under review aggregated 18,400 bags, as against 23,700 bags in the previous week.

* * * *

HAPUR, *4th November*

Sugar prices ruled quiet during the week, despite better outside demand, as factories were anxious to lighten their stocks. Crushing for the new season has not yet begun, but is likely to begin by the end of the week. *Ex*-mill delivery prices were quoted slightly lower as compared to previous week. A rumour indicating the prospect of an imminent increase in excise duty was also reported in the market, which resulted in better buying interest. Small grain quality was quoted around Rs. 32.50 per maund, and bold quality up to Rs. 35 per maund.

Last week-end witnessed good demand from the consuming centres mainly from Punjab in the Muzaffarnagar sugar market. Offtake during the week was good as the wagon supply position was reported satisfactory. Business in bulk quantity was done in Khatauli, Laskar and Mansurpur produce. The mill delivery prices, however, declined by .06 to 25 nP per maund and the latest prices are: Rampur special (B29) Rs. 34.62, Khatauli (B28) Rs. 33.81, Mansurpur (B29) Rs. 33.75, Laksar (B29) Rs. 32.50, Daurala (C29) Rs. 33.37, Mowana (B29) Rs. 34, Amroha (D29) Rs. 31.81, Bijnore (E29) Rs. 31.69, Meerut (D28) Rs. 32.62, Simbhauli (E29) Rs. 32.87.

The sugar market at Kanpur witnessed a revival of good demand and sentiment also turned steadier under the stimulus provided by the improved spot and *ex*-mill turnover. Prices, however, disclosed a mixed pattern during the week. While quotations for east U.P. and Bihar mill deliveries stabilised at lower levels, those for Central U.P. factories suffered a recession by 12 to 25 nP per maund.

In sympathy with the weakness in crystal sugar, *khandsari* prices ruled dull during the week. Demand was reported dormant and inferior grade was quoted between Rs. 27 and Rs. 29, and superior between Rs. 30 and Rs. 32 per maund.

New *gur* arrivals at Hapur amounted to an average of 4,000 to 5,000 maunds daily, but good demand from Delhi and other consuming areas accounted for steady trend in the ready section. *Rabi* sowings having finished, new *gur* arrivals will soon further increase. Old stock is put at about 7,000 maunds, which is not in request. The latest prices here are: Old *kotha* Rs. 11.25, new Rs. 14 to Rs. 16 per maund.

Gur Chakku kotha dry and wet jaggery prices advanced by about 50 nP per maund in the Muzaffarnagar market where demand was reported fairly good and wagon supply position was also satisfactory. New *shakker dara* and *masala* were

quoted from Rs. 16.50 to Rs. 19.50 and from Rs. 19.50 to Rs. 21.50 per maund, respectively. Demand from Rajasthan was good. *Panseran* prices also improved by 50 nP per maund on good local demand.

Future *gur* prices moved both ways during the week and *gur fagun*, opening at Rs. 12.13 last Monday, touched a high of Rs. 12.25 before declining to Rs. 12.10. Today's closing was, however, done at Rs. 12.12.

BLACK PEPPER ADVANCES

(Messrs. Parekh and Co.)

BOMBAY, *6th November*

Malabar black pepper displayed steadier undertone during the week, with improvement in prices, following short-covering in the wake of rumours that some of the East European countries, perhaps Russia, bought a couple of hundred tons for shipment during January-February at Rs. 105 per cwt. f.o.b. Heavy rains in the pepper belts and fair demand in ready were mainly responsible for the present hardening of prices.

Singapore, after going down to Str.$63 under liquidation by stale bulls, improved to Str$66. Stock in Singapore is reported to be rather heavy but is in strong hands.

New York remained inactive but steady, with price for spot hovering round $0.24¼. Grinders were reported to be buying hand to mouth. Consequently, dealers there were selective buyers.

Alleppey improved to Rs. 575, while garbled at Cochin was quoted at Rs. 97½ for December delivery.

In the A.S.T.A. section, December was done at $0.24¼, while there were sellers for January-February-March at $0.24¼.

In the delivery section, following improvement in offtake of ready, December delivery improved to Rs. 535. February was lifted to Rs. 545, mainly because of short covering.

Today's nominal quotations are: Ready delivery Rs. 74 per Bengal maund and December Rs. 530-Rs. 535 and February Rs. 540-Rs. 545 per candy of 5¼ cwts.

TEA DUSTS EASY

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *31st October*

Just under 700,000 lbs. were on offer in dust sale "V" which was held on Tuesday, 29th October. From the outset it was apparent that demand was very limited. Prices for all types were irregularly 10 to 15 nP easier, with the exception of high grown dusts which remained firm. Teas stored in Kozhikode were neglected and there were a number of withdrawals.

The average price realised in dust sale "V" was Re. 1.56 per lb., as against Re. 1.62 per lb. in the previous sale and Re. 1.85 per lb. in the corresponding sale of 1956.

London Market—Sale of 28th October 1957.—Plain and medium irregularly 3*d*. dearer. Best followed quality.

Sale of 29th October 1957.—Generally 2*d*. to 3*d*. dearer.

Colombo Market—Sale of 29th October 1957.—Active and general demand. Considerably dearer rates. Russia operating substantially on high and medium brokens. Good fannings much dearer.

Sale of 30th October 1957.—Generally dearer, particularly liquoring sorts. Good dusts up 30c.

Calcutta Market—Export.—Better general demand. Strong at bottom. Commons and medium B.O.Ps easier. Useful liquoring B.P. and fannings firm to occasionally dearer, while leaf grade about steady. Best C.T.C. advanced 20 to 40 nP Darjeelings and tippy teas sold well.

Internal.—18,350 dust. Good demand well maintained. Black leafy exportable dusts 6 nP easier. Small orthodox Assams dearer. Best C.T.Cs and good Darjeelings well supported. 2,500 packages internal. Leaf improved demand.

Export Quota.—The Government of India has announced a further release of export quota amounting to 5 per cent. of the B.C.B. This brings the total allotment for the 1957-58 season to 55 per cent. so far, as compared with a total of 63.1 per cent. for the whole of season 1956-57. The market strengthened following this anouncement and business is being transacted at 21½ nP.

Forthcoming Auctions.—Dust Sale 'W' will be held on Tuesday, 12th November.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"Sale 1.9.—1,800,000 lbs. Better general demand, particularly for medium brokens which are dearer. Black leaf fannings well supported, but others very irregular and easier. Best liquoring strong, whole leaf easier, particularly orange pekoes."

TEA IMPROVES

(From Our Own Correspondent)

CALCUTTA, *5th November*

A further improvement in demand was in evidence during yesterday's export auctions. A similar trend was also recorded in last week's sales for domestic consumption, although prices for some varieties eased. The continuance of strong demand in London auctions and the gain in prices at that centre were factors which contributed to the upturn here. The decline in tea stocks in the United Kingdom warehouses by 1 million lbs. to 127 million lbs. in the week ended 25th October 1957 was also noted here, and signified that London buyers would continue to show greater interest for replenishing stocks.

Dusts offered during last week's internal sales aggregated 18,283 chests, the quality of which was of a rainy character. There was good demand, and exporters also showed interest. Keen competition was shown to the smaller orthodox teas from Assam, prices of which, as a result, rose. There was good support for the better liquoring C.T.C. Assams, and in particular the best grainy kinds met with competition from exporters. However, prices of black leafy exportable grades, commons, Dooars and the plainer liquoring and unattractive descriptions gave way. Darjeelings with flavour were steady. The quotations were: Best Assam C.T.C. Rs. 2.60 to Rs. 2.90, medium Assam C.T.C. Rs. 2.25 to Rs. 2.40, medium Assam grainy dust Re. 1.68 to Re. 1.72, and medium Dooars Re. 1.64 to Re. 1.68.

Leaf on offer aggregated 2,291 chests, which were of a fibrous description. Prices were better following an improvement in demand.

The strongest feature during yesterday's export sales when offerings amounted to 55,368 packages, was "teas for price." Buyers paid keen attention to clean black fannings, and prices of clean common teas rose. A higher trend was also in evidence in "leg cut" teas. Prices of C.T.C. Assams possessing useful liquors were steady; however, following less demand some lots from the poorer liquoring teas were withdrawn. Whole leaf grades and Darjeelings were easy, but tippy teas were in good form and maintained last rates. The quotations were: Best Assam C.T.C. B.P. Rs. 3.10 to Rs. 3.20 (nominal), best Assam C.T.C. fannings Rs. 2.85 to Rs. 2.90 (nominal), clean black pekoe Rs. 2.25 to Rs. 2.27, medium fannings Re. 1.76 to Re. 1.78, plain fannings Re. 1.72 to Re. 1.74, and plain B.P. Re. 1.62 to Re. 1.64.

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, *5th November*

The week under review was a dull affair in the jute goods market, as overseas interests were not keen to purchase substantial quantities. Although reports from New York were encouraging, inasmuch as there had been increases in the spot and afloat positions, American buying from Calcutta was far from cheerful. It was believed that in the last month shipments were considerably less; as such, an increase in the stock of goods with mills should not cause any surprise in the market. Up to 25th October, hessian shipped, at 17,000 tons, was lower by 8,000 tons, as compared with that in the corresponding period of the previous month. Sacking goods shipments aggregated 24,000 tons, as against 32,000 tons. In this background, the market has now entirely forgotten about recent rumours of unsealing a portion of the looms now remaining idle. These rumours had been circulated earlier by interested parties taking advantage of the satisfactory statistical position. However, those closely acquainted with the history of the jute industry and trade knew it only too well that mills would not again experiment with unsealing looms, unless demand showed a steady upward trend for at least a continuous period of six months.

Ready goods, however, are difficult to be located, and mills are fairly well booked. Mills show greater interest in raw jute. Their expectations of a decline in prices have not so far materialised, as arrivals continue to be meagre and considerably below demand. Even allowing for the delayed monsoon, it is time that raw jute moves in greater quantity. That this is not so is attributed to transport difficulties and the tendency among cultivators to release their production in small quantities in order to avoid any impact on prices. On the anticipation that raw jute arrivals would improve when harvesting got momentum, mills had been purchasing raw jute just to cover their day-to-day requirements. So far, this anticipation has not materialised, and reports from East Pakistan suggesting a setback in crop on account of drought conditions have been noted here. In Cossipore, all arrivals continue to find ready buyers. Mill agencies in the interior are finding very little jute.

Earlier on Tuesday last week, prices of jute goods rose following speculative manipulations in the *fatka*. The higher prices were not sustained, as there was no follow-up demand, and speculative selling emerged. Thus, ready B. twills were priced at Rs. 118.50 and 40″ 10 oz. hessian at Rs. 42.70, as against Rs. 118.50 and Rs. 42.70, respectively, on the previous day. There was no demand for hessian; the 40″ 10 oz. declined further to Rs. 42.65 on Wednesday. On the other hand, ready B. twills spurted to Rs. 119, on account of scarcity of ready goods. It was believed that, in view of the shift in demand to hessian, more hessian looms were in the process of transfer to sacking production. On Thursday, conditions eased in the absence of substantial interest; this was reflected in the decline of 40″ 10 oz. hessian to Rs. 42.35 and B. twills to Rs. 118.85. On the following day, there was a further drop in the prices of these representative constructions to Rs. 42.15 and Rs. 117.25, respectively, although a small measure of speculative support prevented a greater fall in sacking goods. Over the week-end, prices showed little change with the 40″ 10 oz. hessian being priced at Rs. 42.20 and B. twills at Rs. 116.65. However, a small improvement in prices was recorded yesterday following enquiries. Ready 40″ 10 oz. hessian recovered to Rs. 42.37 and B. twills to Rs. 117.15. The 8 oz. hessian was offered at Rs. 34.62.

Prices of raw jute showed fractional improvement, as all new arrivals were readily taken up. Prices in East Pakistan were steady, although business taking place was at a low ebb. In the border areas of Pakistan, the crop was stated to be considerably lower than last year, in view of Government's vigilance against smuggling. The Jute Marketing Corporation is stated to have bought fair quantities from border areas. Growers in the border areas have been warned by the East Pakistani Government to dispose of all their jute by 31st December, lest they should be liable to penalty. Prices were well maintained with jute white C bottoms being quoted at Rs. 25-8, jat white cross bottoms at Rs. 22, N.C. cuttings at Rs. 56, mills firsts at Rs. 205, export lightnings at Rs. 160, export firsts at Rs. 180, and export hearts at Rs. 132.

The latest quotations in Calcutta for new crop November-December delivery are as follows:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	34.00	31.00
Northern	33.00	30.50

Bimli f.a.q.	Rs.	25.00

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, *4th November*

Foodgrain prices ruled steady during the week under review. The disquieting food situation in States in Eastern and Central India has caused considerable concern in Government circles, but the Government appears confident of adequately meeting the situation. A generous and immediate shipment of wheat is expected from Canada under the Colombo Plan and, although the details regarding the period in which the Canadian wheat will be shipped are still being worked out, it is expected to arrive in time to replenish the reserves which are being drained by supplies to deficit areas. It is learnt that the present allocation is of the order of 100,000 tons.

The Union Government has applied the amended provisions of the Essential Commodities Act in respect of wheat to U.P. and Bihar, in order the arrest the upward trend in wheat prices. The Government can now require any stockists of wheat to sell his stocks in these two States at the average price for the past three months. The U.P. Government is reported to have pleaded with the Union Government to convert this State into a separate rice zone in order to tide over the crisis resulting from drought. The State Government, which had planned to close most of the 1,500 fair-price shops after the paddy harvest, has decided to continue these shops and has urged the Centre to increase the quota of imported wheat allotted to this State. Special attention is also being paid to the problem of distribution and the measures under consideration are expected to ensure speedy and efficient distribution of foodgrains in the needy areas.

Wheat prices at Hapur were mostly unchanged during the week at Rs. 16 per maund for *dara* quality and Rs. 17.25 for farm produce. Consumers demand was mostly met from local arrivals which averaged 200 maunds per day and local wheat stock continues unchanged at 29 *khatles*. Sowings of *rabi* grains have finished and rains in some areas in the third week of October have necessitated resowings there. Rice prices continued steady due to disquieting news on the food front in many States. New crop arrivals have begun in larger quantities. Last week-end prices (per maund) were: Basmati Rs. 27 to Rs. 29.25, mainpuri Rs. 24 and coarse Rs. 19.

SUGAR

(*Concluded from page* 864)

enough to be registered with a factory as a supplier) gets hardly one rupee per maund of sugarcane.

"New factories are now being established at capital costs from five to six times what they were even 10 years back. The capital invested in most of the new factories (co-operative units) is mainly from borrowings from Governmental institutions. The depreciation and interest charges that these factories may have to incur on each bag of sugar will be as near to Rs. 12 as makes no difference. On a 10 per cent. recovery basis, the cost of the raw material will be (including cane cess) Rs. 45 per bag. Manufacturing chemicals, labour supervision, insurance charges, packing, renewals, fuel, etc., will cost a further Rs. 22 per bag at least. The cost per bag will be, at a low estimate, Rs. 77 per bag, while it is difficult to now realise even Rs. 70 per bag net, excluding excise and sales taxes. The fear that, unless some relief is given by reducing cane prices and excise duties, the sugar industry will follow the vegetable ghee industry, is genuine.

"The high prices being fixed for cane is justified on the need for fostering increased cane production. But, if by this the sugar industry is to face liquidation, what do we gain? One grants that in a democracy, the numerous and vocal elements like the growers are at a greater advantage than the factory managements. Even so, there is something to be said for fixing cane prices at such a level that only the efficient cultivator, who adopts the latest techniques and gets a larger yield per acre, will be encouraged, and the also rans will be compelled to adopt economic means of raising sugarcane."

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.

||Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T=Taxable. C=Cumulative. R=Redeemable. T.F.=Tax-free.
R.O.=Redeemable at option. N.R.=Non-Redeemable. P.=Participating.

(f) Participating preference shares (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956 (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months notice. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and all other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (a) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page* 851)

world consumption of this metal has been slowing down since the middle of last year and output has continued to rise, prices have all along remained practically unaltered. The total production of aluminium in the main producing countries exceeded 3 million short tons in 1956, as against 2 million tons in 1952. The bulk of the marked rise in production seems to have been accounted for by the U.S., where the Government offered a guaranteed market to many producers for the first five years of their operation. The Government did purchase towards the end of last year a fairly large surplus output, following growing accumulations of stocks with producers consequent on falling off in demand. It is this purchase which must have prevented the aluminium prices from staging a retreat. How long will the U.S. Government hold on to the stocks is not known. This will depend on the trend of prices in the world market in the coming months and the defence requirements which are sure to be reassessed in the light of Russia's tremendous success in inter-continental missiles and space-satellites. Indeed, it looks as though the implications of these vast new achievements in science and technology to all metals, and non-ferrous metals, in particular, have not yet been properly assessed by the markets.

Meanwhile, Aluminium Limited of Canada, one of the major producers of aluminium, has decided to postpone certain phases of its expansion programme which envisages a rise in the capacity from 770,000 tons at present to 850,000 tons in 1958. Announcing this decision, the President of the Company said at Montreal: "While consumption of aluminium is well sustained in most markets, these adjustments reflect our expectation that new production coming into operation during the next year or two in the industry as a whole will take time to absorb." In view of this development and assuming that world consumption will not decline in the next few months, one can state that there may not be any large accumulation of aluminium stocks in the world.

* * * *

It is a cruel paradox that, when considerably large sections of the world population are underfed, there is talk of continued huge world surpluses in wheat. The aggregate supplies held by the four principal exporters—the U.S., Canada, Australia and Argentina—as on 1st July 1957 amounted to 1,763 million bushels; this quantity is, of course, lower by 70 million bushels held a year before. The reduction in surplus would not have occurred but for the U.S. Administration's move to give away large quantities of wheat under grant and loan programmes. For the increase in world wheat crop from 1955-56 to 1956-57 was quite appreciable—190 million bushels—the latter year's crop being put at 7,595 million bushels. This increase, together with the reduction of 70 million bushels in exporters' stocks, means that an extra 260 million bushels have "disappeared." Of this quantity, the share of the U.S. alone is said to be 200 million bushels. The wheat surplus of U.S. at the beginning of the current season was 905 million bushels. The surplus, coupled with the season's estimated crop of 915 million bushels, brings the total supplies available to 1,820 million bushels, which are about 10 per cent. lower than a year previously. The carry-over of Canadian wheat was 723 million bushels and the current season's crop is put at 370 million bushels, so that the overall supply is 1,093 million bushels.

SCOPE FOR NUCLEAR ENERGY IN FREE WORLD

(*Concluded from page* 872)

ever, is a long time ahead, during which many other balance of payments factors could be fundamentally changed.)

Studies of the prospects for nuclear power are summarised in the report also for Italy, Brazil, India, Pakistan and Israel. Of especial interest are the comments on the position in the underdeveloped countries. In Brazil, for example, it is pointed out that the availability of power is limited not by lack of energy resources but rather by the lack of effective planning and by regulatory policies which prevent adequate returns on private capital investment in power facilities. Both in the short- and in the long-term it is contended that, in Brazil, availability of power at a not unreasonable cost is more significant for the country than merely low costs. Nuclear power, it is believed, will only be of importance in Brazil beyond 1975-80. Even if it were to become competitive by, say, 1965, its high foreign exchange cost—despite the existence of domestic thorium resources—would present a major obstacle.

In India also, it is only beyond 1975-80 that nuclear power is expected to enter into wide use, although in regions remote from domestic energy resources, it may become significant earlier. To be competitive in the southern (Madras) and western (Bombay) regions, where thermal power has begun to supplement hydro-power, nuclear power would need to cost about 7 to 8 mills per kw.h. in seaboard locations. In due course, however, India may derive advantages from nuclear energy in the shape of savings in capital outlays on transport—inadequate transport for coal is now a major problem. Savings in foreign exchange may also be possible when at some future date use can be made of domestic thorium resources in lieu of imported fuel.

Pakistan

The position in Pakistan is rather different, in that major thermal power stations fired by natural gas from the Sui and Sylhet fields will offer generating costs as low as any foreseeable in nuclear plants. There is, however, some scope for small nuclear reactors in remote regions to which the transmission of natural gas or electricity from the gas-field areas would be too costly. Such reactors, it is thought, would become competitive with the alternative diesel generating units at costs of 25 mills per kw.h. A severe technical obstacle to maintaining nuclear plants in remote areas would be presented, however, by the limited availability of personnel.

In Israel, the report foresees that nuclear power, if it could be produced at a cost of between 6 and 8 mills per kw.h. might make an important contribution to economic development sometime after 1965. Two projects requiring abundant low-cost energy are especially mentioned, namely, the recovery of fresh from salt water—if lower cost methods could be developed—to be used in irrigating the arid but potentially fertile Negev, and also the development of mineral processing in the Negev.

From these studies of particular countries it emerges that, during the next 25 years or so, nuclear power is likely to spread much more rapidly and widely in the industrialised countries, with their greater technical, capital and industrial resources, than in the underdeveloped countries. In the longer run, however, nuclear power may prove of even greater importance to the now underdeveloped countries. As the raw material resources of the industrially advanced countries become progressively used up—perhaps about the end of the century—the early stages of raw material processing may be located in the producing areas whose lack of indigenous conventional energy resources would no longer be an obstacle. Ultimately also, the use of nuclear power as a low-cost energy source for de-salting water to irrigate arid areas might become another important factor in reshaping the pattern of the world's industry and agriculture. However, while these prospects are long-term, it is to be expected that many countries will begin pilot and development programmes for nuclear power at an early date; and the report concludes that the time to begin such programmes, and also to set international standards and safeguards in using nuclear power, is already at hand.—*By special arrangement with the* PETROLEUM PRESS SERVICE.

ENGINEERING

(*Concluded from page* 868)

problem of the artificially high cost of building materials, thanks to the levy of excise duty and the activities of the State Trading Corporation. Further, the Conference failed to take into account the genuine difficulties which prevent private enterprise from taking a more active interest in expansion of housing facilities. Mr. Reddy, however, placed the problem in its correct perspective when he said that the private builder saw that the "gap between the economic rent of the dwelling which he would put up and the rent-paying capacity of the tenant was becoming gradually larger and larger." In this connection, he pointed out that the economic rent of a one-roomed tenement and that of a two-roomed tenement of average standard comes to about Rs. 28 and Rs. 41 respectively, whereas the income of more than 50 per cent. of the urban households does not exceed Rs. 100 per month. Perhaps this problem could be solved by granting appropriate fiscal reliefs to private builders and relief from vexatious controls and rent regulations. Since the private sector has necessarily to play a large part in housing programme—the Central and State Governments' schemes can touch only a part of the problem—it is of the utmost importance that it should be made worthwhile for private builders to contribute their share to ease the housing shortages. Further, there is one significant difference between Goverment-sponsored housing schemes and private housing schemes in that many of the former provide only temporary accommodation to the tenants during the tenure of their service as industrial workers or Government servants, whereas it is only private housing that can provide a real and lasting solution to the housing problem. Finally, in view of the vast employment potentialities in housing programmes, it is to be hoped that the Central and State Governments will convene at an early date a national housing conference at which private and public builders can meet and discuss the problem in all its aspects and help evolve a truly national housing policy.

ATOMIC ENERGY

The use of nuclear power research figured prominently in the recent talks between the U.S. President, Mr. Eisenhower, and the British Premier, Mr. Harold Macmillan. Two groups of experts have been named to work out specific recommendations in the nuclear and missiles fields. The need for sharing nuclear secrets is believed to have been generally stressed at the meeting. In this connection, it may be recalled that Mr. Eisenhower, in the course of his speech proposing the toast of H.M. Queen Elizabeth on 18th October, said: "We have the power. The only thing is to put it together. Our scientists should work together. N.A.T.O. should not be thought of merely as a military alliance. N.A.T.O. is a way of grouping ability—our manhood, our resources, our industries and our factories." Reports from Washington have pointed out that Mr. Eisenhower's proposal may eventually lead to a request to Congress to modify the law barring the disclosure of vital U.S. knowledge in the atomic field to Britain or any other country.

Against this background, it is encouraging to note that the speeches at the conference of the 59-nation International Atomic Energy Agency, which concluded its session at Vienna, stressed the need for international co-operation in stepping up the peaceful development of atomic energy. Speakers expressed the hope that co-operation shown in founding the agency in the past two years would be continued as it got down to work. The Agency, with headquarters at Vienna, is to set up a pool of nuclear fuels contributed by member-nations, with the aim of diverting as much fissionable material as possible from military stockpiles to peaceful reactors. A corps of inspectors with access to projects aided by the Agency will check that the nuclear pool is not diverted to military purposes. The Agency is also designed to accelerate peaceful atomic development in many other ways.

India is, of course, vitally interested in the peaceful uses of atomic energy. So far, the work in this field has taken the form of research and the setting up of certain reactors. The Government, according to a report from New Delhi, is considering the question of formation of an atomic energy body invested with powers analogous to those of a Ministry. The proposed body, to be called the Atomic Energy Commission, will guide the Rs. 60-crore atomic energy programme contemplated under the second Five-year Plan.

pay 3 per cent. of his earnings directly. He would also contribute as a taxpayer and again as a consumer, because, whatever the immediate effect, prices of many goods would ultimately increase by reason of the increase in the employers' contribution."

As regards the effect of the proposed plan on those in private pension schemes, the Associations point out that it would be disadvantageous to many of their eight million members. If opting out of the State scheme proved to be impracticable, many of the private schemes would have to be wound up and new ones abandoned, because the cost of the Labour Party's scheme would prohibit further contributions to pension. Dealing with the effect on personal savings, the Associations say that people would not only have less net income out of which to save—they would have less incentive to save. Commenting on the proposal to include an automatic cost of living adjustment, the Associations point out that any such provision would itself undermine the currency by providing a further stimulus to inflation. It is maintained that it is quite inappropriate for the State, which is itself responsible for maintaining the soundness of the currency, to provide automatic protection against inflation for one section of the community at the expense of the rest who must then collectively carry a bigger burden every time inflation takes place.

Wage-Price Spiral

The Associations contend that any such scheme would give a sudden and severe shock to the economy. The immediate effect of the proposed heavy increases in the charges on employees and employers would inevitably be, they observe, inflationary. For obviously, the former will be compelled to pass the incidence of the levy on to the consumer through raising the prices. Higher prices would provoke new wage demand and a fresh wage-price spiral would set in. Proceeding, they observe: "The defences against inflation are so thin at present that any further inflationary impulse must be regarded with apprehension." In conclusion, the Associations argue that the main fault of the scheme lies in the fact that it incorporates features which while not inappropriate in a system of social security taxation, introduced to remedy a pressing social need, become quite inappropriate when applied to a scheme for the bulk of the nation's pensions.

William Blake.

VOL. XCV. No. 2436 BOMBAY, 16th NOVEMBER 1957 PRICE: Re. 1.50

INDUSTRIAL FINANCE

A NOTABLE trend in recent years is the increasing demand that is being made by industrial borrowers on the specialised credit institutions. The Chairman of the Industrial Finance Corporation, Mr. K. R. K. Menon, in the course of his speech at the annual meeting of the Corporation, held last month, stated that loan applications from various concerns which the Corporation had not been able to consider so far had already "swollen to an unprecedented volume." It is true that, in 1956-57, there were only 67 industrial applicants for credit, as against 86 in 1955-56. This shortfall is attributed to the difficult position in regard to foreign exchange. Perhaps, the applicants realised that no useful purpose would be served by receiving a loan when they were not certain of getting an adequate quota of foreign exchange. Even so, it is noteworthy that the number of applicants in 1956-57 was larger than that, namely, 46, in 1954-55. But the total amount disbursed as loans has continuously moved up from Rs. 14.53 crores in 1954-55 to Rs. 16.73 crores in 1955-56 and still further to Rs. 26.51 crores in 1956-57. To the extent that the increase in loan applications reflects a willingness on the part of *entrepreneurs* to borrow and invest in industrial enterprises, it is to be welcomed. Indeed, it is the more commendable because the fiscal climate for investment by the private sector is none too favourable.

Clearly, the Corporation cannot meet the increasing demand on its services without adequate funds at its disposal. The Industrial Finance Corporation (Amendment) Bill, 1957, which was adopted by the Lok Sabha this week, is intended to place the Corporation in a better position to raise funds. The two courses open to the Corporation are either to raise additional capital or to increase its borrowings. The authorities feel that it is difficult to raise additional capital. Speaking on the Bill, the Union Deputy Minister for Finance, Mr. B. R. Bhagat, in the course of the debate in the Lok Sabha, said: "In the existing conditions of the money market, it is extremely doubtful if the Corporation will be able to get the additional share capital without substantially increasing the minimum guaranteed dividend which may have to be subsidised by the Government." It may be mentioned, in this connection, that the Government has had to subsidise the Corporation year after year in the last nine years of its existence, except in respect of 1952-53 and 1956-57, in order to enable it to pay even the small guaranteed minimum dividend of 2¼ per cent. Additional capital for the Corporation might well imply larger subventions by the Government for this purpose. Accordingly, the Government has now decided to raise the limit on the Corporation's borrowing powers. Under the present Act, the Corporation can borrow from the public, the Reserve Bank and the Central Government upto five times its paid-up capital plus reserves. Its paid-up capital is now Rs. 5 crores and the reserves stand at Rs. 5½ lakhs. The Corporation cannot, therefore, borrow more than Rs. 25.28 crores. But it has so far borrowed as much as Rs. 21.31 crores, inclusive of a loan of Rs. 10 crores from the Central Government, leaving thereby only a small margin of Rs. 3.97 crores, a sum quite inadequate to cover even the pending applications, let alone new ones. The Bill seeks to raise the borrowing limit to ten times the paid-up capital and reserves; the multiple fixed for the Warehousing Corporation under the Agricultural Produce (Development and Warehousing) Corporation Act, 1956, is, it may be noted, also ten. On the basis of the present level of paid-up capital and reserves, this provision in the Bill will enable the Industrial Finance Corporation to borrow up to Rs. 50.5 crores. A minor amendment empowers the Corporation to accept deposits from the State Governments and Local Authorities, since it was felt that the provision enabling the Corporation to accept deposits from the "public" was not clear as to the agencies from which it could accept such deposits.

It is difficult at present to forecast the impact of the Corporation's new borrowing powers on industrial borrowers. For one thing, it should be clear that the Corporation will have more funds at its disposal. But if it borrows at a high rate of interest, it cannot possibly continue to charge the present rate of interest to its borrowers. Even now, the Corporation's lending rate stands at 7 per cent. per annum, with the usual rebate of ½ per cent. for payment of interest and instalment of principal on due dates; last year, it was 6½ per cent., with the usual rebate of ½ per cent. for prompt payment. In this connection, the Chairman uttered a note of warning in his speech at the recent annual meeting of the Corporation. He indicated that "it is not unlikely that we may have to pay higher rates of interest than we do now on our borrowings in the course of the current year; this will naturally affect our lending rates too." If the Corporation's lending rate goes up beyond the present 7 per cent. level, it will be somewhat difficult for many classes of industrial concerns to borrow from the Corporation, unless their earning capacity also moves up, or alternatively, suitable fiscal reliefs are provided.

It is, however, gratifying to note that the Bill seeks not only to raise the Corporation's capacity to lend by raising the limit on its borrowing powers but also to widen the scope of its lending powers. Thus, the Bill provides that the Corporation can lend to units which are engaged in "processing of goods." This provision, it is stated, will enable a larger number of industries to avail themselves of the Corporation's loan assistance. Another amendment enables the Corporation to provide credit particularly to new industrial concerns which are not in a position to offer adequate securities but deserve encouragement from the point of view of national economy. There is no doubt that this provision will facilitate borrowing by new units which are in the developmental stage. Even so, it has to be implemented with some caution, in order to see that no large advances on the basis of inadequate security are made by the Corporation.

By far the most important amendment is the one which empowers the Corporation to guarantee deferred payments by industrial concerns for equipment imported from abroad. Explaining the need for this amendment, Mr. Bhagat observed that, "in view of the difficult foreign exchange situation in the country, it is not possible for Government to find immediately all the foreign exchange that will be required for large-scale purchases of capital goods outside the country by industrial concerns." The Government has, therefore, encouraged them to arrange deferred payments for their imports. It would, however, appear that, though exporters abroad are inclined to agree to deferred payments, they require guarantees from Government or semi-Government institutions in respect of these deferred payments. The Bill permits the Industrial Finance Corporation to give such guarantees. Thus, the Corporation is now enabled to play a decisive role in the sphere of deferred foreign credits. The scope for the Corporation's activity in this new assignment will be evident from the fact that, upto August 1957, the Government, according to the Union Minister for Industry, Mr. Manubhai Shah (*vide Commerce* dated 26th October, page 777), had given its approval to 137 deferred payment schemes to the total value of Rs. 59.27 crores, which included cash payment of Rs. 16.95 crores, foreign capital investment of Rs. 5.94 crores and deferred payment of the value of Rs. 36.38 crores; industry-wise, the schemes covered 27 sugar projects, 19 industries based on iron and steel, 14 engineering industries, 14 chemical and pharmaceutical industries, 10 textiles, 10 heavy electrical plants, 8 cement plants, 7 paper plants and 5 automobile plants. A large number of applications for deferred payment schemes is stated to be still pending with the Government. Clearly, this number will increase as and when foreign exporters show greater willingness, as a result of the I.F.C.'s guarantee, to extend credit to Indian importers.

An allied amendment is the provision whereby the importers, and not the Govern-

ment as now, have to bear the risk of fluctuations in foreign exchange rates. The existing provision lays down that any loss or profit accruing to the Corporation in connection with any borrowing of foreign currency or fluctuation in the rates of exchange is to be reimbursed by, or paid to, the Central Government, as the case may be. Mr. Bhagat stated that, "in view of the large-scale foreign exchange operations that will be required during the next few years, the Central Government or the Industrial Finance Corporation should not be called upon to bear this risk," and that it should be more properly borne by the industrial concerns, on behalf of which the foreign exchange transactions take place. These concerns, according to Mr. Bhagat, "may, in their turn, cover themselves against these risks by recourse to whatever special arrangement or scheme the Government may devise for this purpose." It remains to be seen what type of scheme for covering the risks involved in fluctuation in foreign exchange rates will be evolved by the Government. It is needless to add that, unless an effective cover against exchange risk is provided, no business man with any foresight will care to buy capital goods on a deferred payment basis lasting between five and seven years.

DEVELOPING MINERAL WEALTH

ALTHOUGH Asia's mineral resources have not been adequately investigated, it has been known that these resources are not inconsiderable. Available data suggest that, at least in respect of some minerals, notably coal and iron ore, the potential reserves are vast. Further, Asia's importance in world mineral economy arises from the fact that, in certain minerals which are of great value in the modern atomic age, its reserves are known to be plentiful. Because of lack of technical personnel and inability to invest capital on a scale which the prospecting and exploitation of minerals need, Asia's mineral development has not been as rapid as it should have been. In this context, the deliberations of the third session of the Sub-Committee of the Mineral Resources Development of the E.C.A.F.E. (Economic Commission for Asia and the Far East) region which commenced in Calcutta early this week are of more than ordinary interest.

In Asia's mineral map, the pride of place is taken by coal, large reserves of which have been located in China and India. Iron ore is to be found in China, India, the Philippines and Thailand. Among non-ferrous metals, Asia is a large producer of tin, Malaya being the largest tin-mining and tin-smelting country in the world. Other producers are Indonesia, China and Thailand. China is also an important producer of antimony. There are large reserves of bauxite in Indonesia and India. Graphite is produced in Ceylon and mica in India. Asia is, however, deficient in sulphur, the only Asian country producing sulphur being Japan. India is a large-scale producer of manganese ore. Chromite producers of the region include India, Japan and the Philippines. China and Burma account for a large part of the world output of tungsten and India for a large proportion of the world's ilmenite output. Petroleum reserves have been not only located but exploited in Indonesia, Burma and Brunei. India's reserves of petroleum are greatly limited, though the prospecting operations that are now being conducted may well reveal richer sources of supply. Broadly, this is the Asian mineral picture. A great deal will, of course, depend on how new resources of mineral wealth are located and also how speedily they are exploited.

In his address, delivered at the meeting of the E.C.A.F.E. Sub-Committee, Mr. K. D. Malaviya, Union Minister for Mines and Oil, pointed out that the mineral reserves of the East, though known to be sufficiently vast, had not yet been fully explored and, to a considerable extent, they had remained unexploited. He rightly stated that the backwardness of technical and scientific knowledge alone was largely responsible for the slow pace of industrial development in the E.C.A.F.E. region. He pleaded for technical co-operation among the Asian countries for purposes of assessing and locating the region's natural resources. He said: "The importance of exchange of information on the subject of minerals among different countries is obviously going to prove a very important factor for us. It should, perhaps, be possible to set up in each and every country the agencies which may collect the available information and disseminate the same to the countries who need it." Since the available resources in men as well as in equipment are limited in the E.C.A.F.E. region, much could be gained through co-operation in the matter of using these resources.

There are two important factors which have played and which do play an important part in mineral development in all underdeveloped countries—foreign aid and mineral policy. Mr. Malaviya admitted that "foreign aid and technical assistance continued to play an important part" in the economic development of the Far Eastern region. But he felt that some countries had shown discrimination against the public sector, while considering India's case for foreign aid. It is not clear what Mr. Malaviya had in mind when he made this complaint. As is well known, foreign aid, whether it is governmental aid or aid from institutional agencies such as the World Bank, has been available for both public and private sectors. That such aid had not been adequate in relation to the need of the E.C.A.F.E. region, in general, and of India, in particular, is known. But this is an entirely different matter. It is true that the World Bank's policy has been not to give financial aid to those industrial and mining projects which could very well be developed by private enterprise. It is also well known that governments of some of the leading free enterprise economies also hold that view. But that is their policy and neither the World Bank nor those other governments is under an obligation to follow the dictates of the Government of India. It is for the Indian Government to modify its policy suitably if it wishes to get the help of these bodies. And, in our opinion, there is nothing wrong whatever in leaving the development of mines to private enterprise, subject to suitable regulations by the Government to safeguard public interest. The position, of course, would be different if the task of development were beyond the ability of the private sector. But that is not the case with this country. That private enterprise in India is quite competent to exploit the mineral resources efficiently and in keeping with national interests cannot be denied by any impartial observer. Its past and present performance alike warrant the conclusion that, given adequate incentives and sufficient freedom to ensure efficient operation, the private sector can handle this job better than the public sector and that the only reason why the Government of India has taken on its shoulders the responsibility for the major portion of the development of mines and minerals is its devotion to a particular brand of ideology, namely, socialist pattern of society.

Further, as we shall show presently, there is ample scope for the State to play its part effectively, in co-operation with the private sector, in the development of the country's mineral resources. Mineral development requires capital investment in other directions too, most of which are public utility in character. Power, transport, port facilities, water-supply and building of new towns, including housing, etc., are some of the facilities which will have to be provided if mineral development is to be carried out successfully. All these functions in a modern democratic economy properly belong to the State and the Government of India can expect the World Bank to provide financial assistance to discharge these functions, leaving the actual development of mines to the private sector. And if the latter, too, were to approach the World Bank, or its associate body, the International Finance Corporation, they would also be able to get some capital. Thus, if the Government's policy towards mines and minerals is orientated in favour of private enterprise, there is every possibility of their development taking place more speedily than is likely under the present policy.

Be that as it may, Mr. Malaviya rightly paid a tribute to the "wisdom, understanding and sympathy" of the countries which had made available to India assistance in the form of technical know-how, equipment and training facilities. Obviously, there is scope for a much larger quantum of assistance in this direction. And it is to be hoped that the governments of the E.C.A.F.E. region will pursue such policies as will induce the industrially advanced countries to give the assistance the region needs so badly.

The next important consideration is the adoption of a constructive mineral policy. After all, mineral development is a long-drawn-out process, involving tedious prospecting for and location of reserves and heavy investment in equipment for exploitation of the reserves. What is necessary is suitable incentive which would stimulate interest and effort in prospecting and make it worthwhile for parties to undertake investment, at the stage of prospecting and at the next stage of development in the event of location of proved reserves. Prospecting could be encouraged by a wider diffusion of "mineral-mindedness." It is, of course, much more than the creation of a psychological atmosphere conducive to prospecting. Technical facilities, in the shape of laboratory assistance for analytical investigation, should be freely available. The shortage of mining engineers and technologists should be remedied. Fortunately, prospecting nowadays has been rendered less difficult than what it was a few years ago, thanks to the advances in "survey" technique through the use of aircraft and air-borne magnetometers and scintillometers. Advances in metallurgical technique have also provided answers to difficult problems in the development of mineral resources.

It is true that mineral development is not so much labour-intensive as capital-intensive. But investment in mining is worthwhile for a number of reasons, two of which at least are important. For a country like India, which is yet to develop heavy industries on a massive scale, some of the ores can be exported in order to earn the foreign exchange badly needed for imports of essential capital and consumer goods. Secondly, as recent experience in Canada has shown, successful mining operations stimulate the establishment of a number of ancillary and key industries. Referring to the impact of mining on Canadian economy—mineral production in Canada more than doubled in value between 1931 and 1941 and again in the next decade, and in 1955 amounted to $1,778 million—the U.K. Board of Trade, in its report on Canada in the "Overseas Economic Surveys" Series, says:

> "Although the industry is a comparatively small employer of labour, it has stimulated general development both directly and indirectly. . . . The industry demands high capital expenditures on associated projects for the supply of power, transport and other services; the provision of power, roads and railways for new mining installations in previously inaccessible areas gives a base for further expansion and a means of exploiting resources (e.g., forests) not previously capable of economic development. In limited favourable localities, agricultural settlement is also encouraged by the market provided by the mining community and associated enterprises."

The countries of the E.C.A.F.E. region will do well to study the methods adopted by Canada for stimulating general public interest and private enterprise in mining operations. Last year, Mr. A. K. Dey of the Geological Survey of India, described, in *Indian Minerals*, the impetus which the Canadian authorities have given to mineral development. Among the many factors which have contributed to the growth of Canada's mineral industry, according to Mr. Dey, are the character of "her mining laws and regulations and easement of mining taxation." These have been conducive to encourage the prospector and to help the mining enterprise in the early stages of its growth. State aid in Canada is forthcoming on a liberal scale in many instances. University training is of a very high order, research in every branch of the subject is permitted and persistent propaganda keeps the public mineral-minded. It would appear that, "by simply marking out the boundaries of his claim and recording its location with the proper officer concerned, the discoverer of a mineral deposit establishes a legal right to work it." Liberal allowances in income-tax also provide incentives to mining companies. Under certain conditions, laboratory tests are made free of charge in State-owned research institutions. The Federal and Provincial Departments of Mines "supply, upon request, all the information, advice and assistance in their power to help the individual or the company engaged in mineral development." Indeed, they consider prospecting so essential to national economy that, in certain provinces, the governments provide "grubstake" grants to prospectors as an aid to their work.

Obviously, these incentives are particularly essential in the E.C.A.F.E. region, in general, and in India, in particular, considering that the mining industry is inadequately developed in relation to the vast scope and need there is for further development. Strictly speaking, mining enterprise does not admit of watertight compartments in the shape of private and public sectors. The whole enterprise must be regarded as a quest for national wealth for which all should be encouraged to run and adequate rewards provided for those who win the race. In the absence of such incentives, mineral wealth in the Asian region will lie unknown and unexploited in the bowels of the earth, yielding no value to the countries which own them.

RUSSIAN OFFER OF CREDIT MADE LAST YEAR FINALISED

CLOTH EXCISE DUTY—MERCANTILE BANK

THURSDAY, 5 P.M.

DUE mainly to bear covering and a certain amount of speculative buying, the leading counters in the share markets have improved a little. Even the popular textile scrips have managed to close at slightly higher levels, despite the Government's firm decision not to reduce the excise duty on cloth. It looks as though market sentiment is slightly changing for the better. The Finance Minister's brief statement in Parliament yesterday on the results of his mission abroad in quest of foreign aid makes encouraging reading. He has described his achievements rather modestly. The latest foreign advices suggest that the U.S. Government is keen on rendering further substantial assistance to India for enabling it to implement its second Plan. It is said that the British Government is backing India's requests to the U.S. and West Germany by lending its moral support in favour of this country. The leader of the Indian industrialists delegation, Mr. G. D. Birla, is expected to be here this week-end and is addressing a Press conference on Monday the 18th inst. He, too, is expected to give an optimistic picture of the results of his delegation's visits to Western countries. The share markets are naturally drawing a certain measure of comfort from these developments. The Finance Minister's remark in the Lok Sabha yesterday that it was not right to jump to the conclusion that, simply because the U.K. raised its Bank rate to 7 per cent., India too would put up its Bank rate has also helped to bolster up the market sentiment in favour of the bulls.

MARKET GOSSIP

The Finance Minister's observation on the Bank rate is a cautiously worded statement and one should not regard it as the last word on the subject. Whether the Bank rate in India will go up or not is a question for which the answer will chiefly depend on the trend of the money market in the coming months. The Indian scheduled banks have again raised their rates of interest on overdrafts by ½ per cent. to cover the increase in the cost of their deposits. They may raise their rates further, if money becomes costlier still. And, in that case, will the Reserve Bank continue to lend credit to the scheduled banks at the current rate of 4 per cent.? Will it not be tempted to charge more on the usance bills which banks discount with it? And, if it does so, will that not ultimately force the Bank rate also to move up, as was the case this year? The Finance Minister may be reluctant to raise the Bank rate. So he was last year. But circumstances forced him to yield. Thus, much will depend on the extent to which the demand for money and credit develops between now and April next. There are, however, reasons to think that the demand for money and credit will be less strong this busy season than in the past. (1) Imports have been drastically cut. (2) Owing to foreign exchange difficulty, Plan expenditure in both the sectors will slow down, thereby making a reduced call on the money market. (3) The volume of agricultural crops is smaller on account of the adverse effect of drought in many parts of the country. (4) The authorities are more vigilant than last year on the price front. They are taking all possible measures to prevent prices from shooting up. And (5) the Reserve Bank has decided to continue its controls on bank credit. It is determined to do its bit for ensuring stability in price levels.

* * * *

One more strong link has been forged in the Indo-Russian economic chain which has been steadily growing in recent years. On Saturday last, an agreement was signed at New Delhi between the Governments of India and Russia on the disbursement of a Rs. 60-crore (500 million rouble) credit offered by Russia over a year ago and promptly accepted by the Government of India. It must be remembered that Russia has offered no new credit and that the amount of credit has probably been taken into account already in drawing up India's requirements of foreign exchange to implement the second Plan. Accordingly, it does not reduce the size of the foreign exchange problem confronting the country. It would, however, be true to say that, if the formal confirmation last week of the informal offer made by Russia and accepted by India a year ago had not taken place, the size of the foreign exchange problem would have expanded to that extent.

It is a little surprising that it should have taken as many as twelve months to finalise a deal of Rs. 60 crores—the offer was made by Russia on 15th November 1956—especially as the Russian Government does not have to suffer from the handicaps of a democratic Government such as the one which the U.S. has. But it is not fair to throw the blame on Russia, because we do not know who has been responsible for this prolonged delay. It will not be surprising if the fault lies on the Indian side also.

Excepting for some details, there is nothing new in the terms of the loan. Mr. K. C. Reddy, who took credit for obtaining this credit line from Russia, had told the public then alone that it was for a period of 12 years, repayable in 12 annual instalments, and that the rate of interest would be no more than 2½ per cent. India, however, must be thankful to Russia for the fact that, although the rates of interest have gone up all over the world, it has not insisted on a rise in the rate of interest to which it had informally agreed a year ago. On the contrary, it has been a little more liberal, in that the terms of credit compare favourably with those offered by it for the Bhilai steel plant.

Under the Bhilai agreement, the period of credit is 12 years and the rate of interest is 2½ per cent., same as in the case of the present agreement, but the first instalment of repayment of the principal, as well as interest, commences right from the first year after the delivery of the plants and not after the whole factory goes into production. In other words, the amortisation begins even as the various plants and equipment arrive at the site of the works. Under the new agreement just concluded, however, repayment will be made in 12 equal annual instalments, beginning from one year after the delivery of the entire machinery and equipment in respect of each of the five projects covered by it. It will thus be noted that the latter agreement gives a little more time to repay the credit than the former. Nevertheless, the amortisation arrangement is less favourable as compared with loans taken from the World Bank which invariably expects repayment to commence only after the project financed by it starts earning.

The Russian credit is to be used only in Russia. It is meant to cover the foreign exchange cost of five projects, namely, a heavy machine building plant, a coal-mining machinery plant, development of Korba coalfields, a thermal power station as part of the Neiveli project, and an optical glass factory. All the plant and machinery required for these projects will have to be bought in Russia. Similarly, technical skill and facilities for training the Indian personnel will have to be found in Russia.

The following is an approximate project-wise breakdown of the credit:

Heavy machine building plant and coal-mining machinery Rs. 26.5 crores; thermal power station with a capacity of 250,000 kw. at Neiveli Rs. 16 crores; Korba coal mines, including a coal washery with a capacity of 2 million tons of coal, Rs. 8 crores; and optical glass factory Rs. 85 lakhs.

The heavy machine building plant, it is said, will begin with a capacity of 45,000 tons and go up to a maximum of 80,000 tons at the final stage. It will enable India to produce, for the first time, equipment needed for steel plants.

The total of all the amounts mentioned above comes to Rs. 51.35 crores, leaving a balance of about Rs. 8.65 crores out of the credit line for about Rs. 60 crores. This balance is evidently intended to cover any increases that may take place in the cost of the plant and machinery between now and the date of their despatch by Russia. In fact, it is stated that Russia has undertaken to meet the entire foreign exchange cost of these projects even if such were to exceed the credit limit of 500 million roubles. Further, it is also stated to have agreed to let India use the balance of this credit, if any surplus were left, for financing any other project. The credit line is thus flexible to some extent and reflects Russia's goodwill and friendliness to India.

Comparisons may be odious. But, since there are many vocal politicians who are prone to exaggerate the Russian help to India, it is necessary to point out that the assistance given by the U.S. to India has been far more generous than that of Russia. The amount of U.S. assistance has been greater and the terms of such assistance more liberal. The U.S. has given not only credits at very low rates of interest but also grants. In saying this, we do not in any way belittle the importance of Russian credit.

* * * *

The last word of the Union Government on the question of excise duty on mill-made cloth has at long last been said, with the categorical declaration by the Minister for Commerce and Industry, Mr. Morarji Desai, in the Lok Sabha on Monday last, that "the Government do not intend to reduce the excise duties imposed on cloth." This decision is deplorable, as it shows that the authorities have failed to make a correct assessment of the difficult position in which the cotton mill industry finds itself today. The staggering increase in excise duty on cloth, made on 1st September 1956, has evoked stiff consumer resistance in internal markets. Consequently, the mills have been compelled not only to bear the whole of the enhanced tax burden —an average of 10 per cent. of the price of cloth—themselves but also to lose heavily by way of a fall in prices—believed to be more than 5 per cent. over the past year. In other words, since the upward revision in excise duty, there has been a drop of over 15 per cent. in mill realisations on cloth sold for domestic consumption. At the same time, there has been a sizable increase in cost of production, brought about by an all-round rise in wages and in the price of raw materials and stores, not to mention machinery.

Even after the fall in prices of cloth, mills are finding it exceedingly difficult to sell their goods, with the result that stocks with mills have mounted up to high levels. Notwithstanding the rise of about 10 per cent. in the rate of cloth exports during 1957, as compared with 1956, the aggregate stocks of cloth lying unsold with mills are estimated at as much as 586.5 million yards (that is, 391,000 bales), as against just 223 million yards (148,678 bales) as on 18th August 1956. These stocks, together with the 322.5 million yards (that is, 215,000 bales) sold but not lifted by the trade, bring the total stocks with mills to 909 million yards (606,000 bales), representing over two months' output.

Despite such heavy stocks, it is regrettable that Mr. Nityanand Kanungo, Minister for Commerce, coolly said in the Lok Sabha that the accumulations were "not abnormal." With this view, the industry does not agree. A stock of two months' production may not seem abnormal on the face of it. But it must be borne in mind that the industry consists of units of varying financial strength and economic efficiency. In an economy seeking to maintain maximum production of consumer goods, it is necessary to enable all the units to carry on their activity profitably. If, as a result of this policy, some of the more efficient units make better profits, the Government and the workers, too, benefit, the former by way of more taxes and the latter by way of higher bonus.

The mounting stocks of cloth, it may be further noted, have caused considerable hardship to mills, especially to the marginal units, inasmuch as the carrying of stocks entails a financial burden, not to speak of the pressure on storage space. It is estimated that, consequent on the huge accumulations of stocks, nearly Rs. 60 crores of finance has been locked up, imposing a severe strain on the finances of the mills, especially in the present stringency of the money market. Apart from this strain, the mills have, as already indicated, incurred a heavy loss following reduced realisations on cloth sold for consumption. To put it differently, the mills are today compelled to accept a price which is lower by 15 per cent. as compared with the price they were receiving prior to the upward revision in excise duty. It may be noted here that the average margin of profit earned by mills in a normal year is not more than 3 to 4 per cent. of the selling price of cloth. Even assuming, for argument's sake, that this margin is as high as 10 per cent., it will be clear that not only has this profit been completely wiped out but, actually, the mills are incurring a loss of 5 per cent. on a conservative estimate.

When the Finance Minister raised the excise duty on cloth in August last year, he stated that that decision had been prompted by two considerations, namely, to mop up the excessive profits in the textile industry and to restrain the increase in consumption of cloth. Now that both these purposes have been more than served—and served with a vengeance—why should the Government not revise the duties downwards? Such a revision is particularly urgent, in the present context of steeply rising prices all round. Over the past year, the prices of foodgrains and other essential items of consumption, for instance, have gone up markedly, so that a larger proportion of the family budget, especially in the low and middle class groups, is being used for the purchase of these items and less for cloth. It is scarcely necessary to point out here that cloth is a commodity the consumption of which is either cut down substantially or postponed, depending on the prices ruling in the market. By continuing to levy a heavy excise duty on cloth, the Government has only adopted a negative approach to the problem of cloth supply.

Apart from reduced realisations from cloth sales and financial burden involved in carrying huge stocks, the mills have to pay, as already stated, enhanced prices for cotton. The wholesale price index of cotton (Base: year ended August 1939=100) in the month of September 1957 was higher at 506, as against 463 at the end of December 1956 and 492 a year before. Similarly, the mills are bearing a heavier wage bill, consequent on the payment of higher dearness allowance due to increase in cost of living. The amount of dearness allowance paid to a worker in the cotton mills of Bombay City during the month of September 1957 was Rs. 77, which compares unfavourably with the average of Rs. 68.77 for the whole of 1956 and Rs. 64.81 for 1955. The mills are also paying higher prices for their requirements of several other raw materials and stores.

It will be evident from the foregoing account that the cotton mills are caught between a fall in both demand and prices of cloth, on the one hand, and higher cost of manufacture, on the other. The financial results of mills, which close their accounts as at the end of June, for 1956-57 reveal a drastic fall in profits. They have been able to pay a dividend to their shareholders only by drawing on their reserves. When the mills publish their accounts for the calendar year 1957 or for the fiscal year 1957-58, they will show either a small profit or a sizable loss. This in turn will adversely affect the bonus payable to workers and thereby aggravate their discontentment. The shareholders, too, will suffer. It is needless to add that the Government alone will be responsible for this state of affairs.

Another outcome may be a fall in production. Some mills are already stated to have curtailed production by working fewer shifts. A cut in production will, of course, solve the problem of accumulations of stocks to some extent, but it is a remedy which is worse than the disease.

If managements of cotton mills are to be constantly faced with the problem of accumulating stocks, falling profits and labour discontentment, will they be enthusiastic about modernising their plant and machinery and introducing automatic looms? A negative reply to this poser will, of course, sound unconvincing to those who believe only in the theory of the stick and not in that of the carrot. Unfortunately, the fact remains that the Government of India consists of persons who do not subscribe to the latter school of thought.

Whatever may be the rights and wrongs, the Government's decision has been received, oddly enough, with a sigh of relief by millowners, be-

NARROW MOVEMENTS IN SHARES

UNDERTONE STEADY AT CLOSE

From Our Own Correspondents

BOMBAY, 14*th November*

EQUITIES on the Stock Exchange presented an indecisive trend for yet another week, though the undertone was steady during the last two days. Activity was at a low ebb, in view of the uncertainty about the successful implementation of the second Five-year Plan, which depends on the extent of foreign aid that would be available. The market was naturally awaiting eagerly the opening of the Lok Sabha's winter session on Monday, when it could hear the Finance Minister make an official statement on the outcome of his mission abroad. The market was not disappointed, when the Finance Minister informed the members of the Lok Sabha that he expected "sizable assistance" from abroad, particularly from the U.S., West Germany and the World Bank, to help the country in its present difficulties. He, however, added that whether the assistance would become available in good time and in a measure commensurate with our needs would be known only over the next few months. There was also a report from Washington that the U.S. President would take a decision soon on the extent of the proposed U.S. aid to India. It is these two factors, among others, which were responsible for the slight improvement in sentiment during the last two days.

Good corporate news, namely, the encouraging progress made by the Indian Iron and Steel Company's expansion scheme to step up its steel production to one million tons per annum, and the announcement of higher dividend by the Scindia Steam Navigation Company, expectations of encouraging dividend announcements by sugar companies and rumours of capital reconstruction by the Premier Construction Company also sustained sentiment.

Earlier in the week, the market was subdued on fears of a rise in Bank rate, the categorical statement by the Union Minister for Commerce and Industry that the Government had no intention of reducing the excise duty on cloth, reports of a fall in output in T.I.S.Co. works during October due to a temporary breakdown in certain machinery and growing scarcity of foodgrains in the country. On balance, equities showed minor variations over the week.

Tata Ordinaries advanced from Rs. 164.25 to Rs. 165.25 before reacting to Rs. 165.50. Today, however, they shot up to Rs. 166.00 but shaded off at close to Rs. 165.75. Tata Steels (new) gained over the week to Rs. 156. Indian Irons moved up from Rs. 18.84 to Rs. 19.12 and, after a short-lived recession to Rs. 18.72, hardened to close at Rs. 19.28.

Textiles were featureless, but the Commerce Minister's statement ruling out the prospect of a cut in excise duty did not result in any selling pressure in this section. Bombay Dyeings crept up from Rs. 50.80 to Rs. 51.30 before finishing at Rs. 51. Centurys were erratic on speculative activity. After moving up from Rs. 392 to Rs. 398, they gave way to Rs. 392, but recouped to close at Rs. 397.50. Kohinoors fluctuated between Rs. 260 and Rs. 263 before receding to Rs. 258 at the close. Central Indias had a loss of Re. 1 at Rs. 86. Finlays dropped Rs. 3 to Rs. 261, while Gokaks gained Re. 1 to Rs. 167. Indu Ordinaries shed 36 nP to Rs. 9.64, Indore Malwas Re. 1 to Rs. 124 and Khataus Rs. 5 to Rs. 147.50. New Greats staged a rise from Rs. 215 to Rs. 225, while New Citys were unchanged at Rs. 125. Shree Niwas Mills held their ground at Rs. 145. Simplex were steady at Rs. 160, while Standards shaded off from Rs. 384 to Rs. 380 and Svadeshis from Rs. 172 to Rs. 171. Tata Mills were quiet at Rs. 50.

Very little activity was noted in bank shares and price variations were fractional. Barodas were unchanged over the week at Rs. 100.50, while Centrals, old and new, gained 30 nP each to Rs. 50.70 and Rs. 53, respectively. Bank of Indias were stagnant at Rs. 131, but Punjab Nationals were lower by 40 nP at Rs. 65.60. United Commercials showed no change at Rs. 57.

In the insurance section, New Indias provided a feature with a rise of Re. 1.50 to Rs. 49. Jupiters had business 8 nP higher at Rs. 9.

Electricity shares presented a mixed trend. Ahmedabad Electrics were supported and they gained 40 nP to Rs. 96.20, while Bombay Suburbans dropped a rupee to Rs. 105. Tata Hydros were maintained on balance at Rs. 114.25. Andhra Valleys were marked down by Rs. 5 to Rs. 1,125, while Tata Powers staged a rise of Rs. 5 to Rs. 1,142.50.

In the sugar group, Belapurs attracted some profit-taking and dropped Re. 1.50 to Rs. 248. Bhopals gained 20 nP to Rs. 19. Expectations of higher dividend pushed up Phaltans from Rs. 141 to Rs. 148.50. Walchandnagars were better by Re. 1.75 at Rs. 263.75. Cement shares were colourless. A.C.Cs moved between Rs. 153.50 and Rs. 151.25 and closed at Rs. 152.50. Their new shares were 50 nP lower at Rs. 78.50. Digvijays changed hands 25 nP higher at Rs. 129.75. Jaipur Udyogs were steady at Rs. 12.24. Orissa Cements gained 8 nP to Rs. 12.72. In the engineering and mining group, Alcocks were subdued at Rs. 227.50, a drop of Re. 1.25 over the week. Tata Locomotives picked up from Rs. 132 to Rs. 136 and closed at Rs. 135.25. Premier Constructions staged a spurt from Rs. 154 to Rs. 158.25 and Shivrajpurs were marked up by Rs. 2.50 to Rs. 84. Indian Coppers gained 6 nP to Rs. 3.04.

In the shipping group, Scindias were a feature with a rise from Rs. 16.88 to Rs. 17.16, on expectations of higher dividend. The Directors announced last evening a dividend of Re. 1-4 per share on all shares (including the bonus shares), which represented a dividend of Re. 1-8 per share on the old capital. This announcement was greeted by the market with only a fractional rise to Rs. 17.20, as the news had already been discounted. Towards the close, the shares dropped to Rs. 17.12 on profit-taking. Great Easterns were lower by 20 nP at Rs. 21.08. Premier Automobiles rose by Re. 1.50 to Rs. 89, while Hindustan Motors were unchanged at Rs. 6.28.

In the miscellaneous group, Bombay Burmahs gave way from Rs. 551 to Rs. 542.50, but gained to close at Rs. 547. British India Corporations were quiet at Rs. 4.58, but National Rayons gained ground from Rs. 208 to Rs. 210.75. Tata Chemicals were better by 12 nP at Rs. 15.28 and Tata Oils by 50 nP at Rs. 37. Hindustan Levers were lower by 12 nP at Rs. 20-12. Killick Industries were marked down by Re. 1.50 to Rs. 162.

* * * *

Calcutta Stock Exchange

CALCUTTA, 13*th November*

After a weak start, equities on the Calcutta Stock Exchange attracted buying activity of a speculative type and prices regained in the latter part of the week under review. However, yesterday there was a setback on profit-taking in the speculative counters, but closing rates were higher on balance for the week as a whole. Speculative Indian Irons commanded good attention following the good progress made of the expansion plans in the Burnpur works, to which a reference was made by the Company's Chairman, Mr. Biren Mookerjee, while formerly lighting a new coke oven battery. His announcement that the Company was anticipating a loan of $20 million from the World Bank for further expansion also contributed to added interest. The Life Insurance Corporation accorded general support to the market. Although market circles noted that, according to Mr. Kamat, the Corporation Chairman, the Corporation did not propose to acquire control of companies by purchasing shares, it was difficult to see how an investor who purchased shares of a company in the open market would not take an active interest in the affairs of that concern by exercising control to the extent permitted by the number of shares held by him. Mr. Kamat said in Calcutta on Monday that of Rs. 35 crores invested by the Corporation in industrial undertakings, Rs. 10.8 crores, or 31 per cent., was in the private sector. Tea shares were accorded more support following the continuance of the uptrend in tea auctions here. With the heralding of an early winter, it was expected that the tea crop would be considerably lower this year than last year's. Up to now the North Indian crop is lower by about 30 million lbs. In the jute section, there was a drop in the number of transactions, as there was the fear that drought conditions would affect the size of the crop. However, during the week prices of raw jute fell, although this was mainly due to the downtrend in jute goods.

Among coals, fair demand pushed up Equitables to Rs. 24.12 from Rs. 23.25. New Beerbhooms gained one point to Rs. 13.75. From Rs. 224, Bengals recovered to Rs. 229, but Burrakurs were unchanged at Rs. 22.12. Pench Valleys were better at Rs. 15.19, but Talchers lost to Re. 1.62 from Re. 1.75.

Although there was a drop in the number of transactions in the jute section, selected counters recorded gains. Barnagores were one of them and, at Rs. 96, were higher by Rs. 5.50. Agarpuras were fractionally better at Rs. 8.62. Kelvins hardened to Rs. 195 from Rs. 194. Megnas advanced to Rs. 88.50 from Rs. 86.50, but Anglo-Indias declined to Rs. 150 from Rs. 152. Fair demand pushed up Gourepores to Rs. 243 from Rs. 240, while Ganges eased to Rs. 59 from Rs. 62.

Better support was accorded to engineering scrips. Indian Irons opened at Rs. 18.65 and were done up to Rs. 19.18. In yesterday's transactions, the rate dropped to Rs. 18.84. Burn & Cos. were a strong feature with a rise to Rs. 334 from Rs. 323. Texmacos closed at Rs. 17.10 after being higher at Rs. 17.40, and Kumardhubis were quiet at Rs. 8.62, as against Rs. 8.75 previously.

Teas were put through at hardening rates. Hattikhiras were maintained at Rs. 11.87, while Brooke Bonds were better at Rs. 18.15. Tezpores were higher at Rs. 19, as were Mims at Rs. 201. At Rs. 140, Birparas added 2 points, and Ledos were taken up to Rs. 18.62 from Rs. 17.94. Carrons gained to Rs. 142 from Rs. 140.

Among miscellaneous industrials, Indian Coppers strengthened to Rs. 3.02 from Rs. 2.95 following the gain in copper prices. At Rs. 11.93, India Steamships recorded a further gain. Calcutta Trams improved to Rs. 15.37 from Rs. 15 on interested buying. Martin Burns were fractionally higher, at Rs. 23.39, as were National Insulated Cables at Rs. 24.37. Dunlop Rubbers met with support at the improved rate of Rs. 20.17 and Indian Cables were fully steady at Rs. 25.37.

* * * *

Madras Stock Exchange

MADRAS, 12*th November*

After presenting a dull trend during the earlier part of the week under review, the Madras Stock Exchange picked up some strength in the subsequent sessions. The initial dullness was due to absence of any encouraging development. Transactions put through were, as a result, greatly restricted and values moved narrowly. The sentiment of operators, however, tended to improve later, thanks to optimistic reports regarding foreign aid and firmer advices from Bombay. Planting shares encountered good support, induced by reports of higher prices for tea, following enlarged enquiry from the U.K. and West Asian countries. With prospects of Russia also entering the market, it was thought that exports of Indian tea might receive a further fillip. Textiles were steady. The categorical statement of the Union Minister for Commerce and Industry in the Lok Sabha on Monday that the Government did not intend to reduce the excise duty on cloth, since it had already been discounted, failed to have any significant effect. The statement was, of course, received with a sigh of relief, because it was thought that, with the removal of uncertainty over the question of excise duty, the traders who were delaying their purchases of cloth in expectation of a cut in excise duty would now come forward to place their orders and lift the cloth. The sugar and miscellaneous sections followed the general trend.

Among tea shares in the planting section, Bababudins improved by 25 nP to Rs. 11.50. Blue Mountains increased by 9 nP to Rs. 3.17. Chandramalais gathered 3 nP to Rs. 3.05. Chembras put on 2 nP to Rs. 3.02. Kil Kotagiris added 10 nP to Rs. 5.75. Neelamalais were 3 nP better at Rs. 5.15. Waterfalls went up by 10 nP to Rs. 3.65. Coffee shares evoked good enquiries. Consolidated Coffees rallied 75 nP to Rs. 25.30. Coffee Lands spurted by 50 nP to Rs. 29. Badras gained 5 nP to Rs. 3. Among rubber shares, Highlands improved by 20 nP to Rs. 11.70. Kailas rose by 25 nP to Rs. 4.10. Midlands advanced by 30 nP to Rs. 14.75. T.R. & Ts and Pullangodes hardened by 5 nP each to Rs. 7 and Re. 1.75, respectively. Nelliampathys gathered 3 nP to Rs. 2.85.

In the textile section, Metturs put on Rs. 5 to Rs. 340. Buckinghams increased by Re. 1.50 to Rs. 160. Vijayamohinis were a rupee better at Rs. 81. Travancore Rayons strengthened by 8 nP to Rs. 10.93. Loyals gathered 25 nP to Rs. 42.75. Rajalakshmis, however, dropped Rs. 4.50 to Rs. 74.

Among miscellaneous shares, Textools provided a feature, the quotation firming up by Rs. 9 to Rs. 204. Rallis advanced by Rs. 2 to Rs. 29.50. Spencers improved by Re. 1.15 to Rs. 17.25. Hindustan Levers and Forest Industries increased by 25 nP each to Rs. 20.25 and Rs. 2.45, respectively. Orissa Cements gained 25 nP to Rs. 12.75. Indian Steel Rollings were quoted 10 nP higher at Rs. 11. Mysore Papers gathered 5 nP to Rs. 15.40.

Among sugar shares, E.I.Ds spurted by Re. 1.10 to Rs. 29.10. Deccans rose by 35 nP to Rs. 8.70 *cum-div.* But Travancores lost 7 nP to Rs. 10.73.

CENTURY FLOUR MILLS LTD.

The recent extensions to the Century Flour Mills Ltd., of Madras (Managing Director: Mr. P. Maruthai Pillai), equipped with machinery supplied by Thomas Robinson and Son, Ltd., of Rochdale, Lancashire, focus attention on the 80-year connection this British firm has had with India as a supplier of flour-mill equipment.

The Madras flour mill's extensions represented the latest of a series of contracts which the Rochdale firm has completed in India since 1945 to help to meet the increasing demand in India for wheat flour. It was because the Madras mill, which Robinsons equipped as the first all-pneumatic mill in India in 1955, proved so successful in operation that the order was placed for the present extensions. In actual working, the mill put in by Robinsons in 1955 is reported to have increased by nearly 30 per cent. the capacity originally anticipated.

The latest extensions have further increased the rated capacity of the mill, and the capacity of the cleaning plant has been doubled—from 80 to 160 bushels an hour—by the comprehensive range of modern machinery now installed. The cleaning plant at Century Mills is believed to be the most modern in the sub-continent. Another important item of the new equipment is the grain conditioner. The principle of the machine is to condition the grain to give the best results in grinding.

The reputation Thomas Robinson and Son, Ltd. has for reliability as milling-machinery builders in India is also indicated by the fact that a Robinson engine built at the turn of the century was still driving a flour mill in Ahmedabad only two years ago.

NEWS IN BRIEF

THE Government of Bombay has decided to continue the present *neera* and palm *gur* products scheme up to 30th June 1958 in the area comprising the pre-reorganised State of Bombay, excluding the transferred territories.

During June 1957, 799 public utility supply undertakings generated 896.1 million kw.h. of power, of which 726.1 million kw.h. were sold to ultimate consumers. Six generating undertakings were newly added. These are at Mangaldai in Assam, Katihar and Saharsa in Bihar and Mahuva and Nakihra and Nakhatrana in Bombay.

The Central Government has allocated a sum of Rs. one crore for flood control measures in Kerala during the second Five-year Plan. In the working season 1957-58, three minor schemes on the Killiam, Karamana and Pamba rivers will be continued. Preliminary work on these schemes was taken up in the last working season and a sum of Rs. 29,000 was spent on them.

The Centre has released a quota of 25,000 tons of groundnut oilcake (expeller variety) for export to all permissible destinations for the period November 1957 to March 1958. Licences against this quota will be granted on shipping bills supported by documentary evidence of valid firm sale contract. The maximum quantity that an exporter will be allowed to export from all ports will be 300 tons.

A State Family Planning Board with the Minister for Public Health as Chairman has been constituted by the Government of Bombay to advise the Government generally with a view to facilitating coordination and ensuring speedy implementation of the programme of family planning in the State and on such other specific matters relating to family planning in the State as may be referred to it. The tenure of the Board is two years.

The Government of Madras is expected to urge the Centre to take up the proposed aluminium plant at Mettur in Salem district, under the second Five-year Plan itself. This scheme has so far not been discussed in the context of re-phasing the second Plan. Before a firm decision regarding the location of the plant is taken, an accurate assessment of the quality and quantity of the bauxite deposits available in the Shevaroy hills has to be made. The Central Government is said to be taking steps in this direction.

The Rihand power station will be sited at Pipri in the Mirzapur District of Uttar Pradesh and will feed ten key 132 kV grid substations of the Rihand transmission network. The complete power station equipment comprising turbines, alternators, indoor switchgear and station transformers are being supplied by the English Electric Company. The power plant for the Rihand power station is being manufactured at the Company's works at Rugby and at Netherton in the United Kingdom.

The Government of India has decided to send a purchase mission, headed by Mr. R. L. Gupta, Secretary, Union Transport Department, to the U.K. and the Continent for the speedy procurement of certain cargo handling and other equipment required at the major ports for stepping up cargo-handling capacity. The total value of the equipment proposed to be purchased is about Rs. 1 crore, representing the most urgent requirements of the ports. These include mobile cranes for lifts, spare engines for old cranes and other spare parts, as most of these items are in short supply.

The Union Government has decided to extend free licensing of all varieties of cotton piecegoods (mill-made and powerloom) and cotton manufactures, including cotton waste blankets other than restricted varieties, to all permissible destinations excluding Nepal, Tibet, Bhutan, Sikkim and the Portuguese Possessions in India for shipment upto 30th June 1958. Accordingly, the licences already issued for the export of cotton piecegoods and cotton manufactures, including cotton waste blankets, will be extended upto a maximum period of one year from the date of issue or till 30th June 1958, whichever is earlier.

The Government of India has accepted the Tariff Commission's main recommendation that protection to the automobile leaf spring industry should be continued upto 31st December 1959 and that the standard rate of protective duty should be retained at the existing level of 50 per cent. *ad valorem*. It has also accepted the Commission's main recommendation that protection to the stearic acid and oleic acid industry should be continued for a period of two years, that is 31st December 1959, at the existing rate of duty, namely, 35 per cent. *ad valorem* or 50 naye paise per lb. whichever is higher.

The Central Board of Revenue has amended the Estate Duty Rules, 1953, to include two new rules, namely, rules 39 and 40. The new rules prescribed the procedure to be followed when any question of valuation of property, which is the subject of an appeal, is referred to the arbitration of two valuers under the Estate Duty Act. The Act itself provides that, in the event of the two valuers failing to reach an agreed decision, the matter should be referred to a third valuer. According to the new rules, the appellant who wishes to make such a reference has to submit an application, in the prescribed form, nominating one of the two valuers to be appointed for the purpose. He has also to deposit in the Treasury the cost of arbitration within one month from the date of such application. The rules require the valuers to give a hearing to the appellant as well as to the department before they decide the question of valuation. The final decision of the valuers will be communicated to the Central Board of Revenue and also to the appellant.

From Abroad

An agreement to develop oil fields in Saudi Arabia has been reached between the Japanese non-Governmental Federation of Economic Organisations (Keidanren) and the West Asian Kingdom.

Discussions on the Common customs tariff and the problem of quantitative import restrictions have been completed by the special G.A.T.T. Committee which is examining the six nation European Common Market Treaty.

Japan has decided to step up its export of textile and other goods to Malaya in order to wipe out as much as possible its trade deficit with that country. While Japan's import from Malaya for the first nine months of this year was of the value of 338 million Malayan dollars, the export was only of the order of 202 Malayan dollars.

The Ceylonese Government has decided to drop its proposal to nationalise foreign-owned tea plantations. This decision has been taken in the interests of the Island's economy. Nationalisation will involve 552 British and Indian owned tea estates, covering about 260,000 acres. The taking-over of these estates will cost the country Rs. 24 crores by way of compensation.

A new steel rolling mill, described as the most advanced of its type in the world, will shortly be completed in Britain. Built at a cost of £18 million, this universal beam rolling mill will produce new steel sections giving greater strength for less weight. It is being built by the firm of Dorman, Long (Steel) Ltd., of Middlebrough. Experimental rolling at the mill is expected to begin early in 1958. The output is estimated at 8,000 tons of steel a week.

The largest and fastest jet airliner in the world, the 600-miles-per-hour Boeing 707 Jet Stratoliner, has been completed as per schedule. The final functional testing and installation of special flight test equipment have now begun, in preparation for the first flight of this airplane, which is of the same type as the 707's ordered by Air-India International. This airplane will be capable of flights from Bombay to Rome in only 7 hours and 15 minutes and can carry up to 150 passengers.

A World Bank loan to help finance a new hydro-electric development project in the country of Trondelag is being sought by Norway. The project, which is estimated to cost £8 million, involves the construction of two power stations in Tunnsjo Valley, North Trondelag, one of 23,000 kw. and another of 145,000 kw. Details of the proposed project have been submitted to the World Bank authorities and a mission from the Bank is expected to visit Norway in the near future.

A scheme for an all-Arab trunk pipeline serving Saudi Arabia, Kuwait, Iraq and Persia has been submitted to the Arab League Oil Experts' Conference which is being held at Baghdad. The sponsor of the plan is a Saudi delegate who is also the Director-General of Oil and Minerals of the Saudi Arabian Government. The plan is essentially a counter proposal to the International Oil Companies' project for a line through Iraq and Turkey to the Mediterranean, avoiding Syrian territory.

The British firm of Dexion, manufacturers of prefabricated steel building units, is establishing a small plant in Greece, for which purpose the Greek Government has given permission for the import of capital. The initial amount of such capital is expected to be of the order of £75,000. The factory will be established in the Athens area. It is said that the products of this firm are highly suitable for agricultural buildings and/or the rapid construction of houses in quake-ridden areas.

The Standard Oil Company of New Jersey has, after extensive investigations, decided to build a new oil refinery on the Oslo Fjord. A special concession has been granted by the Norwegian Government and the Norwegian Subsidiary Company of Standard Oil will float a loan of 85.5 million kroner maximum (£4.28 million) on the Norwegian market to finance the construction of the refinery. The refinery will have a capacity of 40,000 barrels per day. Part of the production will be exported, mainly to Sweden.

By producing 315,793 motor vehicles during last year, of which 279,713 were passenger cars and 36,080 industrial vehicles, Italy has reached the sixth place amongst the world's most important automobile producing countries. The other countries in the order of importance are the U.S.A. (6,900,387), West Germany (1,072,564), Great Britain (1,006,203), France (827,032) and Canada (472,366). The total number of new vehicles registered in 1956 was 232,482. The number of vehicles in circulation in Italy, including the 1956 production, aggregated 1,484,067 (excluding 35,080 trailers) which, in other words, meant one vehicle for every 34.3 inhabitants on an average.

PERSONAL

MR. R. S. Mani, Indian Ambassador in Baghdad, arrived in Bombay from Basra last week.

Mr. B. L. Kapur, until recently Ambassador in Belgium, has been appointed India's first High Commissioner in Ghana.

Mr. Leslie Gamage, M.C., a Director of the General Electric Company, has been elected Chairman and Managing Director of the Company, in succession to Sir Harry Railing who has retired.

Mr. Khub Chand, I.C.S., at present Joint Secretary in the Ministry of External Affairs, has been appointed Ambassador of India to Italy and Minister to Albania. He will assume charge of his new assignment towards the end of December.

Mr. C. H. Bhabha, Vice-Chairman of the Central Bank Ltd., and Mr. B. M. Chinai, President of the Federation of Indian Chambers of Commerce and Industry, who were members of the Indian industrial delegation to the U.S. and Europe, returned to Bombay last week.

The next British plastics exhibition and convention will be held at Olympia, London, from 17th to 27th June 1959 under a new name, the *International Plastics Exhibition and Convention*. It will be organised by the Iliffe journal *British Plastics* with the full support of the British Plastics Federation. The Exhibition and Convention will be a focal point for executives, buyers and technicians from all over the world, an international forum for views and ideas on plastics technology, and a market place for the sale of plastics materials, machinery and finished products. Of the 90,000 people who attended the 1957 Exhibition, 6,000 were from overseas, representing 84 different countries. Excellent business was done in all sections of the show and many exhibitors are planning substantially to increase their stand space for 1959.

Two aluminium works in Western Norway, Ardal and Sunndal, both controlled by the Norwegian State have decided to increase their production to 150,000 tons per year, thus reaching a greater total production than any other factory in Western Europe today. When the Aluminium Works in Mosjoen in Northern Norway now under construction is completed, it will produce 90,000 tons annually. The Norwegian share in the world production of aluminium will then increase from 3 to 4 per cent. When Ardal and Sunndal reach full capacity, according to present plans, the works will be the greatest industrial undertaking in Norway. The total annual production will then have a value of £30 million. Norsk Hydro, the great nitrogen producing concern has, so far, been leading with an annual production of the value of £20 million.

An industrial advisory committee, under the chairmanship of Lord Hives, a prominent British industrialist, has been set up to encourage the establishment of new industries in Malta. The other members of the Committee are Sir George Schuster, former Finance Member of the Viceroy's Executive Council in India, the Hon. Thomas Brand, and Sir George Dowty. The objects of the Committee, which will visit Malta later this month, are to foster and encourage industrial development and to promote the tourist industry, by stimulating interest among outside industrialists. It will also act as a liaison body between industrialists and the Maltese Government. The Committee has been set up by the Maltese Government, in consultation with the British Government, in conformity with the general policy of developing Malta's economy and raising the standard of living on the island.

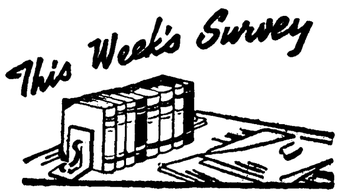
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 19*th November*

Indian Railways

The last two years have been disastrous to the Indian Railways. The deficit in 1931-32 was over nine crores of rupees, owing mainly to an extraordinary fall in gross traffic receipts and as a result of unexampled world-wide economic depression which has considerably aggravated by the political situation in India. These facts are brought out in a report submitted early this month in Delhi to the Public Accounts Committee of the Legislative Assembly. About this time last year the Committee insisted on a summary of the results of the working of the railways in India as a whole based on the latest figures available—like the report a chairman would make in his annual speech to a general meeting of shareholders. In compliance with this healthy desire on the part of the Public Accounts Committee the Chief Commissioner of Railways and the Financial Commissioner of Railways have issued for publication a summary of the results of the working of the Indian Railways during 1931-32. The years 1930-31 and 1931-32 were, as stated above, disastrous, and for the first time since 1921-22 the net receipts of the railways in these years were insufficient to meet their interest charges. The deficit in 1931-32 was over Rs. 9 crores, as compared with a deficit of over Rs. 5 crores during the previous year. The position was worse in 1931-32 than in the previous year, though the railway administrations were able by economies in working to make up over 80 per cent. of the decline in gross traffic receipts during the year.



EXPORTS OF MINERAL ORES

FOR reasons which have never been convincingly set forth, the Government has virtually nationalised the export trade in iron ore and has reduced the private traders' share in the export of manganese ore. The State Trading Corporation is now the sole exporter of iron ore and also has a very large share in the export of manganese ore. Whether as a result of this twist in policy or not, the fact remains that the overseas demand for India's mineral ores has shrunk. The U.S. and other consumers are reported to be evincing interest only in high-grade ores and keen on developing the mines in neighbouring countries. Small wonder, then, that the activities of the State Trading Corporation came in for some sharp criticism by Mr. N. S. Worah, Chairman of the Western India Minerals Association, when he addressed the annual meeting of the Association, held at Bombay last week.

Speaking on behalf of the Association, Mr. Worah declared that they did not "mind the existence of the State Trading Corporation." But he rightly insisted that its "role must be a positive one." He had several valid criticisms to make of the Corporation's activities. The Corporation, he said, had not made available to the public any information about its actual exports. He complained that the Corporation's export quota had remained unutilised and that this factor had produced "far-reaching repercussions." Further, it was interested only in high-grade ores, so that it had not succeeded in lifting the low-grade ores; actually, the Corporation was reported to have suggested the cancellation of its purchase contracts for these ores. Apart from its dealings with communist countries, which had bought mineral ores from India for various reasons, both political and economic, the Corporation had not succeeded in exploring new markets nor in developing new mines. In view of these criticisms, the least the Government should do is to publish the full details of the Corporation's contracts and actual performance (destination-wise) in the matter of export trade in mineral ores.

Mr. Worah made a number of constructive suggestions for improving the export trade in ores. He suggested that the export policy should be laid down for a fairly long period, say, three to five years, so that Indian exporters could plan their trade efficiently. More specifically, he rightly pleaded for the abolition of the quota system. Obviously, such a system can have no validity in the context of the need to stimulate exports. Mr. Worah also pleaded for the abolition of the export duty and of sales tax on ores. Considering that the mineral ores are essentially an export commodity, there is a case for their exemption from sales tax. He questioned the wisdom of application of the Provident Fund Act to manganese and iron ore mines. He felt that it would be difficult to implement the provident fund scheme in the mines, in view of the fact that the mining of the ores was a seasonal industry which stopped operation in the monsoon months, June to November.

An appeal to the mineral ore trade to co-operate with the State Trading Corporation was made by the Union Minister for Commerce and Industry, Mr. Morarji Desai, at a reception held in his honour by the Association. He averred that the exports of ore had not declined but had actually gone up. He did not agree that the U.S. had shifted to other sources of supply for its requirements of low-grade ore because of the imposition of the export duty by India. There were other reasons for the lack of demand for low-grade ores. He pointed out that the American demand for manganese ore was of the order of 4 million tons, as against Indian production of 2 million tons and exports of 1.5 million tons. He felt that India should concentrate on the export of high-grade, rather than low-grade, ore. It is, however, gratifying to note that he gave the assurance that the Government would take steps to facilitate the export of low-grade ores whenever it was necessary.

Two important factors in developing the export trade in ores are that production should be stepped up and transport facilities should be made freely available. Mr. Worah suggested that the State Governments should speedily and liberally deal with the applications for prospecting and mining leases. Since the Central Government has now relaxed the original rigour of its policy for mining operations, it is to be hoped that the States will accord the private sector a higher priority in the matter of developing new mines. As regards transport, Mr. Worah emphasised the need for constructing better roads from mines to loading stations. The importance of transport has been effectively brought out by the Export Promotion Committee which declared that the "only limitation" on India's ability to export metallic ores is the one that is "set by transport facilities within the country." Perhaps, an *ad hoc* departmental inquiry would be able to reveal the mining areas which need transport facilities most and also how best they could be augmented. The Government will also do well to examine the Committee's suggestion that, in order to reduce the transport costs, efforts should be made to beneficiate the manganese ore as much as possible before it is exported.

WOOLLEN INDUSTRY

With the imposition of a ban on imports of woollen manufactures, indigenous industry has been assured of a closed market for its products. It is not surprising, therefore, that the prices of woollen goods have gone up in recent weeks. A possible outcome of a complete ban on imports is the removal of incentive for producers to improve quality. Accordingly, Mr. Nityanand Kanungo, Union Minister for Commerce, did well to urge the woollen manufacturers, while opening the wool exhibition organised by the International Wool Secretariat at Delhi last week, to improve the quality of their products. This was essential, he said, for the development of larger foreign markets and even for the retention of the existing markets. In this connection, he opined that the Wool Development Council was making "very enthusiastic efforts" to develop the mechanised industry and these efforts would before long enable the industry to take its proper place in the industrial framework of the country. It may not be out of place to give here the recent trend of production of of woollen textiles in India:

	Six months ended July		*Calendar year*	
	1957	1956	1956	1955
Yarn (000 lbs.) ...	14.85	14.04	25.58	20.70
Fabrics (000 yards) ...	8.22	8.87	16.31	13.58

The progress made by the mechanised wool industry in the past few years has been quite notable. In fact, the industry, according to Mr. Kanungo, is today in a position to supply the demands of the home market and has even some surplus for export. Russia is one of the buyers of Indian woollen cloth. The hosiery industry in the Punjab has been successful in exporting woollen manufactures to Asian countries. The cottage sector of the wool industry produces mainly carpets, 80 per cent. of which is exported to North America and Europe.

A great defect in the woollen cloth made in India is heavy shrinkage in size after it is washed. Those who use clothes made out of Indian woollen fabrics become greatly disappointed and annoyed when these clothes shrink after a few washes and have to be taken back to the tailors for alterations. This disappointment forces them to seek foreign-made woollen fabrics when the necessity for replenishing their worn-out warm clothing arises. It must be remembered, in this connection, that woollen fabrics are costlier than other textiles and, therefore, one has to be very careful in buying such goods. If only woollen manufacturers take effective steps to remove the defect referred to here and produce goods that will not shrink, they will find ready markets not only in this country but also elsewhere. Unless they do so, no amount of sales promotion and appeal to the patriotic spirit of the people will be of any avail to them in building a sustained trade.

The most important raw material consumed by the woollen industry is raw wool. The supply of raw wool is quite sizable and there is a substantial exportable surplus. But a very large percentage of Indian wool consists of coarse variety which is not suitable for the manufacture of fine goods, the demand for which is increasing. Of necessity, therefore, India has to export most of its raw wool production. The annual rate of exports is about 30 million lbs. Alluding to raw wool situation, the Minister for Commerce stressed that, till the mill industry was able to make adequate use of the raw wool produced in the country and develop foreign markets, it would be necessary to continue to export raw wool "which is earning so much foreign exchange and which ensures a fair price level." He considered it a happy feature that strenuous efforts were being made to improve the quality of wool through schemes financed by the Indian Council of Agricultural Research and the State Governments.

PUBLIC LAW 480

Although the U.S. Public Law 480 has been talked about so widely in India and the world over, not many people know what exactly the Law is and what it stands for. The Law deserves to be better known, considering that it has conferred many benefits to the rest of the world. Now that utmost stress is being laid on the need for large-scale economic assistance from the U.S. to India, the U.S. Information Service has done well to bring out a small brochure entitled *What is Public Law* 480? The brochure gives, in the form of questions and answers, clear details of the P.L. 480 programme in India.

Public Law 480 is an Act of the U.S. Congress, known as the Agricultural Trade Development and Assistance Act of 1954. The Law authorises the U.S. Government to enter into agreements with foreign countries to sell certain agricultural products that are in surplus supply in the U.S. and to accept foreign currencies, such as Indian rupees, as payment. It also permits the use of the proceeds in the recipient countries in order to help them develop their economies. It provides, too, for donations of U.S. agricultural products for famine relief, floods and other emergency assistance. The P.L. 480 programme, while it helps other countries that need larger supplies of agricultural products than they are able to produce or purchase with their limited foreign exchange, also helps the U.S. to find markets for its surplus products and to adjust its supplies downward without causing a collapse of prices or unduly interfering with markets of other countries.

It is under the aforesaid legislation that the Indo-U.S. P.L. 480 Agreement was signed on 29th August 1956; the Agreement, it is interesting to note, is the largest P.L. 480 Agreement the U.S. has concluded with any country. The Agreement provides for the supply, by the U.S. to India, of $360.2 million (Rs. 171.5 crores) worth of agricultural commodities over three years except for rice which is for one year only. The break-up of the quantities and values of the different commodities is given below:

Commodity	Unit	Quantity	Value	
			Millions $	Crores of Rs.
Wheat	Mill. metric tons	3.5	200.0	95.2
Rice	Thousand tons	200	26.5	12.6
Cotton	Thousand bales of 480 lbs.	500	70.0	33.3
Dairy products (milk powder)	Tons	15,000	3.5	1.7
Tobacco	Million lbs.	6	6.0	2.9
Ocean transportation..	Dollar cost for shipment of half the total cargo	..	54.2	25.8
Total ..	..	..	360.2	171.5

Actual arrivals in India by 1st September 1957 were: wheat 1.8 million tons; rice 198,000 tons; cotton 135,000 bales.

The purchases of these commodities are made in the U.S. through usual trade channels by the India Supply Mission in Washington in the case of wheat, rice and dairy products and by Indian private trade for cotton and tobacco. Out of the rupees that are deposited for the produce, a loan of Rs. 111.4 crores (including Rs. 25.7 crores to be reloaned to private industries) and a grant of Rs. 25.6 crores are to be given to the Government of India for financing economic development projects. The balance of Rs. 34.4 crores is to be spent for U.S. uses in India such as market development for agricultural products, financing goods or services for other countries, to pay various U.S. obligations and to finance international educational exchange activities.

The assistance provided by the U.S. Government under the P.L. 480 programme has greatly helped India in financing several development projects under the second Five-year Plan. Nevertheless, the fact remains that the foreign exchange position continues to be none too satisfactory and the "hump" of the difficulty is expected to be reached during the period April 1958 to March 1959. It would not be surprising if the "hump" were to arrive even earlier, what with the necessity to import in the coming months additional foodgrains on a large scale, thanks to drought in many parts of North India. It remains to be seen whether additional assistance under P.L. 480 is possible.

FISH PRODUCTION

Whatever might be the attitude of the advocates of vegetarianism towards fish-eating, there is no doubt that the economic importance and nutritional advantages of the production and consumption of fish are impressive to a degree. The average Indian diet is lacking in protein content and fish, therefore, could serve as a valuable supplementary item in the daily menu. Fishing, while contributing to the aggregate food output, does not involve any encroachment on land. Besides, fishing provides employment and the means of sustenance to a large number of people belonging to the fishing community found dotted along the entire coastline of India. In spite of its obvious importance, the fishing industry in India has not made much progress. However, India is one of the eight largest fish-producing countries of the world. Its output in 1956 aggregated just over one million metric tons, as against 839,000 metric tons in 1955. As compared with this, Japan produced 4.7 million tons, the U.S.A. 2.9 million tons, the U.S.S.R. 2.6 million tons, Communist China 2.5 million tons, Norway 2.1 million tons, the U.K. 1.05 million tons, Canada 1.07 million tons. The minimum requirements of fish to meet the nutritional needs of the population in the country is about four million tons, whereas present production is only about 1.1 million tons.

The organisation of a two-day Fisheries Conference by the Government of India, which was attended by the Ministers of Andhra Pradesh, Bombay, Kerala, Mysore, Orissa and West Bengal and representatives of the Planning Commission and Union Ministries of Finance and Transport, is indicative of the growing realisation of the importance of fisheries in the national economy. The object of the Conference, held in Bombay on the 8th and 9th inst., was to discuss practical measures for implementing fisheries development programmes, with particular reference to the targets laid down in the second Plan. Addressing the Conference, Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, said that in view of the urgent necessity for improving and increasing food supplies, particularly in the context of rapid growth of population and increasing pressure on land, more attention should be given to raising fish production by improving fishing methods, extending fishing areas in seas and exploiting more fully fresh water and sea fisheries. He pointed out that, apart from the added contribution to food, higher fish production would facilitate the organisation and development of an industry catering to both internal and external markets.

One of the factors which has induced the Government to devote attention to the utilisation and development of fishery resources in India is the socio-economic conditions of the fishermen. The Government has realised that the organisation of fishermen on co-operative lines will contribute towards raising their standard of living and increasing fish production. Actual achievement in the organisation of fishermen's co-operatives, however, has not been appreciable. Efforts should be intensified to establish co-operative fishing and marketing societies. Measures are being taken for increasing production of sea-fish in the off-shore and deep-waters by mechanising fishing crafts, improving fishing gear, training fishermen in the handling of mechanised boats and improved nets and by establishing boat-building yards. Some progress has been made in this direction in Bombay. Demand for mechanised boats and improved gear is increasing. But lack of adequate foreign exchange for securing the necessary equipment is one of the real handicaps.

The Government of India established a deep-sea fishing station in Bombay in 1948 for conducting exploratory fishing and a private fishing company was established in 1956 at this port in collaboration with a Japanese firm. Exploratory fishing schemes are proposed for both the East and West coasts with units at Cochin, Tuticorin, and Visakhapatnam. In this connection, it is gratifying to note that Mr. Krishnappa has given the assurance that, in view of the importance of developing fishery resources, the Government of India will encourage deep-sea fishing by offering long-term credits for establishing private and co-operative fishing enterprises covering fishing, processing, marketing and boat-building.

The Industrial Court, Bombay, has rejected the plea of the Ahmedabad Millowners' Association for modifying the previous award to enable a mill working two full shifts of eight hours each and a partial third shift of six and half hours with half an hour's recess to extend the third shift to eight and a half hours (including half an hour's recess) on a day preceding a holiday. The Association had argued that this modification would help make up lost hours in a week of 48 hours permitted under the Factories Act and that, in the interest of production, night shift workers should work for the full eight hours on the day preceding a holiday. The Industrial Court held that night work entailed considerable strain and fatigue on workers and that there were disturbances in their social life. If night shift workers were made to work for eight and a half hours in the shift preceding a weekly holiday or other holidays, the workers would also not be getting the full advantage of the weekly off day or holiday as the case might be.

I.S.M.A.'S SCHEME FOR SUGAR EXPORTS

SETTING UP OF A SEPARATE CORPORATION SUGGESTED

From Our Special Correspondent

NEW DELHI, 12*th November*

DELHI LETTER

THE Committee of the Indian Sugar Mills' Association met again here last week to finalise its scheme for sugar exports in the current season. It is learnt that this scheme visualises the establishment of an export corporation by the I.S.M.A. for handling sugar exports in accordance with the directions of the Food and Agriculture Ministry from time to time. Another feature of the scheme, in outline, is that the I.S.M.A. is to ask each member-factory to reserve 10 per cent. of its production in the current season for export through the Corporation and to pay to that Corporation Rs. 2 per maund on its entire production of the season for subsidising the export-sugar. The individual factory would have to be statutorily compelled to reserve 10 per cent. of its production and to pay up the cost of subsidy by making it a condition in the crushing licence that the factory shall abide by the rules and regulations laid down by the Corporation. This could be done by amending the relevant provisions of the Industries (Development and Regulation) Act or the Sugar Control Order. In order to make good the loss of Rs. 2 per maund, the internal prices of sugar would have to be allowed to go up. In this connection, the I.S.M.A. scheme contemplates the release, by the Food Ministry, of sugar quotas for internal sale only after consultation with the Export Corporation. This is considered necessary to maintain internal prices at a level that will enable the factories to realise the cost of export subsidy from the domestic consumers.

This scheme, it is further learnt, is to be explained to the Commerce and Industry Minister and the Food and Agriculture Minister by a sub-committee which has been constituted by the I.S.M.A. Committee. The Commerce and Industry Minister's approval is sought for the purpose of stipulating that every sugar factory shall be a member of the Export Corporation (as in the case of the former Indian Sugar Syndicate) under the Industries (Development and Regulation) Act. The Food Minister's approval appears to be taken for granted in the light of his expressed desire, according to the Chairman of the I.S.M.A., that sugar should be exported only through the Association. At the same time, present indications do not suggest that either the Food Ministry would be willing to permit the factories to charge Rs. 2 per maund and a little more separately and directly to the domestic consumer or it would undertake any responsibility to see that the factories are paid a reasonable price for the sugar reserved for export. The possible approval of the scheme by the Food Ministry would, in effect, mean that a Government agency like the State Trading Corporation cannot be expected to fare well in a buyers' market overseas. Whether the scheme, with these implications, would be acceptable to the Bombay representatives of the sugar industry is not known, for none of them was present at the latest meeting of the I.S.M.A. Committee. However, the Committee appears to have deputed one of its members—Mr. R. P. Nevatia—to explain the scheme to the Bombay representatives and secure their approval.

Working of the Scheme

Whether or not the I.S.M.A. scheme is finally approved by Government, it might be useful to cover in this despatch an analysis of how the scheme, if implemented, would work in actual practice. This analysis is done for this correspondent by a person who is conversant with the problems of the sugar industry but who is not a member of the I.S.M.A. Committee. The proposed Export Corporation, he says, will collect from the factories, for subsidy purposes, about Rs. 11.7 crores on the estimated sugar production of 21.5 lakh tons in the 1957-58 season. Besides this, tax and freight concessions amounting to about Rs. 11 per maund on the export sugar would also be there. The tax concessions would be by way of refund of excise duty (Rs. 8-4 per maund), sugarcane cess (Re. 1-14 to Rs. 2 per maund) and inter-State sales tax (Re. 0-5-4 per maund) on the quantity of sugar to be exported. A freight concession of 8 annas alone in the present average rate of Rs. 2-8 to Rs. 3 per maund in the case of U.P. sugar factories for transport of sugar to Calcutta or Bombay is taken into account here.

The subsidy of Rs. 11.7 crores on 2.15 lakh tons (that is, 10 per cent. of the estimated production in 1957-58) would work out to Rs. 20 per maund. To this is to be added Rs. 11 per maund by way of tax and freight concessions. This would mean that a maund of sugar could be made available for export purposes at Rs. 2.5 to Rs. 3 per maund at port stations in India. Again, this would mean that Indian sugar can sell in foreign markets as far away as England at Rs. 5.5 to Rs. 6 per maund (inclusive of ocean shipping cost). Under-selling of Indian sugar to that extent is patently unnecessary, because it can compete successfully in foreign markets at a price of Rs. 16 to Rs. 17 per maund. In the expected conditions of the world market, there would thus be no need for an excess of Rs. 10.5 to Rs. 11 per maund by way of export subsidy. In other words, even if a subsidy is to be given, it need not be more than Rs. 9 or Rs. 9.5 per maund. Even this would involve an increase of about one rupee per maund in the internal price of sugar.

Actually, the analysis continues, the I.S.M.A. scheme would mean that the 90 per cent. of current season's vroduction will have to be sold to the domestic consumer at about Rs. 36 per maund (ex-factory) uniformly throughout the country, and each and every factory will have to be assured of this price. If this price is not notified as a control price, there is every possibility of a price competition between some factories having a lower unit cost of production on account of higher sugar recovery, longer season and bigger crushing capacity and others having a higher unit cost of production. While the Government may be inclined to wink at the expected increase in internal sugar price under the I.S.M.A. scheme, it would obviously not be willing to declare the increased price as a control price. In such circumstances, less profitable, or smaller, factories would not be able to recover the export subsidy wholly from the domestic consumer and would, therefore, be put to unbearable loss. It is not unlikely that some of these smaller factories may even come to grief in such a situation.

Deccan Sugar

On the other hand, according to the aforesaid analyst, with the refund of excise duty, sugarcane cess, inter-State sales tax, etc., on export sugar, factories in the Deccan area may be in a better position to take advantage of the export drive to export sugar without as much subsidy as the U.P. and Bihar factories would require. The higher sugar recovery of Deccan factories and the saving on railway freight they will have would mean an f.o.b. price of Rs. 18.5 to Rs. 19 per maund (after tax concessions) whereas the f.o.b. price of U.P. sugar in Bombay would be Rs. 23.5 to Rs. 24 per maund. In other words, Deccan factories may sustain a loss of Rs. 5 to Rs. 5.5 per maund only on export sugar, as against a possible loss of about Rs. 10.0 per maund in the case of U.P. and Bihar factories if there is to be no subsidy. Even this loss the Deccan factories may partly or wholly recover, for, if they are left free to export their sugar according to quotas fixed by the Government, they may be able to take advantage of a possible rise in world sugar price which now is about £40 per ton, as against £65 to £70 per ton a few months back. In any case, any subsidy in their case would be very much less than in the case of U.P. and Bihar factories.

In view of the analysed drawbacks of the I.S.M.A. scheme, the suggestion is advanced that

two generations at your service

WHEN Sven Wingquist founded SKF in 1907, he inaugurated right from the start a technical advisory service for users of SKF products. It offered then—as it has ever since—assistance with the selection of bearings, the preparation of complete bearing schemes, advice on mounting, lubrication and maintenance. For 50 years SKF has helped to ensure the use of the right bearing in the right place in machinery, vehicles, instruments and other applications of every conceivable kind throughout the world. It has carried out systematic research into bearing schemes and helped engineers everywhere to utilize bearings to the full, both technically and economically.

Innumerable bearing problems have been solved by SKF technicians ... and each solution has added to the vast storehouse of technical knowledge and experience available to every SKF engineer.

Today a new generation of specially trained SKF engineers is available in over 250 SKF offices throughout the world to solve the bearing problems of tomorrow. They are there to assist you in your progress. They are experts at their job—and they are backed by modern research departments. With the accumulated experience of the older generation at their disposal, they are ideally equipped to serve you. Why not put them to the test?

AMERICAN LETTER

NOTHING SERIOUSLY WRONG WITH AMERICAN ECONOMY

RETAIL SALES HIGHER THAN LAST YEAR

From Our Special Correspondent

NEW YORK, 5*th November*

RUSSIA'S second satellite with a dog inside has had a profound effect on American public opinion. The effect was measurable quite clearly by a rather severe setback of prices on the New York Stock Exchange. Of course, equity prices have been going down for some time and this was merely a continuation of an already established bear market trend.

Yet, a seasoned observer must be struck by one parallel—Pearl Harbour. At that time, U.S. reaction was immediate because great destruction was wrought and many American lives were lost. The attack on the U.S. naval base also followed many months of tension, Hitler's attacks in Europe, etc., and the whole atmosphere was different from what it is today. At this time, no American lives have been lost and no destruction has been caused, except perhaps to an animal which is an ordinary laboratory occurrence all over the world.

The psychological impact is deep and many Americans welcome the news if only it will tend to remove whatever complacency existed about U.S. superiority.

Nothing Drastic

As a philosophical observation, it may be said that nothing drastic is ever done here, unless there is an emergency. This country, which has led in the development of atomic energy for peaceful purposes—the first public utility plant generating power with nuclear fuel was put into operation the other day—simply has paid no attention to Russian developments, despite the fact that radar listening posts in Turkey have kept track of Soviet rocket test firings. Beyond that, intelligence seems to have been quite inadequate.

President Eisenhower's personal prestige remains unimpaired by these developments but voices of Senators and Congressmen who are now home and not in session, are rising to a crescendo with the demand that something be done. As yet, the Democrats have failed to make political capital out of the dilemma, since they have a majority in Congress and their skirts are not too clean owing to the debacle at Little Rock, Arkansas, over the racial segregation issue. An analysis of the election returns today in this off-year may give a clue to the country's feeling, but this must of necessity be fragmentary since the issues are usually decided at the polls by the independent voters and not by the party machines.

The Typical Question

Leading publications are now conceding that there is a bear market on the stock exchanges and that business is receding fractionally. The question being asked most frequently is "when will business pick again?" This is rather typical of a generation which has been spoiled by years of prosperity which was generated by the last war. Out of a U.S. population of 170 million, more than 65 million people are employed and unemployment is just slightly above 2 million, a little higher than last year, but not alarmingly so.

Some areas are hit harder, of course, than others just as the North-west, but, on the whole, life goes on, bills are being paid, a little bit slower perhaps than a year ago but still quite satisfactorily. The outlook for the future is as bright as ever. In fact, the Sputniks in this respect are the greatest allies of the U.S. They will unquestionably force greater Government activity. That means more contracts for industry and more jobs. Whether this can be done without reactivating inflation is another question, but then inflation has been part of every national civilisation and culture.

Despite all talk of recession, business is still booming by previous standards. Retail sales this year will probably aggregate $200,000 million, about 5 per cent. higher than in 1956 which is slightly higher than the inflationary price increases of the past 12 months. It cannot mean anything else but that the public has confidence in the future and is not particularly disturbed over the state of affairs here or abroad.

The major facets of American economic life are in near balance. Foreign nations, depending on American dollars have little to worry about at the moment. However, there is no question that, gradually, there is developing an inadequacy of savings for industrial developments all over the world. The resources of the U.S. are not inexhaustible. The recent meetings of the International Bank for Reconstruction and Development and of the International Monetary Fund pointed up that problem.

Long-term Problem

The technological advances are driving Governments into inflation and into greater expenditures in order to keep up with the times and to conserve national resources, according to the latest technological principles. Underdeveloped nations such as India are faced with the import of costly machinery to raise the standard of living and in America, too, the raising of money for new schools, new airports, new modern facilities of all sorts for a growing population is beginning to become a problem. It is a long-term problem. For the short-term, all is well, barring unforeseen circumstances.

The visits of Queen Elizabeth II and of Prime Minister Macmillan were regarded as very important here, even though they were somewhat overshadowed not only by the Sputniks, but also by the Kremlin shake-up culminating in the dismissal of Marshal Zhukov, the former comrade-in-arms of President Eisenhower. The Queen captured the hearts of the U.S. by her warmth and by that of Prince Philip. Mr. Macmillan by his presence, while not particularly spectacular, personified Anglo-American co-operation and gave a lift to popular morale.

Middle Eastern developments still have a sinister connotation to the American public. The situation is as explosive as ever and as it has been for a long time. The Eisenhower Doctrine is still alive so far as Washington is concerned, but what does it mean in reality?

Disturbing Thoughts

Should the Russians command enough manpower of their own and of their satellites to march and take the rich oilfields, ports and other spots of significance, there is very little the Western powers could do without using atomic weapons. But suppose the Soviet forces refrained from using atomic weapons? Who would dare to invite immediate retaliation? These are some of the thoughts disturbing people in this country.

Secretary of State John Foster Dulles is under fire, at this time for ineffective foreign policy and for unrealisic approach to the Middle Eastern problem, particularly. Yet, he just underwent a widely publicised check-up which found him to be in very good physical condition and able to remain in office as long as he wished. Mr. Dulles has few friends, not only among Americans but among visiting foreigners. He is a cold person who wants to reason things out on the basis of the letter rather than on the spirit of the law. President Eisenhower is a very loyal person, though, and he has in the past and is likely to be willing in the future to back up the actions of his Secretary of State. Mr. Dulles' predecessor enjoyed an equally unenviable role.

SEQUEL TO BANK RATE RISE IN U.K.

SAVINGS BANK SUSPENDS OPERATIONS

ONE of the victims—perhaps the only victim so far—of the rise in Bank rate in the U.K. is a small savings bank of Birmingham, named the Ideal Bank. The Bank, which is more than 60 years old, having been founded in 1896, announced on 30th October last the stoppage of all withdrawals and acceptance of further deposits until a further investigation into its position had been carried out. Announcing this, the Managing Director of the Bank said that this step had been brought about by the general financial position and that the Directors would make every effort to do their best for the depositors.

The Bank is a small private savings bank. It is not a Trustee Savings Bank and its deposits are not, therefore, guaranteed by the State. Perhaps the difficulties of the Bank cannot all be attributed to the recent rise in British Bank rate to 7 per cent. only, the latest increase in Bank rate serves to accentuate the bank's troubles. The Bank had for some time past been experiencing heavy withdrawals much in excess of fresh deposits. This state of affairs had been largely due to circumstances arising out of the issue of savings certificates by the Government. It may be mentioned, in this connection, that Government has issued, or is still issuing, a series of savings certificates which do not attract income-tax in the hands of their holders, whereas interest earned on the deposits with the Bank attracts income-tax.

The second factor which has increased the Bank's difficulties is the fall in the market value of Government and other similar securities, in which the Bank has invested a large proportion of its funds. The fall in their market value is so heavy that they cannot at this time be realised at anything more than 75 per cent. of the purchase price. They are redeemable securities and can be redeemed on due dates at their nominal value. It is stated that the Ideal Bank hold nearly all securities in trustee stocks, but three-quarters of them are in savings bonds and transport stock, the latter being a much longer dated stock than what joint-stock banks usually hold.

State to Safeguard Depositors

The Bank had, as on 31st March 1957, 9,500 depositors on its books and their total deposits stood at £1,098,000. The Bank has, however, been holding discussions with its clearing bankers, Barclays Bank, for evolving a scheme by which the interests of the depositors can be safeguarded. Barclays Bank has completed its investigations and has made certain suggestions for the consideration of the Ideal Bank's Directors. The final scheme has not been announced up to the time of writing.

It is somewhat gratifying to note that this unfortunate incident in the British banking field has not had any widespread repercussions. No doubt, following the suspension of the Bank's business, many other institutions which accept public deposits received a number of anxious enquiries from their depositors about the security of their money, but they did not lead to any large-scale withdrawals. It had, in fact, been feared that the disclosure of the Ideal Bank's difficulties would not only result in a slowing down of the flow of fresh deposits but accelerate the withdrawal of existing deposits from the commercial banks, hire-purchase finance houses and savings banks which are the three main groups of banks accepting public deposits. Actual experience of these banks has, however, been different. The depositors would appear to have shown exemplary calmness in the circumstances.

The depositors of commercial banks seem to be quite convinced that the banks have invested the bulk of their resources in advances and liquid assets and are, therefore, not likely to be seriously affected by the recent decline in the market value of Government securities. The hire-purchase finance houses, which raised their rates of interest on deposits after the rise in the Bank rate, continue to attract fresh deposits, while withdrawals of hire-purchase money, which is usually subject to one, three or six months' notice, have not been unusual. No doubt, these institutions have had to convince the depositors that their money would be safely employed. The post office and Trustee Savings banks, which between them hold the bulk of the country's savings, have not experienced any large pressure of withdrawals. The Trustee Savings banks, it may be noted here, accept two kinds of deposits, namely, ordinary deposits which, like those placed with post office savings banks, carry State guarantee, and special deposits which do not carry any such guarantee. These banks could, on this ground, have expected the depositors to switch over their funds from special deposits to ordinary deposits, but such a drift from one class of deposits to another more secure class has not taken place so far. Even if it takes place, the banks will not be put to any serious inconvenience, because of the nature of their investments. It is stated that only about 25 per cent. of the funds held in special deposits are normally invested in Government securities and the balance in mortgage loans to local authorities. The latter investments carry a "stress clause," under which the banks can ask for repayment of their loans at six months' notice in emergency conditions, provided such a request is approved by the National Debt Commissioners. In the meantime, the banks can borrow temporarily from joint-stock banks against the security of these maturing debts.

Peculiar Constitution

Though the difficulties of the Ideal Bank are said to be, in large measure, due to the peculiar nature of its constitution, the fact remains that the basic causes of its troubles are the extent of its investments in Government securities and the depreciation in their value consequent on the increase in Bank rate. From this point of view, the sad experience of the Ideal Bank may lead to a widespread withdrawal of institutional support from the Gilt-edged market. The withdrawal of institutional support to the Gilt-edged market need not be considered as any new development as a consequence of the recent rise in the U.K. Bank rate. The retreat has already been in evidence for some years now. Only it is feared that the Ideal Bank's affairs may give this trend greater momentum. Ever since the Bank of England started using the Bank rate weapon as a corrective of the economic ills of the country, the London Discount houses have considerably reduced their investments in short-dated Government securities to levels much below what they were a decade ago. This is understandable, because they stand to lose in two ways. First, they have to borrow money to finance these investments at a cost much higher than the yield on the investments. Secondly, they have suffered capital depreciation on their investments consequent on the fall in their market value.

The experience of the U.K. commercial banks has not been far different. A few years ago, when the Government decided to switch over to a flexible monetary policy, they found a heavy fall in the market value of their holdings in Government securities so that, in some cases, their inner reserves were not sufficient to cover the gap. Consequently, three years ago, when the present tight money policy was adopted, the banks came out as heavy sellers of their Government securities. Though the selling pressure eased after a time, the banks are no longer inclined to renew their support to the Gilt-edged market, as their liquidity position is so good that they can afford to restrict their support to the short-dated securities, maturing within five years.

Trustee Savings Banks

The building societies, which are traditionally known to be good supporters of the Gilt-edged market, investing a substantial portion of their reserves in Government securities, are also deeply concerned over the fall in the market value of their investments. As a result, there is a general tendency among them to reinvest their reserves as far as possible in securities which are more stable than long-term Government securities. A similar change in investment policy is noted in the special investment departments of the Trustee Savings banks also. These banks are by law required to keep their investments in (1) Government securities of less than 15 years' maturity, (2) municipal stocks and (3) local authority mortgages. They have found that, under the present conditions, they will have the least difficulty if they keep their funds in local authority mortgages. To the extent they do so, their support to Government securities is withdrawn. As already noted, the investments in local authority mortgages can be called off on six months' notice in emergency periods.

It is quite possible that with the return of more settled conditions in the securities and money markets, this retreat from the Gilt-edged will become less and less pronounced. But, as "Lombard" the well-known commentator, says in a recent issue of the *Financial Times*, London, "the experiences of the past few years have left too deep an impression for the loss of confidence to be corrected quickly." He adds that the discount houses can hardly be expected to play, for many years to come, the same important role they had played so long in supporting the short-dated securities and commercial banks will certainly be found to restrict their holdings of Government securities to short-dated ones.

U.K. LEADS IN COMMONWEALTH INVESTMENT

The latest figures of capital investments in the British Commonwealth suggests that 70 per cent. of the external capital invested in the sterling Commonwealth during the period 1946 to 1955 came from the United Kingdom. Disclosing this, the Earl of Home, Secretary of State for Commonwealth Relations, said in the House of Lords on the 7th inst., that 15 per cent. had come from the United States, 10 per cent. from the International Bank for Reconstruction and Development, and 5 per cent. from elsewhere. "So far as we can judge, these percentages are being maintained, and the rate of investment in the Commonwealth is running at something like £200 million a year," he added. 83 per cent. of all foreign private investment in India was British.

Lord Home said that Britain's role in the Commonwealth's commerce was also "significant." It took 17 per cent. of Canada's exports, 32 per cent. of Australia's, 65 per cent. of New Zealand's, 30 per cent. of India's, 16 per cent. of Pakistan's, and 29 per cent. of Ceylon's. He added: "We must try to do better, and that is why we so cordially welcome the Canadian proposals that there should be a Commonwealth trade conference which can explore the possibilities for capital development and exchange of goods. When we are considering our own financial situation, we must never lose sight of the fact that the value of the pound is as important to our Commonwealth colleagues as to ourselves."

Proceeding, Lord Home said: "The Commonwealth trade conference in Ottawa will give us a great opportunity to see how we can, to the advantage of each member of the Commonwealth, increase not only trade between ourselves but I hope, too, the funds available for investment." Lord Home added there was no absolute pattern in the Commonwealth, nor should they expect one. When a new government, as in Ghana, was dealing with new problems, it should have full understanding in its early days of independence. If there was criticism in the United Kingdom, it was only because Britain wished to see these new States play their full responsible part in world affairs. In Central Africa, each race—European and African—was essential to the other. "The Central African Federation should be left alone for the next two or three years to work out its own salvation," Lord Home said. "There is far too much political controversy in the air to be healthy at the present time."

LONDON LETTERS

DECLARATION OF WAR WITH LABOUR

WAGE INCREASE VETOED

From Our Own Correspondent

LONDON, *2nd November*

THE reassembly of Parliament has immediately produced a head-on collision between the two parties on economic policy. The Government have given their analysis and in the Chancellor's words, "Since 1948, money incomes had risen by 75 per cent. and output in real terms by 26 per cent., wages and profits spiralled up together," and the Government were determined that increases in both wages and profits should be more difficult to get. The railway men had already put in a claim for an increase and the Chancellor had already told them that they were not going to get it! The Chancellor has also pressed on employers that they should stand firm in the matter of any demand for increases in wages.

All this in the view of the Opposition amounted to a straight declaration of war and so the Government were told this week. Since then, the Government have taken the unprecedented action of vetoing a wage increase—this time among hospital staffs—which had been approved by the Trades Council concerned, on which employers and employees are represented. A 5 per cent. increase was recommended but the approval of the Minister of Health was required as the employees are part of the National Health Service. The Minister of Health had felt obliged to reject the agreed decision, since his positive act of acceptance would have run counter to the Government's recent declarations that they were opposed to further wage increases at the present time.

This news has coincided with the second big claim, following that of the railway men, made by the London bus workers for a substantial weekly increase.

All these developments are being watched with great interest by sterling operators overseas, but so far their betting appears to be against any halt being called to the pressure by the Trade Unions to catch up on the price increases of the past year. Sterling ended the week lower than it began. But no doubt Mr. Thorneycroft, the Chancellor, is on his mettle and will argue that the Government is obliged to stick very firm to the policy they have adopted or else it will confirm all the fears of those who say that the Government cannot really mean it and inflation must continue.

The Leader of the Liberal Party in this country expressed a common view when he said that the atmosphere on both sides would, as a result of forthright statements by Government and by Unions, become so charged that compromises would become impossible. It begins to look as if this point has already been reached and, indeed, in the affair of the railway men, the attitude of the Government means that the Minister of Labour will not be able to act as final arbiter in the event of a deadlock between the railway men's unions and the British Transport Authority. The Opposition spokesman's dramatic description of Government policy as a declaration of war looks like being proved true.

Meanwhile, outside Parliament, the Government spokesmen, including the Prime Minister, have been at pains to say that both sides must co-operate to solve the common problem. The Government wants neither to cut investment nor to cause any unemployment. But it was up to the industry and to the general public, who control two-thirds of national spending, to make sure that spending was kept on as modest a basis as possible. The Government would not finance inflation and the public were asked to follow its example.

Of course, an entirely different point of view is now being put about originating from the economists. This is to the effect that Government policy on wages may create industrial unrest and cause a wave of strikes without serving the main purpose. The latter was being served already through the general fall in world commodity prices and the recession in the American stock markets reflected in the fall on British stock markets, all of which lent credence to the view that we were in for at least a mild spell of deflation. If this view is right, then the Government would have succeeded much better on their industrial front if they had not been so flat-footed about wage increases, been prepared to sanction what appeared to be reasonable demands in the light of increases in the cost of living and concentrated on the financial weapons against inflation of which they are so enamoured. Be that as it may, the Government have taken their stand and, at home as well as among the sterling operators abroad, the results are going to be watched with interest.

THE RESERVE AND THE SPECULATORS

LONDON, *8th November*

During October, the Bank of England drew $250 million from the Export-Import Bank of the U.S. and paid out $133 million to the European Payments Union in settlement of the September deficit. Thus, if all other factors had balanced, there would have been a rise in the reserves at the end of October of $117 million or £42 million. In fact, the gold and dollar reserves rose by $243 million over the month, or £87 million, so that there was a true improvement of £45 million. In addition, the United Kingdom earned a *surplus* with the European Payments Union during October amounting to £9 million, the benefit of which will be felt next month. The net improvement is, therefore, £54 million on trading account and, since not the whole of the E.P.U. surplus will be repaid in gold, of £52 million only in terms of gold and dollars. This brings the reserves back to the level of a little over £700 million at which they stood in November a year ago. But the reserves are, nevertheless, still about £85 million less than they were at the end of July before the August collapse. It will take many months of improvement to rectify the position.

A good many factors are playing at present on the value of sterling. The drawing in of balances by the Bank of France can depress the reserves as can India's sterling policy. But another explanation must be found for the vast movements of the past few months. Bearing in mind the trade position, the relative strength of exports, the general level of British prices compared with American prices, Britain's external position is by no means so weak as to warrant the continuous weakness of sterling and the loss of reserves. The great factor of today on the domestic market is the pressure of wages and the battle which is being joined between Government and Unions. If British citizens take a disconsolate view of the future of British industrial relations and buy American and Canadian securities, they can depress the pound and cause a flight of capital. Traditionally, the Bank of England has aimed at restoring the freedom of transactions in sterling even for capital purposes, and its policies and that of the Treasury, with which it works closely, have been a mixture of the blocking of loopholes and the opening of doors. And what has the freedom to export capital really brought to this country in monetary terms? Would Britain's industrial progress have been less marked, would exports have been lower, if capital movements had been made more difficult?

The theory that capital movements, and movements by British citizens at that, are primarily responsible for the waves of pressure against the pound, must make one question the Government's measures for dealing with the problem. Of course, a 7 per cent. Bank rate can help to check the outflow of funds but only at the expense of internal damage. The Government have apparently accepted that sterling weakness is a sign of British industrial weakness due to an over-straining of the economy. The same arguments are being used in America with regard

WORLD CLOTHING REQUIREMENTS EXPANDING

RECORD OUTPUT OF MAN-MADE FIBRES

THE clothing requirements of the world have registered a notable expansion in recent years, thanks to the steady rise in population and improvement in living standards in many countries. An indication of this is provided by the substantial increase in the production of fibres—natural and man-made. During the calendar year 1956, the world output of fibres aggregated 26,677 million lbs., as against 18,845 million lbs. in 1950, representing an advance of more than 41 per cent., according to the *Textile Organon*. The increase has been shared by all the fibres—cotton, wool, silk, and man-made fibres. It is particularly noticeable in the case of man-made fibres; the quantity actually produced in 1956 was at an all-time record level of 5,929 million lbs. which compares very favourably with 3,634 million lbs. in 1950, a rise of as much as 63 per cent. The production of cotton has also gone up, from 12,839 million lbs. in 1950 to 17,838 million lbs. in 1956. Wool and silk, too, account for an improvement in output, the figures for 1956 being 2,847 million lbs. and 63 million lbs., as against 2,330 million lbs. and 42 million lbs., respectively, six years before.

A striking trend in the world fibre economy, especially since 1952, has been the markedly growing importance of man-made fibres *vis-a-vis* natural fibres. The percentage share of man-made fibres in the total world output of fibres which stood at 17 in 1952 steadily moved up to 22 last year, while that of cotton receded from 72 to 67. The percentage share of wool declined from 11 in 1952 to 10 in the subsequent three years but recovered to 11 in 1956. Although the share of silk in the world output of fibres is negligible, it nevertheless continues to be used in hundreds of ways in apparel, home fashions and industry. Indeed, silk is, in the opinion of Mr. George Elbogen, President of the International Silk Association, a leading fashion fibre and has shown a steady rise in demand in all areas of fabric use and in all price ranges. Explaining the reasons for the continued growing popularity of silk, Mr. Elbogen observes:

"The preference for silk has gone from apparel for women to men's wear and other fields, despite aggressive competition from other fibres, including synthetics ... In a generally depressed textile market, silk has been the only fibre to go steadily ahead since the war. This is true, in spite of the fact that two of silk's major pre-war uses, hosiery and women's lingerie, virtually disappeared during the war. By the time silk importation resumed, the silk industry had to create a market from scratch, so to speak.... With the help of the American silk group's world promotion programme in which 21 nations are taking part, the demand for fabrics of pure silk or silk blends has gone up steadily ... the importance of pure silk fabrics in women's fashions in the high, medium and low-medium price ranges, the strong impact of the silk suit and the silk dinner jacket in men's wear, and the stress on silk fabric hats and silk shoes in the accessory field have all contributed to the growth in silk in recent years."

An idea of world production of different fibres in the past five years can be had from the following statement:

(In million lbs.)

	1956	1955	1954	1953	1952
Cotton	17,838 (67)	18,184 (69)	17,819 (70)	17,992 (72)	16,521 (72)
Wool	2,847 (11)	2,745 (10)	2,619 (10)	2,568 (10)	2,553 (11)
Silk	63	60	56	54	55
Man-made fibres	5,929 (22)	5,611 (21)	4,923 (20)	4,487 (18)	3,805 (17)
Total	26,677 (100)	26,600 (100)	25,147 (100)	25,101 (100)	22,934 (100)

Figures in brackets relate to percentage shares.

The foregoing table shows that the total world output of man-made fibres in 1956 was higher at 5,929 million lbs., as against 5,611 million lbs. in 1955, a rise of 318 million lbs. The bulk of this rise—216 million lbs., to be precise—was accounted for by rayon and acetate, the production of which increased from 5,029 million lbs. in 1955 to 5,245 million lbs. in 1956. The non-cellulosic fibre output expanded from 582 million lbs. to 684 million lbs.

The table at the foot of next column indicates the trend of rayon and acetate production in different countries during 1956 as compared with 1955.

It will be seen from the table that the major portion of the improvement in the world output of rayon and acetate during 1956 is accounted for by Japan, the quantity actually produced being higher by over 185 million lbs. Both filament yarn and staple fibre shared in this increase; the actual extent of the increase was 153.2 million lbs. and 32.0 million lbs., respectively.

The other countries which reported a rise in production in 1956 include the U.S.S.R., West Germany, Italy, Sweden and Austria. India also witnessed a rise in output, the quantity of both filament yarn and staple fibre being higher, the former by 4.9 million lbs. and the latter by 4.6 million lbs. The production of rayon and acetate in the U.S., however, suffered a setback, the decline being 112.8 million lbs. Similarly, there was a fall in output in France, the U.K., the Netherlands and Norway.

The upward trend in the production of rayon and acetate in India noted during 1956 would appear to have gathered further momentum in the current year. During the first seven months of 1957, about 13.38 million lbs. of rayon yarn came off the spindles in this country, as against 10.95 million lbs. in the corresponding period of 1956. Of this quantity, viscose yarn accounted for 11.28 million lbs. (9.31 million lbs. a year before) and acetate yarn for 2.10 million lbs. (1.64 million lbs.). Following the rise in yarn production, the quantity of rayon fabrics woven registered a rise, the figure for the seven months ended July 1957 being 157.92 million yards, as compared with 144.37 million yards a year before. On this basis, the production for the whole of 1957 may be estimated at 270.71 million yards which, however, is lower than the previous year's output of 295.75 million yards.

(In million lbs.)

"WOOL, HOSIERY AND FABRICS"

The 1958 edition of *Wool, Hosiery and Fabrics* has just been published by Messrs. John Worrall Ltd., Oldham, England (Agents in India: Messrs. W. H. Brady & Co., Ltd., Brady House, 12-14, Veer Nariman Road, Bombay 1. *Price:* Rs. 7 plus sales tax). As the previous editions, the latest one contains a comprehensive review of the recent trends in the wool, worsted, carpet and hosiery trades and industries in India and Pakistan. The review covers raw wool production, classification, marketing, import and export; yarn production, knitting and manufacturing, processing, distribution and marketing.

In the course of a special article, Dr. R. V. Rao discusses some problems of the wool industry in India and pleads for the establishment of an all-India wool board to take effective steps for the development of the industry. There are two other interesting articles—"Modern Systems of Woollen Blending" by Mr. W. M. Oddie and "Opeating Featues of the 'Rortomatic' Fancy" by Messrs. E. Tempest and J. Goodall. The publication contains, as usual, the list of woollen and worsted mills in India and Pakistan, the names of leading wool traders in the two countries, and the names of the various trade associations and organisations. Also included is a classified buyers' guide relating to raw materials, yarn spinning, processing and manufacturing, merchandising, etc., as well as machinery, accessories, equipment, chemicals and mill supplies, illustrated lists of advertisers' trade marks and designs, and alphabetical lists of trade and brand names.

The Government of Bombay has constituted a five-man Wage Board for the cotton textile industry for the Vidarbha Region. Mr. Purushottam Kanji is the Chairman of the Board. The representatives of employers are Messrs. Shivakumar Bhuwalka and P. G. Gokhale and those of employees are Messrs. N. H. Shaikh and V. R. Hoshing. The Wage Board will be concerned with all firms using power which are engaged in cotton spinning, all firms using power which are engaged in cotton weaving with or without an admixture of silk, rayon, artificial silk or one or more of these, and all mechanics' shops attached to, and all dyeing, bleaching and printing departments in any of the concerns falling under the previous clauses.

MILLOWNERS OPPOSE FREE TRADE PLAN

HONG KONG MAY AGREE TO RESTRICT CLOTH EXPORTS TO BRITAIN

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, 5th November

A REPORT that Hong Kong might now agree to some sort of voluntary limitation of textile exports to Britain is being treated with some reserve in Lancashire. The suggestion was discussed at Cotton Board headquarters in Manchester, but, while the report was considered "encouraging," a spokesman said that, as there was no official statement on the issue, no one was "bursting with optimism" about it.

Until some definite indication is received in this country of Hong Kong's willingness to agree to a reasonable ceiling on her shipments to Britain, it is unlikely that another Lancashire textile mission will be sent out to the Far East in a further bid to ease the serious import situation confronting the industry. Hong Kong was the major obstacle to agreement when, early this year, a Lancashire team, led by Sir Cuthbert Clegg, visited India, Pakistan and Hong Kong—the three main sources from which the flood of cotton cloth is reaching this country. Pakistan was prepared to consider an overall ceiling within which the three industries could compete. Indian textile leaders, on the other hand, were more prepared to consider individual ceilings. In each case, however, agreement was conditional upon the co-operation of all three Far Eastern textile industries, but it was found impossible to arrive at an understanding with Hong Kong. The suggestion from Hong Kong is that the textile industry there might now be prepared to consider a ceiling on exports to this country which would not be so low as to affect the existing volume of shipments but will give Lancashire a guarantee against any sudden increase.

European Plan Opposed

Leaders of the two main employers' organisations in the spinning and weaving sections of the Lancashire cotton trade have declared opposition to the European free trade area plan unless adequate safeguards are provided. In almost identical resolutions, the Central Committee of the Cotton Spinners' and Manufacturers' Association and the General Committee of the Master Cotton Spinners' Federation have put on record their view that free trade in the European area without safeguards, which could in practice be enforced, would lead to serious and irretrievable damage to the industry. The organisations have expressed opposition to the Government entering into any commitments regarding free trade in textiles unless adequate safeguards are ensured. In particular, a fully cumulative process definition of origin for yarn, grey cloth, finished cloth and made-up goods is demanded.

At the same time, the organisations, which represent owners of some 1,300 spinning and weaving mills, contend that the Lancashire textile industry can compete successfully with other textile industries in countries which have a comparable standard of living and do not enjoy access to raw cotton at lower than world prices and which do not resort to unfair trade practices.

For some weeks, the cotton industry in Lancashire has been awaiting a sign that customers were prepared to operate a little more freely after the quieter trading period which followed the sharp trading expansion at the end of July. After an extensive buying movement, there is bound to be some reaction, particularly when uncertainty over future price levels enters into the considerations of consumers, but it is unusual for the autumn months to slip by without some seasonal improvement in the turnover.

Inquiry has not been lacking and buyers generally have kept in touch with prices and delivery terms, but the ensuing negotiations have failed to provide much satisfaction for spinners and manufacturers. As a result of this cautiousness, the length of order lists held in certain sections has shortened perceptibly. As so often happens, however, there remains a good deal of irregularity in the individual circumstances affecting different firms, even within the same branch.

Much of the disagreement which has arisen between buyers and sellers when discussing new business has rested on the problem of deliveries. Many negotiations have been stifled by the inability of producers to offer goods in the times needed by customers. The widespread absenteeism among the operatives caused by sickness has, of course, been a vital factor in curtailing production and further orders have on occasions been held up as a result.

Manpower Hold-up

The labour problems facing many firms due to older workers retiring and not being replaced by juveniles is a constant source of discouragement to management. Efforts to increase productivity by the use of modern equipment and various mechanical devices are frequently being made, but such developments are slow to mature and to show definite results.

While the industry as a whole remains reasonably well engaged, there are sections where traders are expressing more anxiety about the future. Few people anticipate any pronounced fall in values and, on these grounds, there should be no reason for buyers to act with the cautiousness now apparent. In an era of high interest rates, however, the incentive to keep stocks of any size is clearly reduced and a tendency to operate from hand to mouth cannot be avoided.

It seems that producers will have to reconcile themselves to shorter order lists and that the contracts placed will be small and more varied. This does not make for economic running of machinery, but it is a symptom of the times. Lancashire textile traders are in no position to dictate their requirements to customers in this day and age.

One result of the disposal programme sponsored by the United States Government, through which a large part of the American raw cotton surplus has been shifted, has been to build up supplies in foreign countries where stocks are now much larger than in recent years. The mills in Lancashire, for example, have ample choice when assessing their needs, although they are, to a large extent, restricted to the many different types of cotton grown in the United States.

Raw Cotton Supplies

Visible supplies of raw cotton held in British ports or at sea are now higher than at any time since April 1955, amounting to 387,000 bales. The quantity of purely United States cotton is 227,000 bales, the most which has been available since these statistics were resumed after the war. In contrast, due to international developments, the supply of Egyptian and Sudan cotton has steadily declined over the past 12 months and now barely exceeds 20,000 bales.

Some variation in weekly imports and forwardings to the mills must be anticipated according to the accessibility of transport, whether by sea or by road. Arrivals at the ports mainly from America have picked up again in the last few weeks after the rather quiet period which is generally encountered early in a new season.

The quantity of cotton transported from the ports to the spinning centres, however, has remained very steady for a number of months In the past half-year, there have been only two occasions when forwardings have exceeded 30,000 bales, but only once have they been below 20,000 bales. The level of these movements, however, is now distinctly lower than in the first quarter of the year, when the average was around 35,000 bales per week.

The struggle for export markets is by no means a problem peculiar to Lancashire. Other countries, particularly Japan and India, have continued to make progress in selling cotton textiles in many quarters of the world, but, in the absence of a major increase in purchasing power, there must be a saturation point at some stage. The efforts of local traders to expand markets abroad have been signally unsuccessful during the past year or two.

According to reports provided month by month in the *Overseas Review* issued by Barclays Bank, there are few foreign distributing centres which are not well stocked and in many instances there are signs that further replacements will not be needed for some time. Whether the advices come from African or Asian sources, the constant message is that local merchants are finding progress difficult, with more than adequate supplies and extended credit often required. For example, Tanganyika reports that many merchants have lately been over-optimistic in their estimates of seasonal requirements and are over-stocked. In the Sudan, Indian grey cloths have moved off a little more freely but again over-stocking is apparent. "The acute shortage of liquid funds has resulted in further sales below cost," adds the report.

In contrast, better trading took place in Uganda after a record coffee crop had been grown and in anticipation of a good cotton crop. But in Kenya money is said to be still tight and merchants over-supplied with goods.—*All Rights Reserved.*

HIGHER EXPORT OF BENGAL DESHI AND COTTON WASTE

ABOLITION OF DUTY ON THE LATTER URGED

THE Export Promotion Committee (Chairman: Mr. V. L. D'Souza), in its report submitted to the Government of India, has rightly emphasised the importance of cotton as a valuable foreign exchange earner. Although India's cotton exports constitute only a very small percentage of the aggregate production, their importance from the point of view of foreign exchange earnings cannot be over-emphasised, especially in the context of continuing shortage of these earnings.

During the fiscal year ended March 1956, India exported raw cotton valued at Rs. 26.7 crores. Although exports during the last financial year, that is, April 1956 to March 1957, were lower due to the small surplus available for shipment after domestic consumption demands had been met, their value still aggregated Rs. 13.46 crores. The Committee points out that every effort must be made to stimulate exports of the short-staple harsh cotton of the Bengal *Deshi* type, in the production of which India, together with Pakistan, is enjoying a virtual world monopoly. It has, therefore, recommended that the production of such varieties should be stepped up within as short a time as possible and all handicaps in the way of exports should be removed forthwith.

The Committee notes that consumption of raw cotton in India is rising and the country needs imports of long-staple foreign cotton to the tune of about 6 to 7 lakh bales. Despite the fact that the country is still a net importer of cotton, it is recognised that cotton must continue to be exported for earning foreign exchange which the country will require for a number of years. India cannot afford to lose its foreign markets, which have been built up at great pains, by obstructing regular supplies through cutting off exports. The Committee rightly deprecates the policy of frequent changes in export duties, pointing out that such changes will annoy the customers who usually plan their production six to twelve months ahead. It urges that trade relations must be maintained and foreign markets held even at temporary sacrifice for larger ultimate gains.

In order to be able to export, more cotton must be produced, particularly those varieties which are in continuous demand abroad. At present, India imports long-stapled varieties while its exports are exclusively short-staple cotton. The Committee believes that there is no reason why the principle of comparative cost should not be extended to the production and export of cotton also. This implies that, a country should produce those varieties for which it is most suited and import those difficult to grow internally. Even the U.S., the largest cotton-producing country in the world, does not produce all types of cotton it needs.

Higher Production Urged

The Committee emphasises that since India is ideally suited for the production of such varieties of cotton as Bengal *Deshi*, and those varieties are in great demand abroad, efforts to expand their output should be intensified. The Bengal *Deshi* variety grown in the Punjab and Rajasthan, as is well known, are low cost cotton. The plant is hardy, easily grown, less prone to pests and can do without irrigation, it being a monsoon crop. It matures within four months. The cost of production is low; the yield per acre larger. The Committee points out that the intrinsic value of Bengal *Deshi* is about Rs. 500 but when it is exported, it fetches about Rs. 1,000 including the export duty of Rs. 200 per candy. This is the price at which cotton capable of spinning up to 20 counts could be purchased, while Bengal *Deshi* could spin only four to six counts. The high premium commanded by Bengal *Deshi* is mainly attributed to the fact that it has a resiliency to pressure which no other variety possesses and could therefore be used for extra-spinning uses, such as mixing with wool, padding, etc. The Sind *Deshi* cotton grown in Pakistan, which is in continuous demand abroad, commanding a price higher than the stapled varieties grown by that country, could also be grown in India, especially in parts of Rajasthan. The Committee points out that "to hold the monopoly of this sure and ready foreign exchange earner every effort must be made to increase production" and urges that handicaps on its export must be removed. According to it, even today the country can easily spare 100,000 bales of Bengal *Deshi* cotton which would earn foreign exchange to the tune of Rs. 10 crores. The average annual output of Bengal *Deshi* is about 275,000 bales and domestic mill demand is only about half that quantity. The Committee therefore, rightly maintains that Indian mills have no reason to complain even if half the crop is exported. It is even suggested that, in case of need, Indian mills might be induced to use substitutes so that larger quantities could be made available for export. The Committee strongly recommends that at least 100,000 bales of Bengal *Deshi* should be exported every year.

The Government's policy in relation to cotton exports is that domestic consumers should have the first claim on available supplies of cotton and that the surplus should be allowed to be exported. By and large, this policy is the correct one. Nevertheless, that is, without sacrificing the essence of this policy, there is scope for increasing exports of cotton through increasing the output of exportable varieties of cotton and making them competitive in world markets through appropriate fiscal reliefs. From this point of view, the Committee's suggestions are constructive and deserve the Government's consideration.

Cotton Waste

The Committee is also of the view that, since the country is having large surpluses of cotton waste which cannot all be consumed within the country, the export duty on cotton waste should be removed with a view to enabling more of it to be exported. The annual production of cotton waste in India is about 700,000 bales, of which about 175,000 bales are consumed within the country for such uses as re-spinning, making of mattresses and padding. Although the balance could be exported, shipment of cotton waste has never exceeded four lakh bales a year. Total export of cotton waste was 3.38 lakh bales in 1954-55, 1.2 lakh bales in 1955-56 and only 1.5 lakh bales in 1956-57. The primary reason for this decline in exports is the increasing competition in foreign markets from countries like Pakistan and China. While other countries like the U.S.A. are even subsidising export of cotton waste, export from this country has to bear an export duty of 30 per cent. on soft waste and 50 per cent. on hard waste. Indian cotton waste has been priced out of foreign markets. The Committee, therefore, strongly recommends that the export duty on cotton waste should be abolished and points out that, if this were done, it would not be difficult for India to export, on an average, three to four lakh bales of cotton waste which would mean foreign exchange earnings to the tune of Rs. 6 to Rs. 8 crores.

These findings and recommendations of the Committee are very sensible. They are the result of an objective study of the cotton situation in the country in the light of the need for higher export earnings. The Government will do well to revise its policy on the lines suggested by the Committee. It is gratifying to note that the Government is fully seized of the importance of stepping up the output of short-staple cotton. Mention may be made, in this connection, of two pilot projects recently approved by the Indian Central Cotton Committee for increasing the acreage and production of Bengal *Deshi* and Comilla cotton in Andhra Pradesh and Rajasthan. The programme will be extended to other States and, by the end of the second Plan period, production of these varieties together is expected to go up by 125,000 bales.

The Committee has done well to urge the removal of export duty on cotton waste. If this is done, it will surely go a long way in making cotton waste exported from India competitive with foreign growths. But it is strange that the Committee thought that a similar measure was unnecessary in the case of Bengal *Deshi*. For it is common knowledge that, despite the recent fall in the price of Bengals, foreign demand, especially from Japan, the principal buyer, is small. This is partly due to lower sterling allocation by Japan for cotton purchases and partly to high prices quoted by Indian exporters. Japan considers the ruling price for Bengals, which is about Rs. 640 for December delivery, as very high, especially in the context of cheaper offers by Pakistan. Traders, therefore, feel that, if the export duty of Rs. 100 per bale on Bengal *Deshi* were not reduced, if not abolished, it would be difficult to export the 50,000 bales released for export last month. Export circles point out that the reduction of the export duty by about 50 per cent. would make the growths competitive with foreign equivalents in overseas markets.

EGYPTIAN COTTON

Recent reports suggest that Egypt is assiduously engaged in persuading Germany to import larger quantities of Egyptian cotton, against shipments of machinery and industrial capital goods. Even as it is, Egypt is having an unfavourable balance of trade with Germany, imports from the latter being in excess of cotton shipped to that country. But Germany would appear to be averse to purchase any larger quantities of cotton direct from Egypt. This is because it can get Egyptian cotton cheaper from sources other than Egypt. Substitute growths are also available at lower price. Egypt is understood to have told German importers that East European countries are eager to purchase cotton from Egypt in exchange for industrial equipment. Egypt, presumably, is unwilling to enlarge its trade with the Russian satellites because it seems to have realised that the technique of bulk purchases and reselling of cotton so purchased at lower prices to other needy countries, adopted by Communist countries hitherto, has been instrumental in its losing its traditional customers. Meanwhile, during the current season the total supply of cotton in Egypt is expected to be about 1.27 million bales (of 730 lbs.) comprising a crop of 1.13 million bales and a carry-over of 137,374 bales. Export sales from the commencement of the season till 15th October aggregated 145,889 bales.

GONE are the spacious days of the palki, the horse, the camel and the elephant. Today, for speed and comfort, the way to travel is by air—and wherever possible—by Viscount.

The Viscount represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets.

the Viscount way

To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between Delhi—Calcutta and Calcutta—Rangoon.

Very shortly Viscount services will be extended to all the other I.A.C trunk routes.

SUGAR EXPORTS TO OVERSEAS MARKETS FROM BOMBAY STATE

CHIEF MINISTER ASSURES GOVERNMENT ASSISTANCE

THE Government of Bombay will sympathetically consider how it should assist the sugar industry in the State to export sugar to foreign countries. This encouraging assurance was given by Mr. Y. B. Chavan, Chief Minister of Bombay, while inaugurating the fourteenth Annual Convention of the Deccan Sugar Technologists' Association (India) held at Poona on Friday last week. The various suggestions made for finding an outlet for Bombay sugar in foreign markets, Mr. Chavan declared, required the careful consideration of the Government at various levels. And he added: "The Bombay Government which has promoted sugar factories in the Deccan region of the State itself has a stake in the matter and will, therefore, spare no effort in helping sugar exports."

The aforesaid assurance of the Chief Minister will be widely welcomed. Considering the present trend of world sugar prices and the rigid cost structure of the Deccan sugar industry, the need for a downward revision in the tax incidence cannot be too strongly emphasised. Every maund of sugar produced in the State bears a heavy burden of taxation—Central and State—amounting to Rs. 12.82 which works out to as much as 34 per cent. of the selling price of the commodity. Of this amount, Union excise duty accounts for Rs. 8.27, sales tax for Rs. 2.27, cane cess for Re. 1.73 and town duty for Re. 0.55. The Central Government has, of course, allowed refund of excise duty on sugar that is exported. But even then, the cost of sugar in India is very much higher than the price Indian sugar will actually fetch in the world market, namely, Rs. 20 per maund f.o.b. (at current world prices). Surely, if the Governments of all the States were to allow refund of sales tax and sugarcane cess on sugar sold abroad, the export price could be reduced quite substantially—by Rs. 4 per maund. This aspect was well brought out by Mr. K. J. Somaiya, the retiring President of the Association, in the course of his speech. Mr. Somaiya said:

"Chances of further exports (of sugar) at this moment are slim, because the temporary spurt in the international sugar prices, which went as high as £70 c.i.f., due among other reasons to the beet crop failure in Europe and the Suez crisis, is over and the prices are playing around £45 c.i.f. This would mean an approximate realisation of Rs. 20 per maund f.o.b., as against the minimum realisation of Rs. 27 per maund that must be paid to the manufacturer, taking into consideration the present cost structure of sugar manufacture and freights and after allowing for the rebate of excise duty and cane cess. Thus, there is a net loss of Rs. 7 per maund, that is, as much as 25 per cent., which would work as a great disincentive for the promotion of export. In face of grave foreign exchange crisis and heavy production expected year after year, the aspect of the cost of sugar manufacture assumes major importance and is a challenge to all of us, whether manufacturers, technicians or Government. In view of the very rigid and inflexible cost structure, I do not think much reduction on the cost is possible.

"The challenge for export has to be faced equally by the State Governments, Central Government and the industry. In this connection, I regret to note that State Governments do not want to part with their local taxes, namely, cane cess and sales tax. It is an accepted principle that all the internal taxes on the goods for export should be refundable."

This is, indeed, a correct assessment of the problem of sugar exports and it is gratifying that the Chief Minister of Bombay has assured his Government's sympathetic consideration of the issue.

Roads in Factory Areas

It is also gratifying to learn from him that the Government would spend Rs. 1.5 crore on improving communication facilities in the sugarcane-producing areas. This journal has pointed out, on several occasions in the past, that the transport of cane from the fields to the factories has all along been none too happy, thanks to the deplorable condition of roads. There is no exaggeration whatever in the statement of Mr. Somaiya that it is an awful sight to see a bullock break down on any road and the efforts made by half a dozen cart-men to lift it up. Urging that something must be urgently done, he remarked: "Sugar factories have come forward to contribute their share to the cost of road development as envisaged in the second Five-year Plan. I hope that speedy decision will be taken and substantial amounts will be earmarked from cane cess for this purpose. I would suggest calling for a high-level meeting of the senior representatives of all sugar factories to find out the ways and means of tackling the issue speedily."

In his speech, Mr. Chavan disclosed that the Government distillery which would be set up in Ahmednagar district was expected to start functioning in May or June 1959. This distillery, he said, would convert molasses from sugar factories into industrial alcohol. This move of the Bombay Government, though it is a belated one, must nevertheless be welcomed. Even so, the fact remains that it will not offer an immediate solution to the present disquieting problem of huge accumulations of molasses, thanks to the innumerable controls over the disposal of molasses (as also alcohol) exercised by the State Government in pursuance of its prohibition policy. How vexatious these controls are will be evident from the fact that, even for destroying molasses or using them as manure wherever they are found suitable, the sugar factories have to take permission from the authorities. The fulfilment of this condition involves considerable delay, not to speak of expenditure. In the past season (1956-57), the quantity of molasses lifted from the sugar factories was very negligible. Permission for destroying the molasses by burning was given by the Government only lately and has, as Mr. Somaiya observed, no practical importance.

It is a pity that the molasses problem as a whole has been grossly mishandled for the last many years and the sugar mills are today put to great hardship and inconvenience. Drawing attention to this aspect, Mr. Somaiya said:

"The problem of major magnitude that comes foremost in my mind is that of molasses disposal. I would only like to repeat my last year's remarks which will hold good in a greater measure this year. 'The molasses problem as a whole has been grossly mishandled for the last many years. This year it has reached breaking point and hardly any molasses has been lifted from any of the sugar factories. It would be a problem to store the molasses of the next season. Even permission to throw it away or destroy it has been refused.' This story is repeated again this year. Some factories have stocks of last three seasons and are at their wit's end as to what to do with them. Permission for destruction by burning has been lately received but it has no practical importance. It is hoped that, for the next year, permission to throw molasses in flood water will be received well in advance."

"Gram Panchayats"

As if the several handicaps that have all along continued to face the sugar industry—harsh controls over molasses and alcohol, heavy load of taxes and higher transport charges, to mention only a few—are not sufficient, the institution of Gram Panchayats has lately turned out to be another handicap. Apart from interference with colony constructions and factory changes, the Panchayats have imposed a high tax on colonies. Alluding to these Panchayats, Mr. Somaiya said that, while they did not render any services, they were a nuisance. They were retarding the progress of constructing better houses for workers, as taxation of a recurring nature is based on the cost of the structure. In his reply, the Chief Minister deplored these remarks and declared that it was not right for the industry to take such a view of Gram Panchayats set up as an instrument for the economic and social advancement of the rural population. If the industry had difficulties, solutions could, he added, be found by discussion with the Panchayats.

None opposes the institution of Gram Panchayats. All that the sugar millowners emphasise is that the Panchayats should not

JUTE INDUSTRY AS A FOREIGN EXCHANGE EARNER

EXPORT PROMOTION COMMITTEE'S SUGGESTIONS

IT is a sad irony that at a time when India feels the necessity of conserving every pie of its foreign exchange earnings and augmenting them by every possible means, the main export industries of the country are facing heavy odds, such as heavy fiscal levies by the Government, shortage of raw materials, competition from substitutes as well as other producing countries, etc. The Indian jute industry, which is the biggest foreign exchange earner for the country, contributing on an average 20 per cent. of the total foreign exchange receipts per annum, is an instance in point. There was a time when jute, as the cheapest packaging material, could be readily sold in every part of the world. India, as the sole producer of jute, held a monopoly in this field.

With the partition of the country, the story of the Indian jute industry took a different turn. The country was cut off from its chief source of raw material. This by itself would not have been a great impediment had friendly relations existed between India and Pakistan. But, unfortunately, the latter deliberately set out to place as many handicaps as possible in the way of a free flow of its jute to India. Consequently, India has had to reduce its dependence on Pakistan for raw jute supplies by increasing its own production of the fibre. But it has not yet fully succeeded in this direction. Meanwhile, Pakistan, with its ample supplies of raw jute, has set up mills with most modern machinery for manufacture of jute goods and has emerged as a competitor to India in supplying jute goods to the world markets. It may be interesting to note, in this connection, that in 1956 Pakistan earned a foreign exchange of Rs. 9.35 crores by way of exports of jute goods alone. Its current rate of exports of these goods is at Rs. 8.5 crores per annum. India is handicapped in another direction also. On account of the high cost of raw material, jute goods are growingly becoming uneconomic as a packaging material, though it must be said to the credit of jute goods that they still hold the supremacy in the world of packing and wrapping materials. Pakistan is somewhat more favourably placed in this respect, inasmuch as its cost of production is much lower than that of India, thanks to its modern machinery and cheap labour. It looks as though the competition from substitute packaging materials has come to stay, for the nature of the industries manufacturing the substitute packaging materials is such that they cannot be easily scrapped and the demand switched back to jute, even if jute goods become more economic. The effect of competition from Pakistan and from substitutes is reflected in the gradual decline in India's exports of jute goods since 1948-49 given below:

Year	Quantity (In Tons)	Value (In crores of Rs.)
1948-49	928,796	146.56
1949-50	786,659	126.98
1950-51	649,844	113.35
1951-52	806,822	269.73
1952-53	705,933	128.92
1953-54	777,753	113.88
1954-55	850,869	123.78
1955-56	863,961	118.25
1956-57	N.A.	119.22

N.A.=Not Available.

It will be observed that there was steep rise in exports of jute goods during 1951-52, but this was due to the Korean boom. Barring this exceptional year, the exports of jute goods have shown a downward trend since 1948-49. At any rate, there has been no increase in foreign exchange earnings, though in terms of quantity, there has been a slight increase during the last three or four years. An important point that needs to be noted, in this connection, is that even if there has been increase in the world offtake of jute goods, such increase is negligible as compared with the sharp rise in world production and world trade during the past eight years. The index number of world production of major commodities in 1956-57, for instance, showed a rise of 17 points as compared with the 1948-52 average.

As the foremost earner of foreign exchange, it is but natural that jute manufactures figured prominently in the list of commodities dealt with by the Export Promotion Committee (Chairman: Mr. V. L. D'Souza) which submitted its report recently. The Committee found that the main problem centred round the production of raw jute at the lowest prices possible, which at the same time provide an economic return to the grower. Elaborating this point, the Committee observes:

"Dependence on Pakistan for supplies would not be very expedient, because that country, having already set up a number of jute mills, will increasingly try to process its own raw jute. Therefore, every effort has to be made to increase raw jute production in India. Jute and paddy being competing crops, the main direction of efforts to increase jute production should be towards more intensive cultivation and not merely an expansion in the area under jute and the development of special strains which yield a greater quantity of fibre per plant than now."

The Committee has not recommended any specific measures for increasing jute cultivation in India, as the problem relating to this has only recently been studied by the Jute Enquiry Committee, under the chairmanship of Dr. S. R. Sen, Economic and Statistical Adviser, Union Ministry of Food and Agriculture. Further, a Jute Supervisory Board has been set up, with a view to keeping the closest watch on the production trends of jute.

The Export Promotion Committee has suggested that the increasing competition in the world market on account of the emergence of Pakistan as a manufacturer of jute goods, can be countered in three ways, namely, (a) by reducing the cost of production of the ordinary lines of jute goods, that is hessian and sackings, (b) by increasingly concentrating on the production of specialised fabrics of jute, such as narrow fabrics, linoleum hessian, bitumenised cloth, backings for tufted carpets, and (c) by finding new uses to which jute fibre can be put.

As regards the cost of production, the Committee is aware that a number of mills have already been partially or fully modernised. The progress in a number of them is, however, being hampered by the financial stringency. The Committee has, therefore, done well in asking the National Industrial Development Corporation, which is assisting the industry in its programme of modernisation and rehabilitation, to ensure that the programme is speeded up as much as possible.

The Committee does not consider the present voluntary restriction on the number of hours worked and the voluntary sealing of looms in jute mills as a healthy state of affairs. On the contrary, it suggests for the serious consideration of the Government and the industry that a number of uneconomic units be closed, production concentrated on modernised mills to the extent raw material is available within the country, and the profits pooled together for the common benefit of all the units. Thus, it says:

"The Committee consider that one way of meeting the present difficult situation would be to endeavour to grow types of jute at present being imported, ultimately aiming to limit the manufacture of jute goods to the extent of raw material availability within India. Meanwhile, production can be concentrated on modernised mills working two or even three shifts. If the different jute mills could co-operate in this matter, a number of uneconomic and old-fashioned mills could be closed and the labour so displaced employed by the modernised mills working three shifts. Also, the working capital and profits could be pooled together for the benefit of the industry as a whole. As and when more raw jute becomes available in the country, more mills could be brought on to work three shifts."

The Committee suggests that an intensive propaganda in favour of jute bags as a packing material should be made, bringing out its advantage over paper and cloth, which are its main competitors. Besides exploring to the fullest extent what further possibilities there are for sale of hessian and jute sacks in traditional markets like the U.S. and Australia, it says, new markets should be explored. The Committee finds that there are distinct possibilities of increased exports of jute fabrics to the U.S.S.R., several countries in Eastern Europe, China and Latin America. The Committee desires that the present publicity and sales promotion campaigns of the I.J.M.A. should be intensified and extended to other countries.

As a further step in promoting exports, the Committee recommends that mills should concentrate on special lines of manufacture, just as the jute mills in the U.K. are known to be doing. Thus, it says:

"With our long experience in the manufacture of jute fabrics, it should not be difficult for us to produce these special varieties at competitive prices. We, therefore, recommend that Indian jute mills should increasingly endeavour to manufacture the specialised items and reduce, to that extent, dependence upon common fabrics like hessian and sackings. Government may, therefore, examine how Indian jute mills can be encouraged to produce these special fabrics."

The Committee also suggests that the Research Institute of the I.J.M.A. should concentrate on exploring the various unknown uses for jute. In conclusion, the Committee says that the average exports of jute goods for the last two to three years have been of the order of 850,000 tons per annum and it should be our aim, with increasing cultivation of jute in the country, to step up exports to 1 million tons a year.

None of the foregoing suggestions of the Committee is new, in that every one of them has been advocated by someone or other. Not all of them have, however, been tried and where some of them were tried, the efforts put forth to make them a success were either inadequate or belated. This, however, does not mean that the Committee has not done any useful work. Indeed, it has rendered a distinct service to the jute industry by accepting the suggestions put forward by various interests from time to time and by lending its support to them. Its proposal that the industry's production should be concentrated in its most modern and economic units deserves to be implemented speedily, as it is one of the effective ways of raising the competitive capacity of Indian jute goods.

SMALL DECLINE IN JUTE GOODS STOCKS

A small drop of 800 tons is noted in the stocks of jute goods at the close of October 1957. Though this decline is negligible when compared with that noted in each of the previous three months, it has served to maintain the downward trend for the fourth month in succession and to bring the stocks to 76,200 tons, the lowest level since December 1955. Over the year, the stocks have shrunk by 40,500 tons, as will be seen from the following table:

Jute Goods Stocks

(In Tons)

	As on 31st Oct. '57	As on 30th Sept. '57	As on 31st Aug., '57	As on 31st Oct., '56
Hessian	29,400	30,300	34,800	30,800
Sacking	37,800	39,100	51,100	77,300
Others	9,000	7,000	6,600	8,600
Total	76,200	77,000	92,500	116,700

The fall in stocks is shared by hessian and sacking, the stocks of which have declined by 900 tons and 1,300 tons, respectively, while those of "other manufactures" have risen by 1,400 tons to 9,000 tons, the highest level since May 1957.

SPUTNIKS VIEWED FROM PERSPECTIVE

RUSSIA'S ECONOMIC PROGRESS HAS NOTHING IN COMMON WITH THE SATELLITES' SPEED

[Russia has once again startled the world by firing into the outer space a second satellite—"Sputnik" II—far bigger than the first and carrying in it a live dog. This satellite is said to be flying at a height varying between 500 and 1,000 miles above the surface of the earth, as against 200 to 500 miles at which height "Sputnik" I (launched on 4th October, that is, exactly a month in advance of "Sputnik" II) is circling round the earth. Sputnik II, it is stated, is collecting and transmitting to the earth a much greater amount of additional information than its predecessor. The successful launching of these satellites is a great triumph for Russian scientists and has undoubtedly brought enormous prestige and power for their country.

But this achievement must be viewed in its proper perspective, if the free world is not to be overcome by fear, confusion, frustration and economic chaos. That is exactly what the article on this page, reproduced from the November issue of the **Monthly Bank Letter** *of the* **First National City Bank of New York**, *does. Written before Sputnik II was launched, the article clearly brings out the meaning and the implications of Sputniks to the U.S. and other countries. It highlights the enormous economic cost at which Russia must have gone ahead with the experiments in space-flying. It also shows at the same time that the quality of general education in mathematics and science in Russia must be of a very high order and far superior to that in the free world. A perusal of the article will effectively remind the reader of the great neglect of secondary education in India. The grave consequences of this neglect to the economic and scientific progress have not been fully realised by our leaders.—ED.]*

THE Soviet Government on 4th October opened celebrations of its fortieth anniversary by shooting off a great skyrocket. Even as these words are written, it has still to return to earth or consume itself in flames. The first man-made satellite—"Sputnik"—is rotating on an eccentric orbit, circling the earth at several hundred miles' altitude and at a speed of 18,000 miles per hour.

However long or short the life of the satellite, "Sputnik" ranks as a major breakthrough of applied science. It aroused great interest throughout the world in the practical possibility of space-stations and space-ship trips to the moon. As advertising of Soviet scientific prowess, the effect was enormous. It made the conventional propaganda efforts of the U.S. Information Service seem pedestrian and implausible.

"Sputnik" came as a great shock to the American ego. As Dr. Vannevar Bush, Chairman of the Massachusetts Institute of Technology, said, "we are altogether too smug in this ing phase. Pressures developed to provide the country." Work was speeded on the Navy's "Vanguard" satellite programme, now in a test-Defence Department with more funds for basic research and rocket-powered bomb projects. Suggestions were offered that tax reliefs, shaping up for 1958, might have to be forgone. Some sections of the Press urged abandonment of money limits on expenditures for rocket development—in other words, trying to beat the Russians with inflation.

The excitement of our failure to be first in reaching outer space made many people forget that this is not a military project. The Congress has never endorsed the idea that the people should be taxed to build space-ships. There have been many more urgent needs for funds here on earth. Thus, some experimental work done in 1946-47 was abandoned. Russia tapped this pool of data through their spy system. During World War II, they had captured and stripped Peenemuende, the east German rocket-manufacturing centre.

The U.S. Programme

American work on a satellite (Vanguard) began in 1955 for completion and launching before the end of the International Geophysical Year on 31st December, 1958. The appropriation for the project, which had been originally figured to cost $10 million, totals $110 million of which approximately half has been spent. The purpose is to learn more of the earth and the nature of outer space; it has nothing directly to do with defence. As President Eisenhower emphasised at his 9th October Press conference:

"The rocketry employed by our Naval Research Laboratory for launching our Vanguard has been deliberately separated from our ballistic missile efforts, in order, first, to accent the scientific purposes of the satellite and, second, to avoid interference with top-priority missile programmes. Merging of this scientific effort with military programmes could have produced an orbiting United States satellite before now, but to the detriment of scientific goals and military progress. . . .

Our satellite programme has never been conducted as a race with other nations. Rather, it has been carefully scheduled as part of the scientific work of the International Geophysical Year.

The military effort is compassed in accelerating and incomparably heavier expenditures for missiles using rocket power to carry bombs to specific targets.

Total outlays under all rocket and ballistic programmes are now exceeding $200 million a month. The missile problem is more complicated, for it involves not only sending up a rocket but carrying a bomb to hit a specific target hundreds or thousands of miles away. In the present state of knowledge, airplanes still provide the surest means of delivering bombs on a distant place. However great the values for progress of pure and applied science, the nation cannot be defended today with the weapons of tomorrow.

Military programmes, involving years of effort and development, cannot be upset by every passing fancy. If they were, we would always be in a state of unreadiness. The shifting emphasis of the defence establishment, under the administration of President Eisenhower and Defence Secretary Wilson, is set out in the following table comparing projected outlays in the fiscal year 1958 which began on 1st July, with actual outlays in fiscal 1952. This brings out increasing emphasis on aircraft and on missiles. While the level of total expenditures is modestly lower, it should be borne in mind that we were actively engaged in the Korean War in the earlier year.

Defence Department Military Spending

(Dollar Figures in Millions)

	Fiscal 1958 Estimated Amount	%	Fiscal 1952 Actual Amount	%
Military Personnel Costs ..	$10,345	27.2	$11,152	28.6
Operation and Maintenance .	9,465	24.9	11,682	30.0
Major Procurement—				
Aircraft	7,153	18.8	4,888	12.5

The unique achievement of Soviet science lies in getting a rocket up to an altitude and directing it into an orbit with a speed that neatly matches off centrifugal force with gravitational pull. This is something, evidently, American applied science has not yet been able to work out. But it does not follow that all is lost for this country and for the free world.

We should not overlook our own missile accomplishments. A year ago, this country launched a rocket that went up more than 625 miles and travelled 3,600 miles. Hanson Baldwin, military editor of *The New York Times*, summed up our progress this way 13th October:

"The United States has rocket motors considerably more powerful than those required to launch an earth satellite; those used in the Atlas, for instance, produce a total thrust of about 335,000 pounds. We have also fired at least one missile—the Jupiter C—probably as far as the Russians have fired their longest range missile.

Moreover, we appear to have solved the "re-entry" problem; in other words, we have developed an aero-dynamic shape with a nose cone that permits the war-head to return to earth without burning up and disintegrating because of the heat generated by friction in its passage through denser air.

And just a week ago the Air Force fired a rocket which is calculated to have reached an altitude beyond 2,700 miles (against Sputnik's 580 miles).

How Did They Do It?

The Russians have proved with their satellite that they have developed more than enough rocket power for any earthly uses. Should they apply this power to transport themselves in space-ships to Mars one could only wish them Godspeed. As the London *Daily Telegraph* remarked: "The Russian people go from peasants to space-men without ever tasting the joys this earth can offer."

In developing Sputnik, the Russians built upon the scientific progress of many men and nations. That they carried theory through to the practical achievement is a credit to the quality of education in mathematics and science in Russia.

After the Russian satellite flew off into space the President had a long meeting with a large group of eminent scientists. He said he was "a bit astonished" to find their chief concern was not with our relative position in scientific advancement today, but where we are going to be in ten years. The President endorsed the scientists' view that we have a problem of "awakening America" to "the absolute necessity of increasing the scientific output of our colleges and universities."

What the universities can do depends on the preparation of secondary school education. The most solid benefit of Sputnik could be to repair the quality of our high school curriculum and re-emphasise mathematics and science as required subjects. Back in January, the Sixth Annual Report of the National Science Foundation to President Eisenhower warned that U.S. leadership in technology "could no longer be taken for granted" in the light of Russian emphasis on science and mathematics, particularly in the secondary schools.

Dr. Harold W. Dodds, recently retired president of Princeton University, is another authority who is concerned by the levelling of public school programmes in favour of "easy knowledge, lax instruction, over-emphasis on extracurricular activities and other escapes." Lord Rutherford, the distinguished British physicist, once said of the modern man: "We're going to have trouble with these people. Not only are they not going to know how an electric light bulb works, but they're going to be proud of it."

The Soviet Union has departed from the Marxist principle of "from each according to his abilities, to each according to his needs." It gives stimulus to the efforts of scientists by providing them material comforts far beyond the ordinary living standards of the people. It makes sparing use of progressive income-taxes which in the Western world, cut rewards for gifted individuals so sharply.

Finally, the Russians got their satellite by a tremendous concentration of effort and giving the project a top priority. Men and material are limited in Russia just as they are elsewhere.

The Nutter Study

The Soviet "moon" must be viewed in perspective; all elements in the picture must be considered. The satellite's dazzle should not blind people to the fact that Russia's rate of progress, over all, has had nothing in common with Sputnik's speed through space.

Some people are inclined towards the conclusion that Russia is catching up to us in all departments of scientific and industrial activity. According to *The New York Times*, Congressman James E. Van Zandt made the startling suggestion on 17th October that, within ten years, the Soviet Union might match the United States in industrialisation, scientific progress, and standard of living. Examination of Russian data fails, however, to confirm this conclusion.

A National Bureau of Economic Research study by Professor G. Warren Nutter of the University of Virginia, released 23rd September, concludes that, in 37 industries studied, Soviet production in 1955 typically lagged about 35 years behind the United States. This means, theoretically, that Russian industry is about where we stood in 1920. Professor Nutter finds that, while the Soviets have been moving ahead faster in some industries, Soviet industry more commonly has progressed less rapidly than ours did from the same stage of development. On the basis of the sixth five-year plan, in force when the study was made, Professor Nutter figured that Russia by 1960 would still be 20 years behind the United States in total output and 43 years behind in *per capita* production. According to Harry Schwartz, writing in *The New York Times* for 20th October, the objectives of this five-year plan have had to be scrapped "to make possible the space satellite and attain other political and military objectives."

What Should We Do?

Any one of a number of nations, willing to make the sacrifice in the standards of living of its people, or in other productive achievements, might have been first with a man-made "moon."

To no other nation, probably, was the effort worth the cost. The U.S. Congress, properly more concerned with weapon development, at no point had pressed a speedier development of

WORKING OF STATE-OWNED ROAD TRANSPORT UNDERTAKINGS

SEVERAL CONSTRUCTIVE DECISIONS TAKEN AT ANNUAL CONFERENCE

A STRIKING development in post-war years is the extension of the area of operation of State-owned road transport undertakings. Nationalisation of passenger road transport has been pursued with great vigour in all States. It is now anticipated that, by the end of the second Plan, nearly half of the passenger services will be in the public sector. A conference of State road transport undertakings which was held in Chandigarh (Punjab) towards the close of last month, discussed the many problems which are common to all these undertakings and adopted a number of useful recommendations.

The pioneers in nationalisation of road transport, it may be recalled, were Gwalior, Hyderabad and Travancore which, even in pre-war years, had a nucleus of State-owned fleet of passenger buses. Kutch joined then in 1945 with a non-statutory transport board. Madhya Pradesh, Madras and Uttar Pradesh commenced operating State-owned passenger bus services in 1947. In the following year, Assam, Bihar, Bombay, Orissa, Punjab, W. Bengal, Mysore and Delhi nationalised their road transport services and a year later, in 1949, Saurashtra and Himachal Pradesh followed suit. In each State, the extension of nationalisation has been a gradual process, so that there are still some areas where private owners operate bus services. The biggest State venture in India in the field of road transport is the Bombay State Road Transport Corporation which owns a fleet of about 3,163 vehicles, plying on 1,916 routes and covering a route-mileage of 48,175. It employs 16,000 persons and provides conveyance facilities to some 600,000 passengers every day.

In the first Five-year Plan, a sum of Rs. 12 crores was provided for nationalised road transport programmes in the States, though the actual amount spent is estimated at some Rs. 10 crores. At the end of the first Plan, about one-third of passenger services had been nationalised. The second Plan provides Rs. 26.5 crores for nationalisation of passenger road transport, inclusive of a provision of Rs. 10 crores in the Railway Plan to enable the railways to participate in road transport corporations. At the end of the second Plan, nearly half of the passenger services, as already stated, will be in the public sector. The number of vehicles proposed to be added to some of the State undertakings during the second Plan period are: Assam 237; Bihar 430; Orissa 278; Bombay 781; Kerala 460; Uttar Pradesh 101; W. Bengal 753; Delhi 334. Substantial additions to their fleet strength are expected to increase the fleet in W. Bengal, Punjab and Kerala transport undertakings to over 1,000 by 1961. During the same period, Bombay will have a fleet strength of nearly 4,000.

Annual Conferences

The first conference of State transport undertakings was held in October, 1952. Since then, much valuable work, according to Mr. D. D. Suri, Deputy Transport Secretary, Government of India, has been done at the annual sessions as well as at meetings of the various committees which function as subsidiaries to the Conference. Standardisation of automobiles used by the undertakings has been an important achievement of the Conference. The Government has now restricted the number of types to four for inter-city transport and to one type for intra-city transport. At the same time, the Conference has ensured that vehicles are made available to all undertakings at uniformly low prices. Prices of spare parts have also been brought down. Training facilities at different levels have been instituted in several States, both for engineering and operational staff. Arrangements have also been made for the workers as well as the supervisory staff of one undertaking to receive instruction at, or learn the methods of, another undertaking. Among other steps to increase general efficiency in the operation of nationalised transport, mention must be made of the evolution of a preventive maintenance schedule, a model administrative setup and schedule of standard definition of terms and forms for collecting statistics.

To revert to the Conference held at Chandigarh last month. Inaugurating the Conference, the Union Minister for Transport, Mr. Raj Bahadur, said that, while standards set by nationalised transport in India might be fairly high as compared with the conditions a decade ago, they had yet to achieve Western standards. He stated that the obvious reason for nationalising transport services was the desire to give better and cheaper service and provide more amenities for passengers and employees. At the same time, he added, nationalised units could not ignore the need to conduct the service on sound business principles, so as to secure to the Government a reasonable return on the capital invested. Finally, he emphasised the importance of developing all modes of transport on healthy lines and of catering to the needs of tourists from abroad.

The resolutions adopted by the Conference included the one which recommended the delegation of additional powers to transport corporations for purposes of carrying on their activities on business lines. The Conference also decided in favour of taking responsibility for loss of goods carried by road transport to the extent of Rs. 100 in each case. In cases where the goods carried are of higher value, facilities for insurance will be offered. To minimise accidents, better training of staff, better maintenance facilities, institution of refresher courses and strict enforcement of speed limits were recommended. It was also decided that educational films and posters should be employed for promoting road safety. It suggested that the prior purchasing of tickets should be enforced in order to check loss of revenue. The question of fixation of fares was also taken up and it was felt that the fares should be the minimum possible, after taking into consideration the operational costs; efforts should be made to reduce these costs. The Conference also decided to set up a sub-committee to evolve a uniform pattern of working conditions for transport workers.

Efficiency

While the decisions reached at the Conference are constructive and their adoption would make the State transport undertakings more useful to the public they serve, it is not clear whether the Conference discussed the vital issue of operational efficiency beyond emphasising the desirability of reduction in operational costs. It is a moot point whether the State undertakings are being conducted in an efficient manner. After all, the legislatures cannot be expected to devote much attention to those undertakings. In any case, in the absence of competition, there is no compelling urgency for maintaining and improving efficiency of operation. Further, it is not known whether these undertakings provide sufficient depreciation for replacement of vehicles as and when they lose their life of efficient service. Most of the undertakings are likely to face grave financial problems at the end of the next few years, as they do not seem to have followed this sound principle. Their contributions to the revenues of State and Central Governments have been poor. The State Governments are not receiving adequate return on the capital they have invested in these undertakings. Similarly, the Central Government is losing the income and corporation taxes which it would have received had all this business been allowed to remain in the hands of the private sector. All these issues deserve to be kept under constant scrutiny.

Again, being a conference of nationalised undertakings, it could not examine the questions of policy in relation to passenger transport. Since it is good to maintain a certain element of competition, the State Governments will do well to keep certain routes for operation by the private sector even if they do not permit private operators to carry on their services on the routes served by State undertakings. This will enable the general public as well as the State Governments to know the relative efficiency of private-owned and State-owned transport systems.

A SEMI-CONDUCTOR FACTORY

For many years the British Thomson-Houston Co., Ltd. (B.T.H.) has been a pioneer in the development of semi-conductors, having produced silicon rectifier valves for the first centimetric radar equipment and the first British germanium rectifiers for radio-frequency apparatus. The post-war years have seen a remarkable increase in the use of semi-conductor devices in radio, television, and industrial electronic equipment; but the field of application for these devices was considerably widened in 1952, when a large-area rectifier, the p-n junction type, was introduced. Again, the B.T.H. pioneered development in Britain, producing in 1953 the first germanium high-power, high-voltage rectifier, rated at 300 kw. The importance of this improved means of power conversion over earlier forms, and the prospect of using other semi-conductor materials, such as silicon, for high-power applications, was soon appreciated; as was the possibility of making power devices with similar electrical characteristics to the thyratron valve and using more than one p-n junction. It was therefore decided to build an entirely new factory at Rugby which would provide the best possible working conditions for the manufacture and development of the basic materials and of the high-power germanium and silicon semi-conductor products.

For the successful manufacture in quantity of semi-conductor devices, it is essential that the highly specialised conditions of a development laboratory be reproduced at the production benches. The efficiency of the device depends primarily upon the initial purity of the germanium or silicon used for the rectifying element. Ideally, the impurity of the element should not be greater than one part in a thousand million. It is clear, therefore, that very special precautions must be taken throughout the manufacturing process to protect the materials from contamination by airborne dust and foreign matter in the normal industrial atmosphere. Additional precautions are also necessary to insulate many of the production operations from mechanical and thermal shock.

In a factory of this kind where cleanliness is of supreme importance in order to safeguard the purity of the rectifying elements, special attention must be given to the air-conditioning system and other essential services. Not only is the air entering the building filtered, washed, and heated to maintain automatically an even temperature throughout the factory, but the rate of change of air is also automatically controlled, depending upon the temperature rise in the working areas. The air changes may thus vary between six and 29 times per hour. Electrical power, de-ionised water, gases, and compressed air are piped behind panelling on each side of the building, outlets being arranged at intervals for connection to fume cupboards and working positions. Here again, special precautions are taken in the distribution system to maintain the high purity of the water and gas supplies. Another special feature of the factory services is the piped vacuum systems which enables all working areas to be cleaned with the minimum of effort.

I.I.S.CO.'S COKE OVEN BATTERY

The view that the Indian Iron and Steel Company, Ltd. (I.I.S.Co.) would be able to complete, by the end of March 1959, the target of one million tons of ingot steel set for the Company under the second Five-year Plan was expressed by Sir Biren Mookerjee, Chairman of the Company, in the course of his address at a Press conference, held in Burnpur on 6th inst. Sir Biren, who lit the new 78-oven battery built by Simon Carves for the I.I.S.Co., stated that the Company, by dint of efficient planning, had made good the time lost by the American steel strike and the Suez difficulties.

The completion of the new coke oven battery, No. 8, marks the first stage of the 1953 extension programme under which steel production at Burnpur will be doubled from 0.5 million tons to 1 million tons a year; the major items of the whole programme are two coke-oven batteries, No. 8 and No. 9, two blast furnaces and major expansions of the steel melting shop and boiler and power houses. To finance this programme, the World Bank granted the Company a loan of $31.5 million, and the Government made available a loan of Rs. 7.9 crores, while the Company itself contributed Rs. 7.5 crores. The new battery is a continuation of the existing No. 7 battery which was built in 1950. The ovens of the new battery, however, are of an improved design, in particular in the provision of twin compartment regenerators instead of triple compartment. They have a total daily output capacity of 1,735 tons of coal and the expected output is 1,300 tons of blast furnace coke per day. Valuable by-products include coke oven gas, tar, sulphate of ammonia and ammonia. A new sulphuric acid plant has already commenced production.

Another coke oven factory No. 9 is under construction and, together with the production of No. 8, will go towards meeting the requirements of the two new blast furnaces which are now being erected at Burnpur. Each of these furnaces will be the biggest of their kind in Asia and are designed to produce 1,200 tons of pig iron per day. A striking feature of the plant at Burnpur is that all raw materials such as iron ore, coal and limestone are unloaded outside and are brought into the plant on a conveyor belt system three to four miles long. Finished products are similarly sent out by another way and this eliminates congestion inside the plant.

NEW PRODUCTS AND PROCESSES

New Foaming Agents

THE Central Building Research Institute, Roorkee, has developed a new process for preparing foaming agents from indigenous resources which are stable and need no settling accelerator. The low-density foamed concrete prepared by using these foaming agents has properties which compare favourably with those of foamed concrete prepared by using imported proprietary brands.

Besides, the use of this indigenous foaming agent is expected to result in about 60 per cent. saving in respect of cost of foaming agent as well as saving in foreign exchange. The foaming agent is also suitable for production of high-density foamed concrete used for making non-load bearing pre-cast slabs, thermal insulating floor screeds, etc. Low-density foamed concrete (insulation concrete) is used for heat insulation in cold storage structures and air-conditioned buildings and is a good substitute for cork which is mainly imported into India. Foaming agent is one of the important ingredients for producing foamed concrete. Up to now only foreign proprietary foaming agents have been used for preparing foamed concrete. The Government Housing Factory at Delhi has been given the right to exploit the products.

Plastic Hose

Designed to meet the demands of tropical climates, a new flexible pipeline has been introduced by British industry. In addition to being flexible, it is also portable and requires little or no maintenance. Known as BTR "Plastidry," the pipeline comprises PVC lining and covering fused on to synthetic-fibre reinforcing-material, forming a plastic mass of great strength and wear-resistance. The pipeline is claimed to be completely rotproof, and requires no drying. Another advantage is that it coils flat; and an even more important one, from the tropical viewpoint, is that it is immune to attack by rodents, insects, and fungi, and may be laid in any terrain or stored anywhere without detriment. This new flexible pipeline was designed primarily for irrigation purposes, and is claimed to be the only hose of the flat-coil type which can be exposed to strong sunlight for prolonged periods without suffering appreciable deterioration in strength. It is also claimed that any kind of water—even salt or industrially polluted—can be conducted through the new pipeline without harming it. The Plastidry hose is also suitable for conveying fertilizing or crop-spraying fluids. The flexible hose is being made available in varying diameters, from 1¼ inches to 6 inches. Lightness in weight is also a feature. And in the event of damage, the flexible pipeline can be simply and effectively repaired.

More Effective Thyroid Drug

A recently discovered thyroid hormone called sodium liothyronine works faster and more effectively than those previously used, Dr. Elmore M. Fields reports in the *Journal of the American Medical Association*. In a trial on 100 children, the new hormone produced none of the side effects noted with other thyroid gland substances and was effective in illnesses where other preparations were only partially effective, Dr. Fields says. The hormone was used to treat both hypothyroidism and metabolic insufficiency. The first condition is underactivity of the thyroid gland and the other is thought to be caused by the body cells' poor use of thyroid products. Children suffering from them do not grow normally. In almost all the children treated with liothyronine, there was a striking improvement in behaviour, circulation and appetite. During the original three-month test period, Dr. Fields said, bone growth in many children increased as much as 200 per cent. beyond that expected for normal children of the same ages.

"Cobalt Gun" for Cancer Treatment

Sweden's first "cobalt gun" for cancer treatment, a gammatron installed at the Radiumhemmet hospital in Stockholm, was put into operation recently. When operating at full capacity it will be capable of treating some 20 patients a day, each treatment taking about ten minutes. The gammatron has been designed by experts of the Radiumhemmet, hospital, headed by Professor Sven Hultberg, and of the Radio-physical Institute. It was built in Germany by the Siemens-Reiniger-Werke. In April this year, the Radiumhemmet took delivery of a charge of cobalt 60 isotopes from the United States and in the past few months Prof. Hultberg and his assistants have been test-running the gammatron. By means of the new apparatus it will be possible to treat deep-lying tumours with 1,000 curie of radioactive cobalt, which corresponds to the effect of nearly 2 kilogrammes of radium. As a comparison it may be mentioned that the total quantity of radium at the disposal of Swedish hospitals amounts to only 20-30 grammes.

Chemical Energy Turned Into Electricity

Scientists at Parma, Ohio, U.S.A., have announced development of a new generator that produces electrical power directly from the chemical energy of gases. According to Dr. C. E. Larson, research vice-president of the National Carbon Company, the new fuel cells require no gasoline, steam or hand-driven engine to generate electricity. The chemical energy of hydrogen and oxygen is converted directly into electrical energy. Dr. Larson says that the secret of the new fuel cell's success is the chemically treated, hollow, porous carbon electrodes through which the gas enters the cell and that conducts the electricity produced by the electro-chemical reaction. Practical units already are in operation.

ASIA'S LABOUR PROBLEMS

WORK OF I.L.O.'S REGIONAL CONFERENCES REVIEWED

THE Fourth Asian Regional Conference of the I.L.O. which opens in New Delhi this week, is the second of its kind to be convened in India, the first having been held in 1947. It is in the nature of a return to the Asian constituency for a discussion of problems peculiar to the Asian members of the I.L.O. Although emphasis had been laid, from the very beginning, on the universal character of the Organisation, it was also realised that application of the standards evolved by the International Labour Conferences, the supreme policy-making body of the I.L.O., would present practical difficulties inasmuch as its members in different parts of the world were in varying stages of industrial development. The I.L.O. had, therefore, decided that the peculiar problems of member-States, grouped in different regions, should be investigated, studied and discussed on a tripartite region-wise basis, without, of course, losing sight of the need for international conformity. The Regional Conferences originated from this realisation. The last three Regional Conferences were held in New Delhi, Nuwara Eliya (Ceylon) and Tokyo in the years 1947, 1950 and 1953, respectively.

Although Conventions and Recommendations adopted by the I.L.O. Conferences had helped in improving labour legislation in Asian countries, it was not until the adoption of the Philadelphia Declaration in 1944, which enjoined on the I.L.O. to take positive steps for promoting the economic and social advancement of the less developed parts of the world, that the regional work of the I.L.O. got a vigorous start. The first Asian Regional Conference, held in New Delhi in 1947, set in motion a number of regional activities in diverse fields, which received further momentum from the expanded programme of technical assistance of the U.N. and its specialised agencies, which started operations in 1950.

First Regional Conference

The first Conference considered, among others, problems of social security and the economic background of social policy-making, including industrialisation, in underdeveloped countries. It adopted various resolutions on the need for social security services, organised employment services and family budget inquiries as a basis for determining the real value of wages in Asian countries. The second Asian Regional Conference considered and adopted resolutions on such topics as labour inspection, provision of facilities for the promotion of workers' welfare, development of the co-operative movement, agricultural wages and incomes of primary producers and organisation of manpower. The third Conference discussed three problems in the main. They were: (1) problems of wage policy in Asian countries, (2) workers' housing, (3) protection of young workers. As regards the first, a resolution adopted by the Conference laid down that it should be the common objective of Governments, employers, and workers to establish wages at the highest level consistent with the economic conditions of each country and that, in future, wages should tend to provide the workers with a fair share of the increased productivity resulting from national economic development. To achieve this objective, it recommended the practice of collective agreements as normally the best means of determining and adjusting wages. In the case of countries where collective bargaining is non-existent or not effective, it recommended statutory wage regulation as a preliminary step towards the development of collective bargaining systems. The Conference examined the housing problem and the difficulties hampering its solution such as shortage of materials, capital, and technicians. The Conference also sought to lay down the foundations of a workers' housing policy comprising carefully arranged priorities for the use of available scarce materials. A resolution adopted by the Conference on the protection of young workers recommended a series of measures relating to general education and vocational training, vocational guidance, placement and regulation of the employment of children and young persons and also gave practical advice for the implementation of the programmes so outlined.

These Conferences have been instrumental in focussing attention on the labour problems confronting the countries of the region, stimulating interest in their solution and, in some cases, have even shown the way to their solution. They have also sponsored several meetings of a technical nature on such subjects as manpower problems and labour inspection.

Technical Aid

In accordance with its avowed objective of promoting social and economic advancement, the I.L.O., has been rendering technical advice and assistance to its member-countries. Asian countries have benefited much from this programme. Under its programme of technical assistance, the I.L.O. has been providing experts to Asian countries and granting fellowships and internships to Asian nationals. Regional seminars have been held on labour statistics in New Delhi in 1951, and on factory inspection in Calcutta in February 1952. A seminar on supervisory training was held in Singapore in August 1957 and a training course on employment information and a seminar on vocational guidance, including employment counselling, are to be held in New Delhi. Training courses on Co-operation for Asian nationals have been held at Copenhagen in 1952, at Lahore in 1953 and 1954, at Bandung in 1955 and at Mysore in 1956. Another regional training course is scheduled to be held shortly in Ceylon. Regional working parties on apprenticeship and vocational training have visited various Asian countries and regional employment training institutes have been held for officials engaged in the organisation and administration of employment services. A Motor Maintenance Manual was prepared by an I.L.O. expert for use in Asian countries. Diesel-engine training courses have also been organised by the I.L.O. in Rangoon. Experts under the technical assistance scheme have been provided mainly in such subjects as manpower organisation, productivity, training-within-industry, co-operation and handicrafts, social security, and labour welfare and administration. Fellowships have been provided in similar and allied subjects. The technical assistance programme of the I.L.O. in the Asian region has been expanding from year to year. The expenditure under this programme amounted to $433,373 in 1954, and $637,121 in 1955. The estimated expenditure in 1956 was $977,660 and the approved programme for 1957 will cost $1,063,000. For looking after the planning, implementation and critical evaluation of technical assistance programmes in countries of Asia, the I.L.O. set up an Asian field office at Bangalore in 1949. This office has conducted a series of institutes on the subject of apprenticeship, national administration and training, instructor training, supervisory training and employment services.

Since employer-employee relation is an important factor in the attainment of the objectives of the I.L.O., considerable attention has been given to it. Much of the previous work of the I.L.O. on the subject concerned itself with the study of national legislation and significant developments and practices in the field of industrial relations. International standards regarding various aspects of the question are laid down in the Conventions adopted by the I.L.O. In 1951, two resolutions were adopted which called for the creation of machinery to negotiate, conclude, revise and renew collective agreements and for the establishment of machinery to assist in the voluntary conciliation of industrial disputes.

New Types of Assistance

The programme of labour-management relations now being developed will involve the expansion and intensification of the activities of the I.L.O. in the field. The I.L.O. is also planning to evolve new types of assistance. Hitherto, the main forms of technical assistance supplied by the I.L.O. consisted of sending experts and grant of fellowships to management and trade union representatives, conciliation officers and other Government officials responsible for labour-management relations. Other types of assistance now envisaged are: (1) participation by the I.L.O. in meetings or seminars in different countries where employers and workers could exchange views, (2) organisation on an international or regional level of training seminars for persons responsible for maintaining proper labour-management relations, (3) sponsoring of joint missions composed of employers' and workers' leaders from a country with an advanced and sound system of labour-management relations to a country soliciting assistance in improving labour-management relations.

The New Delhi Conference is being held at a time when rapid changes are coming over the structure and pattern of development of the Indian economy under a comprehensive plan. The I.L.O. has been closely following the recent developments in India and has also been assisting in the solution of some of its problems through technical assistance projects concerned with such matters as manpower planning, training of workers and supervisors, improving productivity and implementation of social security schemes. It will now have an opportunity to see, at first-hand, something of the changes that have come about in India. The Conference will bring together Governments', employers' and workers' delegates from 25 countries of the region. The delegates will discuss the basic problem of the Asian region, poverty, under-employment and unemployment. The labour and social problems of small-scale and handicrafts industries will also be considered. The Conference will also examine the conditions of life and work of share-croppers, tenant farmers and other independent and semi-independent agricultural workers. Another important question on the agenda of the Conference is labour-management relations. As plans for industrial development take rapid strides, this matter becomes increasingly urgent. It is realised that without co-operation between management and labour there is a continuing threat to industrial progress and social security. The Conference will discuss this question with reference to the special social and economic conditions in Asia and seek to find appropriate solutions.

INDUSTRIAL RELATIONS IN AUGUST

Time-loss due to industrial disputes during August 1957 decreased by 1,67,155 man-days, as compared with the previous month. The average duration of disputes current at any time during August was 6.7 days, as against 8.6 days in July. There were 109 fresh disputes in August, bringing the total number of disputes current at any time during the month to 145 including 22 lock-outs. Among the important causes of fresh disputes were "wages and allowances" in 24 cases, "personnel" in 21 cases and "bonus" in 16 cases.

One hundred and thirteen disputes terminated during August. Of these, 78 lasted not more than five days each and only 10 lasted more than 30 days each. The workers were complete or partially successful in 47 cases and unsuccessful in 31 cases. The results were indefinite in 26 cases and not known in nine cases. During the month, time-loss increased only in the "mining and quarrying" group and declined in all the remaining groups.

MUKAND IRON AND STEEL WORKS LIMITED

PRODUCTION OF STEEL CASTINGS TO BE EXPANDED

SPEECH OF SHRI KAMALNAYAN BAJAJ

ADDRESSING the shareholders of the Mukand Iron and Steel Works Limited, at their Nineteenth Annual General Meeting, held at Bombay on Tuesday, 5th November, 1957, Shri Kamalnayan Bajaj, Chairman of the Company, observed as follows:

"GENTLEMEN,

"I have great pleasure in welcoming you to this, the Nineteenth Annual General Meeting of the Company, and in presenting to you for adoption the Audited Statements of Accounts for the year ended 31st March 1957 and Reports of the Directors and Auditors thereon. As the Statements of Accounts and the Reports have been in your hands for some time now, with your permission, I take them as read.

"The working results of the year have been fairly satisfactory and we can say with renewed confidence that the Company has now definitely turned the corner in its march towards stability and progress. The production of steel bars and rods in the steel re-rolling mills of your Company has increased from ?3,610 tons to 32,123 tons in 1956-57, an increase of 35 per cent. The production of steel castings has shown a rise of 63 per cent. from 2,549 tons to 4,153 tons. The gross profit is Rs. 27.72 lakhs, as against Rs. 16.09 lakhs for 1955-56. All this is indicative of the advance made by the Company in that direction.

"It is a matter for great satisfaction to me and my colleagues on the Board that it has been possible for us this time to recommend to you declaration of dividends on ordinary and deferred shares. After the rude shock of partition in 1947, which involved the Company in a loss of its major assets in Lahore, the shareholders of the Company have been patiently waiting for the last ten years for a return on their investment. I trust they would now feel that the confidence which they placed in the management of the Company all these years has resulted not only in rehabilitating this Company but also in bringing it to its present stage of development and profit-earning capacity.

Expansion Plans

"With the growing industrialisation in India, the demand for steel castings in the country is increasing. The Company has expanded its activities to a certain extent by making improvements. It has further planned an expansion programme for steel castings for which an application has been made to the Government of India under the Industries (Development and Regulation) Act of 1951. It is hoped that the necessary sanction will be granted by the Government shortly.

"In order to plan the expansion activities of the Company on an efficient basis and to further improve the existing working, the Company has entered into a technical aid agreement with the well-known British steel foundry, Messrs. David Brown Industries Ltd., England, for a period of eight years during which the Company will get technical guidance on problems relating to the steel foundry including training facilities for the personnel of the Company in the works of the British company.

Labour Situation

"Our relations with labour have, throughout the year, been cordial and happy. As you may have noticed from the chart published in the annual report, the average earnings per worker of your Company have increased by 57 per cent. over his earnings in 1950-51, while the cost of living index during this period has increased by 13 per cent., thus giving a net increase of 44 per cent. in the real earnings of the workers. In the ultimate analysis, after a certain limit, the increase in the workers' earnings will have to be achieved only by increase in his skill and better application of his mind to the work allotted to him as would result in greater productivity.

"In order to combat inflationary trends in the economy, of which wage increases are contributory factors, reduction in costs is necessary by increasing productivity. The quality of the products should also improve. For this purpose improvements and modernisation in plant and equipment should continue to be made by the industry. I trust that the Government of India would give all necessary facilities to the industry for this purpose, and such foreign exchange requirements as may be essential would be given high priority.

"To meet the increasing needs of the Company for finance, the Directors propose to issue new ordinary share capital. Sanction from the Controller of Capital Issues has already been received for Rs. 20,47,475.

Power Supply

"In my address to you last year I had referred to certain difficulties. The question of increased power supply was one of them. I am glad to inform you that additional power has since been sanctioned to us by the Government of Bombay. Regarding the rates of electricity, the tariff has recently been revised by the suppliers and there is a slight reduction of rates though not to the extent we desired. The question of railway siding is still pending.

"The Tariff Commission which has been entrusted with the work of fixing conversion charges for the steel re-rolling industry for converting steel billets into bars and rods is at present seized with the matter. Its report is likely to be ready in the early part of 1958.

"The need of the industry for rehabilitation and expansion was also referred to by me in my speech last year. I trust that the Tariff Commission as well as the Government of India, would make, as in the case of the major steel producers and the cement industry, adequate provision in the costs payable to the industry so as to cover the industry's need for rehabilitation, modernisation and expansion.

"The Committee on Electric Furnaces, Steel Foundries and Steel Re-rolling Mills appointed by the Government of India in July 1956, to which reference was made by me last year, has submitted its report to the Government, which is now on the floor of the Parliament. The Government have not yet taken any final decision on the same. The report has made out a strong case for import of sufficiently large quantities of billets on the ground that the steel rolled by this industry is needed for the projects which are part of the core of the national plan. It has also recommended that the existing rolling mills should be permitted to improve and modernise their plants for better and more efficient working. In the matter of the steel foundry industry also, the Committee has recommended that existing industries should be allowed to expand. I trust the Government would take a favourable decision on these recommendations at an early date.

"The prosperity of the industry in which your Company is engaged, in fact the prosperity of the country as a whole, is linked with the success of the Plan, or rather the hard core of the Plan. We are now amidst the second year of the Second Five-year Plan. The Plan is encountering difficulties, particularly in the availability of foreign exchange. These difficulties should not dishearten us. As our Prime Minister has repeatedly said, these are difficulties of progress, not of stagnation. The real cause for anxiety is, however, on the agricultural side. In spite of the emphasis on the industrial development in the Second Five-year Plan, food remains the key to the success of the Plan.

"I thank the executives, staff and workers for the efforts made by them in improving the working of your factory, without which it would not have been possible to get the satisfactory results as disclosed in the audited balance-sheet and profit and loss account which you are going to consider this evening."

	Rs. 1,00,00,000

ALREADY ISSUED, SUBSCRIBED AND PAID-UP CAPITAL

80,000 Ordinary Shares of Rs. 10 each fully paid	Rs. 8,00,000

NOW BEING ISSUED

10,000 6 per cent. (Free of Income-tax) Cumulative Preference Shares of Rs. 100 each at par	Rs. 10,00,000
4,20,000 Ordinary Shares of Rs. 10 each at par	Rs. 42,00,000
	Rs. 52,00,000

Of the Shares now being issued, firm requests have been received from the Directors and their friends, business associates, dealers, distributors, stockists, and employees for 5,000 Preference Shares and 2,10,000 Ordinary Shares.

PRESENT ISSUE

The remaining 5,000 6 per cent. (Free of Income-tax) Cumulative Preference Shares of Rs. 100 each and 2,10,000 Ordinary Shares of Rs. 10 each are offered at par for public subscription.

The amounts payable in respect of each Share are as follows :

For each Preference Share—

(a) On application .. Rs. 50 per Share.
(b) On allotment .. Nil.
(c) The balance of Rs. 50 in respect of each Preference Share is payable in such calls as may be determined by the Directors provided that no such call shall exceed Rs. 25 per Share and that there shall be an interval of at least one month between the calls.

For each Ordinary Share—

(a) On application .. Rs. 5 per Share.
(b) On allotment .. Nil.
(c) The balance of Rs. 5 in respect of each Ordinary Share is payable in such calls as may be determined by the Directors provided that no such call shall exceed Rs. 2.50 per Share and that there shall be an interval of at least one month between the calls.

Applications must be for a minimum of 5 Preference Shares and 25 Ordinary Shares.

DIVIDENDS, CAPITAL AND MORTGAGE ON FIXED ASSETS

Dividend—The holders of Preference Shares shall be entitled to be paid out of profits determined for distribution of dividend, Cumulative Preferential Dividend at 6 per cent. (Free of Income-tax) and to the right on the winding-up to be paid all arrears of Preferential Dividend whether earned or declared or not down to the commencement of winding-up in priority to any amount in respect of the Ordinary Shares but shall not be entitled to any other rights in the profits of the Company.

Capital—The assets available for distribution to members whether on Liquidation or not shall be applied, first in repaying to the holders of the Preference Shares the amounts paid up or credited as paid up on such Preference Shares up to the commencement of the winding-up in the case of a liquidation and in any other case up to the date of the occurrence of the event which gives rise to the return of assets and the balance of the assets shall be distributed amongst the holders of the Ordinary Shares in proportion to the amounts paid up on the Ordinary Shares held by them respectively. The holders of Preference Shares shall not be entitled to any other rights in the assets of the Company.

The Preference Shares shall not be redeemable.

Mortgage on Fixed Assets—The West Bengal Financial Corporation has agreed to grant a loan of Rs. 9,50,000 to the Company. The loan will be secured by a mortgage of the present as well as future Fixed Assets of the Company. It shall be repaid within a period of 12 years and shall bear interest at 7¼ per cent. per annum.

Subject to the approval of the Central Government in this behalf for which application will be made and so long as this mortgage would subsist the West Bengal Financial Corporation may, at any time, appoint not more than two persons to be Directors of the Company and such Nominee Directors shall not be subject to retirement by rotation nor be required to hold qualification Shares.

HISTORY AND BUSINESS

The Company was incorporated on the 18th December, 1946. Since then it has progressively expanded both in its volume of production and the range of its products. Its Factory now stands on an area of nearly 51 bighas of land. The Company purchased and installed new and up-to-date Machinery for the manufacture of its products. At present it is the largest Mechanical Rubber Goods Manufacturing Unit in India, with an annual output estimated at more than Rupees One Crore and Forty Lakhs. The Company specialises in the production of the following Mechanical Rubber Goods:

1. Transmission and Conveyor Belting.
2. V-belts and Fan Belts.
3. Cycle Tyres.
4. Rubber Hose.
5. Vacuum Brake Hose.
6. Buffer Spring and other Railway Rubber Fittings.
7. Automobile Parts.
8. Rubber Sheeting.
9. Moulded Rubber Goods, etc.

TECHNICAL SET-UP

The Company maintains a high-class technical set-up with a well equipped Laboratory for Research and Design of Products and has some of the best technical personnel available in India. Its technical staff and research workers are engaged in production, technical design and control of products according to the latest American, British and Indian Specifications.

The Company entered into a manufacturing-cum-distribution arrangement with Messrs. Goodyear Tyre & Rubber Co. of India Private Ltd. An Agreement was entered into on 1st January, 1954 whereby the Company started manufacture of Transmission Belting, Conveyor Belting, V-Belts, Rubber Hoses with braided reinforcement, Rubber Dock Fenders, Oil Industry Hoses, Endless Cord Transmission Belt, etc., according to Goodyear Specifications. Necessary technical information and assistance are being rendered by Goodyear to permit production according to their Specifications. Goodyear also furnish necessary technical and production personnel. The arrangement has worked satisfactorily and is still continuing.

PERSONNEL

The total number of employees of the Company including the Management, Staff and Operatives employed at Calcutta and its Branches at Bombay, Delhi, Kottayam and Madras is approximately 1,650. The Company has been operating and will continue to operate recruitment and training schemes for its executives and operatives for its own requirement. Selected personnel are sent overseas for special courses of instruction and for observation of advanced practices. The efficiency and continuity of management at all levels are maintained by promotion wherever possible from within the Organisation.

Labour relations have been very satisfactory and there is reason to hope that it will continue to be so. In recent years during which relations between employers and workers in many industries have been subjected to severe strain and stress, the Company has all along the privilege of being loyally served by its devoted team of workers and has on its part endeavoured to act progressively in matters relating to wages, conditions of work and other welfare activities. The workers have entered into an agreement with the management wherein they have agreed, in consideration of reasonable incentive bonus, to ensure maximum production that is technically possible to achieve.

DEVELOPMENT AND EXPANSION

The Company contemplates development and expansion of its production on the following lines:

(a) Increase in the production of Cycle Tyres by 2,00,000 Nos. per month and Cycle Tubes by 1,00,000 Nos. per month as per Licence No. L/24/21/55 d/-31.12.55. The Planning Commission recommended that the target for production of Cycle Tyres and Tubes by 1960 should be 12 millions each. The actual production in 1956 was—Cycle Tyres 6.31 millions and Cycle Tubes 6.37 millions. The production in the country has, therefore, to be raised by more than 5.70 million each in the course of four years. The Company has obtained permission from the Government to increase Cycle Tyre production by 2.4 million per year and Cycle Tube by 1.2 million per year. There will thus be no difficulty in selling this extra output. In fact to meet the present deficit between demand and supply the Government has to allow large imports of Cycle Tyres and Tubes.

(b) To expand its production of V-Belts and Fan-Belts from 30,000 per month to 80,000 per month as per Licence No. L/24/24/56 dated 20.7.56. The Planning Commission estimated that the capacity should be raised to 1.5 million. Production in the year 1956 was 0.9 million only. The capacity has, therefore, to be increased by 0.6 million.

(c) To set up another complete plant for Belting to increase the production of Transmission Belting by 2,62,000 ft. per month as per Licence No. L/30(4)/E-1/57 dated 25.3.57 and to manufacture other items such as Conveyor Belting, Flooring, Sheeting, Ebonite, etc. By installing another unit for Belting the Company will be able to meet the demand on it for Transmission Belting and Conveyor Belting.

(d) 25 per cent. Expansion in all other lines of manufacture such as Vacuum Hoses, Buffer Springs and other Rubber Fittings for Railways. Under the Second Five-year Plan Railways are likely to expand rapidly. Their requirement for Vacuum Hose, Buffer Spring and other Fittings is likely to increase by 25 per cent. even on a very conservative estimate.

The total turnover after achievement of expansion as envisaged above will be over Rs. 3 Crores per year. There will be no difficulty in selling all the products that will be manufactured as a result of such expansion. There will not be much difficulty about supply of Raw Materials; adequate trained Labour is also available. Part of the machinery and equipment required for the expansion has already arrived and some other units have been shipped. The Company's present production is worth about Rs. 12 lakhs per month. After the expansion this will be doubled and the additional output will be mostly in respect of items that are at present being manufactured. The proposed expansion will be in accordance with the requirements anticipated by the Planning Commission.

PROCEEDS OF ISSUE

The whole of the proceeds of this issue and the expected loan of Rs. 9,50,000 from the West Bengal Financial Corporation will be utilised in the development and expansion of the Factory and for the provision of the necessary working capital.

COST OF PROJECT

On the basis of quotations received from the suppliers of Plant and Machinery for which partial orders have already been placed as well as estimates regarding other expenses carefully prepared the Directors are of the opinion that additional financial requirement in respect of the expansion programme would be as under:

	Rs.
Land	8,00,000
Buildings	10,00,000
Plant and machinery	34,00,000
Expenses of issue (including brokerage)	1,00,000
Working capital	40,00,000
	93,00,000

SOURCES OF FUNDS

The total sum is expected to be obtained as under:

	Rs.
Proceeds of the present issue	52,00,000
Loan to be granted by the West Bengal Financial Corporation	9,50,000
Loan from bank	31,50,000
	93,00,000

PROFITS AND DIVIDEND COVER

ESTIMATES OF PROFITS

Estimated profits calculated on the basis of past working but on estimated annual production of Rs. 3 Crores which will be achieved after completion of the expansion scheme are appended below:

Income—			
Sales			3,00,00,000
Miscellaneous Receipts			2,75,000
			3,02,75,000
Expenses—			
Consumption of Stores and Raw Materials			1,94,56,000
Salaries, Wages and Bonus			30,54,000
Rent, Taxes, Insurance, Interest and Miscellaneous Expenses			30,10,000
			2,55,20,000
		GROSS PROFIT.	47,55,000
Less Appropriation—	Rs.		
Depreciation	6,10,000		
Interest on Loan from West Bengal Financial Corporation	68,875		
			6,78,875
			40,76,125
Less—			
Tax payable on assessable profit	16,70,000		
Tax on Dividend in excess of 6 per cent.	1,30,000		
			18,00,000
		NET PROFIT ..	22,76,125
Sinking Fund for Loan			80,000
			21,96,125
Preference Dividend at 6 per cent.	60,000		
Ordinary Dividend at 20 per cent.	10,00,000		
			10,60,000
			11,36,125
Reserve Fund			8,00,000
Carried Over			3,36,125

PROFITS

On the basis of normal production after expansion of the Factory it is expected that the total sales will be over Rs. 3 Crores per year. The profit as worked out above is estimated at Rs. 40,76,125 after providing Rs. 6,10,000 depreciation and the net profit after payment of taxes is expected to be Rs. 22,76,125. The increased rate of profit is due to the fact that the overhead and other expenses will come down considerably after the expansion thereby appreciably adding to the profit margin.

DIVIDEND

The profits that the Company has been earning so far and that it expects to earn after the additional Plant and Machinery go into production would, in the opinion of the Directors be sufficient to cover payment of Preference Dividend as well as an attractive rate of Dividend on the Ordinary Share Capital.

NATIONAL RUBBER MANUFACTURERS LIMITED—*Contd.*

(PROSPECTUS)

FINANCIAL INFORMATION

Auditors' Report

A copy of the report of the Company's Auditors—Messrs. G. Basu & Co., is appended below, as required under clause 24 of Part I of Schedule II to the Companies Act, 1956.

THE DIRECTORS,
MESSRS. NATIONAL RUBBER MANUFACTURERS LTD.,
LESLIE HOUSE, 19, CHOWRINGHEE, CALCUTTA 13.

Dear Sirs,

We have examined the books and accounts of Messrs. National Rubber Manufacturers Ltd., as kept in Calcutta in which are incorporated the certified returns from Madras Branch (for the year ended 31st December, 1954, 31st December, 1955 and 31st December, 1956) and Bombay, Delhi and Kottayam Branches (for the year ended 31st December, 1956) for the five years ended 31st December, 1956 and report that the profits of the Company are as set forth. These profits have been arrived at after charging all expenses of working, management and consultant's fees including provision for normal depreciation on the basis as allowable for taxation and after making such adjustments as in our opinion are appropriate.

Auditors.

STATUTORY AND GENERAL INFORMATION

MAIN OBJECTS

The main objects of the Company include the manufacture and sale of Mechanical Rubber Goods, Tyres and Tubes.

All the objects of the Company are in law main objects and therefore a copy of the Objects Clause of the Company's Memorandum of Association is annexed hereto and forms part of this PROSPECTUS.

MINIMUM SUBSCRIPTION

According to the estimate made by the Directors a minimum amount of Rs. 5 lakhs has to be raised by this Issue of Shares in order to provide for expenses under the following heads:

		Rs.	Rs.
(i)	Purchase Price of Property (Machinery, Equipments and Land) ...		4,00,000
(ii)	Preliminary Expenses and Commission		Nil
(iii)	Repayment of money borrowed in respect of the foregoing matters ...		Nil
(iv)	Working capital		Nil
(v)	Any other expenditure:		
	Brokerage ...	55,000	
	Expenses of Issue	45,000	1,00,000
			5,00,000

OTHER PREVIOUS ISSUES

This is the first Issue of Shares to the Public; no Shares were issued to the public during the two preceding years. No Share or Debenture was issued during the two preceding years for consideration other than cash.

No premium has been charged on any Share of the Company during the preceding two years nor is any to be charged on this issue.

OPTION TO SUBSCRIBE

No contract or arrangement has been or is proposed to be entered into whereby any option or preferential right of any kind will be given to any person to subscribe to any Shares out of this Issue, except as under:

In consideration of the supply of technical information under the Agreement as referred to in item (1) under the heading "Material Contracts" the Company has granted to Goodyear Tyre & Rubber Co. of India Private Ltd., 209, Lower Circular Road, Calcutta, an option, exercisable during the currency of the Agreement, to purchase up to 25 per cent. of the Company's Ordinary Shares at any time issued and outstanding, at an amount equivalent to the intrinsic value of such shares to be determined by two Chartered Accountants one being nominated by each party. The said option is subject to Government sanction if required under any Government law or valid regulation.

NATIONAL RUBBER MANUFACTURERS LIMITED—*Contd.*

(PROSPECTUS)

UNDERWRITING

The Shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below—

BROKERAGE

Brokerage will be paid to Brokers and Banks at 15 nP per Ordinary Share of Rs. 10 each and Re. 1 per Preference Share of Rs. 100 each on allotments made in respect of applications bearing their stamps. Messrs. Place, Siddons & Gough, 6, Lyons Range, Calcutta, are the Managing Brokers to this issue and will be in addition entitled to a commission of 6 nP per Ordinary Share and 50 nP per Preference Share on all Shares subscribed by the public. Brokerage is estimated at Rs. 55,000 and will be payable by the Company.

No Share Commission, whether to any Underwriter, Subscriber or to any other person was paid by the Company within the two preceding years or is now payable to any promoter or officer.

EXPENSES OF THE ISSUE

The expenses of the issue other than brokerage are estimated at Rs. 45,000 and will be payable by the Company.

PAYMENT TO PROMOTERS

No amount or benefit has been paid or given within the two preceding years or is intended to be paid or given to any promoters, directors or officers of the Company apart from normal remuneration and reimbursement paid to such directors and officers.

(7) Agreement dated the 22nd March, 1957 for lease in respect of Premises Nos. 12, 13 and 14, Chingrighatta Lane, entered into with Sri Anil Kumar Sarkar, Sri Bimal Kumar Sarkar, Sri Kamal Kumar Sarkar and Sri Gour Hari Sarkar.

(8) Agreement dated the 29th May, 1954 for lease in respect of 54/10, Chingrighatta Road, entered into with M/s. Dost Mohammed Estates Private Ltd.

ORDERS FOR SUPPLY OF MACHINERY AND EQUIPMENT

(1) Order No. 255 dated 27-3-57, on M/s. Hermann, Berstorff, Hannover, West Germany, for Extruding Machine, valued DM. 27,000.

(2) Order No. 277 dated 5-4-57, on M/s. Leonh. Herbert, Frankfurt, West Germany, for Cycle Tyre Equipments, valued £22,580.

(3) Order No. 281 dated 8-4-57, on M/s. Daido Machinery Trading Co., Ltd., Kobe, Japan, for Cycle Tyre Press & Moulds, valued £8,668.

(4) Order No. 330 dated 29-4-57, on M/s. Technoexport (Foreign Trade Corpn.) Praha, Czechoslovakia, for Banbury Internal Mixer & Mixing Mill, valued £24,600.

(5) Order No. 893 dated 24-9-56, on M/s. Iddon Bros. Ltd., Leyland, Lancashire, England, for Bale Cutting Machine, valued £1,600.

(6) Order No. 894 dated 24-9-56, on M/s. Daido Machinery Trading Co. Ltd., Kobe, Japan, for Heavy Duty Breaker Mill, valued £3,980.

(7) Order No. 895 dated 24-9-56, on M/s. Francis Shaw & Co. Ltd., Manchester, England, for Cycle Tyre and Tube Machine, valued £19,000.

(8) Order No. 896 dated 24-9-56, on M/s. Hermann, Berstorff, Hannover, West Germany, for Spreading Machine, valued DM. 42,000.

(9) Order No. 393 dated 28-5-57, on M/s. Francis Shaw & Co. Ltd., Manchester, for Spares, valued £953.

DIRECTORS AND MANAGEMENT

The Management of the Company is vested in and exercised by Directors. The Company has no Managing Agents, or Secretaries and Treasurers. The Articles of the Company provide that:—

(i) Unless otherwise determined by a General Meeting, the number of Directors shall not be more than 15 or less than 3.

(ii) The qualification of a Director shall be the holding of Ordinary Shares of the nominal value of at least Rupees One thousand in the Company.

(iii) Unless otherwise determined by the Company in a General Meeting such Directors shall be paid Rs. 100 for attending every Meeting of the Board of Directors or any Committee thereof.

(iv) The Directors may from time to time appoint from amongst themselves one or more to act as a Managing Director or Managing Directors of the Company, for such time with such powers and on such remuneration as the Board may decide subject, however, to the limitation prescribed in Sections 198 and 309 of the Act.

MANAGING DIRECTOR

Mr. Kedar Nath Mookerjee is the Managing Director and shall hold office under an Agreement dated 21st February, 1957 for 5 years from 15th February, 1957 and shall be entitled to hold office on a monthly remuneration of Rs. 2,000. There is no provision for payment of compensation for loss of office.

INTERESTS OF DIRECTORS

Mr. Kedar Nath Mookerjee is the Managing Director of the Company and receives remuneration for his services as such.

Mr. Nirode Gopal Mookerjee, Mr. Milan Kumar Mookerjee, Dr. Bireswar Mookerjee and Dr. Dasarathi Banerjee are employed by the Company as whole-time Directors and receive remuneration as such.

All the whole-time Directors and the Managing Director are entitled to remuneration as long as they hold office as such.

The above Directors and the Managing Director are not interested in the Company except as shareholders. Save as above no Director has any financial or any other interest in the promotion of the Company and in any other property acquired by the Company, during the preceding two years or proposed to be acquired by the Company.

M/s. Kedar Nath Mookerjee, Nirode Gopal Mookerjee, Milan Kumar Mookerjee and Dr. Bireswar Mookerjee are interested as Shareholders of M/s. Gungadhur Banerjee & Co. Private Ltd., who are Selling Agents for Cycle Tyres and Cycle Tubes of the Company and also as Members of M/s. Mookerjee Estates Private Ltd., who are the owners of the building in which the Registered Office of the Company is situated under a monthly tenancy. Mr. D. N. Kapur is interested as a partner of M/s. Place, Siddons & Gough, Brokers and Managing Brokers to this issue.

VOTING RIGHTS

The Preference Shares entitle the holders to receive notice of any General Meeting and to attend and speak thereat but do not entitle them to vote thereat unless either (1) the dividend on the Preference Shares or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting or (2) the business of the meeting includes consideration of a resolution for winding-up the Company or for the repayment or reduction of the Share Capital of the Company or altering the provisions of the Memorandum and Articles of Association with respect to the objects of the Company or varying or abrogating any of the special rights attached to the Preference Shares. On a show of hands every member entitled to vote who (being an individual) is present in person or by proxy or (being a corporation) is present by a representative or by proxy shall have one vote. On a poll the voting rights in respect of the Ordinary and Preference Shares will be as specified in Section 87 of the Companies Act, 1956.

There are no special conditions or restrictions attaching to the Ordinary Share capital of the Company. No member will be entitled to be present or vote either in person or by proxy at any meeting in respect of the shares registered in his name on which any call or other sums presently payable have not been paid or in regard to which the Company has and has exercised any right or lien.

VARIATION OF RIGHTS

The special rights attached to any class of Shares may be varied or abrogated with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of a Resolution passed at a separate meeting of the holders of those shares and supported by the votes of the holders of three-fourths of those shares but not otherwise.

RESTRICTION OF TRANSFER OF SHARES

There are no restrictions on the transfer of fully paid shares, but the Directors may decline to register any transfer of partly paid shares to a person of whom they do not approve and may also refuse to register any transfer of shares on which the Company has a lien.

CAPITALISATION OF RESERVES AND PROFITS

No reserves or profits of the Company have ever been capitalised.

REVALUATION OF ASSETS

Since the incorporation of the Company there has been no surplus arising from revaluation of assets as none has been revalued.

BORROWINGS

Subject to the restrictions imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge the undertaking, property and uncalled capital or any part thereof and to issue Debentures and other securities.

INSPECTION

Copies of the Memorandum and Articles of Association of the Company, Balance Sheet and Profit and Loss Account and Auditors' Reports, the original Consent Order of the Controller of Capital Issues, Licences issued by the Government of India permitting expansion of manufacturing capacity, copies of Contracts and Agreements can be inspected at any time, during the usual office hours at the Registered Office of the Company for a period of 14 days from the date of publication of this PROSPECTUS or until the subscription list closes whichever is earlier.

INDEMNITY

Every Officer or Agent for the time being of the Company shall be indemnified out of the assets of the Company against any liability incurred by him in defending any proceedings whether civil or criminal in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Act in which relief is granted to him by the Court.

APPLICATION FOR SHARES

Applications for Preference and Ordinary Shares should be made on the respective forms accompanying this PROSPECTUS and delivered before the closing of the subscription list. The application form together with the remittance for the full amount payable on application may be sent to the Registered Office or any of the branches of the Company's Bankers or to their Brokers. The remittance if not made in cash should be made by Cheques or Drafts drawn upon a Branch of the Bank to which the application and the Draft or Cheque is being sent. If drawn on a Bank elsewhere Bank charges at 25 nP per cent. must be included in the remittance. Cheques or Drafts should be made payable to National Rubber Manufacturers Ltd. and should, for applicant's protection, be crossed 'ACCOUNT PAYEE' only. A separate Cheque or Draft must accompany each application form. Allotment will be notified by despatch of an Allotment Letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money as the case may be will be refunded to the applicant by a cheque on the Calcutta Branch of the Company's Bankers.

Share Certificates will be issued in exchange of the Letters of Allotment. Such Allotment Letters or Share Certificates will be despatched by Registered Post. Further copies of the PROSPECTUS and Application Forms will be available from the Company's Bankers and the Brokers to the issue and also from the Company's Registered Office. The Shares when issued will be subject to the MEMORANDUM and ARTICLES OF ASSOCIATION of the Company, a copy of which may be inspected at the Registered Office of the Company during office hours.

Dated, CALCUTTA, the 31st October, 1957.

This Notice is not an invitation to subscribe for shares but is issued for the purpose of giving information to the public concerning the Company. A formal Prospectus dated 5th November, 1957, has been delivered to the Registrar of Companies, West Bengal, for registration and copies thereof are obtainable from the Bankers and Brokers named below.

The Consent of the Government of India has been obtained to this issue by an order, a complete copy of which is available for public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation of the Equity Shares of the Company.

The Subscription List will open at the commencement of banking hours on the 19th day of November, 1957, and in accordance with the requirements of the Securities Contracts (Regulation) Rules, 1957, will close on the 21st day of November, 1957, or later at the discretion of the Directors.

PHILIPS INDIA LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913)

SHARE CAPITAL

Authorised

Rs. 5,00,00,000 divided into 50,00,000 Shares of Rs. 10 each.

Issued, Subscribed and Paid-up

Rs. 1,70,00,000 divided into 17,00,000 Equity Shares of Rs. 10 each.

LOAN CAPITAL

The Company has no debentures or other loan capital outstanding but has a bank loan and overdraft secured by hypothecation of stock-in-trade and book debts and also an unsecured bank overdraft.

ISSUE OF

5,00,000 EQUITY SHARES OF Rs. 10 EACH FULLY PAID AT Rs. 12.50 PER SHARE PAYABLE IN FULL ON APPLICATION.

After the shares now being issued have been allotted the Company will not be deemed to be a Company in which the public are substantially interested within the meaning of Section 23A of the Indian Income-tax Act, 1922.

The shares now being issued will rank for any dividend that may be declared in respect of the profits of the current year and of any subsequent years and in all respects pari passu with the Equity Shares of the Company already issued.

HISTORY AND DEVELOPMENTS

The Company was incorporated in India in 1931, as a Private Company primarily for the purpose of carrying on the business of selling in India the great variety of articles manufactured from time to time by N. V. Philips' Gloeilampenfabrieken and their associated companies in the Netherlands under their trade marks. The Company was converted into a Public Company on the 31st October, 1957.

Since 1938, the greater part of the electric lamps sold by the Company has been manufactured in India by Electric Lamp Manufacturers (India) Private Ltd., Calcutta, and since 1951, also by Hind Lamps Private Ltd., Shikohabad.

From the commencement the radio business developed satisfactorily and due to the excellent reputation which Philips radio receiving sets enjoyed with the public it was felt in 1947 that a sufficiently stable basis had been reached to start production in India. In compliance with the Government's policy gradually to reach self-sufficiency in as many industries as possible, it was decided in 1951 to start with the manufacture of radio components as well.

In support of these manufacturing activities agreements have been concluded with N. V. Philips' Gloeilampenfabrieken of Eindhoven, the Netherlands, whereunder the Company obtains the benefit of the research facilities and the vast technical knowledge which the said N. V. Philips' Gloeilampenfabrieken have and will have at their disposal in the field of the production of radio apparatus, radio components, lighting fittings and accessories, public address equipment and other electrical articles; pursuant to Licence Agreements concluded by the Company with N. V. Philips' Gloeilampenfabrieken licences in respect of such manufacture under patents owned by the said N. V. Philips' Gloeilampenfabrieken in India has been granted to the Company.

By a Registered User Agreement the Company has been granted the right to use trade marks owned in India by N. V. Philips' Gloeilampenfabrieken on all products made by the Company—or by third parties for the Company—in accordance with the specifications and on the basis of technical assistance granted by the said N. V. Philips' Gloeilampenfabrieken.

Having regard to the nature of the Company's main business it is evident that there is a close relation between the further electrification of the country and the sales possibilities of the Company.

Under the First Five-Year Plan the electrification of the country increased by about 50 per cent. During the same period the Company succeeded in expanding its business to a far greater extent due to the fact that, in full realisation of the increasing demand for electric and electronic articles, production facilities have been enlarged whilst modern, efficient and well organised regional or branch offices were established in Calcutta, Bombay, Delhi, Madras, Patna, Kanpur, Lucknow and Bangalore.

Moreover and mindful of the fact that in this line of business sales and service go hand in hand, nation-wide service facilities were made available to the public at reasonable cost.

All this, combined with the excellent quality for which the Philips' name has become world-famous, has led to a strong demand for the Company's products throughout India.

Under these circumstances it seems reasonable to anticipate that the Company's progress will continue during the Second Five-Year Plan period in which a further substantial increase in the country's electrification is planned. Apart from the obvious influence of this further electrification on the Company's Light business, it should be noted that under the Second Five-Year Plan the Government has decided to arrange for an ever-widening network of broadcasting stations which will result in a rapid increase of the market potential for radio sets.

It is on the strength of this favourable outlook that the Company decided to plan a second manufacturing centre at Loni, near Poona, for which purpose the Company has entered into an agreement with The Imperial Tobacco Company of India Limited, dated the 1st December 1956, to purchase a plot of land measuring about 60 acres for Rs. 4,00,000. Up-to-date manufacturing space at Loni to house metalware and electroplating departments has already been provided for. The production in these departments is due to start early in 1958, for which purpose imported modern machinery and equipment is being installed at present.

For these metalware activities at Loni the sanction of the Central Government has been received in terms of a Licence under the Registration and Licensing of Industrial Undertakings Rules, 1952, concerning which Licence the following statement has been included in the Prospectus:—

"A licence has been obtained from the Central Government for shifting a part of the undertaking from Calcutta to Poona of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

It is, however, emphasised that it is the Company's intention to maintain the output of the Calcutta factories at full capacity whilst the distribution of the Company's radio products will be possible from two centres. Apart from providing better service to its customers this will involve a considerable saving in expenditure.

The next step will be the construction of new premises to house the second manufacturing centre for radio components and the additional production of radio receiving sets from parts manufactured both in Calcutta and Loni.

New technical developments in the field of electronics are within the orbit of the Company's activities and will be vigorously pursued.

As a result of the progressive industrialisation of the country it may be expected that the demand for electronic equipment for industrial and scientific application available for sale by the Company will continue to increase.

Television, as and when introduced in India, will receive the Company's closest attention. Supported by the vast experience of N. V. Philips' Gloeilampenfabrieken with regard to television all over the world, the Company expects to play an important role in this respect.

The technical "know-how" accessible to the Company, its manufacturing experience, its trained technical staff, service and sales organisation will further strengthen the leading position of the Company not only in respect of its present activities but also in the new fields of electronic application mentioned above.

LAND, PREMISES AND PLANT:

The Company's main factory premises in the Calcutta area are situated at 19, Convent Road, Entally, and 12A, Canal Street, Entally. At both the abovementioned premises the Company has established well equipped and up-to-date factories where the manufacture of radio receivers, radio components, amplifiers, lighting fittings and accessories, as well as servicing is carried on. The works are well equipped with plant and machinery of high quality and up-to-date design to ensure production in accordance with the latest production techniques. All the buildings, plant and machinery are well maintained.

Whilst the Canal Street premises are held under a tenancy arrangement at a monthly rental of Rs. 2,600, the Convent Road premises are the property of the Company. In order to be able to extend the factory and so increase the production, a plot of land containing an area of approximately 1 bigha, adjacent to the Convent Road premises, was purchased in 1957 for Rs. 1,30,000.

In addition, the Company, as mentioned above has contracted to purchase a plot of land at Loni in Bombay State measuring about 60 acres in area for the purpose of substantially increasing its production facilities. The Company already enjoys on this plot modern manufacturing facilities equipped with recently imported modern machinery for the production of metalware and for electroplating.

OFFICE BUILDINGS:

The Central Offices of the Company are situated at 7, Justice Chandra Madhab Road, Calcutta, and 221, Dadabhoi Naoroji Road, Fort, Bombay.

Regional Offices have been established in Bombay, Calcutta, Madras and New Delhi and Branch Offices are situated at Bangalore, Kanpur, Lucknow and Patna.

For all the abovementioned office buildings the Company has entered into lease agreements.

GODOWNS:

The Company possesses a great number of godowns for storage of raw materials and semi-manufactured articles near the factories and for finished products all over the country.

OTHER PREMISES:

For the housing of staff personnel the Company has entered into lease agreements for residential flats in Bombay, Calcutta and Delhi.

MANAGEMENT AND STAFF:

The Chairman and Managing Director as well as the other Directors have been connected with the Philips organisation for years and their valuable experience and guidance in the Company's various fields of activity will be available. They are assisted by other able and experienced officials.

In connection with the rapid growth of the Company during the last few years and the necessity to increase the number of employees (nearly 100 per cent. between 1951 and 1956), the training of staff both in the technical and commercial fields and in that of accounting has become an important part of the Company's policy.

Such training is organised in India as well as abroad. In the former case personnel attend—apart from training courses within the Company—Management Courses organised by Industry in India.

Training outside India is organised in co-operation with N. V. Philips' Gloeilampenfabrieken, the Netherlands.

OBJECTS OF ISSUE:

The objects of this new issue are to enable the Company, with the participation of Indian capital, to expand its production, to extend the range of its activities and to provide additional working capital.

FINANCIAL INFORMATION

The following is a condensation of the Auditors' Report by the Company's Auditors, Messrs. Lovelock & Lewes, as published in the Prospectus.

Year ended	*Sales*	*Profits before Depreciation and Taxation*	*Net Profits (after Depreciation and Taxation*
	Rs.	Rs.	Rs.
1952	1,70,49,141	16,55,751	7,53,508
1953	1,65,72,892 Loss	1,91,319 Loss	4,70,816
1954	2,03,06,066	34,094 Loss	8,14,585
1955	2,92,25,153	15,81,724	11,04,472
1956	4,22,64,729	47,37,997	22,77,721
6 months to 30-6-1957	2,35,70,707	27,90,770	11,81,881

ASSETS AND LIABILITIES as at 30th June, 1957:

	Rs.
Fixed Assets (at original cost less depreciation), Capital Expenditure in Progress, and Investments (at cost)	62,16,998
Current Assets	4,38,77,473
Total Assets ...	5,00,94,471
Less Liabilities	4,42,26,473
Net Assets as at 30th June, 1957	58,67,998

DIVIDENDS ON PAID-UP CAPITAL:

Dividends were 20 per cent. for the year ended the 31st December, 1951; 25 per cent. for the year ended the 31st December, 1952, and *nil* for each of the years ended 31st December, 1953, 1954 and 1955. For the year ended 31st December, 1956, a dividend of 48 per cent. was declared.

PAST TRADING:

During the years prior to 1953 the Company's activities were concentrated in the main cities of India and more particularly in Calcutta. Plans were made for a vigorous programme of expansion and in the years 1953 and 1954, as a first step and at considerable expense, a countrywide sales organisation was established. This expense, however, is already bearing fruit and it is confidently anticipated that the future will show that it was amply justified as the resulting India-wide sales organisation is in a position to provide the necessary facilities not only for a rapid increase of sales of products hitherto handled but also for the promotion of new products. The outcome of this policy is reflected in the Company's turnover figures as follows (1952=100).

	1952	1953	1954	1955	1956
Sales	100	97	119	171	248

This marked increase of the Company's turnover during the last few years has given rise to a corresponding increase in the production of the Calcutta factory and has rendered it desirable to expand further the manufacture of components and also to provide additional space in order to house machinery for metalware production and electroplating at the second manufacturing centre at Loni. By these means the Company will be rendered less dependent on importations from abroad and a corresponding amount of foreign exchange will be saved.

Because of these factors the results for the years 1952, 1953 and 1954 bear no relationship to those of the subsequent years. The profits for the year ended 31st December, 1956 and for the first half year of 1957 show clearly the fruits of the policy of the Company of extending their sales organisation all over India.

FUTURE PROSPECTS AND DIVIDENDS:

The turnover as well as the profits of the Company for the first 6 months of the current financial year exceed the relative figure for 1956 and whilst it is too early to forecast profits for the full financial year 1957, the Directors expect that in the absence of adverse unforeseen circumstances, such profits should not be less than those for the year 1956. **The Directors, therefore, have every reason to hope that the results for the current year will enable them to recommend a dividend on the increased capital which will be more than commensurate with the length of time during which the new shareholders will have held their shares and that as regards 1958 with a continuance of the present level of trading a dividend of approximately 10 per cent. per annum may be anticipated.** With the additional finance now to be made available to the Company and with the Company's various plans gradually materialising it is confidently expected that profits of future financial years will show an increase consistent with the extension of the Company's activities.

GENERAL INFORMATION

MINIMUM SUBSCRIPTION:

The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in Clause 5, Part I of Schedule II of the Companies Act, 1956 is Rs. 50,00,000.

UNDERWRITING:

The shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below.

INTEREST OF DIRECTORS:

Mr. P. C. Vink is the Managing Director of the Company and receives remuneration for his services as such.

Mr. D. P. Dunderdale is a partner in the firm of Messrs. Sandersons & Morgans, Solicitors, to the Company.

Dr. P. K. Kapre, Mr. H. R. Vorstman and Mr. J. Zantman are full time employees of the Company and receive remuneration as such.

No Director has any financial or other interest in any of the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

MANAGEMENT:

The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

BROKERAGE:

Brokerage at the rate of 25 Naye Paise per equity share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stock broker.

Copies of the Prospectus and Forms of Application will not be available at any of the Company's offices but can be obtained from the Bankers named above, at any of their Branches in India, and the following Brokers:

MANAGING BROKERS

Calcutta ... PLACE, SIDDONS & GOUGH, 6, Lyons Range, Calcutta, 1.

BROKERS

Bombay ... BATLIVALA & KARANI, Union Bank Buildings, Dalal Street, Fort, Bombay 1.

New Delhi ... HARBANS SINGH MEHTA & CO., 33, Regal Buildings, Parliament Street, P.O. Box 300, New Delhi 1.

Madras ... PATERSON & CO., 22, Errabalu Chetty Street, P.O. Box 48, Madras 1.

INDIA AND EUROPEAN COMMON MARKET

MR. T. SWAMINATHAN'S SPEECH AT G.A.T.T. MINISTERIAL CONFERENCE

[The implications of the proposed European Common Market to world trade, in general, and to India's foreign trade, in particular, were analysed in the Survey columns of our issue last week. In the course of the analysis, a brief reference was made to the interesting observations made by Mr. T. Swaminathan, I.C.S., Minister for Economics at the Indian High Commissioner's Office in London, at the meeting of the G.A.T.T. Ministerial Conference held at Geneva from 28th to 30th October 1957. Since the subject is of utmost importance, the relevant extracts from Mr. Swaminathan's speech are given below.—ED.]

THE Chairman has drawn attention to the one significant fact in the trend of international trade, namely, that the commerce of the industrialised countries has expanded a good deal more satisfactorily than that of less developed countries. This is an observation which is particularly pertinent in my country's circumstances today. We are in a process of development and the problems of countries in that process are affecting us particularly at the present moment. We are facing serious problems in balancing our external payments and have been compelled to cut down our imports. Our experience in this matter is not unique. It would, therefore, not be inappropriate if I was to indicate how we feel the Contracting Parties, particularly more developed countries, could help us and other countries similarly placed.

First and foremost, external capital investment can be of the greatest assistance. My delegation was particularly happy to note the statement of Sir David Eccles on the subject. Secondly, programmes of aid can be of major help. We are ourselves indebted to many countries for help in various forms and I would take this opportunity to acknowledge the great value of the assistance which we have received through allocations, made by the United States Government under Public Law 480 and in other ways.

Augmenting Exports

Thirdly, our efforts to increase and diversify our exports should be helped in every possible way. India has only three main lines of export —cotton textiles, jute manufactures and tea. In respect of each of these, we have to face not only an inelastic demand abroad but also other impediments such as protectionist policies even in countries which are highly developed and the levy for fiscal reasons of duties which inhibit consumption and reduce our exports.

Fourthly, as we develop, we hope to have more of processed goods than of raw materials for export. Instead of iron ore we might be exporting pig iron or steel or even steel goods. We should like to feel that through the efforts which the G.A.T.T. is making to expand world trade, we shall have the possibility of exporting new products and, of course, in return, importing more than we do today. Finally, stability of commodity prices is an important matter for all countries whose exports consist of primary produce and we feel that through international co-operation we should evolve policies which will lead to greater stability.

Treaty of Rome

Having made these observations which arise from our own experience in India but which we believe apply or will apply to many of the countries in Asia, Africa and South America which are developing their economies, I turn to the main item on the agenda of this session, namely, the Treaty of Rome. We have heard the case put forward very ably for the arrangements contemplated under the Treaty of Rome. We have been told of the motivations from which these arrangements arise. The Contracting Parties have also heard a number of apprehensions expressed in regard to these arrangements. The Indian delegation shares these apprehensions. I shall not now go into details. I would observe that we are on the whole a little apprehensive of the effects of the growth of regionalism on international trade and the multilateral system we have been trying to evolve under the G.A.T.T. A system of multilateral trade with a gradual dismantling of restraints has been laboriously worked out since the end of the war. We agree very much with our Australian colleague that it would be most regrettable if this process of liberalisation were to be reversed. The Messina countries have stated that nothing in the working of the Treaty of Rome would be allowed to derogate from their obligations under the General Agreement. We welcome this assurance and hope that it would be supplemented by arrangements which can be considered satisfactory to all the contracting parties.

From such study as we have been able to make so far, we are unable to persuade ourselves that the association of overseas territories in the manner proposed is compatible with the existing provisions of the General Agreement or could be dealt with under Article XXIV. Here we are in full agreement with Sir David Eccles when he pointed out that the association of overseas territories would amount to the creation of a new area of preference. The Indian delegation is against the creation of new preferential blocs. It considers that insofar as these measures are calculated to help the particular territories, it is most undesirable that economic help should be linked with political dependency.

The Basic Point

The Indian delegation further considers that preferential arrangements which benefit one underdeveloped area may well create a serious problem for others. The admirable statement of the Minister for Ghana should give us all reason to pause and reflect. The association of the overseas territories with the highly industrialised Messina powers under a free trade area arrangement will make their economic and industrial development an impossible task. The basic point about a customs union is that it is a partnership of similar economies and not a tie-up between a market and its customer. Although this is not expressly stated in the Articles, a study of the wording of Article XXIV leaves one in no doubt on this point. We have in the new G.A.T.T. provided in Article XVIII special measures to help economic development. As will be clear from paragraph 8(*a*) (i) of Article XXIV, restrictions falling under Article XVIII cannot be applied by one part of a customs union to another. If, therefore, the association of the overseas territories under the Treaty of Rome is inescapable, we would urge that the sooner we decide clearly and positively to aply the procedures of Article XXV the better it would be for all of us.

We fully appreciate the point made by Dr. Hallstein of Germany that the aims and objectives embodied in the Treaty of Rome are similar to those which have been embodied in the General Agreement. Indeed, considering that the six signatories to the Treaty of Rome were already aware of their commitments under the General Agreement, we feel quite sure that they would not have lightly put their signatures and committed themselves to principles and objectives which were different from those to which they had already subscribed. It is important, however, that we should, through a joint study and scrutiny, ensure that there is no conflict or contradiction between the two Treaties. Where, as in the judgment of many of us, there are conflicts, we hope to resolve them across the table by the exercise of the understanding and goodwill which has characterised the working of the General Agreement.

DELHI LETTER

(*Concluded from page* 904)

a general quota could be declared and individual factories allowed to export sugar, along with the simultaneous announcement of tax and freight concessions for such export-sugar. Some measure of relief in company taxation also could be given. Such factories as have a lower cost structure would automatically take advantage of this and their participation in export promotion might also have the effect of rendering their production still more efficient. Surplus U.P. and Bihar sugar can be easily sold in the deficit areas of the country. A subsidy to help the high-cost U.P. and Bihar factories would not be conducive to making them more efficient by lowering their production costs. In any case, the I.S.M.A. scheme, it is thought, would not be in the best interests of many of the U.P. and Bihar factories themselves which will not be able to realise Rs. 2 and a little more from the domestic consumer in the absence of a statutory control price.

SPUTNIKS VIEWED FROM PERSPECTIVE

(*Concluded from page* 915)

a satellite. The Soviet Union saw and seized a rare opportunity to advertise to the world its scientific know-how and to imply a corresponding leadership in weapon development. Thus, Sputnik looms as a great victory in psychological war.

But, the satellite also shows what a totalitarian Government can accomplish, denying to the mass of its people what we would consider a decent standard of living, milking the resources of its earthly satellites, and concentrating efforts. The United States would be ill-advised to join a battle of braggadocio and put satellite and space-ship projects ahead of military striking and defensive power. President Theodore Roosevelt laid down a wise dictum: "Speak softly but carry a big stick."

Another way to give comfort to the Marxists would be to postpone indefinitely reliefs from the extreme rates of income taxation which are placing such a difficult burden on the accumulation of private capital, incentives to the singularly gifted individual, and new business growth in the United States.

Although responsible officials deny that money limits have held back rocket development, the temptation is strong to find the answer to the Soviets in inflationary deficit financing. Senator O'Mahoney espoused this point of view when he said that our defence plans seemed to be based on "meeting the enemy at the seacoast with a balanced budget."

There is a real possibility that Congress, in deference to public excitement, will be inclined to appropriate any sums that might be requested for rockets. It has been said that the generals and admirals would ask for the moon if they thought that they could get it. In the present instance they might have a Congress willing to say yes.

Inflation

The trouble with disregarding prudent fiscal principles is that the inflation, which results, waters down the value of defence dollars as well as all the rest. Hardly anywhere have costs risen faster than in the area of military "hardware." And scientists are created by an educational process, not by appropriations. What the Defence Department needs to recognise is that the nation cannot afford wasteful interservice rivalries or procurement policies directed at spreading military business rather than using the most efficient contractors.

One of the great popular delusions of our time is that increased federal appropriations are the answer to every problem. Money is nothing if it is not command over resources. If we want more rockets, we must have less planes and guns and ships. If we want more defensive strength in all categories, we must hasten to reverse the rising course of nondefense expenditures. If the people wanted Government to expand on every front, they would have to be content with reduced living standards. Collecting in taxes as much as is spent—in other words balancing the budget—is the simple and straightforward way of recognising these propositions. We are deluding ourselves if we think that deficit financing, in a period of full employment, affords an avenue for escaping limits on manpower resources.

Defence cannot rest on pretense. It must rest on justice and balance, on incentives that produce saving and investment as well as tax revenues to support a strong defensive establishment. Behind the essential weapons of war, the self-reliant individual, working and studying to get ahead, adjusting himself to changing circumstances and adversities, is the invincible power of America.

The United States will submit a proposal to the United Nations General Assembly's Economic Committee next week for increasing its annual programme of technical assistance to $100 million. The proposal will call for raising the financial resources of the U.N.'s expanded programme of technical assistance to $50 million. Some $31 million are now pledged for the 1958 programme. The U.S. proposal also includes the establishment of a special project or technical development fund of $50 million to be earmarked for concentrated work on surveys, research and training projects which are of basic importance to successful economic progress. The U.S. delegation plans to ask the General Assembly to appoint a preparatory commission to define the basic fields and types of project which will be eligible for assistance under the special fund. U.S. contributions to the enlarged programme will be on the same "matching basis" as the current U.N. Technical Assistance Programme. Present congressional legislation authorises the U.S. Government to contribute 38 per cent. of the total for 1959 and 33⅓ per cent. for 1960.

HOW SAFE IS KERALA FOR INVESTORS?

AN ANALYSIS OF RECENT TRENDS

By A Correspondent in Kerala

[There is reason to believe that, thanks to the clever propaganda by the Communist Party, the public has not obtained a clear picture of what is going on in Kerala. When it is said that there is lawlessness in that State, people naturally take it to mean that there must be anarchy there. What has been happening is not anything as dramatic as is conveyed by the term anarchy, which, in any case, cannot happen so long as there is a strong Central Government. But it is something far graver than is generally understood. The democratic forces in the State are being gradually undermined in a very subtle fashion. This will be clear from the article on this page in which the real situation in the State is explained.—ED.]

THE notoriety which Kerala under the Communists has been gaining in recent months as a place where employers as a class are second class citizens has posed the question: How safe is it to invest in Kerala? There are those who sincerely believe that the report of lawlessness in the State are overdrawn and that the Communists are doing a good job under very difficult conditions. There is another section which holds that the truth lies somewhere between what the Communists say and their detractors allege. Sometime ago, one of the leaders of the Communist Party in Kerala asserted that to say anything against the Government of Kerala is treason, a very natural Communist reaction.

For those who live under Communist rule in Kerala, the reaction provoked by the Communist Ministry is one closely related to their individual experience of an attitude to the previous Governments in the State. Kerala is one of the most backward States in the matter of industries. The few manufacturing establishments—Travancore Rayons, the Indian Aluminium Company plant at Alwaye, the Jamuna Thread Mills, the Ogale Glass Factory, the Tata Oil Mills, the Cement Factory at Kottayam, the Sugar Factory at Tiruvilla and the Fertiliser plant in Alwaye—are all financed and/or managed from outside the State. Local enterprise in the matter of commerce and trade is a relatively recent development.

Importance of Plantations

The one large and stable industry in the State, in fact the biggest contributor to the State's economy and revenue, is the plantations. With the reorganisation of the States, Kerala gained over 100,000 acres under pepper, nearly the same acreage under cashew, about 14,000 acres under tea and 44,000 acres under coffee. The total area under plantation crops in the State is over 800,000. So anything that affects the plantations should be a matter of concern to the State.

In any fair analysis of the situation in Kerala, it would be wrong to overlook the peculiar relationship of the Communist Party with labour. It cannot very well abdicate its position as the champions of labour, for its power is founded on that fact. It was, therefore, natural for labour to expect much from a Communist Government, the first to be formed in India, and it is natural that the party should do everything possible to sustain that faith. It would be political *harakiri* not to do so. It would be a mistake not to think that the party realised this as well as the limitations under which it took office. Tactically, it could not do something contrary to the dictates of the grand party strategy of disarming opposition, overcoming suspicions and convincing the country that the Communist Party is attached to the constitution and the processes of parliamentary democracy. So, the party in Kerala was prepared to bend itself backwards in order to prove its devotion to the Indian Constitution. The studied deference to Delhi had to be accommodated within the practical necessity of keeping the workers and the "toiling masses" from the feeling that they have been let down. One of the spectacular measures in order to "enthuse the masses" was the release of many prisoners, generally selected on party considerations. One of the outstanding cases was the remission of the sentence on Vasu Pillai, the Communist Party worker, who was found guilty and sentenced to be hanged for murder. One of the first acts of the Law Minister was to appear in the Trivandrum Central Jail with folded hands before the convicts.

There have been many vague references to the change required in the administration, in general, under Communist rule and to the need for a change in the attitude of the police towards popular movements. Soon after the Communists took office, the Ordinance for the prohibition of eviction was announced which, in many cases, acted as an encouragement for wrongful occupation of cultivated lands by squatters. No squatter would be evicted and proof of overnight occupation was rendered difficult as the squatters and party workers were ready to bear witness for one another. The long and tiresome procedure in subordinate courts was bad enough but the Ordinance made it even more difficult. Many cases of forcible occupation of land and collection of crops were becoming everyday matters. The Ministers simultaneously started a campaign for the re-orientation of the role of the police. In reference to the subject later on, both the Law Minister and the Chief Minister have admitted and denied, depending upon the occasion, about giving instructions to the police about their discretion to resort to sections 107 and 144 of the Cr. P.C. Beyond this there is no evidence as to what firm instructions were given to the police in the matter. It is, however, clear that the formative influence under the Communists in power, their repeated reference to the new role envisaged for the police, the Law Minister's courtesy visit to the Central Jail and the release of prisoners convicted for criminal offence in furtherance of the party's political objectives were sufficient to cause confusion, if not consternation.

Kumbazha Incident

It should not be overlooked that the party would not be in power today but for the support of a handful of so-called independents of whom there are three in the Ministry. Without them, the party would be short of absolute majority in the Assembly. It was, therefore, natural for the party to have decided, as early as in the third week of April, to mobilise its labour support. On the coast, particularly in the coir belt, the Communist hold was secure. In the few industrial establishments and in cashew, the Communist grip on the unions was fairly strong. But the biggest prize of all was plantation labour. The union activists were given the green light and there began a sudden and widespread movement from Kozhikode district in the north to Trivandrum in the south for the control of plantation labour. The repeated incidents on Kumbazha which culminated on the 2nd October with a mass raid on non-communist workers, the week-long siege of lines on Wallardie near Vandiperiyar with its attendant violence and the sudden flare up on Lower Surianelle, Kalaar and Goondoomallay where there are Communist activists, were significant. There were a few such incidents in cashew at Quilon and among other industrial workers. But, on plantations, the movement was widespread, marked for its sudden aggressiveness and all pointing to compact little actions designed to cow down rival union workers. Whilst the workers were being beaten up, records of rival unions made bonfires on open roads and workers intimidated the most ardent propaganda fire was directed against "planters" and the "owning class."

Considerable embarrassment was caused to the Communists when the reports on the incidents began to get into the newspapers. In fact, it was an unexpected development which the party strategists had not expected to encounter. Mr. A. K. Gopalan declared it was treason to oppose a people's government in this manner. Mr. Namboodiripad said it was political in objective and he would pay back in the same coin. There was a sudden wave of Kerala Communist Party spokesmen spanning out to the four corners of India in a smothering propaganda effort. The Party Secretary took time out on a trip which brought him to Madras, Nagpur, New Delhi and Calcutta. The Law Minister went as far as Ambala and Jullundur. Ministers travelled up and down the State countering the effects of the innumerable reports on the law and order situation in the State. Communist spokesmen were heard to declaim on law and order, the role of the police in the perfect democracy they were building, the rights of "people's movements" and, of course, the dark and vile motives of the planters in giving publicity to what was going on in the plantations.

At one time, the Minister for Law, Mr. Krishna Iyer, tried to cloud the issue by giving figures of disputes settled after the Communists came into power. This was soon exposed by the Chairman of the Planters' Association, who said, in a statement, that the number of trade disputes settled or unsettled had nothing to do with mob violence on the estates. The Chief Minister declared that the planters were resorting to attacks on the Ministry, because of its tax policy. This was soon shot down by the planters when they said that the Chief Minister was trying to confuse the issues by linking taxation to lawlessness when each should be dealt with on their respective facts and merits. During Mr. Gulzarilal Nanda's visit, the Communists followed the tactics of countering allegations with more vehement allegations against other parties, rival unions and managements than by any attempt at denials.

Easy Popularity

It is possible to discount or disregard the two extremes of political propaganda in Kerala. What matters is a proper understanding of the forces released and the kind of Kerala that the Communists are shaping. By avoiding the behavioural mistakes of the former parties and their Ministers, it was possible to gain some easy popularity. The surplus budget carried some applause in quarters where its implications were scarcely understood. The extension of wealth tax to agricultural companies, expressly left out by the Indian Finance Minister, was an act designed to hit planting companies. The graduated rates in agricultural income-tax for companies was not only bad in principle but also calculated to hit the planting industry. It appeared to be a guilty conscience which prompted the Communist Party Secretary to say that planters were making a hue and cry on law and order for covering up their chagrin on taxation.

The problem of Kerala can be explained in a few words. Too many people, too little land, too few industries and too underdeveloped an economy. Obviously, the Communists were caught on the racks, one end, the Governmental one, being pulled towards maintaining constitutional proprieties and the party end being pulled by the need to keep its aroused and excited followers humoured. Whatever the Ministry desired to do by way of providing confidence to investors and stability to business was undone by the lower echelons of the party machine in the factories and the fields.

Role of Police

The agitation experts and labour organisers began to feel untrammelled by the existence of laws and found a rich harvest to gather in. The Governmental wing of the party found itself placed with a law and order problem. Its first reaction was to enter into a long public discourse on the Communist concept of the role of the police. This merely added to the confusion and was responsible for the undermining of effective police action. When the public became aware of what was going on and newspapers began to report incidents the party's defence mechanism came into play but it did not discourage violence or lawlessness at the factory or plantation level. Words have gone down the party communication lines to restrain the more exuberant members, but, on its extreme fringes, the party, which is trying to do constitutional tight-rope walking, is not very effective. It cannot also publicly disown its active supporters without serious damage to party interests.

The situation in Kerala cannot be intelligently understood without recognising the aforesaid facts. In the rural parts of Kerala, life goes on as usual, except for the individual cases of squatting, forcible occupation and wrongful harvesting of crops. In the towns of Kerala, there are few industrial establishments. Town dwellers are, therefore, not aware of what goes on in factories and plantations, except what they learn from the Press although party activities like meetings and processions and demonstrations are more frequent. In the remote plantations, lawlessness is not a deliberate and intentional breaking of the law. It is more a manifestation of the disregard for law, induced in workers and the large band of leaders who operate among them. Lawlessness is incidental to this attitude. If a worker feels like going away from work at noon and the management insists on paying him proportionate wage, it may result in violence. If they find rival union members are defiant, they just gather enough party supporters and stone or beat up the men, women and children as recently happened at Kumbazha. That is the new society the Communists are ushering in.

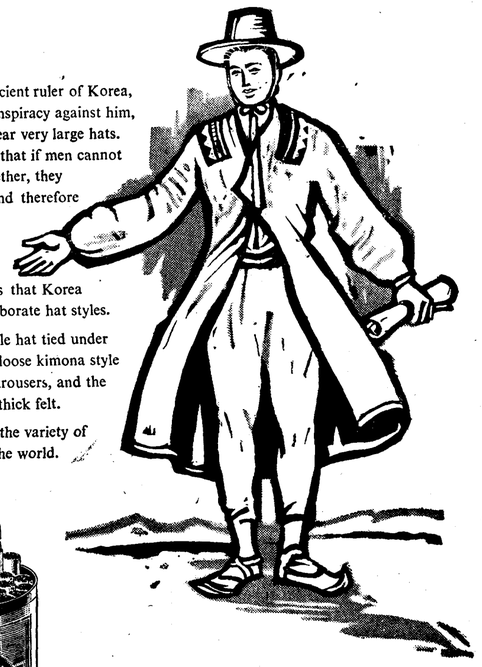
Korea



It is said that an ancient ruler of Korea, to stamp out all conspiracy against him, made the people wear very large hats. His reasoning was that if men cannot put their heads together, they cannot whisper, and therefore cannot conspire.

This tale may or may not be true, but the fact remains that Korea today has many elaborate hat styles.

Here is a Welsh style hat tied under the chin. The long loose kimona style coat covers baggy trousers, and the shoes are made of thick felt.

There is no end to the variety of costumes all over the world.

Wherever you go
—they're good

OIL PRESSURE LAMPS INDUSTRY

NO MORE PROTECTION AFTER END OF THIS YEAR

THE oil pressure lamps industry will cease to enjoy tariff protection after 31st December next. The Tariff Commission's recommendation to this effect has been accepted by the Union Government and suitable steps, it is said, will be taken in due course to implement it. Three chief considerations have weighed with the Commission in recommending deprotection. First, in the matter of cost, the industry has no disadvantage as compared with the imported lamps. For the cost of the domestic product (Rs. 31.34 fair ex-works price) is lower than the landed cost without duty (Rs. 41.84) by Rs. 10.5 per lamp which works out to 25.4 per cent. of the c.i.f. price. Secondly, prejudice against the indigenously produced lamps has disappeared to a large extent, following the notable improvement in quality. Thirdly, the annual capacity of the industry which at present aggregates 156,600 lamps is much more than what is actually required to meet in full the estimated domestic requirements of about 100,000 lamps a year.

With the withdrawal of the standard protective duty of 31½ per cent. *ad valorem* on imports of foreign oil pressure lamps, hurricane and hanging types, irrespective of candle-power, with effect from 1st January 1958, the seven-year era of protection under which the oil pressure lamps industry grew and developed will be terminated. The industry, it will be recalled, was first accorded protection in January 1951. The Government had warned the industry that it would withdraw all concessions or assistance if the industry failed to effect satisfactory improvement in the quality of its products. It is gratifying that the industry did pay heed to the warning and the Government could not but extend the period of protection first till the end of 1953 and subsequently till the end of the following year. The Tariff Commission conducted the second enquiry in 1954 and, on the basis of its findings, the Government continued protection for a further three years, that is, till 31st December 1957.

Capacity and Production

Since the last enquiry (1954), the oil pressure lamps industry has endeavoured not only to expand its capacity but also to maintain a high level of output. The aggregate capacity of the 10 factories working in 1956 out of the 11 units in existence was higher at 159,600 lamps, as against 148,200 lamps in 1954. The actual production has gone up more appreciably, the number of lamps manufactured in 1956 being 86,918, which compares very favourably with 38,589 in 1954, or a rise of as much as 123.3 per cent. Production during the first quarter of 1957 was at an annual rate of 101,708 lamps. The capacity actually utilised has thus increased markedly, from 26 per cent. three years before to over 50 per cent. in 1956. The bulk of the production continues to be accounted for by hurricane type lamps of 300 candle-power and only two units manufacture lamps of over 400 candle-power of hanging type. The following table gives the position in respect of capacity and actual output in the 10 different units engaged in the production of oil pressure lamps during the year 1956 as compared with 1954:

	Capacity		Production	
	1954	1956	1954	1956
Krudd Industries Ltd. ..	60,000	60,000	11,177	38,455
Dazzle Products Ltd.	24,000	27,000	9,348	19,120
Probhat Products Ltd. ..	12,000	24,000	8,476	16,715
Naran Lala Metal Works ..	12,000	12,000	236	1,385
New Royal Co.	12,000	12,000	423	479
Dhalbhum Trades and Industries Ltd.	7,200	3,600	*Nil*	*Nil*
New Bombay Mechanical Works	6,600	6,000	4,043	5,723
Metro Engineering Works ..	6,000	6,000	1,803	2,265
C. S. Poduee & Son	6,000	6,000	2,415	2,646
Shilpa-Peeth Ltd.	2,400	2,400	550	127
TOTAL ..	148,200	159,600	38,471	86,915

It will be seen from the above statement that the expansion in production has occurred only in the three largest units, the extent of the rise during the period 1954-56 being 156 per cent., as against the rise of 33.3 per cent. in the smaller units, while there has actually been a fall in the output of one factory. The Tariff Commission has drawn the attention of the Development Commissioner, Small-Scale Industries, to this position.

In the case of a product like oil pressure lamps, the demand factor is of particular significance. With the expected expansion of electrification during the second Five-year Plan period, the demand for pressure lamps may tend to reduce. The vastness of the area which must remain outside the orbit of electrification for a long time to come, the higher income levels accruing from the Plan and the growing variety of uses to which the lamps are put, all these will, as the Tariff Commission says, probably balance the limiting effects of growing electrification. During the discussions at the public enquiry, the general consensus of opinion was that a 10 per cent. rise in demand over the next three years might be adopted as a conservative estimate. In other words, the total domestic requirements of oil pressure lamps in 1960-61 will work out to 110,000.

Scope for Exports

The present capacity of the industry, as already stated, is more than adequate to meet the aforesaid domestic demand. In fact, there will be a considerable surplus, if the entire capacity is utilised, so that the prospects of developing an export trade in oil pressure lamps are quite bright. India did export more than 1,000 lamps in 1954. The exports have since declined substantially, on account of competition from German lamps and the much cheaper product of Hong Kong. As the industry is well established in India, the Tariff Commission urges the Export Promotion Council to take necessary steps to enable the industry to export its products. In this connection, it observes: "If the Council is satisfied that the cheapness of Hong Kong lamps is due to steel reservoirs which the manufacturers there are using, domestic manufacturers should also be encouraged to use steel reservoirs instead of brass ones. However, that by itself will not be sufficient to develop the export market. Steps will have to be taken to ensure quality of the product also and, if necessary, the Council should insist on the industry obtaining I.S.I. certification marks on the lamps for export." The Government of India has taken note of this recommendation and measures will be taken to implement it as far as possible.

All the raw materials required for the manufacture of lamps are produced in the country. The Tariff Commission observes that it has not received any complaints in regard to the availability of raw materials except those relating to mild steel sheets. Some manufacturers, of course, do not appear to be satisfied with the quality of domestic brass rods and tubes, and they continue to import these articles. Although the value of imported raw materials constitutes only about 10 per cent. of the total cost of the lamp, the Tariff Commission has nevertheless pointed out that "there is hardly any need to import brass rods and tubes, as some of the major producers are already using domestic rods and tubes without detriment to the quality of their products." Again, some manufacturers still continue to import a few components like pressure gauges, mantle holders, nipples and pump valves with head washers, though all these are successfully produced in the country. The Commission has urged the industry to take immediate steps to meet their requirements of all the above-mentioned articles from indigenous sources.

Quality

In its last report (1954), the Tariff Commission had observed that the quality of indigenous oil pressure lamps, though it had improved, required further improvement. The specific defects to which attention had been drawn then included the use of cheap mica chimneys which affected the candle-power of the lamps, defects in pressure gauge, and disparity between actual candle-power of lamps and that marked on them. It is gratifying to be told that the industry has since taken steps to improve the quality of the lamps. These steps include better design and finish, improvements in air pumps, changes in inner casing, mining tube and upper part of the vaporiser, better quality of mantles, replacement of hand presses by automatic punching presses, and installation of screw cutting machines. The industry has, by and large, solved its technical problems and further progress depends, as the Tariff Commission says, on research and its application.

The Commission points out that the railways, the important users of oil pressure lamps, have, with one exception, reported that the quality is satisfactory. Complaints from other sources relate to the quality of pressure gauges and disparity between marked and actual candle-power of lamps. Referring to these defects, the Commission states that "they could be removed easily if the manufacturers paid greater attention to the quality of the lamps they produce; it is particularly desirable that those manufacturers who do not have candle-power testing equipment should take steps to install such equipment without delay."

IMPORTS FROM W. GERMANY

Western Germany is one of the largest suppliers of capital goods and accessories to India. The orders placed in Germany on both Government and private account have risen substantially in the past five years, as is evident from the following table which gives the value of the different items of capital goods imported into India from that country:

(In thousand Deutschemarks)

	1950	1953	1954	1955	1956
Machinery (except electrical machinery)	21,457	88,972	105,001	163,835	220,695
Power-driven machinery	4,881	26,131	30,642	40,715	35,912
Boiler	770	12,307	14,843	20,899	19,395
Combustion engines ..	4,111	9,767	11,280	18,381	14,616
Metal working machinery ..	3,979	14,604	23,513	29,132	39,056
Building and construction machinery	10,026	46,052	46,159	89,770	133,928
Conveyor	119	6,243	6,657	8,358	11,591
Textile machinery ..	2,118	4,328	3,236	9,710	17,026
Other machinery ..	1,793	22,157	17,714	48,074	69,116

Dm 1 = Re. 1-12.

Among the Asian countries, India ranks as the biggest buyer of goods and commodities from W. Germany. Out of the total value of German exports (DM. 1,750 million) in 1956, the share of India alone was nearly 50 per cent., being DM. 830 million. During the first seven months of 1957, German exports to India aggregated about DM. 605 million, so that the total for the whole of 1957 is expected to rise markedly. The main items of exports are machinery, motor vehicles and aircraft, ships, electrical products and iron products.

Exports from W. Germany to Asian countries have registered an appreciable increase in recent years. The total value of these exports during 1957 is expected to amount to DM. 2,500 million, as against DM. 1,750 million in 1956. Japan is the second largest buyer of W. German goods in Asia, its purchases during the period January to July 1957 being DM. 300 million. The value (in million DM.) of German exports to some of the other Asian countries in the same period was: Indonesia 198; Iran 187; Malaya and Singapore 82; Thailand 72; Hong Kong 72; Pakistan 71; Iraq 65; Philippines 62; Saudi Arabia 57; Lebanon 52; Syria 44.

With the permission of the Bonn Foreign Office, a West German trade delegation, sponsored by the East Committee of the German Economy, recently negotiated in Peking a trade agreement with the China Committee for the Promotion of International Trade. The agreement took effect on 13th October last and will last one year only. One of its main aims is to promote direct trade between Germany and China, as opposed to trade *via* third countries which was predominating in the past years. The agreement provides for an annual business of DM. 230 million on either side—that is to say, the present volume of trade between the two countries will hardly be affected by the new agreement. As a matter of course, German exports to China will continue to be in conformity with the West's overall trade policy *vis-a-vis* that country. The goods which the Federal Republic wishes to import from China include grains, oilseeds, bristles, minerals and ores, silk, tea, and raw materials for the German chemical and pharmaceutical industries. The realisation of the agreement will mean that the Federal Republic's trade with Peking will amount to some 0.7 per cent. of the total West German foreign trade.

According to unofficial reports, the German delegation failed to persuade its Chinese counterpart to include in the agreement a proviso for the registration of German hallmarks and patents. This, the Chinese negotiators argued, would necessitate the establishment of diplomatic relations between the two countries. Moreover, they said that China lacked the necessary patent attorneys. Nor were the Chinese willing to agree in principle on the issuance of visas.

EXPORTS OF BRITISH CHEMICALS

Exports of chemical and allied products from the U.K. during the first nine months of this year reached the record total of just over £200,000,000, an increase of £21,000,000 over the figure for the same period of 1956. India and Australia together accounted for about 15 per cent. of the total British exports of chemicals, but, whereas India's takings as compared with the nine months of last year remained stationary, there was a sharp increase in shipments to Australia. It is likely that, by the end of the year, Australia will displace India as the leading market. Exports to South Africa, the third largest outlet, also expanded considerably. There were sizable increases in the demand from a number of other markets, notably Belgium, France, Holland, Italy, New Zealand and Western Germany.

Oversea trade in the newer plastic materials continues to forge ahead, especially in the plasticised and unplasticised vinyl resins, the polystyrene and most other varieties of moulding powders, and in plastic sheet and rod. These products are finding a particularly good outlet in India, Australia, New Zealand, South Africa, France, Holland and Sweden. A steady, and in some instances an increasing, export business is also being done in penicillin and other antibiotic compounds, in vitamin preparations, and in the barbiturates.

AHMEDABAD ELECTRIC MAINTAINS DIVIDEND FOR FIRST HALF-YEAR

NET PROFIT DOWN DUE TO WEALTH TAX

THE working of the Ahmedabad Electricity Company, Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay), during the six months ended 31st March 1957 has yielded quite encouraging results. Revenue from sale of energy, as well as profit for the half-year period under review, indicate that the upward trend in progress was steadily maintained. A comparison of half-yearly results with those for a full year is apt to be misleading to some extent. Nevertheless, it provides a rough idea of the trend of progress of the Company. The gross profit at Rs. 58.12 lakhs is Rs. 2.36 lakhs higher than 50 per cent. of (Rs. 111.53 lakhs), the corresponding figure for the 12 months ended 30th September 1956. The net profit, after providing Rs. 22.05 lakhs for depreciation, as against Rs. 44.95 lakhs last year and Rs. 4.93 lakhs for taxation (including Rs. 4.80 lakhs for wealth tax, based on the book-value of the net assets), as against *nil* in 1955-56, amounts to Rs. 28.68 lakhs, as against Rs. 61.21 lakhs for the year ended 30th September 1956. It will be seen that the net profit for the half-year period under discussion is actually slightly less than half of that for the preceding year. This is due to the adverse effect of wealth tax. The Directors have recommended a dividend of Rs. 3.25 per share for the half-year, which, in effect, means that the dividend has been maintained at 6½ per cent. per annum for 1955-56, to which level it had been stepped up from 5 per cent. for 1954-55.

The maintenance of the dividend at the previous year's rate has, of course, been made possible only with the help, to some extent, of the dividend equalisation fund, from which an amount of Rs. 6.20 lakhs has been withdrawn. Out of the net profit, the Directors have transferred Rs. 3.40 lakhs to contingencies reserve, as against Rs. 3.36 lakhs allocated six months earlier. The employees' retiring gratuities reserve gets a higher allocation of Rs. 2.65 lakhs, as against only Rs. 70,841. The general reserve which was the recipient of Rs. 9.39 lakhs from the 1955-56 results has, however, received nothing.

Although, in actual effect, the reserves have received Rs. 6.05 lakhs in all, there has been a net depletion of about Rs. 15,000 for, as already mentioned, no less than Rs. 6.20 lakhs have been withdrawn from the dividend equalisation fund to meet the proposed dividend. The position in this respect was somewhat better in the previous accounting year when, against a withdrawal of Rs. 8.44 lakhs from the dividend equalisation fund, there was an addition of Rs. 13.46 lakhs to the reserves.

The Company has had to present its accounts for the half-year ended 31st March 1957, in order to fall in line with Rule 26 of the Indian Electricity Rules, 1956, which makes it obligatory for all electricity undertakings to close their accounts on 31st March every year. Hitherto, the Company's accounts were being made up as on 30th September every year. The next report of the Company, it is needless to add, will be for the 12 months ended 31st March 1958.

The following comparative table brings out some of the salient features of the Company's working during the six months ended March last, against the background of its results for the three years ended 30th September 1956:

(In lakhs of rupees)

	For half-year ended March	For the year ended 30th September		
	1957	1956	1955	1954
Earnings from sale of energy ..	177.89	326.46	269.18	240.69
Other income	3.53	6.05	5.81	5.36
Expenses	123.30	220.98	199.03	180.12
Gross profit	58.12	111.53	75.96	65.93
Managing Agents' Commission.	2.46	5.37	3.50	3.68
Depreciation	22.05	44.95	30.34	22.44
Taxation	4.93	..	..	..

Sales of energy during the six months under review amounted to 285.67 million kw.h., as against 548.69 million kw.h. for the whole of 1955-56 and 485.98 million kw.h. for 1954-55.

During the six months under review, 2,329 new consumers were connected, bringing their total number to 52,057. This includes 112 large high tension consumers and the North Gujarat Grid. Describing the Company's progress, generating capacity and its transmission and distribution system, the Directors observe:

"Two turbo-alternators (Nos. 4 and 6) received major overhauls and, together with the rest of the plant, have been maintained in efficient working condition and have given satisfactory services. The generating capacity remained the same as at 30th September 1956, namely, 142,500 kw., while the peak demand increased by 3,000 kw. to 113,400 kw.

"The North Gujarat Grid scheme continues to expand, resulting in increased offtake from the Company, the maximum demand from it during the period being 22,250 kw., as against 20,350 kw. in 1955-56.

"During the period, 2.71 miles of H.T. mains and 7.04 miles of L.T. mains were laid. The length of 66 kV transmission lines stood at 27.91 miles. Four new substations for general supply, one for rural supply and two for industrial 11 kV supply to consumers were erected and brought into commission during the period."

The Company's paid-up capital as at 31st March 1957 remains unchanged at Rs. 874.78 lakhs, all in ordinary shares of Rs. 100 each. The reserves and surplus aggregate Rs. 74.95 lakhs. If these reserves are small in relation to paid-up capital, it is because of the large amount of new capital raised in recent years to finance the large-scale development that has been undertaken by the Company. Accordingly, the low level of reserves is no reflection on the Company's management. Loans secured against 4½ per cent. mortgage debentures, redeemable in June 1960, amount to Rs. 200 lakhs. The gross block of Rs. 13.59 crores, which include additions during the six months of Rs. 15.64 lakhs, stands depreciated at Rs. 10.89 crores. Capital work-in-progress (including plant and machinery in transit) amounts to Rs. 6.54 lakhs. The current assets aggregate Rs. 159.18 lakhs, of which cash and bank balances alone are of the order of Rs. 26.01 lakhs. These cover the current liabilities of Rs. 113 lakhs by a substantial margin.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 95.60 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 7.03 per cent. per annum.

MORARJEE MILL'S PROFIT DOWN SHARPLY

DIVIDENDS PAID OUT OF RESERVE

THE results of the Morarjee Goculdas Spinning and Weaving Company, Ltd. (Managing Agents: Messrs. Piramal Sons Private Ltd., Bombay), for the year ended 30th June 1957, truly reflect the difficult trading conditions under which the cotton textile industry in the country has had to work during the past 14 months. While, on the one hand, the imposition of additional excise duty on cloth adversely affected offtake, the rising trend in the prices of raw cotton and other essential raw materials considerably reduced profit margins on the other. The result has been either a decline in earnings or a net loss. The gross profit of this Company for the year under review at Rs. 21.91 lakhs shows a drop of Rs. 17.81 lakhs from Rs. 39.72 lakhs for the previous year, to which level it had more than doubled from Rs. 19.37 lakhs two years earlier.

The fall in the gross profit has necessitated a substantial pruning of the allocations to essential reserves like depreciation and taxation. Thus, at Rs. 6.97 lakhs, the year's provision for depreciation is only slightly over a third of Rs. 18.46 lakhs set apart in the previous year. This provision covers only the normal depreciation for 1956-57 and not the special depreciation allowances to which the Company is entitled on the capital expenditure incurred during the year. In view of the latter development, the Company seems to have only a very small tax liability for the year under review. Accordingly, it has provided only a very modest sum of Rs. 1 lakh as reserve for taxation. After these transfers, the net profit works out to Rs. 12.46 lakhs, as compared with Rs. 9.69 lakhs a year ago. With Rs. 1.41 lakhs brought in from the previous year's accounts, the sum available for appropriation is Rs. 13.87 lakhs. Out of this, the Directors have transferred Rs. 13.62 lakhs to development reserve and Rs. 2,000 to reserve for bad and doubtful debts. The sizable addition to development reserve probably represents the accelerated depreciation allowance allowed under the Income-tax Act on the new capital expenditure incurred during the year under review. Such expenditure amounted to no less than Rs. 30.09 lakhs. It is thus obvious that, if the Company had provided for all the depreciation allowed under the Income-tax Act, there would have been no net profit at all, but only a loss. It may be noted here that the Company has not provided separately for deferred taxation, a future liability. All this confirms the general impression that the working of cotton mills is not remunerative.

The Company is no doubt paying a dividend of 14 per cent. per annum, free of income-tax, on ordinary shares, besides the 4½ per cent. tax-free, cumulative preference dividend. But this has been done by drawing Rs. 8.02 lakhs from the general reserve. The ordinary dividend for 1956-57 is slightly lower than 15 per cent. paid for 1955-56 but is the same as that for the two years preceding the latter. It, however, compares better with 12 per cent. per annum for 1951-52 and 1952-53.

The following comparative table presents a general view of the Company's progress since June 1954:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale proceeds	323.53	352.59	371.78	332.22
Closing stocks	106.32	73.90	81.68	92.61
Cotton consumed	158.95	146.44	166.76	164.19
Other raw materials, stores, fuel and power consumed ..	46.86	39.83	39.66	37.85
Wages and other expenses ..	128.68	117.40	135.11	116.73
Gross profit	21.91	39.72	19.37	24.19
Managing Agents' Commission.	1.48	3.57	1.94	2.42
Depreciation	6.97	18.46	4.92	5.09
Taxation	1.00	8.00	1.11	..
Net profit	12.46	9.69	11.40	16.68
Transfer from general reserve.	8.02	..	..	..
Transfer to reserves	13.64	..	4.20	7.69
Dividends—				
4½% preference	0.78	0.78	0.78	0.78
Ordinary	7.24 (14%)	7.76 (15%)	7.24 (14%)	7.24 (14%)
Carry forward	0.23	1.41	0.27	1.09

It will be observed from the table that, while sale proceeds in 1956-57 fell by Rs. 29.06 lakhs to Rs. 3.23 crores, the cost of cotton consumed alone was higher by Rs. 12.51 lakhs; other raw materials, stores, fuel, etc., consumed also by Rs. 7.03 lakhs and so too wages and other expenses by Rs. 11.28 lakhs. The steep rise in the closing stocks from Rs. 73.90 lakhs in the previous year to Rs. 1.06 crores at the end of the year of review, reflects, to some extent, the general slump in the cloth and yarn markets. In a reference to the Company's working conditions during the year, the Directors state in their report that, "the profits of the Company have been lower, due to adverse conditions prevailing in the cloth market after the enhancement of excise duty and high prices of cotton, stores, colours and chemicals."

The financial position of the Company, as disclosed by its balance-sheet as at 30th June 1957, is satisfactory. The reserves and surplus amount to Rs. 38.68 lakhs, as against a paid-up capital of Rs. 69 lakhs, in 17,250 4½ per cent. tax-free, cumulative preference shares of Rs. 100 each and 51,750 ordinary shares of Rs. 100 each. It may seem at first sight that the reserves are small but it should be borne in mind that, of the ordinary capital of Rs. 51.75 lakhs, as much as Rs. 34.50 lakhs and the entire preference capital of Rs. 17.25 lakhs represents capitalisation of profits ploughed back in past years. The fixed assets have been written down very well from Rs. 264.75 lakhs to Rs. 81.58 lakhs, the difference, namely, Rs. 183.16 lakhs being the total depreciation provided up to the end of the year of review. The net written down value of the fixed assets mentioned above includes Rs. 30.09 lakhs, being the cost of additions to the block account during the year under review. Of these additions, as much as Rs. 27.59 lakhs represent the amount spent on new plant and machinery. The Directors' wise policy of replacing worn-out assets is further exemplified by the fact that, in the previous year also, a sum of Rs. 30.31 lakhs had been spent by way of additions. The large size current assets amounting to Rs. 191.32 lakhs, cover, by a substantial margin, the total current liabilities of Rs. 165.22 lakhs, including the provision of Rs. 11 lakhs for taxation.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 215 *cum-div.* and, on an *ex-div.* basis, offer a yield of 6.96 per cent. per annum.

COMPENSATION TO INSURANCE COMPANIES

The Life Insurance Corporation of India has paid acquisition compensation to 13 Part 'A' companies to the extent admitted by the Corporation, as per the orders of the Tribunal appointed by the Central Government. The acquisition compensation is payable under section 16 of the Life insurance Corporation of India Act, 1956. The 13 companies, which have thus been paid, are:

All-India General, Bombay Life, Hindusthan Co-operative, Howrah, Indian Globe, Industrial and Prudential, Jayabharat, Lakshmi, National, New Great, New India, Oriental and Ruby General.

Acquisition compensation has also been paid to 28 Part 'A' and three Part 'B' insurers in full and final settlement of their claims under the same section. The names of these companies are:

Part 'A' Companies:—Bharatha Matha, Insurance of India, Metropolitan, Popular, Union Provident, Your Own Provident, Bullion Provident, East India, Mother India Life, Universal Fire and General, Asian, Depositors Benefit, Indian Circar, Indian Mercantile, National Star, Radical, Trust of India, Calcutta, Goodwill, India Life and General, United India, New Guardian of India, Windsor Provident, Aryasthan, Incorporated Provd., Indian Progressive, Western India Life and Ahimsa Provident.

Part 'B' Companies:—City of Calcutta Provident, Mysore Provident and New Karnataka Provident.

The total acquisition compensation paid in respect of the aforesaid 44 companies amounts to Rs. 3.16 crores.

Compensation for the vesting of management in the Central Government for the period from the 19th January 1956 to 31st August, 1956, has also been paid to 119 companies amounting in all to Rs. 11¼ lakhs, under Section 7 of the Life Insurance (Emergency Provision) Act, 1956.

It will be recalled that the Life Insurance Corporation is to pay all compensation to the insurers and not directly to the individual shareholders.

(Concluded from next column)

ducing one or two commodities only, cannot but be considered by the investing public as subject to risks which must be discounted by an attractive yield. The consequence is a large disparity between the market price of the shares and their break-up value, which has led in recent years to efforts being made by speculators to profit from this disparity. Because of the disparity, a situation has arisen in which the shareholder anxious to dispose of his shares has had to accept a price far below their real worth. The take-over bidders are not a cause of the dilemma of the plantation industry; they are a symptom of the present conflict of interest between the long-term development of plantations and the immediate requirements of those shareholders who need to realise their capital in these days of heavy taxation. Is there no solution to this conflict without sacrifice somewhere? We think there may well be, and in Paragon we are trying to find one, not as a compromise but as a creative solution. Our approach is through diversification, by the investment of surplus assets in non-plantation activities."

COL. CHRISTIAN DE LISLE,
Pahang Para Rubber Syndicate Ltd. (London)

Points From The Chair

Inflation

"AS regards inflation, I have always regarded it as inherently dishonest, and evil in its ultimate effects. Its presence to an appreciable extent for any length of time in the economy of a moral nation has to me ever seemed unworthy and indictable. I have consistently aligned myself in strong opposition to those who have advocated a deliberate policy of sustained inflation, because I believe that road would ultimately and inevitably lead to the end of this nation as a free and prosperous society. In recent months there has been ample evidence that inflation is at long last incurring severe public condemnation, and it has also become clear that the primary brand of inflation now endangering the economy is wage inflation, caused by the successive granting of wage increases unconditioned by rises in production. Our economic plight arises principally from this maladjustment and from excessive capital expenditure in the public sector of the economy—excessive in the sense that, although the objectives may be eminently desirable, too much is being attempted in a hurry. Happily, after much indeterminate action, the Government now has every appearance of following a resolute policy, designed to match the magnitude of the task of restoring the internal economy to equilibrium. There lies the crux of the matter. The external problem of the balance of payments is a derivative of internal stresses, and will in large measure be resolved by successful handling of the domestic issues."

THE RT. HON. THE EARL OF AIRLIE,
British Linen Bank

Wages and Productivity

"The average earnings per worker of your Company have increased by 57 per cent. over his earnings in 1950-51, while the cost of living index during this period has increased by 13 per cent., thus giving a net increase of 44 per cent. in the real earnings of the workers. In the ultimate analysis, after a certain limit, the increase in the workers' earnings will have to be achieved only by increase in his skill and better application of his mind to the work allotted to him as would result in greater productivity. In order to combat inflationary trends in the economy, of which wage increases are contributory factors, reduction in costs is necessary by increasing productivity. The quality of the products should also improve. For this purpose, improvements and modernisation in plant and equipment should continue to be made by the industry. I trust that the Government of India would give all necessary facilities to the industry for this purpose and such foreign exchange requirements as may be essential would be given high priority."

SHRI KAMALNAYAN BAJAJ,
Mukand Iron and Steel Works Ltd.

Consumption of Fertilisers

"The consumption of compound fertilisers in terms of plant food nutrients has again risen considerably and largely accounts for the increase in potash consumption. Most of the potash used is applied as a constituent of compound fertilisers and there has been a tendency to increase the proportion of this element in response to farmer demand. The modest increase in nitrogen is also a reflection of increased use in compounds as well as heavier applications of straight fertilisers. The increased sowings of the new varieties of cereals which respond so well to heavy applications of nitrogen, and carry less risk of lodging, are an important factor in its wider use. The levelling off in phosphate consumption gives rise to concern, particularly so when it is associated with increases in the other two elements, for there is a risk of the unbalanced use of the three plant foods with deleterious results on crop quality and yields. Soil analysis is not always a reliable guide to the response obtainable from phosphatic fertilisers, for very often soils with an apparently satisfactory phosphate status will give economic responses when phosphatic fertiliser is applied."

SIR CLAVERING FISON,
Fisons Limited (Suffolk)

Cement Industry in Britain

"In common with all other industries, we have been asked to express our views on how the cement industry would be affected should plan for a European Free Trade Area become a reality. The cement industry in Great Britain is fortunate in that it has ample raw materials in accessible areas, and it also has the advantage of cheaper fuel and power than most other countries in Europe. Our industry is highly mechanised and, therefore, labour costs are not a dominant factor. As cement is an inexpensive article in relation to its weight, it has a natural protection on account of freight from overseas countries. For these reasons, it is unlikely that any European cement manufacturer could compete in the home market with British cement unless dumping was resorted to. On the other hand, owing to the high freight rates, it is unlikely that British cement could be sold at competitive prices in other countries likely to join the Free Trade Area."

N. M. JENSEN,
The Tunnel Portland Cement Co., Ltd. (London).

Dilemma of Plantations

"We must recognise that the price of such commodities as tea and rubber are subject to considerable fluctuations and, therefore, the profits of plantation activities fluctuate accordingly. A plantation company in a politically sensitive area, pro-

COMPANY MEETINGS AND DIVIDENDS

BURN & CO., LTD. Annual General Meeting, Calcutta, 22nd November 1957. Dividend: Rs. 20.00 per share. Transfer books remain closed from 15th to 22nd November 1957, both days inclusive.

DISHERGARH POWER SUPPLY CO., LTD. Annual General Meeting, Calcutta, 25th November 1957. Dividend: Rs. 6.50 per share. Transfer books will remain closed from 18th to 25th November 1957, both days inclusive.

CHAMONG TEA CO., LTD. Annual General Meeting, Calcutta, 28th November 1957. Dividend: Re. 0.75 per share. Transfer books will remain closed from 22nd to 29th November 1957, both days inclusive.

GUNGARAM TEA CO., LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Rs. 10.00 per share. Transfer books will remain closed from 19th to 29th November 1957, both days inclusive.

DAURACHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Re. 1.50 per share. Transfer books will remain closed from 19th to 29th November 1957, both days inclusive.

KUMARDHUBI FIRECLAY AND SILICA WORKS LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Re. 1.00 per share. Transfer books remain closed from 15th to 29th November 1957, both days inclusive.

TELIAPARA TEA CO.,·LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Rs. 15.00 per share. Transfer books will remain closed from 19th to 29th November 1957, both days inclusive.

AMALGAMATED COALFIELDS LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Re. 1.25 per share. Transfer books will remain closed from 22nd to 29th November 1957, both days inclusive.

CENTRAL INDIA COAL-FIELDS LTD. Annual General Meeting, Calcutta, 2nd December 1957. Transfer books remain closed from 15th November to 2nd December 1957, both days inclusive.

VELLORE ELECTRIC CORPORATION LTD. Annual General Meeting, Madras, 5th December 1957. Dividend: Re. 1.00 per share. Transfer books will remain closed from 20th November to 5th December 1957, both days inclusive.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 6th December 1957. Dividend: Rs. 14.00 per share, payable on and after 9th December 1957. Transfer books remain closed from 15th November to 7th December 1957, both days inclusive.

TEXTOOL CO., LTD. Annual General Meeting, Ganapathy, Coimbatore, 11th December 1957. Transfer books will remain closed from 28th November to 11th December 1957, both days inclusive.

COORLA SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 20th December 1957. Dividend: Rs. 12.50 per share (includes bonus of Rs. 5.00 per share). Transfer books will remain closed from 7th to 21st December 1957, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. *Ad-interim* dividend of Re. 0.45 (4½ per cent.) per share, for the year 1957-58. Transfer books will remain closed from 23rd November to 5th December 1957, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Interim dividend of Re. 1.00 per share, for the year ending 31st December 1957, payable on 28th November 1957. Transfer books remain closed from 14th to 27th November 1957, both days inclusive.

AHMEDABAD ADVANCE MILLS LTD. Dividend of Rs. 5.00 per share, for the year ended 30th June 1957, payable on 19th December 1957. Transfer books will remain closed from 18th November to 17th December 1957, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Final dividend of 10 per cent. per annum on preferred ordinary shares and Re. 1.25 per share (including bonus of Re. 0.37 per share) on 'A' and 'B' ordinary shares, for the year ended 31st March 1957.

BELAPUR CO., LTD. Dividend of Rs. 18.00 per share, for the year ended 30th September 1957, payable on 3rd January 1958. Transfer books will remain closed from 18th November to 17th December 1957, both days inclusive.

UNITED BREWERIES LTD. Final dividend of Rs. 7.50 per share (making a total of Rs. 20.00 per share, for the year), for the year ended 31st March 1957.

DAVANGERE COTTON MILLS LTD. Dividend of Rs. 9.00 per share, for the year ended 31st March 1957. Transfer books will remain closed from 26th November to 9th December 1957, both days inclusive.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Final dividend of 12 per cent. (making a total of 17 per cent. for the year), for the year ended 30th September 1957.

GROB TEA CO., LTD. Annual General Meeting, Calcutta, 30th November 1957. Dividend: Rs. 3.25 per 'A' ordinary share (including interim dividend of Re. 1.00 per share) and Re. 1.62 per 'B' ordinary share (including interim dividend of Re. 0.50 per share). Transfer books will remain closed from 23rd to 30th November 1957, both days inclusive.

INVESTMENT AND FINANCE CO., LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Rs. 10.00 per share (includes interim dividend of Rs. 2.50 per share). Transfer books will remain closed from 16th to 29th November 1957, both days inclusive.

DUFFLAGHUR TEA CO., LTD. Annual General Meeting, Calcutta, 28th November 1957. Dividend: Rs. 4.00 per share (includes interim dividend of Re. 1.50 per share). Transfer books will remain closed from 19th to 28th November 1957, both days inclusive.

GOHPUR TEA CO., LTD. Annual General Meeting, Calcutta, 28th November 1957. Dividend: Rs. 2.50 per share (including Re. 1.00 per share). Transfer books will remain closed from 19th to 28th November 1957, both days inclusive.

DISHERGARH POWER RAISES DIVIDEND

BARNAGORE JUTE SUFFERS LOSS

Dishergarh Power Supply Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts show a profit, after charging all expenses, of Rs. 5,92,878 (Rs. 4,35,552) of which provision for taxation requires Rs. 1,80,000 (Rs. 65,000). The balance brought forward from last year was Rs. 9,14,296 (Rs. 9,61,177). The Government of West Bengal has approved the transfer from contingencies reserve of Rs. 67,759 (*nil*) making a total available for appropriation of Rs. 13,94,933 (Rs. 13,31,729). The directors have transferred to contingencies reserve Rs. 23,239 (Rs. 24,233) and to general reserve Rs. 1,28,258 (*nil*) leaving a balance of Rs. 12,43,436 (Rs. 13,07,496). Out of this amount the directors recommend payment of the following dividends:—

At Rs. 5.00 per share on 'A' preference shares absorbing Rs. 80,000 (Rs. 80,000), Rs. 4.50 per share on 'B' preference shares absorbing Rs. 54,000 (Rs. 54,000) and at Rs. 6.50 (Rs. 6.00) per share on ordinary shares absorbing Rs. 2,80,800 (Rs. 2,59,200) leaving a balance to be carried forward of Rs. 8,28,636 (Rs. 9,14,296).

Units sold during the year amounted to 83.76 million compared with 76.73 million during the previous year. This represents an increase of about 6 per cent. and arose partly from increases in the connected load and partly from additional demands by collieries for underground pumping consequent upon abnormal rainfall during the monsoon.

Towards the end of September 1956 there was particularly heavy rainfall which amounted to over 18 inches during a 48-hour period and resulted in flood conditions and the closure of the generating station for a short period. Although, with the assistance of the Damodar Valley Corporation, supply to consumers was maintained, there was a resultant estimated net revenue loss to the Company of Rs. 67,759. In the circumstances the Government of West Bengal approved an equivalent transfer from contingencies reserve and this is shown in the accounts. In conformity with the Electricity (Supply) Act, 1948 the Undertaking's selling rates were increased with effect from 26th September 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	71,20,000	Block ...	59,79,436
Reserves ...	15,50,039	Stores and spare parts	8,14,595
Provision for taxation ...	94,578	Debts, deposits and advances ...	6,43,078
Liabilities ...	14,89,328	Investments	36,27,503
Profit and loss account ...	8,28,636	Cash ...	9,956
		Losses not written off	8,013
Rs.	1,10,82,581	Rs.	1,10,82,581

Barnagore Jute Factory Co., Ltd.

The directors of the above Company (Chairman: Sir John H. Burder, London) submitted the audited accounts of the Company for the year ended 31st March 1957.

The loss for the year amounts to £122,694 to which has to be added depreciation of fixed assets £68,053 (£44,824) and provision for doubtful debts £14,039 (*nil*) making a total of £204,786 (£171,444). After deducting provision for taxation in past years no longer required of £44,654 (*nil*), profit on sale of land in 1956 £3,096 (*nil*) and rent receivable in respect of prior years on requisitioned land £14,439 (*nil*) there is a debit balance of £142,597 (£13,696 after adjustment) to which has to be added the debit balance brought forward from 31st March 1956 of £13,696 leaving a debit balance of £156,293 (£13,696) to be carried forward. This amount has been deducted from the revenue reserves.

Under the terms of the Working Time Agreement of the Indian Jute Mills Association the Mills continued to work 48 hours per week throughout the period under review. Until 16th July 1956, only 5 per cent. of the looms were sealed but as from 18th July a further 2½ per cent. of the looms were sealed and on the 19th September a further 5 per cent., making a total of 12½ per cent. of the total complement under seal for the remainder of the period.

The decision to restrict production was taken by the Indian Jute Mills Association when it became clear that, in spite of the low price of finished goods, there was no increase in demand, indicating that output was considerably in excess of world consumption. Stocks of finished goods held by Calcutta Mills rose steadily during the first half of 1956 to almost double the figures recorded at the end of December 1955. Following the re-sealing of looms on 18th July and 19th September 1956 a very substantial recovery was made from the disastrous earlier over-production, although, due to a general falling off in demand from overseas markets and to a disappointing diminution in the internal offtake, stocks have again tended to rise since the end of March. Hessian production throughout the industry has been maintained at a high level and it is in these constructions that some slight anxiety is at present felt as regards the stock position.

In their last report the directors referred to trading conditions during the year then under review as having remained extremely difficult. During almost the whole of the period covered by the accounts now submitted the same difficulties not only subsisted, but became greatly magnified. For the second year in succession it was at no time possible for the Company simultaneously to buy jute and to sell manufactured goods at prices which did not show a substantial loss on the transaction. Due to over-production during the earlier part of 1956 the prices of finished goods showed substantial falls, while at the same time, due to the increased demand for the raw material, the price of jute remained at a high level.

It is satisfactory that the Government of India have now realised the vital necessity of the achievement of self-sufficiency in jute within India, and measures have been introduced on both a short and long-term policy basis to step up production in the shortest possible time.

Having regard to the steps taken to increase production of raw jute in India, as well as to the curtailment of the production of finished goods to bring this into line with current world demand, the directors feel it possible to regard with somewhat more optimism the future of the Company during the twelve months succeeding those now under review.

The trading loss of £121,539, as disclosed in the accounts now submitted, has been aggravated by extremely heavy benefits and gratuities paid to retrenched workers, following the installation of the modern Mill Machinery to which reference was made in the last report. Compensation paid in this manner has accounted for approximately £55,000 of this loss, against which the benefit of a reduced labour force has not had time to accrue to the fullest extent; but it is now possible to confirm that the estimates of future savings in labour wages, upon which, the decision was made to install the new Mill Machinery, will be fully achieved. Although, as stated above, the full benefit has not yet been obtained, the past year's experience shows that the wage bill for the complement of labour now employed, as compared with the complement of labour on the books before the modernisation programme started to take effect, should show a saving of approximately £122,000 per year: equivalent to over 20 per cent. of the normal wage bill.

To take the fullest advantage of the new machinery now installed a decision was taken, which became effective from the middle of March this year, to close down the South Mill entirely and concentrate all production in East Mill by triple shift working of mill machinery there with double shift working of the Weaving Department. No decision has yet been reached as to the future of the South Mill buildings.

The large scale introduction of new machinery at the same time as maintaining full production with the old equipment is a complex operation of considerable magnitude. The continuation of normal working has been carried on under the most difficult conditions, to which has been added the necessity of running in the new machinery and training the operators in its use.

Accounts in brief were as under:—

Liabilities	£	Assets	£
Capital ...	475,000	Block	705,313

		Investments ...	15,358
		Cash	35,384
£	1,956,240	£	1,956,240

United Collieries Ltd.

The directors of the above Company (Managing Agents: Messrs. Karam Chand Thapar and Bros. Private Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

Raisings and despatches: Raisings during the year under review were 2,54,314 tons as against 2,39,537 tons of the previous year. The corresponding figures for despatches were 2,49,054 tons and 2,40,407 tons respectively. It will be seen that improvement in raisings and despatches were maintained during the year under review.

North Chirimiri Colliery: The screening plant could not be installed during the year, as some parts are yet to be supplied by the manufacturers. The Company's mining engineers are endeavouring their best to expedite its installation.

Central Sounda Colliery: Permission to open Sirka seam was obtained from the Coal Board and the mining engineers are engaged in fitting up the new pit. It is expected to start raising coal from this new seam by the end of 1958.

Accounts for the year under review, after meeting all coal raising expenses, loading and transport charges, royalties, repairs, etc., show a gross profit of Rs. 11,36,668 as against Rs. 13,95,736 of last year. After taking into account the interest and other expenses, providing Rs. 3,55,739 (Rs. 6,39,386) for depreciation and Rs. 3,00,000 for taxation, the accounts for the year under review show a net profit of Rs. 3,07,583 (Rs. 2,90,148) including last year's carry forward of Rs. 26,524 which the directors propose to distribute as follows:—

To dividend on preference share at 5 per cent. per annum for the year ended 31st December 1956 Rs. 62,825 (Rs. 1,25,650 for 1954 and 1955) to dividend on ordinary shares at 7½ (5) per cent. for the year ended 31st December 1956 Rs. 2,06,961 (Rs. 1,37,974) and to carry forward Rs. 37,797 (Rs. 26,524).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,41,475	Block ...	29,54,314
Reserves ...	1,12,799	Capital expenditure in progress ...	2,14,690

		Investments ...	10,88,500
		Cash ...	34,927
		Miscellaneous expenditure	18,461
Rs.	69,06,273	Rs.	69,06,273

Talcher Coalfield Ltd.

The directors of the above Company (Calcutta) submitted the audited accounts of the Company for the year ended 30th September 1956.

The revenue account for the year shows a loss of Rs. 1,92,486. After bringing in the balance from the previous year, there remains a total debit of Rs. 5,62,907 in the profit and loss account to be carried forward.

There has been a huge increase in the expenses of the colliery due to the implementation of the Award of the All India Industrial Tribunal (Colliery Disputes) with effect from 26th May, 1956. Although an increase of Rs. 5 per ton was sanctioned by the Government of India on 5th July, 1956, in the price of the coal raised by the Company's colliery, this did not cover fully the increase in expenditure resulting from the Award. Moreover, there was practically no stock of coal in the colliery during the period under review which could get the benefit of the price increase and therefore no recovery was possible on the liability incurred in respect of the increased wages payable. As it has become necessary to improve the raisings without much delay if the colliery is not to suffer further losses, every effort is being made to secure the finances required for having a higher output.

Raisings for the year were 55,469 (455,651) *tons* 5 (7) cwts. and despatches 45,328 (45,690) tons 6 (7) cwts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	16,49,192
Reserves ...	15,075	Stores ...	1,26,186
Debentures ...	5,00,000	Debts, deposits and advances ...	2,53,739
Liabilities ...	10,79,693	Investments	825
		Cash ...	1,919
		Miscellaneous expenditure and losses	5,62,907
Rs.	25,94,768	Rs.	25,94,768

Phoenix Mills, Ltd.

The directors of the above Company (Agents: Messrs. Ramnarain Sons Private Ltd., Bombay) submitted the audited accounts of the Company for fifteen months ended 31st March 1957.

The result of the fifteen months' working shows a profit of Rs. 17,63,319 after providing Rs. 8,45,839 for depreciation and Rs. 12,00,000 for taxation. To this result has to be added a sum of Rs. 1,18,358 brought forward from last year's account, making a total of Rs. 18,81,677 which, the directors have appropriated as under:—

To payment of a proposed dividend at Rs. 12.50 per share on 48,000 shares, free of income-tax absorbing Rs. 6,00,000 and to gratuity reserve Rs. 8,75,000 leaving a balance to be carried forward to next year's account of Rs. 4,06,677.

Although prices and deliveries were fairly satisfactory during the earlier months of the period under review, the position deteriorated as a consequence of an increase in excise duty on cloth which took effect from 1st September 1956.

The directors have thought it fit to change the year end of the Company from 31st December to 31st March to fall in line with the Income-tax year, with effect from this year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	48,00,000	Block ...	58,94,261
Reserves ...	54,20,707	Stock in trade ...	1,30,38,791
Provision for taxation ...	12,00,000	Stores, spares, etc. ...	12,42,952
Liabilities ...	1,21,64,646	Debts, deposits and advances ...	35,69,037
Profit and loss account ...	4,06,677	Investments ...	1,93,101
		Cash ...	53,888
Rs.	2,39,92,030	Rs.	2,39,92,030

Bhowra Kankanee Collieries Ltd.

The directors of the above Company (Managing Agents: Messrs. Karam Chand Thapar and Bros. Private Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

Raisings and despatches: During the year under review total gross raisings from all the collieries were 6,07,680 tons as against 5,60,970 tons of the previous year. The corresponding figures for despatches were 6,09,026 tons as against 5,77,060 tons. The closing stock was 15,069 tons. The figures given above will show an increase in raisings and despatches from the collieries.

Raisings from Amlabad Colliery were better than in the previous year and is expected to return to normal by the end of year 1957.

The Company's mining engineers have drawn Five-years scheme—with a view to augmenting the raisings from all the collieries by opening new seams and re-opening abandoned seams. Raisings are expected to go up much more from the year 1958 onward.

General: An elaborate scheme for sand stowing has been prepared for Bhowra, Pootki, Kankanee and Amlabad Collieries, and an application was made to the Coal Board for sanction of a loan. The Coal Board has since sanctioned a loan of Rs. 29.23 lakhs.

The existing plants and machinery were maintained in good order and orders for new machinery have been and are being placed to implement our programmes. Arrangements are being made to obtain extra siding space and sand bearing areas for sand stowing purposes.

The accounts for the year under review, after meeting all coal raising expenses, wages, salaries and bonuses, loading and transport charges, royalties and repairs, etc., show a gross profit of Rs. 12,78,995. After taking into account interest, managing agents' remuneration, directors' fees, etc., and after providing Rs. 4,28,122 (Rs. 4,45,028) as depreciation and Rs. 1,13,820 (Rs. 59,545) as development rebate, the accounts show a net profit of Rs. 5,32,174 (Rs. 3,88,528). After providing Rs. 2,85,000 (Rs. 1,80,000) as provision for taxation, there is a credit balance of Rs. 2,73,018 (Rs. 2,08,528) including the last year's carry forward of Rs. 25,844, which the directors propose to distribute as follows:—

To dividend on preference shares at 5½ per cent. per annum (income-tax fee) for the year ended 31st December 1956 Rs. 55,000 (Rs. 54,297), to dividend on ordinary shares at 7½ (5) per cent. per annum for the year ended 31st December 1956 Rs. 1,92,595 (Rs. 1,28,388) and to carry forward Rs. 25,423 (Rs. 25,844).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,68,010	Block ...	43,51,144
Debentures ...	14,25,000	Stock in trade ...	2,55,643
Reserves ...	2,33,365	Stores and spare parts ...	7,99,900
Provision for taxation ...	2,37,935	Debts, deposits and advances ...	37,53,650
Liabilities ...	36,39,506	Cash ...	1,26,554
Profit and loss account ...	25,423	Miscellaneous expenditure ...	42,348
Rs.	93,29,239	Rs.	93,29,239

Upper Ganges Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the 15 months ended 31st March 1957.

The Government of India under Section 37 of the Indian Electricity Act of 1910 has brought into force rules which now make it obligatory for the Company's accounts to be made up to the 31st March of each year. To conform with these rules, it has been necessary to close the accounts on the 31st March, 1957 instead of 31st December, 1956. It is proposed that the Company's accounts will in future be made up annually to the 31st March in each year.

As indicated in the report for the half-year ended 31st December, 1955, there has been an appreciable increase in the number of consumers, with a consequent improvement in the revenue position. This has resulted in a considerable excess of clear profit over reasonable return, making a reduction in rates to consumers possible, and it is proposed to modify the charges for lighting and fan supplies throughout the rural area so as to bring all towns in line with Moradabad, where the charge is 5 annas 6 pies per unit. This, in effect, will mean that the rate in Amroha will be reduced by 6 pies per unit and in all other towns by 1 anna 6 pies per unit, the reduction taking effect from 1st April, 1957.

Satisfactory progress has been maintained during the period under review as indicated in the following schedule:—

Year Ended	*Units Sold*	*Revenue* Rs.
31st December, 1953 ...	7,031,124	11,67,181
31st December, 1954 ...	7,417,106	12,01,849
31st December, 1955 ...	8,138,813	13,34,214
31st March, 1957 (15 months)	11,960,311	20,76,277

After providing for all charges and placing Rs. 12,258 to statutory contingencies reserve, Rs. 49,347 to tariffs and dividends control reserve and Rs. 73,000 to general reserve, there remains a balance of Rs. 83,475 including Rs. 8,097 brought forward from the half-year ended 31st December, 1955. From this is deducted a sum of Rs. 29,925 in respect of dividends paid for the half-year ended 30th June, 1956, leaving a balance of Rs. 53,550 available for distribution, and this amount the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 per cent. per annum free of income-tax for the nine months ended 31st March, 1957 Rs. 44,887 and carrying forward to next year Rs. 8,663.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,99,250	Block ...	10,87,392
Reserves ...	3,69,890	Work-in-progress ...	5,379
Provision for taxation ...	22,065	Stores, spare parts and tools ...	6,88,030
Liabilities ...	16,33,027	Other assets	173
Profit and loss account ...	8,663	Debts, deposits and advances ...	3,59,713
		Investments	80,219
		Cash ...	4,11,989
Rs.	26,32,895	Rs.	26,32,895

Saugor Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the 15 months ended 31st March 1957.

At the time of making this report, information has been received from Saugor that the plant installed in the new thermal station has undergone satisfactory trials, and the power station is to be brought into full commercial use as from the early part of October 1957.

Normal progress has been maintained, although the cost of fuel oil has appreciably increased during the past 12 months, however, with the closing down of the oil engine plant, lower operating costs are expected in future, together with improved output and financial results, due to the affording of a bulk supply to the Madhya Pradesh Electricity Board in connection with the extension of its mains to Damoh and other towns, and a major power load for the municipal water supply scheme.

Satisfactory progress has been maintained during the period under review as indicated in the following schedule:—

Year Ended	*Units Sold*	*Revenue* Rs.
31st December 1953 ...	1,232,629	4,03,122
31st December 1954 ...	1,280,801	4,21,063
31st December 1955 ...	1,358,962	4,42,098
31st March 1957 (15 months)	1,906,378	6,21,206

After providing for all charges and placing Rs. 4,606 to statutory contingencies reserve and Rs. 21,000 to general reserve, there remains a balance of Rs. 21,080 including Rs. 2,246 brought forward from the half-year ended 31st December, 1955. From this is deducted a sum of Rs. 7,500 in respect of dividends paid for the half-year ended 30th June, 1956, leaving a balance of Rs. 13,580 available for distribution, and this amount the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 5 per cent. per annum free of income-tax for the nine months ended 31st March 1957 Rs. 11,250 and carrying forward to next year Rs. 2,330.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	3,08,157
Reserves ...	1,55,919	Capital work-in-progress	5,11,367
Provision for taxation ...	31,832	Stores, spare parts and tools, etc.	1,96,866
Liabilities ...	6,33,210	Other assets	1,692
Profit and loss account ...	2,330	Debts, deposits and advances ...	39,939
		Investments	19,029
		Cash ...	46,241
Rs.	11,23,291	Rs.	11,23,291

Notices

THE BELAPUR COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE thirty-eighth Annual General Meeting of the Belapur Company, Limited, will be held on Tuesday, the 17th day of December, 1957, at 4.00 p.m. (S.T.), at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1957.
2. To declare a Dividend.
3. To elect a Director in place of Sir Purshotamdas Thakurdas, K.B.E., who has attained the age of 78 years and who retires by rotation but who offers himself for re-election, and to consider and if thought fit to pass the following, of which special notice has been received by the Company and is hereby given, as a special resolution:

   "That Sir Purshotamdas Thakurdas, K.B.E., who retires by rotation be and is hereby appointed a Director of the Company and that the age limit prescribed by section 280 of the Companies Act 1956 shall not apply to him."

   The reasons which make this resolution necessary are set out in the statement of material facts annexed to this notice which shall be deemed to be incorporated in this notice.
4. To elect a Director in place of Mr. Bhagwandas C. Mehta, who retires by rotation but offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,

W. H. BRADY & Co., LTD.,

JOSEPH KAY,
Managing Director,
Managing Agents.

BOMBAY, *5th November*, 1957.

Notes: (i) The Transfer Books of the Company will be closed from the 18th day of November, 1957, to the 17th day of December, 1957, both days inclusive.

(ii) The Dividend when declared will be made payable through the Bank of India, Ltd., Fort, Bombay, on and after the 3rd day of January, 1958. The Dividend Warrants will be posted to those shareholders whose names stand on the Company's Register on the 17th day of December, 1957.

To the Shareholders of the Belapur Company, Limited and in particular to:

Mr. William Abel.

M/s. Rajabali Hasom Paroo & Sons Ltd.

ANNEXURE

Statement of material facts and reasons in respect of items of special business in the accompanying Notice dated the 5th November, 1957.

Item No. 3.—Sir Purshotamdas Thakurdas, K.B.E., who retires by rotation and is eligible for re-election, has attained the age of 78 years and hence he can only be re-elected as a Director by a special resolution, notice of which has been received by the Company, in accordance with the requirements of Sections 190, 280 and 281 of the Companies Act, 1956. Sir Purshotamdas Thakurdas has been associated with the Company as a Director since its inception and his wide and varied experience have been most valuable to the Company during that time. It is therefore considered desirable that this association should be continued.

THE AHMEDABAD ADVANCE MILLS LIMITED

NOTICE

THE FIFTY-FIFTH ANNUAL GENERAL MEETING of THE AHMEDABAD ADVANCE MILLS, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Wednesday the 18th December, 1957, at 4-30 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 30th June 1957, and the audited Balance Sheet as at 30th June 1957.
2. To declare Dividends.
3. To appoint a Director in place of Mr. Gautam Sarabhai who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Mr. Pratapsinh Mathuradas who retires by rotation and is eligible for re-appointment.
5. To consider the appointment of Mr. Jal H. Mehta as a Director of the Company in respect of whom a notice in writing, proposing him as a candidate for the office of Director, has been received by the Company.
6. To appoint Auditors for the current year and to fix their remuneration.

Notes:—(*a*) The relative Explanatory Statement, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under item 5 set out above, is annexed hereto.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will be closed from Monday, the 18th November, 1957 to Tuesday, the 17th December, 1957, both days inclusive.

(*d*) If dividends on shares, as recommended by the Directors, are passed at the meeting, the payments will be made on and after Thursday, the 19th December, 1957, to those members whose names are on the Register of the Company on the 17th December, 1957.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,

T. V. BADDELEY,
Director.

BOMBAY, *4th November*, 1957.

ANNEXURE TO NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

The following explanatory statement, as required by Section 173 of the Companies Act, 1956, sets out the material facts relating to the special business under item 5 mentioned in the Notice dated the 4th November, 1957.

There being room for one more Director on the Board of the Company, a notice has been received from some members under Section 257 of the Companies Act, 1956, signifying their intention to propose the appointment of Mr. Jal H. Mehta as a Director of the Company. Mr. Mehta is a businessman of repute, and it would be in the interest of the Company to have the benefit of his advice as a member of the Board. It is, therefore, proposed that his appointment as a Director be made in accordance with the provisions of Section 257(1) of the Act.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,

T. V. BADDELEY,
Director.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 p.m. on Tuesday the 24th day of December 1957, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors, including Sir Asoka K. Roy, who retires by rotation, and, being 71 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

   To be proposed as an Ordinary Resolution.

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

The Share Transfer Registers of the Company will be closed from 12th December, 1957 to 24th December, 1957, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE)
LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, *4th November*, 1957.

Notes:—(*a*) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 8th January, 1958, to those shareholders so entitled whose names appear in the Company's books on the 24th December, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Sir Asoka K. Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

MONEY RATES WELL HELD

(From Our Own Correspondent)

BOMBAY, *13th November*

The short-term money market continued to rule comfortable during the week under review also. The heavy subscriptions to the 4½ per cent. Bombay State Financial Corporation Bonds aggregating Rs. 1 crore, which were fully taken up on the opening day itself, closely following the Rs. 2 crore Municipal Corporation loan issue in the previous week, did not have any effect on the supply position of banks. Banks continued to be free lenders in the inter-bank call money section, though the rate of interest was unchanged at 3 per cent. House money at call and short-term deposits continued to be keenly bid, the former at 4½ to 4¾ per cent. and the latter at 4½ per cent. for one to two months and at 4½ to 4¾ per cent. for three to six months.

A sharp expansion of Rs. 20.54 crores in notes in circulation is shown by the Reserve Bank of India statement for the week ended 8th November 1957. Notes held in the Banking Department are lower by Rs. 21.67 crores and the consequent fall of Rs. 1.13 crores in total notes issued is covered by a similar decline in rupee coin. Foreign securities have declined by Rs. 9.94 crores, but there has been a corresponding rise in rupee securities. While foreign securities are lower by Rs. 9.94 crores, balances held abroad (in the Banking Department) have gone up by Rs. 3.35 crores, so that the net fall in total foreign assets is of the order of Rs. 6.59 crores. Deposits of the Central Government are up by Rs. 1.04 crores, while those of other Governments and banks have declined by Rs. 3.44 crores and Rs. 13.97 crores, respectively. Loans and advances to Governments show a rise of Rs. 1.81 crores, while other loans and advances have gone down by Rs. 1.33 crores, mainly due to the fall of Rs. 2.12 crores in advances to Scheduled banks against usance bills.

The Scheduled banks' statement for the week ended 1st November 1957 discloses a further rise in deposits of banks, demand deposits recording an increase of Rs. 2.60 crores and time deposits Rs. 4.64 crores. Inter-bank borrowings are lower by Rs. 2.94 crores and borrowings from the Reserve Bank by Rs. 5.26 crores. The increase in deposits is accompanied by a fall of Rs. 11.49 crores in advances. Bills purchased and discounted are, however, fractionally higher by Rs. 33 lakhs. There has also been a rise of Rs. 9.93 crores in investments. Cash balances have gone up by Rs. 1.46 crores and money at call and short notice by Rs. 3.06 crores.

The Gilt-edged market was featureless, but the undertone remained steady, thanks to the sustained enquiries for short-dated and short-medium dated loans. The long-dated issues continued to be neglected. The volume of business did not, however, show any expansion. 3 per cent. 1986 Conversion Loan continued to be on offer at Rs. 71.00. 3 per cent. 1970-75 also attracted sellers at Rs. 86.05 and 3 per cent. 1966-68 was friendless at Rs. 91-10. 3 per cent. 1964 was in demand and gained 5 nP to Rs. 93.70. 3 per cent. 1963-65 rose by 5 nP to Rs. 93.35 and 1959-61 by 10 nP to Rs. 93.65, at which levels they were still in request. 3½ per cent. 1961 gained 5 nP to Rs. 99.65. 3½ per cent. 1964 and 1965 had buyers at Rs. 97.55 and Rs. 97.30, respectively. 3½ per cent. 1967 was on offer at Rs. 97.60 and 3¾ per cent. 1967 at Rs. 99.50. 4 per cent. 1972 had sellers at Rs. 100. State loans were featureless, but demand was evident in selected issues. Thus, 4 per cent. Madras 1967 gained 5 nP to Rs. 96.50 and Andhra 1967 scored a similar gain to Rs. 95.80. Andhra 1968 was marked up by 10 nP to Rs. 95.90.

The rupee ruled steady in terms of the dollar, in consonance with the trend of sterling abroad. Bank's selling rate of ready dollars dropped a little from Rs. 480 to Rs. 477.75 and their buying rate from Rs. 474.75 to Rs. 474.25 per $100. In London, spot sterling gained from $2.80-2.80½ to $2.80½-2.80¾ and three months' forward from $2.77.9/16-2.77.11/16 to $2.77⅝-2.78. Transferable sterling was marked up from 278.30-278.45 cents to 278.40-278.50 cents.

TRADING IN KIPS POOR

(From Our Own Correspondent)

MADRAS, *11th November*

Trading in kips was poor, because shippers were not able to follow U.K. importers' bids. Premium class tannages, especially light weights, were sold at unchanged prices, while medium weights and heavies were difficult to sell. There was good inland demand for inferior fifths at 5 per cent. above U.K. levels. Arrivals of buffalo hides were small and clearance was good at firm prices. Buff calf market was steady and cow calf weak.

There was no change in the tanned skins section. Importers were trying to buy 3d. to 6d. lower than last levels, which shippers were resisting. There was good call for common sheep and prime sheep, while mediums were weak. Exporters to Japan were not active.

HIDES FIRM

(From Our Own Correspondent)

KANPUR, *11th November*

During the week under review, the hides and skins market ruled firm. Buyers were active. There was an appreciable rise in prices of the major items. The main parties fathering the transactions were the local tanners headed by Messrs. Cooper Allens. Fresh supplies were ample.

The latest quotations are: Wet salted cow, 1st grade Rs. 340, 2nd grade Rs. 270 and 3rd grade Rs. 145 to Rs. 150 per score; wet salted buff, 1st grade 1 lb. 6 ozs., 2nd grade 1 lb. 10 ozs. and 3rd grade 1 lb. 12 ozs. per rupee; wet salted buff calf, 1 lb. 14 ozs. per rupee; goat, 1st grade Rs. 320 and 2nd grade Rs. 225 per 100 pieces; sheep, 1st grade Rs. 350 and 2nd grade Rs. 325 per 100 pieces.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, *13th November*

The bullion market ruled firm during the week under review, thanks to the strong speculative support and good demand for both gold and silver in the ready section. The bullish enthusiasm in silver was fanned by reports that the heavy rains in the north would affect the influx of Tibetan coins and, with the onset of winter, there might not be any arrivals of coins from Kalimpong. The strict vigilance of the customs authorities, leading to heavy hauling of smuggled gold in recent weeks, coupled with the heavy offtake in the ready section, lifted up gold prices, with the result that, after a lapse of six months, they once again crossed this week the Rs. 109-mark.

Forward silver (9th December settlement) advanced from Rs. 182-11 to Rs. 184-11 today, before closing at Rs. 184-9.

Ready silver moved up from Rs. 181-11 to Rs. 184-1 and closed at Rs. 183-15. The discount, at which ready is quoted under December settlement, narrowed down from Re. 1 to As. 10, reflecting the shortage in floating stocks and the rise in demand. The floating stocks are estimated at 600 bars. The daily average arrivals were 30 bars, while the offtake improved from 15 bars to 20 bars per day.

Gold for forward delivery, (7th December settlement) hardened from Rs. 108-2 to Rs. 109-4, but shaded off on profit-taking to Rs. 109 at the close.

Ready gold gained from Rs. 108-3 to Rs. 109-9, before finishing at Rs. 109-4 today. The premium over the current settlement widened from an anna to As. 4. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals and offtake were each of the order of 3,500 tolas.

In New York, silver price was marked down yesterday from 90⅝c. to 90⅜c., but London prices were unchanged at 78¼d. for spot and 78¼d. for forward. Gold, however, declined from 249s. 9½d. to 249s. 8½d.

The following comparative table shows at a glance the trend of the market during the week under review:

	13-11-57	Highest	Lowest	6-11-57

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, *11th November*

While wheat prices ruled steady during the week under review, fresh gains were registered in the prices of maize and *bajra*, due to good seasonal demand. In order to check the rising trend in wheat prices, the Union Government has applied the amended provisions of the Essential Commodities Act in respect of wheat in the U.P. and the Punjab and this has acted as a check to the rising prices of wheat here.

Wheat was mostly unchanged at Rs. 16 per maund for average quality, while farm produce was transacted upto Rs. 17.25 per maund. Local wheat arrivals during the week were at an average of 150 maunds and stock here ran down by one *khati* during the week to 28 *khaties*. The corresponding figure last year was 72 *khaties*.

Rice continued to rule steady during the week, despite increase in new crop arrivals. This trend was attributed to food scarcity in neighbouring areas. The week-end prevailing prices were: Basmati Rs. 27 to Rs. 29; mainpuri Rs. 24; coarse quality Rs. 18.75 per maund.

Gram maintained a steady trend during the week, as local stock was small. Barley and *bejhar*, however, were quiet. Maize and *bajra* advanced fractionally, due to brisk demand. Maize was in request from Bihar and *bajra* from Rajasthan. *Guwar* was in good demand, in the face of poor local stocks. *Guwar* and *jowar* were steady at unchanged price levels. The latest prices (in rupees per maund) were: Gram 11.50 to 11.87; barley 10.7; *bejhar* 10; maize 12.25; *bajra* 13.25; *guwar* 13; *jowar* 9 to 10.50.

Although outside demand was dormant, peas and *arhar* prices did not display any signs of fall. Local stocks were mostly stationary. *Urd* and *moong* were bullish, in line with future section prices and the latest quotations on Monday were: peas *dara* Rs. 11.06; farm Rs. 11.31 to Rs. 11.75; peas *dal* Rs. 12.62; *bilti* Rs. 33.25 per bag, *arhar* Rs. 11; *arhar dal* Rs. 14.87; *bilti* Rs 38; *urd* Rs. 17.50 to Rs. 19.50; *moong* Rs. 17 to Rs. 18; *massor* Rs. 15 per maund.

After recording gains in the earlier part of the week, pulses futures declined later. The quotations as on Monday were: Peas *mangsir* Rs. 11.07; *jeth* Rs. 11.28; *arhar mangsir* Rs. 11.09; *jeth* Rs. 11.72; *bajra poh* Rs. 13.42; maize *poh* Rs. 12.44; *urd maha* Rs. 17.40; *moong maha* Rs. 15.31.

Sowings of *rabi* crops have been completed and the latest reports about germination are that they are satisfactory.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *13th November*

The weak trend noted last week in the cotton futures market gathered further momentum during the week under review and the market ruled distinctly easy. The chief influencing factors were weak advices from upcountry centres following heavy arrivals of crop, slow offtake in the piece-goods and yarn market and the consequent accumulation of stocks, the Government's unhelpful attitude in the matter of revision of excise duty on cloth and the continued monetary stringency. There were reports that some mills were going to close down one shift or seal a percentage of spindles. Although the forecast of a cyclone and firm advices from oilseeds market imparted some strength to the market on Monday, the recovery proved shortlived as weather showed signs of improvement. There were heavy liquidation of long positions and short selling with the result that values registered a sharp decline. Although the daily turnover improved considerably the undertone throughout the week was distinctly easy.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 701.50, Re. one lower than the previous close. The market ruled steady that day on encouraging advices from the oilseeds market. Owing to the absence of support, in the context of heavy selling on news of large arrivals of crop in terminal markets, the contract took a downward course subsequently, reaching a low of Rs. 692 on Saturday. After improving to Rs. 703.50 on Monday, following the forecast of cyclone, the contract succumbed to heavy liquidation, dropping to Rs. 688 yesterday. Opening today's session at Rs. 690.50, the contract suffered a sharp set back due to renewed bear pressure, and declined to Rs. 686. It closed, however, slightly higher at Rs. 689.50. The net loss over the week was Rs. 13.50.

The trend of price of the contract during the week is indicated below:

(In rupees per candy of 784 lbs.)

	13-11-57	*High*	*Low*	6-11-57
I.C.C. Moglai Jarilla (March 1958) ...	689.50	703.50	686	702.50

As daily arrivals in upcountry centres increased considerably, the interest of investors and mill buyers has shifted from the local to terminal markets. Arrivals in Berar and Punjab are over 25,000 bales a day. Quality of new crop in Berar is reported to be very good. Marketing has commenced in Khandesh and is to begin shortly in Jarilla tracts. In Punjab, about a quarter of the crop has already been sold. The crop progress in Gujerat is satisfactory and not much damage has been reported.

Spot premiums also declined in sympathy with the futures. Traders were very cautious as a further fall in prices was expected due to the mounting crop arrivals. Mill purchases were mainly for covering immediate requirements, as mills were reluctant to make large commitments in view of the declining trend of the market. The principal varieties which attracted attention were 197/3 Khandesh, Berar and ready lots of Kalyan and Laxmi. Some Bombay and Ahmedabad mills were also interested in CO 2.

On the export front, shippers interest in exportable styles continued to be subdued. Japan is reported to have decided to cut cotton imports during the six months period, October 1957 to March 1958, by about 300,000 bales to 1.1 million bales. Of the 50,000 bales of Bengal *Deshi* released for export early last month, only about 20,000 bales have been sold so far. Actual shipment aggregates about 3,000 bales.

A sizable volume of business was reported in new crop Uganda. The quota of 10,000 bales of Egyptian cotton has already been absorbed and the trade is awaiting a fresh quota of another 10,000 bales under the special payments arrangements. Some stray business was reported in American cotton 1-5/32" staple.

The following are the latest available spot rates—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

New Crop: Bengal *Deshi* 680 (710); Berar Jarilla 765 (785); Khandesh 790 (810); Oomra *Deshi* 750 (760); Vijay 900 (910); Hubli Laxmi 895 (895); Jayadhar 780 (785). *Delivery Contracts*: Khandesh 782 (797); Berar 772 (787); Vijay 13/16" 880 (894); 320F 863 (875); 216F 878 (892); Bengal 632 (642); Mathia 672 (672).

The steady movement of crop in the Punjab and the continued slackness of overseas demand exerted a downward pressure on cotton futures values in Karachi market which ruled easy over the greater part of the week. News that Japan has cut import of foreign cotton for the six months period October 1957 to March 1958, by about 300,000 bales imparted further weakness to the market. Towards the close of the week, however, a recovery was evident due, mainly, to short covering and firmer New York advices. The earlier losses were made up and both the January and March contracts closed the week higher. N.T.R.G. January which had closed at Rs. 76-7 last week improved, after having declined to Rs. 75-11-6, to close at Rs. 76-12. The March delivery, after touching a low of Rs. 78-2 on the 8th inst., closed higher at Rs. 78-7, as compared with last week's closing rate of Rs. 78-5.

In the spot section, barring Deshi styles, most other varieties were quoted lower. At close on the 12th inst., Sind Deshi and Punjab Deshi were quoted at Rs. 79 and Rs. 77-10 respectively. The following are the latest available rates—in rupees

per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 85-11; S.G. 80-11; L.S.S. Punjab Roller 77-3; S.G. 81-3; N.T. Roller 83-8; S.G. 89-4; 289F Punjab Roller 85-12; S.G. 94.

Under the pressure of strong speculative buying, based on the expectation of a renewed demand from overseas customers, cotton values in the Alexandria cotton futures market firmed up. Contrary to expectation, although the Sudan Gezira Board had reduced its reserve prices, Egyptian shippers have not reduced their offers. Spot premiums for higher grades of Karnak, Menoufi and Giza 30 have also hardened, due to scarcity of offerings. The latest available quotations—in tallaris per lb.—from Alexandria are given below, the figures in brackets being last week's closing rates:

Karnak: November 87.35 (84.40); January 85.15 (83.20). *Ashmouni*: December 69.05 (68.10); February 69 (68.25).

The Uganda Lint Marketing Board has announced a programme of five auctions for new crop Uganda this month. At each of these auctions, a quantity of 13,000 bales will be offered. B.P.52 will be offered for February-March or March-April delivery while other varieties will be offered for November-December delivery but with a proviso that delivery will be made in February-March if the earlier months prove to be unworkable. The Board has already sold about 125,500 bales of new crop Uganda and if the quantity offered at the five auctions this month are fully taken up, the total sold would aggregate 190,500 bales. Present estimates of new crop are around 285,000 bales.

Firm conditions prevailed in the Liverpool cotton futures market. The lower U.S., crop forecast by the Department of Agriculture on the 8th inst., was bullishly interpreted. Under large-scale buying orders, both the American and American type contracts firmed up. Following the reduction in the reserve prices of the Gezira Board, Sudan cotton contracts in Liverpool markets were marked down. The following are the latest available quotations from Liverpool:

American cotton one inch staple contract: December-January 25.80; March-April 25.97; May-June 26.07; July-August 26.07. *American cotton mixed growth contract*: December-January 26.80; March-April 26.75; May-June 26.85; July-August 26.83. *Sudan*: November-December 35.00; January-February 35.45; May-June 35.50.

Buoyant conditions prevailed in the New York cotton futures market. Prices rallied on trade and New Orleans buying and local short-covering. The main influencing factor was the November crop forecast, published on the 8th inst., which placed the season's crop lower at 11,788,000, as against last month's estimate of 12,401,000 bales. The yield per acre was estimated at 413 lbs., as compared with 435 lbs. a month ago. This compares with the last season's production of 13,310,000 bales and yield of 409 lbs. per acre and the ten-year (1945-54) average production of 13,098,000 bales and yield of 383 lbs.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	12-11-57	5-11-57	29-10-57
Spot	35.75	35.35	35.35
December	35.60	35.14	35.04
March	35.87	35.17	35.18
May	35.66	35.25	35.17

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 13*th November*

The easy trend noted in the yarn market last week continued unabated. Business transacted was at a low ebb and values continued to move downward. Forward deliveries of rayon yarns came in for persistent selling, on reports of heavy accumulations of stocks, thanks to poor offtake for domestic consumption. Export enquiries are said to be not encouraging, despite the efforts of the industry and the Government to boost sales of rayon fabrics abroad. It is stated that Japan, Italy and other countries are offering stiff competition to India in the export markets for fabrics. A section of the trade, however, feels that, with the concessions given by the Government, about Rs. 2 crores worth of fabrics may be exported in the next six months. In sympathy with rayon yarns and following bearish advices from consuming centres like Amritsar, Ludhiana and Bhagalpur, staple fibre yarns were also subjected to renewed selling and suffered a further break in prices. Cotton yarns, too, encountered selling, induced by pressure of sales by several mills in the face of poor demand from handlooms and powerlooms, as well as from overseas markets, particularly Aden, East Africa, Ethiopia, Hong Kong and Ceylon. Even reports that about 25,000 bales of yarn had been sold against the recent Burma tender failed to have any effect.

Snia rayon yarn (120 dull cones) December delivery slumped by Rs. 5 to Rs. 807. Business in the February delivery commenced today and, after moving narrowly, the contract closed at Rs. 796. Spot yarns, however, were steady. 120 Japan gathered 3 nP to Rs. 4.23 and 150 Japan 2 nP to Rs. 4.22. 120 Italy and 150 Italy were both quiet, the former at Rs. 4.50 and the latter at Rs. 4.25. Among indigenous yarns, National Rayons 120 bright cones first grade added 7 nP to Rs. 3.94. 150 bright cones first grade put on 2 nP to Rs. 3.43.

Staple fibre yarn (40 x 2) December delivery encountered heavy selling and dropped Rs. 12 to Rs. 530. Business in the February delivery commenced today at Rs. 532. After rising to Rs. 533, it closed lower at Rs. 528. Spot (40x2) New Greats came down by 6 nP to Rs. 2.94. Citys lost 2 nP to Rs. 3.06. Kohinoors were a naya paisa lower at Rs. 3.11. Centurys softened by 2 nP to Rs. 2.98. Among foreign yarns, Paramounts were neglected at Rs. 5.31, but Fujis gained 2 nP to Rs. 5.30.

In the cotton yarn section, ten counts Moderns and Podars were dull at Rs. 14.75 and Rs. 14.25, respectively. Twenty counts Gokaks were unchanged at Rs. 17.62. Moderns, however, hardened by 5 nP to Rs. 17.75. Among thirty counts, Indus decreased by 6 nP to Rs. 21.25. Forty counts Minaxis eased by 13 nP to Rs. 24.81. Gokaks dropped a rupee to Rs. 24.50. Moderns were stagnant at Rs. 25.50. Among sixty counts Moderns declined by 75 nP to Rs. 59.50. Raghuvamshis shed 25 nP to Rs. 52.25. Finlays were dull at Rs. 60. Eighty counts Mahendras eased by 5 nP to Rs. 68.20. Moderns changed hands at Rs. 73.50. Finlays were on offer at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	13-11-1957	6-11-1957
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia October	807.00	—
December	—	812.00
February	796.00	—
120 Japau (per lb.)	4.23	4.20
150 Japan (per lb.)	4.22	4.20
120 Italy (per lb.)	4.50	4.50
150 Italy (per lb.)	4.25	4.25
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October	530.00	—
40 x 2 December	—	542.00
February	528.00	—
40 x 2 New Great (per lb.)	2.94	3.00
40 x 2 Century (per lb.)	2.98	3.00
40 x 2 City (per lb.)	3.06	3.08
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.25	14.25
20s Gokak	17.62	17.62
30s Indu	21.25	21.31
40s Minaxi	24.81	24.94
60s Raghuvamshi	52.25	52.50
80s Modern	73.50	73.50

MARGINS ON GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, 13*th November*

What had been expected in the past fortnight has, at last happened. After the close of yesterday's session of the oilseeds market, the Forward Markets Commission came out with its directive imposing special margins in respect of the Bombay Oil and Oilseeds Exchange, as well as other recognised associations trading in groundnut and groundnut oil in Delhi, Saurashtra, Adoni and Madras. The margins will be at the rate of Rs. 25 per candy on all net purchases above a price level of Rs. 165 per candy of groundnut kernel obtaining in Bombay. The marginal line for the above mentioned centres will be in relation to the prices currently ruling in those centres but on the same basis as that for Bombay. The special margins will be payable on the net long position of each client as at the close of business tomorrow (Thursday), the brokers being required to submit the position of each client without any offsetting as between transactions of the various clients. Announcing this measure, the Commission said:

"The Commission hopes that, with the levy of the special margins, a certain amount of stability will be introduced in the groundnut market. As close watch is being kept on the position of the delivery contracts and, if there is a tendency to large-scale diversion from hedge to delivery contracts with a view to avoiding the special margins, steps will be taken to apply the margins also to delivery contracts in groundnut and groundnut oil."

The aforesaid move of the Forward Markets Commission is a sequel to the "speculative excesses and the consequent rise in the prices of groundnut futures." Groundnut February 1958 has been continuously moving up in the past 2½ months. The quotation which stood at Rs. 138.37 on 31st August steadily rose to touch a peak of Rs. 167.75 on Monday this week. Even the categorical declaration by the Union Government, made at the last weekend, that it would not relax the present ban on exports of groundnuts and groundnut oil and the warning of the F.M.C. to the trade not to boost groundnut oil prices artificially failed to check the rising tendency in prices. It is with a view to discouraging speculative buying that the F.M.C. has, it is said, taken recourse to the drastic measure of imposing margins.

The imposition of margins has had no perceptible effect on the oilseeds market and prices in the groundnut section, though they have not gone up higher than the price fixed by the F.M.C., continue to rule fully firm knocking at the "ceiling" price. The renewed firmness has been aided by the persistent tendency on the part of bulls to go long, while bears are feeling diffident. Reports of an upward revision in the prices of *vanaspati* and of some business having been put through in groundnut oil cake with Iron Curtain countries at £23 per ton (f.o.b.) have also imparted some strength. It may be noted here that, on Wednesday last, the Government of India released a quota of 25,000 tons of groundnut oil cake (expeller variety) for export during the five months ending March 1958. The maximum quantity that an exporter will be allowed to export from all the ports is fixed at 300 tons.

Groundnut February 1958 contract jumped up from Rs. 164.87 on Wednesday to Rs. 167.12 at the close on the following day. After receding to Rs. 165.62 on profit-taking, it recovered again to touch a high of Rs. 167.75 on Monday, but declined to Rs. 165.50 yesterday. Following the imposition of margins, the contract eased further to Rs. 164.62 today, at which rate it was lower by 25 nP as compared with the closing rate last week. Bold ready advanced from Rs. 33.62 to Rs. 34.50 on Monday and yesterday before finishing today lower at Rs. 33.75. Coromandel quality improved by 25 nP to Rs. 35.12. Khandesh gained a like amount to Rs. 35.75. Groundnut oil *ex*-mill picked up 37 nP to Rs. 20.37 and railway receipt 13 nP to Rs. 20.

The castorseeds section ruled irregular during the week under review on alternate bouts of buying and selling. May 1958 contract advanced from Rs. 157.75 to Rs. 158.75 on Thursday, but gave way in the subsequent two sessions to Rs. 156 on Saturday. It recovered to Rs. 157.25 on Monday before declining again to Rs. 156.25 yesterday. Today the contract met with excellent buying support induced by the absence of any mention about margins in castorseeds in the F.M.C.'s directive issued yesterday, the quotation climbing up to Rs. 158.15 at the close today. Ready Madras, however, lost over the week 75 nP to Rs. 32.75 and Kanpur 50 nP to Rs. 31.50. Castor oil commercial shed 25 nP to Rs. 18. Oil B.S.S. eased by 12 nP to Rs. 19.25.

Trading in the linseed section was dull, thanks to absence of any encouraging development. Transactions put through were limited and values moved narrowly. May 1958 contract, after rising from Rs. 31.81 to Rs. 32.19, declined to Rs. 31.81 yesterday before closing higher at Rs. 31.94 today. Bold ready fluctuated between Rs. 31.31 and Rs. 31 before finishing at Rs. 30.87. October-November were practically unchanged at Rs. 31.25. Linseed oil ready, after decreasing from Rs. 16 to Rs. 15.87, recovered to Rs. 16 today.

Cottonseed February 1958 contract put on 75 nP to Rs. 108.50 on the opening day. It declined to Rs. 106.50 yesterday but recovered slightly today, the closing rate being Rs. 106.75.

Among other seeds, kardi bold ready encountered good enquiries from shippers and rallied Re. 1.25 to Rs. 22.25. Niger Madras was also favoured well, the rate spurting by a rupee to Rs. 29.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	13-11-1957	6-11-1957	30-10-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	164.62	164.87	160.37
Bold ready (per cwt.)	33.75	33.62	33.50
Khandesh quality	35.75	35.50	34.50
Linseed—			
May 1958	31.94	31.81	30.62
Bold ready (per cwt.)	30.87	30.87	29.69
October-November	31.25	31.24	29.94
Castorseed—			
May 1958	158.15	157.75	154.25
Madras (per cwt.)	32.75	33.50	33.62
Cottonseed—			
February 1958	106.75	107.75	105.50
Groundnut oil—			
Ex-mill ready (per quarter)	20.37	20.00	19.37
Castor oil—			
Commercial (per quarter)	18.00	19.62	18.37
Linseed oil—			
Ready	16.00	16.00	15.56

SUGAR QUIET

(From Our Own Correspondents)

BOMBAY, 13*th November*

The sugar market continues to rule quiet during the week under review. There are reports that the Indian Sugar Mills Association may be able to persuade the Union Food Ministry to permit the establishment of a syndicate to be in charge of sugar sales for both internal consumption and export. The Government has still not announced the normal monthly release of sugar for sale in the free market. Knowledgeable quarters feel that the release will be announced by the 18th inst., and this is expected to be larger than usual.

Thanks to the delay in the issue of release orders, arrivals of sugar into the market were poor. They aggregated only 5,700 bags, as against 18,400 bags a week before and 23,700 bags two weeks before.

Sugar prices remained unchanged this week too. Small grain was quoted at Rs. 99 per bag, including sales tax, medium grain at Rs. 100-103 and large grain at Rs. 104-109.

* * * *

HAPUR, 11*th November*

Sugar prices continued to rule depressed during the week under review. Crushing for new season had begun in factories in the South a few days ago, while, in the North, it has now begun in some of the factories. The consensus of opinion is that all the major units will show an increase in their sugar output. The carryover from the preceding season is placed at 470,000 tons and, with an estimated production of 2.15 million tons, the total supplies available will come to 2.62 million tons. The domestic consumption is likely to be maintained around 1.9 million tons, leaving an expected surplus of about 700,000 tons. In order to augment the country's foreign exchange, the Government will encourage exports, but world prices are not favouring exports at current rates. A scheme may be evolved for exports at rates comparable to world price levels. Ex-mill delivery prices eased slightly during the week, as the factories were anxious to lighten their stocks.

Sugar markets in Muzaffarnager ruled quiet during the week, as, barring some enquiry from Punjab, demand from other consuming centres was dormant. Prices of some qualities of various mills declined by 6 to 12 nP per maund during the week. Crushing in several factories will start this week. The latest ex-mill delivery prices were: Meerut (D28) Rs. 32.62; Rampur (B29) Rs. 34.50; Mansurpur (B29) Rs. 33.75; Daurala (C29) Rs. 33.37; Khatauli (B28) Rs. 33.81.

Trading in sugar received a setback during the week, as the bulk of the monthly quota had been sold out. Rumours were current that the Government was discussing with the sugar interests the possibility of enhancing the internal prices, with a view to subsidising exports. Spot sugar ruled steady. While offtake was fairly good, the market was in an understocked position.

The *khandsari* market ruled quiet, and prices were mostly unchanged at Rs. 27 to Rs. 31.50 per maund, according to quality.

Arrivals of new *gur* were 8,000 maunds today. Outside buying enquiry being slack, prices eased by Re. 1 per maund. Old *gur* stock was put at 7,000 maunds which was not attracting demand. Ready *gur* arrivals are likely to increase further and a further fall in prices is apprehended. Arrivals of new *gur* are also increasing in the Muzaffarnager market where the daily average is about 5,000 maunds. *Chaku*, *ladoo* and *pansera* qualities eased by 50 nP per maund during the week. *Shakker dara* and Masala prices also eased by Re. 1 to Rs. 2 per maund. Stocks of old *khandsari* are nearing exhaustion and new production has not yet begun. Demand for *pansera* and *chaku* quality of *gur* was fairly good from Punjab and Gujerat. There was good enquiry for *shakker* from Rajasthan. The week's offtake was good, as wagon supply position was satisfactory. Prevailing prices were: *Gur chakku* Rs. 15 to Rs. 16; *ladoo* Rs. 15 to Rs. 15.50; *pansera* Rs. 15 Rs. 15.25; *shakker dara* Rs. 16.50 to Rs. 18; *masala* Rs. 18 to Rs. 19.50 per maund.

Futures *gur* ruled quiet both ways during the week, the latest quotation for *fagun* delivery being Rs. 12.06.

BEST LIQUORING TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 7*th November*

Approximately 1,800,000 lbs. were on offer in Sale No. 29 which was held on Tuesday, 5th November. The sale opened to a better general demand and, in particular, buyers showed interest in low medium and medium brokens which must be quoted dearer. There was a useful enquiry for black leaf fannings and these types advanced slightly. All other low medium and medium fannings were irregular and occasionally easier. Best liquoring teas met with some competition and prices were often dearer. There was rather less enquiry for whole leaf grades and, in particular, orange pekoes were difficult of sale. The following are the quotations:—

	1957 Rs.
Plain B.P.	1.35
Low medium	1.38—1.55
Medium	1.50—1.78
Good medium	1.80—2.05
Quality	2.25—3.95

The average price of tea realised in Sale No. 29 was Re. 1.82 per lb., as compared with Re. 1.86 per lb. realised in the previous sale and Rs. 2.62 per lb. in the corresponding sale of 1956.

London Market: *Sale of 4th November* 1957:—Stronger tone all round, particularly best and medium Assams.

Sale of 5th November 1957:—Generally firmer, though somewhat irregular.

Colombo Market: *Sale of 4th November* 1957:—After quiet opening became active. Medium and highgrowns considerably dearer. Lowgrowns steady. Offgrades liquoring sorts dearer.

Calcutta Market: *Export*:—Good general demand. Common brokens and fannings six nP dearer. Medium B.O.P. and orange fannings easier. Best C.T.C. tippy teas and Darjeelings sold well. Whole leaf about steady.

Internal:—18,500 chest dusts. Continued strong for all orthodox. Leafy Exportable up to 6 nP dearer. Fair demand C.T.C. often 20 nP easier. Inferior C.T.C weak. 3,000 chests leaf. Continued good demand C.T.C. tending dearer.

Export Duty:—The Government of India has issued a notification fixing the price of tea, for the purpose of determining export duty, at Rs. 3.30 per lb., as compared with Rs. 3.48 for the previous month. The export duty, however, remains unchanged at 38 nP.

Export Quota:—There has been an easier tendency and business has been done at 19 nP.

Forthcoming Auctions:—Sale No. 30 will be held on 19th November.

As we go to Press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale N*:—800,000 lbs. Useful demand, but prices very irregular and 10 to 20 nP lower."

EXPORT TEAS STEADY

(From Our Own Correspondent)

CALCUTTA, 12*th November*

Steady conditions prevailed during yesterday's export sales. Buying on behalf of Great Britain was active, and prices improved further. British buyers were replenishing their stocks, and this was also indicated by the uptrend in the auctions held in London last week, where the lower grades were subjected to competition and medium and best quality teas were in the forefront. Middle East buyers are also showing greater interest, with Egypt having already committed to buy 2,000 tons of dusts and fannings. It is believed that Egypt is likely to show more interest.

There are now no two opinions as to the North Indian tea output this year being lower than last year. The decline up to now is by more than 30 million lbs., and with an early winter, this quantity cannot be made good during rest of the year.

Russia was again a prominent buyer in last week's auctions in Colombo. Medium and high grown teas there realised higher prices, while low, medium and low-grown fannings gave way. As Russia has proposed to buy 40 million lbs. of Ceylonese tea, Russian interest in Colombo auctions will continue to be a feature.

In the auctions for internal consumption held here last week, dusts on offer aggregated 18,266 chests, the quality of which was maintained. All orthodox teas met with a strong and active demand. The larger leafy teas advanced by 8 nP with the small useful liquoring grades from Assam receiving the keen attention of buyers and non-withered Dooars rising in competition. The demand for C.T.C. Assams dwindled as the sales drew to a close, and there were withdrawals. The plainer fibrous teas were extremely quiet, while the clean bright liquoring teas resisted the lower trend. The quotations were: best Assam C.T.C. Rs. 2.60 to Rs. 2.90 (nominal), medium Assam C.T.C. Rs. 2.20 to Rs. 2.30, medium Assam grainy dust Re. 1.74 to Re. 1.78, and medium Doars Re. 1.70 to Re. 1.74.

Leaf grades amounted to 2,948 chests. C.T.C. Assams were a strong feature, and other teas were firm.

In contrast with the above conditions, the Chittagong sales held on 6th November displayed weakness. Prices gave way. Leaf offerings amounted to 13,875 chests. While tippy teas and legg-cut fannings were about steady, whole leaf grades lost by As. 1½, and all other varieties by As. 2 to As. 3. Green teas eased by As. 3. The rates were: O.P. Rs. 2-9, Pekoe Rs. 2-6-6, B.O.P. Re. 1-12-6 to Re. 1-13-0, B.P.S. Re. 1-12-6, O.F. Re. 1-12-6, B.P. Re. 1-12-0, and P.F. Re. 1-10.

Dusts on offer amounted to 3,779 chests. Prices gave way despite fair demand with Sylhet plain quality quoting at Rs. 2-1-0.

About 19,200 chests of leaf and 4,350 chests of dust will be offered in the next Chittagong sales scheduled to be held on Wednesday, 20th November.

There was strong and active demand during yesterday's export sales, offerings amounting to 50,830 packages. The popular teas advanced, while others gave way. A dearer tendency was recorded in the commonest sorts and clean commons with black leaf. Good attention was paid to leafy medium B.Ps. On the other hand, medium B.O.Ps declined by 20 to 30 nP excepting the few lots with bright liquors. Orange fannings also eased. Medium C.T.Cs with indifferent liquor and leaf lost by 10 to 25 nP, while the very best lots in this category were taken up at steady rates. Legg-cut teas rose by 6 to 10 nP. Stylish B.P.Ss were in good demand. Whole leaf grades also met with good demand, but prices were irregular. Tippy teas received good attention. The quotations were: Best Assam C.T.C. fannings Rs. 2.80 to Rs. 3.00, clean black pekoe Rs. 2.25 to Rs. 2.30, best Assam C.T.C. B.P. Rs. 3.00 to Rs. 3.50 (nominal), medium fannings Re. 1.86 to Re. 1.90, plain B.P. Re. 1.66 to Re. 1.70, plain fannings Re. 1.78 to Re. 1.87, and medium B.P. Re. 1.76 to Re. 1.80.

Export quota changed hands at 19 nP.

JUTE GOODS MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, 12*th November*

The jute goods market ruled quiet during the week under review, and prices gave way, as overseas demand for jute goods was at a low ebb. Buyers on behalf of foreign countries were anticipating this break in prices and had been postponing entering into commitments earlier. This week's lower prices did not, however, attract any large-scale buying from foreign countries. Buying was cautious, as consumers desired that the lower trend should be sustained. The hope that prices would settle down to buyers' favour was entertained, inasmuch as raw jute prices were also forced down. Arrivals of the new crop continued to be in small quantities, and all imports met with ready buyers, but prices nevertheless moved down. This week's fall in demand for jute goods demonstrated that there was no case for increasing production and that the rumour about a fortnight ago that mills were considering unsealing a portion of the idle looms was circulated with a speculative intent. As anticipated in these columns, shipments of jute goods, including coastal despatches, were considerably lower in the month of October than in September. Hessian shipped amounted to only 23,200 tons, as against 35,100 tons in the previous month, and sacking goods, at 37,000 tons, were lower by 15,700 tons. Considering that September was an exceptionally good month, figures of shipments for October compare favourably with averages. Stocks of jute goods with mills at the end of October were lower by 800 tons at 76,200 tons. While miscellaneous constructions increased by 1,400 tons to 9,000 tons, hessian was lower by 900 tons at 29,400 tons and sacking goods, at 37,800 tons, represented a fall of 1,300 tons.

As regards shipment during the current month is concerned, the progress so far is satisfactory and if maintained this month's figures would be considerably encouraging. Up to 5th November, sacking goods shipped amounted to 15,500 tons, as against 9,000 tons and 9,400 tons in the corresponding period of October and September, respectively, and hessian to 14,000 tons, as against 6,000 and 11,600 tons, respectively.

Jute interests here have noted the statement made by Mr. P. D. Khaitan, member of the Indian Central Jute Committee, in Patna recently. It is correct that India grows the lower varieties of jute more than what Indian mills can consume. If only some exports are permitted, wastage can be mitigated and the area under the poorer varieties can be increased considerably and the country enabled to earn foreign exchange at a time when it is invaluable. Raw jute exports are at present entirely banned, and the ban was placed immediately after partition which made India dependent on Pakistan for about 50 per cent. of the raw jute required by mills. The position has since gradually changed, and imports of raw jute from Pakistan have dwindled down to a few thousands of bales from millions of bales a year. This year's drought has affected the jute crop in Bihar, but even then market circles here anticipate that the jute crop for the country taken as a whole would be higher than last year.

In the meantime, the jute conference which would open in Dacca on 25th November and at which most countries importing raw jute from Pakistan would participate is awaited with great interest here. The Conference is being convened by the Pakistani Jute Association with the active support of the East Pakistani Government, and it is to devise ways and means of increasing exports. India has been invited to attend the conference, but it has not so far accepted the invitation. The price policy pursued by the Pakistani Government in regard to raw jute exports has systematically discouraged buyers. The trade here knows only too well the difficulties which the Pakistani Government placed in the way of exports to India. Quality was considerably below what was stated, and complaints in this regard were hardly effective. With the result, considerable loss was suffered by importers at this end. In addition, there were difficulties caused by transport delays and the unduly long time the State Bank of Pakistan took in passing the E.P.C. forms. At one time, the Pakistani Government thought that Indian mills would close down without the raw jute from East Bengal. This has since proved illusory, and the Pakistani authorities are now only too anxious to strengthen trade connections with India and increase its exports. The countries that have agreed to send representatives to the proposed conference include Egypt, France, Czechoslovakia, Lebanon, the United States, Germany, Spain, Poland, Japan, Great Britain and Belgium.

Early in the week, ready B. twills were steady at Rs. 118 on speculative support, and, in sympathy, ready hessian 40" 10 oz. was maintained at Rs. 42.20. At these levels, genuine buying was conspicuous by its absence. Shippers also withdrew their support. As a result, on Tuesday last week, B. twills fell to Rs. 117 and hessian 40" 10 oz. to Rs. 42. Speculators, especially the weak amongst them, became nervous, and began to unload their holdings. This, caupled with the anxiety of mills to sell as much as they could, affected sentiment, and the two representative constructions mentioned above gave way to Rs. 115.45 and Rs. 41.60, respectively. At this stage, speculators feared that stock figures, as and when they were announced, would show a rise, which might take down prices. With these thoughts in their minds, they began to liquidate their holdings as much as they could regardless of the loss. The total of stock figures, in fact, showed a rise of 800 tons, although hessian and sacking goods had fallen. The falls were, of course, insignificant and were hence neglected by the market. The decline in prices, therefore, continued and by the week-end ready B. twills were as low as Rs. 114.20 and hessian 40" 10 oz. Rs. 41.50.

More support was accorded by mills to raw jute. Prices, however, fell and this was in consonance with the trend in jute goods. Arrivals were lower than demand. The latest quotations available in Calcutta for the new crop, November-December delivery, are as follows:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	32.50	30.50
Northern	32.00	30.00
Indian:		
Northern	31.00	28.50

Pucca bales 1st marks Rs. 180.00 per bale.

COPPER IMPROVES

(From Our Own Correspondent)

CALCUTTA, 13*th November*

While prices of electrolytic zinc and tin continued to fall, electrolytic copper, encouraged by the uptrend in London and New York, registered a small recovery during the week under review. It was considered probable that the higher trend in New York would be maintained, in view of the drop in production in the United States and Rhodesia.

Electrolytic copper opened at Rs. 150 and on renewed offerings by stockists fell to Rs. 148. By this time, reports of steadiness in London and New York were to hand, and the weak holders discontinued selling. The prices soon recovered and closed higher on balance. Tin lost further to Rs. 512 from Rs. 520, but is still higher than the replacement cost. It was felt that when shipments against the current import licences were reached, the price would move down considerably. As such, stock holders were anxious to get rid of their holdings, thereby contributing to the decline. Electrolytic zinc closed lower at Rs. 58, while virgin lead after dipping to Rs. 63 regained to the opening rate of Rs. 64.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.

||Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T=Taxable. C=Cumulative. R=Redeemable. T.F.=Tax-free.
R.O.=Redeemable at option. N.R.=Non-Redeemable. P.=Participating.

(f) Participating preference shares (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1956 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956 (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. (p)—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns ' Paid-up Ordinary Capital ' and ' Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page* 899)

cause they feel that it would end the feeling of uncertainty in cloth markets, brought about by rumours of a possible reduction in excise duties, and thereby lead to a movement of cloth from their godowns to the wholesale and retail markets. They are hoping that those dealers who were delaying their purchases in expectation of a cut in excise rates would now come forward to place their orders and lift the cloth. It remains to be seen to what extent this hope will materialise. For, psychologically, all markets for consumer goods are in a bearish mood and one does not know when it will change for the better.

The decision of the Directors of the Mercantile Bank of India to reconstruct the Bank's capital structure is in consonance with the recent trend in capital reorganisation of joint-stock banks in Britain. It has become the practice of these banks to abolish different classes of shares in favour of only one class of shares with equal rights. In the case of the Mercantile Bank of India, the Directors' proposal is to be carried out in four steps, (1) by the abolition of the uncalled liability on the present issued shares, (2) by splitting them, (3) by a share for share free scrip issue, and (4) by consolidation into one class.

The announcement of the scheme did not come as a surprise, for it had been made known even in July last, along with the announcement of the Bank's interim dividend for the current year, that a capital reorganisation scheme was pending. Along with the change in capital structure, for which the shareholders' approval is sought to be obtained on the 25th inst., the name of the Bank will also be changed to Mercantile Bank Ltd., by dropping the word "India" from its present name.

At present, the Bank's capital structure is made up as follows:

150,000 'A' shares of £5 each (£2 10*s*. paid).

150,000 'B' shares of £5 each (£2 10*s*. paid).

720,000 'C' shares of £1 each (fully paid).

The Directors propose to cancel the uncalled liability of £2 10*s*. on each of the 150,000 'A' and 150,000 'B' shares and, thereafter, to divide all the 'A' and 'B' £2 10*s*. (paid-up) shares and the 720,000 'C' shares of £1 each into shares of 10*s*. each. This splitting will result in 2,940,000 shares of 10*s*. each fully paid-up. The holders of these shares will then receive a free scrip bonus of 10*s*. each for every share of 10*s*. This will require the capitalisation of a sum of £1,470,000 from the reserve fund which, as at the end of December 1956, stood at £2,000,000. After the free scrip issue, all the shares will be consolidated into ordinary shares of £1 each, so that the final paid-up capital of the Bank after the reorganisation will be made up of 2,940,000 shares of £1 each. The consent of the British Treasury for the capitalisation from the reserve fund has been obtained. The authorised capital of the Bank is also proposed to be increased from the present level of £3 million to £4 million by the creation of 1 million new ordinary shares of £1 each, but it is not the intention of the Board to issue for the present any further share capital. The withdrawal of a sum of £1.47 million from the published reserve for the purpose of capitalisation will be replenished by the transfer of a like amount from the innner reserve.

Any possible hope that the capital reconstruction will carry with it a dividend gift has been dispelled by the Directors' announcement that they expect to "be able to appropriate for distribution as final dividend for 1957 the same amount as distributed by way of interim in August last, but dividends thereafter must necessarily depend upon results." It will, however, be recalled that the Board raised the interim dividend for the current year sharply from 7 per cent. to 12½ per cent. (less tax) on all classes of shares.

The main beneficiaries of this scheme will be the holders of 'A' and 'B' shares, who will receive a double gift, by way of cancellation of the uncalled liability on their holdings and a 100 per cent. bonus issue. The cancellation of the uncalled liability may also result in a certain amount of appreciation in the market value of these two classes of shares. The holders of 'C' class shares may, therefore, have reason to grouse on the ground that they will not receive any compensation to balance the cancellation of the uncalled liability of £2 10*s*. on the 'A' and 'B' shares. In fact, in the recent past, shareholders similarly placed in the case of certain companies, had received some compensation. So far as the dividend rights are concerned, the 'A' shares are entitled to a fixed cumulative preferential dividend of 5 per cent. and to participate equally with the 'B' and 'C' class shares in any further dividend declared after 5 per cent. has been paid on these. In practice, however, there has been no occasion to exercise these rights, as the dividend has for many years been paid at a uniform rate on all classes of shares at a much higher level. The proposed capital reorganisation does not, therefore, involve any infringement of the dividend rights of 'A' class shares.

The proposed scheme for reorganisation of the Bank's capital is the second one to be carried out in the last few years. The previous occasion was in September 1954, when all the three classes of shares were split to their present value and a gift of a bonus issue was made to holders of all three classes of shares. Thus, the 'A' and 'B' of £12 10*s*. paid-up each and 'C' shares of £5 each were split into five shares of £2 10*s*. each and £1 each, respectively, and a sum of £420,000 was capitalised from the reserves to issue 420,000 'C' shares of £1 each fully paid as bonus to holders of their existing shares in the proportion of one fully paid 'C' share for each 'A' or 'B' share and two for every five 'C' shares held.

LONDON LETTERS

(*Concluded from page* 907)

to that country's position and yet in both countries a great deal of engineering capacity goes idle. The implication is that the domestic economy would be much better served if it were not made to dance to the external tune. The underlying idea of breaking away from the gold standard was to enable a separation between the country's internal and economic positions but the Government have for practical purposes put the United Kingdom back on to the gold standard. Their policy is dominated by the movements of the gold reserve and, if their analysis of the reason is wrong, then capital is being made unduly expensive in this country to no purpose, and overseas borrowers who might use British capacity are being driven away to no purpose. Far better more stringent measures of exchange control over capital movements and healthy reserves.

There are two final thoughts which bear on this problem of sterling and the speculator. The first is that Switzerland has been steadily importing capital instead of exporting capital for no better reason than that, in a disturbed world, she has been regarded as a haven of refuge. Dollar money, as well as sterling money, has found its way to that country. And against that at home the Board of Trade's final estimates of capital spending by manufacturing industry confirm that, in the second quarter of this year, the rate of increase was less than in the first quarter. Similarly, the Board of Trade's figures for industrial building approvals in the third quarter are 7½ per cent. lower than in the corresponding period last year—capital into Switzerland, less building at home. These two points are connected and should hold a sharp lesson.—

All Rights Reserved.

SUGAR

(*Concluded from page* 912)

interfere too much with the factories and that the taxes they impose must be reasonable. As Mr. Somaiya pertinently remarked, it is only when the factories are assured that provision of better amenities to workers will not attract heavy taxes in the shape of *Panchayat* levy that colony conditions can improve. But the present conditions act as a positive disincentive to the factories for improving the quality of housing.

In the course of his address, Mr. Somaiya reiterated the importance of establishing a separate full-fledged sugar research institute in the Deccan. He stated that the National Institute of Kanpur, since it was far away, was not of much help to the sugar factories in this region. It was very essential that these factories had an institute which would cater to their specialised needs and requirements, as well as make available technicians trained in these requirements who could manage the sugar factories. Mr. Somaiya assured his Association's full support to such an institute. He also urged the Government of Bombay to give more liberal grants to the Sugarcane Research Station of Padegaon, so that it could intensify the research programme. Incidentally, he suggested the allotment of a definite percentage of the cane cess collections for the purpose of the Station.

After the inaugural ceremony was over, the Annual Convention of the Deccan Sugar Technologists' Association addressed itself to the discussion on the various scientific and technological aspects of sugar industry, including the agricultural sector. The discussions centred round several papers—thirty in number—prepared and read by experts in the line. There were two important papers, one on "Steam Economy" and the other on "Losses from Cane to Crystal." The papers on agriculture were devoted to the study of the different aspects of sugarcane cultivation, with solutions offered to some of the problems. Due importance was also given to such aspects as cane loading and manuring. Under cane pathology, a very detailed study of grassy growth was an important article read at the Convention. For the first time, studies about spraying for recovery were presented and these evoked interesting discussion. Among the papers on general topics were those on synthetic cake preparation and replacement of the usual manures by manure prepared from waste.

Notice

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

TENDER NOTICE

THE MINISTRY OF RAILWAYS (RAILWAY Board) invite tenders from competent and experienced contractors for the design, manufacture, supply, erection and maintenance for a period of one year of 25 kV, Single Phase 50 Cycle, A.C. Overhead traction equipment, complete in all respects including structures and foundations, necessary for the electrification of approximately 700 route miles (about 1,750 track miles) of 5′-6″ gauge track on the Calcutta-Moghalsarai and Asansol-Rourkela sections of the Eastern and South-Eastern Railways respectively. The mileage would be divided into approximate sections of 100 to 200 miles of Main line track and 25 to 60 miles of sidings. The sections would be required to be completed by the end of 1959. The Railway Board reserves the right to award the contract for one or more sections to one or more contractors.

2. The particulars of the tenders together with specification can be purchased from the Office of the Director, Electrical Engineering (Railway Board), State Entry Road, New Delhi, after 18th November, 1957, on payment of Rs. 100 per copy in cash or by money order.

3. The prospective tenderers should submit sealed letters on or before 18th December 1957 to the French National Railways, Paris—The Technical Associates of the Ministry of Railways for this work and also submit simultaneously a sealed copy to the Engineer-in-Chief, Electrification, Railway Board, New Delhi, India, indicating their intention to submit quotation together with details as given below:

(1) Their previous experience on similar electrification projects together with the magnitude and other details of such works they had undertaken during the past 10 years. The details of any large contracts in hand shall also be given.

(2) Their resources for materials and equipment together with names of manufacturers from whom early deliveries of materials can be assured.

(3) Details of the experience and number of technical personnel employed.

(4) The sections of lines as indicated in the Tender for which they would quote, stating the approximate time schedule for completion of work on each section.

4. The detailed offers should be submitted on or before 31st January 1958 to the undersigned and a copy sent simultaneously to the French National Railways, Paris. The offers will be opened in public at 11 a.m. local time on 1st February 1958 in the Office of the Engineer-in-Chief, Electrification, Railway Board, New Delhi, India, and by the S.N.C.F. in Paris.

5. The address of the French National Railways for the purpose of the Tender will be:

M. Vaubourdolle
Chief Adjoint Des Installations Fixes
S.N.C.F.
42 Rue De Chateandun
Paris Ix

All envelopes containing correspondence on this subject should be marked "For the Indian Railways."

6. Earnest money with tender and security deposit on placing the order, will be called for.

7. Alternative quotations should also be given for deferred payment terms. Details will be in the particulars of tenders mentioned in para 2 above.

8. This has been issued with the concurrence of the Ministry of Finance (Economic Affairs Department).

M. N. MUKERJEE,
for Secretary, Railway Board.

William Blake.

VOL. XCV. No. 2437 BOMBAY, 23rd NOVEMBER 1957 PRICE: Re. 1.50

REPORT ON FOODGRAINS—I

EVEN a rapid study of the Report of the Foodgrains Enquiry Committee (Chairman: Mr. Asoka Mehta) clearly shows that the Committee has done an excellent job. At the time the Committee was appointed, there were many who wondered whether anything useful could be achieved by holding yet another enquiry on the food situation. This was a genuine doubt, because there had been no dearth of enquiries in the past and not all the recommendations of the earlier committees were faithfully implemented. Further, there were many informed observers who knew what exactly was wrong on the food front and what should be done to improve the position. And some of them were inside the Government. Consequently, it was felt that the need of the hour was action and not a fresh enquiry. But the Government and the party in power were in two minds. All sorts of views were being ventilated on the causes that had led to higher prices and scarcity of food. Similarly, all sorts of solutions were being advocated. The protagonists of drastic land reform, for instance, sought to make the difficult food situation their ally and hustle the country through to their unrealistic goals. Some others were trying to make capital out of the situation by suggesting total controls on food, including rationing. There was, in short, a babel of voices and that from influential quarters. The only way to make a calm approach which would point to right solutions was to refer the problem to a committee of diligent people. It was a political necessity. The hands of Administration against amateurs and shallow thinkers, who abound in Parliament and in all the political parties, had to be strengthened.

The Committee, in our opinion, has served this purpose well and that without much waste of time. Indeed, it is one of the few enquiry committees which have carried out their task expeditiously and efficiently. The Committee's analysis of the causes for the difficult food situation is objective, thorough and scientific. It has been candid enough to bring to light the shortcomings in the Government's policy and actions. Its suggestions for avoiding the past mistakes in future are sober and well thought out. They are, of course, not novel, in that some one or other has advanced them in the past. But the Committee has added force to them by lending its support and the Government can conveniently quote the Committee as the authority for implementing these suggestions and for rejecting some of the drastic solutions which are, perhaps, inevitable in a dire and desperate situation but are being pressed for adoption straightaway by a section of public opinion. It must also be mentioned that the Committee has bestowed more thought than its predecessors on the framework necessary for implementing the proposals for avoiding violent fluctuation in prices of foodgrains. The fact that some of its remedies for tackling the current situation are already in force, such, for instance, as restrictions on movement of foodgrains, creation of zones, cordoning of big cities, opening of fair price shops and issue of family ration cards to the low-income group, only means that, in a given situation, there can be no two opinions on the solutions to be adopted and that—this is important—there is no quick solution to India's food problem. The Committee has also done some valuable work in pinpointing the chronically deficit areas, which are appropriately described by it as "epicentres" of disturbance, and in putting forward pertinent suggestions for keeping these areas under constant vigilance and control. One need not get unduly perturbed by the Committee's observation that the "ultimate policy should be that of progressive and planned socialisation of the wholesale trade in foodgrains." For, in making this remark, the Committee does not mean that wholesale dealers should be eliminated. All that it means here is that, for a long time to come, there can be no unfettered free trade in foodgrains and that the State must play an effective role in stabilising foodgrain prices and in bringing about an equitable distribution of the available supply of foodgrains. It is not easy to disagree with this proposition.

In view of the importance of the problem examined by the Asoka Mehta Committee, it is necessary to analyse its findings and recommendations at some length. This cannot be done in one article. We, therefore, propose to confine ourselves in this article to the Committee's assessment of the recent developments, leaving its prognosis of the food situation as it might develop during the next few years and its suggestions for tackling the problem to another article.

The Committee has vividly brought out the wide variations in the prices of foodgrains to producers and consumers. It is true that prices of almost everything have fluctuated in recent years, but the swing in those of foodgrains has been over a very wide margin after decontrol was practically completed in 1953. Thus, between the middle of 1953 and the middle of 1955, the general price index declined by 17.6 per cent. and then rose by 23.4 per cent. by the middle of 1957. The price index of manufactured goods first fell by 2.8 per cent. and then rose by 10.5 per cent. during these two periods. As against this, the price index of cereals first slumped by 34 per cent. and then shot up by 51 per cent. It will be noted that the magnitude of rise in cereal prices during the latter part of the period under review was greater than the magnitude of fall in the earlier part. If the precipitous drop in prices caused severe hardship to growers and stockists of foodgrains, the steep rise hit the consumers badly. Anyway, such great instability in food prices, it will be readily conceded, is injurious to any economy, more so to one with a plan for rapid development. It causes dismay and discomfort to producers and consumers alike and upsets the whole plan. The elimination of this instability is the major problem to be solved.

It has been the practice of politicians, especially those occupying seats of power, to blame the mercantile community whenever prices tend to rise, conveniently ignoring that it is their own inefficiency and lack of foresight that are the basic causes for the disequilibrium in the economy. It is gratifying to find that, despite the fact that the Chairman of the Committee himself is a politician, and that of leftist persuasion, there is no trace of this commonplace criticism of the much-maligned traders. This is a tribute to the intellectual honesty of Mr. Asoka Mehta and other members of the Committee. They have exposed the root of the trouble in saying that the rise in prices is basically the consequence of the rate of economic development and its mode of financing. The high level of investment expenditure on public and private account, accompanied by deficit financing and large-scale credit expansion, has led to a general increase in the demand for foodgrains. As against Rs. 343 crores in 1953-54 and Rs. 476 crores in 1954-55, the Plan investment went up sharply to Rs. 667 crores in 1955-56, then to Rs. 761 crores in 1956-57 and is currently running at the budgeted rate of Rs. 900 crores. The money supply has gone up from Rs. 1,794 crores on 31st March 1954 to Rs. 2,240.2 crores on 31st August 1957, or an increase of nearly 25 per cent. in 3½ years. The velocity of money in circulation has also gained momentum, so that the money supply is much more active today than it was some years ago. Some broad idea of this increase can be had from the turnover of bank money which accounts for one-third of the money supply. Between 1950 and 1957, the turnover of bank money has steadily increased from 31.3 to 45.7. According to the Committee's report, a study of figures for over 20 years indicates that, after a gradual fall from 41.2 in 1937 to 22 in 1944, the velocity of bank money has staged a steady rise and is now well over the pre-war level. While the purchasing power has thus gone up, there has been no such increase in the supply of foodgrains. On the contrary, there was a marked shrinkage in the

availability of foodgrains, thanks to a fall in production in 1954-55 and 1955-56, as will be seen from the two tables on this page.

It is a natural phenomenon of free markets that, when prices decline, or tend to decline, traders generally keep only minimum stocks in order to avoid losses and that the reverse is the case when prices begin to look up; in the latter event, traders will be inclined to keep more stocks. These features of a free market aggravate, to some extent, price movements in times of pronounced surpluses or pronounced shortages. The Committee has been realistic in not blaming the trade for these normal characteristics of a free market and in concentrating its attention on the basic causes. In doing so, it has been careful to note the difference between production and marketable surplus. The more important factor that determines the price level, it is needless to add, is not production but, marketable surplus. This surplus will be less or more according to the farmer's capacity to retain a part of his crop and his desire to do so. It will be noted from the tables on this page that total foodgrain production in 1956-57 was nearly the same as in 1953-54 and so also gross availability, thanks to the sharp rise in imports. And yet prices of foodgrains have been ruling higher. Apart from the monetary factors already referred to, an important cause for this state of affairs, according to the Committee's findings, is a drop in market arrivals of foodgrains occasioned by an increase in the producers' consumption and hoarding by producers in expectation of higher prices. The Committee's report clearly confirms that there has been an increase in the holding capacity of farmers. It is of the view that not only big and medium but also small producers have been withholding stocks from the market in the hope of getting better prices.

To sum up the causes for the rise in foodgrain prices. There has been a sizable increase in population. The money supply has expanded at a rapid rate. There was a shortfall in production in the previous two years and, though this has been nearly offset in 1956-57, the residual effect of the shortfall is still there. There has been a slowing down in market arrivals. There have been persistent shortages in certain areas of the country, owing to failure of crops brought about by unfavourable weather conditions. Reports of scarcity from these "epicentres" have had a bullish effect in other areas as well and aggravated the general inflationary trend.

One may now ask as to what the Government could have done in the aforesaid circumstances. Surely, it could not stop the population from growing. Curtailment of development expenditure it could have done, but that would have meant a delay in implementing the Plan. It could not have completely prevented the shortfall in production, as most of it was due to the vagaries of the weather—an element not amenable to the control of the authorities at New Delhi. It has tried to meet the situation by importing more foodgrains, by selling from its surplus stocks, by gradually reimposing one control after another and by placing restrictions on advances by banks. And yet the situation has deteriorated. How then could the Government be blamed for what has happened? For an answer to this question one must read the first four chapters of the Committee's report, especially the second part of the fourth chapter. Looking in retrospect at the factors that have contributed to the rise in prices and the Government's policy, the Committee comes to the perfectly right conclusion that the Government had inadequately assessed the implications of economic development on the scale planned by it and that economic prescience developed only slowly among the powers-that-be. But the one great mistake made by the latter and not stressed by the Committee is that they did not pay heed to those who foresaw what was coming and urged adoption of suitable measures.

The Committee feels that total dismantling of controls was a hasty step, but who asked for total abolition of controls? Surely, not the public. The authorities themselves abolished the restrictions on movement of foodgrains, the zonal system, etc., because they preferred to follow the path of least resistance during 1953-54 and 1954-55, when prices were going down rapidly. They even allowed exports of some foodgrains. They disregarded the suggestion that Government should build up buffer stocks by buying from the open market when prices fell. It is true that, when foodgrains finally crashed, an attempt was made to support them, but it was a very feeble one and therefore ineffective. In fact, there was a general complacency in Government circles and they failed to realise that the country was still liable to periodical cycles of ups and downs in food production. It is common knowledge that, for a long time, they were reluctant to admit that a good part of the bumper crops in 1952-53 and 1953-54 were due to extremely favourable weather conditions and the incentive provided by decontrols to farmers. They deluded themselves by saying that it was all the result of the developmental efforts under the first Plan. Consequently, they could not appreciate the importance of the suggestion for husbanding the excess production. The failure of the Government to hold the prices of foodgrains at reasonable levels, which would have served the twofold purpose of accumulation of sizable stocks for the rainy day and a fair margin of profit for the grower, has been largely responsible for the plight in which the country finds itself today. It must be remembered, in this connection, that the low levels of prices that followed two consecutive years of increased production themselves acted as a damper to farmers and contributed to a fall in production in the subsequent years.

It is interesting to learn from the Committee's report that the Food Ministry is not to be blamed for the above bungling. Indeed, we are told that the Food Ministry was in favour of (*a*) keeping a minimum reserve stock of 1.5 million tons, (*b*) buying foodgrains in the open market at reasonable prices for building up buffer stocks, and (*c*) importing 8 to 10 million tons of wheat for five years from the U.S.A. under P.L. 480 as a safety measure, instead of 3 million tons as finally decided by the Government. Unfortunately, the Committee does not throw enough light to enable us to know who was responsible for rejecting these proposals of the Food Ministry. Be that as it may, the Committee's conclusion is that "undue optimism about the food situation led to the slackening, or at least prevented the accelerating, of efforts for increased food production in many of the States." There is no exaggeration at all in this statement; if anything, it is an underestimation of the consequences, because, but for the false optimism about the food position, the second Plan might have been drawn up on more realistic lines and the country saved from the muddle in which it finds itself today.

THE BIRLA MISSION

A STATEMENT was made to the Press on Monday this week by the industrial delegation which visited Western countries during the past three months under the leadership of Mr. G. D. Birla. This is the first authentic account of the delegation's impressions and a fuller report is yet to be submitted to the Federation of Chambers of Commerce which sponsored the delegation with the blessings of the Government of India. The Press statement is remarkable more for what it says on the things that require to be done in this country than for what the delegation has achieved in the countries which it visited. The one solid achievement the delegation claims is that it has succeeded in dispelling the "doubts and misapprehensions" of foreign investors about India's economic policy. The relevant portion of the statement reads as follows:

"We strived to create a climate abroad for foreign investments and commercial credits. In the course of the discussions with business men and financiers, we found that there existed lot of misapprehensions and doubts among them about our economic policy. The spate of recent fiscal and taxation measures came in for a good deal of discussion. There was still the fear of nationalisation and there were also doubts about the role of the private sector. The scheme of compulsory deposits and heavy taxation in the last budget too came in for criticism. There was complaint also of too much interference by Government. The restriction on the quantum of royalty on the licence to manufacture also came in for criticism. Whether these doubts and misgivings were imaginary or genuine was not the point. The fact was that they existed and we had to take cognisance of the same. With discussions and talks with top business men and bankers, we were happy to find that we had succeeded, to a large extent, in dispelling many doubts and misgivings."

A similar claim has been made by the Finance Minister, Mr. T. T. Krishnamachari, also. It is to be hoped that both of them, that is, the Finance Minister and the industrial delegation, have correctly assessed the situation and the outcome of their talks. If we are a little sceptical of these claims, it is because we find it hard to believe that one could easily convince foreign investors by mere explanations. After all, their doubts are not founded on fiction. And what they are suffering from is not "misapprehensions," as the delegation has chosen to describe it, but apprehensions. One has only to recall the various speeches of the Finance Minister on the floor of Parliament and outside during the past one year, as well as the speeches of business men on various occasions during this period, to realise that there is an ideological content in the economic policy of the Government, as well as in the latest taxation measures. Further, the delegation itself mentions in the very same statement that, "while we have been able to satisfy him (the foreign investor) to a large extent, *ultimately he would like to wait and see how things shape in this country.*" This could mean only one thing and that is the foreign investor is still in doubt about the advisability of investing in this country. Again, in the very next para, the delegation says: "We believe that we have created an atmosphere which, *if properly exploited*, will lead to larger foreign investments and also obtaining larger commercial credit." But it does not explain how the atmosphere could be properly exploited. Here is a fine example of beating about the bush.

In the latter portion of its Press statement, however, the delegation has done some plain speaking. "There are," it observes, "contradictory currents in our present economic problems and difficulties which need the attention of all those interested in our progress." Explaining this point, the delegation says:

"We find that, while there is no serious difficulty for the private sector in attracting foreign investments or commercial credits from abroad, in order to make full use of them, we must have, in the first place, a project on our hand. And to have a project we must primarily be in a position to raise the initial capital in the country itself. *As things are at present, there is not the slightest possibility of raising any sizable capital in India. And, if we cannot raise internal capital, we can have no project and, consequently, no basis for seeking credits from abroad.*"

From this explanation proceeds the crisp but blunt comment of the delegation that "the path to progress is thus completely blocked." Thus, there is no point in talking about raising foreign capital, until the problem of scarcity of internal resources is solved. This is exactly what this journal said before the delegation left the shores of this country in quest of foreign capital. The delegation says that it does not take a pessimistic view, because the key to the door which is blocking the country's progress is in India. This is perfectly true, but the key is in the hands of the very persons who slammed the door and firmly secured it in the past twelve months by fixing up more locks and bolts. The strongest of these locks and bolts were added only a few months ago, in the face of vehement opposition and eloquent persuasion from those who believe in that approach. It is an open secret now that as many as eight Union Ministers themselves questioned the wisdom of these steps but to no purpose. And yet the delegation concludes its statement by remarking that "we believe that India is wise enough to take the right course. And from this emanates our optimism." This is not reason but only a sentiment and a fine note on which to close the statement. We will, however, be only too happy to see our scepticism completely belied, and that at an early date.

SHARE MARKETS HESITANT AGAIN

TREND OF BULLION AND COPPER—NEW SCHEME FOR LANCASHIRE MILLS

THURSDAY, 5 P.M.

MARKET GOSSIP

A FEELING of uncertainty has, once again, begun to assail the share markets. There are grave doubts whether there has been any real change of heart in the Government towards the private sector. The Government's refusal to reduce the excise duty on cloth is a pointer to the way in which its mind is still working. There is, of course, a belief in some knowledgeable circles that, as the Finance Minister has had an opportunity to look at the economic policy of the Government, in general, and the taxation policy, in particular, from the angle of free enterprise economies abroad, he may be favourably inclined towards the private sector when the next budget is presented to Parliament. But this is only a surmise, if not mere hope. Anyway, it is on this expectation that the markets are living and but for it there might have been a fresh collapse by now.

The closer economic association of India with West Germany is an encouraging factor and a good augury. It may help open the eyes of the Government to the defects in its economic policies. It is encouraging to hear that Dr. Erhard, the German Economic Minister and a great believer in the virtues of free enterprise, will be visiting this country in the next few months to see things for himself. Dr. Jacobsson, the Managing Director of the International Monetary Fund and a reputed economist, will also be visiting this country in a couple of months. He, too, has great faith in free enterprise. It is to be hoped that the visits of these famous economists will help the Government to implement the second Plan on more realistic lines and to appreciate the contention that, given a little more freedom and incentive, the private sector can do more for the economic progress of the country than the public sector. It is, of course, true that the Cambridge economist, Kaldor, father of India's wealth and expenditure taxes, will also be visiting the country before the budget. But it is not necessary to view his excursion to this country in unfavourable light, though it is at the expense of the Indian taxpayer. A closer reading of his report, submitted last year, will show that he has said many harsh things about the rigours of the Indian taxation system. Indeed, if his whole scheme had been incorporated (it is a different matter whether it would have been practicable), investors' position would not have been as bad as it is now. It is, perhaps, not widely known that Kaldor was strongly opposed to the tax on bonus shares and dividends, as well as to the control over deposits. It may be that his ensuing visit may contribute to a moderation of this country's tax policies. All these are, of course, pure conjectures and it will be highly risky to take a definite stand on the Stock Exchange basing oneself on them.

It is significant that the Industrialist Delegation's statement on the results of its visits to the U.S., the U.K., France and West Germany has failed to engender a bullish fervour in the share markets. Mr. G. D. Birla's assertion that there was no cause for pessimism has gone unnoticed. Market circles feel that his estimate of foreign exchange at $250 million which India may receive from *all* sources in the U.S., including the World Bank, falls very much short of India's needs and its earlier expectations. Close on the heels of this estimate comes the disappointing news that President Eisenhower has tentatively decided against the proposal of the State Department that Congress should be asked to sanction a large loan to India to finance its second Five-year Plan. The figure of $150 million is mentioned by the same report as the amount which the American Government may advance to India from funds already appropriated by the U.S. Congress. While this is not a small sum and will help the country to fill the foreign exchange gap to some extent, it does not go far to implement even the core of the Plan.

* * * *

The bullion market in Bombay is somewhat subdued after last week's firmness. There has, however, been no marked setback in prices. Over the week, ready silver is lower by only Re. 1-3 per 100 tolas at Rs. 182-8 and ready gold by As. 5 per tola at Rs. 108-10. This slight reversal of the trend is due to the fact that market expectations in respect of inflow of Tibetan coins and of seasonal demand for gold have not yet materialised. Though the flow of coins do dwindle during the winter months and the winter has already set in, the pace of arrivals so far does not seem to have slackened. In respect of gold notwithstanding the strict vigilance of the customs authorities and the recent haul of smuggled gold, sizable arrivals of unauthorised metal in the market do persist. On the demand side, the offtake of silver and gold has not picked up, as was expected in the market, the reasons being the drought conditions in several parts of the country, which have affected the agriculturists, and official measures to bring down agricultural prices.

It must, nevertheless, be noted that the current prices are higher than those which prevailed at this time of the season during the last five years, as will be seen from the following table:

		Ready silver Rs.	a.	*Ready gold* Rs.	a.
21st November 1957	...	182	8	108	10
21st November 1956	...	176	1	106	4
21st November 1955	...	173	14	98	3
22nd November 1954	...	159	0	89	0
21st November 1953	...	153	7	84	0

One of the main causes for the rise in prices of precious metals over the last five years is the larger income in the hands of agriculturists who still have a fancy for these metals and do not believe in, or understand the intricacies of, more productive investments. They have not been losers on that account, as has been the case with investors in equities or Gilt-edged securities which have suffered in value on account of the Government's fiscal measures and dearer money conditions. This unproductive investment in precious metals is, however, not on such a large scale as can be termed hoarding. Even if it can be called so, it is not so large as is prevalent in some of the Continental countries in the West, where hoarders run riot in cornering all available supplies even on the flimsiest grounds. Hoarders in France, for instance, are very sensitive to political changes—and changes in Governments in that country are frequent occurrences.

Fears of a fresh Government crisis—hardly a few weeks after the new Government took over (the crisis has since been averted, with the Prime Minister just winning a vote of confidence)—the difficult foreign exchange reserve position, threats of labour strike and "diplomatic flurry" over the arms aid to Tunisia by the U.S. and the U.K. in the face of French objections, all these caused a rush for gold in Paris. This lifted the price of the yellow metal from Frs. 543,000 per kilo gold ingot (on the 7th) to Frs. 590,000 on the 14th inst. The latter rate is said to be the highest level since 1952, when the record level of Frs. 633,000 was touched. On Monday this week, however, some profit-taking was in evidence on optimism regarding the National Assembly's vote of confidence in the Government. Gold price fell back to Frs. 571,000, only to recover again to Frs. 581,000 yesterday.

A similar trend is noted in Turkey also. The sovereign, which had fetched about £T135 in Istanbul just before the general election on 27th October last, jumped up to £T150 last week, the rise reflecting the growing lack of confidence in the economic policy of the present Government. Much of the demand for gold in Turkey is said to be from farmers and peasants who recently received their annual post-harvest production premiums. They had also the benefit of an increase of 33 per cent. in the price of wheat decreed by the Government a few months ago. With no check on the inflationary spiral, prices of goods are moving up much faster than the rise in earnings, resulting in a depreciation of the Turkish pound. There has, therefore, been a flight of money into gold, silver, precious stones, etc.

It will thus be seen that the sudden spurt in gold prices in Paris and Istanbul has been due to special reasons. The trend of gold in the international markets as a whole has, however, been quiet, thanks to the increase in supply, without any corresponding expansion in demand. It will be interesting to recall, in this connection, that Russia has been selling gold on a substantial scale every year during the last few years. The reasons for this annual sale of gold are known only to the Russian authorities. However, as the sale is being made every year, it is presumed that Russia wants to improve its foreign exchange earnings by selling a good part, if not all, of its output of the yellow metal, just as South Africa and other main gold-producing countries are doing. Russia seems to have a reason for selling its gold. Its sales take place usually between the end of October and the following January or February. In accordance with this practice, Russia commenced its sale this year also a few weeks ago. Though the quantity sold so far has not been on as large a scale as in the previous year, it is stated that several tons of gold have already been disposed of in various markets. A good quantity of this gold is said to have found its way to London. It may not be surprising if Russian gold forms part of the metal that is being smuggled into India.

As against this supply, the demand has not been very large, but sufficient support is said to be forthcoming in the international gold markets to sustain the price of gold in terms of the U.S. dollar. Thus, the international gold price is being quoted now at $34.97, as against $34.94 a month ago. The slight spurt in value is not, it is stated, due to any large-scale buying by France in international markets. Nevertheless, there has been some import of gold into France and it is being financed by smuggling French currency notes out of France.

Quite apart from the hoarding in France, Turkey and other countries, there has recently been a slight increase in demand for gold generally, presumably due to expectation that there may be a rise in the official international price of gold. This expectation seems to be based on the feeling that the recent slackening of world economic activity, particularly in the U.S., may induce America to agree to an increase in the world gold price. The U.S. had been opposing an increase in the price on the ground that such a step might give momentum to inflationary pressures both in America and abroad. Now that the U.S. authorities conceded that inflation is no longer a dominant factor in the American economy, it is argued, they may agree to an increase in world price of gold.

Another factor which has given rise to hopes of an increase in the world price of gold is the growing tendency on the part of the Governments of some countries to strengthen that portion of their currency reserves in gold rather than that held in dollars, a notable example of such countries being West Germany. In India, it may be recalled in passing, the Government has only recently decided to keep the gold part of the reserves intact at Rs. 115 crores, while taking powers to reduce its sterling reserves to Rs. 85 crores and even to *nil* in an emergency. It is pointed out in this connection that the change in preference to gold reserves has taken place even at a time when, with the relatively high interest rates prevailing in America, it would have been more profitable for these countries (other than America) to hold reserves in dollars than in gold. This is taken as an indication of the Governments' feeling that world economic trends are taking such a shape that an increase in the world price of gold is not unlikely.

All these expectations are wishful thinking, because the slackening of economic activity is not so serious as to force America to change the attitude towards gold price. American authorities still feel that there is a latent danger of inflation in the U.S. economy. If the Government of West Germany or that of any other country feels like keeping a little more gold as part of its currency reserve, it must be a normal precaution to cover unforeseen contingencies. After all, it is unwise to keep all eggs in one basket. And, in this age of inflation, it is not imprudent to keep a part of one's savings in precious metals.

* * * *

After months of persistent weakness, the copper market would appear to have picked up some strength of late. Electrolytic Copper at Calcutta which had dropped to as low as Rs. 148 early last week, as against Rs. 168 in the middle of October, has since recovered to Rs. 157 (as on the 19th inst.) The recovery has been aided principally by the continued upward trend in prices in the world copper market. Cash copper on the London Metal Exchange, for instance, is now quoted at over £191 per ton, an improvement of £11 as compared with the low of £180½ on 22nd October 1957; at one time on the 6th inst., it had even touched £196. The recent rising tendency in world copper prices is due to the following three notable developments:

First, the customs smelters in the U.S. have raised their selling prices by ½ cent to 26 cents per lb.

Secondly, there is reported to be good demand from buyers in the U.S., the U.K. and the Continent. It is expected that the demand will broaden further in the coming weeks, with the entry into the market of consumers who have run down their stocks. Russia is likely to purchase 15,000 tons of copper wire from U.K. manufacturers.

Finally, attempts are being made by the copper producers to bring about a sort of stability in copper prices. The chief of the commercial division of the Chilean Copper Department recently had talks with the representatives of U.K. copper consumers on the present state of the copper market and the possibility of avoiding the wide fluctuations in prices. Chile is particularly interested in stable prices of copper, because copper accounts for a considerably large portion of its export earnings (53 per cent. last year), as also of the State's revenue (23 per cent.). With the continued drop in copper, prices this year, the revenue of the Chilean Government is said to have declined by 10 per cent.

If consumer buying in copper were to persist, as expected, and if the leading producers were to continue the cutback in output which they have effected, world copper stocks will tend to decline. Although the latest estimates of stocks are not available, it is gathered that they are still pretty large. At the end of September 1957, world copper stocks aggregated as much as 933,000 tons, about 14,000 tons more than in the previous month. Most of the increase was in stocks held by producers. The U.S. producers' stocks of copper at the end of September were 375,000 tons and stocks in the U.K. amounted to 101,000 tons. The huge world copper stocks must be attributed to the fact that the trend of copper consumption had hitherto failed to keep pace with the "very substantial" increase in supplies, thanks to absence of strikes in the main producing centres and to the bringing into production of the many new mines developed either under the stimulus of the Korean boom or on account of rising prices.

Despite the continued existence of large stocks, copper producers are inclined to feel that the outlook for the metal will be quite bright. In his statement circulated to the members of the Roan Antelope Copper Mines Ltd., Sir Ronald L. Prain, the Chairman, observes: "... present price levels do not constitute any threat to the future development of copper as an industrial material and, for this reason, one is justified in placing greater confidence in the long-term outlook for the commodity than was the position two years ago. We would expect, therefore, that copper will continue to reproduce its historic growth factor and that, if this is so, the present imbalance between supply and demand should be corrected and the copper producing industry will continue to enjoy the development which has characterised it during this century." He, however, emphasises the need for avoiding the extremes of high and low prices of copper. In his opinion, such can be ensured by efforts on the part of the larger producers of the world to alter the pattern of supply by orderly curtailment when prices reach certain low levels, for there is little that producers can do to alter the pattern of demand.

Plan for Cotton is the name of the document in which Mr. Harold Wilson, the author, has put forward a series of proposals designed to reorganise the Lancashire textile industry, including compulsory amalgamations of mills, if peaceful persuasion fails. The proposals have already received the unanimous support of the United Textile Factory Workers' Legislative Council. One of the main proposals envisages the establishment of a statutory commission entrusted with the task of building and

EQUITIES IRREGULAR

UNDERTONE REMAINS STEADY

(From Our Own Correspondents)

BOMBAY, 21*st November*

THE share market maintained a steady tone during the week under review, though the trend of prices was somewhat irregular. Earlier in the week the sentiment was bullish and equities staged a sharp rise. On Tuesday and Wednesday, there was a slight setback, but today again prices recovered and closed on a steady note.

The early buoyancy was due to short-covering and sizable fresh speculative buying. The cut in the discount rate by some of the U.S. Federal Reserve Banks and hopes of an early decision by the U.S. Government on its aid to India bolstered up sentiment. The decision of the State Finance Ministers to abolish sales tax on cloth (among other commodities) and replace it with additional excise duty, which would mean a lower price for consumers and thus stimulate consumption of cloth, induced good support to textile shares. Renewed optimism regarding early issue of bonus shares by Bombay Burmah and the note of optimism about the outlook for Tata Chemicals struck by the Company's Chairman at the annual general meeting held on Friday last also sustained the bullish enthusiasm.

On Tuesday and Wednesday, as stated already, the sentiment was subdued. Mr. G. D. Birla's statement at the Press conference held on Monday evening that he personally estimated a sum of $250 million might be available to India from the U.S. was not cheerfully noted in the market. For this amount of loan, even if it materialises, will fall very much short of the country's requirements. The market also noted his observations about the paucity of internal resources, without which we can have no projects and, consequently, no basis for seeking credit abroad.

Today, however, there was again an improvement on replacement buying and short-covering. The signing of the agreement between the World Bank and the Tata Iron and Steel Company for a loan of $32.5 million assisted the sentiment to some extent. This loan, together with the earlier one of $75 million, brings the aggregate loan to the Company to $107.5 million, the biggest sum granted by the World Bank to any private company in the world.

In the steel section, Tata Ordinaries jumped up earlier in the week from Rs. 165.75 to Rs. 168.50, but reacted slowly to Rs. 165.75 this morning. Just before the close, they improved to Rs. 167. The new shares gained over the week Rs. 2 to Rs. 158. Indian Irons, after being marked up from Rs. 19.28 to Rs. 19.56, gave way to Rs. 19.12, only to recover to Rs. 19.28 at the close.

Among textiles, Bombay Dyeings moved within a narrow range between Rs. 52 and Rs. 51.10 and closed at Rs. 51.20. Centurys gained from Rs. 397.50 to Rs. 405 and, after a setback to Rs. 398, moved up to Rs. 403, Kohinoors gained on balance Rs. 5.50 at Rs. 263.50; the highest level touched during the week being Rs. 266. Central Indias improved by a rupee to Rs. 87, while Finlays were maintained on balance at Rs. 261. Gokaks, however, suffered a decline of Rs. 3.25 to Rs. 163.75 and Indu Ordinaries a fraction to Rs. 9.60. Indore Malwas were done a rupee lower at Rs. 123. Morarjees scored a gain of Rs. 10 to Rs. 225 and Mysore Spinnings Rs. 2 to Rs. 93. Podars declined by Rs. 2 to Rs. 145, but Simplex were unchanged at Rs. 160. Standards gathered Rs. 2 to Rs. 382 and Svadeshis Re. 1.50 to Rs. 172.50. Swans changed hands Rs. 7.50 lower at Rs. 325, while Tata Mills were a shade better at Rs. 39.75.

Bank shares ruled steady, but gains in most cases were no more than fractional. Barodas were unchanged at Rs. 100.50, while Central Banks gained 10 nP to Rs. 50.80 and their new shares 50 nP to Rs. 53.50. Bank of Indias, both old and new, recorded a rise of 25 nP each to Rs. 131.25 and Rs. 132.75, respectively. United Commercials advanced by Re. 1.50 to Rs. 58.50.

Small business was done in insurance shares. New Indias were down by 50 nP to Rs. 48.50, while Indian Mercantiles had business 75 nP higher at Rs. 40.75.

Electricity shares presented a mixed pattern. Ahmedabad Electrics were taken up 80 nP higher at Rs. 97 and Bombay Suburbans 50 nP higher at Rs. 105.50. Surat Electrics were marked down by Rs. 4.50 to Rs. 105.50. Tata Hydros picked up 75 nP to Rs. 115 and Tata Powers rose by Rs. 12.50 to Rs. 1,155. Andhra Valleys shed Re. 1.25 to Rs. 1,123.75.

Belapurs came up to Rs. 250, but closed lower at Rs. 249. Bhopals were dull at Rs. 18.96. Phaltans lost Re. 1.25 to Rs. 147.25, while Walchandnagars improved by Re. 1.25 to Rs. 265 and Maharashtra Sugars by Rs. 10 to Rs. 840. Cement shares were colourless. After an early advance from Rs. 152.50 to Rs. 154.25, Associated Cements gave way to Rs. 151.50. Their new shares were a shade better at Rs. 79. Digvijay Cements were lower by 75 nP at Rs. 129. Orissa Cements were unchanged at Rs. 12.72. In the engineering group, Alcocks held their own at Rs. 227.50. After an initial advance from Rs. 135.25 to Rs. 140, Tata Locomotives receded to Rs. 135.50. Premier Constructions dropped Re. 1.50 to Rs. 156.75. Larsen and Toubros shed 32 nP to Rs. 12.72. Shivrajpurs, among mining shares, were maintained at Rs. 84 and Indian Coppers at Rs. 3.04.

Shipping shares were steady with a modest gain on balance. Scindias hardened from Rs. 17.12 to Rs. 17.48, but gradually receded to close at Rs. 17.28. Great Easterns moved up by 24 nP to Rs. 21.32. Among automobiles, Hindustan Motors were featureless at Rs. 6.32, while Premier Automobiles rose by a rupee to Rs. 90.

In the miscellaneous group, Bombay Burmahs appreciated from Rs. 547 to Rs. 557.50 before receding to Rs. 548 at the close. Their Partly-paids were Re. 1.75 lower at Rs. 207.50. National Rayons advanced from Rs. 210.75 to Rs. 218.50, but profit-taking pruned the gains and the shares closed at Rs. 214.25. Gwalior Rayons moved down by 40 nP to Rs. 9.80. Tata Chemicals gathered no more than 24 nP to Rs. 15.52, while Tata Oils shed 50 nP to Rs. 36.50. Wimcos were better by Re. 1.50 at Rs. 161.25. Hindustan Levers were quiet at Rs. 19.88.

* * * *

Calcutta Stock Exchange

CALCUTTA, 20*th November*

Although there was a shrinkage in the volume of business put through on the Calcutta Stock Exchange during the week under review, up to Friday last there was keen speculative trading and the more popular counters recorded visible gains. The reduction in the American discount rate, the Finance Minister's firm anticipation of sizable assistance from the United States, West Germany and the International Bank, and the news report from Washington to the effect that President Eisenhower was likely to urge Congress for substantial assistance to India were factors which sustained speculative enthusiasm in a large measure, and which gathered the shrewd investor's fervour, in a small measure. Mr. Krishnamachari's statement ruled out any possibility, at least for the time being, of an upward revision in the Bank rate, and this factor was also put to good use by speculative elements.

During the last two days, however, there was a setback, the sentiment having been affected by lack of follow-up support. According to the statement made by Mr. G. D. Birla in Bombay, the expected aid from the U.S. would be about $250 million, which market circles here considered as far from being "sizable" or "substantial" as determined by India's needs. As such, Mr. Birla's expectation was much below that of Mr. Krishnamachari. The difference between these two estimates undermined speculative enthusiasm. Market circles anticipated that more support for sugar, tobacco and textile shares would be forthcoming, in view of the decision by the States' Finance Ministers, who met in New Delhi under the chairmanship of Mr. T. T. Krishnamachari, to abolish the sales tax on these three commodities and levy in its place a Central excise duty, thereby making these items cheaper to the consumer. Jutes were again paid more attention, in view of the better statistical position of jute goods. Teas also attracted buying, in view of the marked improvement in demand in auctions.

More support was accorded to coal shares. For it was now considered more than probable that a portion of the target for production fixed for the public sector would have to be transferred to the private sector, if coal output was to meet the needs of the growing industries. Burrakurs were raised to Rs. 22.25 from Rs. 22.12. On strong support Pench Valley gained substantially to Rs. 18.

Among textiles, Dunbars were a solitary feature with a rise from Rs. 125 to Rs. 131. Cawnpores were unchanged at Rs. 531, while Kesorams sagged to Rs. 10.81 after being higher at Rs. 11. Bengai Nagpurs hovered around Rs. 5.69.

In the jute section, while Anglo-Indias regained to Rs. 152.50 from Rs. 150, Nationals were unchanged at Rs. 20.05 and Kinnisons at Rs. 131. Barnagores were raised to Rs. 95.50 after being lower at Rs. 93.

Earlier in the week, engineering shares were better. Guest Keen Williams were in steady demand and realised Rs. 28.62. Texmacos, after hardening to Rs. 17.35 from Rs. 17.25, closed at Rs. 17.30. Burn & Cos. lost from Rs. 333 to Rs. 327. At Rs. 166, Indian Standard Wagons hardened by Rs. 2. Indian Irons opened at Rs. 18.78 and gradually rose to Rs. 19.56.

* * * *

Madras Stock Exchange

MADRAS, 19*th November*

Barring a few selected scrips which encountered some investment support, the Madras Stock Exchange presented an easy trend with values tending to look down. Operators were generally inclined to take a pessimistic view of the outlook for equities, notwithstanding prospects of fresh financial aid from abroad as indicated by both the Union Finance Minister and the leader of the Industrial Delegation. The Finance Minister's remark that it was not right to conclude that, merely because the Bank rate in the U.K. had been raised, India would similarly raise the rate also failed to bolster up the market sentiment in favour of bulls. This was because of apprehensions of reduced return from investment in shares of companies, what with the persistently rising trend in cost of production, thanks to enhanced prices of raw materials, higher transport charges and heavier wage bill. Textile shares continued to rule depressed on renewed reports of heavy accumulations of stocks (both yarn and cloth) lying unsold with mills which have resulted in considerable loss to mills. Planting shares lacked support on the news of labour unrest in the Kerala plantations. It is stated that the labourers have demanded an immediate upward revision in wages and provision of other amenities; they have decided to go on token strike on 2nd December next to synchronise with the observance of a "demands day."

Among tea shares in the planting section, Coonoors declined by 40 nP to Rs. 19.60. Mlamallays were quoted a rupee lower at Rs. 37. Nilgiris shed 10 nP to Rs. 8.45. Peermades receded by 25 nP to Rs. 21.75. Coorg Teas and Kil Kotagiris eased by 5 nP each to Rs. 10.05 and Rs. 5.70, respectively. Chembras and Ouchterloneys softened by 2 nP each, the former to Rs. 3 and the latter to Rs. 4.58. Parksides, however, advanced by 35 nP to Rs. 14.60, on special support. Haileyburias increased by 15 nP to Rs. 15.90. Coffee shares were in somewhat better form, due to encouraging working results of a few companies. Coffee Lands improved by 90 nP to Rs. 29.90. Kumergodes gathered 5 nP to Rs. 6.05. Sangameshwars added 3 nP to Rs. 2.25. Rajendras were firm at Rs. 9.25, Badras at Rs. 3 and Balmadies at Rs. 3.05. Consolidated Coffees, on the other hand, receded by 25 nP to Rs. 25.05. Among rubber shares, Peninsulars climbed down by Re. 1.50 to Rs. 19.50. Tropicals were quoted 25 nP lower at Rs. 25.75. Malankaras receded by 23 nP to Rs. 15.10.

In the textile section, K. Rajendras and Coimbatore Pioneers decreased by Rs. 3 each to Rs. 93 and Rs. 242, respectively. Cannanores lost Rs. 2 to Rs. 162. Maduras, Rayalaseemas, Sivanandhas and Vijayakumars eased by a rupee each to Rs. 36.50, Rs. 123, Rs. 14 and Rs. 118, respectively. Mysore Silks were 15 nP lower at Re. 1.50. Hemalathas softened by 5 nP to Rs. 9.75. Trichinopolys shed 7 nP to Rs. 12.85.

Among sugar shares, Mysores suffered a loss of 63 nP to Rs. 38.12. E.I.Ds declined by 20 nP to Rs. 28.90. Jeypores were 10 nP lower at Rs. 13.20. Indias shed 5 nP to Rs. 12.35.

TAX CONCESSIONS FOR REMITTANCES TO INDIA OUT OF FOREIGN INCOMES

Tax concessions available to people residing abroad who wish to bring into India their accumulated foreign income have been clarified in a Press note issued by the Government of India. The subject matter for assessment for any assessment year is the income for the relevant previous year. Thus, for the assessment year 1957-58, the income which will be subject to tax will be that of the year commencing 1st April 1956 to 31st March 1957 (assuming that the assessee keeps his accounts according to the financial year).

Persons who do not ordinarily reside in India and 'non-residents' for purposes of the Indian Income-tax Act, do not pay any Indian tax on their incomes abroad. They are subject to Indian tax only to the extent to which any income accrues or arises to them in India, or is received in India by them or on their behalf. Any remittances they make to India out of their foreign income are completely free of Indian income-tax, the only exception being remittances made to wives. Such remittances to wives are, however, taxed on the rates applicable to the wife's total income and not on the basis of the income of the person making the remittances.

With regard to the position of persons hitherto non-resident in India who wish to bring into India their accumulated foreign income either immediately on their return to India or some time thereafter, amendments made to the Indian Income-tax Act in recent years provide for adequate safeguards.

If a person hitherto non-resident in India brings into India his past foreign profits within two years of his becoming a resident in India, he will not be subject to any tax liability on those profits; e.g., if a business man who returned to India from South Africa in May 1956 brings a sum of Rs. 2 lakhs in June 1957 out of the profits earned by him in South Africa before his arrival in India, the sum of Rs. 2 lakhs will be excluded from the total income for the year 1st April 1957 to 31st March 1958, i.e., it will not be included in the total income even for rate purposes. Thus, if the income earned in India during 1st April 1957 to 31st March 1958 is Rs. 6,000 he will be taxed only on Rs. 6,000 and at the rate applicable to Rs. 6,000.

Even if the past profits are brought to India more than two years after the assessees becoming resident in India, they will not be included in his total income provided that tax liabilities, if any, already outstanding against the assessee on the date of the remittance are discharged within three months of the date of remittance. Thus, if in the example given above, a further sum of Rs. 2 lakhs out of past foreign profits is brought to India on 10th May 1959, and if on that date, the assessee has an outstanding tax liability of Rs. 10,000 the whole of the sum of Rs. 3 lakhs will be excluded from the total income if the tax liability of Rs. 10,000 is discharged before 10th August 1959.

Remittances of capital are, of course, not taxable as income, in any case.

NEWS IN BRIEF

THE All-India Handloom Board is examining a proposal to open an emporium of handloom fabrics in Africa in order to step up the sale of Indian handloom cloth there.

The all-India first estimate of *tur* for 1957-58 puts the current year's area at 4,928,000 acres, as against the corresponding adjusted estimate of 4,808,000 acres for 1956-57, representing an increase of 120,000 acres or 2.5 per cent.

The annual general meeting of the Associated Chambers of Commerce of India will be held on Saturday, 14th December 1957, at the Royal Exchange, Calcutta. The Prime Minister has accepted the invitation of the Chamber to be their principal guest and to address the meeting.

The total output of iron ore in India increased from 310,720 tons in July 1957 to 346,422 tons in August 1957. The returns received from 113 mines for August show despatches aggregating 258,253 tons to the iron and steel plants and 109,014 tons to the export market. The reported stocks as at the end of the month amounted to 1,427,518 tons.

As an economy measure, the Government of India has decided to abolish the office of the Controller of Mining Leases at Ranchi, with effect from the 30th inst. The work relating to the modification of old mining leases under the Mining Leases (Modification of Terms) Rules, 1956, now conducted by that office will be handled in future by the Controller of Mining Leases, Nagpur.

The Central Standing Committee for Co-ordination of Power and Tele-communication Lines has been reconstituted by the Government of India. The function of this Committee will be to study and co-ordinate problems connected with the laying of power and tele-communication lines. Mr. Hayath, member, Central Water and Power Commission, is the Chairman.

The All-India Plastics Manufacturers' Association, Bombay, is organising an All-India Plastics Exhibition at Sir C. J. Hall, Fort, Bombay 1, from 20th to 30th December 1957. This is the sixth exhibition organised by the Association with the object of popularising plastics products and also to educate the general public about the innumerable applications of this modern versatile material.

A mission for the speedy procurement of cargo-handling and other port equipment, led by Mr. R. L. Gupta, Secretary, Union Transport Department, left for the U.K. and the Continent this week. The mission is expected to visit London, Rome, Dusseldorf, Rotterdam, Paris and Geneva. Equipment worth about Rs. 1 crore, representing the most urgent requirements of the major ports, is expected to be purchased.

The Government of India has announced that, as an interim measure, rail movement facilities will be given to manganese mine owners operating in the Panch Mahals district of Bombay State and in Rajasthan for ores conforming to certain specifications. These facilities will be given from the loading stations of Dohad, Shivarajpur, Nathpuri, Pani and Meghanagar in respect of manganese ore having a manganese content to 40 per cent. and less and silicon dioxide content of more than 25 per cent. or phosphorous content of more than 0.2 per cent. The concession will remain in force up to 31st January next.

At the meeting of the E.C.A.F.E. Sub-committee on mineral resources development held at Calcutta last week, the United States and the Soviet Union offered Asian countries technical assistance, information and training in the prospecting and utilisation of radio active mineral. A similar offer was made earlier by the United Kingdom, France and Australia also. The representatives of the Soviet Union and the United States gave the Sub-committee particulars of the know-how they could contribute to Asian efforts to use the newest source of energy. India, Japan, Malaya and British Borneo made statements at the meeting on their efforts to unearth radio-active deposits.

From Abroad

Pakistan is exploring the possibilities of raising a £10-million loan in the U.K. for financing its development projects.

It is reported that Canada has agreed to give Ceylon Rs. 4.5 million (about £337,500) worth of flour to help finance its Colombo Plan capital aid programme.

The Presidium of the U.S.S.R. Supreme Soviet has considered and ratified the agreement on economic and technical co-operation between the U.S.S.R. and the Syrian Republic, signed at Damascus on 28th October last.

The provisional value of Britain's exports last month was £271.80 million or £25 million more than in September. But they were 1.5 per cent. below the monthly rate for the first nine months of the year.

Prices of a wide range of petroleum products in Britain have been reduced by ½*d.* to ¾*d.* a gallon. This reduction, voluntarily carried out by the various oil companies, is due to a marked seasonal weakness in prices for lighter products in the Western Hemisphere.

Steel production (ingots and castings) in the European Coal and Steel Community in October reached 5.42 million metric tons, a record total for any month. The figure compares with 5.07 million tons in September and 5.17 million tons in October 1956. The total for the first ten months of 1957 was 49.5 million tons, as against 47.2 million tons in the January-October period of 1956, representing a rise of 5 per cent.

A new air traffic agreement between Sweden, Norway and Denmark and the Union of South Africa has been concluded, after negotiations among the representatives of the four countries. The text of the agreement will be submitted to the Governments for approval. According to the agreement, the Scandinavian Airlines System will be allowed to introduce tourist class and use modern aircraft on its route to Johannesburg.

Fifty T.W.A. executives assembled in Athens, Greece, recently, for a three-day world conference on tourism and airline traffic problems. They predicted that more Americans would take overseas vacations than ever before, during the forthcoming winter season. It is stated that overseas Americans have more money to spend this year than in previous years. The summer tourist season this year has broken all records, despite a bad start resulting from the Suez crisis.

Banks in West Germany have started investing funds in London and Amsterdam in order to take advantage of the higher interest rates prevailing in these centres. One-year Treasury Bills issued by the Dutch Government fetched 5¼ per cent. during the week ended 11th November, 1957, as against 3⅜ per cent. available in Germany on six months Treasury Bills. Similarly, short-term money in London, repayable on seven days' notice, is fetching 5 to 5¼ per cent., as against 3⅜ per cent. in Frankfurt.

Television has become a helpful device at the Tennessee Coal and Iron Company's Red Mountain iron ore mine near Birmingham, Alabama. The cameras, located 1,030 feet below the surface, scan operations at a rotary dump yard and pass them to the monitors located 75 feet above. The cameras can be automatically swivelled, so as to give the dump operators a complete view of the yard. In the past, when trouble developed in the dumping operation, a signal system halted all movement, stopping the entire operation.

The Norwegian Minister of Fisheries has stated that an absolute condition for Norway joining the European Common Market must be that fisheries products and fats are included. Although the Government has not so far come to any decision with regard to its policy, Norway, it is said, cannot enter into an agreement about a Northern customs union, if fish and fisheries products are not included. The same point of view will be of decisive importance in whether or not Norway will join the European free trade area.

According to Mr. Christopher T. Brunner, Vice-Chairman of the British Road Federation, the U.K.'s total economic loss in monetary terms on account of lack of adequate roads cannot be less than £500 million a year. This sum is equivalent to the cost of maintaining the Royal Air Force. Although the U.K. has the most serious traffic problem of any European country, the amount spent on construction and maintenance of roads has been by far the smallest in recent years, both per vehicle and as a share of the national product.

The personal income of Americans during the first ten months of 1957 was at an annual rate of $342,500 million, that is, $17,500 million above the corresponding period a year ago. This represented a 5.5 per cent. rise in personal income, which includes wages and salaries, net income on business proprietorships, dividends, interest and rents received from real estate, and other kinds of individual income. The October income flow this year is put at $11.500 million which is 3.5 per cent. higher as compared with the corresponding month of last year.

An agreement has been entered into between the United States and Pakistan under which the U.S. will finance the sale of surplus agricultural products to Pakistan of the value of $53.45 million. This is the fourth such agreement between the two countries, which will bring the total U.S. aid under this heading to $186.10 million. The products to be supplied under the new pact include wheat, rice, dairy products and inedible low. The proceeds from the sales will be used to finance development programmes in Pakistan and to meet U.S. operational expenses there.

The Soviet Union is building a "scientists' city" in mid-Siberia and is contemplating another 1,500 miles further east, near Irkutsk. The city now being built near Novo Sibirsk will house 20,000 professors and students who do research in nuclear energy, automation and jet and rocket techniques. Almost all branches of science will be represented in the city. Top priority will be given to institutes of nuclear physics, mathematics and computing machinery. The mechanics institute is expected to produce robots to take the place of factory workers, foremen and even duty engineers. The building of the city will take about three years but the two institutes of mathematics and nuclear physics are expected to be in operation in a year's time.

The new pharmaceutical laboratory of Imperial Chemical Industries was opened last month at Alderley Park, Cheshire, U.K., by Lord Waverley, a former Chancellor of the Exchequer. Costing almost Rs. 2 crores, it is claimed to be the most advanced of its kind in the world and is equipped with every modern research aid. An interesting feature of the laboratory is an isolated animal house which costs over Rs. 32 lakhs. Here animals are bred free from natural disease, a constant source of trouble in research. Everything that enters or leaves this three-storey building must pass through a rigid routine of sterilisation, decontamination and insecticidal sprays. All equipment is thoroughly sterilised and, in an air-conditioned atmosphere where the air is changed ten times an hour, the animals live separated by an aseptic "look" from the outside world.

The Japanese Finance Ministry has finally decided to ratify the agreement between the Japanese Arabian Oil Company and Saudi Arabia for the development of oilfields in Arabian territory by Japan. Although details about the agreement are not available, reports from Tokyo reveal that the Japanese Company will pay Saudi Arabia $3 million annually until oil is struck, after which it will have to pay an additional $2 million. Annual payments will date back to the time when drilling commences. Profits from the oil are to be shared on the basis of 56 per cent. for Arabia and 44 per cent. for Japan. All the facilities which are to be made available in this connection will be handed over to Arabia when the agreement expires after 40 years.

PERSONAL

MR. B. K. Kapur, High Commissioner for India in Ghana, has been concurrently appointed Commissioner for the Government of India in Nigeria.

Mr. B. N. Adarkar, India's Executive Director on the International Monetary Fund, arrived in Bombay from London on Monday this week for consultations with the Government. He is expected to be in India for a month.

Dr. C. A. Mehta, an industrialist of Bombay, who attended the International Industrial Development Conference held at San Francisco recently, has returned. He was on a tour of the Continent, the United States and Japan.

Mr. D. N. Gulhati, Joint Secretary, Ministry of Irrigation and Power, Government of India, who led the Indian delegation for talks between India and Pakistan over canal waters, held under the auspices of the World Bank, returned this week.

Mr. George West, Assistant Exports Manager of the Chemicals Division of Newton, Chambers & Co., Ltd., of Thorncliffe, near Sheffield, Yorkshire, who is on a 20,000-mile business tour, will arrive in Bombay on 4th December 1957.

Mr. G. R. Ferguson, President, Caltex East Company, and Chairman, Caltex Oil Refining (India) Ltd., arrived in Bombay on Monday. He is on his way to Visakhapatnam to attend the inauguration of the new Caltex Refinery on the 30th inst.

Mr. G. D. Birla, leader of the Indian industrial delegation to the U.S. and Europe, returned to Bombay from Geneva on Friday the 15th inst. The other members of the delegation who also returned with him were Messrs. Shriyans Prasad Jain, Ramnath Podar, D. P. Goenka, S. S. Kanoria and B. D. Garware.

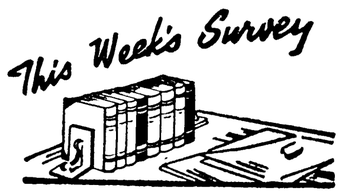
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 26*th November*

Belapur's Ten Lakhs Profit

An ordinary general meeting of the shareholders of the Belapur Company, Limited, was held at the Royal Insurance Buildings, Churchgate Street, Bombay, last week, under the presidency of Sir Joseph Kay. The report of the Directors for the year ended 30th September 1932, together with the audited statement of accounts, showed a net profit of Rs. 10,01,842, after charging Rs. 99,388 for depreciation. This sum, taken together with Rs. 5,340, brought forward from last year's amount, left a balance of Rs. 10,07,182. The Directors proposed paying a dividend of Rs. 6 per share, free of income-tax, and placing Rs. 7,60,000 for provision against taxes and towards reserve and provident funds and for future extension. They finally proposed carrying Rs. 21,594 forward to the following year's account. In the course of their report, the Directors observed that the season, from an estate point of view, had been again highly satisfactory, the crop showing considerable improvement both in regard to field yields and sugar content. The report was duly adopted. Sir Kikabhai Premchand was appointed a Director of the Company, and Sir Lalubhai Samaldas and Mr. D. Moir, who retired by rotation, were re-elected directors.



BOMBAY PORT TRUST

BEING a premier port in the country, the Bombay Port, along with the ports at Calcutta and Madras, enjoys a national status. In post-war years, the Bombay Port has handled a continuously expanding volume of cargo. In 1956-57, to which year the latest report of the Bombay Port Trust (Chairman: Mr. L. T. Gholap) refers, the port handled 11.98 million tons, as compared with 10.31 million tons in the previous year and 6.37 million tons in 1947-48. The increase in cargo is shared by both imports and exports. Imports expanded from 4.68 million tons in 1947-48 to 6.71 million tons in 1955-56 and still further to 8.24 million tons in 1956-57; the corresponding figures for exports were 1.69 million tons, 3.59 million tons and 3.74 million tons. Reflecting the growth in operations, the revenue account showed an increase. Between 1955-56 and 1956-57, the revenue under general account increased from Rs. 9.62 crores to Rs. 11.08 crores and pilotage account from Rs. 19.06 lakhs to Rs. 19.60 lakhs. Revenue from special receipts was lower at Rs. 79.55 lakhs as against Rs. 1.54 crores. The accounts reveal a surplus of Rs. 2.33 crores on general account and Rs. 6.78 lakhs on pilotage account. It may be mentioned here that since the institution of the Trust, the total expenditure on capital account amounts to Rs. 40.71 crores.

The efficiency of the port naturally depends a great deal on the co-operation of the workers. From this point of view, the labour situation in the port in 1956-57 left much to be desired. The report records how labour conditions "continued to be unsettled and there were a number of stoppages of work, some of them on flimsy grounds." It is to be hoped that the workers' unions will realise the importance of maintaining efficiency to national economy. The authorities, on their part, are steadily adding to the welfare amenities they provide for the workers. These facilities include welfare centres, reading rooms, clinics for women and children. A notable development during the year was the construction and equipment of two two-storeyed canteen buildings at an estimated cost of Rs. 5 lakhs.

SUBSTITUTE FOR S.U.N.F.E.D.

It became clear long ago that the proposal to establish a Special United Nations Fund for Economic Development, better known as S.U.N.F.E.D., would not succeed for both political and economic reasons. The proposal was that the developed countries should contribute a small percentage of their national income to this Fund to be utilised for the economic development of underdeveloped countries. It was based on the general ground that poverty anywhere is a danger to peace and prosperity everywhere and that the developed countries could make a small saving in the vast amounts they were spending on armaments and defence for making an effective contribution to raise the living standards of the poverty-stricken people of Asia, Africa and Latin America and elsewhere in the world. Originally, it was hoped that the disarmament talks would succeed and that this, in turn, would induce the richer countries to take kindly to the proposal for establishing S.U.N.F.E.D. In recent years, however, Britain and the U.S. have been taking the stand that S.U.N.F.E.D. is not a workable proposition. But the underdeveloped countries have continued to urge the U.N. to establish this Fund. A resolution has been sponsored by Argentina, Ceylon, Chile, Egypt, Greece, India, Indonesia, Mexico, the Netherlands, Venezuela and Yugoslavia that a committee be set up to outline the machinery for S.U.N.F.E.D. This resolution is now before the 82-nation Economic Committee. It is being opposed by the U.S., which no doubt has the backing of the U.K.

In theory, S.U.N.F.E.D. sounds as an ideal and logical proposition. But one has to be practical and view the position in the light of the current international political situation which has been bedevilled by a number of conflicting issues. The disarmament talks have ended in a deadlock, what with Russia threatening to stage a walk out. It is also a moot point whether, in this sharply divided world, S.U.N.F.E.D. could work smoothly even if it came into existence. In any case, without the co-operation of the U.S. and Britain, the scheme for S.U.N.F.E.D. will be a thorough failure. The underdeveloped countries will, therefore, do well to take a more realistic view on this subject by not insisting on a proposal which does not appeal to some of the leading developed countries.

It is noteworthy that the United States is making a constructive approach to the problem. Instead of S.U.N.F.E.D., the U.S. has proposed a U.N. Special Projects Fund. The purpose of this Fund is, of course, much more limited than that of S.U.N.F.E.D. But it is well within the limits upto which the developed countries of the U.N. are prepared to go for helping the underdeveloped countries collectively. Briefly, the U.S. proposal envisages a threefold increase to $100 million per annum in the U.N. technical assistance now being rendered in a limited and piecemeal way.

According to the U.S. representative, Mr. Walter Judd, the Special Projects Fund would enable the U.N. to support costly and long-range projects such as water resources and permanent regional training institutes. "It would not," to quote him, "build bridges, dams, roads, power plants or houses; the capital required for that kind of job far exceeds the resources Governments are now prepared, or able, to make available. Rather, it would do the more basic work of helping countries in a sustained and systematic way to train their manpower and assess and use their resources more effectively." Proceeding, he observed that research and experimentation in new and effective ways were the essence of economic development and added that the Special Fund, for instance, could help the underdeveloped countries to know "how to use indigenous products for new industries, how to convert sugarcane waste into building board of high tensile strength, and how to put waste products to economic use." Mr. Judd offered to appeal personally to the U.S. Congress for raising the U.S. contribution to the Fund from the present level of 33⅓ per cent. applicable up to 1959 only to at least 40 per cent. of the size of the Fund, as now proposed by him, for several years. Mr. Judd's proposal falls short of the expectations of the underdeveloped countries. But something is always better than nothing.

I.L.O. AND ASIA

Two pertinent points of substantial significance commended by Mr. G. L. Nanda, Union Minister for Planning, Labour and Employment, for the consideration of the international labour experts now in conclave at New Delhi, under the auspices of the Asian Regional Conference of the I.L.O., are that the latter should expand its operational activities in the Asian region and that measures should be initiated to make available more equipment to Asian countries under the technical assistance programmes. In saying this Mr. Nanda did not mean minimising the importance of the other activities of the I.L.O. such as "standard-setting," its traditional preoccupation. The performance of the organisation in the field has been commendable. But, as Mr. Nanda rightly observed, the greater need of Asian countries at present is a much further intensification of the I.L.O.'s operational activities. These activities involve provision of member-Governments with expert advice and technical assistance in matters connected with labour and social policy, including help and guidance for building up employment service, increasing productivity and the development of training facilities and administration of social security programmes. For, as Mr. Nanda admitted with commendable frankness, the endeavours of the countries of the region to reduce their dependence on agriculture and find other avenues of livelihood for its expanding population have met with only marginal success.

In his report to the Conference, surveying the economic development in Asia during the past four years since the Tokyo Conference, Mr. David A. Morse, Director General of the I.L.O., put this problem in sharp focus. He observed: "The basic problems have not changed over the last four years. From such statistical evidence as is available, it is clear that the gap (between living levels in Asia and those in the highly developed countries of the West) has not been lessening but has even been widening. Poverty is still crushing and widespread and, capital and entrepreneurial and technical skill are still short. Manpower—the greatest potential asset in Asian development—is still suffering from unemployment and underemployment. Industrialisation is slow to make an impact on these age-old problems. Two-thirds or more of the economically active population .... still draw their livelihood from agriculture. The rise in employment opportunity in industry has barely kept pace with the growth in the total labour force. The population of the region is increasing at the rate of about 12 million people per year and is now nearing 800 million."

National effort, supplemented by international assistance, is making slow but perceptible changes in the economic and social life of the people. But, if better results have not materialised, it is because either the one or the other or both are deficient. Mr. Nanda felt that the I.L.O. could do more in its own sphere of action to meet the needs of India and other needy countries by contributing from its vast fund of experience and expertise. But, if I.L.O. activities in this region are to be expanded and intensified, either its financial resources will have to be considerably augmented or its work reorganised on a revised system of priorities, giving greater importance to Asia. As getting more funds is not an easy task, Mr. Nanda suggested that certain readjustments should be brought about in the form of a wider reorganisation of work.

If intensification of the operational activities of the I.L.O. required a slowing down of the work of standard-setting, as Mr. Nanda recognised, the Asian countries must be prepared for it. As a measure of economy, he suggested that the International Labour Conference might be held once in two years, instead of annually as at present. Industrial Committees and other *ad hoc* committees and commissions must be reduced in numbers as also their frequency. This would give a much-needed relief to countries like India having limitations both of resources and personnel and will also facilitate the bestowing of more thought and attention on matters relating to the I.L.O.

True, acceptance of these suggestions of Mr. Nanda would mean that more of the resources of the I.L.O. should be expended on problems of more direct interest to underdeveloped countries. It might also involve, in the absence of additional funds, a slowing down of work in regard to certain types of work, which in spite of their importance, are not immediate, live issues.

COASTAL FREIGHT

The Central Government has decided that there should be a "moratorium" on coastal freight rates till the end of December 1958. This was revealed by Mr. Humayun Kabir, Union Minister for Civil Aviation, in the course of a statement indicating the Government's views on the recommendations of the Rail-Sea-Co-ordination Committee, placed before the Lok Sabha on Friday last week. The decision is, however, only of academic value. For the Indian Coastal Conference will be free to make minor adjustments in freight rates up to and not exceeding 7½ per cent. All that is required is only that prior information be sent to the Director-General of Shipping in each case of such variation. An increase in general cargo rates even above 7½ per cent. can be effected after obtaining the Government's specific approval. As regards coal, salt and timber, the freight rates will continue to be negotiated as at present. It will be interesting to note here that the current coastal freight rates are 15 per cent. above those in force prior to 15th October 1955. The Rail-Sea-Co-ordination Committee, it will be recalled, had recommended some time ago a general increase of 15 per cent. in the rates of coastal freight as were in force before 15th October 1955 without any distinction between rates for west coast trade and wider coast trade. This recommendation was accepted by the Government. This recommendation was given effect to in three stages. There were two interim increases of 5 per cent. each. These were followed by a 5 per cent. increase in freight rates from 1st September last, thus bringing the total increase to 15 per cent.

A notable suggestion of the Committee which has been accepted by the Government relates to the upward revision—by 15 per cent.—in the coastal freight rates on coal as were in force prior to the above date with retrospective effect from 1st April 1956. Since an interim increase of 5 per cent. was already effective since 15th October 1955, it has been decided to restrict the fresh enhancement to 10 per cent. with effect from 1st April 1956. The Government has, however, rejected the Committee's proposal for bringing the freight rates on salt generally to the level of rates on coal in the reverse direction. The Committee had, of course, opined that, as the suggested revision was likely to result in a sudden and steep increase in freight rates on salt, the rates must be revised in the first instance to Rs. 37-12 from Saurashtra ports to Calcutta and to Rs. 28-8 from Tuticorin to Calcutta. But the Government is of the view that the freight rates provisionally fixed from 1st January this year should continue.

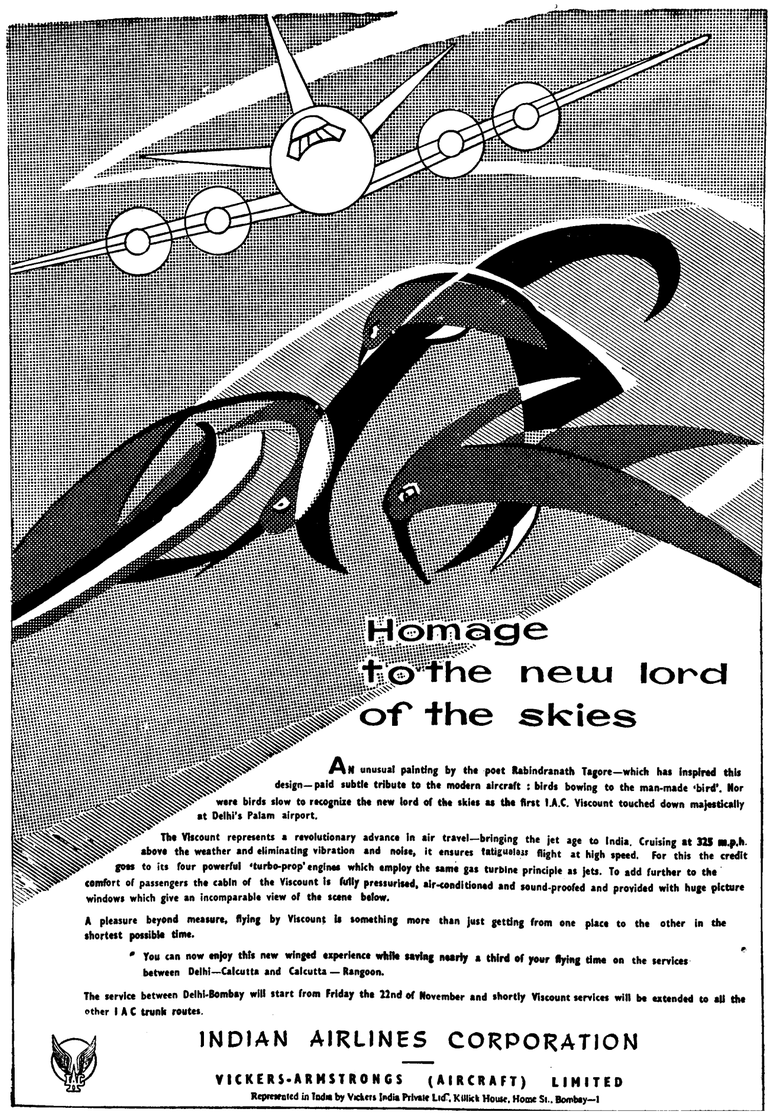
The recommendations pertaining to coastal freight rate increases as made by the Rail-Sea-Co-ordination Committee included, it was said, an allowance of Rs. 37.14 lakhs per annum towards rehabilitation and building up of reserves. The Committee had specifically urged the Government to take suitable steps to ensure that the funds were so utilised. While on this proposal, the Government has decided that provision of a rehabilitation reserve by the coastal shipping companies need not be insisted upon, in view of the fact that the freight rates on salt have not been allowed to be raised as recommended by the Committee. It has, of course, agreed that the position must be reviewed if and when freight rates on salt are enhanced.

The question of coastal freight rates is a very important one and, while fixing rates, due consideration must be paid to one vital factor. The freight rates should ensure to the coastal shipping companies a return which is adequate not merely to make the coastal service meet fully the cost of operation but also to provide sufficient incentive on the part of the companies for maintaining a high standard of service and expanding the scope of operations. At the same time, the actual incidence of the revision in freight rates on the industry, trade and consumer must not be overlooked. It may be noted here that the total quantity of cargo carried by coastal ships every year is pretty large. During 1955-56, for instance, the cargo carried amounted to 5,683,000 deadweight tons, representing about 23 per cent. of the aggregate tonnage of imports and exports. Of this volume, dry cargo carried by steamers and sailing vessels accounted for 2.8 million dw.t. and 1.5 million dw.t., respectively. The balance of 1,383,000 dw.t. constituted the refined oil products carried by tankers.

LORD HEYWORTH ON INDIA

The flow of fresh foreign capital into India continues to be only in trickles, the total of investments actually made last year being no more than Rs. 2.24 crores. One of the deterrents to a larger flow of such capital is the heavy incidence of taxation. That there is no exaggeration whatever in this view is evident from the statement made by no less a person than Lord Heyworth, Chairman of the world-famous Unilever Limited, at a Press conference in New Delhi the other day, that the return which the foreign investor in the private sector in India was getting after payment of taxes was lower as compared with that in other countries. As an instance, Lord Heyworth mentioned that the return a foreign investor gets in India was only half of what he would get in the U.S. He rightly stressed that, while the size of the huge market in India with 400 million consumers was an attractive feature for the foreign investor, "there must also be a climate favourable for him and a more flexible plan which will attract the investor of capital." By favourable climate, he meant not only less taxation but also reasonable freedom to exploit.

Lord Heyworth commended the progress made in achieving internal stability and the way in which the administrative machinery had been developed. These were, he said, elements essential to attract capital from whatever source. Revealing that he had noticed everywhere a sense of purpose, enthusiasm and confidence in persons occupying key positions, Lord Heyworth expressed particular satisfaction at the increasing attention devoted by private enterprise and Government for the recruitment and training of managers and administrators. He alluded to the Administrative Staff College of India—this is scheduled to start next month—and hoped that it would justify itself. Incidentally, this project has received assistance from the Administrative Staff College in the U.K., of which Lord Heyworth is the Chairman. Surely, such co-operation between the two countries in the field of training managers at all levels, as the Unilever Chairman averred, can be useful and mutually beneficial. Reassuring is his statement that Unilever had every faith in India and its future and was interested in playing its part in further development.



FINANCE COMMISSION'S REPORT

PERFORMANCE OF STATE GOVERNMENTS NOT FULLY APPRECIATED

From Our Special Correspondent

NEW DELHI, 19*th November*

DELHI LETTER

ONE of the important highlights of the week under review was the publication of the report of the Finance Commission, the second set up under Article 280 of the Constitution. Even the bare summary, carried by the daily papers here and elsewhere in the country, of the Commission's recommendations has created the right impression that its scheme of devolution of some Union taxes and Union grants to the States' revenue budgets is fairly generous, because it provides for a transfer of an estimated Rs. 140 crores, on an average, per annum in the five-year period ending 31st March 1962, as against an annual average of Rs. 93 crores transferred to the States under the first Commission's recommendations in the five years ending 31st March 1957. Actually, the total amount that will be transferred comes to about Rs. 170 crores if the tax on railway fares, the expected increase in tax proceeds when the States' sales taxes on mill-made textiles, sugar and tobacco (including manufactured varieties) are replaced by Centrally-levied additional excise duties on them and the saving in States' interest charges arising from the Commission's recommended scheme of consolidating the large number of Central loans to the States into four categories and rationalising their rates of interest so as not to exceed 3 per cent. per annum in some cases and 2½ per cent. per annum in other cases, are also taken into account. By all accounts, this will be a generous addition to the States' revenues every year till the end of 1961-62.

But there are already some indications that opinion in the States is not likely to be unanimous on whether the devolution scheme, just accepted by the Government of India, is generous, in spite of the fact that the Commission has fully taken into account the requirements of the States for implementing the revenue portion (accounting for Rs. 709 crores in all) of their second five-year plans.

Still the State Governments may grumble that they will not have any revenue surpluses to be transferred to their capital budgets, particularly because they will not be able to raise additional tax revenue in the wake of the Centre's huge tax effort in the current year and also because small savings and public loans will not bring in the resources to the required or expected extent.

As the State Governments, as of today, have not reconciled themselves to the prospect of possible pruning of their plan-schemes whether on the revenue side or on the capital side, their grumbling would only be natural. And so the Commission's strong advice that "development expenditure should be adjusted to the available resources and States should not run into a revenue deficit even for meeting such expenditure" is not likely to be appreciated by them. After all, the picture of States' finances on the revenue side, as it emerges from the statistical tables specially constructed and presented in the Commission's full report, tell a story which does not appear to have been recognised by the Commission. The two small tables in this letter, constructed out of the far bigger tables given in the 80-page statistical appendix to the Commission's report, may be sufficient to bring out in a nutshell that the State Governments have not been imprudent or extravagant in the management of their revenue budgets.

In fairness to the States it has to be pointed out that, while the total revenue of the Union has increased in 1957-58 (Budget) by about 73 per cent. over that of 1950-51, the total revenue of all the States together has also increased by an almost equal percentage (69) in the period. So, it is not as if the State Governments have been negligent in the matter of tapping additional sources of revenue. As a matter of fact, it is surprising that they have very nearly matched the performance of the Union Centre which is any day more favourably situated to raise additional revenue. If they are now expected to continue to compete with the Centre in the matter of raising additional revenue or to cut down their plan expenditures on revenue account in the remaining years of the Plan, when such expenditures might have to be larger than in the first two years if the initial shortfalls are to be made good, the harassed taxpayer might only prefer to see them pruned. In which case, the plan expenditures of the States on revenue account which are largely on social services may have to be drastically reduced.

It is here that the Finance Commission should have taken note of the fact that, while the States' expenditure on administrative services has shown a welcome decline from 27.4 per cent. of their total expenditure met from revenue in 1951-52 to 20.5 per cent. in 1955-56, their expenditure on social services has revealed a tardy increase from 29.8 per cent. of their total expenditure met from revenue in the former year to 31.4 per cent. in the latter year. Again, while the *per capita* cost of the administrative services to the States' citizens has increased by just half a rupee in the period, the *per capita* cost of social services has increased by nearly two rupees. As both population and costs of social services have increased in the period, it may have to be inferred that only a modest expansion of such services—an expansion that would have normally taken place even without a plan—is taking place and being presented as due to the Plan. Although anything like a big expansion of social services for which the States are predominantly responsible is not possible in the remaining years of the second Plan, the State Governments would naturally be anxious to expand them at least at a normal rate consistent with the increase in population. Any additional revenue which the Centre is expected to make available to the States on this account should not, however, involve any fresh tax burdens. Whether such assistance, over and above the Finance Commission's scheme of devolution of revenue and grants, would be possible, this correspondent is unable to say with any confidence.

TABLE 1—*Revenue*

Heads of revenue	As percentages of total revenue of all States		In rupees *per capita*	
	1951-52	1955-56	1951-52	1955-56
Agricultural income-tax	1.1	1.4	..	..
Land revenue	12.2	13.9	1.4	2.2
State excise	12.2	7.8	1.4	1.2
Stamps	5.4	4.3	0.6	0.7
Registration	1.0	0.7	..	..
Sales taxes (including those on motor spirit)	14.4	14.2	1.7	2.2
Other taxes and duties	10.0	7.5	..	..
Share of income-tax	12.8	9.8	1.5	2.0
Share of Union excise duties	..	2.9		
Statutory grants from Centre	4.3	4.3	0.5	0.7
Grants under Article 282	1.9	9.3	0.2	1.5

WHEN BANKS FAIL

From Our Own Correspondents

LONDON, 16*th November*

LONDON LETTER

IN these days of joint-stock banking, it is almost unheard of for a bank to go out of business and that is why the failure of the Ideal Bank in the Midlands, created a minor sensation in this country. The Ideal Bank was about 100 years old, it had grown up along with the whole of this country's modern banking system and survived the vicissitudes of numberless depressions, including the bank-killer of 1933, and the wars of this century. It was primarily a small savings bank with deposits totalling no more than £1 million and less than 10,000 depositors. It was not a bank that went in for investment adventures and, by the canons of nineteenth century bank economics, it was soundly administered.

Its failure is a sign of the times. What was sound in the nineteenth century is not sound in the mid-twentieth century. The Bank put its depositors' money in long-dated Gilt-edged stocks and therein lay its downfall. Gilt-edged have diminished in value as inflation has increased and the sharp rise in Bank rate precipitated a further collapse. Today the famous Consols 2½ per cent. stand at £45/46. War Loan 3½ per cent. in spite of the fact that it is redeemable at any time, stands at £61½. 3 per cent. Savings Bonds redeemable at any time up to 1965 stand at £85. The Ideal Bank found that it could meet the withdrawals of its depositors only by realising its assets at a heavy capital loss. The villain of the piece is, therefore, inflation and dear money.

But, though the Bank decided to suspend withdrawals, the depositors will not suffer. Confidence in the banking system was at stake and the Big Five, all anxious to expand their business by inducing people to bank who have so far missed the advantages and avoided the disadvantages of owning a cheque book, could not contemplate the bankruptcy of even the smallest fry of their confraternity.

Barclays Comes to the Rescue

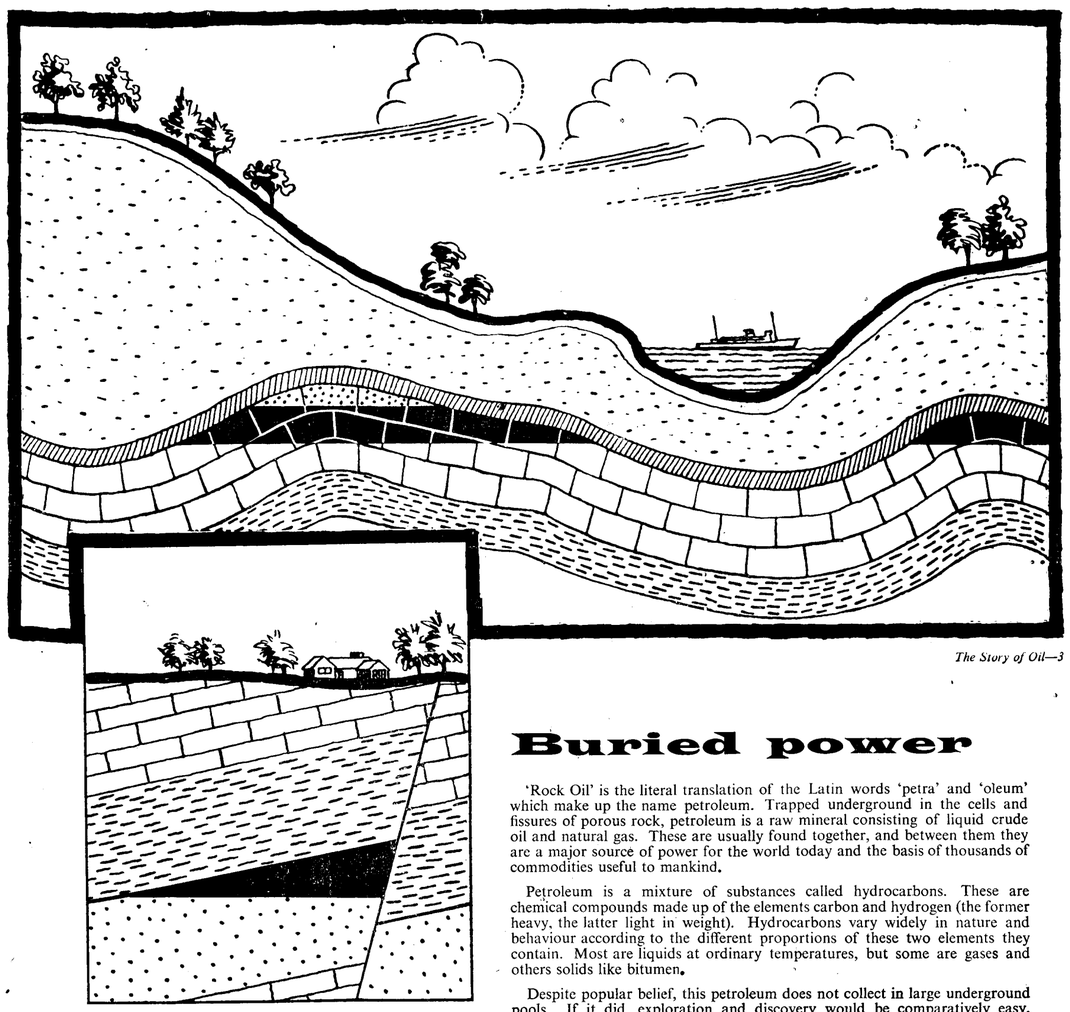
The Clearing Bankers of the Ideal Bank were one of the Big Five, Barclays, and, for the honour of British banking as a whole, Barclays stepped in to underwrite all the deposits of the Ideal Bank and, in consequence, to take over the Bank, whose business will henceforth be conducted through Barclays' own branches in the Midlands. Thus, Barclays have gained £1 million in deposits and assets which, though not worth £1 million today, will for the most part come to maturity at some time or other and fetch their nominal value. There will probably be even in the long run, some small investment loss on the transaction as a whole, but confidence in the banking system as such will have been maintained and the price paid will be cheap as compared with the disadvantages that would have accompanied a traditional bankruptcy.

The disability of the Ideal Bank is not shared by the joint-stock banks. These first of all work on a high liquidity ratio and, in addition to the 8 per cent. of till money they carry, they have a wide field of manœuvre in various forms of money more or less at call. Their advances are not subject to depreciation and their investments are in equities and in short-term Gilts as well as in longer-term Gilts. They could not fail individually, they could only fail as part of a complete failure of the whole banking system.

Buying Power of the £

Savings in this country are also invested in the Post Office and in Trustee Savings Banks. The investment affairs of the Post Office are, in fact, the responsibility of the Treasury acting through the National Debt Commissioners. The Post Office itself is not concerned with investment and could repay the savings left with it down to the last pound by calls on the Treasury. The Trustee Savings Banks operate in a similar way with a similar State backing so far as current account savings are concerned. If depositors choose to put in their money on a longer-term basis and thereby earn more interest, then they also take more risk, for such moneys can be invested by the Trustee Savings Banks in suitable investments of their choice and these are necessarily vulnerable. But the scale of their

(*Continued on page* 999)



The Story of Oil—3

Buried power

'Rock Oil' is the literal translation of the Latin words 'petra' and 'oleum' which make up the name petroleum. Trapped underground in the cells and fissures of porous rock, petroleum is a raw mineral consisting of liquid crude oil and natural gas. These are usually found together, and between them they are a major source of power for the world today and the basis of thousands of commodities useful to mankind.

Petroleum is a mixture of substances called hydrocarbons. These are chemical compounds made up of the elements carbon and hydrogen (the former heavy, the latter light in weight). Hydrocarbons vary widely in nature and behaviour according to the different proportions of these two elements they contain. Most are liquids at ordinary temperatures, but some are gases and others solids like bitumen.

Despite popular belief, this petroleum does not collect in large underground pools. If it did, exploration and discovery would be comparatively easy. Instead it lies, usually with a quantity of salt water, in layers of solid looking porous rocks closed in by walls or caps of non-porous rocks which prevent it escaping. There are three main types of oil-trap—the 'anticline', an arch-shaped upward fold in the earth's rock layers; the 'fault', or fracture in the earth's crust whereby a non-porous layer has slipped to cut off a porous layer; and the 'stratigraphic' trap, where because of changes in the type of rock a porous layer becomes sealed off by non-porous rocks.

Thus, when geologists begin their search for oil, they start with the knowledge that certain types of rock formation are more likely to yield oil than others.

The drawing at the top shows the inside shape of an *anticline*. Compression has buckled up the earth's crust, squeezed it into these folds. The other illustration is of a *fault*, a dislocation in rocks. Two sections of the earth have been forced in different directions until they cracked, slipped out of position, and upset the alignment of all the rock strata involved. The black section indicates oil-bearing rock.

U.S. FEDERAL DISCOUNT RATE CUT

INFLATIONARY PRESSURE EASING—BUSINESS ACTIVITY SLOWS DOWN

FIVE of the twelve Federal Reserve Banks in the U.S. have reduced their discount rate from 3½ per cent. to 3 per cent. Of these, four effected the cut from the 15th inst. and one from the 19th inst. It is expected that the other seven banks also will soon follow suit, but up to the time of writing (Wednesday evening) none of these has announced a cut in their discount rates. The cut by the five Regional Reserve Banks restores the discount rate to the level which prevailed in August, when they stepped up the rate from 3 per cent. to 3½ per cent. It also marks a reversal of the upward trend in discount rate which began in April 1955, as a measure to check the growing pressure of demand for credit. The Board had approved, since then, increases in discount rate on six occasions—on most of which the rise was ¼ per cent.—till the rate reached a peak of 3½ per cent. in August.

The reduction in the U.S. Federal discount rate, which corresponds to the Indian or British Bank rate, within three months of the last increase, is in distinct contrast to the rise in the British Bank rate from 5 per cent. to 7 per cent., effected in September last, and the increases in discount rates of the Central banks of several other countries in the last few months. It is, however, in consonance with the downward trend in interest rates noted in recent weeks in Canada and West Germany—the latter reduced its Bank rate from 4½ per cent. to 4 per cent. almost simultaneously with the rise in the British Bank rate in September last. It is also in tune with the easing of interest rates in the U.S. itself for several weeks now. For instance, the U.S. Treasury Bill rate, which had successively advanced from 3.04 per cent. in May to a high of 3.625 per cent. in September, declined steadily to touch 3.473 per cent. last week. A similar trend is noted in commercial bill rate also. What is more noteworthy about the U.S. Treasury Bill rate is that it had consistenly been above the Federal Reserve Banks' discount rate from the last quarter of 1956 till recently, but it fell on the 8th inst. below 3½ per cent., the then discount rate.

Inflation—No More A Dominant Factor

It will thus be seen that last week's cut in the U.S. discount rate does not represent any new initiative on the part of the Federal Reserve Board but only an adjustment of its own rate to the market rates which had already set in motion, reflecting the slowing down of economic activity in the U.S. Nevertheless, it is an acknowledgment by the Federal Reserve authorities and the U.S. Treasury that inflationary pressures have tended to ease and that the need for credit restraint has lessened. According to a spokesman of the Federal Reserve Board, "it is a recognition that inflation, at least temporarily, has ceased to be the dominant factor in the economy. It is an attempt to adapt to current conditions." It is explained that the U.S. economy had been on a plateau for a long time. The feverish surge in economy has now been worked off and the Bank rate should, therefore, be changed to meet present circumstances.

It is common knowledge that a business recession in the U.S. has set in during the past few weeks. Though industrial production, trade and employment are still at a high level, there are enough indications to show that the pace of increase has slowed down. In fact, there has been a slackening of fresh orders and they are not sufficient to mop off the rising production, with the result that a growing level of inventories poses a problem to industries. Consequently, there has been a falling off in demand for credit. During the first half of the year, there was a steady upward rise in bank lending to business and private borrowers. Since the beginning of September, there has been a check to this rising trend. The latest figures of bank lending prepared by the Federal Reserve Board are not available, but the statistics of bank advances relating to New York banks suggest that the trend is definitely downward. Between mid-August and end of October, the advances of New York banks are said to have declined by about $130 million, as against an increase of over $500 million in the corresponding period of 1956. Business loans of New York City banks during the week ended 13th November showed only a rise of $12 million, as compared with $116 million in the corresponding week of 1956.

The slowing down of business activity and widespread talk in recent months that this is the forerunner of an impending recession, with its own world-wide repercussions, has discouraged many business concerns from undertaking new expansion programmes. This is also one of the reasons for the falling off in demand for bank credit. The present business trends in the U.S. has led to expectations that capital goods spending in the country would decline next year. These fears have been confirmed by McGraw Hill Publishing Company, which forecasts, in its annual survey, a fall of 7 per cent. from the 1957 peak in capital spending during 1958. The decline in capital expenditure may in turn lead to an increase in savings in excess of investment demand, resulting in easier money conditions and a further fall in interest rates.

Control on Credit Not Relaxed

The reduction in discount rate may be followed by further cuts, if business activity continues to ease. A rise in discount rate can also be expected, if the business recession halts and inflationary forces gain fresh momentum. It is generally expected that the expected fall in economic activity can be avoided by a larger expenditure on defence. In fine, the situation, despite the official stamp of approval of easy money conditions, is still obscure. For the Federal Reserve Board has not relaxed its firm control on credit supply, despite its lowering of the discount rate. Member banks are being asked to get part of their requirements by borrowing from the Board. The Board is said to be unwilling to allow the credit supply to be free, since it considers that there still remains a latent danger of inflation.

Though the slackening of business activity and the easing of interest rates have been in evidence for some weeks now, the business community would appear to have not expected the Federal Reserve Board to act so quickly as it has done, because of the Board's declared firm policy of curtailing credit expansion as a means of fighting inflation. The announcement of the Board's approval of a cut in discount rate, therefore, came as a surprise. The U.S. bankers are of the view that it is too early to say whether the prime interest rate will be lowered as a result of last week's cut in discount rate. For according to an economist of a New York bank, banks still do not have surplus money to lend.

(*Concluded from next column*)

sonal elements in the trade of other sterling countries, was mainly the result of the burst of currency speculation which followed the revaluation of the French franc.

It was feared for a time that the German Deutsche Mark might be revalued upwards, and that sterling might be devalued; funds were taken away from London, foreign traders were slow to pay their bills and quick to demand payment. Sterling became weak, and the gold reserves fell.

But short-term capital movements of this kind can be reversed fairly quickly. The British and German Governments reaffirmed that they had no intention of changing their exchange parities, the meeting of the International Monetary Fund passed without incident, Mr. Thorneycroft announced new economic measures designed to strengthen sterling. The pound became stronger almost at once, and there was a small reflux of foreign exchange in the last week of September.

In October money began to flow back into its normal channels quickly. The Sterling Area gold and dollar reserves rose by $243,000,000—actually a rise of $126,000,000 when account is taken of the $250,000,000 drawn from the Export-Import Bank and the $133,000,000 paid to the European Payments Union in respect of September. On top of this, there was a £9,000,000 surplus with E.P.U. in October—the best result for this month since 1952.

A large part of this rise in the reserves must be put down to currency rather than to commercial transactions, and a large part of the gold lost in August and September has yet to be recovered. But things are moving in the right direction. The first response to Mr. Thorneycroft's new measures has been satisfactory.

U.K.'S NEW MONETARY POLICY

RESULTS SATISFACTORY

By John Kingsley

SEVERAL facts about United Kingdom business activity in the first nine months of 1957 now stand out clearly, and three of them have an obvious bearing on the new economic measures announced by the Chancellor of the Exchequer, Mr. Peter Thorneycroft, in September. The first is that demand of nearly all kinds remained persistently strong, in spite of the steps already taken to restrict it. With the end of petrol rationing, for example, expenditure on consumption by the general public rose sharply: more was spent not only on motoring but on food, tobacco, clothes and durable household goods, and outstanding hire-purchase debt began to rise again.

This recovery in consumption spending was accompanied by a continued rise in capital expenditure on new plant and machinery, particularly in manufacturing industry, by higher investment in stocks, and by sharp acceleration in the pace of expenditure on the railway modernisation programme.

It is true that there was evidence to suggest that demand might not continue to grow at this rate. The growth of investment in manufacturing industry was slackening, there were signs that the increase in consumer expenditure was gradually being overtaken by higher prices, while real expenditure on goods and services by the Government and by local authorities had already fallen. But there is no doubt that home demand remained extremely strong during the first half of 1957.

This rise in demand—and exports, too, were still growing—was reflected in national output. Production rose quite sharply in May, with the passing of the Suez crisis and the end of strikes in the shipbuilding and engineering industries; the output of capital goods continued to increase, and there was a marked recovery in the output of consumer goods.

The rise in production has been maintained and improved. In August, it was 5 per cent. above that a year earlier, but, over the period, production increases have been more than matched by the increase in money incomes. During the first half of 1957, compared with the same period of 1956, output of goods and services rose by around 2 per cent., while money incomes—wages and profits—rose by 5 per cent. The result was a rise in the final prices of all goods and services of 3 per cent.—a rise which was mostly due to the increase in internal costs. Since June, retail prices have gone up on last year by 4 per cent.

This rise in demand, output, and prices was accompanied by an extremely strong external payments position. In the first half of 1957, despite the special strains on oil and shipping income produced by the Suez crisis, there was a current payments surplus of £125,000,000—only a little less than the £159,000,000 achieved in the first half of 1956. In the 12 months to June of this year, the payments surplus amounted to £211,000,000 against a surplus of only £57,000,000 in the previous 12 months.

The volume of exports has continued to rise, more than making up for the cost of special oil imports and the general rise in imports needed to back the growth of industrial production; it has risen further in the third quarter, in which there is also likely to have been a further recovery in invisible income. But it must be admitted that the rate of growth of exports is slackening, and that the fall in import prices which is helping to strengthen the current trade balance could lead to export difficulties if it goes further.

As a result of this strong trading position, the Sterling Area's gold and dollar reserves rose by £88,000,000 in the first half of 1957. This was an extremely encouraging result, since it was achieved in spite of a sharp rise in long-term investment abroad—mainly due to the purchase of dollar securities by United Kingdom residents through Sterling Area free markets. It was made possible by an improvement in short-term capital account and in particular due to the rebuilding of London balances by Germany and by Sterling Area countries.

Since June, of course, there have been fresh changes in short-term capital account. The United Kingdom trade balance has continued to improve, but the gold reserves fell sharply in September. This fall, though partly due to sea-

Notice

GOVERNMENT OF INDIA

MINISTRY OF RAILWAYS

(Railway Board)

TENDER NOTICE

THE MINISTRY OF RAILWAYS (RAILWAY Board) invite tenders from competent and experienced contractors for the design, manufacture, supply, erection and maintenance for a period of one year of 25 kV, Single Phase 50 Cycle, A.C. Overhead traction equipment, complete in all respects including structures and foundations, necessary for the electrification of approximately 700 route miles (about 1,750 track miles) of 5'-6" gauge track on the Calcutta-Moghalsarai and Asansol-Rourkela sections of the Eastern and South-Eastern Railways respectively. The mileage would be divided into approximate sections of 100 to 200 miles of Main line track and 25 to 60 miles of sidings. The sections would be required to be completed by the end of 1959. The Railway Board reserves the right to award the contract for one or more sections to one or more contractors.

2. The particulars of the tenders together with specification can be purchased from the Office of the Director, Electrical Engineering (Railway Board), State Entry Road, New Delhi, after 18th November, 1957, on payment of Rs. 100 per copy in cash or by money order.

3. The prospective tenderers should submit sealed letters on or before 18th December 1957 to the French National Railways, Paris—The Technical Associates of the Ministry of Railways for this work and also submit simultaneously a sealed copy to the Engineer-in-Chief, Electrification, Railway Board, New Delhi, India, indicating their intention to submit quotation together with details as given below:

(1) Their previous experience on similar electrification projects together with the magnitude and other details of such works they had undertaken during the past 10 years. The details of any large contracts in hand shall also be given.

(2) Their resources for materials and equipment together with names of manufacturers from whom early deliveries of materials can be assured.

(3) Details of the experience and number of technical personnel employed.

(4) The sections of lines as indicated in the Tender for which they would quote, stating the approximate time schedule for completion of work on each section.

4. The detailed offers should be submitted on or before 31st January 1958 to the undersigned and a copy sent simultaneously to the French National Railways, Paris. The offers will be opened in public at 11 a.m. local time on 1st February 1958 in the Office of the Engineer-in-Chief, Electrification, Railway Board, New Delhi, India, and by the S.N.C.F. in Paris.

5. The address of the French National Railways for the purpose of the Tender will be:

M. Vaubourdolle
Chief Adjoint Des Installations Fixes
S.N.C.F.
42 Rue De Chateandun
Paris IX

All envelopes containing correspondence on this subject should be marked "For the Indian Railways."

6. Earnest money with tender and security deposit on placing the order, will be called for.

7. Alternative quotations should also be given for deferred payment terms. Details will be in the particulars of tenders mentioned in para 2 above.

8. This has been issued with the concurrence of the Ministry of Finance (Economic Affairs Department).

M. N. MUKERJEE,
for *Secretary, Railway Board.*

After being refined into quality petroleum products, I am transported to the market. Here, through a well organised distribution system, I finally come to meet you—the consumer. Before I do that, however, you must meet my friends who bring me to you.

Stanvac, working through its Sales Offices, dealers and agents located throughout the country, is a good example of a well-knit organisation which markets me in my various forms. Its dealers and agents are an important element in the distribution chain. They are efficient and independent businessmen—big and small—who supply quality petroleum products so vitally needed by you. Stanvac helps these dealers by way of free advice and training their personnel to give efficient and courteous service to the customer.

By helping these enterprising businessmen to progress in their chosen field, Stanvac plays a significant part in the fast developing economy of the community and, indeed, of the nation as a whole.

LIONEL EDWARDS (PRIVATE) LIMITED

UNION GOVERNMENT ACCEPTS FINANCE COMMISSION'S RECOMMENDATIONS

STATES TO RECEIVE MORE FROM CENTRE

THE report of the Finance Commission (Chairman: Mr. K. Santhanam) and the Government of India's acceptance of the unanimous recommendations contained therein were laid on the table of the Lok Sabha on Thursday the 14th inst. The Commission, it will be recalled, was constituted on 1st June 1956. Although the work of the Commission was, in a sense, the continuation of that of the previous Commission (Chairman: Mr. K. C. Neogy), it had, in addition to making recommendations about the allocation of income-tax, the sharing of Union excise duties and grants-in-aid under Articles 273 and 275 of the Constitution, the following additional terms of reference:

To make recommendations about the distribution of Estate Duty on property other than agricultural land and tax on railway fares;

to determine the amount of the present income of the States from sales taxes on mill-made cloth, sugar and tobacco to be introduced in place of the existing sales taxes on these commodities and to suggest the method of distributing these additional duties of excise proposed in replacement of sales taxes; and

to review the terms and conditions of loans given by the Centre to States during the period from 15th August 1947 to 31st March 1956 and recommend modifications if considered necessary.

The Finance Commission has put forward two important recommendations with regard to the distribution of income-tax. They are: (1) an upward revision in the States' share of the net proceeds of tax on income (other than corporation tax) but excluding taxes on Federal emoluments and those attributable to Union territories (fixed at 1 per cent. of the net proceeds) from 55 per cent. to 60 per cent.; (2) a change in the basis of distribution of this amount among the States, from 80 per cent. on population and 20 per cent. on collection to 90 per cent. and 10 per cent., respectively.

Excise Duties

The Commission has widened the range of the divisible excise duties by suggesting the inclusion of duties on coffee, tea, sugar, paper and vegetable non-essential oils, along with the three existing items, namely, matches, vegetable products and tobacco. The States' share is fixed at 25 per cent. of the net proceeds of duty on the eight commodities, the share of each State being almost wholly on the basis of population with certain minor adjustments among the States. Under the previous award, 40 per cent. of the excise duty on matches, vegetable products and tobacco is distributed among the States.

As regards the terms of reference pertaining to the distribution of excise duties on textiles, sugar and tobacco that are proposed to be levied in order to replace the sales tax on these goods, the Commission has computed the total income now accruing to the States from sales taxes, by whatever name called, on mill-made textiles, sugar and tobacco at Rs. 32.50 crores a year. It has recommended that, out of the net proceeds of the proposed additional duties of excise on these commodities, the States should first be paid the compensation as assessed by them and the balance, if any, distributed among the States. This distribution is based partly on population and partly on consumption. It has recommended that, before distribution to the States, one per cent. of the net proceeds should be retained by the Union in respect of Union Territories and 1¼ per cent. should be paid to the State of Jammu and Kashmir. There is no sales tax at present in that State, but a share of the additional duties would nevertheless be due to it as the duties will be levied in that State also.

Estate Duty

The net proceeds of the Estate Duty have to be distributed in accordance with principles laid down by law of Parliament. They are now provisionally distributed among the States like the net proceeds of income-tax except that the entire sum, less the portion attributable to the Union Territories, is distributed, instead of 55 per cent. as in the case of income-tax. For the period upto 31st March 1957, the Commission has suggested that this provisional distribution be formally ratified by law. For the future, it has recommended that, after retaining one per cent. in respect of Union Territories, the balance of the net proceeds should be notionally allocated between immovable property and other property in proportion to the gross value of such property brought into assessment in each year, the share thus allotted to immovable property being distributed in proportion to the value of such property located in each State and the balance in proportion to the population of the State.

Tax on Railway Fares

As regards the tax on railway fares, the Commission has recommended that ¼ per cent. of the net proceeds be retained by the Union in respect of the Union Territories and the balance distributed to the States. The distribution has been broadly based on the average earnings for the three years ended March 1956, of the railways located in each State, the figures being separately worked out for each zonal railways and for each gauge of such railway and distributed among the States covered by these railways on the basis of route mileage.

Grants-in-aid

The first Finance Commission recommended the payment of grants-in-aid of Rs. 75 lakhs each to Assam and Bihar, Rs. 15 lakhs to Orissa and Rs. 150 lakhs to West Bengal *in lieu* of the share of the export duty on jute and jute products. Following the transfer of certain territories from Bihar to West Bengal, as a result of States reorganisation, the grant for Bihar was reduced by Rs. 2.69 lakhs; this sum was added to the grant to West Bengal. The Santanam Commission has recommended that the same amounts may continue to be paid to those States till 31st March, 1960, when, under Article 273 of the Constitution, these grants cease to be payable. The dislocation likely to be caused to the revenues of these States on this account has been taken into account by the Commission in its recommendations for general grants-in-aid.

Under the scheme of devolution suggested by the first Commission and accepted by Government, fixed grants were paid to Assam (Rs. 100 lakhs), Orissa (Rs. 75 lakhs), Punjab (Rs. 125 lakhs), Saurashtra (Rs. 40 lakhs), Travancore-Cochin (Rs. 45 lakhs), Mysore (Rs. 40 lakhs) and West Bengal (Rs. 80 lakhs), while under a separate agreement with Jammu and Kashmir, a sum of Rs. 250 lakhs is paid annually to that State as grant-in-aid. As suggested by that Commission, special grants for the expansion of primary education for the States of Bihar, Hyderabad, Madhya Bharat, Madhya Pradesh, Orissa, P.E.P.S.U., Punjab and Rajasthan amounting in all to Rs. 9 crores for the four years ending 1956-57 were also paid. The Santanam Commission has not recommended any grant for broad purposes like this, but has proposed substantial grants-in-aid for 11 out of the 14 States.

Three principles of grants-in-aid have been laid down by the Finance Commission. First, the eligibility of a State to grants-in-aid and the amount of such aid should depend upon its fiscal need in a comprehensive sense. In a Union, in which the Centre and the States co-operate for planned development, grants-in-aid should subserve this end. Priorities and provisions in the Plan itself should determine the fiscal needs for development for the period of the Plan. Secondly, the gap between the ordinary revenue of a State and its normal inescapable expenditure should, as far as possible, be met by sharing of taxes. Grants-in-aid should be largely a residuary form of assistance given in the form of general and unconditional grants. Thirdly, grants for broad purposes may also be given. While they last, they should be grants-in-aid of revenues, but the States would be under an obligation to spend the whole amount in furtherance of the broad purposes indicated. Where those purposes are provided for in a comprehensive plan, there will be no scope for such grants.

The aforesaid recommendations of the Finance Commission have been summarised in tabular form at the foot of the page. The scheme of devolution suggested by the Commission is expected to involve an annual transfer of Rs. 140 crores from Central revenues to the States by way of shares of revenue and general grants-in-aid. This sum, it may be noted, represents a rise of Rs. 47 crores as compared with the average amount received every year by the States under the last Commission's award in the five years ended 31st March 1957. The scheme of devolution, it is stated, takes into account "the needs of the States, with due regard to the ability of the Central Government, with its immense responsibilities, particularly for defence and national development, to transfer resources to the States. The Commission claims that its scheme maintains a balance between devolution by transfer of shares of taxes and devolution by fixed grants-in-aid." The Commission emphasises that "any modification of individual recommendations will upset this balance."

Loans

After a review of the terms and conditions of the loans remitted to their consideration, the Commission has recommended that no modification need be made in the case of loans which have been given interest-free. In the case of loans given for the rehabilitation of displaced persons, it has recommended that, with effect from 1st April 1957, the State Governments should be required to pay to the Centre only the sums realised by them from the displaced persons on account of principal and interest, including arrears. It has suggested that the outstanding balance of the loans carrying interest at 3 per cent., and above should be consolidated into two loans both carrying interest at 3 per cent., one covering the outstandings of loans with a remaining maturity of 20 years and less repayable on the expiry of 15 years and the other covering the balance of loans and repayable on the expiry of 30 years. It has suggested the similar consolidation of loans carrying interest at less than 3 per cent. into two loans but carrying a rate of interest at 2½ per cent. The debt consolidation scheme suggested by the Commission will give all the States together a relief of Rs. 5 crores per annum.

The operation of section 15 of the Central Sales Tax Act has been postponed from 1st October 1957 to 1st January 1958. An officer of the Finance Ministry has discussed with certain State Governments the difficulties anticipated by them on the enforcement of the section. The agreed decision reached in the light of the above discussions will be incorporated in a Bill that will be brought before Parliament shortly.

INFRINGEMENT OF TEXTILE DESIGNS BY JAPANESE DECLINES MARKEDLY

PROSPECTS FOR COTTON MILLS

From A Special Correspondent

MANCHESTER, 12*th November*

MANCHESTER LETTER

VIEWS and comment on the proposed European free trade area among Lancashire textile men differ widely, but majority opinion is extremely anxious about the prospects unless safeguards to protect local interests are included in the scheme. No more clearly defined attitude could have been expressed than the resolutions drawn up by the two leading organisations representing employers in spinning and weaving. These statements, adopted by the central bodies of each organisation, refer to the "serious and irretrievable damage" which could be caused to Lancashire in the event of the plan being put into operation without suitable safeguards.

Ever since the proposals were first put forward, the threat of increased competition, not only from Continental countries themselves but also from the rising Eastern suppliers, has been an ever-present fear which many millowners cannot eradicate. The glib suggestion that the system will provide a new and expanding market for Lancashire products can easily have a boomerang effect by offering Britain's home market in textiles on the altar of expediency on behalf of other industries and wider political issues.

It would be unwise, however, to hope that the resolutions will carry much weight when they reach Governmental circles. Already Britain as a nation is so involved in the scheme that there can be no turning back. The Government, in the words of its spokesmen, is clearly committed to the idea in principle and it is doubtful whether any individual trades will be able to exert enough pressure to secure protection from wider and more intensive competition.

Avoiding the Issue

The usual reply when such matters are raised in open debate is for the supporter of the free trade area plan to say: "These fears about competition are exactly those I hear from our competitors on the Continent." In this way, the problem is side-stepped, but the fact remains that, without the safeguards which Lancashire traders are demanding, the whole area may well become a prey to Eastern competition. Some opponents of the scheme go so far as to believe that Europe will become "a dumping ground" for the world's cheap suppliers of textiles.

In view of the inroads which have been made in the export trade of traditional cloth-producing areas, further opportunities to infiltrate into overseas markets by the newer textile industries would result in Lancashire, in particular, becoming a net importer and losing even the small export trade she still retains. This pessimistic viewpoint will be roundly challenged by certain firms which have peculiar access to Continental markets and which believe in making the best of the present circumstances.

Design Infringement

An issue causing almost as much ferment just over two years ago as does the spectacular flow of foreign grey cloth today was the widespread infringement of Lancashire textile designs by the Japanese. Almost unnoticed, the problem has slipped into the background amid the welter of words and effort expended in trying to stem the import flood; unnoticed, that is, by the day-to-day observer but not by the British Steering Committee on Textile Designs.

This "watchdog" organisation, representing the principal trade organisations in the cotton and rayon industries, has been keeping constant vigilance since the Manchester Chamber of Commerce mission to Osaka in May 1955 urged the Japanese to initiate measures to safeguard Lancashire's interests. The problem has been brought into fine focus again by the visit to Manchester of Mr. K. Nomachi, chief official of the Japan Textile Colour Design Centre, which has the responsibility of protecting the originality of cotton and rayon textile designs.

A fresh appraisal of the incidence of design copying by the Japanese reveals a remarkable diminution. In the year before the mission flew to Japan, several hundred cases of infringement were reported through Lancashire trade circles; in the 12 months following the Osaka talks, the number fell to "double figures," and so far this year, it is understood, only four instances have come to light. A large slice of the credit for this transformation must go to the Chamber of Commerce mission, for it is largely on its recommendations that the Japanese have based their protective measures.

New System's Success

Apart from the routine procedure of registration and certification of designs, additional safeguards have been instituted. One of the chief causes of design infringement, the Japanese claimed, was the practice of some foreign buyers wrongly to claim ownership of cloth designs submitted for printing in Japan. Under the new system, before a Japanese exporter is allowed by the design centre to proceed with the order, a letter must first be secured by the overseas customer from the original calico printer establishing that the design does, in fact, belong to him. In addition, every yard of cloth now exported from Japan is checked by a Government inspection bureau and must be approved by the design centre.

Obstacles in the way of the malpractices of the past, coupled with an apparently genuine desire by the Japanese to prevent infringement, suggest that Lancashire may well have heard the last of this old and complex problem. It is perhaps pertinent to point out that the solution has been found by negotiation on an industry-to-industry level, although that will doubtless give little comfort to those now leading the call for Government intervention to control cloth imports, particularly in view of the latest report that Hong Kong has repeated its unwillingness to put a voluntary ceiling on shipments to Britain, as urged by Lancashire trade leaders.

Sir Raymond Streat

Sir Raymond Streat, who retired from the position of Chairman of Britain's Cotton Board at the end of September, has taken up a position within the trade. After holding the official post as Lancashire's chief negotiator with the Government for 17 years, he has joined the Board of the £1,000,000 Manchester textile manufacturing group, Simpson and Godlee Ltd.

In his previous post, he received £5,000 a year, but one of the rules stipulated for the Cotton Board Chairman was that he should have no financial interest in any of Lancashire's 1,300 mills. When Sir Raymond retired, however, he hinted that he would be taking up a number of business appointments. This is his first directorship, but he has also been appointed Chairman of the Court of Governors of Manchester University.

Textile Company Prospects

Among the many changes which are taking place in Lancashire textile concerns, the advice is often given to chairmen to amalgamate or sell up. This suggestion was made at the annual meeting of Hickson, Lloyd and King Ltd., the old-established Manchester manufacturing and merchanting group.

One stockholder contended that the Company was faced with two alternatives—either to seek a take-over by a prosperous firm or to wind up the company and distribute the assets to the shareholders. He told the meeting that he was disappointed at the year's results (there was a net profit of £17,877, as against £22,547 in the previous year) and offered to take the initiative in forming a shareholders' committee to carry out his proposals. The Company's total assets were about £900,000, but the profit was only about the same as the amount paid out in fees and salaries.

Mr. Leslie Shaw, the Chairman, said that the Company's first duty was to its employees, its second to customers and its third to stockholders. Over the years, he recalled, the Company had done very well for its stockholders and he considered the remarks made about fees and salaries "extremely unfair." Earlier, in his annual statement, he had said that the Company's disappointing results were due partly to increased expenditure and partly to a recession in sales during the months of May and June. There was little doubt that the Suez crisis and the shipbuilders' strike were responsible for this drop in turnover.—*All Rights Reserved.*

STANDARD COTTONS OF 1955-56

FIBRE AND YARN TESTS INDICATE GENERAL DETERIORATION IN PERFORMANCE

DETAILED tests carried out by the Technological Laboratory of the Indian Central Cotton Committee at Matunga, Bombay, on the fibre properties and spinning performance of the standard Indian cottons belonging to the 1955-56 season showed that 15 out of the 22 standard cottons tested recorded a deterioration in performance over the previous season, six gave approximately the same results and only one, namely, Kalyan of Bombay State, showed a definite improvement. The remaining two were new varieties added to the list of standard cotton, in the place of those removed from the list and comparisons were, therefore, not possible. The standard cottons which produced approximately the same results as those of the 1954-55 season were, according to the *Technological Report on Standard Indian Cottons*, 1956 prepared by Dr. R. L. N. Iyengar, Director of the Laboratory, Laxmi, Surat 1027 A.L.F. of Bombay State, H. 20 of Madhya Pradesh, Gaorani 6 of Hyderabad, Karunganni 5 of Madras and Westerns I of Andhra. Others, namely, Jaydhar, Vijay, Jarilla, and Virnar of Bombay, L.S.S., P.A. 320, F. of Punjab, Buri 0394 of Madhya Pradesh, Gaorani 12 and Parbhani American I of Hyderabad, Cambodia Co2, M.C.U. 1 (winter), Karunganni 2 of Madras and Nandyal 14 of Andhra gave definitely poorer results. The report also contains detailed data regarding the test conducted on each cotton, giving agricultural details, the graders' valuation report, the spinning masters' report and complete information regarding the treatment, waste percentage, yarn breakage and the test results carried out on fibre and yarn.

What is Standard Cotton

Standard cottons, it may be mentioned here, are cottons which are kept as standards of reference for gauging the improvement in quality of cotton grown in the various tracts. In India, formerly, different types of cotton used to be grown by the farmers regardless of whether they were suited to the geographical and climatic conditions of the particular tract. With the establishment of the Agricultural Departments, systematic work was begun for evolving varieties better suited to the varying conditions of different tracts and they were recommended for cultivation. It is these improved varieties which are maintained as standard cottons in the experimental stations. They are grown each season from pure seeds and under as nearly the same conditions as those grown by the cultivators, to serve as standards of reference. It may be noted that, in 1954-55, standard Indian cottons covered 55 per cent. of the total area under cotton cultivation in India, as compared with 53 per cent. in the previous season.

Object of Testing

New and improved varieties evolved by cotton breeders are tested at the Technological Laboratory and authoritative valuations on the quality of these cottons, as compared with those of the standard ones, are supplied to them. The standard cottons themselves are tested in each season. There are four objects in testing the standard cottons. First, these tests, as they are made in each season on the same varieties grown under as nearly the same conditions, serve to establish a scale of reference for the country's entire cotton crop. For example, one could compare, from the supplementary tests made for the cotton trade, the performance of the commercial Virnar (197-3) cotton grown in any one season with the standard cotton which is grown in the same season from pure seed on an experimental farm. Secondly, tests on standard cottons grown in successive seasons are helpful in studying the seasonal variations in fibre properties and spinning performance of these cottons which, in turn, gives information regarding the average quality of these cottons and the maximum variation which might be expected in any one season. The quality and seasonal variation of the standard cotton reflect, to some extent, the quality and seasonal variation of the commercial crop. Thirdly, the data collected on standard cottons help to determine the correlations of the fibre properties of different varieties of cotton with their spinning values. Lastly, these tests also assist the marketing of cotton by providing the trade with detailed information concerning their fibre properties and yarn characteristics.

There are 22 cottons in the latest list of standard cottons maintained by the Indian Central Cotton Committee belonging to different States. The following is the current list of standard cottons, arranged State-wise:

Bombay Cottons—	*Hyderabad Cottons*—
Jaydhar	Gaorani 6
Laxmi	Gaorani 12
Vijay	Parbhani American I
Surat 1027 A.L.F	*Madras Cotton*—
Vijadpa (2087)	Cambodia Co. 2
Jarilla	M. C. U. I.
Virnar (197-3)	(1) Summer crop
Kalyan	(2) Winter crop
Punjab Cottons—	M. C. U.
Punjab American	2 (Summer)
L.S.S.	Karunganni K.2
P.A. 320 F.	Karunganni K.5
Madhya Pradesh—	*Andhra Cotton*
H. 420	Nandyal 14 (Northerns)
Buri 0394	Westerns I (H I)

These standard cottons generally remain unchanged but when one of them has definitely proved unsuitable or gone out of cultivation or been superseded by better varieties, it is omitted from the list and a new one added to it.

Past Performance

As regards the performance of standard cottons in the past, it may be noted, there was a steady improvement in performance from 1930-31 to 1934-35. This improvement, however, suffered a setback in the 1935-36 season, from which there was a welcome change for the better in the 1936-37 season. The 1938-39 season witnessed an improvement in a few cases, but this was offset by a decline in the performance of the majority of cottons, while the 1939-40 season indicated a general improvement in most cases. This improvement was not maintained in 1940-41, but the 1941-42 season had given, on the whole better results than the previous one. This was generally maintained in the next six seasons—1942-48—but there was a setback in 1948-49 which was partially recovered in 1949-50. This recovery was maintained, to a certain extent, in the next five seasons ending 1954-55. This trend was again reversed in the 1955-56 season, that is, the one under report, during which the performance of most of the standard cottons showed a definite deterioration.

EGYPTIAN AND SUDAN COTTON

The latest reports state that Egypt, after prolonged negotiations, have at last succeeded in persuading West Germany to agree to purchase its cotton. It is learnt that a barter deal has been concluded between Egypt and West Germany according to which, Germany will import E£2.5 million worth of Egyptian cotton in exchange for 30,000 tons of its fertilisers. Meanwhile, it is reported that Sudan has decided to reduce its export duty on cotton by 50 per cent. to 3.75*d.* per lb. The current duty is 7.50*d.* per lb. The Sudan Gezira Board has also brought about an overall reduction in its reserve price. The reduced prices will be effective up to 18th March 1958. It may be noted that, faced with slow demand and the resulting heavy accumulation of unsold stocks, the Board had reduced its reserve price on the 5th inst., in order to stimulate interest from traditional customers. Reports indicate that Sudan, in a new bid to capture European markets, is sponsoring another trade delegation to Europe. It may be noted that, the Sudanese Prime Minister, during his recent visit to London and Paris, failed to induce British and French buyers to purchase large quantities of Sudanese cotton. Sudan has also officially announced that it would sell cotton to any country, irrespective of ideological differences. Negotiations for selling cotton to China and Russia are presumed to be under way.

TEXTILE FACTORY IN NIGERIA

A huge cotton textile mill—the Kaduna Textile Factory—has just commenced production in the northern region of Nigeria. The steady increase in cotton production and the considerable impression its quality has made on overseas spinners and manufacturers underlined the Government of Nigeria's wish to see a textile industry established in the region, using locally-grown cotton. The factory has been set up at a cost of over £1 million by the Government in partnership with a leading British company, David Whitehead and Sons Ltd., which has been appointed managing agents. The Factory employs 700 Nigerians and 50 Europeans. Working for six days in a week and on a three-shift basis, the factory will produce about 12 million yards of 'baft' cloth every year. Baft being one of the most popular cloth materials in West Africa, the entire production of the mill will be sold in Nigeria.

Assistance in financing Kaduna Textiles Ltd. (and many other projects) has been given by the Northern Regional Marketing Board and the Northern Region Development Corporation, the two closely linked statutory organisations. The main purpose of the Development Corporation is to promote and aid financially the industrial and agricultural schemes throughout the region. The Corporation is convinced that success of any commercial venture it supports will result only through co-operation with industrial managements who are willing, like Messrs. Whitehead, to invest in the region. The Corporation is willing to provide non-participating capital and the Regional Government grants tax exemption under its Aid to Pioneer Industries Ordinance.

CLOSURE OF COTTON MILLS

Fourteen cotton mills were closed during the past year due either to financial difficulties or to uneconomic working, and, as a result, 15,539 workers were out of employment. This was revealed by Mr. Abid Ali, Union Deputy Minister for Labour, in the course of his reply to a question in the Lok Sabha the other day. The Minister detailed the steps taken by the Government to prevent closure of mills. These are given below:

For mills which require finance for rehabilitation in order to ensure future continued working on economic lines, loans were granted from the National Industries Development Corporation after conducting necessary investigation by the special team working under the Textile Commissioner. Vigorous steps are being taken up by Government for expediting the grant of these loans.

Wherever there are complaints about mismanagement of any mill, appropriate action is taken either under the relevant provisions of the Company Law or under the Industries (Development and Regulation) Act, 1951, for a thorough investigation into the affairs of the mill for taking remedial steps wherever possible.

Workers are provided some relief by way of compensation for loss of employment under the provisions of the Industrial Disputes (Amendment) Act, 1957, which also acts as a factor discouraging the closures in general.

TARGETS FOR STEEL

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

Six million tons a year is India's immediate target for steel—the absolute minimum for her present needs.
Eighteen million tons is the target for the Third Five Year Plan—it can be done.
India's deposits of iron ore, with the highest iron content in the world, can last a hundred years.
Adequate supplies of metallurgical coal and other raw materials abound.
The combination of technical skill and high quality materials makes India the world's cheapest producer of steel.
IISCO'S immediate target—eight hundred thousand tons of finished steel and two hundred and eighty thousand tons of pig iron.

INDIAN IISCO STEEL

THE INDIAN IRON & STEEL CO. LTD.
Works: Burnpur and Kulti
Head Office: 12, Mission Row, Calcutta.

THE ENGINEERING INDUSTRY is vitally dependent on Imports of equipment and materials in order to maintain and expand production. The foreign exchange needed can be found, in part, from exports of Indian engineering products for which there is a considerable demand in neighbouring countries. Indian engineering firms can build up valuable export connections. The services of the Council are at their disposal.

CONSERVATION OF COKING COAL

LARGER ASSISTANCE GIVEN FOR STOWING

ONE of the tasks facing the coal industry in India is to meet the growing fuel requirements of an industrially expanding economy, taking due care, at the same time, to see that the limited supply of metallurgical or first class coking coal is not wasted. The known and proved resources of this valuable coal are very much limited, while the needs of the current Five-year Plan and the subsequent Plans are considerable. The Coal Board has been taking several measures during the last few years to conserve coking coal; these steps are: (1) control over production of coking coal, (2) encouraging stowing of coking coal mines by granting financial assistance to collieries in need of such assistance and enforcing stowing in some large mines, (3) washing of coals, (4) restriction on the opening and re-opening of mines or seams, (5) restriction on depillaring in seams without stowing, and (6) grading of coal before despatching. The progress of these measures during the year ended 31st March 1957 is outlined in the Annual Report of the Coal Board for the year just released.

As in previous years, the raisings of coking coals of selected A and B grades, as well as grades I and II, were restricted during the year under review also by fixing a ceiling on output of individual collieries. For the year 1956, the Government of India originally fixed the ceiling of output for coking coal collieries at 15 million tons, made up of 7.70 million tons for selected A and B grades, 4.20 million tons for grade I and 3.10 million tons for grade II. The total ceiling represented an increase of 0.68 million tons over the previous year's ceiling of 14.32 million tons. In view, however, of the experience that in the past years, the total production had actually been well below the total of overall ceiling, the Coal Board, with the approval of the Government, revised upwards the ceiling to 15.41 million tons. The following table shows the revised grade-wise limits, as compared with the original ceiling and actual output during 1956:

(In million tons)

	Initial ceiling	Revised ceiling	Actual output
Selected A and B grades	7.70	7.88	7.23
Grade I	4.20	4.43	4.12
Grade II	3.10	3.10	2.46
Total ..	15.00	15.41	13.81

Output Less than Ceiling

In October 1956, the Coal Board increased the ceilings again by a further 10 per cent., in view of the anticipated loss of production in September 1956 due to strikes and large-scale flooding of mines in the Raniganj coalfield. It will, however, be seen from the table above that the actual output under each grade is less than that permitted (even below the original ceiling) for each grade. In this connection, the Coal Board points out that, during the last five years, the ceilings fixed have always been set sufficiently higher and since 1954 the targets have been gradually increased. In answer to the criticism that the policy of pegging has been operating as a hindrance to increased production, the Coal Board draws attention to the figures of ceiling and actual output during the last five years. "The causes for the production being less than the celing," it adds, "are inherent in the mining conditions of many of the collieries where stowing is urgently necessary." It must, however, be noted that the actual output of coking coal during 1956 was 460,000 tons higher than in 1955. If the production had not been higher still, it was due to factors beyond the control of the collieries, namely, the failure of the Government to reach a prompt decision in regard to such essential matters as permission to open new mines or seams or permission to commence depillaring operation, the delay preventing the coal industry from going ahead with its development plans.

It may also be noted here that the ceiling on coking coal output for 1957 has been fixed at a still higher level of 16 million tons, made up of 7.90 million tons for selected A and B grades, 4.40 million tons for grade I and 3.70 million tons for grade II.

Stowing is an important feature of modern mining technique essential for safety as well as for the conservation of the coal reserves. During the year 1956-57, the number of collieries adopting stowing measures increased from 61 to 67; the number of collieries for which assistance for voluntary stowing was sanctioned was 86. The quantity of stowing materials consumed, however, showed a slight decline from 5.26 million tons to 5.22 million tons. The amount of financial assistance received by the 67 collieries was Rs. 71.87 lakhs, as against Rs. 61.41 lakhs paid to 61 collieries in 1955-56. The quantity of coal raised by these collieries with stowing increased from 2.90 million tons to 3.05 million tons.

The availability and supply of stowing material, however, constituted a big problem for the Coal Board. After careful and exhaustive discussions, the Board came to the conclusion that central ropeways to transport sand, serving groups of collieries, provided the best answer. In spite of the difficulties in the way of the Board undertaking such ventures, renewed efforts were made to reconsider the position and to assess the extent of central sand supply schemes immediately necessary. Towards the end of the year under review, a separate committee for each of the Jharia and Raniganj areas, consisting of the representatives of colliery owners in each area, was appointed to study the requirements of sand stowing in individual collieries and to draw up central schemes of sand supply for mines and areas which were not at present served by any of the existing ropeways and for which no plans of sand supply had yet been worked out. The Committee's report is shortly to be published.

Government Washeries

In accordance with the decision of the Government of India on the Coal Washeries Committee's report that the washing of all coking coals should be achieved by stages, the Coal Board decided for the present, to wash coal only to the extent necessary to meet the needs of the existing steel plants and those projected in the second Five-year Plan period. In the absence of any firm proposals from private producers to undertake washing of coal on the scale required by the country, the Government took upon itself the responsibility of supplying the necessary washed coal for steel plants and started investigations, in consultation with the Coal Board and the Fuel Research Institute, into the type and capacity of the washeries to be set up, their location and the grades of coal to be washed. No final plans have emerged as yet, but preliminary studies indicated that it would be necessary to establish three central washeries in the Jharia coalfield to meet the entire requirements of washed coal in the near future. Two formal applications for setting up private washing plants, one at Kharkharee colliery and the other at Dhori colliery, were, however, received. But the proposal pertaining to the Kharkharee colliery was rejected in view of the plans for central washeries. And the other washery was not considered as immediately necessary.

As regards grading of coal, the Coal Board received, during 1956-57, 113 applications for initial grading of seams and for review of existing grades, of which 56 cases were disposed of during the year. The reasons for the delay in the disposal of applications for grading were three: (1) there was a paucity of field staff; (2) collieries were not ready with seam faces for sampling due to waterlogged workings, lack of initial development and other causes; and (3) wagon samples were not available in the cases of grade II and lower grades, both of which did not get regular supply of wagons.

DOMESTIC FUEL

About 1.67 million tons of soft coke per annum is now being manufactured and despatched for domestic consumption, according to Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel. Disclosing this, in reply to a question in the Lok Sabha last week, the Minister said that the rest of the supply was met by firewood, charcoal, cow-dung cakes, farm wastes, coal gas—in fact, any waste product that burnt.

The approved plans of the private sector, said Sardar Swaran Singh, "provides for an additional one million tons of coking coal of lower grades being produced for the manufacture of soft coke; further, when coking coals are washed for metallurgical purposes, a large quantity of middlings will become available and these also may be utilised for the manufacture of soft coke depending on availability of transport and markets."

WORLD SUGAR TRENDS

CONSUMPTION UPWARD

THE world is carrying less stocks of sugar now than it did in the past three years. The exact figure of estimated stocks as at the end of August 1957 is not yet available but it is said to be well below 10.5 million metric tons held a year before, 11.5 million tons two years before and 12.0 million tons three years before. The decline in stocks may appear somewhat surprising, considering the continued upward trend in world production of sugar. The total quantity of centrifugal sugar produced in the world (excluding the U.S.S.R., Eastern Europe and China) has gone up from 30.8 million tons in 1953-54 to 31.6 million tons in 1954-55, 32.0 million tons in 1955-56 and 33.3 million tons in 1956-57. But the increase in output has been far outstripped by consumption which has expanded on an average by 1.4 million tons or 4.8 per cent. annually since 1951, according to the F.A.O. report, *The State of Food and Agriculture*, 1957. Preliminary estimates indicate that the free world consumption of sugar exceeded 33 million tons in 1956, representing a rise of as much as 1.5 million tons as compared with 1955. Consumption in 1951 aggregated only 26.1 million tons. The *per capita* consumption of sugar in the free world during 1956 was 18.3 kilograms (1 pound=0.4535924 kilogram), as against 14.3 kilograms in 1934-38.

Inclusive of the U.S.S.R., Eastern Europe and China, the total world consumption of sugar amounted to 40.4 million tons in 1956, or about 10.0 million tons more than in 1951. The increase in consumption has been the smallest in the U.S., Australia and North European countries which even before the war had a *per capita* consumption of over 45 kilograms. In Latin America, Asia, the Near East and Africa, however, rising *per capita* income and a decline in the price of sugar in relation to other commodities have helped to bring about an average *per capita* increase of 100 per cent. since the pre-war period.

Profound Changes

The F.A.O. review of the trends in world sugar economy in 1956-57 reveals that the season witnessed "profound changes." Reflecting the widening disparity between production and consumption, stocks were reduced and prices almost doubled in a very short time. In many countries, these developments stimulated a re-appraisal of sugar production policies, the results of which will become apparent in the next few years.

World production of sugar, as already stated, has continued to move up in recent years. The improvement would have been more marked but for two important factors. First, weather conditions were unfavourable. Secondly some countries imposed restrictions on production necessitated by the low world market prices during 1953-56. Recently, revival of interest in expanding sugar production has taken place in many importing countries where expansion plans had been held in check by low sugar prices. In the exporting countries also, production appears to have received a new impetus.

Rise in Consumption

The rise in sugar production is expected to be accompanied by a similar rise in consumption. There are indications, the F.A.O. report says, that the long-term trend in consumption is rising at an accelerating rate. The aggregate world consumption of centrifugal sugar in 1960 is estimated at 45 million tons (if supplies are available), some 7 million tons more than in 1955. This estimate is based on three assumptions—continuation of the current trend in population, further improvement in *per capita* real income and maintenance of retail prices of sugar at the average of 1953-56 levels.

In the opinion of the F.A.O., sugar shows a wide range of prices at the retail level. This is attributed partly to the commodity being conveniently taxable and partly to differences in costs of production. Differentiation has been made among low-cost (below 20 U.S. cents per kilogram), medium-cost (20-40 cents) and high-cost (over 40 cents) countries. It is stated that the relative prices of sugar go far to account for the differences in consumption in the mid-income range. Generally speaking, the low cost, high-consumption countries are the cane-sugar producing and exporting countries, while the high-cost, low-consumption group includes most of the Mediterranean countries or countries with somewhat similar climates.

THE HOUSE OF KILLICK

A SAGA OF ENTERPRISE

A NOTABLE change in India's economy since independence has been the extensive transfer of ownership from British to Indian hands of industrial and commercial enterprises pioneered by earlier British merchants. Many of these enterprises which had modest beginnings have blossomed into thriving industries and commercial organisations.

A typical unit in such metamorphosis has been the House of Killick, which, since independence, has, in its new corporate form, marched from strength to strength.

The diversity of the Company's operations covers such wide industrial lines as cotton and silk textiles, electricity generation and supply, manganese ore, coal, cement and light engineering industries (apart from the operations of its subsidiaries covering such fields as shipping, import and service of machinery and consumer articles, lubricants, etc.). This gives an indication of the fund of talent manning its vast organisation and of its resilience.

The name of Kohinoor Mills, with its trade mark of the crowing cock, is a byword in the textile market. Founded in 1896, with an original issued capital of Rs. 16 lakhs, and operating as a spinning mill, the Company has grown to an annual production capacity of about 32 million yards of cloth and about 9½ million lbs. of yarn, of which over 2 million yards of cloth are exported to overseas markets.

Electric Supply

The Killick group of electric supply companies serving the industrial city of Ahmedabad and its environs, Surat, the home of the *jari* industry, and the sprawling suburbs of Bombay, have been in the forefront of electric development in India. The undertaking that started in Ahmedabad as a small diesel station has developed into one of the biggest thermal power stations in South-East Asia and the Ahmedabad power station will, by 1960, have an installed capacity of 187,500 kw. The expansion of electric power in Ahmedabad has, of course, sustained and nourished the growth of the city's great textile industry.

The Ahmedabad power station also supplies bulk power to the Bombay State Electricity Board's North Gujerat Electric Grid, apart from the villages and farms around the city of Ahmedabad which are supplied by the Company itself.

Surat's ancient gold thread and *jari* industry has progressed with the growth of the Surat Electricity Company, and the Company can well take pride in having so much assisted in fostering the city's economic development.

The expansion of power facilities in the suburbs of Bombay has not all been one of easy development. Operations in the early stages, especially, had to face many difficulties, but the foresight of the pioneers who saw the potentiality for huge development in the area, later proved to be amply justified.

In evaluating Killick enterprises an important place must be given to their role in pioneering branch line railways in the country —a field not always offering adequate financial reward. In the undivided Punjab in the North West, in Gujerat in Western India, in the Vidarbha region in the enlarged Bombay State and in Bengal in the East, nine feeder railway systems in all were sponsored. All but one, the Central Provinces Railways Company, Ltd., have been acquired by the State in the last 20 years or so.

Mining

In the field of mineral development, the Shivrajpur Syndicate is an undertaking which has been mining and exporting manganese ore for more than half a century. Manganese ore is a commodity earning valuable foreign exchange. During the five-year period 1952-56, the value of the manganese ore exported by the Company has been about Rs. 7 crores, the bulk of which has been dollar earnings.

The development represented in the coal mining operations of the Hingir-Rampur Coal Company, Ltd., have not been insignificant. The Company has, however, had a share of the varying fortunes inherent in an extractive industry.

The cement industry, represented by the giant A.C.C. combine, has to thank, for its present strength, the pioneering efforts of the F.E. Dinshaw, Tatas, Khatau and Killick enterprises.

A significant phase in India's industrial development in recent years is the phenomenal growth of the engineering industry, and the House of Killick has contributed its share in this branch. The "Lighthouse" Brand Engineers' Steel Files from the renowned Sheffield firm of John Baker and Sons Ltd., enjoy an established reputation in the Indian market, and this brand of Steel File, after acquisition of the trade mark and Patent Rights, is now manufactured by Killicks in the Industrial Estate of the House at Chandivli, near Bombay. It is impressive to note here that the Indian product manufactured under the banner of the House of Killick has been shown to compare favourably with the original Sheffield product.

Industrial Nucleus

The Chandivli Industrial Estate of the House of Killick, with extensive factory space, bids fair to become an important industrial nucleus. Already planned are manufacture of varied products such as nuts and bolts, dog-spikes and coach screws, Snowcem cement paints, Dexion slotted angle, etc.

If industry is the basic strength of a modern society, commerce and trade are sinews, which are no less important. The commercial organisation represented by the House's subsidiary, Killick Nixon & Co. Private Ltd., has, in catering to the country's need for imported machinery and consumer goods, as well as shipping service, performed for many years and continues to perform an essential service.

All human institutions should look forward; but a backward glance may offer inspiration for the onward march. The past record of the House of Killick is a guarantee of its potentialities for furthering India's development.

JUTE GOODS PRODUCTION DECLINES

ARRIVALS OF RAW JUTE SLACKENING

THE jute goods market in Calcutta has been ruling quiet, in contrast to the steady tone displayed by the raw jute market. The fall in production of mills during October and the lower stocks of goods with mills do not seem to have inspired the market. This state of affairs is due to the poor enquiry from overseas buyers, the much expected demand from foreign countries having not materialised. The weakness of the *fatka* market, where speculators are said to be liquidating their holdings, and the disappointing shipping statistics for the month of October are additional factors for the present weakness, particularly in sacking. In fact, ready B. twills are said to command a premium of only Rs. 2 over the forward, as against about Rs. 8 a few weeks ago. The narrowing of the gap between the ready and forward rates is, however, expected to stimulate more demand from overseas in the near future, provided the present trend is maintained.

Of the two principal varieties of manufactured goods, namely, hessian and sacking, hessian is relatively more steady than sacking. This is evidently due to the fact that the bulk of the fall in production during the past month is accounted for by hessian, while the decline in sacking output is only fractional. The total production in October amounted to 83,500 tons, as against 86,000 tons in the previous month. This setback has reversed the upward trend noted a month before, when the output rose from 81,900 tons (in August) to 86,000 tons. It will, however, be seen that the drop in output during the past month has only partially offset the rise in September, so that the October output is still much higher than that for August. It may also be noted from the following table that last month's production is 3,100 tons more than that in the corresponding month of 1956:

(In tons)

	October, 1957	September, 1957	August, 1957	October, 1956
Hessian	31,700	33,700	33,900	34,700
Sacking	47,100	47,300	43,100	40,500
Others	4,700	5,000	4,900	5,200
Total ..	83,500	86,000	81,900	80,400

The fall in output during October is due to the shorter number of working hours, at 192, as against 200.5 in September. It will be noted with interest that, as compared with October 1956, production has risen, despite a shorter working period; in October 1956 the number of working hours was 203.5. This is, perhaps, due to the modernisation carried out by several mills.

Sharp Fall in Hessian

Of the total decline of 2,500 tons in output, hessian alone accounts for 2,000 tons at 31,700 tons. With this drop, the downward trend in production of hessian is maintained for the third month in succession and the production is taken to the lowest level since January 1956. Sacking output is lower by only 200 tons, at 47,100 tons, as against an increase of 4,200 tons noted in September. The production of "other manufactures" has shrunk by 300 tons to 4,700 tons. This decline may be small, but it does seem to justify the criticism that, in spite of the keen competition from other countries and substitutes, the Indian jute mills are not diverting their attention to manufacture of special varieties which can stimulate more foreign demand.

As already stated, the shipment statistics for the month of October do not make encouraging reading, as will be seen from the following table, which give gross figures based on shipping bills presented and include coastal shipment also:

(In tons)

	Bags	Cloth	Total
Hessian			
October 1957	2,716.6	20,582.1	23,298.7
September 1957	3,400.1	31,668.7	35,126.8
October 1956	4,782.7	31,516.7	36,299.4
Sacking			
October 1957	38,533.4	1,445.8	39,979.2
September 1957	52,124.2	647.0	52,071.2
October 1956	41,911.2	1,265.5	43,176.7

The quantity of jute goods licensed for export during October was only 56,867 tons, as against 90,200 tons in the previous month. Of these, hessian accounted for 23,860 tons, sacking for 30,570 tons and other manufactures for 2,437 tons, the corresponding figures for September being 34,637 tons, 50,851 tons and 4,715 tons, respectively.

While the trend of export has not been encouraging, mills are worried about the supply of raw jute and the prevailing prices which are very much above the rates which can be expected at this part of the season. Arrivals have been very slow and sellers are holding on in anticipation of higher prices. The change in the purchase policy of mills is also said to be responsible for the high prices. Formerly, it was the practice of mills to purchase their requirements of raw jute on a large scale in a short period of time when prices are favourable. But now, they are reported to be buying small quantities almost every day, which make the aggregate purchases of all mills per day a sizable quantity, say 10,000 to 20,000 maunds. Such heavy purchases per day naturally push up the price. Moreover, the tendency to raise mesta output in areas where Daisee used to be grown has resulted in a shortfall in supply of Daisee jute, while the demand for it is on the increase. There are reports of damage to crop by drought, but this has not created any buying spree among mills, as buyers believe that the new crop, which is being kept off the market by sellers, will soon come in large quantities, as sellers cannot afford to hold on for long.

According to Mr. P. D. Khaitan, member of the Indian Central Jute Committee, and Secretary of the Bihar Jute and Tobacco Growers' Association, the continued drought in Bihar has played havoc not only with food crops but also with the jute crop in the State. About 50 to 60 per cent. of the crop is said to have turned into low grade jute due to lack of water. If the drought conditions continue for another four months, Mr. Khaitan says, the next jute crop will also be affected. As a help to the growers of the low grade varieties, he suggests that the Government of India should ban the import of these varieties from Pakistan or remove the export restrictions on them.

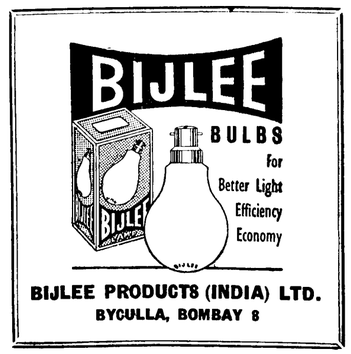
MORE RESEARCH ACTIVITY IN BRITISH JUTE INDUSTRY

Disclosing greater research activity in the British jute industry, Mr. W. Stevenson Philip, Chairman of the British Jute Trade Research Association, at its annual general meeting held in Dundee, Scotland, on 13th November, said that the industry was now in a period of transition in which scientific research would prove of growing importance. "It is quite possible," he asserted, "that, following the Board of Trade's action in July, there will have to be a shift towards more speciality lines as competition in the bread-and-butter lines becomes greater. New cloths will have to be developed to fulfil special requirements, and new finishing treatments may well be called for."

The Board of Trade decision in July referred to by Mr. Philip was to lower the basis of the Jute Control's selling prices for the principal types of hessians imported for making sacks.

INSTITUTE TO STUDY INDUSTRIAL FIBRES

A European institute for the study of industrial fibres is being set up at Geneva by four National Federations of the continental jute industry, reports the *Jute Bulletin* of the Indian Central Jute Committee. The object of the institute is research and study of all materials that can be used by the jute industry in their manufactures and the institute will take particular interest in the experiences of other countries, notably in Africa, South America and certain fibre-growing districts in the Mediterrancan. It appears that the European jute industry is seriously engaged in attempts to reduce its dependence on raw jute as much as possible. It is already known that Africa and South America have an abundance of raw material which very closely resembles jute in every way and can be easily used as raw material in the jute industry.



INDIAN COFFEE CROP MAY BE LOWER

WORLD AGREEMENT ARRESTS FALL IN PRICES ABROAD

THE Coffee Board, which is due to hold its half-yearly meeting on the 29th inst., is expected to consider the export allocation to be made out of the 1957-58 crop, in the light of the estimate available by then. In the meantime, trade estimates, which have not usually gone wide off the actual crop, places the current season's output at 32,000 tons, as against the Coffee Board's earlier estimate of 37,100 tons. The planters expect the crop to go down considerably, on account of the widespread prevalence of leaf diseases in Mysore and Coorg, the two main coffee-producing areas of India. The present weather conditions, however, seem to indicate that the 1958-59 crop will be a bumper one, exceeding 50,000 tons.

The total quantity of coffee sold for export out of the 1956-57 crop till now, according to the latest *Coffee News Letter*, amounts to 12,990 tons, as against the export allocation of 15,320 tons. The enquiry for 500 tons received from the U.S.S.R. in September, to which a reference was made in the previous *News Letter*, did not materialise. This is not surprising in the light of past experience of trade enquiries from Russia. Be that as it may, Russian trade deals, whether they materialise or not, seem to be influencing the world markets in many commodities. The Board concluded, through the State Trading Corporation, the sale of another 400 tons of plantation coffee with East Germany on 30th October 1957; this is in addition to the sale of 400 tons made in September.

The Board released 2,480 tons of coffee for internal consumption during October, bringing the total releases for the internal market during the first ten months of 1957 to 21,547 tons, as compared with 20,077 tons released in the corresponding period of 1956.

The Board has sanctioned, up to the end of October, loans aggregating Rs. 1.46 lakhs for development scheme to 31 growers. The Board has requested the Mysore Government not to accept the recommendations of the Mysore Tenancy Agricultural Land Laws Committee relating to coffee holdings, or in the alternative, to defer their consideration pending consultation with the Coffee Board.

Reverting to the subject of export of coffee, it may be noted that the world market for coffee has turned a bit steady in recent weeks, thanks to the decision of the main coffee producers to support the market. An agreement to this effect was signed recently in Mexico among the main producers of coffee. Prior to this agreement, the market had been ruling weak and the fall in prices would have been much sharper but for the buying support by the Brazilian and Colombian Governments. It was, however, expected that, with world supplies heavy, the recession could not be halted without a concerted effort on the part of the main producing countries. The result was the Mexico City coffee export agreement, under which shipments of coffee are regulated and reserve quotas are fixed. Thus, the mild coffee producers have agreed to limit their exports to 80 per cent. of the average for the previous two years. They have also agreed to hold reserves equivalent to 10 per cent. of all shipments until the end of September 1958. Brazil will hold reserves amounting to 20 per cent. of its exports during the 12 months ending September next. The new agreement, if faithfully put into effect, is expected to take a substantial weight of coffee off the world market and lift world coffee prices, but there seems to be some doubt whether the parties to the agreement will stick to the latter. This doubt has arisen because a number of participating countries have been hit hard on their international balance of payments position by the fall in coffee prices this year and may find it difficult to finance the scheme for more than a short period. In the case of Brazil, it has been able to make good, to some extent, the losses on coffee by its sales of sugar and cocoa. In fine, the outlook for the world coffee market depends on the success of the Mexico agreement.

TEA TRADE

The Government of India has no proposal to direct the State Trading Corporation to handle the country's tea exports. The Government has no information to the effect that foreign interests in tea industry are threatening the marketing system of Indian tea whenever it suits them by boosting of East African tea. The chief factor for the high prices of Indian tea on the Continent is the high import duty levied by countries there. It ranges from 100 to 150 per cent.

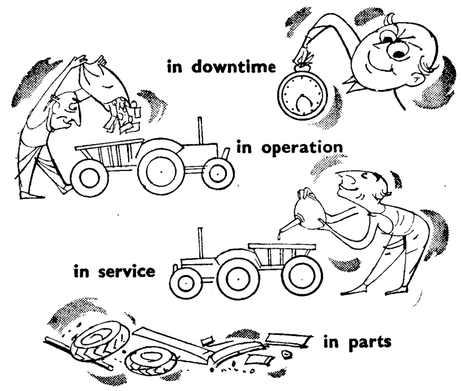
What's the job going to cost!

Before you buy your earthmoving equipment find out the job-costs



It's the *total job cost* that should be considered and not *only the purchase price* of equipment. Get the best for your job—buy "Caterpillar" earthmoving machines. You will have less downtime, lower operating costs, better service and ready supply of parts.

Pushing, pulling or carrying, on tracks or rubber, "Caterpillar" will move more earth in less time at less cost per cubic yard than any other machine. The high efficiency of Caterpillar performance more than offsets the initial costs.

LIGHT ELECTRICAL INDUSTRIES

MR. M. M. SHAH REVIEWS PROGRESS

THERE is in this country ever-widening scope for the production of light electrical goods, such as lamps, fans, radio receivers and batteries, considering that large-scale expansion in the output of electrical energy is contemplated in the second and third Five-year Plans. During the period of the first Plan, the installed capacity for generation of electricity increased from 1.83 million kw. to 3.4 million kw. or by about 1.5 million kw. The second Plan contemplates an increase of 3.5 million kw. in generation capacity, which will raise the total capacity to 6.9 million kw. by 1960-61. Tentative proposals for the third Plan envisage a much higher level of output—about 15 million kw. The achievement of these targets may, however, be hampered by the continuing shortage in foreign exchange. Nevertheless, it should be clear that as further expansion in the output of electrical energy takes place, there will be a growing demand for the products of the light electrical industries. In this connection, it is gratifying to note, from a comprehensive review of the progress of these industries which formed part of the address delivered by the Union Minister for Industry, Mr. M. M. Shah, at a meeting of the Development Council for Light Electrical Industries, held last week in Bombay, that these industries have been able to establish a significant record of progress.

The increase in the output of light electrical industries over the period 1951 to 1956 ranges from 27 per cent. to 93 per cent. The following table gives the production in 1951, 1956 and the estimated output in 1957.

	Units	1951	1956	1957†
Electrical lamps—				
(a) G.L.S. and others ..	Millions	15.52	29.85	33.0
(b) Fluorescent tubes ..	No.	..	880,000	1,000,000
(c) Miniature lamps ..	Millions	3.52	3.52	3.5
Electric fans	Nos.	212,000	338,932	513,000
Radio receivers	,,	82,890	150,596	185,000
House service meters ..	,,	1,726*	230,303	330,000
Dry batteries	Mill. cells	143	181.4	180.0
Storage batteries	Nos.	212,000	314,199	320,000

* Experimental production. † Estimated.

A reference to the table at the bottom of this page will show that, on the basis of additional capacities, already licensed or approved, a large increase in the capacity of light electrical industries may be confidently expected at the end of the second Plan. Indeed, if the schemes now approved are implemented, the total capacity in several industries will be in excess of the targets fixed for them. In this connection, Mr. Shah suggested that the targets for a number of industries could be revised upwards by 25 per cent. to 50 per cent., with a view to eliminating imports and allowing sufficient margin for possibility of exports.

Lamps

Analysing the problems of individual electrical industries, Mr. Shah said that the electric lamps industry had made satisfactory progress, the output having increased from 15.5 million lamps in 1951 to 33 million (estimated) in the current year. It would, however, appear that the industry is not yet self-sufficient in respect of raw materials and components. While the industry is substantially meeting its requirements of glass shells from indigenous sources, it is still dependent on imports of glass tubes and rods, caps, leading-in-wires, filament wires, etc. Production of brass caps and glass tubes has been recently established and some of the units have plans to expand the capacities still further. Mr. Shah said he would, however, like to see more units undertake the manufacture of components and materials for electric lamps, particularly the larger units, keeping in view their own requirements and the requirements of other small units. The present installed capacity for general lighting service and other similar lamps is of the order of 43 million and expansion schemes have been sanctioned for an additional capacity of 13 million lamps. All this would seem to cover the target for these lamps.

The capacity for the manufacture of fluorescent tubes and miniature lamps has been established during the first Five-year Plan period and, although, in the case of the latter, not much progress has been achieved in the earlier stages, it is heartening to note that the production has increased substantially from 3.5 million in 1956 to a level of about 8.5 million during the current year. It is also noticed that substantial additional capacities have been sanctioned for expansion. Mr. Shah expressed the hope that, with the current import restrictions, the industry would rise to the occasion and make efforts to meet the country's demand to the maximum extent possible. Further, two schemes have been approved for creating capacity for special types of lamps, such as photoflash lamps and mercury vapour lamps, which have not so far been produced in the country. The value of imports of the special types of lamps was in the neighbourhood of Rs. 35 lakhs in 1956 and, at present, it is of the order of Rs. 52 lakhs. This will give one an idea of the gap to be filled in these and other types of special lamps.

The electric fan industry now produces over 500.000 fans a year, as against 212,000 in 1951 and a mere 180,000 in 1948. In a tropical country with all its inevitable concomitants of heat and dust, the fan industry plays a vital role in the sphere of domestic and public health. Further, it is one of the new industries which have begun to contribute to the country's foreign exchange earnings. Exports of fans are taking place at an annual rate of Rs. 20 to 25 lakhs. The industry is very near the target fixed for it under the second Plan. It is satisfactory to note that substantial capacity which will take the industry's capacity to a level much higher than the target under the second Plan, has already been licensed.

Radio Sets

The present level of production of the radio receiver industry which is among India's post-independence industries is about 185,000 sets a year, as against 150,000 sets in 1956 and 83,000 sets in 1951. Mr. Shah rightly urged that the emphasis should increasingly shift from mere assembly of parts to manufacture of components. While items such as transformers, coils, cabinets, dials and miscellaneous metalware components are being manufactured in India and some beginning has been made in the manufacture of a few other essential components, the industry has still to cover a large field, represented by valves, condensers, resistances and loudspeakers. It is necessary, Mr. Shah said, to devote greater attention for establishing the manufacture of these items, so that India's dependence on imports may be reduced.

Regular production of house service meters commenced from 1952, when the output was only 34,000 meters. At present, production is running at an annual rate of 330,000 meters. In spite of considerable increase in production, the country is not yet self-sufficient in meeting the demands for house service meters. The 1960-61 target, originally fixed by the Council at 450,000 single phase meters, has since been revised to 650,000 meters per year. Schemes for expansion and new units for substantial capacities have been approved. In expanding production, Mr. Shah said, care should be taken to eliminate substantially imports of components. He added: "The manufacture of polyphase meters has not yet been established in the country. I am sure, manufacturers while implementing their expansion programmes, will give due consideration to the manufacture of polyphase meters also."

The dry battery industry has increased its production from 143 million cells in 1951 to 180 million cells in 1957 (estimated). But the industry faces certain problems arising out of shortage of raw materials. Mr. Shah urged the industry to make efforts to utilise "substitute materials indigenously available, even if it involves processing of basic materials" and also to consider the question of manufacturing primary batteries which are being imported. The motor vehicle battery industry now produces 320,000 units a year, as against 212,000 in 1951. The country's requirements of motor vehicle batteries are being met almost entirely from indigenous production. Increasing interest is also being shown by manufacturers in developing new lines of manufacture, such as the production of batteries required by the Defence and Railway Departments. A few firms have also plans to manufacture stationary cells required by the Posts and Telegraphs Department and electricity undertakings. It is hoped that the manufacturers will soon implement their schemes. Mr. Shah emphasised that, while developing the manufacture of special types of batteries, an important aspect the manufacturers should bear in mind, is the manufacture of special components, such as plates, separators and special containers. Since the bulk of the requirements of synthetic separators is at present being imported, Mr. Shah urged the manufacturers to see that production of this item was also developed within the country.

In conclusion, Mr. Shah pointed out that the Government was not in a position to grant import licences for raw materials to the extent demanded by the industry; such licences were being given on the basis of the 1956 level of production. He, therefore, advised them to concentrate on the use of substitute materials which were indigenously available. He, however, assured the manufacturers "all help and assistance" for increasing production. He also stressed that the manufacturers should explore possibilities of increasing the exports of light electrical goods. He said he had, "in particular, in mind, items like electric lamps, radio receivers and storage batteries." Since the installed capacity in these items, as already stated, has been built up to a fairly high level, it should not be difficult to produce surplus goods for export purposes. It is to be hoped that the manufacturers will not only maintain but improve the quality of their goods, in view of the fact that, in foreign markets in particular, it is the "quality" that will ultimately determine the level of export trade.

Industry	Units	Target 1960-61	Present capacity	Additional capacity licensed or approved	Total capacity	Present level of imports	Estimated production in 1957	Production target 1960-61	Gap to be bridged

† Includes other types of lamps also.

SOVIET TECHNOLOGY

"Soviet scientists are tackling the problem of harnessing thermo-nuclear reactions of light elements, primarily of hydrogen, for power generation," writes Mr. Anatoly Blagonravov in *Promyshlenno Ekonomicheskaya Gazeta*, an industrial and economic newspaper in Russia. Reviewing the outstanding achievements of Soviet scientists in the past few years, Mr. Blagonravov points out that for a deeper penetration into the nature of nuclear forces and properties of elementary particles, a proton accelerator of upto 50 billion electron-volt capacity is being created in the Soviet Union. Referring to achievements in radar technique, he states that, at present, it is possible to measure the distance to the moon by means of radar. Radio telescopes are being used to study the sun and cosmic space.

Mr. Blagonravov predicts that, in the near future, dramatic changes should be expected in many spheres of technology as a result of the use of semi-conductors. In particular, Soviet scientists have developed powerful and highly sensitive photo-elements and thermo-elements for the direct transformation of light and heat energy into electrical energy.

As regards prospects for automation of production, the Soviet scientist notes that the latest thing in this field is the use of rapid electronic computers will make possible extensive development pre-set programme. This development, according to him, opens opportunities of automatic control of direct line of production. The use of these computers will make possible extensive development of automatic production lines with eventual transition to fully automated plants. A highly important link in technical progress, according to Mr. Blagonravov, is remote control. In the U.S.S.R., he says, most hydro-power stations and sub-stations of major grids have been switched to remote control. Such control is also increasingly applied in railway transport. Highly promising tele-signalling devices have been developed based on the use of magnetic elements with a rectangular hysteresis loop. The new devices, it is stated, require no maintenance, operate under any conditions and are as reliable as wire systems. Finally, he points out that, in the near future, the manufacture of these devices will begin on an industrial scale and preparations for their use are being made in coal mining and iron and steel industries, railway transport and hydro-power stations.

NEW PRODUCTS AND PROCESSES

Extinguisher for Metal Fires

MODEL PDMU 25 is a new special-purpose fire extinguisher designed to meet the difficult problems of fire outbreaks involving metals such as sodium and calcium, or magnesium and aluminium in the form of powder or swarf. Produced by the Pyrene Company, Ltd., of London, the new extinguisher is charged with 25 lbs., of dry chemical powder which is discharged under pressure provided by a cartridge of CO_2 gas. This dry chemical powder is applied to the burning metal by means of an applicator comprising a long tubular metal extension terminating in a cone-shaped spreader. The applicator ensures that the discharge of dry chemical powder is delivered lightly on to the fire in order to prevent the danger of scattering which is associated with this class of fire. Speedy operation is effected simply by removing the safety clip, detaching the applicator and striking the top of the extinguisher. A "squeeze-grip" control valve enables the flow of dry chemical powder to be shut off at will and to be used to its fullest advantage.

New Milk Product

A process for making a greatly improved concentrated sterilised milk—a canned product which will keep its fresh milk characteristics for several months with, or without refrigeration—has been developed by the University of Wisconsin, U.S.A., which plans to obtain a public patent, making the technique available without cost to any user. For the housewife, the new product is said to have many advantages. It can be used like cream on cereals and desserts, or as a beverage, depending upon the amount of water added. According to the University researchers, the concentrated milk can be made in dairy plants with processing equipment already on the market. Production on a commercial scale will require the development of factory-size equipment for packaging the new type product. The costs of processing are expected to be comparable to costs of making evaporated milk.

"Wonder Drug" for Plant Diseases

An antibiotic ("wonder drug") material that is said to be highly effective against plant diseases caused by bacteria has been patented in the U.S. by Chas. Pfizer and Company, drug manufacturers. The material is described as a mixture of streptomycin. The Company expects that its greatest value will be in treating fruit trees, since it combats fire blight of apples and pears. Heretofore, extensive pruning has been the only method available for combating these diseases. The new material is also recommended for bacterial spot of tomatoes and peppers, walnut blight, soft rot and blackleg of potatoes, wildfire and blue mould of tobacco, halo blight of beans, bacterial blight of celery, angular leaf spot of cucumbers, and various diseases of decorative plants.

New Photo Cell

A new type of "electric eye" which employs a small amount of strontium-90 in place of the light bulb used in conventional photo-electric cell systems has been developed in the U.S. Among its advantages, according to a report to the American Institute of Electrical Engineers, are great reliability and the ability to operate for prolonged periods without requiring repairs. Also, because the radioactive material produces a beam unaffected by temperature, shock, or other environmental conditions, the new system can be used in situations in which light bulb systems are inoperable—for example, where dust or smoke would obscure an ordinary light beam before it hits the photo-electric cell.

New Chemical Compound for Plastics

A new chemical compound which can be used in the manufacture of a number of different types of plastics has been developed by the American Cyanamid Company, New York. The compound, which is called N.N.—diallylmelanine, can be used, it is claimed, not only to form curable resins from original raw materials, or monomers, but also to manufacture man-made fibres that can be dyed with acid dyes from acrylonitrile materials. A number of other potential industrial applications are currently being investigated, some of which may apply to other fields of the chemical industry. It is expected that the new compound will shortly be made available in experimental quantities so that the further investigation of its industrial usefulness can be carried out by individual companies.

Atomic Lamps

The first production models of a new line of "atomic lamps" which will provide, it is claimed, power-free, uninterrupted illumination for up to 10 years was shown at the Atomic Trade Fair held in New York. The lamps, called Isolites, utilise radioactive Krypton 85 gas. Light sources are made up of specially processed phosphor crystals enclosed in a hermetically sealed transparent capsule and excited to produce light by luminescence by the radiation emitted by the gas. The lamps, which are expected to meet a diversity of signal and marking applications, will be available in a variety of design configurations and colour emissions.

Gasoline From Gilsonite Ore

Gilsonite ore, a material that looks a little like coal, though it will not burn, is now being turned into gasoline by a refinery in the United States. It is the first commercial plant in the U.S. to make gasoline from a material other than crude oil. The gilsonite being used for this purpose is mined in the western State of Utah. The American Gilsonite Company mines it, grinds it up, and pumps it 72 miles through a pipeline to its refinery. There the ore is melted down and transformed into gasoline and also into industrial coke. Gilsonite is ordinarily used in paints and varnishes, floor tiles, automobile brake linings, and in such moulded products as battery cases.

MYSORE LAMP WORKS LIMITED

CHAIRMAN, MR. J. L. D'SA'S SPEECH AT ANNUAL GENERAL MEETING

ADDRESSING the shareholders of the Mysore Lamp Works Ltd., at their Annual General Meeting held in Bangalore on 28th October 1957, Mr. J. L. D'Sa, Chairman of the Company, disclosed that the Company had received further large orders for the supply of high wattage lamps required by the various big projects in India and work had been taken up to meet these orders. Though the foreign exchange shortage had affected the Company's import programme to some extent, Mr. D'Sa added, sufficient stocks of raw materials had been built up and some requirements of glass shells and brass caps would be met from indigenous sources.

The following is the full text of Mr. D'Sa's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you to this annual general meeting of the Company. This is the first annual general meeting I am privileged to address after revestment by the Government of the management of the Company with the Board of Directors. The revestment of management was ordered by the Government of Mysore on 10th September 1956 and I was appointed Chairman by the Government and a new Board of Directors elected by you is functioning since then. Copies of the report of the Directors and accounts for the year ended 31st March 1957 have already been circulated and, I trust, you will let me take them as read. Before moving the adoption of the report, I wish, with your permission, to make some general remarks on the result of the working of the Company during the period under review and the general trend in the lamp industry.

"You will find from the report and the accounts, which have been prepared in conformity with the new Companies Act, that the profit for the year under report has been nearly double the previous year's profit. There has been a significant increase in production and sales and, in fact, a record for all these years since the inception of the Company has been established in this behalf. It is all the more gratifying to note that, in spite of bottlenecks in the supply of foreign raw materials and keen competition in the lamp market, we have been able to effect greater production and sales and earn better profits.

"Gentlemen, we are passing through an important phase in the industrial development of our country under the second Five-year Plan. The country is progressing well towards increasing the *per capita* income with the pursuing of a development economy. This means expansion and starting of new industries, completion of various hydro-electric schemes, electrification of rural parts, opening of new townships, better housing and, ultimately, a rise in the standard of living. The demand for electric lamps can, therefore, be expected to rise substantially during and after the Plan period and I am sure a bright future lies ahead of us.

Capacity of the Industry

"The capacity of the existing units of the lamp industry in the country for manufacture of G.L.S. lamps is assessed by the Government of India to be of the order of 36 million pieces and lamps of other varieties at 7.8 million pieces. The total for the country would, therefore, be 43.8 million pieces. An extra capacity of about 12.5 million pieces has also been sanctioned in favour of various units. In the light of the increase in demand, the Planning Commission have a fixed target capacity of 50 million G.L.S. lamps on a single-shift basis system by 1960-61 and the Development Council for Light Electrical Industries which was set up by the Government of India in the early part of 1955 under the Industries (Development and Regulation) Act, 1951, and under the purview of which the electrical lamp industry is also included, is expected to go into the question of development of the industry and it is anticipated that the interests of the Indian unit would be safeguarded by the said Council.

"With regard to our own Company and its activities, I am pleased to mention that during the year, the manufacture of high wattage lamps required by the various big projects in India was undertaken and large supplies were effected. Further orders have been received and work has been taken up to supply these in larger quantities.

"The basic raw materials for the manufacture of lamps consist of both imported and indigenous materials. Major items like glass shells, glass tubes, filament wires, molybdenum wires, etc., have to be imported for which foreign exchange is required. As you are aware, the foreign exchange resources of the country is so much depleted that the Government have found it necessary to impose severe restrictions on imports. Even though our import programmes have been slightly affected by these restrictions, I am glad to inform you that sufficient stocks of raw materials have been built up. Partial requirements of glass shells and brass caps are expected to be met with the indigenous sources of supply.

"Consequent on the reorganisation of States, the agency territories and terms had to be suitably altered to suit the new set-up. Accordingly, and as required by the new Companies Act, your general approval was taken for fixing and renewing agencies in all the States including the Mysore State. I am happy to state that all the agents are doing good business and I expect that they will improve upon this in the coming years.

"A scheme for the manufacture of fluorescent tubes with foreign collaboration was under consideration for some time past. On careful consideration, it was found that it was not advisable at this juncture to take up the manufacture of fluorescent tubes by incurring such a heavy expenditure. Some companies engaged in the manufacture of fluorescent tubes were already in the market and some others which were granted licences were not yet able to get the required machinery for want of foreign exchange. With the increased electrification of rural areas during the second Five-year Plan, it is learnt that the demand for fluorescent tubes is diminishing, while the demand for incandescent lamps is on the increase. Your Directors have thought it best to defer it for the present.

Consent for Bonus Issue Refused

"The question of issue of bonus shares in the proportion of one share for every three ordinary shares held had been referred to the Government of India for their consent. They have informed that they are unable to give consent for the reason that the Company does not appear to be undercapitalised. The subject has been considered by your Board of Directors and they have resolved that the matter may be referred to our auditor for opinion whether the Company has been undercapitalised or not.

"The Company owes a debt of gratitude to the Government of Mysore for their continued interest in the welfare of the Company and the encouragement they have been giving us by placing their orders for all their requirements. Before revestment of the management by the Government the Company made progress in all directions and this would be seen from the vital statistics published, along with the report. I take this opportunity of thanking the previous Controllers and members of the Advisory Board who have conducted the affairs of the Company in an able manner. My colleagues on the new Board have been helpful and are extending their fullest co-operation to me in conducting the affairs of the Company. I am confident that under the new set-up, the Company would continue to progress as hitherto. The entire staff from the Secretary downwards have contributed to the satisfactory working during the year. The relationship between labour and management continued to be cordial.

"I shall now conclude, expressing my thanks for the uniform co-operation I have received from my colleagues on the Board and all the employees for the good work done by them as indicated by the results achieved. I now formally move that the Directors' report and audited balance-sheet and profit and loss account for the year ended 31st March 1957 be hereby adopted."

Note.—This is not the proceedings of the annual general meeting, but only the speech of the Chairman. The proceedings of the annual general meeting will be separately circulated to all the members.

NUCLEAR FISSION AND MARINE INSURANCE

I.U.M.I. STUDY GROUP ON ATOM RISKS

THE successful launching of *Nautilus*, the first nuclear-powered submarine by the U.S. five years ago, marked the dawn of a new era in maritime history. It demonstrated that nuclear energy could be used safely and efficiently for marine propulsion. This stirred ship-designers and engineers the world over to study the problem of utilising nuclear power for commercial vessels and the progress of scientific research in this field during the past few years has been so rapid that one can confidently look forward to a time in the immediate future when atom-powered ships will span the oceans carrying cargoes and passengers. In July last year, President Eisenhower signed a Bill passed by the Congress authorising the construction of the world's first nuclear-powered merchant ship. It has been announced by Russia that the hull of the first Soviet nuclear-powered ship will be launched this year. The Hamburg Association for the Utilisation of Atomic Energy in Shipping has placed an order with the Hanover Technical College for a nuclear reactor plant for driving a 10,000 h.p. turbine installation. The Swedish Shipbuilding Research Foundation is actively considering the aspects of marine propulsion. The Kawasaki Dock Yard, Kobe, Japan, plans to build a 40,000-ton nuclear-powered tank by 1965. In the the U.K., a number of shipbuilding groups like Hawker Siddeley, John Brown and Cammel Laird, Babcock and Wilcox and the Atomic Energy Authority are considering designs of nuclear-powered propulsion plants and their application to merchant vessels.

Economic Implications

"This transition from fossil to fission," as Mr. Clarence G. Morse, of the Federal Maritime Administration of the U.S. remarked, "is as significant in maritime history as the transition from sail to steam." Nuclear propulsion of marine vessels has far-reaching economic implications. The capital cost of a nuclear-powered vessel will, indeed, be very high. But there are other operational advantages which a present-day steamer does not possess. It has been estimated, for instance, that the first Norwegian atomic-powered merchant vessel, which will be a tanker of 32,000 tons deadweight having a cruising speed of 18 knots, will be able to operate for 47 months without refuelling. The reactor, together with its heavy metal protection, is expected to weigh about 1,000 tons, as compared with a weight of 275 tons for a conventional engine for a vessel of this size. But considering that a large present-day tanker has to carry, say, 3,000 tons of fuel, a nuclear-powered vessel has the advantage of being lighter. Of course, the capital cost of a nuclear reactor in a vessel would be very much more than the cost of an ordinary heating installation. But in considering the cost, account should be taken not merely of the initial outlay involved but also of all the comparative costs during the lifetime of the vessel, including the cost of the fuel, wear and tear, replenishment of boilers and machinery, etc. A nuclear-powered vessel has the added and unique advantage that the serious economic waste involved in the time spent on refuelling, which a conventional vessel must sustain, will be totally absent in the case of the former. There has been in the past a continuous upward climb in the cost of mineral fuel and this trend will, in all probability, continue in future also. As against this, by reason of improvements in research and scientific inventions, the present high cost of the reactor plants is likely to come down. These two opposite movements may, in the opinion of experts, cross each other at a date earlier than is anticipated at present.

An Intriguing Problem

Naturally, these developments in the field of marine traction have great significance for the marine branch of the insurance industry. For, the latter will, in due course, be called upon to provide insurance cover against new types of risks and new forms which old hazards might take. True, the question of insurance of nuclear-powered ships has not so far posed itself in reality. But the issue, when it assumes the contours of reality, would, as the *Review* comments, "be an intriguing one, not merely because of the new forms that old hazards may take but because, to an extent, discussion at this stage is a theoretical exercise in the fundamental principles and practice of insurance, with a view to assessing the liabilities that may face insurers and the potentialities of the market as well as practical questions of exactly how the market should handle the risks when they arise and also because the problems overlap so clearly into the international field."

New Challenge

That marine insurers are aware of this new challenge to their ingenuity and enterprise is evident from the following comment made by Mr. Madoe M. Pease, Vice-President of the American Institute of Marine Underwriters: "Any uncertainty that may have existed as to the use of nuclear fission for the development of power for commercial uses has long since passed. We have now atomic-propelled submarines and a number of power plants are under consideration. The problems as they affect marine business are, to a very slight degree, with us now and a serious appraisal of our position cannot long be delayed. A new fuel has come into being and very little courage is required to prophesy that, in the not too distant future, its use will be widespread."

Marine underwriters look at the problem from the standpoint of loss or damage from direct as well as indirect causes to both hull and cargoes. As problems similar to those present in the insuring of stationary reactors may well also arise in connection with the nuclear reactor plants to be used on ships, the consideration of property and third-party insurance will have to be taken into account in hull insurance, especially as certain third-party factors are involved in hull insurance in the event of collision.

Study of Atom Risks

The International Union of Marine Insurance (I.U.M.I.) appointed an Atom Risks Study Group, under the chairmanship of Mr. A. B. Stewart of Lloyds of London, to study the question. Mr. Stewart reported to the annual conference of the I.U.M.I., held recently at Copenhagen, that the Study Group had a long discussion and it was found that the members' opinions did not coincide in all respects due to the fact that the atomic developments were so rapid and experience so limited that a definite stand was not possible at the moment. Nevertheless, the Study Group unanimously suggested that the members of the Council of the I.U.M.I. should colltct, in their own countries, information relating to: (*a*) laws or draft laws dealing with where the liability should lie; (*b*) laws or draft laws dealing with limitations of liability; (*c*) arrangements in the various markets in regard to the extent of cover given exclusions, limitations, etc; (*d*) laws contemplated in connection with hulls or nuclear propulsion or the carriage of isotopes or fissionable material; (*e*) the views of scientists or other experts in the various countries as to the possible extent of loss or damage if there were a reactor accident in a large port or if there were an error or mishap in disposal of waste; and (*f*) views as to the degree of susceptibility to radiation of various commodities. The Study Group also suggested that consideration should be given to the British insurance market's report on land-based reactors to ascertain as to where the problem of marine insurers is the same or parallel with the non-marine one and to what extent different.

Mr. Stewart's Views

In a report to the Council setting forth his personal views, Mr. Stewart held that he found no reason to alter the opinions expressed in his last year's report that underwriters can cover the hulls of nuclear-powered ships. He continued to believe that a pool was unnecessary for the purpose. His distaste for the pool system of underwriting atomic risks appears to be based on the ground that pools tend to ignore the skill of the individual underwriter in the selection of risks. Nevertheless, he agreed that pools were still better than State intervention. He was of the opinion that underwriters should not depart from their wording, limiting loss from "R.D.C. or liability" to the value stated in the policy. Insurers can, however, give further cover for "R.D.C. and liability" by separate policies, always with a limit, albeit substantial, and with a time limit or discovery clause. There was no difficulty, according to him, with the insurance of cargoes. Mr. Stewart emphasised that marine underwriters should be more and more on their guard against throwing away their birthright of insuring any kind of risk by showing so much fear of the problem as to suggest that the industry had neither the ability nor the resources to give adequate cover. If that happened, he added, they could hardly complain if others stepped into their shoes. It would then be only a matter of time, he reminded them, before underwriters were pushed out, especially as in 20 or 30 years' time most vessels would be nuclear-powered. He added: "So, by all means let us keep on the alert, learn all we can and make all the enquiries we can, but, if there be a bias, let that bias be towards giving the utmost cover than running away from it."

Mr. Robert Meyer of Switzerland agreed that underwriters should cover atomic risks but thought that it was better at this stage to over-estimate rather than underestimate them. The main problem, he said, was the underwriters' capacity. Since one accident might cause a variety of damages, an underwriter might have to face an accumulation of claims easily exceeding his capacity. Prof. E. Artom of Italy said that the possibility of a catastrophe could not be denied but the question was how probable it was. He suggested that market associations should maintain closer contact with their national delegates to the O.E.E.C. which was preparing a draft international convention on liability of atomic risks. Mr. Peter Leth of Copenhagen, while agreeing that underwriters should not shirk this new responsibility, thought that they should keep open an emergency door by establishing atomic pools.

PENSION FOR RAILWAY EMPLOYEES

The Government of India has decided to extend the pension scheme, as it operates in other Central Ministries, to cover one million railway employees who have hitherto been enjoying the benefit of Provident Fund. The pension scheme seeks to confer retirement benefit after 30 years of qualifying service, or superannuation, in the shape of a monthly pension plus a lump sum as retirement gratuity up to a maximum of an employee's emoluments for 15 months. In the event of an employee's death in service, family pensions, as also gratuity on account of death, are admissible, subject to certain conditions.

Retirement benefits, at present admissible to railway employees, consist of a contributory provident fund to which Government contributes an amount equal to the employees' compulsory contribution at the rate of 8¼ per cent. of pay. A special extra contribution to the Provident Fund of the employee at the end of his service is also made by the Government. Representations have been made by and on behalf of railway employees that the pension scheme as it exists in other Central Ministries should be made applicable to railway employees also. Such demands have been made frequently in Parliament also. The Government of India was considering this question for some time in the recent past and, in consultation with the railway employees' organisations, has now decided to make the pension scheme applicable to railway employees also.

According to the decision now taken, all persons who were in service under the Ministry of Railways on 1st April 1957 and those who join the service up to the date of issue of orders introducing the pension scheme, will be given an option to elect for the pension scheme or to continue, if they so prefer, under the existing system of contributory Provident Fund. All new entrants to railway service from the date of issue of the orders will, however, come under the pension scheme. In the case of existing railway employees their entire permanent service would be treated as having been rendered in the pensionable establishment and half the period of their temporary service will be treated as "qualifying service" for pension under the pension rules. This constitutes a substantial improvement of the retirement benefits of the staff, especially class IV staff, who were admitted to the contributory Provident Fund as late as 1940-41. Now the full period of permanent service and 50 per cent. of temporary service will count towards retirement benefits under the pension scheme. To cover specifically the case of class IV staff who put in more than 30 years' service, in whose case the retirement benefits under the pension scheme might prove to be less favourable than those under the contributory Provident Fund scheme, the pension scheme has been modified to equalise the retirement benefits by providing that such employees shall receive an additional gratuity of Rs. 200 for every year of qualifying service beyond 30 years, subject to a maximum of Rs. 1,000. This benefit is applicable to all employees retiring as class IV staff.

Compulsory subscriptions to the Provident Fund by railway employees are to continue even after the introduction of the scheme. This form of compulsory saving, it is expected, will not only supplement the retirement benefits of the employee but will also assist him to meet the premia on any insurance policies he might take. The National Federation of Indian Railwaymen has welcomed this decision.

It is difficult to assess the financial implications of the change, as the cost of the Provident Fund, as well as the pension scheme, is affected by a variety of factors such as changes in the rate of interest, the expectation of life after retirement, the extent of casualties in the service, the promotion of the employees in the service, etc. The pension scheme has, however, been approved by the Government primarily as a measure for improving the social security of this important section of Central Government employees.

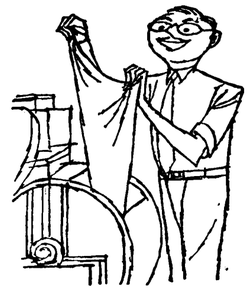
The secret of Popular Poplin — Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*



Look for SANFORIZED RECD TD MK on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

DEVELOPMENT OF TRANSPORT LOPSIDED

FRESH APPRAISAL OF RAILWAY PLAN AND CAPACITY OF ROADS URGENTLY REQUIRED

By B. V. Vagh, B.E. (Civil), M.I.E. (Ind.)*

THE recent announcement by the Railway Minister that the allotment for the railways under the second Five-year Plan has been raised from Rs. 1,125 to Rs. 1,425 crores to enable them to reach their original target of a freight capacity of about 181 million tons of goods per annum by 1960-61 has raised several issues which require consideration. Fortunately, it appears that the Planning Commission and the Finance Ministry have not yet sanctioned this increase and *Commerce*, in its issue of 12th October, and *Capital*, in its issue of 17th October, have both criticised the proposed railway increase.

In the first place, many have queried the original railway estimate of 181 million tons of goods freight. Based on the production targets of the first Plan, the minimum estimated increase in our production by 1955-56 was 30 per cent. over that in 1950-51. This figure was first estimated by the writer in his pamphlet *Goods Transport And The Plan* in 1954 and subsequently confirmed by the Study Group, Ministry of Transport, Planning in 1955.

Estimated Freight

The railways carried about 115 million tons of goods in 1955-56, as against about 92 million tons in 1950-51 and left over about 5 million tons. Thus, the requirements of the first Plan were about 120 million tons of railway traffic, as against 92 million tons pre-Plan, that is, an increase of 28 million tons on 92 million tons equal to 30 per cent. In regard to road transport, the number of goods vehicles in the country rose from about 90,000 in 1950-51 to about 117,000 in 1955-56, an increase of about 27,000 on 90,000, that is, 30 per cent. Thus, the figure of a 30 per cent. increase based on the production targets of the first Plan has been borne out by results.

On the same basis, the increase in production in the second Plan works out to about 3½ times the increase in the first Plan, that is, about 105 per cent. over that in 1950-51, since the actual increase in the first Plan was 30 per cent. On this basis, the increase in railway freight in 1960-61 should be 1.05 x 92=about 97 million tons and their total traffic 92+97=189 million tons. In point of fact, this figure is very likely to be near 200 million tons at least, taking into account several changes in our production targets and certain additional imports. Also a portion at least of the 25 million tons of overseas trade which is estimated to be available by 1960-61 will have to be carried by the railways and, therefore, to be included in their freight capacity. Therefore, *prima facie*, the original estimate of the railways of 181 million tons seems to be an underestimate and, before deciding on fresh allotments, the Planning Commission should first assess the total transport requirements of the Plan, including freight not carried by the railways, and decide what portion thereof should be carried by the railways and what portion by other services, according to their capacities.

The Estimate of Costs

The second point in this discussion is a clarification of the Railway Minister's statement that, with an allotment of Rs. 300 crores, the railways will be able to carry about 181 million tons per annum by 1960-61. It was mentioned previously, on behalf of the railways, that, with their previous allotment of Rs. 1,125 crores, they would be able to carry an extra 47 million tons of goods per annum, 5 million tons of the arrears of the first Plan and 42 million tons extra, making in all 115 million tons of 1955-56 *plus* 47 million tons extra=162 million tons by 1960-61 in addition to an increase of about 3 per cent. per annum in passenger traffic. Subsequently, it was mentioned that, on account of rising costs, the amount would have to be Rs. 1,225 crores, that is, 9 per cent. more. Now, it is said that, with an additional about Rs. 200 crores, they will be able to carry (presumably) the same passenger traffic as before, that is, an increase of 3 per cent. per annum and 181 million tons of goods and presumably also the backlog of 5 million tons from 1955-56, that is, 186 million tons in all. If the 9 per cent. increase on account of rising costs is applied, as it has to be, to the railways' original figure of Rs. 1,480 crores (before it was cut down to Rs. 1,125 crores) we arrive at Rs. 1,613 crores (Rs. 1,480+9 per cent.) for 181 million tons of goods traffic and an increase of 5 per cent. per annum in passenger traffic which was originally provided for. Against this, we are now told that, in Rs. 1,425 crores, they will be able to carry 186 million tons of goods and a 3 per cent. increase in passenger traffic per annum. This seems to suggest that, in spite of an increase of about 5 million tons per annum in goods traffic, a reduction of 2 per cent. per annum in passenger traffic (from 5 per cent. to 3 per cent.) will account for a saving of (Rs. 1,613-Rs. 1,425 crores)=nearly Rs. 200 crores! In the light of previous figures, this requires clarification to ensure that the present figure is not an underestimate. Side by side, it is also necessary to have a fresh appraisal of the total traffic of the second Plan and the railways' share thereof to ensure that the country is not committed to the development of one service only as in the past.

National Highways

But let us take the railways at their word and assume that they will be able to carry another 24 million tons of goods per annum (186 against 162) with an additional allotment of Rs. 200 crores more. Here, the country is entitled to know whether any other form of transport will not be able to carry that tonnage in less cost. We have a system of National Highways comprising about 14,000 miles. The average traffic density on our roads, including the truck equivalent of our bullock carts, is about 1.5 per mile. In the case of National Highways which carry more traffic, it can be taken at three times the average, i.e., about five vehicles per mile. Roads in other developed countries have a traffic density of from 5 to 25 vehicles per mile. This suggests that our National Highways should be capable of carrying at least 10 vehicles per mile instead of about five as at present. Hence, there is room on our National Highways for 5x14,000=70,000, say, 75,000 more vehicles.

The medium type trucks produced in this country have a capacity of from 5 to 7½ tons pay-load, say, an average of six tons per trip. Taking the onward trip as full and the return trip as half (the railways' return trip is said to be about 70 per cent.), a truck can do about 2 lakh ton/miles per annum; travelling 200 miles per day for 250 days in a year. This means a total of 15,000 million ton/miles per annum for 75,000 trucks and on the same average lead for long-distance traffic as in the case of the railways, i.e., 300 miles, 50 million tons of goods per annum. That is, our system of National Highways is capable of carrying about 50 million tons per annum, as against about 24 million tons proposed to be carried by the railways.

Cost of Road Transport

Now let us see the cost. Out of about 14,000 miles of National Highways, about 2,000 miles have a two-lane carriageway. They will carry truck-trailer combinations. Of the rest, most of the mileage has a modern surface and has a one-lane carriageway which can carry single trucks. What is missing is about 56 major bridges and some minor bridges, which require about Rs. 40 crores. Included in this amount is a small foreign exchange component on high-tensile steel, but it is understood that there may be no difficulty in getting it under the Technical Aid Scheme. Therefore, so far as the road part is concerned, the only expenditure required is a sum of Rs. 40 crores on bridges.

Now the cost of importing 75,000 extra trucks (i.e., extra to the target of truck production set by the Planning Commission) in the C.K.D. condition will be about Rs. 100 crores. Against it, a sum of about Rs. 25 crores will be realised by way of import duty. Adjusting this amount, the net requirements will be about Rs. 75 crores. The trucks manufactured in this country are based on the makes in three foreign countries, namely, U.S., West Germany and U.K. If the above imports of 75,000 trucks are divided among these countries in certain ratios, the imports from each country may be worth about Rs. 20 to Rs. 25 crores each. In view of the recent discussions of the Finance Minister and our trade delegation in foreign countries, it may not be outside the bounds of possibility to obtain long-term credit for such small sums. If this is found to be feasible and every effort should be made to make it feasible, then it means that, in order to carry 50 million tons of goods per annum by 1960-61 by road, the country will have to spare about Rs. 115 crores (Rs. 40 crores for bridges and Rs. 75 crores for vehicles) against about Rs. 200 crores required by the railways to carry only 24 million tons. Even if only two-thirds of this figure, that is, 33 million tons per annum by road is reached by 1960-61 on account of delays and unforeseen difficulties, still the proposition is well worth considering, its greatest advantage being that it will set a pattern from the third Plan onwards and free the country from the domination of only one form of service, namely, the railways. In regard to the execution of such a scheme, there should be no particular difficulties. It is understood that the requisite number of bridges can be constructed by 1960-61 if the allotment of Rs. 40 crores be forthcoming. There should be no difficulty also in getting the requisite number of trucks over a period of four years, if a concerted attempt is made, and in regard to the executive machinery the Government of India propose to appoint shortly an Inter-State Transport Commission which can be charged straightaway with the task of making these vehicles going.

Return to State and Employment

Finally, there is the point about a return to the Government in the shape of taxes on these extra vehicles. In 1956-57, the yield to Government, both the Centre and States, from taxation on motor vehicles, excluding import duty on vehicles, was about Rs. 64 crores from about 4 lakhs of taxed vehicles of all types. This is about Rs. 1,600 per vehicle per annum. In the case of trucks, it may well be about Rs. 2,500 per truck per annum. This is Rs. 18.75 crores on 75,000 additional trucks. Against this, the return on Rs. 200 crores if the amount is allotted to the railways will be only Rs. 8 crores at their present rate of 4 per cent. per annum on the capital at charge. Again, railways pay no income-tax but truck operators pay it and, if each of the new operators required to man the 75,000 extra trucks owns, 30 vehicles, it means 2,500 additional income-tax payers. These vehicles would also provide permanent employment for about 4½ lakhs of hands at an average of about six per truck including repairs and services, in addition to temporary employment for at least 2 lakhs of hands on bridge work worth Rs. 40 crores. In 1955-56, the railways

INDUSTRIALISATION OF ASIAN REGION

I.L.O. REPORT ON SMALL AND HANDICRAFT SECTORS

IT is a fully accepted fact that economic development in Asian countries is synonymous with industrialisation. The rate of population growth in these countries has been considerably high in recent years. The net annual addition to the population during the five years 1950-55 was as much as 22.6 million, as against 15.5 million, 14.0 million and 10.6 million in the decenniums 1940-50, 1930-40 and 1920-30, respectively. Over the 35 years ended 1955, the population of Asian countries thus rose by 514 million, from 967 million in 1920 to 1,481 million in 1954. But the available land resources are too inadequate to provide for even a subsistence living to a vast majority of the increased population, let alone full employment, so that the standard of living in the region continues to be at a deplorably low level. It is but natural that utmost emphasis should be laid on industrialisation. This point is fully stressed by the I.L.O. Asian Regional Conference in its fourth report on small and handicraft industries.

The need for industrialisation, however, raises a number of questions such as formation of capital required and development of skilled labour force. One important question is whether the plans for the promotion of manufacturing should emphasise the development of new large-scale factory units or the fostering of small-scale industries—when the choice is possible. Posing this question, the I.L.O. report observes: "More extensive enquiries in the field might be particularly rewarding, in view of the fact that, in principle, small industry seems to fit into the economic and social conditions of most Asian countries better than large-scale production... As compared with factory production, small-scale enterprise tends to need relatively more labour, less capital, and a more modest level of organisational and managerial talent."

Important Considerations

While no one will dispute the force of the aforesaid statement, it must be pointed out that the official policy governing development of small-scale industries should not be extended to such an extent as to relegate sound economic considerations to the background, their place being taken over by highly ideological considerations. In India, for instance, the Governments —Central and State—have imposed restrictions and tax burdens on several large-scale industries with a view to helping the small units. This is certainly regrettable. In determining the exact place of small industries in the economic set-up of any country, it is imperative that the economic importance of the large-scale industrial sector should receive adequate recognition. Further, the authorities should take into account the price which the consumer will ultimately be called upon to pay for his requirements of goods and commodities. Needless to say that the development of small industries must be ensured purely on its merits and not at the cost of the more efficient large-scale sector. As the I.L.O. has pertinently remarked, an important question is the co-ordination of policies aiming at the development of small industries with programmes of large-scale industries as well as with the overall development plans.

In the considered opinion of the I.L.O., there should be a central organisation to plan, supervise and co-ordinate the development of small industries. This authority should, wherever possible, function separately and not be burdened with other administrative responsibilities. Steps have already been taken in this direction by India, Pakistan, Ceylon and Afghanistan. In most of the Asian countries, small-scale industries are being protected through fiscal and other measures. The co-operative organisation is considered to be the most efficient means of developing small-scale industries. The success of such an organisation, of course, depends on the way in which it is fostered. Co-operation in small-scale industries, as, indeed, in any other field of economic activity, has little chance of success, if it is not a spontaneous growth but is imposed from above. It would be better if a system were adopted where the benefits of individual proprietorship which permits a reward adequate to individual effort are combined with those of minimum co-operative effort.

The I.L.O. report has done well to draw special attention to management problems. As it rightly says, there is urgent need everywhere for trained teachers and advisers for small firms. According to it, in most Asian countries, assistance to small firms through common services, advisory and others, will have to be undertaken by Governments, at least in part. Voluntary organisations such as producers' co-operatives and trade unions can supplement and co-operate with Government-sponsored services.

Human Relations

The report has also done well to draw attention to the need for improving human relations in small-scale undertakings for both social and economic reasons. In this connection, it makes the following observations:

"Relatively little study has been made of labour and human problems involved in small industrial development. The small-scale enterprise has certain special characteristics which place these problems in a different setting from those of a large-scale enterprise. For example, small-scale undertakings operate, in varying degrees, as a family enterprise. (In the State of West Bengal, family labour accounts for more than 90 per cent. of the total labour employed in small industries.) Also, a considerable proportion of the labour force engaged in small industries is seasonal in character.

"Many small-scale industries are characterised by the absence of measures designed to promote better labour-management relations, particularly at the workshop level.

"It is imperative that continuous attention be given to the improvement of human relations in these undertakings, both for social and economic reasons. An essential element in the successful execution of a programme of improved human relations relates to the training of both management and workers. Workers' educational schemes do not seem to be adequately developed in Asia, and the existing programmes cater mostly to trade union leaders connected with large-scale undertakings in urban or semi-urban areas."

A disquieting feature of small-scale industries *vis-a-vis* medium and large industries is the relatively low level of wages. This is attributed by the I.L.O. report to five important factors—marginal existence of many small undertakings, low productivity per worker, low rate of profit, total lack of organisation of workers, difficulty of supervising applications of legislation on minimum wage rates in small units. It is scarcely necessary to mention here that, unless these drawbacks are removed, the small-scale industries cannot be expected to play a significant and sustained role in the economy of India as well as of other Asian countries. All the drawbacks can certainly be removed not by palliatives or short-cut remedies but by taking energetic steps to improve the very set-up of these industries through modernisation of their productive equipment and better methods of marketing. Special mention must be made of mechanisation of production operations. Again, the small-scale industries must be developed not as independent entities but as auxiliaries to large factories, as in Japan.

An argument frequently put forward by the protagonists of small industries is that they tend to correspond more closely to factors of production in Asian countries, in that they need more labour and relatively less capital than large-scale industries. Referring to this argument, the I.L.O. Secretariat observes, in its report presented at the Fourth Asian Regional Conference in New Delhi, that, while the former proposition is true, the latter is more doubtful. Citing the instance of India, it points out that there is some evidence suggesting that, at least in a number of fields, small-scale undertakings actually use more capital as well as more labour per unit of output. The I.L.O. Secretariat has, therefore, warned that, "if this were generally true, it would undermine one of the main economic arguments for favouring small-scale industry." In this connection, it rightly urges that, since the data relating to small-scale industries are scrappy and inconclusive, a systematic study of the relative amounts of capital and labour employed per unit of output in various industries and under different methods of large- and small-scale production is of great importance.

Technical Assistance

In conclusion, the fourth I.L.O. Asian Regional Conference report on small and handicraft industries has reviewed the I.L.O.'s technical assistance activities in the Asian region. The review reveals that preliminary surveys of small industries have been carried out in Afghanistan, Burma, Ceylon and Malaya. The surveys have underlined in a number of cases the need for developing a central machinery to secure adequate co-ordination of various programmes designed to promote development of small industries. Technical assistance for the raising of productivity has been provided by the I.L.O. to India, Pakistan, Ceylon and Hong Kong.

A large number of I.L.O. handicraft projects have directly or indirectly been concerned with training and extension service for small-scale industry. In some cases, this assistance has been concerned with the organisation of training courses for selected workers or with the establishment of demonstration projects and pilot plants; in other cases, it has taken the form of training instructors, officers and managers responsible for the supervision of new industrial units.

In a number of Asian countries, the I.L.O. experts have assisted in the improvement of methods and techniques in existing crafts, or with the promotion of new lines of small-scale production—cotton and silk weaving in Afghanistan; small powerloom weaving and coir manufacture in Ceylon; and lacquerware products and mechanical cordage in Thailand.

The I.L.O. missions in some countries have dealt with other aspects of small industrial development such as financing, standardisation and marketing. Advice on handicraft designs and marketing is being tendered, for example, to Thailand. In addition to the organisation of regional co-operative training courses, the I.L.O. has provided advice and assistance on co-operative education and training in Burma, Ceylon, Pakistan, the Philippines and Thailand.

INDO-U.K. TRADE

India had an adverse balance of trade to the extent of £18.10 million with the U.K. during the first three quarters of 1957, as against £20.69 million in the corresponding period last year. The slight improvement in the position thus may be due to a marked rise in exports of goods and commodities from India to the U.K. which in the aforesaid period aggregated £116.98 million as against £104.72 million a year before. Imports from the U.K. were also higher, being £135.09 million, as against £125.41 million.

The bulk of the exports from India to the U.K. consisted of tea; during the nine months ended September last, the U.K. bought £58.87 million worth of Indian tea, a rise of £14.31 million as compared with the same period in 1956. The other important items were leather and leather manufactures, cotton textiles, and miscellaneous textile manufactures. Among the goods imported by India from the U.K. were machinery, electric apparatus and appliances, chemicals, and iron and steel. The table below gives the trend of India's trade with the U.K. during the first three quarters of 1956 and 1957, as also in the whole of 1956.

(In thousand £s sterling)

	1956	Jan.-September	
		1956	1957
Total all exports	167,837	125,407	135,085
Of which :			
Machinery other than electric	45,271	33,427	34,429
Electric machinery, apparatus and appliances	21,203	16,070	17,339
Chemicals	18,266	13,859	13,848
Iron and steel	15,926	11,982	11,421
Total all imports	141,468	104,717	116,981
Of which :			
Tea	68,893	44,554	58,866
Leather and manufactures and dressed furs ..	11,475	9,446	10,671
Cotton yarns and woven fabrics	7,475	6,014	7,732
Miscellaneous textile manufactures.	11,729	8,784	9,358

The total sales of British plastics this year are expected to exceed 400,000 tons, worth £100 million, which is 20 per cent. more than last year's record sales. The biggest advances this year, as in the last five years, have been in the thermo-plastics group, of which the three leaders are polythene, polyvinyl chloride, and polystyrene. Polythene output is over 40 per cent. higher than last year, and is expected to reach some 55,000 tons this year with several new plants coming into operation in the near future. The advance of polyvinyl chloride has been equally spectacular. Total production is now expected to reach some 65,000 tons, as against 48,000 tons last year. Total production capacity in the United Kingdom is stated to be in the region of 90,000 tons. The third, namely, polystyrene, has also made rapid advances, and production this year will be about 30,000 tons with almost all plants fully extended.

The first mixed-traffic Diesel-electric locomotive for British Railways' £1,200-million development scheme, designed to make the system the most up to date in the world, was handed over on the 31st ultimo, five weeks ahead of schedule. This 1,250 h.p. locomotive is designed for speeds up to 75 m.p.h., though it is capable of 90 m.p.h. The remaining 19 locomotives in this batch, now on the assembly line, will roll off at the rate of one every three weeks. Under British Railways' development scheme, there will be a huge increase in the number of services operated by diesels; by the end of this year alone, it is expected that over 1,450 vehicles, for use in multiple-unit diesel trains, will be in service. At least 1,000 more are likely to be added by the end of 1958.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a *single* chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto: Agriculture—Automotive — Aviation — Beverages — Ceramics — Chemical Processing — Cosmetics, Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather Tanning — Lumber — Machinery — Mining — Packaging — Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production... improve products... decrease operating costs... and increase your sales.

RESULTS OF BELAPUR EXCELLENT

PROFIT AT NEW RECORD HIGH

INVESTORS in ordinary shares of sugar companies have every reason to feel gratified that their holdings are among those which have suffered the least in the depression in the stock markets during the past one year. Thus, while the index number of variable dividend industrial security prices (base 1949-50=100) for all India has dropped from 123.6 (for the week ended 3rd November 1956) to 98.6 for the corresponding week of this year, that of sugar shares, in particular, has fallen from 108.0 to 95.7 only. Investors in the Belapur Company Ltd., one of the finest sugar factories in India, will actually find that their holdings have practically suffered no depreciation over the year, the latest quotation of these Rs. 50 paid-up shares being Rs. 248, as against Rs. 249 a year ago, both including the dividends for the respective years.

Sugar shares and, in particular, Belapurs, have held their ground, despite the heavy corporate taxation and the 100 per cent. increase in excise duty on sugar levied in May this year. The reasons for this are not far to seek. The sugar industry is one of the few which have had a prosperous year by raising its production substantially to a record level. Its output during the sugar season 1956-57 went up to such an extent that it could find a surplus for export, while the prices of sugar remained more or less stable for most part of the year. It is true that, in some months of 1957, sugar prices rose, but the net increase in prices over the year corresponds to the increase in excise duty. In other words, sugar manufacturers were able to pass on the burden of higher excise duty to consumers and retain their margin of profit at fairly high levels.

In the case of most sugar companies the higher profit margin was secured through improved efficiency and increased production. The Belapur Company Ltd. (Managing Agents: Messrs. W. H. Brady & Co. Ltd., Bombay) is one of these companies. Its results for the year ended 30th September 1957 constitute a fresh record. The Company was again able to produce a high tonnage of sugar per acre and its total production during the year under review touched a new peak in its history. The gross profit aggregates Rs. 77.96 lakhs, a rise of Rs. 17.64 lakhs or 29.2 per cent. over the year. With this rise, the profit has maintained the upward trend for the third year in succession, the aggregate increase over the three years being Rs. 25.09 lakhs or 47.4 per cent. At Rs. 77.96 lakhs, the year's profit exceeds the previous high of Rs. 66.43 lakhs reached in 1947-48. The net profit, too, after larger provision for taxation, shows an impressive rise from Rs. 33.34 lakhs for 1955-56 to Rs. 47.95 lakhs for the year under review. The provision for taxation, at Rs. 20 lakhs, includes a sum of Rs. 60,000 for wealth tax.

In the circumstances, it is not surprising that the Directors have recommended a higher dividend of 36 per cent., as against 32 per cent. paid for the previous year. It will be noted with interest that the dividends for 1955-56 and 1956-57 are both on the capital increased in January 1956 by the issue of a 50 per cent. scrip bonus, except, for one difference, namely, that, while the 1955-56 dividend on the bonus shares was only for six months—from April to September—the latest higher dividend is for full 12 months. The more impressive part of the Directors' appropriation policy is that, even while recommending a higher dividend, they toe a conservative or cautious line. For, with an additional sum of over Rs. 14.5 lakhs available for appropriation and with an already very sound financial position, the Directors could have been far more generous in their dividend distribution, but they have not done so. They obviously believe that, despite the unhelpful taxation policy of the Government which penalises savings through higher taxation, industries should build up large reserves, which help not only themselves in their development programme but also indirectly other industries through capital markets. They have, thus, strengthened the general reserve by Rs. 10 lakhs, in addition to Rs. 8 lakhs added last year. They have also doubled the allocation to the reserve for housing from Rs. 5 lakhs to Rs. 10 lakhs. They have, however, reduced the transfer for gratuity reserve from Rs. 2 lakhs to Rs. 80,000, but this is probably due to the Company having built up by now sufficient reserve for this purpose. After all these allocations there is a surplus of Rs. 3 lakhs to be carried over to the current year which compares favourably with about Rs. 53,000 brought in.

The progress of the Company during the last three years is well illustrated by the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1957	1956	1955	1954
Sale proceeds of sugar (gross) ..	1,89.42	1,48.12	1,41.70	1,27.65

* Dividend of Rs. 16 per share on the old shares and Rs. 8 per share on the new bonus shares ranking for dividend from 1st April 1956.

The following extract from the Directors' report gives an idea of the trading conditions during the year:

"Once again your Directors have pleasure in announcing further records achieved by your Company during the year under review. The profit figure and the quantity of sugar produced are all-time records, but the percentage recovery was slightly lower than the highest ever reached, because of the extended crushing season which continued beyond the usual time. A negligible amount of outside cane was purchased during the year.

"There was no change in the prevailing system of sales releases which, as before, were issued approximately once a month by the Government of India and, at the end of the financial year, your Company was carrying an unreleased quantity of just less than 30 per cent. of its total production.

"There was not a great rise in sugar prices throughout the year, the tendency being slightly upward except when the Government doubled the excise duty which had the effect of putting up market rates to the extent of the increase.

"Certain modifications introduced during the year enabled the quality of finished sugar to be improved and the standard of our product today is higher than ever.

"The machinery has been well maintained and a new large godown is in course of construction to take care of the heavy stocks and avoid the use of temporary structures.

"The estate results are highly satisfactory and the standing crops are in good condition."

The financial position of the Company, as seen from its latest balance-sheet, is very sound. The paid-up capital stands at Rs. 70.50 lakhs, of which as much as Rs. 51.70 lakhs represents capitalisation of reserves. Even after such a heavy transfer to the capital account the reserves and surplus aggregate Rs. 126.54 lakhs. The provision for taxation amounts to Rs. 35.95 lakhs and other current liabilities are no more than Rs. 49.09 lakhs. The gross block of the value of Rs. 150.47 lakhs stands written down to Rs. 41.71 lakhs. The current assets amount to Rs. 240.36 lakhs, of which investments (all in Gilt-edged securities) and cash balances alone account for Rs. 109.82 lakhs.

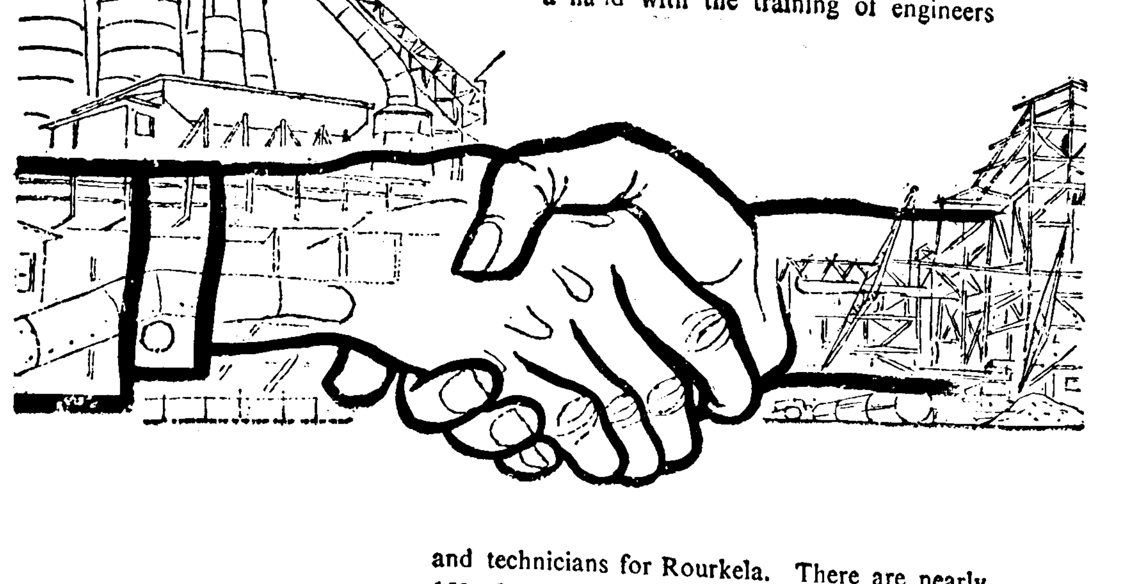
The outlook for the industry, in general, and the Company, in particular, during the current year (1957-58), is fairly promising. It is, however, too early to say anything worthwhile about the margin of profit for 1957-58, except that one should hope for the best. Much will depend on the taxation and sugar control policies of the Government. In recent weeks, there has been a fall in prices of sugar and, with domestic production tending to rise, it is a moot point whether the industry will continue to be in a position to pass on the full burden of the high level of excise duty in the coming months. The extent of sacrifice which sugar companies will have to make to reach the export target of 200,000 tons that is proposed for the current season is also not known. Given, however, the same set of conditions as those that prevailed last year, the Company should be able to report another year of satisfactory results.

The Company's Rs. 50 paid-up shares are being currently quoted at Rs. 248 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 7.8 per cent. per annum, free of income-tax.

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers



and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

Good Wishes to Rourkela

INDIA STEAMSHIP REPORTS IMPRESSIVE PROFIT

PREMIUM RESERVE TO BE CAPITALISED

HIGHLY gratifying results are disclosed by the statement of accounts of the India Steamship Company Ltd. (Managing Agents: Messrs. Lionel Edwards Private Ltd., Calcutta) for the year ended 31st March 1957. The Company's freight earnings for the year are the highest on its record, profits have sharply risen to a new impressive level and its reserves have been substantially strengthened. Its working in the previous year also was encouraging to a degree and that, coming after three years of successive decline in profits, had made us state in our last year's review that the Company appeared to have turned the corner. The further progress which it has made during the course of only one year, while reflecting the steady growth of the Indian shipping industry, redounds to the credit of the Company's management. The Directors can feel justly proud that the optimistic forecast which they had made about the Company's working during the year under review has been more than fulfilled.

The Company's gross profit at Rs. 167.08 lakhs shows a smart rise of Rs. 77.94 lakhs over Rs. 89.14 lakhs for the previous year. Expressed in percentage, the improvement in earnings works out to 87.4. It may be remembered that the previous year's profit itself had exceeded the erstwhile high for 1951-52 at Rs. 76.27 lakhs. The year's gross profit, therefore, is a fresh record in the Company's history. The net profit, too, after making substantially higher allocations for depreciation and taxation, stands at the appreciably high level of Rs. 92.22 lakhs, as compared with a mere Rs. 37.73 lakhs a year ago.

The improved results have enabled the Directors to set aside a large sum of Rs. 66.01 lakhs, equal to about 72 per cent. of the net profit, to the various reserves, as against a mere Rs. 15 lakhs last year. The general reserve has been provided this year with Rs. 35 lakhs, that is, Rs. 20 lakhs more than a year ago. A dividend equalisation reserve has been created for the first time and credited with Rs. 23.75 lakhs. The fleet replacement reserve gets Rs. 7.26 lakhs. This reserve has been further strengthened by the addition of Rs. 18.70 lakhs, representing the surplus realised from the sale of a ship and another Rs. 3,496 being the profit on sale of motor cars, etc. In view of these additions to reserves, which have been made with an eye to the Company's further progress, the Directors have not found it possible to raise the distribution to the ordinary shareholders. Accordingly, they have only proposed to maintain the dividend at the rate of 10 per cent., that is, at Re. 1 per share of Rs. 10 each.

Meanwhile, the Directors propose to capitalise, subject to the sanction of the Controller of Capital Issues, the premium reserve on shares amounting to Rs. 24.99 lakhs. This sum is equal to a little over 10 per cent. of the ordinary capital standing at Rs. 2.25 crores. The Company can, therefore, comfortably issue one bonus share for every 10 shares and, given the current level of profits, maintain the dividend at 10 per cent. per annum on the increased capital with ease. As readers are aware, capitalisation of premium reserve does not attract the tax on bonus shares. In order to permit this issue, the Company's authorised capital is sought to be raised from Rs. 3 crores to Rs. 5 crores.

A noteworthy feature of the year's working is the slight fall in expenses from Rs. 4.39 crores to Rs. 4.38 crores. The main items of expenditure in which a fall has been recorded are port charges (including marine dues, light dues, customs, etc.) which show a decrease from Rs. 192.37 lakhs to Rs. 185.82 lakhs and repairs and maintenance of fleet from Rs. 30.57 lakhs to Rs. 28.92 lakhs. No amount seems to have been spent on charter hire on which a sum of Rs. 15.04 lakhs had to be expended in the previous year.

Alluding to the year's working, the Directors observe thus:

"During the period under review, 11 ocean-going vessels were employed on the liner service in the India/U.K./Continent run and in the special India/Black Sea route. Two of the 11 vessels were, at the instance of the Government of India during the latter part of the year, detailed for carrying cargo from India to the Russian ports in the Black Sea and from the Russian ports to India.

"The Company, in pursuance of its policy of expanding its fleet, had added one more new vessel, the *Indian Splendour*, which was built and delivered by Messrs. Howaldtswerke, Hamburg, in May 1957. "Two new ships, the *Indian Resolve* and the *Indian Resource*, operated from March 1956 and June 1956 respectively. The sale of the *Indian Importer* in May 1956, however, kept the strength of the fleet at 11 ocean-going vessels. The *Indian Commerce* was exclusively employed in the coastal trade of India.

"During the year, shipping companies operating to the U.K. and Continent through the Suez Canal had to face some serious problems, consequent on the closure of the Canal for some months. Ships had to be diverted round the West African coast both on the westward and eastward journeys. The fleet of the Company had a special problem, which concerned only the Indian lines and did not affect other shipping companies. This was the need to avoid what were the most convenient ports in Africa for bunkering, namely, the ports in South Africa and in the Portuguese possessions in Africa. The Directors are, therefore, gratified to report that in spite of all these handicaps, the freight results are the highest on record for your Company."

It is noteworthy that the Company has been able to show the aforesaid gratifying results, despite the difficult situation that arose from the closure of the Suez Canal. This, again, points to a high degree of efficiency on the part of the management. The Company's freight earnings during the year under review rose fairly substantially from Rs. 526.12 lakhs to Rs. 600.17 lakhs, which, the Directors say, are the highest on record for the Company. This can be seen from the comparative table given below, which also reveals the other features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Freight earned	600.17	526.12	401.00	360.28
Other income	4.87	2.22	1.72	1.31
Expenses	437.96	439.20	375.85	330.70
Gross profit	167.08	89.14	26.87	30.89
Managing Agents' commission	11.60	8.91	2.68	3.09
Depreciation	48.36	41.50	22.88	26.04
Taxation	15.00	1.00	0.42	0.77
Net profit	92.22	37.73	0.88	0.99
Transfer to reserves	66.01	15.00	..	..
Dividends—				
5 per cent. cum. preference	1.25	1.25	1.25	1.25
Ordinary	22.50 (10%)	22.50 (10%)	..	..
Carry forward	2.71	0.26	1.28	1.65

The balance-sheet of the Company as at 31st March 1957 shows the paid-up capital unchanged at Rs. 2.50 crores, consisting of 25,000 five per cent. tax-free redeemable cumulative preference shares of Rs. 100 each and 2,250,000 ordinary shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating Rs. 177.45 lakhs, besides a reserve for taxation of Rs. 23 lakhs. Loans secured from the Government of India by mortgage of ships included in the fleet amount to no less than Rs. 7.98 crores. The current liabilities total Rs. 220.24 lakhs, inclusive of incomplete voyages amounting to Rs. 115.51 lakhs. There was an addition of Rs. 150.74 lakhs to the fleet account during the year, bringing it to a total gross value of Rs. 9.96 crores which, along with other assets, bring the total value of the block account to Rs. 12.79 crores. This has been written down to a book value of Rs. 10.16 crores. The current assets aggregate Rs. 4.53 crores.

The Rs. 10 fully paid-up shares of the Company are currently quoted at Rs. 11.88 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 9.19 per cent. per annum.

(Concluded from next column)

ing interest at 5½ per cent. Besides this, it has current liabilities of the order of Rs. 33.18 lakhs. The gross block of Rs. 141.77 lakhs, inclusive of the sizable additions during the year amounting to Rs. 28.72 lakhs, stands written down to Rs. 97.63 lakhs. Capital work in progress accounts for Rs. 2.84 lakhs. The current assets aggregate Rs. 65.46 lakhs and cover the current liabilities and the provision for taxation by a wide margin. The Company is thus in a sound financial position. That is only as it should be, because it has been in existence since 1909, that is, very nearly for five decades, and that, too, under able management.

The Rs. 10 fully paid-up shares of the Company are nominally quoted at Rs. 16.50 *cum-div.* On an *ex-div.* basis and on the basis of the year's dividend, the shares give a yield of 6.45 per cent. per annum.

KUMARDHUBI'S RESULTS ENCOURAGING

OUTLOOK OPTIMISTIC

THE results of the Kumardhubi Fireclay and Silica Works Ltd. (Managing Agents: Messrs. Bird & Co. Private Ltd., Calcutta) for the year ended 31st December 1956 are encouraging. The gross profit at Rs. 14.32 lakhs is higher by Rs. 3.24 lakhs, as compared with Rs. 11.08 lakhs for 1955. It is also better by Rs. 5.45 lakhs as compared with 1954. After slightly higher provisions for both depreciation and taxation, the net profit also stands higher at Rs. 7.40 lakhs, as against Rs. 5.38 lakhs for 1955 and Rs. 4.41 lakhs for 1954.

The higher earnings have enabled the Directors to set apart a larger sum to reserves. Thus, Rs. 4.19 lakhs, as against Rs. 2.75 lakhs a year before, has been utilised for this purpose. Details of this allocation reveal that reserve for tax contingency gets Rs. 55,000 (Rs. 41,500 last year), development rebate reserve Rs. 1.68 lakhs (Rs. 3,500), general reserve Rs. 756 (Rs. 1.30 lakhs), reserve for plant renovation Rs. 1.75 lakhs (Rs. 50,000) and debenture redemption reserve *nil* (Rs. 50,000). The dividend, however, has been lowered to 10 per cent. from 15 per cent. per annum for the previous few years. It must be remembered that, although the dividend is lower, it is on a higher capital of Rs. 30 lakhs, raised by a fresh issue of Rs. 15 lakhs in ordinary shares of Rs. 10 each in December 1956. Consequently, the ordinary dividend for the year at 10 per cent. per annum absorbs Rs. 3 lakhs, as against Rs. 2.25 lakhs for 1955 at 15 per cent.

The following comparative table brings out the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	108.78	97.08	92.21	89.78

* On the increased capital of Rs. 30 lakhs.
† On the increased capital of Rs. 15 lakhs.
‡ On a capital of Rs. 10 lakhs.

It will be seen from the above table that the Company's sale proceeds have been steadily going up and, for the year under review, they have advanced by as much as Rs. 11.70 lakhs to Rs. 108.78 lakhs. This is better than the progress made in the previous two years. The Directors state that the first stage of expanded firebrick section was completed during the year and that the new tunnel kiln was put into operation in the month of December. Work on the second stage, according to them, is also well advanced, including the third tunnel kiln. The Company's works are said to be fully booked ahead with orders.

It will be recalled, in this connection, that the Company's products are of vital importance to iron and steel and other heavy industries, where furnaces are a part of their works. The Company is a leading producer of silica bricks for steel plants and coke ovens and of all classes of firebricks. Its works are situated in Bihar, close to India's heavy industries. Since expansion of such heavy industries is the key feature of India's plan for economic development, it is reasonable to take an optimistic view of the outlook for the Company.

The paid-up capital of the Company as at 31st December 1956 stands raised from Rs. 21 lakhs in 1955 to Rs. 36 lakhs, in view of the new issue of ordinary shares, as already stated. The Company has in all 300,000 ordinary shares of Rs. 10 each, besides 4,000 5½ per cent. redeemable cumulative preference shares of Rs. 100 each and 2,000 seven per cent. cumulative preference shares of Rs. 100 each. Since closing the accounts for 1956, however, all the seven per cent. preference shares of Rs. 100 each have been repaid at a premium of Rs. 5 per share. The reserves and surplus aggregate Rs. 76.74 lakhs, of which Rs. 54.22 lakhs represent reserves created by revaluation of fixed assets. The Company has a debenture liability of Rs. 20 lakhs, carry-

(Continued in previous column)

KOTHARI TEXTILES EARN LESS

DIVIDEND, HOWEVER, MAINTAINED

HIGHER costs of production, consequent on dearer cotton, wage increases, labour unrest of one kind or another, a cut in the essential power supply, albeit for a short period, and lower prices prevailing in the yarn and cloth markets, all these cumulatively have led to a further reduction in the earnings of Kothari Textiles Ltd. (Managing Agents: Messrs. Kothari and Sons, Madras) for the year ended 30th June 1957. The gross profit at Rs. 11.99 lakhs has receded by Rs. 1.05 lakhs from Rs. 13.04 lakhs for the previous year, while it is Rs. 6.13 lakhs lower than Rs. 18.12 lakhs earned in 1954-55, which, by the way, was the highest since 1943-44.

The next profit, even after providing a slightly lower amount for depreciation, also stands lower at Rs. 5.28 lakhs, as compared with Rs. 6.25 lakhs for the previous year. No provision for tax has been made for the sixth year in succession. Neither has any amount been transferred to the reserves. A sum of Rs. 30,000 has, however, been set apart as provision for wealth tax. The dividend on the old ordinary shares is being maintained at 10 per cent. per annum, the same as that for the past two years. The new shares are to get a dividend of 7.708 per cent. per annum. It will be recalled that the Company had issued, in May 1956, 60,000 'B' preference shares of Rs. 10 each and 180,000 new ordinary shares of Rs. 10 each, both at par, in the ratio of one 'B' preference and ordinary share for every four ordinary shares held. A dividend of 4.625 per cent. per annum has been declared on the new 'B' preference shares for the year under review.

The following comparative table clearly brings out the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale proceeds	81.06	84.94	88.43	67.19
Stocks	18.25	6.61	9.86	5.54
Expenses	81.65	69.21	74.72	63.17

* 6 per cent. per annum on the old preference shares and 4.625 per cent. per annum on the new 'B' preference shares.
† 10 per cent. per annum on the old ordinary shares and 7.708 per cent. per annum on the new ordinary shares.

The table reveals that the Company's sale proceeds during the year declined further to Rs. 81.06 lakhs from Rs. 84.94 lakhs realised in the previous year. Expenses, on the other hand, rose substantially by Rs. 12.44 lakhs. This was due to the rise in the cost of cotton consumed from Rs. 41.64 lakhs to Rs. 49.41 lakhs, factory wages and establishment from Rs. 14.01 lakhs to Rs. 18.54 lakhs and general office expenses from Rs. 98,105 to Rs. 2.02 lakhs.

Explaining the working of the mill and the trading conditions, the Chairman, Mr. D. C. Kothari, says, in his statement to the shareholders, as follows:

"During this year, we were able to work only an average of about 31,000 spindles and 240 automatic looms, as against our installed capacity of 42,000 spindles and 300 automatic looms, largely because of the want of certain components for the machinery and there was also a power cut for nearly six weeks which affected our production adversely. Moreover, the labour also did not, for a time, implement the voluntary agreement which the Millowners' Association entered into with all the unions for the Coimbatore region. Consequently, there were for a short time strikes and lockouts in the Coimbatore area and our mill was also affected for a short period. However, I am glad to report to you that these matters were amicably settled and the mills then resumed normal production. During the second half of our financial year, yarn prices also had come down. Due to these various causes, our profits were not as good as expected.

"We were able to export about 50 per cent. of the production of our cloth abroad. Our cloth was well received in the overseas markets and we were able to maintain these markets due to the better quality of our cloth, in spite of severe competition. But the position is now becoming more difficult and, in the internal market, due to the increase in excise duty, there is accumulation of stocks and, unless the Government decides to reduce the excise levy, the offtake of cloth in the country will be difficult. With regard to yarn, prices have fallen and almost all the mills are facing accumulation of stocks. However, we expect the position to improve in the near future. With the increased spindleage, I expect that in the coming years we should be able to show good progress, in spite of the heavier rates of taxation and increasing cost of labour due to higher wages and better amenities."

The Company has been sanctioned 24,000 additional spindles by the Union Government. Although it raised an additional capital of Rs. 24 lakhs, the expansion is expected to cost the Company nearly Rs. 73 lakhs, and the Directors consider it desirable that a further capital of Rs. 25.20 lakhs should be raised from the ordinary shareholders to meet a part of the expansion cost. The Company has purchased near Tudiyalur, which is about seven miles from Coimbatore, the necessary land for the mill. Construction of the building is going on and machineries are expected to arrive shortly. The Directors expect that at least 12,000 spindles will commence production by the middle of next year. The Chairman of the Company is confident that the profits expected from the present capacity of the mill will be sufficient to maintain the current rates of dividend on the existing, as well as the proposed increased capital of Rs. 25.20 lakhs.

The latest balance-sheet of the Company shows its paid-up capital at Rs. 60 lakhs, in 120,000 six per cent. tax-free cumulative preference shares of Rs. 10 each, 60,000 six per cent. tax-free cumulative 'B' preference shares of Rs. 10 each and 420,000 ordinary shares of Rs. 10 each. Of the ordinary capital, Rs. 10 lakhs represent the amount capitalised out of reserves in past years. As against this, the reserves and surplus aggregate Rs. 20.17 lakhs. There is no provision for taxation, nor is there a reserve for deferred tax liability. The current liabilities total Rs. 61.62 lakhs. These include secured loans from banks to the tune of Rs. 41.42 lakhs. The gross block of Rs. 105.81 lakhs, along with additions during the year of Rs. 12.53 lakhs, stands written down at Rs. 67.53 lakhs. The current assets of Rs. 74.25 lakhs cover the current liabilities by a comfortable margin.

The Rs. 10 fully paid-up shares of the Company are currently quoted at Rs. 11.10 *cum-div.* On an *ex-div.* basis, the yield works out to 9.9 per cent. per annum.

Points From The Chair

Demand for Electrical Goods

"YOU will be interested to learn that there is a growing demand for various electrical goods, and the production targets for the second Five-year Plan period of many items, including transformers, have been revised upwards by the Planning Commission. The difficulties on account of foreign exchange and stringency of capital in the country may, to some extent, limit the size of expansion. Electric lamps, transformers, etc., are absolutely essential items in any industrial development and, therefore, notwithstanding the difficulties of exchange and capital, the demand for electrical goods handled by the Company will continue to grow. I am confident that, with proper planning and the best use of its resources, the Company should be able to make considerable improvements, both in production and sales. It is becoming increasingly important for our country to earn foreign exchange through exports. You will be glad to know that our European partners in Hind Lamps have appreciated the necessity of export of engineering goods from India, and have agreed that we may export lamps to various countries in South Asia, Middle East and East Africa."

KAMALNAYAN BAJAJ,
Radio Lamp Works Ltd.

Kerala Labour Policy

"Besides, the labour policy of Government (Kerala) appears to be that all disputes between labour and management should be settled by direct negotiation and there is a strong disinclination to employ the statutory methods laid down, that is, adjudication by a tribunal. Up to a point, I believe this policy to be sound. It is always better if disputes can be settled quickly by negotiation rather than by resort to long-drawn-out arguments before a tribunal. However, the degree of success likely to be achieved by the direct negotiation method is governed by the attitude of both parties to a dispute. Both must be reasonably flexible and accommodating, if any worthwhile result is going to be achieved. Above all, this method is doomed to failure if one of the parties not only puts its demands unreasonably high, but backs them with a threat to resort to force. Bargaining from a position of strength in this way makes the process of direct negotiation a farce, and it is for the purpose of defeating unfair tactics of this nature that the process of adjudication is available and should be resorted to, because of course once a dispute has been referred to adjudication, both strike by the employees and lockout by the employer become illegal. This is particularly important in a continuous process factory such as this one, in which a lightning strike during the cane crushing season can inflict severe loss, both on the company and on the cane growers. All this should be sufficiently obvious, but I regret to have to inform shareholders that the labour and clerical staff of this factory adopted these very tactics and Government did not see fit to take any action that would have had the effect of making the threatened strike illegal."

Travancore Sugars and Chemicals Ltd.

COMPANY MEETINGS AND DIVIDENDS

PANCHURA ESTATES LTD. Annual General Meeting, Coonoor, 25th November 1957. Dividend: 20 per cent. Transfer books remain closed from 19th to 25th November 1957, both days inclusive.

SOOM TEA CO., LTD. Annual General Meeting, Calcutta, 28th November 1957. Dividend: Rs. 4.00 (includes interim dividend of Re. 1.50 per share). Transfer books remain closed from 22nd to 28th November 1957, both days inclusive.

NILPUR TEA CO., LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Rs. 30.00 (30 per cent.) per share. Transfer books will remain closed from 25th to 29th November 1957, both days inclusive.

TUKVAR CO., LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: *Nil*. Transfer books will remain closed from 25th to 29th November 1957, both days inclusive.

DIMAKUSI TEA CO., LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Rs. 3.00 (includes interim dividend of Re. 1.00 per share). Transfer books remain closed from 20th to 29th November 1957, both days inclusive.

BOR PUKHRI TEA CO., LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Re. 1.50 (15 per cent.) per share. Transfer books remain closed from 20th to 29th November 1957, both days inclusive.

AMALGAMATED COALFIELDS LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Re. 1.25 per share. Transfer books remain closed from 22nd to 29th November 1957, both days inclusive.

GENERAL INVESTMENT AND TRUST CO., LTD. Annual General Meeting, Calcutta, 29th November 1957. Dividend: Rs. 7.50 (includes interim dividend of Re. 1.87) per share. Transfer books remain closed from 16th to 29th November 1957, both days inclusive.

METHONI TEA CO., LTD. Annual General Meeting, Calcutta, 30th November 1957. Dividend: Re. 1.00 per share final). Transfer books remain closed from 23rd to 30th November 1957, both days inclusive.

VELIMALAI RUBBER CO., LTD. Annual General Meeting, Kottayam (Kerala State), 30th November 1957. Dividend: Re. 0.62 (12½ per cent.) per share. Transfer books will remain closed from 28th to 30th November 1957, both days inclusive.

KOTAMULLAI TEA CO., LTD. Annual General Meeting, Calcutta, 30th November 1957. Dividend: *Nil*. Transfer books remain closed from 20th to 30th November 1957, both days inclusive.

HANTAPARA TEA CO., LTD. Annual General Meeting, Calcutta, 30th November 1957. Dividend: Rs. 7.50 per share. Transfer books remain closed from 20th to 30th November 1957, both days inclusive.

CENTRAL INDIA COAL-FIELDS LTD. Annual General Meeting, Calcutta, 2nd December 1957. Dividend: Re. 0.50 per share. Transfer books remain closed from 15th November to 2nd December 1957, both days inclusive.

DHELAKHAT TEA CO., LTD. Annual General Meeting, Calcutta, 4th December 1957. Transfer books remain closed from 21st November to 5th December 1957, both days inclusive.

WEST COAST PAPER MILLS LTD. Annual General Meeting, Bombay, 9th December 1957. Dividend: *Nil*. Transfer books will remain closed from 25th November to 9th December 1957, both days inclusive.

BELAPUR CO., LTD. Annual General Meeting, Bombay, 17th December 1957. Dividend: Rs. 18.00 (36 per cent.) per share, payable on and after 3rd January 1958. Transfer books remain closed from 18th November to 17th December 1957, both days inclusive.

AHMEDABAD ADVANCE MILLS LTD. Annual General Meeting, Bombay, 18th December 1957. Dividend: Rs. 5.00 (5 per cent.) per share payable on and after 19th December 1957. Transfer books remain closed from 18th November to 17th December 1957, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 24th December 1957. Final dividend of 10 per cent. per annum on preferred ordinary shares and Re. 1.25 per share (including bonus of Re 0.37 per share) on 'A' and 'B' ordinary shares, for the year ended 31st March 1957. Transfer books will remain closed from 12th to 24th December 1957, both days inclusive.

INDIA CEMENTS LTD. Dividend of 4 per cent. on the ordinary shares, for the half-year ended 30th September 1957.

DECCAN SUGAR AND ABKHARI CO., LTD. Final dividend of 12 per cent. on the ordinary shares (making a total of 14½ per cent.) on the increased capital) for the year ended 31st May 1957. Transfer books will remain closed from 10th to 23rd December 1957, both days inclusive.

COMPANY REGISTRATIONS

KAMALA UDYOGA PRIVATE LTD. (First Director: Mr. J. K. Somani.) Business: Manufacture of engineering goods, machinery, tools, etc. Private company. Authorised capital: Rs. 10,00,000. Address: Shrinivas House, Waudby Road, Bombay.

TELERAD PRIVATE LTD. (First Director: Mr. H. C. Khatiwala.) Business: Manufacture of radio receiver sets, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Block K-2, 1st Floor, Atlas Mill Compound, Reay Road, Bombay.

FORDHAM PRESSINGS (INDIA) PRIVATE LTD. (Managing Director: Mr. Kenneth N. Pedder.) Business: Manufacture of ferrous and non-ferrous flushing cisterns, sanitaryware, etc. Authorised capital: Rs. 4,50,000. Private company. Address: Jan Mansion, 2nd Floor, Sir P. M. Road, Fort, Bombay.

RESULTS OF AHMEDABAD ADVANCE MILLS DISAPPOINTING

CENTRAL INDIA COAL MAINTAINS DIVIDEND

Ahmedabad Advance Mills Ltd.

THE directors of the above Company (Managing Agents: Tata Industries Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th June 1957.

The profit for the year amounted to Rs. 4,066 (Rs. 13,11,721). Adding thereto the balance brought forward from the previous years' accounts of Rs. 17,089 (Rs. 5,408) and the amount transferred from general reserve of Rs. 2,50,000 (*nil*), the total amount available for disposal is Rs. 2,71,155 (Rs. 13,17,129). From this sum the directors have transferred to general reserve Rs. *nil* (Rs. 8,13,040) and to gratuity reserve Rs. 10,000 (Rs. 20,000) leaving a balance of Rs. 2,61,155 (Rs. 4,84,089). The directors recommend the following dividends for the year ended 30th June 1957, to be paid, if declared by the shareholders:—

On preference shares at Rs. 5 per share, free of income-tax Rs. 50,000 (Rs. 50,000) and on ordinary shares at Rs. 5 (Rs. 12) per share, without deduction of income-tax Rs. 2,00,000 (Rs. 4,17,000) leaving to be carried forward Rs. 11,155 (Rs. 17,089).

The directors regret that the result for the year is disappointing. The constant rise in the cost of production and the crippling effect on the cloth trade of the country brought about by the drastic increase in excise duty are the main factors that have contributed to this poor result. Upto August 1956 trading conditions were quite normal, with sustained demand for cloth at fairly remunerative prices. From September onwards, however, with the steep rise in excise duty, there came a precipitate fall, both in demand and prices. This resulted in substantial increase in stocks, entailing heavy interest and insurance charges. Simultaneously, severe credit restrictions were imposed by banks under Government directions, which aggravated the trade crisis. Further, Government restrictions on the holding of stocks by mills and wholesalers beyond a certain limit made conditions worse for the industry. Under such adverse circumstances, stocks had to be disposed of at sacrificial prices.

On account of inadequate profits it has not been possible to provide full depreciation for the year. For the same reason the managing agents have kindly agreed to forgo their minimum commission of Rs. 50,000 to which they were entitled.

During the year, untimely rains and cold spells affected cotton crop all over the country, resulting in low yields and also quality damage. Mill consumption on the other hand increased remarkably, leading to a boomlet in cotton prices, all the leading varieties touching the ceiling.

The Futures market was kept in control by the directives of the Forward Markets Commission which intervened whenever futures prices seemed to run away. On 23rd June 1957, instead of the two futures contracts, viz., Fine MG Jarilla 25/32" and Fine MG Vijay 27/32", one omnibus Indian Cotton Contract, as in the past, was reintroduced. The basis of the new contract is 25/32" Moglai Jarilla fair average quality.

A substantial part of the mills' reorganisation and modernisation plan was carried out during the year under report. A sum of about Rs. 25 lakhs was expended during the year on new machinery and other equipments.

To meet a part of the heavy capital expenditure incurred on the mills' reorganisation and renovation programme the directors issued, during the year under report, debentures of the total value of Rs. 30 lakhs. These debentures carry interest at 5½ per cent. (taxable) and are to be redeemed on 31st December 1971 or, at the option of the Company, at any time after 31st December 1966, on giving six months' prior notice.

The Industrial Court recently made an Award, directing payment of gratuities to mill workers in Ahmedabad. The scale of gratuity is one month's basic wages for each year of service for the period prior to the coming into force of the Employees' Provident Fund Act, 1952, and half a month's basic wages for each year of service thereafter, subject to a maximum of 15 months' basic wages. The Award has been made effective from 16th September 1957.

On the extension of the Employees' State Insurance Act to Bombay, the type of insurance underwriting carried on by the Millowners' Mutual Insurance Association Ltd. was taken over by the Employees' State Insurance Corporation. The Millowners' Mutual thereupon ceased to do insurance business. It had, at the close of business, Rs. 18,85,000 to the credit of its reserve fund account, and it proposed to its members that the sum be donated to the Bombay Millowners' Association to be utilised by it for acquiring an immovable property in Bombay for the purpose of that body. The Company's share in the reserve fund amount worked out to about Rs. 26,975 and the directors considered it desirable to agree to the proposal of the Millowners' Mutual.

An Administrative Staff College has recently been established in India on the pattern of the College at Henley-on-Thames, England, for higher executive training in industrial administration and business management of staff drawn from private enterprise and Government organisations. The directors have considered it desirable that the Company should become an ordinary member of the institution, paying an annual contribution of Rs. 2,000 for five years.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	60,00,000	Block ...	1,04,60,680
Debentures ...	30,00,000	Work-in-progress ...	2,06,311
Reserves ...	21,31,987	Stock-in-trade ...	95,86,739
Provision for taxation ...	1,36,558	Stores, spares and tools, etc. ...	11,91,228
Liabilities ...	1,31,80,228	Debts, deposits and advances ...	17,59,381
Profit and loss account ...	11,155	Investments ...	8,20,388
		Cash ...	4,35,201
	Rs. 2,44,59,928		Rs. 2,44,59,928

Central India Coalfields Ltd.

The directors of the above Company (Managing Agents: Hindusthan Investment Corporation Ltd. Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The profit for the year, after providing Rs. 5,00,014 (Rs. 3,97,355) for depreciation, amounts to Rs. 2,48,324 (Rs. 2,45,758) which, together with the balance brought forward from last year's account of Rs. 9,927 (Rs. 14,019) makes a total of Rs. 2,58,251 (Rs. 2,59,777). The directors recommend payment of a dividend at the rate of Re. 0.50 (Re. 0.50) per share, absorbing Rs. 2,49,850 (Rs. 2,49,850) leaving a balance to be carried forward to the next year's account of Rs. 8,401 (Rs. 9,927).

Raisings:—Workings at both the Collieries of the Company were satisfactory. Total raisings for the year were 1,56,342 (1,62,721) tons and despatches were 1,55,456 (1,54,307) tons. The supply of empty wagons during the year showed an improvement, and, as such, the despatches were much better. 1,02,880 (67,314) tons of coal were raised at Orient Colliery where the Company acted as raising contractor to Messrs. Orient Paper Mills Ltd.

The directors are glad to report that during the current year this Colliery has been acquired by the Company from Messrs. Orient Paper Mills Ltd. The Colliery's working appears to be fairly satisfactory and the directors feel that it is a profitable acquisition. The Company has launched a programme for substantial increase of raisings in order to reach the targets, as licensed by the Government under the Second Five-year Plan for the Company's Collieries. The directors have every hope that this would be achieved within the Second Plan period.

As mentioned in the directors' last report, the Coal Industry during the year has seen considerable changes in its cost structure. The Award of the All India Industrial Tribunal (Colliery Disputes) has already been applicable from May 1956. On an appeal by the labour, the Labour Appellate Tribunal gave a further increase in the wages with retrospective effect from May 1956. As such, the Company will now be required to pay nearly 13 months of arrear wages as calculated according to the Appellate Tribunal Award. A price increase of Re. 1-8 per ton was announced by the Government with effect from July 1957 in order to help cover the increase in the cost of production as brought about by the Labour Appellate Tribunal Award. However, the current coal prices are under scrutiny of a special committee appointed by the Government of India and the committee is expected to recommend suitable changes in the same, if so required. The Industry is awaiting its recommendations with keen interest.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,97,750	Block ...	33,59,000
Provision for wealth tax	22,500	Stock of coal	1,15,705
Liabilities ...	10,63,157	Stores and spare parts	6,12,779
Profit and loss account	8,401	Other assets	24,635
		Debts, deposits and advances ...	14,43,308
		Investments ...	1,67,316
		Cash ...	3,69,065
	Rs. 60,91,808		Rs. 60,91,808

Amalgamated Coalfields Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The Company's profit for the year, after the inclusion of Rs. 28,610 (Rs. 38,026) brought forward Rs. 1,30,175 (Rs. 29,786) provision for liability written back and Rs. 25,000 (*nil*) benevolent fund transferred is Rs. 10,52,639 (Rs. 10,43,595). And after making provision for taxation of Rs. 1,28,300 (Rs. 4,16,235) and Labour Appellate Tribunal Award of Rs. 6,75,859 (*nil*), there remains Rs. 2,48,480 (Rs. 6,27,360) to which the directors have added by transfer from general reserve Rs. 4,50,000 (*nil*), making a total of Rs. 6,98,480 (Rs. 6,27,360). Out of this the directors have placed to contingencies reserve Rs. 3,50,000 (*nil*) and recommend the payment of a dividend at the rate of 12½ (12½) per cent. per annum without any deduction for income-tax paid by the Company, absorbing Rs. 3,18,750 (Rs. 3,18,750) leaving to be carried forward Rs. 29,730 (Rs. 28,610 after placing Rs. 2,50,000 to machinery replacement and development reserve and Rs. 30,000 to dividend equalisation fund).

Output and despatches of steam and other grades of coal for the last three years are as follows:—

Year ended	*Raisings* Tons	*Despatches* Tons
31st March, 1957	8,53,379	8,55,642
31st March, 1956	8,34,805	8,61,759
31st March 1955	7,99,630	7,68,505

Capital expenditure during the year is Rs. 7,70,135 against Rs. 6,66,358 in the previous year. Large expenses are being incurred in developing new collieries to replace the old ones nearing exhaustion, to enable this Company to maintain production.

In this account, provision has been made for Rs. 6,75,859 being the estimated cost of the Labour Appellate Tribunal Award for the period from 26th May, 1956 to 31st March, 1957. The Award was made retrospective from 26th May, 1956 whereas the selling prices were increased by Re. 1.50 per ton as from 8th July, 1957. In view of the above, it has been necessary to transfer Rs. 4,50,000 from general reserve to the credit of profit and loss account to maintan the dividend at 12½ per cent. per annum, after providing Rs. 3,50,000 for contingencies reserve and to leave a carry forward of Rs. 29,730. If the selling prices of coal of this Company are not materially altered, it will be possible to replenish the general reserve in the near future. A new committee has been set up by the Government of India to examine the current coal prices and to recommend changes necessary, if any.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Dauracherra Tea Co., Ltd.

The directors of the above Company (Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 3,45,294 (Rs. 3,20,277). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 1,90,280 (Rs. 6,60,922), of which the directors have transferred Rs. 50,000 (Rs. 4,15,000) to revenue reserve.

Dividend.—It is proposed to pay a dividend of 15 per cent., leaving Rs. 50,280 (Rs. 35,922) to be carried forward. The dividend at 20 per cent. for season 1955 was paid on 22nd January, 1957.

Tea crop was 4,922 maunds as compared with 4,417 maunds in 1955. The average selling price realised was Rs. 2-4-3 per lb. as against Rs. 2-4-2 per lb. in the previous year.

Estimates for 1957 provide for a crop of 4,300 maunds at an outlay of Rs. 5,64,280, including inland freight and sale charges. Planted area is now 584.19 acres.

The State Bank of Pakistan have sanctioned the remittance of the entire Pakistani trading profits of the Company for season 1954 to this country and the amount has been received.

Accounts in brief are as under:—

		Cash ...	4,18,723
	Rs. 24,02,842		Rs. 24,02,842

Gungaram Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 3,63,146 (Rs. 3,23,079). On transfer of this sum to profit and loss account and after sundry adjustment, including a transfer of Rs. 37,000 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 3,92,260 (Rs. 2,96,491) of which the directors have transferred Rs. 1,54,000 (Rs. 50,000) to revenue reserve. It is proposed to pay a dividend of 10 (7½) per cent. and to carry forward Rs. 1,03,860 (Rs. 95,691).

Tea crop.—The outturns and average selling prices realised compare with those of the previous year as under:—The crop from Gungaram estate was 13,130 (12,900) maunds and Ord estate 3,961 (3,098) maunds. The average selling prices, per pound of tea for Gungaram was Re. 1-13-11 (Re. 1-11-3) and Ord Rs. 2-1-2 (Re. 1-14-10).

Estimates for 1957 provide for a total crop of 16,700 maunds at an outlay of Rs. 21,44,630, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,44,000	Block ...	16,53,988

Chamong Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit on revenue account of Rs. 1,10,108 (loss of Rs. 21,519).

After providing for depreciation amounting to Rs. 8,982 (Rs. 5,366), bonus for 1956 to labourers of Rs. 14,500 (*nil*) and bonus for 1956 to clerical staff of Rs. 4,000 (*nil*). After transferring the above profit, making various adjustments, setting aside Rs. 15,000 (*nil*), for taxation the balance available on profit and loss account amounts to Rs. 54,350 (debit of Rs. 41,071) from which it is proposed to pay a dividend of 7½ (*nil*) per cent. for 1956 absorbing Rs. 20,993 (*nil*) and carry forward Rs. 33,357 (debit of Rs. 41,071).

The quantity of tea sold in 1956 was 1,76,418 pounds as against 1,44,772 pounds in 1955. The average sale price obtained per pound of tea was Rs. 3-9-3 (Rs. 2-14-8½).

The estimate for 1957 provides for a crop of 1,60,000 lbs. of tea at a total cost of Rs. 5,43,900, the average cost per pound being Rs. 3.40 per pound.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,79,900	Block ...	3,11,700

Teliapara Tea Co., Ltd.

The directors of the above Company (Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 8,28,828 (Rs. 7,11,533). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 2,72,429 (Rs. 13,81,706), of which the directors have transferred Rs. 75,000 (Rs. 8,00,000) to revenue reserve. The provision for taxation includes an amount claimed by the Government of Pakistan in respect of tax on the exchange difference arising out of the devaluation of Indian currency in 1949. It also includes tax claimed by the Government of India on an exchange profit said to arise in India during 1955. These two claims are both being disputed by the Company but the actual amount of relief which may eventually be available cannot be estimated at this stage, as the entire basis of assessment is still under review in Pakistan.

Dividend.—It is proposed to pay a dividend of 15 (25) per cent. and to carry forward Rs. 62,429 (Rs. 86,706). The dividend of 25 per cent. for season 1955 was paid on 24th January, 1957.

Crop.—The outturns and average selling prices realised compare with those of the previous year as under: Crop from Teliapara estate was 8,211 (6,196) maunds and from Satchurie estate was 5,515 (4,820) maunds. The average selling prices per pound of tea was as follows: Teliapara Rs. 2-1-8 (Rs. 2-4-1) and for Satchurie Rs. 2-0-4 (Rs. 2-3-2).

Estimates for 1957 provide for a total crop of 10,900 maunds at an outlay of Rs. 13,91,470, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	12,78,478
Reserves ...	21,23,827	Stock-in-trade	10,67,994

Liabilities ...	6,13,042	Debts, deposits and advances ...	7,25,224
Profit and loss account ...	62,429	Investments	5,28,489
		Cash ...	11,30,629
	Rs. 49,01,686		Rs. 49,01,686

Jiyajeerao Cotton Mills, Ltd.

The directors of the above Company (Managing Agents: Birla Gwalior Private Ltd., Birlanagar, Gwalior) submitted the audited accounts of the Company for the year ended 31st March 1957.

During the year under review, the Company declared distribution of Rs. 11,12,767 as additional dividend for the year ended 31st March 1956, according to an order of the Board of Referees, under Section 23A(4) of the Indian Income Tax Act. In order to meet this liability the Company transferred a sum of Rs. 10,00,000 to the profit and loss account out of the taxation provisions made during that year. Thus the position of profit and loss account after making the above adjustments stood as under:—

Amount brought forward from last year's account Rs. 2,34,000 and amount transferred out of the taxation provisions made during the year ended 31st March 1956 Rs. 10,00,000 making a total of Rs. 12,34,000. The amount distributed in additional dividend at 4 nP per ordinary share of Rs. 10 each on 46,36,530 ordinary shares free of income-tax by resolution of the Shareholders passed in their meeting held on 26th March 1957 absorbed Rs. 11,12,767 leaving a balance of Rs. 1,21,233. After providing Rs. 21,20,329 (Rs. 19,01,409) for depreciation and Rs. 30,00,000 (Rs. 47,25,000 for taxation, for the year, there remains an available balance of Rs. 23,00,270 (Rs. 18,22,271) to the credit of profit and loss account. On adding to this amount, the credit balance of Rs. 1,21,233 (Rs. 1,43,031) brought forward from last year's account, as explained above, the amount available for disposal is Rs. 24,21,503 (Rs. 20,03,749 including Rs. 38,447 being unspent liabilities written back). The directors have made the following appropriations out of this sum:—

Towards payment of dividend on 1,00,000 5½ per cent. tax-free cumulative redeemable preference shares of Rs. 100 each, *vide* resolution of the Board dated the 18th January 1957 Rs. 5,50,000 (Rs. 3,20,833), towards payment of dividend on 46,36,530 ordinary shares of Rs. 10 each at 35 (31) nP per share free of income-tax Rs. 16,22,786 (Rs. 14,48,916) and to carry forward to the next year Rs. 2,48,717 (Rs. 2,34,000).

In addition to the money being spent on the construction of the Soda Ash and Caustic Soda Factory at Porbandar (Saurashtra), the Company incurred further capital expenditure of about Rs. 10,85,000 in expansion, renewal and modernisation of the Company's plant, machinery and buildings at Gawalior.

The construction of the buildings for the Soda Ash and Caustic Soda Factory at Porbandar is progressing satisfactorily. Delivery of Machinery has commenced from foreign countries. It is expected that the complete plant will be delivered within the next few months. Manufacture of salt was already undertaken during the year under review. The manufacture of soda ash and caustic soda is expected to begin from the middle of next year.

During the year under review the Company got permission from the Controller of Capital Issues Government of India, to issue further 1,00,000 cumulative preference shares of Rs. 100 each.

Bajrang Trading Co., Ltd.—The Jiyajeerao Cotton Mills Ltd., held the entire paid up Capital of Rs. 50,000 in Bajrang Trading Co., Ltd., as on 30th June 1956. The Bajrang Trading Co., Ltd., made a profit of Rs. 182 for the year ended 30th June 1956 and the total loss incurred by that Company from the time it became a subsidiary of the Jiyajeerao Cotton Mills Ltd., upto 30th June 1956 amounted to Rs. 22,815. The total amount of loss has been carried forward, in the balance sheet of that Company and no adjustment has been made in the books of this Company in respect of the said loss of the subsidiary Company. After the close of this Company's accounts on 31st March 1957, this subsidiary Company has been amalgamated in a Company known as Bharat Trading Co., Ltd., Fort Road, Gwalior, under the orders of the Hon'ble High Court of Judicature, Madhya Pradesh. All assets and liabilities together with up-to-date losses in this subsidiary Company have been taken over by that Company and the Jiyajeerao Cotton Mills Ltd., were given 5,000 ordinary shares worth Rs. 50,000 in the transferee Company, *viz.* The Bharat Trading Co., Ltd., Gwalior, in lieu of their holdings in this subsidiary Company.

Investments Ltd.—The Jiyajeerao Cotton Mills Ltd., held 707 and 1,95,000 ordinary and preference shares respectively, in the Investments Ltd., out of the total issue of 50,000 ordinary and 1,95,000 preference shares in that Company, as on 31st March 1957. The net profit in Investments Ltd., for its financial year ended 31st March 1957, amounts to Rs. 2,69,605 with which the members of the Jiyajeerao Cotton Mills Ltd., are concerned and which is not dealt with in the Company's accounts. The net aggregate profit in Investments Ltd., upto the year ended 31st March 1957 amounts to Rs. 2,99,278 with which the members of the Jiyajeerao Cotton Mills Ltd., are concerned and which likewise is not dealt with in the Company's accounts. It may be brought to the notice of the shareholders that since most of the capital of this subsidiary Company is being invested in Government securities and shares of joint stock companies, the yield therefrom is hardly sufficient to pay even the fixed dividend on its preference shares; and the ordinary shareholders have had to go without any return, it was thought desirable to take over all the assets and liabilities of this subsidiary Company and amalgamate them into those of the parent Company *viz.* Jiyajeerao Cotton Mills Ltd., and both the ordinary and preference shareholders should get back the paid up value of the shares, at par, from Jiyajeerao Cotton Mills Ltd., the transferee Company. In accordance with such scheme of amalgamation an application in this respect is to be made to the Hon'ble High Court of the Judicature, Madhya Pradesh, by the Investments Ltd., Gwalior.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,63,65,300	Block ...	1,16,05,264
Reserves ...	3,24,05,304	Work-in-progress	23,14,059

Liabilities ...	1,32,26,247	Stores, spare parts, etc.	34,38,171
Profit and loss account ...	2,48,717	Debts, deposits and advances	1,21,05,901
		Investments	3,88,50,294
		Cash ...	2,02,90,510
	Rs. 10,43,94,792		Rs. 10,43,94,792

Vellore Electric Corporation, Ltd.

The directors of the above Company (Managing Agents: Messrs. Chandrie and Co., Private Ltd., Madras) submit the audited accounts of the Company for the year ended 31st March 1957.

Progress.—The capital expenditure incurred on rural and other extensions and system improvements amounted to approximately Rs. 3,39,750. The Company's distribution systems were maintained in good order and consumers were given satisfactory service. At the close of the year there were 46.57 miles of high tension lines and 161.89 miles of low tension lines. 5 sub-stations were erected during the year and 742 additional consumers were connected up.

The following statistics will show the progress made during the year:—

		1955-56	1956-57
Total units purchased in KWhs	..	1,23,16,508	1,23,32,892
Total units sold in KWhs	..	1,06,03,388	1,07,82,055
Cost of units purchased	.. Rs.	3,67,441	4,37,162
Gross revenue ...	.. Rs.	9,79,084	10,91,677
Villages electrified	..	34	41
No. of consumers connected	..	9,050	„ 9,792
Maximum demand in KWs:—			
Vellore	.. .. ..	1,380	1,530
Ranipet	.. .. ..	1,150	1,150

Tariff Rates.—The Government of Madras have increased their rates of supply of energy to all licensees by 30 per cent. as and from 1st September 1956. This has necessitated our increasing the tariff rates on all our consumers except agricultural and local authority consumers. The present tariff may again undergo a slight variation with the benefit to the consumers when the tariff under new decimal coinage is introduced.

Future programme.—With the formation of the Madras State Electricity Board and with the dearth of allotment of funds for the various projects under the second Plan, it is hoped that this undertaking is not likely to be taken over by the Government within the next few years. The directors again approached the Madras Industrial Investment Corporation Ltd., for a further loan of Rs. 3 lakhs after getting the necessary sanction from the State Government. This loan has been sanctioned and we shall be taking certain major works shortly.

Electricity (Supply) Amending Act, 1957.—The Bill referred to in the director's last report has been passed by the Parliament without any appreciable variation. In the coming financial year the reasonable return to the shareholders will get reduced slightly. However, the directors expect to maintain the usual rate of dividend.

Impediments.—Restrictions on power has become an annual feature during the summer months. This year also there was cut in quota of power allotted to the Company between April and June 1956 and cut was removed in July 1956. Further this position seems to be inevitable during the coming summer also as the demand for power exceeds the actual generating capacity and the Madras State Electricity Board is taking steps in improving the generating capacity.

After providing for reserve for depreciation as per Supply Act Rs. 1,03,886 (Rs. 87,727), provision for Indian income-tax and super-tax Rs. 30,000 (Rs. 70,000) and contingencies reserve Rs. 6,888 (Rs. 6,043) the year's working has resulted in a net profit of Rs. 96,910 (Rs. 78,252). After adding the profit brought forward from previous year after payment of final dividend for 1955-56 of Rs. 1,45,068 (Rs. 79,131) and refund from Income-tax Department of Rs. 45,177 (Rs. 33,222) there is a total of Rs. 2,87,155 (Rs. 1,92,568 including adjustments). The profit made during the year viz., Rs. 96,910 falls short of the reasonable return as per the Electricity (Supply) Act, 1948 by about Rs. 15,125. Out of the balance of Rs. 2,87,155 (Rs. 1,92,568) the directors now recommend the payment of a dividend of 6 per cent. less income tax on preference shares and 10 (10) per cent. free of income-tax on ordinary shares for the year ended 31st March 1957 which will absorb Rs. 47,500 (Rs. 47,500) and leave a balance of Rs. 2,39,655 (Rs. 1,45,068).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,25,000	Block ...	19,92,175
Reserves ...	5,88,576	Stores, tools etc. ...	3,73,846

Profit and loss account ...	2,39,656	Cash ...	1,47,029
		Miscellaneous expenses and losses ...	7,443
	Rs. 27,93,946		Rs. 27,93,946

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE INDIAN CABLE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-eighth Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Friday, the 27th December 1957, at 11 o'clock in the forenoon, for the following purposes:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1957.
2. To declare Dividends.
3. To elect a Director.
4. To re-appoint the firm of Messrs. Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

As Special Business.

5. (*a*) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Branch offices of the Company at Bombay, Ahmedabad, Ambala, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad,

and to fix their remuneration.

(*b*) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch offices of the Company at Madras, Bangalore and Coimbatore,

and to fix their remuneration.

To consider and if thought fit pass the following resolutions with or without modification:—

As an Ordinary Resolution.

6. "That the accounts of the Branch office of the Company at Karachi, Pakistan, be not audited under the provisions of Section 228(1) of the Companies Act, 1956."

As an Ordinary Resolution.

7. (*a*) "That the Board be authorised to offer new Ordinary shares for subscription for cash at such price as may be determined by the Board to the persons on the Company's Register of Members on such date as may be fixed by the Board in the proportion of one new Ordinary share for every two shares, Ordinary and/or Preference, held by each such member on the said date (no fractional entitlement being given for the odd share in the case of any holding of an odd number of shares) with the right to renounce all or any of the shares so offered to him in favour of any other person or persons, whether members of the Company or not, and with the right to apply for additional shares not taken up by members to whom they were originally offered or their renouncees."

(*b*) "That such offer and the issue of the new Ordinary shares be made in such manner and on such terms, consistent with (*a*) above, as the Board may, in its absolute discretion, determine."

(*c*) "That the Board be authorised to dispose of any of the said new Ordinary shares not taken up in response to the offer in such manner and at such price as it thinks most beneficial to the Company."

(*d*) "That the Board be authorised, if it thinks fit, to arrange for the issue to be underwritten on such terms, consistent with the provisions of the Company's Articles of Association in that behalf, as it may determine."

The Share Transfer Books of the Company will be closed from the 14th December 1957 to the 27th December 1957, both days inclusive.

Dividends, if any, declared at this meeting will be payable to Shareholders registered on the Company's Books on the 27th December 1957, or their mandatees.

By Order of the Board,
B. J. WOODLEY,
Chairman.

9, HARE STREET,
CALCUTTA, *5th November* 1957.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE INDIAN CABLE COMPANY LIMITED

THE DIRECTORS HAVE DECIDED TO RECOMMEND at the forthcoming Annual General Meeting of the Shareholders to be held on the 27th December 1957, Dividends for the year to 31st March 1957, as follows:—

(*a*) Dividend on Cumulative Participating Preference Shares at 12½ per cent. free of Income-tax.

(*b*) Cash Bonus on Cumulative Participating Preference Shares at 2½ per cent. free of Income-tax.

(*c*) Dividend on Ordinary Shares at 12½ per cent. free of Income-tax.

(*d*) Cash Bonus on Ordinary Shares at 2½ per cent. free of Income-tax.

By Order of the Board,
B. J. WOODLEY,
Chairman.

CALCUTTA, *5th November* 1957.

BENARES ELECTRIC LIGHT AND POWER COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Fifty-eighth Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 16th December 1957, at 11-0 a.m., for the following purposes:—

1. To receive and adopt the audited Accounts for the fifteen months ended 31st March 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Sir Josna Ghosal, who has attained the age of 86 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

(*a*) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December 1956, and 30th June 1957.

(*b*) That the Articles of Association of the Company be altered in manner following:—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors."

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings."

(ii) Article 87 shall be deleted and the following new Article substituted therefor:

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special."

(iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor:

(iv) Article 176 shall be deleted and the following new Article substituted therefor:

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company."

(v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:

(vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 10th December 1957, to the 16th December 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA.
Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA-1, *18th November* 1957.

A ship engine working on nuclear fuel has been manufactured for the atomic ice-breaker *Lenin*, which is being built at a shipyard in Leningrad. All steam-turbine units which constitute the main power plant of the ship have shown high qualities during tests. The new turbines have been designed to work on steam-generated atomic reactor. They will drive generators supplying energy to the electric motors rotating the ship screws.

The first Soviet-built atomic ship, it is claimed, will be the most powerful ice-breaker in the world. The total capacity of its power plant will be 44,000 h.p. The *Glacier*, the latest American-built ice-breaker, with a 22,000-h.p. engine, is said to be the biggest ice-breaker now in service. The ice-breaker, *Lenin*, will have a displacement of 16,000 tons with 2.75 h.p. per ton of water displacement. Thus, its power to displacement ratio will be the biggest ever in modern ice-breakers. This atomic ice-breaker, it is stated, will be able to spend a year on the high seas or in Arctic-pack ice without re-fuelling.

GILT-EDGED STEADY

(From Our Own Correspondent)

BOMBAY, *20th November*

The comfortable conditions in the short-term money market noted in the last few weeks continued during the week under review also, thanks to the good supply of funds with banks. The demand for credit was also on the wane, so that banks were able to reduce their borrowings from the Reserve Bank to some extent. There was, however, no change in interest rates, which held their own levels. Inter-bank call money was quoted at 3 per cent. and house money at call up to 4½ per cent. Short-term deposits were offered 4¼ per cent. for one to two months and 4¼ to 4½ per cent. for three to six months.

Notes in circulation have shrunk by Rs. 3.94 crores during the week ended 15th November 1957, according to the latest Reserve Bank of India statement. This is in contrast to the sharp rise of Rs. 20.54 crores noted in the previous week. Notes held in the Banking Department have gone up by Rs. 4.51 crores. A fall of Rs. 9.94 crores is disclosed in foreign securities and a corresponding increase in rupee securities. The decline in foreign securities has been offset to some extent by the rise of Rs. 4.95 crores in balances held abroad. Central Government's deposits have fallen by Rs. 3.22 crores, while those of the other Governments and banks have gone up by Rs. 2.03 crores and Rs. 7.34 crores, respectively. Loans and advances other than to Governments have declined by Rs. 2.51 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.35 crores. Investments have risen by Rs. 10.95 crores.

The Scheduled banks' statement for the week ended 8th November 1957 shows a decline of Rs. 6.74 crores in demand deposits and an increase of Rs. 5.49 crores in time deposits. Borrowings from the Reserve Bank stand reduced by Rs. 1.61 crores. Advances show an increase of Rs. 2.73 crores, but bills purchased and discounted are lower by Rs. 5.12 crores. Investments are up by Rs. 3.49 crores, while cash balances have shrunk by Rs. 10.91 crores.

The Gilt-edged market remained steady, with some institutional support and good enquiries for short and short-medium dated loans. The 4 per cent. 1967 and 1968 State loans were also in request. 3 per cent. 1986 Conversion Loan was stagnant at the Reserve Bank's support level of Rs. 71.00. 3 per cent. 1970-75 had sellers at Rs. 86.05. 3 per cent. 1966-68 was featureless at Rs. 91.10. 3 per cent. 1964 was in demand at Rs. 93.65, which was, however, 5 nP lower than a week ago. 3 per cent. 1963-65 was in request at Rs. 93.35 and 1959-61 gained 5 nP to Rs. 98.70. 3½ per cent. 1961 shed 5 nP to Rs. 99.60, while 3½ per cent. 1964 hardened by 5 nP to Rs. 97.60. 3½ per cent. 1965 improved by 10 nP to Rs. 97.40, while 3½ per cent. 1967 was maintained at Rs. 97.60 and 3¾ per cent. 1967 at Rs. 99.50. 4 per cent. 1972 was on offer at Rs. 100. Among State loans, 4¼ per cent. 1969 Bombay improved by 5 nP to Rs. 99.70. 4 per cent. Madras 1968 gained 5 nP to Rs. 96.55 and Andhra 1968 10 nP to Rs. 96. U.P. 1968 was marked up by 5 nP to Rs. 96.20. 4¼ per cent. Mysore 1969 gathered 5 nP to Rs. 98.75.

There was a further strengthening of the rupee in terms of the dollar during the week under review, in sympathy with a similar trend in sterling abroad. Banks' selling rate of ready dollars declined further from Rs. 477.75 to Rs. 477 per $100 and their buying rate from Rs. 474.25 to Rs. 473.75 per $100. In New York, spot sterling gained ground from $2.80½-2.80¾ to $2.80¾-2.80⅞ three months' forward from $2.77⅞-2.78 to $2.78¼-2.78⅜ and transferable sterling from 278.40-278.50 cents to 278.65-278.75 cents.

FOODGRAINS MOVE UP

(From Our Own Correspondent)

HAPUR, *18th November*

Foodgrain prices continued to rule steady during the past week. The Government claims that the various measures adopted by the Government since the middle of July has proved fairly effective in controlling grain prices. Steps taken include the application of the amended Essential Commodities Act to the States of Punjab, Rajasthan and western districts of U.P. in respect of gram and also to U.P. and Punjab in respect of wheat from the 2nd inst. The other measures which have helped indirectly in bringing down foodgrain prices are restrictions imposed on exports of rice and paddy and their products from Punjab, delegation of powers to State Governments to make orders for licensing or regulating the storage, distribution, etc., of foodgrains, and introduction of a licensing system for roller flour mills in respect of wheat and its products.

Wheat prices at Hapur improved slightly during the week to be quoted at Rs. 16.12 per maund for average *dara* quality and up to Rs. 17.25 for farm produce. Daily arrivals into the market went up to an average of 200 to 250 maunds and the stockists feared that the Government might not compel them to sell wheat stocks at the average price for three months. Local wheat stock was put at 28 *khaties*, the corresponding figure last year being 66 *khaties*. A heavy quantity of imported wheat is to be brought here for reserves, but want of storage facilities is being felt.

Rice recorded slight gains during the week, despite increased arrivals of new crop, following heavy loss reports to paddy crops in various parts of Northern India. Damage to paddy crop is still being assessed, but roughly the loss is placed at 50 per cent. in Bihar and between 25 and 50 per cent. in the different parts of Madhya Pradesh. Orissa's loss is estimated at 55 to 65 per cent. of the normal production and the shortfall in production in West Bengal is about 800,000 tons. The U.P. Government has estimated the damage to late paddy crop in east U.P. at about 60 per cent. The prevailing prices of rice here are: *Basmati* Rs. 27 to Rs. 29.25; *mainpuri* Rs. 24.25; coarse quality Rs. 19 per maund.

Gram ruled steady during the week, as local stocks with the trade were small. Present stocks here at 50 *khaties* are mostly State Government-owned to be sent to east U.P. The corresponding figure last year was 105 *khaties* with the trade. Maize and *bajra* continued to be in good demand for seasonal consumption and prices recorded a slight improvement during the week. Barley and *bejhar*, however, ruled quiet due to poor demand. *Guwar* and *jowar* also ruled steady. The week-end prices (in rupees per maund) were: Gram 11.62 to 12; maize 13.50; *bajra* 13.62; barley 10.50; *bejhar* 10; *guwar* 13 and *jowar* 9 to 10.50.

Peas and *arhar* eased fractionally during the week as ready demand was slack. Local stock position was better than that in the previous year. *Urd* and *moong*, however, were mostly unchanged and the week-end prices were: Peas *dara* Rs. 10.81; farm Rs. 11 to Rs. 11.37; peas *dal* Rs. 12.56; *bilti* Rs. 32.87 per bag; *arhar* Rs. 10.75; *arhar dal* Rs. 14.62; *bilti* Rs. 38 per bag; *urd* Rs. 17.50 to Rs. 19.50; *moong* Rs. 17 to Rs. 18 and *massor* Rs. 15 per maund.

Pulses futures eased slightly in line with ready prices. The latest quotations were: Peas *mangsir* Rs. 10.80; *maha* Rs. 11.03; *jeth* Rs. 10.99; *arhar mangsir* Rs. 10.80; *maha* Rs. 11.07; *jeth* Rs. 11.55; *bajra poh* Rs. 13.02; maize *poh* Rs. 12.53; *urd maha* Rs. 17; *moong maha* Rs. 15.06.

SETBACK IN BULLION

(From Our Own Correspondent)

BOMBAY, *20th November*

A quiet tone prevailed in the bullion market during the week and prices of both silver and gold suffered a slight setback, in distinct contrast to the bullish trend displayed in the previous week. This reversal of the trend was due partly to increased arrivals of Tibetan coins, contrary to expectations that the inflow from this source might slow down, and partly to a fall in offtake in the ready section.

In gold, the seasonal offtake was not on a scale anticipated by the market. Further, arrivals during the last two days were on a fairly large scale. The slackening of the offtake in the ready section in gold is reflected in the conversion of the premium of As. 4 which ready gold commanded over the current settlement into a discount of an anna today.

Forward silver (December settlement) receded from Rs. 184-9 to Rs. 183-2 before closing at Rs. 183-4. The January settlement was marked down from Rs. 185-3 to 184-2.

Ready silver dipped from Rs. 183-15 to Rs. 182-12. The floating stocks of silver are estimated at 700 bars. The daily average arrivals were 50 bars, while the offtake was of the order of only 15 bars.

Gold for forward delivery (December settlement) reacted from Rs. 109 to Rs. 108-1, but closed a shade better at Rs. 108-3. The January settlement, business in which commenced on Monday this week at Rs. 109-1, came down to Rs. 108-6 at the close today.

Ready gold dipped from Rs. 109-4 to Rs. 108-2. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was lower at 2,000 tolas.

In New York, silver was unchanged at 90⅜c, while the London prices showed a steady recession. Spot silver in London fell from 78½d. to 78d. and forward from 78½d. to 77⅞d., the lowest levels for the year so far. Gold also was marked down from 249s. 8½d. to 249s. 5½d., following an improvement in the value of sterling *vis-a-vis* the U.S. dollar.

The following comparative table shows at a glance the trend of the market during the week under review:

	20-11-57	Highest	Lowest	13-11-57
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

LINSEED REACTS

(Messrs. A. Bradley and Co.)

CALCUTTA, *18th November*

There has been a slight reaction in the linseed market during the week and prices have lost most of the ground gained last week. The main reason has been a notable improvement in arrivals from centres, combined with evidence of keener interest from sellers. The crushers who had been active at the beginning making fair-sized purchases, became rather reserved towards the close, owing to the stagnant conditions of the oil market. With no improvement in overseas advices and poor local demand, oil prices have declined somewhat.

The latest available quotation for November-December is Rs. 23-4 per maund.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *20th November*

The easy trend noted in the cotton futures market in the past few weeks, following heavy arrivals of crop in terminal markets, abated during the week under review. In fact, the market put on a distinctly cheerful appearance. There were persistent rumours of a substantial reduction in sales tax on cotton piecegoods. This factor, together with the reappearance of cloudy weather in certain leading cotton tracts like Berar, induced the bulls to push up prices. The upswing was aided further by reports of smaller arrivals in terminal markets. The revival of mill demand in the spot section, with the resultant improvement in prices, expectations of an export quota and reports of deterioration in the quality of new crop arrivals in Punjab, too, imparted strength to the market. Mill and trade buying was on a fairly large scale, and cotton futures registered handsome gains.

I.C.C. Moglai Jarilla commenced the week at Rs. 690, as against the previous close of Rs. 689.50, and improved to Rs. 702 yesterday before finishing at Rs. 698. The contract opened today at Rs. 698.50, and moved up to Rs. 703.25 under persistent buying orders. After declining to Rs. 696, on speculative selling, the contract again recovered to Rs. 703.25. The net gain over the week was Rs. 13.75.

The following is the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	20-11-57	*High*	*Low*	13-11-57
I.C.C. Moglai Jarilla (March 1958) ...	703.25	703.25	687	689.50

The spot section was also active. Barring Bengals, prices of most other popular varieties registered an improvement. There was revival of mill demand. Mills which were financially sound enlarged their purchases of new crop Khandesh, Berar, Kalyan, etc. Enquiries were noted for most of the popular varieties. Southern mills were particularly interested in new crop Punjab and Jarilla.

In the export section, superfine Bengals evoked good demand, although no sizable volume of business was reported. Foreign buyers' interest in Bengal *Deshi* continues to be small and the shippers feel that, unless the export duty of Rs. 100 per bale is reduced, if not abolished, it would be difficult to find buyers for it.

In the foreign section, American Good Middling 1-5/32" elicited attention of operators. Following the cut in export duty on Sudanese cotton and reduction in the Gezira Board's reserve prices, Sudan cotton was in the limelight and sizable business was reported to have been put through in Sudan cotton, subject to the availability of import licence. The following are the latest available spot rates—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

New Crop: Bengal *Deshi* 670 (680); Berar Jarilla 765 (780); Khandesh 790 (810); Oomra *Deshi* 750 (750); Vijay 910 (900); Hubli Laxmi 895 (890); Jayadhar 780 (760). *Delivery Contracts*: Khandesh 790 (782); Berar 782 (772); Vijay 13/16" 896 (880); 320F 868 (863); 216F 882 (878); Bengal 636 (632); Mathia 665 (672).

Firm conditions prevailed in the Karachi cotton futures market during the week under review. The firmness was aided by encouraging New York advices and expectation of better demand from overseas customers, especially Japan and China. Consequently, prices recorded a rise. The rise would have been more marked but for larger arrivals of new crop in Punjab and slackness in domestic spinner demand. The spot section also ruled firm. The quotations for most varieties improved. Among *Deshi* styles, Sind *Deshi* met with good buying support. The following are the latest available rates—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 81-8; Punjab *Deshi* 77-6; 4F Punjab Roller 76-7; S.G. 80-7; L.S.S. Punjab Roller 77-15; N.T. Roller 85-2; S.G. 91-6; 289F Punjab Roller 88-2; S.G. 96-2.

The Alexandria cotton futures market depicted a firm trend during the first three sessions of the week but showed a sagging tendency in subsequent sessions which persisted till the close of the week. The earlier firmness was mainly due to support by bull operators in the expectation of a revival of demand from Germany following the conclusion of a barter deal between Egypt and Germany under which the latter would import E. 2.5 million pounds worth of Egyptian cotton against export of 30,000 tons of fertilisers to the former. Karnak November improved on active buying to 95.85 tallaris and Ashmouni December to 70.30 tallaris on the 16th inst. But the market reacted sharply on news that the Sudan had cut the export duty on cotton by 50 per cent. and that the Gezira Board had reduced its reserve prices further. As a result, a large part of the earlier gain was wiped out. Nevertheless, the closing rates were higher than those at the end of last week. The following are the latest available quotations—in tallaris per lb.—from Alexandria.

Karnak: November 88.50; January 85.50. *Ashmouni*: December 69.50; February 69.25.

While the near deliveries (December-January) of both the American and American type contracts in the Liverpool cotton futures market ruled easy due mainly to long liquidation, the distant positions firmed up on Commission House buying and trade support. The latter was mainly prompted by firmer advices from New York. The reduction in the reserve prices of the Sudan Gezira Board and the revision of export tax exerted a downward pressure on Sudan contracts, leading to a sharp

decline in value. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December-January 25.76; March-April 26.29; May-June 26.48; July-August 26.53. *American cotton mixed growth contract*: December-January 26.97; March-April 27.16; May-June 27.30; July-August 27.29. *Sudan*: November-December 32.70; January-February 33.50; May-June 33.55.

The New York cotton futures market continued to rule very firm under persistent trade buying of current crop months. A good part of the demand was attributed to covering operations against sales abroad. The tightness of the free market supplies of good quality cotton would also appear to have imparted strength to the market.

The U.S. Agriculture Department has announced the export sale of 27.366 bales of 1955 crop U.S. Government-owned upland cotton at an average price of 27.81 cents per lb. This was the first sale of surplus cotton which required the buyer to pay carrying or storage charges. The Agriculture Department has set these carrying charges at 25 points for the month of November. They would increase in each succeeding month. At the last sale on 31st October when the carrying charges were absorbed by the Department, 19,594 bales were sold at an average price of 27.32 cents per lb. The next offering of cotton would include, for the first time, about 920,000 bales of 1956 crop cotton which had been taken over by the Agriculture Department on 1st August 1957. The Department would eventually place on sale under the regular bidding programme about 3.7 million bales of 1956 crop cotton. Its total inventory was about five million bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	19-11-57	12-11-57	5-11-57
Spot	36.50	35.75	35.35
December	36.48	35.60	35.14
March	36.18	35.67	35.17
May	36.16	35.66	35.25

SUGAR QUIETLY STEADY

(From Our Own Correspondents)

BOMBAY, 20*th November*

Firm conditions prevailed in the sugar market during the major part of the week, but, towards the close, a quietly steady trend crept in following the release of the monthly quota of 170,000 tons. The earlier firmness was due to the unduly long delay in the release of the quota, which led to a rise of nearly a rupee per bag. This gain, however, disappeared after the quota was released late in the evening yesterday. The quantity of 170,000 tons released this week is the same as that released last month, though some traders were expecting that the quota would be larger than usual. The share of the Bombay-Deccan mills is, of course, slightly more, but it is so because the Food Ministry has sought to equalise the quota to these mills with that in North and South India. The mills in North India had been given special allotments for export purposes, while those in South India were granted *ad hoc* releases at the end of the last season. Most of the Deccan mills welcome the slight rise in their quota, as they have large stocks with them and as they have commenced their crushing for the new season which in turn will add to their stocks.

Following the release orders, medium grain sugar came in for some selling and declined from Rs. 100-103 to Rs. 100-102, including sales tax. Small grain was quiet at Rs. 99, as also large grain at Rs. 104-109.

Arrivals of sugar into the market during the week were slightly larger, being 7,000 bags, as against 5,700 bags in the previous week.

* * * *

HAPUR, 18*th November*

Sugar prices ruled steady during the week, due to better demand from consuming centres, mainly the Punjab. The trade is anxiously awaiting the Government of India's policy in regard to exports. The Sugar Mills' Association is reported to have suggested that exports may be made through a monopolistic body and that the Government may impose some levy on the entire production to meet the losses on account of exports at lower prices. Crushing for the new season have begun here in some of the factories.

Sugar prices in the Muzaffarnagar market recorded a steady trend due to good demand from all consuming centres, barring the South. Business in heavy quantity was recorded during the week and ex-mill delivery prices of different varieties advanced by 6 nP to 19 nP per maund. The delay in the release of new sugar quota also acted as a bullish factor. Rohana, Deobhand, Iqbalpur and Mansurpur sugar factories started crushing during the week and the rest will do so very shortly. The latest ex-mill delivery prices were: Meerut (D28) Rs. 32.56; Rampur (B29) Rs. 34.50; Mansurpur (B29) Rs. 34.12; Shamli (B28) Rs. 33.62; Daurala (B29) Rs. 33.37; Mawana (B29) Rs. 33.75; Amroha (D29) Rs. 32.96; Simbhauli (E29) Rs. 32.87.

Sugar prices at Kanpur registered modest gains during the week, thanks to tightness in supply position, as the previous quota sugar had been exhausted. Sugar factories in east U.P. are expected to start crushing by the end of the month, but it is not yet possible to forecast the length of the crushing season, since the extent of loss to cane crop by drought remains to be ascertained. The prevailing prices of some of the factories were as follows:—

A29: Hathwa Rs. 34; Maholi Rs. 33.50; Rohtas Rs. 35.50; B29: Hatwa Rs. 33.62; Maholi Rs. 33.31; Champaran Rs. 34.62; Partabpur Rs. 34.62; C29 Rohtas Rs. 34.75; Hargaon Rs. 32.50; Gola Rs. 32.81; D29: Amroha Rs. 31.87; Lakhimpur Rs. 32.12; Barbanki Rs. 32.62; Pilibhit Rs. 32.12; E29: Bijnore Rs. 31.75; Bareilly Rs. 31.87; Pilibhit Rs. 32.

New *gur* arrivals have mounted to an average of 6,000 to 7,000 maunds daily at Hapur, but, as demand is fairly good and loading facilities are easy, prices have been maintained at high levels. Baili quality is very much in demand from Gujerat side and this quality is drawing Rs. 2 per maund higher than the average quality. Old stock is now put at about 4,000 maunds. The prevailing prices are: *Gur* new Rs. 13 to Rs. 14; old *kotha* Rs. 11; *balti* quality Rs. 16 per maund. New *gur* arrivals will further increase.

Gur prices in the Muzaffarnagar declined during the week, as daily arrivals have mounted to about 8,000 maunds. *Chaku kotha* and *pansera* varieties lost about a rupee per maund. Demand, however, continues to be good from all consuming centres. *Shakker dara* is in good demand from Rajasthan. Arrivals of new *khandsari* have begun but in meagre quantity. The wagon supply position is satisfactory. The prevailing week-end prices are: *Chaku* Rs. 14.50 to Rs. 15.50; *ludu* Rs. 14.75 to Rs. 14.37; *khurpapar* Rs. 13.75 to Rs. 14; *shakker masala* Rs. 16 to Rs. 17; *khandsari* new Rs. 32.

Future *gur* prices ruled quietly both ways during the week. The latest quotations were near the opening level of the week, *fagun* delivery being quoted at Rs. 12.13.

YARNS FIRM

(From Our Own Correspondent)

BOMBAY, 20*th November*

The yarn market presented a firm trend during the week under review, with the exception of cotton yarns which ruled dull. Although there was no fresh encouraging development, operators were strongly inclined to feel that the prices of yarns would tend to move up in the coming weeks. In particular, rayon yarns met with persistent bull support induced by fears of growing scarcity in supplies, following the steep cut in imports during the six months' ending March 1958. It may be noted here that established importers have not been granted any licences for this period and the actual users also are given very much reduced quotas. Even reports that rayon yarns were being replaced by nylon yarns in several mills following increasing demand for fabrics made with the latter yarn failed to have any effect on trading in rayon yarns which recorded handsome gains. In sympathy, staple fibre yarns also registered an improvement. Cotton yarns, however, continued to remain dull, notwithstanding firmness of cotton prices and prospects of Burma buying Indian cotton yarn. For demand from consuming centres was considerably slack. It was reported that there were large stocks of yarn in Ludhiana and other places.

Snia rayon yarns (120 dull cones) December delivery elicited good attention of traders and advanced by Rs. 12 to Rs. 819. February delivery rallied Rs. 9 to Rs. 805. Among spot yarns, 120 Japan gained 2 nP to Rs. 4.25. 150 Italy put on 3 nP to Rs. 4.28. 120 Italy were fully maintained at Rs. 4.50. But 150 Japan lost 2 nP to Rs. 4.20. Among indigenous yarns, National Rayons 150 bright cones first grade spurted by 9 nP to Rs. 3.52. 120 bright cones first grade gathered 3 nP to Rs. 3.97.

Staple fibre yarns (40x2) December delivery met with good buying support which lifted up the quotation by Rs. 11 to Rs. 541. The February position forged ahead by Rs. 15 to Rs. 543. Spot (40x2) New Greats were quoted 3 nP higher at Rs. 2.97. Citys were firm at Rs. 3.09. Kohinoors rose by 14 nP to Rs. 3.25. But Centurys were a naya paisa lower at Rs. 2.97. Among foreign yarns, Fujis gained 4 nP to Rs. 5.34. Paramounts were fully steady at Rs. 5.31.

In the cotton yarn section, ten counts were neglected, Podars being quoted at Rs. 14.25 and Moderns at Rs. 14.75. Deals in twenty counts Gokaks and Moderns were put through at Rs. 17.62 and Rs. 17.75, respectively, same as last week. Among thirty counts, Indus were stagnant at Rs. 21.25. Forty counts Moderns declined by 25 nP to Rs. 25.25. Gokaks were dull at Rs. 24.50. Minaxis, however, evoked some support and gathered 3 nP to Rs. 24.84. Among sixty counts, Raghuvamshis were on offer at Rs. 52, Finlays at Rs. 60 and Moderns at Rs. 59.50. Eighty counts Finlays changed hands at Rs. 75, same as last week. Moderns were neglected at Rs. 73.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	20-11-1957	13-11-57
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 dull Cones Snia December	819.00	807.00
120 dull Cones Snia February	805.00	796.00
120 Japan (per lb.)	4.25	4.23
150 Japan (per lb.)	4.20	4.22
120 Italy (per lb.)	4.50	4.50
150 Italy (per lb.)	4.28	4.25
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 December	541.00	530.00
40 × 2 February	543.00	528.00
40 × 2 New Great (per lb.)	2.97	2.94
150 Jupan (per lb.)	2.97	2.98
40 × 2 Century (per lb.)	3.09	3.06
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.25	14.25
20s Gokak	17.62	17.62
30s Indu	21.25	21.25
40s Minaxi	24.84	24.81
60s Raghuvamshi	52.00	52.25
80s Modern	73.50	73.50

GROUNDNUT FIRM AGAIN

(From Our Own Correspondent)

BOMBAY, 20*th November*

The firmness of groundnuts continues unabated, notwithstanding the imposition of a special margin of Rs. 25 per candy on buyers of February contract whenever the price exceeds Rs. 165. The margin became operative immediately after the contract pierced the Rs. 165-level on Friday the 15th inst. The rate at one time on that day was as high as Rs. 166.37. The margin amount collected by the Oilseeds Exchange on the net outstanding position as on that day was Rs. 38.85 lakhs, the actual quantity involved in the transaction being about 155,400 candies. The prices of course, tended to decline in the subsequent three sessions, thanks to rumours of further restrictive measures by the Forward Markets Commission and increased arrivals which induced hedge selling. But today, again, the groundnut section ruled buoyant, with prices knocking at the "ceiling" of Rs. 165. The bulls were in no mood to lighten their positions, while the bears were feeling diffident. Some in the oilseeds trade expect that groundnut and groundnut oil prices would continue to move up, what with the growing shortage in foodgrains and the resultant rise in prices of food articles. There are, however, others who are inclined to feel that the prices will not be higher than the "ceiling." For, according to them, the incidence of margin is very rigorous, since it has to be paid on the net long position of each client without any offsetting as between transactions of the various clients.

In contrast to the firm trend in groundnuts, castorseed ruled distinctly bearish and there was a sharp recession in values. There were reports that the new crop would be higher than what was anticipated earlier, in view of the recent beneficial rain in Gujerat and Saurashtra tracts. The prospects for castor oil exports were also considered to be bleak, as a result of the marked drop in overseas quotations. Even at much reduced rates, transactions actually put through were, it is said, of a limited nature. Linseed encountered some selling induced by the continued slackness in foreign demand. Cottonseed also came in for selling, despite improvement in raw cotton prices. Kardiseed and nigerseed, too, were dominated by sellers and sustained a fall in prices.

The groundnut February 1958 contract opened the week at Rs. 164.37, as against Rs. 164.62 last week-end, and advanced to Rs. 166.37 on Friday but gradually declined to Rs. 163 at one time yesterday. Thereafter, a recovery ensued and the contract rose to Rs. 164.62 today. Over the week, Bold ready, however, receded by 50 nP to Rs. 33.25. Khandesh quality lost a similar amount to Rs. 35.25 Groundnut oil *ex*-mill eased by 50 nP to Rs. 19.87. Railway receipt shed 38 nP to Rs. 19.62.

Castorseeds May 1958 contract was subjected to persistent selling and was hammered down from Rs. 158.15 on Wednesday last to Rs. 149.50 today. At the close, however, it was a shade better at Rs. 151.50. Ready Madras fell by Re. 1.50 to Rs. 31.25 and Kanpur by Re. 1.25 to Rs. 30.25. Castor oil B.S.S. dropped Re. 1.06 to Rs. 18.19. Commercial retreated by 88 nP to Rs. 17.12.

Linseed May 1958 contract, after firming up from Rs. 31.94 to Rs. 32.31 on Friday, receded to Rs. 31.56 before closing at Rs. 31.81. Bold ready declined over the week by 37 nP to Rs. 30.50. Linseed oil ready lost 13 nP to Rs. 15.87.

Cottonseed February 1958 contract, which stood at Rs. 106.75 at the close of last week, steadily moved down to Rs. 101.50 yesterday. But profit-taking at low levels and firm advices from the cotton market led to a recovery in prices, today's closing rate being Rs. 103.50. Nevertheless, over the week, the contract was thus lower by Rs. 3.25.

Among other seeds, Kardi bold ready was subjected to continued selling and declined to touch Rs. 20 on Monday. It, however, improved subsequently and finished the week at Rs. 20.75. Niger Madras quality, after improving from Rs. 29 to Rs. 29.37 in the first two sessions of the week, relapsed to Rs. 28.37 yesterday, though it finished a little better at Rs. 28.75 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	20-11-1957	13-11-1957	6-11-1957
Groundnut—	Rs.	Rs.	Rs.
February 1958	164.62	164.62	164.87
Bold ready (per cwt.)	33.25	33.75	33.62
Khandesh quality	34.25	35.75	35.50
Linseed—			
May 1958			
Bold ready (per cwt.)	31.81	31.94	31.81
October-November	30.50	30.87	30.87
Cottonseed—	30.50	31.25	31.24
May 1958			
Madras (per cwt.)	151.50	158.15	157.75
February 1958	51.25	32.75	33.50
Groundnut oil—	108.50	106.75	107.75
Ex-mill ready (per quarter) ..	19.87	20.37	20.00

Commercial (per quarter) ..	17.12	18.00	19.62
Linseed oil—			
Ready	15.87	16.00	16.00

BLACK PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, 20*th November*

Malabar black pepper continued to remain in the doldrums, in view of the absence of any encouraging news either from consuming centres or from supplying ones. The market in New York ruled quiet with minor fluctuations. During the entire autumn season, dealers there refused to follow the advance in primary markets, as grinders proved sporadic buyers. They seemed to be more quality-conscious and as such preferred to pay ½ to 1 cent more for Tellicherry quality over Alleppey. It is reported that some business in spot was done in Tellicherry quality in New York at as high as $0.25½. There

are buyers for this quality at $0.25, while Alleppey is going abegging.

During the whole year, Singapore market remained a tame affair, as demand from Europe was non-aggressive, since the Continental dealers stockpiled pepper during the Suez crisis and London dealers were unwilling to store pepper, in view of high bank rate.

Singapore, after going down to Str.$62, reacted to Str.$64, but the business was reported to be thin, following the news that sellers from Sarawak and Indonesia were offering cheaper by about 3 to 4 per cent. to the U.S.A. and Europe than their counterparts at Singapore. Holders at Singapore were anxious to liquidate their stock, as they wanted to lower their inventories before the end of the financial year. Stock there was reported to be fairly large.

Local market, in both A.S.T.A. and delivery, showed a small improvement, following the news of some business with Russia and East European countries, but the improvement proved short-lived, because growers and second-hand dealers remained soft sellers, owing to the fear of new arrivals soon pressing the market. Inland demand has once again fallen down. December and Jan.-Feb.-March, after improving to $0.24, are now quoted at $0.23½.

Alleppey, after touching Rs. 562½, receded to Rs. 550, thanks to new arrivals. New arrivals in Alleppey and Cochin are averaging 75 candies with quality improving, though not up to the export standard.

In delivery, prices, after improving to Rs. 535 for December, hovered round about Rs. 516 with small interest. There is pressure of liquidation in December delivery, as buyers are unwilling to switch from December to February, because of high contago charges.

Today's nominal quotations are: Ready delivery Rs. 74 per Bengal maund, December Rs. 516-Rs. 521 and February Rs. 526-Rs. 531 per candy of 5¼ cwts.

DUST TEAS EASY

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 14*th November*

Approximately 800,000 lbs. were on offer in dust sale 'W', which was held on Tuesday, 12th November. Although there was a useful demand prices were irregular and easier all round. Milled dust were 10 nP to 15 nP lower, whilst mediums were irregular and occasionally up to 20 nP below last rates. Best liquoring dusts sold well, but were barely steady.

The average priced realised in Dust Sale 'W' was Re. 1.48 per lb., as against Re. 1.56 per lb. in the previous sale and Re. 1.95 per lb. in the corresponding sale of 1956.

London Market: Sale of 11th November 1957:—Market fully firm to occasionally dearer.

Sale of 12th November 1957:—Strong demand. Dearer all round, especially best.

Colombo Market: Sale of 11th November 1957:—Good quality firm. Poorer highgrowns declined 10 to 20c., low mediums 20 to 30c. Lowgrowns inclined easier.

Sale of 12th November 1957:—Liquoring sorts firm. Low dusts and fannings easier.

Calcutta Market:—*Export*:—Good general demand. Market generally 6 nP to 10 nP dearer for most offerings. Whole leaf steady. C.T.C. weakest feature.

Internal:—15,600 Packages dust. Good demand well maintained. Clean leaf orthodox and best C.T.C. firm to dearer. Fibrous secondary C.T.Cs. 20 nP easier. 3,000 packages internal leaf. Improved demand. Prices generally dearer.

Export Quota:—The market has remained steady at 19 nP.

Forthcoming Auctions:—Dust sale 'X' will be held on Tuesday, 26th November.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 30:—1,875,000 lbs. Strong general demand, particularly for low medium and medium brokens and fannings which are irregularly 5 nP to 10 nP dearer, sometimes more. Best liquoring easier, following quality. Whole leaf irregular. Orange pekoes easier. Flowery pekoes steady."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 19*th November*

There was good demand during the internal sales held last week, and at yesterday's export auctions. Buyers were active and were increasing their holdings, as they believed that this year's crop would be lower. That also accounted for the steady conditions in the London sales, where the good colourv C.T.C. teas were very much in the forefront.

Dusts offerings during the internal sales held on Tuesday last amounted to 15,542 chests. Strong competition was offered to the cleanly sorted orthodox teas, prices of which rose above valuation. In a like manner, considerable interest was shown in the good liquoring smaller grades from Assam. Prices of the best liquoring C.T.C. Assams rose above those listed in invoices; but the poorer liquoring fibrous C.T.Cs lost by 20 nP per lb. Among Darjeelings, those lots with flavour met with good demand. The quotations were: best Assam C.T.C. Rs. 2.70 to Rs. 3.00, medium Assam C.T.C. Rs. 2.05 to Rs. 2.20, medium Assam grainy dust Re. 1.76 to Re. 1.80, and medium Dooars Re. 1.74 to Re. 1.76.

Leaf on offer amounting to 2,884 chests met with improved demand. Prices also rose.

At last Saturday's annual meeting of the Assam branch of the Indian Tea Association held in Jorhat, the Chairman, Mr. L. F. Paget, explained how even a slight reduction of average sale price of tea would affect production at economic rates. For the industry had to meet certain statutory obligations such as implementation of the Plantation Labour Act, payment of wages, provident fund, taxes, cesses, duties, etc. He said that any further increase in production cost was only possible on tea finding some profitable market. It is suggested that the problems facing the tea gardens can be lessened if the Governments of Assam and West Bengal withdraw the entry taxes.

Another matter referred to by Mr. Paget was the efforts made by the industry to produce more and more of the best teas. However, climatic and weather conditions retarded their efforts to a certain extent. Moreover, the incentive to produce the best teas was for a time affected when planters distressingly noted that good Assam teas were being sold at below production costs. The Suez Canal crisis bridged the price gap between the good and the best teas; however, this was only a temporary feature.

The feature during yesterday's export sales was the strong support which British buyers accorded to common teas. There was equally strong demand for other teas on offer. Total offerings amounted to 54,971 packages. Prices of clean commons and commonest teas advanced by 2 to 4 nP., while black fannings were about steady at previous rates. Among C.T.C. Assams, the lots having useful and improved liquors rose by 20 nP per lb. at times, while the poorer lots lost by 15 to 20 nP. Subsequently, there were some withdrawals. Leggcut teas met with active inquiry. B.O.Ps, among medium Assam orthodox teas, met with better support. Whole leaf grades were sold at higher rates, and a higher demand pushed up prices for Darjeelings and tippy teas. The quotations were: best Assam C.T.C. fannings Rs. 2.80 to Rs. 3.00 (nominal), best Assam C.T.C. B.P. Rs. 3.00 to Rs. 3.50 (nominal), clean black pekoe Rs. 2.30, medium fannings Re. 1.86 to Re. 1.90, medium B.P. Re. 1.76 to Re. 1.80, plain B.P. Re. 1.70 to Re. 1.72, and plain fannings Re. 1.78 to Re. 1.82.

Export quota changed hands at 19 nP. Subsequently, buyers demanded 19½ nP with buyers offerings 18½ nP.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 19*th November*

During the week under review, prices of jute goods moved within narrow limits, but closed lower on balance. While prices of the inferior raw jute varieties eased fractionally, Daissee jute was fully steady. Daissee quality was indeed difficult to be obtained. In fact, reports from some districts stating that the Daissee crop has been fully booked have been received. Daissee output during this season, it was feared, would be lower, as some of the area normally growing this variety has been sown with mesta. This factor continues to impart a steadier tendency in raw jute prices and, despite a fall in prices of jute goods, raw material is being maintained at comparatively higher level. Fresh arrivals continue to be much below for this time of the season, and the purchasing policy of mills to go in for small quantities at one time is not paying dividends. For, if most mills resort to purchases of this type, the quantity that can go into the hands of mills would be considerable in order to upset anticipations.

During the week, figures relating to output of mills for the month of October were published. Production, at 83,500 tons, was lower by 2,500 tons compared to September. This was due to a reduction in the number of working hours. Sacking goods produced aggregated 47,100 tons, a fall of only 200 tons, and miscellaneous constructions, at 4,700 tons, represented a decline of 300 tons. The largest fall was recorded in hessian, which at 31,700 tons, revealed a shrinkage of 2,000 tons. This suggested that the tendency of mills to transfer looms from hessian to heavy goods continued. It was noted that considering the stocks at the end of September and October, i.e., 77,000 tons and 76,200 tons, respectively, demand during October aggregated 84,300 tons or 800 tons more than production. Shipments in November have continued to be satisfactory, and the general expectation is that stocks at the end of this month would record a further reduction. Hessian shipped during the first ten days of the month amounted to 20,000 tons, as against 9,000 tons for the same period in October, and sacking goods 19,000 tons, as against 13,000 tons. As compared to sacking, hessian was steadier during the week, as more business with the United States was anticipated during the rest of the year.

A feature during the week under review was the nervousness exhibited by speculative stockists, and the consequent selling pressure in the *fatka*. A number of foreign enquiries was received, but, with little business passing, mills lost interest and at the decline withdrew from the market. Ready B. twills were quoted on Tuesday last at Rs. 114.75, at which rate speculators accorded support. The price gained to Rs. 115.25 on Wednesday. The ready 40" 10 oz. hessian was stronger at Rs. 41.65, as against Rs. 41.50 on Tuesday. Anticipations of business with the United States imparted a steadier tendency to hessian, the 40" 10 oz. of which advanced to Rs. 41.75 on Thursday, while B. twills sagged to Rs. 114.40 following heavy selling by speculators at the previous day's higher level. Weak holders began disposing of their stocks as speedily as possible and ready B. twills touched the lowest level of the week at Rs. 113 on Friday last. The output figures for October showed that the proportion of hessian to sacking recorded a decline. This factor as against the anticipated business with American buyers checked the decline in 40" 10 oz. hessian which was quoted at Rs. 41.45 on Friday and raised to Rs. 41.55 by the week-end. On Saturday, B. twills at Rs. 113.20 recorded a small recovery. Yesterday, a further recovery to Rs. 113.62 was a feature.

Mills purchased only small quantities of raw jute. In view of the decline in prices of jute goods, mills forced sellers to discount rates. As a result, Daissee mesta was quiet at Rs. 25.50. However, the better varieties maintained the previous levels. The latest quotations for the different varieties of jute for November-December delivery are:

	Middles	*Bottoms*
Pakistani:	Rs.	Rs.
District	33.50	30.50
Northern	33.00	30.00
Indian:		
Northern	30.25	28.75
Assam	30.50	28.00
Murshidabad	26.50	24.00
Daissee	32.75	30.25
Bimli f.a.q.		Rs. 23.50

Pucca bales 1st marks ready Rs. 175.00 per bale.

METALS RECOVER

(From Our Own Correspondent)

CALCUTTA, 19*th November*

The feature in the metal market during the week under review was a slight recovery in prices. This was attributed to more purchases at lower level. A similar trend was also in evidence in the principal overseas markets. There was a report that the U.S. Government proposed to release the stockpiled metals and minerals, but as this could be done only after considerable formalities and the Congress would have to approve the Administration's proposal finally, no flooding in the market in the immediate future was anticipated. Already, the production of principal metals has been reduced, and, in spite of this, prices have been caught in a slump. As such, any big release of Government stocks at this juncture would only affect prices seriously. Locally, electrolytic copper improved to Rs. 157 from Rs. 151. Demand was fully met with a Government enquiry contributing further to steadiness. Fire-refined copper was priced at Rs. 155. According to a report from London, Russia was likely to purchase 15,000 tons of copper wire from U.K. manufacturers. In the United States, there was steady demand, and custom smelters raised the price by ½ cent to 26 cents per lb. In the meanwhile, it was reported that floods have caused stoppage of production in the Kansanhi copper mines of the Anglo-American Corporation group. Electrolytic zinc firmed to Rs. 58.50 from Rs. 56.75. However, commercial demand was low, while there were enquiries on Government account. In London also, the price gained fractionally, but the Government's decision to release zinc from stockpile retarded sentiment. Virgin lead recovered to Rs. 64 from Rs. 63. In contrast, tin lost to Rs. 502 from Rs. 505. It was reported that this year's surplus in tin would amount to 12,500 tons, as against 6,000 tons anticipated earlier.

HIDES IMPROVE

(From Our Own Correspondent)

KANPUR, 18*th November*

Demand for wet salted buff was keen, while supplies were not ample during the week under review. The major part of the disposed goods were absorbed by the local tanneries. The Madras dealers were keen buyers of lighter cow, sheep and goat. A good proportion of new arrivals was supplied by the local butcheries. Prices moved upward.

The latest available quotations are: Wet salted cow 1st grade Rs. 340, 2nd grade Rs. 270 and 3rd grade Rs. 150 per score; wet salted buff 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 10 ozs. per rupee; goat 1st grade Rs. 325 to Rs. 350 and 2nd grade Rs. 225 to Rs. 250 per 100 pieces; sheep Rs. 250 to Rs. 275 per 100 pieces.

TRADING IN KIPS DIFFICULT

(From Our Own Correspondent)

MADRAS, 18*th November*

Trading in kips with the U.K. has been difficult, because importers state that they are unable to produce kip leather at profitable prices and are not keen to hold stocks. Tanners at this end find that the raw market and the price of tanning materials have advanced by over 10 per cent. during the last three months. The situation is complex and the tanners are reported to be going slow in the matter of raw hides purchases. Arrivals of kips in the local bazar are small, due to the monsoon, and clearances are slow but at unchanged prices.

Inquiries for premium marks, especially light weights, are patchy, and other weights have been ignored. Arrivals of buffalo hides and calves are moderate and are met with brisk clearance.

In the tanned skins section, there is good demand for prime class goat skins, especially lower grades and prime class sheep skins all selections. Market quality goat skins rule weak, but sheep skins are firm, due to several overseas inquiries.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These share are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.

||Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

(x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (a) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

QUESTION HOUR IN PARLIAMENT

Bank Advances

BANK advances against foodgrains have shown a decline in accordance with the Reserve Bank directives in this matter and stood at Rs. 3.8 crores on 27th September 1957. The figure had gone up by Rs. 30 lakhs a month later because of the new crop arrivals in the market. I have no information whether the banks are now making advances against foodgrains but calling it advances against fodder. The process of applying the credit squeeze is a continuing one. (No case of wilful non-compliance of the Reserve Bank's directives by banks has come to the notice of the Government. No evidence has been received to indicate that advances to industries, etc., are being utilised for the purpose of speculation in foodgrains.—*B. R. Bhagat.*)

* * * *

Foreign Exchange for Durgapur Steel Plant

India does not propose to avail of the deferred credit until the bank rates become more favourable. Actually, although it had originally applied to draw 11.5 million sterling, India had actually drawn only half of a million from this credit. Under the agreement, India could draw on the credit any time it liked. I am not quite sure that the interest rates are going to remain at this level until our payments are finally made. It is quite likely it may come down.

—*T. T. Krishnamachari*

New Foreign Capital Investment

The industry-wise investment of foreign capital in India during 1956 was as follows:

	Rs. (lakhs)
Manufacturing—	
Iron and steel products	53.78
Automobiles and accessories	44.63
Machinery and machine tools	8.40
Building and building materials	4.74
Heavy chemicals	22.63
Sugar	49.45
Cotton goods	16.76
Others	15.09
Total	215.48
Trading—	
Machinery and machine tools	5.84
Exporters and importers	1.40
Total	7.24
Others	0.96
Grand total	223.68

The country-wise investment of foreign capital during 1956 was as follows:

	Rs. (lakhs)
United Kingdom	134.16
United States of America	13.33
West Germany	14.67
Switzerland	9.27
Belgium	1.40
British East Africa	50.41
Others	0.44
Total	223.68

These figures do not cover (i) investments in branches of foreign companies, (ii) investments made out of retained profits, (iii) investments in oil refineries, and (iv) a major part of investment in the shape of goods. The investment figure shown against British East Africa is perhaps a repatriation of Indian capital there rather than a foreign investment from that country.

* * * *

Insurance Corporation

Out of shares and debentures worth about Rs. 1.34 crore underwritten by the Life Insurance Corporation, it took up shares and debentures of the face value of about Rs. 1.21 crore.

* * * *

Investment of Life Funds

The Insurance Fund of the Life Insurance Corporation stood at Rs. 378.9 crores approximately on 31st August 1956. The amounts at credit of the Fund are utilised in meeting claims on policies matured or surrendered, granting loans to policyholders within the surrender value of their policies, and generally in making investments in securities and shares, on mortgages of property on acquisition of land and house property, etc.

* * * *

Insurance Policies

The total number of policies issued and the sums assured since the nationalisation of insurance business are: 1st September to 31st December 1956—147,069 policies worth Rs. 55 crores; 1st January to 28th October 1957—496,456 policies worth Rs. 177 crores.

* * * *

Janata Policy

The Janata Policy Scheme is proposed to be extended to all parts of the country. The total value of policies issued up to 28th October 1957 was about Rs. 63 lakhs.

* * * *

Economies in Projects

The Committee on Plan Projects headed by the Home Minister has effected economies in a number of projects in the second Plan. The Committee has recommended a saving of Rs. 1.30 crore in the Chambal and Takawali projects. The Minister for Irrigation and Power has initiated action to save and cut down expenditure on go-downs, etc., by Rs. 1.8 crore.

* * * *

Sales Tax Bill

The Government will shortly bring forward a Bill in the Lok Sabha with a view to removing some of the difficulties anticipated by the State Governments in the enforcement of the Central Sales Tax Act 1956. An officer of the Finance Ministry has discussed these difficulties with some State Governments and the Bill will incorporate the agreed decisions.

—*B. R. Bhagat*

N.I.D.C. Schemes

There have been fair indications that collaboration with suitable foreign firms will be available in many of the projects investigated by the National Industrial Development Corporation. Technical aspects and project details of most of the N.I.D.C. schemes are almost finalised. Apart from technical collaboration, availability of foreign capital or suitable long-term payment facilities for plant and machinery is a vital factor. This is under active negotiations.

—*Manubhai Shah*

Rebate on Handloom Cloth

The amount of rebate paid on handloom products will be reduced from 1st December 1957. The reason is that it is essential to allot more funds to other development schemes in the handloom industry.

* * * *

Hosiery Industry

The Government will shortly implement a scheme for giving drawback of customs duty on exports of indigenous rayon hosiery manufactured from imported rayon yarn. This is expected to enable the indigenous hosiery industry to compete successfully in foreign markets. Import of new machinery for replacement purposes for producing quality goods have been permitted.

—*Nityanand Kanungo*

Foreign Exchange Saving

The amount of foreign exchange estimated to be saved by restrictions on imports during the next six months is approximately Rs. 60 crores, excluding iron and steel.

* * * *

Oil Prices

One of the companies is considering the question of making some further reduction in the prices of oil products distributed in Assam.

—*D. K. Malaviya*

MARKET GOSSIP

(*Concluded from page 955*)

equipping new premises and leasing them to such managements as would operate them efficiently and in the public interest. The Commission, it is suggested, must also lease machinery or provide finance on easy terms for any approved scheme of re-equipment and place bulk orders with the textile machinery industry. The Commission, according to Mr. Wilson, should have power to propose to appropriate concerns in the industry voluntary schemes for amalgamation. The schemes should be discussed with the interests concerned and, if voluntary action is not taken within a given period, the Commission must be authorised to publish their grouping scheme.

The four other important proposals contained in the *Plan for Cotton* relate to the following:

Government control over the principal 'giant' spinning combines through purchase of the controlling interest of voting shares;

setting up of a raw cotton commission to control imports of cotton; it is, of course, recognised that there may be a case for a dual system under which spinners can choose between Government-sponsored imports or private enterprise;

detailed control by the President of the Board of Trade over the minimum price arrangements operated by the spinning and finishing industries; and

creation of a Government-sponsored commission to deal with large-scale imports of cotton cloth from the Far East, if voluntary efforts to reach an agreement end in deadlock.

It will be evident from the foregoing account that the proposals provide for a wide measure of State intervention in the affairs of the Lancashire cotton industry. The reactions of the millowners in Lancashire to these proposals are not known at the time of writing. There is, however, no doubt that they will oppose some of the proposals tooth and nail, though they may welcome the last suggestion which has a serious implication to the Indian cotton textile industry.

* * * *

Prospects for sugar exports from India have become bleaker still, at any rate for the present. Being a non-member of the International Sugar Agreement, India is now affected by the quota restrictions on sugar imports into the member-countries of the Agreement which have become operative consequent on the spot price of Cuban sugar in New York ruling below 4 cents a lb. for 17 consecutive days. Brazil and Peru are the two other countries which are also hit by this development; in recent weeks, Brazil has been selling large quantities of sugar at progressively lower prices. The quota restrictions, of course, apply only till the end of December next, but there is no reason to suppose that it will not be continued. The whole question will depend on the decision the World Sugar Council takes when it reviews the position again in the light of the trends in world sugar supply and prices.

* * * *

The National Bank of Pakistan is opening a branch in Baghdad. This will be the Bank's second branch in the Middle East, the first one being in Jedda, Saudi Arabia, opened in 1950 for the benefit of Pakistani pilgrims to Mecca. It is said that, though the establishment of the branch at Baghdad has no connection with Pakistan's membership of the Baghdad Pact, the machinery for contact in Baghdad as a result of the Pact has been helpful in the opening of the branch.

DEVELOPMENT OF TRANSPORT LOPSIDED

(*Concluded from page 976*)

employed about 10½ lakhs of hands for carrying about 1,300 million passengers and about 115 million tons of goods. At an average of about 200 lbs. per passenger, including luggage, the former is equivalent to a load of about 115 million tons. This means that their total load was about 115 million tons on account of passengers and about the same on account of goods, a total of about 230 million tons, giving an employment potential of about 4,500 hands per million tons or 1.08 lakhs for 24 million tons. As compared with this, the above figures of about 4½ lakhs of permanent hands and 2 lakhs of temporary hands for road transport are impressive and well worth consideration.

Summary

Summarising, the position works out as follows:

1. The original railway estimate of a freight of about 181 million tons of goods per annum by 1960-61 requires a fresh assessment.
2. The Planning Commission should also estimate the total transport requirements of the second Plan, taking into consideration freight not carried by the railways and apportion allotments for different transport services taking into account their capacities.
3. The point now made by the railways that, with an additional about Rs. 200 crores, they will be able to carry an extra freight of about 24 million tons of goods requires examination in the light of their original estimate of Rs. 1,480 crores and a 9 per cent. increase in cost since noticed on account of rising costs.
4. Even if the above estimate is found to be correct, the relative position of long-distance goods traffic by railways and road transport works out as follows:—

	Railways	*Roads*
(i) Capacity (Million tons)	24	50* 33†
(ii) Allotment (Rs. crores)	200	110
(iii) Return to State (Rs. crores)	8	18¾
(iv) Employment (No. of hands in lakhs)	1.08	4½‡ 2§

* Maximum. † Minimum. ‡ Permanent. § Temporary.

5. Hence, no further allotment (in addition to Rs. 1,225 crores) should be made to the railways, without a thorough examination of the above possibilities of long-distance road transport on our National Highways.
6. The cost of 75,000 trucks to the operators will be a maximum of about Rs. 225 crores, which, together with about Rs. 40 crores required for bridges, makes a total of Rs. 265 crores for the scheme; that is, about Rs. 150 crores (Rs. 265 crores—Rs. 115 crores) will have to be found by the operators. This should not present any difficulty, in view of the recent amendment to the State Bank Act, permitting loans to hire-purchase organisations for the purchase of new trucks.

LONDON LETTER

(*Concluded from page 960*)

operations has rendered them immune so far from the troubles that afflicted the Ideal Bank.

The buying power of the pound has suffered a remarkably steady diminution since 1939. It has been neither more nor less marked in the last 10 years than it was during the six years of war. It now stands at some 60 per cent. of its level in 1946 and at little over a third of its level just before the war. The problem of such a diminishing pound affects all savings in which a sum invested at one time is repayable for a similar monetary amount at a later time. So far, Governments have concerned themselves only with aspirations of putting an end to this diminishing value of the currency. None has yet been either defeatist enough or realist enough to devise means whereby savings in public institutions can be prevented from losing their value to the depositor. The depositors of the Ideal Bank have had their money assured to them, but the depositor who put in £100 in 1939 and can draw it out now, whether it was in the Ideal Bank or in the Post Office or at any State Guaranteed institution, will only get back in purchasing power little more than a third of what he put in. It is this failure of the monetary system that really requires inspired attention.—*All Rights Reserved.*

DEBATE ON THE PLAN

THE debate on the second Five-year Plan, which was resumed last week in the Lok Sabha after a break of nearly ten weeks, proved no more instructive than when it was first initiated. To those who expected to hear from the Government the precise lines on which it would tackle the admittedly grave difficulties it faces today, the debate must have been disappointing to a degree. Confronted with the problem of reconciling the requirements of a large Plan, the outlay on which is growing because of the rise in prices both within and outside the country, with the available resources, both internal and external, which are apparently shrinking fast, the Government now finds itself in a situation in which it is compelled to wield the proverbial axe. Nevertheless, what one misses is an informed statement as to what precisely are the resources in sight and how the Government proposes to put them to maximum use in the execution of the Plan. To harp merely upon the imperative necessity of carrying out the "core" of the Plan will possibly get the country nowhere, for no one knows what part of the Plan has to be exiled from the sanctum of the core.

It is some consolation—though it cannot be a very great tribute—to note that the Government is alive to the gravity of the problems. It might have been more comforting if this awareness had resulted in more purposeful measures. After all, the difficulties which the Government faces today are not new. They have been with us at least for over a year now. During these months which the locust hath eaten, there has not been a day when it has not been impressed upon the Government that the economic situation was not conducive to the implementation of the whole Plan, that it was necessary to adopt a well-thought-out order of priority for the various projects included in it, and that the very attempt to implement the whole Plan was causing misgivings abroad about India's economic wisdom, thereby making the task of raising external resources more difficult. And yet, all that the Government has done is to place the lid on imports, to take some half-hearted measures of marginal utility for promoting exports and to follow a fiscal policy which is self-defeating. For all the country knows, the Plan has been left practically intact without the pruning which it needs and the strict reallotment of priorities which the situation demands. Again, it is no tribute to the Government if the excuse for the delay in taking appropriate decisions is that it has been inspired by Micawber-like expectations of "something extraordinary" to turn up. There never was an age of economic miracles.

If the debate lacked clarity about the future of the Plan, it did not at least lose the perspective. Mr. Nehru reiterated his now well-known emphasis on agriculture. He is still known abroad as the famous author of the *Discovery of India*. Nearer home, he deserves to be known as the discoverer of rural India. In all our preoccupations with grandiose schemes for the development of heavy industries, we are likely to lose sight of the main support of our economy—agriculture. Mr. Nehru has done well in keeping food and agriculture steadily before his Government and the country. He may or may not be right—we think, given the existing conditions, he is over-optimistic—in pitching the target for additional foodgrain production at 15 million tons, as against the 10 million tons the Foodgrains Committee deems realistic. But the point is, irrespective of whether the target is 10 or 15 million tons or only a modest maintenance of existing levels of output, more effort than is now being made in the sphere of agriculture is clearly needed.

The Finance Minister was content with giving a general idea of where the "resources" shoe pinches most and of the principles which will govern the rephasing of the Plan. He expressed the hope that additional taxation at the Centre and in the States will cover the gap of Rs. 400 crores in internal resources. He was inclined to regard Rs. 900-1,000 crores as the limit for deficit financing, as against the Rs. 1,200-crore ceiling assumed in the Plan. The Government, according to him, will need external assistance to the tune of Rs. 700 crores, the bulk of which will have to be found over the next 18 months, in order to enable it to implement the "core" of the Plan. At long last, he conceded that the Plan had to be rephased and gave up his erstwhile stand that the whole Plan must and would be implemented at any cost. He gave a broad idea of the lines on which the Plan would be redrawn. In rephasing it, the Government, we are told, will follow three principles. In the first place, it will provide funds, both internal and external, for carrying forward the projects which have already advanced considerably. Secondly, it will try to complete the programmes in respect of the core of the Plan, broadly described as the railways, major ports, steel, coal and ancillary power programmes. Thirdly, it will not undertake any new commitments outside the core, except against external assistance, in the form of either foreign investment or deferred payment terms.

All this is much too vague to constitute a definite statement of policy, nor a scientific order of priority. And, even as a guide to those who are in charge of the various projects, it is unlikely to prove helpful. It is best that firm decisions are taken and taken without delay. The longer the decision is postponed the greater will be the difficulties, for, as often happens in the public sector and as has happened in the past two years, commitments will be made from which the Government will find itself difficult to wriggle out later. It should be possible to assess the internal and external resources in sight. This assessment is the first task before the Government. Once this is completed, the question of rephasing the Plan should be taken up for high-level decision. The Central and State Departments should be told as to how far they can go. In the absence of clear directives, there will be drift and waste. Later on, if more foreign assistance materialises as a result of the continuous efforts that are being made and the internal economic situation improves, some more projects could be taken on hand.

Meanwhile, efforts should be made to mobilise internal resources for development and pave the way for external resources. There are still many aspects of the Plan which are best left to the private sector. For instance, why should a large part of the expansion in coal output be reserved for the public sector at a time when it has neither the men nor all the resources to carry the programme through and when the private sector can very well implement the programme more speedily and at a smaller cost, provided, of course, it is given the necessary climate for raising the fresh capital that is required for this purpose? Again, in order to generate internal resources, the Finance Minister has rightly emphasised the importance of small savings movement and increased tax efforts by the State Governments. So far as small savings movement is concerned, it cannot gain momentum if the price level is not held in check and sufficiently attractive incentives are not offered. There is scope for some re-thinking on the question of interest rates and the period of validity for small savings bonds. Perhaps, a higher rate of interest, payable annually, will be a better inducement.

Above all, both as a means of channelling internal resources to development and as a measure of assisting the inward flow of foreign capital, there is need to re-formulate the fiscal policy. Why should not the Government give up the super-tax on dividends, the bonus tax, and the compulsory deposit scheme? In fact, the Government ought to give up the wealth and expenditure taxes also, the imposition of which has done more harm than good. By abandoning these fiscal measures, the Government will have created a climate for savings and investment. In the States sphere, there may be scope for economy in expenditure. But there is very little scope for tapping fresh sources. Agricultural income-tax could be imposed in States where it has not been imposed or the rates increased in States where they are low. But in some States, notably Kerala and Madras, the rates are unconscionably high. At the same time, one should remember that, in the context of the great drought in several States and the urgent need to stimulate agricultural production, the scope for increased agricultural taxation is strictly limited.

Larger doses of further taxation, whether in the Central or in the State sphere, will either be regressive or generate some resources for the public sector only at the expense of all further expansion in, if not serious contraction of, the private sector. It is thus crystal clear that the Plan, as originally contemplated and requiring not less than Rs. 6,000 crores (at today's prices) for the public sector alone, is beyond the real resources that can be raised in the near future and that even the hope of the Finance Minister that the country can carry out a plan involving an expenditure of Rs. 4,800 crores at the current level of prices, is high. Even when the second Plan was prepared, it was doubtful whether a sum of Rs. 4,800 crores could be successfully raised. How does he propose to find funds of this order now, considering that conditions today are less cheerful than they were two years ago when the Plan was drafted and more foreign exchange has to be found for buying food?

REPORT ON FOODGRAINS—II

ONE of the main terms of reference to the Asoka Mehta Committee on foodgrains related to an assessment of the likely trends in demand and availability of foodgrains over the next few years. Forecasting of economic trends, as the Committee rightly observes, is an extremely hazardous task, especially in the atomic age when dynamic forces, political and economic, are at work. One cannot be sure of even the normal functioning of the seasons, as they are nowadays liable to be materially influenced by the experiments that are being carried out by the big powers in nuclear weapons. Yet the Committee has not shirked this responsibility and has tried to discharge it by trying to estimate the likely increase in the demand for, and the supply of, foodgrains in a diligent manner. An exercise of this sort can be tried in many ways and the conclusions may not be satisfactory to all, for it is easy to question the premises, especially, where, as in India, the statistical data are notorious for their unreliability. Nevertheless, the assumptions made by the Committee in regard to growth of population, urbanisation, increase in incomes, and changes in the food habits of the people and to the impact of these factors on the trend of demand for foodgrains seem to be reasonable, though there may be room for critics to quibble about them. This is also true of the Committee's estimates of the trend of production in the period ending 1960-61, that is, with the last year of the second Plan.

The Committee has proceeded on the assumption that, between 1955-56 and 1960-61, India's population may rise at the rate of 1.5 to 2 per cent. per annum. It is inclined to think that the latter figure, namely, 2 per cent., may turn out to be nearer the mark than the former, in view of the fall in death rate without a corresponding decline in birth rate. The increase in the demand for foodgrains on account of the rise in population is placed at 10 per cent., after making due allowance for the growth in urbanisation. The Committee has rightly assumed that people in urban areas eat less foodgrains than people in rural areas. An increase of 4.7 per cent. in the demand for foodgrains is expected to take place as a result of rise in incomes. Thus, it is anticipated that the consumer demand for foodgrains will rise by about 14.4 to 15 per cent. in the second Plan period. The Committee has also assumed that, as the incomes of people in the lower strata of the society expand, the character of the demand for foodgrains will tend to change from coarse grains to finer, that is, those who are now content with poorer quality of rice and wheat will go in for better varieties; similarly, those who are now using millets will prefer rice and wheat. Indeed, this trend has already begun to manifest itself and will gather momentum if the rate of developmental expenditure is kept up.

On the aforesaid assumptions and assuming that the current level of prices will be maintained, the Committee expects the demand for all foodgrains to rise from 69 million tons in the base period to 79 million tons by 1960-61, of which 56 million tons are likely to be in superior grains—rice, wheat and pulses—and 23 million tons in inferior grains, namely, millets. The breakdown of the total demand between rural and urban areas works out roughly to 66 and 13 million tons, respectively. As against the estimated total demand, production is expected to go up to only 77 million tons, an increase of a little over 10 million tons—10.3 million tons, to be exact—over 1955-56. This increase represents only two-thirds of that (15 million tons) envisaged in the second Plan. In other words, the Committee is of the opinion that the Plan target for foodgrains is on the high side, having regard to the known capacity of the country to implement it. Many may raise their eyebrows on this assumption, but the facts of the situation and past experience are not on their side. Despite all that has been said and done in the name of increasing agricultural production, the fact remains that there has been hardly any increase in the overall yield per acre, without which India cannot achieve self-sufficiency in foodgrains.

* * * *

If the Foodgrains Enquiry Committee has brought out one point, it is that the achievements of State Governments in the sphere of agricultural, especially foodgrains, production are poor. There has been more tall talk than hard work, and solid results are not commensurate with the investments made. If, therefore, the Committee has proceeded on the assumption that the achievements on the food front in the second Plan will fall short of the target by a third, it cannot be blamed. But to the credit of the Committee it must be said that it has clearly stated that its estimates of production in the coming years are only tentative and subject to a number of qualifications. If weather turns out to be highly favourable in all the next four years, if all the State Governments pay undivided attention to agriculture and if all the other requisites for increased production, such as water, fertilisers, and improved seeds, are provided promptly and at reasonable cost, there is every possibility of the country faring better than the anticipations of the Committee. All the same, it will be a pleasant surprise to us, if the Committee's estimated increase turns out to be a gross underestimate, for the "ifs" mentioned above are formidable, if not far too many. It is, therefore, better to accept the Committee's conclusion that, even in a normal year, it will be necessary for India to import two to three million tons of foodgrains per annum during the next few years, and to revise our plans for economic development accordingly.

That India has not attained self-sufficiency in food has now been painfully brought home. The latest picture of the food position for 1957-58 is more depressing than the prospects outlined by the Committee. The production in the current year is expected to be short by three to four million tons because of inadequate rainfall in the closing months of the monsoon. This deficit substantially raises the quantum of imports that will be necessary between now and 1960-61. In all, a minimum of 12 to 13 million tons may have to be imported in the next four years, of which at least three million tons must be obtained in less than a year. Ways and means of closing this gap are now receiving the urgent attention of the Government. That is only so far as the immediate needs are concerned. In order to solve the problem for the coming years, long-term agreements will have to be concluded with Burma (for rice), the U.S. (for wheat and rice), Canada and Australia (for wheat). It is obvious, in the light of what has been stated thus far, that the task of formulating a stable and long-term food policy will be extremely difficult without an assured supply of foodgrains from abroad. In fact, as the Committee pertinently remarks, "assurance of continued imports of certain quantities of foodgrains will constitute the very basis of a successful food policy for some years to come." But this does not necessarily mean that the country should not strive hard for achieving self-sufficiency.

* * * *

In saying that neither unfettered private trade nor full control—by which is meant compulsory procurement of the whole production, introduction of rationing, strict control of prices, etc.—is desirable, the Committee has shown that it has not ignored the lessons of recent history. When an emergency arises, in which the choice is between full control and starvation, full control, as the Committee points out, is the only solution. Surely, no responsible person will oppose this contention. But wisdom lies in preventing such an emergency and also in providing for such an emergency in case it were to arise. Acute inflation, or runaway inflation as it is popularly known, can and should be avoided. It is only a question of sound management of a country's economy. Acts of God cannot be foreseen; nor can they be avoided. Since, however, they do take place occasionally, one must be prepared for them and not be caught napping. It is in this context that the Committee's suggestions for (*a*) maintaining a minimum reserve of two million tons of foodgrains, (*b*) building up a buffer stock, and (*c*) suitable machinery for exercising strategic controls over prices, all as part of permanent armaments ever ready to defend the food front, should be viewed if their value is to be appreciated.

Further, since self-sufficiency in foodgrains is still a distant goal and since the country has taken on hand large development projects which will result in injection of big doses of purchasing power, the instability of food prices is not likely to abate during the next few years. It is, therefore, risky to give complete freedom to trade in a basic necessity like foodgrains. It is in the interests of free enterprise itself to recognise this point and welcome the controls of regulatory type recommended by the Committee. Stabilisation of food prices is a prerequisite for industrial peace and orderly industrial growth. It will be wrong to think that the Committee has made a doctrinaire approach to the problem. One has to read its report in full to feel convinced. A clear proof of it is provided by its rejection of full controls of the type the country had in the decade ended 1953 as a permanent solution to the food problem. The Committee has been quite alive to the evils of full controls. It points out that rationing will require heavy commitments by the Government, lead to larger imports than necessary, breed corruption, and create discontentment among people. Similarly, it recognises that complete procurement, a concomitant of rationing, will have an adverse effect on production and result in widespread black marketing, as well as contempt for law among the people.

It is true that the measures suggested by the Committee for stabilising foodgrain prices are not of much value for resolving the present difficulties, for which the only effective solution lies in stepping up imports and in ensuring that the controls that have now been assumed are efficiently implemented and do not aggravate the hardships of deficit areas. But that is no reason for putting the Committee's suggestions into cold storage, as was done with the proposals of its predecessors. On the contrary, every effort must be made to implement them. The buffer stock scheme may have to wait till production goes up and temporary surpluses develop. But the machinery for it can be worked out now and kept ready. Again, prices do not fluctuate widely only when there are surpluses and deficits. A perusal of the Committee's report will show that price fluctuations are not only cyclical but also seasonal and regional, both of which could be as abnormal as the former. Such distortions of the price structure also create considerable strains and stresses and should be minimised as far as practicable. This will be possible only if there is constant supervision of the food front and if arrangements exist for buying surpluses in areas where they occur and diverting them to deficit areas where prices threaten to shoot up. Fiscal and monetary controls also can be effectively used to arrest price fluctuations. It is to do this policing and rescue work effectively that the Committee has suggested a policy-making body, called the Price Stabilisation Board, an executive body, known as Foodgrains Stabilisation Organisation, and a Prices Intelligence Division to collect the relevant data and information on the basis of which policies and actions are to be decided. An Advisory Council, composed of representatives of all the concerned sections of the public, has also been advocated. It is, however, a question of detail whether there should be one more advisory council, but the policy-making body and the executive set-up, coupled with its intelligence section, as suggested by the Committee, should be formed, if some order and stability are to be established in the supply, distribution and prices of foodgrains. Agriculture in this country has suffered from long neglect. It is high time that something effective was done to ensure a fair minimum price for the grower and a stable price for the consumer.

Throughout the world, agriculture has been given most favourable treatment, more especially since the outbreak of the Second World War. And what has so far been done in India is nothing as compared with what the Governments of the U.S., Canada, Australia, the U.K., Italy, the Scandinavian countries and Japan, to mention only some of the free countries, have been doing for the welfare of their respective farmers and for raising agricultural production. In none of these countries has food been allowed to be the football of free traders and speculators. The Asoka Mehta Committee is perfectly right when it suggests that the State should take greater interest in regulating the marketing of foodgrains and progressively socialise the wholesale trade in this essential commodity. The use of the word "socialise" seems to have frightened many and has induced some to presume that a giant monolithic corporation will replace the numerous dealers in foodgrains. A careful reading of the report will show that the Committee has not used the word "socialisation" in the sense of "nationalisation." On the contrary, as was pointed out by us last week, the Committee envisages a distinct role for private traders. Only, it wants their freedom to speculate and to make unlimited profits to be restricted. Indeed, there is nothing novel in this suggestion of the Committee, in that it is already in operation in some form or other in most of the countries listed above. Incidentally, if the Government were to relieve the private sector of a part of the hundreds of crores now used in financing the trade in foodgrains, so much more money would be available for investment in industries and for marketing of manufactured goods. Accordingly, it may prove a blessing in disguise.

IMPLICATIONS OF THE GREAT DROUGHT

ART SILK IMPORTS—CREDIT FROM JAPAN—STATE BANK'S NEW ENTERPRISE

THURSDAY, 5 P.M.

MARKET GOSSIP

THERE have been no new developments in the share markets this week. The trend has been a mixed one. Some scrips have managed to register a modest rise, while others have sustained fractional losses. Steels and cements figure prominently in the former and cotton textiles in the latter. Some engineering, chemical and shipping shares have improved a little, while planting and jutes have retreated. On the whole, the trend is a little steadier than a week ago, but the feeling of hesitancy still lingers. There is, however, no selling pressure and the speculators are fighting shy of going short. That is one good thing about the markets. Significantly enough, the Finance Minister's statement that there might be marginal increases in Central taxation and that the States must raise more revenue has had no sustained adverse effect. Similarly, the Washington report last week that the U.S. President had tentatively decided against approaching the Congress for a special long-term loan for India has failed to make any lasting impression on the markets. This shows that the majority of operators are inclined to hope for the best.

From all available indications, it looks as though it is premature to come to any definite conclusion about the size of economic aid from the U.S. The sum of 150 million dollars mentioned in last week's Washington report is actually a little more than the amount that was expected to be received from the existing funds at the disposal of the U.S. Government. It will not be wrong to say that there is today a greater realisation in the U.S. of the importance of helping India than before. It is just possible that the American Government may ultimately decide to recommend to the Congress to give a long-term credit to this country. Much, however, will depend on what the Government of India does in the coming weeks. Will it have the courage to admit its Himalayan blunders in its economic policies by reversing some of the steps it took in the past eighteen months? No loss of face is involved here. On the contrary, the Government will go up in the estimation of free countries from which it is seeking large-scale financial and technical assistance for implementing its Plan. It is, of course, true that the Communists in this country will try to make much political capital out of it. But is the Congress Party going to decide its policies and programmes in a manner that will secure the approval of the Communists? To do so is to play into the hands of the Communists. Surely, the Congress, we hope, is wise enough to realise this danger before it is too late.

* * * *

The share markets do not seem to have taken into account the implications to the national economy of the great drought that has befallen this poor country. The full dimensions of this disaster were cautiously outlined in Parliament only a couple of days ago by India's Food Minister, Mr. A. P. Jain, who cannot be accused of being a pessimist or as one who is generally inclined to exaggerate a distressing situation. If he is guilty of anything, it is that he has always painted a more optimistic picture of India's food position than was warranted. What Mr. Jain told the House this week is disquieting indeed. He revealed that crops had withered over a very large area of 170,000 square miles in Orissa, Bihar, Eastern Uttar Pradesh and parts of West Bengal, Madhya Pradesh and Bombay. The loss of foodgrains is placed at anything between three and four million tons and the major portion of it has been sustained in rice. The area affected has a population of 80 million, equivalent to a little over 21 per cent. of India's total population.

Now what are the implications of this situation?

1. The capacity among the people for buying consumer goods will be less and the long-expected revival of demand for cloth may not fully materialise.

2. The State Governments concerned, as well as the Central Government, will have to divert a part of their funds for giving relief to the people who have been seriously affected by the drought. Consequently, they will have less money for other purposes. The hope for relief in Union taxes may not materialise.

3. With such a heavy shrinkage in the internal supply of foodgrains, the Government will have to reduce the quantum of deficit financing in the current year to a much greater extent than it is willing to concede now.

4. Quite a good part of the additional foreign assistance that may be secured may have to be utilised to buy rice and wheat from abroad. At least, a part of the wheat needed could be had against credit, but, as rice is difficult to be had, it has to be paid for in cash.

5. The cumulative result of all the four factors mentioned above is that the problem of raising internal resources has become more difficult than is generally assumed.

The next twelve months are thus going to be a very trying period for India.

The Life Insurance Corporation, as is well known, has been the principal prop of the share markets ever since the Finance Minister hit at them with his anti-rich and the so-called anti-inflationary fiscal policies in September 1956. How much has the Corporation invested in shares since then? Full and up-to-date figures are not yet available. But, according to a statement laid on the table of the Lok Sabha by the Finance Minister this week, the total investments made by the L.I.C. in the various industries in the country amounted to Rs. 11,08,58,000 during the 12 months ended 31st August 1957. Of this amount, Rs. 10,76,44,000 were invested in the private sector and the balance of Rs. 32,14,000 in the public sector. The following is the industry-wise breakdown of the total investments made in the year under review:

(In lakhs of rupees)

Banks	75.99
Cement	128.58
Chemicals and Pharmaceuticals	30.81
Coal	1.89
Electricity	51.55
Engineering	157.96
Mining	12.46
Paper	43.89
Plantations	8.64
Shipping	4.87
Steel	146.64
Cotton	97.78
Jute	9.43
Rayon	7.22
Miscellaneous	302.93
Sugar	27.96

It will be seen from the foregoing particulars that engineering, steel, cement and textile shares have received substantial support from the L.I.C. and that the lowest sum has been invested in coal scrips. Electricity, paper and sugar shares have enjoyed sizable support at its hands. The most surprising feature is that the Corporation has invested about Rs. 76 lakhs in the shares of banks. It is surprising because this is not so well known in market circles. It will be interesting to know whether these investments are in the shares of joint-stock banks or in those of the Government-sponsored special credit institutions.

Like the cotton mills, art silk mills also continue to complain of heavy accumulation of cloth stocks. The offtake is reported to be poor. Apart from the general slackness in the demand for textile goods, the main reason for the glut in art silk fabrics seems to be the excessive imports of art silk yarn which were permitted in the last year or two. In 1956-57 alone, India imported about 60 million lbs. of art silk yarn, and, in the current fiscal year, imports may well add up to a total of 40 million lbs. These imports, together with the domestic production of some 30 million lbs., would make in all about 70 million lbs., as against the estimated domestic demand of only 50 million lbs. In 1956 and 1957, the average total availability, it is estimated, was as high as 87 million lbs. Surely, there is scope for a total ban on imports of yarn. It is true that the latest import policy has greatly restricted imports. Even so, there is a clear case for imposition of a more rigorous ban. Further, there have been reports of misuse by the traders and manufacturers of the facilities for import of yarn given to them. In this context, it remains to be seen whether the new facility in the shape of permission for imports of yarn against exports of art silk cloth will also not be misused.

In any scheme of priorities, in the allocation of foreign exchange, the imports of art silk yarn as well as proposals for setting up rayon yarn and staple fibre producing units should necessarily take a low place. From this point of view, it may be doubted whether the Government was wise in granting its permission for a proposal to set up a Rs. 5-crore rayon yarn plant in South India. The ostensible reason for permitting this project is that it is based upon a scheme of deferred credits to which the Italian suppliers of plant and equipment have agreed. But this is to ignore the consideration that even deferred credits have to be paid for, often at heavy interest rates, and the necessary foreign exchange has to be found at a later date. Further, it should not be forgotten that the raw material for this project also has to be imported, thereby imposing additional strain on the foreign exchange resources. The Government will, therefore, do well to subject even the schemes based on deferred credit facilities to a rigorous test of priorities.

* * * *

Ever since Prime Minister Nehru's visit to Japan, considerable interest has been aroused on the possibility of Japan granting a yen credit to India. The joint *communique* issued on 13th October last after the series of talks between the Prime Ministers of the two countries at Tokyo said: "Prime Minister Kishi expressed his sincere hope that the second Five-year Plan of India would be successfully carried out. In connection with the implementation of the Plan, the two Prime Ministers agreed, in principle, on Japan's co-operation with India in the way of yen credit to finance the supply of capital goods from Japan." The Government of India is shortly sending an economic mission to Japan to negotiate the details of the credit. The mission is likely to be led by Mr. K. B. Lall, Joint Secretary, Ministry of Commerce and Industry.

It is premature to speculate on the probable amount of credit that will actually be made available by Japan to India, as well as on the rate of interest, period of the loan and other terms of repayment. The latest Press reports from Tokyo, however, say that the Japanese Government has drawn up a plan for extending 18 billion yen credit (Rs. 24 crores) to India. The credit will be used mainly for the purchase of capital goods such as machinery and equipment for industries.

Meanwhile, negotiations are said to be under way between the two countries for the purchase by India of ships for coastal trade, rolling stock and dynamos worth about Rs. 9.5 crores (7,200 million yen). But it is not known whether this purchase and the purchase of textile machinery worth about Rs. 8.0 crores (6,048 million yen) under the recently concluded deferred payment agreement will be part of the proposed yen credit or outside it.

The grant or a Japanese yen loan will help India, to some extent, in bridging the wide foreign exchange gap in the second Plan. Japan, it will be recalled, is one of the countries with which India has been continuously having trade deficit since the past three years, in contrast to the favourable balance enjoyed during the years 1952-53 and 1953-54, as the following figures will show:

(In crores of rupees)

	Exports	Imports	Balance
Year ended March—			
1953	31.18	15.82	+15.36
1954	23.16	13.06	+10.10
1955	16.10	20.57	— 4.47
1956	13.15	33.37	—20.22
April-December 1956 ..	20.39	34.21	—13.82
